NOTES

1. In groups [C10L 1/12](#) - [C10L 1/30](#){[C10L 1/308](#)} , in the absence of an indication to the contrary, a compound is always classified in the last appropriate place.
2. A metal salt or an ammonium salt of a compound is classified as that compound, e.g. a chromium sulfonate is classified as a sulfonate in group [C10L 1/24](#) and not in group [C10L 1/30](#).
3. When classifying in this group, it is desirable to classify the individual additional components using Combination Sets with symbols chosen from groups [C10L 1/12](#) - [C10L 1/308](#)
4. Mixtures of additives are classified in the corresponding main group. Individual additives can be classified using Combination Sets according to the Note above
5. When several alternatives for the same individual additive are mentioned, e.g. as a Markush-formula, classification may be done in

C10L 1/106
(continued)

the corresponding main group only, the alternatives being classified using Combination Sets, according to the Note above.

6. Documents classified until April 2003, have been classified with Combination Sets as explained in the Notes above, however using symbols chosen from groups [C10L 1/10](#) - [C10L 1/308](#).
