

The IP system in the Fourth Industrial Revolution

Patent System

Fulfillment of the examination infrastructure of IoT related technology would be helpful for filing preparation and prosecution and patent analysis. For example, examination guideline, patent classification of IoT related technology.

Industry would appreciate advancing harmonized classification of IoT related technology.

Understanding of challenges on IP system relating to IoT (big data, cloud computing), use of AI at business activities

Interactive discussion and studies with offices in charge and Industry would be important for Industry for sharing consistent directions of development and adjustment of relating IP system.

Utilization of data across industries and business layers

In order to encourage the innovation relating to services by utilizing IoT technology, users of such system should consider across industries and/or business layers.
