has failed to meet its obligation to provide clarifications or advice, a request for re-establishment filed within the period of one year can, when the principle of the protection of legitimate expectations is taken into account, be treated as valid even though the fee for re-establishment was not paid until after the period of one year had expired. In the present case, the requester's right to be treated as though the non-observance had not occurred can take precedence over third parties' interest in legal certainty, which the one-year period in Art. 122(2), third sentence, EPC 1973 is intended to ensure.

## 4.2. Inability to observe a time limit

The word "unable" in Art. 122(1) EPC implies an objective fact or obstacle preventing the required action, e.g. a wrong date inadvertently being entered into a monitoring system (T 413/91, see also T 1054/03, T 1026/06, T 493/08, T 1962/08, T 836/09, T 592/11). Unawareness of the expiry of the time limit must be distinguished from a deliberate act on the part of the applicant (representative) which is, for example, attributable to tactical considerations (see in this chapter III.E.4.2.1). Persistent financial difficulties incurred by the persons concerned through no fault of their own have also been recognised as such an obstacle (see in this chapter III.E.4.2.2).

### 4.2.1 Deliberate act missing a time limit; tactical considerations

In T 413/91 the appellant's reasons for not filing any statement of grounds were that he had expected an agreement with the proprietor, which, however, did not come about. The board stated that such a reason did not justify re-establishment of rights, pointing out that it was an extraordinary means of judicial remedy. It offered no choice to a party as a substitute for the proper action to be taken, nor did it imply any right to have the fatal effect of an **intentional step** cancelled, even if this step later on proved to have been a mistake. A party who had deliberately chosen not to file a statement of grounds for the appeal could not achieve an appellate review through the back door of a request for re-establishment.

In J 2/02 the board added that Art. 122 EPC did not imply for an applicant any right to have the final effect of an **intentional** action cancelled. Holding back the payment of the fee for a reason other than being unable to comply with the legal provisions - particularly as a matter of strategy in the circumstances and for tactical considerations - is outside the scope of Art. 122 EPC, and deprives the applicant of the possibility to invoke this article.

In T 1026/06 the board distinguished its case from the situation in T 413/91 and J 2/02, in which the boards had not recognised the act of intentionally allowing a time limit to expire as an obstacle. These two cases differed from the current case, in so far as the parties concerned had deliberately refrained, for motives extraneous to the proceedings, from performing the required actions, whereas the appellant in the current case had been unable to file an appeal because of a mistake of law.

In T 250/89 (OJ 1992, 355) the opponent had claimed that he could not have filed the statement of grounds in due time because he would have needed to refer to documents

withheld by a third party. The board confirmed the line taken in earlier decisions (see **G 1/86**, OJ 1987, 447; **T 287/84**, OJ 1985, 333). When determining whether all due care required by the circumstances had been taken, the word "all" was important and failure to observe a time limit had to be the result of an oversight, not a **culpable error**. The board rejected the application for re-establishment of rights on the ground that the opponent had had sufficient material at his disposal to be able to draw up the statement of grounds in due time in accordance with Art. 108, third sentence, EPC 1973 and R. 64 EPC 1973.

In **J 11/09** the representative omitted to make payment of the third renewal fee because he was unwilling to advance the renewal fee on account of unpaid invoices. Accordingly, the renewal fee remained unpaid not inadvertently, but **on purpose**. Given that payment had been refused on purpose, it was not possible to say that a one-off error had occurred in an otherwise well functioning system in the professional representative's office.

#### 4.2.2 Financial difficulties

In **J 22/88** (OJ 1990, 244) the Legal Board held that financial difficulties experienced through no fault of one's own and leading to failure to observe time limits for the payment of fees could constitute grounds for granting re-establishment of rights. A prerequisite for granting the request was that the applicant should have tried with all due care to obtain financial support. The board also made it clear that for "all due care" to be proven, it had, of course, to be clear that the financial difficulties were genuine and were due to circumstances beyond the reasonable control of the applicant (see also **J 31/89**, **T 822/93**). In **J 9/89** the board noted that there was no evidence before the board of any effort having been made by or on behalf of the appellant to find financial support during the critical period.

In **J 11/98** the applicant requested re-establishment in respect of the time limit for paying the renewal fee, on the grounds that at the relevant times the appellant had been seeking protection under Chapter 11 of US bankruptcy law. The board confirmed the examining division's decision refusing the request. The applicant had not shown that at the relevant time it had been so lacking in funds as to be absolutely unable to make the payment. Only the latter situation had been accepted by the board, in an exceptional case (**J 22/88**), as a ground for re-establishment. In the case at issue, the non-payment of the renewal fee was due not to an absolute inability to pay but to the applicant's business priorities at the time.

In **J 6/14** the board held that it was clear from the events described and from all the evidence adduced that the appellant, an individual applicant who had been faced with serious health problems, had been in a very difficult financial situation for several years. He had proven the genuine existence of his difficulties to justify his failure to pay the renewal fee plus additional fee. The board consequently found that he had satisfied the requirements of Art. 122 EPC.

### 4.3. Making good the omitted act

The omitted act must be performed within two months from removal of the cause of non-compliance (Art. 122(2), second sentence, EPC 1973; R. 136(2) EPC).

According to **T 167/97** (OJ 1999, 488), the requirement of Art. 122(2), second sentence, EPC 1973 implies that the completed act likewise must meet the requirements of the EPC - i.e. in the case at issue that the statement of grounds of appeal is admissible for the purpose of Art. 108, last sentence, EPC 1973. Where the statement of grounds filed with the request for re-establishment is insufficient for the appeal to be declared admissible, the request for re-establishment must itself be declared inadmissible.

### 4.4. Substantiation of the request for re-establishment

Under R. 136(2) EPC (Art. 122(3) EPC 1973) the request for re-establishment has to state the grounds on which it is based, and set out the facts on which it relies. The boards consider this requirement in relation either to the admissibility of the request or to the submissions that must be taken into account when analysing the merits of the request (see in this chapter III.E.5.1 "Submissions to be taken into account").

It is a condition for the admissibility of a request for re-establishment of rights that a duly substantiated statement of grounds be submitted within the time limit for filing the request (**J 15/10**, see also **J 19/05**). A request for re-establishment of rights complies with the requirement of R. 136(2), first sentence, EPC if a conclusive case is made, setting out and substantiating the grounds and facts on which the request relies (**J 15/10**; **T 13/82**, OJ 1983, 411). Thereby it is ascertained that the factual basis for the requested decision is not altered after the expiry of the time limit for the request (**J 15/10**, **J 19/05**, **T 585/08**, **T 479/10**). Therefore, the request for re-establishment of rights must set forth the precise cause of non-compliance with the time limit concerned (i.e. a fact or obstacle preventing the required action within the time limit), specify at what time and under which circumstances the cause occurred and was removed, and present the core facts making it possible to consider whether all the due care required by the circumstances had been taken to comply with the time limit concerned (**J 15/10**, **T 479/10**, see also **J 18/98**). A request for re-establishment of rights which relies on general statements only and contains no specific facts does not satisfy the requirement for a duly substantiated request under R. 136(2), first sentence, EPC (**J 19/05**, **T 1465/08**, **J 15/10**). The mere payment of the fee does not meet the requirements of R. 136(2) EPC (**T 1465/08**).

In **J 19/05** the board held that the request for re-establishment of rights was not sufficiently substantiated. The request was couched in purely general terms and contained no concrete facts identifying a reason for non-observance, the chronological sequence of events or the causes underlying the action or inaction of the persons involved concerning non-payment of a renewal fee.

In **T 13/82** (OJ 1983, 411) the board held that a conclusive case must be made, setting out and substantiating the facts, for the probability - at least - that a wrongful act or

omission on the part of an assistant was the cause of the failure to meet the time limit: the mere possibility was not sufficient to exculpate the applicant.

In **T 287/84** (OJ 1985, 333) the board decided that an application for re-establishment of rights could be considered as complying with the requirement that it had to set out the facts on which it relied (Art. 122(3) EPC 1973) if the initially filed application in writing, which did not contain such facts, could be read together with a further document, which contained them and was filed before the expiry of the period within which the application had to be filed.

In **T 324/90** (OJ 1993, 33) the board held that **evidence** proving the facts set out in the application could be filed after expiry of the two-month time limit laid down in Art. 122(2) EPC 1973. Only the grounds and a statement of the facts had to be filed within the two-month period. It was not necessary to indicate in an application for re-establishment the means (e.g. medical certificates, sworn statements and the like) by which the facts relied on would be proved. Such evidence could be submitted after the time limit, if so required (see also **T 667/92**, **T 261/07**, **T 1764/08**).

In **J 8/95** the appellants argued that the German-language version of Art. 122(3) EPC 1973 did not stipulate that the statement of grounds for an application for re-establishment of rights had to be filed within the time limit laid down in Art. 122(2) EPC 1973. The board decided that Art. 177(1) EPC 1973 assumed a uniform legislative intent, which could only be identified on the basis of all three texts of the EPC 1973 (see also **T 324/90**, OJ 1993, 33).

#### **4.5. Correction of deficiencies in the request for re-establishment**

If the request for re-establishment is deficient, the principle of legitimate expectation may oblige the EPO to draw attention to the deficiency if it is readily identifiable by the EPO and the party can still correct it within the time limit under R. 136(1) EPC, Art. 122(2) EPC 1973 (see Chapter III.A.3, Obligation to draw attention to easily remediable deficiencies; see e.g. **T 14/89**, OJ 1990, 432; **J 13/90**, OJ 1994, 456; **J 2/94**; **T 585/08**). If a warning can be expected but is not issued to the applicant within the relevant time limit, the EPO must set a period within which the applicant can correct the deficiency and perform the procedural act in due time (**J 13/90**, OJ 1994, 456). However, this obligation to set a new time limit does not apply to absolute time limits (such as the one year time limit under R. 136(1) EPC, Art. 122(2), third sentence, EPC 1973), which by definition are non-extendable (**J 34/92**).

#### **5. Merit of request for re-establishment of rights**

Under Art. 122(1) EPC, for re-establishment to be allowed the requester must show that he missed the time limit despite taking all the due care required by the circumstances.

## 5.1. Submissions to be taken into account

In **J 5/94** it was decided that the grounds on which a request for re-establishment of rights was based could be amplified, provided this **completed the submission** that had been filed **in due time** and thus did not alter the basis on which the original request for re-establishment had been filed (see also **J 19/05**, **T 585/08**, **J 15/10**, **T 592/11**).

In **T 324/90** (OJ 1993, 33) the board held that **evidence** proving the facts set out in the application could be filed after expiry of the two-month time limit laid down in Art. 122(2) EPC 1973. Only the grounds and a statement of the facts had to be filed within the two-month period. Likewise in **T 261/07** the board allowed the patentee, who had initially given an account of all the relevant facts to the best of its knowledge, to subsequently adduce further clarifying **evidence** supporting the case.

In **J 18/98** the examining division had refused the applicant's application for restitutio in integrum. An appeal was filed against that decision. From the established case law on Art. 122(3) EPC 1973 the board concluded that **facts submitted only with the statement of grounds of appeal** could not be taken into account, since the function of appeal proceedings was only to give a judicial decision upon the correctness of an earlier decision of the department of first instance (**T 34/90**, OJ 1992, 454).

In **T 257/07** the board stated that it had been only one year after the removal of the cause for non-compliance that the appellant qualified certain statements previously made and added new facts that previously went unmentioned, in particular regarding the system for managing files and deadlines. This omission could not be subsequently remedied by the addition of further facts, as case law would only allow the appellant to "submit further evidence which clarifies the facts which were set out in the application for re-establishment" (**J 2/86**, OJ 1987, 362; **T 261/07**; see also **T 742/11**, **T 2274/11**, **J 6/14**).

In **J 5/11** the Legal Board held that the applicant for re-establishment of rights who failed to substantiate his request adequately in the first instance proceedings, in particular after being expressly invited to do so, **could not normally** make good that failure by submitting additional evidence with the grounds of appeal. While it was true that the primary function of the boards was to give a judicial decision on the correctness of a first-instance decision of the Office (see **J 18/98**), that does not necessarily mean that new **evidence** submitted for the first time on appeal was automatically inadmissible. A rigid rule excluding all new evidence on appeal might lead to injustice and unfairness in some cases and would not be compatible with the principles of procedural law generally recognised in the Contracting States (cf. Art. 125 EPC).

In **J 16/11** the Legal Board pointed out that the boards of appeal had consistently ruled that facts pleaded for the first time during the appeal proceedings should in principle not be taken into consideration (see **J 18/98**, **T 257/07**). In the case at issue, the board had, by its communication, informed the appellant that the evidence currently on file did not seem convincing enough and, exceptionally, gave the appellant an opportunity to improve its case at this late stage of the proceedings. However, the representative,

instead of filing evidence, produced a "sworn statement" written by the appellant himself. Given that the new submission did not complement the already existing facts, but presented a new situation, these facts and evidence had to be disregarded.

## 5.2. General comments on due care

In numerous decisions the boards have ruled on the "all due care required by the circumstances" issue. In considering it, the circumstances of each case must be looked at as a whole (**T 287/84**, OJ 1985, 333). The obligation to exercise due care must be considered in the light of the situation as it stood before the time limit expired. In other words, the steps the party took to comply with the time limit are to be assessed solely on the basis of the circumstances applying at that time (see e.g. **T 667/92**, **T 381/93**, **T 743/05**, **J 1/07**, **T 1465/07**, **J 3/12**, **J 4/12**). The requirements of re-establishment, and in particular of due care, **must not be interpreted in an excessive manner** that unreasonably restricts access to the board and thus prevents the board from deciding on the merits of the case (**T 1465/07**).

In **T 30/90** the board held that the allowability of applications for re-establishment hinged on whether the conduct of the appellant and/or his representative, during the entire period after the relevant decision, was indicative of "all due care required by the circumstances". In this connection, "all due care" meant all appropriate care, i.e. as much as would be taken under the circumstances by the **average reasonably competent patentee/representative** (see also **J 11/09**). The board in **T 1289/10** held that as a general rule, a representative acting reasonably would at least take account of known problems and apply known solutions to avoid them.

For cases where the cause of non-compliance with a time limit involves some error in the carrying out of the party's intention to comply with the time limit, the case law has established the criterion that due care is considered to have been taken if non-compliance with the time limit results either from **exceptional circumstances** or from an **isolated mistake within a normally satisfactory monitoring system** (**J 2/86**, **J 3/86**, OJ 1987, 362; **T 428/98**, OJ 2001, 494 and **T 785/01**).

The party requesting re-establishment of rights bears the burden of making the case and proving that the requirements are met (**J 5/80**, OJ 1981, 343; **J 18/98**; **T 592/11**, **J 3/13**).

## 5.3. Exceptional circumstances

### 5.3.1 Organisational upheaval

In **T 14/89** (OJ 1990, 432), due to **internal reorganisation and removals**, the R. 58(5) EPC 1973 communication did not reach the responsible department of the patent proprietor. The board found that this fact, which led to non-observance of the time limit, constituted an isolated mistake such as could not be ruled out despite careful company organisation.

In **T 469/93** the board found that even if all due care required by the circumstances were to be exercised, the occasional error during **complex transfers of company ownership** could not entirely be avoided. The error in this case being an exceptional one, the causes of which had since been removed, the appellant's request for re-establishment of rights was to be allowed.

In **J 13/90** (OJ 1994, 456) the applicant, a small firm employing about 15 people, was in **takeover** negotiations with another company. In the course of the negotiations a change of attorney took place. As a result of the unforeseeable breakdown in negotiations plus the fact that action had already been taken to replace the previous attorney, payment of the fourth-year renewal fee had been overlooked. This isolated mistake in a special situation was, in the board's opinion, excusable.

In **J 21/92** and **J 24/92** the applicant and his representative (both Americans) had each changed their **fee-monitoring system**, independently of each other. The situation was further complicated by the fact that the representative was no longer responsible for paying the appellant's renewal fees.

In **T 369/91** (OJ 1993, 561) the relevant circumstances involved moving from a manual to a **computerised time-limit monitoring system**. Here "due care" meant ensuring that during the changeover period the representatives handling the various kinds of cases were told which system - manual or computerised - had generated the reminder in question. Only then could they reliably know if and when a further reminder was likely.

In **T 489/04** the board did not recognise the **installation of a new computer system** as an extraordinary circumstance. On the contrary, it considered the resulting burden on employees as foreseeable and containable, had appropriate measures been taken in good time.

In **J 11/06** the appellant submitted that, due to the removal and later change of the US representative, there was some confusion caused by this reorganisation. However, the board noted that no details at all had been given as to why this affected the payment of the renewal fee. Likewise in **J 4/07** the board did not recognise the presence of exceptional circumstances because the representative's submissions were inadequate.

### 5.3.2 Sudden serious illness

In **T 525/91** the board found it credible that the sudden and unforeseen diagnosis of illness and the announcement of the urgent need for a major operation caused the appellant's representative not only great physical weakness but also severe psychological stress. In those circumstances, and in view of the short period between diagnosis and hospital admission (two working days) and the proven absence of the secretary on one of those working days, it had to be acknowledged that even on the days between diagnosis and admission the representative had been in an exceptional situation which impeded him from devoting the necessary attention to the imminent time limit and taking the precautions needed to ensure that it was observed. In the

circumstances the board deemed the conditions for re-establishment to have been met (see also the reference in **T 1401/05** to **T 558/02**).

In **T 387/11** the representative put forward a credible case that he had failed to observe the time limit for filing the statement of grounds because of severe psychological stress caused by a sudden and unexpected bereavement (see also **T 970/12**).

However, in this context, the case law also requires an **effective system of staff substitution in case of absence** (see in this chapter III.E.5.4.5 "Staff substitution and deputising"; in particular, re the duty of care in a large firm see **T 324/90** below; re the applicant's duties see **T 1401/05** below; re the duties of a representative running a one-person office see **J 41/92** below; and re the duty of care of an individual applicant see **J 5/94**).

#### **5.4. Isolated mistake within a satisfactory system for monitoring time limits or for processing mail**

An isolated mistake by an assistant that happens in a normally satisfactory system is excusable; for cases in which such a mistake occurred and the request for re-establishment was granted see, for example, **T 612/90**, **T 281/96**, **T 1001/95**, **T 72/99**, **T 1024/02**, **T 462/02**, **T 165/04**, **T 221/04**, **T 836/09**, **T 1355/09**, **T 1171/13**, **T 1269/13**. The appellant or his representative must plausibly show that a normally effective system for monitoring time limits prescribed by the EPC was established at the relevant time in the office in question (**J 2/86**, **J 3/86**, OJ 1987, 362; **J 23/92**; **T 428/98**, OJ 2001, 494; **J 13/07**; **J 3/12**; **J 4/12**).

##### **5.4.1 "Isolated mistake" by representative**

The case law on "an isolated mistake in an otherwise satisfactory system" cannot be relied on to ignore a failure to act by the professional representative himself, unless there are special circumstances (**T 1095/06**); an isolated mistake by a professional representative in performing his check on the time limit once he has received the file to deal with is then – as a rule at least – inexcusable (**T 592/11**, see also **R 18/13** with reference to the travaux préparatoires). See in this chapter III.E.5.5.4 e) "Ultimate responsibility of the representative".

##### **5.4.2 A system operating efficiently for many years as evidence that it is normally satisfactory**

The fact that this system operated efficiently for many years was **evidence** in many decisions that it was normally satisfactory (see **J 31/90**, **J 32/90**, **T 309/88** and **T 30/90**). In **T 130/83** the board stated that if a proper reminder system had been instituted by a representative, in order to guard against the consequences of oversight in a busy office, this was itself strong prima facie evidence of the taking of care by the representative (see also **T 869/90**, **T 715/91**, **T 111/92**).

However, in **T 1465/07**, the board disagreed with the view that a monitoring system of time limits can be held to have been normally satisfactory because it worked without previous problems and consequently accept that all due care had been taken even though doubts exist. Evidence that such a monitoring system operated efficiently for many years will weigh in favour of a finding of a normally satisfactory character but will be counterbalanced by evidence that main features of such a character, such as an independent cross-check, go missing. In that case a satisfactory character will be excluded (see also **T 1962/08**).

In **T 1764/08** the board considered that the mere allegation that the case at issue was the first instance of unintended failure in filing an appeal does not show that all due care was normally observed and does not prove that a satisfactory system was in place in the representative's office.

#### 5.4.3 Cause of mistake remains unclear

In **T 529/09** the board allowed the request for re-establishment of rights. The board accepted that the representative's firm had a well-functioning and reliable system in place for processing incoming mail and monitoring time limits. The fact that in the case at issue the communication was apparently misplaced (since it did not reach the representative in charge and the time limit set in it was not entered in the computer system of the firm) had to be regarded as an isolated mistake in an otherwise satisfactory system. While **the precise circumstances of the mistake could not be elucidated any further**, this was not a sufficient reason for denying that all due care required by the circumstances had been observed in the present case.

In a similar situation the board in **T 580/06** granted the request for re-establishment even though the **cause** of the failure ultimately **remained unclear** (see also **T 1355/09**).

#### 5.4.4 Requirement for a cross-check

In **J 9/86** the board was of the opinion that in a large firm where a large number of dates had to be monitored at any given time, it was normally to be expected that at least one effective cross-check was built into the system (**T 223/88**, **J 26/92**, **T 808/03**, **T 1149/11**). The cross-check must be independent of the person responsible for monitoring time limits (**T 828/94**, **T 257/07**, **T 1962/08**). The additional burden of an independent cross-check is not disproportionate for a large firm, where the cross-check can be organised more economically than in a smaller one (**T 1465/07**). In relation to small firms and offices, the boards have at times dispensed with the requirement for a cross-check (e.g. **J 31/90**, **T 166/87**, **J 11/03**, **T 1355/09**, see below). As to the representative's own responsibility for performing an additional check when receiving the file to deal with, see **T 1561/05**, **T 592/11**, **R 18/13** as summarised in this chapter III.E.5.5.4 e) "Ultimate responsibility of the representative".

In **T 828/94** the board noted that a monitoring system should contain an **independent cross-check** to prevent the misunderstanding between a representative and a technical assistant from assuming that a notice of appeal would be prepared and filed on time by

the other person, for example, someone would be responsible for checking independently of the representative and the assistant. The board noted that where a misunderstanding was likely to arise as a result of the two being responsible for the same file, the assistant should have clear instructions on how to proceed.

Concerning the need for an independent cross-checking mechanism and the form it should take, see also **T 428/98** (OJ 2001, 494), **T 1172/00**, **T 785/01**, **T 36/97**, **T 622/01**, **J 1/07**, **J 13/07**, and **T 1726/08**. In **T 257/07** the board emphasised that an independent cross-check must necessarily include either **another person** or an automated system alerting another person.

In **T 1962/08** the representative argued before the board that an independent cross-check in the system for monitoring time limits was not obligatory. The board confirmed what had been said in **T 428/98**, namely that the requirements to be met by a system for monitoring time limits in general included making sure that monitoring duties were not left to one person alone, but that the system incorporated an overall checking mechanism which was independent of the person responsible for monitoring time limits. This checking mechanism could be provided within a single system for monitoring time limits. If the checking mechanism involved a second system for monitoring time limits, the latter had to be independent of the former ("redundant") (see also **T 1465/07**).

In **T 686/97** the board held that the provision of a "redundant" or "failsafe system" is an essential component of a normally satisfactory reminder system in corporate patent departments. The failure to provide administrative reminders to the responsible patent attorneys of the time limits applying to the filing of statements of grounds of appeal was incompatible with the operation of a normally satisfactory system.

In **T 283/01** of 3.9.2002 the board pointed out that the applicant's system was not properly designed to handle the appeal in question, involving partial responsibility of an external representative. The deviation from the normal way of filing and prosecuting an appeal had been the applicant's deliberate decision in the particular circumstances of the case. Taking all due care required by the circumstances of the case should have implied installing an **individual control mechanism**, offering a realistic possibility of detecting and correcting the failure to note and calculate the time limit for filing the statement of grounds.

**T 261/07** concerned a case in which an **intermediary delivery service** received and distributed mail within the patentee's premises. The board held that there had been no effective cross-check. Such a failsafe system would have required a regular comparison between the mail room database and the database of the Central Intellectual Property Department in order to discover discrepancies.

The case **T 836/09** concerns the re-establishment of rights after an isolated mistake by an assistant within an otherwise satisfactory system of **processing outbound mail**. In a case where the mistake happened when processing the mail, the duty of at least one effective cross-check built into that system was dispensed with, irrespective of whether or not a large firm was concerned. The reason was that, in contrast to the monitoring of

time limits, the risk of an error in the processing of outbound mail was low because such processing generally involved the execution of straightforward steps (see also **T 178/07**, **T 1171/13**).

In **T 1355/09** the board held that no control mechanism had to be in place because the firm involved was very small and it had not overlooked a time limit, but rather the mistake had been made **during payment** of the appeal fee, i.e. whilst performing the act needed to observe the time limit. In these circumstances, no control mechanism was required, the likelihood of error being comparatively low. Insisting on one would in practice reduce the time limit: to be effective, any checks would have to be made after payment, but also within the time limit.

In **T 1149/11** the board held that the duty of care concerning supervision of the assistant required that an effective cross-check was implemented, at least in a firm where a large number of time limits have to be monitored.

In **T 73/89** the board rejected the application for re-establishment of rights because, in order to work properly, the normally satisfactory diary system required a qualified attorney to check whether, in any particular case, an extension was necessary or possible; in this case, concerning a patent department of two attorneys, no such check was made.

In **T 166/87** the board held that in a relatively **small office**, normally working in an efficient and personal manner, employing normally reliable personnel, a cross-check mechanism, especially in relation to one-off payments such as an appeal fee, could fairly be regarded as superfluous.

In **J 31/90** the board took the view that this system, while far from perfect, could be considered in the special circumstances of the case to be normally satisfactory. The board emphasised, however, that the system could only be so considered because of the particular conditions in which the representative and her secretary worked. Over a period of ten years, working together alone in a small office they had built up an excellent working relationship and mutual trust.

In **T 428/98** (OJ 2001, 494) the board stressed the exceptional nature of the ruling in **J 31/90** and **T 166/87** and said that according to the appellant's submission his representatives' office was staffed by two patent agents, two lawyers, a partly qualified patent lawyer (*Patentassessor*) and a law graduate, i.e. six people dealing in their main professional capacity with cases relating to intellectual property rights. Such cases being commonly subject to time limits, with immediate negative legal consequences for the client if they were missed, time-limit monitoring in such an office was a major undertaking in terms of both significance and scale. The board therefore deemed a cross-checking mechanism to be essential. See also **T 1962/08**, **T 1726/08** (firm with 40 attorneys at four locations is not small), **T 479/10**.

In **J 11/03** the board confirmed that the organisational requirements for a generally efficient time-limit monitoring system were subject to variation on account of the firm's

size and nature and the number of time limits that had to be monitored. A cross-checking mechanism may in certain circumstances be regarded as superfluous in a small firm employing normally reliable personnel and normally working in an efficient and personal manner, but not in a large company with its own patent department (**T 166/87**). The appellant was a very small firm with a commercial division essentially comprising only the commercial manager and the book-keeper. In the circumstances additional checking that payments had actually been made might be deemed superfluous without impairing the functioning of the system.

#### 5.4.5 Staff substitution and deputising

In **T 324/90** (OJ 1993, 33) the board held that in a large firm, where a considerable number of deadlines had to be monitored at any given time, it had normally to be expected that at least **an effective system of staff substitution** in the case of illness and for absences in general was in operation in order to ensure that official documents such as decisions by the EPO, which started periods within which procedural steps had to be carried out, were properly complied with.

In **T 1401/05** (20.9.2006) the Board followed decisions **T 324/90**, **J 41/92** and **J 5/94** and deemed it necessary that **reasonable provisions for absence** due to the illness of a person who is in charge of monitoring time limits are made, unless in the particular circumstances of a case imposing such provisions would have to be considered as an undue burden. Only where any necessary provisions have been taken will it be possible to deem the monitoring system of time limits to be "normally satisfactory" (see **T 324/90**), which is a condition for a finding of due care and, thus, for considering illness to be an excuse for not meeting a deadline. Regarding the need for a back-up in the specific case, the Board considered it of relevance that the number of time-limits to be complied with was small (the appellant filed only a few patent applications per year). Under these circumstances, the Board accepts that it was not necessary for meeting the standard of due care to make specific provisions for the unforeseeable two-day illness of the sole employee in charge of monitoring of time limits; more specifically, no substitute for him had to be appointed.

In **T 122/91** the board held that due care had not been exercised if the head of an office went off on a journey without informing his deputy of matters requiring immediate attention because a time limit was involved.

In **J 41/92** (OJ 1995, 93) the Legal Board of Appeal found that a careful and diligent professional representative had, in any case, to be expected to take into account that he or she might fall ill and be prevented for some time from taking care of time limits. Therefore, if a professional representative ran a one-person office, appropriate provisions needed to be made so that, in the case of an absence through illness, the observance of time limits could be ensured with the **help of other persons**. If there was no substitute or assistant at the representative's office, co-operation with colleagues or with a professional association could, for example, be sought for this purpose. See also **T 387/11**, in which the representative, who ran a one-person office, had taken precautions to ensure that another representative could cover for him if he were absent

owing to illness, so that deadlines would normally be met. In taking such organisational measures, he had met the requisite standard of "all due care".

In **T 677/02** the board decided that a large enterprise had not exercised all the due care required by the circumstances if, when the representative actually responsible was on **short time working**, no **deputy** had been designated to cross-check the input of time limits into the system for monitoring time limits.

#### 5.4.6 Second mistake by responsible person

In **T 808/03** the board held that the condition of "an isolated mistake by a usually reliable person" was not met in the present case, as the responsible person had made a **second** mistake when processing the reminder of a system for monitoring time limits.

#### 5.4.7 Deficiencies in computerised systems

In **T 473/07** the board held that the representative's practice of checking only the dates entered by his records clerks while relying on the resulting time limits calculated by the computerised system did not rule out errors. Modern real-world offices comprised computerised systems but **program deficiencies** were also a well-known part of that reality and could not be absolutely ruled out. Therefore, relying exclusively on a time limit generated by a computer program and refraining even from a plausibility check did not meet the all-due-care requirement.

In **T 902/05** the board held that whether the systems used in a particular firm to ensure that procedural acts were completed in due time fulfilled the requirement of the taking of "all due care" depended upon the individual circumstances of each case (see also **T 1663/12**). Where an applicant relied solely on electronic means to record and monitor time limits, the regular making of back-up copies, or some equivalent form of securing data, would generally be an elementary precaution. This had not been done in the case at issue.

For a case in which the computerised system was deemed satisfactory, see **T 1269/13**.

### 5.5. Persons required to exercise due care; requirements regarding due care

Primarily it is up to the applicant (patent proprietor) to show due care. The applicant has to accept the actions of his representative, including the actions of the attorney's assistants and employees, on his behalf (**J 5/13** with reference to **J 5/80**, OJ 1981, 343; **J 1/07**). The "due-care" obligation is assessed differently, depending on whether an applicant, his representative or an assistant is involved.

### 5.5.1 Due care on the part of the applicant

#### a) General principles

In **J 3/93** the board ruled that the duty to exercise all due care stipulated by Art. 122 EPC 1973 applied first and foremost to the applicant and then, by virtue of the delegation implicit in his appointment, to the professional representative authorised to represent the applicant before the EPO. The fact that the representative had acted correctly did not exempt his client from suffering the consequences of his own mistakes, or even negligence (see also **J 16/93**, **J 17/03**, **J 1/07**, **J 1/13**).

In **T 381/93** the board of appeal observed that the applicant was entitled to rely on his duly authorised professional representative to deal with the EPO. However, the board held that to the extent that he was on notice that a time limit had not been met and/or that instructions were required in order to meet it, an applicant had a duty to take all due care in the circumstances to meet the time limit.

In **J 22/92** the board held that the applicant, who had appointed US attorneys for the purpose of the PCT application, was entitled to believe that a copy of a communication had been sent to the US attorneys as well. The board referred to the principle of proportionality and stated that the loss of the patent application as a result of what may be considered at most a minor procedural irregularity would otherwise appear an extremely severe result. The board held that, in the case in point, the due care to be considered was in fact not that which was expected from a professional representative but that which was expected from an applicant unaware of the proceedings.

#### b) Unrepresented individual applicant

In **J 5/94** the board made allowance for the fact that the appellant was an individual applicant who had not appointed a representative and who was neither familiar with the requirements of the Convention nor in possession of an established office organisation attuned to ensuring that procedural deadlines were met. The board pointed out that in such a case the **same standards** of care as those required of a professional representative or the patent department of a large firm could **not** be applied.

At the same time, an individual applicant was also obliged to exercise due care in the course of the procedure. Accordingly, when not using the services of a professional representative, he must himself take all possible steps to ensure that he can do, properly and punctually, whatever is required during the grant procedure to prevent any loss of rights. He is not entitled either to invoke **general ignorance of the law** or to leave undone anything which may reasonably be expected of him with a view to observing time limits (**J 5/94**, **J 27/01**, **T 671/02**, **J 2/02**, **J 6/07**, **T 493/08**, **T 555/08**, **J 15/08**, **J 8/09**, **J 7/12**).

With regard to re-establishment in respect of disciplinary proceedings and the European Qualifying Examination, the board ruled in **D 6/82** (OJ 1983, 337) that a mistake of law, particularly one regarding the provisions on notification and calculation of time limits, did

not, as a general rule, constitute grounds for re-establishment of rights. The obligation to take "all due care required by the circumstances" meant that persons engaged in proceedings before or involving the EPO had to acquaint themselves with the relevant procedural rules.

In **J 23/87** the board ruled that exercising due care under Art. 122 EPC 1973 meant that an applicant, when deciding whether to pursue his application, could not rely entirely on **information** provided voluntarily by PCT authorities and the EPO at various stages of the procedure, and instead had to ensure that he was normally able to comply with the basic PCT and EPC 1973 time limits even if he received this information late or not at all.

In **T 601/93** the appellant was not aware of the need to file a statement of grounds within the time limit. The board held that any **legal error** which might have led the appellant to believe that the requirement was not to be observed would exclude the application of due care, considering the unequivocal provision in Art. 108 EPC 1973.

#### c) Choosing a sufficiently competent representative

In **J 23/87** the applicant failed to furnish a translation of an international application within the prescribed time limit. The appellant, a small Japanese firm with limited financial resources, submitted that a Japanese patent attorney without special knowledge of PCT matters had been consulted, and that this attorney had misinformed the appellant. The board held that for an applicant who lacked the necessary knowledge of the PCT and the Convention procedures, it was obviously necessary to consult a competent professional representative in order to cope with the procedures involved in such a patent application. Thus, the board was not satisfied that the appellant, being completely ignorant about the special procedure to be observed in this case, had chosen a sufficiently competent professional representative and let him properly advise the appellant on the matters involved having had an opportunity to study the details concerning the present application.

#### 5.5.2 Due care on the part of the professional representative

When an applicant is represented by a professional representative, a request for *restitutio in integrum* cannot be acceded to unless the representative himself can show that he has taken the due care required of an applicant or proprietor by Art. 122(1) EPC (**J 5/80**, OJ 1981, 343). In other words, what Art. 122 EPC requires from an applicant also applies to an applicant's representative (**T 1149/11**).

The extensive case law on a professional representative's duty of care in **dealing with assistants** is dealt with below in this chapter III.E.5.5.4.

#### a) Communication between professional representatives and their clients, the EPO or other representatives

In **T 112/89** the board stated that, regarding the due care required by Art. 122(1) EPC 1973, the obligations of the applicant and those of his representative

were clearly distinct and that the due care to be exercised by the representative might depend on the **relationship which existed between him and his client**. The board noted that it was clear that both the representative and the applicant had to exercise all due care in order to observe all the time limits during patent granting procedures. In the case at issue, the board was not convinced that the duty of the representative was fully discharged when he had notified his client that a time limit was to be observed and was satisfied that the client had received the notification. On the contrary, when a representative had been instructed to lodge an appeal and did not receive in due time from his client the necessary additional instructions he needed to discharge his duty, he should take all necessary measures to try to obtain from his client these instructions.

In **T 1401/05** (20 September 2006) the board stated that the communication between the representative and his client (patent applicant) had worked efficiently. The representative was therefore entitled to rely on his client's awareness of the expiry of the time limit. The representative was not required to issue a further reminder to meet his obligations of due care.

In **T 1289/10** the board held that if a European representative provided a contact **email** address for all kinds of mail, including mail that may require immediate action by the representative, it was essential to perform a mail check at least at the end of each business day. Given the known problem that legitimate mail from time to time was wrongly marked as a possible threat it was evident that this check must include the quarantine area of the email system.

In **T 1101/14** the board considered that the **signing** of documents was an act that required particular care on the representative's part, especially when the signature related to the last legal remedy against an adverse decision. A representative who had mistakenly signed a statement of grounds of appeal having most of its pages missing had, in the absence of special circumstances which could justify the representative's mistake, to be considered not to have taken all due care required by the circumstances.

In **J 15/14** the board held that in a proper workflow between two representative's offices where one had the function to give instructions to the other, a confirmation from the other representative that a particular instruction had been received and followed was required; if no confirmation was received a follow-up e-mail should be sent in order to safeguard the rights of the client.

#### b) Payment of renewal fees

In **J 11/06** the board held that according to the established jurisprudence of the Legal Board of Appeal following decision **J 27/90**, even if renewal fees were paid by someone else, the appointed professional representative remained responsible in the procedure before the EPO, and had to take the necessary steps to ensure payment if intended (likewise **J 1/07**, **J 4/07**, **J 12/10**, **J 5/13**). No reasons had been submitted as to which concrete steps had been taken. The board distinguished the case at issue from **T 14/89** and **J 13/90**. In both these cases, specific reasons were given as to why the mistakes happened, and corroborating evidence was filed.

In **J 4/07** the European representative had every reason to believe that it was the appellant's intention to continue prosecution of the application in suit. Under these circumstances the Board did not consider that it was sufficient for the European representative only to send a single reminder more than four months prior to the expiry of the critical term.

In **J 12/10** the board confirmed that it was established jurisprudence of the boards of appeal that a representative, once appointed - and even if the renewal fees were paid by someone else - remained otherwise fully responsible for the application, and that this included a continuing obligation to monitor time limits, send reminders to the applicant, etc.

In **J 5/13** the board considered that the extent of the duties of the representative depended on the agreement between the representative and his client. An appointed representative whose authorisation was silent concerning the payment of the renewal fees and who had not received any funds for this purpose was **not expected to pay the fee by advancing money** on behalf of the applicant out of his own pocket (**J 16/93, J 19/04, J 1/07**). Instead, he retained only a "**secondary responsibility**" (see **J 1/07**). Thus the representative's responsibility, above all, consists in finding out what his client really intends to do with respect to payment of the renewal fees (see **J 16/93**). The scope of duties of a representative who retains only such a "secondary responsibility" to inform and advise his client with respect to the due date for renewal fees cannot be the same as it would be if he were responsible for the payment itself. In the case in question, the representative had fulfilled his responsibility by sending repeated letters to the responsible person within the appellant's company.

In **T 942/12** the board held that if a European representative was **expressly instructed** that he was not required to monitor the payment of renewal fees, the duty of due care did not involve that he nevertheless monitored the payment. It could not be expected that the European representative monitors renewal fee payments at his own expense.

In **J 19/04** the board held that a professional representative is not obliged to pay renewal fees on his client's behalf if he has received no instructions to do so. However, the representative's conduct has to be assessed according to the extent to which he has done all that is necessary to ascertain the **client's true wishes** (see also **J 1/07**). It is not the number of (unanswered) reminders that is decisive, but when those reminders were sent in relation to the date on which the time limit expired, how the reminders were formulated and what the representative's duties were in relation to the client.

In **J 16/93** the board stated that a representative who had not received **any funds** for the **purpose of paying the renewal fee** and whose authorisation was silent in this respect was not expected to advance moneys on behalf of his client out of his own pocket. As the client was, in this situation, free to abandon its application by ceasing to pay the fees demanded by the Convention, the representative risked effecting a payment which he would not be able to recover either from the EPO (even though his client had not wished the payment to be made), or from the client, if the authorisation was silent in this respect.

In **T 338/98** the appellant was first represented by professional representative A, but later asked him to transfer all files to a new representative B. One European patent application failed to be transmitted. Although the representatives were aware that the renewal fee was due for this application, they did not reach clear agreement about paying it, with the result that the fee was not paid and the application was deemed to be withdrawn. The board held that in these circumstances it did not appear appropriate formally to delimit the individual responsibilities of each of the representatives during a transfer of cases requiring, by its very nature, close co-operation between the persons involved and naturally leading to overlapping responsibilities. The fact that in these circumstances the representatives had been unable to reach agreement about the way to proceed and that the appellant had not been informed of the outstanding renewal fee and of the disappearance of the file in question was not an indication that all due care required by the circumstances had been taken at that moment.

c) Ignorance of or erroneous interpretation of a provision of the EPC

In **J 3/88** the board noted that account should be taken of the fact that under Art. 134(1) EPC 1973 the contracting states had in principle confined representation of applicants before the EPO to "professional representatives" who, by virtue of their qualification should guarantee the best possible representation. The board stated that it followed that a representative could not relieve himself of responsibility for carrying out tasks which, by reason of his qualification, fell upon him personally, such as, for example, the interpretation of laws and treaties. If he delegated such tasks to an employee and if the latter made an error in the course of that work which resulted in the failure to observe a time limit, the representative could not claim that he had taken all due care required by the circumstances (see also **J 33/90**).

In **J 31/89** the Legal Board of Appeal confirmed that erroneous interpretation of the EPC **owing to a mistake of law** on the part of the duly authorised representative with regard to the rules for calculating time limits (in the case in point, regarding the late payment of a renewal fee together with the additional fee) could not be excused. The appellant and the representative failed to determine correctly the last date for valid payment of the renewal fee (see **J 42/89, T 853/90, T 493/95, T 881/98**).

In **T 624/96** the board expressed doubts about the nature of the original mistake, which concerned calculation of the time limit for filing the statement of grounds of appeal. This was possibly a "mistake of law" caused by ignorance or misinterpretation of the provisions of the EPC, as in e.g. **J 31/89** or **T 853/90**. The board found that in the circumstances of the case at issue, however, the agent had not made a "mistake of law" of this kind. The agent cited an earlier appeal in which he had represented the same applicant, showing that he indeed had some familiarity with the appeals procedure. He also submitted programmes of training courses, at which he had given talks on European patents and EPO proceedings. It could be therefore be ruled out that a legal error in calculating the period for lodging the statement of grounds of appeal might have arisen from his ignorance of the EPC.

In **J 28/92** the board held that the misinterpretation of a provision of the EPC by a representative was not without basis or unreasonable and considered that there was no basis for penalising the representative for having arrived at a **not unreasonable interpretation** of a rule of the EPC, which subsequently turned out to be wrong. The representative's interpretation of a legal provision of the EPC was not the result of, and did not lead to, a failure to exercise all due care required by the circumstances. In **T 493/08** the board shared the view expressed in **J 28/92** and stated that there might be exceptions to the rule that an error of law could not be excused, which, however, could be acknowledged only under rigorous criteria.

In **T 516/91** the mistake made by the representative was that he requested **an extension of two months for submitting the grounds of appeal**. The board emphasised that the time limits set by Art. 108 EPC 1973 could not be extended. In mistakenly believing that an extension of these time limits was possible, the representative failed to exercise due care (see also **T 248/91**, **T 853/90**, **T 316/13**).

In **T 460/95** the representative requested an extension of the time limit, although, in his professional capacity, he should have known that time limits under Art. 108 EPC 1973 could not be extended. The board noted that representatives were expected to be acquainted with the provisions of the EPC regarding time limits, and that the representatives in question had not been as vigilant as the situation demanded. In this specific case, however, the representative had taken the precaution of contacting the Registry of the Boards of Appeal beforehand, and had received information from that body which had led him to take action prejudicial to his interests. The board held that appellants should not suffer injury merely because they had relied on **information received from the EPO** which later proved to be mistaken or likely to have been misunderstood.

In **T 881/98**, the appellant's professional representative had written to the Registry of the boards of appeal requesting a two-month extension to a time limit, without giving reasons or indicating that the time limit in question was for submitting the statement of grounds of appeal. He added that if not notified to the contrary he would assume his request was allowed. The board refused the request for re-establishment. The Registry had not fallen short of legitimate expectations, as in this case (in contrast to **T 460/95**) the appellant had not been misled to his detriment by wrong information from the Registry but had himself made the mistake of thinking that the time limit could be extended.

In **T 733/98** the board informed the appellants that the statement setting out the grounds of appeal did not comply with Art. 108, third sentence, EPC 1973. The appellants requested re-establishment in respect of the time limit for filing the statement of grounds, arguing that they had relied on Legal Advice No. 15/84 of the EPO, which had still been in force when they had received the communication under R. 51(4) EPC 1973. The board held that the appellants had misinterpreted the Legal Advice in question, having failed to realise that the procedure for handling main and auxiliary requests which it described no longer applied once amended R. 51 EPC 1973 entered into force. The board decided that the requirement of all due care required by the circumstances was not met in this case.

In **T 744/11** the statement setting out the grounds of appeal was received in electronic form three minutes after expiry of the four-month time limit. The representative argued that his office was based in Cambridge and that, since the clocks in the United Kingdom were one hour behind Central European Time (CET), he had sent the statement of grounds within the time limit. The board could not accept this argument for the simple reason that the relevant time for the purpose of the law was the time at the EPO (i.e. the time at Munich or The Hague) and not the time in the United Kingdom. However, the board considered the appellant's request allowable, in particular because the appellant had shown that the non-observance of the time limit was not caused by lack of due care but rather by a justifiable human error on the part of the representative.

According to **T 316/13**, a European patent attorney is expected to know the EPC provisions concerning the legal remedies available in the event of failure to observe time limits, even if he has never been faced with the problem before, without waiting for the board of appeal to tell him exactly what he needs to do.

d) Starting work on a case close to the expiry of the time limit

In **J 16/92** the board made it clear that anyone getting himself into a situation where he could not be sure of being able to complete the omitted act ran the risk of his request for further processing being ruled inadmissible for failure to complete the omitted act in good time. In this case the representative had not started working on the file until four days before expiry of the time limit for further processing and hence had discovered too late that he was unable to find the first communication to which he was to respond. See also **J 7/12** (where a payment order was transmitted late in the afternoon of the last day of the grace period for paying a renewal fee plus additional fee).

e) Designation of receiving offices

In **J 1/03** the board emphasised the paramount importance of the designation of receiving Offices and the difficulty or even impossibility, in many cases, of correcting wrong or missing designations. Consequently, the benchmark for what "all due care" meant in those cases, was very high. Likewise the check of the content of the international application on the basis of the "Notification of Receipt of Record Copy" issued by the International Bureau had to be made very carefully.

f) Abandonment of application

In **T 1022/14** the board observed that abandonment of an application was a final action with serious consequences if misapplied. Thus for a decision to close a file and to abandon an application the utmost care had to be taken to establish whether the client had without any doubt issued instructions to that effect. The decision to abandon an application had to be taken by the representative himself, on the basis of his own observations and knowledge. This responsibility could not be delegated to employees, as decisions of this kind required the special knowledge of the representative for which he had to assume personal responsibility as a professional.

### 5.5.3 Due care on the part of a non-authorised representative

In determining whether all due care has been taken, the acts of all those persons the appellant has asked to act on its behalf must be considered, which also applies to non-authorised representatives instructed by the appellant (**T 2274/11** with reference to **J 4/07**).

In **J 25/96** the board held that where a US applicant availed himself of the services of a US patent attorney for matters which in relation to the EPO fell within the applicant's responsibility, the US patent attorney had to be regarded as the agent of the applicant. Thus, to meet the "all due care" requirement, the **US patent attorney** had to show he had taken the due care required of an applicant (see also **J 3/88**, **T 1401/05**).

In **J 4/07** the board pointed out that a non-European representative can be held responsible for meeting the obligations of any representative whose duty it is to care for his client's interests, irrespective of whether such representative is entitled to represent before the EPO or any other patent office (see **J 25/96**). The monitoring of specific time limits that were set expressly does not depend on knowledge of EPC law. Thus a non-European representative must also establish a **reliable monitoring system** for such time limits. Furthermore, any representative, whether European or non-European, moving from one law firm to another must take provisions upon entry in that firm that those filed that he carries over are integrated into a time limit monitoring system.

In **J 3/08** the board held that according to the established jurisprudence, if an agent was appointed, the agent had also to observe all due care and if he did not act accordingly this was imputed to the applicant. In the case at issue, it was clear that the agent, by not acting as instructed, had not properly handled the case. According to the board, if **fraud** by an agent were to be accepted as a reason for re-establishment of rights, by derogation from the general principle that an agent's behaviour was imputed to the applicant, the evidence presented must be so conclusive as to convince the board that a fraud took place as opposed to just unprofessional behaviour.

In **T 742/11** the board held that the actions of an agent, who acted as an intermediary between the appellant and the professional representative, must be imputed to the party he is acting for, and the same level of care is expected from the agent as from a professional representative, or at least as from the party itself. Indeed, requiring a certain level of care from a professional representative and a party using his services would become utterly pointless if an intermediary acting between the party and the professional representative were not required to show the same level of care.

### 5.5.4 Due care in dealing with assistants

#### a) Introduction

The case law concerning due care on the part of professional representatives' assistants was established in **J 5/80** (OJ 1981, 343). This key ruling by the Legal Board of Appeal lays down that a request for re-establishment of rights can be acceded to in the event of

a culpable error on the part of the assistant, if the professional representative is able to show that he has **chosen** for the work a suitable person **properly instructed in the tasks to be performed**, and that he has himself exercised reasonable **supervision** over the work (see also **T 191/82**, OJ 1985, 189; **T 105/85**, **T 110/85**, OJ 1987, 157; **T 11/87**, **T 176/91**, **T 949/94**, **T 221/04**, **T 1149/11**, **T 1171/13**).

Where an assistant has been entrusted with carrying out **routine tasks** such as typing, posting letters and noting time limits, the same strict standard of care is not expected as is demanded of the representative himself or the applicant (**J 5/80**, **J 33/90**, **J 26/92**, **T 43/96** of 5 July 1996; **T 221/04**, **T 1465/07**, **T 1663/12**). Decision **J 5/80** also pointed out that, if other than **routine tasks** are delegated which normally would fall to the representative by virtue of his professional qualification, the representative would not be able to establish that he exercised all due care (see also **J 33/90** and **T 715/91**). More recent decisions stress that responsibility in every respect passes to the representative as soon as he is presented with the file for processing, and that to that extent he is not justified in relying on an assistant's calculation of a time limit (see in this chapter III.E.5.5.4 e) "Ultimate responsibility of the representative").

For a case where an unrepresented individual applicant has entrusted a third person with the payment of renewal fees and other administrative tasks, see **T 555/08**.

Regarding the **burden of proof** in the form of an adequately detailed statement in connection with the duty of care in the selection, instruction and supervision of assistants, see **J 18/98**.

b) Selection, instruction and supervision

It is incumbent upon the representative to choose for the work a suitable person, properly instructed in the tasks to be performed, and to exercise reasonable supervision over the work (**J 5/80**; **J 16/82**, OJ 1983, 262). These duties are incumbent upon him also with regard to **substitutes** for holidays, special leave and other emergency situations. New assistants must be supervised on a regular basis for a period of at least some months (see **J 3/88**, **T 715/91**).

The case law cited above applies equally to a **patent attorney residing in the USA** (or his assistants) if he acts in collaboration with the duly appointed professional representative. In **J 3/88** the US patent attorney of a "non-resident" applicant acted in collaboration with the duly appointed professional representative. The "docket clerks" (assistants of the US patent attorney) were entrusted with the performance of routine tasks such as noting time limits and checking due dates. The board stated that in order to be able to carry out these admittedly rather simple tasks properly, they needed nevertheless some **basic knowledge**. The board concluded that, although no special qualifications were required, it was fairly impossible for a docket clerk to perform these routine tasks satisfactorily without having previously been given appropriate instruction and being supervised closely until he was familiar with the job. A reasonable **supervision** of the activity of a newly engaged docket clerk implied that his work be periodically checked. In order to be effective and avoid culpable errors, these periodic

checks should not be initiated mainly by the docket clerk on the occasion of his alerting the patent attorney in charge to a coming due date, but should rather be performed systematically irrespective of such alerts, at least during an initial training period of several months. These checks should be aimed at making sure that, especially in consideration of subsequently received fees reminders, the index cards were accurately updated.

In **T 191/82** (OJ 1985, 189) the non-payment in due time of an additional fee was found to be clearly attributable to an unfortunate concatenation of errors by nevertheless properly selected and experienced employees.

In **J 12/84** (OJ 1985, 108) the due care required in the circumstances was not observed when the **employees of another company** were instructed to sign for registered mail addressed to the representative, as he was not able to supervise the work of such persons not employed by his firm.

In **T 309/88** the board stated that even employees **without formal training** as patent attorney's assistants could perform the task of recording and monitoring time limits. This was routine work which did not require specialised knowledge and professional qualifications. However, the assistant had to be properly instructed in the tasks to be performed and a trained employee had to be on hand to give advice.

In **J 26/92** the board noted that according to the case law of the boards of appeal, routine tasks could be entrusted to an assistant provided that the necessary due care on the part of the representative had been exercised in dealing with the assistant. In this respect, it was incumbent upon the representative to choose for the performance of routine tasks a suitable person, properly instructed in the tasks to be performed, and to exercise reasonable supervision over their work.

In **T 949/94** the board stated that a representative was expected to exercise a reasonable supervision over the work delegated. This did not mean that he had to supervise the posting of every letter. Once he had signed a letter and ordered his secretary to post it, he was entitled to assume that it had been posted. In the light of that, the board was satisfied that the representative had exercised due care in dealing with his secretary (**J 31/90**, **T 1171/13**).

In **T 1062/96** the board found that the **posting** of a letter prepared and signed by the representative was a **typical routine task** which the representative could entrust to an assistant (see also **T 335/06**). In the case in question the assistant was expressly instructed to send the letter by fax on the same day. In a properly organised office the representative could rely on the correct execution of such an instruction. The sending of the fax did not require any specialised knowledge or qualification. Therefore, the assistant, here a secretary, who had proven to be reliable in the daily work of the representative's office, could have been expected to do this job within her own responsibility. Since the order was to be carried out more or less immediately, a later check whether the fax had actually been despatched was not necessary.

In **T 1465/07** the board considered the obligations of the representative in dealing with assistants developed by the case law of the boards to be fully compatible with the **principle of proportionality**. In the case at issue the secretary of the representative had previously worked for another partner and after her taking up her new job the **instructions** given in relation to the backup check consisted in little more than the order to continue to perform that check in the same way as she had done in her former position. The board considered that this was insufficient and that she required **supervision** at shorter intervals during the period immediately following her taking up the new job. Requiring such supervision was not only appropriate and necessary but also not disproportionate, as supervision does not require a substantial amount of time.

In **T 1764/08** the board held that filing an admissible appeal was not a routine task, but rather a complicated task which needed clear instructions from the professional representative to his assistant. In the case at issue, however, there was no evidence on file as to whether the assistant received instructions from the appellant's representative to send the statement of grounds of appeal to the EPO, and if so, what instructions.

In **T 1149/11** the board held that if a representative of an applicant delegated tasks to an assistant, the representative carried the duty of care concerning the proper selection, instruction and supervision of the assistant. This responsibility lasted as long as delegation of tasks was given. The duty of care concerning supervision of the assistant required that an effective cross-check was implemented, at least in a firm where a large number of time limits have to be monitored. This was particularly so in the case at issue because the nature of the time limit concerned required particular care. In fact, the time limit for filing a notice of appeal and paying the appeal fee pursuant to Art. 108 EPC was absolutely critical because, if it was missed, there was no further ordinary remedy and the contested decision had legal effect (see also **T 439/06**, OJ 2007, 491).

In **T 555/08** the board found that the requisite standard of due care was not met by uncritically accepting the accuracy of an **assistant's oral statements** although they must have been open to doubt (see **T 602/94**). Failure to query or check such statements had to be viewed in the context of the obligation to supervise assistants. Especially where there were signs that mistakes might have been made, it was essential to check whether assistants were correctly performing the duties assigned to them.

In **T 2336/10** the board held that the representative did not appear to have issued proper instructions as regards the correct way to deal with the time limit for filing a **statement of grounds of appeal**. An assistant to whom that task was entrusted had to be instructed to work on the assumption that, once the notice of appeal had been filed and the appeal fee paid, a statement of grounds of appeal would in principle have to be filed within the four-month time limit laid down in Art. 108 EPC.

c) Technically qualified assistant

In **T 715/91** the board held that the consequences of an error by a technically qualified assistant (an engineer training for the European qualifying examination) imputed to the representative would also have to be borne by the appellants. The task of writing, or at

least supervising, the despatch of important submissions, such as grounds of appeal, would normally fall to the representative himself. Furthermore, given that the assistant had only recently been taken on, the representative could not be expected to have been able to ascertain in such a short time to what degree the assistant did know the rules and regulations of the EPC.

In **T 828/94** the board found *inter alia* that the technical assistant in charge was not supervised well enough and had not been properly instructed.

Referring to the required standard in exercising due care, the board decided in **T 832/99** that a technical employee working in a firm of patent attorneys was not an assistant but was carrying out *de facto* the work of a patent attorney. This meant that the **same strict requirements** for due care would have to be applied to the technical employee as were applied to the appellant and the appellant's representative.

d) Substitutes replacing assistants

In **J 16/82** (OJ 1983, 262) the board stated that the conditions relating to assistants also applied in the case of a substitute replacing an assistant who was on holiday, ill or otherwise absent. It was a commonly experienced fact of life that assistants did have to be temporarily replaced from time to time. Where a qualified assistant was absent, therefore, the applicant or representative had either to be able to call on a similarly qualified substitute or else himself to take over the work assigned to the assistant. The **same standard of care** had to be exercised as regards the choice, instruction and supervision of the substitute as of the assistant himself (**T 105/85**).

e) Ultimate responsibility of the representative

In **J 25/96** the statement of grounds for the request for re-establishment of rights explained *inter alia* that non-observance of the time limit had been caused by the assistant entrusted with monitoring time limits. The board held that the case law according to which a representative could entrust suitably qualified and supervised personnel with monitoring time limits had been developed for routine tasks and normal cases. It did not mean that a representative could also entirely leave such staff to monitor cases which (i) were **particularly urgent**, (ii) needed **particular attention** and further steps by the representative himself to ensure that the necessary acts were still performed in time, (iii) could result in an **irrevocable loss of rights** if any error or delay occurred.

In **T 719/03** the board did not accept the appellant's argument that the failure to comply with the time limit had been an isolated mistake by the qualified secretary who had noted on the cover page of the revocation decision only the time limit for appeal but not also the time limit for filing the statement of grounds of appeal. The board held that the appellant's representative had himself failed to exercise due care, since the contested decision had been shown to him twice without his noticing the incompleteness of the note concerning the mandatory time limit that had to be monitored. The board took the view that, with **careful handling** of a dossier involving statutory time limits, the

representative was so often faced with the time limits to be observed that **compliance with the time limit was ensured**.

In **T 439/06** (OJ 2007, 491), concerning the necessary "due care" required from the representative, the board emphasised that fulfilling the requirements of proper selection, instruction and supervision only meant that the assistant's error in dealing with the delegated task cannot be imputed to the representative. It does not mean that with the proper selection, instruction and supervision of the assistant the representative's responsibility ends there once and for all, and that he need not take further care with respect to the delegated task (see also **T 1149/11**). What all due care calls for depends on the specific circumstances of the case. It is not necessary to perform a triple check from the outset, once such a decision is received in the representative's office and when the time limit is noted. This still belongs to the administrative treatment of the file where the representative does not yet need to be involved if he has installed a satisfactory system. However, once the representative gets the file on his desk for his own action, in order to comply with the relevant time limit, responsibility passes over to him in all respects. All due care under these circumstances requires the representative to verify the time limit calculated by his records department when he receives the file for dealing with it. He cannot simply rely on having delegated this task once and for all to his records department (see also **J 1/07**; **T 719/03**; **T 473/07**).

Likewise in **T 1561/05** the board held that the representative was personally at fault in failing, when signing the statement of grounds for appeal, to check the calculation of the time limits by his support staff and therefore to notice that the calculation was wrong. A task forming part of the representative's **core duties**, such as performing a **final check** when signing a submission which is subject to a time limit, cannot be delegated in a way that absolves the representative of responsibility.

In **T 1095/06** the board stated that a professional representative could not be required to double-check every action by an assistant. If the professional representative failed to act because he had not received a reminder due to some error of a properly chosen, properly instructed, and reasonably supervised assistant this could be regarded as "an isolated error in an otherwise satisfactory system" which would still allow re-establishment to be granted. However, a professional representative must be presumed to be **supervising his own work continuously**. The case law on "an isolated mistake in an otherwise satisfactory system" could not be relied on to ignore a failure to act by the professional representative himself, unless there were special circumstances which made the failure to act compatible with taking all due care.

In **T 592/11** the board held that, where a double check was carried out by the representative and an assistant, the former was liable for any negligence in performing his own part of this check. This was because, where double checks were carried out by assistants only, the representative had to perform an additional, third check (see **T 439/06**, **T 1561/05**). If, however, they were carried out by an assistant and the representative himself, the latter had to be subject to the same standard of care with respect to his part of the check. An isolated mistake by a professional representative in performing his check was then - as a rule at least - inexcusable.

In **R 18/13** two "isolated" mistakes had been made, one by the professional representative, the other by his assistant. The Enlarged Board considered the travaux préparatoires and found that an "isolated mistake", such as assistants might make, was not excusable in a representative. If he was given a file to deal with, he could not simply assume that his assistants had reliably done all their work on it so far; he had to make sure, through appropriate control mechanisms before the file reached him, that time limits arising were complied with, or – at the latest when he was given the file to deal with – check for any time limits himself. The request for re-establishment was refused.

#### 5.5.5 Due care in using mail delivery services

In decision **T 667/92** the board considered whether the appellant could be said to have taken all the due care required by the circumstances when allowing only two days for delivery from the UK to Germany and whether, in these circumstances, the choice of using a special carrier for the delivery was in keeping with the due care requirement. The board pointed out that a party who missed a time limit had also to show due care in its **choice of method of delivery** and that the use of outside agents might be held against the applicant under Art. 122 EPC 1973 owing to a lack of proper safeguards. The board added that in parallel situations telefaxing should preferably be used. The board took into account the very extraordinary circumstances regarding the withholding of the item by the customs in Munich for 36 hours, an incident which could not reasonably be foreseen, and allowed the request.

In **T 381/93** the problem arose from the failure of the private courier service to deliver the package containing the corresponding documents to the EPO as instructed. In deciding on due care, the board referred to decision **T 667/92**, in which it was stated that a party who had missed a time limit had also to show due care in its choice of method of delivery. The board held that once a reliable carrier had been chosen and commissioned for the delivery, a party was entitled to rely on them, provided that the party had given all the necessary and proper instructions to the carrier.

If a party to proceedings requests re-establishment of rights on the basis that a document missed an EPO time limit because it did not arrive within the **standard delivery time**, that party will have to prove that the form of postage used would normally have ensured that the document would reach the EPO on time. The board left out of account the question of whether a party who relies on the usual delivery time has exercised all due care with regard to the time limit (**T 777/98**, OJ 2001, 509).

## 6. Procedural treatment of requests for re-establishment

### 6.1. Department competent to decide upon the request

The department competent to decide on the omitted act shall decide upon the application (R. 136(4) EPC, Art. 122(4) EPC 1973).

The boards of appeal are competent to decide on the request for re-establishment in respect of the time limit for filing a **notice of appeal** (Art. 108 EPC), since the

department competent to decide whether the appeal was inadmissible for non-compliance with Art. 108 EPC is, under R. 101(1) EPC, the board of appeal (**T 1973/09**, **T 808/03**, **T 949/94**, **T 473/91**, OJ 1993, 630). The boards of appeal are also competent to decide on the request for re-establishment in respect of the time limit for filing the written **statement setting out the grounds of appeal (T 624/96)**.

While this competence in relation to admissibility of an appeal is subject to the exception of Art. 109(1) EPC (interlocutory revision), this provision confers only the limited power to set aside the department's own decision if the appeal was considered admissible **and** well founded (**T 808/03**, **T 1973/09**). The admissibility of an appeal under Art. 109 EPC only falls under the jurisdiction of the department of first instance when this question can be decided immediately on the basis of the appeal submissions themselves (notice of appeal and statement of grounds, date of payment of the appeal fee). The boards of appeal have exclusive jurisdiction over a request for restitutio in respect of a time limit relating to the appeal itself (**T 473/91**, **T 949/94**, **T 65/11**).

In **T 555/08** loss of rights (deemed withdrawal of the application due to non-payment of a **renewal fee**) occurred **while appeal proceedings were pending**. When appeal proceedings start, responsibility for the case passes from the department of first instance to the boards of appeal (the devolutive effect, see **T 473/91**, OJ 1993, 630). Hence in the case in point jurisdiction to decide on the request for re-establishment lay with the board hearing the pending appeal (see **T 191/82**, OJ 1985, 189; **T 936/90**; **T 708/08**; **T 1935/08**).

In **T 1381/11** the board referred to **T 555/08** and held that a loss of rights due to the non-payment of renewal fees automatically terminated the appeal proceedings. The issue of whether or not an appeal was pending was therefore directly linked to a request for re-establishment of rights regarding failure to pay the renewal fee made at the appeal stage. The formalities officer should therefore have acted on behalf of the board of appeal rather than the examining division, before which the case was no longer pending. The board thus took the view that it had jurisdiction to decide over the request for re-establishment of rights according to Art. 111(1), second sentence, EPC (see also **T 649/13**).

In **W 3/93** (OJ 1994, 931) the board held that as the board had to decide on the protest, it was also competent to examine the request for re-establishment of rights (Art. 122(4) EPC 1973).

In **J 22/86** (OJ 1987, 280) the board stated in relation to the failure to pay **grant and printing fees** and to file translations that the examining division was in the first instance competent to decide upon such omitted act. However, in view of the special circumstances of this case, the board decided, pursuant to Art. 111(1) EPC 1973, to exercise the power of the examining division to decide upon the application for restitutio (see also **J 9/86**).

In **T 26/88** (OJ 1991, 30) the appellant failed to comply with the request (pursuant to R. 58(5) EPC 1973) to pay the printing fee and to file translations of the claims within

three months of notification of the request. The board found that the circumstances of decision **J 22/86** were quite different from the case at issue and justified the exceptional exercise of the power of the examining division to decide on the application for re-establishment. In the case before the board the **opposition division's formalities officer** was responsible (see also **T 522/88**).

In **J 10/93** (OJ 1997, 91) the Legal Division not only decided on the request for recording the transfer of a patent application, for which it was competent according to Art. 20(1) EPC 1973, but also dealt with the appellants' application for re-establishment of rights which it rejected as inadmissible. Since the omitted act was the applicants' failure to reply to a communication of the examining division issued pursuant to Art. 96(2) EPC 1973, the department competent to decide on the application for restitutio was the **examining division** (Art. 122(4) EPC 1973). The board set aside the decision finding that the Legal Division had exceeded its powers. It stated that this could not be justified by any need to decide on the request for restitutio as a preliminary issue to be answered before examining the request for registering the transfer.

In **J 23/96** the examining division had informed the applicant that the request for re-establishment would be decided once the decision under R. 69(2) EPC 1973 was final, or during any ensuing appeal. Before the board, the applicant suggested that the board decide on the request for re-establishment. The board refused to decide on the request for re-establishment because it was not the "competent department" within the meaning of Art. 122(4) EPC 1973. The competent department was the examining division.

## **6.2. Request for re-establishment as auxiliary request**

In **J 23/96** the applicant had applied for a decision under R. 69(2) EPC 1973 (R. 112(2) EPC) and, as an **auxiliary request**, asked for re-establishment of rights. The examining division issued a brief communication saying that the request for re-establishment would be decided once the decision under R. 69(2) EPC 1973 was final, or during any ensuing appeal. The board noted that auxiliary requests were filed in case the main request was refused; they then took its place and had to be dealt with in the **same** decision. The course taken by the examining division was at odds with procedural economy, and might also oblige the applicant to appeal twice. This amounted to a substantial procedural violation (see also **J 1/80**). The board referred the matter back, without considering the merits, for the division to decide on the two requests together.

## **6.3. Parties to re-establishment proceedings and the right to be heard**

In **T 1561/05** the board held that in the context of inter partes proceedings, the patent proprietor and the opponent were also parties to the re-establishment proceedings. The party contesting the request has an unlimited right to be heard under Art. 113 EPC 1973.

In **T 552/02** the board held that the response to be given to the application for re-establishment was of the utmost importance for the respondents, as it affected the actual admissibility of the appeal and hence the reviewability of the opposition division's decision to revoke the patent in suit. From this the board deduced that it would be a

breach of Art. 113(1) EPC 1973 to take a decision concerning the interests not only of the appellants but also of the respondents without giving the latter an opportunity to present comments.

#### **6.4. Concurrent request for interruption of proceedings**

In **J ..87** (=J 902/87, OJ 1988, 323) the board decided that, in accordance with R. 90 EPC 1973 (R. 142 EPC), which the EPO must apply of its own motion, the legal incapacity of an applicant or his representative has the effect of interrupting proceedings and, where appropriate, the one-year time limit referred to in Art. 122(2) EPC 1973 (now R. 136(1) EPC).

In **T 315/87** the board stated that, in case a request for interruption was filed together with a request for re-establishment, preference should be given to the application of Art. 122 EPC 1973, under which less severe impairment could also be grounds for re-establishment of rights. The question of any interruption of proceedings under R. 90 EPC 1973 could be left open provided that all the losses of rights which had occurred could be overcome by *restitutio in integrum*.

In **J 9/90** the Legal Board of Appeal held that for R. 90(1)(b) EPC 1973 (interruption of proceedings because of insolvency) to be applied in the light of Art. 60(3) EPC 1973 (unchanged) and R. 20(3) EPC 1973 (R. 22(3) EPC), the applicant entered in the Register of European Patents and the insolvent person (here, a limited company) had to be **legally identical**. However, the fact that the persons involved were not identical did not necessarily rule out re-establishment of rights under Art. 122 EPC 1973. Someone who was only indirectly affected by an event, such as insolvency, could be "unable" within the meaning of Art. 122(1) EPC 1973. In such a case however the persons so affected had to prove that they had exercised all the due care that could have been expected of them in the circumstances of such an insolvency.

#### **6.5. Re-establishment in the context of the President's extension of time limits during general disruption**

In **T 192/84** (OJ 1985, 39) it was held that if the President of the EPO extended time limits expiring during a period of general interruption in the delivery of mail in a contracting state (R. 85(2) EPC 1973; now R. 134 EPC, reworded), a pending application for re-establishment of rights considered to have been lost during that period, which had been filed by a representative having his place of business within that state, had to be deemed to have been made without purpose *ab initio*, even though the non-observance of the time limit was due to causes other than the interruption in the delivery of mail. Accordingly, it could be declared that no rights were lost and the fee for re-establishment of rights could be refunded.

#### **6.6. Redundant request for re-establishment**

In **T 1198/03** the respondent (opponent) sent his reply to the appellant's statement of grounds of appeal one day late and requested that, if the board did not otherwise

consider the reply, he be re-established into **the time limit for filing the reply**. The board decided to consider the respondent's reply. The request for re-establishment was therefore redundant.

In **T 2317/13** the board held that the re-establishment request was redundant since the delay in filing the statement of grounds of appeal had been only of minutes and the lateness of the filing was truly minimal (the first four pages of the statement of grounds were in fact received before the time limit expired). According to the board, the discretion given to the board by Art. 13(1) RPBA to admit and consider late-filed submissions which amended a party's previously filed written case extended to the late admission and consideration of the written case itself (see **T 1198/03**).

## 7. Rights of use under Article 122(5) EPC

In **J 5/79** (OJ 1980, 71) the board stated that according to Art. 122(6) EPC 1973 (Art. 122(5) EPC), third party rights of use arose only where the restoration related to an already **published European patent application** or a European patent; those whose commercial interests were at stake should be entitled to be sure that protection, the existence of which was public knowledge, and which had fallen into the public domain, no longer had effect. In the case at issue, the restoration related to an application that was unpublished at the material time, so on that ground alone there could be no third party rights of use. In addition, the restoration of rights had not been **made public**. Third party rights to continue use of an invention where an applicant's rights have been lost and restored cannot arise if the loss and restoration of the applicant's rights occur before publication of the European patent application.

## 8. Principle of proportionality

In **T 111/92** the statement of grounds of appeal had been filed two days late due to an error of calculation of the due date on the part of the representative. The board held that the mistake in calculating the ten-day period due to human error at a time when the person in question was under pressure was an isolated mistake in an otherwise satisfactory system. The board referred to the principle of proportionality and stated that, in accordance with general principles of law, as applied in the context of administrative law, a procedural means used to achieve a given end (e.g. a sanction following a procedural non-compliance) should be no more than that which is appropriate and necessary to achieve that end. Bearing the principle of proportionality in mind, the loss of the patent application because of the procedural irregularity which has occurred in the case at issue would be a severe result. Moreover, the interests of any third party misled within the meaning of Art. 122(6) EPC 1973 by the fact that the statement of grounds of appeal was filed two days late would be protected by Art. 122(6) EPC 1973. The board allowed thus the application for re-establishment (see also **T 869/90**, **T 635/94**, **T 804/95**, **T 27/98** and **J 22/92**).

In **J 44/92** and **J 48/92** the boards noted that the principle of proportionality **only** applied **in borderline cases, in support of other grounds** already substantiating to a certain extent the allowance of the appeal. Usually it had been applied where a time limit had

been missed by one or two days due to some miscalculation (see below). The board considered that the principle of proportionality did not assist the appellant as there had been a major system fault, which could not be excused by reliance on the principle of proportionality.

In decision **T 971/99** and **T 1070/97** the boards stated that Art. 122(1) EPC 1973 **did not leave any room for the application of the principle of proportionality**, so that the number of days by which a time limit had been missed was irrelevant for deciding whether all due care was applied or not. Only the character of the conduct before the time limit expires was decisive for the consideration of the issue of due care, not the length of the ensuing delay (see also **T 439/06**, OJ 2007, 491; **T 1561/05**; **T 1465/07**).

In **T 1465/07** the board interpreted Art. 122 EPC 1973 in the context of the right of access to a court taking into account the case law of the European Court of Human Rights and the European Court of Justice. The principle of proportionality applies to limitations of the right of access to the boards of appeal, such as rules on time limits, by legislative measures or their application. This means that those measures or their application must not exceed the limits of what is appropriate and necessary in order to attain the objectives legitimately pursued by the legislation in question; when there is a choice among several appropriate measures or ways of applying them recourse must be had to the least onerous, and the disadvantages caused must not be disproportionate to the aims pursued. As for the application of Art. 108 EPC 1973 in conjunction with Art. 122 EPC 1973, the principle of proportionality has the consequence that the interpretation of those provisions must not impose means that are inappropriate, unnecessary or disproportionate in relation to the aim to be achieved, namely legal certainty and the proper administration of justice by avoiding any discrimination or arbitrary treatment. Correspondingly, the **conditions for granting re-establishment**, in particular the requirement of due care, **must not be interpreted in an excessive manner** that unreasonably restricts access to the board and thus prevents the board from deciding on the merits of the case.

In **J 8/09** the appellant had failed to pay a renewal fee and requested re-establishment of rights. He put forward the principle of proportionality, citing the fact that a company was already producing the system to which the application related and that the consequence of a single late payment of the renewal fee would be disproportionate. The board rejected this argument. The principle of proportionality could be defined as a duty for a court or an administration to find a balance between a party's error and the legally ensuing consequences when a margin of weighing the importance of the circumstances existed (see **J 5/97**). However, when the boards of appeal referred to the principle of proportionality in the case law, it was never as a main ground but in support of other grounds already substantiating, to a certain extent, the allowability of the appeal especially when a reliable system for managing the time limits and an isolated mistake within such a system could be assessed (see **J 44/92** and **J 48/92**).

In **J 13/11** the Legal Board stated that the time limits in the EPC aim to serve legal certainty and the proper administration of justice by avoiding any discrimination or arbitrary treatment (see also **T 1465/07**, **T 592/11**). The severe consequence of a loss of

a patent application in the case at issue could not be considered in isolation but had to be assessed against the values of legal certainty and proper administration of justice that are embodied by the time limits appropriate to Art. 122 EPC. The application of the principle of proportionality would empty the time limits of Art. 122 EPC of any content and would make the provisions of this article uncertain. In addition the boards of appeal do not have the power to apply provisions of the EPC *contra legem*, that is contrary to their unambiguous meaning and purpose.

## 9. Refund of the fee for re-establishment

In **J 7/93** the EPO did not tell the appellant to ignore its previous communications issued in connection with a time limit supposed to be missed; this would have enabled the appellant to recognise that its request for re-establishment was unnecessary. Instead, the EPO continued the proceedings for re-establishment of rights and finally refused *restitutio* without taking into account the fact that these proceedings had been unnecessary from the very beginning. The board found that this amounted to a substantial procedural violation within the meaning of R. 67 EPC 1973. The board held that it was equitable to order reimbursement of the appeal fee, even though the appellant had not applied for this (**J 7/82**, OJ 1982, 391). The board held that since there was no longer any legal ground to request re-establishment of rights, the fee for re-establishment was wrongly accepted by the EPO and, therefore, had to be refunded to the appellant (confirming **J 1/80** and **T 522/88**).

In **T 1198/03** the respondent (opponent) sent his reply to the appellant's statement of grounds of appeal one day late and requested that, if the board did not otherwise consider the reply, he be re-established into **the time limit for filing the reply**. The board decided to consider the respondent's reply. The *restitutio* request was therefore **redundant**. Distinguishing the present case from other cases, where an application for re-establishment of rights was equally redundant but the boards did reimburse the corresponding fee, the board stated that, in the case before it, *restitutio* was not, as a matter of principle, applicable as a remedy, and that in such a situation a party should not be able to reap cost benefits from the redundancy of a *restitutio* request filed on an auxiliary basis. Otherwise parties might be encouraged to file such inapplicable requests.

In **T 2317/13** the board held that the re-establishment request was **redundant** since the delay in filing the statement of grounds of appeal had been only of minutes and the lateness of the filing was truly minimal. The board decided to reimburse the fee for re-establishment. It compared the case with the one in **T 152/82** (OJ 1984, 301), in which the fee had been reimbursed after it became apparent that the re-establishment request would not have become effective.

In contrast, in **T 971/06** the **Office had committed mistakes** which caused the request for re-establishment. As the appealed decision of the examining division did not comply with Art. 97(2) EPC 1973, it was considered invalid by the board. The examination should therefore have been re-opened without an appeal. Furthermore, the appellant was misled by the examining division for several months as to the procedure for remedying the mistake. When the examining division finally issued a communication

refusing its request to correct the decision, the appellant filed an appeal, a statement of grounds of appeal and requests for re-establishment. The board considered these requests unnecessary, but an understandable reaction. It found that the fees paid in respect of these requests had to be refunded.

In **T 46/07**, the board found that, if the fee for re-establishment of rights is paid after expiry of the two-month period laid down in Art. 122(2) EPC 1973, the application for re-establishment of rights does not come into existence and therefore the fee must be refunded even without a respective request.

In **T 2454/11**, the board observed that, in earlier board decisions taken in the light of **G 1/86**, requests from an **appealing opponent** for re-establishment of rights had been regarded as "devoid of purpose" or "not validly filed" and the fee refunded (see e.g. **T 520/89**, **T 266/97**). The board endorsed the view taken more recently in **T 1026/06** that the fee was not refundable. It could only be reimbursed if it had been paid for no legal reason or if a refund was required by a legislative provision. Under Art. 122(3) EPC, a request for re-establishment of rights was not deemed to be filed until the fee had been paid, so payment was required for the request to have effect. There had therefore been a legal reason for its payment and there was no provision requiring a refund.

In **T 2017/12** (OJ 2014, A76) the appellant had missed the time limits for filing the appeal and the statement of grounds of appeal. It had **paid the fee** for re-establishment of rights **twice**, once for each missed time limit. The board refused the request for refund of one of the fees. There were no explicit provisions in the EPC dealing with the case in which several time limits had been missed. This was an indication that each time limit had to be considered separately and that, in the absence of any hint to the contrary, for the number of fees to be paid the number of missed time limits was decisive. In line with decision **J 26/95**, the board considered that the corresponding time limits expired independently of one another, notwithstanding the fact that they were triggered by the same event. In addition, the failure to meet either of these time limits individually results in a loss of the right to appeal. Failure to comply with either one of the two time limits would cause the appeal to be rejected as inadmissible, provided that the appeal fee was paid. Consequently, two fees for re-establishment were indeed due and hence a refund of one of those fees was not possible.

## F. Languages

1.	Language of filing and date of filing of a European patent application	646
2.	Language of the proceedings	647
3.	Derogations from the language of the proceedings in written proceedings and in oral proceedings	647
4.	Language privilege	649
5.	Translations	649
6.	Language-related fee reductions	651
6.1.	European patent application	651
6.2.	Request for examination	651

---

The central provisions of the language regime of the EPC are to be found in Art. 14 EPC and R. 3 to 7 EPC.

Attention is also drawn to the Guidelines for Examination, A-VII and E-IV – November 2015 version.

### 1. Language of filing and date of filing of a European patent application

Art. 14(2) EPC requires that a European patent application is filed in one of the official languages of the EPO - i.e. English, French or German (Art. 14(1) EPC) - or, if filed in any other language, translated into one of the official languages. It is therefore possible to file an application in any language, in compliance with Art. 5 PLT, which states that, for the purpose of obtaining a filing date, a description of the invention in a language of the applicant's choice must be accepted (see also R. 40(1)(c) EPC). If a required translation is not filed in due time (see R. 6(1), 36(2), 40(3), 57(a), 58 EPC), the application shall be deemed to be withdrawn (Art. 14(2) EPC; cf. Art. 90(3) EPC 1973 and **J 18/01**).

Under the former law, a European patent application could only be filed in an official EPO language (Art. 14(1) EPC 1973) or, by persons benefiting from the "language privilege", in an official language of a contracting state other than English, French or German ("admissible non-EPO language"), with a translation to be filed in an official EPO language (Art. 14(2) EPC 1973; see also **J 15/98**, OJ 2001, 183; **J 6/05** and **J 9/01**). To be accorded a date of filing, an application had to contain one or more claims, in addition to a description, in one of the languages referred to in Art. 14(1) and (2) EPC 1973 (Art. 80(d) EPC 1973; see also **J 18/96**, OJ 1998, 403 and **J 22/03**). For the current scope of the "language privilege" see Art. 14(4) EPC and R. 6(3) - (7) EPC and also in this chapter III.F.4-6.

In **J 7/80** (OJ 1981, 137) the Legal Board held that where documents making up an application were partly in an official language of the EPO and partly in another language which was an official language of a contracting state, then, for the purposes of deciding whether the application complied with Art. 14(1) or (2) EPC 1973, in accordance with

Art. 80(d) EPC 1973, the significant language was that used for the description and claims. Other documents making up the application should normally be corrected by translation into that language.

In **T 382/94** (OJ 1998, 24) the board held that if the drawings were filed in full on the date of filing, they formed part of the application as filed, even if they contained text matter in an official language other than the language of the proceedings. There was nothing to prevent the application being amended on the basis of a translation of this text matter into the language of the proceedings.

## **2. Language of the proceedings**

The official language in which the application is filed or into which it is translated is the language of the proceedings in all proceedings before the Office, unless the Implementing Regulations provide otherwise (Art. 14(3) EPC).

In **G 4/08** (OJ 2010, 572) the Enlarged Board of Appeal ruled that if an international application has been filed and published under the PCT in one official language of the EPO, it is not possible, on entry into the European phase, to file a translation of the application into one of the other two EPO official languages.

## **3. Derogations from the language of the proceedings in written proceedings and in oral proceedings**

Under R. 3(1) EPC (R. 1(1) EPC 1973) any party may use any EPO official language in written proceedings.

In **T 706/91** the appeal had been drawn up in accordance with R. 1(1) EPC 1973 in one of the official languages, namely German. The appellant had therefore cited passages from the disputed European patent's claims and description in that language, even though they had been drawn up in French as the language of the proceedings. The board decided that these references were admissible.

In **G 4/08** (OJ 2010, 572) the Enlarged Board of Appeal clarified that EPO departments cannot use, in written proceedings on a European patent application or an international application in the regional phase, an EPO official language other than the language of the proceedings used for the application under Art. 14(3) EPC (thereby overruling **J 18/90**, OJ 1992, 511).

R. 4(1) EPC (cf. R. 2(1) EPC 1973) allows any party to oral proceedings to use an official language of the EPO other than the language of the proceedings, provided he either gives the EPO at least one month's notice or arranges for interpreting into the language of the proceedings. Under R. 4(5) EPC the EPO must, if necessary, provide at its own expense interpretation into the language of the proceedings, or, where appropriate, into its other official languages, unless such interpretation is the responsibility of one of the parties.

In **T 34/90** (OJ 1992, 454) the respondent did not give notice that he wished to use another official language in the oral proceedings and also failed to provide interpretation. His representative argued that because he had lawfully used an alternative official language in oral proceedings before the opposition division, he should be allowed to use the same language in the hearing before the board. The board reiterated the principle that appeal proceedings are not a mere continuation of first-instance proceedings, but are, for the purpose of deciding the permissibility of using an alternative official language under R. 2(1) EPC 1973 (R. 4(1) EPC), as for other procedural purposes, wholly separate and independent from those. Accordingly, the respondent's attempt to use the other language, without fulfilling the requirements of R. 2(1) EPC 1973 as they applied to the pending appeal proceedings, was rejected.

See also the communication from the Vice-President of DG 3, OJ SE 3/2007, 118.

In **T 774/05** the board stated that R. 2(1) EPC 1973 (R. 4(1) EPC) implied that a party could choose to use one of the official languages set out in Art. 14(1) EPC 1973 and was entitled to speak and hear that language. However, a party had to be clear as to which official language it wished to use. The party then had a right to both speak and hear in that language, so long as the conditions of R. 2(1) EPC 1973 were fulfilled. The party did not, however, have a right to have a language in which it would speak and a different language in which it would listen.

In **T 418/07** the respondent announced that it would use German at the oral proceedings (language of the proceedings being English) and requested the board to provide translation from German into English for the benefit of one of its employees who would attend the oral proceedings and who did not speak German. The board acknowledged the right of any party to use any of the three official languages in oral proceedings, but stated that the right to interpreting from either of the two other languages was circumscribed by R. 4 EPC. A party which elected to use a language which was not understood by one of its own representatives or employees could not for that reason request a free translation. The board could not provide translation merely to suit the convenience of a party.

In **T 2422/10** the board rejected the respondent's argument that it had an absolute right to interpreting into English as the language of the proceedings. The general rule needed to be set against the principle of efficiency of the proceedings and the duty of all services of the EPO, including the boards of appeal, to observe the finances of the EPO. The wording of R. 4(5) EPC allowed the board to assess the necessity of such interpreting (cf. **T 131/07**). It was evident that the respondent's representative was quite capable of understanding any oral submissions of the appellant in German without interpretation.

The respondent was also accompanied by an expert, whom the board decided not to hear following the criteria of **G 4/95** (OJ 1996, 412). In these circumstances the board considered that interpretation into English for the expert at the expense of the EPO would not be justified. Accompanying persons did not have an automatic right to it.

The matter of the language arrangements in oral proceedings in relation to an accompanying person also arose in **T 131/07** and **R 3/08** (for the latter see under chapter IV.F.3.13.18).

For a case which concerns the discretion given to the EPO under R. 4(1), last sentence, EPC to derogate from the provisions of this Rule, see **T 982/08**.

On the costs of interpreting during oral proceedings see further III.C.5.2.

#### **4. Language privilege**

According to Art. 14(4) EPC, natural or legal persons having their residence or principal place of business within the territory of a contracting state having a language other than English, French or German as an official language, and nationals of that state who are resident abroad, may file documents which have to be submitted within a given time limit in an official language of that state (these languages are sometimes referred to as "admissible non-EPO languages"). A translation in an official EPO language must also be filed (see R. 6(2) EPC). The scope of the fee reductions available in respect of documents filed in accordance with Art. 14(4) EPC has been limited with effect from 1 April 2014 (see in this chapter III.F.6). For the language provisions with respect to the filing of the European patent application itself, see in this chapter III.F.1.

The board in **T 149/85** (OJ 1986, 103) decided that it is inadmissible for a German opponent to file an opposition in Dutch even if represented by a Dutch patent attorney.

In **T 1152/05** the notice of appeal was filed in Dutch by a company which had its principal place of business in the US and thus could not benefit from the provisions of Art. 14(4) EPC. A translation into French was filed on the same day. The notice of appeal was deemed not to have been filed. Following **G 6/91** (OJ 1992, 491), if the translation was filed at the same time as the original, the EPO could not take it as the "official" notice of appeal and ignore the original as superfluous. See also **T 41/09** and III.A.3.2.1.

#### **5. Translations**

Concerning the filing of a required translation of a European patent application, see in this chapter III.F.1.

Under Art. 14(4) EPC, if any required translation of a document filed in accordance with that provision is not supplied in due time (see R. 6(2) EPC), the document is deemed not to have been filed (cf. Art. 14(5) EPC 1973).

In **T 323/87** (OJ 1989, 343), the translation required under Art. 14(4) EPC 1973 was not filed in due time in accordance with R. 6(2) EPC 1973. The notice of appeal was therefore deemed not to have been received (Art. 14(5) EPC 1973), and the appeal was held not to have been filed. See also **T 193/87** (OJ 1993, 207), which concerned a notice of opposition.

However, in **T 126/04** the board did not follow **T 323/87** with respect to the legal consequence of failure to comply with the time limit. It held that the only possible interpretation of the reference in R. 65(1) EPC 1973 to R. 1(1) EPC 1973, which itself referred to Art. 14(4) EPC 1973, was that R. 65(1) EPC 1973 determined the legal consequence of failure to file a translation of the notice of appeal as required by Art. 14(4) EPC 1973. The legal consequence was therefore the **inadmissibility of the appeal**. It was not a case of conflict within the meaning of Art. 164(2) EPC 1973, since R. 65(1) EPC 1973 was a *lex specialis*. The provisions of R. 65(1) EPC 1973 are now to be found in R. 101(1) EPC, which does not refer to R. 3(1) EPC, the equivalent to R. 1(1) EPC 1973.

In **T 170/83** (OJ 1984, 605) a debit order was filed in error in Dutch. The board held that Art. 14 EPC 1973 did not apply - a debit order did not have to contain text in a language at all, whilst remaining quite clear. The question whether a debit order in a non-official language was effective therefore did not arise.

In **T 700/05**, the board found that, taking into account that Euro-PCT applications were deemed by Art. 153(2) EPC to be European applications and the principle that they thus had to be treated as favourably as applications made in a contracting state, a PCT application originally filed in Japanese had to be treated in the same way as an application filed in the language of a contracting state which was not an official language of the EPC. The provision of Art. 14(2) EPC 1973 had thus to be applied by analogy to allow also the translation into English of an original PCT application in Japanese to be brought into conformity with the original Japanese text of the application throughout the proceedings before the EPO, i.e. also including opposition and appeal proceedings. See also **T 1483/10**.

Shortly before the oral proceedings before the board in case **T 265/11**, the appellant (opponent) filed an uncertified translation of the claims of the international application underlying the patent. It argued that it was evident from this translation that certain features were different in the originally filed claims with respect to the English translation filed on entry into the European phase (Art. 158(2) EPC 1973), and requested that the newly filed translation filed be used as a basis for the analysis under Art. 123(2) EPC. The board affirmed that an international application for which the EPO is a designated or elected Office, and which has been accorded an international date of filing, is equivalent to a regular European application (Art. 150(3) EPC 1973; now Art. 153(2) EPC). For the application in question, R. 7 EPC 1973 (cf. R. 7 EPC) applied *mutatis mutandis* to the translation filed under Art. 158(2) EPC 1973. As no evidence had been provided that the translation already on file was not in conformity with the original text of the application, the board, in accordance with R. 7 EPC 1973, assumed that translation to be in conformity with the original text of the application for the aforementioned purpose.

Concerning translation points in relation to amendments see Chapter II.E.1.1.5 "Language issues".

## 6. Language-related fee reductions

Under R. 6(3) - (7) EPC (as in force from 1 April 2014 – see Decision of the Administrative Council of 13 December 2013, OJ 2014, A4) certain categories of applicants fulfilling the requirements of Art. 14(4) EPC are eligible for a fee reduction when filing a European patent application or request for examination (see also Notice of 10 January 2014, OJ 2014, A23). A corresponding language-related fee reduction is no longer available for oppositions, appeals, requests for limitation or for revocation, or petitions for review (for earlier decisions concerning the former reduction of the opposition and appeal fees, see "Case Law of the Boards of Appeal", 7<sup>th</sup> ed. 2013, III.F.5).

In **G 6/91** (OJ 1992, 491) the Enlarged Board of Appeal ruled that the persons concerned were only entitled to the fee reduction under R. 6(3) EPC 1973 if they filed the **essential item of the first act** in filing, examination, opposition or appeal proceedings (note: the last two cases are no longer relevant – see previous paragraph) in an official language of the state concerned other than English, French or German, and supplied the necessary translation **no earlier than simultaneously** with the original. According to **T 905/90** (OJ 1994, 306, Corr. 556), neither a request for a fee reduction, nor a notification that only a reduced fee had been paid, was an essential part of the first act of the relevant proceedings (see also **J 4/88**, OJ 1989, 483).

### 6.1. European patent application

Under the EPC 1973, an application could be filed in an official EPO language (Art. 14(1) EPC 1973) or, by persons benefiting from the "language privilege", in an official language of a contracting state other than English, French or German (Art. 14(2) EPC 1973).

According to **J 4/88** (OJ 1989, 483, see headnote), for the purposes of Art. 14(2) EPC 1973 and R. 6(3) EPC 1973 it was sufficient if the description and claims were filed in an official language of a contracting state other than English, French or German; it was not significant for this purpose that other parts of the European patent application were filed in one of the official languages of the EPO only (further to **J 7/80**, OJ 1981, 137 – see in this chapter III.F.1). If the applicant availed himself of the option provided in Art. 14(2) EPC 1973 both the filing fee and the examination fee were reduced (R. 6(3) EPC 1973).

### 6.2. Request for examination

**J 4/88** (OJ 1989, 483) (see in this chapter III.F.6.1) deals with the reduction of both the filing fee and the examination fee.

In **J 21/98** (OJ 2000, 406) the appellant (applicant), who had filed a **request for examination** in Italian within the time limit provided for under Art. 94(2) EPC 1973 (see now R. 70(1) EPC), and simultaneously an English translation, had been refused the reduction in the examination fee pursuant to Art. 14 EPC 1973. According to the

Receiving Section, the written request for examination in Italian should have been filed together with the request for grant. However, according to the board, Art. 94(2) EPC 1973, in conjunction with Art. 75, Art. 92 and Art. 94(1) EPC 1973, was to be interpreted such that, within the grant procedure, the request for examination constituted an **autonomous step** quite separate from the (previous) step of filing the patent application, enabling the applicant to consider whether to continue the grant procedure in the light of the search report. Since the EPC 1973 gave the applicant the right to file the request for examination after the publication of the search report, it followed that the same right had to be owed to the applicant who wanted to avail himself of the option provided for in Art. 14(2) and (4) EPC 1973 (see also **J 22/98**, **J 6/99**, **J 14/99** and **J 15/99**).

In **J 36/03** the board held that the examination fee should be reduced if the request for examination was filed in an authorised non-official language, even in cases where the **application was transferred, before the examination fee was paid**, to an applicant who was not one of the persons referred to in Art. 14(2) EPC 1973.

## 1. Introduction

Before an administrative authority or a court takes a decision, it is required to establish the existence of the material facts, i.e. the facts from which, under the relevant legal provision, the legal effect ensues. The facts are established by taking evidence. The purpose of all evidence, whatever its nature, is to confirm a party's assertions.

The main provisions governing evidence, the means and taking of evidence and the conservation of evidence are Art. 117 EPC, Art. 131(2) EPC, R. 117 to 124 EPC (the last rule as amended by decision CA/D 6/14 of the Administrative Council (OJ 2015, A17), which entered into force on 1 April 2015) and R. 150 EPC.

In the revised EPC 2000, the content of Art. 117(2) to (6) EPC 1973 was rephrased in the new Art. 117(2) EPC. The procedural aspects concerning the taking of evidence were transferred to the Implementing Regulations (see OJ SE 5/2007, Part II, pp. 176-192). Furthermore, the revised Art. 117(1) EPC no longer lists the EPO departments which may take evidence; it now includes a general reference to "proceedings before the European Patent Office".

Art. 117 EPC, entitled "Means and taking of evidence", provides for the submission of evidence before all EPO departments, including the Receiving Section, examining divisions, opposition divisions, the Legal Division and the boards of appeal.

Beyond the letter of the EPC, the boards of appeal have addressed multiple issues of admissibility and taking of evidence in their case law. In addition, they have elaborated specific principles governing the evaluation of evidence and the allocation of the burden of proof in order to ensure that EPO proceedings are conducted in a fair and consistent manner.

In accordance with the principle of free evaluation of evidence, any kind of evidence, regardless of its nature, is admissible (**T 482/89**, OJ 1992, 646).

That proceedings before the EPO are conducted in accordance with the principle of free evaluation of evidence was recently reiterated by the Enlarged Board (**G 1/12**, OJ 2014, A114).

Parties can freely choose the evidence they wish to submit - the kinds listed in Art. 117(1) EPC are merely examples (**T 543/95**, **T 142/97**, OJ 2000, 358).

Art. 117(1) EPC and Art. 113(1) EPC embody a basic procedural right generally recognised in the EPC contracting states, viz. the right to give evidence in appropriate form (specifically by producing documents under Art. 117(1)(c) EPC) and the right to have that evidence heard (**T 1110/03**, OJ 2005, 302).

Whether or not a fact can be regarded as proven has to be assessed by the department hearing the case having taken all the relevant evidence into consideration (**T 474/04**, OJ 2006, 129, citing **G 3/97**, OJ 1999, 245, point 5 of the Reasons).

All the means of giving or obtaining evidence covered by Art. 117 EPC are subject to the discretion of the EPO department concerned, which will order it to be taken only if it considers this necessary (**T 798/93**, OJ 8/1997, 363).

If the evidence offered as proof of contested facts essential to the settlement of the dispute is decisive, the department hearing the case must, as a rule, order that it be taken (see **T 474/04**, OJ 2006, 129, about witnesses). All appropriate offers of evidence made by the parties should be taken up (**T 329/02**).

As for the standard of proof, the EPO generally applies the "balance of probabilities" (see **J 20/85**, OJ 1987, 102, point 4 of the Reasons). The balance of probabilities standard is met if, after evaluating the evidence, the boards are persuaded one way or the other (**T 286/10**). However, especially in cases where only one party – the opponent – had access to information about an alleged public prior use, the case law has tended toward expecting that the public prior use be proved beyond any reasonable doubt or "up to the hilt" (see e.g. **T 55/01**, point 4.1 of the Reasons, and **T 472/92**, OJ 1998, 161, point 3.1 of the Reasons; **T 2451/13** (Catchword)). Summary of the case law concerning the standard of proof can be found e.g. in the following recent cases: **T 738/04** (point 3.4 of the Reasons); **T 286/10** (point 2.2 of the Reasons); **T 918/11** (point 3.3 of the Reasons); **T 2054/11** (points 2.2 and 2.3 of the Reasons); **T 2227/11** (point 2 of the Reasons); **T 274/12** (point 4.2.1 of the Reasons); **T 202/13** (point 15.6.1 of the Reasons); **T 2451/13** (point 3.2 of the Reasons).

**T 286/10**, a decision on **internet publications** cited as prior art, is dealt with below, in the section on the standard of proof needed to persuade the department concerned (see in this chapter III.G.4.3.1 and III.G.4.3.3 and in Chapter I.C.3.2.3).

Examining the evidence a board took into account would amount to revisiting the substance of the case and so falls outside the ambit of the review procedure (**R 21/09**, **R 6/12**). A reversal of the burden of proof is not covered by the exhaustive list of possible grounds for a petition for review (**R 21/10**).

R. 3(3) EPC provides that documentary evidence may be filed in any language. The EPO may, however, require that a translation in one of its official languages be filed within a specified period. If the required translation is not filed in due time, the EPO may disregard the document in question, as for example in **T 276/07**. The language to be used for taking evidence and writing the minutes is governed by Art. 14(3) EPC (language of the proceedings) and R. 4 EPC (derogations from the provisions on use of the language of the proceedings in oral proceedings); (Guidelines E-III, 1.3 "Taking of evidence" – November 2015 version; see also Chapter III.F.2. "Language of the proceedings").

Cross-references: evidential matters permeate all aspects of patent law; it is thus recommended to read also the following chapters, which deal specifically with these matters: I.C.3.2.3 "Internet disclosures"; I.C.3.2.2 "Lectures and oral disclosure"; I.C.3.5 "Issues of proof"; I.C.3.5.1 "Burden of proof"; I.C.3.5.2 "Standard of proof"; I.C.3.5.2c) "Internet – proof of the date of availability"; II.A.2.2.2 "Burden of proof"; II.C.5.6.7

"Experiments"; II.C.5.8 "Post-published documents"; II.C.8. "Evidence"; II.E.5 "Evidence and standard of proof for allowing amendments and corrections"; III.A.1.3 "Causal link and the requirement of proof"; III.B.2.3 "Surprising grounds or evidence"; III.B.2.4.3 "Failure to consider evidence"; III.B.2.6.4 "Hearing witnesses"; III.B.2.7.1 "Facts and evidence put forward for the first time during oral proceedings in inter partes cases"; III.C.4.4 "Late submission of new facts and evidence in the preparation for oral proceedings - Rule 116 EPC"; III.E.4.4 "Substantiation of the request for re-establishment"; III.R.6 "Distinction between presentation of facts and evidence and presentation of arguments"; IV.B.2.8.5 "Fresh argument based on grounds and evidence communicated beforehand"; IV.C.1.2 "Late-filed facts, arguments and evidence in opposition proceedings"; IV.C.1.3 "Late-filed facts, arguments and evidence in appeal proceedings"; IV.C.1.3.6c) "Evidence of common general knowledge"; IV.C.2.2.6 "Evidence for and effect of a transfer"; IV.D.2.2.8 "Indication of facts, evidence and arguments – substantiation of grounds for opposition"; IV.D.2.2.9c) "Alleged public prior use"; IV.D.3.4.5 "Examination of fresh facts and evidence"; IV.E.7.2.4 "New facts or evidence". See also Guidelines E-III "Taking and conservation of evidence" – November 2015 version.

## 2. Admissible evidence

### 2.1. Non-exhaustive list of admissible means of evidence

Art. 117(1) EPC does not contain an exhaustive list of admissible evidence, only mere examples. Parties to the proceedings are thus free in their choice of evidence. **Any kind of evidence** is admissible during proceedings before the EPO.

The EPC does not foresee that certain questions of fact may only be proved by certain forms of evidence. Questions of fact must be settled on the basis of any credible information available (see e.g. **J 11/88**, OJ 1989, 433).

For instance, request for correction may be based upon means of evidence in other than document form (**G 11/91**, OJ 1993, 125; cf. **G 3/89**, OJ 1993, 117).

Any kind of evidence, regardless of its nature, is admissible during proceedings before the EPO. Accordingly, the boards of appeal have admitted to the proceedings evidence obtained from witnesses or experts in accordance with R. 117 EPC (former R. 72 EPC 1973) as well as documents of any kind, including affidavits and statutory declarations (see **T 117/86**, OJ 1989, 401; **T 416/87**, OJ 1990, 415; **T 323/89**, OJ 1992, 169; **T 314/90**).

The admissibility of evidence should be clearly **distinguished** from the weight of evidence: whereas admissibility involves the question whether a piece of evidence should be considered at all, the probative value of evidence refers to the question whether the evidence to be considered provides sufficient proof of the alleged facts (see e.g. **T 1698/08** on the distinction between admission of evidence and probative value of a document, and **T 838/92** about a witness).

In **T 1710/12**, in the board's view, Art. 117(1) EPC gives **no order of preference** regarding the means of giving or obtaining evidence in proceedings before the EPO and it remains the **free choice of a party** to rely on the hearing of a witness (Art. 117(1)(d) EPC) or on production of a sworn statement in writing (Art. 117(1)(g) EPC).

The board in **T 885/02** observed that the opinion of an expert does not necessarily reflect the view of the skilled reader for various reasons. Those **experts** who were in the case at issue **eminent scientists** had their own experience which was not necessarily common general knowledge. Those observations did not mean that those declarations were to be disregarded.

## 2.2. Witness testimonies and expert opinions

### 2.2.1 Hearing witnesses

It is the function of a witness to corroborate what has been alleged (**T 543/95**) and not to fill in the gaps in facts brought forward to support the case (**T 374/02**). It is necessary that a party who wishes to adduce evidence by means of a witness should indicate what **factual details** it wishes to prove by this means (**T 374/02**). The principle of free evaluation of evidence also applies to the hearing of witnesses under Art. 117(1)(d) EPC (**T 482/89**, OJ 1992, 646).

Compare the present section of this chapter with chapter III.G.2.3 below on statements in writing (written testimony). Compare also: chapter III.G.3.1 below on the relevance of evidence offered, particularly requests that witnesses be heard; chapter III.G.3.2 on when evidence should be submitted or taken; chapter III.G.3.3 on, among other things, observance of the right to be heard where a request that a witness be heard is refused. Chapter III.G.4.2.1 below deals with how oral testimony and written statements are assessed.

The EPC requires **clear requests** with regard to testimonies a party wishes witnesses to give, since the responsible department of the EPO must issue a decision regarding the taking of oral evidence (see Art. 117(1)(d) and R. 72(1) EPC). The board in **T 374/02** was of the opinion that the "implicit offer of witnesses" did not specify what should be able to persuade the board to evaluate the evidence already existing in the file differently. Witnesses were meant to corroborate the facts not to fill in gaps in the facts and arguments. The lack of an indication of the facts which were to be proven by testimonies of the three persons mentioned meant that the necessary conditions for the hearing of witnesses did not exist in the case before the board (other examples: **T 2054/11**; **T 703/12**). **T 1028/11**, cited below, deals with a - justified - refusal to hear a witness and an alleged infringement of the right to be heard. In **T 30/12**, the board refused a request to rehear a witness (see below on the relevance of evidence offered).

The EPC does not rule out that the parties to the proceedings offer their **employees** as witnesses (see e.g. **T 482/89**, OJ 1992, 646; **T 124/88**, **T 830/90**, OJ 1994, 713; **T 443/93**, **T 937/93**) or **clients** (**T 575/94**). See also **T 327/91**, **T 558/95**, cited in this

chapter III.G.2.3 on statements in writing, and **T 508/00** under chapter III.G.3.2 on when evidence should be submitted). The credibility of witnesses cannot be impugned merely because they had a **business relationship** with a party (**J 10/04**, referring to several other decisions). The allegation that a witness might be biased does not itself render the testimony inadmissible; suspicion of bias is rather a matter to be considered during the evaluation of evidence. The **parties must be given an opportunity to comment** on the results of the witness hearing (**T 838/92**; on this point also **T 582/90**). In the context of an alleged oral disclosure (lecture), evidence from the lecturer and a member of the audience, provided by them in the form of both affidavits and oral testimony, was not considered by the board in **T 2003/08** to prove beyond reasonable doubt that the subject-matter of the claim was disclosed during the lecture; the board also observed that relations with the appellant-opponent's company could possibly have influenced their objectivity. In contrast to the opposition division the board considered it appropriate to hear Dr W and Dr K as witnesses because their testimony **could affect the outcome of the proceedings**. The transcript of the witness hearing contained a point concerning their relationship to the appellant-opponent. In the end their oral testimony did not dispel the board's doubts as to the content of the lecture.

The opposition division apparently considered documents as being of a more conclusive evidentiary value than witnesses. Such an approach has no basis in the EPC, Art. 117 EPC containing no ranking of the means of evidence listed in it. The board was also of the opinion that the application of the standard of proof "beyond reasonable doubt" did not justify disregarding the testimonies (**T 918/11**, prior use - long-ago events).

In **T 582/90** the witness was heard by the competent court in Nantes, France (in **T 827/99**, hearing of a witness by national tribunal not necessary).

One object of producing written statements – which are an admissible form of evidence – is to avoid having to call those who made them as witnesses (**T 674/91**; see, however, **T 474/04**, in which it was held that the department of first instance ought to have heard the person who had made the written declaration in question, *infra* in this chapter III.G.2.3).

See also in this chapter: **T 703/12** (timing of a request that a witness be heard – generic reference to submissions in opposition); **T 480/11** (late witness); **T 838/92** (impartiality of a witness); **T 267/06** (need to order the hearing of a witness); **T 716/06** (whether the evidence offered was useful); **T 1096/08** and **T 225/03** (first-instance department wrongly decided not to hear the witnesses); **T 1100/07** (department of first instance's decision not to order hearing of witnesses justified in one case but not in the other); **T 190/05** (citing **T 474/04** extensively and specifying how the department of first instance should have proceeded); **T 361/00** (unnecessary to hear author of unsworn written statements as a witness because statements irrelevant to outcome of the decision); **T 1210/05** (conclusions based exclusively on the testimony of a witness); **R 6/12** (hearing witnesses/experts not ordered by the board). See also in this chapter III.G.4.2.1, III.G.3.1 below on relevance, and Chapter III.B.2.6.4 "Hearing witnesses".

### 2.2.2 Difference between witnesses and experts

The boards of appeal have drawn a distinction between the hearing of witnesses and the hearing of **opinions by experts**: a witness is put forward to substantiate facts of which he/she has personal knowledge. In **T 311/01** the appellant (opponent) offered witness testimony on the skilled person's knowledge and understanding of the cited prior art. However, the testimony was offered as evidence not of specific facts but of the knowledge and ideas of skilled persons in the technical field concerned, so that the appellant was in fact offering experts, not witnesses. Regarding itself expert enough with regard to the features and advantages described in the prior art, the board refused to hear the proposed "witnesses" (see also **T 1511/06** and **T 32/10**).

In **T 480/11** the appellant had referred to Mr J. as a technical expert in its letter of four weeks before the oral proceedings and had requested that he be allowed to comment on any technical issue relating to the claimed invention that might come up. However, the subject on which he intended to speak according to the appellant's request as specified during the oral proceedings was not simply a technical issue but an event in the past, namely the performance of experiments and the results obtained thereby, which had taken place at the appellant's laboratory. So the appellant's request was actually directed to hearing Mr J. as a witness rather than as a technical expert. If the witness had been allowed to speak, the respondent would have had to be given sufficient opportunity to challenge the witness statement and it would have been necessary to adjourn the oral proceedings. The board decided not to allow the appellant's request to hear Mr J., pursuant to Art. 13(3) RPBA.

In a case where the board including three technically qualified members assesses technical facts in the light of patent law and considers itself expert enough to decide upon a matter without technical assistance from an expert within the meaning of Art. 117(1)(e) EPC, such assessment, as stated by the board in **T 1676/08** (case with five members), is a matter for the board and not for a technical expert within the meaning of Art. 117(1)(e) EPC. Such assessment does not mean that any member of the board becomes a witness within the meaning of Art. 117(1)(d) EPC or an expert within the meaning of Art. 117(1)(e) EPC.

### 2.2.3 Expert opinions (Article 117(1)(e) EPC)

The decisions reported below concern requests that the board take evidence from an independent expert under Art. 117(1)(e) EPC and R. 121 EPC (the case law shows that the boards refused those requests). Such cases are to be distinguished from those where opinions of a party's expert are submitted as evidence (which are more common) and in which the department in question will evaluate the opinion's probative value; see in this chapter e.g. **T 753/09** (expert opinion produced too late); **T 1676/08**; **T 658/04**; **T 885/02**; **T 276/07** (language); **T 74/00** (legal expert opinion, Japanese law); **T 517/14** (right of priority, legal expert opinion, Israeli law); **R 18/09** (late-filed external legal opinion on the admissibility of the petition). An opinion of a party's expert is a means of evidence under Art. 117(1) EPC (**T 517/14**, point 2.8.4 of the Reasons). See also the section of this chapter on evidence based on tests and experiments.

In **T 375/00**, the board, ruling on the opponent's request that it order an expert opinion under Art. 117(1)(e) EPC, held that actively seeking experts to help the case of one of the parties could leave it open to an accusation of partiality and that it was for the parties to find the evidence they needed. **Only if** the board did not consider itself in a position to decide upon a matter without technical assistance would expert evidence within the meaning of Art. 117(1)(e) EPC become appropriate (**T 1676/08**, citing also **T 395/91**, point 5.3 of the Reasons, **T 230/92**, point 5.3 of the Reasons, **T 375/00**, point 1.2.2 of the Reasons, and **T 311/01**, point 5 of the Reasons). Other cases rejecting a request for an expert opinion: **T 1548/08**, **T 1763/06**.

In **T 443/93** too, the board refused a request for such an expert opinion made at the oral proceedings after a witness had been heard, noting that the appellant had neither filed the request on time, nor supplied specific grounds justifying such a request at that stage in the proceedings.

In **T 392/06**, during oral proceedings the respondent (opponent) requested the appointment of an independent technical expert in view of the contradictory experimental results of the appellant (proprietor) and the respondents (opponents). The board said that the onus to provide evidence rested on the opponents. The board had not settled a contradiction between experiments from the appellant and the respondents, but had decided on the evidence submitted by the respondents, which turned out to be incomplete. The board had no reason to substitute for the respondents **to compensate for their deficiency** in the provision of the evidence which supported their objection of lack of novelty in allowing an independent expert. Furthermore, commissioning of an independent expert would have made postponement of the oral proceedings necessary, which was contrary to Art. 13(3) RPBA (see also the obiter dictum in **T 998/04**, reported in this chapter III.G.5.1.1, on the burden of proof).

**T 8/13** addressed several procedural aspects. On the request formulated by the appellant (opponent) to hear an independent expert of a university, the board considered that the questions on which it had to decide did not require any further technical expertise to be gathered from outside the Office. The appellant did not provide any further argument as to why hearing an independent technical expert would have been required in order to decide on this case. There were thus no good reasons why the board should have exercised its discretionary power under R. 117 EPC as requested by the appellant.

### 2.3. Statements in writing

Art. 117(1)(g) EPC provides for sworn statements in writing as a means of evidence (rare in practice). However, since any kind of evidence is admissible in proceedings before the EPO, other, less solemn types of written statement (common in practice), e.g. statutory declarations, are also accepted. It is for the boards then to assess their probative value on a case-by-case basis. Such declarations consist of a witness's written statement, the main purpose of which is to avoid the need to hear that witness. The board may, however, decide to order such a hearing, for example if a party so requests. The terminology used in the case law includes "affidavits", "statutory declarations" and

"unsworn statements" (French: "déclarations écrites", "déclarations sur l'honneur" and "attestations"; German: "eidesstattliche Versicherungen" and "eidesstattliche Erklärungen").

According to the practice of the boards of appeal, affidavits or statutory declarations, whether in original or copy form, are considered as possible means of providing evidence. One purpose of written declarations is to avoid the need to hear the undersigning person as a witness. Where such declarations consist of answers to questions put forward by legal experts several declarations may have certain stereotyped formulations in common. The board is not obliged to check the signatures as long as no counter-opinion has been presented concerning those signatures (**T 674/91**; see also **T 558/95**). In **T 474/04** (OJ 2006, 129), where one party invoked **T 674/91** to justify not having to hear the author of an unsworn witness declaration ("eidesstattliche Versicherung") as a witness, the board pointed out that the case before it was different in that the fundamental assertions made in the declaration were **contested**, the author had been offered as a witness, and the appellant had consistently demanded that he be heard. The opposition division's decision not to summon him as a witness although he was available had handicapped the appellant in its defence against what turned out to be the **decisive piece of evidence**. It was observed that this piece of evidence largely lay "within the power and knowledge of the opponent".

Written statements by potential witnesses or parties typically have a lower probative value than oral evidence taken by the department deciding on the case. If a disputed point is **highly relevant to the validity of the contested patent**, it is, as a rule, not in keeping with good procedural practice for an opposition division not to take up an opportunity to hear a witness or party in evidence and instead to require written statements and make do with their typically lower probative value. The board in **T 329/02** could not identify any extraordinary circumstances that might have justified an exception to this rule in the case in point.

In **T 918/11**, the board found that it went against the general rules concerning the consideration of evidence to distinguish dogmatically between the evidentiary value of a witness testimony on the one hand and a document on the other hand. The opposition division had apparently considered documents to be of a more conclusive evidentiary value than witnesses. Such an approach had no basis in the EPC, Art. 117 EPC containing no ranking of the therein listed means of evidence.

Sworn statements in writing, one of the means of giving evidence listed in Art. 117(1) EPC, are **not automatically ordered simply at the request of one party**. All the means of giving or obtaining evidence covered by Art. 117 EPC are subject to the discretion of the department concerned, which will order their use only if it considers this necessary (**T 798/93**, OJ 8/1997, 363).

The board may consider an affidavit to be admissible evidence even if it is signed by the general manager of the appellant (see **T 327/91**). In **T 2003/08** (reported in this chapter) the board observed that relations with the appellant's (opponent's) company could possibly have influenced Dr W's and Dr K's objectivity concerning their declarations

("Eidesstattliche Versicherung"). The board considered that its reservations concerning declarations E1 (declaration of Dr W, lecturer) and E2 (declaration of Dr K, member of the audience) could possibly be dispelled by hearing the authors of declarations E1 and E2 themselves.

Sworn statement (Art. 117(1)(g) EPC) are to be distinguished from "**statutory declarations**", which are not given on oath. Albeit not explicitly covered by Art. 117(1)(g) EPC, statutory declarations are regarded as admissible means of evidence and are taken into account in accordance with the principle of the unfettered consideration of evidence (see e.g. **T 770/91**, **J 10/04** and **T 535/08**).

A statutory declaration ("eidesstattliche Erklärung" or "déclaration tenant lieu de serment") is a means of giving evidence within the meaning of Art. 117(1) EPC and as such is subject to the principle of free evaluation of evidence (**T 558/95**, cf. **T 482/89**, OJ 1992, 646, point 2.1 of the Reasons; **T 575/94**, point 3.7 of the Reasons). The board in **T 443/93**, which had French as the language of the proceedings, referred to a document entitled "eidesstattliche Erklärung" alternately as a "déclaration sous serment" (affidavit) and a "déclaration écrite" (written statement); **T 563/02** referred to a document entitled "affidavit" as "déclaration sur l'honneur". The board in **T 474/04** (OJ 2006, 129), which had English as the language of the proceedings, referred to a document entitled "eidesstattliche Versicherung" as a "declaration in lieu of an oath" and an "unsworn witness declaration". In **T 703/12**, the board called a document of this kind entitled "eidesstattliche Versicherung" a "statutory declaration" and in **T 1231/11** an "affidavit". In proceedings before the EPO even a simple declaration can be an admissible means of evidence within the meaning of Art. 117(1) EPC (**T 474/04**, OJ 2006, 129 – a decision establishing a number of points relating to the law of evidence). The EPO accepts unsworn solemn declarations the same way it accepts other unsworn statements (**T 970/93**, **T 313/04**).

In **T 558/95**, the board held that the fact that the statutory declarations produced by the opponent partly used the same wording and had been drawn up by employees of the opponent did not necessarily mean they should be excluded as inadmissible. The opposition division had discretion to decide whether to examine them, and to **determine whether or not** the evidence in them was **sufficient**.

In **T 190/05**, which contains extensive reasoning on the issue of evidence, the board ruled that, under R. 68(2) EPC 1973 (R. 111(2) EPC), the opposition division ought to have explained more clearly in the reasons for its decision why it had regarded the alleged prior use as substantiated and the statutory declaration as sufficient evidence. Neither the summons nor the brief communication, nor the minutes of oral proceedings, could substitute adequate reasoning in the decision.

In **R 3/10** the Enlarged Board took signed declarations of persons who had attended the oral proceedings into account.

On the probative value of witness testimony and written statements, see also in this chapter III.G.4.2.1.

## 2.4. Other documents

In any proceedings before, inter alia, an opposition division or a board of appeal, evidence may be given by producing documents, either in response to an order by the department hearing the case (Art. 117(1)(c) EPC) or – more commonly – on a party's own initiative in support of its claims. As the EPC neither defines the term "documents" nor gives any indication of the probative value of such documents, the principle of free evaluation of evidence applies. **Any kind of document**, regardless of its nature, is **admissible** during proceedings before the EPO, including appeal proceedings (**T 482/89**, OJ 1992, 646).

The term "documents" in Art. 117(1)(c) EPC was considered in **T 314/90** as meaning essentially all written documents in which thoughts are expressed by means of characters or drawings, including published documents.

In **T 795/93** the board was of the opinion that a document as a means of disclosing the state of the art was a means of proof with a variety of functions. It was intended first to prove what had been made available to the public in the written description it contained, i.e. what contribution in the form of information, knowledge, teaching, etc. it made to the state of the art, and also served to prove when such information had been made available.

**T 760/89** (OJ 1994, 797) dealt with a deposition stemming from infringement proceedings before a United States District Court filed in the opposition proceedings as evidence. The board held that it is in principle admissible under the EPC to consider evidence obtained by a foreign court because the list of means of evidence enumerated in Art. 117(1) EPC is non-exhaustive and because the principle of free evaluation of evidence applies. On national decisions and the production in proceedings before the EPO boards of appeal of documents produced in national court proceedings, see **R 21/09** (chapter III.G.3.3 "Right to be heard" and for more examples of cases concerning **national proceedings** in connection with issues of evidence: **T 582/90**, **T 665/95**, **T 1904/12** (boards not always obliged to justify in detail why a given piece of evidence is disregarded or not convincing), **T 407/08** (experts' opinion ordered by German Court filed by party), **T 276/07** (expert appointed by Court of Bologna), **T 885/02** (several kind of documents/arguments submitted)).

In **T 71/99** the minutes of the proceedings as taken by the opposition division did not provide a full account of the conduct of the oral proceedings. To show the board what had actually happened, the respondent submitted part of a copy of **a report of the opposition proceedings** which had been dictated by his representative in the course of those proceedings. The appellant argued that this document should not be admitted, albeit without disputing the facts set out in it. Since the submitted part of the report was significantly more precise and not difficult to understand, the board saw no reason to disregard the evidence. In **R 3/08** the Enlarged Board, having taken private minutes into account, considered that there was no indication that the petitioner had raised any objection. On minutes of oral proceedings as evidence of the course of the proceedings, see chapters III.C.4.9, IV.F.3.5.4 and **R 7/11**.

In **T 1698/08** the respondent (patentee) objected to the admission of an (**internet**) extract from the Zürich Commercial Register as it stated at the end that the information was provided without warranty and had no legal effect whatsoever, which in its opinion had the consequence that the extract could not be considered as a means of evidence within the meaning of Art. 117(1) EPC. The board stated that Art. 117(1)(c) EPC lists "production of documents" as a valid means of giving evidence, noting that the list in Art. 117(1) EPC is not exhaustive. A refusal to admit such a piece of evidence (an uncertified extract from a commercial register) could therefore not be based on Art. 117(1) EPC. The board decided that there was no reason to exercise its discretion to refuse to admit the evidence, as it could neither be said that it was irrelevant nor that it was unnecessary. A **refusal** to admit it could in any case **not be based** on statements in the document with respect to the **accuracy of the facts** it contained. Such statements relate to the probative value of a document.

See also in this chapter III.G.4.2.3 "Archives and internet publications" and III.G.4.2.4 "Other written evidence". **T 286/10**, a decision on internet publications cited as prior art, is dealt with there and in the section on the standard of proof required to persuade the department concerned (chapter III.G.4.3.1 and III.G.4.3.3).

### 3. Taking of evidence

#### 3.1. Relevance of the evidence

Art. 117 EPC entitled "Means and taking of evidence" is applicable before all EPO departments, including the Receiving Section, examining divisions, opposition divisions, the Legal Division and the boards of appeal. The decision whether to order any of the means of taking evidence listed there depends on whether or not the evidence in question can be considered relevant (i.e. necessary or useful for settlement of the dispute). The decisions reported here deal, essentially, with requests that a witness be heard and it may also be useful to refer to the section in this chapter III.G.2.2, which concerns (refused) requests that an expert's opinion be obtained (Art. 117(1)(c) EPC). Reference is also made to chapter III.G.3.2, which deals with situations when the giving or taking of evidence can be requested or should be ordered. See also in this chapter III.G.3.3, which deals with whether a failure to order that evidence be taken results in an infringement of the right to be heard.

The EPO departments must ascertain the **relevance of evidence submitted to them** before deciding whether to admit or reject it. EPO departments do indeed have some discretion in admitting evidence offered, for example where it is no longer needed because the fact at issue is not contested by the other party, where the decision will in any case go in favour of the party offering it, where it is submitted very late in the proceedings and is considered immaterial, or where for some other reason it cannot affect the outcome (e.g. evidence offered in an inadmissibly late-filed opposition) (**T 142/97**, OJ 2000, 358).

In **T 798/93** (OJ 1997, 363), the board observed that all the **means of giving or taking evidence** covered by Art. 117 EPC are subject to the **discretion** of the department

concerned, which will order their use only if it considers this necessary. It then refused the appellant's request for the taking of evidence as to the opponent's identity because it was couched in general terms and did not refer to any specific means. The only specific means requested was a sworn statement in writing but, in the absence of any legitimate doubt as to the opponent's identity, the board considered that this was neither useful nor necessary.

All appropriate offers of evidence made by the parties should be taken up. As a rule, it cannot be considered to be in keeping with good procedural practice for an opposition division not to take up an opportunity to hear a witness or party in evidence (**T 329/02**).

According to **T 716/06**, it is true that where **oral evidence of a witness** is requested by a party the competent EPO department should grant this request only if it considers this oral evidence necessary, i.e. when it is required to clarify matters that are decisive for the decision to be taken. If a request is made by an opponent to hear a witness on an alleged public prior use and on the disclosure of a certain feature by this prior use, the competent department of the EPO must as a rule grant this request before deciding that the alleged public prior use is neither established nor a novelty-destroying part of the state of the art because the feature in question is not found to be disclosed therein. In **T 2003/08** (reported supra) the board – in contrast to the opposition division – considered it appropriate to hear the witnesses because their testimony **could affect the outcome** of the proceedings.

In **T 1100/07** (alleged prior use, sale of a vehicle with a given feature), the department of first instance had refused to hear two witnesses. The board held that it had been right to refuse to hear one of them, as he would merely have confirmed what he had said in his written statement about documents that anyway spoke for themselves and hearing him would have had no impact on the final decision. It should, however, have heard the other witness. It was true that the request that he be heard had been filed late and that granting it would have meant adjourning the oral proceedings, but the opposition division had based its final decision on a failure to establish the prior existence of a single given feature and the witness would allegedly have been able to give evidence on that very point. Thus, the refusal to hear him was wrong and might have affected the outcome of the decision. The case was remitted to the opposition division.

In **T 361/00** the board explained in detail why, given the circumstances of the case before it, hearing the witness would be unnecessary because it would in no way affect the outcome of its decision.

In **T 1231/11** the board refused the request to hear a witness in support of an allegation of prior use. The witness had been offered to confirm the contents of his statutory declaration, but the board concluded that since he had not made any written statement regarding the decisive issue, any information provided on this matter would amount to introducing new facts into the proceedings. As to the opponent's assertion that the witness had been unable to produce such a written statement due to confidentiality obligations, it was questionable for the board how he would have complied with such obligations during oral proceedings, since those were, like the minutes of the taking of

evidence and the decision, public. In addition the board concluded that there had been no substantial procedural violation by the department of first instance since hearing the witness had not been considered relevant for the outcome of the case. The board found the circumstances to be different from those ruled on in three other cases, where the request to hear witnesses related to facts already on file: **T 267/06** (essential details referred to in the affidavit); **T 25/08** (hearing necessary in order to confirm what had been brought forward in writing); **T 448/07** (need to clarify inconsistencies in a written statement).

In **T 1410/14** (prior use – train – test drive) the board remarked in particular that, since the witness whose hearing the opponent had requested would not have been able to testify as to the decisive material facts, such a hearing would serve no purpose.

In case **T 30/12**, as evidence adduced for proving the invoked public prior use in opposition proceedings, the appellant (opponent) relied upon the drawing A9 and the testimony of Mr H, made before the opposition division. As regards the request for a renewed hearing of the witness Mr H before the board, the board noted that the appellant did not request that the witness be heard again to supplement his testimony by corroborating facts but only to clarify the statements made before the opposition division. However, the statements made by the witness as to whether document A9 was handed over to a member of the public were clear and unambiguous. The request to **rehear** Mr H was eventually rejected by the board.

### **3.2. Time frame for submitting evidence**

This section concerns when the parties should submit evidence and when the taking of evidence should be requested or ordered. It should be read together with chapter III.G.3.3 below, which deals with the issue of respect of the right to be heard where the department decides not to consider the evidence offered. The circumstances in **T 1028/11**, for example, illustrate the impact of the timing of an offer of evidence.

While it has been accepted in the jurisprudence of the boards of appeal that EPO departments have some discretion in admitting evidence, e.g. where the evidence is unnecessary or of no relevance (cf. **T 142/97**, OJ 2000, 358, point 2.2 of the Reasons), the **main legal basis for refusing the admission of evidence** is, as stated by the board in **T 1698/08**, the provisions dealing with the late filing of evidence (Art. 114(2) EPC, Art. 12(4) and 13 RPBA). See for consideration of late-filed evidence: Chapter IV.C.1 "Late submission".

R. 116 EPC (former R. 71a EPC 1973) should not be construed as an invitation to file new evidence or other material departing from the legal and factual framework of issues and grounds pleaded and evidenced throughout the proceedings prior to the hearing of the appeal (**T 39/93**, OJ 1997, 134, cited more recently in this connection in e.g. **T 1932/12**).

In **T 100/97**, the board discussed in detail the criteria to be applied to late-filed evidence. Since a UK infringement action had been stayed pending the outcome of the EPO

appeal, a swift settlement of the case was especially desirable, and admitting facts and evidence submitted at a late stage might have resulted in a remittal protracting the already lengthy proceedings and thus further delaying the UK proceedings. Moreover, for the contents of the statements to be considered sufficiently credible, they had to be **corroborated by documents of a definite date**. Taking into account the very late stage in the proceedings and in the absence of any such documents, it could not be established with a sufficient degree of certainty what had been made available to the public before the priority date of the opposed patent; the board therefore decided to disregard the late-filed evidence (Art. 114(2) EPC). Compare with **T 1057/09** (point 5.9 of the Reasons) concerning remaining doubts as to the authenticity of a late evidence.

In **T 1830/11**, the board observed that there are **no provisions** in the EPC **obliging** opponents to provide evidence against every possible fallback position defined in the dependent claims. Thus, if amendments were made to the claims during oral proceedings before the opposition division (as in the case at issue, where claim 1 had been amended to include the features of a dependent claim in the patent as granted), the obligation to submit evidence "in due time" under Art. 114(2) EPC might, depending on the circumstances, arise first at the stage of filing the statement of grounds of appeal. The board added that, contrary to what the patent proprietor (respondent) had claimed, **T 66/11** did not specify that late-filed documents cited in response to amendments resulting from a combination of granted claims were inevitably inadmissible. That the newly cited document did not disclose all features of claim 1 did make it any less relevant to its purpose, which was to show that the opposition division had erred in the contested decision on a specific point.

The board in **T 574/02** found that documents could not be considered late-filed simply because they had only been submitted on appeal, and any board faced with a request that it refuse to admit a document or evidence as late-filed first of all had to verify whether it really was late or whether, in the particular circumstances of the case, it had been submitted in due time (for a detailed account of the relevant criteria, points 2.2.2 to 2.3 of the Reasons). Finding that the filing party had at all times acted and reacted promptly and with good judgment, the board held that the documents had been submitted **in due time** within the meaning of Art. 114 EPC. Concerning the moment in time fixed by the rules when a party's case is deemed to be completed, refer for example to **T 1949/09** (late-filed tests).

In **T 1096/08**, the board could not share the view of the opposition division. Exercising its discretion under Art. 12(4) and 13(1) RPBA, the board considered it appropriate to take evidence from the two witnesses offered by the respondent (opponent) during the first oral proceedings. By contrast, the board did not admit to the first oral proceedings a further witness who had been offered **at a late stage**. In the board's view, the piecemeal approach of the respondent to asserting yet another alleged prior use shortly before the second oral proceedings clearly could not have been dealt with by the appellant or the board without further adjournment of the oral proceedings (for the consequences of such a piecemeal strategy, see **T 245/10** below).

The board in **T 1100/07** held that, although the opponent's request that a witness be heard had been filed late and unsatisfactorily presented, the opposition division ought to have heard the witness, particularly since he could have provided testimony on a crucial point it had ultimately relied on in its decision. The case was remitted to the opposition division for a hearing of the witness. The board's decision includes extensive reasoning on its findings on witness testimony.

In case **T 703/12**, the board stated that, in accordance with Art. 12(2) RPBA, the appellant's statement of grounds of appeal **should contain its complete case**, inter alia it should specify expressly all the evidence relied on. The appellant (opponent) was aware from the impugned decision that it was questionable whether the alleged prior use had been proven beyond any reasonable doubt. Therefore the board considered that there was no justification, such as a new development in the appeal proceedings, for the appellant to wait until the oral proceedings to request that Mr B (author of the statutory declaration D2) be heard as a witness in order to prove the alleged prior uses detailed in D2. Furthermore, consistent with established jurisprudence, the generic reference to the appellant's submissions in opposition in the notice of appeal could not be interpreted as expressly specifying the offer of Mr B as a witness. Accordingly, the witness offer made for the first time during the oral proceedings constituted an **amendment to the appellant's case** in accordance with Art. 13(1) RPBA and could only have been dealt with by an adjournment of the oral proceedings. In accordance with Art. 13(3) RPBA, the board exercised its discretion not to hear Mr. B. On the issue of a party's complete case, refer to **T 30/15**.

In **T 1760/10**, a replacement witness, Mr S, was offered due to the death of the first witness proposed. During oral proceedings the board decided to hear Mr S as a witness. The respondent (patentee) objected to the hearing of the witness: the nomination of Mr S as a witness was **late** (March 2013 / notice of appeal 2010 / oral proceedings October 2013) and the appellant (opponent) had not indicated the matters on which he should testify. In the board's view, nothing should have surprised the respondent in this regard. In the communication issued with the summons to oral proceedings, the board had indeed indicated that the chain of alleged public prior use contained certain irregularities and did not seem to be sufficiently proven and that the appellant was at liberty to request Mr S to attend oral proceedings, at which he might be heard, albeit that it remained unclear at that time as to how Mr S had relevant knowledge of the events.

When a party seeks to prove potentially relevant facts by means of the statement of a witness, it is particularly important that this statement be furnished early in the opposition phase so as to enable the witness to give oral evidence in accordance with Art. 117 EPC 1973 (**T 953/90**).

In **T 753/09** an expert declaration had been filed by the appellant (opponent) as a response to the summons to oral proceedings issued by the board, ostensibly to demonstrate how the skilled person would interpret documents E1 and E2. The expert declaration had been submitted **less than two months before the oral proceedings** and was therefore regarded as a late submission. Having said that it would allow such belated evidence only if it were sufficiently relevant and if the other party could

reasonably react to the late filing, the board ultimately refused to admit it into the proceedings. Firstly, the declaration did not provide more technical information than the documents E1 and E2 themselves, thus from a technical point of view it was not more relevant than the documents on file. Given that the technical teaching of both documents was relatively simple, and given that patent attorneys normally had a technical background themselves, the expert's explanations might as well be put forward in an equally convincing fashion by the authorised representatives of the appellants, with no less evidential weight before the board. Secondly, an expert declaration had to be considered not just as an argument, but as evidence pursuant to Art. 117(1)(e) EPC. The other party should be given the possibility to have such an expert declaration verified or possibly refuted by another expert with the same qualifications (as requested by the respondent as an auxiliary measure). Indeed, in the particular case, such a defence against the expert declaration required quite some time.

It is clear from the provisions of Art. 13 RPBA that, in spite of the principle of the right to be heard under Art. 113(1) EPC, a party does not have the right to have evidence which he filed or offered during appeal proceedings, in particular during *inter partes* proceedings, admitted into these proceedings (**T 1676/08**). In this case the board addressed several procedural aspects, in particular the fact that – allegedly in response to expert opinions submitted by the opponent – the patent proprietor had submitted as evidence a large volume of documents comprising more than a thousand pages and containing expert opinions only one month ahead of the oral proceedings, which the board had already postponed once at the proprietor's request. Stating detailed reasons for its decision, the board applied Art. 13(3) RPBA and refused to admit one of those expert opinions in particular (D100), finding that D100 was not identifiable as of particular relevance among submissions of over a thousand pages. It also refused to order at such a late stage an opinion by an expert pursuant Art. 117(1)(e) EPC or, since the relevant conditions set out in **G 4/95** were not met, to hear the party's expert at the oral proceedings in the capacity of an accompanying person.

In **T 245/10** the board held that the respondent (opponent) had had sufficient time to consider the results of comparative tests filed with the statement of the grounds of appeal, and admitted them into the appeal proceedings. The respondent had announced in 2010 that it would comment on those tests and/or present counter-tests on condition the board first issued an opinion on the admissibility of the appellant's tests. The board found that, in filing its own comparative tests only a month before the oral proceedings in 2012, the respondent had taken the risk of compromising the admissibility of its own tests, observing that a **piecemeal strategy** resulting in multiple rounds of oral proceedings devoted solely to the admissibility of late-filed evidence ran counter to **procedural economy** (Art. 15(6) RPBA). Before setting out its conclusion as to whether the late-filed experimental data was admissible, the board (citing **T 270/90**, OJ 1993, 725, point 2.2 of the Reasons) had first of all reiterated that, in accordance with the criteria established by the boards for the exercise of discretion to admit or disregard such evidence, it had to ensure that the late submission was not a **tactical abuse of procedure** prejudicial to procedural fairness and that admitting the evidence would not infringe the other party's right to be heard.

In case **T 712/97**, the opposition division did not allow the appellant's experimental report in response to the respondent-patentee's experimental report into the proceedings. To admit the experimental report of one party, but not the response of the other party gave the appearance of **discriminatory treatment**. The opposition division had committed a procedural violation.

In **T 973/10**, the board, in exercising its discretion to decide whether to admit late-filed evidence of prior use, considered whether there were any circumstances justifying its late submission and whether it was prima facie relevant. It found that there was no justification, rejecting the appellant's (opponent's) argument that finding the evidence had been costly. The financial consequences of the workload involved could not justify submitting new evidence at the appeal stage. Nor was the late submission justified by the appellant's decision to appoint a new representative for the appeal. The board then held that the evidence was anyway not prima facie relevant. The **photographs** produced were not sufficiently compelling evidence because they did not enable it to reach any objective conclusion as to the nature and structural details of the device allegedly disclosed at a meeting. It thus refused to admit the late-filed evidence into the appeal proceedings (Art. 114(2) EPC in conjunction with Art. 12(4) RPBA).

The board in **T 508/00** ruled that poor communication within a company or group of subsidiary companies was not an adequate and acceptable reason to admit late-filed documents the opponent had submitted during the appeal proceedings in support of an alleged prior use. Moreover, the documents in question, which included technical drawings with no explanations, were so large in number that it would have been difficult for the board or the other party to deal with them properly. The board therefore refused to admit them. By contrast, it admitted written statements produced by the opponent because they related to the alleged prior use, had been submitted relatively early in the appeal proceedings, giving the patent proprietor time to respond to them, and constituted a response to the opposition division's decision and to employee statements produced by the proprietor a month prior to the oral proceedings before the opposition division.

In **J 20/85** (OJ 1987, 102), the Legal Board held that evidence should be taken as soon as an issue arises. In a dispute between the appellant and the Receiving Section as to whether a particular document had been filed on a particular day, the post room staff could not have been expected to have a clear recollection of what had happened more than a year after the events in question. See also in this chapter: **T 1028/11** (late-filed request for a witness hearing); **T 2003/08** (hearing of a duly summoned witness who had failed to confirm attendance but was present on the appointed day).

In **T 190/05**, the board found that the opposition division had been wrong to base its finding that an alleged prior use had destroyed a patent's novelty solely on a statutory declaration, because the patent proprietor had expressly disputed both the allegations made by the opponent and those in the declaration, which represented, besides, a piece of evidence and not in itself prior art. That it would have been impossible to give the witness named by the opponent the minimum two months' advance notice (R. 72(2), first sentence, EPC 1973, R. 118 EPC) of the already scheduled oral proceedings was not, in the board's view, an exceptional circumstance justifying the failure to invite him. The

case was remitted to the opposition division for a hearing of the witness and also to avoid the loss of two instances for determination of the case.

A party may be heard in the absence of his patent attorney if the latter has been duly informed (cf. **T 451/89** and **T 883/90**, ex parte cases concerning apparatus that seemed to operate in a manner clearly contrary to well-established physical laws – taking of evidence ordered at oral proceedings).

### 3.3. Right to be heard

An opposition division's refusal to consider evidence filed **in due time** infringes a party's fundamental right to free choice of evidence and the right to be heard (**T 142/97**, OJ 2000, 358). Pursuant to Art. 113(1) EPC each party must be allowed to comment on any evidence legitimately submitted in the proceedings. Allowing one party, even the party that originally submitted the evidence, to require unilaterally and arbitrarily that the evidence be withdrawn or excluded from consideration would infringe this right (**T 95/07**; cf. the case in **T 760/89**, OJ 1994, 797, concerning a return of documents filed as evidence).

As a rule, if assertions made in an unsworn witness declaration ("eidesstattliche Versicherung") remain **contested**, a request from a party to hear the witness must be **granted** before these assertions are made the basis of a decision against the contesting party. In **T 474/04** (OJ 2006, 129), the opposition division had revoked the patent in suit because the invention did not involve an inventive step over the prior use evidenced in the declaration in lieu of an oath. Since fundamental assertions made in the declaration had been contested, the author was offered as a witness. Although the appellant (patentee) had consistently demanded that the author be heard, the opposition division decided not to summon him as a witness, even though he was available. In the board's view, the appellant had effectively been prevented from making use of a decisive piece of evidence. Thus, the opposition division had infringed the appellant's right to be heard, which constituted a substantial procedural violation justifying the remittal of the case to the department of first instance (this decision was extensively cited in **T 190/05**).

Failure to consider evidence will normally constitute a substantial procedural violation in that it deprives a party of basic rights enshrined in Art. 117(1) and Art. 113(1) EPC (**T 1098/07**). In **T 135/96** (point 3 of the Reasons), ignoring documents (and arguments) relevant to inventive step was found to violate the party's right to be heard. The board in **T 1110/03** (OJ 2005, 302) made a similar finding where indirect evidence substantiating an allegation of fact relevant to novelty was disregarded. In **T 1110/03**, the board observed that Art. 117(1) EPC and Art. 113(1) EPC embody a basic procedural right generally recognised in the EPC contracting states, viz. the right to give evidence in appropriate form (specifically by producing documents under Art. 117(1)(c) EPC) and the right to **have that evidence heard** (**T 1110/03**); except to the extent that they were expressly excluded from the debate (**T 2294/12**). In **T 1536/08** the opposition division had infringed the opponent's right to be heard by completely ignoring the unambiguous offer in its notice of opposition to provide the original printed versions of crucial prior-art documents (see also Chapter III.B.2.4.3 "Failure to consider evidence").

In **T 838/92** the board observed that in applying the principle of free evaluation of evidence, the opposition division or the board of appeal must exercise caution when evaluating the testimony of a witness whose impartiality is in doubt, with the parties of course being given an opportunity to comment on that testimony (Art. 113(1) EPC 1973). The board was not minded to sustain the appellant's objection to consideration of court bailiffs' reports on the basis that they had been established unilaterally. Such documents recording findings of fact were merely pieces of information which could be added to the file as evidence once they had been **submitted to the parties for comment**. In **T 909/03**, where one of the appellants had objected to the manner in which a witness had been heard, the board held that it was not necessary for a party to be given a copy of the minuted testimony before questioning a witness. During the oral proceedings the party had been given sufficient opportunity to comment on the testimony of the witness.

In **R 6/12** (case **T 928/10**), the Enlarged Board considered unfounded the assertion made by the petitioner (opponent) in its first ground for review that it had been surprised by the board's failure to order that expert witnesses be heard. The petitioner could and should have taken an **active part in the proceedings** and, in particular, it was up to it to inform the board during the debate of any need to hear witness to support its line of argument. In its second ground for review, the petitioner contended that the board's decision did not take account of its arguments in general or, more specifically, the submissions of an assistant expert on the technical effect alleged by the patent proprietor. The Enlarged Board, without assessing the evidence the board had taken into account, which would have amounted to revisiting the substance of the case and so fell outside the ambit of the review procedure, dismissed the petitioner's claim to have been denied its right to be heard as unfounded. The board was **not obliged to address in detail each and every argument** presented by the party. The Enlarged Board had already found in **R 21/09** that, on the pretext of an alleged infringement of the right to be heard, it was actually being asked to review the substance of the decision by examining whether the evidence the board had relied on had been appropriate and sufficient. This clearly fell outside the ambit of review proceedings, it being solely a matter for the board to decide whether to take a piece of evidence into account and, if so, to determine its probative value.

While it is well-established by case law that **third-party observations** can be considered, both at first instance and on appeal, there is no obligation on the board beyond such consideration and no right of a third party to be heard on the admissibility of its observations and of any evidence in support of observations. The admissibility of third-party observations (and accompanying evidence) is entirely a matter for the board (**T 390/07**). As a rule, third parties have none of the procedural rights associated with status as a party to the proceedings, in particular the right to be heard (**T 1756/11**). Conversely, parties to the proceedings can comment at any stage on new facts and evidence emerging from third-party observations filed after expiry of the opposition period, if they think that these could influence the decision (**T 1756/11**; see also Chapter III.N. "Third-party observations").

In **T 267/06** an **affidavit** with an attached, **undated drawing** (item D12) and a witness hearing had been offered as evidence of the public prior use claimed in the notice of

opposition. The opposition division had rejected the opposition to the European patent. The only reference it had made in its decision to the offer of a witness hearing as evidence was in the "Summary of facts and submissions", while the reasons dealt exclusively with the item D12 affidavit and drawing. In the board's view, essential details referred to in the affidavit and deemed to be illustrated in the drawing seemed not to have been taken sufficiently into account by the opposition division. In those circumstances, the witness hearing offered as further evidence should not have been disregarded for the purposes of assessing the claimed public prior use as per D12. This amounted to a fundamental procedural violation as it deprived the opponent of the opportunity to exercise the right to be heard under Art. 113(1) EPC.

The appellant in **T 1028/11** alleged that the opposition division had infringed its right to be heard, and so committed a procedural violation, by refusing to hear the witness it had offered. The board disagreed: a witness's function was, in essence, simply to corroborate the alleged facts on which they were heard and not to fill in gaps in those facts. Parties therefore had to specify what legally relevant facts the witness's testimony was intended to prove. Based on the evidence available, the opposition division had taken the view that the public prior use was not prejudicial to patentability. The board found that there would have been little point in hearing the witness at that stage. During the oral proceedings, the opponent had again requested that the witness be heard. Given the witness's absence, however, the opposition division could not have granted the request without adjourning the proceedings. Thus, at that late stage of the proceedings, the opposition division had been entitled to dismiss the request and had not thereby committed any procedural violation. This case was cited in **T 444/09**.

In **T 2003/08**, witnesses were summoned in accordance with R. 118 EPC and they were invited to confirm their attendance. Neither witness replied at all. But both witnesses were present on the day for which they were summoned. The appellant (patentee) requested the board to refrain from hearing them. The failure to react to the invitation in the summonses did not have any influence on the board's view that the witness evidence of Dr W and Dr K was necessary. Furthermore the board stressed that if a witness does not himself comply with a request directed to him, it does not mean that the party or representative is indulging in "**procedural games**".

In **T 361/00** the board ruled that there was no point hearing the author of statutory declarations as a witness at oral proceedings because, in view of the other aspects on file that had been discussed, it would not change its decision. Nor did the board agree that the opposition division had committed a substantial procedural violation by ignoring an offer to present the witness: the minutes of the oral proceedings – which the party concerned had not contested – did not record that it had made such an offer.

In **T 1872/08**, the board decided that in not admitting the comparative tests offered by the patentee, the opposition division had not taken into account that it deemed further comparative data to be absolutely necessary in order to overcome its objections as to inventive step. The opposition division had thus **deprived** the patentee **of the possibility to defend its case effectively**. For these reasons, the opposition division

had not used its discretion in a reasonable way by not admitting the additional comparative tests.

In **G 4/92**, concerning the exceptional case of a decision taken against a party who has been duly summoned but fails to appear at oral proceedings, the Enlarged Board established that **new evidence** may not be considered unless it has been previously notified and merely supports the assertions of the party who submits it, whereas new arguments may in principle be used to support the reasons for the decision (**G 4/92**, OJ 1994, 149, headnote 2). For more on non-attendance at oral proceedings, see Chapter III.C.3.

In **R 21/09**, the party alleged an **infringement of the right to defence** on the basis that the board had refused to allow further discussion of **all the documents submitted to the English courts**.

See also Chapter III.B.1 "Right to be heard".

### 3.4. Return of filed evidence

As a rule, documents filed as evidence during opposition proceedings and submissions referring to them remain in the file until the end of the proceedings and for at least five more years (see R. 147 EPC (amended since then: OJ 2015, A83); former R. 95a EPC 1973). Documents filed as evidence may only exceptionally and on a substantiated request remain unconsidered and be returned. Such an exception exists if the interests of the filing party in having them returned unconsidered clearly prevail over the interests of any other party and the public interest. This might be the case if the documents have been filed in **breach of a confidentiality agreement** and if they do not belong to the state of the art but are third party statements filed as part of the response to the opposition, and if the other parties involved agree with the request. The same applies to submissions referring to such documents (**T 760/89**, OJ 1994, 797).

## 4. Evaluation of evidence

### 4.1. Principle of free evaluation of evidence

Neither in the EPC nor in the case law of the board of appeal are formal rules laid down for the evaluation of evidence. The Enlarged Board of Appeal has recalled that proceedings before the EPO are conducted in accordance with the principle of the free evaluation of evidence (**G 1/12**, OJ 2014, A114, citing **G 3/97**, OJ 1999, 245, point 5 of the Reasons, and **G 4/97**, OJ 1999, 270, point 5 of the Reasons).

Thus the EPO departments have the power to assess whether the alleged facts are sufficiently established on a case-by-case basis. Under the principle of free evaluation of evidence, the respective body takes its decision on the basis of all of the evidence available in the proceedings, and in the light of its conviction arrived at freely on the evaluation whether an alleged fact has occurred or not (see e.g. **T 482/89**, OJ 1992, 646; **T 592/98**, **T 972/02**; see also e.g. **T 838/92**, in which the board found there was a

detailed and consistent body of evidence establishing that a device had been on sale before the patent application was filed). However, the principle of free evaluation of evidence in EPO proceedings cannot go so far as to justify the refusal of a **relevant and appropriate** offer of evidence. Free evaluation of evidence means that there are no firm rules according to which certain types of evidence are, or are not, convincing. The deciding body must take all the relevant evidence before deciding whether or not a fact can be regarded as proven (**T 474/04**, OJ 2006, 129, citing **G 3/97**, OJ 1999, 245, point 5 of the Reasons). On the other hand, failure to submit evidence despite a board's request to do so may be viewed as a sign that the evidence would perhaps not confirm what has been claimed (see **T 428/98**).

When evaluating evidence, it is necessary to distinguish between a document which is alleged to be part of the state of the art within the meaning of Art. 54(2) EPC, in the sense that the document itself is alleged to represent an instance of what has been made available to the public before the priority date of the opposed patent, and a document which is not itself part of the state of the art, but which is submitted as evidence of the state of the art or in substantiation of any other allegation of fact relevant to issues of novelty and inventive step (**T 1110/03**, OJ 2005, 302). In the first situation, a document is **direct evidence** of the state of the art; its status as state of the art cannot normally be challenged except on authenticity. In the second situation, a document is also **evidence** albeit **indirect**; it provides a basis for an inference about, e.g. the state of the art, common general knowledge in the art, issues of interpretation or technical prejudice etc. – an inference which is subject to challenge as to its plausibility. Only a document of the first kind can be disregarded on the sole ground that it is published after the priority date. Documents of the second kind do not stand or fall by their publication date even on issues of novelty and inventive step. Disregarding indirect evidence would deprive the party of a basic legal procedural right generally recognised in the contracting states and enshrined in Art. 117(1) and Art. 113(1) EPC.

Following the above distinction, the board in **T 1797/09** held the comparative examples in document D1 that had not been made available to the public at the priority date, i.e. a document that qualified as indirect evidence, to be equivalent to the comparative examples put forward by a party as proof of its allegations. Such examples were allowable at any reasonable point of the proceedings, provided they were not in abuse of the proceedings. In the case at issue, the comparative examples in document D1 cast doubt on the allegation that the claimed features would solve the technical problem in a non-obvious manner. The patent was thus revoked for lack of inventive step.

The board in **T 419/12** likewise applied the distinction clarified in **T 1110/03** and ruled that the fact two of the documents cited had been published after the priority date did not preclude their admission for the purpose of clarifying facts or common general knowledge.

#### 4.2. Probative value of evidence on a case-by-case basis

According to the principle of free evaluation of evidence, each piece of evidence is given an appropriate weighting according to its probative value. As the Enlarged Board of

Appeal pointed out in **G 3/97** (OJ 1999, 245, point 5 of the Reasons) and **G 4/97** (OJ 1999, 270, point 5 of the Reasons), "(t)he principle of free evaluation would be contradicted by laying down firm rules of evidence defining the extent to which certain types of evidence were, or were not, convincing" (cited in **G 1/12**, OJ 2014, A114).

The following cases illustrate how the boards have evaluated various pieces of evidence in the light of the specific circumstances.

#### 4.2.1 Witness testimony and written statements

See also in this chapter III.G.2.2 and III.G.2.3.

The probative value of the declarations of a witness depends on the circumstances of the particular case (**T 937/93**, cited in **T 190/05**). The **credibility of witnesses** cannot be impugned merely because they are related to one another and have a business relationship with one of the parties (**T 363/90**). An allegation based solely on suspicion cannot reasonably be expected to form a valid ground for casting doubt on the credibility of the evidence (see **T 970/93** involving allegations of falsified evidence). The statements of employees of one of the parties were regarded as sufficient evidence in a series of appeal cases, e.g. **T 162/87** and **T 627/88**, **T 124/88**, **T 482/89** (OJ 1992, 646), **T 363/90**, **T 830/90** (OJ 1994, 713), **T 838/92** and **T 327/91**, **T 190/05**, **J 10/04** (employee of representative's law firm).

In **J 10/04**, the Receiving Section had doubted the credibility of sworn statements given by a legal assistant on the basis that they were not persuasive because she was not impartial and her statements were based on personal impressions. It had not invited her to be heard in person as a witness because it had considered that this would not lead to a different its evaluation of the evidence. The Legal Board held, first of all, that a sworn statement was a form of evidence with a high probative value, especially if it was given, as in the case in point, in the knowledge that wilfully false statements were punishable under the applicable law. Strong reasons were therefore needed to disregard this kind of evidence, for example a set of circumstances making the statement very unlikely. If the Receiving Section had considered the circumstances described in the statement very unlikely, it ought to have heard the witness personally in order to evaluate her credibility (the ruling in **J 10/04** has been applied in e.g. **T 1100/07**, in which the board reiterated some of the rules on hearing witnesses).

With regard to the credibility of witnesses, the board observed in **T 1210/05** that even a person who was not being dishonest might make untruthful statements. A person can be honestly mistaken in his recollection of an event, particularly if the event took place some time ago.

In **T 100/97**, without casting doubt on the good faith of the submitted declaration, the board stated that for the content of such statements to be considered sufficiently credible, it had to be **corroborated by documents of a definite date**. In the absence of any such documents, the board decided that it could not be established with a sufficient

degree of certainty what had been made available to the public before the priority date of the opposed patent.

In **T 804/92** (OJ 1994, 862) the opposition division had, in a communication to the parties, suggested in detail the content of a statement under oath. Such a practice was firmly rejected by the board because it involved the risk of leading witnesses and could seriously undermine the probative value of such statements. This applied to departments at any instance in proceedings before the EPO.

In **T 1191/97** the appellant's criticism of the evaluation of evidence by the department of first instance did not pose a serious threat to the witness's credibility. The fact that the events at issue had taken place a long time ago could readily explain certain imprecisions in the witness's testimony. The board saw no indication that the witness had been in breach of his obligation to testify to the best of his recollection.

In **T 61/07** the board made clear that the doubts cast by the respondent on the witness's memory about events which had happened 23 years ago concerned not the witness's credibility but the **credibility of the testimony**. However, it saw no reason to doubt that his testimony was credible. Just because the witnesses had each independently met a third witness before being heard did not automatically mean that their recollections had been influenced. Shortly before a party alleges prior use, witnesses are normally sounded out about what they actually remember. Such a discussion with a potential witness did not automatically imply that during it the party or one of its staff had influenced what the party remembered.

In **T 905/94**, the board held that the fact that one witness had made his declaration three years earlier than other witnesses was not sufficient reason to make his testimony more credible.

In **T 473/93** the board decided that the appellant's surmise that he had been in error in making his statutory declaration was not sufficient to allow orally presented facts which deviated from the declaration to appear more credible. The fact alleged orally therefore had to be regarded as not proven.

In **T 361/00**, the appellant (opponent), seeking to establish novelty-destroying public prior use during the opposition proceedings, had submitted a technical report and a statutory declaration ("eidesstattliche Erklärung") relating to visits to a cement works and proposed that the declaration's author additionally be heard as a witness. On appeal, it submitted two new documents, one being a second statutory declaration by the same author. The board went into the circumstances of the visits and the particular features of cement works in some detail and, observing that it was common ground between the parties that the technical report had not been made available to visitors, held that the fact that they could have found out what was in it **on request** did not mean its content had been made publicly available. Visiting a cement works was not the same as visiting a library. As to the two **statutory declarations**, the board had no doubt that they had been made in good faith but found them to be **contradictory**. Having found that the appellant's submissions at the oral proceedings had not clarified the contradictions, it

concluded that the appellant had failed to furnish conclusive proof of the alleged prior use. Lastly, it held that there was no need to hear the witness, giving reasons for this finding (on contradictory statements, see also **T 833/99**).

In **national proceedings** before the Dutch District Court and Court of Appeal, several witnesses had been heard, and written statements had been introduced by both parties. The Dutch Court of Appeal could not establish an uninterrupted chain of proof that the alleged public prior uses had indeed taken place before the priority date of the contested patent. After evaluating the Dutch Appeal Court's findings, the board's judgment in **T 665/95** was that no further investigations were necessary and that the conclusion of the Dutch Appeal Court could be followed, with the consequence that the subject-matter of the granted claim 1, contrary to the impugned decision of the opposition division, was considered to be novel. (Other examples of cases in which findings made in national proceedings served as evidence include **T 760/89**, OJ 1994, 797 (USA); **T 582/90** (FR), **T 1043/93** (IT), **T 885/02** (NL); **T 276/07** (IT); **T 407/08** (DE); **R 21/09** (UK); **T 1904/12** (DE) and **T 202/13** (NO)).

An **unsigned statement** by an unknown and unnamed person should in principle be given minimal weight (**T 750/94**, OJ 1998, 32). In **T 212/97**, the board could not regard the citation of facts based on **hearsay** and not accompanied by a witness testimony as adequate evidence for the alleged prior uses.

#### 4.2.2 Test and experimental evidence

In **T 702/99** the board made extensive remarks with regard to the probative value of test evidence. It noted that it was essential that **comparative tests** conducted by a number of persons as evidence for or against qualities such as an improved "feel" of a product (e.g. cosmetics) be made under conditions of maximum objectivity on the part of those conducting the tests. Parties to proceedings should adopt the same standards in the preparation of such test evidence as they should in the preparation of experimental evidence. While the use of independent persons would naturally tend to carry more weight, the use of employees might not be objectionable per se as long as the test conditions were designed to ensure that the employees were not biased by prior knowledge of either the tested products or of their employer's expectation of the test result. The presentation of test evidence also had to be accurate, but the format of the presentation was of secondary importance; a carefully prepared report and/or table might convey as much information as a large number of statements from the testers.

In **T 275/11**, the invention concerned a bleaching/highlighting composition for hair. In order to demonstrate that the problem was successfully solved, the appellant (patentee) referred to two comparative examples. The board cited **T 702/99** and recalled that the comparison had to be made under conditions that ensured maximum objectivity on the part of those conducting the tests. It was desirable to show that the tests had been **carried out under "blind" conditions** to avoid any suspicion of bias. The board found that there was no indication of the conditions under which these tests had been conducted. Therefore, any effects referred to by the appellant had to be disregarded.

In **T 453/04** the board found the **experimental evidence** advanced by the appellant (opponent) to be defective for two reasons. Firstly, the teachings of the patent in suit were not accurately replicated. Secondly, the product presented as representative of the prior art had not been shown to belong to the prior art. Thus the experimental evidence of the appellant did not demonstrate that the process steps set out in claim 1 of the main request resulted in products indistinguishable from those of the prior art.

In **T 1872/08** which concerned inventive step and the non-obvious solution of a problem based on an advantageous effect demonstrated by means of comparative tests, the Opposition Division had not deemed the tests provided by the applicant (appellant) to be relevant because the tests had been made with one specific printer on one specific paper, both different from the paper and the printer used in example 18 of document (D9). The board stated that, according to the established jurisprudence of the boards of appeal, "in the case where comparative tests are chosen to demonstrate an inventive step with an improved effect over a claimed area, the nature of the comparison with the closest state of the art must be such that **the effect** is convincingly shown to have its **origin in the distinguishing feature of the invention**. For this purpose it may be necessary to modify the elements of comparison so that they differ only by such a distinguishing feature ..." (**T 197/86**, OJ 1989, 371, point 6.1.3 of the Reasons). The board concluded in **T 1872/08** that the comparative tests provided sufficient evidence that the problem was solved.

In **T 71/09**, the tests cited by the appellant (proprietor) had compared a composition according to the invention with a different composition found in the prior art. The board observed that, where comparative tests were chosen to establish inventive step on the basis of an effect produced over the claimed area, the comparison with the closest prior art had to show convincingly that the effect was **attributable to** the distinguishing of feature the invention. In the circumstances of the case, however, a mere comparison of the two compositions was insufficient to demonstrate that the alleged effect had been caused by the claimed solution or that this effect had been produced across the entire claimed area. Indeed, the improved resistance of hair dye to shampoos might **be caused by other factors**. Improved durability of hair dye had not been established for all the claimed compositions.

In **T 479/06**, the board found that tests results cited by the proprietor to show that the problem was solved by the claimed solution and so establish inventive step were **not conclusive**. It could not conclude on that basis that the technical problem had actually been solved, so the technical problem had to be redefined.

In **T 1127/10** (hair treatment), the problem to be solved had been defined in the light of the closest prior art. The next step was to examine whether the claimed subject-matter actually solved that problem and, if not, to redefine the problem. Since there was no experimental data in any of the examples in the patent, the appellant had submitted a document reporting on two series of comparative tests. The board, however, after reiterating the criteria to be met by comparative tests produced to establish a technical improvement over the closest prior art, found that the document's description of the test procedure and analysis of the results were deficient and insufficiently informative to

demonstrate plausibly that such an improvement had been achieved (see also **T 1962/12**: comparative examples deficient – improvement not plausibly demonstrated).

The board in **T 578/06**, noting that the EPC does not require experimental proof for patentability, considered that the disclosure of experimental data or results in the application as filed and/or post-published evidence was not always required to establish that the claimed subject-matter solved the objective technical problem. This was particularly true where no substantiated doubt had been raised.

The Enlarged Board stated in **R 9/14** that the petitioner was mistaken in believing that the deciding board had committed a serious procedural violation by not informing it of the correct sequence to be followed in the problem-solution approach and in the way it had applied the substantive law. The submission of comparative-test results to prove an effect or improvement was part of the problem-solution approach when establishing the problem over the closest prior art that is effectively solved by the claimed subject-matter. The petitioner's specialist knowledge of patent law should have told it that. There could thus be no question of a "surprise" or infringement of the right to be heard.

In **T 1248/08**, in the application as filed, a number pertaining to a value used in example 1 was illegible and indecipherable. It was not clear whether it should read "0.08" or "0.09", or even "0.05". The board held that the arguments of the appellant adopting proof "on the balance of probability", in particular **a survey** in favour of the value of "0.09", had to fail. According to the survey conducted amongst partners and staff at the firm of the appellant's representative these results demonstrated that the value in question could not be considered to be "0.09" with a certainty "beyond reasonable doubt", as required by the established jurisprudence. In any event, a question of accuracy and disclosure could not be decided by a **poll** (see also Chapter II.E.5 "Evidence and standard of proof for allowing amendments and corrections").

#### 4.2.3 Archives and internet publications

In **T 314/99** concerning the availability to the public of a diploma degree paper ("Diplomarbeit"), the board took the view that the paper had not become publicly available by its mere arrival in the archive of the Chemistry Department Library of the University. The **logbook** produced in evidence was a handwritten note book in which the diploma degree papers received in the archive were entered by the librarians. The logbook itself was not an official publication of the library but essentially an internal document of the library staff. After closer examination of the annotations in the logbook, the board said that it could not be concluded with certainty that the relevant entries had actually been made before the relevant priority date and it could not be ruled out that they had been added at a later time, when for one reason or another the time frame had become relevant. (See also, with respect to a diploma thesis allegedly disclosed during an oral presentation, **T 1057/09**).

In **T 91/98** the respondent (opponent) had challenged inventive step on the basis of document (8) which was an **entry from the Lexis-Nexis database**. The document did not, however, provide any evidence as to when this information had been entered into

the database, i.e. as to when it had been made available to the public. Nor could the date of availability be taken as the date mentioned in the heading of the entry (September 3, 1985) as this latter date could not be equated to the distribution date of the information and was not even necessarily correct. After detailed evaluation of the declarations and affidavits filed by the respondent the board arrived at the conclusion that the date on which the information contained in document (8) had been made available to the public could not be unambiguously defined.

In **T 286/10**, the board held that a merely general allegation that **digital libraries** were unreliable was not enough to cast doubt on the date on which a document stored with Internet Archive ([www.archive.org](http://www.archive.org)) had become publicly available. It applied the usual standard of proof on the balance of probabilities (more recently, **T 2227/11**).

In **T 1698/08**, there was no reason for the board to exercise its discretion to refuse to admit the evidence, as it could neither be said that it was irrelevant nor that it was unnecessary. A refusal to admit could in any case not be based on statements in the document with respect to the **accuracy of the facts** it contained. Such statements related to the probative value of a document. Based on the principle of the free evaluation of evidence (**G 3/97**, OJ 1999, 245, point 5 of the Reasons), the board is free in assessing to what extent the information in a document is credible, whereby such a statement may play a role. Case **T 1698/08**, in respect of the disputed validity of an authorisation related to an (internet) **uncertified extract** from a commercial register.

For decisions on internet disclosures, see aforementioned **T 286/10**, in which the board rejected the conclusion reached in **T 1134/06** that digital libraries on the internet are inherently unreliable (see chapters III.G.4.3.1 and III.G.4.3.3 below, dealing with standards of proof), but also **T 1469/10** and Chapter I.C.3.2.3 "Internet disclosures" and I.C.3.5.2c) "Internet – proof of the date of availability". Lastly, see **T 1553/06** (point 5 of the Reasons, pages 41 to 43) and **T 2/09** (point 3.2 of the Reasons, pages 53 to 56), both exceptional in that they were test cases (N.B. both these decisions preceded **T 286/10**).

#### 4.2.4 Other written evidence

In **T 332/87** a dated **internal paper**, marked as being confidential and not signed, was - together with an undated leaflet - not considered sufficient evidence. In **T 595/89** the board decided that the opponent's in-house documents relating to the installation of a device in an aeroplane and to the sale thereof were not sufficient to prove public prior use.

In **T 204/88** a **letter of tender** was not sufficient to prove public prior use because it was not discernible when and to whom the device was to be delivered and because the device was described in terms too general for anyone to identify whether it corresponded to the invention. In **T 725/89** too, a dated tender was not regarded as sufficient evidence, as it was not proven when the tender had actually been presented, and the date of the tender was only one week prior to the priority date. By contrast, the board took the view

in **T 482/89** (OJ 1992, 646) that an **unsigned delivery note**, together with other documents, could constitute sufficient evidence of delivery.

In **T 48/96** the board decided not to accept copies of pages from a **catalogue** bearing a date as sufficient proof of availability to the public. In order to prove the allegation that a particular apparatus described in a catalogue had been available to the public before the priority date, it was not sufficient to show that the catalogue had been published on time, because a mere indication in a catalogue did not constitute absolute proof that the described product had in fact been available to anybody; for example, there could have been a delay (see in this chapter III.G.4.3.3 for examples of cases concerning catalogues and commercial brochures, including **T 1710/12**, in which the board addressed the implications for the standard of proof where such a catalogue has not been produced in support of alleged prior use).

In **T 905/94** the patent proprietor had exhibited a blind at an exhibition. After having considered the evidence regarding the exhibition the board looked at the question of whether use of the same **trade name** for different models could constitute evidence of the fact that the patent proprietor had marketed or described the blinds according to the patent at issue before the date of priority. In the board's opinion, such use could not constitute sufficient evidence since it was common practice in industry for the same name to be used and retained for a product, the technical characteristics of which changed over time as improvements were made.

In **T 2357/12** concerning the transfer of opponent status and the concept of "universal succession", the board commented on the evaluation of evidence. The proprietor questioned the probative force of **private documents**, as submitted in this case, rather than public registration documents, as evidence of the transfer of opponent status in inter partes proceedings. The board stated that whereas **public registers** often enjoyed public trust regarding the facts registered and other public documents might be more conclusive on formal questions, the identity of the issuer and the date and place of creation of a private document could be more easily contested. However, neither kind of document provided irrefutable evidence of the correctness of a document's content. Citing examples of the different types of documents accepted in individual cases, the board pointed out that the boards had always accepted public and/or private documents as evidence of the transfer of rights, whether by way of universal succession or a single transfer of assets. The level of proof required was credibility of the facts for which evidence was given, in the light of all circumstances.

The opponent having died, the board had to decide in **T 74/00** whether the evidence had shown that an heir or heirs had succeeded to the right of the opponent to appeal or to the appeal itself. In the board's view, the best evidence which could be provided was evidence of the relevant law of succession (here, Japanese law) by way of **legal opinion** from a Japanese attorney-at-law; the mere filing of copies of a party's correspondence with his instructing Japanese attorneys could not serve as substitute. In **T 205/14** (and **T 517/14**) Israeli law (applicable) was proved to the satisfaction of the board by an expert opinion provided by the party (right of priority – assignment).

### 4.3. Standard of proof

#### 4.3.1 General – "Balance of probabilities"

The EPO departments decide on the issues that arise before them on the basis of the evidence adduced by the parties. Their decisions need not, and in most cases cannot, be based on absolute conviction, but instead are to be arrived at on the basis of the overall balance of probabilities, in other words on the footing that one set of facts is more likely to be true than the other. If the result of the boards' evaluation of the evidence is such as to persuade them one way or another, then the **balance of probabilities** standard is met. This standard applies particularly in opposition appeal proceedings where the boards of appeal are called upon to reach a conclusion on the basis of the overall balance of probabilities, as distinct from "beyond all reasonable doubt" or "absolute conviction" (on the latter concept, refer to the more recent case **T 2451/13**). Each of the parties must therefore seek to prove facts alleged by it to that degree of proof (see e.g. **T 182/89**, OJ 1991, 391; **T 270/90**, OJ 1993, 725; **T 859/90**, **T 109/91**, **T 409/91**, OJ 1994, 653; **T 1054/92**, **T 296/93**, OJ 1995, 627; **T 326/93**, **T 343/95**, **T 363/96**). The standard of balance of probabilities applies also in decisions issued in ex parte proceedings (**T 381/87**, OJ 1990, 213; **T 69/86**, **T 128/87**, OJ 1989, 406; **T 939/92**, OJ 1996, 309).

When an issue of fact is being examined and decided by the EPO on the balance of probabilities, **the more serious the issue** the more convincing must the evidence be to support it. If a decision on such an issue may result in refusal or revocation of a European patent, for example, in a case concerning alleged prior publication or prior use, the available evidence in relation to that issue must be very critically and strictly examined. A European patent should not be refused or revoked unless the grounds for refusal or revocation (that is, the legal and factual reasons) are fully and properly proved (**T 750/94**, OJ 1998, 32; **T 329/02**). See also Guidelines G-IV, 1 "State of the art – General remarks and definition" – November 2015 version): "If the applicant shows sound reasons for doubting whether the document forms part of the 'state of the art' in relation to his application and any further investigation does not produce evidence sufficient to remove that doubt, the examiner should not pursue the matter further."

The board in **T 286/10**, citing **T 472/92**, observed that it is settled case law that evidence is generally assessed in terms of what seems most probable; it made an **exception** only for public prior use objections where practically all the supporting evidence lay within the power and knowledge of the opponent (see in this chapter III.G.4.3.2 "Public prior use").

The strict standard was required for **internet disclosures** in **T 1134/06** (point 4.1 of the Reasons; affirmed in **T 1875/06**, points 7 to 9 of the Reasons), the board taking the view that internet archives were generally unreliable, and that the prior publication of an internet disclosure therefore had to be proven beyond all reasonable doubt. The board in more recent **T 286/10** disagreed. Instead, it followed **T 2339/09** (point 2 of the Reasons) and **T 990/09** (point 10 of the Reasons) and held that there was no legal basis for applying different evidential requirements to internet disclosures than to the prior art generally: in other words, the normal requirements – balance of probability or sufficient

presumption – applied, once any uncertainties had been clarified. There was no reason to apply the yardstick of "beyond any reasonable doubt". Nor could **T 472/92** be used, in the case in point, to justify a different standard of proof for internet disclosures. (More recently, see **T 2227/11**, with reference to the Guidelines and the Notice from the EPO concerning internet citations, OJ 2009, 456).

In the board's judgment in **T 658/04**, an expert's declaration which is not supported by verifiable facts but which merely constructs some hypotheses, cannot reflect the **common general knowledge** to be considered for assessing the sufficiency of disclosure within the meaning of Art. 83 EPC. For this reason, document (12) – declaration of U.K Pandit submitted by the appellant (patent proprietor) as an expert opinion – did not form part of the common general knowledge. **T 658/04** also summarised what is part of the common general knowledge according to the case law of the boards of appeal.

In cases concerning an application for re-establishment of rights in respect of the time limit for filing the statement of grounds according to R. 136 EPC (former Art. 122(2) and (3) EPC 1973), the application is regarded as duly supported only if it is clear from the facts set out and credibly substantiated ("glaubhaft gemacht") that the applicant took all due care required by the circumstances to observe the time limit (see **T 13/82**, OJ 1983, 411; cf. also **T 243/86**). It is not further specified whether this standard involves a lower degree of probability, as the term "Glaubhaftmachung" for the purposes of German, Austrian and Swiss law (see Chapter III.E.4.4).

#### 4.3.2 Public prior use

Although the standard of proof is the same for all objections covered by Art. 100 EPC (cf. **T 270/90**, OJ 1993, 725), the case law identifies two levels or standards of proof to be applied with regard to disputes around public prior use - either the "balance of probabilities" or "up to the hilt". The standard of **balance of probabilities** is applicable when both the patent proprietor and the opponent had access to the material of which public prior use is alleged (see e.g. **T 363/96**, **T 12/00**, **T 1105/00**, **T 2043/07**, **T 1464/05**, point 4.3 of the Reasons; **T 202/13**, point 15.6.2 of the Reasons; **T 1170/13**, point 2.3 of the Reasons). By contrast, in cases **where all evidence** in support of an alleged public prior use lies within the **power and knowledge of the opponent**, while the patentee has barely any or no access to it at all, it is incumbent upon the opponent to prove the alleged prior use **up to the hilt** (**T 472/92**, OJ 1998, 161; cf. **T 782/92** referring to proof "beyond any reasonable doubt"). Subsequent case law also confirmed that, where public prior use is cited, the assessment of probability which normally underlies the boards' opinion must yield to a stricter criterion close to **absolute conviction** (**T 97/94**, OJ 1998, 467; see also **T 848/94** and **T 12/00**; recent case **T 2451/13** discussed this concept). Decision **T 918/11** (point 3.3 of the Reasons) summarised the case law on standards of proof and the conclusion drawn in **T 750/94** (OJ 1998, 32), with the board also emphasising the need to take into consideration that the application of the strict standard of proof referred to in the impugned decision was not justified in view of the fact that the actual production and the selling of the containers was clearly outside the sphere of the opponent. The board was also of the opinion that the application of the standard of proof

"beyond reasonable doubt" did not justify disregarding the witness testimony (regarding facts which had occurred a long time ago). The more recent decision **T 2451/13** summarised the principles governing the standard of proof in case of public prior use and specified the meaning of the standard of "up to the hilt" (see Catchword) used in **T 472/92**, which is to prove beyond reasonable doubt. All the evidence about the publication date of a brochure was essentially in the hands of the opponent (brochure originated from a subsidiary of the opponent, on this latter point see also **T 738/04**).

If any reasonable doubt exists as to what might or might not be the result of carrying out the literal disclosure and instructions of a prior art document, in other words if there remains a "grey area", then the case of anticipation based on such a document has to fail (**T 793/93**; see also **T 464/94** and **T 95/07**).

In **T 2010/08**, the board pointed out that the requirement to prove prior use beyond reasonable doubt could not be circumvented by overstressing the principle of *ex officio* investigation and so shifting the burden of proof from the opponent to the opposition division or the board of appeal.

The board in **T 703/12** stated that all the evidence in support of the alleged public prior use (of a water filter jug, presented at the Ambiente trade fair in Frankfurt) lay within the power and knowledge of the appellant (opponent). The respondent (patent proprietor) disputed that the "what" was disclosed and that the "circumstances" of the prior use were proven beyond any reasonable doubt. The board was not convinced that either what was disclosed or the circumstances of the alleged disclosure had been proven to the required degree of certainty, namely beyond any reasonable doubt.

**T 274/12** dealt with an alleged prior use (talks between firms), all the evidence being in the hands of the opponent. In this case the board had to also decide whether there was an implicit obligation to maintain secrecy.

In **T 1469/08**, the appellant (opponent) alleged a public prior use in the form of the sale of composite "PARP PU" prostheses before the patent's priority date. Although the public prior use stemmed from the opponent itself, it had provided only **sales records** to substantiate the prostheses' availability. In such circumstances, there were **serious doubts** that documents actually existed establishing the prostheses' availability to the public before the priority date. See also **T 71/09**, setting out the case law and citing **T 750/94** and **T 97/94**. The respondent (opponent) alleged public prior use prejudicial to the novelty and inventive step of the subject-matter claimed. Here too, the prior use was its own: the evidence presented involved its company's sale of a certain product. The board held that the evidence submitted failed to establish the product's composition beyond any reasonable doubt.

In **T 674/91**, the board stated that all the assertions (affidavits or declarations) made by different witnesses of the alleged prior use and which were in agreement with one another already provided **sufficient evidence** of the commercial nature of the tests mentioned. An obligation of confidentiality could not have existed, since the access to

the new tool was not restricted to a particular group of persons. The board concluded that the prior use was prior art within the meaning of Art. 54(2) EPC 1973.

In **T 1210/05**, the board concluded that the contested prior disclosure via the **public display of a poster** identical to document (1) at an Edinburgh congress had not been sufficiently established, i.e. beyond all reasonable doubt, based on the following considerations: the fact that the various means of evidence, namely the submitted documents, the affidavits of the witnesses as well as their oral testimony, did not contradict each other was not sufficient to meet the required standard of proof. Furthermore, the finding of the opposition division rested **exclusively on the testimony of one of the witnesses**. No independent evidence (in writing or by other persons) was available to support it. This did not mean that the written and oral testimony of the witness was per se insufficient. However, the board stated that there had to be good reasons for treating this evidence alone as having established the facts beyond any reasonable doubt.

**T 1057/09** concerned a "diploma thesis" whose content was allegedly disclosed inter alia during an oral presentation before the priority date of the patent in suit (ephemeral - beyond any reasonable doubt).

In **T 225/03** the opposition division had not taken evidence by hearing the witness before revoking the patent because it had considered the allegation of public prior use to be adequately proven by the documentary evidence. The board found that level of proof to be insufficient, and held that the respondent's request – that the **documentary evidence be complemented by hearing the witness** – had to be granted, as only the witness could confirm the links between the individual pieces of evidence and the circumstances of use as explained in his statutory declaration. It therefore sent the case back to the department of first instance for further prosecution.

In **T 441/04** the board agreed with the respondent (patent proprietor) that evidence in document form was normally preferable to witness testimony about long-ago events. But that did not mean that in the case in point such testimony was necessarily excluded per se or less convincing than documentary evidence. Applying the (high) standard of proof beyond doubt, the board considered that it had taken due account of the fact that the alleged public prior use – proven by witness testimony – was attributable to the appellant. The evidence submitted (mainly witness testimony) had measured up to that standard, and therefore no new or additional proof (such as drawings) was needed.

In **T 1914/08**, the board – like the opposition division at first instance – regarded two witnesses' testimonies as the decisive evidence proving without any gaps the alleged prior public use. Each testimony, considered in isolation, gave a consistent and full picture of the process in question. Accordingly, it endorsed the opposition division's evaluation of the evidence, the standard of proof applied by it ("beyond all reasonable doubt") and the result of its analysis. It held, moreover, that the patent proprietor's (appellant's) request for additional evidence had to be refused. Since the opposition division had, in the course of its unfettered consideration of the evidence, concluded that the alleged prior public use had, essentially, been established by the two witnesses'

testimonies and since the appellant had been unable to cast doubt on the probative value of those testimonies, there was no need for the opponent (respondent) to adduce further evidence in either the opposition or the appeal proceedings.

In **T 833/99**, the opponent (appellant) had raised a novelty objection, claiming that prior use had occurred following public disclosure of an identical process: grooved-rail frogs for tramlines had been sold and installed in various German towns over a specified period. The opposition division had found this disclosure to be insufficiently proven, and had duly dismissed the objection. In support of its contention that the manufacturing process lacked novelty, the opponent relied on two photos (showing the grooved-rail frogs) measuring 6 cm by 6 cm and appearing inside a **prospectus**. The **photos** were **not clear enough** to say that the edges could not have been the result of flame-cutting. Lastly, during **invitations to tender**, the municipal employees had been required to observe confidentiality. The appellant said they might have breached that confidentiality, e.g. by informing repair workers of certain steps in the process, but **did not back this up with firm facts** such as dates, circumstances, etc., or with other evidence. Mere suppositions could not be entertained; they were not proof, and the onus was on the appellant to show that its **allegations were well founded** (**T 782/92**; **T 472/92**, OJ 1998, 161). Lastly, the board observed that there was no law to the effect that the confidentiality governing **tender procedures** ends when they do.

Features of subject-matter that was visible only briefly can be considered to have been made publicly available only if it can be shown beyond doubt that they were clearly and directly apparent to the skilled person for that short time (**T 1410/14**: train – test drive).

#### 4.3.3 Public availability of prior art documents

With regard to the public availability of **commercial brochures**, some boards adopt the less strict standard of the "balance of probabilities" (see e.g. **T 743/89** (brochure produced by the patentee) and **T 804/05** (prospectus issued by a third party)). Concerning a commercial brochure (prospectus) of a product produced by the opponent, in one decision, **T 1748/10**, the board considered it more appropriate to assess public availability on "the balance of probabilities" citing **T 743/89** and **T 1140/09** and not the standard "up to the hilt" as alleged by the patentee, in view of the fact that the brochure originated from the opponent. In the board's view, although D1 originated from the opponent, it was distributed to the public. Therefore both parties were able to access and adduce evidence relating to the availability of document D1. The board in **T 1140/09** considered the "balance of probabilities" to be the proper standard of proof to be applied for the question of the public availability of document E3, a brochure that had been distributed by the appellant (opponent) to visitors at CeBIT and had therefore been made available to the public before the priority date. In the particular case, **however**, the evidence presented by the appellant was such that it also met the stricter standard of proof as proposed by the respondent. Given the importance of large industrial fairs such as CeBIT for doing business and the strong interest of the appellant in making its brochure as widely available as possible, the board found that the public availability of document E3 was proven beyond reasonable doubt.

In **T 184/11** the board first had to decide whether the document was an advertising brochure or a product data sheet. It contained no detailed technical data, merely general technical information. After a detailed review of the case law on standards of proof and the public availability of advertising brochures, the board decided that nothing in the reasons given for the contested decision indicated that the opposition division, in assessing probability, had not critically and precisely evaluated the evidence before it.

In **T 146/13**, the proprietor maintained that it had not been proven beyond any doubt that an advertising brochure had been distributed before the patent's priority date. The board, citing settled case law on commercial brochures as prior art and in particular **T 743/89** and **T 804/05**, held that enough time (two years) had elapsed between printing and the priority date to conclude that the brochure really had been made available to the public. Adding that in practice the whole point of printing advertising brochures was to attract the attention of potential clients, it therefore decided that the brochure was prior art within the meaning of Art. 54(2) EPC. (Compare with **T 738/04**, point 4.1.1 of the Reasons).

In **T 743/89** it had been proved that a **leaflet** disclosing the invention had been printed seven months before the priority date, but it was uncertain when the leaflet had been distributed. Based on the balance of probabilities, the board concluded that the leaflet was available to the public before the priority date of the patent in suit and was, consequently, comprised in the state of the art. Although the date of distribution could no longer, i.e. 10 years on, be ascertained, it could reasonably be assumed that it had taken place within less than 7 months and had thus been completed well before the priority date of the patent in suit. The opposite assumption that the brochure had been kept confidential was not very plausible since it was in the patentee's own interest to ensure wide-spread distribution of the brochure in order to inform as many potential customers as possible of this latest development in a highly competitive field. Hence, the onus of proof was incumbent on the patentee who incidentally, being the originator of the pamphlet, should be in the possession of the necessary information.

In **T 2451/13** the board applied the standard "up to the hilt" as meaning beyond reasonable doubt concerning the publication date of a brochure (brochure originated from a subsidiary of the opponent - all evidence essentially in the hands of the opponent).

The board in **T 1710/12** agreed that the rigorous standard of "up to the hilt" is typically applied in cases where a prior use is involved. However, in the case before it, catalogue E1 had not been provided **in support of** an alleged prior use, but as written evidence on its own. The board thus deemed it appropriate to judge the public availability of E1 using the "balance of probabilities" approach. Document E1 (catalogue published by a company not being a party) was considered prior art under Art. 54(2) EPC.

In **T 2003/08** the board observed that, in contrast to a written document the contents of which are fixed and can be read again and again, an **oral presentation** is ephemeral. Therefore, the standard of proof for ascertaining the contents of an oral disclosure is high. **T 1212/97** could not be interpreted as setting an absolute standard for the amount of evidence necessary to prove the contents of an oral disclosure. In the present case

evidence from the lecturer and a member of the audience, provided by them in the form of both affidavits and oral testimony, was not considered by the board to prove beyond reasonable doubt that the subject-matter of the claim was disclosed during the lecture (see also **T 667/01** and **T 12/01** about oral presentations, and **T 1057/09** about the alleged availability of a "diploma thesis" whose content was allegedly disclosed *inter alia* during an oral presentation before the priority date of the patent in suit).

In **T 151/99** the board regarded it as **highly plausible** in the light of the available evidence that a **master's thesis** had become available to at least one member of the public. If the reference was in a document published before the priority date of the patent in suit then it could be assumed that the thesis had also been made available to the public before the said date (decision analysed more recently in **T 538/09**, which concerns a master's thesis of the first examiner as prior art; also citing **T 1134/06** and **T 750/94** in that an important criterion in evaluating evidence is the reliability of the source: fullfiled for University of Utah).

In **T 1134/06** the board pointed out that, as a first step in evaluating evidence, the **reliability of the source** had to be ascertained. Where, for the purposes of assessing novelty and inventive step, the state of the art under Art. 54(2) EPC is established on the basis of traditional publications such as published patent applications or specifications, the majority of these publications emanate from sources which are considered as reliable. The evidentiary weight of such sources normally resides in the large number of physical, existing copies of the publication, or because the source itself has the character of public authority, such as a patent office. Therefore, publication date and content are assumed to be truthful with a high level of confidence. In the case at issue, however, the disclosure had been made available to the public on the **Internet**. In order to establish that an internet disclosure formed part of the state of the art, the board held that the same strict standard of proof as for prior use or prior oral disclosure had to be applied – the same questions "when", "what" and "under which circumstances" had to be answered (endorsed by **T 1875/06**. In a more recent decision, **T 19/05**, concerning a printout of web pages the board stated that if an internet disclosure is to be used as prior art, a strict standard of proof should be adopted (availability to the public before the effective filing date was not proven in this case; not even used as common general knowledge as alleged by the opponent). Furthermore, the board took the view that the circumstances which allowed the determination of whether a disclosure on the Internet had been made available to the public might, where appropriate, also include factors that had a bearing on the reliability of the information, for example, the manner in which information had been procured and date stamped, how it had been preserved by the source, and whether it had remained unaltered since deposit. However comparison should be made with **T 286/10** regarding Internet Archive ([www.archive.org](http://www.archive.org)) that applies the usual standard of proof on the balance of probabilities (see also **T 2227/11**); chapter III.G.4.2.3. Concerning information from the internet see also Chapters I.C.3.2.3 "Internet disclosures"; I.C.3.5 "Issues of proof"; I.C.3.5.2c) "Internet – proof of the date of availability".

In **T 1469/10** the board held that the publication dates indicated on the documents published by the ETSI 3GPP organisation, which was regarded as a reputable

standardisation body having clear and reliable rules for their publications, were of a high probative value and thus might serve as prima facie evidence that a document was published on the date indicated, and regarded the documents at issue thus as representing the state of the art under Art. 54(2) EPC.

As a matter of principle, if an **adverse decision** of an organ of the EPO is to rely on a certain fact that fact should be proven beyond any reasonable doubt. In **T 826/03**, the board applied this principle when attempting to establish the publication date of a Canadian patent application, and whether it was prior art. It found that in view of the contradictory evidence on file and in the absence of any further clarifying information from the Canadian Intellectual Property Office, it was virtually impossible for the board to establish with certainty that the public had access to the application according to document D3 before the priority date claimed by the application in suit. It therefore considered document D3 as not belonging to the prior art within the meaning of Art. 54(2) EPC.

#### 4.3.4 Claiming a valid priority

In **T 1056/01** the board pointed out that because of the crucial effect a valid priority date had on patentability, the date of filing of the application whose priority was claimed had to be proven in a formal way, namely by a certificate issued by the authority which had received that application (see R. 53(1) EPC and Art. 4D(3) Paris Convention). Even if no such **formal proof** was prescribed for the timely withdrawal of a previous application pursuant to Art. 87(4) EPC (see Art. 4C(4) Paris Convention), it appeared appropriate to require an equally high standard of proof, for once there existed a previous application concerning the same invention both dates were equally relevant for establishing the validity of the claimed priority. However, in the case at issue, the timely withdrawal of the UK application for the purposes of Art. 87(4) EPC could not be established. Unlike facts barring patentability (see for example **T 219/83** cited by the appellant), the timely withdrawal of a previous application was a positive precondition for claiming a valid priority from a subsequent application for the same invention. Hence, the date of the effect of the withdrawal was a fact which could act in the applicant's favour, and she had relied on it just as she had relied on the filing date (and the content) of the subsequent UK application (this decision was cited and applied in **T 62/05**)

Case **T 493/06** involved the issue of the valid transfer of a priority application. According to the board, the submitted statutory declarations and notarial certifications provided sufficient evidence that the copy of the transfer agreement was the same as the original.

In **T 205/14** the board disagreed with the reasoning of **T 62/05** that the transfer had to be proven in a formal way, applying an equally high standard of proof as that required by Art. 72 EPC 1973. Art. 72 EPC 1973 set out formal requirements for a valid assignment of a European patent application and thereby limited the means of giving or obtaining evidence for determining such a transfer. Having regard to Art. 117 EPC and the principle of free evaluation of evidence, the rule should not be extended beyond its scope of application. Since the provisions of the EPC did not lend themselves to an autonomous determination of the requirements for transfer of the right of priority, the

validity of such transfer was a matter of **national law** (cf. **T 1008/96** (two pieces of evidence mutually exclusive: declaration before a notary public and decision of Italian Court); cf. also approach in **T 160/13** (transfer of priority right within a corporate group – emails), **J 19/87**, **T 493/06**). **T 205/14** and **T 517/14** deal with numerous issues of proof, standard of proof and burden of proof.

See also Chapter II.D.2.2 "Priority right of the applicant or his successor in title".

#### 4.3.5 Abusive conduct

In **G 3/97** and **G 4/97** (OJ 1999, 245 and 270) the Enlarged Board of Appeal held that if the person named as opponent according to R. 76(2)(a) EPC (former R. 55(a) EPC 1973) was acting on behalf of a third party, such an opposition was inadmissible only if the involvement of the opponent was to be regarded as circumventing the law by abuse of process. The deciding body had to be satisfied on the basis of clear and convincing evidence that the law had been circumvented by abuse of process.

In **T 291/97** the appellant had contended in the statement of grounds of appeal that the publication of document (1) had occurred in consequence of an evident abuse within the meaning of Art. 55(1)(a) EPC, and thus did not constitute prior art citable against the claims at issue. The board decided that the above publication was to be taken into consideration for the application of Art. 54 EPC. It observed in its decision that the finding of an **evident abuse** under Art. 55(1)(a) EPC was a serious matter. An abuse was not lightly to be presumed. The standard of proof was identified by the words "evident abuse" (German: "offensichtlicher Missbrauch"; French: "un abus évident") as being high: the case had to be clear-cut, and a doubtful case would not be resolved in favour of the applicant. The evidence filed in the case at issue did not meet the standard that the board would consider appropriate, in particular in that virtually every declaration filed contained serious mis-statements that had subsequently been corrected, or the indicated mis-statements had not been relied on. That the errors had been corrected or not relied on was commendable, but left unresolved the problem of whether any part of such a statement could be relied on at all. The board also pointed out that in proceedings before the EPO it had to be possible to rely on the written evidence as having been checked with the facts; should that not be the case, the party in question would run the risk of having its evidence being disregarded as unreliable as a whole (see also **T 41/02**).

In **D 5/86** (OJ 1989, 210), the board held that an infringement of the rules of professional conduct had to be established to the satisfaction of the disciplinary body before it could impose a disciplinary measure. Absolute certainty was not required, but a **higher degree of probability** which in human experience verged on certainty. A disciplinary measure could not be imposed if there was reasonable doubt as to whether the infringement had occurred.

#### 4.3.6 Receipt of formal documents

See Chapter III.O.4 "Spheres of risk and apportioning the burden of proof" and Administrative Council decision CA/D 6/14 dated 15 October 2014 (entry into force: 1 April 2015) amending R. 2, 124, 125, 126, 127, 129, 133 and 134 EPC (OJ 2015, A17; explanatory notice: OJ 2015, A36), discussed in the chapter on notification. With respect to the burden of proving receipt, see also chapter III.G.5.1.2(e) below.

The issue under appeal in **T 1200/01** was whether an opposition of the appellant against the patent could be deemed to have been filed. According to Art. 99(1), last sentence, EPC, this was only the case if the opposition fee had been paid within the opposition period. However, in the case at issue no trace of a notice of opposition nor of a voucher for payment of the opposition fee allegedly filed by the appellant had been found within the EPO. The board noted that, concerning the standard of proof to be applied for establishing the receipt of documents not found within the EPO, it was the established case law of the boards of appeal that, even if proof to this effect could seldom lead to absolute certainty, it at least had to show to a **high degree of probability** that the alleged filing had taken place (see also **T 128/87**, OJ 1989, 406, cited by the board). It also noted that in some previous cases (see **T 243/86** and **T 69/86**, cited by the board) it had been accepted that this standard was met if there were concrete traces of the item sought which, even if they did not show it for certain, indicated a high probability of the lost document having once been in the EPO. Nevertheless, any other means of giving evidence, such as witness testimony, could equally be considered in this context.

The communication noting the loss of rights under R. 112(1) EPC (former R. 69(1) EPC 1973) is deemed to have been delivered to the addressee on the tenth day following its posting, unless the letter failed to reach the addressee or reached him at a later date. In the event of any dispute, it is incumbent on the EPO to establish that the letter reached its destination (R. 126(2) EPC; CA/D 6/14 for the revised wording; former R. 78(2) EPC 1973). In **J 9/05** and **J 18/05**, the only evidence provided by the examining division was a letter from the Deutsche Post referring to the information received from the foreign postal service, according to which the letter had been delivered to an authorised recipient, who, however, was not specified. The board stated that the probative value of the submissions and evidence of the appellant had to be balanced against the probative value of evidence established by the EPO. Balancing the evidence of the examining division, which consisted of the rather vague letter from the Deutsche Post, against the evidence submitted by the appellant, and taking into account the serious consequences for the appellant, the board came to the conclusion that it had not been sufficiently proven that the applicant had received the R. 69(1) EPC communication. In such a situation, where the EPO bore the burden of proof, the applicant had to be given the benefit of the doubt.

In **T 529/09** a communication pursuant to R. 82(3) EPC (invitation to parties to file observations with regard to the maintenance of patent in amended form) had been sent out on 8 September 2008 by registered letter addressed to the proprietor's representative. According to R. 126(2) EPC (see CA/D 6/14 for the revised wording) a registered letter was deemed to have been delivered to the addressee on the tenth day

following its posting, unless it had failed to reach the addressee or reached him at a later date. In the board's view, "delivered to the addressee" did not mean that the notification in question had to be brought to the attention of the professional representative in person. It sufficed that the registered letter had been received by a person authorised to take delivery, e.g. an employee of the representative's office (see **T 743/05**). In the present case, the board regarded the evidence on file as sufficiently reliable and complete to prove the proper delivery of the letter. In this respect, the board highlighted a significant difference between this case and **J 9/05** and **J 18/05**, in which the appellant had filed a considerable amount of counter-evidence pointing out specific reasons why the letter might not have been received by the representative's office.

See also **J 10/04**, reported above, which differed from the "ordinary" cases concerning lost mail in that the application had reached the USPTO and only some of the papers were missing, and **T 1535/10**, in which the board found that responsibility for obstacles and delays in receiving decisions having to be notified under R. 126(1) EPC had to be assigned according to spheres of risk (III.O.4 "Spheres of risk and apportioning the burden of proof").

## 5. Burden of proof

### 5.1. Apportioning the burden of proof

#### 5.1.1 General

In the absence of relevant EPC provisions, the principles concerning the allocation of the burden of proof have been developed through the case law of the boards of appeal. **Each party bears the burden of proof for the facts it alleges.** At all events, a party cannot deny facts which related to its own actions or were the subject of its own perceptions on the ground of "ignorance", if the presentation of the facts in question is essentially the party's responsibility (**T 247/98**).

With regard to principles of procedural law generally recognised in the contracting states, a party relying on Art. 125 EPC and asserting that German law allows for the revision of a decision of a court of final jurisdiction in the case of a fundamental procedural violation, will also have to produce evidence that such a procedural principle exists in most EPC contracting states and is therefore "generally recognised" for the purpose of Art. 125 EPC (**T 843/91**, OJ 1994, 832). Following on from that, another board stated in **T 833/94** that, when the evidence offered did not directly indicate the truth or falsity of the fact in issue, but required knowledge of the **national law** and patent practice, such **law and practice had to be proved, as did any other fact** on which a party based its arguments (proof of a national right by means of a written statement from a Japanese lawyer (**T 74/00**), and proof of Israeli law applicable by submitting a legal expert opinion, (**T 517/14**)).

In **ex parte proceedings** the applicant bears the burden of proof for the facts in his favour, e.g. the fact that a document cited by the examining division does not form part of the state of the art (**T 160/92**, OJ 1995, 35), the fact that the conditions laid down in

Art. 123 EPC have been met (**T 383/88**) or the fact that a limitation of the claims is admissible (**T 2/81**, OJ 1982, 394). Sufficient disclosure also obliges the applicant to provide evidence of the skilled person's relevant knowledge if there is reason to believe it may not cover all the subject-matter claimed. If reasonable doubts exist about the scope or public nature of the specialist knowledge required for adequate disclosure of the invention, the applicant discharges his duty to disclose by submitting suitable evidence in support of the facts in his favour, in order to fulfil his duty to disclose the invention (**T 82/07**). In **T 32/95**, the board referred to a passage from the Guidelines (now G-IV, 1 "State of the art" – November 2015 version, which is cited in full in connection with **T 750/94**, see point 4.3.1 above).

As far as issues relating to patentability requirements are concerned, the burden of proof in **examination proceedings** cannot lie initially with the applicant. If an examining division raises an objection, it must be appropriately substantiated. In **T 578/06** the examining division had failed to provide such substantiation. Also, the passage in the "Case Law of the Boards of Appeal of the EPO" (see paragraph immediately above) could not support its view that in *ex parte* proceedings the applicant has the burden of proof for facts in his favour, as it appeared to have been taken out of its context. In this respect, the board clarified that all the procedural situations referred to in this passage were those where, in response to a substantiated objection from the examining division, the applicant was required to support its contention.

It is not sufficient in opposition proceedings for the opponent to impugn a granted patent with an assertion which cannot be substantiated. And if the EPO is unable to establish the facts of its own motion, the proprietor is given the benefit of the doubt (**T 219/83**, OJ 1986, 211, 328; see also **T 293/87** and **T 459/87**). According to **T 200/94** (following established case law), if a board's investigation does not enable it to verify beyond reasonable doubt the facts alleged, this goes to the detriment of the party needing to prove them, i.e. the party who relies on these facts. In **appeal proceedings**, the party's status as opponent makes no difference when it comes to assigning the burden of proof (this follows also from **T 740/90**, **T 270/90**, OJ 1993, 725 and **T 381/87**, OJ 1990, 213). Parties to proceedings bear separate burdens of proving the facts they allege, and if a fact that is material to the decision is not proven, then the decision goes against the party that failed to discharge that burden. In **T 1469/08**, the appellant (opponent), who was alleging prior use, argued that all the prostheses in question, whatever their article code and batch of manufacture, had the same structure as the one submitted as evidence to the EPO, but failed to provide any evidence to support that (the board cited **T 270/90**, OJ 1993, 725, point 2.1 of the Reasons; **T 355/97**, point 2.5 of the Reasons).

In **T 998/04** the board emphasised as an *obiter dictum* that the burden of proof for alleged lack of patentability lay with the opponent and could not be dispensed with by requesting the board to carry out its own investigations, in particular, by summoning four named witnesses, by commissioning an independent expert to carry out experimental tests and by allowing individuals from the appellant company to attend any tests and to question witnesses or experts. Moreover, granting these requests would not be consistent with the character of the post-grant opposition proceedings under the EPC which were in principle to be considered as contentious proceedings between parties

normally representing opposite interests, who should be given equally fair treatment (see **G 9/91**, OJ 1993, 408, point 2 of the Reasons). If the opponent disputes the existence of novelty, an inventive step or the reproducibility of the invention, it bears the burden of proof in this respect at first and second instance (e.g. **T 762/04**, **T 382/93**, **T 16/87**, OJ 1992,212; **T 182/89**, OJ 1991, 391). In case of uncertainty about a prior-art disclosure, the patentee should be given the benefit of the doubt (**T 1003/96**; see also **T 230/92**, **T 345/86**, **T 601/91** and **T 968/91**).

A technical problem set out in a patent is considered to be credibly solved by a claimed invention if there are no reasons to assume the contrary. Under such circumstances, the burden is normally on the opponent to prove the opposite or at least provide evidence casting doubt on the alleged solution of the problem. If the opponent succeeds, the burden of proof shifts to the patent proprietor who must then prove its assertions (see e.g. **T 1797/09**). Where, however, the opponent succeeds in casting serious doubt on the persuasiveness of the patentee's evidence merely by arguing that this evidence was subject to **erroneous evaluation** by the examining division, this allegation may render the patentee's evidence inappropriate but cannot justify the conclusion that the invention **fails** to solve the existing technical problem. Such allegation does not discharge the opponent from the burden of submitting convincing counter-evidence that the claimed subject-matter cannot solve the technical problem (**T 596/99**).

The appellant relied upon experimental reports. However, these tests did not prove its allegations beyond all reasonable doubt. The proprietor (appellant) submitted that the burden of proof lay with the respondents (Opponents) to show that the amendments did in fact extend the protection conferred (Art. 123(3) EPC). However, it was the proprietor (appellant), who had amended the patent as granted and who was responsible for demonstrating, beyond all reasonable doubt, that said amendment did not extend the protection conferred (**T 2285/09**).

Reversely, the patentee cannot relieve itself of the burden of providing **counter-evidence** for facts it alleges by simply stating that all the evidence was within the power of its opponent (with reference to **T 472/92**, OJ 1998, 161;), without providing proof for the contention that it is not within its power to obtain counter-evidence (**T 254/98**). As far as apportioning the burden of proof is concerned, it is irrelevant whether or not the patentee can access the requisite evidence more easily than the opponent (**T 1162/07**; see also **T 1710/12**).

### 5.1.2 Individual cases

#### a) Novelty

For the purpose of assessing novelty, the party alleging that the inevitable outcome of a prior art disclosure is in contradiction with the explicit disclosure of the cited prior art has not only the burden of reproducing the earlier disclosure in such a way as to demonstrate that the alleged inevitable outcome has occurred, but also the burden of proving convincingly that if any significant deviation from the conditions specified in the earlier disclosure are not material to the outcome (**T 204/00**; see also **T 396/89**).

In **T 713/01** the appellant denied the existence of an "enabling" disclosure in D2 with regard to the preparation of polymers in the presence of a solubilised lithium pyrrolidide initiator by reference to **T 124/87** (OJ 1989, 491) and **T 206/83** (OJ 1987, 5). According to this case law, the criterion for a prior art disclosure to be novelty-destroying is that the claimed subject-matter should be directly and unequivocally inferred from an enabling disclosure in it. In the case at issue, the board held that the only difference between D2 and the claim wording, i.e. the presence or not of a solubilising agent as part of the lithium pyrrolidide initiator, did not qualify as a distinguishing feature of the claimed product because that "**product-by-process**" feature was not detectable on the product by a reliably distinguishing property. In this context, the board added that in proceedings before the examining division the burden of proof for an allegedly distinguishing "product-by-process" feature lay with the applicant (see further **T 205/83**, OJ 1985, 363 and **T 279/84**).

See Chapter I.C. "Novelty".

b) Inventive step

In **T 547/88** inventive step was contested. Although the board had asked the parties to issue a joint protocol stating what **tests** had to be done and under what conditions, each party had in fact conducted its own experiments and obtained contradictory results. It was therefore not possible for the board, on the basis of these tests, to conclude definitively that no inventive step was involved. The board held that in such a case the patent proprietor should be given the benefit of the doubt with regard to the relevance of the claimed features to the problem to be solved. Moreover, since the prior art did not suggest the subject-matter of the contested claims, that subject-matter implied an inventive step. The patent was therefore maintained.

The burden of proving that the claimed method leads to the **advantageous effects** mentioned in the patent in suit rests with the patentee. In the absence of any corroborating evidence that these advantageous effects were obtained, the alleged effects are not to be taken into account when assessing inventive step (cf. **T 97/00**; see also **T 1409/04**).

In **T 862/11**, the appellant (opponent) failed to submit comparative tests in support of its own assertion that an improvement was implausible owing to the lack of any evidence. In the absence of such tests, however, it failed to convince the board, which therefore regarded the problem as solved, and saw no need to reformulate it.

See Chapter I.D. "Inventive step".

c) Sufficiency of disclosure

The burden of proof is determined by the legal cases which the respective parties are trying to make. Whether it is discharged or not is assessed by the board based on all the relevant evidence put before it. The burden of proof of insufficiency is as a general rule on the **opponents**, who should prove that despite making all reasonable efforts they

were unable to put the invention into practice. If the patentee is claiming a result, which the prevailing technical opinion suggests is not achievable, and if the opponents are not able to repeat the method in the patent, they cannot be expected to do more than the patentee. Then, the burden of proof is on the patentee to show that the extraction method in the patent works as stated so that at least one way of putting the invention into practice has been given to the skilled person (approach set out e.g. in **T 518/10**, which in turn cited **T 792/00** and **T 1842/06**).

**T 30/15** (inter partes) contains extensive reasoning on the issue of burden of proof and on the submission of evidence in respect of Art. 83 EPC in conjunction with procedural aspects (RPBA) especially at the appeal stage after a first instance decision revoking the patent for insufficiency of disclosure. (Compare with **T 1329/11**, point 3.9 of the Reasons).

In **T 1886/12**, which also contains reasoning on the issue of burden of proof concerning alleged insufficiency of disclosure, the appellant (opponent) raised several objections but did not discharge the burden of proof.

d) Content of the priority document

In **T 1147/02** the board dealt with the issue of which party to the appeal proceedings bore the burden of proving the exact content of a priority document in order to establish the relevant priority date. Since the appellant was the one to challenge the priority date necessary for establishing prior art, the principles elaborated in the case law of the boards of appeal dictated that the appellant also bore the burden of convincingly proving that the relevant date was not the filing date of the priority document.

e) Receipt of formal documents

See also Chapter III.O.4 "Spheres of risk and apportioning the burden of proof". R. 126 EPC (notification by post) and R. 127 EPC (electronic notification) lay down rules on the burden of proof in case of dispute (for the amended versions of these provisions, see CA/D 6/14 in OJ 2015, A17, and the explanatory notice in OJ 2015, A36, points 3.1 ff). On the requisite standard of proof, see also in this chapter III.G.5.1.2(d) and III.G.4.3.6.

In **T 632/95** the board pointed out that the burden of proving that a document had been received lay with the party submitting the document just as, vice versa, the EPO bore the burden of proving receipt of the documents it issued.

It has to be observed that a party submitting that something has not happened is faced with the difficulty of proving this allegation. The party can essentially presume what could have happened or what normally would have been done if a letter had been received, in order to cast doubt upon the EPO's evidence, but it is hardly ever possible to file compelling evidence that the letter was not received. The EPO is also in a difficult situation if an applicant submits that it has not received a communication. The EPO then has to start enquiries with the postal services and rely on the information obtained. Since

details are not given, this information is usually unsatisfactory. After a certain period the relevant information may not even be obtainable at all. However, this ought not to be to the detriment of the applicant, specifically not where communication noting a loss of rights is concerned. These problems could be avoided if such communications were delivered by registered letter with advice of delivery (**J 9/05** and **J 18/05**).

According to the German version of R. 126 (2) EPC (former R. 78(2) EPC 1973), the EPO must in a case of doubt ("im Zweifel") establish the date on which the letter was delivered to the addressee. In **T 247/98** the board decided that, when establishing the meaning of the term "im Zweifel" in the German version, account should be taken of the French and English versions, which assumed that there was a dispute ("en cas de contestation", "in the event of any dispute"). From the general principles concerning the burden of presentation which fell on the parties, it followed that a party seeking the application of a legal provision favourable to its interests had to set out the facts justifying such application, even if it did not ultimately bear the burden of proof for those facts. Although, in the event of a dispute within the meaning of said rule, the burden of proof for the date of delivery fell on the EPO, this could not be taken to mean that a party wishing to rely on the late delivery of a letter from the EPO had no obligation to contribute to the clarification of circumstances within its own sphere of activity but could sit back, as it were, and wait to see whether the EPO succeeded in ascertaining when the letter had been delivered to the party. A dispute ("Zweifel" in the German version) within the meaning of this rule could only arise if it was maintained that a letter had in fact been received more than ten days following its posting.

In **J 3/14** the board stated that, in a situation where the representative submitted that he had not received a communication, the EPO bore the burden of proof. In the board's opinion, it had at least been **made plausible** that the postal authorities erroneously delivered the letter to an unauthorised person in view of an authorisation which seemed to allow the collection of "all registered mail". The appellant also brought evidence as to the absence of its representative from her place of business. The board concluded that, in cases where the EPO bore the burden of proof, the applicant had to be given the **benefit of the doubt**. If doubts remained about what had really happened, this could not be to the detriment of the applicant. This applied all the more in a situation like the one at issue where the refusal of the application was the immediate consequence for the applicant.

In **T 50/12** the board held that, by producing the advice of delivery, the EPO had fulfilled its duty under R. 126(2) EPC to assess the actual date of delivery to the addressee. Hence, the burden of proof lay with the appellant. To prove the later delivery, the appellant submitted two documents, neither of which convinced the board of appeal.

Under the EPC, the date of receipt of an item at the EPO is critical when assessing compliance with a time limit. The burden of proof that a filing has been effected falls on the filing party. The impossibility of furnishing proof of a higher probability that an item was filed than that it was not filed, must therefore count against the filing party – as found by the board in **T 1200/01**. In this particular case, the available evidence did not convince the board that there was a higher degree of probability that the alleged filing had taken

place than that it had not. Contrary to the decision in **T 1200/01**, the board in **T 2454/11** found that the strict allocation of the burden of proof to the sender of correspondence addressed to the EPO could not be mitigated by weighing up the probability of receipt. Such an approach to examining the issue would seriously jeopardise legal certainty and water down the standard of legal clarity required in formal procedures such as those before the EPO. The need in disputed cases to interpret the vague legal notion of probability and the judicial exercise of ascertaining whether a greater or lesser likelihood was to be presumed would result in a wide variety of possibly contradictory approaches to the issue. Such inconsistencies would run counter to the need for a transparent and straightforward procedure and therefore had to be avoided in the interests of the public and third parties involved in the proceedings. Consequently, a high probability of delivery could not be a factor in deciding whether correspondence had actually been received. Rather, it was for the sender to prove such receipt to the board's satisfaction.

In **J 10/91** the board held that if a letter and attached cheque in payment of a fee, had been lost without further evidence or any high probability that it had been lost in the EPO, the risk was then borne by the sender. Even conclusive evidence that something had been posted could not be treated as sufficient to prove that a document had been received by the EPO. In this respect, the board in **J 8/93** stated that if the post failed to deliver a document, the applicant would suffer the consequences for failing to file that document.

Under R. 125(4) EPC (former R. 82 EPC 1973; paragraph 4 not amended by CA/D 6/14) the burden of proof that documents have been duly notified to the parties lies with the EPO. In **T 580/06** the question was raised whether the "OK" reference on the transmission sheet of a faxed document was sufficient proof of receipt. In the absence of relevant EPO case law, the board drew on procedural principles developed for notification by fax in German law, the fax transmission in question having arisen in the territory of the Federal Republic of Germany. In line with the German case law on that issue, the board recognised that an up-to-date objective assessment of the question of **receipt of a fax** by the addressee needed to take into account the technology underlying faxes. The high reliability of this technology nowadays was based amongst other things on established technical protocols, according to which modern fax machines operated. On the basis of various considerations the board reached the conclusion that the "OK" reference on the transmission sheet of a fax was to be regarded as proof of an error-free and complete transmission, through which the fax had entered into the area of responsibility of the representative. Once the fax had entered the area of responsibility of the addressee indicated by the reference "OK", then a transfer of risk took place so that the recipient bore the risks in his own sphere.

Under R. 125(4) and 126(2) EPC the EPO has to bear not only the risks arising within its own sphere but also the "transport" risks, e.g. of post going astray on its way to the addressee. But here a distinction must be drawn between risks borne by the EPO and those for which the addressee has organisational responsibility and power (T 1535/10, see headnote). See Chapter III.O.4, "Spheres of risk and apportioning the burden of proof". This same division of risk applies also to newer, electronic means of notification

under R. 127 EPC (see also the EPO's explanatory notice in OJ 2015, A36, especially as regards amendment of R. 124 to 127 and 129 EPC).

## 5.2. Shifting the burden of proof

### 5.2.1 General

Once a party has submitted conclusive proof of its allegations, it has complied with the requirement of the burden of proof. The evidence need not prove the facts with absolute certainty in order to be deemed conclusive; it suffices that it proves that they are highly probable. If a party has discharged its burden of proof, the counterparty seeking to refute the conclusively established facts by way of counter-arguments bears the burden of proving the alleged facts (**T 1162/07**; see also **T 270/90**, OJ 1993, 725). In **T 109/91** the board held that the burden of proof might shift constantly as a function of the weight of the evidence, i.e. if a party provided enough evidence to demonstrate a fact to the conviction of the board, the mere allegation of the contrary by the other party is not convincing (confirmed e.g. in **T 525/90**, **T 239/92** and **T 838/92**).

In **ex parte proceedings**, when the applicant challenges prima facie evidence concerning a fact, i.e. the nominal publication date of a document, and submits evidence to displace such prima facie evidence, the burden of proof shifts to the examining division to establish that the document was "made available to the public" within the meaning of Art. 54(2) EPC on that date (see **T 929/94** with reference to **T 750/94**, OJ 1998, 32). According to **T 128/87** (OJ 1989, 406), a party presenting a cheque to the EPO bore the burden of proof for its receipt by the EPO. However, if the party furnished sufficient proof that a certain document had been filed, such evidence shifted to the EPO the burden of providing a greater weight of evidence to the contrary (**T 770/91** and **J 20/85**, OJ 1987, 102). The more recent case **T 538/09** addressed this issue of burden of proof and standard of proof in its analysis of **T 750/94** and **T 151/99**.

In **opposition proceedings** the burden of proving that the objections raised under Art. 100 EPC have been substantiated lies with the opponent. Where the opposition division has decided to maintain the patent and the opponent has filed an appeal against this decision, the burden of demonstrating **on appeal** that the reasons for maintaining the patent were justified is not automatically shifted to the patent proprietor (**T 667/94**). In other words, appeal proceedings do not result in a shift in the burden of proof to the detriment of the patentee; before the opposition division it is the opponent who bears the burden of proof of demonstrating that the patent does not fulfil the requirements of the EPC (**T 1210/05**). However, once the opposition division has decided to revoke the patent, the burden shifts to the proprietor of the patent, who then has to demonstrate on appeal that the reasons for revoking the patent were not sound, i.e. that the opposition division's decision was wrong as to the merits (**T 585/92**, OJ 1996, 129; point 3.2 of the Reasons).

### 5.2.2 Cases in which the burden of proof was reversed

In **T 570/08** the opponents had filed evidence in the form of comparative tests with the aim to support their argument that the claimed additive composition in the patent-in-suit did not solve the problem of improving lubricity and solubility of a diesel fuel oil. These results were in contrast to the tests which the patent proprietor had provided, so that the board was confronted with a series of tests leading to contradictory results. Therefore the board could not share the patent proprietor's argument that the burden of proof rested with the opponents, since the opponents' test results cast doubts on the effect allegedly achieved by the present invention. The patent proprietor could not convincingly eliminate those doubts and the patent was revoked.

In **T 131/03** the board pointed out that, once the opponent had established a strong presumption that **unusual parameters** as those used to define the claimed subject-matter were inherently disclosed in the prior art, the patent proprietor could not merely claim the benefit of the doubt. It was incumbent upon the patentee to establish the extent to which the parameters used in the definition of its invention actually distinguished the claimed subject-matter from the prior art.

The burden of establishing insufficiency of disclosure generally lies with the opponent. When the patent does not give any information on how a feature of the invention can be put into practice, only a weak presumption exists that the invention is sufficiently disclosed. In such case, the opponent can discharge the burden of proof by plausibly arguing that common general knowledge would not enable the skilled person to put this feature into practice. The patent proprietor then bears the burden of establishing the contrary assertion that common general knowledge would indeed enable the skilled person to carry out the invention (**T 63/06**). In **T 338/10**, citing this approach, the board held that the reasoned arguments submitted by the respondent (opponent) reversed the burden of proof, placing the onus on the appellant to show that the skilled person would have considered it likely that the claimed therapeutic effect was obtainable in the case in point, despite a lack of data and thus only a weak presumption. But since the appellant had not responded by submitting any arguments or evidence, the board held that the patent as granted did not comply with Art. 83 EPC (the principles applicable in the context of that article are set out in **T 518/10**, see Chapter II.C.8).

In **T 1846/10** the board observed that example 5 of the patent provided verifiable facts which raised **serious doubts** that the invention could in fact be carried out by the average person skilled in the art without undue experimentation or inventive skills by following the guidance provided in the patent. Under these circumstances, no additional experimental evidence from the appellant (opponent) was required as it could rely on the evidence provided by the patent itself. The board concluded that the appellant had discharged its burden of proof.

In **T 792/00** the board found that if the patent contained only an example with a hypothetical experimental protocol, and if this example was to be relied on for showing sufficiency, then the burden of proving that this protocol worked in practice as stated lay with the patentee. Evidence that a variation of the protocol worked was unlikely to be

enough. However, if the example contained a complete experimental protocol and the patentee affirmed that the results reported had been obtained, a board was likely to accept that the patentee had done enough to shift the burden of proof to the opponent who would then have to provide a repeat of the experiment in order to convincingly demonstrate that the protocol did not, in fact, work as stated.

In **T 967/09** the board observed that a successful objection of lack of sufficiency of disclosure presupposes that there are **serious doubts**, substantiated by verifiable facts (see e.g. **T 19/90**, OJ 1990, 476 and **T 890/02**, OJ 2005, 497). In order to establish insufficiency of disclosure in inter partes proceedings, the burden of proof is upon an opponent to establish, on the balance of probabilities, that a skilled person reading the patent, using his common general knowledge, would be unable to carry out the invention (see **T 182/89**, OJ 1991, 391). In **T 967/09**, the board was satisfied that opponent III had substantiated, by means of verifiable facts, serious doubts that the patent did not disclose the invention as defined in claim 1 in a manner sufficiently clear and complete for it to be carried out by the skilled person. These doubts were considered not to be convincingly rebutted by the appellant (patent proprietor). Accordingly, the board considered that respondent (opponent III) had discharged its burden of proof in this respect. Therefore the patent, in respect of the subject-matter of claim 1, was insufficiently disclosed. **T 1842/06** sets out various evidential requirements under Art. 83 EPC, especially those applicable in ex parte proceedings. It states that if an examining division or board objects that the description's disclosure is insufficient, it bears the burden of proving that. If an invention is "revolutionary" (e.g. linked to the "memory of water"), reversing this burden of proof may be justified if the claimed invention's feasibility and reproducibility does not appear sufficiently plausible on the basis of the application. Doubts might arise for example merely because a technical effect that is **a priori contrary to the laws of physics** is not adequately substantiated by experimental results (see also **T 518/10**, point 7.10.1 of the Reasons, on the burden of proving insufficiency in inter partes cases).

In **R 21/10**, the Enlarged Board ruled that a board's alleged reversal of the burden of proof is not a ground for review, these being exhaustively listed in Art. 112a(2)(a) to (e) and R. 104 and 105 EPC. It found that, in any event, the technical board concerned – far from reversing the burden of proof – had merely applied the rule that each party bears the burden of proving the facts it asserts.

### 5.2.3 Cases in which the burden of proof was not reversed

In **T 954/93** the appellant (opponent) had put forward objections to the patent on the basis of lack of novelty, which would have had to be demonstrated by means of experiments. It had not, however, carried out any tests on the ground that they would have been very expensive. The board considered the allegation unproven and refused to reverse the burden of proof. The fact that experiments would have been very expensive did not shift the burden of proof onto the patent proprietor.

In **T 453/04** the opposition had been rejected, i.e. the grounds alleged pursuant to Art. 100 EPC had been found not to be substantiated. The board referred to the previous

case law in **T 667/94** according to which, in such cases, the burden of showing that the decision of the opposition division was incorrect remained with the appellant (opponent). The burden is not automatically shifted to the proprietor to show on appeal that the reasons for maintaining the patent were justified was not automatically shifted to the proprietor.

According to **T 499/00**, the burden of proof could not be reversed to rest with the patentee in cases where – as opposed to the situation in **T 585/92** – the patent had been revoked by the opposition division not on the strength of a real failure to disclose the information needed to reproduce the claimed subject-matter, but for reasons that the board elsewhere deemed erroneous.

## H. Interpretation of the EPC

1.	The Vienna Convention on the Law of Treaties	705
1.1.	Principles of interpretation of the Vienna Convention	706
1.1.1	The interpretation of good faith in accordance with the ordinary meaning	706
1.1.2	Supplementary means of interpretation	707

7.	Changes in relation to an established practice and interpretation	714
8.	Interpretation of the various language texts of the EPC (Article 177 EPC)	715

---

On the interpretation of provisions of the EPC, the EPC itself provides relatively little guidance. There is the Protocol on the Interpretation of Art. 69 EPC of 5 October 1973 as revised by the Act revising the EPC of 29 November 2000. This deals with the extent of protection under Art. 69 EPC. Otherwise, the EPC contains only regulations like the hierarchy of legal provisions (Art. 150(2) and 164(2) EPC) and the equal authenticity of the EPC in its three official language versions (Art. 177 EPC). Art. 125 EPC is not concerned with the interpretation of the EPC but serves merely as a "fill-in" in case of missing procedural provisions. The EPC itself thus contains no general rules for its interpretation, and one must look outside the terms of the Convention itself for such rules (**G 2/12**, **G 2/13**, OJ 2016, A27 and A28).

As an international treaty, the EPC has to be interpreted in accordance with the rules of interpretation developed in the so-called "law of nations" or public international law. To the traditional kind of international treaty which regulates legal relations between States had to be added the treaty which directly creates and defines rights and duties for individuals and corporate bodies (**G 5/83**, OJ 1985, 64; **G 2/12**, **G 2/13**).

In the interpretation of international treaties which provide the legal basis for the rights and duties of individuals and corporate bodies it is necessary to pay attention to questions of harmonisation of national and international rules of law. The boards of appeal may take into consideration decisions and opinions given by national courts in interpreting the law (see **G 5/83**, OJ 1985, 64; see also **G 2/12**, **G 2/13**). Nevertheless, in the proceedings before the European Patent Office, such considerations do not exonerate a board of appeal from its duty as an independent judicial body to interpret and apply the EPC and to decide in last instance in patent granting matters. TRIPS provisions, like decisions of the European and International Courts of Justice and national decisions, are elements to be taken into consideration by the boards of appeal but are not binding on them (**T 154/04**, OJ 2008, 46).

Although the European Patent Organisation is not a party to the Vienna Convention on the Law of Treaties concluded on 23 May 1969 (hereinafter Vienna Convention), the principles of interpretation of Arts. 31 and 32 of the Vienna Convention are to be applied to the interpretation of the EPC even though its provisions do not apply to the EPC *ex lege* (**G 5/83**, **G 2/08**, OJ 2010, 456). The boards of appeal refer to legal sources outside the EPC, including, for example, Vienna Convention and the TRIPS Agreement. Thus the boards of appeal may be guided in their decisions by the provisions of other international instruments. However, they have no obligation to apply them directly (**G 2/02** and **G 3/02**, OJ 2004, 483).

### 1. The Vienna Convention on the Law of Treaties

In **G 5/83** (OJ 1985, 64) the Enlarged Board stated that the provisions of the Vienna Convention do not apply to the EPC *ex lege*, since the former Convention applies only to treaties which are concluded by States after the entry into force of the Vienna Convention with regard to such States (Art. 4, Vienna Convention). At the time of conclusion of the EPC, the Vienna Convention was not in force. Nevertheless, there were convincing precedents for applying the rules for interpretation of treaties incorporated in the Vienna Convention to a treaty to which in terms they do not apply (see also **G 2/12**, **G 2/13**). The International Court of Justice did already apply principles expressed in the Vienna Convention to situations to which the Convention strictly did not apply, whilst the European Court of Human Rights, the Federal German Constitutional Court and the House of Lords (England) have also applied the principles of interpretation in Art. 31 and 32 of the Convention to treaties to which strictly they do not apply. After a careful study of the whole subject, the Enlarged Board of Appeal concluded that the European Patent Office had to do the same.

In **J 10/98** (OJ 2003, 184) the Legal Board of Appeal stated that, although the Vienna Convention did not expressly apply to the interpretation of EPC, PCT or the Paris Convention, since it came into force at a later date than all of those treaties, in accordance with what had been recognised by the Enlarged Board of Appeal in decision **G 5/83**, its principles of interpretation were a valuable guide to the interpretation of all treaties executed both before and after it. In **T 1173/97** (OJ 1999, 609) the board stated that although the Vienna Convention is not applicable to the EPC, it has considerable

authority and has frequently been cited by the boards of appeal when applying principles laid down in it.

### 1.1. Principles of interpretation of the Vienna Convention

It is established in the jurisprudence that the principles of interpretation provided for in Art. 31 and 32 Vienna Convention are to be applied when interpreting the EPC. Decisions and opinions given by national courts in interpreting the law may also be taken into consideration (**G 2/12**, **G 2/13**). These principles have been acknowledged and applied by the Enlarged Board and the boards of appeal alike (**G 1/83**; **G 5/83**; **G 2/02** and **G 3/02**, OJ 2004, 483; **G 2/08**, OJ 2010, 456; **J 10/98**, OJ 2003, 184; **T 128/82**, OJ 1984, 164; **T 1173/97**, OJ 1999, 609).

#### 1.1.1 The interpretation of good faith in accordance with the ordinary meaning

In **G 2/08** (OJ 2010, 456) the Enlarged Board stated that from the reading of Art. 31 and 32 of the Vienna Convention taken together it follows that the provisions of a treaty (here the EPC) must first be construed according to the ordinary meaning of the terms in their context and in the light of its **object and purpose**, which means that the judge is not entitled to depart from clear provisions of law, this principle pertaining to the requirement of good faith. From the wording of Art. 32 Vienna Convention it can also be derived that **preparatory documents** are primarily to be drawn into consideration in order to confirm a meaning or to determine a meaning if the first and ordinary means of construction would lead to ambiguity or to an absurd result (see also decision **G 1/07** of 15 February 2010, point 3.1 of the Reasons).

In **G 2/12** and **G 2/13** (OJ 2016, A27 and A28) the Enlarged Board stated that this objective method of interpretation is directed to establishing the "authentic" meaning of the relevant provision and its legal terms. The starting point of interpretation is thus the wording, i.e. the "objective" meaning, regardless of the original "subjective" intention of the contracting parties. To this end, the provisions are to be read in their context so that they comply with the object and purpose of the EPC.

In **T 1173/97** the board analysed some aspects of the meaning of the expression "computer programs as such", with the emphasis on the "as such", and arrived at the conclusion that a computer program product is not excluded from patentability if it possesses the potential to bring about a "further" technical effect. The board was of the opinion that that interpretation to the exclusion of computer programs as such under Art. 52(2)(c) and (3) EPC 1973 was in full agreement with the provisions of the Vienna Convention. In its interpretation the board did not go beyond the ordinary meaning given to the terms of the EPC. The meaning it attributed to the expression "as such" in Art. 52(3) EPC 1973 was, in its opinion, not a special meaning within the meaning of Art. 31(4) Vienna Convention, which would have required the consent of the parties to the EPC.

### 1.1.2 Supplementary means of interpretation

It is a generally recognised rule of international law that when interpreting international treaties ancillary use may be made of material relating to their genesis. Under Art. 32 of the Vienna Convention, recourse may be had to supplementary means of interpretation, particularly the preparatory work for a treaty and the circumstances in which it was concluded, in order to confirm the meaning arrived at by application of Art. 31 or to determine the meaning when application of Art. 31(a) leaves the meaning ambiguous or obscure, or (b) produces a meaning which is obviously nonsensical or unreasonable (**T 128/82**, OJ 1984,164; see also **G 2/07**, OJ 2012, 130; **G 1/08**, OJ 2012, 206, point 4.3 of the Reasons; **G 2/12** and **G 2/13**).

In **G 2/12** and **G 2/13** the Enlarged Board stated that the preparatory work ("travaux préparatoires") and the circumstances of the conclusion of the EPC serve only as supplementary sources of evidence to confirm the result of the interpretation or if no reasonable meaning can be determined by applying the general rule of interpretation (Art. 32 Vienna Convention).

In **J 8/82** (OJ 1984, 155) the board noted however that it was well recognised that Art. 31 and Art. 32 of the Vienna Convention on the interpretation of treaties merely codified existing public international law. In **J 4/91** (OJ 1992, 402), for example, the Legal Board of Appeal drew on historical material relating to the EPC 1973 to support its view, arrived at from a teleological and systematic interpretation of the relevant provisions, regarding the additional period for paying renewal fees. **G 1/98** (OJ 2000, 111) discussed the purpose of Art. 53(b) EPC 1973, its relationship to other international treaties and legal texts, and its legislative history. In **G 3/98** and **G 2/99** (OJ 2001, 62 and 83), the Enlarged Board reached its conclusions on Art. 55(1) EPC 1973 after interpreting the wording and considering also the legislator's intention and the aspects of systematic, historical and dynamic interpretation.

### 1.1.3 Interpretation of exclusions from patentability under the Vienna Convention

In **G 1/07** (OJ 2011, 134) the appellant had submitted that exclusions to patentability had to be construed narrowly according to Art. 31 and 32 of the Vienna Convention.

The Enlarged Board held that no general principle of narrow interpretation of exclusions from patentability which would be applicable **a priori** to the interpretation of any such exclusions can be derived from the Vienna Convention. Rather, the general rule in Art. 31, point 1, of the Vienna Convention that a treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose must apply to the exclusion clauses contained in the EPC in the same manner as to any other provision. If the interpretation of the provision concerned according to these principles of interpretation leads to the result that a narrow interpretation is the right approach then and only then is such restrictive meaning to be given to it.

In **G 2/12** and **G 2/13** the Enlarged Board came to the conclusion that whilst there is no general notion of an obligatorily restrictive construction of exceptions to patentability, for example, such as that adopted by the Court of Justice of the European Union (CJEU) when insisting on a narrow interpretation of exceptions to or derogations from fundamental EC Treaty principles embodied in the four freedoms (Judgment of 21 June 1974, C 2-74, *Jean Reyners v. Belgian State*, ECJ 1974, 631), such a narrow interpretation might well result from applying the general principles of interpretation to a specific provision with regard to specific legal and factual circumstances.

**G 1/07** made reference to Opinion **G 1/04**, OJ 2006, 334 (point 6 of the Reasons). In that Opinion, the Enlarged Board stated - with reference to decisions of the boards of appeal having acknowledged the existence of such an a priori principle - that the "frequently cited principle", according to which exclusion clauses from patentability laid down in the EPC are to be construed in a restrictive manner, does not apply without exception. In that Opinion concerning the definition of the term diagnostic methods practised on the human or animal body, the Enlarged Board came to its conclusion that the said exclusion was indeed to be interpreted narrowly only after a thorough examination of the wording and the purpose of the exclusion clause concerned. The same approach was also taken in the Enlarged Board's decision **G 2/06** (OJ 2009, 306). There, the Enlarged Board was concerned with the interpretation of the exclusion from patentability of biotechnological inventions relating to uses of human embryos for industrial or commercial purposes under R. 28(c) EPC (and the corresponding Art. 6(2) of the EC Directive on the legal protection of biotechnological inventions). The Enlarged Board made no reference to the existence of a principle of narrow construction of exceptions from patentability. Instead, as a method for interpreting the extent of the prohibition the Enlarged Board went directly to the rules of interpretation laid down in the Vienna Convention, i.e. it looked at the terms of the provision and its object and purpose (point 16 of the Reasons). No mention was made in that decision of any narrow or restrictive view which would have to be taken because the said prohibition was an exception to patentability. The Enlarged Board decided to proceed in the same way in **G 1/07**.

## 1.2. Application of the rules of interpretation

In consolidated cases **G 2/12** and **G 2/13** (OJ 2016, A27 and A28) the term "essentially biological processes for the production of plants" in Art. 53(b) EPC needed to be construed pursuant to the general rules of interpretation. The Enlarged Board noted that it was established in the jurisprudence that the principles of interpretation provided for in Arts. 31 and 32 of the Vienna Convention were to be applied when interpreting the EPC. This question was to be analysed by means of a **methodical interpretation** of Art. 53(b) EPC in respect of, primarily, its wording and, secondarily, considering also the legislator's intention and the aspects of systematic and historical interpretation. In particular, it applied various methodical lines of interpretation which included grammatical, systematic and teleological interpretations as well as supplementary means of interpretation, principally, the preparatory work. None of these lines of interpretation led the Enlarged Board to conclude that the term "essentially biological processes for the production of plants" extended beyond the processes to products defined or obtained by

such processes. This result was confirmed when the preparatory work of the EPC was taken into account as a supplementary means of interpretation.

The supplementary means of interpretation have already been commented on above (see in this chapter III.H.1.1.2). Further arguments and the case law referred to by the Enlarged Board in **G 2/12** and **G 2/13** in applying the various **lines of interpretation** are reproduced below.

#### 1.2.1 Grammatical interpretation

The Enlarged Board stated that when interpreting provisions of the EPC, it usually starts from the wording of the relevant provision and even if the wording of a provision reveals its meaning clearly, it is then to be examined whether the result of the literal interpretation is confirmed by the meaning of the words in their context. It could well be that the wording only superficially has a clear meaning. At any rate, a literal interpretation must not contradict the purpose of the provision (see **G 1/90**, OJ 1991, 275, 278, point 4 of the Reasons); **G 6/91** (OJ 1992, 491, 499, point 15 of the Reasons); **G 3/98** (OJ 2001, 62, 71, point 2.2 of the Reasons). However, in the case in point, more than one meaning could in principle be attributed to the wording (cf. **G 1/88**, OJ 1989, 189, 193, point 2.2 of the Reasons). Therefore, the true and intended meaning of the term "essentially biological processes for the production of plants" needed to be analysed further.

#### 1.2.2 Systematic interpretation

The systematic interpretation formed a second pillar when construing a legal provision and its terms (see **G 1/88**, point 3 of the Reasons; **G 9/92**, point 1 of the Reasons; **G 4/95**, OJ 1996, 412, 421 et seq., points 4 and 5 of the Reasons; **G 3/98**, OJ 2001, 62, 71, point 2.2 of the Reasons; **G 4/98**, OJ 2001, 131, 143, point 4 of the Reasons). In applying this second method of interpretation the meaning of the wording in question was to be established in the context of the relevant provision itself. In addition, the provision as such had to be interpreted taking into account its position and function within a coherent group of related legal norms.

#### 1.2.3 Teleological interpretation

Like national and international courts, the Enlarged Board applies the method of teleological interpretation in the construction of legislative provisions in the light of their purpose, values, and the legal, social and economic goals they aim to achieve. In this, the Enlarged Board examined their objective sense and purpose (e.g. **G 1/88**, point 5 of the Reasons; **G 1/03**, point 2.1.1 of the Reasons). The starting point was marked by determining the general object of the relevant provision (*ratio legis*) because the interpretation could not contradict the provision's spirit (**G 6/91**, point 8 of the Reasons).

#### 1.2.4 Subsequent agreement or practice

The object and purpose of the exclusion under Art. 53(b) EPC was not, however, sufficiently obvious to answer the question whether or not the clause was to be

construed in a narrow or broad way. The Enlarged Board noted that under Art. 31(3) of the Vienna Convention any subsequent agreement between the parties regarding the interpretation of the treaty or its application, and any subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation is to be taken into account. It pointed out that R. 26(5) EPC (formerly R. 23b(5) EPC 1973) could be regarded as such subsequent agreement and practice. R. 26(1) EPC explicitly calls for due consideration of the Biotech Directive (see **G 2/06**, point 16 of the Reasons).

### 1.2.5 Secondary considerations

The Enlarged Board stated that a "dynamic interpretation" might come into play where considerations have arisen since the Convention was signed which might give reason to believe that a literal interpretation of the wording of the relevant provision would conflict with the legislator's aims. Secondary considerations serve the purpose of testing the legal soundness of the conclusions reached in interpreting the scope of application of the process exclusion under Art. 53(b) EPC. The Enlarged Board concluded that the concept of a dynamic interpretation did not require revising the result of the interpretation established by applying traditional rules of construction.

## 2. Interpretation of the EPC affected by TRIPS Agreement

### 2.1. General

The European Patent Organisation, established by the EPC, which constitutes a special agreement under Art. 19 of the Paris Convention, is not a party to the WTO/TRIPS Agreement. The Enlarged Board of Appeal observed in **G 2/02** and **G 3/02** (OJ 2004, 483) that although the EPO is not a party to TRIPS and not bound by it, the national legal systems of the EPC Contracting States might be affected by TRIPS and they may be under an obligation to see to it that the EPC is in conformity with TRIPS. The European Patent Organisation as an international organisation has an internal legal system of its own, the EPC. The boards of appeal of the EPO have the task of ensuring compliance with the autonomous legal system established by the EPC and are bound by the provisions of the EPC alone (Art. 23(3) EPC).

### 2.2. Elements to be taken into consideration by the boards of appeal

The issue of the application of TRIPS in the context of the EPC has been considered on a number of occasions by the boards of appeal of the EPO (see for instance **G 1/97**, OJ 2000, 322, **T 1173/97**, OJ 1999, 609, **J 10/98**).

In **T 1173/97** the board stated that although TRIPS may not be applied directly to the EPC, the board found it appropriate to take it into consideration, since it is aimed at setting common standards and principles concerning the availability, scope and use of trade-related intellectual property rights, and therefore of patent rights. Thus TRIPS gives a clear indication of current trends.

In **G 2/02** and **G 3/02** the Enlarged Board of Appeal noted that TRIPS provisions, like decisions of the European and International Courts of Justice and national decisions, are elements to be taken into consideration by the boards of appeal but are not binding on them. Whereas it is legitimate for the boards of appeal to use the TRIPS Agreement as a means to interpret provisions of the EPC 1973 which allow different interpretations, specific provisions of TRIPS cannot justify ignoring express and unambiguous provisions of the EPC 1973. To do so would usurp the role of the legislator. This was confirmed by the fact that the legislator of EPC 2000 found it necessary to revise Art. 87 EPC 1973 in order to implement the TRIPS Agreement. The law to be applied by the boards of appeal was governed by the provisions of the EPC only.

In **T 1173/97** (OJ 1999, 609) the board decided that, although TRIPS could not be applied directly to the EPC 1973, it was appropriate to take it into consideration in connection with the patentability of computer program products, for TRIPS was aimed at setting common standards and principles concerning the availability, scope and use of trade-related intellectual property rights. It thus gave a clear indication of current trends. The appellant's reference to current practice at the US and Japanese patent offices caused the board to emphasise that the situation under these two legal systems (US, JP) differed greatly from that under the EPC 1973; only the EPC 1973 contained an exclusion such as that in Art. 52(2) and (3) EPC 1973. These developments nevertheless represented a useful indication of modern trends and, in the board's view, could contribute to the highly desirable further (worldwide) harmonisation of patent law.

### **3. The European Convention on Human Rights**

In its decision of 25 April 2014 in **R 19/12**, the Enlarged Board of Appeal observed that Article 6 ECHR had been recognised in **G 1/05** (OJ 2007, 362) and **G 2/08** of 15 June 2009 as a binding standard for proceedings before the boards of appeal because it relied on principles of law common to all member states of the European Patent Organisation and applying to all its departments (see also **D 11/91** and Chapter III.J.1.3. "The Convention for the Protection of Human Rights and Fundamental Freedoms"). That justified applying both national case law and that of the European Court of Human Rights as a supplementary means of interpreting the EPC.

### **4. Impact of national decisions on the case law of the boards of appeal**

#### **4.1. The duty of the boards of appeal to interpret and apply the EPC**

In **G 2/02** and **G 3/02** (OJ 2004, 483) the Enlarged Board of Appeal recognised that, in accordance with the aim of the EPC, as expressed in its preamble, to strengthen cooperation between the States of Europe in respect of the protection of inventions, there has always been the intention to harmonise the substantive patent law to be applied in the Contracting States and in the EPO.

In **G 5/83** the Enlarged Board of Appeal stated that in the interpretation of international treaties which provide the legal basis for the rights and duties of individuals and corporate bodies it is, of course, necessary to pay attention to questions of

harmonisation of national and international rules of law. This aspect of interpretation, not dealt with by the provisions of the Vienna Convention, is particularly important where, as is the case with European patent law, provisions of an international treaty have been taken over into national legislation. The establishment of harmonised patent legislation in the Contracting States must necessarily be accompanied by harmonised interpretation. For this reason, it is incumbent upon the European Patent Office, and particularly its boards of appeal, to take into consideration the decisions and expressions of opinion of courts and industrial property offices in the Contracting States. In **T 154/04** (OJ 2008, 46) the board stated that in the proceedings before the European Patent Office, such considerations do not exonerate a board of appeal from its duty as an independent judicial body to interpret and apply the EPC and to decide in the last instance in patent granting matters. In addition, despite harmonised legal regulations it is not self-evident that their interpretation is also harmonised among different national courts, let alone courts of different contracting states, so that the boards of appeal would be at a loss as to which interpretation to follow if they did not exercise their own independent judgment.

#### **4.2. Effects on the case law due to the differences between national legislation and the EPC**

In **J 9/07** the board stated that according to Art. 1 EPC 1973 the EPC established a system of law common to the contracting states for the grant of patents for inventions. This common system of law is applicable to all European patent applications irrespective of which contracting states have been designated in the European patent application. Although in general a high degree of harmonization between the EPC and national laws is desirable and has indeed been achieved, differences between national legislation and the EPC are not ruled out by Art. 2(2) EPC 1973 or Art. 66 EPC 1973 in this regard. The board stated that, save to the extent that the Convention expressly provides otherwise, the EPO is not allowed to take into consideration with respect to the designated state concerned a specific national legal provision which would be more favourable for the applicant than the provisions of the EPC. This is because this would have the consequence of giving European applications unequal treatment as regards the requirements for grant depending on which state or states have been designated, contrary to Art. 1 EPC 1973. It would also go against the principle of the unity of the application enshrined in Art. 118 EPC 1973 since, if a more favourable national provision were to be applied in relation to the designated state concerned, distinguishing between a case in which the designated state concerned is the only one designated and a case in which further states have been designated as well would appear arbitrary and unjustifiable.

#### **4.3. National decisions: no binding effect on the boards of appeal**

In decision **T 452/91** it was held that in proceedings before the instances of the EPO, questions of patentability were to be decided solely in accordance with the EPC. No national decision should be cited as if it were binding on the EPO, and claims should not be refused by the EPO on the ground that their "patentability cannot be upheld under the jurisdiction of one member state". It could be that the law in most or all other contracting states was different. The reasoning that led the national instance to its conclusion might

well lead an EPO instance to a similar conclusion under the EPC, but this would first need a careful assessment of the EPC, and of relevant EPO board of appeal case law, a comparison with the legislation and jurisprudence on which the national instance reached its conclusion, and a study of the position in other contracting states (**R 21/09, T 1753/06**).

### **5. Decisions of the Administrative Council: boards of appeal not formally bound**

In **J 16/96** (OJ 1998, 347) the issue was whether an association of representatives within the meaning of R. 101(9) EPC 1973 could also be formed by professional representatives who did not work in private practice. The Administrative Council of the European Patent Organisation had decided at its 4th meeting in 1978 that an association within the meaning of this rule could only be an association consisting of professional representatives in private practice. The Legal Board of Appeal pointed out that in their decisions the boards of appeal were not bound by any instructions and complied only with the provisions of the EPC 1973 (Art. 23(3) EPC 1973). The boards of appeal could not be formally bound by a decision of the Administrative Council concerning a question of interpretation, nor could such a decision be deemed to be an instruction for their decisions. However, such a decision was a relevant element in interpretation.

The board stated that according to consistent board of appeal case law, for the purpose of the interpretation of the EPC the rules of interpretation laid down in the Vienna Convention are to be applied (see **G 5/83**). Interpreting the case in accordance with Art. 31(1) of the Vienna Convention, the board concluded that an association within the meaning of R. 101(9) EPC 1973 could also be an association of representatives not engaged in private practice. The intended aim of the Council's decision, which was to eliminate ambiguities in the application of R. 101(9) EPC 1973, had, in the light of recent developments in the profession, not been achieved, and as such the decision was less important in relation to the other factors involved in interpretation.

### **6. Implementing Regulations**

In **T 39/93** (OJ 1997, 134) the board held that, in view of Art. 164(2) EPC 1973, the meaning of an Article of the EPC on its true interpretation as established by a ruling of the Enlarged Board of Appeal could not, in the board's view, be overturned by a newly drafted Rule of the Implementing Regulations, the effect of which would be to conflict with this interpretation. This is because, according to Art. 164(2) EPC 1973, in the case of conflict between the provisions of this Convention (the EPC Article) and those of the Implementing Regulations, the provisions of this Convention shall prevail (see also **T 885/93, T 83/05, G 2/07**, OJ 2012, 130).

In **T 991/04** of 22 November 2005 the board stated that the Munich Diplomatic Conference (1973) as the legislator of the European patent system drafted the first versions of the EPC 1973 and the Implementing Rules as a legal unity which should be read in a consistent way. In this regard the Implementing Regulations had the function of an **authentic interpretation** of the EPC 1973.

In **G 2/07** (OJ 2012, 130) the Enlarged Board of Appeal noted that the provisions of the Biotech Directive 98/44/EC, which were not yet contained in the Convention and related to substantive patentability requirements, were incorporated in the interest of uniformity in harmonised European patent law into the Implementing Regulations as they stood (see the Notice dated 1 July 1999 concerning the amendment of the Implementing Regulations to the EPC (OJ 1999, 573, point 19 of the Reasons, explanatory notes to R. 23b(5) EPC 1973)). The referring board (cf. **T 83/05**, OJ 2007, 644) had argued that the competence of the Administrative Council to amend the Implementing Regulations according to Art. 33(1)(b) EPC did not extend to core issues of substantive patent law, so that the introduction of provisions determining the boundaries of patentable subject-matter was *ultra vires*. Decisions **J 11/91** and **J 16/91** (OJ 1994, 28, point 2.3.4 of the Reasons) of the Legal Board of Appeal, cited in the referring decision, contained a sentence stating that the Regulations may deal only with procedural questions and not with matters of substantive law. No reason was given in these decisions as to why this should be so.

The Enlarged Board of Appeal stated that it is the function of the Implementing Regulations to determine in more detail how the Articles should be applied and there is nothing in the Convention allowing the conclusion that this would not also apply in the case of Articles governing issues of substantive patent law. The limits to the Administrative Council's law-making powers by means of the Implementing Regulations could be inferred from Art. 164(2) EPC. According to that Article, in case of conflict between the provisions of the Convention and those of the Implementing Regulations, the provisions of the Convention shall prevail. In decision **G 2/93** (OJ 1995, 275), the Enlarged Board of Appeal accepted that R. 28 EPC 1973 implemented Art. 83 EPC 1973 and was, at least in part, substantive in nature. Furthermore, in its more recent decision **G 2/06** (OJ 2009, 306, points 12 and 13 of the Reasons), too, the Enlarged Board did not doubt the Administrative Council's power to lay down provisions concerning substantive law in the Implementing Regulations.

Thus the Enlarged Board of Appeal held that the legislator is entitled to provide for issues of substantive law in the Rules of the Implementing Regulations. However, a Rule, not having a legal history of its own, must be clear enough to indicate to those applying it in what way the legislator intended the Article to be interpreted by means of that Rule. This, however, was not the case for R. 26(5) EPC. R. 26(5) EPC did not give any useful guidance on how to interpret the term "essentially biological process for the production of plants" in Art. 53(b) EPC and therefore that term had to be interpreted on its own authority. This was for the Enlarged Board to do (for further details on decision **G 2/07** (OJ 2012, 130)).

## **7. Changes in relation to an established practice and interpretation**

In **G 2/07** (OJ 2012, 130) the Enlarged Board of Appeal stated that there can be no "legitimate expectation" that an interpretation of a substantive provision governing patentability given in a decision of the boards of appeal will not be overruled in the future by the Enlarged Board, since recognising such an expectation as legitimate would undermine the function of the Enlarged Board of Appeal. This holds particularly true for

issues on which there is no solid body of decisions all to the same effect but where instead the relevant jurisprudence consists only of a very limited number of individual decisions, as is presently the case. In the past, the Enlarged Board has granted a transitional period in cases in which the Enlarged Board's decision has brought about a change in relation to an established procedural practice which the parties could not be expected to foresee. By contrast, for the reasons given above, the existence of "legitimate expectations" has never been acknowledged for issues before the Enlarged Board concerning the correct application, i.e. interpretation, of substantive patent law.

#### **8. Interpretation of the various language texts of the EPC (Article 177 EPC)**

In **J 8/95** it was held that even if one language version of a provision of the EPC were found to differ from the other two versions, no legal consequences could be derived from that version other than those which could be derived from the other two versions - regardless of the language of the proceedings. A difference in the wording in one language would have to be considered only in so far as it could form one element of the interpretation. In the case at issue, however, the provision under consideration, even in the allegedly different version, could readily be understood in context in the same way as the other two official languages, with the result that all three versions of the provision corresponded as far as content was concerned (see also **T 2321/08**).

**I. Main and auxiliary requests**

6.	Interlocutory decision on allowable auxiliary request – distinction between examination proceedings and opposition proceedings	719
7.	Opposition procedure	720
8.	Appeal procedure	721

---

**1. Possibility of filing auxiliary requests**

In the proceedings before the EPO main and auxiliary requests are allowed (for grant proceedings see e.g. **T 79/89**, OJ 1992, 283; for opposition proceedings see e.g. **T 234/86**, OJ 1989, 79). An auxiliary request is a request for amendment which is contingent upon the main request (or preceding auxiliary requests) being held to be unallowable **T 153/85** (OJ 1988, 1). It is also a request for amendment covered by R. 86(3) EPC 1973 (now R. 137(3) EPC); Art. 96(2) EPC 1973 and R. 51(2) EPC 1973 (see now Art. 94(3) EPC and R. 71(2) EPC); and, during appeal proceedings, Art. 110(2) EPC 1973 and R. 66(1) EPC 1973 (see R. 100(1) EPC) (**T 79/89**, OJ 1992, 283).

**2. Order of requests**

The established system of main and auxiliary requests in the proceedings before the EPO provides that parties, when filing alternative sets of claims, must indicate the order of preference for each set of claims (**R 14/10**, **T 1125/13**).

Before a decision can be taken on the basis of an auxiliary request, the main request has to be examined and decided upon (**T 484/88**). The board in **T 169/96** pointed out that, under Art. 113(2) EPC 1973, the EPO was bound by the requests of the applicant or proprietor, and, in the case of main and auxiliary requests, this meant that the EPO was also bound to the order of the requests. However, in **T 911/06** the board held that this principle did not necessarily apply to the proceedings before the boards, see in this chapter III.I.8, below.

In **T 1439/05** the board held that to avoid misunderstanding, the examining division should clarify the status of the requests before pronouncing its decision at the conclusion of oral proceedings. In **T 883/07** the board held that in accordance with generally recognised procedural requirements, albeit not codified specifically in the EPC, once a higher order request was refused that request was off the table and the next request in the order chosen by the requester had to be considered as if it were the sole request.

### **3. Admissibility of requests**

#### **3.1. Party's responsibility to define subject-matter by filing appropriate requests**

In **T 506/91** the board held that filing requests and deciding if several alternative requests were appropriate or not was a matter that in the end could only be decided by the party concerned and it should be routine for representatives to decide independently how to pursue their cases, including what requests to submit.

In **T 382/96** the board stressed that one of the fundamental principles of European patent law was that responsibility for defining the subject-matter of a patent rested with the applicant (in opposition proceedings the patent proprietor). The applicant (patent proprietor) could not offload this responsibility de facto on to the EPO or any other parties to the proceedings by filing a multitude of requests, let alone incompletely formulated request variants. Doing so constituted an abuse of procedure, as it overburdened the EPO and any other parties to the proceedings with work not originally theirs to perform and thereby hampered the orderly conduct of proceedings. Auxiliary requests which had not been verbally specified in more detail were inadmissible for the purposes of R. 64(b) EPC 1973 because they did not identify the extent to which amendment or cancellation of the contested decision was requested; the same went for auxiliary requests for which no grounds had been set out (i.e. not substantiated) within the meaning of the third sentence of Art. 108 EPC 1973.

**T 446/00** concerned a case in which a large number of requests was filed with an offer to amend the claims further if the board so wished; the board held that a party could not in that manner abdicate its responsibility to present its case to the board and that such requests were both inadmissible and an abuse of procedure.

In **T 745/03** the board also pointed out that it was up to a party to decide on the presentation of its case. When filing several sets of claims, a party usually listed them in order of preference, the least limited claims being a main request, the more limited versions auxiliary requests, so that if a higher order request should fail, then a lower, more limited request would still have a chance of success. In the case before the board this had changed to an approach which could more aptly be designated as "pick and mix", as independent claims present in higher order requests were also to be found in lower order requests in differing permutations of independent claims. The "pick and mix" approach can both give an impression of fishing around for something patentable and mean that some independent claims are not even the subject of a decision. See also **T 221/06**.

In **R 11/08** the Enlarged Board confirmed that adopting a "pick and mix" approach could run the risk of requests being found inadmissible, abuse of procedure, and disadvantages for the party in question.

### **3.2. Requests of equal ranking**

In **T 148/06** the board held several requests inadmissible which were submitted not as principle and auxiliary requests, but as requests of equal ranking. It was not the board's duty to give a legal opinion on the admissibility of several requests as guidance for appellants in defining the order in which they would like their requests to be examined.

### **3.3. Requesting further opportunity to formulate new requests**

In **T 792/92** the board considered as inadmissible the appellant's request at the end of the oral proceedings that, should the outcome of the discussions be negative for him, he be given the opportunity to formulate new requests.

### **3.4. Admissibility of late-filed requests**

On the late-filing of requests for amendment in appeal proceedings, see Chapter IV.E.4. "Filing of amended claims in appeal proceedings"; in opposition proceedings, see Chapter IV.D.4.3. "Time frame for filing amendments"; and in examination proceedings, see Chapter IV.B.3.3.3 "Criteria for admitting amendments filed in reply to the Rule 71(3) EPC communication".

## **4. Obligation to give reasons for refusal of each request**

If a decision relates to several requests, it must give reasons for the rejection of each one. It must be clear from the decision which considerations led the division to its conclusions (**T 234/86** (inter partes), **T 169/96** (ex parte)).

According to **T 961/00**, it is a party's procedural right to file and maintain such requests as are regarded by the competent organ as unallowable or even inadmissible. If a party does so, then the competent organ has to give a decision on it, i.e. to refuse it if it is unallowable or inadmissible (see **T 1105/96**, OJ 1998, 249), but it cannot simply disregard it and deal with the case as if the request did not exist. On the contrary, this would constitute a substantial procedural violation.

In **T 1157/01** the applicant had maintained all its requests (main and three auxiliary requests). When it declared its non-approval of the text proposed for grant based on the third auxiliary request, however, the appellant did not explicitly repeat that it maintained all its previous and higher ranking requests. However, according to the general principle "A jure nemo recedere praesumitur" mentioned in **G 1/88** (OJ 1989, 189), in the absence of an explicit withdrawal, surrender of a right could not be simply presumed and silence could not be deemed to be equivalent to surrender in the logic of how the Convention operated. The decision under appeal had omitted to give reasons for the refusal of the

higher ranking requests still pending before the examining division, which amounted to a substantial procedural violation.

## **5. Examination procedure**

### **5.1. Direct rejection of auxiliary request by examining division**

In **T 488/94**, the board stated that before refusing an application in the case of main and auxiliary requests, the Examining Division in accordance with Art. 113(1) EPC 1973 would not only have to communicate its arguments regarding non-allowability of the main request to the applicant, but also regarding non-allowability of the auxiliary request, if the result of the subsequent examination of the auxiliary request was also negative. A "direct" rejection of an auxiliary request without preceding communication of the grounds on which the rejection was based would only comply with the requirements of Art. 113(1) EPC 1973 under rather exceptional circumstances.

### **5.2. Rejection in advance of further request by examining division**

According to **T 1105/96** (OJ 1998, 249), an applicant had a right both to file one or more auxiliary requests in addition to a main request, and to maintain all such requests even if the examining division communicated its view that all except the last auxiliary request were inadmissible or unallowable, and he was then entitled to a reasoned appealable decision in respect of rejection of each such request. Where an examining division had communicated its view that a further request in the form of an amended text of a claim would be allowable, the rejection in advance of such a further request unless all preceding requests were abandoned was an unlawful exercise of discretion under R. 86(3) EPC 1973 (R. 137(3) EPC) and a substantial procedural violation under R. 67 EPC 1973 (R. 103 EPC).

### **5.3. Practice of proposing one main and one or more auxiliary requests**

The board in **T 1351/06** referred to the decisions **T 79/89** (OJ 1992, 283), **T 169/96**, **T 1105/96**, (OJ 1998, 249) and to Legal Advice No. 15/05 (rev. 2, OJ 2005, 357; now incorporated into the Guidelines, see Guidelines H-III, 3. – November 2015 version), where it was held that it was standard practice at the EPO that the applicant was able to propose one main and one or more auxiliary requests at the examination stage, to amend the text of the application. The board saw no reason why the applicant should not also be able to do so in response to a communication under R. 51(4) EPC 1973, especially in cases where that communication had not been preceded by a communication under Art. 96(2) EPC 1973 and thus constituted a "first communication" within the meaning of R. 86(3) EPC 1973.

## **6. Interlocutory decision on allowable auxiliary request – distinction between examination proceedings and opposition proceedings**

In **T 549/96** it was noted that Art. 113(2) EPC 1973 required the examining division to decide upon an application only in the text agreed by the applicant. Thus an applicant

had to indicate clearly at the end of the proceedings which text he wished to be used. If an applicant failed to indicate his approval of the text of an allowable subsidiary request, e.g. by express disapproval or by maintaining one or more unallowable higher-preference requests over one considered allowable by the examining division, the examining division could refuse the application under Art. 97(1) EPC 1973. The board **contrasted opposition and grant proceedings**. In the case of an allowable auxiliary request in opposition proceedings an interlocutory decision was taken under Art. 106(3) EPC 1973 (Art. 106(2) EPC) to the effect that the European patent met the requirements of the EPC 1973, account being taken of the amendments made by the patent proprietor. This interlocutory decision then also had to include the reasons why the preceding requests did not meet the requirements of the EPC 1973. This saved the proprietor the further costs of fulfilling the formal requirements under R. 58(5) EPC 1973 (R. 82(2) EPC) before there was a final decision on the version in which the patent could be maintained. No comparable situation existed in grant proceedings. On the contrary, in ex parte appeal proceedings the principle of examination ex officio applied. Up to the grant stage it had to be ensured that the conditions for patentability were met. An interlocutory decision, stating that the application in a certain version met the requirements of the EPC 1973, would be in conflict with this purpose. The board drew attention to Legal Advice No. 15/98 (OJ 1998, 113; replaced by Legal Advice No. 15/05 (rev. 2), OJ 2005, 357; various aspects and procedural consequences of filing auxiliary requests have been incorporated into the Guidelines, see Guidelines H-III, 3 – November 2015 version).

In **T 482/06**, the board found that decision **T 549/96** was compatible with the updated Legal Advice, as it stated that "an applicant must unambiguously indicate at the end of the proceedings, which text he proposes". Legal Advice No. 15/05 set out the mechanism to provide this indication. See also **T 976/97**, also before the entry into force of Legal Advice 15/05, where the situation was similar to that in **T 549/96**. In **T 1220/05** the board (referring to **T 839/95** and **T 549/96**) held that interlocutory decisions finding an auxiliary request allowable were not in keeping with standard first-instance practice in examination proceedings, as opposed to opposition proceedings (see Legal Advice No. 15/05 (rev. 2), point 1.1), and in appeal jurisprudence were deemed undesirable owing to possible repercussions (binding effect, no reformatio in peius).

## 7. Opposition procedure

According to **T 234/86** (OJ 1989, 79), the opposition division can – and in certain circumstances must – maintain the patent as per the patentee's subordinate auxiliary request if he pursues main and auxiliary requests which are not allowable although taking precedence over the allowable one. Rejection of the requests which take precedence must be substantiated.

In **T 5/89** (OJ 1992, 348) the board confirmed that a decision may confine itself to rejecting the main request only if all subordinate requests have been withdrawn. This principle was also confirmed in **T 785/91** and **T 81/93**. Following **T 5/89**, the board in **T 861/97** stated that deciding to revoke a patent solely on the basis of the main request

when there was an expressly maintained auxiliary request constituted an infringement of Art. 113(2) EPC 1973.

In **T 155/88** the board made it clear that the patentee could not be required to withdraw any request. If he filed one or more auxiliary requests in addition to a main request and did not withdraw any of them, an opposition division was obliged in its decision to give reasons why each successive request was either not admissible (in the exercise of its discretion under R. 57(1) EPC 1973 and R. 58(2) EPC 1973, see **T 406/86**, OJ 1989, 302), or not allowable on substantive grounds (see **T 234/86**, OJ 1989, 79). If an opposition division allowed an auxiliary request without giving reasons in its decision as to why the main request or preceding auxiliary requests were not allowable, such decision would be set aside as void and of no legal effect, and the appeal fee refunded on the basis of a substantial procedural violation, as was the case in **T 234/86** and **T 484/88**.

The board in **T 848/00** agreed with the reasoning of decision **T 155/88** that if a patentee proposed amendments to its claims which arose out of the opposition and which were intended to meet the grounds of objection raised in the opposition by limiting the scope of protection sought, this should not normally be interpreted as an abandonment of the subject-matter protected by the claims of the patent as granted. But this statement did not influence how the amended set of claims was to be read because a restriction of claims was possible without abandoning the subject-matter of the patent specification as originally filed.

## 8. Appeal procedure

In **T 911/06** the board stated that applying the general principles of court procedure to the order of the requests of the appellant proprietor might be inconsistent with the purpose of the appeal procedure inter partes as expressed in the decision **G 9/91** (OJ 1993, 408). In the board's opinion, examining new requests in the appeal, when the appellant proprietor had also requested examination of the correctness of the first instance decision as a lower ranking request, would effectively reduce the appeal procedure to a simple continuation of the first instance proceedings, although it was apparent from the general logic of the EPC, that the appeal proceedings were wholly separate and independent from the proceedings at first instance. The board noted that it had been established in Legal Advice from the EPO No. 15/05 (rev. 2), OJ 2005, 357 as well as in several decisions of the boards that in the case of main and auxiliary requests from the applicant or proprietor in first instance examination and opposition proceedings, the EPO was bound to the order of these requests. However, this principle did not necessarily apply to second instance proceedings before the boards of appeal. In view of the foregoing, the board considered that it was in line with the purpose of the appeal to examine first whether the department of first instance had correctly assessed the substance of the requests presented to it. Thus, in the case at issue, the correctness of the decision refusing the maintenance of the patent as granted had to be examined first, before examining the new amended claims.

6.2.3	Suspected partiality of the Chairman of the Enlarged Board of Appeal	738

## 7. Legal restrictions for former board members

740

---

**1. General principles****1.1. Exclusion and objection**

Pursuant to Art. 24(1) EPC, members of the boards of appeal or of the Enlarged Board of Appeal may not take part in a case in which they have any personal interest, or if they have previously been involved as representatives of one of the parties, or if they participated in the decision under appeal. Art. 24(3) EPC additionally provides that members of a board of appeal may be objected to by any party for one of the reasons mentioned in Art. 24(1) EPC, or if suspected of partiality. According to Art. 3(3) RPBA and Art. 4(3) RPEBA there are no further proceedings in the case before a decision on the exclusion of the member is taken. For the purposes of taking this decision, the member objected to is replaced (Art. 24(4) EPC).

According to the Enlarged Board in **G 2/08** of 15 June 2009, Art. 24 EPC envisages two different situations: exclusion and objection. The first, under paragraph 1, is exclusion *ex officio* of a member of the boards of appeal for specific reasons, primarily for having a personal interest or having been involved in the decision under appeal. The second, under paragraph 3, is objection by a party if it suspects a member of a board of partiality. In other words, under "Exclusion and objection" (Ausschließung und Ablehnung; Abstention et récusation) the legislator distinguishes between, on the one hand, an irrefutable presumption of law consisting in those compelling **grounds of exclusion** that must apply *ex officio*, and may therefore be raised by anyone, i.e. the parties, the board or a third person, without their having to justify any personal interest as of right, and, on the other hand, the **ground of objection** that may be raised by any party to the proceedings if it suspects partiality in a member of a board of appeal or of the Enlarged Board of Appeal, since said party enjoys a personal and legitimate interest to act in the proceedings and is entitled to due process of law in respect of said interest. In such a case the burden of proof lies with the party who raises the objection, since board members, including those on the Enlarged Board of Appeal, are *a priori* **presumed** to be unbiased (see in this chapter III.J.1.4). This distinction is also reflected in Art. 112a(2)(a) EPC (petition for review), which provides that a possible ground of review consists in a member of a board of appeal having participated in a case in breach of Art. 24(1) EPC or despite having been excluded pursuant to a decision under Art. 24(4) EPC. In other words, whereas the grounds under Art. 24(1) EPC are considered to be peremptory due to the violation of the legal principle that nobody should be a judge in his own cause, the ground which could have justified an objection for suspicion of partiality is not directly envisaged as constituting *a priori* (i.e. unless proven and decided by the board; see also **R 20/09**) a cause of review.

## 1.2. Rationale and importance

According to the Enlarged Board in **G 1/05** of 7 December 2006 (OJ 2007, 362), the right to object to a judge for reasons of suspicion of partiality is meant to prevent judges from being influenced in their decision-making - be it deliberately or inadvertently - by extraneous considerations, prejudices and predilections, i.e. by considerations other than the arguments they consider factually and legally relevant for the case under consideration. A suspicion of partiality might arise where there are circumstances possibly justifying a suspicion of a tendency to favour one or more of the parties or to discriminate against one of them.

In **G 5/91** (OJ 1992, 617) and **G 1/05** of 7 December 2006 the Enlarged Board underlined the importance of a very strict observance of the requirement of impartiality in proceedings before it and the other boards of appeal in view of their judicial functions at final instance within the European patent granting system.

## 1.3. The European Convention on Human Rights

In **G 1/05** of 7 December 2006 (OJ 2007, 362) the Enlarged Board stated that the principle of equal treatment and the right of parties to a fair trial enshrined in Art. 6(1) of the European Convention for the Protection of Human Rights and Fundamental Freedoms (ECHR) oblige the boards of appeal to decide the individual cases pending before them according to uniformly applied criteria and not in an arbitrary manner. In interlocutory decision **G 2/08** of 15 June 2009 the Enlarged Board also stressed that it and the other boards of appeal act as judicial bodies and apply general principles of procedural law.

In its decision **R 19/12** of 25 April 2014, the Enlarged Board observed that Art. 6 ECHR had been recognised in **G 1/05** and **G 2/08** as the binding standard for proceedings before the boards of appeal because it relies on principles of law common to all the European Patent Organisation's member states and applying to all its departments (see also **D 11/91**). This justified applying both national case law and that of the European Court of Human Rights as a supplementary means of interpretation for the EPC.

## 1.4. "Subjective" and "objective" test, presumption of impartiality

In **T 190/03** (OJ 2006, 502; see also **R 8/13** of 20 March 2015, **R 19/12** of 25 April 2014, **T 283/03**, **T 572/03**, **T 1193/02**, **T 1021/01** of 18 March 2005, **T 281/03** of 18 March 2005 and **T 281/03** of 30 March 2006) the board observed that there were two distinct aspects of partiality involved in the situations envisaged by Art. 24 EPC 1973: firstly, partiality for subjective reasons, i.e. actual partiality on the part of the member, for example due to a personal interest or a dislike of a party; and secondly, a suspicion or appearance of partiality, which would be derived by an "objective observer" from a particular action of a member, or an assumed response to a proprietor's action. Accordingly, partiality had to be determined on the basis of the following **two tests**: firstly, a "subjective" test requiring proof of actual partiality of the member concerned; and secondly, an "objective" test

according to which the deciding board judged whether the circumstances of the case gave rise to an objectively justified fear of partiality.

Actual partiality was an internal characteristic of the member himself and its presence went against the principle of a fair trial. However, suspicion and appearances were not enough to show actual partiality. It was a fundamental duty of a board member acting in a judicial capacity to take decisions objectively and not be swayed by personal interest or other peoples' comments or actions. Indeed, this principle was explicitly contained in the solemn declaration taken by board members at the time of their inauguration. Thus, a board member's personal impartiality was to be **presumed** until there was proof to the contrary (see also **G 2/08** of 15 June 2009 and **R 19/12** of 25 April 2014).

On the other hand, the appearance of partiality involved external aspects and reflected, regardless of whether the member was actually biased or not, the confidence that the board inspired in the public; as the old adage went: "Justice must not only be done; it must be seen to be done" (see also **T 900/02**, **T 2291/08** and **R 8/13** of 20 March 2015). Since this aspect of partiality related to appearances, it did not need to be proved in the same way as actual partiality, but rather it had to be established whether the circumstances gave rise to an objectively justified fear of partiality (objective element). This essentially corresponded to the "objective" and "reasonable" grounds identified in the case law of the EPO. The board stated that the above was in line with generally acknowledged procedural principles in the contracting states, e.g. the jurisprudence of the European Court of Human Rights (ECtHR).

In **G 1/05** of 7 December 2006 (OJ 2007, 362) the Enlarged Board of Appeal stated that, for an objection under Art. 24(3), first sentence, EPC to be justified, it was not necessary that the board member concerned actually be partial. It sufficed that there was a **suspicion**, i.e. an appearance, of partiality (called the "objective test" in the ECtHR jurisprudence since *Piersack v. Belgium* (1982) of 1 October 1982, No 8692/79, paragraph 30). There should be no risk that the courts would not ensure that justice was both done and perceived by the public to have been done. What was at stake was the confidence that the boards of appeal inspired in the public (see also **R 19/12** of 25 April 2014, **T 190/03** of 18 March 2005, OJ 2006, 502, ECtHR: *Puolitaival and Pirttiäho v. Finland* of 23 November 2004, No. 54857/00, paragraph 42). The Enlarged Board noted that it was, however, also commonly recognised in the jurisprudence of the boards of appeal and elsewhere that the party's "suspicion" had to be justified on an objective basis. Purely subjective impressions or vague suspicions were not enough (see also **G 3/08** of 16 October 2009, **R 2/12**, **T 1674/12**, **T 1020/06** of 28 November 2008, **T 985/01** of 18 March 2005 and **T 190/03** of 18 March 2005, OJ 2006, 502, point 7 of the Reasons and the other decisions cited there). The standpoint of the person concerned was important but not decisive (ECtHR: *Puolitaival*, paragraph 42; see also **T 241/98** of 22 March 1999 and **R 8/13** of 20 March 2015). The question was whether a reasonable, objective and informed person would on the correct facts reasonably apprehend that the judge had not or would not bring an impartial mind to bear on the adjudication of the case. It was thus necessary that a reasonable onlooker considering the circumstances of the case would conclude that the party might have good reasons to doubt the impartiality of the member objected to (see also **T 954/98** of 9 December 1999).

### 1.5. Parties' right to have their case decided by the judge designated by law

In **G 1/05** of 7 December 2006 (OJ 2007, 362) the Enlarged Board of Appeal stated that it is very important that board members discharge their duty to sit in the cases allocated to them. The right of the parties to a hearing before a judge or court in the particular composition as determined by the provisions applicable thereto ranks at constitutional level in some of the contracting states and is also recognised in the jurisprudence of the boards of appeal (see **T 954/98** of 9 December 1999, **J 15/04**, **R 15/11**). Therefore, board members cannot withdraw from the proceedings at will, i.e. for reasons which have nothing to do with the purpose of the provisions on exclusion and objection (see in this chapter III.J.2.1).

In **G 2/08** of 15 June 2009 the Enlarged Board also pointed out that its members have a duty to sit on the cases allocated to them (see also **G 3/08** of 16 October 2009) according to their jurisdiction both "*ratione legis*" and "*ratione materiae*". That is to say, parties to judicial proceedings have a right to have their case considered and decided by the judge designated or appointed by law (*droit d'être jugé par son juge naturel*; *Recht auf den gesetzlichen Richter*). This essential principle is even enshrined at constitutional level in some EPC contracting states, e.g. Germany, Austria and Switzerland. On the other hand, Art. 6(1) of the European Convention of Human Rights (ECHR) requires *inter alia* that "in the determination of his civil rights and obligations ... everyone is entitled to a fair and public hearing within a reasonable time by an independent and impartial tribunal established by law". These principles are not incompatible and have to be construed in such a way that they are not mutually exclusive.

In **R 19/12** of 25 April 2014 the Enlarged Board likewise stressed that interpretation of the rules on objections of suspected partiality had to find a balance between two principles: no one may escape the jurisdiction of the judge appointed by law, but on the other hand everyone has a fundamental right to a fair trial before an independent and impartial tribunal (Art. 6(1) ECHR, Art. 47(2) of the Charter of Fundamental Rights of the European Union).

### 1.6. Applicability of Article 24 EPC to first-instance proceedings

In **G 5/91** (OJ 1992, 617) the Enlarged Board stated that Art. 24 EPC applies only to members of the boards of appeal and of the Enlarged Board of Appeal. Nevertheless, according to the Enlarged Board it must be considered as a general principle of law that nobody should decide a case in respect of which a party may have good reasons to assume partiality. The basic requirement of impartiality therefore applies also to the members of the EPO's departments of first instance who take part in decision-making activities affecting the rights of any party (see also **T 433/93**, **T 95/04**, **T 283/03**, **T 1193/02**). However, Art. 24(1) EPC 1973 contained some provisions specifically aimed at safeguarding the impartiality of members of the boards of appeal and of the Enlarged Board of Appeal. For example, while no member of a board of appeal could take part in an appeal if he had participated in the decision under appeal (see in this chapter III.J.5.1.2), it was clearly permissible under Art. 19(2) EPC 1973 for one member of an opposition division to have taken part in the proceedings for grant of the patent to which

the opposition related. In **T 1674/12** the board observed that, whilst the rules applicable to board members were different, a member of an examining division which had granted a patent could take part in opposition proceedings concerning the same patent, provided he did not act as chairman (see Art. 19(2) EPC).

**T 990/06** concerned enlargement of the opposition division by the addition of a legally qualified examiner. The board stressed that the division's composition had to be clear at all times so that its compliance with Art. 19(2) EPC and its members' impartiality pursuant to **G 5/91** could be verified.

See also Chapter III.K.2 "Composition of the competent departments of first instance".

### **1.7. Applicability of Article 24 EPC to disciplinary proceedings**

Art. 3 of the Additional Rules of Procedure of the Disciplinary Board of Appeal of the EPO (Supplementary publication 1, OJ 2016) contains rules on exclusion and objection in proceedings before the Disciplinary Board of Appeal. In **D 7/82** (OJ 1983, 185) the Disciplinary Board applied Art. 24(3) EPC by analogy.

## **2. Initiation of partiality proceedings and other procedural issues**

Art. 24 EPC provides for two procedural alternatives. First, under paragraph 2, the member concerned may inform the board of a reason for exclusion. Second, under paragraph 3, a party may raise an objection if it has reason to do so. Art. 3(1) RPBA and Art. 4(1) RPEBA additionally provide that the procedure under Art. 24(4) is to be applied if a board has knowledge of a possible reason for exclusion or objection which does not originate from a member himself or from any party to the proceedings.

### **2.1. Notices of self-recusation**

In **G 1/05** of 7 December 2006 (OJ 2007, 362) a member of the Enlarged Board of Appeal informed it that she ought not to be taking part in the referral, since one of the opponents in the underlying case was represented by the law firm in which her husband and her son were partners. The Enlarged Board noted that Art. 24(2) EPC 1973 served to safeguard the general principle of law that nobody should decide a case in respect of which a party might have good reasons to assume partiality, by obliging a board member to inform the board accordingly if he or she considered that he or she should not take part in a case for any such reason. This would prevent the circumstances underlying a notice of withdrawal from arising later in the proceedings and casting a shadow on the decision-making process or even the decision taken. If a member of a board of appeal in a notice of withdrawal under Art. 24(2) EPC 1973 gave a ground which could by its nature constitute a possible ground for an objection of partiality, that ground should normally be respected by the decision on replacement of the board member concerned because it could be expected that the member submitting the notice knew best whether or not a possible suspicion of partiality might arise.

In **J 15/04**, the board noted that board members' notices of self-recusation did not automatically effect their final exclusion from the proceedings (see also **R 2/15** of 21 October 2015). A notice of self-recusation only initiated the procedure under Art. 24(4) EPC 1973 but did not pre-empt the outcome of the decision to be taken. If one accepted that a notice of self-recusation would immediately and automatically exclude the member concerned, then the party's formal right to a hearing before a duly appointed member of the board as established by the EPC would be violated. The board stated that the grounds of possible partiality given by a board member in a notice of self-recusation should normally be respected by the decision. It could be expected that the member submitting a notice of self-recusation based on specific facts knew best whether or not a possible suspicion of partiality might arise. The public or a party should not suspect bias after a decision of a board of appeal finding no grounds of suspicion of partiality (see also **T 584/09** of 1 March 2013).

In **R 2/15** of 21 October 2015 the Enlarged Board held that in the case of a party's objection under Art. 24(3), first sentence, EPC (see in this chapter III.J.2.3) it had to be established that there was subjective partiality or at least an appearance of partiality (objective partiality). In the case of self-recusation, however, it was sufficient that an appearance of partiality was at least arguable in the circumstances of the case.

## **2.2. Objection by other board members of the same board of appeal**

In **J 15/04** the notices of self-recusation of the two legal members contained information concerning a possible reason for exclusion of the chairman (which did not originate from the chairman himself). The board stated that for one of the originally appointed members of the board to be replaced by his alternate, the individual member had to have informed the board that he should not take part in the appeal or have been objected to by one of the parties. However, according to Art. 3(1) RPBA, the application of Art. 24(4) EPC 1973 extended to cases in which the board had knowledge of a possible reason for exclusion or objection which did not originate from a member himself or from any party to the proceedings. Thus, Art. 3 RPBA established the possibility of an objection by other members of the same board. In the case at hand, the replacement of the originally appointed chairman by an alternate chairman for the purposes of taking a decision under Art. 24(4) EPC 1973 was justified under Art. 3(1) RPBA.

## **2.3. Objection by a party**

Most partiality proceedings are initiated by a party objecting to a board member under Art. 24(3) EPC. According to the established jurisprudence of the boards of appeal, if a party is to receive a fair hearing before a tribunal, such a party should have no reasonable ground (on an objective basis) to suspect that any member of the tribunal is partial or prejudiced in relation to deciding the case (cf. **G 5/91**, OJ 1992, 617; **G 1/05** of 7 December 2006, OJ 2007, 362; **T 433/93**, OJ 1997, 509; **T 95/04**, **T 283/03**, **T 1193/02**).

## **2.4. Objection by a third party**

In **G 2/08** of 15 June 2009, the Enlarged Board of Appeal noted that objections of suspicion of partiality were the monopoly of parties to the proceedings. However, under Art. 4(1) RPEBA, if the Enlarged Board of Appeal had knowledge of a possible reason for exclusion or objection which did not originate from a member himself or from any party to the proceedings, then the procedure of Art. 24(4) EPC was to be applied (see also Art. 3(1) RPBA). When construing the meaning of the wording "possible reason for exclusion or objection", one had to bear in mind the following distinction: (a) grounds that may be raised ex officio according to Art. 24(1) EPC and (b) an objection of partiality, reserved to the parties.

A third person could worsen the procedural status of a party to the proceedings by attempting to deprive the latter of its judge established by law. Thus, systematically allowing such complaints to proceed could well result in undue delay of the proceedings. It might therefore appear appropriate not to proceed any further with a complaint if an alleged reason for exclusion or objection not originating from a party to the proceedings or the Enlarged Board of Appeal itself would amount to an abuse of procedure. That would be the case where a complaint was not substantiated at all, ignored established case law, or had been filed maliciously in order to damage a member's reputation or with the purpose of delaying the proceedings, this list not being exhaustive.

## **2.5. Statement of grounds of objection defines the factual scope of the objection**

In **R 2/14** the Enlarged Board of Appeal held that the factual scope of an objection pursuant to Art. 24(3) EPC is defined in the statement of grounds of objection initiating the interlocutory proceedings under Art. 24(4) EPC. Apart from a subsequent elaboration of said objection by supporting facts, evidence and arguments, the subject-matter of the proceedings, as a rule, cannot be extended or changed, whether by new facts or by a new objection. Accordingly, the Enlarged Board of Appeal did not admit a submission in which the petitioner referred to a new category of objections (personal or "subjective partiality" as opposed to structural or "objective partiality"). Moreover, the circumstances on which the petitioner relied had only arisen after the closure of the oral proceedings.

## **2.6. Comments of the board member concerned**

Under Art. 3(2) RPBA and Art. 4(2) RPEBA the member concerned is to be invited to present his comments as to whether there is a reason for exclusion (as to the scope of this provision, see **T 985/01** of 18 March 2005).

In **T 1938/09** the appellant referred to **R 19/12** of 25 April 2014 and objected to the chairman of the board, arguing he was a potential deputy for VP3 (see in this chapter III.J.6.2.3). The chairman had not provided details, as requested by the appellant, on whether he had deputised for VP3. The board acknowledged that there might be cases where a board would not be in a position to decide on the objection without having received the necessary information from the member objected to. However, in the case

at hand the board deemed it irrelevant for the question of impartiality whether the chairman had deputised for VP3 and refused the partiality objection.

### **3. Admissibility**

According to Art. 24(3) EPC an objection on the ground of suspected partiality is not admissible if, while being aware of a reason for objection, the party has taken a procedural step. Nor may it be based on the nationality of members. Additionally, the boards have rejected objections as inadmissible because they were not reasoned or were a mere repetition of a previously rejected objection.

#### **3.1. Competence of the board in its original composition**

In **T 1028/96** (OJ 2000, 475) the board stated that, if an objection under Art. 24(1) or (3) EPC 1973 was made by a party, Art. 24(3), second sentence, EPC 1973 clearly required a preliminary examination of admissibility (see also **R 12/09** of 3 December 2009 and **T 355/13**). The board stated that the purpose of the preliminary examination for admissibility was to determine whether the objection could go forward for substantive examination and decision. If, from the point of view of the board in its original composition, the objection was admissible, then the procedure under Art. 24(4) EPC 1973 applied. Thus, the issue of admissibility was only relevant to the opening of the procedure under Art. 24(4) EPC 1973 and had no bearing on the future decision of the new board nominated in accordance with Art. 24(4) EPC 1973.

#### **3.2. Obligation to raise the objection immediately**

In **G 5/91** (OJ 1992, 617), the Enlarged Board of Appeal stated that, although Art. 24(3) EPC 1973 was only applicable to appeal proceedings, an objection on the ground of suspected partiality could also be disregarded at first instance if it had not been raised immediately after the party had become aware of the reason for the objection (or if it was based on nationality). The system might otherwise be open to abuse.

In **T 49/11** the admissibility of the partiality objection was disputed because the respondent, after having received the summons which had made the parties aware of the composition of the board, had filed two letters with the board before raising the partiality objection. In the first letter, the respondent had expressed its intention to speak German at the oral proceedings. The board held that such a statement constituted a procedural step within the meaning of Art. 24(3), second sentence, EPC, because it was a formal notification under R. 4(1) EPC. The partiality objection was therefore rejected as inadmissible. After analysing the text of Art. 24(3), second sentence, EPC in the three official languages (Art. 177(1) EPC), the difference between Art. 24 EPC 2000 and Art. 24 EPC 1973, and the transitional provisions of the EPC 2000, the board stated that it would have come to the same result under the old and the new text of Art. 24(3) EPC.

In **T 1677/11** it was alleged that, since the substantively identical parallel appeal case **T 1760/11** had been decided by a board in identical composition one week previously,

the board would not bring an open mind to the appeal now before it. The board first had to decide whether the said objections were admissible. It noted that the principle underlying Art. 24(3), second sentence, EPC was that an objection should be "raised immediately after the party concerned has become aware of the reason for the objection" (see below **G 5/91**, OJ 1992, 617). The board further noted that the respondents had been aware of the closely related parallel appeal **T 1760/11** right from the beginning of the current appeal proceedings. Nevertheless, it was only after an adverse decision in that case had been announced that the respondents raised their objections of suspected partiality in the case at issue. The board stated that regardless of whether the respondents had taken a specific procedural step in the current appeal proceedings, they had not submitted their objection immediately after having become aware of the reasons. It held that, in view of the fact that the objections raised were linked to both appeals, attendance at oral proceedings in **T 1760/11** had to be regarded, in the factual context of the case now at issue, as a procedural step within the meaning of Art. 24(3) EPC. Thus, the objections under Art. 24(3) EPC were rejected as inadmissible.

In **T 1020/06** of 15 May 2009 the board held that filing new requests after proceedings under Art. 24(4) EPC 1973 had been started did not render the partiality objection inadmissible.

### **3.3. Objection must be reasoned and substantiated**

In **T 1028/96** of 15 September 1999 (OJ 2000, 475) the board stated that, in addition to the two admissibility conditions prescribed in Art. 24(3) EPC, the EPC required, as a general rule, that objections be reasoned, i.e. indicated facts and arguments which were alleged to support such an objection. From this requirement it followed, firstly, that an objection based on purely subjective unreasonable doubts should be rejected as inadmissible. It also followed that if facts and arguments filed could not support the objection of suspected partiality raised, the objection was likewise inadmissible (see also **T 355/13**).

In **R 12/09** of 3 December 2009 the Enlarged Board of Appeal referred to **T 1028/96** and also held that, when determining admissibility, it had to be established whether the objection had been duly substantiated. However, according to the Enlarged Board, this merely meant ascertaining whether it met the minimum standard for objective reasoning, and not whether that reasoning was also persuasive.

### **3.4. Objection based on an obviously wrong understanding of the board's procedural obligations, the right to be heard and the principle of a fair trial**

In **T 355/13** the appellant suspected the board of partiality, inter alia because it had not provided a provisional opinion on decisive aspects of the case and because it had issued a summons to oral proceedings instead of remitting the case to the department of first instance. Referring to **G 6/95**, the board stressed that there was no procedural obligation for the board to issue any provisional opinion, and that in inter partes proceedings it was not possible to automatically follow a party's request without giving the other parties the possibility to be heard on that request (in oral proceedings, if requested). The board

considered the partiality objection inadmissible, as it was based on an obviously wrong interpretation of the board's procedural obligations, the right to be heard and the principle of a fair trial.

### **3.5. Repetition of a previous objection**

In **T 281/03** of 17 May 2006 the board found that the reason for the third partiality objection was essentially the same as that already decided by the replacement board in connection with the second partiality objection. Since the new objection had been made directly upon resumption of the oral proceedings after the respondent's previous objection to partiality had been refused, no new reason for objection could exist, so that the objection was simply a repetition of the previous objection and amounted to an abuse of the proceedings. Hence, the board decided that the request was inadmissible.

### **3.6. Dual function as members of the Enlarged Board and another board of appeal**

In **R 12/09** of 3 December 2009 the petitioner objected to the members of the Enlarged Board in petition for review proceedings, alleging that they inevitably had a personal interest owing to their capacity as members of a technical board or the Legal Board of Appeal. The Enlarged Board rejected this objection as inadmissible (see in this chapter III.J.6.2.1).

## **4. Suspected partiality of members of the departments of first instance**

### **4.1. Competence to decide**

According to the Enlarged Board of Appeal in **G 5/91** (OJ 1992, 617) the practice that a partiality objection made at first instance is decided by the director of the department concerned cannot be considered illegal in view of the administrative character of the first-instance departments, which are subject to internal instructions by the President under Art. 10(2)(a) EPC (see also **T 2509/11** and **T 71/99**). Under the EPC there is no legal basis for any separate appeal against an order of a director rejecting a partiality objection to a member of a department of first instance such as an opposition division. However, the composition of the opposition division can be challenged on appeal against the final or interlocutory decision of the division. If not all the members of an opposition division fulfil the requirement of impartiality, there is a procedural violation which would normally render the decision void. The Enlarged Board of Appeal made it clear that it lay within the competence of the boards of appeal to decide whether this requirement had been fulfilled. This was also done in practice (cf. e.g. **T 251/88**, **T 939/91**, **T 382/92**, **T 476/95**, **T 838/02**, **T 1349/10**). Such consideration might take place of the boards' own motion or at the request of a party to the appeal proceedings.

In **T 479/04** the board found that **G 5/91** did not prohibit an opposition division from deciding itself on an allegation of partiality made against it. Moreover, although the Enlarged Board had considered it advantageous for the procedural matter to be settled before a decision on the substance was taken, it could not be inferred from **G 5/91** that it was forbidden to decide on that matter together with the decision on the substance. The

board concluded that the opposition division had not committed any procedural error by deciding itself, as part of the contested decision.

#### **4.2. Rehearing of a case after remittal**

In **T 433/93** (OJ 1997, 509), following a substantial procedural violation, the decision was set aside, and the case remitted to the department of first instance for re-hearing. The board found that the remitted case had to be examined and decided by a different composition of opposition division (that is, by a composition of three new members). The board considered that if the case were re-heard and re-decided by the same composition of opposition division, the members would first have to attempt to put out of their minds the result of their previous decision on the case. The board noted that the important point was not whether the file record showed any previous evidence of actual partiality by the members of the opposition division during the previous conduct of the case (see **T 261/88** of 16 February 1993), or whether the present members of the opposition division would in fact be unprejudiced or impartial if they re-heard the case, but whether a party would have reasonable ground to suspect that they would not receive a fair hearing if the case was re-heard before the same composition of opposition division. In **T 2362/08** the board also ordered a new composition of the opposition division after remittal, stating that after procedural irregularities in the first proceedings it was fundamental that the parties have no ground to suspect that they had not received a fair hearing in the further proceedings, as they might well do if the same opposition division were again to revoke the patent even after conducting the proceedings in an impeccable way.

In **T 611/01** the board found a substantial procedural violation had occurred, remitted the case to the department of first instance and considered that the new examination proceedings should be conducted by a differently composed examining division (three new members). This was typically done when there was a question of possible bias against a party. Although that was not the case here, a differently composed division could also be appropriate when a party had reasonable grounds for feeling it might not otherwise have a fair re-hearing (see **T 433/93**, OJ 1997, 509; see also **T 628/95** of 13.5.1996). Even if the appellant had not requested a different composition it would have been important to avoid, after grave procedural irregularities, any ground for dissatisfaction with the conduct of the further proceedings. This could be the case if the same examining division, even after impeccably conducted proceedings, refused the application again.

#### **4.3. Personal interest**

In **T 143/91** the board held that a member of an opposition division was biased if he had a personal interest within the meaning of Art. 24(1) EPC 1973. The mere fact that the member had previously been employed by a company dependent on a party to the opposition proceedings was, however, not sufficient proof of such an interest.

Under Art. 17(1) of the Service Regulations for permanent employees of the EPO any permanent employee who, in the performance of his duties, is called upon to decide on a

matter in the handling or outcome of which he has a personal interest such as to impair his independence must inform the President of the Office. According to paragraph 2, this provision does not apply to members of the boards of appeal.

#### **4.4. Disqualifying partiality**

In **T 261/88** of 16 February 1993 the board stated that disqualifying partiality presumes that there is a preconceived attitude on the part of a deciding person towards a party to the case. When considering an allegation of partiality (in this case mainly based on the fact that the examiner was a former employee of the opponent), regard must be had to the particular facts of the case (cf. **G 5/91**). The board noted that the fact that the examiner's views differed from those held by the party was not disqualifying in itself. Disqualifying partiality was limited to situations where the opinion of a person responsible for taking decisions affecting the right of parties was swayed by his attitude towards a party. The content of the file had to be examined to find out whether there were major deficiencies in the reasoning underlying the decision to such an extent that there was reason to believe that they were the result of a preconceived attitude. In the case in hand, the board could not find anything basically or conspicuously wrong with the analysis of the technical questions.

In **T 900/02** the board stated that a suspicion of partiality inevitably arose if a member of an opposition division, or any other first-instance body, first solicited and then accepted employment with a firm in which a partner or other employee was conducting a case pending before that member. It stressed that, to be above all suspicion of partiality, every member had to avoid any such situation at any time during the proceedings. No-one could be seen as independent of both parties while in the employ of one of them. The board held that the second examiner's employment by the respondent's representative's firm was both a fundamental deficiency in the first instance proceedings under Art. 10 RPBA and a substantial procedural violation under R. 67 EPC 1973.

In **T 951/91** (OJ 1995, 202) objections under Art. 24 and Art. 19(2) EPC 1973 were raised suggesting that the opposition division had been biased in its attitude to the parties. The board observed that nothing in the minutes of the oral proceedings, which the appellant had not criticised, led to the conclusion that the arguments had not been duly considered by the opposition division or that the latter could be suspected of bias. The reasons in the appealed decision did not reveal any bias either.

In **T 1055/05** the board decided that the examining division's refusal to minute the submissions of a party's representative during oral proceedings did not infringe the right to be heard or constitute grounds for suspecting partiality.

#### **5. Suspected partiality of members of the boards of appeal**

Art. 24(1) EPC states that members of the boards of appeal or of the Enlarged Board of Appeal may not take part in a case in which they have any personal interest, or if they have previously been involved as representatives of one of the parties, or if they participated in the decision under appeal. Art. 24(3) EPC prescribes that members of a

board of appeal or of the Enlarged Board of Appeal may be objected to by any party for one of the reasons mentioned in Art. 24(1) EPC, or if suspected of partiality.

### **5.1. Grounds for exclusion under Article 24(1) EPC**

#### **5.1.1 Previous involvement of a board member as a party's representative**

In **R 16/10** the Enlarged Board rejected the petitioner's argument that Art. 24(1) EPC included not only the specific situation where one of the members had represented a party in the case in question but also the general situation where a member had previously acted as representative of that party in any matter. Art. 24(1) EPC related to involvement in the particular case in question and not to any past representation (see also Chapter IV.F.3.11 "Article 112a(2)(a) EPC - alleged breach of Article 24 EPC").

#### **5.1.2 Participation in the decision under appeal**

In **T 1028/96** of 15 September 1999 (OJ 2000, 475) the board stated that a member of a board in opposition appeal proceedings who had participated in the decision to grant the patent had not "participated in the decision under appeal" within the meaning of Art. 24(1) EPC 1973. However, in certain special circumstances members of a board in opposition appeal proceedings may be "suspected of partiality" within the meaning of Art. 24(3) EPC if they participated in the decision to grant the patent in suit.

In **J 15/04** the board considered whether it would be appropriate to exclude a member of the board from proceedings whenever he had played any role in a previous case which had any functional coherence with the one under consideration. Such functional coherency could be seen in the relationship of a divisional application to its parent application, as in the procedural situation at issue. The board noted that if members of a board were to be excluded because that board decided the same legal question in every case in an identical way, any established jurisprudence of a board would lead to exclusion of its members whenever the same legal question was at stake. The principle of judicial efficiency also constituted an essential element of the right to a fair trial and outweighed any allegation concerning a generally "possible" suspicion of partiality which was not based on the specific facts of the case. By the same token, the principle of a fair trial did not generally exclude a member of the boards of appeal from dealing with a party's case repeatedly, as might happen when a board referred a case back to the first instance and the appeal from the following decision established the competence of the same board. The essence of Art. 24(1) EPC 1973 was not to establish an assumption that any former involvement of a member of the board in a case dealing with the interests of a specific party established a suspicion of partiality of that member in all subsequent cases, but to exclude the participation of this member in reviewing a decision which had been dealt with by himself as part of the deciding body. In the case at issue, the board refused the partiality objection.

In **T 1020/06** of 28 November 2008 the board found that there was no provision in the RPBA or the Business Distribution Scheme (BDS) for a member to be excluded from participation in an appeal case pending before a technical board if that member had

already dealt with a similar legal or factual question in another case pending before the same or another technical board. On the contrary, Art. 7 BDS stipulated that, where appeals pending before the board were closely linked the chairman could order that the board decide in the same composition. The board rejected the objections of partiality under Art. 24(3) EPC 1973 against the original board members.

## 5.2. Grounds for objection under Article 24(3) EPC

### 5.2.1 Expressions of opinions on legal issues

In **T 241/98** of 22 March 1999 the board of appeal observed that forming an opinion is one of the most important tasks of a board. Issuing a preliminary opinion is to be seen within this context and therefore cannot be regarded as partial (see also in this chapter III.J.6.2.2).

### 5.2.2 Disqualifying partiality

In **T 843/91** of 17 March 1993 the board noted that disqualifying partiality presumed a preconceived attitude on the part of a deciding person towards a party (see also **T 1028/96** of 15 September 1999). More precisely, in the board's view, partiality would be willingly to favour one party by granting it rights to which it was not entitled, or by intentionally disregarding the rights of the other party (cf. **T 261/88** of 16 February 1993). The question whether an objection to board members on the ground of suspected partiality was justified could only be decided in the light of the particular circumstances of each individual case (cf. **G 5/91**). The board found that, whatever their gravity, deficiencies, erroneous practices or procedural violations could not be regarded as a basis for an objection on the ground of partiality if they did not result from such a preconceived attitude or deliberate intention.

In the appeal proceedings underlying **R 17/09** members of the board used the term "man in the street". The Enlarged Board found that in English this term had no pejorative associations but was commonly used to describe an average citizen. It could see no support for the allegation that members of the board were influenced in their decision by any bias against the petitioner.

### 5.2.3 Discretionary procedural decisions negatively affecting a party

According to **T 954/98** of 9 December 1999 the mere fact of taking discretionary procedural steps which might disadvantage a particular party is not enough to justify exclusion, not even if the party interpreted those steps as expressing bias against it.

In **T 190/03** of 18 March 2005 (OJ 2006, 502; see also **T 283/03**, **T 572/03** and **T 985/01** of 18 March 2005) the board held that not admitting amended claims, regardless of whether the board had correctly used its power or discretion to do so, would not give rise to an objectively justified fear of partiality.

## **6. Suspected partiality of members of the Enlarged Board of Appeal**

As is clear from its wording, Art. 24 EPC applies to both members of the boards of appeal and members of the Enlarged Board of Appeal.

### **6.1. Referral proceedings under Article 112 EPC**

#### 6.1.1 Previous participation in cases as members of the boards of appeal

In **G 1/05** of 7 December 2006 (OJ 2007, 362) a member of the Enlarged Board of Appeal was objected to because he had been the chairman of a technical board which had given a prior decision related to the question of law referred to the Enlarged Board. The Enlarged Board held that to the extent that the participation in a referral of a board member having already dealt with the matter as a member of a board of appeal was not excluded by the relevant provisions (Art. 1(2) RPEBA and Art. 2(3) BDS of the Enlarged Board of Appeal), an objection of partiality could not be based on that very fact alone (see also **G 2/08** of 15 June 2009 and **R 12/09** of 3 December 2009). On the contrary, unless there were specific circumstances casting doubt on the member's ability to approach the parties' submissions with an open mind on a later occasion, there could not be any objectively justified, i.e. reasonable, suspicion of partiality against a member of the Enlarged Board of Appeal. Moreover, if all members of the Enlarged Board of Appeal having once taken part in a decision expressing a view on a point of law which was then referred to the Enlarged Board were to be excluded from taking part in that referral, the Enlarged Board's functioning would be severely affected. It could become impossible to allocate the number of Enlarged Board members needed to conduct the case. The Enlarged Board of Appeal noted that the situation could be viewed differently if there were deficiencies in the view expressed to such an extent that there was reason to believe that they were the result of a preconceived attitude. It would also have been different if a board member had pronounced on a matter to be decided with his or her participation in such outspoken, extreme or unbalanced terms, be it in the course of or outside the proceedings, that his or her ability to consider the arguments put forward by the parties with an open mind and without a preconceived attitude and to bring an objective judgment to bear on the issues before him or her, could be doubted.

#### 6.1.2 Expressions of opinion on legal issues

In **G 3/08** of 16 October 2009 the Enlarged Board noted that, according to established case law of the boards of appeal, of the Enlarged Board of Appeal and also of national courts of member states, the mere fact that a board member had expressed a view on the legal issue to be decided on a previous occasion, be it in a prior decision or in literature, be it in a prior position in the EPO or as an expert for external political institutions, could not lead to doubts as to impartiality.

### **6.2. Petition for review proceedings under Article 112a EPC**

The present chapter concerns partiality objections raised in petition for review proceedings against members of the Enlarged Board themselves. For decisions of the

Enlarged Board on the alleged breach of Art. 24 EPC in appeal proceedings, see Chapter IV.F.3.11 "Article 112a(2)(a) EPC - alleged breach of Article 24 EPC". As to the replacement of board members after a petition for review has been held allowable, see Chapter IV.F.3.16 "Rule 108(3) EPC - effects of a successful petition for review".

#### 6.2.1 Previous participation in cases as members of the boards of appeal

In **R 12/09** of 3 December 2009 (see also **R 2/14** of 17 February 2015) the petitioner had objected to the Enlarged Board members, alleging that they inevitably had a personal interest owing to their capacity as members of a technical board or the Legal Board of Appeal. The board observed that the legislator had consciously decided to allocate the task of hearing petitions for review to the Enlarged Board as a pre-existing body with appointed members and, when doing so, had been fully aware that those members were for the most part also experienced members of technical boards or the Legal Board of Appeal. The legislator could thus only have intended that those members also be deployed in procedures under Art. 112a EPC. The legislator had demonstrated its intention that these members' dual function should not, by itself, constitute a reason for objecting to or excluding them when it came to performing this task. The objection was thus dismissed as inadmissible.

#### 6.2.2 Expressions of opinion on legal issues

In **R 2/12** of 26 September 2012 the objection of suspected partiality was derived exclusively from the communication by which the petitioner was informed of the Enlarged Board's provisional opinion on the petition. The Enlarged Board found it would be incompatible with an objective assessment of a case and with the principle of a fair trial in inter partes proceedings, if a board member could be 'deposed' on the ground that they did not opine in favour of a particular party right from the beginning of the proceedings. See also in this chapter III.J.5.2.1.

#### 6.2.3 Suspected partiality of the Chairman of the Enlarged Board of Appeal

In **R 19/12** of 25 April 2014 the petitioner objected to the chairman of the Enlarged Board of Appeal on account of his involvement, past and present, in the administration of the EPO. The Enlarged Board stressed that the rules on exclusion and objection were designed to maintain the necessary distance for the judge from the issues at stake and the parties thereto and also from the body whose decision was being reviewed. Such distance was especially important where it concerned the distance of the court and its judges from the administrative authority whose decisions were reviewed. The fact that a judge had previously held high office in an administrative hierarchy was not a sufficient ground that on its own justified a suspicion of partiality. However, the judge concerned had been appointed simultaneously as Vice-President DG 3 (VP3) and chairman of the Enlarged Board and remained, as VP3, part of the Office's administrative hierarchy. Under Art. 10(2)(f) EPC he remained subject to the supervisory authority of the President as his immediate superior. Under Art. 10(3) EPC the President was assisted by the vice-presidents, this being institutionalised in the form of the Management Committee (MAC) and the General Advisory Committee (GAC). VP3 might therefore be faced with

conflicting demands. On the one hand, as a vice-president subordinate to the President he had to implement the latter's management and performance objectives, even in relation to the boards of appeal; on the other, as part of his managerial responsibility for the boards he had to ensure that their judicial independence was not prejudiced by measures taken by the President and his administrative hierarchy. If the Enlarged Board approved a review of first-instance decisions which was restrictive in terms of the right to be heard, the examining and opposition divisions would have more latitude to shape proceedings in accordance with prescribed efficiency objectives. There was good reason for a reasonable, objective and informed person to fear that the chairman might not be capable of exercising his judicial function uninfluenced by instructions given to him in his capacity as VP3. The Enlarged Board thus considered the partiality objection to its chairman to be well-founded.

In **R 2/14** of 17 February 2015 the petitioner also requested that the chairman of the Enlarged Board be replaced due to partiality. The chairman stated that, following interlocutory decision **R 19/12** of 25 April 2014, his managerial activities in the senior management committees of the Office, i.e. the MAC and the GAC, had been discontinued. The Enlarged Board thus considered that the factual circumstances clearly differed from those on which interlocutory decision **R 19/12** had been based. What remained was that the chairman, in his function as VP3, continued to be subject to the provisions of Art. 10(2)(f) and (3) EPC, according to which the vice-presidents assist the President and are subject to his supervisory authority. These provisions could come into conflict with Art. 23(3) EPC, according to which the chairman, in his judicial function, is not bound by any instructions. Applying the concept of "normative concordance", the Enlarged Board of Appeal stated that the President's power to give instructions to the chairman in his function as VP3 pursuant to Art. 10(2)(f) and (3) EPC was limited by virtue of Art. 23(3) EPC. The chairman was accordingly relieved of any obligation (i) to obey any presidential instructions, (ii) to observe other administrative/executive directions or (iii) to assist the President pursuant to Art. 10(3) EPC, if and to the extent that any such instruction, direction or assistance might affect him and/or any other member of the boards of appeal in performing their judicial duties. When confronted with an unresolvable conflict between a managerial and a judicial obligation, his judicial duties under Art. 23(3) and 24 EPC and under Art. 6(1) ECHR prevailed. The Enlarged Board of Appeal concluded that a reasonable, objective and informed person would, after the implementation of the institutional measures adopted following interlocutory decision **R 19/12**, no longer have good reason to suspect the chairman of partiality.

In **R 8/13** of 20 March 2015 the Enlarged Board did not accept the petitioners' view that **R 19/12** was generally binding for all petition proceedings that included VP3 as chairman of the Enlarged Board. In **R 19/12** the decisive objective circumstances which created an impression of a lack of independence and impartiality for an objective observer were that the chairman of the Enlarged Board had been involved, in his function as VP3, in two administrative bodies (MAC and GAC). However, the involvement of VP3 in EPO management bodies had been limited. Moreover, the EPC's legislative history showed that the potential conflicts intrinsic to the dual function of VP3 and chairman of the Enlarged Board were perceived even prior to **R 19/12**, and were circumvented merely by means of specific organisational measures. Art. 23 EPC limited the President's power to

give instructions under Art. 10(2)(f) EPC to the Enlarged Board's chairman in his capacity as VP3. The Enlarged Board concluded that, in the circumstances of the present case and in view of VP3's restricted duties, there were no ascertainable facts giving objective cause to believe that Art. 23 EPC could no longer fulfil its safeguard role vis-à-vis Art. 10(2)(f) and (3) EPC. Whether the current organisational structure was the most appropriate one would be for the legislator to decide.

## **7. Legal restrictions for former board members**

In **G 2/94** (OJ 1996, 401) the Enlarged Board of Appeal noted that there was a potential conflict between what might be seen as a right of former board of appeal members to seek subsequent employment on the basis of their special knowledge by making oral submissions during proceedings before the EPO, and the need for proceedings before the EPO to be conducted free from any suspicion of partiality. The existence of such a potential conflict was well recognised in national judicial systems, as was the approach to resolving it through a number of legal restrictions. The existence of such restrictions reflected the generally recognised principle of law that parties to legal proceedings were entitled to a fair hearing before judges who could not reasonably be suspected of partiality. The Enlarged Board of Appeal noted that the public interest in the proper conduct of proceedings before the EPO had to prevail over the personal interest of former board of appeal members wishing to make oral submissions on behalf of parties to such proceedings. In the interest of the proper administration of proceedings before the EPO it was necessary to place some restrictions upon the admissibility of oral submissions by former members of the boards of appeal during such proceedings. See also Chapter III.R.5.2 "Oral submissions by former members of the boards of appeal".

In **T 585/06** the board noted that the former member of the boards of appeal had no longer been an EPO employee when he had attended the oral proceedings. By virtue of the fundamental principle of freedom to exercise a profession, he was in principle not prevented from working as a consultant in the field of patent law. He had not acted as an authorised representative, and had not addressed the opposition division. This amounted to an important difference from the facts of case **G 2/94**, where a former member of the boards of appeal had presented his case before his former colleagues. In the case at issue, the former member had given only hints by whispering to the authorised representative, who had been absolutely free to accept them or not, but had not made any intervention of his own motion. The appellant's representative had agreed at the beginning of the oral proceedings to his sitting beside and assisting the respondent's representative. The request for reimbursement of the appeal fee was thus refused.

**K. Formal aspects of decisions of EPO departments**

5.	Principles for the exercise of discretion	761

---

## 1. Right to a decision after notification of loss of rights (Rule 112 EPC)

### 1.1. Notification of loss of rights under Rule 112(1) EPC

Pursuant to R. 112(1) EPC (former R. 69(1) EPC 1973) if the EPO notes that the loss of any rights results from the EPC, it must communicate this to the party concerned. If the party disagrees with the finding of the EPO it may apply for a decision on the matter by the EPO (R. 112(2) EPC, former R. 69(2) EPC 1973) or it may request further processing or reestablishment of rights, as the case may be (**J 14/94**, OJ 1995, 824).

### 1.2. Form of notification of loss of rights under Rule 112(1) EPC

The board in **J 43/92** noted that R. 69(1) EPC 1973 did not prescribe any particular form for the communications provided therein, distinguishing them from other communications or notifications under the EPC. A reference to a time limit to apply for a decision was not necessarily decisive as to the true nature of the communication. Whether a document constituted a communication pursuant to R. 69(1) EPC 1973 should be derived from its substantive content and its context.

### 1.3. Duties not entrusted to formalities officers

The **act of informing** an opponent under R. 112(2) EPC does not belong to the duties entrusted to formalities officers of the opposition divisions by virtue of the powers transferred to the Vice-President of Directorate-General 2 of the EPO by order of the President of the EPO under R. 11(2) EPC (see **T 161/96**; OJ 1999, 331). An appellant is not therefore entitled to rely on the formalities officer's communication that no loss of rights has occurred.

In **T 808/03** the board found that a formalities officer was not empowered to grant *restitutio in integrum* in relation to the filing of a notice of appeal (apart from the exception of the granting of interlocutory revision pursuant to Art. 109(1) EPC 1973) and that the purported decision was accordingly null and void. The department competent to decide whether an appeal was admissible and thus *inter alia* whether a notice of appeal met the requirements of the EPC 1973 was, subject to the exception mentioned, the board of appeal of the EPO (R. 65(1) EPC 1973; see **T 949/94** of 24.3.1995 and **T 473/91**, OJ 1993, 630).

#### **1.4. Right to a decision under Rule 112(2) EPC**

The right to a decision after notification of loss of rights is a substantial procedural right which cannot be ignored by the EPO. A party who applies for a decision under R. 112(2) EPC is entitled to receive one. If the correctness of a notification of loss of rights under R. 112(1) EPC is challenged, the EPO has a duty to reply within a **reasonable period of time** having regard to the subject-matter of the communication (see **J 29/86**, OJ 1988, 84; and **J 34/92**).

#### **1.5. Purpose of notification of loss of rights under Rule 112 EPC**

In **J 7/92** the board stated that the purpose of a notification under R. 69(1) EPC 1973 is not to give an applicant a chance to take at least remedial action by way of a request for re-establishment of rights. As stated by the Enlarged Board in its opinion **G 1/90** (OJ 1991, 275), when, according to the EPC the European patent application shall be deemed to be withdrawn, the applicant must be "informed" of the loss of rights (R. 69(1) EPC 1973). According to R. 69(2) EPC 1973 he may then, within two months of notification of the communication, apply for a decision "if he considers that the finding of the EPO is inaccurate". Although it is the customary practice of the EPO to send renewal fee reminders, it is in no way compelled to issue such communications. By communicating such information, the EPO provides only a voluntary service from which no rights can be derived (following **J 12/84** (OJ 1985, 108)). The EPC 1973 did not provide that the EPO should note the loss of rights mentioned in R. 69(1) EPC 1973 within a certain period. Nor did it provide any period of time for the ensuing communication. However, when incoming requests or documents contained clear deficiencies which were obviously easy to correct and could be expected to be remedied within the time limit to avoid a loss of rights, then the principles of good faith might require the EPO to draw attention to such deficiencies (on the principle of the protection of legitimate expectations see Chapter III.A).

#### **1.6. Circumstances under which decision can be applied for under Rule 112(2) EPC**

In **J 43/92** the board noted that a decision pursuant to R. 69(2) EPC 1973 (now R. 112(2) EPC) could only validly be applied for in the circumstances defined in R. 69(1) EPC 1973 (now R. 112(1) EPC). Thus, it was a necessary condition for such an application that the EPO had previously noted the loss of a right resulting from the EPC 1973 without any decision and communicated this to the party concerned.

Otherwise, there was no basis for the EPO to give a decision pursuant to R. 69(2) EPC 1973.

## **2. Composition of the competent departments of first instance**

### **2.1. Examining division**

Art. 18(2) EPC stipulates that an examining division must consist of three technical qualified examiners. If the examining division considers that the nature of the decision so requires, it shall be enlarged by the addition of a legally qualified examiner.

In **T 714/92** the board held that the taking of a decision on a date on which the examining division no longer existed in its stated composition, without the examining division ensuring that it be apparent from the part of the file open to public inspection that the member who left the examining division had agreed the text of the decision before leaving, had to be considered as a substantial procedural violation. Thus the impugned decision was set aside as void ab initio and without legal effect.

In **T 160/09** the board found it permissible for the second examiner at oral proceedings to be different from the one who signed the summons. This was not at all comparable to the situation in **T 390/86** (see point 2.2 below), where the written decision had not been signed by those members of the opposition division who had delivered the decision during oral proceedings. There is no prohibition on changing the composition of a division, nor is the EPO required to follow a particular procedure to do this.

In **T 1207/09** the examining division's second member at oral proceedings was not the one who had signed the summons. In view of **T 390/86** (OJ 1989, 30) it was argued that this was a substantial procedural violation. The board took a different view, following **T 160/09**. In **T 390/86**, the written decision had not been signed by the examining division members who had taken the decision at the oral proceedings. Under those circumstances it was not certain that the written decision reflected their views. But **T 390/86** did not mean that the examining division's composition could not be changed prior to oral proceedings. In the case at issue, the decision had been signed by the examiners who had taken part in the oral proceedings, so **T 390/86** did not apply. Furthermore, Art. 18(2) EPC set out only that an examining division had to consist of three technically qualified examiners; it did not require that the initial composition be maintained throughout the proceedings.

### **2.2. Opposition division**

Art. 19(2) EPC stipulates that an opposition division must consist of three technical examiners, at least two of whom must not have taken part in the proceedings for grant of the patent to which the opposition relates. An examiner who has taken part in the proceedings for grant of the patent may not be chairman of the opposition division.

### 2.2.1 Composition of opposition division includes those who have taken part in proceedings for grant contrary to Art. 19(2) EPC

Where the composition of an opposition division is held to be contrary to the requirements of Art. 19(2) EPC, in that two or more took part in the prior proceedings for grant, this is generally held to be a substantial procedural violation, the decision is set aside, the appeal fee reimbursed and the case remitted for fresh examination by an opposition division with a different composition (see e.g. **T 251/88**, **T 382/92**, **T 476/95**, **T 135/12**, **T 285/11**). If only one examiner took part in the prior proceedings, that examiner may not be chairman in the subsequent opposition proceedings under Art. 19(2) EPC (**T 939/91**).

Art. 19(2), first and second sentence, EPC refers to the participation of members of the opposition division at **every stage** of the grant proceedings, not only to their involvement in the final decision (**T 476/95**).

In cases of a breach of Art. 19(2) EPC it follows from the lack of jurisdiction of the department of first instance that the impugned decision is void ab initio. The faulty constitution of the opposition division gives rise to a substantial procedural violation and the appeal fee must be reimbursed (see e.g. **T 382/92**).

### 2.2.2 Change in composition of opposition division during opposition proceedings

In **T 390/86** (OJ 1989, 30) all three members of the opposition division were changed between the oral and written decision. The board held that a decision must at least be written on behalf of and represent the views of the members appointed to decide the proceedings, and must bear signatures which indicate this. The written reasons for a decision delivered during oral proceedings can only be signed by members of the deciding body who took part in the oral proceedings. The same principle applies if between the orally delivered decision and the written decision proceedings in accordance with R. 58(4) EPC 1973 have taken place. Where a final substantive decision has been given orally by an opposition division during oral proceedings, if the subsequent written decision giving the reasons for such oral substantive decision is signed by persons who did not constitute the opposition division during the oral proceedings, the decision is invalid.

**T 390/86** has been followed in numerous decisions, see for example, **T 243/87**, **T 960/94** and **T 2076/11**.

In **T 243/87** the board of appeal developed the principles established in **T 390/86**, further holding that even though only **one** member of the opposition division had been replaced after the oral proceedings, there was no longer any guarantee that the reasoned decision signed subsequently accurately reflected the point of view of all three members who had taken part in the oral proceedings. The situation in which one of the appointed members was incapacitated (e.g. through illness) was quite different; in such cases one of them could sign on behalf of the member unable to do so after checking that the reasoned written decision represented the point of view of all the members who had taken part in

the oral proceedings. This was followed in other cases where only one member of the opposition division had changed between the oral and written decision; see e.g. **T 960/94** and **T 862/98**. However, where the change in the composition of the opposition division occurs **prior** to the oral proceedings, this is not by itself a breach of the right to a fair hearing (**T 1652/08**). In the case at issue the opposition division had at all times been properly composed and, accordingly, there had been no infringement of Art. 19(2) EPC 1973.

In **T 900/02** a number of procedural irregularities had occurred after the oral proceedings before the opposition division, including a delay of over three years before despatch of the written decision (in fact, two decisions were issued, in different compositions). The board followed **T 390/86** and **T 862/98**; a signed written decision issued after oral proceedings should be the decision of those members of the first instance who conducted the oral proceedings and none others. If for any reason, (even quite acceptable and understandable reasons such as illness or retirement), the same three members were not available, then the parties were to be offered new oral proceedings.

### 2.2.3 Enlargement and reduction of opposition division

In **T 990/06** the board took the view that Art. 19(2) EPC 1973 gave clear instructions as to how an opposition division was normally to be composed. This ensured that the parties knew what panel would be hearing and deciding on their case at oral proceedings and could thus verify compliance with Art. 19(2) EPC 1973 and check that the panel members were impartial in keeping with **G 5/91** (OJ 1992, 617). It was therefore essential that the opposition division's composition be clear and verifiable at all crucial stages of the proceedings. For this reason any procedure to enlarge it by adding a legally qualified member under Art. 19(2) EPC 1973 likewise had to be open to scrutiny. Such transparency was, of course, also required where the legally qualified member ceased to be on the division because there was no longer any reason for him to participate.

In **T 1254/11** the board held that an opposition division enlarged to four members pursuant to Art. 19(2) EPC 1973 could in principle be reduced again to three members. It was for the four-person panel to decide on the reduction. In this respect the board concurred with **T 990/06**. In deciding on the reduction, the opposition division consisting of four members must properly exercise its discretion. The board assumed *arguendo* that the fact that neither a decision to enlarge nor a decision to reduce the opposition division had been added to the publicly available file and the fact that the appointment of the new chairman could only be traced from the internal register of the EPO both constituted fundamental deficiencies of the proceedings before the opposition division. However, unlike in **T 990/06**, it was possible to determine from the file that the division had been lawfully enlarged and, at a later stage, lawfully reduced again.

### 2.2.4 Remittal after breach of Article 19(2) EPC

It is established case law (see **T 251/88**, **T 939/91**, **T 382/92**, **T 476/95**, **T 838/02**, **T 825/08**, **T 1349/10**, **T 1700/10**) that an improper composition of the opposition division

is a substantial procedural violation requiring remittal to the opposition division under Art. 111 EPC and reimbursement of the appeal fee (see also Chapter IV.E.7 "Remittal to the department of first instance").

In **T 838/02**, the chairman of the opposition division was excluded as he had participated in the grant proceedings. The board held that if the composition of the opposition division was contrary to Art. 19(2) EPC 1973, the parties should be given the opportunity to comment, before the board decided on the remittal of the case. In **T 1349/10**, with similar facts, the board distinguished the situation from that in **T 838/02**, where the patent had been revoked by the opposition division and held that violations of Art. 19(2) EPC 1973 should lead to a remittal regardless of the parties' position at least in situations where third parties were affected by the outcome of the defective first instance proceedings, as in the case before it, where the patent was maintained in the opposition proceedings.

In **T 234/11** the dossier showed that two members of the opposition division had taken part in the grant proceedings, in contravention of Art. 19(2) EPC. The board ruled that the wording of Art. 19(2) EPC left no room for discretion. Nor did **T 838/02** apply, because here the parties to the proceedings had differing interests: one sought remittal to the opposition division, the other did not want that. In contrast to **T 838/02**, where the patent had been revoked by the department of first instance, here the issue was the patent's maintenance in amended form. As a result, the public too was affected by the procedurally flawed decision (see **T 1349/10**), so the case was remitted.

### **3. Date of decision**

#### **3.1. Entry into force of decisions**

The Enlarged Board of Appeal in **G 12/91** (OJ 1994, 285) distinguished between decisions taken after the closure of the debate in oral proceedings and decisions taken following written proceedings. Where oral proceedings are held, the decision may be given orally. The decision becomes effective by virtue of its being pronounced. The equivalent of that point in time in written proceedings is the moment the decision is notified. Once it has been pronounced and, in the case of written proceedings, notified, the decision enters into force and cannot be amended, even by the department that issued it. A decision may only be revoked by the department that issued it by way of an interlocutory revision under Art. 109 EPC 1973 if one of the parties has filed an admissible and well-founded appeal.

#### **3.2. Completion of the internal decision-making process**

According to **G 12/91** (OJ 1994, 285) the point in time at which a decision enters into force, i.e. the moment it is pronounced or notified, is not the last moment at which parties could still submit observations. This had to be done **at an earlier point** in the proceedings to allow the decision-making department time to deliberate and then issue its decision based on the parties' submissions. Where oral proceedings are held, this moment is the closing of the debate, this point being fixed by the decision-making

department - having first heard the parties' submissions - to allow itself time to consider its decision (see **J 42/89**; **T 762/90** and **T 595/90**, OJ 1994, 695).

In the case of decisions taken following **written** proceedings, the point in time at which the internal decision-making process was completed was the date on which the formalities section handed over the date-stamped, post-dated decision to the EPO postal service.

This marks the completion of proceedings before the decision-making department, which can no longer amend its decision. This point in time should be clearly indicated in the decision (see also **T 631/94**, OJ 1996, 67, which held that intervention was not possible thereafter if no appeal was filed).

In **T 2573/11** the board decided that if it was clearly indicated in the decision on which date the formalities section handed the decision over to the EPO postal service, this date was thus the date on which written proceedings before the decision-making department were completed.

In **T 798/95** the board held that a request for amendment filed after the completion of the proceedings up to grant before an examining division was to be disregarded even if the filing of the request and the completion of the proceedings occurred on the same date.

### **3.3. Date European patent takes effect and jurisdiction after pendency**

A request under R. 139 EPC for amendments to the description or claims can only be filed during the pendency of application or opposition proceedings. Under Art. 97(3) EPC, the decision to grant a European patent takes effect on the date on which the mention of the grant is published in the European Patent Bulletin. After that date, R. 139 EPC can only be applied while opposition proceedings were pending. See, for example, **J 42/92**, where the board also pointed out that there was no reason why, once no application or opposition proceedings were pending before the EPO, decisions on the question of corrections should not fall within the sole jurisdiction of the national courts or other authorities responsible for proceedings in which this question might arise (see also **T 777/97**).

## **4. Form of decisions**

### **4.1. General issues**

#### **4.1.1 Notification of decision under Rule 111 EPC.**

When a substantive decision is given orally during oral proceedings it must be formally notified to the parties in writing (R. 111(1) EPC) and formally completed by giving reasons for the decision in writing (R. 111(2) EPC) (see **T 390/86** (OJ 1989, 30). According to this decision, it was clear from R. 68 EPC 1973 (now R. 111 EPC) and Art. 108 EPC 1973 that until a substantive oral decision was formally completed in

writing and notified to the parties, the two-month period within which a notice of appeal had to be filed did not begin.

#### 4.1.2 Substance of decisions

For more detail see also Chapter IV.E.2.2.2 "Decisions".

A decision of the EPO may be, but ought not to be, given in a document which in form appears to be merely a communication (**J 8/81**, OJ 1982, 10). Whether a document issued by the EPO constitutes a decision or a communication depends on the substance of its **contents**, not on its **form** (see e.g. **J 8/81**, OJ 1982, 10; **J 26/87**, OJ 1989, 329; **J 43/92**, **T 222/85**, OJ 1988, 128, **T 713/02**, **J 14/07** and **T 165/07**). The criterion of substance has to be assessed in its procedural context (see **T 713/02**, OJ 2006, 267). The decisive question was whether the document at issue, when objectively interpreted in its context, could have been understood by its addressees as a final, i.e. not merely preliminary, and binding determination of substantive or procedural issues by the competent organ of the EPO.

In **T 222/85** (OJ 1988, 128) the board noted that the contents of a "communication" never constituted a "decision". This distinction was important, because only a "decision" could be the subject of an appeal - see Art. 106(1) EPC 1973. In the case at issue the communication only represented a preliminary view, on an ex parte basis, and was not binding upon the department of the EPO which sent it. In contrast, the contents of a "decision" were always final and binding in relation to the department of the EPO which issued it, and could only be challenged by way of appeal.

In **T 999/93** a notification of the decision of the Examining Division in writing was never prepared; the annex to the minutes of the oral proceedings - although containing reasons - could not validly fulfil the function of a decision in writing since it did not bear any name or signature. It was not possible to see from it that it was made by the examiners who were appointed to the particular examining division responsible for the oral proceedings. If a decision of a particular division is to be legally valid, it must have been written on behalf of and represent the views of the members who were appointed to that division to decide the issues forming the subject of the decision, and it must bear signatures which indicate this (see **T 390/86**, OJ 1989, 30).

In **J 14/07** the board held that the communication refusing the request for reimbursement of 50% of the examination fee constituted a decision within the meaning of Art. 106(1) EPC 1973, even though it was not signed since the formalities officer was competent to decide on the request for reimbursement of the fee (R. 9(2) EPC 1973 in conjunction with the Notice from the Vice-President of Directorate-General 2 of the European Patent Office dated 28 April 1999 concerning the entrustment to non examining staff of certain duties normally the responsibility of the examining or opposition divisions, OJ 1999, 504). See now Decision of the President of the European Patent Office date 12 December 2013 (OJ 2014, A6). See also in this chapter III.K.4.5.3 a).

#### 4.1.3 Communication under Rule 111(2) EPC

Under R. 111 EPC (formerly R. 68 EPC 1973), decisions of the EPO which are open to appeal shall be accompanied by a written communication of the possibility of appeal. The Rule explicitly states that the parties may not invoke the omission of the communication. According to **T 42/84** (OJ 1988, 251), this applies equally to the omission of the text of the articles alone. The failure of the Office to enclose the text of Arts. 106 to 108 EPC with the decision thus neither invalidated the decision nor did it constitute a substantial procedural violation. See also **T 231/99** and **T 493/08**.

#### 4.1.4 Department of first instance issues more than one decision

In **T 830/03** the opposition division had issued a second written decision intended to supersede a first written decision already sent. The board noted that the need for legal certainty required a presumption of validity in favour of a written decision which was notified to the parties by an opposition division in accordance with the formal requirements of the EPC 1973, in particular R. 68 to R. 70 EPC 1973 (now R. 111 to 113 EPC). Once the decision was pronounced and the (first) written decision, in the case at issue, notified to the parties, the opposition division was bound by it even if it considered its decision not to "have any legal effect" (see **T 371/92**, OJ 1995, 324). The decision could be set aside only by the second instance on the condition that an allowable appeal was filed under Art. 106 EPC 1973. With the filing of the first notice of appeal, the power to deal with the issues involved in this case passed from the department of first instance to the appeal instance (devolutive effect of the appeal). All actions carried out by the opposition division after the notification of the (first) decision, and a fortiori after the filing of the first appeal, were ultra vires and thus had no legal effect.

In **T 1257/08** the board, referring to **T 830/03** stated that under the presumption of legal validity, the first written decision notified constitute the opposition division's only legally valid written decision. The opposition division was bound by it and could not itself set it aside. Furthermore, only the first written decision as legally valid decision was appealable.

It is disproportionate to impose on the appellant the filing of two statements of grounds of appeal as a precaution (**T 993/06** following **T 116/90**).

The board in **T 1093/05** (OJ 2008, 430) pointed out that it is established board of appeal and Enlarged Board of Appeal case law that an examining division is bound by its final decision on an application, which can be set aside only following an admissible, allowable appeal (see **G 12/91**, OJ 1994, 285; **G 4/91**, OJ 1993, 707; **T 371/92**, OJ 1995, 324; **T 1081/02**; **T 830/03**). In view of this established case law, the board could not subscribe to the view expressed in **T 971/06** that an erroneous decision is a nullity and therefore no appeal needs to be filed against it. (NB Only one decision was issued in **T 971/06**).

#### 4.1.5 Inconsistency between oral and written decisions

An inconsistency between the oral decision announced at the oral proceedings and the written decision is in breach of R. 111 EPC (formerly R. 68(1) EPC 1973) and is hence a substantial procedural violation (see e.g. **T 666/90**). In this decision the opposition division had indicated in oral proceedings that it would maintain the patent as amended on submission of new claims (which were submitted by the deadline set) but in its written decision revoked the patent. Similarly, in **T 425/97** the sole ground of appeal was the inconsistency existing between the written decision and the form of the patent held to be patentable by the opposition division at the oral proceedings. The substantive deviation amounted to a procedural violation. See also **T 318/01**, **T 1590/06** and **T 1698/06**.

In examination proceedings, where the decision to grant the patent referred to the documents approved by the applicant under R. 51(4) EPC 1973 (now R. 71(3) EPC) these documents became an integral part of that decision (see **T 850/95**, OJ 1997, 152). In **T 740/00** the board found by analogy, that in opposition proceedings the documents referred to in the decision to maintain the patent in amended form also formed an integral part of that decision. Differences between the decision pronounced at the oral proceedings and the written decision were not mistakes which could be corrected under R. 89 EPC 1973, but amounted to a substantial procedural violation requiring immediate remittal of the case to the department of first instance.

### 4.2. Reasons for the decision

#### 4.2.1 Legal requirement for reasoned decisions under Rule 111(2) EPC

R. 111(2) EPC (formerly R. 68(2) EPC 1973) embodies the general principle of law that appealable decisions must be reasoned and states: "Decisions of the European Patent Office which are open to appeal shall be reasoned".

The function of appeal proceedings is to give a judicial decision upon the correctness of a separate earlier decision taken by a department of first instance (see inter alia **T 34/90**, OJ 1992, 454 and **G 9/91**, OJ 1993, 408). A reasoned decision issued by the first instance department meeting the requirements of R. 111 EPC is accordingly also a prerequisite for the examination of the appeal (**T 1182/05**).

The reasoning given in a decision open to appeal has to enable the appellants and the board of appeal to examine whether the decision was justified or not. A decision therefore should discuss the facts, evidence and arguments which are essential to the decision in detail. It has to contain the logical chain of reasoning which led to the relevant conclusion (**T 292/90** on inventive step; confirmed in many decisions, e.g. **T 951/92**, **T 740/93**, **T 698/94**, **T 278/00** (OJ 2003, 546); **T 70/02**, **T 963/02**, **T 897/03**, **T 763/04**, **T 316/05**, **T 1366/05**, **T 1612/07**, **T 1870/07**, **T 1997/08** and **T 2366/11**).

The decision has expressly to set out the logical chain of argument upon which the conclusion and therefore the final verdict were based, in respect of each and every ground that was pleaded and substantiated (**T 698/94**). It is the consistent case law of

the boards of appeal (see e.g. **T 740/93**) that a "reasoned" decision should deal with all important issues of dispute. See also **T 1709/06**. The grounds upon which the decision was based and all decisive considerations in respect of the factual and legal aspects of the case must be discussed in detail in the decision (see e.g. **T 278/00** (OJ 2003, 546) and **T 1182/05**).

Under Art. 113(1) EPC, EPO decisions had to show that the parties' fundamental arguments had been addressed (**T 2352/13**). According to **T 246/08**: "In brief, a decision must show that all potentially refutative arguments adduced by a party are actually refutable." Merely repeating the parties' submissions was not enough; rather, it had to be clear from the reasons that their core arguments had been addressed in substance in arriving at the decision. In particular, final decisions had to take account of comments received in response to EPO communications (see **T 1997/08**). The board held that the right to be heard had been infringed.

The principle enshrined in R. 68(2) EPC 1973 (now R. 111(2) EPC) ensured a fair procedure between the EPO and parties to proceedings, and the EPO could only properly issue a decision against a party if the grounds on which it was based had been adequately reasoned (**T 652/97**). In **T 1123/04** the board noted that the criteria for the "reasoned decision" under R. 68(2) EPC 1973 are elaborated in the Guidelines (currently Guidelines E-IX, 5 – November 2014 version): the requirement in R. 68(2) EPC 1973 for a "reasoned decision" was not only motivated by the basic legal principle that a party should be informed of the detailed grounds of a negative decision, but that such reasoning and grounds should be comprehensible to those conducting a later judicial review (R. 68(2) EPC 1973: "Decisions ...which are open to appeal"). It should not be necessary for a board of appeal to have to reconstruct or even speculate as to the possible reasons for a negative decision in the first instance proceedings. In principle, a decision referred to in R. 68(2) EPC 1973 should be complete and self-contained.

In **J 20/99** the board noted that all EPO departments should, if quoting a decision of the boards of appeal or any other legal authority, identify that authority and place the cited passage(s) in quotation marks, not merely cite verbatim without attribution.

#### 4.2.2 Examples of compliance with the requirements of Rule 111(2) EPC (former Rule 68(2) EPC 1973)

##### a) Incomplete and deficient reasoning

In **T 856/91**, the contested decision referred to the knowledge of prominent skilled persons and cited "a statement by a well-known expert" but contained no information enabling the reader to infer who these persons were or exactly what they had said. This did not contravene R. 68(2) EPC 1973; it was sufficient for a decision to be reasoned in some way, even if the reasoning was incomplete and deficient. Following **T 856/91**, the board in **T 1231/03** found that the material defects in the opposition division's decision which the appellant had cited (incoherent line of argument, inaccurate formulation of the technical problem and allegedly erroneous assessments) could not constitute a breach

of R. 68(2) EPC 1973. In **T 1747/06** the board distinguished the case before it from that in **T 856/91** (see in this chapter III.K.4.2.3 b)).

See in this chapter III.K.4.2.3 a) for examples of cases where incomplete reasoning was nonetheless found sufficient within the meaning of R. 111(2) EPC.

b) Reasons not well-founded

In **T 647/93** (OJ 1995, 132) the board observed that the reasons for the refusal of the application in the examining division's decision were somewhat enigmatic and there was no basis for them in the EPC 1973. However, even if the reasons for the decision were not well founded, this did not mean that the decision was not reasoned at all within the meaning of R. 68(2) EPC 1973.

c) Findings to obviate remittal

In **T 473/98** (OJ 2001, 231) the board held that it is entirely appropriate and desirable in the interests of overall procedural efficiency and effectiveness that an opposition division should include in the reasons for a revocation decision pursuant to Art. 102(1) EPC 1973 employing the standard decision formula, by way of obiter dicta, findings which could obviate remittal in the event of the revocation being reversed on appeal.

#### 4.2.3 Examples of non-compliance with the requirements of Rule 111(2) EPC (former Rule 68(2) EPC 1973)

a) Incomplete and deficient reasoning

A decision is not reasoned within the meaning of R. 111(2), first sentence, EPC if it is not unambiguously clear from it (possibly after consulting other parts of the file) which request(s) – including any items such as claims, description pages and drawings – it is based on (**T 405/12**).

In **T 278/00** (OJ 2003, 546) the board held that the reasoning of a decision under appeal must be taken as it stands. The requirements of R. 68(2) EPC 1973 could not be construed in such a way that, in spite of the presence of unintelligible and therefore deficient reasoning, it was up to the board or the appellant to speculate as to what might be the intended meaning of it. The board had to be in a position to assess on the basis of the reasoning given in the decision under appeal whether the conclusion drawn by the first instance was justified or not. That requirement was not satisfied when the board was unable to decide which of the various inconsistent findings indicated in and justifying the decision under appeal were correct and which were false (see also **T 316/05**).

In **T 70/02** the board found that simply stating "no convincing arguments have been found in your letter" in response to letters in which the objections put forward were exhaustively discussed by the applicant, did not comply with R. 68(2) EPC 1973. Whilst reasoning did not mean that all the arguments submitted should be dealt with in detail, it was a general principle of good faith and fair proceedings that reasoned decisions

should contain at least some reasoning on crucial points of dispute, in order to give the party concerned a fair idea of why its submissions were not considered convincing and to enable it to base its grounds of appeal on relevant issues.

The mere summary of a party's submissions does not constitute sufficient reasoning (**T 1366/05** and **T 534/08**). In the latter case it was not clear from the wording of the contested written decision why the opposition division had come to its conclusion, whether or not the opposition division had adopted the respondent's arguments entirely, or whether or not it had had its own objections.

In **T 1929/12** the board ruled that remittal was not appropriate, despite deficiencies in the reasons for the decision. See Chapter IV.E.7 "Remittal to the department of first instance".

b) No explanation given for decision reached

In **T 493/88** (OJ 1991, 380) the board held that a decision of an opposition division rejecting an opposition had not been correctly reasoned within the meaning of R. 68(2), first sentence, EPC 1973 if, after giving the reasons why the opposition division, unlike the opponent, considered the subject-matter of the patent to be new, it failed to state the reasons why it considered that the subject-matter also involved an inventive step.

Where there was no explanation of how the examining division had arrived at its conclusion that the claimed process was an obvious juxtaposition of certain documents, this was held insufficient **T 292/90**).

In **T 153/89** the examining division had given no reasons for finding in its decision that the subject-matter of the dependent claims was not inventive. The board of appeal took the view that the perfunctory statement in the contested decision did not permit the board to judge whether this issue had been sufficiently investigated, or investigated at all. The examining division's decision on such grounds did not amount to a reasoned decision.

In **T 698/94** neither the minutes of the oral proceedings before the opposition division nor the appealed decision itself contained the slightest hint at the arguments brought forward by the parties. It was impossible for the parties to the proceedings to see how the opposition division had arrived at its conclusion of lack of novelty. The losing party was deprived of its legitimate right to challenge the reasoning on which the decision was based, which was the very purpose of proceedings before the boards of appeal (see **G 9/91**, OJ 1993, 408).

See also **T 135/96**, **T 652/97**.

In **T 1747/06** the board distinguished the situation before it from that in **T 856/91**, where the board had held that an incomplete decision did not constitute a breach of R. 68(2) EPC 1973 since it was sufficient for a decision to be reasoned in some way, even if the reasoning was incomplete and deficient. According to the board in **T 1747/06**, **T 856/91** dealt with the specific question of whether or not references in the reasoning of

the decision to the knowledge of recognised experts and to a statement of a recognised expert in the context of what a person skilled in the art could derive from a specifically cited prior art document, without it being clear who these experts were or what exactly the statement was, resulted in the decision being not reasoned. The board concluded that the decision was reasoned even if the reasoning was incomplete and deficient. In the case at issue in **T 1747/06**, however, no reasoning was given at all (see also in this chapter III.K.4.2.2 a) above).

In **T 1724/10** the board held that the juxtaposition of seemingly contradictory conclusions (e.g. acknowledgement of technical differences but no possibility to define a technical problem), presented in the contested decision as apodictically evident and without any factual support, does not constitute a "reasoned decision" within the meaning of R. 111(2) EPC.

c) References to communications

See also below Chapter III.K.4.3 "Decisions according to the state of the file".

In **T 897/03** the board held that a decision that leaves it to the appeal board and the appellant to speculate as to which of the reasons given by the examining division in different communications might have been decisive for the refusal of the application, could not be considered to meet the requirements of R. 68(2) EPC 1973 (see also **T 652/97** and **T 278/00**, OJ 2003, 546).

In **T 963/02** the board stated that if a decision was merely reasoned by a reference to a preceding communication, the requirement of R. 68(2), first sentence, EPC 1973 was only met if the communication referred to itself fulfilled the conditions defined in **T 897/03** and **T 278/00** above.

In **T 177/15** the decision under appeal solely referred to reasons given in two communications issued in the course of the examination of the application, each dealing with a different set of claims. Hence the board had to examine both communications for facts, evidence and arguments that may have justified the refusal of the application. This was deemed to be at odds with the principle that, for a decision to be reasoned (R. 111(2) EPC), it must be self-contained, i.e. it must include all and each of the facts, evidence and arguments that are essential to the decision and the chain of reasoning in the decision must be complete.

In **T 353/11** the decision under appeal referred solely to a communication annexed to a summons to attend oral proceedings. The communication did no more than to identify the closest prior art and the distinguishing feature of the invention, indicate that it was "not clear" whether the examples of the application illustrated the distinguishing feature of the invention, state it would be examined whether or not the process was inventive, and invite the appellant to file a comparative example. It neither gave an explicit conclusion with respect to inventive step, nor any reasons as to why the claimed process was not inventive. Thus, the examining division did not issue a reasoned decision within the meaning of R. 111(2) EPC.

d) Reference to decision of board of appeal

In **T 227/95** the contested decision contained no reasons on the merits of the case but merely stated: "for the reasons it is referred to the decision of the board of appeal dated 24.01.94" (meaning **T 527/92**). However, **T 527/92** contained no such reasons, since the case was remitted to the opposition division for further prosecution. The requirements of R. 68(2) EPC 1973 were not met.

In **T 1205/12** and **T 1206/12**, which are worded identically, the board held that a mere reference to jurisprudence of the boards of appeal did not, by itself, constitute or replace an argument in a first instance decision. If a deciding body, in a decision, wanted to rely on an argument put forward in a decision of the boards, be it part of its ratio decidendi or an obiter dictum, it was insufficient merely to refer to it or to cite it. The deciding body also had to make clear that it adopted the argument and explain why, in what respect and to what extent this argument applied to the case at hand.

e) References to unrelated issues

In **T 615/95** the board held that an examining division's decision should not be supplemented normally by annexes dealing with issues having no relation to the issues dealt with in the reasons for this decision.

f) Assessment of inventive step without assessing the prior art

In **T 87/08** the board pointed out that Art. 56 EPC required that the assessment of inventive step be made "having regard to the state of the art". Accordingly, a decision was not sufficiently reasoned in the sense of R. 68(2) EPC 1973 (R. 111(2) EPC) if the chain of reasoning to justify the finding of lack of inventive step merely stated that a purported effect had not been achieved, i.e. this technical problem had not been solved, without reformulating the problem in a less ambitious way and without assessing the obviousness of the claimed solution to that reformulated problem in the light of the cited prior art.

In **T 2375/10** the board found that since the requirement of inventive step under Art. 56 EPC had to be assessed in the light of the prior art, the decision of the examining division to conclude that there was a lack of inventive step without referring to the prior art was insufficiently reasoned within the meaning of R. 111(2) EPC. See also **T 306/09**.

g) Identical decision after remittal for further prosecution

In **T 740/93** the case had been sent back to the department of first instance because of a procedural violation (incorrect composition of the opposition division). Because of the remittal with the order for further prosecution of the opposition, the first decision became nothing more than a communication and the first statement of grounds of appeal therefore had to be considered as a response to this communication. The new opposition division rendered a decision which was nearly identical to the first one. Although the decision under appeal contained a reasoning as to why the subject-matter of the patent

in suit was considered to lack an inventive step and referred to points of dispute raised in the proceedings up to the first decision, it did not contain any direct reference to the important issues of dispute raised in the first statement of grounds of appeal and failed to comment upon the other issues of dispute. It thus did not meet the requirements of R. 68(2) EPC 1973.

### 4.3. Decisions according to the state of the file

#### 4.3.1 Request for decision 'on the file as it stands'

Applicants may request a decision "on the file as it stands" or "according to the state of the file", e.g. when all arguments have been sufficiently put forward in the proceedings and the applicant is interested in a speedy appealable decision. In such a case, the decision will be of a standard form, simply referring to the previous communication(s) for its grounds and to the request of the applicant for such a decision (see Guidelines E-IX, 4.4 – November 2015 version). See also in this chapter III.K.4.2.3 c).

#### 4.3.2 Decisions 'on the file as it stands' to be reasoned

No provision of the Guidelines can override an article or rule of the EPC 1973, such as R. 68(2) EPC 1973, now R. 111(2) EPC (**T 861/02**). It is therefore well-established that, notwithstanding the provisions of the Guidelines, decisions open to appeal must still be reasoned. The standard form provided for by the Guidelines is entirely appropriate in the special case where the examining division fully expressed and reasoned its objections to the application text in preceding communications (**T 1182/05**). It may be used to issue a decision only if all the arguments put forward have already been sufficiently addressed in one or more preceding communications and no new objections have been raised since those communications were transmitted (**T 1093/13**, **T 2364/09**). However, a standard decision form for issuing a decision "on the state of the file" which refers to several communications, leaving it up to the board of appeal to construct the applicable reasons by "mosaicing" various arguments from the file, or, which leaves it in doubt which arguments apply to which claim version, does not meet the "reasoned" requirement of R. 68(2) EPC 1973 (now R. 111(2) EPC). See, for example, **T 278/00** (OJ 2003, 546), **T 861/02**, **T 897/03**, **T 276/04**, **T 1182/05**, **T 1309/05**, **T 1356/05**, **T 1360/05**, **T 1709/06**, **T 952/07**, **T 1612/07**, **T 1442/09**, **T 177/15** and **T 180/10**. These requirements obviously aim at allowing the losing party to understand the reasons for the negative decision taken against it so that it can envisage the filing of an appeal. The same is true for the board of appeal, which has to understand why the department of first instance took the impugned decision (**T 952/07**).

In **T 180/10**, contrary to what was stated in the second communication ("the applicant's explanations ... have been carefully considered"), it was apparent that the examining division had ignored all the appellant's arguments since this communication and, therefore, the decision were silent on them. The requirements of R. 68(2) EPC 1973 were not fulfilled.

The Guidelines (C-V, 15.2 - November 2015 version) explain that, in order to comply with the requirement that a decision on the state of the file be reasoned (R. 111(2) EPC), use of a standard form referring to the previous communication is only possible where the previous communication properly identifies the application documents on file and is well-reasoned and complete with respect to the grounds and the reasons for the refusal of the current request.

#### 4.3.3 No waiver of right to a reasoned decision

A request for a decision on the state of the file thus cannot be construed as a waiver of the right to a fully reasoned first instance decision, even in the light of the suggested procedure in the Guidelines (**T 265/03**, **T 583/04**, **T 1182/05**, **T 1356/05**, **T 1360/05**, **T 1309/05** and **T 750/06**). The duty to provide reasons in administrative decisions is a fundamental principle in all contracting States, R. 68(2) EPC 1973 being simply an expression of this principle. Further, from the point of view of the practical functioning of the system envisaged in the EPC, absent a reasoned decision within the meaning of this rule the board could not examine the appeal (Art. 110 EPC) (**T 265/03**, **T 1356/05** and **T 1360/05**, following **T 278/00**).

#### 4.3.4 Documents comprising 'state of the file'

The "state of the file" is not restricted to those documents on file which were issued by the EPO, but also includes all those documents and arguments which were filed by the applicant prior to (or even simultaneously with) his request for a decision "on the status of the file" (**T 265/03**). It does not include the note of a telephone conversation (**T 583/04**). This was the summary record of a conversation not a communication pursuant to Art. 96(2) EPC 1973. Whereas the phone call note is a record of a dialogue, a communication constitutes a unilateral legal notice to a party. The two documents serve quite different purposes. This does not exclude the possibility of the statements made orally by phone being confirmed and adopted in a formal communication from the examining division inviting observations with a term set for reply. See also **T 750/06**.

### 4.4. Right to have comments considered

The right to be heard under Art. 113(1) EPC is not just a right to present comments but also to have those comments **duly considered** (see, e.g. **J 7/82**, OJ 1982, 391; **T 508/01**, **T 763/04**, **T 1123/04** and **T 246/08**).

The comments presented must be considered in the ensuing decision (**J 7/82**, OJ 1982, 391 and **T 246/08**). A decision must show that all potentially refutative arguments adduced by a party are actually refutable. Failure to take into due account a potentially refutative argument of the applicant when deciding the case deprived the applicant of its right to be heard in contravention of Art. 113(1) EPC and amounted to a substantial procedural violation (**T 246/08**).

On inadequate reasons given in the decision at first instance, and the circumstances in which reimbursement of the appeal fee is justified, see Chapter IV.E.8.4.4.

## 4.5. Signatures on a decision

### 4.5.1 Decisions to be signed

In **T 390/86** (OJ 1989, 30) the board noted that although R. 70 EPC 1973 (now R. 113 EPC) states that "any communication from the EPO is to be signed by and to state the name of the employee responsible", there was nothing in R. 68 EPC 1973 (now R. 111 EPC) or elsewhere in the EPC which specifically required the decision of a first-instance department of the EPO (i.e. one open to appeal) to be signed by the employee(s) responsible. The board held that if the decision of a particular division was to be legally valid it had to bear the signatures of the members who had been appointed to that division to decide the issue. (See also e.g. **T 999/93**).

### 4.5.2 Examples of invalid signatures

#### a) When decision is announced in oral proceedings

The written reasons for a decision delivered during oral proceedings can only be signed by members of the deciding body who took part in the oral proceedings. The same principle applies if between the orally delivered decision and the written decision proceedings in accordance with R. 58(4) EPC (R. 82(1) EPC) have taken place (**T 390/86**, OJ 1989, 30). The board went on to say that in a case where a final substantive decision has been given orally by an opposition division during oral proceedings, if the subsequent written decision giving the reasons for such oral substantive decision is signed by persons who did not constitute the opposition division during the oral proceedings, the decision is invalid.

A decision signed by two members who had taken part in the oral proceedings and by one who had not was held null and void in **T 243/87**. The board ordered remittal to the department of first instance, and a refund of the appeal fee because a substantial procedural violation had occurred.

#### b) Director's signature in place of examiner's signature

A director's signature purporting to be on behalf of the second examiner was invalid because nothing in the EPC 1973 authorised a director to sign on behalf of a member of an examining division to which he did not himself belong (**T 211/05**).

### 4.5.3 Examples of valid signatures

#### a) Computer-generated communications

In **T 225/96**, the board noted that the forms accompanying the decisions are never signed, because they are computer-generated and therefore, under R. 70(2) EPC 1973 (now R. 113(2) EPC), a seal may replace the signature.

In **J 14/07** the communication refusing the request for reimbursement of 50% of the examination fee constituted a decision within the meaning of Art. 106(1) EPC 1973, even though it was not signed (see in this chapter III.K.4.1.2). The mere indication of the name of the formalities officer without any signature, but which had been replaced by a seal, complied with the requirements of the then current R. 70(2) EPC 1973 because the communication was produced using a computer.

b) Death of examiner between oral proceedings and written decision

In **T 1170/05** one of the examiners had died and so the decision of the first instance bore the signatures of only two of the three members of the division, the chairman signing on behalf of the deceased examiner. The chairman explicitly declared in a note that the written grounds reflected those which had been discussed during the deliberation of the examining division, and which had led to the decision announced at the end of the oral proceedings. This was held to comply with the case law of the boards of appeal, in particular, **T 243/87** (see in this chapter III.K.4.5.2); the decision was valid.

c) Decision in written proceedings

In the contested first-instance decision in **T 777/97**, only two of the members of the division had signed the decision, one purporting to sign on behalf of the absent chairman. According to the board, decisions **T 390/86** and **T 243/87** (see in this chapter III.K.4.5.2(a)) were not directly applicable, because those two cases had been concerned with the decision making departments' composition during the oral proceedings at which they had announced their respective decisions, since the subsequent written decisions giving the reasons for those oral decisions had to be signed by the same department members. The case now in hand, by contrast, concerned a decision taken in a written procedure on the basis of the evidence on file. It went without saying that only those members who had taken the decision could decide on a request for its correction. The decision had to be considered open to appeal.

d) Illegible signature

In **D 8/82** (OJ 1983, 378) the surname of the signature appeared only as a mark in which one could still discern the first letter and which was recognisably intended as a signature. The board held that it was valid since in several contracting states of the EPO there is no requirement that a signature be legible or recognisably composed of letters. It is enough that it serves to identify the signatory.

e) Draft decisions

In **T 225/96**, the contested decision had been signed by only the first examiner on the opposition division. The board sent the case back for regularisation, but the division replied that the three non-signing members were not prepared to put their names to a text issued without their knowledge or approval. The board concluded that the document sent to the parties was merely a draft. This amounted to a substantial procedural violation. Had the signatures merely been missing, this could have been corrected under

R. 89 EPC 1973 (now R. 140 EPC) which allows correction of linguistic errors, errors of transcription and obvious mistakes in EPO decisions. In general, the decision as notified to the parties is presumed to be authentic. See also **T 837/01**.

## 5. Principles for the exercise of discretion

The EPO can only exercise discretion if the power to do so can be derived from the EPC (**J 4/87** and **J 20/87**, OJ 1989, 67). Discretion-related issues are discussed in numerous other chapters under the relevant provisions: see e.g. Chapter IV.B.2.6.1 for the examining division's discretion under R. 137(3) EPC, Chapter IV.C.1.3.3 for the opposition division's discretion over late-filed submissions, Chapter IV.E.3.6 for review of first-instance discretionary decisions, Chapter IV.E.7.6 for discretion over remittal, Chapter IV.C.1.3.3 for the boards' discretion over late-filed submissions, and Chapter IV.E.4.4.5 for discretion over claim amendments in appeal proceedings.

Thus, in the event of an unforeseeable postal delay causing non-compliance with a time limit, where R. 85(2) EPC 1973 (relating to general interruption or subsequent dislocation in the delivery of mail in a Contracting State) was not applicable so as to extend the time limit, the EPO had no discretion to extend it (**J 4/87**). Similarly, there was no support anywhere for the idea that the EPO was entitled to exercise any general discretion based on equity in respect of refunding the fee for the European search report (**J 20/87**, OJ 1989, 67).

When a decision hinges upon the exercise of discretion the reasons should be given. Such reasons should take into account those factors which are legally relevant to the issue in question, and should not simply consider whether the facts of the case are exactly the same as in a previously decided case. Such factors are determined by considering the purpose of the exercise of the discretion in its context, and in the context of the EPC as a whole, e.g. the balancing of the EPO's interest in a speedy completion of the proceedings against the applicant's interest in obtaining a patent which is legally valid in all the Contracting States (**T 182/88**, OJ 1990, 287; citing **T 183/89**). This has been followed in many decisions, see e.g. **T 951/97**, **T 749/02**, **T 497/03**, and **T 1837/07**.

In **G 7/93** (OJ 1994, 775) the Enlarged Board stated that if an examining division had exercised its discretion under R. 86(3) EPC 1973 (now R. 137 EPC) against an applicant in a particular case and the applicant filed an appeal against the way in which discretion had been exercised, it was not the function of a board of appeal to review all the facts and circumstances of the case as if it were in the place of the department of first instance, in order to decide whether or not it would have exercised its discretion in the same way as the department of first instance. If a department of first instance was required under the EPC to exercise its discretion in certain circumstances, it should have a certain degree of freedom when doing so, without interference from the boards of appeal. In the circumstances of a case such as that before the referring board, a board of appeal should only overrule the way in which a department of first instance had exercised its discretion if it came to the conclusion either that the department had not exercised its discretion in accordance with the proper principles, or that it had done so in

an unreasonable way, and had thus exceeded the proper limits of its discretion (see also **T 640/91**, OJ 1994, 918).

In **T 109/08** the board held that a board of appeal, when reviewing the opposition division's exercise of discretion under Art. 114(2) EPC, has the power to overrule a decision if the board concludes that the opposition division based its decision on manifestly incorrect technical assumptions or on an erroneous approach to applying said ground of opposition since this amounts to a misuse of the discretionary power under Art. 114(2) EPC.

## L. Correction of errors in decisions

1.	General issues	763
1.1.	Retrospective effect of corrections	764
1.2.	Correction requests as opposed to appeals	764
2.	Errors in the printed version of the European patent specification	765
3.	Competence to correct a decision under Rule 140 EPC (former Rule 89 EPC 1973)	766
4.	Procedural status of third parties	767

### 1. General issues

R. 140 EPC (formerly R. 89 EPC 1973) states that, in EPO decisions, only linguistic errors, errors of transcription and obvious mistakes may be corrected. It cannot be used to correct errors of substance, content or procedure. It does however cover both decisions of the boards and those of first-instance departments. The boards' previous case law, that it could be within the scope of R. 140 EPC (R. 89 EPC 1973) to correct the text of a patent if it was not, and obviously could not be, in the form intended by the decision-making department (classic examples of such rulings being **T 850/95**, OJ 1997, 152; **T 425/97**, **T 965/98**), was radically changed by **G 1/10**. The boards in **T 367/96** and **G 1/97** (OJ 2000, 322) had already held previously that R. 89 EPC 1973 had to be interpreted narrowly and, accordingly, only allowed for the correction of formal errors in the written text of the decision notified to the parties in accordance with R. 111 EPC (R. 68 EPC 1973). It did not, however, pave the way for re-examination of the factual or legal issues on which a decision was based, nor for reversal of any conclusion derived by the decision-making department from a consideration of these issues.

In **G 1/10** (OJ 2013, 194), however, the Enlarged Board went further, holding that, since R. 140 EPC is not available to correct the text of a patent, a patent proprietor's request for such a correction is inadmissible whenever made, including during opposition or limitation proceedings. The Enlarged Board's decision was limited to corrections of grant decisions, more precisely to corrections within grant decisions of the description, claims and drawings (patent documents), and not concerned with corrections of bibliographic data.

The Enlarged Board of Appeal pointed out that legal certainty and the prevention of adverse effects on third parties were the reasons for the narrow ambit of allowable corrections under R. 140 EPC (see **G 1/97**, travaux préparatoires). It agreed with the statement in **T 850/95** that patent documents referred to in a grant decision become an integral part of the decision, but did not agree with the subsequent conclusion that errors in those documents may subsequently be corrected under R. 140 EPC.

The Enlarged Board stated that the absence of a possibility to request patent corrections under R. 140 EPC should not prejudice patent proprietors. If a correction is obvious (as it should be to satisfy R. 140 EPC) then there will be no surprise or adverse effect on

opponents or others, because all concerned should read the patent as if corrected and an actual correction is unnecessary. If, however a correction is less than immediately obvious, it should not be allowed under R. 140 EPC anyway, which is confined to correction of "obvious mistakes". If, given the opportunity to check the patent text before approving it, an applicant does not draw any errors to the attention of the examining division and thus ensures that his approval is limited to the correct text, then the responsibility for any errors remaining in that text after grant should be his alone, whether the error was made (or introduced) by him or by the examining division.

If however the examining division proceeds to make a decision to grant which contains an error subsequently made by it, so that the granted text is not that approved by the proprietor, then the proprietor is adversely affected by that decision and is entitled to appeal. A patent proprietor may seek to amend his patent during opposition or limitation proceedings and such an amendment could remove a perceived error, however, it would have to satisfy all the legal requirements for amendments including Art. 123 EPC.

In **T 212/88** (OJ 1992, 28) the board held that the absence of a chairman's or minute-writer's signature at the end of an opposition division's decision was a rectifiable, obvious error within the meaning of R. 89 EPC 1973 (now R. 140 EPC). In the case in question a second examiner had been referred to in the minutes as a member of the opposition division, although in fact he was not a member and did not take part in the oral proceedings (see also **T 212/97**).

### **1.1. Retrospective effect of corrections**

In **T 212/88** the board held that correction of errors had to be by means of a decision under R. 89 EPC 1973 (now R. 140 EPC) with retrospective effect from the date of the original decision. The same board emphasised the retrospective effect of corrections under R. 89 EPC 1973 in **T 116/90** but stated that it was unnecessary to re-date the decision as from the date of correction.

### **1.2. Correction requests as opposed to appeals**

In **T 425/97** the board referred to **G 8/95** (OJ 1996, 481), which dealt with the scope of R. 89 EPC 1973 (now R. 140 EPC), stating that the difference between an appeal against a decision and a request for correction of a decision might be seen in the fact that in the first case the remedy was directed against the substance of the decision and in the latter case against the form in which the decision was expressed. In another decision issued prior to **G 1/10**, the board in **T 1093/05** (OJ 2008, 430) similarly held that, if a grant decision was defective, the patent proprietor had to consider carefully the nature of the defect and how it could best be rectified. If it involved a substantial procedural violation, rectification was possible only on appeal. A request for correction under R. 89 EPC could succeed only if it was clear that the examining division had not intended to grant the patent in that form – and also in what form it had intended to grant it.

In **T 1869/12** the board stated that in case of procedural violations in the granting procedure, rectification is only possible via appeal against the decision to grant. A correction of the published European patent specification or of the decision to grant cannot be allowed when this specification corresponds to the true intention of the Examining Division when granting the patent

## **2. Errors in the printed version of the European patent specification**

In **T 150/89** some printing errors in the published patent specification were found which were not present in the version accepted by the EPO. The board found that such omissions should normally be corrected as a matter of routine. The decision to grant was legally binding as regards existence and scope of the patent (Art. 97 EPC 1973). The specification reproduced that decision (Art. 98 EPC 1973). It was an official document published by a public authority for general information, and as such had legal force before the courts. It was therefore subject to the same correction criteria as the grant decision itself under R. 89 EPC 1973 (now R. 140 EPC). Thus the specification was to be brought into line with the decision to grant, and whether this took the form of a reprint or a corrigendum (which was a matter for the department of first instance, or possibly its formalities officer, to decide) should clearly indicate the correction made.

In **T 55/00** the examining division had sent a "Communication under R. 51(4) EPC 1973" to the representative of the appellant. The enclosed documents contained only pages 1 to 40 of the description. The appeal was against the decision of the examining division to refuse the appellant's request for correction of errors under R. 89 EPC 1973 (now R. 140 EPC). He had requested the issue of a corrected patent specification. The board held that a correction under R. 89 EPC 1973 was not possible, because the non-inclusion of pages 41 to 44 of the description was due to the discretion of the examining division and not to any error. The board held that because the EPC 1973 did not provide for any possibility of amending or revoking a patent once granted - except as a result of an opposition procedure - and because patent proprietors were not allowed to file a notice of opposition against their own patent, it was very important also to check the content of the decision and documents.

In **T 1869/12** the appellant (applicant) lodged an appeal against the decision of the examining division refusing to correct the published European patent specification. It tried to achieve, via correction of the decision to grant, the patent to be comprising the set of claims proposed by the examining division with a communication under R. 71(3) EPC, however, with substantive amendments as subsequently proposed by the appellant. The board based its decision on **G 1/10** and also stated that the appellant's request could not be granted, since it was clear that the examining division intended - and maintained that intention - to grant the patent with its own proposed claims. While the procedure to grant was defective the board stated that the appellant should have filed an appeal against the decision to grant the patent.

### **3. Competence to correct a decision under Rule 140 EPC (former Rule 89 EPC 1973)**

The EPO makes corrections on request or of its own motion (**T 150/89**). In **G 8/95** (OJ 1996, 481) the Enlarged Board of Appeal decided that the competence to correct errors in a decision under R. 89 EPC 1973 (now R. 140 EPC) lay with the body which had given the decision. So in the examination procedure the examining division had to decide on a request to correct errors in the decision to grant. If the request for correction of the decision to grant concerned the grant of the patent, then the decision on the correction had also to concern the grant of the patent, since it was the request of the party which defined the subject of the dispute. The Enlarged Board also agreed with the statement made in **J 30/94** (OJ 1992, 516) that it was the decision to refuse the request for correction which was under appeal. According to the Enlarged Board, this did not alter the subject of the dispute before the second instance. The decisive criterion in Art. 21(3)(a) EPC 1973 was not that the decision under appeal was itself the decision to grant. It was sufficient for the decision to "concern" the grant, and this was necessarily the case if the subject of the decision was the text in which the patent was to be or had been granted, since this was the result of the substantive examination and defined the rights conferred by the patent. The Enlarged Board came to the conclusion that the decision refusing a request for correction of the decision to grant concerned the grant of the patent. It was, therefore, the technical boards – not the Legal Board of Appeal – which had to decide on appeals from a decision of an examining division refusing a request under R. 89 EPC 1973 for correction of the decision to grant.

In **T 867/96** the patentee had requested the correction under R. 89 EPC 1973 (now R. 140 EPC) of a sentence, in the reasons for a board of appeal decision, stating that all the parties had agreed that a certain document represented the closest prior art. The board pointed out that the case was closed, as *res judicata*, and therefore no longer before it. Citing in particular **G 8/95** (OJ 1996, 481) and **G 1/97** (OJ 2000, 322), the board held that only the board which had taken a decision could decide whether it required correction. Furthermore, establishing whether correction was necessary involved studying the facts, implying in general and up to a certain point that such requests were admissible. The current board thus ruled that the request for correction was admissible. However, it also held that this particular request did not fulfil the requirements of R. 89 EPC 1973, was unfounded and should therefore be refused.

In **T 212/97** the board pointed out that R. 89 EPC 1973 (now R. 140 EPC) permitted the opposition division to correct an obvious mistake in the copy of the decision notified to the parties. In the case at issue, a fourth person had been named as a member of the opposition division although no such person had been mentioned in the original document.

In **J 12/85** (OJ 1986, 155), the board held that a board of appeal could only examine appeals from decisions of other instances of the EPO (Art. 21(1) EPC). A decision on this request first had to be rendered by the examining division before the matter could be referred to the board of appeal. It also held that an applicant for a European patent could

only be "adversely affected" within the meaning of Art. 107 EPC by a decision to grant the patent if such a decision was inconsistent with what he had specifically requested.

In **J 16/99** the board held that when correction of the priority date of a granted patent is requested, there may be a case for correction under R. 89 EPC 1973 (now R. 140 EPC) of the EPO's decision to grant. The board found that R. 89 EPC 1973 was applicable since, being applicable to errors of transcription and obvious mistakes in a decision of the EPO, it allowed the correction of errors in, inter alia, decisions to grant, without the limiting requirement that proceedings be pending.

The board also found that the formalities officer who had taken the decision under appeal had no authority to take a decision under R. 89 EPC 1973. Such decisions had to be made by the examining division (see **G 8/95**, OJ 1996, 481), and were not one of the category of decisions which could be delegated to formalities officers (see the Notice of the Vice-President of DG 2 of the EPO, OJ 1984, 317, as revised by the further Notice, OJ 1989, 178 - the version applicable at the time of the decision under appeal - and again revised, with no effect on the point at issue here, by Notice in OJ 2014, A6).

In **T 226/02** the board considered that the opposition division had acted *ultra vires* in taking a decision under R. 89 EPC 1973 to correct a decision of the examining division. The board held that only the body which had taken a decision was entitled to correct it so as to put it in the form which it had intended it to take. Thus, only the examining division was entitled to correct its own decision. This finding was endorsed by the board in **T 1495/09**, which held that, in the case at issue, pursuant to R. 140 EPC, the opposition division in opposition proceedings had no competence to correct the decision taken by the examining division and would thus have acted *ultra vires* if it had corrected the grant decision. The same applied to the board of appeal in opposition-appeal proceedings (Art. 111(1), second sentence, EPC 1973).

#### **4. Procedural status of third parties**

In **T 1259/09**, in the course of the opposition proceedings, opponents had requested a correction of the decision to grant pursuant to R. 140 EPC. The opposition division forwarded this request to the examining division. In a communication the examining division informed the opposition division that no correction of the grant decision would take place. The opponents filed an appeal against this communication of the examining division. The dispute at issue was whether the appellants (opponents), by filing their request for correction, had initiated proceedings before the examining division which were separate from the ex parte examination proceedings with the consequence that they had become a party to the proceedings before the examining division. The board held that by filing a request for correction of the grant decision under R. 140 EPC a third party does not become a party to the examination proceedings.

## M. Inspection of files, European Patent Register and stay of proceedings

1.	Inspection of files	768

3.2.	Rule 14(3) EPC	775

---

### 1. Inspection of files

#### 1.1. General

Art. 128 EPC governs the inspection of European patent applications. Paragraphs 1, 2 and 5 regulate file inspection prior to publication of the application under Art. 93 EPC and are therefore exceptions, as an application must normally be kept secret until it is published. Thus file inspection may be granted under Art. 128(1) EPC if the applicant consents or under Art. 128(2) EPC if the applicant himself has invoked his rights under the application. Paragraphs 3 and 4 on the other hand regulate file inspection after the application has been published (see in this chapter III.M.1.2).

According to **J 5/81** (OJ 1982, 155), under Art. 128 EPC, the confidential treatment of patent applications ceases on publication of the application, not on expiry of the 18-month period mentioned in Art. 93(1) EPC. Any person who can prove that the applicant has invoked the rights under the European patent application against him may obtain inspection of the files **before the publication of the application** and without the consent of the applicant under Art. 128(2) EPC.

According to **J 14/91** (OJ 1993, 479), rights under a European patent application could be considered invoked under Art. 128(2) EPC where their invocation was formulated in relation to the first filing in a contracting state but the subsequent European application was mentioned at the same time. Any dispute between the applicant and a third party concerning the latter's right to inspect the files pursuant to Art. 128(2) EPC was best decided in oral proceedings convened at short notice.

In **J 27/87** the board confirmed the Receiving Section's decision to refuse a request pursuant to Art. 128(2) EPC, because there was no proof that the applicants had invoked their rights under the application against the appellants. The extracts from correspondence in which the applicants' representative asserted that his clients had

developed a new technology and mentioned the patent application were not deemed sufficient evidence.

In the case before the board in **T 1101/99**, a **formalities officer** acting for the opposition division rejected the request for inspection of the file. The board noted that the term 'granting of inspection' set out in the Notice of the Vice-President of DG 2 of the EPO concerning the entrustment to formalities officers of certain duties normally the responsibility of the opposition divisions of the EPO (dated 28.4.1999, OJ 1999, 504, point 13) apparently referred only to a positive decision, whereas in the decision under appeal the request for inspection was rejected. The board found that there was no justification for interpreting the delegation of duties beyond its actual wording such that it would also cover the rejection of requests for file inspection.

## 1.2. Exclusion from inspection under Rule 144 EPC

Under Art. 128(4) EPC, after publication of the European patent application, the files relating to it may be inspected on request, subject to the restrictions laid down in the Implementing Regulations. R. 144 EPC (previously R. 93 EPC 1973) indicates those parts of the file which are to be excluded from inspection pursuant to Art. 128(4) EPC. These include documents excluded from inspection by the President of the EPO (R. 144(d) EPC).

The President exercised this power to exclude documents in Art. 1(2) of her decision of 12 July 2007 (OJ SE 3/2007, 125), which provides that: "Documents or parts thereof ... (a) shall be excluded from file inspection at the reasoned request of a party or his representative if their inspection would be prejudicial to the legitimate personal or economic interests of natural or legal persons".

In **T 2522/10** the board summarised that the test for exclusion or non-exclusion is clear and straightforward – would the document in question serve the purpose of informing the public about the patent or patent application in issue? While the answer to that question will depend on the facts of each case, if the answer once ascertained is "yes", then there may be no exclusion and the matter need not be considered further. If the answer is "no", then consideration must be given to a further question, namely whether inspection would be prejudicial to the legitimate personal or economic interest of natural or legal persons.

Examples where file inspection would not have served the purpose of informing the public about the patent are to be found in the decisions **T 379/01**, **T 1401/05** and **J 23/10**. In each of these cases the material which was the subject of a request for exclusion from file inspection had no relevance to the subject matter of the patent (Decision of the President dated 12 July 2007, OJ SE 3/2007, 125).

In **T 379/01** the board stressed that the provisions concerning the exclusion of documents from file inspection stipulated exceptions from the principle of public inspection of files pursuant to Art. 128(4) EPC 1973, thus requiring a **narrow construction** of those provisions. The board concluded that a merely **abstract** prejudice

to hypothetical personal or economic interests was not a sufficient bar. The party requesting such exclusion should rather show that public access to certain documents would be prejudicial to specific and concrete personal or economic interests.

In **J 23/10** it could be gathered from the document in question that the applicant paid the renewal fees for certain applications for which they were not the registered applicant. These applications had been transferred to them but this had not been made public. It was still the assignor who was mentioned in the register. In the Board's view, this is information about internal relationships between the parties concerned, the publication of which could be prejudicial to their economic interests, while being irrelevant for the assessment of the patent application as such and therefore to be excluded from file inspection.

In **T 264/00** two internal documents, belonging respectively to the appellant and to the respondent and concerning the outcome of a confidential meeting between two of their employees, contained confidential information on the conception, manufacture and marketing of some of the respondent's products. The board held that the dissemination of this information might effectively be prejudicial to legitimate economic interests. Pursuant to R. 93(d) EPC 1973, therefore, the documents had not been made available to the public.

In **T 2254/08** the board decided that the inspection of documents that were marked confidential on filing but were publicly accessible on the internet was not prejudicial to the economic interests of the appellant (proprietor).

In **T 99/09** the document for which inspection had been requested contained precise technical details, particularly as to the source of the constituents of a medicinal product available on the market and certain specifications for the product's manufacture. Given the technical nature of the document, the board concluded that its disclosure might indeed be prejudicial to the appellant's economic interests. Since the respondents had not objected to or commented on the request to exclude the document from inspection, it was excluded under Art. 1(2)(a) of the EPO President's decision of 12 July 2007 (OJ SE 3/2007, 125) in the light of Art. 128(4) and R. 144(d) EPC.

In **T 1839/11** the board came to the conclusion that where a filed document contains information, some of which serves the purpose of informing the public about the patent but some of which does not, the filing of a version of the document in a form from which the latter information has been redacted may form the proper basis for an order excluding the unredacted document from file inspection under R. 144 EPC, the redacted version being open to file inspection.

Filed documents which, following a substantial procedural violation, were to be withdrawn from the part of the file available for public inspection and which did not fall under the exclusions listed in R. 93 EPC 1973 had to be returned to the filing party if it so requested (**T 811/90**). Similarly, documents marked "confidential" which did not belong to classes of documents to be excluded from file inspection were returned to the party concerned without note being taken of their contents (**T 516/89**, OJ 1992, 436; see also

the later decision of the President of the EPO, OJ 2001, 458). See also **T 760/89** (OJ 1994, 797) in Chapter III.G.3.4 "Return of filed evidence".

## **2. European Patent Register**

### **2.1. General**

Art. 127 and R. 143 EPC (previously R. 92 EPC 1973) govern entries in the European Patent Register. R. 143 EPC gives a list of items that are to be entered in the Register, additional entries required being specified in the EPO President's decision dated 15 July 2014 concerning the information given in the European Patent Register, which was adopted under R. 143(2) EPC. The Register shows the state of the proceedings and the legal status of patents rights. Entries are made in it until the end of the opposition period or of opposition proceedings, as appropriate.

According to **J 5/79** (OJ 1980, 71), no entries can be made in the Register prior to publication of the European patent application (Art. 127 EPC 1973 – unchanged in that respect).

An entry in the European Patent Register recording the withdrawal of a patent application fulfils the same function as a publication in the European Patent Bulletin in that it amounts to a notification to the public (**J 25/03**, OJ 2006, 395; see also **J 14/04** and **J 12/03**). The withdrawal of an application cannot be retracted once it has been published in the European Patent Register (**J 2/15**).

Under Art. 20 EPC in conjunction with the EPO President's decision dated 21 November 2013 concerning the responsibilities of the Legal Division (OJ 2013, 600), the Legal Division is usually responsible for decisions on entries and deletions in the European Patent Register (for exceptions – in cases where a request can be granted directly – see EPO President's decision dated 21 November 2013 concerning the entrustment to non-legally qualified staff of certain duties incumbent on the Legal Division, OJ 2013, 601). Appeals against such decisions are a matter for the Legal Board of Appeal, not the technical boards (Art. 106(1) and Art. 21(2) EPC). The entitlement of the proprietor entered in the Register cannot be questioned in either opposition or appeal proceedings (see **T 553/90**, OJ 1993, 666).

### **2.2. Registration of licences**

As to the recording in the Register of European Patents of an exclusive licence under a patent **already granted**, the Legal Board of Appeal ruled in its decisions **J 17/91** (OJ 1994, 225) and **J 19/91** that registration was no longer possible once the patent had been granted because the EPO had renounced jurisdiction in favour of the national offices of the contracting states designated in the request for grant.

### 2.3. Transfer

Art. 72 EPC provides that an assignment of a European patent application must be made in writing and requires the signatures of the parties to the contract. Under R. 22 EPC, a transfer of a European patent application is recorded in the Register of European Patents at the request of an interested party and on production of documents satisfying the EPO that the transfer has taken place. This is in line with the PCT system (R. 92bis.1 PCT).

In **J 12/00** the board summarised the preconditions for registering a transfer of a European patent application (now enshrined in R. 22 EPC) as follows: (i) a request of an interested party; (ii) the production of documents satisfying the EPO that the transfer has taken place; and (iii) the payment of an administrative fee. Documents relating merely to the obligation to transfer the right, but not to the transfer itself, were not sufficient to satisfy the EPO. Nor, according to the board, was it enough to cite registrations in different countries on the basis of documents other than assignment documents (similarly **J 4/10**).

In **T 128/10** the board held that the three requirements under R. 22 EPC in conjunction with R. 85 EPC, as formulated in **J 12/00**, did not need to be fulfilled at the same time. If they were met on different dates, the transfer would only have effect vis-à-vis the EPO at the date on which all the requirements mentioned above were fulfilled.

In **J 38/92** and **J 39/92** the Legal Board of Appeal ruled that a transfer could only be recorded in the European Patent Register on the basis of an official document in accordance with R. 20(1) EPC 1973 if that document **directly** verified the transfer (similarly **J 4/10**). It did not suffice if a judgment was submitted which mentioned another document from which it was possible to verify the transfer.

In appeal proceedings, assessing whether there are documents satisfying the EPO that a transfer has taken place in accordance with R. 20(1) and (3) EPC 1973 and recording the transfer in the Register is a matter for the department of first instance responsible for making the entry in the Register. Accordingly, in appeal proceedings, substitution of another party for the original applicant is possible only once the relevant department of first instance has made the entry or where there is clear-cut evidence of a transfer (**J 26/95**, OJ 1999, 668; see also **T 976/97**, **T 1751/07**).

A transfer can be recorded in the European Patent Register even after deemed withdrawal of a patent application, if it is still possible that restitutio is available and the successor in title has taken, together with his request for registering the transfer, procedural steps suitable for restoring the application (**J 10/93**, OJ 1997, 91).

In **J 17/12** the board held that the transfer of a European patent application may not be recorded in the European Patent Register at a time when proceedings for the grant of the application are stayed under R. 14(1) EPC. There is nothing to stop the filing, during the suspension of grant proceedings, of a request to transfer the application, but no action will be taken on the request during the suspension. While the fact of the transfer

may not be apparent from the register, it will be apparent from an inspection of the public file, as will the decision to stay the grant proceedings itself.

In **J 17/14** the board decided that the reversal of a completed transfer in the Register was not necessarily justified simply because doubts subsequently arose as to whether the claimed succession had been satisfactorily proven. There were cases where it might be more appropriate to stay the grant or opposition proceedings in favour of the party originally registered.

### 3. Stay of proceedings under Rule 14(1) EPC

#### 3.1. Rule 14(1) EPC

##### 3.1.1 General

Under R. 14(1) EPC (R. 13(1) EPC 1973) the EPO must stay the proceedings for grant ex officio if a third party provides it with evidence (under the EPC 1973, 'proof') that he has instituted proceedings against the applicant seeking a decision within the meaning of Art. 61(1) EPC (see **J 28/94**, OJ 1997, 400; **T 146/82**, OJ 1985, 267; **J 10/02**, **J 6/10**, **J 7/10**), unless the third party communicates to the EPO in writing his consent to the continuation of such proceedings. The patentee will not be heard but may file a request with the Legal Division not to suspend proceedings. An appeal may be filed against the Legal Division's decision adversely affecting the applicant, proprietor or third party respectively (**J 28/94**, OJ 1997, 400).

Decision **J 15/06** followed **J 28/94** (OJ 1997, 400). The communication ordering suspension was considered to be a preliminary procedural measure "sui generis" which was justified as a preventive measure to preserve the third party's possible rights to the patent in dispute and took immediate effect. The respondent's withdrawal of its request for suspension of the proceedings significantly changed the procedural situation in the appeal proceedings. However, the existence of a legitimate interest of a third party was an unwritten prerequisite for a further stay of the proceedings under R. 13 EPC 1973. The withdrawal was therefore equivalent to and to be interpreted as consent to the continuation of the proceedings pursuant to R. 13(1) EPC 1973. See also **J 18/06**.

The grant proceedings ended on the date on which the European Patent Bulletin mentioned the grant (Art. 97(4) EPC 1973). In the interim period, **proceedings for grant** were still **pending** before the EPO and a request for suspension of proceedings under R. 13 EPC 1973 was admissible (**J 7/96**, OJ 1999, 443). See also **J 33/95**, **J 36/97**, **J 15/06**, according to which the EPO can also order suspension pursuant to R. 13(1) EPC 1973 after the publication of the mention of the grant of a patent was acknowledged provided that an allowable request had been filed before the publication. Suspension of the proceedings for grant meant that the legal status quo existing at the time they were suspended was maintained, i.e. neither the EPO nor the parties might validly perform any legal acts while the proceedings were suspended (**J 38/92** and **J 39/92**).

In **J 20/05**, **G 1/09** and **J 9/12** the boards established that R. 14 EPC prevents the filing of a divisional application if the proceedings for grant concerning the earlier application are stayed. In **J 9/12** the board held that an application filed after the effective date of the stay of proceedings concerning the parent application, but before communication of stay, is to be treated as a divisional application.

In **J 10/02** the appellant argued that in the case where an appeal was lodged against a decision to suspend grant proceedings, the provision of R. 13 EPC 1973 appeared to be in conflict with the provisions of Art. 106(1) EPC 1973. The board, however, pointed out that the suspensive effect of an appeal served to provide an appellant with provisional legal protection in the sense that no action should be taken to implement the decision of the department of first instance in order not to deprive the appeal of its purpose. However, if the grant proceedings were continued and the appellant were to arrive at a definitive end to the grant proceedings in its favour, this would be more than the appellant could achieve if it succeeded with the appeal under consideration.

### 3.1.2 Opening of proceedings before a national court

According to **T 146/82** (OJ 1985, 267), suspension had to be ordered if satisfactory proof of the opening of relevant proceedings before a national court was given to the EPO by a third party, provided that the European patent application had not been withdrawn or was not deemed to have been withdrawn.

In **J 6/03** the legal board held that R. 13(1) EPC 1973 referred to proceedings which resulted directly, i.e. generally and automatically, in decisions mentioned in Art. 61(1) EPC 1973. The provision was therefore not applicable in respect of decisions of courts of third states (here, Canada).

According to **J 36/97** neither the jurisdiction of the national court whose decision was to be recognised nor the validity of such decision might be reviewed by the boards of appeal (see also **J 8/96** and **J 10/02**). When and how legally relevant civil proceedings were opened in a contracting state was likewise determined by national law (**J 7/00**).

In **J 9/06** the Legal Board pointed out that, according to **G 3/92** (OJ 1994, 607), only the courts of the contracting states have jurisdiction to decide claims to entitlement to the right to the grant of a European patent. It was not possible for the EPO, nor was it its function in the context of the examination of a request to suspend proceedings under R. 13 EPC 1973, to examine whether the subject-matter disclosed in a European patent application in respect of which suspension was requested corresponded to the disclosure of another application, ownership of which was disputed before a national court.

In **J 15/13** the board held that while it is established case law that the board is not allowed to examine the substance and merits of a national entitlement case, the board's power of examination cannot be limited to the mere check whether the claim submitted with the entitlement suit is directed to the transfer of the application but - to a certain extent - also allows and may even require a consideration of the grounds given in the

complaint of the entitlement suit. The board has to verify that the national proceedings are in accordance with R. 14(1) EPC, since to request a stay of the grant proceedings is a strong weapon which can be misused.

### **3.2. Rule 14(3) EPC**

Under R. 14(3) EPC (R. 13(3) EPC 1973), upon staying the proceedings for grant, the EPO may set a date on which it intends to resume the proceedings for grant, regardless of the stage reached in the national proceedings under R. 14(1) EPC. It is clear from the wording of R. 14(3) EPC that this is a discretionary decision (**J 33/03**).

When exercising its discretion under R. 13(3) EPC 1973, the board in **J 10/02** took into account the fact that the entitlement proceedings only concerned part of the invention and the duration of the suspension.

In parallel decisions **J 6/10** and **J 7/10** the legal board held that some aspects of the exercise of discretion under R. 14(3) EPC are (i) how long the proceedings before the national courts/authorities have been pending (with a period of more than four years held to be considerable both for grant proceedings to be stayed and for entitlement proceedings to be pending in first instance) (ii) the duration of the suspension of grant proceedings, and (iii) requests for suspension of grant proceedings filed at a late stage.

In **J 15/13** the board held that the filing of the request under R. 14(1) EPC at the last possible moment may only be taken as an argument for the resumption of the grant proceedings if such behaviour appears to be a misuse of the respondent's right to a stay of the grant proceedings.

In **J 13/12** the board decided in the light of **J 33/03** that, unlike the position under R. 14(1) EPC, R. 14(3) EPC gave the EPO discretion to decide whether proceedings were to be resumed. In exercising its discretion under R. 14(3) EPC, it had to weigh the interests of the applicant up against those of the third party which had brought a national action to determine rights against the applicant. The Guidelines for Examination, as internal administrative guidelines, could also be consulted; but they gave no indication that the national proceedings had to be finally closed, where applicable after exhaustion of all legal remedies, before a date for resuming the grant proceedings could be set, or at any rate before they could actually be resumed.

The board held in **T 146/82** (OJ 1985, 267) that if, in accordance with R. 13(3) EPC 1973, the EPO set a date on which it intended to continue the proceedings for the grant of the European patent, the date might be varied or the order staying the proceedings might be discharged at the subsequent request of the applicant or of the third party who applied for the order.

### 1. Introduction

Under Art. 115 EPC, any third party may present, following publication of the European patent application, observations concerning the patentability of the invention to which the application or patent relates. There are no fees or deadlines for presenting such observations. The third party is not a party to the proceedings. R. 114(1) EPC requires that any such observations be filed in an official language of the EPO, while R. 114(2) EPC states that they will be communicated to the applicant or patent proprietor. Third-party observations are an integral part of the files and, as such, open to inspection under Art. 128 EPC. More information can be found in the Guidelines (see e.g. A-VII, 3.5, A-XI, 2.1, D-X, 4.5 and E-V, 3 – November 2015 version), the President's decision of 10 May 2011 and the Notice from the EPO dated 10 May 2011 concerning the filing of third-party observations (OJ 2011, 418).

Observations must be restricted to the substantive requirements of the EPC (see Art. 52 to 57 EPC). Most observations concern lack of novelty and/or lack of inventive step. In the proceedings for petition for review **R 18/11** third-party observations were filed. The Enlarged Board considered the observations to be inadmissible, because according to Art. 115 EPC such submissions had to concern patentability, and patentability issues could not be the subject of review proceedings.

Art. 115 EPC helps to ensure that no legally invalid patents are granted or maintained. The public must be able to rely as far as possible on the legal validity of a patent granted

by the EPO and the provision is designed to protect this public interest (**T 156/84**, OJ 1988, 372; **T 60/91**, OJ 1993, 551; **T 1495/09**).

## 2. Formal requirements

### 2.1. Language of the documents

Under R. 114(1) EPC, any observations by a third party must be filed **in writing** in an official language of the EPO, i.e. English, French or German; otherwise, they are deemed not to have been received. Observations not filed in an official language and so deemed not to have been received are nevertheless added to the file and so accessible to the public under Art. 128(4) EPC. Third-party observations will be communicated to the applicant or patent proprietor even if they have not been filed in one of the prescribed official languages (Art. 14(4), R. 114(1) EPC).

R. 114(1) EPC also explicitly provides for applicability of R. 3(3) EPC, which states that **documentary evidence** and, in particular, publications substantiating an argument may be filed in any language. The EPO may, however, require that a translation in one of its official languages be filed, within a period to be specified. If a translation is not filed in due time, the EPO may disregard the document in question.

### 2.2. When can third-party observations be filed?

Art. 115 EPC specifies that observations cannot be filed until after publication of the European patent application but sets no upper time limit for their presentation by persons wishing to make adverse observations concerning the patentability of inventions claimed in patent applications/patents. This means that observations can also be filed during opposition proceedings, even after expiry of the opposition period, and during appeal proceedings (**T 390/90**, **G 9/91**, OJ 1993, 408, **T 1756/11**). Art. 115 EPC explicitly covers all proceedings before the EPO and so applies, in principle, to revocation and limitation proceedings too.

### 2.3. Pending proceedings

The provision of Art. 115(1), second sentence, EPC that a third party shall not be "a party to proceedings before the European Patent Office" assumed that proceedings were pending before the EPO.

In **T 580/89** (OJ 1993, 218), observations submitted by a third party were not added to the file until after the decision had been taken and therefore not considered.

In **T 690/98** the question arose of whether observations filed by a third party could give rise to a reassessment by the Office of its own motion, under Art. 114(1) EPC 1973, of the patentability of the subject-matter of the contested patent, even if the appeal proved to be inadmissible. In the board's view, the answer was no, since the admissibility of an appeal, according to Art. 110(1) EPC 1973, was a prerequisite for examination of the appeal. The substance of the contested decision could only be examined when

admissibility was established. Therefore, objections by third parties lodged at the appeal stage were not to be examined by the Office of its own motion as there no appeal proceedings were pending.

#### **2.4. Anonymously filed observations**

The EPO President's decision and the EPO notice concerning the filing of third-party observations under Art. 115 EPC (OJ 2011, 418 and 420) allow unsigned third-party observations to be filed anonymously, but only at first instance.

In the *inter partes* proceedings **T 735/04**, document D6, a patent application by one of the patent proprietors, was cited in anonymous third party observations. Since D6 was highly relevant for the patentability of the claimed subject-matter and could cause the patent to be revoked, it was introduced into the proceedings.

In **T 146/07** anonymous third-party observations were received by the board at a very late stage. According to R. 114(1) EPC, any observations by a third party must be filed in writing. The board stated that this requirement implied that the observations have to be signed (see R. 50(3) and 86 EPC) in order to allow an identification of the third party. Identification is particularly important in the context of opposition proceedings in order to allow the competent organ of the EPO to verify whether the observations have indeed been filed by a third-party rather than by a party to the proceedings. Otherwise, a party might be tempted to submit late observations and/or documents by means of anonymous third party observations in order to avoid negative procedural consequences such as apportionment of costs. The board was aware that anonymously filed third-party observations might nevertheless be adopted by a party to the proceedings as its own or may even trigger objections by the competent organ of the EPO of its own motion (see above **T 735/04**). In the absence of such a further procedural act, anonymous third-party observations are to be disregarded altogether. This view is in line with the decisions **G 1/03** and **G 2/03** (OJ 2004, 413 and 448) in which the Enlarged Board of Appeal refused to take into account an anonymously filed third-party statement. In **T 1439/09** the board saw no need to depart from this line of reasoning. Therefore, the anonymous observations filed under Art. 115 EPC were deemed not to have been filed and were disregarded by the board.

In view of these decisions, the board in **T 1756/11** held that anonymous third-party observations made at a very late stage in the opposition appeal proceedings should not be given formal consideration in order to preclude hidden procedural abuse by the parties. Likewise in **T 1181/12** the board did not take into consideration third-party observations which were submitted anonymously during the appeal proceedings.

In **T 1336/09**, however, the board came to the conclusion that in this *ex parte* case the anonymous character of the third-party observations did not bar them from being admitted into the procedure. In respect of the anonymous character of the observations under Art. 115 EPC, the board noted that the Decision of the President of the EPO and a Notice from the EPO concerning the filing of third-party observations under Art. 115 EPC (OJ 2011, 418 and 420) allowed third-party observations to be filed without signature and

anonymously. The board stated that the above dispositions were in line with earlier decisions of the boards, which did admit such observations, without apparent misgivings in relation to their anonymous character (**T 735/04**, **T 258/05**). Unlike **T 146/07**, which had concerned an *inter partes* appeal, the case at hand here (**T 1336/09**) concerned *ex parte* proceedings, in which the appellant was the sole party and could raise new issues or submit new prior art at any time - as could the board of its own motion by virtue of Art. 114(1) EPC. Accordingly, the risk of anonymous third-party observations providing a cover for procedural abuse could largely be excluded.

## **2.5. Reasons for observations**

R. 114(1) EPC requires, among other things, that third-party observations state the grounds on which they are based.

In **T 189/92** the board held that it was the responsibility of the third party to ensure that the facts and evidence filed were not only unequivocally clear but also as complete as possible, so that they could be handled directly by the investigating instance without doubt and without further inquiry.

In **T 908/95**, the evidence adduced to show fulfilment of the criteria for establishing public prior use, in particular public availability, did not substantiate or prove such fulfilment to the extent that the allegation could be accepted. The board found that the additional inquiries needed to prove it, which might even include the hearing of witnesses, could only be conducted with the co-operation of the "third party", but that this was impossible where the person in question was not a party to the proceedings. The third party's observations therefore had to be disregarded (see also **T 73/86**).

In **T 301/95** (OJ 1997, 519), the opposition division had disregarded third-party observations as to a claim of public prior use, as the alleged facts had not been proven with near certainty.

In **T 866/01** the board stated that observations by a third party are regularly taken into consideration by the department which is responsible for deciding on the grant, maintenance or revocation of a patent, if such observations provide legal or technical information relevant to the decision to be taken by that department. Since in the case at issue the submissions contained no information which would be considered relevant to the present decision, they did not fall within the category of observations by a third party.

## **3. Third party's legal status**

### **3.1. General issues**

Art. 115 EPC 1973 provided that "any person" may present observations, whilst the German version referred to "jeder Dritte" and the French to "tout tiers". The revised EPC has aligned the English version with the German and French, so that it now refers to "any third party". See **T 338/89** of 10.12.1990 and **T 811/90**.

In **T 1224/09** the board pointed out that the only requirement in Art. 115 and R. 114 EPC relating to the entitlement to submit third party observations was the requirement that the third party would not be a party to the proceedings. There is no requirement to state whether the third party was acting in its own name or on behalf of someone else.

In **T 811/90**, the patentee had filed an appeal against a decision of the opposition division concerning the removal of certain documents from the public part of the file. The opponent was not a party to the impugned decision and was consequently not entitled to be a party to the proceedings before the board. His request was therefore inadmissible but was admitted as an observation by a "third party".

Similarly the board in **T 446/95** held that the intervention of a company was inadmissible, so its auxiliary requests were also inadmissible. However, there was nothing to prevent the company's observations and the documents it had filed from being dealt with under Art. 115 EPC 1973 (**T 223/11**).

In **T 7/07**, the board held that the patent in suit had not been granted for Lithuania under the EPC, as Lithuania was an extension state and therefore could not be designated for a European patent. The board agreed with the findings in **T 1196/08** that an intervention based on proceedings for infringement of a patent that has effect in a particular state solely on the basis of national law is inadmissible. The intervener's submissions were consequently regarded as third-party observations under Art. 115 EPC.

In **T 887/04** of 14 November 2006, the board found that, although the intervention had to be held inadmissible, account had to be taken of document D5 cited by the intervener under Art. 115 EPC 1973 for the purposes of examining novelty and inventive step, because, despite its belated submission, it was highly relevant.

### **3.2. Third party's procedural rights**

According to Art. 115 EPC a third party does not become a party to the proceedings. In principle, therefore, third parties have none of the procedural rights associated with such status, in particular the right to appeal and the right to be heard (**T 1756/11**). Their observations are to be examined as submitted and assessed with regard to credibility (**T 951/93**, **T 1196/08**).

In **T 951/91** the board found that by interpreting Art. 115 EPC 1973 in the light of their object and purpose, it was clear that they were intended exclusively to cut down, and not to extend, the rights of third parties, still less to extend their rights beyond the rights of parties to the EPO.

As a third party within the meaning of Art. 115 EPC is not a party to the proceedings and has no more than an opportunity to "present observations", the admissibility of these observations is entirely a matter for the board. While it is well-established by case-law that third-party observations can be considered, both at first instance and on appeal, there is no obligation on the board beyond such consideration and no right of a third

party to be heard on the admissibility of its observations or any evidence in support of them. The actual parties to proceedings naturally have the right to be heard in relation to such observations, but their admissibility is entirely a matter for the board (**T 390/07**). Parties to the proceedings can comment at any stage on new facts and evidence emerging from third-party observations filed after expiry of the opposition period, if they think that these could influence the decision. The opposition division or the board of appeal, exercising its discretion, is then obliged to rule on whether or not to admit the late-filed comments into the proceedings (**T 1756/11**).

In **T 283/02**, the opposition division had duly forwarded the observations by third parties to the patentee, who had made no comment. The failure of the opposition division to mention these observations in its decision did not constitute a procedural violation, even though a mention would have been desirable.

#### **4. Third-party observations in opposition proceedings**

##### **4.1. Third-party observations and the scope of opposition**

Examination of an opposition is limited to the extent to which the patent is opposed in the notice of opposition. If the opponent limits the notice of opposition to certain matters, the remaining matters are not opposed within the meaning of Art. 101 and 102 EPC 1973 or the subject of any proceedings within the meaning of Art. 114 and 115 EPC 1973 (**G 9/91** and **G 10/91**, OJ 1993, 408 and 420). The opponent thereby deliberately refrains from exercising his right under the EPC to oppose the other matters covered by the patent and, consequently, the EPO has no competence to deal with them at all. (**T 737/92**, **T 653/02**, **T 31/08**).

Following **G 9/91** and **G 10/91** (OJ 1993, 408 and 420), the board in **T 580/89** of 28 April 1993 concluded that it had no power to examine the patentability of the subject-matter of claims which had not been opposed in the notice of opposition but were the subject of observations by the third party under Art. 115 EPC 1973 which had not reached the EPO until after the decision of the opposition division had been taken.

##### **4.2. Introducing a fresh ground for opposition in opposition proceedings**

An opposition division may, in application of Art. 114(1) EPC, of its own motion raise a ground for opposition not covered by the statement pursuant to R. 76(2)(c) EPC but referred to by a third party under Art. 115 EPC after the expiry of the time limit laid down in Art. 99(1) EPC. The Enlarged Board emphasised that the consideration of grounds not properly covered by the statement should only take place before the opposition division in cases where, prima facie, there were clear reasons to believe that such grounds were relevant and would in whole or in part prejudice the maintenance of the patent. The possibility under Art. 114(2) EPC of disregarding facts and evidence in support of fresh grounds not submitted in due time should, of course, also be kept in mind (**G 9/91**, OJ 1993, 408; **T 356/94**, **T 1053/05**).

### 4.3. Introducing a fresh ground for opposition in appeal proceedings

In an appeal procedure the provisions of Art. 114(1) EPC 1973 have to be interpreted in a more restrictive manner than in an opposition procedure and, accordingly, fresh grounds for opposition raised by an opponent or referred to by a third party under Art. 115 EPC 1973 after expiry of the time limit laid down in Art. 99(1) EPC 1973 may in principle not be introduced at the appeal stage, unless the patentee agreed. (**G 9/91**, **G 10/91**, OJ 1993, 408, 420).

In **T 667/92** of 27 November 1996, the board disregarded third-party observations because the patentee had not consented to their admission.

In **T 1667/07** some documents which were copies of submissions made by third parties during the examination of the application were submitted as evidence in support of fresh grounds for opposition raised for the first time on appeal. The board pointed out that since it cannot consider the fresh grounds of opposition put forward by the appellant for the first time in appeal proceedings - as the patent proprietor opposed to their introduction into the proceedings - it cannot consider **evidence** submitted in their support either.

### 5. Third-party observations filed at a late procedural stage

The board in **T 1756/11** held as follows: although the Art. 114(2) EPC provision on late-filed submissions mentions only the parties to the proceedings, established case law holds that submissions (i.e. facts and evidence) emerging from third-party observations not filed until after expiry of the opposition period are likewise to be treated, by way of a legal fiction, as "late": this means that Art. 115 EPC cannot serve to extend third parties' rights, let alone extend them beyond the rights of parties to the proceedings (see **T 951/91**, OJ 1995, 202). In other words, where third-party observations are filed after the time limit under Art. 99(1) EPC, the principle enshrined in Art. 114(1) EPC of examination by the EPO of its own motion is to be applied on the fictional basis that those observations are late, i.e. they are subject to the criteria developed in the case law for the boards' exercise of discretion in deciding whether to admit late-filed submissions within the meaning of Art. 114(2) EPC (see **T 580/89**, OJ 1993, 218).

#### 5.1. Opposition proceedings

In **T 1756/11** the board observed that, in view of the notice from the EPO concerning the filing of third-party observations in first-instance proceedings (see OJ 2011, 418 and 420), the opposition divisions should at least comment on the relevance of third-party observations, for example in the summons to oral proceedings.

In **T 301/95** of 28 March 2000, a third party had alleged public prior use after expiry of the period for opposition, i.e. belatedly. Under Art. 114(2) EPC 1973, it was at the discretion of the opposition division and the board of appeal whether or not to consider the belated submissions, but in deciding whether to do so, the most important criterion was the relevance of the belatedly cited prior art. The observations were not considered.

A document submitted under Art. 115 EPC 1973 during opposition proceedings, but after the time limit for filing the notice of opposition had expired, was discussed in the appeal proceedings, but not taken into account as it was found not proven to be publicly available at the relevant time and thus did not form part of the state of the art (**T 314/99**).

## 5.2. Appeal proceedings

Irrespective of a third party's legal status, the principle that the EPO must examine the facts of its own motion in first-instance administrative proceedings does not have the same legal importance in judicial appeal proceedings, in particular in *inter partes* proceedings (**G 9/91** and **G 10/91**, OJ 1993, 408, 420).

In **T 1756/11** the board observed that the boards usually have to disregard late-filed third-party observations in opposition appeal proceedings of their own motion, unless they relate to amendments to the claims or other parts of the patent made during the opposition or appeal proceedings. In that case, a board can, under certain circumstances, in the course of examining these amendments either disregard a third party's late-filed submission or, where appropriate, admit it into the proceedings and consider it at its discretion; see Art. 12(4) and 13(1) and (3) RPBA.

In **T 1224/09** a third party had submitted documents D53 to D55 (Japanese patent applications) at the start of the appeal proceedings. The board considered documents D53 to D55 to be prima facie relevant, as they had led to the refusal of the corresponding application before the Japanese Patent Office. The board stated that third party observations could be submitted at any time as long as proceedings were pending. Admitting and considering such observations, however, was an issue to be decided by the competent department of the EPO. In the case of the boards of appeal, the principles set out in Art. 13 RPBA seemed to be a reasonable basis on which the discretion to admit the third party observations was to be exercised, i.e. in view inter alia of the complexity of the new subject-matter, the current state of the proceedings, the need for procedural economy and, where oral proceedings were arranged, whether the board or the other parties could reasonably be expected to deal with the third party observations without adjournment of the oral proceedings. The board decided to admit documents D53 to D55 into the appeal proceedings.

In **T 637/09** the board stated that the admission into the appeal proceedings of third-party observations filed in the course of these proceedings is at the board's discretion. When exercising its discretion the board took into account that it should not accord the third party within the meaning of Art. 115 EPC more favourable treatment than would be given to an actual party seeking to introduce such submissions at that stage of the proceedings. The third-party observations filed shortly before the oral proceedings were not admitted into the proceedings since their admission would have accorded the third party more favourable treatment than would have been given to an actual party.

In **T 953/02** the respondent had challenged the submission under Art. 115 EPC 1973 because of a signature which was deficient, i.e. not that of a natural person. The submission by the third party was filed substantially less than one month before the oral

proceedings. The board did not admit it into the proceedings. This also removed any need to consider the arguments set out in the respondent's letter or the literature enclosed.

In **T 771/13** the observations were received by the EPO some days before oral proceedings. The novelty objection was not based on state of the art under the EPC. Moreover, the remaining documents and objections were not prima facie more relevant than those raised previously. Consequently there was no need to decide whether or not to admit these late-filed observations.

The observations under Art. 115 EPC were filed more than 1 1/2 years before the oral proceedings so that the parties and the board had sufficient time to consider the document. In fact, appellant I had already reacted in the written proceedings to the submission of the third party by filing amended claims and a declaration. The board had also notified the parties that it considers document D 27 to be relevant. None of the parties had requested that the submission of the third party be disregarded. Thus, the board decided to admit the submission of the third party into the proceedings (**T 458/07**).

## **6. Remittal following filing of observations**

A board may choose to remit a case to the department of first instance as a result of observations filed under Art. 115 EPC. See, for example, **T 249/84** and **T 176/91**.

In **T 929/94**, a preliminary examination by the board of the third-party observations and the supporting material showed that an entirely new case based on new facts and evidence had been presented against the patentability of the claimed invention in these observations. In order to preserve the applicant's right to review through appeal of any adverse decision of the department of first instance, the board remitted the case for examination of and decision upon such new material, as requested by the applicant.

In **T 41/00**, a document submitted during the appeal proceedings by a third party under Art. 115 EPC 1973 appeared to come closer to the claimed subject-matter than any of the prior-art citations considered during the examination proceedings. However, since it remained open to question whether the document had been available to the public at the patent's priority date, the case was remitted to the department of first instance.

In **T 848/06** the board intended to remit the case to the department of first instance. The board concluded that it would not be appropriate for the board to take into account the third party observations so as not to prejudice their consideration by the said department.

In **T 30/01** the case was remitted to the department of first instance for further prosecution. The board stated that the opposition division would also have to consider whether to admit or disregard the observations presented during the appeal proceedings by the third party and partially incorporated by reference in the respondent's own case.

## O. Notifications

1.	Forms of notification	785
1.1.	Notification by postal services	785
1.2.	Notification by means of electronic communication	786
1.3.	Notification by delivery by hand and delivery by public notice	787
2.	Notification to representatives	787
3.	Notification to third parties	788
4.	Spheres of risk and apportioning the burden of proof	789

Notifications are governed in detail by Art. 119 EPC and R. 125 to 130 EPC. Notification may be made by post, delivery by hand, public notice or, as provided for in R. 127 EPC, by means of electronic communication. More specific provision for the last means was made in the President's decision of 11 March 2015 (OJ 3/2015, A28) and Administrative Council decision CA/D 6/14 of 15 October 2014 (OJ 2/2015, A17). Together these form the basis for continuation of the EPO's pilot project, originally launched by the decision of the President of 4 July 2012 (OJ 8-9/2012, 486, which has ceased to have effect), during which it is progressively introducing new technical means for the electronic communication of patent applications, other documents, notifications and further information. Under the above-mentioned Council decision CA/D 6/14 (OJ 2/2015, A17), a set of amendments to the Implementing Regulations concerning notification and the use of electronic tools in proceedings before the EPO entered into force on 1 April 2015. In particular amendments to R. 2, 125, 126, 127 and 129 EPC were adopted, and these are explained in the sections on the individual forms of notification. Amended R. 125(1) EPC clarifies what documents must be notified and serves merely as an explicit legal basis for the EPO's existing practice of not formally notifying notices and communications from which no time limits are reckoned.

### 1. Forms of notification

#### 1.1. Notification by postal services

In R. 126 EPC, and also in R. 2(1), 125(2) and 133(1) EPC, references to "post" have been replaced by "postal services" and "postal service providers". This gives the Office the freedom to choose any postal service provider it regards as suited to serving notification.

R. 126 EPC stipulates that decisions incurring a period for appeal or a petition for review, summonses and other such documents as determined by the President must be notified by registered letter with advice of delivery or equivalent. All other notifications by postal services must be by registered letter. Under R. 126(2) EPC the letter is deemed to be delivered to the addressee on the tenth day following its posting, unless the letter has failed to reach the addressee or has reached him at a later date; in the event of any dispute, it is incumbent on the EPO to establish that the letter has reached its destination or, as the case may be, to establish the date on which the letter was delivered to the

addressee. Notification is deemed to have been effected even if acceptance of the letter has been refused. Under R. 126(4) EPC, the law of the state in the territory of which the notification is made applies to other matters concerning notification, e.g. whether delivery to a person other than the addressee constitutes effective notification to the latter.

In **J 9/96** the Legal Board of Appeal held that notification of a communication posted as an ordinary letter in accordance with R. 78(2) EPC 1973 (no longer applicable since 1.1.1999) was deemed to have been made when despatch had taken place. However, if the communication did not reach the addressee and was not returned to the EPO, the legal fiction of deemed notification could not be applied, unless the EPO could establish that it had duly despatched the communication (see also **J 27/97** and **J 32/97**). On the question of apportioning the burden of proof and spheres of risk in connection with notification irregularities, see in this chapter III.O.4.

## **1.2. Notification by means of electronic communication**

Under the new R. 127 EPC, notification may also be effected by means of electronic communication. However, for this to happen, users must have agreed to receive communications by such means. In spite of the new legal basis, this form of notification was at the time of publication still restricted in practice to the documents listed on the EPO website, which in particular do not include documents relating to appeal proceedings.

R. 127(2) EPC extends the safeguards that already apply for notification by post to electronic notification. It defines the date on which an electronic document is deemed to be delivered as the tenth day after its transmission. In case of dispute, the Office must prove that the electronic document reached the addressee, or the date on which it reached him. This provision is not limited to any specific technical solution or tool, such as the Mailbox service.

The President's decision of 11 March 2015 (effective as of 1 April 2015) is now the legal basis for the EPO's Mailbox service. It defines the date of transmission, which triggers the ten-day period under R. 127(2) EPC, as the date indicated in the document ("the date of the document"), provided the addressee can access it in the Mailbox by that date. In other words, the ten-day period cannot be considered to have started before the date of the document. If the addressee disputes the date of transmission, it is up to the EPO to establish it. The ten-day period then starts on the date thus established (Art. 9 of the decision, OJ 2015, A28).

Facsimile ("fax") transmission of notifications is generally not admissible (**J 27/97**) and therefore does not constitute valid notification even if receipt is proven. The situation was different in **T 580/06** where notification of a shortfall under point 6.4 ADA was sent only by fax. However, this form of notification was in keeping with point 6.4 ADA in conjunction with R. 77(2)(d) EPC 1973. The President had not laid down conditions for notifications by fax within the meaning of that rule; in particular, postal confirmation of the fax had not been made compulsory. Thus the notification had been made in due form. In the board's view, the "OK" on the fax transmission report was to be regarded as

evidence of complete and error-free transmission, on which the fax became the recipient's responsibility.

### **1.3. Notification by delivery by hand and delivery by public notice**

Under R. 128 EPC notification may be effected on the premises of the EPO by delivery by hand of the document to the addressee, who must on delivery acknowledge its receipt. Notification is deemed to have been effected even if the addressee refuses to accept the document or to acknowledge receipt thereof.

If the address of the addressee cannot be established, or if notification in accordance with R. 126(1) EPC has proved to be impossible even after a second attempt, notification is effected by public notice (R. 129(1) EPC). In this case, the EPO informs the parties and the public of the date on which the document is deemed to have been delivered by publishing a notice in the European Patent Bulletin. The document is deemed to have been delivered one month after publication of the notice.

## **2. Notification to representatives**

If a representative has been appointed, notifications must be addressed to him in accordance with R. 130(1) EPC (previously R. 81(1) EPC 1973) from the time of his appointment. This only applies if a representative is actually appointed before a notification is posted since a notification has to be made on the basis of the facts on file at the time of posting (**J 22/94**). If several representatives have been appointed for a single party, notification to any one of them is sufficient (**T 1281/01**).

In **J 17/98** the board stated that the filing of a general authorisation does not, without any additional information linking the authorisation to a specific case and/or to the appointment of a representative, imply the appointment of a professional representative (see also decision **J 20/96**).

In its decision **J 5/04**, the board made it clear that the initial designation of a representative at the time when the international application had been filed with a receiving Office other than the EPO (here: INPI) did not meet the requirements for the valid designation of the representative for the regional phase before the EPO.

In **T 812/04**, the board pointed out that R. 101(6) EPC 1973, in conjunction with R. 81(1) EPC 1973, clearly indicated that, until the termination of an authorisation had been communicated to the EPO, the latter was obliged to notify communications, decisions or other documents to the duly appointed representative and that these notifications alone would have valid effects. The fact that the appellant had filed the notice of appeal himself imposed no obligation on the Registry of the boards of appeal to inquire about the legal status of relations between the applicant (client) and the duly appointed representative or to send the documents and communications subsequently directly to the client direct.

In **J 19/92** the Legal Board of Appeal held that notifications to an applicant's representative were duly made if they were despatched before the representative relinquished his brief. The notification to the applicant did not therefore have to be repeated after the brief had been relinquished. On the contrary, it was the representative who was obliged to inform his client of the notification. In **T 247/98** the board confirmed that what determined whether a R. 81(1) EPC 1973 notification was to be sent to the representative was the legal situation at the time when the document was despatched (see also **T 1281/01**).

However, in **T 703/92** the written decision and minutes of the oral proceedings were sent not to the authorised representative but to the opponents. The board found that, as the provision relating to notification had not been observed, the question whether a notification had effectively taken place depended (in accordance with R. 82 EPC 1973) on whether and when the representative had received the full decision.

In **T 172/04** the notification concerned had been received by an employee authorised to receive post on behalf of the representative. That the representative himself only had knowledge of the notification several days or weeks later was therefore irrelevant, as the only legal condition to consider, i.e. delivery to the addressee, was established. This finding was upheld in **T 743/05**, in which the board observed that the addressee is a person to whom something is addressed and that the authorised employee of the representative's office's signature on the advice of delivery met this definition. A different interpretation (i.e. that it had to be brought to the attention of the professional representative himself), would lead to uncertainty for all the users of the European Patent system, as the answer to the question whether notification had effectively taken place could in that case depend entirely on the honesty, goodwill or organisational skills of the professional representative (similarly **T 261/07**).

In **J 28/10** the representative's office was located in a large building in a business-park and incoming mail for the law firm was left at the doorman's desk. The doorman was the employee of a security company, this company having a contractual relation with the company that administrated the business-park where the representative rented office space. This led the board to the conclusion that a letter which is delivered to a recipient, who is also identified as recipient for previous deliveries should be deemed delivered by the postman to an authorised recipient, acting within the mail reception process implemented at the representative's office and accepted by him.

### **3. Notification to third parties**

In **T 261/07** the decision to revoke the patent was delivered (by registered letter with advice of delivery) to a person who was not an employee of the patentee (to whom the notification was addressed), but of a company that received letters on behalf of the patentee. No acknowledgement of receipt was on file for the patentee, who claimed never to have received the decision. Following **T 172/04** and **T 743/05**, the board held that for reasons of legal certainty, delivery to the addressee is effected once a person authorised by the addressee has received the letter. In **T 1535/10** too, the board held that, where the recipient did not operate his own mail office and instead made use of an

external mail office, he had to accept that the external office would be treated as if it were his own in matters relating to the delivery of communications subject to deadlines. Any delay in forwarding such communications on the part of the external office would thus be attributed to the recipient's sphere.

In **J 35/97**, a communication was handed to a third party not authorised by the appellant to accept it. The said party was in the addressee's business premises, but not an employee. In the board's view, that meant that notification under Section 12(1) and (2) RPCPS had not occurred. Nor did the party qualify under any of the categories of "substitute addressee". There was also no evidence that the appellant had ever seen the communication. The board therefore found the EPO had not shown notification to have been properly effected.

#### **4. Spheres of risk and apportioning the burden of proof**

R. 126(2) EPC states: "Where notification is effected in accordance with paragraph 1, the letter shall be deemed to be delivered to the addressee on the tenth day following its handover to the postal service provider, unless it has failed to reach the addressee or has reached him at a later date; in the event of any dispute, it shall be incumbent on the European Patent Office to establish that the letter has reached its destination or to establish the date on which the letter was delivered to the addressee, as the case may be." In cases where the EPO is not able to prove the actual date of notification, a letter, for instance, sent by the addressee himself which indicates the date of receipt is accepted as proof. If it is evident from an addressee's reply that he has received the document, although he does not mention the date of its notification, the date on which that reply was written is to be regarded as the date of notification (Guidelines E-I, 2.5 – November 2015 version, re R. 125(4) EPC). The risk associated with electronic notification under the new R. 127 EPC is apportioned in the same way.

In **T 1535/10**, the board held that responsibility for obstacles to and delays in the receipt of decisions to be notified under R. 126(1) EPC had to be assigned according to spheres of risk. The Office was liable for both the risks arising in its own sphere and "transport risks". However, it distinguished such risks from those within the recipient's sphere of organisation and influence, e.g. the risk that employees or other authorised recipients failed to forward a letter delivered to the business address, or delayed in doing so. For a presumption that a letter had entered the recipient's sphere of organisation and influence, it sufficed that it had been delivered to his address and that he was in a position to take note of it, irrespective of whether he had actually taken (final) possession of it and noted its content (see also **T 580/06**).

In keeping with the bulk of the boards' case law, it was decided in **J 14/14** that it is clear from the wording of R. 126(2) EPC that, in the event of any dispute as to whether a notification has been received by the addressee, the onus is on the EPO to establish the fact and date of delivery. In the case, the only proof of delivery that the EPO had in respect of the communication in question, was a letter from Deutsche Post, referring to a registered letter sent to the appellant's representative and stating that it was delivered to a person authorised to receive it. This was deemed insufficient to fulfil the requirements

of R. 126(2) EPC since there was no proof that the appellant's representative or any other named individual signed a document acknowledging receipt of the letter and no communication from the foreign postal service was disclosed (see also **J 9/05** and **J 18/05**, where a similar confirmation letter by the Deutsche Post was held not to be sufficient to prove the receipt of an EPO notification).

In decisions **T 529/09** and **T 1304/07** however, the boards held that seeing as the appellant did not submit any further arguments or evidence in order to demonstrate that the Deutsche Post's confirmation failed to establish that the registered letter reached its destination, the evidence on file had to be regarded as sufficiently reliable and complete for proving the proper delivery of the letter.

In **T 247/98** the board stated that when establishing the meaning of the term "im Zweifel" in the German version of R. 126(2) EPC, account should be taken of the French and English versions, which assume that there is a dispute ('en cas de contestation', 'in the event of any dispute'). A dispute ('Zweifel', literally 'doubt' in the German version) within the meaning of this rule could only arise if it was maintained that a letter had in fact been received more than ten days following its posting. The mere absence of the advice of delivery or the receipt from the file was not in itself sufficient to give rise to a dispute ('Zweifel') within the meaning of this rule.

## **P. Applications by non-entitled persons**

Art. 61 EPC deals with the remedies available where a person other than the patent applicant is held by a national court to be the person entitled to the grant of a European patent. The Article remains unchanged in substance. For further details, see R. 16 EPC and R. 17 EPC.

In **G 3/92** (OJ 1994, 607), the Enlarged Board of Appeal was called upon to consider the application of Art. 61(1)(b) EPC 1973 in the following circumstances:

The appellant had lodged a European patent application in 1988. The search report revealed the existence of a prior application filed in 1985 for substantially the same invention by a third party, to whom the appellant had revealed the invention in confidence in 1982. This prior application had been published, and in 1986 deemed to be withdrawn for non-payment of the examination fee. Thereupon the appellant claimed from the UK Patent Office Comptroller, and was granted, entitlement to a patent for the invention disclosed in the prior European application under Section 12(1) UK Patents Act 1977. The appellant was thus allowed under Section 12(6) UK Patents Act 1977 to file a new application in the UK to be treated as having the same filing dates as the prior European application. The appellant then filed a new European patent application in respect of the invention disclosed in the prior application under Art. 61(1)(b) EPC 1973 in 1990.

The referring Legal Board of Appeal took the view in its interlocutory decision **J 1/91** dated 31.3.1992 (OJ 1993, 281) that the Comptroller's decision was a final decision within the meaning of Art. 61 EPC 1973. However, whilst entitlement to a patent was a matter for national courts to decide, those courts had no power directly to provide a remedy under the Convention, that being a matter to be dealt with by the EPO under Art. 61 EPC 1973.

The Enlarged Board of Appeal held that when it has been adjudged by a final decision of a national court that a person other than the applicant is entitled to the grant of a European patent, and that person, in compliance with the specific requirements of Art. 61(1) EPC 1973, files a new European patent application in respect of the same invention under Art. 61(1)(b) EPC 1973, it is not a pre-condition for the application to be accepted that the earlier original usurping application is still pending before the EPO at the time the new application is filed.

The Legal Board of Appeal therefore ruled in **J 1/91** dated 24.8.1994 that the conditions of Art. 61(1)(b) EPC 1973 had been met and accordingly remitted the patent application to the Receiving Section for further prosecution.

For stay of proceedings before the EPO in case of entitlement suit, see also Chapter III.M.3 "Stay of proceedings under Rule 14(1) EPC".

## Q. Rules relating to Fees

1.	General	792
2.	Payment of fees	793
2.1.	Methods of payment	793
2.2.	Debit orders	793
2.3.	Indication of purpose of payment	794
3.	Date of payment	795
3.1.	Fiction of fee payment in due time - ten-day fail-safe arrangement	795
4.	Insufficient payments - small amounts lacking	795
5.	Reduction of the examination fee	797
6.	Partial refund of the examination fee	797

---

### 1. General

The Rules relating to Fees (RFees) determine the amounts of the fees levied by the EPO and the ways in which they are to be paid (Art. 51(4) EPC), They also contain provisions regulating the due date for fees, the particulars to be indicated concerning payments, the date of payment, insufficient payments and certain refunds and reductions.

According to the Legal Board of Appeal in **J 7/07**, no provision of the EPC states explicitly that the EPC takes precedence over the Rules relating to Fees in cases of conflict between them. However, the EPC is clearly the higher legal norm, and in case of conflict, by analogy with Art. 164(2) EPC 1973, the provisions of the EPC should take precedence over the provisions of the Rules relating to Fees. Also on general legal principles, the Implementing Regulations should take precedence over the Rules relating to Fees. See also Chapter III.D.1.2.2 "Applicability of R. 132 EPC to the Rules relating to Fees".

The EPC 2000 required a revised version of the Rules relating to Fees, which also entered into force on 13.12.2007 (see Administrative Council decision of 7.12.2006, OJ 2007, 10; also Administrative Council decision of 25.10.2007, OJ 2007, 533). Since then, further amendments have come into effect (see European Patent Convention, 16th edition 2016, and OJ 2014, A4 and A5). The relevant chapter of the Guidelines for Examination (November 2015 version) is Part A-X. Up-to-date fee information on fees is available in the Official Journal of the EPO under the rubric "Guidance for the payment of fees, expenses and prices" and on the EPO website at [www.epo.org/fees](http://www.epo.org/fees).

Besides the cases set out below, decisions concerning individual procedural fees are to be found in the relevant chapters of this book.

## 2. Payment of fees

### 2.1. Methods of payment

Fees due to the Office may be paid by the methods foreseen in Art. 5 RFees (see also **R 2/09**). Art. 5(1) RFees provides for payment or transfer to a bank account held by the Office. Under Art. 5(2) RFees further payment methods may be allowed by the President of the EPO (see in particular Chapter III.Q.2.2 below).

### 2.2. Debit orders

Under Art. 5(2) and Art. 7(2) RFees the EPO makes deposit accounts available for the settlement of fees and costs of other services provided by the EPO. These are governed by the Arrangements for deposit accounts (ADA) and their annexes, the latest version of which entered into force on 1 April 2015 (see Supplementary Publication 3, OJ 2015; see also point 5.3 as revised with effect from 1.4.2016, OJ 2016, A14).

Already in **T 152/82** (OJ 1984, 301) it was held that the EPO must execute a debit order in accordance with the substance of that order where the intention was clear, even though the amount specified was clearly incorrect. This also applied where a national form was used in error, as in **T 170/83** (OJ 1984, 605). A timely filed statement that a debit order for payment of a fee had been issued was itself considered such a debit order in the absence of any record of the original (**T 17/83**, OJ 1984, 306).

In **T 1265/10** the board considered in the particular circumstances of the case that the crossing of Section X of the notice of opposition (EPO Form 2300) to indicate enclosure of a fee payment voucher (which enclosure, however, was not found at the EPO) was a declaration of the intention to pay the opposition fee. A debit order had to be unambiguously recognisable and show a clear and unambiguous intention to make a particular payment (**T 170/83**, OJ 1984, 605; **T 152/82**, OJ 1984, 301; **T 152/85**, OJ 1987, 191). As stated in **T 170/83**, an authorisation to be derived from the circumstances required that the authorising person (account holder) was known and clearly identifiable, and that certain fees due to the EPO for a known procedure were meant to be paid by the withdrawal from such account (and not in any other way). Following **T 806/99**, which was based on almost identical facts, the board found these conditions to be fulfilled. This was sufficient for payment of the fee.

In **J 14/12** the question was whether for the renewal fees paid on a divisional application additional fees were also due. The board found that, for some of the renewal fees, a letter filed within the four-month period of R. 51(3), second sentence, EPC requesting (in general terms) debiting of the fees falling due with the filing of that divisional application was, when read in conjunction with the internal fee calculation sheet filed with the application, sufficient to fulfil the requirements for the content of a valid debit order (see point 6.3 ADA, version valid from 1.4.2009, Supplement to OJ 3/2009). Hence, those renewal fees were timely paid and additional fees were not due.

Since 1.4.2014, for debit orders not filed online it has become mandatory under point 6.2 ADA to use the standard payment forms (EPO Form 1010, PCT/RO/101 or PCT/IPEA/401; see Supplementary Publication 4, OJ 2014; also OJ 2014, A24, and OJ 2015, A64).

In case **T 773/07**, which concerned the Arrangements for deposit accounts in force until 12.12.2007 (Supplement to OJ 1/2005), the appellant's deposit account held insufficient funds to cover the appeal fee. The board rejected the argument that this fee could or should have been booked before six other fees on the relevant date. It was not for the EPO cashier to choose priorities between fees to be paid, all the more so since it was the responsibility of the account holder to ensure that the account contained sufficient funds at all times (point 5.2 ADA).

In **T 871/08** the opponent had indicated that the appeal fee would be paid by online debit order, but also requested that, if this was not done by one day before expiry of the Art. 108 EPC 1973 time limit, the Office should debit the fee. The board held that the payment of the appeal fee was exclusively the responsibility of the appellant or its representative, who could not discharge themselves by shifting the responsibility to the Office, let alone with a conditional order. However, in **T 2364/12** a different conclusion was reached in the circumstances of that case.

It is to be noted that point 6.3 ADA now expressly states that debit orders must be unconditional (with effect from 1.4.2009, Supplement to OJ 3/2009) and furthermore provides that debit orders filed online may specify a deferred execution date (with effect from 1.4.2014, Supplementary Publication 4, OJ 2014).

As confirmed in **T 270/00**, if an automatic debit order is revoked after the decisive payment date for the appeal fee, this is too late to affect the payment. Valid payment of the appeal fee is a matter of fact, which cannot be undone and is not at the disposal of the appellant.

### **2.3. Indication of purpose of payment**

According to **J 16/84** (OJ 1985, 357, headnote), which concerned the application of the former Art. 7(2) RFees (now Art. 6(2) RFees), if when a fee is paid the purpose of the payment has evidently been given incorrectly, this deficiency is not prejudicial if the intended purpose can be established without difficulty from the remaining information. The inadvertent use of a fee by the EPO for a different purpose from that evidently intended by the person making the payment has no effect on the purpose intended by that person.

In **J 19/96** the board noted that **J 23/82** (OJ 1983, 127) held that the indication of the purpose of a payment within the time limit for payment was not a mandatory requirement for payment to have been made in due time and, according to Art. 7(2) RFees (now Art. 6(2) RFees), could thus still be given later. However, the current board doubted whether this meant that it was generally possible to change the purpose of a payment

after expiry of the relevant time limit with retroactive effect to the date on which the payment was made.

**J 23/82** and **J 19/96**, which concerned designation fees for individual contracting states under the earlier law, are reported in the "Case Law of the Boards of Appeal", 6th ed. 2010, VI.F.2.4.

### 3. Date of payment

Where an amount is paid into or transferred to a bank account held by the Office, the date on which the amount of the payment or transfer is **actually entered** in its account is considered to be the date on which the payment has been made to the Office (Art. 7(1) RFees, formerly Art. 8(1) RFees). Thus, where an appeal fee was mistakenly transferred to a bank account held by the German Patent Office (GPO), neither the date on which the transfer was entered in the GPO's account nor the date on which the order to transfer the amount to the GPO was issued could be taken into account to establish whether a fee due to the EPO had been paid in due time (see **T 45/94** and **T 1130/98**).

#### 3.1. Fiction of fee payment in due time - ten-day fail-safe arrangement

Under Art. 7(3), (4) RFees, provided that certain requirements are met, the period for payment of a fee is considered to have been observed even if payment is not **received** until after expiry of the period in which it should have been made. If the payment was **undertaken** no later than ten days before expiry of said period, no surcharge becomes payable under Art. 7(3) RFees. However, as confirmed in **J 25/12**, payment of a surcharge does not create a possibility to **pay** a missing fee amount **after expiry** of the period for payment. For the application of the rule see **T 842/90** and **J 20/00**. In the latter case, which concerned the payment of a renewal fee, the board held that it applied, because in effect the due date for payment of a renewal fee marks the last day of a period (R. 37(1) EPC 1973; cf. R. 51(1) EPC) during which this fee can be validly paid.

Art. 7(3) RFees does not apply to key dates after which payments reaching the EPO are affected by a fee increase (**J 18/85**, OJ 1987, 356).

According to **J 7/08**, a period for payment may be deemed to have been observed within the meaning of Art. 8(3) RFees 1973 (cf. Art. 7(3) RFees) even if the receipt of the funds after the expiry of the period is no longer attributable to the original transfer order, but to another payment transaction initiated in the meantime (see also **J 22/85**, OJ 1987, 455).

#### 4. Insufficient payments - small amounts lacking

Under Art. 8 RFees, a time limit for payment is in principle deemed to have been observed only if the full amount of the fee has been paid in due time. However, the EPO has the discretion, where this is considered justified, to overlook any small amounts lacking without prejudice to the rights of the person making the payment.

The justification for overlooking a small fee underpayment has been considered by the boards of appeal in several cases. In **T 130/82** (OJ 1984, 172) the board decided that it was justified to overlook an underpayment of just over 10%. In **J 11/85** (OJ 1986, 1) the board stated that an underpayment of about 10% may as a rule be considered as a small amount (see also **T 109/86** of 20.7.1987). See also **T 343/02**, where the underpayment of less than 2% due to the unexpected deduction of bank charges was overlooked. The board in **J 25/12** did not doubt that the underpayment could be regarded as a small amount, but stressed that the EPO could exercise its discretion to overlook small amounts only if justified. This was not so here since the representative had been informed about the changed fee rates and invited to pay the amount lacking within a time limit – which, however, he had failed to do.

In the cases set out below the amount lacking corresponded to the 20% language-based fee reduction according to former R. 6(3) EPC and Art. 14(1) RFees. Under the revised provisions (in force from 1.4.2014 – see Decision of the Administrative Council of 13 December 2013, OJ 2014, A4), this reduction applies only to the filing and examination fees and certain categories of applicant, and the amount is set at 30%.

According to **T 290/90** (OJ 1992, 368), whether it is justified to overlook a small amount lacking must be decided on an objective basis, having regard to all the relevant circumstances of the case, and not on a subjective basis. The board held that in the circumstances 20% of the opposition fee could properly be regarded as a small amount, because it was inappropriate to punish the appellant for contending that he was entitled to a reduction in the opposition fee (under R. 6(3) EPC 1973), and the missing 20% was paid soon after expiry of the period.

However, in **T 905/90** (OJ 1994, 306, Corr. 556) the board found that the meaning of 'smallness' could best be determined by comparing the amount of shortfall with the amount of the full fee. A difference of 20% clearly could thus not, on purely arithmetical grounds, be regarded as small. It was with very small or trifling amounts that the former Art. 9 RFees (see now Art. 8 RFees) was designed to deal so as to prevent a loss of rights where an inadvertent error of some kind had led to a slight underpayment of an amount due in respect of the relevant proceedings.

In **J 27/92** (OJ 1995, 288) the examination fee was underpaid by about 20%, amounting to DEM 560. Distinguishing **T 905/90**, the board defined the concept of a "small amount lacking" as a fixed proportion of the amount of the fees to be paid. At most, 20% of the fee to be paid might be regarded as small within the meaning of the provision. Moreover, the choice of 20% would achieve the desirable end of making it possible to apply the provision to cases where a party paying fees mistakenly sought to take advantage of the (now former) 20% reduction in fees available under R. 6(3) EPC 1973 and former Art. 12(1) RFees (see now Art. 14(1) RFees). In the circumstances of the case the board decided that it was justified to overlook the deficit as the applicant not only paid it without delay, but also appeared to have been misled into paying only 80% of the fees as a result of information provided by the EPO. For a different approach, see **T 642/12**, in which the board, following **T 905/90**, considered that "small amounts lacking" are to be read as "insignificant or negligible amounts".

Reference is also made to decision **T 152/82** (OJ 1984, 301), relevant to incorrect amounts in debit orders (see in this chapter III.Q.2.2 above).

#### **5. Reduction of the examination fee**

In **J 1/09**, the Legal Board held that R. 107(2) EPC 1973 governed the reduction of the examination fee after the entry of an international application into the European phase. It did not apply to divisional applications. Art. 12(2) RFees 2003 only laid down the level of the reduction. For the conditions for the reduction it referred to R. 107(2) EPC 1973 (see also **J 14/07**).

#### **6. Partial refund of the examination fee**

The Legal Board ruled in **J 25/10** (OJ 2011, 624, see headnote) that following the withdrawal of a European patent application, a refusal by the examining division of a request for a 75% refund of the examination fee, on the basis that substantive examination has already begun (Art. 11(b) RFees), must be based on facts which objectively demonstrate that this is so. See also **J 9/10**. Following these two decisions the EPO made adjustments to the system for refunding search and examination fees - see Notice dated 29 January 2013 (OJ 2013, 153).

**R. Representation**

1.	Professional representatives	799
1.1.	List of professional representatives (Article 134(1) EPC)	799
1.2.	Duty of persons without residence nor place of business within a contracting state to be represented by a professional representative	800
1.3.	Professional representatives during the transitional period	801
1.4.	Procedural steps performed by a person other than the professional representative	802
2.	Legal practitioners entitled to act as professional representative	803
2.1.	General issues	803
2.2.	Register of legal practitioners	804
2.3.	Qualifying conditions according to Article 134(8) EPC	805
3.	Appointment of a common representative (Rule 151 EPC)	806
4.	Authorisations for appointment of a representative	808
4.1.	Filing of the authorisation	808
4.2.	General authorisations	811
4.3.	Sub-authorisations	813
4.4.	Authorisation of an association of representatives	814
5.	Oral submissions by an accompanying person	815
5.1.	Enlarged Board's landmark decision G 4/95	815
5.2.	Application of the case law established by the Enlarged Board	817
5.3.	Oral submissions by former members of the boards of appeal	824
5.4.	Oral submissions by qualified patent lawyers of non-EPC contracting states	826
6.	Distinction between presentation of facts and evidence and presentation of arguments	826

---

As recalled in **J 1/04** for instance, there is no obligation for an applicant having a principal place of business within an EPC contracting state to be represented in proceedings established by the Convention. If, however, the applicant wishes to be represented, he must authorise either an employee or a professional representative or legal practitioner.

The basic conditions applicable to representation by employees (Art. 133(3), first sentence EPC) are set out in the EPO's Guidelines for Examination A-VIII, 1.5 "Signed authorisation" and 1.7 "Invitation to file an authorisation" – November 2015 version. Regarding an employee of a **group of companies**, **T 2308/10** says that an employee of a company in such a group is not entitled to represent another company belonging to the same group. **T 298/97** had already established that, there being no provision in the Implementing Regulations pursuant to Article 133(3), last sentence, EPC, the EPC did not currently allow the representation of one legal person by an employee of another economically related legal person.

In **J 8/10** (OJ 2012, 472), which deals with a number of points relating to representation, the board observed that the main provision governing entitlement to act in EPO

proceedings is Art. 134 EPC, legal practitioners' entitlement to act being regulated in particular by its paragraph 8. R. 152 EPC governs the filing and effects of authorisations.

The following section looks at problems addressed by the boards arising in cases where the parties are represented in proceedings, either by choice (see previous paragraphs) or by obligation (because they have no residence or principal place of business in a contracting state).

Art. 133 EPC contains the general principles governing representation with respect to proceedings under the EPC. It remains unchanged with the entry into force of the EPC 2000 (13 December 2007), save for minor editorial streamlining and changes aimed at increasing the consistency of the text of the EPC as a whole. Art. 134 EPC on representation before the EPO is likewise substantively unchanged but features some editorial amendments, in particular to take account of the deletion of Art. 163 EPC 1973, now largely superseded. The substance of the "grandfather clause" of Art. 163 EPC 1973 has in effect been integrated in Art. 134(3) EPC in simplified form as a permanent feature of the EPC designed to deal with the situation of national representatives of states acceding to the EPC in the future. The revised Art. 134 EPC is applicable as from the entry into force of the EPC 2000.

The Guidelines (November 2015 version) explain the developments in the area of representation, most notably in: A-III, 2 "Representation"; A-III, 16.2 "Period allowed for remedying deficiencies"; A-VIII, 1 "Representation", also D-I, 7 "Representation"; E-II, 8.5 "Submissions by the parties"; and E-III, 1.6.1 "General remarks", last paragraph. They also refer to the decisions of the EPO President dated 12 July 2007 (OJ SE 3/2007, A.3 and L.1.). Readers can find analyses of those decisions in, for example, **T 267/08**, **J 8/10** and **T 1744/09**.

On the signature of documents see the Guidelines (November 2015 version), A-VIII, 3 "Signature of documents", in particular A-VIII, 3.2 and 3.3, along with A-VIII, 2.5, and the decisions cited there, including the decision of the EPO President dated 26 February 2009 (OJ 2009, 182).

On notification to representatives, please see also R. 130 EPC, the Guidelines E-I, 2.4 – November 2015 version, and Chapter III.O.

The HTML version of the EPC on [www.epo.org](http://www.epo.org) provides regularly updated links, in particular to decisions of the President, in the footnotes to the relevant provisions.

## **1. Professional representatives**

### **1.1. List of professional representatives (Article 134(1) EPC)**

Art. 134(1) EPC stipulates that professional representation of natural or legal persons in proceedings established by the EPC may only be undertaken by professional representatives whose names appear on a list maintained for this purpose by the EPO. The requirements for entry in this list are laid down in Art. 134(2) EPC. In the context of

Art. 134(1) EPC, it is also useful to consult Rule 154 EPC "Amendment of the list of professional representatives", as well as the decision of the EPO President, OJ 2013, 600, and the Notice from the EPO, OJ 2015, A55.

The objective of the list of professional representatives is to provide a survey of particularly qualified representatives in patent matters (**D 14/93**, OJ 1997, 561).

In **J 1/78** (OJ 1979, 285) the appellant was entered on the list of professional representatives before the EPO under the letter "V" as "von F., A.". The object of his appeal was to obtain a ruling which would enable him to be entered under the letter "F" as, for example, in the telephone directory. The decision found that the entry was made in accordance with the principles laid down by the President of the EPO whereby the full surname must be entered in alphabetical order. Under German law, former titles of nobility ("von") form part of the surname. The board noted that the purpose of entry on the list was to confer upon the person whose name was entered the right to appear in the European patent grant procedure. A distinction had to be made between entry for the purposes of conferring a right and publication of the list, which latter was not prescribed in the EPC 1973. The EPO issues a directory from time to time for the purposes of meeting public demand for information. In this directory, the person entered on the list could be allowed an additional entry under another letter should he so desire.

## **1.2. Duty of persons without residence nor place of business within a contracting state to be represented by a professional representative**

According to Art. 133(1) EPC, no person shall be compelled to be represented by a professional representative in proceedings established by the EPC. However, Art. 133(2) EPC stipulates that natural or legal persons not having either a contracting state residence or their principal place of business within the territory of one of the contracting states must be represented by a professional representative and act through him in all proceedings established by the Convention (**T 1157/01** reviews the applicable law), other than in filing the European patent application (see **T 451/89** and **T 883/90**). The Implementing Regulations may permit other exceptions.

In **T 213/89** the Japanese inventor replied directly to the EPO with a set of revised application documents, and accompanied by a letter to his representative indicating that the revised documents had also been sent to the representative. The board noted that no confirmation by the representative was received that any of the submissions directly received from the inventor should be regarded as an official reply to an EPO action. Since persons not having a residence or their principal place of business within the territory of one of the contracting states must act through their representative in the proceedings, the said submissions received direct could not be taken into account.

Likewise in **T 717/04**, the representative lodged the appeal for the applicant on 11 March 2004 and paid the prescribed appeal fee simultaneously. The statement of grounds of appeal was received on 18 May 2004. On 27 February 2007, a letter from the appealing applicant, a natural person with an address not within the territory of one of the contracting states, was faxed to the EPO with arguments and a new set of claims to be

taken into account. According to Art. 133(2) EPC 1973, since the appealing applicant's address was not within the territory of one of the contracting states, the board concluded that filing claims and arguments such as those in the appealing applicant's letter of 27 February 2007 would have required professional representation. As these submissions were neither made nor endorsed by the representative, the board could not take them into account.

In **J 9/13** the Receiving Section refused the European patent application pursuant to Art. 90(5) EPC, because the applicant, resident in Moscow, had not appointed a professional representative as required by Art. 133(2) EPC. The appellant (applicant) contended that Art. 133(2) EPC did not apply to residents of the Russian Federation. The Russian Federation was a party to the "Partnership and Cooperation Agreement (PCA). The board stressed that neither the European Patent Organisation nor the European Patent Office is part or member of the European Union. This was inter alia confirmed by the Enlarged Board of Appeal in decision **R 1/10**. Therefore, neither the European Patent Organisation nor the European Patent Office are bound by the provisions of the PCA, neither of them is a "party" or "other party" pursuant to Art. 98 of the PCA. For this reason alone, this international agreement could not serve as a legal basis for according to the appellant the same treatment as that which is accorded to residents of EPC countries with regard to proceedings established by the EPC. The appeal was deemed not to have been filed (R. 152(6) EPC by analogy).

### 1.3. Professional representatives during the transitional period

One of the conditions for including a professional representative on the EPO list is that he has passed the European qualifying examination (EQE). During a transitional period after the EPC 1973 first entered into force, this requirement could be waived under the conditions laid down in Art. 163 EPC 1973 (see **J 19/89**, OJ 1991, 425; **J 10/81**). For all states acceding to the EPC 1973 at its inception, this period ended on 7.10.1981 (decision of the Administrative Council dated 6.7.1978, OJ 1978, 327). Art. 163 EPC 1973 was one of the transitional provisions, now superseded, and has therefore been deleted in the new EPC 2000.

After the above date, under Art. 163(6) EPC 1973, a person with his place of business or employment in a state newly acceding to the EPC 1973 may, during a period of one year as from that state's accession, be added to the list under the conditions laid down in Art. 163(1) to (5) EPC 1973, i.e. without having to pass the EQE. Art. 163(6) EPC 1973 retains all its significance as a grandfather clause and is therefore preserved in the EPC 2000 to deal with the situation of national representatives of states acceding to the EPC in the future. The substance of the **grandfather clause** of Art. 163 EPC 1973 has therefore been **integrated in Art. 134(3) EPC 2000** in simplified form, as a permanent provision of the EPC.

The reunification of Germany posed its own problems, in **J 18/92**, **J 30/92**, **J 31/92**, **J 32/92** and **J 33/92**, regarding the admission of professional representatives. The appellants argued that the provisions of Art. 163(6) EPC 1973 should be applied to patent attorneys, even where they had qualified in West Germany and not the former

GDR. In the board's view, Art. 163(6) EPC 1973 could only be applied by analogy to those finding themselves in a similar situation to the patent agents of a country acceding to the EPC. This requirement was fulfilled only by patent agents from the former GDR and not by their colleagues who had already been admitted in the West. The board held that it would be strange if those who were admitted as patent agents in a contracting state were able to become authorised representatives without having to pass the examination merely by way of analogy with people working in a country which had just become a member. The appeals were accordingly dismissed.

#### **1.4. Procedural steps performed by a person other than the professional representative**

In **J 28/86** (OJ 1988, 85) the Legal Board of Appeal held that a request for examination filed by a person who was not entitled to act as a representative in accordance with Art. 134 EPC 1973 was invalid. The board noted that the situation did not change because the representative had later been entered on the list of professional representatives. In this capacity he had neither approved nor resubmitted the invalid request he had made earlier.

In decision **T 665/89** the board addressed the question of the admissibility of an opposition by an opponent whose residence was not in a contracting state, where the notice of opposition was signed by a person who was neither a professional representative (Art. 134(1) or Art. 134(7) EPC 1973) nor an employee of the opponent (Art. 133(3) EPC 1973). The board of appeal concluded that the actions of the unauthorised person ought to be judged as if the signature were missing, and thus assumed that the **deficiency** was remediable. The opponent supplied the missing correct signature at the EPO's invitation within the time limit laid down. The document thus retained the original date of receipt in accordance with R. 36(3), third sentence, EPC 1973 (**G 3/99** cites **T 665/89** in point 20 of the Reasons).

In **T 803/03** the board examined the relevant EPO case law (**J 28/86** and **T 665/89**) and its implications for the case at issue, which concerned an abandonment order signed by a non-entitled person.

**R 18/09** the Enlarged Board of Appeal, referring in detail to **G 3/99**, stated that concerning the principle that a plurality of persons acting in common be treated as a single party (a "group party") and the requirement that such a group party acts through a common representative which both apply to petition proceedings. It was also held in **G 3/99** (point 20 of the Reasons) that there is no practical need to acknowledge the validity of procedural acts of one member of a group party who is not its common representative. Such a procedural act is treated by the EPO in the same way as a missing signature. Where an appeal is filed by a non-entitled person, it shall be considered as not duly signed and the common representative be invited to sign it within a given time limit. (See also **G 3/99** under III.R.3. "Appointment of a common representative (R. 151 EPC)").

In **J 32/86** the board held that the mere appointment of a professional representative to meet the requirement of Art. 133(2) EPC 1973 (the appellant had his residence in the USA) did not automatically have the legal effect of validating acts previously performed by an applicant himself. The EPO was however obliged to give the representative a fair chance to remedy any deficiency of this kind that might have occurred before his appointment and which could still lawfully be remedied by him.

## **2. Legal practitioners entitled to act as professional representative**

### **2.1. General issues**

According to Art. 134(1) EPC, professional representation of natural or legal persons in proceedings established by the EPC may only be undertaken by professional representatives whose names appear on the above list. However, Art. 134(8) EPC (former Art. 134(7) EPC 1973) provides that professional representation in such proceedings may also be undertaken, in the same way as by a professional representative, by any legal practitioner qualified in one of the contracting states and having his place of business within such state, to the extent that he is entitled, within the said state, to act as a professional representative in patent matters. The arrangements for legal practitioners set out in Art. 134(8) EPC therefore constituted an exception.

In **J 8/10** (OJ 2012, 472), the board observed that, if a legal practitioner wishes to act under Art. 134(8) EPC, the EPO considers whether he meets the conditions of that provision (i.e. is qualified in a contracting state and has his place of business and the right to act as a professional representative in patent matters in that state). For professional representatives it does not need to consider whether they are entitled to act before it, because it has its own list of those who are (Art. 134(1) EPC). If the legal practitioner fulfils the conditions, the EPO enters his name on a list which – like the list of associations of representatives – it keeps as an internal working tool and does not publish.

In **J 19/89** (OJ 1991, 425) it was observed that despite all the differences in the designations and career backgrounds of the persons included in the ranks of legal practitioners, the profession had developed on an essentially equal footing in the contracting states as a result of Europe's common legal history and shared legal culture. The board noted that the last clause of Art. 134(7), first sentence, EPC 1973 was necessary because under national law even an actual legal practitioner might be precluded to some degree from acting as a professional representative in patent matters. That clause prevented a "Rechtsanwalt", "legal practitioner" or "avocat" from having more extensive powers of representation before the EPO than he was entitled to before his national patent office. Art. 134(7) EPC 1973 was therefore a special rule limited in scope to the corpus of legal practitioners, which existed under various designations in all the contracting states. Members of the profession of Rechtsanwalt and comparable professions in the contracting states were entitled under Art. 134(7) EPC 1973 to act as professional representatives before the EPO, not by virtue of their status as individual Rechtsanwälte but by virtue of the institution of the profession of Rechtsanwalt as such.

In **J 18/99** the main issue was whether or not the appellant, a legal practitioner (abogado) qualified in Spain and having his place of business in Spain, was entitled under Art. 134(7) EPC 1973 to undertake professional representation of third parties in proceedings before the EPO. The board concluded that for the application of Art. 134(7) EPC 1973 all that was significant was that a legal practitioner qualified in a contracting state was - as such - entitled, within that state, to act as a representative in patent matters. The Convention did not distinguish for this purpose between entitlement to act as a "simple" representative or as a "professional" representative of clients (reference being made to the "travaux préparatoires"). Following the examination of national provisions and conclusions drawn by the OHIM (Communication No. 2/96 of its President of 22 March 1996, point 1), the board concluded that under the current Spanish law, any legal practitioner qualified in Spain and having his place of business in Spain was entitled to represent clients in patent matters before the Spanish Patent and Trademark Office if he presented an authorisation from the party.

## 2.2. Register of legal practitioners

The register of legal practitioners must be clearly distinguished from the list of professional representatives established in accordance with Art. 134(1) to (4) EPC.

Whereas, according to Art. 134(4) EPC 1973, the entry of a person's name in the list of professional representatives entitles them to act in **all proceedings** established by the EPC 1973, the EPC 1973 does not contain any corresponding provision for legal practitioners. Their competence to undertake representation before the EPO is not general, but depends directly on their complying with the provisions of Art. 134(7) EPC 1973 (**J 27/95**).

The objective of the list of professional representatives is to provide a survey of particularly qualified representatives in patent matters; it would be jeopardised if legal practitioners without such qualifications were included on the list. Accordingly, the conditions for entry on the list of professional representatives under Art. 134(2) EPC 1973 also apply to legal practitioners (**D 14/93**, OJ 1997, 561).

According to the practice of the EPO, legal practitioners who indicate their intention to undertake representation in proceedings before the EPO and present an authorisation are entered in a register of legal practitioners, provided that they comply with the requirements of Art. 134(8) EPC. The Legal Division is responsible for checking these requirements and for the registration of names in, or deletion from, the register of legal practitioners (see also **J 27/95**).

In **J 18/99**, an issue concerned the appellant's registration as a legal practitioner under Art. 134(7) EPC 1973. The board noted that the appellant, a legal practitioner ("abogado") in Spain, had requested registration as a legal practitioner entitled to act in proceedings established by the EPC in accordance with Art. 134(7) EPC 1973 without filing a signed authorisation, whereas according to the practice of the Legal Division legal practitioners were registered only if they had filed a signed authorisation from a party.

The board therefore remitted the case to the Legal Division with the order to register the appellant, provided that he filed the signed authorisation.

### 2.3. Qualifying conditions according to Article 134(8) EPC

In **J 19/89** (OJ 1991, 425) the Legal Board of Appeal considered whether a patent attorney under national law should, in view of his legal qualifications and entitlement to act as a professional representative in national patent matters, be regarded as a "legal practitioner" within the meaning of Art. 134(7) EPC 1973 and hence be authorised to act before the EPO. The board decided that irrespective of his specialist qualifications and powers of representation in national patent matters, a **patent attorney** under national law could not be regarded as a "legal practitioner" within the meaning of Art. 134(7) EPC 1973, and therefore was not entitled to act as a professional representative before the EPO (see also **D 14/93**, OJ 1997, 561).

In **T 643/01** the appellant (patent proprietor) contended in particular that the opponent's reply of 28 January 2002 was inadmissible on the ground that it had been signed by Mr R., who was a legal practitioner and member of the Paris Bar but who was allegedly unable to show that he possessed an authorisation conforming to the requirements of R. 101(1) EPC 1973. The appellant requested that, if the signatory concerned was relying on his official status as a professional representative before the EPO, the board should find that French law prohibited such a plurality of offices, since the exercise of the profession of barrister could not properly be combined simultaneously with that of industrial property attorney. In the appellant's view, these provisions should be transposed into the law of the EPC. The board held, in the case at issue, that the signatory of the impugned pleadings of 28 January 2002 was entitled to act before the EPO and held the appropriate authorisation for that purpose. Mr R. and Mr D., legal practitioners and members of a partnership, were indeed members of the Paris Bar, and the names of both appeared on the list of professional representatives before the EPO. They were therefore both entitled to act in one capacity or the other before the EPO under Art. 134(1) and (7) EPC 1973. The board held that a decision on the legality, in France, of simultaneously exercising the profession of barrister and acting as a professional representative before the EPO fell solely within the jurisdiction of French professional and judicial bodies.

In **J 27/95**, the Legal Board of Appeal first made it clear that the competence of legal practitioners to undertake representation before the EPO depended directly on their complying with the provisions of Art. 134(7) EPC 1973. Thus, each time a legal practitioner made a request to act as a professional representative in proceedings before the EPO, the Legal Division had the right to examine whether he or she satisfied the conditions under Art. 134(7) EPC 1973. If such a request was refused, it could be refiled and reconsidered on the basis of new facts at any time. In its decision the board pointed out that according to Art. 134(7) EPC 1973 a legal practitioner qualified in a contracting state had to have "his place of business in such State". The board noted that in all three languages of the EPC 1973 the expression "his place of business" (in contrast to "a place of business") was used. The board stated that this formulation made it clear that

the place of business within the meaning of Art. 134(7) EPC 1973 was the place (if any) at which a person practised his or her profession as legal practitioner.

### **3. Appointment of a common representative (Rule 151 EPC)**

In **J 35/92** the first-named of two individual joint applicants had transferred his rights in the application to a company, which had appointed another representative who had then purportedly withdrawn the application. The second applicant did not agree with the withdrawal. The department of first instance held that the company was entitled unilaterally to withdraw the application by virtue of R. 100(1) EPC 1973, according to which the first-named applicant could be regarded as the representative of both, but the board of appeal disagreed. R. 100 EPC 1973 applied only where no joint professional representative had been appointed, whereas in the case in question the original applicants had appointed a representative, who continued to act for the second applicant. The board therefore concluded that the purported withdrawal of the application by the first-named applicant was invalid. The parties were given two months to appoint a joint professional representative, failing which one would be appointed by the EPO.

In **J 10/96** the Legal Board of Appeal ruled that where several applicants were represented jointly by a professional representative, who during the course of proceedings ceased to represent his clients, the correct procedure to be followed was that contained in R. 100(2), second sentence, EPC 1973, according to which the applicants were to be requested by the EPO to appoint a common representative within two months. If this request was not complied with, the EPO was empowered to appoint the common representative.

In **G 3/99** (OJ 2002, 347) the Enlarged Board of Appeal dealt with the question of the admissibility of joint oppositions and joint appeals. The decision makes it clear that an opposition filed in common, apart from the fact that it is filed by more than one person, is as much a single opposition as an opposition filed by only one person. Consequently, the common opponents are obliged to act in common through their duly determined common representative. In an opposition filed in common, there must in all cases be a common representative (Art. 133(4) and R. 100 EPC 1973), and only that common representative is entitled to act in the opposition proceedings on behalf of all the common opponents taken as a whole.

The decision further notes that an individual common opponent not being the common representative, or a subgroup of the group who filed the opposition in common, but without their common representative, is not allowed to act or intervene on his own or on behalf of one or more or all of the other individuals. Thus, only the common representative is entitled to sign the filed documents (R. 100 and R. 36(3) EPC 1973), the signature of other individuals not being required. At any stage of the procedure, be it the opposition or the appeal procedure, it may also occur that the joint member who is the common representative intends to withdraw from being a joint member, i.e. to withdraw from the proceedings. In such circumstances, he must notify his decision to the EPO with the procedural consequence that, for the determination of a new common representative, the provisions of R. 100(1) EPC 1973 have to be applied for the

opposition procedure by virtue of the last sentence of that rule and, for the subsequent appeal procedure, by virtue of R. 66(1) EPC 1973.

It may also occur that the common representative ceases to act in the procedure without the EPO being informed thereof. In both cases, the other joint members must take the appropriate action to continue the procedure in due time and to inform the EPO of the new common representative, if appointed. However, there is no practical need to acknowledge the validity of procedural acts of a joint member who is not the common representative. Since a procedural act performed by a non-entitled person is treated by the EPO in the same way as a missing signature (see **T 665/89**), each joint member or any other person acting on his behalf can perform such an act to avoid missing a time limit, provided the deficiency is remedied within a further time limit set by the board in the communication under R. 36(3) EPC 1973 notified to the common representative and sent for information to the non-entitled person who performed the act. The deficiency can be remedied if the procedural act is signed by the common representative. If, for whatever reason, this person ceases to be a joint member, the signature must be provided by a new common representative appointed pursuant to R. 100 EPC 1973.

**G 3/99** was applied in **T 1154/06** in connection with the necessity of appointing a professional representative if the first-named of multiple patent proprietors was not resident in a contracting state. (See **R 18/09**, in which the Enlarged Board referred to these two decisions and held that both the principle that a plurality of persons acting in common must be treated as a single party (a "group party") and the requirement that such a group party acts through a common representative apply to petition proceedings.)

In **T 1654/13** it was submitted that the appeal filed by the common representative of the joint patent proprietors had to be understood as having been filed on behalf of both patent proprietors as joint appellants. The wording used in the notice of appeal, referring only to the first of the two patent proprietors, i.e. Unilever N.V., thus had to be understood only in relation to the request for the reduction of the appeal fee. The board, citing Art. 118 EPC and calling to mind **R 18/09** and **T 1154/06**, decided that there was no doubt that Unilever N.V. and Unilever PLC were joint appellants. The appeal was admissible.

In decision **T 1366/04** the appeal had been filed by the first of two joint patent proprietors only. The board held that the requirements of Art. 118 EPC were met and that there was no doubt about the identity and appellant status of the two patent proprietors.

Decision **T 418/07** concerns a different case, where shortly before the oral proceedings the respondent (patent proprietor) appointed a second firm of representatives as joint representatives in addition to the firm already acting and asked the board to send copies of all correspondence to both firms. In this case of **multiple representatives**, the board held that while it is open to a party to appoint as many representatives as it may wish, the board is not aware of any requirement on it or on other parties to send correspondence to more than one representative of one party. If a party wants to retain multiple representatives, it must make its own arrangements for copying correspondence

to them all. Parties cannot expect the board to provide copying services for their convenience.

The issue of the validity of an appeal filed by a person who is not the common representative named under R. 151 EPC (R. 100 EPC 1973) in the notice of opposition is dealt with in the Chapter IV.E. "Appeal procedure".

#### 4. Authorisations for appointment of a representative

At various points in the following sections there are references to the issue of whether an authorisation actually exists, a problem in a number of cases.

##### 4.1. Filing of the authorisation

R. 101 EPC 1973 has been redrafted as **R. 152 EPC 2000**. R. 152(6) EPC, in particular, now reads: "If **a required** authorisation is not filed in due time, any procedural steps taken by the representative, other than the filing of a European patent application, shall **be deemed not to have been taken**, without prejudice to any other legal consequences provided for by this Convention." See also the decision of the EPO President dated 12 July 2007 on the filing of authorisations (OJ SE 3/2007, 128, L.1.), and **J 8/10** (OJ 2012, 470), which is reported in this chapter III.R.4.4 below. It is also useful to read the aforementioned 2007 decision in conjunction with the decision of the EPO President dated 26 April 2012 concerning notification of representation changes by professional representatives (OJ 2012, 352). See also the Guidelines A-VIII, 3.2 and 1.5 "Signed authorisation" – November 2015 version. Those Guidelines also deal in A-VIII, 2.5 with the exceptions applicable to authorisations in the context of filing documents after filing the patent application (e.g. Article 2 of the decision of the EPO President dated 10 September 2014, OJ 2014, A98, which excludes authorisations from filing using the EPO's web-form filing service; Article 2 of the decision of the EPO President dated 20 April 2012, OJ 2012, 348, which excludes authorisations from those documents that may be admissibly filed by e-mail during video conferences; and Article 3 of the decision of the EPO President dated 12 July 2007, OJ SE 3/2007, 8, A.3, which forbids the filing of authorisations by fax) and in the Guidelines A-VIII, 1.7 – November 2015 version with invitations to file an authorisation.

In **J 12/88** it turned out that the former representative of the appellant had acted before the EPO on behalf of the appellant without being instructed to do so and using a forged authorisation. The board considered all these proceedings to be null and void. There had never been a valid European patent application before the EPO. All fees paid to the EPO on behalf of the appellant never had been due and had to be reimbursed.

In **T 850/96** the appellant had alleged that the opposition was not admissible because the signatories of the notice of opposition did not file an authorisation. According to him an employee must declare with the notice of opposition that he acts as a professional representative. Otherwise he must file an authorisation. In the case under consideration both signatories of the notice of opposition were professional representatives. The board held that Art. 1(1) of the decision of the President of the EPO of 19 July 1991

(OJ 1991, 489) stipulates that a professional representative whose name appears on the list maintained by the EPO **and who identifies himself as such** shall be required to file a signed authorisation only in the circumstances set out in Art. 1(2) and (3) of this decision of the President (now decision of 2007, OJ SE 3/2007, 128). In the case at issue, the deficiency had not been the lack of a signed authorisation, but the failure of the signatories of the notice of opposition to identify themselves as professional representatives (see also **T 1744/09** citing **T 850/96** saying that a professional representative identifying himself retroactively is not precluded. **T 1744/09** addresses other interesting topics like verbal or written authorisation; "invalid signature").

In **T 425/05**, the respondent (patent proprietor) requested the board at the start of the procedure to declare the appeal inadmissible, on the one hand because it had been filed at a date when the original opponent (company I) had been dissolved and had therefore ceased to have legal existence, and on the other because the mistake in the notice of appeal could not be a mere clerical error on the part of the professional representative which could easily be corrected, since the representative manifestly could not act on behalf of company F, which had not yet authorised him to do so. The board began by establishing that the representative's authorisation to act on behalf of company I had never been contested or rescinded. It was equally evident that the original opponent, company I, no longer had legal existence, as it had been dissolved and its assets had passed into the hands of company F, its associate and sole shareholder. The board concluded that company F had succeeded company I as opponent, and therefore also as the client of the representative. Thus the appeal filed by the representative, whose authorisation, confirmed in the meantime, had never been rescinded, had been implicitly, but necessarily, filed on behalf of his actual client, company F; the identification of company I as the opponent (appellant) in the notice of appeal was due to a clerical error which had since been corrected. Citing **T 425/05**, see **T 1744/09** concerning the admissibility of an opposition and the appeal.

In **T 267/08** a change of representation had been notified by the new representative together with the notice of appeal. The previous representative had not contacted the EPO to indicate that his authorisation had terminated. In such cases, the procedure to be followed was governed by R. 152 EPC in combination with the decision of the President of the European Patent Office dated 12 July 2007 on the filing of authorisations (OJ SE 3/2007, L.1). This decision stated that in cases of a change of representation, and where the EPO had not been notified of the termination of the previous representative's authorisation, "the new representative must file, together with the notification of his appointment, an individual authorisation (original and one copy) or a reference to a general authorisation already on file. If he does not, he shall be requested to do so within a period to be specified by the European Patent Office."

In the case at issue, the board invited the new representative under R. 152(2) EPC to file an authorisation, as the board had realised that the authorisation failed to name the correct opponent. The new representative sent the authorisation by fax but failed to file the original version. Interpreting decision of the President L.1, the board concluded that where only a copy of the authorisation was filed in response to the invitation under

R. 152(2) EPC the EPO was under no legal obligation to additionally request the filing of the original.

The board stated that the filing of a valid authorisation for the opponent (appellant) must, of necessity, entail the **filing of the original**, and a professional representative should know this. The board considered that it should be sufficient to simply request that an authorisation be filed. The acceptable form of the authorisation was derivable from decision of the President L.1. Responsibility for filing a valid authorisation could not be devolved to the board. The legal consequence of this was that the procedural steps taken by the new representative were deemed not to have been taken (R. 152(6) EPC). Consequently the notice of appeal was deemed not to have been filed and an appeal did not exist. In the absence of an appeal, there was no basis for payment of the appeal fee, which was therefore reimbursed.

In **T 637/09** the appellant informed the board and the respondent that Mr M, who was already acting as its professional representative, would be joined by Mr S, another professional representative. Mr S's authorisation to represent the appellant was challenged by the respondent at the start of the oral proceedings. The board observed that under R. 152(10) EPC a party may be represented by several representatives acting jointly. In any case, Mr S's appointment as a joint representative was not a change of representative within the meaning of Art. 1(2) of the Decision of the EPO President dated 12 July 2007 on the filing of authorisations (OJ SE 3/2007, 128, L.1.) and he was therefore not required to file a signed authorisation as stipulated there in order to be able to represent the appellant. Nor did the board have any reason to doubt that Mr S was authorised to represent the appellant. In the circumstances of the case, there was no need to file a (further) authorisation under Art. 1(3) of the decision. The board concluded that Mr S was duly authorised to represent the appellant along with Mr M. (See also the Notice from the EPO, OJ 2013, 535, section II "Authorisation of several representatives singly pursuant to Rule 152(10) EPC").

In **T 1542/10**, a letter was filed on 10 January 2011 by professional representative P. The letter indicated "Nokia Siemens Networks OY" as opponent and used the same internal reference number as that indicated by representative B in the notice of opposition. In addition it referred to an enclosed power of attorney. According to this authorisation representative B authorised P to represent "Nokia Siemens Networks GmbH & Co. KG". In reply, the appellant (patent proprietor) took the view that the letter which had been filed by representative P on 10 January 2011 did not qualify as a written reply by the respondent for the purposes of Art. 12(1)(b) RPBA and should instead be regarded as a third party observation pursuant to Art. 115 EPC. It was argued that the letter was submitted on behalf of a **legal person different** from the respondent since the enclosed authorisation did not indicate the respondent's name but that of Nokia Siemens Networks GmbH & Co. KG. The appellant further maintained that the respondent having thus failed to reply to the grounds of appeal had lost its status as a party as of right according to Art. 107, second sentence, EPC or at least its entitlement to submit observations regarding the appellant's case set out in the statement of grounds of appeal. Under the given circumstances it was quite obvious to the board from an objective perspective that the indication of the name Nokia Siemens Networks GmbH & Co. KG in the authorisation

was made erroneously. The fact that the board's registry did not receive an answer after it had sent out a communication pointing out that no valid authorisation had been submitted by the respondent's new representative did not entail any negative consequences for the respondent. In particular it was noted that the communication **did not specify any time limit** so that the sanction provided for by R. 152(6) EPC could not apply. Neither was the lack of response a sufficient reason for retrospectively giving a different meaning to the letter dated 10 January 2011 since that meaning had to be assessed objectively as understood at the time when the letter was received. In view of the authorisations submitted by the respondent in its letter dated 13 June 2013 and at the oral proceedings, the board had **no doubt** that representative P had been authorised to represent the respondent. It followed that the letter dated 10 January 2011 had to be regarded as a written reply to the appellant's statement of grounds of appeal for the purposes of Art. 12(1)(b) RPBA.

The board in **T 1700/11** ruled that if a European representative files an opposition on behalf of a party but fails to file a signed authorisation in due time in response to a request to do so from the board, the opposition is deemed not to have been filed (R. 152(1) and (6) EPC). The board held that this legal fiction resulted in a loss of rights (R. 112(1) EPC) and that an examination of the admissibility of the opposition, which had not been filed according to the legal fiction, was out of the question.

In **T 534/07** it was decided that the validity of procedural acts undertaken by the representative for his client was not affected by the existence of a conflict of interest.

See also Chapter IV.E.2.4. "Entitlement to appeal", and in particular **T 1324/06** where the very existence of the authorisation was challenged.

#### **4.2. General authorisations**

This subsection deals inter alia with the extent of the powers conferred.

In **J 9/99** (OJ 2004, 309) the board decided that the Legal Division had authority to check the authorisation of a representative named in a general authorisation and to issue a formal decision to reject the registration of a general authorisation. A decision not to register a general authorisation can only be issued in respect of a request from a party to the proceedings within the meaning of R. 101(2) EPC 1973, i.e. either an authorising or an authorised party.

In **J 11/93** the applicant submitted in his statement of grounds of appeal that the official communication should have been sent to the authorised European representative since he had been duly empowered to act on behalf of the applicant by a general authorisation filed with the EPO in respect of another European patent application. Instead of this the communication was sent directly to the applicant, a US company.

The board observed that the usual form recommended for general powers had not been used and nothing in the document filed with the co-pending application allowed the Receiving Section to infer that the applicant intended the said document to be regarded

as a general power rather than a specific one. The board confirmed that the authorisation in suit had never been registered by the EPO as being a general one, and that even if it had been so registered it would then have been incumbent on the applicant to communicate the number allotted to the general authorisation so that the Receiving Section could take it into consideration before sending the communication to the applicant at its last known address, rather than to the representative. Under these circumstances the board considered that when the letter sent directly to the applicant was issued no European professional representative had yet been appointed by the applicant. Hence the provisions of R. 81 EPC 1973, according to which - if a representative (i.e. a European one) had been appointed - notifications were to be addressed to him, could not apply but consequently only those of R. 78(2) EPC 1973 (version as in force up to 31.12.1998) relating to notifications in respect of addressees not having either a residence or place of business in one of the contracting states and who had not appointed an authorised representative.

In **J 17/98** the Legal Board of Appeal had to rule on whether communications concerning the deemed withdrawal of applications had been correctly notified to the applicants, who were residents of a non-EPC contracting state, even though general authorisations were held by the EPO on their behalf. The applicants argued that the communications relating to deemed withdrawal should in fact have been notified to the representatives appearing in the general authorisations on file with the EPO. The board held that the filing of a general authorisation to act on behalf of a specific applicant and the notification of the appointment of a representative in an individual application were two **separate** procedural acts. By definition, general authorisations did not refer to specific cases and did not allow the EPO to assume, without further information from the applicant, that a specific representative had been appointed in a particular case. From the Convention it was clear that the filing of a general authorisation did not imply the appointment of a professional representative in a specific case. In such clear cases directly following from the provisions of the Convention the principle of the protection of legitimate expectations did not require the EPO to issue comprehensive legal advice extending beyond the form in question, provided it was in itself clear and unambiguous (see also Chapter III.O.2 "Notification to representatives").

In case **J 1/04**, the relevant question in this case was whether the notifications of the communications were correctly addressed to the appellant. In the appeal proceedings the appellant no longer contested that the registered letters had come into the hands of its employee, who had picked them up at a local post office. The appellant criticised the EPO's practice of sending communications directly to the applicant, even if the latter had appointed a national representative in the international phase, as discriminative and as disregarding the express wish of the applicant not to handle matters himself.

The board first noted that Art. 133 EPC 1973 makes it clear that there is no obligation for an applicant having a principal place of business within an EPC contracting state to be represented in proceedings established by the Convention. If, however, the applicant wishes to be represented, he must authorise either an employee or a professional representative or legal practitioner. Whatever possibility the applicant prefers, if he does not wish to handle matters himself and therefore wishes to be represented, he must

appoint a representative who is entitled, in accordance with the provisions of Art. 134 EPC 1973, to undertake representation before the EPO. In the case at issue the applicant did not do this, although the EPO had expressly pointed out to the applicant that an authorisation for the international phase did not comprise an authorisation for the European phase and that disregard thereof could lead to a loss of rights. The board held that the requirement that only persons fulfilling the conditions for representation before the EPO under Art. 134 EPC 1973 are entitled to undertake representation before the EPO was not of a discriminative nature. Furthermore, as long as the applicant did not appoint a representative who was entitled to represent him before the EPO, the general principle applied that procedural acts had to be performed by the EPO in relation to the registered applicant as being the party to the proceedings. Thus, notifications had to be addressed to the registered applicant and they had been correctly made if they were addressed to the applicant (appellant) in the case at issue. The appeal was dismissed.

In **T 1378/05** the appeal had been validly filed by legal representative G. on the basis of a "mere" authorisation to act "in matters concerning European patent application 'Method for authorisation in file transfer systems'" in proceedings before the German Patent Office, the Federal Patent Court and the - German - Federal Supreme Court. Thus there was no authorisation for proceedings before the European Patent Office. The appellant filed such an authorisation within the two-month time limit set by the board and therefore "in due time" within the meaning of R. 101(4) EPC 1973. The opponent argued that there was clear evidence to show that the authorisation filed subsequently by the patent proprietor was backdated. The filing of this substantively false document could not fulfil the requirement of filing a correct authorisation, so for this reason, too, the appeal had to be deemed not to have been filed. The board could not accept the opponent's argument. It also noted that it did not have to be decided whether the principle of the protection of legitimate expectations already made it imperative in this case to regard the appeal as validly filed by legal representative G., after he had been regarded as the patentee's representative throughout the proceedings so far as well as in the published patent specification. The opponent itself had only challenged this ten years later, after a file inspection at the appeal stage. The appeal was therefore to be deemed filed and was, moreover, admissible in other respects.

In **T 1865/07**, the board noted that, in the circumstances of the case, giving an incorrect general authorisation number was of no consequence.

### **4.3. Sub-authorisations**

In **T 227/92** it was held that a sub-authorisation from a professional representative to a person who was not a professional representative within the meaning of Art. 134 EPC 1973 was invalid. The latter person's role was therefore limited to that of technical adviser to the professional representative.

In **T 382/03** the previous representative, Mr E. of UDL, filed a fax to announce that Mr U., who was not a member of that association, would appear for respondent 1 at the oral proceedings before the board. Mr E. did not notify the board that his association's authorisation was terminating. Hence, that was a situation where the President's

decision required the new representative, Mr U., to prove that he was authorised to act on behalf of respondent 1. As Mr U. did not refer to a general authorisation from respondent 1, proof of an individual authorisation had to be provided to the board. In principle, that could be done by filing a direct individual authorisation from opponent 1, or by filing a sub-authorisation from an authorised representative who was entitled to sub-authorise a third representative. In view of the sub-authorisation from UDL submitted by Mr U. at the oral proceedings, the only issue remaining was whether or not UDL was entitled to give such a sub-authorisation. As Mr G. had filed notice of opposition 1 without filing an authorisation, there was no evidence on file that Mr G. had obtained the power to give sub-authorisations. In the board's view, the issue of whether or not a board considers a representative to be authorised by a party was a matter of proof including a free evaluation of the evidence and overall circumstances in an individual case. To define an appropriate standard of proof with respect to a representative's authorisation, the board took account of the purpose for requiring an authorisation.

For an example of a professional representative entitled by a chain of sub-authorisations to make submissions on behalf a party, see **T 1081/06**.

In **T 1676/08**, the board had no reason in the circumstances of the specific case to doubt that Mr S, a legal practitioner entitled to act as a representative, was duly sub-authorised (Art. 133 and R. 152(1) EPC and Art. 2, first sentence, of the decision of the President dated 12 July 2007 on the filing of authorisations, OJ SE 3/2007, 128). Moreover, on the same day of the oral proceedings, the professional representative, Mr M, stated as a precautionary measure that he endorsed any submission made by Mr S during these oral proceedings.

In **T 1693/10**, the contested sub-authorisation given to a second professional representative had eventually been withdrawn. This second representative was regarded from then on as assisting the first representative as an "accompanying person" within the meaning of **G 4/95** but was not permitted to speak at the oral proceedings because at least one of the criteria laid down in that decision for such permission had not been met.

#### **4.4. Authorisation of an association of representatives**

The Administrative Council's decision CA/D 9/13 of 16 October 2013 on the interpretation of the term "association of representatives" (OJ 11/2013, 500) endorsed the interpretation in **J 16/96** (below). For more information on this subject, see also the Notice dated 28 August 2013 on matters concerning representation before the EPO (OJ 11/2013, 535).

As explained in **J 8/10** (OJ 2012, 470), the EPO keeps a list of associations of representatives as an internal working tool which it does not publish.

In **J 16/96** (OJ 1998, 347) the EPO Legal Division had informed a company X that its patents department could not be registered as an association of representatives. Such an association meant one consisting solely of professional representatives in private practice. The Legal Board concluded that there was no basis in the Convention for the

EPO's practice of restricting R. 101(9) EPC 1973 (now R. 152(11) EPC) to professional representatives "in private practice". An **association** within the meaning of that provision could therefore **also** be formed by **professional representatives not in private practice**. There was no reason to interpret the term "association of representatives" in a way which limited its meaning. (**J 16/96** cited on this point in **T 656/98**). As mentioned in the introduction to this point, Decision CA/D 9/13 endorsed the Legal Board's interpretation in **J 16/96**.

Case **J 8/10** (OJ 2012, 470) was about whether legal practitioners too could belong to associations of representatives under R. 152(11) EPC (R. 101(9) EPC 1973), with the board discussing various practical aspects and their legal consequences. The Legal Board interpreted R. 152(11) EPC as referring to an association of professional representatives. Therefore, legal practitioners were not covered by the legal fiction of R. 152(11) EPC.

## **5. Oral submissions by an accompanying person**

According to the decision **G 4/95** (OJ 1996, 412) oral submissions by an accompanying person in opposition or opposition appeal proceedings cannot be made as a matter of right, but only with the permission and at the discretion of the board. When exercising its discretion decision **G 4/95** specified the main criteria to be considered (see below).

This section begins by presenting the case law established by **G 4/95** and then illustrates by way of examples how the boards have applied it since.

### **5.1. Enlarged Board's landmark decision G 4/95**

In **J 11/94** (OJ 1995, 596), the Legal Board of Appeal referred the following question to the Enlarged Board of Appeal: might a board of appeal exercise discretion in deciding whether or not a person not entitled under Art. 134(1) and (7) EPC 1973 to represent parties to proceedings before the EPO could make submissions during oral proceedings in addition to the pleadings by the professional representative? Further, if such discretion existed, what criteria did the board have to observe when exercising it?

The Enlarged Board of Appeal also had to decide on a question referred to it by the board in **T 803/93** (OJ 1996, 204), namely whether, and if so in what circumstances, a person other than the professional representative (that is, an accompanying person) might make oral submissions on behalf of a party concerning either legal or technical issues, during oral proceedings under Art. 116 EPC 1973 before an opposition division or a board of appeal. This question went beyond the circumstances of **J 11/94**, which concerned ex parte proceedings involving only legal issues.

The Enlarged Board gave its answer in two decisions: **G 2/94** (OJ 1996, 401) referring to **J 11/94**, and **G 4/95** (OJ 1996, 412) occasioned by **T 803/93**.

In **G 4/95** (OJ 1996, 412) the Enlarged Board noted that the appointment of a professional representative by a party involved the authorisation and identification of the

professionally qualified person who was responsible for the presentation to the EPO of all submissions made by the party. Such presentation of a party's case was the essential core of the function of a professional representative under Art. 133 EPC 1973. During oral proceedings, a professional representative was expected to present the entire case of the party that he or she represented.

The Enlarged Board considered separately the presentation of facts and evidence, on the one hand, and the presentation of arguments, on the other hand.

As to the presentation of facts or evidence by an accompanying person, the Enlarged Board held that such oral submissions during oral proceedings - in addition to the complete presentation of the party's case by the professional representative - are not excluded under the EPC. They may be allowed under the overall discretionary control which the EPC gives to the EPO with respect to the filing of facts and evidence.

As to the question whether an accompanying person may make oral submissions during oral proceedings by way of argument, the Enlarged Board pointed out that Art. 133 EPC 1973 made no distinction between written and oral proceedings in connection with the requirements for representation. Thus a professional representative was responsible for all written and oral submissions made on behalf of the party who had appointed him. However, in the context of the **written procedure** provided under the Convention for oppositions and opposition appeals an appointed professional representative could submit additional documents signed by a third person (for example a professor of law or science). Provided that they were submitted under the responsibility and control of the professional representative, they did not have to be excluded from consideration in the proceedings in which they were filed. Similarly, during **oral proceedings** under Art. 116 EPC 1973 in the context of opposition or opposition appeal proceedings, a person accompanying the professional representative of a party was not excluded from making oral submissions in relation to either legal or technical issues on behalf of that party to the proceedings under the control of the professional representative, and in addition to the complete presentation of the party's case by the professional representative.

The Enlarged Board further held that such oral submissions could not be made as a matter of right, but only with the permission of and at the discretion of the EPO. The following **criteria** should be considered by the EPO when exercising its discretion:

- (i) The professional representative should request permission for such oral submissions to be made. The request should state the name and qualifications of the accompanying person and should specify the subject-matter of the proposed oral submissions.
- (ii) The request should be made sufficiently in advance of the oral proceedings so that all opposing parties are able properly to prepare themselves in relation to the proposed oral submissions.

(iii) A request made shortly before or at the oral proceedings should, in the absence of exceptional circumstances, be refused unless each opposing party has agreed to the making of the oral submissions requested.

(iv) The EPO should be satisfied that oral submissions by an accompanying person were made under the continuing responsibility and control of the professional representative.

In **G 2/94** (OJ 1996, 401) the Enlarged Board made it clear that there was no difference as a matter of principle between the admissibility of such oral submissions in *ex parte* proceedings and in *inter partes* (opposition) proceedings, and that this matter had been fully considered in the context of opposition proceedings in **G 4/95** (OJ 1996, 412). The Enlarged Board noted that it was important that the board should control the proceedings. The board should exercise its discretion in accordance with the circumstances of each individual case. The main criterion to be considered was that the board should be fully informed of all relevant matters before deciding the case. The board should be satisfied that the oral submissions were made by the accompanying person under the continuing responsibility and control of the professional representative.

## 5.2. Application of the case law established by the Enlarged Board

The decisions reported below show how the criteria established by the Enlarged Board have been applied, both in oral proceedings before the boards and when scrutinising decisions taken by the department of first instance. Irrespective of the outcome – i.e. whether or not the person accompanying a party was authorised to make oral submissions – the boards have considered the various criteria in the light of the circumstances of the individual case. It is therefore useful to consult their reasoning no matter what the scenario and it would be artificial to divide the cases up according to the conclusion eventually reached. Nevertheless, to give the reader a quick overview, they are first listed according to the outcome, together with some keywords for orientation but without any details of the reasons given.

In the following cases, the accompanying person was **not authorised** to make oral submissions: **T 334/94** (request not made early enough); **T 1208/06** (inventor not the proprietor); **T 89/04** (classed as accompanying person – request made just three days before the oral proceedings); **T 2135/08** (no information on experts' qualifications and subject-matter of oral submissions); **T 1706/06** (request not made early enough – consent not given by the other party); **T 302/02** (submissions of the expert of a party on subject-matter not specified in some detail beforehand); **T 1676/08** (examination of the criteria – numerous procedural points raised); **T 2552/11** (insufficient information to enable other party to prepare); **T 520/07** (request made during oral proceedings – same submissions by same person at first instance – appeal proceedings separate); **T 8/13** (person closely followed the whole case from beginning); **T 378/08** (standard application of the criteria in specific case of an EQE candidate); **T 1693/10** (sub-authorisation withdrawn – "accompanying representative" an accompanying person within the meaning of **G 4/95** – no request that an oral presentation be made by the "accompanying representative" – alleged conflict of interests).

In the following cases, the accompanying person was **authorised** to make oral submissions: **T 899/97** (request made early enough in circumstances); **T 475/01** (persons accompanying both parties – one party representing itself); **T 1212/02** (professional representative's colleague – pragmatic approach); **T 754/08** (former patent attorney); **T 1207/06** (presentation of the entire case – not established); **T 919/07** (accompanying persons authorised if contribution relevant to discussion); **T 1458/11** (trainee in professional representative's law firm – objection on appeal to scope of submissions not upheld).

In the following decisions, the boards held that **G 4/95** did not apply: **T 621/08** (patent proprietor); **T 1687/08** (lawyer).

In **T 1027/13**, the board concluded that it was not established that the department of first instance in exercising its powers of discretion had examined the criteria laid down in **G 4/95**.

In **R 3/08**, the Enlarged Board looked at the specific question of whether an accompanying person can validly raise a procedural objection pursuant to R. 106 EPC. More details can be found at the end of this section.

The facts and reasons leading to the decisions listed above are detailed below:

In **T 334/94** the board emphasised that for a legal or technical expert to be allowed to make submissions at oral proceedings on behalf of a party and under the control of that party's representative, certain criteria relating to Art. 113(1) EPC 1973 had to be fulfilled. **G 4/95** had ruled that the party wanting such submissions to be made had to ask permission sufficiently in advance of the oral proceedings to give the other parties time to prepare. Only in exceptional circumstances should the EPO allow such a request if made just before the date of the hearing, unless all the other parties agreed. The board noted that the Enlarged Board had not defined what "sufficiently in advance" meant, or laid down a deadline for making such requests. In its view, the **deadline of one month** before the proceedings for filing submissions or new sets of claims was a minimum. On that basis, nominating an accompanying expert one week before the proceedings was not acceptable.

In **T 899/97** the appellant (opponent) requested that a technical expert be allowed to speak during the oral proceedings in order to explain the physical phenomena that occurred when a prior art separator was used. Pointing out that the relevant letter from the appellant had reached him only two weeks before the oral proceedings, and referring to **G 4/95** (OJ 1996, 412) and **T 334/94**, the respondent requested that this technical expert be refused permission to speak. The board considered the particular circumstances of the case, i.e. that no time limit for making further submissions had been set by the board with the summons to oral proceedings; that the respondent (patent proprietor), although he had had two weeks' notice of the technical expert's appearance at the oral proceedings, had not taken any immediate action in this respect, but merely objected to his being heard at the beginning of the oral proceedings; that the respondent, when referring to the criteria (ii) and (iii) mentioned in headnote 2(b) of decision **G 4/95**,

had not indicated any specific preparatory measure that had been rendered impossible or hindered by the relatively late presentation by this technical expert; that this technical expert was one of the authors of the test report (R2) filed by the appellant with the statement of grounds, that the board had raised some questions on this specific technical issue in the annex to the summons to oral proceedings, and that these technical issues had already been discussed before the department of first instance. With these circumstances in mind, the board held that the appellant's request that the technical expert be heard had been submitted sufficiently in advance of the oral proceedings, and that the respondent had been able "to properly prepare" himself for that expert's oral submissions, including his explanations concerning the physical phenomena occurring in prior art separators as tested in R2 (see **G 4/95**). With this in mind the board held that the request to hear the technical expert had been submitted sufficiently in advance of the oral proceedings by the appellant, and that the respondent had been able "to properly prepare" himself in relation to the oral submissions" by this technical expert, including explanations concerning the physical phenomena occurring in prior art separators as tested in R2.

The strict approach of allowing **only** the authorised professional representative to present the party's case and make oral submissions contradicts the position explicitly expressed by the Enlarged Board in **G 4/95** (as held in **T 1027/13**, reported below, in relation to a categorical refusal to hear a technical expert on the ground that this would have amounted to circumventing the rules on representation).

In **T 621/98**, during oral proceedings, the board was faced with the question of whether the patent proprietor, who was professionally represented, needed to announce in advance his intention to make submissions during the proceedings, pursuant to **G 4/95** (OJ 1996, 412). The board ruled that the patent proprietor was a party to the proceedings and as such was not to be treated as an accompanying person. As a party to the proceedings he had a right to take part in them.

In **T 1208/06** the inventor was not identical to the patent proprietor, so **T 621/98** did not apply. In the circumstances, and applying the criteria of **G 4/95**, the board held the opposition division to have acted correctly by categorising the inventor as an "accompanying person" and not as a party to the proceedings within the meaning of Art. 99(3) EPC and by rejecting the proprietor's request.

In **T 89/04** Mr D. was a vice president of the company OpenTV. Since the company ACTV, Inc. was recorded in the Register of European Patents as the patentee, OpenTV, which was a different legal person, was not a party to the proceedings in accordance with Art. 99(4) and 107, second sentence, EPC 1973. Decision **T 621/98**, to which the patentee/respondent referred, did not apply to the case at issue, since it dealt with a different situation, where the professional representative was accompanied by the patentee. Mr D. was considered to be a person accompanying the representative and, therefore, the criteria set out in decision **G 4/95** had to be met. A request which, as in this case, was made three days before oral proceedings, i.e. not sufficiently in advance, should, in the absence of exceptional circumstances, be permitted only if the opposing party agreed. Since the board saw no exceptional circumstances, and the appellant

(opponent) objected that he could not prepare himself properly, the board did not allow Mr D. to make oral submissions on behalf of the respondent (patentee) at the oral proceedings.

In **T 475/01** the board, exercising its discretion under the Convention and taking account of the criteria established by **G 4/95** allowed oral submissions by the persons accompanying both parties at the oral proceedings. Unlike the respondent, the board took the view that neither the EPC nor the above Enlarged Board decision could be held to imply that **a party that represented itself** in proceedings was to be treated differently to a professional representative in respect of oral submissions by accompanying persons.

In **T 1212/02** the appellant did not consent to a colleague of the representative of the respondent (opponent) making submissions before the board during oral proceedings. While the representative herself was authorised to act as a professional representative within the meaning of Art. 134 EPC 1973, the same was not true of her colleague, even though he too worked in the patent department of the same firm, the respondent's holding company, and was familiar with the case in point. The appellant (patentee) observed that no provision had yet been made under Art. 133(3) EPC 1973 to allow the employees of one legal person to represent another legal person. As the appellant had argued, it was true that no legal provision had been made for the representative of one company to be undertaken by an employee of another company connected with the former company. It was also true that it was a matter for the board's discretion to allow a person who was not the professional representative authorised for the case in point to make oral submissions on legal or technical issues before the board, provided the criteria established in **G 4/95** were met. To save time, the board in the case at issue decided on a pragmatic approach and allowed the professional representative's colleague to make submissions, but only after the representative had given an express assurance that she took full responsibility for such submissions.

In **T 754/08**, it had been announced that Mr R., a former patent attorney of the appellant (opponent) in this case, would make technical statements during the oral proceedings. It was not disputed that Mr R. had the knowledge of a technical expert in the field of the patent in suit. However, in the respondent's/patent proprietor's view, since Mr R. was the former patent attorney of the appellant in this case, his submissions would be those of a professional representative. Since he was not authorised to act in the latter function, he should not be allowed to speak during the oral proceedings. The board decided that the conditions set out in the decision **G 4/95** were applicable to **any accompanying person**. Therefore, there was no reason to exclude a former European patent attorney as such. Since the conditions were met the board saw no reason not to allow Mr R. to make oral submissions during the oral proceedings.

In **T 1693/10**, the appellant's representative had eventually withdrawn a sub-authorisation – challenged by the other party – given to a second professional representative with the result that this second representative had to be regarded as assisting the appellant's representative as an "accompanying person" within the meaning of **G 4/95**. Nevertheless, since at least one of the criteria laid down in that decision had

not been met (no request from the appellant that the accompanying person be permitted to make oral submissions), he was not authorised to address the board during the oral proceedings. The board, however, dismissed the objection raised by the respondent under Rule 106 EPC to the fact that the accompanying representative was beside the appellant's professional representative during the oral proceedings and not in the audience. One of the grounds for dismissal was that the respondent had failed to indicate how the mere presence of the accompanying person beside the appellant's professional representative infringed the rights invoked, which included the right to a fair hearing, a right not on the exhaustive list in Art. 112a(2) EPC. The board was in addition not competent to decide on possible conflicts of interest. The respondent's mere assertion that the accompanying person, who had worked for the firm of the respondent's representative, had had access to confidential information on the matter at issue had not been substantiated. Since the respondent had in any event not objected to the appellant's actual representative, there was no need to decide on the question.

Concerning the admissibility of oral presentations by three technical experts, the board in **T 2135/08** concluded that none of the three criteria i), ii) and iii) of **G 4/95** were met, among other reasons since the requesting party had failed to state -even at the oral proceedings- the qualifications of these three persons and to specify the subject-matter of their proposed oral submissions. In **T 1706/06**, quoting **G 4/95**, the board said that a request made shortly before the oral proceedings should, in the absence of exceptional circumstances, be refused unless each opposing party has agreed to the making of the oral submissions requested. In the case in point the patent proprietor did not agree. Moreover the board considered that the filing of the request for the technical expert of the opponent to be heard was made "shortly" before the oral proceedings. No exceptional circumstances existed; the board refused the request for the technical expert to be heard. To cite a different example, in case **T 1207/06** the patent proprietor questioned the admissibility of the presentation of submissions at the oral proceedings by the person accompanying the representative of the opponent, objecting that the accompanying person tried to **present the entire** opponent's **case**, which, according to **G 4/95**, was not allowed. The board in **T 1207/06** did not agree with this objection and was satisfied that the four criteria in **G 4/95** had been met.

The board in **T 302/02**, applying **G 4/95**, did not allow the expert to make submissions. If an expert were allowed to make submissions on subject-matter not specified in some detail beforehand, the other party or parties would be placed at a disadvantage since they could not prepare themselves properly, and this would be against the spirit and purpose of decision **G 4/95** and should only be permitted if none of the parties to the proceedings objects. In **T 1676/08**, concerning the admission of an oral presentation from the accompanying person, Mr L, the board examined one by one the four main criteria established in **G 4/95**. Referring also to **T 302/02**, the board ultimately refused to allow Mr L to make submissions on behalf of the appellants as an accompanying person at the oral proceedings.

In **T 2552/11**, the board did not permit oral submissions from Mr J. The statement by the appellant (opponent) that Mr. J would "refer to the prior art documents cited by the

opponent" was very general, and not sufficient to enable the respondent (patent proprietor) to prepare itself properly.

In **T 919/07**, where the requests in writing concerning oral submissions by accompanying persons did not indicate what such submissions could contribute to the evidence on the file, the board exercised its discretion by deciding that the accompanying persons should be heard in the event that the board wished to ask them questions.

In **T 520/07** the board did not share the respondent (patentee's view) that the appellant could not be surprised by its request, the same accompanying person having already made submissions in oral proceedings before the opposition division. In all procedural matters, appeal proceedings were completely separate from first-instance ones, so requests made in the latter had no effect for the former.

In **T 1687/08**, at oral proceedings held before the opposition division on 25 February 2008, the division had refused Mr J permission to speak on behalf of the patent proprietor/ appellant. The board found in the case at issue that the requirements for representation by a legal practitioner were fulfilled, i.e. that the letter dated 16 January 2008 represented an authorisation which established that Mr J was entitled to represent the patent proprietor. The board stated that from the minutes of the oral proceedings and the decision under appeal it was apparent that the opposition division had not considered Mr J to be a legal practitioner under Art. 134(8) EPC. Instead, it had treated him as an accompanying person, and therefore applied the requirements set out in decision **G 4/95** (OJ 1996, 412). In particular they had based their refusal to allow Mr J to speak on the failure of the patent proprietor to announce his intention that Mr J should be able to make oral submissions before the date set in the summons to oral proceedings pursuant to R. 71a EPC 1973. Since the patent proprietor had requested Mr J's participation in the oral proceedings as a legal practitioner under Art. 134(8) EPC, not as an accompanying person within the meaning of decision **G 4/95**, the division's decision not to allow him to speak had been taken under the wrong legal provision. The board concluded that such a denial by the opposition division of the right of representation had to be considered as a substantial procedural violation. Nor was the board convinced by the respondent's arguments that the authorisation in the letter of 16 January 2008 was late-filed because R. 71a EPC 1973 was applicable to the filing of authorisations. R. 71a(1) EPC 1973 concerned only the filing of "written submissions" and "facts and evidence"; authorisations did not fall into either of those categories. The decision under appeal was set aside, the case remitted and the appeal fee reimbursed.

In **T 1027/13**, on the day of the first instance oral proceedings, the chairman had categorically forbidden Mr H ("accompanying person" within the meaning of **G 4/95**) to address the opposition division and to communicate with Mr W (representative), apparently under the impression that Mr H had not only been present to make submissions regarding some specific legal or technical points, but had actually been **intending to present the complete case** in place of the **newly appointed representative** Mr W (former representative had fallen ill, shortly before the day of the oral proceedings). The patent proprietor and the opposition division had concluded that Mr H was trying to act as the representative of the opponent, thereby circumventing the

provisions of Art. 133 and 134 EPC. The patentee also contested that there was proper control and supervision by Mr W since he had declared that he was not prepared to defend the case in oral proceedings. It was disputed whether any submissions of Mr H would have then been made under the responsibility and continuing control of the authorised representative Mr W. No objective indications were at hand which could convincingly establish this. The question to be decided by the board was whether or not the categorical refusal to let Mr H make oral submissions or even communicate with the authorised representative merely amounted to a very strict but, nevertheless, correct exercise of discretionary power, still in line with the principles stated in **G 4/95** or, instead, to an inappropriate exercise of this discretion, going beyond the discretionary remit. The board stated that as a consequence of this conduct of the oral proceedings, the representative of the opponent appeared to have been totally deprived of any support he was expecting to get from the announced accompanying person Mr H, i.e. a person very familiar with all aspects of the case from its very beginning. The categorical refusal in effect had been keeping the opponent from taking position in an "efficient and effective manner" on the contentious issues of the case, which would also have included the obviously very important supporting oral contributions by Mr H. It could not be gathered from the minutes of the first instance oral proceedings that the criteria of **G 4/95** had actually been considered by the opposition division in deciding not to let Mr H speak. Considering this and the contradictory assertions of the parties regarding what had happened at the oral proceedings, the board concluded that it was not established that the criteria of **G 4/95** had actually been addressed as such.

In a communication the board in **T 8/13** stated that the request to allow another person who was not a professional representative to make submissions on behalf of the appellant (opponent) during the oral proceedings would not be allowable in view of the conditions set by Art. 134 EPC and having regard to decision **G 4/95**. In reply to the board's preliminary view expressed in its communication, the appellant argued that Ms. L, attending the oral proceedings together with the appellant, had closely followed the whole case from the beginning and should therefore have been allowed to present the case. Moreover, the appellant suffered from asthma and could therefore only plead the case with difficulty. Also, the appellant stated that it was at a disadvantage in view of the fact that the respondent was represented by two professional representatives. The board was not persuaded by these arguments and refused the appellant's request, as already preliminarily mentioned in its communication. Ms. L was neither a representative according to Art. 134 EPC nor was she presented as a technical expert to be heard on a technical question. The personal involvement with the case or her relationship to the appellant also did not qualify Ms. L to have made submissions as an accompanying person in accordance with the conditions set out in **G 4/95**. In regard to the appellant's medical condition, the appellant was informed by the board that it was prepared to interrupt the proceedings from time to time should this be required.

For a classic application of the requirements set out in **G 4/95** to a party's contention that, since the accompanying person was preparing for the European qualifying examination, he ought to be given a training opportunity, see **T 378/08**.

In case **T 1458/11** appellant 2 (patent proprietor) was represented by a professional representative, Mr Ch, accompanied by Mr H, a **trainee in the law firm** of Mr Ch. Mr H had not been announced prior to the oral proceedings before the opposition division. Appellant 2 requested that Mr H be allowed to speak "on selected issues during the oral proceedings under his (Mr Ch's) supervision and responsibility". Appellant 1 (opponent) agreed to this with the proviso that Mr H would "not make the complete case". The opposition division allowed Mr H to speak "on selected issues under Mr Ch's responsibility". After the impugned decision was pronounced, appellant 1 submitted that, according to its observations, Mr H had spoken "for more than 50% of the time" and that this was not what had been agreed at the beginning of the oral proceedings. According to **G 4/95**, the opposition division had the duty to ensure that the oral submissions made by an accompanying person satisfy the conditions that they are made **in addition to** the complete presentation of the party's case by its professional representative and under the continuing responsibility and control of the professional representative. According to appellant 1, the submissions made by Mr H did not comply with the conditions set forth in **G 4/95**, i.e. were not in addition to the complete presentation of appellant 2's case by the professional representative, Mr Ch. The board considered the submissions of the parties and the content of the **minutes of the oral proceedings** before the opposition division. It was not possible to establish, on an objective basis, whether the submissions made by the accompanying person were in addition to the complete presentation of the professional representative or whether they went beyond that or even amounted to a presentation of substantially the complete case of the party. It was incumbent on appellant 1 to inform the opposition division of any alleged negligence of the opposition division's duty as soon as it became aware of it. This immediate reaction was required since a party to the proceedings must take an active part and must on its own initiative submit in due time whatever will support its position (cf. **R 2/08**, point 8.5 of the Reasons). In the case at hand, appellant 1 should and could have informed the opposition division. Furthermore, nothing indicated that appellant 1 was taken by surprise or that it was not prepared, or at least could not have been prepared, for the oral submissions made by the accompanying person (**G 4/95**, point 10 of the Reasons, second paragraph). The board failed to see that a procedural violation occurred during the proceedings before the opposition division.

In **R 3/08** the question arose whether an accompanying person can validly raise a procedural objection pursuant to R. 106 EPC. However, in the circumstances this question did not need to be answered since, based on the affidavit of Mr S.L., it was credible that the professional representative himself explicitly supported his procedural objections. Even if, in the absence of further evidence, the exact circumstances of the representative's intervention was not established, the board was prepared to assume in favour of the petitioner that the objections raised in that phase of the oral proceedings met the requirements of R. 106 EPC.

### **5.3. Oral submissions by former members of the boards of appeal**

In **J 11/94** (OJ 1995, 596) the authorised representative was accompanied during oral proceedings by a former chairman of the Legal Board of Appeal who had retired about a year and a half previously. The professional representative requested permission for the

former board member to make submissions in addition to his own arguments. The case referred to the Enlarged Board therefore encompassed the question whether special criteria applied to the exercise of a board's discretion in relation to a request for the making of additional oral submissions by a former board of appeal member.

The Enlarged Board noted in **G 2/94** (OJ 1996, 401) that there was a potential conflict between what might be seen as a right of former board of appeal members to seek subsequent employment on the basis of their special knowledge by making oral submissions during proceedings before the EPO, and the need for proceedings before the EPO to be conducted free from any suspicion of partiality. The existence of such a potential conflict was well recognised in the context of national judicial systems where it was clear that persons accepting appointments as judges were subject to restrictions if they wished to work in private legal practice after having served as judges. The existence of such restrictions reflected the generally recognised principle of law that parties to legal proceedings were entitled to a fair hearing before judges who could not reasonably be suspected of partiality. It concluded that the above potential conflict had to be resolved with a view to avoiding any suspicion of partiality during the conduct of proceedings before the EPO. The public interest in the proper conduct of proceedings before the EPO had to prevail over the personal interests of former board of appeal members who wished to make oral submissions on behalf of parties to the proceedings.

It was therefore necessary to place **restrictions** on the admissibility of such oral submissions, at least for a reasonable period of time following termination of a person's appointment as a member of a board of appeal. In the absence of specific legislation, the point in time following termination of his or her appointment after which a former member of the boards of appeal might make oral submissions in proceedings before the board of appeal was **a matter within the judicial discretion** of the boards of appeal. The Enlarged Board found that during either ex parte or inter partes proceedings, a board of appeal should refuse permission for a former member of the boards of appeal to make oral submissions during oral proceedings before it, unless it was completely satisfied that **a sufficient period of time** had elapsed following termination of such former member's appointment to the boards of appeal, so that the board of appeal could not reasonably be suspected of partiality in deciding the case if it allowed such oral submissions to be made.

The board of appeal should normally refuse permission for a former member of the boards of appeal to make oral submissions during oral proceedings before it, until at least **three years** have elapsed following termination of the former member's appointment to the boards of appeal. After three years have elapsed, permission should be granted except in very special circumstances. Before the expiry of three years, there would normally be too great a risk that the public would consider the making of such submissions in oral proceedings to give an unfair advantage to the party on whose behalf a former member appeared.

**T 585/06** dealt with the presence of a former member of the boards of appeal at the oral proceedings before the opposition division and acting as consultant of the patent proprietor. The former member had not acted as an authorised representative but only

as the patent proprietor's consultant. He had not addressed the opposition division. This amounted to an important difference from the facts of case **G 2/94** (see Chapter IV.E.8.4.6 g) "Reimbursement of Appeal Fee - Partiality").

#### **5.4. Oral submissions by qualified patent lawyers of non-EPC contracting states**

Another question of law decided in **G 4/95** above was whether, having regard in particular to the provisions of Art. 133 and Art. 134 EPC 1973, a person who was not qualified in accordance with Art. 134 EPC 1973 but was a qualified patent lawyer in a country which was not an EPC contracting state might present some or all of a party's case as if he were qualified under Art. 134 EPC 1973. The Enlarged Board decided that no special criteria applied to the making of oral submissions by qualified patent lawyers of countries which were not contracting states to the EPC. The criteria set out above were equally applicable to such patent lawyers (see **T 774/05** with respect to "US patent attorney", and **T 756/09**, below, with respect to "Australian patent attorney").

In case **T 756/09**, the request for oral submissions by Dr M, an Australian patent attorney, was made only ten days before the oral proceedings and the appellant (opponent) had denied its agreement both in writing and at the beginning of the oral proceedings. Hence, according to the case law of the boards of appeal, a person accompanying the professional representative should not be allowed to make oral submissions unless exceptional circumstances could be identified. In support of its request, the respondent (patent proprietor) essentially submitted that Dr. M would not make submissions in the capacity of a technical expert, but as a patent attorney who was very familiar with the case, had advised the professional representative before the oral proceedings and would continue to do so during the oral proceedings. Taking into account the circumstances of the case, in particular that Dr. M was not a technical expert and thus was **not** expected to elaborate on technical aspects of the case in a manner which might take the appellant **by surprise**, the board concluded that submissions made directly by Dr. M under the supervision of the professional representative would not put the appellant (opponent) at a disadvantage and might contribute to an efficient debate. Hence, despite its late filing, the board decided to accede to the respondent's request for oral submissions by an accompanying person with the proviso that such submissions would be stopped if new technical facts or arguments were introduced into the debate.

#### **6. Distinction between presentation of facts and evidence and presentation of arguments**

In **G 4/95** the Enlarged Board noted that the distinction between the presentation of facts and evidence, on the one hand, and the presentation of arguments, on the other hand, was of basic importance under the EPC. It noted, as discussed in **T 843/91** (OJ 1994, 818), a practice developed in the boards of appeal "to allow contributions by experts under the control of the authorised representative when it considers it would be useful for the good understanding of the case", thus mirroring the practice within the opposition division. In decision **T 843/91** it was suggested that the legal basis for admitting such oral submissions by "experts" was Art. 117 EPC 1973. In this connection, the Enlarged Board did not accept that Art. 117 EPC 1973 provided a legal basis for

hearing oral submissions by an accompanying person involving the presentation of facts and evidence, as was suggested in decision **T 843/91** for example. Art. 117 EPC 1973 and its implementing rules, R. 72 to R. 76 EPC 1973, were solely concerned with setting out the procedure relevant to the formal "taking of evidence". Such procedure necessarily involved as a precondition for its use the making of a decision to take evidence within the meaning of Art. 117 EPC 1973, and that decision had to set out all the matters prescribed in R. 72(1) EPC 1973, as the first stage in the procedure.

## S. Guidelines for Examination in the European Patent Office

1.	Guidelines not binding on boards	828
2.	Guidelines binding (in principle) on departments of first instance	830
3.	The boards' application of the Guidelines in specific cases	832

---

In accordance with Art. 10(2)(a) of the European Patent Convention (EPC), the President of the European Patent Office (EPO) adopted, effective as at 1 June 1978, the Guidelines for Examination in the European Patent Office. By decision of the President dated 28 July 2015 the Guidelines have been amended pursuant to Art. 10(2) EPC in accordance with the policy of revising them annually. The **version in force** at the time of this case law report's publication is the **November 2015** edition (available online at [www.epo.org](http://www.epo.org)), and this is the only valid official version as from 1 November 2015 (OJ 2015, A74, concerning updating of the Guidelines). Please note that the Guidelines do not constitute legal provisions. For the ultimate authority on practice at the EPO reference should be made firstly to the EPC itself, including the Implementing Regulations, and secondly to the interpretation put upon the EPC by the boards of appeal and the Enlarged Board of Appeal (Guidelines, General Part, 3 "General remarks" – November 2015 version). Apart from important issues relating to interlocutory revision, the Guidelines do not deal with the appeals procedure (Guidelines, General Part, 5 "Survey of the processing of applications and patents" – November 2015 version).

It should be borne in mind that the edition of the Guidelines referred to in the following abstracts of board decisions is that applied by the board in question and may have been worded differently from the November 2015 version.

### 1. Guidelines not binding on boards

The Guidelines for Examination are not binding on the boards of appeal (settled case law; see, for instance, **T 1561/05** of 17 October 2006, point 1.5 of the Reasons).

In **T 1561/05** the board confirmed that the Guidelines for Examination in the EPO were not binding on the boards of appeal (applying **T 162/82**, OJ 1987, 533). **T 1561/05** of 17 October 2006 is also referred to in **J 7/10**.

In **T 740/98** the board noted, among other things, that the legal system established under the Convention did not treat the Guidelines as binding.

In **T 1356/05** (also **T 1360/05**) the board stated that no provision of the Guidelines could override an article or rule of the EPC.

In **T 500/00** the appellant argued that the disclaimer had been made in good faith according to the Guidelines and in accordance with the practice of the boards of appeal at the time of making the disclaimer. The board pointed out that the Guidelines were not

rules of law and noted that what counted was not whether the opposition division had acted in accordance with the Guidelines, but whether it had acted in accordance with the Convention. In any event, the principle of good faith could not have been successfully invoked in this case.

In **T 552/02** the appellants (proprietors) essentially based their assertion on a passage in the Guidelines. They also submitted that Art. 15(2) RPBA (as in force until 12 December 2007) obliged the board to state its grounds if it gave a different interpretation of the EPC 1973 to that provided for in the Guidelines. On the latter point the board said (a) that the members of the board were not bound by any instructions and had only to comply with the provisions of the EPC 1973, which meant the board was not bound by the Guidelines, and (b) that Art. 15(2) RPBA 2003 did not oblige the board to state grounds for deviating from the Guidelines but simply stipulated that it should "state the grounds for its action if it consider[ed] that [its] decision [would] be more readily understood in the light of such grounds".

As to the alleged lack of consistency between what was in fact the established case law and the Guidelines for Examination, the board in **T 1741/08** noted that it was not bound by the Guidelines, an important factor in the judicial independence of the boards of appeal (Art. 23(3) EPC). An alleged divergence between the Guidelines for Examination and case law therefore could not be a sufficient basis for challenging the case law by means of a **referral** to the Enlarged Board of Appeal.

The board in **T 2311/10**, unlike the examining division, found that in connection with amendments the three-point or essentiality test (see Guidelines H-V, 3.1 and 3.2.1 – June 2012 version) was unhelpful or even misleading when assessing the admissibility of an intermediate generalisation taken from the description for the purpose of delimitation from subsequently identified prior art. Since the November 2014 version, the Guidelines no longer refer to the three-point or essentiality test (**T 331/87**) in the context of intermediate generalisations.

The appellant (applicant) in **T 1363/12** relied on the revised Guidelines (H-IV, 2.3 – November 2014 version [NB: Guidelines H-IV, 2.2, last paragraph – November 2015 version]) in support of a general submission that a more lenient standard than the "gold" standard should be applied when assessing compliance with Art. 123(2) EPC. Quite apart from the fact that the boards of appeal are not bound by the Guidelines for Examination, as was acknowledged by the appellant, it is to be noted that the principles established by the Enlarged Board of Appeal for the assessment of the requirement of Art. 123(2) EPC could not be changed **by issuing amended Guidelines**. Consequently, the appellant's suggestion that the above statement was somehow applicable at the time of the oral proceedings before the board was wrong: there had been no change in the standard to be applied under Art. 123(2) EPC. Furthermore, while the passage from the Guidelines might well be correct when applied to particular factual situations similar to that which arose in **T 2619/11**, any more general principle could not be derived from this decision.

The fact that the Guidelines are not binding on the boards of appeal does not mean that the boards do not apply them or quote them as a source of inspiration (see in this chapter III.S.3).

## **2. Guidelines binding (in principle) on departments of first instance**

The Guidelines state (General Part, page 5, point 3 – November 2015 version): "The Guidelines are intended to cover normal occurrences. They should therefore be considered only as general instructions. The application of the Guidelines to individual European patent applications or patents is the responsibility of the examining staff and they may depart from these instructions in exceptional cases. Nevertheless, as a general rule, parties can expect the EPO to act in accordance with the Guidelines. ... It should be noted also that the Guidelines do not constitute legal provisions. For the ultimate authority on practice in the EPO, it is necessary to refer firstly to the European Patent Convention".

In **T 647/93** (OJ 1995, 132) the board stated that it was normally desirable for examining divisions to act in accordance with the Guidelines, but pointed out that these were not rules of law, so failure to follow a procedure set out in them was not in itself a substantial procedural violation (**T 51/94**, **T 937/97**).

In **T 162/82** (OJ 1987, 533) and **T 42/84** (OJ 1988, 251), two boards of appeal ruled on the discretionary power of examining divisions to depart from the EPO Guidelines. According to these two decisions, the Guidelines were only general instructions intended to cover normal occurrences. Thus, an examining division could depart from them provided it acted in accordance with the EPC. In reviewing the decision of an examining division, a board of appeal would wish to ensure uniform application of the law and judge whether the division had acted in accordance with the Convention, not whether it had acted in accordance with the Guidelines.

In **T 500/00** the board noted that what counted was not whether the opposition division had acted in accordance with the Guidelines, but whether it had acted in accordance with the Convention.

In **T 1388/10**, the board observed that the Guidelines merely offered general guidance covering normal occurrences. Their application in specific individual cases was the responsibility of the examining division, which could depart from them in exceptional cases. Also, the Guidelines were not the law – unlike the EPC and its Implementing Regulations. When reviewing examining division decisions, the boards did not assess whether the division had complied with the Guidelines. Rather, they considered whether it had exercised its discretion within the limits set by the EPC and its Implementing Regulations.

In **T 905/90** (OJ 1994, 306, Corr. 556) the board held that specific communications or other actions within the framework of particular proceedings and official statements such as guidelines were not the only sources of legitimate expectations; these could also properly arise from the actual general conduct or established practice of organs of the

EPO. All changes in these practices should be officially announced at the earliest possible moment in order to avoid misleading the parties.

In **J 27/94** (OJ 1995, 831) the board stated that there might be cases in which the public had a legitimate expectation that the department of first instance would not deviate from the established case law. This might apply if the relevant case law had become enshrined in the consistent practice of the department of first instance, and in particular if this had been made known to the public in published Guidelines, Legal Advice or Notices from the EPO. In such a situation, an applicant might legitimately expect that a practice allowing or even recommending a particular way of proceeding would not be changed without appropriate advance information. In the case at issue, the Guidelines had remained unchanged, which in fact led to the reasonable expectation that the practice based on them would likewise not be changed. The department of first instance processing this case had therefore not been obliged by the principle of the protection of legitimate expectations.

The board in **T 1607/08** recalled that the Guidelines published by the EPO were one of the sources of legitimate expectations. Therefore, where the Guidelines gave the clear indication that the continuation of the opposition proceedings had to be communicated to the patent proprietor, the latter was entitled to expect that such information would be given before a decision on the substantive issues was issued. Otherwise, as in the case at issue, the decision to revoke the contested patent would come as a surprise to the patent proprietor.

In **T 182/90** (OJ 1994, 641), **T 119/91**, **T 523/91**, **T 366/92** and **T 397/94** the boards of appeal stated that it was **not** a substantial procedural violation within the meaning of R. 67 EPC 1973 if a request to be called back by or have an interview with the primary examiner was ignored. It was a matter for the examiner's discretion to decide whether to conduct such informal discussions in accordance with the Guidelines, bearing in mind the particular circumstances of the case (see also **T 300/89**, OJ 1991, 480).

The examining division's failure to follow a procedure set out in the Guidelines is not in itself a substantial procedural violation unless it also constitutes a violation of a rule or principle of procedure governed by an article of the Convention or one of the Implementing Regulations. This is because the Guidelines are not legally binding (**T 42/84**, OJ 1988, 251; **T 51/94**, **J 24/96**, OJ 2001, 434).

In **T 246/08** the board noted that the Guidelines for Examination indicated Art. 113(2) EPC 1973 as the legal basis for refusing an application in the circumstances of the case before it, i.e. in which no agreed claim text existed. The board, however, preferred the approach of the examining division (see Art. 78(1)(c) EPC 1973). It held that although an examining division should normally apply the Guidelines, failure to do so was neither a mistake in law nor a procedural violation. For the reasons set out, in this particular instance the board saw the deviation as a matter for approval rather than reproach.

In **T 313/10** the examining division had argued, using their own criteria, that a method performed by a computer was excluded. This was contrary to the established jurisprudence as set out in the Guidelines.

In **J 29/10**, point 2.3 of the Reasons, the Legal Board referred to the General Part of the Guidelines, as then worded, before going on to explain what matters, in its view, the Guidelines were not intended to cover.

In **T 1020/15** the board cited, in addition to applicable EPC provisions, numerous passages from the Guidelines (E-IX, 1.2; C-VIII, 1, 3 and 4; G-IV, 7.5.3; E-X, 7.1(i), 7.3 and 7.4) in support of its finding that the examining division's decision was vitiated by four substantial procedural violations.

According to the board in **T 755/14**, contrary to the appellant's view, although the search and examining divisions had failed to follow the procedure established in the Guidelines for considering unity, their substantively incorrect assessment of the unity issue could not be regarded as or equated to a substantial procedural violation within the meaning of R. 103(1) EPC, especially as the Guidelines were not legally binding. The board was also unable to identify any substantial procedural violation in the action then taken by the examining division.

### **3. The boards' application of the Guidelines in specific cases**

Although the boards are not bound by the Guidelines, this does not mean that they do not take them into account or turn to them for inspiration when reaching their decisions. It should be borne in mind that the edition of the Guidelines referred to in the decisions summarised below to illustrate the related case law is that applied by the board in the specific case concerned and not necessarily that currently in force (November 2015 version).

In **T 651/91** the board cited with approval the Guidelines, confirming that a generic disclosure did not normally deprive any specific example falling within that disclosure of novelty.

In **T 523/89** the board saw no reason to disagree with the general principle of interpretation laid down in the Guidelines.

In **T 631/97** (OJ 2001, 13) the board found that the interpretation of R. 46(1) EPC 1973 was in agreement with that of the Enlarged Board of Appeal in Opinion **G 2/92**. It also found that the Guidelines were fully consistent with **G 2/92** and R. 46 EPC 1973.

In **T 587/98** (OJ 2000, 497) the board found that the claims were not "conflicting" claims within the meaning of the Guidelines.

The Enlarged Board in **G 3/14** (OJ 2015, A102) observed that neither the EPC itself nor the Implementing Regulations made any distinction between independent and dependent claims when it came to their compliance with the requirements of the EPC at

the examination stage. Although not part of the express legal framework of the EPC, the Guidelines likewise made no distinction between independent and dependent claims when it came to objections of lack of clarity (see e.g. Part F-IV, 4.1 – November 2014 version; this part is unchanged in the November 2015 version).

In **T 32/95** (ex parte) the board found that, once the applicant had indicated sound reasons for doubting whether a cited document belonged to the state of the art, the examiner should have acted as recommended in the Guidelines, i.e. not pursued the matter further if additional investigation failed to produce sufficient evidence to remove that doubt.

In **T 802/97** the board noted that when applying Art. 96(2) EPC 1973, the established practice of the examining divisions was set out in particular in the Guidelines for Examination in the EPO.

In **T 946/96** the board noted that if an examining division refused its consent to a further amendment under R. 86(3) EPC 1973, the recognised correct procedure for the examining division to follow was clearly set out in the Guidelines.

In **T 300/89** (OJ 1991, 480) the board held, in relation to the appellant's complaint as to the failure of the examiner to telephone as requested, that the practice in relation to such informal communications was clearly set out in the Guidelines.

In **T 839/95** the board noted that an interlocutory decision in the case of an allowable auxiliary request was foreseen in the instructions to examiners only for auxiliary requests in opposition proceedings.

In **T 736/95** (OJ 2001, 191), having regard to the Enlarged Board of Appeal's decisions in **G 10/91** (OJ 1993, 420) and **G 1/95** (OJ 1996, 615) and to the Guidelines for Examination in the EPO, the board concluded that the department of first instance at least had to examine whether a fresh ground was relevant. The aim of first-instance proceedings was to avoid invalid patents.

The applicant's request "to render a decision on the record" was not to be construed as a waiver of the right to a fully reasoned first-instance decision, even in the light of the suggested procedure in the Guidelines (see **T 1309/05**, **T 583/04**).

In **T 1709/06** the board noted that although the Guidelines for Examination E-X, 4.4, suggested a procedure for issuing a decision "on the state of the file" taking a standard form, a number of decisions of the boards of appeal (see **T 1309/05**, **T 1356/05**) had pointed out that such a standard decision form did not meet the "reasoned" requirement of R. 68(2) EPC 1973 (now R. 111(2) EPC).

In **T 1123/04** the board noted that R. 68(2) EPC 1973 (now R. 111(2) EPC) stipulated that decisions of the European Patent Office which were open to appeal had to be reasoned. The criteria for the "reasoning" were, for instance, elaborated in the Guidelines.

The board in **T 1741/08** remarked that it would seem that while the statement in Guidelines G-II, 3.7, was not actually inconsistent with the case law of the boards of appeal, the optimistic tone might sometimes mislead (potential) applicants.

The reasons given in the EPO notice of 8 November 2013 on handwritten amendments for changing a practice that had been applied for years at first instance and was also recognised in the Guidelines do not warrant changing the established practice of the boards of appeal and the related case law (**T 37/12**, citing **T 1635/10**, point 5 of the Reasons).

With regard to the requirements of Art. 84 EPC, the appellant in **T 1882/12** argued that Guidelines C-III, 4.9 [F-IV, 4.9 in the November 2015 version] on optional features did not impose a ban on the terms "preferably", "preferred" and "more particularly" to which the examining division had objected, but rather required that they be looked at carefully in their specific context to ensure that they did not introduce ambiguity. In the appellant's view the examining division's procedural violation was essentially that it had incorrectly assessed the clarity requirement because the claim wording in the case in point had not been carefully examined, which was **inconsistent with the Guidelines and hence contrary to the principle of equal treatment**. Yet the mere fact that other examining divisions had not raised such objections in similar cases did not imply a breach of the principle of equal treatment. As the appellant itself had submitted, the Guidelines prescribed a careful examination.

In **T 1060/13** the board, in explaining the conditions under which interlocutory revision must be granted by the examining division, drew attention to an inconsistency both in the Guidelines of June 2012, applicable to the case, and with the version of September 2013. However, the text quoted has been amended in the meantime and is no longer to be found as such in the Guidelines dated November 2015 (E-X, 7.4.2). In particular, the reference to the obiter dictum has been deleted.

In **T 2068/14** the board had to consider whether the decision of the examining division was adequately reasoned. The board endorsed the following statement in the Guidelines, as it reflected the jurisprudence of the boards of appeal: "It is particularly important that special attention should be paid to important facts and arguments which may speak against the decision made. If not, the impression might be given that such points have been overlooked" (Guidelines of September 2013, then applicable (idem Guidelines November 2015, E-IX, 5, Reasoning of decisions).

## IV. PROCEEDINGS BEFORE THE EPO

### A. Preliminary and formalities examination

1.	Introduction	836
2.	Responsibility for formalities examination	836
3.	Where and how applications may be filed	837
4.	Persons entitled to file application	837
5.	Accordance of a date of filing	838
5.1.	Requirements for according a date of filing	838
5.2.	Identity of the applicant	840
5.2.1	Requirement for information identifying the applicant (Rule 40(1)(b) EPC)	840
5.2.2	Correction of designation of applicant (Rule 139 EPC)	840
5.3.	Legal effect of accordance of a date of filing	841
5.4.	Subsequent filing of missing parts of the description or missing drawings (Rule 56 EPC)	842
5.4.1	Legal provisions	842
5.4.2	Interpretation of Rule 56 EPC	843
5.4.3	Whether to apply R. 56 EPC or R. 139 EPC	844
5.5.	Corrections under Rule 139 EPC	845
5.5.1	Legal provisions	845
5.5.2	No replacement of invention	845
5.5.3	Extent of competence of the Receiving Section	847
5.6.	Change of date of filing	847
6.	Examination of formal requirements	848
6.1.	Requirements of a European patent application (Article 78 EPC)	849
6.2.	Designation of the inventor	850
6.3.	Any other requirement laid down in the Implementing Regulations	851
6.3.1	General provisions governing the presentation of application documents (Rule 49 EPC)	851
7.	Designation of states	851
7.1.	Legal provisions	851
7.2.	Effect of non-payment of the designation fee	852
7.2.1	Deemed withdrawal	852
7.2.2	Designation of states in divisional applications	852
7.2.3	No correction of non-payment of fee under R. 88 EPC 1973	853
7.3.	Correction of designation of states (Rule 139 EPC)	853
8.	Priority	855
8.1.	Filing of priority documents	855
8.2.	Correction of priority declarations	855
8.2.1	Introduction	855
8.2.2	Correction of priority declarations under R. 88 EPC 1973	855
	a) Requirement for mistake to have been made	855
	b) Time limit for request for correction	856
8.2.3	Rule 52(3) EPC	858
9.	Deemed withdrawal of the application (Rule 100(3) EPC)	858
10.	Publication of the application	859

## 1. Introduction

The EPO first examines whether a patent application satisfies the requirements for the **accordance of a date of filing** in accordance with the Implementing Regulations (Art. 80 EPC, Art. 90(1) EPC and R. 40 EPC). Only if an application is accorded a date of filing is the **examination as to formal requirements** commenced (Art. 90(3) EPC).

## 2. Responsibility for formalities examination

Under Art. 16 EPC, the Receiving Section is responsible for the examination on filing and the examination as to formal requirements of European patent applications. It retains responsibility up to the time when the Examining Division becomes responsible for the examination of the European patent application under Art. 94 EPC (R. 10 EPC).

The limitation in time of the Receiving Section's responsibility was previously in Art. 16 EPC 1973. The move to the Implementing Regulations ensures greater flexibility in determining when competence passes within the EPO from one department to another.

The Receiving Section is also no longer limited to the EPO's branch in The Hague as it was under Art. 16 EPC 1973. According to **T 1012/03**, the amendments to Art. 16 and 17 EPC deleting the allocation of the Search Divisions and Receiving Section to the branch at The Hague clearly indicate that the EPC no longer restricts the competence of the President of the EPO to decide which transactions shall be carried out at Munich and which at The Hague.

In **G 1/02** (OJ 2003, 165) the Enlarged Board of Appeal pointed out that Art. 90 EPC 1973 and Art. 91 EPC 1973 entrusted to the Receiving Section certain duties relating to formalities examination of applications on filing, and the section's decisions may give rise to a loss of rights (see Art. 91(3) EPC 1973) which are appealable (see Art. 106 EPC 1973). The Receiving Section is composed entirely of formalities officers who - just like their counterparts working with opposition divisions - receive specialist training but are not required to have studied a technical subject or law at university.

In **J 18/84** (OJ 1987, 215) the Legal Board of Appeal distinguished the respective areas of responsibility of the Receiving Section and the Legal Division regarding the designation of the inventor. The examination of an initial designation of inventor complying with Art. 81 EPC 1973 fell exclusively to the Receiving Section as one of its formalities examination responsibilities under Art. 16 and 91 EPC 1973. (These responsibilities are now in Art. 16 and 90(3) EPC). However, once entries began in the Register of European Patents - which under Art. 127, 2nd sentence, EPC 1973 coincided with the publication of the European patent application - the Legal Division might be competent for disputed corrections.

In **J 13/02**, the board took the view that the fact that the EPC 2000 versions of Art. 16 to 18 EPC were already applicable in accordance with Art. 6 of the Revision Act did not alter the fact that the Receiving Section's competence came to an end once a valid request for examination has been made with the result that the examining division had to examine whether the application met the requirements of the EPC 1973 (Art. 94(1) EPC 1973 in conjunction with Art. 96(2), 97(1) and 97(2) EPC 1973).

See in this chapter IV.A.5.5.3 for the extent of competence of the Receiving Section in respect of requests for correction under R. 139 EPC.

### **3. Where and how applications may be filed**

Under Art. 75 EPC a European patent application may be filed with the EPO or, if the law of a Contracting State so permits, (and subject to Art. 76(1) EPC) with the central industrial property office or other competent authority of that State.

According to **J 3/80** (OJ 1980, 92), the obligation to forward European patent applications filed nationally to the EPO rests upon the relevant central industrial property office and not upon the applicant (see also **J 1/12** in this chapter IV.A.5.1; see also Chapter III.E.2.2 "Time limit for applicant to observe").

The form of filing is regulated by R. 2 EPC and may be by hand, by post or by technical means of communication. Details and conditions are laid down by the President of the EPO. Documents purporting to be documents filed subsequently for the purposes of R. 2(1) EPC must be deemed not to have been received if they are filed with technical means not approved by the President of the EPO (**T 765/08**).

### **4. Persons entitled to file application**

A European patent application may be filed by any natural or legal person, or any body equivalent to a legal person by virtue of the law governing it (Art. 58 EPC). An application may also be filed either by joint applicants or by two or more applicants designating different Contracting States (Art. 59 EPC).

In proceedings before the EPO, the applicant is deemed to be entitled to exercise the right to a European patent (Art. 60(3) EPC). This fiction only relieves the EPO of any need to investigate the existence of the entitlement. However, when a person referred to in Art. 60(1) EPC, other than the applicant, disputes the entitlement to the grant of a European patent, the entitlement may be modified under the conditions provided for in Art. 61 EPC.

The Enlarged Board held in **G 3/92** (OJ 1994, 607) that when it has been adjudged by a final decision of a national court that a person other than the applicant is entitled to the grant of a European patent, and that person, in compliance with the specific requirements of Art. 61(1) EPC, files a new European patent application in respect of the same invention under Art. 61(1)(b) EPC, it is not a pre-condition for the application to be

accepted that the earlier original usurping application is still pending before the EPO at the time the new application is filed.

## **5. Accordance of a date of filing**

### **5.1. Requirements for according a date of filing**

The date of filing of the European patent application shall be the date on which the requirements laid down in the Implementing Regulations are fulfilled (Art. 80 EPC, which is applicable to European patent applications filed on or after 13.12.2007). Detailed provisions concerning the requirements have been moved to the Implementing Regulations (R. 40 EPC). The requirements include:

- an indication that a European patent is sought;
- information identifying the applicant or allowing the applicant to be contacted (see in this chapter IV.A.5.2);
- a description or reference to a previously filed application.

The patent application must be filed with the EPO or other competent authority in accordance with Art. 75(1) EPC.

If a date of filing cannot be accorded following the examination under Art. 90(1) EPC, the application is not dealt with as a European patent application (Art. 90(2) EPC).

According to **G 2/95** (OJ 1996, 555), Art. 80 EPC 1973 stipulated the minimum requirements which had to be met in order for a filing date to be accorded. According to Art. 80(d) EPC 1973 (see now R. 40 EPC), the documents filed by the applicant had to contain a description and one or more claims (in accordance with Art. 14 EPC 1973, which was substantially amended in the EPC 2000). However, the description and claims did not have to comply with the other requirements of the EPC 1973. It was sufficient for the application documents to clearly contain a description and one or more claims. However, if they did not contain a description or claims, the requirements for according a filing date under Art. 80(d) EPC 1973 were not met and could not be created subsequently by way of a correction under R. 88 EPC 1973 (see now R. 139 EPC and this chapter IV.A.5.5). If the application documents met the requirements of Art. 80 EPC 1973, the European patent application was accorded a filing date.

In **J 18/86** (OJ 1988, 165) the board stated that under R. 24 EPC 1973 in conjunction with Art. 75(1)(b) EPC 1973 the date of filing of a European application was always the date on which the application documents were actually received, either by the EPO directly or by a competent national authority. Nothing in the EPC 1973 admitted of the possibility of applying a provision of any national law to the determination of the date of filing of a European patent application.

In **J 4/87** (OJ 1988, 172), the board held that in the event of an unforeseeable postal delay causing non-compliance with a time limit, if R. 85(2) EPC 1973 (relating to general interruption or subsequent dislocation in the delivery of mail in a Contracting State) was not applicable so as to extend the time limit, the EPO had no discretion to extend it. Applying the principles set out in **J 18/86** above, the date of filing was the actual date of receipt by the EPO or a competent national authority. See also **J 13/05**.

In **J 12/05**, the Legal Board, citing **J 4/87** and **J 18/86**, held that the EPC did not permit backdating of the filing date. It went on to state that, even where the conditions for extending the priority period under either R. 84a EPC or R. 85 EPC were met, this did not result in a change of the actual filing date. Instead, there arose a legal fiction that the priority period had been observed, even though the filing date was actually later than that period's expiry date.

In **T 382/94** (OJ 1998, 24), the claims and description had been filed in German, but the drawings contained text matter in English. The board held that the EPC 1973 did not make the accordance of a filing date dependent on any text matter in the drawings being in a language in accordance with Art. 14(1) or (2) EPC 1973. If the drawings were filed in full on the date of filing, they formed part of the application as filed, even if they contained text matter in an official language other than the language of proceedings. The language requirements for a European patent application were amended under the EPC 2000, see Chapter III.F.1 "Language of filing and date of filing of a European patent application".

In **J 1/12** the appellant had filed a European patent application with the UK Patent Office with the same documents as those underlying the later application before the EPO. The application in the UK never reached the EPO. The Legal Board therefore had to consider whether, contrary to Art. 80 EPC 1973, it was justified to assign the application the earlier filing date (Art. 75(1)(b) EPC 1973). Art. 77(2) EPC 1973 provides that European patent applications filed within the member states are to be forwarded to the EPO within six weeks after filing. Art. 77(5) EPC 1973 supplements this provision by providing that European patent applications which do not reach the EPO before the specified time limit are deemed to be withdrawn. It followed that the application filed with the UK Patent Office was deemed to have been withdrawn. No re-establishment of rights is provided for. In such a situation the legislator expressly provides in the last sentence of Art. 77(5) EPC 1973 for the refund of the filing, search and designation fees. In addition, Art. 135(1)(a) and 136(2) EPC provide facilities for a conversion of the lost European patent application into national patent applications. It followed that the legislator of the EPC clearly recognised the harsh consequences of Art. 77(5) EPC 1973 for an applicant. But, having recognised the problem, the legislator did not provide the applicant with any means to regain the lost application.

## 5.2. Identity of the applicant

### 5.2.1 Requirement for information identifying the applicant (Rule 40(1)(b) EPC)

R. 40(1)(b) EPC provides that the date of filing of a European patent shall be the date on which the documents filed by the applicant contain, inter alia, 'information identifying the applicant or the allowing the applicant to be contacted'. (The latter option was added in the EPC 2000). The requirement for information identifying the applicant was previously contained in Art. 80(c) EPC 1973.

In **J 25/86** (OJ 1987, 475) it was pointed out that the requirement under Art. 80(c) EPC 1973 for "information identifying the applicant" was to be considered as having been met whenever it was possible to establish beyond reasonable doubt the identity of the applicant on the basis of all data contained in the documents filed by the applicant or his representative.

As noted in this chapter IV.A.4, under Art. 60(3) EPC the EPO assumes the applicant to be entitled to the European patent.

In **T 948/10** the EPO was wrongly informed that the applicant company's name had changed, and amended it accordingly. As neither the appellant's representative nor the examining division/Client Data Registration department had had any reason to believe that the party to the proceedings was anyone other than the original applicant, the board found that this error did not invalidate the procedural steps taken taken by the applicant before the first-instance departments ("falsa demonstratio non nocet"), and that the EPO should correct the mistake itself.

### 5.2.2 Correction of designation of applicant (Rule 139 EPC)

Under R. 139 EPC linguistic errors, errors of transcription and mistakes in any document filed with the EPO may be corrected on request. The decisions below consider the application of the EPC 1973 (R. 88 EPC 1973, which was not amended in substance). The provisions concerning identification of the applicant have been amended (see in this chapter IV.A.5.2.1).

In **J 7/80** (OJ 1981, 137), the board held that if the wrong applicant was named in an application and the wrong applicant and the correct applicant were both companies forming part of the same group of companies then the mistake could be corrected under R. 88 EPC 1973, if there was sufficient evidence to support the request for correction.

Following **J 7/80** (OJ 1981, 137) it was held in **J 18/93** (OJ 1997, 326), **J 17/96** and **J 31/96** that a correction substituting the name of the applicant was allowable under R. 88 EPC 1973 if there was sufficient evidence to support the request for correction. This rule was not in conflict with the provisions of Art. 61 EPC 1973, which concerned ownership disputes. R. 88, second sentence, EPC 1973 was not applicable. It was only necessary to verify whether there was sufficient evidence to support the request under R. 88 EPC 1973 for correction of the applicant's name; where the correction of a mistake

was requested and R. 88, second sentence, EPC 1973 was not applicable, the EPO had to be satisfied that a mistake had been made, what the mistake was and what the correction should be. In **J 8/80** (OJ 1980, 293), the board added that, in order to avoid any abuse, the burden of proving the facts had to be a heavy one.

A correction under R. 88, first sentence, EPC 1973 was retroactive to the original date of filing (**J 3/91**, OJ 1994, 365; **J 2/92**, OJ 1994, 375) and the application was restored to the form which it should have taken on the filing date if the error had not been made (**J 4/85**, OJ 1986, 205).

In **J 17/97** and **J 18/97** the representative had filed the parent application in the name of Int. Inc., but the divisional application in the name of S.medica. Due to the different identities of the applicants, the Receiving Section had refused to treat the application as a divisional application. In its decisions, the Legal Board did not allow the request for correction to replace the name of the applicant of the divisional application with the name of the applicant of the parent application pursuant to R. 88 EPC 1973 because the appellant had not proved that the divisional application had been filed in error by S.medica and should have been filed by Int. Inc.

### **5.3. Legal effect of accordance of a date of filing**

According to **T 1409/05** (OJ 2007, 113) a legally effective - in the terminology of the EPC, an accorded - filing date had several different legal effects. Amongst others:

(a) it marked the beginning of the pendency of a European patent application; Art. 80 EPC 1973 in conjunction with Art. 90(1)(a), 90(2) EPC 1973;

(b) it marked the notional date on which the applicant formally claimed to have deposited his invention with the EPO; and

(c) the filing date defined the state of the art and hence the extent of search and examination, for the purposes of Art. 54(2) and (3) EPC 1973.

The legal effects (a) to (c) ensued immediately when the filing date was accorded. Further legal effects of the filing date unfolded upon publication of the patent application:

(d) It marked the date which counted as the filing date so as to affect other applications for the purposes of Art. 54(3) EPC 1973.

The filing date unfolded still further legal effects on grant:

(e) it marked the starting date for the granted protection envisaged by Art. 64(1) EPC 1973, cf Art. 63(1) EPC 1973; and

(f) the filing date marked the legally confirmed date by which the applicant had deposited the invention for which protection was granted, and as such, recognised the claim of (b).

The board went on to point out that the difference between the legally relevant dates (a) to (f) was clearly shown by the fact that logically they did not need to coincide, although this was the core assumption in the patent granting system established by the EPC.

A filing date for a "normal" application was accorded as soon as the requirements of Art. 80 EPC 1973 were met - apart from other formal issues, such as language etc. If an application was deemed to have been accorded a filing date, an application came into existence. In other words, there was a pending application, and the legal effects (a) to (c) above were obtained.

Conversely, a pending application had always to be deemed to have been accorded a filing date. It was true that the EPC used the notion of an application that was not deemed to have been accorded a filing date; cf Art. 90(2) EPC 1973. However, such a purported application would legally never be pending, as there would be no application; cf Art. 90(2) EPC. Such a purported application was neither searched nor examined, and neither filing, search, examination nor annual fees needed to be paid thereafter. A purported application which did not have a filing date simply did not exist as an application *sensu stricto* for the purposes of the EPC. This showed that a pending application without a filing date would be in a legal limbo. In other words, the notion of according a filing date was synonymous with the legal recognition of the existence of a pending European patent application.

The board in **T 382/94** (OJ 1998, 24) found that the accordance of a date of filing could by its very nature relate only to the **whole** of the application documents filed in accordance with Art. 80 EPC 1973. The EPC 1973 did not contain any provision which prescribed that the filing date could be accorded to only a part of these documents. As a result, according to Art. 123(2) EPC the limits for changing or correcting the parts of an application affecting the disclosure (ie the description, claims and drawings) were defined by "what a skilled person would derive ... from the whole of these documents as filed" (**G 3/89** (OJ 1993, 117)). The content of the European patent application as filed was established with the description, claims and, where appropriate, the drawings (following **G 2/95**, OJ 1996, 555).

#### **5.4. Subsequent filing of missing parts of the description or missing drawings (Rule 56 EPC)**

##### 5.4.1 Legal provisions

If the examination under Art. 90 EPC to determine whether the application satisfies the requirements for the accordance of a date of filing reveals that parts of the description, or drawings, appear to be missing, the EPO invites the applicant to file the missing parts within two months (R. 56(1) EPC). The rule's counterpart under the EPC 1973, R. 43 EPC 1973 referred only to missing drawings. The reference to missing parts of the description was added in the EPC 2000. Thus, in **J 7/97**, under the EPC 1973, where a European patent application had been filed with the EPO by fax, but one page of the description was missing, this was not considered an 'obvious error' and a filing date was granted for the application but omitting the page which was not faxed.

Where the applicant files missing parts of the description or missing drawings within two months of the date of filing or of a communication by the EPO inviting him to file the missing parts, the application is re-dated to the date on which the missing parts were filed. However, if the application claims priority, the missing parts of the description or the missing drawings are completely contained in the earlier application and all the requirements of R. 56(3) EPC are fulfilled, the application is not re-dated but retains the date on which the requirements laid down in R. 40(1) EPC were fulfilled (R. 56(3) EPC).

R. 56 EPC applies only to applications filed after the entry into force of EPC 2000 (**J 3/06**, OJ 2009, 170). According to the Legal Board, applications filed before 13 December 2007 can be seen to be subject to EPC 2000 as regards the applicability of the Implementing Regulations when the article corresponding to the rule in question also applies to patent applications filed prior to 13 December 2007 under Article 1 of the Administrative Council's decision of 28 June 2001. However, a rule in the Implementing Regulations can be assumed to apply to a particular EPC 2000 article when it puts a more detailed construction on that article, in keeping with the purpose of "implementing" the EPC. This is not true of the relationship between Art. 90 and R. 56 EPC because R. 56 EPC does not elucidate Art. 90 EPC. In the context of the system as a whole, R. 56 EPC relates to Art. 80 EPC (filing date), which is not in the catalogue of provisions stated to be also applicable to pending procedures as soon as EPC 2000 was to enter into force. Consequently, the rules relating to it do not apply either.

In **T 2166/10** the patent proprietor filed an appeal against the decision of the opposition division revoking his patent, which had been granted on the basis of a Euro-PCT application. Some of the pages of the description had been missing from the original application and the opposition division held that only the originally filed pages were entitled to the international filing date. The subject-matter as granted consequently extended beyond the content of the application as filed.

In the board's judgment, there was no doubt that the preliminary examination and the patent in suit were partly based on new description pages which had been submitted in the course of the international preliminary examination procedure by way of amendment and which were missing from the application as originally filed. The applicant had never raised the issue of the missing pages or requested a correction of the filing date (cf. **J 3/00**). Nor did the applicant subsequently file a request for correction of an error in the decision to grant. The board therefore concluded that the opposition division was correct when it held that the application as filed therefore did not include the missing pages of the description.

#### 5.4.2 Interpretation of Rule 56 EPC

According to **J 27/10**, the same interpretation is to be given to the term "parts of the description ... appear to be missing" in R. 56(1), first sentence, EPC as to the term "missing parts of the description" in the subsequent paragraphs of R. 56 EPC for deciding if a part is missing from the description. The term "description" in "missing parts of the description" in R. 56 EPC refers to the description which was originally filed in order to obtain a filing date and not to any other description. The incomplete originally

filed description is to be completed by the missing parts which must be added to the already filed text of the description. Thus an interpretation of R. 56 EPC that some, or all, of the description that was originally filed in order to obtain a filing date could be amended, replaced or deleted is incorrect.

In **J 15/12** the board made it clear, with reference to **J 27/10**, that R. 56 EPC could also not be used to replace drawings. R. 56(1), first sentence, EPC was confined to drawings referred to in the description or claims but which appeared to be missing. In **J 12/14** the board stated that the filing of drawings where the re-production of the figures is of low visual quality cannot be remedied by R. 56 EPC.

In **J 2/12** the Legal Board found that where (a) the description as filed with an application includes references to numbered drawings and (b) drawings with corresponding numbering are also filed with the application, different drawings may nevertheless be filed later under R. 56 EPC as "missing drawings" if it can be established without having to apply technical knowledge that the drawings originally filed with the application are not the drawings referred to in the description and that the later-filed drawings are the drawings referred to in the description. In the case at issue, it was immediately apparent that the figures referred to in the description were not the figures as originally filed. In other cases it might be that such a conclusion could not be reached so readily, but as it was so clear in this case, the Legal Board did not have to consider where in general the dividing line should be drawn.

#### 5.4.3 Whether to apply R. 56 EPC or R. 139 EPC

The decisions below consider the application of the equivalent rules under the EPC 1973;

- R. 43 EPC 1973 (now R. 56 EPC), which, however, referred only to missing drawings. The reference to missing parts of the description was added in the EPC 2000; and
- R. 88 EPC 1973 (now R. 139 EPC), which provides, inter alia, that mistakes in any document filed with the EPO may be corrected on request. However, if the request concerns, inter alia, the description or drawings, the correction must be obvious in the sense that it is immediately evident that nothing else would have been intended than what is offered as the correction.

In **J 19/80** (OJ 1981, 65) it was held that if a **part** of a drawing was missing, the missing part was not to be considered as a missing drawing for the purposes of R. 43 EPC 1973; the whole figure was to be considered as an incorrect drawing. The correction of drawings was dealt with in R. 88 EPC 1973. Moreover, the evidence required to support a request for correction of a drawing by adding a missing part had to be unambiguous. However, according to **G 3/89** and **G 11/91** (OJ 1993, 117 and 125), the parts of a European patent application or of a European patent relating to the disclosure (the description, claims and drawings) might be corrected under R. 88, second sentence, EPC 1973 only within the limits of what a skilled person would have derived directly and unambiguously, using common general knowledge, and seen objectively

and relative to the date of filing, from the whole of these documents as filed. Such a correction was of a strictly declaratory nature and thus did not infringe the prohibition of extension under Art. 123(2) EPC 1973. Documents not meeting this condition might not be used for a correction under R. 88, second sentence, EPC 1973 even if they were filed together with the European patent application. These included, inter alia, priority documents, the abstract and the like.

In the explanatory remarks to EPC 2000 in CA/PL/06, it was explained that R. 56(1) EPC is not intended to apply to missing **parts** of the drawings. If the Receiving Section notes that a part of a drawing is missing, it will treat the application, for the purpose of R. 56 EPC, as if the complete drawing were missing and will invite the applicant to re-submit the complete drawing.

According to **J 1/82** (OJ 1982, 293), if a sheet including two complete figures was late-filed, these could not be considered incorrect drawings for the purposes of R. 88 EPC 1973 - the late filing of one or more complete figures was dealt with in R. 43 EPC 1973.

## **5.5. Corrections under Rule 139 EPC**

### 5.5.1 Legal provisions

Under R. 139 EPC (formerly R. 88 EPC 1973), mistakes in any document filed with the EPO may be corrected on request. However, if the request for such correction concerns the description, claims or drawings, the correction must be obvious in the sense that it is immediately evident that nothing else would have been intended than what is offered as the correction. Re corrections under R. 139, second sentence, EPC see also Chapter II.E.4 "Correction of errors in the description, claims and drawings – Rule 139 EPC".

### 5.5.2 No replacement of invention

The decisions below are mainly about applying R. 88 EPC 1973, which however has not substantively changed; in R. 139 EPC, only minor editorial amendments to all three language versions have been made.

In **G 2/95** (OJ 1996, 555) the Enlarged Board held that the complete documents forming a European patent application, that is the description, claims and drawings, cannot be replaced by way of a correction under R. 88 EPC by other documents which the applicants had intended to file with their request for grant (overruling **T 726/93**, OJ 1995, 478). The interpretation of R. 88 EPC 1973 had to be in accord with Art. 123(2) EPC 1973. This meant that a correction under R. 88 EPC 1973 was thus bound by Art. 123(2) EPC 1973, in so far as it related to the content of the European patent application as filed (see **G 3/89** (OJ 1993, 117)). Such a correction could therefore be made only within the limits of what a skilled person would derive directly and unambiguously, using common general knowledge and seen objectively and relative to

the date of filing, from the whole of the documents forming the content of the European patent application (referring to **G 3/89**).

The content of the European patent application was formed by the parts of the application which determined the disclosure of the invention, namely the description, claims and drawings (referring to **G 3/89**). As a result of the prohibition of extension under Art. 123(2) EPC 1973, documents other than the description, claims and drawings could only be used in so far as they were sufficient for proving the common general knowledge on the date of filing (referring to **G 3/89**). On the other hand, documents not meeting this condition could not be used for a correction even if they were filed together with the European patent application. These included, inter alia, priority documents, the abstract and the like (referring to **G 3/89**). See also **J 5/06**.

In decision **J 21/94**, taken on 20.1.1997 and terminating the appeal proceedings following the referral to the Enlarged Board of Appeal dealt with in **G 2/95** (OJ 1996, 555), the Legal Board concluded that the originally disclosed invention B could be accorded a filing date even if there were contradictions between the request for grant (which related to invention A) and the application documents (which disclosed invention B). If a further invention (here invention A) was disclosed during grant proceedings, it could not be given a filing date unless it was clear that protection for this invention was now sought.

In **J 5/06**, the board referred to **J 21/94** and stated, if an application is accorded a date of filing pursuant to Art. 80 EPC 1973, the technical content of the application is definitively established (**G 2/95**). Exchanging this technical content with another one is a technical modification. The application of the strict requirements of either Art. 123(2) or R. 88 EPC 1973, second sentence, is not limited to those circumstances when a minor part of a complete description needs to be interpreted relative to the rest, but these requirements are applicable to any suggested amendment or correction. This means that the technical content of the application as filed cannot simply be discarded, even if it does not correspond to the intention of the applicant, but must be considered when deciding whether an amendment or correction is allowable or not. The intention of the applicant at the time of filing (or even later) is immaterial in establishing the technical content of a patent application.

In **J 16/13** the appellant requested correction of the wrongly filed description and claims under R. 139 EPC. The board stated that the skilled person would have immediately recognised the mismatch between the drawings and the other parts of the description. However, it was not "immediately evident that nothing else would have been intended than what is offered as the correction". R. 139 EPC required certainty as to the only correction possible; here, that was lacking. The board noted that the case before it was similar to **J 5/06**, in which it had been confirmed that the earlier case law (up to **T 726/93**) holding that R. 88 EPC 1973 had to be applied in the light of the applicant's intentions had clearly now been overturned (see **G 2/95**, **J 21/94**, **G 3/89**), and the request that the patent specification be corrected under R. 139 EPC was refused.

### 5.5.3 Extent of competence of the Receiving Section

R. 139 EPC, second sentence, (previously R. 88 EPC 1973) lays down as a condition for acceptance of a request for correction concerning a description, claims or drawings that a correction must be obvious in the sense that it is immediately evident that nothing else would have been intended than what is offered as the correction. This often requires a technical examination of the file, so that the question has arisen under R. 88 EPC 1973 whether the Receiving Section was competent to deal with the correction in such a case.

In decision **J 4/85** (OJ 1986, 205) the board made it clear that the duties of the Receiving Section did not include a technical examination of the file; it should not, therefore, take a decision on a request for correction necessitating such an examination, but should leave the request in abeyance until the file had been transferred to the examining division (likewise **J 5/12**).

However, in **J 33/89** (OJ 1991, 288) the board pointed out that the Receiving Section remained competent for decisions on requests for correction of drawings under R. 88, second sentence, EPC 1973 unless the request necessitated a technical examination. In **J 12/14** the board agreed, and decided that the question of what technical features the figures in the drawings showed with respect to the claimed invention was not part of the formal examination procedure before the Receiving Section.

In **J 5/01** the board decided that the wording of Art. 16 EPC 1973 and Art. 18 EPC 1973 as they stood left no room for an interpretation according to which the responsibility for a European patent application could be split between the Receiving Section and the examining division. The clear and mutually exclusive allocation of this responsibility in the EPC prevailed over considerations of procedural or cost economy (likewise **T 2411/10**; contrary to **J 8/82**, OJ 1984, 155). Thus, relying on the point in time at which a request for correction was made rather than on the two acts mentioned in Art. 16 EPC 1973 (request for examination or indication under Art. 96(1) EPC 1973) would be *contra legem*.

The board pointed out that corrections under R. 88 EPC 1973 were not a matter which formed part of the examination on filing or of the examination as to formal requirements (Art. 90 and 91 EPC 1973). Rather, the wish or the need for a correction might arise during the whole grant procedure and even afterwards, e.g. during opposition proceedings. For corrections necessitating a technical examination see **J 4/85**, OJ 1986, 205.

### 5.6. Change of date of filing

The Legal Board of Appeal held in **J 14/90** (OJ 1992, 505) that re-dating an application could not be justified on the grounds that the later date would permit the granting of a European patent for a new Contracting State. The designation of a state formed part of the request for grant of a patent, and hence belonged to the documents making up a patent application, which meant that in principle there was no reason why the filing date of an application should not be changed to the date on which a further state was

designated. What was lacking were the necessary legislative provisions which would make this possible. In the case before the board there were no special circumstances, as had been the case with decision **J 5/89**. On the contrary the public interest and the need for consistency ruled out a re-dating.

In **J 5/89** the Legal Board of Appeal had stated that it was clear that Art. 80 EPC set a date **before** which a date of filing could not be accorded to an application, but it did not follow that an application could not be given a **later** filing date with the consent of the applicant, provided that there was no detriment to the public interest, in circumstances in which the applicant had been **misled** by the EPO into not filing a new application entitled to that later filing date. See also Chapter III.A. "The principle of the protection of legitimate expectations".

**J 18/90** (OJ 1992, 511) followed **J 14/90** (OJ 1992, 505) in holding that the express designation of a new Contracting State in a European patent application shortly before entry into force of the EPC for that state was no justification for deferring the filing date until the date of entry into force. However, the Legal Board added in **J 18/90** that such express designation might, after checking with the applicant, be interpreted as meaning that the applicant did not want a filing date earlier than the date on which the EPC entered into force for the state concerned.

In **T 683/06** the appeal had been lodged against a decision of the examining division to refuse a divisional application. The parent application had been sent by fax during the night. Some of the documents had arrived before midnight, some of them after midnight. According to the examining division's contested decision, the divisional application extended beyond the content of the parent application (Art. 76(1) EPC) because the claims in the divisional application were supported only by those parts of the documents for the parent application which had arrived by fax after midnight and in the light of the applicant's decision in favour of the earlier filing date did not belong to the parent application.

In its main request, the appellant sought to have the date after midnight recognised as the parent application's date of filing. However, the EPC makes no provision for a filing date once fixed to be changed subsequently. Only R. 56 EPC enables the filing date to be moved back if missing drawings or parts of the description are filed later. The correction of errors in filed documents in accordance with R. 139 EPC may also result in a change of filing date. But the case in point involved no such correction. Nor was a correction possible under R. 140 EPC.

## **6. Examination of formal requirements**

Under Art. 90(3) EPC, if the patent application is accorded a date of filing, the EPO examines, in accordance with the Implementing Regulations, whether the following requirements have been satisfied:

- Art. 14 EPC, concerning the language of the patent application (see Chapter III.F.1);

- Art. 78 EPC, concerning the requirements of a European patent application (see in this chapter IV.A.6.1);

- Art. 81 EPC, concerning the designation of the inventor (see in this chapter IV.A.6.2);

as well as any requirements laid down in the Implementing Regulations, and, where applicable;

- Art. 88 EPC, concerning claiming priority (see in this chapter IV.A.8);

- Art. 133 EPC, concerning general principles of representation (see Chapter III.R);

- any other requirement laid down in the Implementing Regulations (see in this chapter IV.A.6.3).

Under Art. 90(4) EPC, where the EPO notes that there are deficiencies which may be corrected, it shall give the applicant an opportunity to correct them. If any deficiency noted under Art. 90(3) EPC is not corrected, the patent application shall be refused unless the EPC provides a different legal consequence (Art. 90(5) EPC).

In **J 18/08** the board stated that Art. 90(5) EPC provides that if any deficiency noted in the examination under paragraph 3 is not corrected, the European patent application shall be refused unless a different legal consequence is provided by the Convention. From this it follows that if an appeal is filed against such a refusal, the board has to examine whether the deficiency noted has been corrected or not. The present case was different from the situation where the non-observance of a time limit automatically leads to the application being deemed to be withdrawn. In such a case the legal consequence automatically ensues when an act required within a specific time limit is not performed, without any decision to be taken concerning the refusal of the application (R. 112 EPC). By contrast, if the application is refused under Art. 90(5) EPC the deficiency on which the decision is based can be corrected at the appeal stage.

### **6.1. Requirements of a European patent application (Article 78 EPC)**

Under Art. 78(1) EPC a European patent application shall contain:

- a request for the grant of a European patent;
- a description of the invention;
- one or more claims;
- any drawings referred to in the description or the claims;
- an abstract

In addition it shall satisfy the requirements laid down in the Implementing Regulations.

Under Art. 78(2) EPC a European patent application is subject to the payment of the filing fee and the search fee. If the filing fee or the search fee is not paid in due time, the application shall be deemed to be withdrawn.

In **J 13/04**, the patent application had been validly filed with the French Patent Office INPI. The board observed that, under Art. 78(2) EPC 1973, the time limit for payment of the filing and search fees in the case at hand could not be determined on the basis of either the date on which the application was forwarded to the EPO or the date on which the receipt had been issued under R. 24(2) EPC 1973 but rather only on the basis of the date on which the application had been received by the competent national authority, provided that the date of that filing was also the date of filing within the meaning of Art. 80 EPC 1973.

## 6.2. Designation of the inventor

The European patent application shall designate the inventor. If the applicant is not the inventor or is not the sole inventor, the designation shall contain a statement indicating the origin of the right to the European patent (Art. 81 EPC).

A European patent application must also contain a request for the grant of a European patent (Art. 78(1) EPC). Under R. 19 EPC, the request for grant of a European patent shall contain the designation of the inventor. If the designation of the inventor is not made in accordance with this Rule, the EPO shall inform the applicant under R. 60(1) EPC that the application will be refused unless the designation is made within sixteen months of the date of filing of the application, or, if priority is claimed, of the date of priority. This period is deemed to have been observed if the information is communicated before completion of the technical preparations for the publication of the patent application.

R. 19(1) EPC requires consent to the rectification of a designation of inventor to be given by a "wrongly designated" person. In **J 8/82** (OJ 1984, 155), the Legal Board of Appeal held that a person already named whose name is not to be cancelled from the designation is not a "wrongly designated" person within the meaning of the Rule and his consent to the addition of the name of another person is not required. (The Legal Board of Appeal's finding in this decision on the allocation of responsibility between the Receiving Section and Examining Division for making a decision concerning such requests was overruled in **J 5/01**, see in this chapter IV.A.5.5.3).

The issue which arose in **J 1/10** was whether the legal position regarding designation of the inventor is changed by early publication of the European patent application at the applicant's request under Art. 93(1)(b) EPC, which can mean that the European patent application as published does not tell the public who the inventor is. In the board's judgment, early publication under Art. 93(1)(b) EPC did not affect the time period under R. 60(1) EPC for filing the designation of the inventor. If it did, it would shorten the 16-month period for filing that designation. However, there was no legal basis for assuming any connection between early publication and a reduction in the 16-month period. Nor

could this be inferred from R. 60(1) EPC or the provisions governing the procedure for rectifying deficiencies (Art. 90(3) and (4) EPC).

### **6.3. Any other requirement laid down in the Implementing Regulations**

#### **6.3.1 General provisions governing the presentation of application documents (Rule 49 EPC)**

General provisions governing the presentation of the application documents are to be found in R. 49 EPC. These include the requirement in R. 49(2) EPC that the documents making up the application shall be presented so as to allow electronic and direct reproduction in an unlimited number of copies. The application which was the subject of **J 4/09** was rejected by the Receiving Section on the ground that it was in breach of this provision. The Legal Board of Appeal disagreed, observing, first of all, that the fact that the drawings had become part of the EPO's electronic file and did not differ noticeably from the filed versions went against the receiving section's view.

It went on to say that it was not part of the examination as to formal requirements to consider what precisely could be gathered from the drawings. Rather, it was the applicant who determined the scope of disclosure by selecting the application documents and their form, so that their informative value was his responsibility. An analysis going beyond the points to be examined on filing under R. 46 and 49(1) to (9) and (12) EPC was impermissible. In particular, it was not permissible for improved drawings to result in a disclosure which could not be found in the original version of the application; nor could the applicant be compelled to change the drawings and so sacrifice a disclosure which, in his view, could only take this form.

## **7. Designation of states**

### **7.1. Legal provisions**

Under Art. 79(1) EPC **all** the contracting states which are party to the EPC at the time of filing of the patent application are deemed to be designated in the request for grant of a European patent. This is different from the situation under the EPC 1973, where contracting states had to be positively designated in the request for grant. This practice caused problems since, in principle, a later designation made after the filing date of the European patent application was inadmissible. Applicants continue to have the option of withdrawing designations pursuant to Art. 79(3) EPC.

Under Art. 79(2) EPC the designation of a contracting state **may** be subject to the payment of a designation fee (under the EPC 1973 it was stated, 'The designation of a Contracting State **shall** be subject to the payment of the designation fee.' - emphasis added). Since 1.4.2009, a flat designation fee has been payable for one or more contracting states designated (Art. 2(3) RFees).

The time limit for the payment of designation fees is within six months of the date on which the European Patent Bulletin mentions the publication of the European search report (R. 39 EPC, formerly Art. 79(2) EPC 1973).

The revised Art. 79 EPC is applicable to all European patent applications filed on or after 13.12.2007.

For case law on Art. 79(2) EPC 1973 (as in force until 30.6.1997), please refer to the "Case Law of the Boards of Appeal of the European Patent Edition", 5th Edition 2006, VII.A.4.1 "Article 79(2) EPC (old version)".

## **7.2. Effect of non-payment of the designation fee**

### 7.2.1 Deemed withdrawal

Since 1.4.2009 a single designation fee has been payable in respect of **all** the Contracting States of the EPC. R. 39 EPC in force from that date provides that the designation fee shall be paid within six months of the date on which the European Patent Bulletin mentions the publication of the European search report. Where the designation fee is not paid in due time or the designations of all the Contracting States are withdrawn, the European patent application shall be deemed to be withdrawn. Under the EPC 1973 the same time limit was to be found in Art. 79(2) EPC.

Under Art. 121 EPC, where a designation is deemed withdrawn for any contracting state in respect of which the designation fee has not been paid (R. 39(2) EPC), the applicant may now apply for further processing, unless he has waived his rights to receive a R. 112(1) EPC communication and to request further processing by crossing the appropriate box in the Request for grant form.

R. 39 EPC as amended from 1.4.2009 applies to European patent applications filed on or after that date, as well as international applications entering the regional phase on or after that date.

### 7.2.2 Designation of states in divisional applications

Art. 76(2) EPC 1973 stipulated that a European divisional application could not designate contracting states which were not designated in the earlier application.

In **G 4/98** (OJ 2001, 131), the Enlarged Board of Appeal held, overruling **J 22/95** (OJ 1998, 569), that, without prejudice to Art. 67(4) EPC 1973, the designation of a contracting state party to the EPC 1973 in a European patent application did not retroactively lose its legal effect and was not deemed never to have taken place if the relevant designation fee had not been paid within the applicable time limit.

The Enlarged Board of Appeal further held that since in its opinion no general retroactive effect was attached to the fact that a designation was deemed to be withdrawn, the deemed withdrawal necessarily took effect upon expiry of the time limits mentioned in

Art. 79(2) EPC 1973 and R. 15(2), 25(2) and 107(1) EPC 1973, as applicable, and not upon expiry of the period of grace provided by R. 85a EPC 1973.

Art. 76(2) EPC has therefore been amended to ensure that only those contracting states which remain designated in the earlier application at the time of filing of a divisional application are deemed to be designated in the divisional application. (Similarly, the EPO can only act as the "designated Office" for states designated in an international application in respect of which the EPC was in force on the date on which the international application was filed; **J 30/90**, OJ 1992, 516).

#### 7.2.3 No correction of non-payment of fee under R. 88 EPC 1973

In **J 21/84** (OJ 1986, 75) it was held that if the designation fee for a state was paid, neither within the time limit under Art. 79(2) EPC 1973 nor within the period of grace under R. 85a EPC 1973 together with the surcharge, such failure could not be corrected on the basis of and in conjunction with the correction of an error according to R. 88 EPC 1973.

Concerning the indication of the purpose of fee amounts paid in respect of designation fees under the earlier law, see "Case Law of the Boards of Appeal of the EPO", 6th edition 2010, VI.F.2.4 "Designation fees".

### 7.3. Correction of designation of states (Rule 139 EPC)

Under R. 139 EPC linguistic errors, errors of transcription and mistakes in any document filed with the EPO may be corrected on request. The decisions below consider the application of the EPC 1973 (R. 88 EPC 1973, which was not amended in substance). However, under Art. 79(1) EPC **all** the contracting states which are party to the EPC at the time of filing of the patent application are now deemed to be designated in the request for grant of a European patent. Applicants continue to have the option of withdrawing designations pursuant to Art. 79(3) EPC (see in this chapter IV.A.7.1).

According to **J 10/87** (OJ 1989, 323) a request for retraction of a withdrawal of the designation of a Contracting State filed after publication of the patent application may have been allowable under R. 88 EPC 1973 in appropriate circumstances, in particular if;

- (a) the public had not been officially notified of the withdrawal by the EPO at the time the retraction of the withdrawal was applied for;
- (b) the erroneous withdrawal was due to an excusable oversight;
- (c) the requested correction did not result in a substantial delay of the proceedings; and
- (d) the EPO was satisfied that the interests of third parties who may possibly have taken notice of the withdrawal by inspection of the file are adequately protected.

**J 17/99** explained that with respect to corrections of designations in Euro-PCT applications, the same principles applied as for Euro-direct applications (see also Chapter VI. "The EPO acting as a PCT authority").

**J 27/96** concerned a Euro-PCT application which originally designated all the contracting states for a European patent, but on entry into the regional phase only designated and paid fees for ten. The board acknowledged that correction of a mistake pursuant to R. 88 EPC 1973 by adding the designation of a state had in principle been allowed by the Legal Board of Appeal (see **J 3/81**, OJ 1982, 100). However, it could remain undecided whether R. 88 EPC 1973 could have been applied to the designations purported to be missing, as the lack of fee payment in due time was not a mistake that could be corrected under R. 88 EPC 1973 and was therefore a failure which could not be remedied (referring to **J 21/84**, OJ 1986, 75). Nor could the appellant's auxiliary request to replace expressly designated states with other non-designated states succeed - the designated states were not designated erroneously - rather the error lay in the omission of the non-designated states. Moreover, were there a retroactive effect of the correction, this did not mean that the applicant would be reinstated into the procedural phase when designations had to be made and fees paid or that, in consequence, the whole procedure in that phase would be available to him again. Correction of a mistake was an isolated procedural measure and not a case of re-establishment into a procedural phase as a whole.

In **J 3/01** the Legal Board of Appeal was concerned with the same problem, in that the appellant's request was aimed at a reinstatement into an earlier procedural phase by means of a correction under R. 88 EPC 1973. The board held that correction under R. 88 EPC 1973 did not reverse the effect of decisions already taken on the basis of the uncorrected document and did not re-open a procedural phase already terminated or a time limit already expired. In other words, a procedural loss of right only indirectly caused by the incorrect document would not be remedied by a later correction of the document pursuant to R. 88 EPC 1973. This principle also characterised the functional and essential difference between a correction under R. 88 EPC 1973 on the one hand and *restitutio in integrum* pursuant to Art. 122 EPC 1973 on the other hand (see also **J 25/01**). The board concluded that correction under R. 88 EPC 1973, to include designation of the UK following failure to pay the designation fee, was not allowable, as it would be in breach of Art. 122(5) EPC 1973, according to which re-establishment into periods for payment of designation fees was not allowable.

In **J 16/08** the request for correction of the designation of states was allowed in the unusual circumstances of the case. Following the case law summarised in **J 7/90** (OJ 1993, 133) and endorsed in **J 6/02**, the board applied the three conditions to be met by such a request for correction in order for it to be allowable - firstly, that the error was an excusable oversight; secondly, that the request for correction was filed without undue delay upon discovery of the error, and thirdly, that the request for correction was, in the public interest, made early enough to enable publication of a warning with the European patent application. No such warning was required in the circumstances of this case, as the application had erroneously been published showing all contracting states as designated. Third parties were therefore not prejudiced by the correction, since no

publication had ever indicated that the territorial scope of the invention was limited to two contracting states.

## 8. Priority

### 8.1. Filing of priority documents

An applicant desiring to take advantage of the priority of a previous application must file a declaration of priority and any other document required, in accordance with the Implementing Regulations (Art. 88 EPC). Under R. 52(2) EPC, a declaration of priority shall preferably be made on filing the European patent application, but it may still be made with sixteen months of the earliest priority date claimed. This is a significant relaxation of the requirements as compared to R. 38(2) EPC 1973, under which at least the date and the state of the previous application had to be indicated on filing.

Similarly, R. 53 EPC (R. 38(3) EPC 1973) provides that an applicant claiming priority shall file a copy of the previous application within sixteen months of the earliest priority date claimed.

In **J 1/80** (OJ 1980, 289) it was stated that as R. 38(3) EPC 1973 permitted an applicant to file certified copies of the priority documents at any time before the end of the sixteenth month after the date of priority, there was only a deficiency which he must be given an invitation to correct if the priority documents had not been filed at the end of the period.

### 8.2. Correction of priority declarations

#### 8.2.1 Introduction

Under the EPC 1973, the correction of priority declarations was allowed under R. 88 EPC 1973. The possibility to correct the declaration of priority was expressly introduced into the EPC 200 in R. 52(3) EPC.

#### 8.2.2 Correction of priority declarations under R. 88 EPC 1973

##### a) Requirement for mistake to have been made

Under the EPC 1973, the Legal Board allowed correction of state designations under R. 88, first sentence, EPC 1973 (now R. 139 EPC), early on (**J 8/80**, OJ 1980, 293; **J 12/80**, OJ 1981, 143; **J 3/81**, OJ 1982, 100; **J 21/84**, OJ 1986, 75). Shortly afterwards the rather strict principles developed in these decisions were also applied in cases where correction of priority declarations was at stake. Although a mistake correctable under R. 88, first sentence, EPC 1973 could be an incorrect statement or the result of an omission, all the previous cases related to omitted priority declarations (**J 3/82**, OJ 1983, 171; **J 4/82**, OJ 1982, 385; **J 14/82**, OJ 1983, 121; **J 11/89** and **J 7/90**, OJ 1993, 133).

In the four decisions **J 3/91** (OJ 1994, 365), **J 6/91** (OJ 1994, 349), **J 9/91** and **J 2/92** (OJ 1994, 375), the Legal Board refined the principles to be applied to corrections of priority declarations. In **J 6/91** it analysed and summarised the previous case law, pointing out that the applicant had to prove a **mistake**, i.e. that the document filed with the EPO did not express the true intention of the person on whose behalf it was filed. In the earlier decisions the **burden of proof** on the applicant was defined as a heavy one. In **J 9/91**, however, the board took the view that the omission of a priority declaration would, in nearly every case, be an error. Thus, as a general rule, there was no need in cases of this kind to require special evidence to discharge the burden on the applicant of proving that a mistake had been made.

b) Time limit for request for correction

Despite the fact that R. 88, first sentence, EPC 1973 allowed correction without any time bar, the Legal Board followed the established case law requiring a request for correction of a priority claim to be made sufficiently early for a warning to be included in the publication of the application (**J 3/82**, OJ 1983, 171; **J 4/82**, OJ 1982, 385; **J 14/82**, OJ 1983, 121). This principle was upheld because the EPO, when exercising its discretionary power under R. 88, first sentence, EPC 1973 had to balance the applicant's interest in gaining optimum protection and a third party's interest in maintaining legal security and, in particular, in ensuring that the published application data were correct.

The board in **J 6/91** noticed, however, that the previous case law in special circumstances already allowed the correction even without such a warning:

(i) if the EPO was partly responsible for the fact that no warning was published (**J 12/80**, OJ 1981, 143) and/or

(ii) if the interest of the public was not seriously affected because

- the mistake was obvious (in this sense, implicitly, **J 8/80**, OJ 1989, 293);

- under certain circumstances, where only a second or further priority was added (**J 4/82**, OJ 1982, 385; **J 14/82**, OJ 1983, 121; **J 11/89**);

- the public was otherwise informed about the full scope of protection sought by the applicant (**J 14/82**, OJ 1983, 121).

In **J 3/91**, **J 6/91** and **J 2/92** it was held that even after publication of a European patent application without a warning, the priority declaration could be corrected under R. 88, first sentence, EPC 1973 provided that there was an **obvious discrepancy** in the published application indicating that something was wrong. In such a case the interests of third parties were not adversely affected by the correction.

In **J 3/91** the board held that an experienced practitioner could have noticed the obvious discrepancy because the claimed Japanese priority date (31.12.1983) and the European

application date (3.1.1984) were close together and the Japanese file number was mentioned.

In **J 6/91** the international application in suit claiming priority from a US continuation-in-part application was itself presented as a continuation-in-part application and referred back to an earlier US application. In view of this and other special circumstances, the board allowed the addition of a (first) priority claim referring to the earlier US application.

In **J 2/92** the US priority date claimed for a PCT application was, owing to a clerical error, a Saturday when the USPTO was closed, instead of the previous Friday. The correct date was indicated on the priority document. Owing to a further clerical error in the request for transmittal of priority documents under R. 17.1(b) PCT (a typing error in the document number), the Receiving Office - in this case the USPTO - transmitted the wrong document to WIPO. The board allowed its replacement even after publication of the international application, adding, however, that this might not always be possible (see also **T 33/06**).

In the parallel cases **T 972/93** and **T 973/93** the examining division had refused a request for the priority date to be corrected. European patent application E1 claimed the priority of a French application F1, from which two French divisional applications F2 and F3 were filed within the priority year claiming the priority of the parent application. At issue in **T 972/93** and **T 973/93** were European applications E2 and E3, which claimed the priority of F2 and F3 respectively. In error however, the filing date of F2 and F3 was given as the priority date. This mistake was detected during examination proceedings, after E2 and E3 had been published with the wrong priority date, because E1 was discovered as a prior right within the meaning of Art. 54(3) EPC 1973 (Art. 54 EPC has been substantially amended - see Chapter I.C. "Novelty").

The board of appeal allowed the correction (following **J 6/91**, OJ 1994, 349), ruling that the mistake was apparent, because only eight months separated the filing date of E2 and E3 from the incorrect priority date, whereas the priority year was usually exploited to the full. The interests of third parties had not been adversely affected because the precautionary filing of two European divisional applications with respect to E1, which had the same content as F2 and F3, made it possible to gain protection for the subject-matters of E2 and E3 with the priority of F1.

On the other hand, in **J 7/94** (OJ 1995, 817) the board did not allow the correction. It held that the mere fact that an existing priority was not claimed could not justify adding this priority by correction. The correction of priority data, not requested sufficiently early for a warning to be included in the publication of the application, was only allowable if it was justified by special circumstances (confirming **J 6/91**, OJ 1994, 349). See also **T 796/94**.

In **J 11/92** (OJ 1995, 25) it was held that an incomplete priority declaration could be corrected, by the addition of an omitted priority in special circumstances, even after publication of the European patent application without a warning to the public that a request for correction had been made, provided that the public had been informed about the full scope of European patent protection sought, by way of a second European or

Euro-PCT patent application, filed as a precautionary measure by the applicant in due time (referring to **J 6/91**, OJ 1994, 349).

In **T 713/02** (OJ 2006, 267), the board held that the examination of a request for correction of priority data after the publication of the application was not to be restricted to that portion of the facts and circumstances which in a decision of a board of appeal in another case were considered not to preclude the correction. Therefore, in the case before the board, it could not be ignored that the requested correction by addition of an earlier priority date would eliminate from the state of the art pursuant to Art. 54(2) EPC 1973 a highly relevant document, which the applicant had previously de facto accepted as comprised in that state of the art (see, however, the Notice from the European Patent Office regarding decision **T 713/02** (OJ 2006, 293), according to which the EPO's departments of first instance do not, for the time being, follow the findings that no decisions, except where a total loss of rights should be remedied, may be taken in the applicant's favour prior to the decisions terminating the granting procedure).

### 8.2.3 Rule 52(3) EPC

New R. 52(3) EPC introduced the possibility to correct the declaration of priority. New R. 52(2) EPC and (3) EPC apply the time periods laid down in the PCT for the addition or correction of priority claims to Euro-direct applications, with the necessary terminological adjustments, in order to avoid treating Euro-PCT and Euro-direct applications differently. Pursuant to R. 52(3) EPC, an applicant may correct a declaration of priority within 'sixteen months from the earliest priority date claimed, or, where the correction would cause a change in the earliest priority date claimed, within sixteen months from the correct earliest priority date, whichever sixteen-month period expires first, provided that such correction may be submitted until the expiry of four months from the date of filing accorded to the European patent application'. However, for easy publication, a declaration of priority may not be made or corrected after a request under Art. 93(1)(b) EPC has been filed (R. 52(4) EPC).

## 9. Deemed withdrawal of the application (Rule 100(3) EPC)

R. 100 EPC concerns the examination of appeals. If the applicant fails to reply in due time to an invitation under R. 100(2) EPC, the European patent application is deemed to be withdrawn under R. 100(3) EPC. These provisions were previously contained in Art. 110(2) and (3) EPC 1973 respectively.

The Legal Board held in **J 29/94** (OJ 1998, 147) that if the appellants failed to reply in due time to an invitation under Art. 110(3) EPC 1973, the European patent application was deemed withdrawn, even if the appeal related to formal points, as the effect of the appeal, namely that the board of appeal was now competent for the case, applied to the entire application (see Chapter IV.E.1.2 "Devolutive effect of appeal").

## 10. Publication of the application

Art. 93 EPC concerns the publication of the European patent application, which should take place as soon as possible after the expiry of a period of eighteen months from the date of filing, or, if priority has been claimed, from the date of priority, unless the applicant requests earlier publication. Under R. 67(1) EPC (R. 48 EPC 1973), the President of the EPO shall determine when the technical preparations for publication of the patent application are deemed to have been completed. The application shall not be published if it has been finally refused or withdrawn or is deemed to be withdrawn before the termination of the technical preparations for publication (R. 67(2) EPC).

In **J 5/81** (OJ 1982, 155) it was stated that the key date for completion of the technical preparations for publication under Art. 93 EPC 1973 specifiable pursuant to R. 48(1) EPC 1973 could be said to give the applicant a certain minimum period of time within which his withdrawal of the application also prevented its publication. If the application was not withdrawn until after the key date, the applicant could no longer rely on its not being published. Nevertheless, the EPO was allowed by law to prevent publication, at its own discretion.

**B. Examination procedure**

1.	Stage before substantive examination	862
1.1.	Amendments made by the applicant of his own volition under Rule 137(2) EPC	862
1.2.	Request for examination (Rule 70 EPC)	863
1.2.1	General issues	863
1.2.2	The invitation to confirm early request for examination (R. 70(2) EPC)	864
2.	The first stage of substantive examination	865
2.1.	Beginning of "substantive examination"	865
2.2.	One invention to be the subject of examination	866
2.3.	Consolidation of proceedings	866
2.4.	Communications under Rule 71(1) and (2) EPC	866
2.4.1	Invitation to correct deficiencies and to propose amendments (Rule 71(1) EPC)	866
2.4.2	Content of Rule 71(2) EPC communication	867
2.5.	Refusal after a single communication	869
2.5.1	General issues	869
2.5.2	Failing to make a "bona fide" response	870
2.6.	Amendments under Rule 137(3) EPC	872
2.6.1	Discretion of the examining division under Rule 137(3) EPC	872
2.6.2	Consent under Rule 137(3) EPC in oral proceedings	875
2.6.3	The burden of proposing amendments	875
2.6.4	Reasons for the exercise of discretion	876
2.6.5	Second communication under Rule 71(3) EPC: the consent of the examining division	878
2.7.	Failure to reply to the communication from the examining division (Article 94(4) EPC)	878
2.7.1	Reply within the meaning of Article 94(4) EPC	878
2.7.2	Waiver of the applicant's right to present comments	879
2.8.	Issue of a further communication under Article 113(1) EPC	879
2.8.1	General issues	879
2.8.2	Arguments taken into account in the decision of the examining division	880
2.8.3	Information on non-compliance: the essential reasoning	881
2.8.4	Essential reasoning based on an IPER	882
2.8.5	Fresh argument based on grounds and evidence communicated beforehand	883
2.8.6	Bona fide attempt by the applicant to overcome the objections	883
2.8.7	Form of the communication under Article 113(1) EPC	884
2.9.	Informal communications	885
2.9.1	Telephone conversations	885
2.9.2	Interviews	886
3.	The grant stage in examination	887
3.1.	Rule 71(3) EPC communication: the text for approval	887
3.2.	Approval of the text by the applicant	888
3.2.1	General issues	888
3.2.2	Clear and unambiguous approval of the text	888

---

3.2.3	Decisions with no text submitted or agreed by the applicant (Article 113(2) EPC)	890
	a) General issues	890
	b) Auxiliary request issues	891
3.2.4	Examination procedure under the previous system (Rule 71 EPC and Rule 51(4) EPC 1973)	893
3.3.	Amendments or corrections filed in response to the communication under Rule 71(3) EPC	894
3.3.1	Amendments where Rule 71(3) EPC communication is the first communication	894
3.3.2	Amendments and corrections requested according to Rule 71(6) EPC	894
3.3.3	Criteria for admitting amendments filed in reply to the Rule 71(3) EPC communication	894
3.3.4	Claims fees due in response to Rule 71(3) EPC communication	898
3.4.	Amendment after approval of the text for grant	898
3.5.	Examination after remittal for further prosecution	900
3.6.	Amendments after the decision to grant	901
3.7.	Withdrawal of amendments and abandonment of subject matter	902
3.7.1	General issues	902
3.7.2	Effects of non-payment of claims fees	903
3.8.	Withdrawal of the patent application	903
3.8.1	General issues	903
3.8.2	Correction of the withdrawal of the application under Rule 139 EPC	906
3.9.	Refusal of a European patent application under Article 97(2) EPC (former Article 97(1) EPC 1973)	909
3.10.	Entry into force of a decision to grant a European patent	910
3.11.	Errors in the Patent Bulletin	912
4.	Additional searches during examination	913
4.1.	Rule 63 EPC governing incomplete search	913
4.1.1	Introduction	913
4.1.2	Additional search necessary: limited discretion of the examining division	914
4.1.3	Declaration under Rule 63(2) EPC	916
	a) Notoriously well-known technical features	916
	b) Subject-matter not having technical character	917
4.1.4	Invitation to restrict the claims under Rule 63(3) EPC	917
4.2.	Non-payment of further search fees under Rule 64 EPC	918
5.	Amendments relating to unsearched subject-matter - Rule 137(5) EPC	918
5.1.	General issues	918
5.2.	The purpose of Rule 137(5) EPC	919
5.3.	Applicability of Rule 137(5) EPC	920
5.3.1	General issues	920
5.3.2	Extent of the European search report	920
5.3.3	Subject-matter of amendment not combining with the originally claimed invention	923
5.4.	Criteria for consent to amendments under R. 137(5) EPC	924
5.4.1	Amendment not affecting the notion of unity of invention	924
5.4.2	Amendments filed to meet an objection	926

5.5. Non-compliance with Rule 137(5) EPC: a ground for refusing an application 926

---

**1. Stage before substantive examination****1.1. Amendments made by the applicant of his own volition under Rule 137(2) EPC**

R. 137(2) EPC specifies that "Together with any comments, corrections or amendments made in response to communications by the European Patent Office under R. 70a (1) or (2) EPC, or R. 161(1) EPC, the applicant may amend the description, claims and drawings of his own volition".

Thus, following receipt of the search report and search opinion, and prior to the first communication from the examining division, the applicant must (subject to certain exceptions) respond to the search opinion, by filing amendments to the description, claims or drawings and/or filing his observations on the objections raised in the search opinion. Any amendments filed at this stage are made by the applicant **of his own volition** in accordance with R. 137(2) EPC (Guidelines C-II, 3.1 – November 2015 version).

A reply to the search opinion and any amendments made by the applicant of his own volition should be on file when the substantive examination phase starts (see R. 70a, 137 and 161 EPC) (CA/81/10 Rev. 1, R. 71). The applicant's response required by R. 70a EPC (or filed voluntarily in response to search opinions not requiring a response) will be taken into account by the examining division when drafting the first communication.

In **T 1178/08** the board stated that in accordance with Art. 123(1) EPC in conjunction with R. 137(2) and (3) EPC, an applicant is to be given at least one opportunity to amend the application of his own volition. No further amendments may be made without the consent of the examining division. It noted that the EPC and the Implementing Regulations do not contain explicit provisions concerning the admissibility of amendments in appeal proceedings. R. 66(1) EPC 1973 sets out that the provisions relating to proceedings before the department which has made the decision from which the appeal is brought are applicable *mutatis mutandis* in such a case. Thus the board held that an appellant is not entitled, as a matter of right, to present amendments of his own volition at the appeal stage, but as a matter of discretion to be exercised by the board. Art. 12 and 13 RPBA set out the provisions governing the basis of appeal proceedings and amendments to a party's case which are binding upon the boards of appeal (Art. 23 RPBA). In **T 979/02** the board found that by virtue of Art. 111(1) EPC and R. 66(1) EPC, these provisions (i.e. R. 86(3) EPC 1973) are also applicable to appeal proceedings *mutatis mutandis*.

## 1.2. Request for examination (Rule 70 EPC)

### 1.2.1 General issues

According to Art. 94(1) EPC, the EPO shall, in accordance with the Implementing Regulations, examine on request whether the European patent application and the invention to which it relates meet the requirements of the EPC. The request shall not be deemed to be filed until the examination fee has been paid (Art. 94(1), second sentence, EPC; former Art. 94(2) EPC 1973). If no request for examination has been made in due time, the application shall be deemed to be withdrawn (Art. 94(2) EPC).

R. 70 EPC regulates the practical arrangements for filing the request for examination, including the form and the time limit. R. 70(1) EPC stipulates that the applicant may request examination of the European patent application up to **six months** after the date on which the European Patent Bulletin mentions the publication of the European search report. The request may not be withdrawn.

In **J 21/98** (OJ 2000, 406) the board stated that the request for examination constituted an autonomous step, which had to be kept quite separate from the (previous) step of filing the European patent application. In particular, the provision of Art. 94(1) EPC 1973, pursuant to which, for the examination of the application to be started, the applicant had to file a written request, showed that, according to the EPC, the patent application was not considered as the only necessary step to be taken by the applicant to obtain the grant of a patent, since a further step was necessary, consisting in a written request for examination - that meant a new declaration of intention to continue the grant procedure. Thus the applicant was given the right to know the outcome of the search report before deciding whether to ask for the prosecution of the grant procedure by means of the request for examination, which implied the payment of the related fee, or to drop said procedure. The provisions of the Convention were indeed clearly aimed at giving the applicant the possibility to properly consider the convenience of a further prosecution of the grant procedure in the light of the outcome of the search report.

In **J 12/82** (OJ 1983, 221) the board found that the unequivocal terms of Art. 94 EPC 1973 did not permit any wide interpretation - in fact the Article required that the request be written, filed within a certain period and accompanied by payment of the fee within the same period. In addition it should be noted that the authors of the EPC 1973, i.e. the contracting states, gave the request filed within the time limit extensive effects: it could not be withdrawn (Art. 94(2), last sentence, EPC 1973), yet on the other hand, if it was filed late the patent application was automatically deemed to be withdrawn (Art. 94(3) EPC 1973). The board held that the mere payment of the examination fee within the time limits provided for in Art. 94(2) EPC 1973 could not be a substitute for filing the request itself in good time.

In **J 4/00** the board held that a request for examination under Art. 94 EPC 1973 required, over and above payment of the examination fee, that the underlying intention of an applicant that his application should proceed to examination was manifested in a written statement made by the applicant or his representative addressed to the EPO and

received there in time. While this requirement was quite distinct from that of payment of the examination fee, there was no prescribed form of words for a request for examination which could be contained in the same document as a debit order or other payment instruction. To qualify as a request for examination, in the circumstances of the case the only reasonable interpretation of the text filed with the EPO had to be that the applicant thereby wanted to inform the EPO that he wished to have the application examined pursuant to Art. 94 EPC 1973.

#### 1.2.2 The invitation to confirm early request for examination (R. 70(2) EPC)

Under R. 70(2) EPC (former Art. 96(1) EPC 1973) if the request for examination has been filed before the European search report has been transmitted to the applicant, the European Patent Office shall **invite the applicant** to indicate, within a period to be specified, **whether he wishes to proceed further** with the application, and shall give him the opportunity to comment on the search report and to amend, where appropriate, the description, claims and drawings.

Following a decision of the Legal Board of Appeal (**J 8/83**, OJ 1985, 102), it is the practice of the Office to send the invitation provided for in R. 70(2) EPC also in cases where a supplementary European search report is to be drawn up on a Euro-PCT-application. The six months time limit should also be applicable in this case (see CA/29/09).

In **J 8/83** (OJ 1985, 102) and **J 9/83** the board found that if a supplementary European Search report has to be drawn up in respect of an international application which was deemed to be a European patent application, the applicant was entitled to receive the invitations provided for in Art. 96(1) EPC 1973 and R. 51(1) EPC 1973. Since in the case of such an international application, responsibility for examination of the application did not pass to the examining division until the applicant had indicated under Art. 96(1) EPC 1973 that he desired to proceed further with his application, the applicant might obtain a refund of the examination fee if in response to the invitation under Art. 96(1) EPC 1973 he withdrew his application, or allowed it to be deemed to be withdrawn.

The board noted that the provisions of Art. 96(1) EPC 1973 and R. 51(1) EPC 1973 clearly operated in the respective interests of applicants, third parties and the EPO by encouraging applicants to review their applications critically and realistically in the light of the European search report, before substantive examination began. The opportunity given by the EPO to obtain a refund of the substantial fee for examination by withdrawing the application at that stage, or allowing it to be deemed to be withdrawn, provided an additional incentive to withdraw cases which were unlikely to succeed.

## 2. The first stage of substantive examination

### 2.1. Beginning of "substantive examination"

Responsibility for examining the application passes from the Receiving Section to the examining division at the time when a request for examination is filed. This is subject to two exceptions: (i) if the applicant has filed a request for examination before the European search report has been sent to him, then the examining division is responsible only from the time when the confirmation of the request is received by the EPO following an invitation under R. 70(2) EPC; (ii) if the applicant has filed a request for examination before the European search report has been sent to him and has also waived the right to receive an invitation to confirm under R. 70(2) EPC, then the examining division is responsible only from the time when the search report is sent to the applicant (Guidelines C-II, 1 – November 2015 version).

In order for examination of a European application can begin, the applicant is required to file a request for examination, which, however, is not deemed to be filed until after the examination fee has been paid.

In **J 9/10** the board held that a communication pursuant to Art. 94(3) EPC on EPO Form 2001A which was automatically generated by a computer and posted by a formalities officer without the involvement of an examiner appointed to the examining division did not constitute a legally effective act of the examining division and therefore could not be regarded as the beginning of "substantive examination" pursuant to Art. 10b(b) RFees (inserted by decision of the Administrative Council of 10 June 1988, as last amended by decision of the Administrative Council of 15 December 2005).

The fulfilment of the second condition for the refund of the examination fee according to Art. 10b(b) RFees, gave rise to the questions of what "substantive examination" was and what kind of act or acts amounted to the beginning of "substantive examination". The board noted that to ensure predictability and verifiability of the application of Art. 10b(b) RFees, the beginning of "substantive examination" had to be interpreted as requiring a concrete and verifiable act of the examining division as regards "substantive examination" after having assumed responsibility for the examination of the application (**J 25/10**). The board held that if a communication of a particular examining division was to be legally valid, it had to have been written on behalf of and represent the views of the members who had been appointed to that division to examine the issues forming the subject of the communication. There was, however, no indication in the file that the appointed primary examiner had actually authenticated the communication under Art. 94(3) EPC before it was despatched by the formalities officer. Therefore, the communication could not be attributed to the examining division, but only to the formalities officer whose name was indicated on EPO Form 2001A. Further, the board found that the formalities officer, although acting in good faith, had had no power to issue the communication pursuant to Art. Art. 94(3) EPC. Such power was transferred to formalities officers by R. 11(3) EPC in conjunction with the Decision of the President of the European Patent Office dated 12 July 2007 concerning the entrustment to non-

examining staff of certain duties normally the responsibility of the examining or opposition divisions (OJ SE 3/2007, 106).

## **2.2. One invention to be the subject of examination**

In **T 158/12** the appellant's view was that there was no article or rule in the EPC which would prevent the applicant from changing from one invention to another – if they were searched – during examination. The board considered, however, that the articles and rules present in the EPC form a statutory system which clearly lead to the conclusion that there was no provision allowing the payment of multiple examination fees for a patent application. The board stated that for one application, only one examination is to be carried out as the result of the single examination fee which has been paid. Having once chosen one invention (or one group of inventions) to be made the subject of examination, this choice could not be altered once examination of that invention has commenced. The board was of the opinion that this approach based on the statutory provisions of the EPC was confirmed in opinion **G 2/92**. Hence, the appellant's view that the examination of an application could be based on more than one invention was not supported by this opinion of the Enlarged Board of Appeal.

## **2.3. Consolidation of proceedings**

In **J 17/92** the possibility of consolidating proceedings and the preconditions it laid down for such consolidation were subject to review by the boards of appeal. The board held that allowing consolidation was something both permissible and desirable under the EPC, in accordance with the desire expressed in the preamble to the EPC that such protection be obtainable in the contracting states by means of a single procedure for the grant of patents. Consolidation was not only in the interest of applicants, but also in that of the public not to have to take account of two separate European patents with the same text. The board noted that the conditions to be imposed on consolidation should not be more restrictive than necessary. It therefore took the view that the condition that the two applications at issue as filed had to be identical was too stringent. In the case at issue, the board found that if the form of claims with which the applicant wished to proceed in the consolidated applications was acceptable either as an amended set of claims or as being identical to the set of claims as filed, consolidation should be possible. In the board's view, such an amended set of claims should prima facie not prevent consolidation.

## **2.4. Communications under Rule 71(1) and (2) EPC**

### **2.4.1 Invitation to correct deficiencies and to propose amendments (Rule 71(1) EPC)**

The applicant's response to the search opinion required by R. 70a EPC (or filed voluntarily in response to search opinions not requiring a response) will be taken into account by the examining division when drafting the first communication (Guidelines C-II, 3 – November 2015 version).

If deficiencies persist in the application even after the applicant has filed his response to the search opinion, the examining division will issue a communication according to Art. 94(3) and R. 71(1) and (2) EPC in subsequent examination proceedings and will consider the applicant's reply thereto before issuing a decision or a summons to oral proceedings (Guidelines C-III, 4 – November 2015 version).

According to Art. 94(3) EPC if the examination reveals that the application or the invention to which it relates does not meet the requirements of the EPC, the examining division shall invite the applicant, **as often as necessary**, to file his observations and, subject to Art. 123(1) EPC to **amend the application**. In line with EPO practice, it has now been made clear that the EPO may not only invite the applicant to file his observations, but may also invite him to amend the application in accordance with Art. 123 EPC.

Further, according to R. 71(1) EPC (former R. 51(2) EPC 1973) in any communication under Art. 94(3) EPC the examining division shall, where appropriate, invite the applicant to **correct any deficiencies** noted and to amend the description, claims and drawings within a period to be specified.

In **T 301/10** the board stated that according to the established case law developed in relation to Art. 96(2) EPC 1973 and also applicable to Art. 94(3) EPC, the expression "as often as necessary" in this article indicates that the examining division has discretion which has to be exercised objectively in the light of the circumstances of the case (see, for instance, decisions **T 162/82** (OJ 1987, 533), **T 300/89** (OJ 1991, 480), and **T 726/04**).

Under Art. 113(1) EPC, however, it is not necessary to give the applicant repeated opportunities to comment on the examining division's submissions if the main objections to the grant of a European patent remain the same. A further invitation to present comments following a substantiated communication in which deficiencies were recorded is only appropriate if it would appear likely that, in the light of the applicant's reply, the examination proceedings would terminate in the granting of a patent (see **T 84/82**, OJ 1983, 451; **T 161/82**, OJ 1984, 551; **T 162/82**, OJ 1987, 533; **T 243/89**, **T 300/89**, OJ 1991, 480; **T 793/92** and **T 516/93**).

#### 2.4.2 Content of Rule 71(2) EPC communication

According to R. 71(2) EPC (R. 51(3) EPC 1973) any communication under Art. 94(3) EPC (Art. 96(2) EPC 1973), shall contain a reasoned statement covering, where appropriate, all the grounds against the grant of the European patent.

If no search opinion has been issued (see Guidelines C-VI, 3; F-V, 13.1(ii) and B-XI, 1.1), the examiner's first communication under Art. 94(3) EPC will, as a general rule (see B-XI, 3) and by analogy with the search opinion, cover all objections to the application (Guidelines C-III, 4 – November 2015 version).

In **T 937/09**, the board observed that, according to R. 71(2) EPC, any communication under Art. 94(3) EPC had to contain a reasoned statement covering, where appropriate, all the grounds against the grant of the European patent. This rule thus contained two requirements: applicants had to be informed, first, of each EPC requirement deemed not to be met and, second, for each such requirement, of the legal and factual reasons why it was deemed not to be met.

In **J 32/95** (OJ 1999, 733) the board held that the objection raised by the appellant that the examining division had unduly dealt with the application in a piecemeal manner was also unfounded. According to the Guidelines C-III, 5 (see also November 2015 version), cited by the appellant, the examiner's first letter should, as a general rule, cover all objections to the application. Pursuant to R. 51(3) EPC any communication shall, where appropriate, cover all the grounds against the grant of the European patent. Thus, whether and to what extent this is to be done is a matter of procedural expediency. This means that the examining division has to weigh the aspects of the case involved. In particular, the likelihood that the objection raised can be overcome, the kind of amendments which can be expected, and any objections which could yet remain thereafter have to be weighed against the amount of additional work involved for the examining division.

In the case at issue, an objection concerning lack of novelty was raised in the first communication against all claims of the application. Such a far-reaching objection can normally only be overcome by substantial amendment of the claims. Therefore, claims amended in this way, if filed, have to be largely re-examined with respect to the prior art. In the view of the board, R. 51(3) EPC therefore does not require that an examining division should immediately raise the objection that the claims on file lack inventive step in relation to other documents, if it is of the opinion that all the claims in the application are anticipated by one document. By contrast, in its second communication concerning the amended claims filed by the appellant, the examining division, although maintaining the non-novelty objection against new claim 1, also raised an objection of lack of inventive step. Thus the board came to the conclusion that the appellant's submission that the examining division had breached R. 51(3) EPC by issuing several communications was unfounded (see also **T 937/09**).

In **T 2311/10**, the board held that whether and to what extent the examining division covered all the grounds against the grant of the European patent in a communication of was a question of procedural economy (see **J 32/95**) and a matter for the division's discretion.

In **T 161/82** (OJ 1984, 551) the board noted that a distinction had to be made between the grounds on which a decision was based (ie the requirements of the EPC which were not satisfied by the application or the invention to which it related) and the reasoned statement explaining in greater detail why the examining division was of the opinion that such grounds existed (see R. 51(3) EPC 1973). Art. 113(1) EPC 1973 did not require an applicant to be given repeated opportunity to comment on arguments of the examining division so long as the decisive objections to the grant of the European patent remained

the same except for some supplementary observations concerning the applicant's arguments which did not convince the examining division.

In **T 20/83** (OJ 1983, 419) the board noted that Art. 96(2) EPC 1973 prescribed that the examining division had to draw all obstacles to patentability to the applicant's attention. This conclusion related to the requirements for patentability as laid down in the EPC itself. The validity of a patent in various contracting states was however not an immediate condition under the EPC (see **T 830/91**, OJ 1994, 728).

In **T 98/88** the board pointed out that R. 51(3) EPC 1973 did not make it compulsory for communications in accordance with Art. 96(2) EPC 1973 to set out all the grounds against the grant of the patent. The board's view in this case was that deferral of the examination in respect of the requirements under Art. 52 EPC 1973 until a clear version of the claims had been received did not conflict with R. 51(3) EPC 1973 (see also **T 677/97**).

## **2.5. Refusal after a single communication**

### 2.5.1 General issues

According to the jurisprudence of the boards of appeal, an examining division may refuse an application after a single communication if it does not consider that there is a prospect of a positive result (see **T 201/98**, **T 79/91**, **T 1969/07**), without warning (**T 1002/03**, **T 1969/07**). The refusal of an application after the first communication is justified if decisive objections against patentability remain (see **T 84/82**, **T 161/82**, **T 300/89**, **T 95/04**), particularly where the claimed subject-matter has not been substantially modified (see also **T 66/83**, **T 304/91**, **T 63/93**).

In **T 821/96** the board stated that, according to the established case law, it was left to the examining division's discretion to decide whether to issue a further invitation to present comments under Art. 96(2) EPC 1973. A further invitation would only be appropriate if it appeared likely that, in the light of the applicant's reply, the examination proceedings would terminate in the granting of a patent (see also **T 201/98**).

In **T 449/03** the board stated that the appellant's allegation that the applicant was generally entitled to receive at least two communications in the examination proceedings before a negative decision on patentability was unfounded (see **T 84/82**, OJ 1983, 451). However, where features are added to a claim in response to an official communication, it is only in exceptional cases that a further communication may be dispensed with (cf. **T 161/82**, OJ 1984, 551): for example where it can be held that the features added to the claim are implicit to the specific part of the prior art document already held against the subject-matter of the claim, so that the objection against patentability communicated to the applicant remains the same.

In **T 5/81** (OJ 1982, 249) the appellant submitted that, in the only communication sent, the examiner had failed to comment on claim 5, an omission which was contrary to Art. 96(2) EPC 1973 and R. 51(3) EPC 1973. The board noted that an appeal might

relate only to a decision subject to appeal within the meaning of Art. 106(1) EPC 1973 and not to preparatory measures. Art. 96(2) EPC 1973 and R. 51(3) EPC 1973 applied exclusively to that **preparatory procedure**. A failure to comply with these requirements could not be taken into consideration unless it had some influence on the decision to refuse, as in the case of a breach of Art. 113(1) EPC 1973. The appellant's objection was unfounded, not only for this reason, but also because the examiner commented on the content of the claim in question by drawing attention to the possibility of formulating an independent claim based thereon. Since the appellant did not make use of that possibility, the examining division was not obliged to discuss it when refusing the application. The allusion thereto in the reasons for the decision did not form part of the ratio decidendi and was intended solely to demonstrate that the examining division was aware of the fact that the application might contain patentable subject-matter. A refusal under these circumstances was not open to challenge (see also **T 228/89**, **T 347/04**, **R 14/10**).

#### 2.5.2 Failing to make a "bona fide" response

In **T 802/97** the board noted that when applying Art. 96(2) EPC 1973 to determine in a specific case whether an applicant should be given a further opportunity to present comments or amendments before refusing an application **after** a single official communication, the established practice of the examining divisions as set out in particular in the Guidelines is to **warn** the applicant who had made a **bona fide attempt** to deal with the examining division's objections, e.g. by a telephone conversation or by a short further written action, that the application will be refused unless he can produce further more convincing arguments or makes appropriate amendments within a specified time limit. Only when the applicant has not made any real effort to deal with the objections raised in the first communication, should the examining division consider immediate refusal of the application, this however being an exceptional case (see also **T 587/02**).

In **T 1388/10** the appellant argued that the refusal of its application had been flawed because refusal directly after a first examining communication was allowed only if the applicant failed to make a "bona fide" response to that communication, whereas in the present case it had indeed made a "bona fide" attempt to overcome the examining division's objections. Its application should therefore not have been refused without a further "warning".

The board noted that examining divisions have discretion over how often to invite an applicant to comment. It also had to be borne in mind that the Guidelines merely offered general guidance covering normal occurrences. Their application in specific individual cases was the responsibility of the examining division, which could depart from them in exceptional cases. Also, the Guidelines were not the law – unlike the EPC and its Implementing Regulations. The board pointed out that when reviewing examining divisions' decisions it did not assess whether the division had complied with the Guidelines. Rather, it considered whether the division had exercised its discretion within the limits set by the EPC and its Implementing Regulations. In the case before it, the board held that the examining division's decision not to issue a second communication

under Art. 94(3) EPC fell within the discretion available to it, and its exercise of that discretion had not been flawed.

In **T 201/98** the board accepted that in the case at issue the appellant's response to the single communication was a bona fide attempt to deal with the examining division's objections. However it was the established jurisprudence of the boards of appeal that an examining division did not exceed its discretionary power by immediately refusing an application, provided that the decision complied with Art. 113(1) EPC 1973, i.e. was based on grounds on which the appellant had had an opportunity to present comments, see **T 84/82** (OJ 1983, 451) and **T 300/89** (OJ 1991, 480). In the case before it, the board considered that the decision of the examining division was based on grounds on which the appellant had had an opportunity to present comments in accordance with Art. 113(1) EPC 1973.

In **T 677/97**, the board took the view that the pre-decision examination procedure did not meet the minimum legal standard set by the EPC in Art. 96(2) EPC 1973 and R. 51(2) and (3) EPC 1973. R. 51(3) EPC 1973, by virtue of the phrase "where appropriate", allowed the examining division discretion to issue a first communication which is less than comprehensive. This interpretation of the EPC had also been approved in decision **T 98/88**. It was incumbent on the examining division under Art. 96(2) EPC 1973 to send a second communication containing a reasoned statement as to why the objection under Art. 56 EPC was maintained. In making this finding the board was not departing from the established jurisprudence of the EPO boards of appeal which recognised that it was within the discretion of an examining division to issue a refusal decision after a single communication. In the circumstances of the case at issue, however, an immediate refusal was not a reasonable exercise of this discretion. The limits on the examining division's discretion in this respect were explained in decision **T 951/92** (OJ 1996, 53).

The board stated that if a communication under R. 51(3) EPC 1973 and pursuant to Art. 96(2) EPC 1973 did not set out the essential legal and factual reasoning which would lead to a finding that a requirement of the EPC had not been met, then a decision based upon such a finding could not be issued without contravening Art. 113(1) EPC 1973, unless and until a communication had been issued which contained such essential reasoning. If a decision was issued in the absence of a communication containing such essential reasoning, Art. 96(2) EPC 1973 was also contravened, since in order to avoid contravening Art. 113(1) EPC 1973 it was "necessary" to issue a further communication (following decision **T 640/91**, OJ 1994, 918).

In **T 89/93** the board again held that the examining division could not refuse an application after a first communication if the applicant had made a **serious** attempt to overcome the objections raised or if it appeared likely that continuing the procedure would lead to a positive result. Following **T 908/91**, the board decided, however, that reimbursement of the fee for appeal would not be equitable (**T 181/95**, **T 958/99**, **T 1578/05**).

In **T 1002/03** the board stated that it was established jurisprudence of the boards of appeal that an examining division did not exceed its discretionary power pursuant to Art. 96(2) EPC 1973 ("as often as necessary") by proceeding to an immediate refusal after a first communication, provided that the decision complied with Art. 113(1) EPC 1973, i.e. was based on grounds on which the appellant had had an opportunity to present comments. In the case in point, the examining division's first and only official communication under Art. 96(2) EPC 1973 stated that the deficiencies mentioned in the IPER gave rise to objections under the corresponding provisions of the EPC. In reply to the official communication the appellant filed a new set of claims in which only claim 1 had been amended to overcome the objection of lack of clarity in the IPER. In the board's view no **special warning** in the official communication was necessary in these circumstances. Accordingly the appellant's right to be heard (Art. 113(1) EPC 1973) was not violated and the examining division did not exercise its discretion in an unreasonable way by refusing the application after a single official communication (see also **T 1969/07**).

## 2.6. Amendments under Rule 137(3) EPC

### 2.6.1 Discretion of the examining division under Rule 137(3) EPC

Under Art. 123(1) EPC, a European patent application or a European patent may be amended in proceedings before the EPO, in accordance with the Implementing Regulations. R. 137(3) EPC is of particular relevance.

R. 137(3) EPC stipulates that no further amendment may be made without the consent of the examining division. Thus the applicant may amend only if the examiner consents to the amendments proposed. Giving the examining division this discretion is intended to ensure that the examination procedure is brought to a conclusion in as few actions as possible (Guidelines C-IV, 3; H-II, 2.3 – November 2015 version). In exercising its discretion the examining division must consider all relevant factors; in particular, it must balance the applicant's interest in obtaining a patent which is legally valid and the EPO's interest in bringing the examination procedure to a close in an effective way (in accordance with the principles set out in **G 7/93**). Furthermore, the exercise of discretion under R. 137(3) EPC needs to be reasoned.

In giving or withholding such consent, the examining division has to exercise its discretion responsibly and in accordance with the principles as set out in the decision **G 7/93** (OJ 1994, 775) which, although made in relation to amendments made in the pre-grant stage, are of general validity. The Enlarged Board pointed out that in the exercise of its discretion under R. 86(3) EPC (now R. 137(3) EPC), an examining division is required to consider **all relevant factors** which arise in a case. In particular, it must consider both the applicant's interest in obtaining a patent which is legally valid in all of the designated states, and the EPO's interest in bringing the examination procedure to a close by the issue of a decision to grant the patent, and must balance these interests against one another (**T 1982/07**). Once an examining division has exercised such discretion, a board of appeal should only overrule it if it comes to the conclusion either that the examining division did not exercise its discretion in accordance with the right

principles or that it exercised its discretion in an unreasonable way and had thus exceeded the proper limit of its discretion (see **T 237/96** with particular reference to **G 7/93**, OJ 1994, 775, **T 182/88**, OJ 1990, 287, **T 937/09**, **T 1214/09**).

In **T 1074/10** the board noted that the convergence criterion (whether the respective versions of the sets of claims converge or diverge) had been accepted by the boards of appeal and has also been applied by the boards themselves (see e.g. **T 240/04**; **T 1685/07**; **T 1969/08**). R. 86(3) EPC 1973 - and, equivalently, R. 137(3) EPC - leaves open entirely how the examining division should exercise its discretion. In particular, neither defines a convergence criterion nor a criterion based on prima facie compliance with the requirements of the EPC. The board was of the opinion that the "divergence" of a request from earlier requests in the sense that it changes substantially the issues at stake could be contrary to the EPO's interest in bringing the procedure to a close. Therefore, the board agreed with the cited jurisprudence and considered that **divergence of a request is one factor** amongst others which a deciding instance may consider when exercising its discretion under R. 86(3) EPC 1973. The decision of the examining division not to admit a request was therefore not wrong merely because this criterion was used, as the board understood the appellant to be arguing. Hence, the appellant's argument failed.

In **T 996/12** the appellant objected that the examining division had exercised its discretion under R. 137(3) EPC not only unreasonably, but also by applying the wrong principles as to the inadmissibility of the last amendments. The board stated that, in general terms, the way in which the examining division should exercise its discretion to allow amendment of an application depends upon the circumstances of each individual case and on the stage of the pre-grant procedure which the application has reached. It noted that a board of appeal reviews this exercise of discretion not in the form of how it would have decided in the case, but whether it was exercised according to the wrong principles, without taking into account the right principles, or whether it was exercised in an unreasonable way. In this respect, the board noted that the applicable Guidelines did not support the concept of converging claim sets being a requirement for allowing amendments or, conversely, a diverging claim set not being acceptable. The examining division referred to two board of appeal decisions, **T 1685/07** and **T 745/03**, for this criterion. Apart from the fact that these decisions apply particularly to the situation where a patent proprietor submits a plurality of auxiliary requests in addition to a main request in opposition appeal proceedings, it needed to be stressed that its underlining justification was to be found in the efficiency of these appeal proceedings, the latter being of a judicial nature in contrast to the purely administrative character of the proceedings before, for instance the examining division or the opposition division. The board found that this fundamental distinction *eo ipso* made the unqualified application of this criterion by the department of first instance of the EPO questionable. The appellant's objection that the examining division had exercised its discretion wrongly as to the inadmissibility of the last amendments was held not well-founded.

In **T 573/12** the board noted that according to R. 137(3) EPC (in the applicable version of December 2007, which is identical to former R. 86(3) EPC 1973) any amendment after the reply to the first communication needs the consent of the examining division. This

means that the examining division has discretion. One of the criteria applied in this context and accepted by the boards of appeal is whether the amendment *prima facie* overcomes objections previously raised. However, as set out in **G 7/93** (OJ 1994, 775), an examining division, when considering whether to admit an amendment or not, is required to consider all relevant factors which arise in the case. In particular it must consider and balance the applicant's interest in obtaining a patent and the EPO's interest in bringing the examination procedure to a close. In the case at issue, the examining division's first communication was rather vague and assessed the invention in rather general terms, without analysing the individual features. The appellant's subsequent amendment added some features to the independent claims. In the board's judgment, this was a *bona fide* reaction. Additionally, it was the first amendment which was dependent on the examining division's consent and the minutes showed that the examining division could and did discuss the added features. Admitting the request would not have involved excessive or unjustified additional work. Furthermore, the Guidelines (Part C-VI, 4.7 – April 2010 version) stated: "Regarding less extensive amendments, the examiner should adopt a reasonable approach, trying to balance fairness to the applicant against the need to avoid unnecessary delay and excessive and unjustified additional work for the EPO." Given the above circumstances, the board held that the examining division did not properly balance all relevant factors and thus could not endorse the examining division's conduct.

In **T 937/09**, the board held that, under the second sentence of R. 137(3) EPC (as adopted by decision of the Administrative Council of 7 December 2006; see 13th edition of the "European Patent Convention", European Patent Office, 2007), it was for the examining division to decide in a proper exercise of discretion whether to admit amendments to a European patent application after the first communication. In the board's view, this meant that the examining division had to admit amendments filed by the applicant together with the reply to a communication giving reasoned notice of a particular deficiency for the first time, if it could already have raised an objection to that deficiency in its first communication, and if the amendments could be regarded as an objectively suitable attempt to correct the deficiency.

In **T 166/86** (OJ 1987, 372) the board held that under R. 86(3) EPC 1973, further amendments - which included the submission of a separate set of claims for a given contracting state - could only be made with the consent of the examining division (see Legal Advice No. 4/80, OJ 1980, 48). The examining division had to take the decision on whether to consent to the requested amendment after due assessment of the particular circumstances. In particular, this involved balancing the EPO's interest in the speedy completion of the proceedings against the applicant's interest in obtaining a patent which was legally valid in all the contracting states. The examining division would not be able to refuse its consent to an amendment if, for good reasons, the applicant was only at that late stage in a position to request the amendment, or if the requested amendment was obviously essential for him and to take it into account would not appreciably delay the grant procedure. In the board's view, the latter situation was the case here.

In **T 640/91** (OJ 1994, 918) the board stated that the requirement in Art. 96(2) EPC 1973 that the examining division must invite the applicant to file his observations "as often as

necessary" implicitly recognised that in certain circumstances the examining division would be legally **obliged** to invite further observations from the applicant before issuing a decision. Having regard to Art. 113(1) EPC 1973, there was a "necessary" legal obligation for an examining division to invite further observations from an applicant before issuing a decision adversely affecting him, where the division might be inclined to issue an immediate decision on the ground that he had shown lack of good faith in his previous observations. The board pointed out, moreover, that it was in principle not the function of an examining division to assess either the degree of collaboration from applicants or their good faith when deciding whether or not to invite further observations in the exercise of its discretion under Art. 96(2) EPC 1973. The exercise of this discretion depended primarily upon whether or not there was a reasonable prospect that such an invitation could lead to the grant of a patent (see also **T 855/90**, in which the board found that the examining division had exercised its discretion unreasonably).

In **T 229/93** the board found that in the circumstances of the case at issue the examining division should have considered refusing to consent to the amendments pursuant to R. 86(3) EPC 1973, since the filing of such amendments after the expiry of the time limit for answering the first communication of the examining division in the form of a completely retyped description was contrary to the requirement of procedural economy (see **T 113/92**).

In **T 951/97** the board noted that whether or not consent was given was at the discretion of the examining division and depended on the facts of the individual case, on the nature of the grounds for seeking an amendment, and equally on the stage of the procedure. It was easier to secure an amendment at an earlier rather than at a later stage (see **T 529/94** and **T 76/89**).

#### 2.6.2 Consent under Rule 137(3) EPC in oral proceedings

R. 116(2) EPC supplements R. 137(3) EPC with a special provision on amendments to the application where oral proceedings are to be held, under which the examining division has discretion to disregard such amendments if they are not filed before the date fixed in the summons to such proceedings. However, whilst meeting the deadline for filing further requests for amendments to the application fixed in the summons under R. 116 EPC does not render R. 137(3) EPC inapplicable, requests filed by that deadline can only be refused under R. 137(3), sentence 2, EPC in a proper exercise of discretion which must take account of the factors set out above (**T 937/09**).

#### 2.6.3 The burden of proposing amendments

In **T 300/89** (OJ 1991, 480) the board pointed out that, even if it were possible for the examiner to envisage amendments which might lead to the grant of a patent, the burden lay with the applicant to propose amendments if he so wished (including various alternatives in the form of auxiliary requests). These amendments could be proposed in the applicant's observations in reply to the first communication (Art. 96(2) EPC 1973) from the examining division, where any objections were raised (**T 599/92**). It also held that an applicant had a right to request oral proceedings at any time, but if he wished to

avoid the risk of an adverse decision being issued without oral proceedings being appointed, he should request oral proceedings at the latest in his observations in reply to such (here, first) communication under Art. 96(2) EPC 1973.

In **T 301/10** the board stated that it is incumbent upon the appellant to maintain unamended or to amend - optionally on an auxiliary basis - the application documents upon which examination is to be carried out and a decision eventually to be reached (Art. 94 and 97 EPC together with Art. 113(2) EPC 1973) (see supra **T 300/89**, point 9.1 of the Reasons), and not upon the examining division to prolong the examination procedure beyond the procedural framework set out in the EPC (see in this respect Art. 123(1) EPC together with R. 86(3) EPC 1973) until the applicant opts for amending the application and eventually "exhausts" all possibilities for amendment, as this would seriously undermine the principle of procedural economy.

#### 2.6.4 Reasons for the exercise of discretion

In **T 182/88** (OJ 1990, 287) and **T 166/86** (OJ 1987, 372), the board decided that a separate set of claims submitted at a late stage in the proceedings was admissible under the particular circumstances. It added that the EPO's user-friendly reputation should clearly be excluded from consideration during the exercise of any discretion by the EPO. The showing of consideration towards parties before the EPO should not be confused with the proper exercise of discretion according to the law. It was also held that when a decision hinged on the exercise of discretion, the **reasons should be given**.

In **T 309/09**, the board doubted that the number of auxiliary requests could generally be considered a factor on the basis of which their admission under R. 137(3) EPC could properly be denied outright. Whilst it did not wish to rule out that a large number of auxiliary requests might be a sufficient reason in specific cases, it decided that the question could be left unanswered in the case before it, as in any event six auxiliary requests could not automatically be considered excessive. Nor did it have to consider whether **a lack of convergence among the requests** was relevant in this connection, because the contested decision did not contain any explicit analysis of specific cases which might support such a conclusion, even though any convergence criterion applied would at any rate have had to be assessed separately for each individual request. The board concluded that the examining division had been entitled to exercise discretion and had done so in accordance criteria which were essentially correct in the light of **G 7/93**, but that, contrary to R. 111(2) EPC, it had failed to give adequate reasons in support of its exercise of discretion in the contested decision. Discretionary decisions could not be taken arbitrarily and - like all decisions open to appeal - had to be substantiated. Even deficient reasoning was a fundamental procedural error on the basis of which the matter could be remitted back to the department of first instance under Art. 11 RPBA.

In **T 246/08** the board stated that it is the established jurisprudence of the boards of appeal that the power of the examining division to consent to amendments under R. 137(3) EPC is a discretionary power that has to be exercised after considering all the relevant factors of the specific case and balance in particular the applicant's interest in obtaining an adequate protection for his invention and the EPO's interest in bringing the

examination to a close in an effective and speedy way. Moreover, the exercise of a discretionary power has to be reasoned, otherwise it would be arbitrary. It followed that a refusal of consent to amend made in advance of any amendment being submitted could not be a reasonable exercise of discretion pursuant to R. 137(3) EPC. Indeed in the judgment of the board it was ipso facto a substantial procedural violation since it risked deterring an applicant from making an amendment which could not reasonably have been forbidden. (see also **T 872/90**).

In **T 1105/96** (OJ 1998, 249) the board noted that the admissibility of any main or auxiliary request which was filed after the reply to the first communication from the examining division was a matter within the discretion of the examining division (R. 86(3) EPC 1973). Such discretion must be exercised lawfully having regard to the relevant circumstances. In a case such as this, where an examining division had indicated that a further request in the form of an amended text for the main claim of an application would be allowable, it was difficult to imagine any circumstances in which it would be lawful for the examining division to deny the admissibility of such request, in the exercise of such discretion. Certainly, in the circumstances of the case at issue, the rejection in advance of such a further auxiliary request unless all preceding requests were abandoned was an abuse of procedure, an unlawful exercise of discretion under R. 86(3) EPC 1973 and thus a substantial procedural violation within the meaning of R. 67 EPC 1973.

In **T 233/12** the board noted that R. 137(3) EPC provides that any second and "further amendment" to the description, claims and drawings requires the consent of the examining division. This makes admission of such a further amendment a matter of discretion for the examining division. According to **G 7/93**, the board should only overrule the way in which a first instance department has exercised its discretion if it comes to the conclusion either that the first instance department in its decision has not exercised its discretion in accordance with the right principles, or that it has exercised its discretion in an unreasonable way, and has thus exceeded the proper limits of its discretion.

The board pointed out that the criterion that an amended set of claims is prima facie not allowable is, in general, an accepted principle (amongst others) to be taken into account in the assessment of whether consent under R. 137(3) EPC should be given to the amendment. While a prima facie finding that a claim is not allowable may, by its very nature, be justified in briefer terms than a fully reasoned conclusion, the reasons for a prima facie finding may not be so short as to reduce the finding to a mere allegation. Moreover, the amount of reasoning required to justify a prima facie finding was amongst the parameters which the examining division had to balance in view of the circumstances of each individual case when exercising its discretion. In particular, if, as in this case, an applicant files an amendment together with arguments as to why the amendment, in its view, satisfies a particular requirement of the EPC, the examining division cannot merely assert the contrary without giving an indication as to why the applicant's argument failed. That is, a prima facie finding must not simply ignore the arguments on file which appear to directly contradict it. For these reasons, the board concluded that the examining division had not exercised its discretion under R. 137(3) EPC in a reasonable way.

### 2.6.5 Second communication under Rule 71(3) EPC: the consent of the examining division

If the examining division gives its consent under R. 137(3) EPC to these amendments and/or the correction and considers them allowable without issuing a further communication under Art. 94(3) EPC, it issues a **second communication** under R. 71(3) EPC based on the amended/corrected text, after which it then proceeds to the grant of the patent pursuant to Art. 97(1) EPC (see below in this chapter IV.B.3.1 "R. 71(3) EPC communication: the text for approval"). Where amendments or corrections are not admitted, or where they are admitted but not considered allowable, examination will be resumed (Guidelines H-II, 2.5.3 – November 2015 version).

### 2.7. Failure to reply to the communication from the examining division (Article 94(4) EPC)

According to Art. 94(4) EPC, if the applicant fails to reply in due time to any communication from the examining division, the application shall be deemed to be withdrawn. Art. 94(4) EPC corresponds in essence to Art. 96(3) EPC 1973.

#### 2.7.1 Reply within the meaning of Article 94(4) EPC

In **J 37/89** (OJ 1993, 201), the Legal Board of Appeal construed Art. 96(3) EPC 1973 to mean that an applicant who merely requests an extension of the term for reply which request is then refused, 'fails to reply' within the meaning of that sub-paragraph, with the consequence that the application must be deemed withdrawn.

In **T 160/92** (OJ 1995, 35) the board held that Art. 96(3) EPC 1973 did not require "a complete reply", but only "a reply" in order to avoid the consequence of having the application deemed to be withdrawn. A letter of reply to a communication of the examining division filed in due time by the applicant and dealing with substantial points of this communication constituted a reply within the meaning of Art. 96(3) EPC 1973 and thus, from the point of view of procedural law, ruled out the possibility of deemed withdrawal.

Both of these decisions **J 37/89**, **T 160/92** also expressed the view that a letter of reply did not have to be (substantively) complete or cogent in order to qualify as a reply within the meaning of Art. 96(3) EPC 1973 (**T 685/98**, OJ 1999, 346).

In **J 29/94** (OJ 1998, 147) the board observed - in relation to Art. 110(3) EPC 1973 - that there was another form of reply which could result in a refusal, and not in the deemed withdrawal of the application; if the applicant did not want to reply in substance to the communication, it was permissible for him to ask for a decision on the file as it stood.

In **J 5/07** the board held that the filing of a divisional application did not constitute a response to an invitation by the examining division in the parent application within the meaning of Art. 96(3) EPC 1973. The board noted that a divisional application was legally and administratively separate and independent from the grant proceedings

concerning the parent application (see **G 1/05** (OJ 2008, 271; points 3.1 and 8.1 of the Reasons; **T 441/92**). The filing of a divisional application leaves the text of the patent application objected to unamended.

In **T 861/03**, the board found that filing a request for an interview with the processing examiner without also submitting substantive observations on deficiencies identified in the communication under Art. 96(2) EPC 1973 did not amount to an adequate reply for the purposes of Art. 96(3) EPC 1973, under which the legal consequence of failing to submit such a reply was that the application was deemed to be withdrawn.

#### 2.7.2 Waiver of the applicant's right to present comments

In unclear cases there can be no presumption that an applicant has waived his right to be heard under Art. 113(1) EPC. Hence a refusal decision pursuant to Art. 97(2) EPC (former Art. 97(1) EPC 1973) based on such a presumption and taken before expiry of the term originally set for reply to a communication contravenes Art. 113(1) EPC and thus involves a substantial procedural violation (**T 685/98**).

In **T 685/98** (OJ 1999, 346) the board noted that prior to a valid refusal under Art. 97(1) EPC 1973 the applicant must either have exercised his right to comment or have waived this right. It held that a simple procedural request made by the applicant after receipt of the R. 51(2) EPC 1973 communication could not be treated as a waiver of the right to present comments during the remainder of the four-month term set for reply. When the applicant neither replied in substance to the objections raised nor waived his right to present comments, then the refusal of the application was ultra vires and voidable ab initio because under Art. 97(1) EPC 1973 the application was to be refused, if no different sanction was provided for by the Convention. However, Art. 96(3) EPC 1973 provides a different sanction for failure to reply, namely the deemed withdrawal of the application.

### 2.8. Issue of a further communication under Article 113(1) EPC

#### 2.8.1 General issues

If it appears that the previous communications were insufficiently reasoned or incomplete, or if the applicant has filed amendments and/or arguments since the previous communication, the examiner should carefully consider Art. 113(1) EPC before issuing a refusal. A further communication may have to be issued with sufficient reasoning, unless oral proceedings are to be held (see Guidelines C-V, 15.4 – November 2015 version).

Under Art. 113(1) EPC, the decisions of the EPO may only be based on grounds or evidence on which the parties concerned have had an opportunity to present their comments.

In **T 645/11** the board stated that Art. 113(1) EPC 1973 guarantees that proceedings before the EPO will be conducted openly and fairly (see **J 20/85**, OJ 1987, 102, point

4(a) of the Reasons; **J 3/90**, OJ 1991, 550). The right to be heard ensures that the parties to proceedings are not taken by surprise by grounds mentioned in an adverse decision (see decisions **T 669/90**, OJ 1992, 739 and **T 892/92**, OJ 1994, 664, for example). That requires, firstly, that a party be given an opportunity to comment on the grounds and evidence alleged against it. In particular, it means that if a decision to refuse is taken on the basis of grounds which have not previously been presented to the applicant, then the decision does not comply with the provisions of Art. 113(1) EPC 1973. It is not sufficient that the applicant be presented with an assertion that the application fails to comply with some provision of the EPC. There must also be an explanation of why it fails to comply. The right to be heard also requires the deciding instance demonstrably to hear and consider any relevant comments (**T 763/04**, or **T 246/08**).

In **T 690/09** the board stated that if a request for amendment is refused, the examining division must inform the applicant of the reasons for not admitting the amendments in order to satisfy the right to be heard according to Art. 113(1) EPC. The applicant will typically be invited to request grant on the basis of a preceding acceptable version of the claim set if such a version exists. Otherwise, if the applicant maintains his request for amendment, the application has to be refused under Art. 97(2) EPC, since there is no text which has been approved by the applicant and allowed by the examining division (see Art. 113(2) EPC 1973, decisions **T 647/93**, OJ 1995, 132; **T 946/96** and **T 237/96**).

In **T 246/08** the board stated that established jurisprudence has interpreted this provision to mean that the comments presented must be considered in the ensuing decision (**J 7/82**, OJ 1982, 391). Thus a decision which fails to take explicitly into account potentially refutative arguments submitted by a party, i.e. arguments which may militate against or cast doubt on the decision in question, contravenes Art. 113(1) EPC 1973, thereby constituting a substantial procedural violation. In brief, a decision must show that all potentially refutative arguments adduced by a party are actually refutable (see also **T 1170/07**).

In **T 1854/08** the applicant was informed by e-mail that the three newly filed requests were not admitted into the proceedings because they introduced substantial obscurities. The board stated that the applicant had not been given any opportunity to present his comments to overcome the negative position expressed in the e-mail. Contrary to that, he had had to gather from the e-mail that it was no longer possible to convince the examining division. This followed from the fact that the refusal to admit the newly filed request was not presented as a provisional opinion of the division but as a decision which could not be overturned. This contravened Art. 113(1) EPC.

#### 2.8.2 Arguments taken into account in the decision of the examining division

According to the jurisprudence of the boards of appeal, the examining division does not have to address each of the party's arguments (see e.g. **T 1969/07**, **T 1557/07**, or **R 19/10**).

In **T 1557/07** the board stated that with regard to the allegation that the examining division did not fully and accurately deal with all the relevant arguments submitted by the applicants, the examining division was under no obligation to address each and every argument presented by the party concerned. In the case at issue, the examining division had commented on the crucial points of dispute thus giving the applicants a fair idea of why their submissions were not considered convincing. This allegation was therefore also not conclusive. In conclusion, the examining division had not committed a substantial procedural violation.

In **R 19/10** the petitioner submitted that Art. 113(1) EPC not only enshrined a party's right to be heard before a decision was issued against it, but also guaranteed its right to have the relevant grounds fully taken into account in the written decision. The Enlarged Board of Appeal stated that it agreed in principle. However, this principle was not without any limitation, as explained in decision **T 1557/07**, referred to by the petitioner itself: provided that the reasons given enable the parties concerned to understand whether the decision was justified or not, the deciding organ is under no obligation to address each and every argument presented by the party concerned.

In **T 802/97** the board held that if a decision included several grounds, it should meet the requirements of Art. 113(1) EPC 1973 with respect of each of the grounds. In the board's judgment, if a decision of the EPO included several grounds supported by respective arguments and evidence, it was of fundamental importance that the decision as a whole met the mandatory requirements of Art. 113(1) EPC 1973. Leaving it up to the deciding body to suggest which of the grounds were to be considered as the basis of the decision and which were not - and did not therefore need to comply with the requirements of Art. 113(1) EPC 1973 - could only lead to legal uncertainty and confusion of the parties. An exception from the above principle could be obiter dicta which were not part of the grounds on which a decision is based.

### 2.8.3 Information on non-compliance: the essential reasoning

In **T 951/92** (OJ 1996, 53) the board held that if a communication under R. 51(3) EPC 1973 and pursuant to Art. 96(2) EPC 1973 did not set out the essential legal and factual reasoning to support a finding that a requirement of the EPC had not been met, then a decision based on such a finding could not be issued without contravening Art. 113(1) EPC 1973, unless and until a communication had been issued which did contain the essential reasoning. If a decision was issued in the absence of a communication containing essential reasoning, Art. 96(2) EPC 1973 was also contravened, since in order to avoid contravening Art. 113(1) EPC 1973 it was "necessary" to issue a further communication (see also **T 520/94**, **T 750/94**, OJ 1998, 32; **T 487/93**, **T 121/95**, **T 677/97**).

In **T 951/92** (OJ 1996, 53) the board summed up the case law by stating that Art. 113(1) EPC 1973 was intended to ensure that, before a decision refusing an application for non-compliance with a requirement of the Convention was issued, the applicant had been **clearly** informed by the EPO of the essential legal and factual reasons on which the finding of non-compliance was based. This was so that in advance

of the decision he knew both that the application might be refused and why, and also so that he might have a proper opportunity to comment upon the reasons and/or to propose amendments so as to avoid refusal of the application. Thus the term "grounds or evidence" in Art. 113(1) EPC 1973 should **not** be **narrowly** interpreted. In particular, in the context of the examination procedure the word "grounds" did not refer merely to a ground of objection to the application in the narrow sense of a requirement of the Convention which was considered not to be met. The word "grounds" should rather be interpreted as referring to the **essential reasoning**, both legal and factual, which led to refusal of the application (**T 187/95**). In other words, before a decision was issued an applicant had to be informed of the requirement which he had to meet and had to have an opportunity of meeting it (see also **T 520/94**, **T 750/94**, OJ 1998, 32; **T 487/93** and **T 121/95**).

In **T 907/91** the examining division refused the application without informing the applicant of its grounds for not accepting the amended documents submitted after receipt of the first communication and after oral proceedings. The board held this action to be in breach of Art. 113(1) EPC 1973 because, prior to issuing the contested decision in written or oral proceedings, the examining division should have given its reasons for refusing to accept the amended documents. Such grounds could be of a formal nature or relate to substantive patent law, depending on the relevant provisions. However, other grounds could also be brought to bear, based on generally recognised principles of procedural law (see Art. 125 EPC 1973), such as the applicant's attempt to delay proceedings by submitting an excessively large number of requests for amendments in clear abuse of the patent grant procedure.

In **T 763/04** the board stated that Art. 113(1) EPC enshrines a party's right to be heard before a decision is issued against it. In accordance with the established jurisprudence of the boards of appeal (see **J 7/82**, OJ 1982, 391 and **T 94/84**, OJ 1986, 337) this right also guarantees the right to have the relevant grounds fully taken into account in the written decision. The board held that Art. 113(1) EPC 1973 will be contravened where, as in the case before it, facts and arguments, which from the appellant's submissions are clearly central to his case and which may speak against the decision taken, are completely disregarded in the decision in question. The board stated that Art. 113(1) EPC 1973 requires not merely that a party be given the opportunity to voice comments, but more importantly that the deciding instance demonstrably hears and considers these comments. In summary, the right to be heard in accordance with Art. 113(1) EPC 1973 is contravened if the decision of the first instance fails to mention and to take into consideration important facts and arguments which may speak against the decision in question (see also **T 206/10**; **T 246/08**).

#### 2.8.4 Essential reasoning based on an IPER

In **T 275/99** the board held that the requirements of Art. 113(1) EPC 1973 were met if the appealed decision was entirely based on the grounds, facts and evidence which were already known to the appellant from the extensive international preliminary examination report (IPER) which had been drawn up for the description and the claims of the international application corresponding exactly to the European application refused and

which had been incorporated by way of reference in an official communication of the examining division.

In **T 587/02** the board held that if the only communication preceding the decision to refuse an application merely draws attention to an International Preliminary Examination Report (IPER), the requirements of Art. 113(1) EPC are met provided the IPER constitutes a reasoned statement as required by R. 51(3) EPC 1973, using language corresponding to that of the EPC.

In **T 1870/07** the single communication from the examining division pursuant to Art. 96(2) EPC 1973 merely signalled agreement with the IPER. The board did not see any objection to citing an IPER from an International Preliminary Examining Authority other than the EPO, provided that it constituted a reasoned statement (see, for example, **T 951/92**). However, in its view, the IPER failed to meet the requirements of a reasoned statement. In the communication of the examining division, there was no logical chain of reasoning which would have permitted the appellant to understand and deal with the novelty objection, either by amendment or counterargument. Art. 113(1) EPC 1973 was, therefore, not satisfied.

#### 2.8.5 Fresh argument based on grounds and evidence communicated beforehand

According to the case law of the boards of appeal, the use of a fresh argument in a decision still based on grounds and evidence communicated beforehand is not precluded.

The board pointed out in **T 268/00** that the right to be heard pursuant to Art. 113(1) EPC 1973 only precluded a decision's being taken on the basis of fresh evidence and grounds, while the use of a **fresh argument**, here based on a particular technical opinion, in a decision still based on grounds communicated beforehand was not precluded. Hence the technical argument in the decision under appeal addressed by the appellant, whether fresh or not, did not violate any of the appellant's rights. As to the technical substance of that argument, whilst the appellant might neither agree with the finding of the examining division nor with the technical argument given, a divergence of views between the examining division and the appellant on the substantive issue of inventive step did not amount to a procedural violation (see also **T 1557/07**, **T 815/089**).

#### 2.8.6 Bona fide attempt by the applicant to overcome the objections

In a case where an applicant has made a bona fide attempt to overcome the objections raised by the examining division, Art. 113(1) EPC may require such an attempt to be confirmed in the light of amended claims and substantial comments of the applicant (**T 734/91**, **T 582/93**).

In **T 734/91** the appellant had filed a fresh set of claims in reply to a communication of the examining division, the subject-matter of claim 1 being considerably changed in the light of the objection of lack of novelty raised by the examining division. These were **substantial amendments** in the light of the objections raised by the examining division.

The effort by the appellant was therefore considered to represent a bona fide attempt to overcome these objections. Claim 1 as amended had not been dealt with in the communication by the examining division but only in the contested decision. Thus the appellant did not have an opportunity to present his comments with regard to the grounds for refusal of this amended claim 1. The board stated that the examining division has to communicate the grounds against the grant of a patent to the applicant before refusing an application. In doing so it has to exercise its discretion to decide when it is deemed necessary and appropriate to invite the applicant's comments. This has to be done objectively in the light of the circumstances of each case (**T 162/82**, OJ 1987, 533). This does not mean that the applicant should be given repeated opportunity to comment on the same objections (**T 161/82**, OJ 1984, 551; **T 42/84**, OJ 1988, 251; **T 243/89**). In a case where an applicant has made a bona fide attempt to overcome the objections raised by the examining division, Art. 113(1) EPC 1973 may require such an attempt to be confirmed in the light of amended claims and substantial comments of the applicant (see also **T 998/05**).

In **T 763/04** the board held that the appellant, who had made a bona fide attempt to address the sole objection raised, could have legitimately expected the examining division out of fairness to use the discretion afforded by Art. 96(2) EPC 1973 to offer at least one further opportunity to address the objection. The board considered the refusal after the third communication, which was the first R. 51(3) EPC 1973 compliant communication as regards the ground of lack of novelty, without the issuance of a further communication, to represent a violation of the general principle of good faith and fair proceedings underlying the proceedings before the EPO.

In **T 92/96** the board found that, after notification of a correctly reasoned communication from the examining division, the applicants had had an opportunity to comment on the objections set out therein, but had confined themselves to suggesting a **minor correction** to the claim. The examining division decided to refuse the application, since the applicants had made no real effort to reply to the objections. In the board's view, the applicants had therefore suffered no prejudice. Consequently, the examining division had not committed a procedural violation, particularly with regard to Art. 113(1) EPC 1973.

#### 2.8.7 Form of the communication under Article 113(1) EPC

In **T 1237/07** the board pointed out that the right to present comments enshrined in Art. 113(1) EPC 1973 did not necessarily need to be exercised in writing but could be satisfied by way of oral proceedings.

In **T 497/02** the board found that Art. 113(1) EPC 1973 merely requires applicants to be afforded the opportunity to present their comments on the grounds on which the EPO bases its decision: it does not require a written communication nor does it specify how much time applicants should be afforded to consider and present their comments.

## 2.9. Informal communications

### 2.9.1 Telephone conversations

In **T 300/89** (OJ 1991, 480) the board held, in relation to the appellant's complaint as to the failure of the examiner to telephone as requested, that the practice in relation to such informal communications was clearly set out in the Guidelines. Such informal communications and the practice relating to them should be clearly distinguished from the formal examination procedure governed by Art. 96(2) EPC 1973 and R. 51 EPC 1973. The examiner's discretion as to whether to make such an informal communication had to be exercised in accordance with the Guidelines, having regard to the particular circumstances of each individual case. An exercise of such discretion adversely to an applicant, such as in the case in question, could not by its nature be a procedural violation, however, because the procedure for such conversations was informal in the sense that it was not governed by the EPC 1973, but was additional to the procedure provided by the EPC 1973. In any event, in the board's view, in the case in question no criticism could properly be made of the examiner in relation to his failing to telephone the appellant.

In **T 160/92** (OJ 1995, 35) the appellant claimed that in two telephone conversations with the primary examiner he was misled into believing that a refusal was not imminent, as a further communication would be issued as the next step of the procedure. The board noted that telephone calls between examiners of the EPO and applicants, in some situations, could be a tool for speeding up an otherwise slower procedure. However, one should be warned against expecting too much from them in critical situations, as misunderstandings could happen more easily than in writing, sometimes promoted by the fact that one of the two participants in the conversation might not be fully prepared for dealing with the case. It was with good reason that the procedure before the EPO was in principle, with the exception of oral proceedings under Art. 116 EPC 1973, a written procedure. Moreover, in the examination (as well as in the opposition) procedure the primary examiner was only one of a division of three examiners, it being well-known that his individual statements could not be binding for the division. Furthermore, telephone conversations were not provided for in the Convention and did not, as such, form part of the formal procedure before the EPO. The board held that the answer to the controversial question whether the applicant was misled about the possibility of imminent refusal of the application must be sought by focusing on the procedurally relevant content of the file.

In **T 1905/07** the board held that such an oral communication could in principle allow the applicant to exercise the right to present comments enshrined in Art. 113(1) EPC 1973, either orally (for instance in the oral proceedings planned for the next day) or in writing. However, presenting new grounds in a telephone conversation should not be equated with presenting the same grounds in formal oral proceedings or in a formal written communication. First, mere verbal communication by telephone was more prone to misunderstandings. Secondly, a party also had a right to be heard by the organ which took the decision, i.e. the examining division in the case at issue. A telephone conversation with only one of the examiners of that division did not safeguard this right in

the same way as oral proceedings. Whether or not a party's fundamental right to be heard had been infringed depended on the particular circumstances of the case.

### 2.9.2 Interviews

In principle, the refusal of a request for an interview with the examiner concerned does not contravene any of the rules of procedure contained in the Convention. If the applicant requests a personal consultation, the request should be granted unless the nature of the issue to be discussed requires formal proceedings or the examiner believes that no useful purpose would be served by such a discussion. (Guidelines C-VII, 2, November 2015 version).

In **T 98/88** it was held that Art. 116 EPC 1973 gave every party the absolute right to oral proceedings, but not the right to an interview with a particular member of an examining division. It is for the examiner concerned to decide whether such an interview should take place (see also **T 589/93**). In **T 193/93**, the board held that examiners were under no obligation to grant an "interview" (**T 235/85**, **T 909/95**).

In **T 409/87** the board noted that Art. 116 EPC 1973 makes it clear that whether or not the EPO considers it to be expedient, a party is entitled to oral proceedings upon request (see **T 299/86**, OJ 1988, 88). However, a request for an interview is clearly not, by itself, a request for oral proceedings and there is no obligation upon the examining division to grant such request for an interview when, as set out in the Guidelines, the examiner believes that no useful purpose would be served by such a discussion (see **T 19/87**, OJ 1988, 268, **T 909/95**). As an interview, in contrast to oral proceedings, is not a procedural step provided by the Convention, the refusal to grant a request for an interview is not a decision open to appeal and, therefore, does not fall under the provision of R. 68(2), first half-sentence, EPC 1973.

In **T 283/88** the board stated that if a request for oral proceedings has been made, such proceedings must therefore be appointed. This is in contrast to a request for an interview before the examining division, in which case the examining division may refuse such a request if it considers that no useful purpose would be served by such a discussion (cf. Guidelines). As pointed out in the decision in case **T 19/87**, if there is any doubt in any particular case as to whether or not oral proceedings have been requested, it is clearly desirable as a matter of practice that clarification should be sought from the party concerned.

In **T 366/92** the statement that the applicant "would welcome the opportunity to discuss the case with the Examiner at an informal interview ..." did not constitute a request for oral proceedings under Art. 116 EPC 1973.

In **T 299/86** (OJ 1988, 88) the board held that the right of a party to request oral proceedings under Art. 116 EPC 1973 was in no way affected by the fact that such party could have also requested and/or attended an interview with the examiner.

In **T 808/94** the board stated that informal interviews (also called "personal consultation") and/or informal consultations by telephone which were carried out by the primary examiner alone could not replace duly requested oral proceedings under Art. 116 EPC 1973, which were to take place before all members of the examining division (Art. 18(2) EPC 1973).

### **3. The grant stage in examination**

By decision of the Administrative Council CA/D 2/10 of 26 October 2010 (OJ 2010, 637), R. 71 EPC's paragraphs 3 to 7 of were amended, its paragraphs 8 to 11 were deleted and new R. 71a EPC was inserted. The provisions as amended entered into force on 1 April 2012.

R. 71 EPC governing the last phase of the grant proceedings has been split into two separate rules: new R. 71 EPC focuses on the work of the examining division and R. 71a EPC on issues which arise when the grant procedure is concluded and which are mainly dealt with by the formalities officer acting on behalf of the division.

#### **3.1. Rule 71(3) EPC communication: the text for approval**

New R. 71 EPC reinstates the pre-2002 practice concerning changes to the text intended for grant suggested by the examining divisions. The new text of R. 71(3) EPC (R. 51(4) EPC 1973), which entered into force on 1 April 2012, reads as follows: "Before the examining division decides to grant the European patent, it shall inform the applicant of the text in which it intends to grant it and of the related bibliographic data. In this communication the examining division shall invite the applicant to pay the fee for grant and publishing and to file a translation of the claims in the two official languages of the European Patent Office other than the language of the proceedings within four months."

Thus once the examining division has decided that a patent can be granted it must inform the applicant of the text on the basis of which it intends to do so. Under the new regime, this text may include amendments and corrections made by the examining division on its own initiative which it can reasonably expect the applicant to accept. (Guidelines C-V, 1.1 – November 2015 version, Text for approval).

In **T 1849/12** the appellant asked for the withdrawal of the examining division's communication, and requested that the examining division be instructed to issue the communication under R. 71(3) EPC without delay - specifically before the expiry of 18 months from the priority date - and therefore to grant the European patent as quickly as possible. The board noted that Art. 93(2) EPC provided for the possibility of granting a patent before the expiry of the 18-month period. An earlier grant was thus not ruled out, provided the examining division had already concluded that the application met all the requirements of the EPC. As this was not yet so in the case at issue, the possibility provided for in Art. 93(2) EPC of granting a patent before the 18 months expired did not apply. The board did not see any conflict in this regard between the provisions of Art. 93(2) and 97(1) EPC. Under the Convention, the granting of a patent was conditional upon the mandatory examination of all EPC requirements. A patent could only be

granted if the examining division considered all examination requirements met. Contrary to the appellant's claim, the examining board had no discretion in this regard. It had to be taken into account that the EPO was responsible for safeguarding the interests of the public, in addition to those of the appellant, and the public had to be able to rely on it doing so. Nor was the requirement of novelty over the prior art according to Art. 54(3) EPC a subordinate one, as the appellant appeared to claim. Rather, the lack of novelty over prior art according to Art. 54(3) EPC was a ground for both opposition under Art. 100(a) EPC and revocation under Art. 138(1)(a) EPC.

## 3.2. Approval of the text by the applicant

### 3.2.1 General issues

The new provisions decided by the Administrative Council, which entered into force on 1 April 2012 (CA/D 2/10 of 26.10.2010, OJ 2010, 637), are not intended to change the current procedure for cases where the applicant agrees with the text communicated to him under R. 71(3) EPC. This means that if the applicant pays the fees and files the translations within this period (and files or requests no corrections or amendments to the text proposed for grant in the R. 71(3) EPC communication), he will be **deemed to have approved** the text intended for grant (R. 71(5) EPC) (Guidelines C-V, 1.1 – November 2015 version).

The above also applies where the R. 71(3) EPC communication was based on an auxiliary request, provided that the applicant does not reply to the R. 71(3) EPC communication by requesting that a grant be based on a higher ranking request. This means that, in the absence of any indication to the contrary, the above acts imply approval of the text of the auxiliary request upon which the R. 71(3) EPC communication was based as well as the abandonment of all higher ranking requests. The above also applies where the R. 71(3) EPC communication included proposals by the examining division for amendments or corrections of the text intended for grant. Consequently, provided the applicant does not reject these proposed amendments or corrections in his reply, the completion of the above acts constitutes approval of the text containing the amendments or corrections as proposed by the examining division (Guidelines C-V, 2 – November 2015 version, "Grant of a patent").

### 3.2.2 Clear and unambiguous approval of the text

A number of decisions commented on below relate to earlier versions of former R. 51(4) EPC 1973 (now R. 71(3) EPC, version 2012). Nevertheless, they may also be applicable to the new R. 71(3) EPC.

In **J 12/83** (OJ 1985, 6) the board held that an applicant for a European patent could be "adversely affected", within the meaning of Art. 107 EPC 1973, by a decision to grant the patent if the patent were granted with a text not approved by the applicant, contrary to Art. 97(2)(a) EPC 1973. Approval, for the purposes of that Article, had to be established "in accordance with the provisions of the Implementing Regulations" (here R. 51(4) EPC 1973).

In **J 13/94** the board observed that any approval of the text, in accordance with R. 51(4) EPC 1973, might thus have serious procedural consequences for applicants. Hence, according to the case law of the Legal Board of Appeal, declarations by applicants should only be treated as valid approval under R. 51(4) EPC 1973 if they were clear and unambiguous which, in particular, implied that:

the approval was not subject to any condition (**J 27/94**, OJ 1995, 831);

it was clear to which text the applicant had given his approval (**J 29/95**, OJ 1996, 489).

In **J 27/94** (OJ 1995, 831) the board held that in the interests of legal certainty a procedural declaration had to be unambiguous (confirming **J 11/94**, OJ 1995, 596). This implied that it must not be subject to any condition, leaving it open whether the EPO could proceed further on the basis thereof. It found that the examining division should not have treated the letter in question as valid approval under R. 51(4) EPC 1973, because it contained a condition which made the approval invalid. The approval of the text intended for grant was a necessary requirement for the next step in the proceedings, i.e. the communication under R. 51(6) EPC 1973. It had to be clear for the EPO when receiving the declaration whether or not it was an appropriate basis for the despatch of this communication. In the interests of legal certainty the board stated that procedural declarations had to be unambiguous. The examining division should have objected to the invalid approval, with the eventual consequence foreseen in R. 51(5), first sentence, EPC 1973.

In **T 971/06** the board noted that the approval by an applicant or patent proprietor under Art. 97(2)(a) EPC 1973 was a principle underlying all decisions of the EPO (see Art. 113(2) EPC 1973). Accordingly, it was perfectly clear that it was an absolute pre-condition of any decision of the examining division to grant a patent that an applicant had to have consented to the proposed text. If that pre-condition were not fulfilled, the only courses of action open to the examining division were to refuse the application under Art. 97(1) EPC 1973 or, if possible amendments or corrections remain to be considered, to continue the examination. So strict was the approval condition that, as the case law showed, the only valid approval was that which was unconditional, unambiguous and clear (see **J 13/94** of 4 October 1996; **J 27/94**, OJ 1995, 831; and **J 29/95**, OJ 1996, 489). The board held that in the absence of a valid approval, the examining division had no power to make a decision to grant and any decision to grant purportedly made without the applicant's valid approval could have no legal effect. Any such purported decision was therefore a nullity.

In **T 872/90** the board held that, in view of the requirement of Art. 113(2) EPC 1973 according to which the EPO would consider and decide on the European application only in the text submitted to it, or agreed, by the appellant, former claims which had been replaced by newly filed claims could no longer be considered to constitute a text agreed to by the applicant.

In **T 1/92** (OJ 1993, 685) the board held that the applicant's approval of the text is only binding if it is still unambiguously present at the expiry of the R. 51(4) EPC 1973 period.

### 3.2.3 Decisions with no text submitted or agreed by the applicant (Article 113(2) EPC)

#### a) General issues

Art. 113(2) EPC states that the EPO shall examine, and decide upon, the European patent application or the European patent only in the text submitted to it, or agreed, by the applicant or the proprietor of the patent.

The applicant may reply to the communication under R. 71(3) EPC by simply disapproving of the text proposed therein and not paying any fees or filing the translations of the claims. In such cases, the application is not deemed to be withdrawn under R. 71(7) EPC. However, the application could be refused under Art. 97(2) EPC for failure to comply with Art. 113(2) EPC, because there is no text agreed to by the applicant (see Guidelines C-V, 4.9 – November 2015 version, "Applicant disapproves of the text proposed for grant").

In **T 690/09** the board stated that the application would be refused under Art. 97(2) EPC, if there is no text which has been approved by the applicant and allowed by the examining division (see Art. 113(2) EPC 1973, decisions **T 647/93**, OJ 1995, 132; **T 946/96** and **T 237/96**).

In **T 1093/05** the board noted that to grant a patent in a text not approved by the applicant was in breach of Art. 97(2)(a) and 113(2) EPC 1973 and thus a substantial procedural violation. The board stated that in those circumstances it was established board of appeal and Enlarged Board of Appeal case law that an examining division was bound by its final decision on an application, which could be set aside only following an admissible, reasoned appeal (see **G 12/91**, OJ 1994, 285; **G 4/91**, OJ 1993, 707; **T 371/92**, OJ 1995, 324; **T 1081/02**; **T 830/03**). In view of this established case law, the board could not subscribe to the view expressed in **T 971/06** that an erroneous decision was a nullity and therefore no appeal needed to be filed against it.

In **T 237/96** the board noted that in circumstances in which, as in the case in question, amendments proposed by the applicant were not allowed by the examining division by virtue of R. 86(3) EPC 1973 and the applicant did not give its agreement to any other version of the application documents, the established practice of the EPO, sanctioned by consistent case law, was to refuse the application on the ground that there was no version approved by the applicant within the meaning of Art. 113(2) EPC 1973 on which a patent could be granted.

Some decisions showed a different approach concerning the legal basis for refusing an application where no agreed claim text existed. In **T 246/08** the board held that the substantive legal requirement for the continued presence of claims in an application was expressed in Art. 78(1)(c) EPC, not in Art. 113(2) EPC. It noted that Art. 78(1)(c) EPC 1973 was a requirement of the application not only for according a filing date, but also for substantive examination and grant, whereas Art. 113(2) EPC 1973 was silent as to the legal consequence of the absence of an agreed text (**T 2112/09**).

In **T 32/82** (OJ 1984, 354) the board held that in accordance with Art. 113(2) EPC 1973, it could only decide on the European patent application in the text submitted to it or agreed by the applicant. It followed that when deciding the appeal the board had no authority under the Convention to order the grant of a European patent containing claims which were different from those submitted by the applicant in their content or interdependency. Even if the board had indicated to an applicant that a dependent claim might be allowable if rewritten as an independent claim but the applicant had not expressly requested the board to consider it as such, the board was not obliged to do so.

In **T 647/93** (OJ 1995, 132) the board stated that the provision of Art. 113(2) EPC 1973, that the EPO shall consider and decide upon the European patent application or the European patent only in the text submitted to it, or agreed, by the applicant for or proprietor of the patent, is a fundamental procedural principle, being part of the right to be heard, and is of such prime importance that any infringement of it, even as the result of a mistaken interpretation of a request, must, in principle, be considered to be a substantial procedural violation. In any case, such violation occurs when, as in the case at issue, the examining division does not make use of the possibility of granting interlocutory revision under Art. 109 EPC 1973, after the mistake has been pointed out in the grounds of appeal (see **T 121/95**).

#### b) Auxiliary request issues

Where it is not clear which higher request the applicant wishes to pursue, the examining division must request the applicant to clarify this in resumed examination proceedings. (Guidelines C-V, 4.9 – November 2015 version).

In **T 1255/04** (OJ 2005, 424) the board held that in a case where there is a request considered allowable on which a R. 51(4) EPC 1973 communication is to be sent, but there are also not allowed higher-ranking requests, the communication under R. 51(4) EPC 1973 is deficient if it is not accompanied by reasons why the higher-ranking requests are not allowed. This communication should also expressly mention the option of maintaining the disallowed requests, thus reminding the applicant and the examining division of the possibility for the applicant of asking for a written appealable decision on these higher-ranking requests (decision **T 1181/04** followed). It pointed out that if the applicant maintains a still pending higher-ranking request discussed at the oral proceedings before the examining division, that request cannot be refused under R. 86(3) EPC 1973. The decision under appeal, by merely stating that the application was refused because there was no version approved of by the applicant within the meaning of Art. 113(2) EPC 1973 on which a patent could be granted, was inadequately reasoned because it did not give the substantive reasons why what the applicant did not approve of was not in conformity with the patentability requirements of the EPC.

In **T 169/96** the board held that according to Art. 113(2) EPC 1973, the EPO was bound to the requests of the applicant or proprietor. In case of main and auxiliary requests, this meant that the EPO was also bound to the order of the requests. Before a decision could be taken on the basis of an auxiliary request, the main request had to be examined and decided upon (**T 484/88**, dated 1 February 1989). This principle was violated by the

examining division. The applicants were only invited to indicate their approval of the text according to auxiliary request III. Therefore, their express disapproval related necessarily only to this version of the application. There was nothing in the file which could be interpreted as a withdrawal of the main request and the auxiliary requests I and II. Hence, these requests were pending when the decision under appeal was taken and the failure to give a decision on these requests was a violation of Art. 113(2) EPC 1973. The failure to deal with the requests preceding auxiliary request III violated also R. 68(2) EPC 1973. If a decision related to several requests, it had to give reasons for the rejection of each one (**T 234/86**). The fact that the first examiner had expressed a preliminary view in a previous communication which might be applicable to these requests could not replace reasons in the decision itself. Whereas the reasons of a decision might, in the interest of procedural economy, refer in appropriate cases to previous communications, it had to be clear from the decision which considerations led the division to its conclusions (**T 234/86**, see also **T 1439/05**).

In **T 255/05** the board observed that the appellant's "auxiliary request" was not one single request but encompassed numerous requests. It was totally undefined in which order these four requests and any such combination requests should be considered by the board. The board noted that according to Art. 113(2) EPC 1973, the EPO should consider or decide upon the European patent application only in the text submitted to it, or agreed, by the applicant. It was therefore the applicant's responsibility to define the text on the basis of which it requested a patent to be granted. In the case of auxiliary requests this included the requirement that the applicant had also to indicate the order in which the requests were to be examined. This was so because filing an auxiliary request meant that such a request was only filed in the event that the preceding request was not allowed by the board. As a consequence, when the appellant, even after having been invited to do so by the board, did not clearly indicate the order in which its several requests were submitted and what the exact content of each of these requests was, there was no text submitted or agreed by the applicant within the meaning of Art. 113(2) EPC 1973 and no request which could be considered by the board. Therefore, the appellant's "auxiliary request" had to be disregarded.

In **T 888/07** the board held that, if the examining division refused to consent to the latest submitted set of amended claims, put forward to substitute for the claims previously on file under R. 86(3) EPC 1973, the previous set of claims that the examining division had consented to consider but which the applicant had not maintained as an auxiliary request was not automatically revived. It noted that in accordance with Art. 113(2) EPC and established case law (see e.g. **T 237/96**) a decision could not be based on the previous set of claims. Art. 113(2) EPC 1973 stated that the European Patent Office had to consider and decide upon the European application or patent only in the text submitted to it, or agreed to, by the applicant or proprietor. Deciding to refuse an application on the grounds that the claims previously on file were not allowable would have contravened Art. 113(2) EPC 1973, since these claims were no longer pending.

### 3.2.4 Examination procedure under the previous system (Rule 71 EPC and Rule 51(4) EPC 1973)

Under the system existing before 1 April 2012, R. 51 EPC 1973 implemented the examination procedure established in Art. 96 and 97 EPC 1973. In particular, R. 51(4) EPC stipulated that the examining division had to communicate to the applicant the text in which it intended to grant the patent and invite him to pay the fees and file the translation. According to the last sentence of this provision, the payment of the fees and the filing of the translation was considered to be implicit approval of the text proposed by the examining division.

In **T 1181/04** (OJ 2005, 312) the board noted that the function of a communication under R. 51(4) EPC 1973 was to establish whether the applicant approved the proposed text of the patent as foreseen in Art. 97(2)(a) and Art. 113(2) EPC 1973. If, after receiving the communication under R. 51(4) EPC 1973, the applicant approved the version of the patent proposed by the examining division and fulfilled the formal requirements for grant, the examining division would issue a decision to grant according to Art. 97(2) EPC 1973. If he did not approve, the application was refused according to Art. 97(1) EPC 1973, since the EPC did not provide any other sanction in this case. The board pointed out that the way in which R. 51(4) EPC 1973 and Art. 97(1) and (2) EPC 1973 operated indicated that a communication under R. 51(4) EPC 1973 was not intended to terminate the examination procedure but was rather a **preparatory action** and was therefore not appealable. An appeal against a communication under R. 51(4) EPC 1973 would therefore normally be considered inadmissible.

The board noted that the communication under R. 51(4) EPC 1973 from the examining division gave the appellant the impression that no possibility was available to him other than to pay and accept the proposed text or not to pay and lose the application. This impression was even stronger because reasons for turning down the higher-ranking requests were also contained in the document and no indication was given as to how to proceed if the appellant wished to maintain these higher-ranking requests. The board observed that where approval was not given, this also had a legal consequence, namely the refusal of the application in accordance with Art. 97(1) EPC 1973. The legal consequence of the non-existence of the applicant's approval was not the same as that foreseen for the failure to pay the fees or to file the translation. In the former case the application was refused, whereas in the latter it was deemed to be withdrawn. The board noted that the fact that an applicant's disapproval of the text proposed for grant had special legal consequences also made it necessary to ensure that disapproval was clearly established by the examining division.

The board noted that the communication sent to the applicant reflected an EPO practice that did not provide for a procedure to be followed in the event that the applicant did not agree with the version proposed by the examining division. The board found that this practice was not justified by the EPC. The applicant's approval of the text proposed for grant by the examining division was an essential and crucial element in the grant procedure and its existence or non-existence needed to be formally ascertained. Further, the applicant should have been given the opportunity to express his disapproval of the

text proposed for grant by the examining division with a communication under R. 51(4) EPC 1973 and to obtain an appealable decision refusing his requests. In **T 1255/04** (OJ 2005, 424) and **T 1226/07** the boards followed decision **T 1181/04**.

### **3.3. Amendments or corrections filed in response to the communication under Rule 71(3) EPC**

#### 3.3.1 Amendments where Rule 71(3) EPC communication is the first communication

The applicant's right to amend the application of his own volition after receipt of the examiner's first communication was shifted to the procedural stage of response to the opinion accompanying the European search report (see Decision of the Administrative Council, which entered into force on 1 April 2010, OJ 2009, 299).

Thus, by way of exception, in cases where the R. 71(3) EPC communication is also the first communication in examination proceedings, amendments filed in response thereto **must** be admitted into the proceedings under R. 137 EPC. However, where a further R. 71(3) EPC communication is sent in respect of such cases, any amendments filed in response thereto must be consented to by the examining division according to R. 137(3) EPC (see Guidelines C-V, 4.4- November 2015 version).

#### 3.3.2 Amendments and corrections requested according to Rule 71(6) EPC

R. 71(6) EPC reads as follows: "if the applicant, within the period under paragraph 3, requests reasoned amendments or corrections to the communicated text or keeps to the latest text submitted by him, the examining division shall issue a new communication under paragraph 3 if it gives its consent; otherwise it shall resume the examination proceedings" (see also Notice from the EPO dated 8 June 2015 concerning the possibility to waive the right to a further communication under R. 71(3) EPC, OJ 2015, A52; Guidelines C-V, 4.11 – November 2015 version).

All of the amendments or corrections requested by the applicant have to be reasoned, in particular those which have not been on file yet (CA/81/10, Rule 71 Rev 1).

Where amendments or corrections are not admitted, or where they are admitted but not considered allowable, examination will be resumed (Guidelines H-II, 2.5.3 – November 2015 version).

The boards of appeal have confirmed in their case law (e.g. **T 1064/04**) that the principles set out in **G 7/93** (OJ 1994, 775) also apply after the structural amendment of R. 51 EPC 1973 in 2002 (CA/81/10 Rule 71 Rev 1).

#### 3.3.3 Criteria for admitting amendments filed in reply to the Rule 71(3) EPC communication

The criteria for accepting or refusing requests for amendment under R. 137(3) EPC (former R. 86(3) EPC 1973), or correction under R. 139 EPC (former R. 88 EPC 1973),

have not been changed by new R. 71 EPC (former R. 51 EPC 1973), which entered into force on 01.04.2012 (OJ 2010, 637).

Decision **G 7/93** (OJ 1994, 775) dealt with the criteria for assessing the admissibility of late-filed amendments in examination. In particular, applying the principles of **G 7/93** to amendments filed in response to the communication under R. 71(3) EPC means that this communication does not constitute an opportunity for the applicant to call into question the outcome of the earlier procedure (**T 375/90**).

The Enlarged Board of Appeal noted that the question whether an approval submitted under R. 51(4) EPC 1973 becomes binding once a communication in accordance with R. 51(6) EPC 1973 has been issued depended rather upon the proper interpretation of Art. 123(1) EPC in conjunction with R. 86(3) EPC 1973. The Enlarged Board of Appeal came to the conclusion that the approval of a notified text submitted by an applicant pursuant to R. 71(3) EPC (former R. 51(4) EPC 1973) does not become binding. It stated that, in general terms, the way in which the examining division should exercise its discretion to allow an amendment of an application must depend upon the circumstances of each individual case, and must also depend upon the stage of the pre-grant procedure which the application has reached. It is clear from the wording of the provisions in R. 51(4) to (6) EPC 1973 that the underlying object of the R. 51(6) EPC 1973 communication is to conclude the granting procedure on the basis of the previously notified and approved text of the application. Thus although the examining division still has a discretion to allow amendments at this stage of the pre-grant procedure, such discretion must be exercised with the above underlying object in mind. In particular it held that admission of amendments at a late stage of the proceedings is to be the exception and not the rule.

In **T 1064/04** the board stated that the principles in **G 7/93** could be considered generally applicable to new requests put forward at a late stage of the proceedings, where the applicant had already had at least one opportunity to amend the application and the examining division has already completed substantive examination of the application. The board found that the examining division had exercised its discretion in a reasonable way in accordance with the applicable principles. A late stage of the examination proceedings had been reached at the end of the oral proceedings, and any amendments thereafter fell to be considered under the principles derivable from decision **G 7/93**. **T 1064/04** summarised the principles derived from decision **G 7/93** (OJ 1994, 775) on admission of amendments at a late stage of proceedings (see also **T 1540/11** and **T 1326/11**). The principles that can be derived from decision of the Enlarged Board of Appeal are:

(a) Until the issue of a decision to grant the patent, the examining division does have discretion under R. 86(3) EPC 1973 (now R. 137(3) EPC), second sentence, whether or not to allow the amendment of the application at a late stage, irrespective of whether the applicant has already agreed to a text (**G 7/93**, point 2.1 of the Reasons).

(b) The examining division is required to exercise its discretion considering all relevant factors, in particular the applicant's interest in obtaining a patent which is valid in all

designated states, and the EPO's interest in bringing examination to a close, and must balance these against one another (**G 7/93**, points 2.2 and 2.3 of the Reasons).

(c) Allowing a request for amendment at a late stage of the examination proceedings, that is, against the background that the applicant has already had at least one opportunity to amend the application and that the examining division has already completed the substantive examination of the application, will be an exception and not the rule (**G 7/93**, point 2.3 of the Reasons).

(d) It is not the function of a board of appeal to review all the facts of the case as if it were in the place of the department of first instance, in order to decide whether or not it would have exercised the discretion in the same way as the department of first instance. Rather a board of appeal should only overrule the way in which the department of first instance exercised its discretion if it comes to the conclusion either that the department of first instance has not exercised its discretion in the right way as set out in (b) above or has exercised its discretion in an unreasonable way, and thus exceeded the proper limits of its discretion (**G 7/93**, point 2.6 of the Reasons).

In **T 1399/10** the board held that if an examining division comes to the conclusion that a request is not prima facie allowable but introduces new deficiencies, it is justified for the division to refuse the request under R. 137(3) EPC.

In **T 1326/11** the decision under appeal dealt solely with the refusal under R. 137(3) EPC (2010) by the examining division to admit into the proceedings the request received after issuance of the communication under R. 71(3) EPC. Thus, the question to be decided on this appeal was whether this refusal was an appropriate exercise of the discretion given to the examining division under R. 137(3) EPC. Guided by the principles to be found on **G 7/93** as summarised in **T 1064/04**, the board dismissed the appeal and decided that the examining division correctly and reasonably exercised its discretion under R. 137(3) EPC not to admit the request through balancing the applicant's interest in obtaining a valid patent and the EPO's interest in bringing the examination to a close. The board was of the view that the complexity of the case only supported the decision of the examining division not to admit a request at a very late stage of proceedings, which had already involved two communications of the examining division and oral proceedings before it. Admitting the request at that late stage would have led to re-examination and consequently unduly lengthened the proceedings.

In **T 246/08** the board held that a refusal of consent to amend made in advance of any amendment being submitted cannot be a reasonable exercise of discretion pursuant to R. 137(3) EPC (former R. 86(3) EPC 1973) and is ipso facto a substantial procedural violation.

A number of decisions set out below relate to earlier versions of former R. 51(4) EPC 1973 (now R. 71(3) EPC). Nevertheless, they may also be applicable to the new R. 71(3) EPC.

In **T 375/90** the board noted the conditions defined by the boards of appeal limiting the extent of the discretion which may be exercised when applying R. 86(3) EPC 1973, where amendments were proposed by the applicant after issue of the R. 51(4) EPC 1973 communication:

(i) There is no discretion in the obligation to admit amendments which remove deficiencies constituting violations of the EPC 1973 (see **T 171/85**, OJ 1987, 160 and **T 609/88**).

(ii) In all other cases the EPO's interest in a speedy completion of the proceedings must be balanced against the applicant's interest in the grant of a patent with amended claims (see **T 166/86**, OJ 1987, 372; **T 182/88**, OJ 1990, 287 and **T 76/89**).

The board noted that the Guidelines H-II, 4 (see also Guidelines, November 2015 version) stated that the communication under R. 51(4) EPC 1973 did not constitute an opportunity for the applicant to call into question the outcome of the earlier procedure and only minor amendments would be considered within the period under R. 51(4) EPC 1973. It followed from the foregoing considerations that the examining division (or the board acting within its competence), when applying the provisions of R. 86(3) EPC 1973, is **not completely free** to deny any examination of the respective amended documents (see also **T 989/99**).

In **T 999/93** the decision to refuse the application under R. 51(5), first sentence, EPC 1973 for lack of any approved text of the application (Art. 113(2) EPC 1973), was incorrect since the fact that the appellant never withdrew the main and first and second auxiliary requests as well as the appellant's letter of 6.4.1993 (disapproval of the text proposed for grant, but request for a decision on the main request) clearly showed that he indeed approved and proposed the text according to his higher-ranking requests (see also R. 51(5), second sentence, EPC 1973). The decision would instead have required reasoning as to the substance of the main, first auxiliary and second auxiliary requests.

In **T 237/96** the board held that the broadening of the scope of claim 1 requested by the applicant after receipt of the examining division's communication under R. 51(4) EPC 1973 so as to encompass one originally disclosed embodiment was not consistent with his previous submission that said embodiment was not part of the invention, raised new issues as to clarity and inventive step and was not supported by any argumentation in favour of the allowability of the amended claim. The board found that the examining division, in refusing to consent to the amendment under R. 86(3) EPC 1973, did not exercise its discretion in a wrong or unreasonable manner. Had it given its consent to the amended version of the claim, it would have been necessary to restart examination from the beginning, which, given the prima facie lack of clarity of the claim, would have led to a considerable delay.

In **T 1066/96** it was clear that further amendments could not be excluded wholesale in advance, but the discretion under R. 86(3) EPC 1973 had to be exercised on a case by case basis balancing the interests of the EPO and the applicant against one another

(see **G 7/93**, OJ 1994, 775). Therefore, in exercising its discretion under R. 86(3) EPC 1973 in a negative way, an examining division could only refuse an application if, before issuing a decision, it had informed the applicant of the fact that the further amendments requested would not be admitted and of the reasons for not admitting said amendments, thereby taking due account of the applicant's reasons for such late filing of further amendments. If the applicant maintained its request and its counterarguments were not considered convincing by the examining division, the application had to be refused under Art. 97(1) EPC 1973, since it contained no claims to which the applicant had agreed.

In **T 121/06** the board held that issuing a communication under R. 51(4) EPC 1973 in which amendments were proposed, which the applicant could not reasonably be expected to accept without further discussion, constituted a substantial procedural violation.

#### 3.3.4 Claims fees due in response to Rule 71(3) EPC communication

According to R. 71(4) EPC (in force since 01.04.2012) if the European patent application in the text intended for grant comprises more than fifteen claims, the examining division shall invite the applicant to pay claims fees in respect of the sixteenth and each subsequent claim within the period under paragraph 3 unless the said fees have already been paid under R. 45 or 162 EPC.

The appeal in **J 6/12** was lodged against the decision by the formalities officer acting for the examining division to refuse a request for a refund under R. 71(5) EPC of ten claims fees following amendments which had resulted in a smaller number of claims. R. 71(6) EPC (now R. 71(4) EPC), which entered into force in December 2007, was the legal basis for the invitation to pay claims fees. According to this provision, the "text [of the application] intended for grant" was the basis for charging additional claims fees. However, the Legal Board held that this text had only become final after the examining division had approved the filed amendments, and not already on the date of issue of the communication under R. 71(3) EPC. Fees which the appellant had been invited to pay at that earlier stage had not yet become payable and decreased in the measure that the appellant had reduced the number of claims in response to the communication under R. 71(3) EPC. The board stressed that the EPO could not retain fees of more than insignificant amounts which had been paid for no legal reason.

#### 3.4. Amendment after approval of the text for grant

R. 71a (2) EPC (Conclusion of the grant procedure) makes it clear that, until the decision to grant the European patent is issued, the examining division may resume the examination proceedings at any time.

The text for grant is communicated to the applicant by despatching a communication under R. 71(3) EPC, in which the applicant is furthermore invited to pay the fee for grant and publishing and to file a translation of the claims within a period of four months, which is non-extendable. Under R. 71(5) EPC if the applicant pays the fees and files the

translations within this period (and files or requests no corrections or amendments to the text proposed for grant in the R. 71(3) EPC communication), he will be deemed to have approved the text intended for grant (Guidelines C-V, 1.1 – November 2015 version).

According to the case law an examining division has discretion to allow amendments until issue of a decision to grant (see **G 7/93**, order 1, OJ 1994, 775 and **G 12/91**, OJ 1994, 285) (**T 690/09**).

Once the applicant has approved the text communicated to him pursuant to R. 71(3) EPC, by paying the fees and filing the translation of the claims, further requests for amendment will **only exceptionally** be admitted under the discretionary power of the examining division given by R. 137(3) EPC. A clear example of an admissible request is where the applicant files separate sets of claims for designated States that made reservations under Art. 167(2) EPC 1973 or for which prior national rights exist. Similarly, it is appropriate to admit minor amendments which do not require re-opening of the substantive examination and which do not appreciably delay the issue of the decision to grant (see **G 7/93**, OJ 1994, 775).

A refusal of amendments must be reasoned, and both Art. 113(1) and Art. 116(1) EPC must be observed. It must be shown that the conditions defined in **G 7/93** (OJ 1994, 775) are not met. This means that arguments must be given as to why the amendments are not minor in nature but in fact necessitate resuming substantive examination while considerably delaying the issue of a decision to grant the patent (Guidelines H-II, 2.6 - November 2015 version).

In decision **G 7/93** (OJ 1994, 775) the Enlarged Board stated that the wording in R. 86(3) EPC 1973 (now R. 137(3) EPC) "No further amendment may be made without the consent of the examining division" simply meant that the examining division might or might not give its consent to a request for amendment by the applicant. The approval of a notified text submitted by an applicant pursuant to R. 51(4) EPC 1973 was not rendered binding by virtue of a communication being issued in accordance with R. 51(6) EPC 1973. Even following the issue of such a communication and until the issue of a decision to grant the patent, it was left to the discretion of the examining division under R. 86(3), second sentence, EPC 1973 whether or not to allow amendment of the application. However, since the underlying object of a R. 51(6) EPC 1973 (earlier version) communication was to conclude the granting procedure on the basis of the approved text, a request for amendment which was received by an examining division after such a communication has been issued should be considered in a different way from a similar request for amendment received at a much earlier stage in the overall examination procedure, and in particular before approval by the applicant of a notified text. Such a request should be considered in the context of the very late stage in the pre-grant procedure at which it had been made, and against the background that the examining division had already completed its substantive examination of the application, and that the applicant had already had at least one opportunity to amend the application. Against such a background, allowing a requested amendment after the issue of a R. 51(6) EPC 1973 communication would be the exception rather than the rule.

The question remained in what kind of circumstances it would be appropriate to make an exception to the normal rule. In the Enlarged Board's view, the discretion to allow amendment should be exercised according to the same principles. Of course, an objection should only be raised by an examining division at that stage of the proceedings if it was prepared to allow amendments to meet the objection. When exercising its discretion following the issue of a R. 51(6) EPC 1973 communication, an examining division had to consider **all relevant factors**. In particular it had to consider and balance the applicant's interest in obtaining a patent which would be legally valid in all of the designated states, and the EPO's interest in bringing the examination procedure to a close by the issue of a decision to grant the patent.

In **G 10/92** (OJ 1994, 633) the Enlarged Board stated that if examination proceedings were re-opened by the examining division after approval in accordance with R. 51(4) EPC 1973, because - for whatever reason - the proposed text for grant was to be amended, R. 51(4) EPC 1973 required that the applicant once again be informed of the text in which the examining division intended to grant the European patent. The same was true in appeal proceedings. The approval in accordance with R. 51(4) EPC 1973 given before the department of first instance was equally binding on an appeal. If the board of appeal then concluded that the patent had to be amended prior to grant, the applicant again had to approve the amended text, approval being stated before the board if the board was ruling on the issue, or to the examining division if the matter had been remitted.

In **G 10/93** (OJ 1995, 172) the Enlarged Board held that the examining division was not bound by the view - whether positive or negative - expressed in the examination pursuant to Art. 96(2) EPC 1973; examination proceedings could be re-opened "for whatever reason" after the approval in accordance with R. 51(4) EPC 1973.

In **T 171/85** (OJ 1987, 160) the board decided that if discrepancies or inconsistencies are found in the text communicated under R. 51(4) EPC 1973 to the applicant for a European patent, they may be removed in agreement between examining division and applicant even if the latter has already given his approval under R. 51(4) EPC 1973 to the (faulty) text.

### **3.5. Examination after remittal for further prosecution**

If a case is remitted from the boards of appeal for further prosecution, the examining division must check whether requests from examination proceedings prior to the appeal are still outstanding and must give the party an opportunity to comment (see **T 1494/05**) (Guidelines E-IX, 1.2 – November 2015 version).

If a department has to give a decision in a case which has already been remitted by the board of appeal for further prosecution to that department, it is bound by the ratio decidendi of the board of appeal, insofar as the facts, e.g. the subject-matter of the patent and the relevant state of the art, are the same (Guidelines E-IX, 9).

In **T 79/89** (OJ 1992, 283) the board rejected the appellant's main request, and remitted the case to the department of first instance for further prosecution on the basis of the auxiliary request. In this case, Art. 111(2) EPC 1973 was applicable, according to which the department of first instance shall be bound by the ratio decidendi of the board of appeal, insofar as the facts are the same. The ratio decidendi of the board of appeal's previous decision was that the subject-matter of the main request was not allowable, but that the grant of a patent in accordance with the auxiliary request was subject to a consideration of its patentability by the examining division. In this case, in the board's judgment, following the issue of the board's previous decision, the examining division clearly had no power to re-open examination on the basis of the claims which the appellant requested (with subject-matter corresponding to the previously rejected main request). Having examined the subject-matter of the auxiliary request for patentability and found no objection to it, the examining division was bound to issue a communication under R. 51(4) EPC 1973 with a text based on the auxiliary request. Furthermore, in the absence of approval of such text, in the board's judgment the examining division was bound to refuse the application, for the reasons set out in its decision. Since the examining division had no power to re-open examination in respect of the claims as requested by the appellant, in the context of the appeal in question the board necessarily had no power to re-open examination in respect of such claims, because it could only exercise power which was within the competence of the examining division (Art. 111(1) EPC 1973). Thus, the main request of the appellant had to be refused.

### 3.6. Amendments after the decision to grant

Once the decision to grant is handed over to the EPO's internal postal service for transmittal to the applicant, the examining division is bound by it (see **G 12/91**, OJ 1994, 285) and can only amend it to the limited extent provided for in R. 140 EPC. In the examination procedure, this corresponds to the date on which the centrally generated Form 2006, "Decision to grant a European patent pursuant to Art. 97(1) EPC", is forwarded to the postal service. This date is shown at the bottom right-hand corner of Form 2006. The examining division is no longer competent to decide on a request for amendments or corrections under R. 139 EPC if the filing of the request and the completion of the proceedings occur on the same date (**T 798/95**) (see Guidelines H-II, 2.6 – November 2015 version).

In **T 798/95** the decision to grant the European patent was handed over by the formalities section of the examining division to the EPO postal service for notification. The request for amendment of the application under R. 86(3) EPC 1973 was filed on the same day at 6.47 pm, thus after completion of the proceedings. Referring to **G 12/91** (OJ 1994, 285), the board held that a request for amendment under R. 86(3) EPC 1973 filed after completion of the proceedings up to grant before an examining division was to be disregarded, even if the filing of the request and the completion of the proceedings occurred on the same date.

### 3.7. Withdrawal of amendments and abandonment of subject matter

#### 3.7.1 General issues

A request to withdraw an amendment is itself a request for further amendment; thus, if this request occurs after reply to the first communication from the examiner, the corresponding amendment will be admitted only if the examiner consents.

In deleting subject-matter from an application, the applicant should avoid any statement which could be interpreted as abandonment of that subject-matter. Otherwise the subject-matter cannot be reinstated (see **J 15/85**, confirmed in **G 1/05** and **G 1/06**). (Guidelines H-III, 2.5 – November 2015 version).

In **J 15/85** (OJ 1986, 395) it was held that if an applicant cancels claims in a patent application but fails to state at the time that their deletion is without prejudice to the filing of a divisional application, the examining division is obliged to withhold its consent to the subsequent filing of a divisional application. However, a declaration of abandonment can be interpreted to the effect that there was no intention to abandon definitively the subject-matter of the application or patent. In **T 910/92** the applicants had expressly abandoned several claims in their application, but later retracted their declaration and requested that the claims deleted from the application be reinstated in a divisional application. The board considered under what circumstances it was possible to retract a declaration of abandonment. It referred to the case law, which required that the real intention of the party making the declaration be established, taking into account all the circumstances of the case, and concluded that in this case the appellants' real intention was not to abandon part of the original disclosure altogether, but to avoid the lack of unity that had arisen as a result of the change in the protection sought. In contrast to the case in **J 15/85** the board did not see any need in this case to protect the public interest by generally prohibiting the retraction of a declaration of abandonment. It could be expected that any third parties interested in the proceedings relating to the application in question would have asked to inspect the files at suitable intervals up until the conclusion of the proceedings (**G 1/06**, OJ 2008, 307; **G 1/05**, OJ 2008, 271; **J 2/01**, OJ 2005, 88 and **J 29/97**).

In **J 13/84** (OJ 1985, 34) the board applied the same criteria to the interpretation of a declaration of abandonment as the case law had developed for declarations of withdrawal of an application. In particular, all the circumstances had to be taken into consideration and not just the preceding declarations. In the case in question the applicants had deleted their claim 21 in response to a communication from the examining division, adding that "in accordance with the examiner's suggestion, we are filing a divisional application for the intermediate products ... and for their method of preparation". The Receiving Section took the view that the divisional application, with the former claim 21 as its subject-matter, was not filed within the period of two months prescribed in R. 25(1)(b) EPC 1973 (in the version which entered into force on 7.10.1977; the provision was deleted with effect from 1.10.1988). It argued that claim 21, which had already been divided out from the application on 6.6.1983 and therefore no longer formed part of the parent application on 31.8.1983 (the date of filing of the

divisional application), could no longer be converted into a divisional application. The board did not share this view and called for the declaration of abandonment to be interpreted in the same way as a declaration of withdrawal of an application, i.e. taking into account all the circumstances. It added that, generally speaking, and as stated in the summary of the Legal Board's decision in **J 11/80** (OJ 1981, 141), a request for withdrawal should only be accepted without question if it is completely unqualified and unambiguous.

The board also referred to decisions **J 24/82**, **J 25/82** and **J 26/82** (OJ 1984, 467), in which it was found that, where claims were withdrawn specifically under R. 25(1) EPC 1973 (in the version which entered into force on 7.10.1977), the applicant's restrictive intention was not to be interpreted in isolation on the strength of particular statements but in the context of the entire procedure. The board took the view that in this case no express intention to drop the claim ensued from the circumstances. The divisional application was therefore admissible.

In **T 118/91** the board ruled that the inclusion of a particular claim in a divisional application did not mean that claim had been dropped from the parent application.

### 3.7.2 Effects of non-payment of claims fees

If an applicant fails to pay claims fees, he is considered under R. 45(3) EPC (former R. 31 EPC 1973) to have abandoned the claims. Apart from resolving the specific question whether certain parts of the application were part of the description or were claims, decision **J 15/88** (OJ 1990, 445) made clear that such abandonment of certain claims could only cause a substantive loss of subject-matter if the subject-matter involved was contained only in the claims and not also in the description or drawings. The board held that an applicant who declined to pay claims fees when they were demanded ran the risk that features of a claim deemed to have been abandoned pursuant to R. 31(2) EPC 1973, which were not otherwise to be found in the description or drawings, could not subsequently be reintroduced into the application and, in particular, into the claims. The idea that there could be forced abandonment of subject-matter, in reliance on R. 31(2) EPC 1973, appeared rather to be in conflict with the principles of higher law to be deduced from Art. 52(1) EPC 1973 in conjunction with Art. 123(2) EPC 1973. An applicant normally had the right to derive subject-matter from any part of the description, claims or drawings as originally filed. This view has since been confirmed in other ex parte proceedings, namely **T 490/90**.

## 3.8. Withdrawal of the patent application

### 3.8.1 General issues

A valid notice of withdrawal which has been received at the EPO is binding on the applicant, although, in the case of withdrawal by mistake, R. 139 EPC (R. 88 EPC 1973) may be applicable (see e.g. **J 10/87**, OJ 1989, 323, and **J 4/97**; see also **T 1673/07**, **J 6/13**). However, a withdrawal cannot be retracted once the public has been officially informed of it (**J 1/11**, **J 2/15**). Decision **J 1/11** held that a publication in the European

Patent Register has the same legal effect as a publication in the European Patent Bulletin, unless otherwise specified (see also **J 2/15**).

A request for withdrawal of a European application should only be accepted without question if it is completely **unambiguous** and **unconditional** (cf. **J 11/87**, OJ 1988, 367; **J 27/94**, OJ 1995, 831; **J 19/03**) (see also **J 11/80**, OJ 1981, 141; **T 60/00**, **J 38/03**, and **T 1673/07**). In **J 11/87** (OJ 1988, 367) the board added that where there was even the slightest doubt as to the applicant's actual intent such a declaration should be construed as a declaration of withdrawal only if the subsequent facts confirmed that such had been his true intent.

In **J 15/86** (OJ 1988, 417) the board stated that there was a recognised difference between passive abandonment and active withdrawal of a European patent application. Each case in which there was a dispute as to the applicant's intention had to be considered on its own facts. A written statement by the applicant or his representative had to be interpreted in the context of the document as a whole and the surrounding circumstances. Similarly, **J 7/87** (OJ 1988, 422) ruled that the language used had to be interpreted in the light of the surrounding circumstances, from which it had to be clear that the applicant really wanted immediate and unconditional withdrawal rather than passive abandonment leading in the course of time to deemed withdrawal. Actual withdrawal did not depend on whether the applicant had used the term "withdrawal".

In **J 6/86** (OJ 1988, 124) the board considered the statement "the applicant wishes to abandon this application" as an unambiguous withdrawal of a European patent application, since nothing in the circumstances under which the statement had been made could be taken as qualifying such an interpretation. It is too late to ask for retraction of a notice of withdrawal once the withdrawal has been notified to the public in the European Patent Bulletin (see **J 15/86**, OJ 1988, 417). In this case it was alleged that the withdrawal had been made by mistake.

In **J 4/97**, the applicants informed the EPO three days after withdrawal that their request had been made erroneously and should be cancelled. The EPO informed the applicants that the withdrawal had come into force and was binding, and notification of the withdrawal was later published in the European Patent Bulletin. However, the board held that the withdrawal of the application could be corrected under R. 88 EPC 1973. The legal considerations contained in **J 10/87** concerning the retraction of a withdrawal of a designation of a contracting state applied equally to the withdrawal of a patent application as a whole. In particular, it had to be ascertained that the withdrawal had been due to an excusable error, that there was no undue delay in seeking retraction, and that the retraction of the withdrawal had not adversely affected the public interest or the interests of third parties.

In the circumstances of the case at issue, the board held that the mere fact that the withdrawal was retracted after only three days was a strong indication that it had indeed been made in error. The error resulted from confusion between two similar reference numbers assigned by the appellants to their patent applications. In the board's opinion this mistake could be considered as an excusable oversight. The public interest was not

affected because **the withdrawal was retracted before the corresponding entry was made in the Register** of European Patents and more than six weeks before the withdrawal was officially notified to the public in the European Patent Bulletin. Thus, at the time the general public was informed of the withdrawal, the public part of the file clearly showed that a request for cancellation of the withdrawal had been filed thereby warning third parties relying on the information published by the EPO. The interests of third parties could be protected if a national court applied Art. 122(6) EPC 1973 *mutatis mutandis*.

In **J 4/03** the Legal Board noted that the request for retraction of the withdrawal of the application had been made after notification of the withdrawal in the European Patent Bulletin, the means of official publication of the EPO. That meant that the public had already received the information that the application no longer existed so that the principal precondition for allowing a correction was not met (see also **J 7/06**).

In **J 14/04** the board rejected the request for correction of the withdrawal of the application. It agreed with **J 10/87** that the public interest lay in being able to rely on information officially published by the EPO. However, the board took the view that the Register of European Patents constituted an official publication (see also **J 37/03** and **J 38/03**), and as, at the time of the request for withdrawal, access to the Register was freely offered to the public on the Internet, the request for withdrawal was available to the public on the date the Register indicated the request for withdrawal was recorded. It was of no relevance whether the file was actually consulted on this date. Nor did the board consider that Art. 122(6) EPC 1973 could apply *mutatis mutandis* to cases of correction under R. 88 EPC 1973.

The Legal Board held in **J 25/03** (OJ 2006, 395) that entries in the Register of European Patents also amounted to **notification to the public** from the day of their publication as well as publication in the European Patent Bulletin. The board rejected the request for correction of the withdrawal of the patent application and added that it was of no relevance that only four days had elapsed between mention of the withdrawal in the Register and mention of the request for retraction of the withdrawal. Legal certainty would suffer unacceptably if further delay were permitted for retraction of the withdrawal in such circumstances where even after inspection of the complete file there would not have been any reason for a third party to suspect, at the time of the official notification to the public of the withdrawal, that the withdrawal could be erroneous and later retracted.

In **J 6/13** it was not disputed that the applicant's letter was an unambiguous withdrawal of the application. The board pointed out that an applicant is bound by its procedural acts notified to the EPO provided that the procedural statement was unambiguous and unconditional (**J 19/03**). The board held that there could be no **retraction of a withdrawal** if there was no reason for third parties to assume that the withdrawal was erroneous. Referring to decision **J 12/03** (citing with approval decision **J 25/03**, OJ 2006, 395), the board pointed out that in the interest of legal certainty for third parties, and taking into account the **public function of the Register**, a third party upon file inspection must have had good reason to suspect that the withdrawal was made in error in order to allow its retraction.

The board had to determine whether, in the current case, such good reason was present. The board took the view that, based on decisions **J 12/03** and **J 18/10**, the prospects of the application, however promising, were insufficient to infer an obvious or even potential contradiction with a subsequent withdrawal. Patent applications may be withdrawn due to considerations of business strategy, investor preference, shift in portfolios, agreements with competitors, etc. Due to financial considerations, most granted European patents are validated only in a limited number of countries. These considerations may come into play at any time, even after the recent payment of annuities, or after the communication of a positive search report. The favourable prospects of the application in this case would thus not lead a third party to the conclusion that the withdrawal was possibly made in error. Nor did they lead the representative who handled the case and who communicated the withdrawal to this conclusion, either. Therefore, the appeal was dismissed.

In **J 2/15** the board affirmed previous case law that the mention of a withdrawal in the European Patent Register is tantamount to official notice of such act to the public. For the case at issue the board held that such withdrawal was unambiguous, unconditional and became effective as of the date of receipt by the Office. A withdrawal after publication in the European Patent Register was thus no longer possible, and the examining division was therefore correct in rejecting the request for a retraction of the withdrawal made after such publication of the withdrawal.

### 3.8.2 Correction of the withdrawal of the application under Rule 139 EPC

In **J 1/11** it was not disputed by the appellant that retraction of the withdrawal was no longer possible once the withdrawal had been published in the European Patent Bulletin. The question at issue was whether a publication of the withdrawal in the European Patent Register should have the same legal consequences. The appellant argued that, despite the technical and functional approximation of Register and Bulletin, only the latter carried the presumption of an official publication. The board noted that both the European Patent Register according to Art. 127 EPC and the European Patent Bulletin according to Art. 129(a) EPC were official sources of information to the public. There was nothing that would allow a distinction as to which of the two was more official, reliable or decisive. This was not to say that the Bulletin had no functions other than those of information. Contrary to what the appellant alleged, entries into the Bulletin were no more "cast in stone" than those of the Register, and could be corrected either under R. 140 EPC, or by way of a decision. As far as the function of providing information to the public was concerned, the board was unable to deduce a fundamental difference between the Register and the Bulletin. The factual elements surrounding the official character of the information available support the general availability to the public of the entries in the Register of European Patents, from the day they appear in it (see also **J 2/15**). In conclusion, the board decided that the appellant's requests for retraction of the withdrawal of its application as a correction of an error under R. 139 EPC had to be refused.

The board pointed out that explicitly withdrawing a pending patent application is a declaration of the highest importance for the applicant, since all the legal effects of the

application, such as establishing a preliminary right, are finally abandoned. In the light of these consequences, utmost caution is therefore required when declaring the withdrawal of an application. A correction of errors in documents filed with the EPO under R. 139 EPC is only possible under strictly defined conditions. In the case at issue, the **request for retraction of the withdrawal** reached the EPO more than a month after the withdrawal was made and after it was recorded in the European Patent Register. Yet it is not primarily the EPO that is concerned with a withdrawal, but the public, for which a withdrawal is of potential interest. It is thus the public that can be regarded as the ultimate addressee of such a withdrawal. Therefore, a withdrawal cannot be retracted once the public has been officially informed of it. In a broader sense, this is also reflected in the principle that a declaration of intent can only be retracted if the retraction reaches the addressee either before said declaration or at the same time, a rule that can be found in the civil law systems of many contracting states of the EPC (see also **J 2/15**).

In **J 2/15** the applicant had pointed to a "fundamental inconsistency" between the decisions in cases **J 10/87** and **J 4/97** on the one hand, and **J 25/03** and **J 1/11** on the other. The board acknowledged that the reasoning of the more recent decisions had led a change in the case law due to the **evolution of technical means**. However, this could not be seen as an inconsistency in the case law where cases on the same subject-matter arrive at different results and have a different reasoning whilst being decided at the same time. The board was of the opinion that this inconsistency had been comprehensively addressed in decision **J 1/11**, and the board saw no need to elaborate on this further.

In **J 19/03** the board noted that it is obvious that corrections of procedural acts having an ab initio effect have a potentially serious impact on an application, in particular if they relate to its territorial extent or to whether the application is pending at all, and raise serious concerns as to legal certainty not only for the applicants vis-à-vis the EPO but also for the public. Therefore, the jurisprudence of the boards of appeal took as a starting point that, as a general rule, an applicant is bound by its procedural acts notified to the EPO provided that the procedural statement was unambiguous and unconditional (cf. **J 11/87**, OJ 1988, 367; **J 27/94**, OJ 1995, 831) and is not allowed to reverse these acts so that they can be considered as never filed (**J 10/87**, OJ 1989, 323; **J 4/97**; see also **J 2/15**). On the other hand, the boards of appeal considered that R. 88 EPC 1973 acknowledged as a further legal value the desirability of having regard to true, as opposed to ostensible, party intentions in legal proceedings (**T 824/00**, OJ 2004, 5) in appropriate circumstances. As a result of the conflict between these two legal principles, the case law read R. 88, first sentence, EPC 1973 as conferring a discretion on the competent instance to allow or not to allow a correction of an error since it is only stated in this rule that a respective error "may be corrected". The Legal Board decided that the notice of withdrawal did not contain a relevant error or mistake which could be corrected under R. 88, first sentence, EPC 1973. The board found that under R. 88, first sentence, EPC 1973, it was not sufficient to prove that a divergence had occurred between the true intention of the applicant and the declaration filed by its representative; rather it was additionally required that this divergence was caused by an error of the person who was competent to make the decision on the procedural act before the EPO. Therefore, as a rule, in cases where the party was represented by a professional

representative the error pursuant to R. 88 EPC 1973 must be an error of the representative in expressing his own intentions. This requirement was not met in the case in point.

In **J 10/08** the matter to be dealt with was the request of the appellant to retract this withdrawal under R. 139 EPC (2007) because it was, according to the appellant, made erroneously. This rule allowed correction of errors in documents filed with the EPO, these errors being defined as linguistic errors, errors of transcription and mistakes. In the case under consideration the document filed with the EPO did not show any kind of such an error. The error was not of a factual kind but of a mental one. Therefore it had to be examined whether the correction of such an error could also be subsumed under R. 139 EPC (2007). The board noted that the boards of appeal have dealt with this question in a great number of decisions. One of those decisions on the question of a possible retraction of a procedural declaration was **J 10/87** (OJ 1989, 323) with reference to earlier decisions. In this decision the board developed the preconditions under which a correction of a procedural declaration might be allowed, namely that the public had not been officially notified of the withdrawal by the EPO, that the erroneous withdrawal was due to an excusable oversight, that the requested correction would not delay the proceedings substantially and that the interests of third parties who might have taken note of the withdrawal by inspection of the file were adequately protected. The board accepted that it was not the intention of the appellant in the case before it to withdraw the application but that this was due to a misunderstanding between the various representatives of the appellant dealing with the case. In the case at issue, the board concluded that the public would not have been misinformed or misled by the information published in the European Patent Register and the withdrawal of the application could be retracted in the case before it by correction under R. 139 EPC (2007).

In **T 1673/07** the appellant argued that it should be allowed under R. 88 EPC 1973 (which corresponds to R. 139 EPC) to resile from the withdrawal of the designation of Germany and France, since it had been made under an erroneous assumption. The board, however, stated that, according to the established case law of the boards of appeal, one precondition for such a retraction was that the relevant request be made before the withdrawal has been officially notified to the public (see e.g. decisions **J 15/86**, OJ 1988, 417 and **J 25/03**, OJ 2006, 395). This was in the interests of legal certainty and balancing the interests of the applicant and of third parties, in particular in being able to rely on information officially published, and was an objective criterion which applied irrespective of the true intentions or mindset of the person who had made the relevant statement. In the case at issue the withdrawal had been published in the European Patent Bulletin about half a year before the validity of the withdrawal of the designations was contested for the first time. In conclusion, the withdrawal of the designation was valid and could not be retracted.

### 3.9. Refusal of a European patent application under Article 97(2) EPC (former Article 97(1) EPC 1973)

Under Art. 97(2) EPC (former Art. 97(1) EPC 1973) if the examining division is of the opinion that the European patent application or the invention to which it relates does not meet the requirements of this Convention, it shall refuse the application unless this Convention provides for a different legal consequence.

In **R 14/10** the Enlarged Board of Appeal held that there is no obligation under the EPC to carry out the examination of a European patent application or patent in its entirety, i.e. in respect of all pending claims if a claim considered unallowable has been maintained and no auxiliary request relating to a set of claims not comprising this unallowable claim has been submitted. In such a case the application or patent fails to meet a requirement of the EPC and is open to refusal or revocation (see **T 228/89**, point 4.2 of the Reasons referring to **T 5/81**, OJ 1982, 249, point 3 of the Reasons) (see also **T 293/86**, **T 398/86** and **T 98/88**).

In **T 162/88** it was stated that if the European patent application in the version submitted or approved by the applicant contained a claim which the examining division considered unallowable, the examining division had to refuse the European patent application in its entirety under Art. 97(2) EPC and not just the claim concerned (see also **T 117/88**, **T 253/89** and **T 228/89**).

In **T 11/82** (OJ 1983, 479) the board held that a European patent application had to satisfy the conditions laid down in the Implementing Regulations (see Art. 78(3) EPC 1973). If, in the opinion of the examining division, the application did not do so, the examining division was obliged by Art. 97(1) EPC 1973 to refuse it.

In several decisions the boards pointed out that it was highly desirable that the examining division should give an appealable decision with **sufficient reasoning** on all the issues that had been properly raised by the EPO during the examination proceedings and dealt with substantively in the applicant's reply. Such "complete" decisions streamlined the procedure rendering remittal to the department of first instance unnecessary; the board could decide all issues already raised in the department of first instance without depriving the appellant of the opportunity to have them considered at two instances (see **T 153/89**, **T 33/93** and **T 311/94**).

In **T 839/95** the examining division did not take a final decision as provided for in Art. 97 EPC 1973. Instead, it issued a decision indicated as an interlocutory decision under Art. 106(3) EPC 1973 rejecting the main and two auxiliary requests and stating that the invention claimed according to the third auxiliary request was found to meet the requirements of the Convention.

The board noted that an interlocutory decision in the case of an allowable auxiliary request is foreseen in the instructions to examiners only for auxiliary requests in opposition proceedings. It did not consider it appropriate for the department of the first instance to proceed in the same way in grant proceedings. In the board's judgment, the

purpose of the interlocutory decision in opposition proceedings was intended to save the proprietor the further cost of fulfilling the formal requirements under R. 58(5) EPC 1973 before there was a final decision on the version in which the patent could be maintained (**T 89/90**, OJ 1992, 456). A corresponding situation did not exist in grant proceedings because there was no adverse party who might object to the version to which the applicant had agreed. The appeal was admissible, since the appellant was adversely affected by the rejection of his preceding requests.

In **T 856/05** the appellant applicant had argued that since the decision of the examining division did not give any reasons for refusing claim 6, it was not reasoned, thereby contravening R. 68(2) EPC 1973. The board held that it was sufficient for the examining division, when deciding to refuse a European patent application under Art. 97(1) EPC 1973, to state one ground only which in their opinion would prejudice the grant of a European patent, since the EPC did not contain any provision which would allow a European patent to be partially granted. In the case at issue, the examining division was unable to grant a patent because it was of the opinion that the subject matter of claim 1 did not involve an inventive step. Consequently, the examining division was under no obligation to comment on the other claims.

In **T 1423/07** the examining division had refused the application on the basis of the Guidelines). The board stated that the EPC did indeed not contain any explicit provision which would prohibit double patenting. By invoking an "accepted principle in most patent systems that two patents cannot be granted to the same applicant for one invention", the above passage of the Guidelines made reference to Art. 125 EPC as a basis for not allowing double patenting. Therefore, what had to be evaluated was whether a European application could be refused on the grounds of double patenting on the basis of Art. 125 EPC.

The board found that there was a general principle of law generally recognised in the contracting states which did not allow **double patenting** arising from a granted national patent and a granted European patent, but this did not provide a basis for refusing a European application under Art. 97(2) EPC or Art. 97(1) EPC 1973. In view of the fact that the national patent laws of only two of the contracting states and the case law of a third contracting state provided a basis for refusing a patent application on the grounds of double patenting, there was no principle of law generally recognised in the contracting states which justified refusing a European patent application on the ground of double patenting.

### **3.10. Entry into force of a decision to grant a European patent**

Under Art. 97(3) EPC (former Art. 97(4) EPC 1973) the decision to grant a European patent shall take effect on the date on which the mention of the grant is published in the European Patent Bulletin. New Art. 97(3) EPC is essentially identical to Art. 97(4), first sentence, EPC 1973. The provisions concerning the minimum period that must lapse before the grant can take effect have been deleted from the Article. With the other grant formalities being transferred to the Implementing Regulations (see R. 71 EPC), this

matter too was more appropriately regulated at a lower legislative level. Consequently, Art. 97(6) EPC 1973 was deleted as unnecessary.

Under the EPC 2000, Art. 98 EPC stipulates that the European Patent Office shall publish the specification of the European patent as soon as possible after the mention of the grant of the European patent has been published in the European Patent Bulletin. The contents of the specification are transferred to the Implementing Regulations (see R. 73(1) EPC). Art. 98 EPC now contains the words "as soon as possible" in order to indicate that it is not always technically possible to publish the specification on the same day as the mention of the grant.

In **J 7/96** (OJ 1999, 443) the board did not share the view of the department of first instance and the applicant that the proceedings for grant were concluded on the date the examining division reaches its decision to grant a European patent under Art. 97(2) EPC 1973. The board noted that it was true that this date represented the date on which the process of reaching a decision on the application within the examining division was concluded; both the EPO and the applicant were bound by the decision as far as the text of the patent to be granted, the claims, description and drawings were concerned, and the subject-matter of the text of the patent became *res judicata* at that date. Thereafter, the EPO could no longer amend its decision and had to disregard any fresh matter the parties might submit (see **G 12/91**, OJ 1994, 285). Only linguistic errors, errors of transcription and obvious mistakes could be corrected later under R. 89 EPC 1973. The date on which the decision to grant the European patent was reached was thus clearly decisive as regards the EPO and the applicant.

The board noted that under Art. 97(4) EPC 1973, the decision to grant a European patent referred to in Art. 97(2) EPC 1973 does not take effect until the date on which the European Patent Bulletin mentions the grant. It is from this date of mention that, in accordance with Art. 64(1) EPC 1973, a European patent confers on its proprietor the same rights in respect of each Contracting State in respect of which it is granted as would be conferred by a national patent granted in that State. The mention also marks the time when the responsibility of the EPO comes to an end and the national patent systems take over, the granted patent becoming a bundle of national patents. It also marks the start of the period during which a notice of opposition may be filed (Art. 99(1) EPC 1973). Thus, the date of publication of the mention of the grant of the patent is the date on which the grant of the patent takes legal effect with respect to third parties, and on which the extent of protection conferred on the applicant is determined once and for all by means of the accompanying publication of the specification of the patent pursuant to Art. 98 EPC 1973. During the period between the decision to grant the patent (Art. 97(2) EPC 1973) and the publication of the mention of the grant (Art. 97(4) EPC 1973), the application is deemed to be **still pending** before the EPO. As the department of first instance itself admits in its decision, and as is also not disputed by the applicant, according to established EPO practice it is still possible during this **interim period** to take some limited action in respect of the application, which may, for example, be withdrawn or transferred. Applicants may even withdraw individual designations if they so wish. For its part, the EPO continues to have certain rights or obligations

concerning the patent during this period; for example, the annual fees fall due and transfers of rights in the patent must be registered by the EPO.

In **J 23/03** the appellant requested that the designation country GR incorrectly marked with a cross be corrected to GB. After a considerable exchange of correspondence, the examining division refused the request for correction on the ground that, from the date of publication of the patent, public interest in the reliability of the published information overrode the patent proprietor's interest in a correction, especially as he had had several opportunities to check the designation information in the course of the proceedings, namely after the notification of forms 2004 and 2005.

The board stated that R. 88 EPC 1973 did not contain an explicit reference to a time limit and that a request for correction could therefore be submitted at any stage of the patent grant procedure (see also **J 6/02**). This also applied to the correction of incorrect designation information in the application documents as requested by the appellant. The board nevertheless found that the appellant's request for correction of the designation information in the application documents had been submitted to the EPO only on 29.4.2002. Mention of the grant of his patent had appeared in the Patent Bulletin over a month before that date. Under Art. 97(4) EPC 1973, mention of the patent grant led to the grant of the patent taking effect and to the patent grant proceedings being concluded. At the time that the appellant submitted his request for correction, therefore, the proceedings were no longer pending (see **J 7/96**, OJ 1999, 433 and **J 42/92**).

The board held that the pendency of patent grant proceedings was, however, a requirement for the submission of an admissible request for correction because after that date the bundle of European patents granted under a single system divides into national patents which are then no longer administered by the EPO but by the appropriate national offices.

### **3.11. Errors in the Patent Bulletin**

Art. 97(3) EPC (former Art. 97(4) EPC 1973) stipulates that the decision to grant a European patent shall take effect on the date on which the mention of the grant is published in the European Patent Bulletin.

In decision **J 14/87** (OJ 1988, 295) the question arose to what extent a deficiency in the publication of the mention of grant of a European patent, i.e. the omission of important particulars relating to the grant, might render the patent ineffective. The board held that in principle deficiencies in the publication of the mention of grant in the European Patent Bulletin did not necessarily render the decision to grant within the meaning of Art. 97(4) EPC 1973 ineffective. Nevertheless, this matter could be decided only in the light of the case in question and the fact that the purpose of the publication was to draw the attention of interested parties to the grant of the patent, and also that any decision to file an opposition had, under normal circumstances, to be based on a careful examination of the extent of the protection conferred by the patent and not solely on the particulars given in the European Patent Bulletin. Such an examination could be carried

out satisfactorily only if the patent specification was published at the same time as the mention of grant of the patent.

#### 4. Additional searches during examination

An additional search will sometimes be required either at the first stage of amendment or subsequently. This may arise for a number of reasons (for more details, see Guidelines C-IV, 7.2 – November 2015 version).

##### 4.1. Rule 63 EPC governing incomplete search

###### 4.1.1 Introduction

R. 63(1) and (2) EPC (Incomplete search) (former R. 63 EPC; R. 45 EPC 1973) have been amended by decision of the Administrative Council CA/D 3/09 of 25 March 2009 (OJ 2009, 299), which entered into force on 1 April 2010.

Under R. 63(1) EPC if the EPO considers that the European patent application fails to such an extent to comply with the EPC that it is impossible to carry out a meaningful search regarding the state of the art on the basis of all or some of the subject-matter claimed, it shall invite the applicant to file, within a period of two months, a statement indicating the subject-matter to be searched.

According to R. 63(2) EPC if the statement under paragraph 1 is not filed in due time, or if it is not sufficient to overcome the deficiency noted under paragraph 1, the EPO shall either issue a reasoned declaration stating that the European patent application fails to such an extent to comply with the EPC that it is impossible to carry out a meaningful search regarding the state of the art on the basis of all or some of the subject-matter claimed or, as far as is practicable, draw up a partial search report. The reasoned declaration or the partial search report shall be considered, for the purposes of subsequent proceedings, as the European search report.

In the ideal case, the applicant's statement removes completely the deficiencies under Art. 84 EPC and a **complete search report** can be drawn up. Alternatively, the **partial search report** will be drawn up in the light of the applicant's submissions, so that it will be up to the applicant to delimit the subject-matter to be searched.

R. 63 EPC enables the applicant to submit statements more clearly defining the subject-matter to be searched in cases where a normal search cannot be carried out. However, because the search report should, as a rule, be drawn up in time for publication together with the application further processing in respect of the period referred to in proposed R. 63(1) EPC will be excluded. This implies that re-establishment of rights will be possible.

In **T 1242/04** (OJ 2007, 421) the board held that R. 63 EPC applies to cases which do not comply with the provisions of the EPC to such an extent that it is not "possible" to carry out a "meaningful search" into the state of the art on the basis of all or some of the

claims. Thus a R. 45 EPC declaration is allowed only where a search is not possible. In other cases the search division draws up a partial search report, "so far as is practicable". R. 45 EPC relates only to the practicability of a search and not to the potential relevance of its results in subsequent substantive examination.

#### 4.1.2 Additional search necessary: limited discretion of the examining division

In **T 1515/07** the board stated that in normal circumstances an additional search had to be carried out if a search under R. 63 EPC is missing. It was true that the case law allowed discretion in this respect, but this discretion was limited to the special cases of notoriously known features or those explicitly accepted by the applicant as known. In all other cases, an additional search had to be performed. In particular, as long as no search had been performed an examining division should normally not refuse an application for lack of inventive step if the invention as claimed contained at least one technical feature which was not notorious. The examining division considered that it was not "necessary" to carry out a search because a decision could be reached anyway. The examining division was held to have committed a substantial procedural violation within the meaning of R. 103(1)(a) EPC by not performing an additional search that was manifestly necessary. It was therefore equitable to reimburse the appeal fee.

In **T 1242/04** it was held that only when a search is not at all possible can it be denied under R. 45 EPC 1973. Whether or not the search division believes that the result of a search will be of use for the substantive examination is irrelevant. If nevertheless the situation occurs that no search has been performed although it could (and should) have been, an examining division is not obliged to perform an additional search for purely formal reasons if it considers a refusal of the application to be justified on the basis of prior art which is either so well known that it clearly does not require written proof or is accepted by the applicant as known. In all other cases an additional search should be performed.

In **T 690/06** regarding the procedure before the examining division the board was of the opinion that the examining division should have performed an additional search since the database partitioning and access control features were neither non-technical nor notorious. Following the principles set out in decision **T 1242/04** (OJ 2007, 421), the board considered that, as long as no search has been performed, an examining division should normally not refuse an application for lack of inventive step if the invention as claimed contained at least one technical feature which was not notorious. The term "notorious" had to be interpreted narrowly.

In **T 1411/08** the board understood "notorious" as implying that technical detail was not significant. The board stated that where a search division has decided that no search was to be performed, it is not always necessary for the examining division to carry out an "additional search" before raising an inventive-step objection. According to the established case law of the boards of appeal it is possible to raise an objection of lack of inventive step without documented prior art. That should be allowable where the objection is based on 'notorious knowledge' or indisputably forms part of the common general knowledge (**T 1242/04**, OJ 2007, 421). Such cases, however, are exceptional,

and a search is otherwise essential. In the case at issue, the examining division could and should have ensured that a search was performed before refusing the application for lack of inventive step. The board considered that the failure to carry out an "additional search" constituted a substantial procedural violation and that the reimbursement of the appeal fee must be ordered.

In **T 1924/07** the board held that the applicant's acknowledgement in the original application that certain prior art is known is, in general, not a sufficient reason for not carrying out an additional search. The only condition under which an additional search can be dispensed with is where all the technical features of a claim correspond to "notorious" prior art.

In **T 2299/10** the decision under appeal was, *inter alia*, based on the objection that the subject-matter of claim 1 lacked an inventive step. The EPO acting as International Searching Authority issued a declaration of non-establishment of the international search report under Art. 17(2)(a) PCT. No supplementary European search report was established either. The examining division examined the application despite the fact that no search had been carried out. However, this is only possible in exceptional cases and, according to the jurisprudence of the boards of appeal, an additional search for pertinent prior art may be dispensed with only if the technical features of the claims are considered to be "notorious", i.e. generic and so well known that they cannot reasonably be refuted (see **T 1411/08**). In the board's judgment, the technical features went beyond the mere common general knowledge and could not be considered "notorious". An applicant's acknowledgement in the original application that certain prior art was known is in general not a sufficient reason for not carrying out an additional search since such statements may be – and indeed frequently are – withdrawn or qualified. Moreover, this could only apply in cases where all the technical features in the claim would be acknowledged as known (see **T 1924/07**). In the case at issue, however, the appellant did not acknowledge the relevant features of claim 1 mentioned as being known. Thus, claim 1 could not be definitively assessed with respect to novelty and inventive step without knowledge of the relevant documented prior art. Thus the request required a search for relevant prior art. Hence the matter had to be remitted for an additional search and further examination.

In **T 2249/13** the appellant doubted the legitimacy of the Notice from the European Patent Office dated 1 October 2007 concerning business methods (OJ 2007, 592), which announced a no-search policy for claims pertaining to business methods. Such discrimination was not justified. It considered that the EPO had enriched itself unfairly by receiving the search fee without performing a search. Furthermore, the no-search declaration of the search division could not be deemed to be a European search report under R. 63(2) EPC as the search division had ignored R. 63(1) EPC by failing to invite the appellant to file a statement indicating the subject-matter to be searched. The board pointed out that the board was applying the EPC and associated provisions as they stand. The Rules Relating to Fees did not provide for a refund of the search fee in case of a no-search declaration under R. 63 EPC. R. 63(2) EPC states that such a no-search declaration shall be considered as the European search report. Further, the fact that the search division did not comply with R. 63(1) EPC (failure to communicate with the

appellant) did not alter the legal situation. The search division's actions were not open for review by the board (Art. 106(1) EPC) and, for the same reason, neither was the search division's reliance on the Notice from the EPO dated 1 October 2007 concerning business methods. Therefore, the board considered that the request for a (partial) refund of the search fee was inadmissible.

#### 4.1.3 Declaration under Rule 63(2) EPC

##### a) Notoriously well-known technical features

According to the case law of the boards of appeal an examining division need not carry out an additional search if the technical features of the claims are notoriously well known. In particular, it is possible to raise an objection of lack of inventive step without documented prior art (see e.g. **T 939/92**, point 2.3 of the Reasons, OJ 1996, 309; **T 1242/04**, OJ 2007, 421, **T 1411/08**). That should be allowable where the objection was based on "notorious knowledge" or indisputably forms part of the common general knowledge. In such cases it would be inappropriate to carry out an additional search for documented prior art on purely formal grounds (**T 1242/04**, OJ 2007, 421; see also **T 690/06**, **T 698/11**).

In **T 359/11** the board held that where the relevant search authority has stated, either in a search report or in a declaration that no search report will be established, that it is not necessary to cite any documentary evidence of the prior art on the grounds that all of the technical features of the claimed invention are notorious, it is always incumbent upon the examining division to consider whether an additional search is necessary. The criterion to be applied is that if the invention as claimed contains at least one technical feature which is not notorious, the application should normally not be refused for lack of inventive step without performing an additional search (see point 3.9 of the Reasons and **T 690/06**). In the case at issue, the choice of the examining division to decide on the issue of inventive step without performing an additional search could only be considered justifiable if the claimed subject-matter comprises no technical features which are non-notorious.

In **T 2467/09** the examining division refused the application for lack of inventive step without making reference to documentary evidence. In fact, no prior art search was carried out in either the international phase or the European phase. The board noted that according to the established case law of the boards of appeal, an application should normally not be refused for lack of inventive step as long as no search has been performed. An exception may however be made in cases where the objection is based on knowledge that is "notorious" or indisputably forms part of the common general knowledge.

The board pointed out that while it could not be reasonably disputed that server systems providing web pages were known at the priority date of the application, in the board's view this was less evident for "technologies for the dynamic building of web pages". While such technologies were probably well-known in 2008, which was when the examining division for the first time explicitly relied on their existence, it had to be kept in

mind that the field of web technology had evolved considerably in the eight years following the filing of the priority application in April 2000. The board noted that the argument that certain knowledge is notorious is only a sufficiently cogent reason if it satisfies any reasonable addressee, i.e. if, at the time the argument is to be assessed by the applicant and, in case of an appeal, by a board of appeal, it cannot be reasonably disputed that that knowledge formed part of the common general knowledge of the skilled person at the effective filing date. In the present case, the board did not consider it to be indisputable that "technologies for the dynamic building of web pages", let alone specific technologies that could take away the novelty or inventive step of the invention as claimed, were generally known in April 2000. It followed that, without documentary evidence, the examining division's reasoning failed to convince in this respect. The board remitted the case to the department of first instance for further prosecution. The examining division was to carry out an additional search on the basis of the claims, including the dependent claims.

#### b) Subject-matter not having technical character

In **T 1242/04** (OJ 2007, 421) the board noted that R. 45 EPC 1973 applied to cases which did not comply with the provisions of the Convention to such an extent that it was not "possible" to carry out a "meaningful search" into the state of the art on the basis of all or some of the claims. Thus a R. 45 EPC 1973 declaration was allowed only where a search was not possible. In other cases the search division would draw up a partial search report, "so far as is practicable". In the board's view, R. 45 EPC 1973 related only to the practicability of a search and not to the potential relevance of its results in subsequent substantive examination. The board noted that it was not evident that claims directed only to technical features that the search division deemed "trivial" could prevent a meaningful search into the state of the art, which in fact ought to be particularly simple in such a case. The board held that where the application's subject-matter had **non-technical** aspects, a declaration under R. 45 EPC 1973 might be issued only in exceptional cases in which the claimed subject matter clearly had no technical character. In the board's view, however, it was not always necessary in such circumstances to carry out an additional search in the documented prior art.

#### 4.1.4 Invitation to restrict the claims under Rule 63(3) EPC

R. 63(3) EPC is based on the same reasoning as former R. 62a(2) EPC. It states that when a partial search report has been drawn up, the examining division shall invite the applicant to restrict the claims to the subject-matter searched unless it finds that the objection under paragraph 1 was not justified.

R. 63(3) EPC in conjunction with proposed R. 137(5), second sentence, EPC, ensures that no patent will be granted with claims directed to unsearched subject-matter. Whereas proposed R. 137(5), second sentence, EPC, relates to amendments made during the grant procedure which are under the control of the examining division, R. 63(3) EPC is necessary to avoid originally filed claims relating to the unsearched subject-matter remaining in the application. If the applicant does not comply with the invitation under R. 63(3) EPC, the application will not meet all requirements of the EPC

and may be refused under Art. 97(2) EPC (Guidelines C-III, 3.3 – November 2015 version) (CA/29/09, points 7 and 15).

#### **4.2. Non-payment of further search fees under Rule 64 EPC**

R. 64(1) EPC (former R. 46 EPC 1973) was amended by decision of the Administrative Council (OJ 2009, 299), and entered into force on 01.04.2010.

Under R. 64(1) EPC if the EPO considers that the European patent application does not comply with the requirement of unity of invention, it shall draw up a partial search report on those parts of the application which relate to the invention, or the group of inventions within the meaning of Art. 82 EPC, first mentioned in the claims. It shall inform the applicant that, for the European search report to cover the other inventions, a further search fee must be paid, in respect of each invention involved, within a period of two months. The European search report shall be drawn up for the parts of the application relating to inventions in respect of which search fees have been paid.

In **G 2/92** (OJ 1993, 591) the Enlarged Board of Appeal stated that an applicant who fails to pay the further search fees for a non-unitary application when requested to do so by the Search Division cannot pursue that application for the subject-matter in respect of which no search fees have been paid. Such an applicant must file a divisional application in respect of such subject-matter if he wishes to seek protection for it (CA/29/09). It also stated that if the applicant has not availed himself of the opportunity to have the search results on the other inventions included in the search report because he has paid no additional search fees in response to the invitation under R. 46(1) EPC 1973, he will be taken to have elected that the application should proceed on the basis of the invention which has been searched (see **G 2/92**). However, non-payment is not to be equated with the abandonment of parts of the application.

In **T 998/14**, however, the board noted that decision **G 2/92** does not necessarily apply for **features** which are disclosed in the original application documents in connection with an invention or group of inventions in respect of which a search has been made.

### **5. Amendments relating to unsearched subject-matter - Rule 137(5) EPC**

#### **5.1. General issues**

R. 137(5) EPC as in force from 01.04.2010 (OJ 2009, 299) (former R. 137(4) EPC and R. 86 (4) EPC 1973) relates to amendments made during the grant procedure which are under the control of the examining division. It stipulates that amended claims may not relate to unsearched subject-matter which does not combine with the originally claimed invention or group of inventions to form a single general inventive concept. Nor may they relate to subject-matter not searched in accordance with R. 62a or R. 63 EPC.

In **T 2459/12** what was at issue was whether the invention is "unsearched" within the meaning of R. 137(5) EPC, which limits the choice of subject-matter which may be put forward by way of amendment for examination in the European procedure. The board

stated that it was clear that the only interpretation of R. 137(5) EPC was that, within the meaning of R. 137(5) EPC, "unsearched" means "unsearched by the EPO". It was consequently the view of the board that where, following the drawing up of a supplementary European search report by the EPO, an applicant files amended claims seeking protection for subject-matter not covered by the supplementary European search as a result of the application of R. 164(1) EPC as then in force, an objection under R. 137(5) EPC should be raised.

## 5.2. The purpose of Rule 137(5) EPC

The wording of R. 137(5) EPC is the same as that of R. 86(4) EPC 1973. R. 86(4) EPC 1973 (with effect from 1 June 1995), was intended to prevent amendments of the application which circumvent this principle that a search fee must always be paid for an invention presented for examination (**T 274/03**). This rule was introduced to give the EPO the means to react appropriately when the applicant dropped existing claims and replaced them with originally non-unitary subject-matter extracted from the description (see **T 1285/11**).

In **T 274/03** the board stated, with regard to R. 86(4) EPC 1973 (now R. 137(5) EPC), which was introduced with effect from 1.6.1995, that it was intended to prevent amendments of the application which circumvent the principle that a search fee must always be paid for an invention presented for examination. R. 86(4) EPC 1973 stops applicants switching to unsearched subject-matter in the reply to a communication from the examining division and makes means available for the EPO to react when different subject-matter is claimed not simultaneously but in sequence as is the case when the applicant drops the existing claims and replaces them with originally non-unitary subject-matter extracted from the description (**T 2334/11**).

In **T 443/97** the board stated that R. 86(4) EPC 1973 (now R. 137(5) EPC) concerned examination proceedings, and particularly those cases in which no further search fees requested by the search division for non-unitary subject-matter had been paid by the applicant. The purpose of R. 86(4) EPC 1973 was to exclude any amendment which circumvented the principle according to which a search fee must always be paid for an invention presented for examination. The board noted that unity of invention was a requirement of an administrative nature and that the administrative purposes of this requirement were fulfilled when the examination procedure had been concluded, i.e. when the patent had been granted (see **G 1/91**, OJ 1992, 253). Therefore, R. 86(4) EPC 1973 was not relevant for the opposition case at issue.

### 5.3. Applicability of Rule 137(5) EPC

#### 5.3.1 General issues

R. 137(5) EPC provides that amended claims are not admissible in the following two cases:

(1) the amended claims may not relate to unsearched subject-matter "which does not combine with the originally claimed invention or group of inventions to form a single general inventive concept" and

(2) the amended claims lack unity of invention with the originally claimed invention or group of inventions.

See also Guidelines H-II, 6.2 – November 2015 version (Amendments directed to unsearched matter).

According to well-established case law, R. 137(5) EPC does not apply when the applicant has not paid the search fee in respect of a non-unitary invention relating to the originally filed claims (see **T 708/00**, OJ 2004, 160, **T 1285/11**).

In **T 613/99** the board stated that R. 86(4) EPC 1973 referred to a particular situation, i.e. where subject-matter was described but not claimed in the original application and was therefore not searched; where that subject-matter failed to meet the requirement for unity of invention with the matter claimed in the application; and where, following the search report, the applicants had filed fresh claims relating only to this unsearched matter. In this situation, the patentability of these fresh claims could not be examined in the context of the original application, since this would have amounted to a derogation from the principle endorsed in **G 2/92** (OJ 1993, 591), according to which the invention to be examined had to be an invention for which a search fee had been paid. In the case at issue, the situation was entirely different. The claimed subject-matter in the application under consideration had been claimed in the original application and had therefore been searched, even if it had not been possible to carry out a **meaningful search**. Moreover, the invention forming the subject of claims 1 and 2 of the application at issue was substantially the same as that which formed the subject of claims 1 and 2 of the original application. In such a situation, if the examining division rejected a finding of the search division regarding matter excluded from the search, a so-called additional European search could be carried out at the request of the examining division.

#### 5.3.2 Extent of the European search report

The extent of the search for prior art to be conducted for the purposes of the European search report is defined in Art. 92 EPC, which states that the EPO shall be drawn "on the basis of the claims, with due regard to the description and any drawings". In principle, and in so far as possible and reasonable, the search should cover the entire subject-matter to which the claims are directed or to which they might reasonably be expected to

be directed after they have been amended (Guidelines B-III, 3.5 – November 2015 version).

In **T 708/00** (OJ 2004, 160) the application was refused by the examining division, principally on the grounds that the new claims were not allowable under R. 86(4) EPC 1973. The board stated that the provisions of Art. 92(1) EPC 1973 must not have the effect of limiting the search solely to the subject-matter of the claims, even if this would simplify matters for the search division. Nor does this imply that the sole purpose of the description and drawings is to help interpret the claims. It does, however, mean that the search division has to be discerning in the use of its discretionary power so as to ensure that the search is in complete accordance with the subject-matter of the patent application (see R. 44(1) EPC 1973), i.e. the invention, even if the essential features are not all defined in the claims at the time of search but are disclosed for example in the description or drawings. In the case at issue, the applicants were never informed of exactly what subject-matter is searched, which means that the examining division and board of appeal were also without any information in this regard. It was therefore impossible - since negative proof is out of the question - to establish what subject-matter went "unsearched" under R. 86(4) EPC 1973. This rule therefore had to be interpreted using alternative means such as the preparatory documents or the documents published regarding the adoption of the rule. The board came to the conclusion that amended claims may only be refused on the basis of R. 86(4) EPC 1973 if the subject-matter of the claims filed originally and that of the amended claims is such that, had all claims originally been filed together, a further search fee would have been payable - on top of the search fee payable in respect of the claims actually filed at the outset - in respect of the amended claims, relating to a different invention within the meaning of R. 46(1) EPC 1973.

The board noted that R. 86(4) EPC 1973 must be interpreted so as to fairly balance the objective of this rule, namely the EPO's interest in collecting, in return for services rendered, search and examination fees, and the fundamental right conferred by the EPC on the applicant to make amendments at least once to the description, claims and drawings that prove necessary during the grant procedure. The board pointed out that the intention and purpose of R. 86(4) EPC 1973 and the interference with the applicant's fundamental right to amend the application at least once called for a strict interpretation of R. 86(4) EPC 1973 (**T 141/04**). It held that R. 86(4) EPC 1973 did not apply when the applicant had not paid the search fee in respect of a non-unitary invention relating to the originally filed claims in spite of being invited to do so under R. 46(1) EPC 1973. In that case, the application could not be examined further, and a divisional application would have to be filed if protection were sought (see **G 2/92**, OJ 1993, 591). The boards in **T 319/96** and **T 631/97** (OJ 2001, 13) made a clear distinction between applying the provisions of R. 86(4) EPC 1973 and a situation where search fees were not paid in spite of an invitation to do so under R. 46(1) EPC 1973.

In **T 789/07** the board held that in order to search a claimed feature completely – as required by Art. 92 EPC and in line with the Guidelines – the search division must as a rule ascertain how the **feature is to be interpreted in the light of the description** and drawings. Only then can it arrive at a reasoned assessment about the amendments likely

to be made to the claims during examination proceedings and within the framework of the original disclosure. This interpretation also forms the basis for comparison, with a view to R. 86(4) EPC 1973, with the originally claimed invention or group of inventions. The board also took the view that a claimed feature falling within the scope of the search must be regarded for R. 86(4) EPC 1973 purposes as searched, even if it was not in fact searched in a specific case (see also **T 2334/11**).

In **T 2334/11**, the examining division had taken the view that the amendment to claim 1 did not meet the requirements of R. 137(5) EPC and so refused the amended set of claims according to the main request. The board observed that the first requirement for applicability of R. 137(5) EPC (formerly R. 137(4) EPC and, before that, R. 86(4) EPC 1973) was that the amended claims related to unsearched subject-matter. It stressed that it did not necessarily follow from the mere fact that a feature was not included in the searched set of claims that it had not been searched (see **T 708/00**, OJ 2004, 160, **T 377/01** and **T 789/07**). Thus, Art. 92(1) EPC, as worded in the EPC 1973 in force **at the time of the search** at issue, required that the search report be drawn up "on the basis of the claims, with due regard to the description", while the Guidelines stated that "in principle, the search should cover the entire subject-matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended". In the board's view, the **subject-matter of the amended claim had to be deemed searched** for the purposes of R. 137(5) EPC, even if the search had not actually covered the added feature (see **T 789/07**) (see also **T 345/13**).

In **T 345/13** the board noted that the search should be made on the basis of the claims, with due regard to the description and any drawings (Art. 92 EPC), and with particular emphasis on the inventive concept. In principle, the search should cover the entire subject-matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended (Guidelines, B-III, 3.5). It followed from these principles that in the present case the subject-matter of the amended claims should have been covered by the search, and is thus deemed to be searched for the purpose of applying R. 137(4) EPC as in force before 1 April 2010. The board therefore did not follow the examining division's application of R. 137(5) EPC [R. 137(4) EPC as in force before 1 April 2010], since a prerequisite for applying this Rule, ie that the amended claims relate to unsearched subject-matter, was not fulfilled. For this reason alone the impugned decision had to be set aside.

In **T 264/09** the board stated that if a feature which has not been searched and which further defines an element which was already part of a claim which had been searched, is taken from the description and added to this claim in order to overcome an objection under the EPC, e.g. lack of inventive step, this does not result in a claim which has been amended such that it relates to unsearched subject-matter which does not combine with the originally claimed invention to form a single general inventive concept. The board thereby followed the well-established case law on the interpretation of R. 86(4) EPC 1973 (see e.g. **T 708/00** (OJ 2004, 160), **T 274/03**, and **T 141/04**), it being noted that R. 86(4) EPC 1973 has the same wording as R. 137(4) EPC (as in force at the date the examining division took its decision), which, as from 1 April 2010, is included in R. 137(5) EPC. The board noted that the Guidelines were drafted accordingly; these

explicitly mention the possibility of carrying out an additional search in connection with the examination of amended claims (**T 2334/11**).

### 5.3.3 Subject-matter of amendment not combining with the originally claimed invention

In **T 442/11**, the board noted that, under R. 137(4) EPC, as in force before 1 April 2010, amended patent claims could not relate to unsearched subject-matter which did not combine with the originally claimed invention or group of inventions to form a single general inventive concept. It observed that R. 137(4) EPC (having the same wording as R. 86(4) EPC 1973) had entered into force on 1 June 1995 and been incorporated in the Implementing Regulations to prevent applicants from switching, during the examination proceedings, the protection sought to unsearched parts of the application **which had not yet been claimed when the search was performed** (see "travaux préparatoires" on R. 86(4) EPC 1973, OJ 1995, 409; and **T 509/11**, **T 2334/11**).

In **T 442/95** the appellants submitted new claims, based on subject-matter which did not appear in the claims as filed. They submitted that the description of this newly claimed subject-matter was to be found in the description. In the board's judgment, the subject-matter claimed had not been searched and did not combine with the originally claimed and searched groups of inventions to form a single general inventive concept. There was no need at this stage to investigate whether the application as filed provided support for such a claim, because under R. 86(4) EPC 1973 the claim was not admissible. The only path open to the appellants was to pursue the subject-matter of said claim in the form of a divisional application.

In **T 353/03** the examining division had stated in its decision of refusal that the new feature in claim 1 had not been searched and that, for that reason, the application was refused according to Art. 97(1) in conjunction with R. 86(4) EPC 1973. The board found that in its decision the examining division did not take into account the fact that R. 86(4) EPC 1973 mentioned another condition which also had to be fulfilled for amended claims to be rejected, namely that the unsearched subject-matter did not combine with the originally claimed invention to form a single general inventive concept (lack of unity). There was no discussion in the appealed decision as to why the subject-matter of new claim 1 was not in unity with original claim 1. The board came to the conclusion that the appealed decision was not reasoned within the meaning of R. 68(2) EPC 1973.

In **T 333/10** the board found that the subject-matter of amended claim 1 could not be considered to have been searched and it did not combine with any of the originally claimed inventions to form a single general inventive concept. The appellant referred to decision **T 2334/11** and argued that, in a case like the one before it, no "a posteriori" unity judgment was to be made; rather, it was to be generally examined if the added feature taken from the description combined with the originally claimed invention to form a single general inventive concept focused on in the claims and description as originally filed.

The board noted that the claims as originally filed had been found to lack unity by the search division. It also stated that the instant case concerned the replacement of some of the features from the combination of features on which the search was based by features which might not be considered as corresponding special technical features within the meaning of R. 44(1) EPC and which could not be expected to constitute a pure limitation of one of the searched inventions. In contrast, decision **T 2334/11** concerned a factual situation in which added features restricted the scope of the searched subject-matter. This difference had also been addressed in decision **T 2334/11**, which essentially stated that the jurisprudence concerning R. 137(5) EPC (version of 1 April 2010) distinguished between cases in which the claimed subject-matter was substantially changed, in particular by replacement or omission of a feature in a claim, and which could give rise to an objection under R. 137(5) EPC, and cases which concerned the pure limitation or concretisation of a claim by adding a feature disclosed in the application as originally filed, and which did not normally cause lack of unity with the originally claimed invention within the meaning of R. 137(5) EPC. In the case before it, the board did not see a limitation or concretisation of any of the four inventions which had initially been searched and which could have been pursued by the appellant. The board noted that decision **T 2334/11** could not be understood to the effect that the amendment of an independent claim by a feature extracted from the description is generally admissible under R. 137(4) EPC if the subject-matter of the independent claim has been searched and lacks novelty with respect to a prior-art document. Instead, the board in decision **T 2334/11** emphasised that – in such cases – it always has to be examined whether the added feature is linked to the general inventive idea that can be deduced from the claims and description as originally filed. Hence, the amended set of claims was not admissible.

#### **5.4. Criteria for consent to amendments under R. 137(5) EPC**

The question concerning the criteria to be used for the proper application of R. 137(5) EPC has been dealt with in various decisions of the boards of appeal.

##### **5.4.1 Amendment not affecting the notion of unity of invention**

A claim may be limited by inclusion of additional features, provided the resulting combination was originally disclosed and does not relate to an invention which was not searched (Guidelines H-V, 3.2 – November 2015 version).

In **T 708/00** (OJ 2004, 160) the board held that under R. 86(4) EPC 1973, amended claims could only be refused if the subject-matter of the claims filed originally and that of the amended claims was such that, had all the claims originally been filed together, a further search fee would have been payable - on top of the search fees payable in respect of the claims actually filed at the outset - in respect of the amended claims, relating to a different invention within the meaning of R. 46(1) EPC 1973 (see also **T 319/96** and **T 631/97**, OJ 2001, 13). It noted that "a subsequent amendment to limit the subject-matter of the main claim by additional features disclosed in the application as filed did not generally affect the notion of unity of invention under either R. 86 (4) or 46 (1) EPC 1973" and that "it is normal for an applicant to make such an amendment in

respect of an objection to the patentability of the subject-matter in unlimited form" (T 2334/11).

In T 274/03 it was however made clear that certain conditions have to be satisfied for an amendment not to generally affect the notion of unity of invention. Thus, this notion is not affected, and therefore no post-search switching of subject-matter is involved by the amendment, if for instance features are added from the description to further define an element that was already a feature of the original main claim, to further specify an essential aspect of the original main claim (see T 1394/04).

In T 2334/11, the board held that what generally had to be ascertained for the purposes of applying R. 137(5) EPC where an original claim was amended by adding a feature was whether the added feature could be regarded as falling under the original general inventive concept as established in the light of the claims and description as filed (see T 1640/07), and not whether the originally claimed subject-matter and the subject-matter defined in the amended claim withstood an assessment of unity *a posteriori*. It found that one of the ideas underlying the case law on application of R. 137(5) EPC was that, while amendments to claimed subject-matter which considerably altered the essence or nature of the invention - especially through replacement or omission of features in a claim (see T 442/95 and T 274/07) - might occasion an objection under R. 137(5) EPC, the mere limitation or the more specific drafting or supplementing of a claim by inclusion of a feature disclosed in the application as filed, in order, for example, to overcome an objection of lack of clarity, novelty or inventive step, generally did not result in a lack of unity with the originally claimed invention for the purposes of R. 137(5) EPC.

In T 1394/04 the board noted that careful consideration of the very nature of the added feature is necessary in order to determine whether the amendment leads to a situation where lack of unity of inventive concept between the original main claim and the later claimed subject-matter arises. Such a situation in the context at issue would necessarily entail an implicit finding of lack of unity "a posteriori" (T 274/03, point 6 of the Reasons) and according to the Guidelines this form of objection to lack of unity should be the exception. The board also noted that it could not be excluded that such a situation could arise as a consequence of later amendments supported solely by the description. In fact, it may occur that the description of the application contains a further general inventive concept, distinct from that underlying the main claim and its dependent claims, if any, but not clearly identified or declared as such in the description. In such a case, if the subject-matter of the main claim based on the first inventive concept had to be amended, on account of a lack of novelty resulting from too broad terms used in the wording, any amendment of the claim pertaining exclusively to said further inventive concept could justify an objection of lack of unity "a posteriori". This example elucidates that situations may actually occur where the amendment of the main claim, whose subject-matter lacks novelty, based on features supported exclusively by the description, may affect the notion of unity of the invention. Although such situations occur very rarely in practice, as already noted above, in such cases R. 86 (4) EPC would have to be applied in order to **avoid a possible circumvention** of Art. 82 EPC. In the case at issue however it was clear that, much the same way as in the decision T 274/03, the introduced amendment feature merely constituted a further specification of original features of the claim which

are essential to the invention. This constituted an essential aspect of the invention. Therefore, no lack of unity pursuant to R. 86 (4) EPC 1973 in conjunction with Art. 82 EPC 1973 could be found.

#### 5.4.2 Amendments filed to meet an objection

In **T 141/04** the board held that R. 86(4) EPC 1973 does not apply if a feature originally disclosed in the description is added to an originally-filed claim **in order to meet an objection** raised. It noted that the Guidelines were in line with the jurisprudence of the boards of appeal. The board noted that, notwithstanding the applicant's right to introduce subject-matter from the description into the claims, the exercise of such a right is not without restrictions, as indicated by Art. 123(1) EPC 1973 and R. 86(3) EPC 1973. Therefore, the examining division could possibly have exercised its discretion under R. 86(3) EPC 1973, last sentence, to refuse to admit this request, as it was filed for the first time during the oral proceedings before the examining division and apparently comprised unsearched subject matter. As such, the request could not reasonably be considered as clearly allowable, this latter being a usually applied requirement for admissibility of a request at such a late stage of the proceedings. On the contrary, the potential requirement for an additional search would have represented an unreasonable protraction of the examination procedure.

In **T 274/03** the board noted that it was clear that post-search "switching" of subject-matter clearly implied a significant change in the nature of the subject-matter being claimed which was not normally comparable to the addition of features taken from the description to further define an element that was already a feature of the original main claim. The board was of the opinion that an amendment amounting to the restriction of an original main claim by including complementary features from the original description into the claim represented an admissible reaction of an applicant vis-à-vis an objection against the patentability of the unamended claim and did not constitute an abuse of the system of the nature which R. 86(4) EPC 1973 was introduced to prevent (**T 377/01** and **T 708/00**). This type of amendment should not therefore in general be judged as contravening the requirements of the rule, **even though an additional search could be required**. In this context it was to be observed that the implicit finding of lack of unity between the originally claimed and later claimed subject-matter, which was a prerequisite for an objection under R. 86(4) EPC 1973, had to, with amendments of the type under consideration here, be a posteriori. The Guidelines made it clear however that this form of objection to lack of unity should be the exception, with benefit of the doubt being given to the applicant (see also **T 2334/11**).

#### 5.5. Non-compliance with Rule 137(5) EPC: a ground for refusing an application

In **T 2459/12** (see point 5.3 of the Reasons) the board noted that in decision **T 1981/12** doubt was also expressed whether R. 137(5) EPC could be an appropriate basis for refusing an application. The deciding board in **T 1981/12** concluded that, by reference to decisions **T 708/00** and **T 442/95**, an amendment not complying with this rule was inadmissible. According to Art. 97(2) EPC, a European patent application which does not meet the requirements of the EPC is refused unless "this Convention provides for a

different legal consequence". R. 137(5) EPC sets out a requirement to be met by amended claims of a European patent application, and neither in the Rule itself nor elsewhere in the EPC is any "different legal consequence" provided for the case where this requirement is not met. The board therefore judged that a failure to meet the requirements of R. 137(5) EPC is a ground for refusal of the application under Art. 97(2) EPC. This was also entirely consistent with the view taken in decision **T 708/00**. R. 86(4) EPC 1973 was regarded as having "the status of an administrative provision in the context of the search and grant procedures", as is "the case for the unity of invention requirement in general".

### C. Special features of opposition and appeal proceedings

1.	Late submission	930
1.1.	General principles	930
1.1.1	Interpretation of Art. 114 EPC	930
1.1.2	Legal basis	931
1.1.3	Historical development	931
1.1.4	Examination as to relevance	933
1.1.5	Documents cited in the patent specification or search report	933
1.2.	Late-filed facts, arguments and evidence in opposition proceedings	934
1.2.1	Late submissions	934
1.2.2	Opposition divisions' exercise of discretion	935
	a) General principles	935
	b) Reasons for the decision	936
	c) Proper exercise of discretion	936
	d) Improper exercise of discretion	937
1.2.3	Late submission of new arguments	938
	a) New arguments – definition	938
	b) Late submission of new arguments	938
1.3.	Late-filed facts, arguments and evidence in appeal proceedings	939
1.3.1	General	939
1.3.2	Rules of Procedure of the Boards of Appeal	939
1.3.3	The boards' discretion	940
1.3.4	Procedural economy	941
1.3.5	Complexity of new subject-matter	941
1.3.6	Legitimate reaction to the first-instance decision	942
	a) General	942
	b) Documents admitted	943
	c) Evidence of common general knowledge	944
1.3.7	Relevance	944
1.3.8	Complete case	945
1.3.9	Communication of a board of appeal	945
1.3.10	Reinforcement of arguments	945
1.3.11	Submission of new arguments on appeal	945
	a) General	945
	b) New arguments admitted	946
	c) New arguments not admitted	947
1.3.12	Adjournment of oral proceedings	948
1.3.13	Absence of a party from oral proceedings (Art. 15(3) RPBA)	948
1.3.14	Article 12(4) RPBA	949
	a) Documents and evidence withheld at first instance	949
	b) Documents and evidence not admitted by the opposition division	950
	c) Documents and evidence admitted under Art. 12(4) RPBA	951
1.3.15	Cases of abuse of procedure	952
	a) No abuse of procedure	952
	b) Abuse of procedure (yes)	953
1.3.16	Late submission of experimental data	954

a)	Test reports admitted into the proceedings	954
b)	Test reports not admitted into the proceedings	954
1.3.17	Public prior use	955
a)	No consideration of late-filed evidence of public prior use	955
b)	Consideration of late-filed evidence of public prior use	957
1.3.18	Change of representative	957
1.3.19	New submissions in proceedings resumed before the boards	958
2.	Transfer of party status	958
2.1.	Party status as patent proprietor	958
2.2.	Party status as opponent	959
2.2.1	General principles	959
2.2.2	Universal succession	960
2.2.3	Transfer together with the business assets to which the opposition relates	961
2.2.4	No transfer: sale of opponent's subsidiary company	962
2.2.5	Legal uncertainty as to who is the correct party	963
2.2.6	Evidence for and effect of a transfer	964
a)	Date of effective transfer	964
b)	What kind of evidence suffices	966
c)	Natural heir	966
2.2.7	Effect of finding that no transfer took place	966
3.	Intervention	967
3.1.	Admissibility	967
3.1.1	Any third party	967
3.1.2	Relevant patent	968
3.1.3	National infringement proceedings	968
3.1.4	Proceedings pending before the EPO	970
a)	Intervention in opposition proceedings	970
b)	Intervention in appeal proceedings	970
3.1.5	Time limit for intervention	971
3.1.6	Fees	971
3.1.7	Substantiation requirement	972
3.2.	Legal status of intervener	972
3.2.1	In opposition proceedings	972
3.2.2	In appeal proceedings	972
3.2.3	Time limits in pending proceedings	973
4.	Continuation of the opposition proceedings by the EPO	973
4.1.	Surrender and lapse of the patent	973
4.1.1	Surrender of patent	973
4.1.2	Continuation of the opposition proceedings after lapse or surrender (Rule 84(1) EPC)	974
a)	Request for continuation of the proceedings made by the opponent	975
b)	Request for continuation of the proceedings made by the patent proprietor	976
4.2.	Death or legal incapacity of an opponent	976
4.3.	Withdrawal of opposition	976
4.3.1	Form and effect of withdrawal on party status	977

4.3.2	Effect of withdrawal on opposition proceedings before the departments of first instance	977
4.3.3	Effect of withdrawal on opposition appeal proceedings	978
5.	Limitation/revocation	979
5.1.	Limitation/revocation - Article 105a-105c EPC	979
5.2.	Requests for revocation during opposition and opposition appeal proceedings	979
6.	Apportionment of costs	981
6.1.	Principle that each party must bear its own costs	981
6.2.	Equity of a different apportionment of costs – case groups	982
6.2.1	Late submission of documents and/or requests	983
	a) Late submission was unjustified	983
	b) Late submission was justified	987
6.2.2	Acts or omissions prejudicing the timely and efficient conduct of oral proceedings	990
	a) Failure of a party to appear at oral proceedings	990
	b) Request for scheduling or postponement of oral proceedings; withdrawal of request for oral proceedings	994
	c) Other cases	996
6.2.3	Filing of opposition or appeal	997
6.2.4	Withdrawal of opposition or appeal at short notice	998
6.2.5	Other cases	999
6.3.	Procedural aspects	1000
6.3.1	Filing a request for apportionment of costs	1000
6.3.2	Competence issues	1001
6.3.3	Apportionment of costs	1001
	a) Future costs	1002
	b) Procedure for fixing costs	1002
6.3.4	Appeal solely against the decision on costs inadmissible	1003

---

## 1. Late submission

### 1.1. General principles

#### 1.1.1 Interpretation of Art. 114 EPC

Under Art. 114(1) EPC, the EPO is obliged to examine the facts of its own motion, and in doing so, it is not restricted to the facts, evidence and arguments provided by the parties and the relief sought. According to Art. 114(2) EPC, however, the EPO may disregard facts or evidence which are not submitted in due time by the parties concerned. Interpretation of Art. 114 EPC therefore requires an analysis of the inter-relationship between its paragraphs Art. 114(1) and (2). In **T 122/84** (OJ 1987, 177) the board summarised the historical development of the principle of ex officio examination with regard to late submission on the basis of the "travaux préparatoires" to the EPC 1973. A solution it found compatible with this principle was to leave it to the discretion of the

department concerned whether or not to examine facts or evidence not submitted in due time, rather than, as had also been considered, ruling out such examination altogether.

A rigid rule excluding all new evidence on appeal might lead to injustice and unfairness in some cases and would not be compatible with the principles of procedural law generally recognised in the Contracting States (**J 5/11**, **J 6/14**).

The discretionary power under Art. 114(2) EPC is clearly conferred on the EPO departments only to ensure that proceedings run smoothly and to forestall tactical abuse (**T 273/84**, OJ 1986, 346).

### 1.1.2 Legal basis

What is meant by "in due time" for the purposes of Art. 114(2) EPC requires interpretation. The parties in inter partes cases are subject to a particular duty to facilitate due and swift conduct of the proceedings, in particular by submitting all relevant facts, evidence, arguments and requests as early and completely as possible. This duty is reflected in the EPC provisions governing the handling of late submissions: Art. 114(2) EPC as a general provision; R. 137 EPC for the grant procedure; and R. 76(2)(c) and R. 80 EPC for the opposition procedure. For procedures at first instance, R. 116(1) EPC additionally provides that, when issuing the summons to oral proceedings, the EPO must fix a final date for making written submissions in preparation for those proceedings. Precise rules governing appeal proceedings are also laid down in the Rules of Procedure of the Boards of Appeal, which were comprehensively amended in 2003 (RPBA 2003), and revised again in 2007, when the provisions on subsequent amendments were renumbered but left unchanged in substance (see, in particular, Art. 12 and 13 RPBA).

### 1.1.3 Historical development

The boards of appeal have developed different approaches to the consideration of late submissions. According to one of these, the principle of examination by the EPO of its own motion (Art. 114(1) EPC) takes precedence over the possibility of disregarding facts or evidence not submitted in due time. This follows from the EPO's duty towards the public not to grant or maintain patents which it is convinced are legally invalid (**T 156/84**, OJ 1988, 372). Accordingly, the main criterion for deciding on the admissibility of late-filed documents and evidence is their **relevance**, i.e. their evidential weight in relation to other documents already in the case (see e.g. **T 322/95**, **T 475/96**, **T 864/97**, **T 892/98**, **T 605/99**, **T 100/07**).

In addition, the principles set out by the Enlarged Board in **G 9/91** and **G 10/91** (OJ 1993, 408 and 420) with regard to the admissibility of fresh grounds of opposition are also generally applicable to late-filed new facts and evidence in support of grounds of opposition already presented in the notice of opposition, in proceedings before both the opposition divisions and the boards of appeal (see in particular **T 1002/92** OJ 1995, 605).

In the landmark decision **T 1002/92**, the board reached the following conclusion: **in proceedings before the opposition divisions**, late-filed facts, evidence and related arguments which go beyond the "indication of the facts, evidence and arguments" presented in the notice of opposition pursuant to R. 55(c) EPC 1973 in support of the grounds of opposition on which the opposition is based should only exceptionally be admitted into the proceedings if, *prima facie*, there are clear reasons to suspect that such late-filed material would prejudice the maintenance of the European patent in suit.

The criteria governing the admission of late-filed facts, evidence and arguments are more restrictive and stringent in proceedings before the boards of appeal than in opposition proceedings at first instance.

In **T 1002/92** the board held that in contrast to the first-instance proceedings, the appeal procedure is a judicial procedure and therefore "less investigative". Therefore, as regards **proceedings before the boards of appeal**, new facts, evidence and related arguments which go beyond the "indication of the facts, evidence and arguments" presented in the notice of opposition pursuant to R. 55(c) EPC 1973 in support of the grounds of opposition on which the opposition is based should only very exceptionally be admitted into the proceedings in the appropriate exercise of the board's discretion and if such new material was *prima facie* highly relevant in the sense that it could reasonably be expected to change the eventual result and was thus highly likely to prejudice maintenance of the European patent in suit. In addition other factors relevant to the case, in particular whether the patentee objected to the admissibility of the new material and the reasons for any such objection, and the degree of procedural complication that its admission was likely to cause, should be taken into account. In general the later such new material was filed, the greater the degree of procedural complication it was likely to cause.

Many decisions have affirmed **T 1002/92** (see, among others, **T 267/92**, **T 255/93**, **T 463/95**, **T 481/00**, **T 982/02**, **T 671/03**, **T 874/03**, **T 1027/03**, **T 151/05**, **T 1600/06**, **T 1883/12**).

In many earlier decisions, too, the relevance of late-filed documents was no longer viewed as being the only decisive criterion for admitting them. Other criteria, such as how late the documents were, why they had been submitted late and whether their submission constituted a procedural abuse or whether admitting the late-filed documents could lead to an excessive delay in the proceedings, were also held to be decisive (see **T 534/89**, OJ 1994, 464; **T 17/91**, **T 951/91**, OJ 1995, 202; **T 1019/92**, **T 1182/01**, **T 927/04**).

With regard to how the various criteria are applied in opposition and appeal proceedings, see in this chapter, IV.C.1.2 "Late-filed facts, arguments and evidence in opposition proceedings" and IV.C.1.3 "Late-filed facts, arguments and evidence in appeal proceedings" below.

#### 1.1.4 Examination as to relevance

According to established case law of the boards of appeal, a decisive criterion for admitting late-filed documents is their prima facie relevance, see **T 1002/92**, OJ 1995, 605; **T 212/91**, **T 931/06** and **T 1883/12**. Also the Guidelines (E-V, 2 – November 2015 version) mention prima facie relevance as the most important (albeit not exclusive) criterion. The approach outlined there follows from the principles set out in **G 9/91** and **G 10/91** (OJ 1993, 408 and 420).

The admission of a citation which could have been submitted earlier and was therefore late filed depends on whether it is decisive (relevant) for the outcome of the case (see **T 258/84**, OJ 1987, 119). If it is relevant - i.e. if it might cause the patent to be revoked or its scope to be limited - it must be admitted into the case and taken into account (**T 164/89**, **T 1016/93**).

Regarding examination as to relevance, the board explained in **T 560/89** (OJ 1992, 725) that Art. 114(2) EPC 1973 allowed the EPO to disregard documents which contained no more information than the documents filed on time and did not disclose matter which could change the outcome of the decision. Late-filed evidence is admissible only if it is more relevant than the evidence already on file (**T 1557/05**). According to the decision in **T 611/90** (OJ 1993, 50), the boards could reject late-filed evidence, documents and other submissions on the ground that they were irrelevant, i.e. no more "weighty" or "cogent" than those already on file (**T 237/03**). Prima facie relevance is ascertained on the face of the facts, i.e. with little investigative effort, which reflects the need for procedural expediency in considering and admitting late-filed facts and evidence (**T 1883/12**). The interest in procedural expediency is also expressed in the common approach of **T 1557/05** not to admit late documents which, prima facie, are no more relevant than what is already on file. In this regard the board added in **T 1883/12** that relevance is decided in relation to facts to be proven, and if late documents, on the face of it, are not more relevant to those facts than admitted evidence and thus appear to add nothing, it is perfectly reasonable in the interest of procedural economy not to admit them.

#### 1.1.5 Documents cited in the patent specification or search report

A document considered during the examination procedure is not automatically scrutinised in opposition or opposition appeal proceedings, even if it is quoted and acknowledged in the contested European patent (**T 155/87**, **T 198/88**, OJ 1991, 254; **T 484/89**, **T 652/99**). According to **T 291/89** this also applied to a document cited in the search report. In **T 111/04** the board agreed with the case law and considered that this applied also to evidence filed during the grant proceedings.

In **T 536/88** (OJ 1992, 638) the board pointed out, however, that the document cited and acknowledged in the description of the contested patent itself as the closest prior art and on the basis of which the technical problem in the description was formulated remains an exception. Such a document also forms part of the opposition or opposition appeal proceedings even if it is not expressly cited within the opposition period (**T 541/98**, **T 652/99**, **T 454/02**, **T 86/03**).

In **T 140/00** although document (7) had been cited in the specification of the patent in suit, it had merely been acknowledged as conventional background art; it was not considered therein as essential or as the closest prior art and starting point of the claimed invention. Therefore, that document did not automatically form part of the appeal proceedings and, thus, was late-filed evidence subject to a discretionary decision of the board.

In **T 234/90**, **T 300/90** and **T 501/94** (OJ 1997, 193) the board held that a document indicated in a citation as the closest prior art for the purpose of elucidating the technical problem set out in the citation did not automatically form part of the opposition or opposition appeal proceedings if not expressly cited within the opposition period.

In the board's view in **T 387/89** (OJ 1992, 583), neither an opposition division nor a board of appeal had any duty to reconsider the relevance of documents cited in the European search report if such documents had not been relied upon by the opponents to support their grounds of opposition. Under Art. 114(1) EPC 1973, however, an opposition division or appeal board could introduce new documents into the opposition proceedings if it had good reason to suppose that the documents could affect the outcome of the decision (**T 420/93**, **T 530/00**). In **T 588/89** the board similarly introduced a document into the appeal proceedings under Art. 114(1) EPC 1973, because, in its view, the document reflected the closest prior art and raised doubts as to whether an inventive step had taken place.

## **1.2. Late-filed facts, arguments and evidence in opposition proceedings**

### **1.2.1 Late submissions**

The boards have stressed that opponents are required to submit all their objections during the opposition period, setting each out in full (**T 117/86**, OJ 1989, 401). Under R. 76(2)(c) EPC, the notice of opposition must contain a statement of the extent to which the European patent is opposed and of the grounds on which the opposition is based, as well as an indication of the facts and evidence presented in support of these grounds. R. 116(1) EPC provides that, when the summons to oral proceedings is issued, a final date for making written submissions in preparation for the oral proceedings must be fixed. New facts and evidence submitted after this date need not be considered, unless admitted on the grounds that the subject of the proceedings has changed. The rule confers scope for discretion (**T 798/05**, **T 2102/08**, **T 1253/09**).

An example of a change in the subject of the proceedings is where, in timely response to the points raised in the note annexed to the summons, the patent proprietor files amendments which have the result that a new document becomes relevant; in such a case the opponent should be allowed to present this document and must be given a chance to comment on the amendments (Art. 113(1) EPC; see also Guidelines E-II, 8.6 – November 2015 version). In **T 117/02** the board stated that in the case of a request to introduce late-filed submissions (here: a new ground of opposition and new arguments and evidence) the right to be heard should be granted before those late-filed submissions were rejected. In summary, an opponent must be given an opportunity to

respond in an appropriate way when the subject of the proceedings has changed, for example due to amendment. Depending on the nature of the amendment this may involve the filing of further documents (**T 366/11**).

Filing "on time" refers not only to facts and evidence submitted by the opponent within the nine-month opposition period but also to those that the patent proprietor may advance in his response to the grounds for opposition within the four-month time limit. New facts, documents and/or evidence would be regarded as having been filed on time if their filing was occasioned by an argument or a point raised by another party or in the appealed decision so that, under the circumstances of the case, they could not have been filed earlier. The submission of facts and evidence within successive time limits could then also be "on time", if the principle of procedural economy has been duly observed, i.e. the submitting party has taken due care in the proceedings (**T 156/84**, OJ 1988, 372; **T 201/92**, **T 238/92**, **T 389/95**, **T 532/95**, **T 502/98**, **T 468/99**, **T 574/02**, **T 320/08**).

### 1.2.2 Opposition divisions' exercise of discretion

#### a) General principles

It is at the opposition division's discretion whether to admit late-filed documents (Art. 114(2) EPC). According to settled case law, it must first examine them as to their relevance. Late-filed facts and evidence and supporting arguments should only exceptionally be admitted into the proceedings if, *prima facie*, there are reasons to suspect that such late-filed documents prejudice the maintenance of the European patent in suit (see, in particular, **T 1002/92**, OJ 1995, 605; **T 1643/11**; Guidelines E-V, 2 and 2.1 – November 2015 version; and in this chapter IV.C.1.1.4 "Examination as to relevance").

The discretionary power conferred by Art. 114 EPC necessarily implies that the EPO department of first instance must have a certain degree of freedom in exercising its power. A board of appeal should only overrule the way in which a department of first instance has exercised its discretion when deciding on a particular case if it concludes that it has done so according to the wrong principles, or without taking into account the right principles, or in an unreasonable way, and has thus exceeded the proper limits of its discretion (**T 640/91**, OJ 1994, 918, **G 7/93**, OJ 1994, 775, **T 1485/08**, **T 2513/11**, **T 544/12**). This rule also applies with respect to opposition division decisions on the admission of late-filed submissions (**T 1209/05**, **T 1652/08**, **T 1253/09**). It is not the function of a board of appeal to review all the facts and circumstances of the case as if it were in the place of the department of first instance in order to decide whether or not it would have exercised such discretion in the same way (**T 75/11**). This power has to be exercised reasonably after hearing the parties, including in oral proceedings if requested (**T 281/00**).

In **T 467/08** the board refused the request to disregard on appeal comparative test results submitted in the opposition proceedings, on the basis that neither the EPC itself nor the RPBA provided for such a decision. The boards merely had competence to

review a decision taken by the opposition division on whether or not to admit late-filed submissions, documents and requests filed in those earlier proceedings, or to decide themselves whether or not to admit submissions, documents and requests filed on appeal.

In **T 1652/08**, the appellant argued that the late-filed documents, which the opposition division had admitted - wrongly in its view - to the proceedings, were no more relevant than those previously introduced. The board, however, held that, in establishing whether a document was prima facie relevant, the decisive factor was not whether it was even more relevant than a previously filed document, but rather whether it was prima facie relevant for the outcome of the case. Where documents had been properly admitted into the first-instance proceedings and the contested decision was based on them, they had to be admitted on appeal too (see also **T 1568/12**).

b) Reasons for the decision

According to the consistent case law of the boards of appeal, although Art. 114(2) EPC gives an opposition division discretion not to consider facts and evidence not submitted in due time, the division is obliged to give reasons for its decision; it is not enough merely to cite their late submission (**T 705/90**, **T 214/01**, **T 1855/13**). Even if submissions are late-filed, their admission remains a procedural aspect over which the opposition division can exercise discretion. As a consequence, the decision needs to show the reasoning why the discretion was exercised one way or the other (**T 1855/13**).

In **T 2097/10**, the board found that the brief statement of reasons given by the opposition division - to the effect that documents D18 and D19 were relevant and not especially voluminous - was sufficient. Indeed, it was not apparent from the minutes that the patentee's representative had been denied an opportunity to comment on those documents, or that he had asked for more time to prepare such comments but his request had been refused.

c) Proper exercise of discretion

In **T 267/03** the board decided that a late submission not admitted by the opposition division was not to be admitted on appeal if the opposition division had correctly exercised its discretionary power under Art. 114(2) EPC 1973 (see also **T 927/04**).

In **T 2165/10**, applying the criteria of prima facie relevance, documents E1-E10, which related to an alleged public prior use, had not been admitted into the proceedings by the opposition division. The board shared the opposition division's conclusion that E1-E10 had been filed late without good reason. The reason mentioned by the appellant for their late submission was that the public prior use had taken place more than 20 years ago in a foreign country. Since the legal time limit for keeping documents had long elapsed, many of the relevant documents had been destroyed. The board, however, shared the respondent's view that the appellant should have included an indication of the alleged public prior use in its notice of opposition and indicated/filed all evidence in its possession at that time.

In **T 1643/11** the board had no doubt that the opposition division had considered the correct criterion, prima facie relevance, and had done so in detail and in a reasoned manner in deciding not to admit D9 and D13 into the proceedings (see also **T 782/13**, **T 2513/11**).

d) Improper exercise of discretion

In **T 1194/08** the opposition division indicated that E15, a late filed document, was accepted as a belated submission. In the oral proceedings, however, the opposition division decided to reject the document as having been filed late. In the opinion of the board, the opposition division was not entitled to reverse its admittance of the document during the oral proceedings. The opponent was entitled to rely on the earlier decision of the opposition division to admit the document into the proceedings. The board therefore considered that E15 was already in the proceedings so that there was no need to take a decision regarding its admittance into the appeal proceedings.

In **T 68/02** document D16 was discussed extensively by the respondent without objecting to its admission into the proceedings. At the start of the oral proceedings before the Opposition Division the respondent requested that the document not be admitted into the proceedings. The Opposition Division as a consequence did not admit the document. The board could not agree with the action of the Opposition Division in this respect. The discussion of the document by the respondent and the Opposition Division before the oral proceedings took place led to the normal expectation that the document was already in the proceedings and that the oral proceedings could be prepared on this basis.

In **T 1485/08**, the opposition division had decided not to admit the late filing (i.e. on the day of the oral proceedings) of an English translation of a Korean patent which had been filed in a timely fashion with the grounds of opposition. The appellant maintained that the document was highly relevant to the issue of novelty. The board noted that the document (Korean patent) had been filed with the notice of opposition against novelty of the patent in suit. Although not in one of the official languages of the EPO, from the use of various English terms in the description of the document it was already discernible that its subject-matter was related to the claimed subject-matter. The board was of the opinion that the opposition division in not admitting the English translation for the sole reason that it was late-filed, without having examined its relevance or considered any other criteria, did not properly exercise its discretion.

In **T 544/12** the board pointed out that a bare assertion of a lack of prima facie relevance was not by itself sufficient reasoning. Without any sufficient reasons being given by the opposition division for not admitting the late-filed documents, the board was not in a position to decide whether or not the opposition division had exercised its discretion in an appropriate way. In such a situation, it was first necessary for the board to put itself in the place of the opposition division and to decide whether or not it would have exercised such discretion in the same way as the opposition division did. If the board came to the conclusion that, in the position of the opposition division, it would not have exercised its discretion to admit these documents, the separate question would then arise whether the board should exercise its discretion to admit the documents as documents (late-)filed in

the appeal proceedings). In the event, the board considered that the documents had been *prima facie* relevant and should have been admitted.

### 1.2.3 Late submission of new arguments

#### a) New arguments – definition

The Enlarged Board of Appeal defined "new arguments" in opinion **G 4/92** (OJ 1994, 149) not as new grounds or evidence, but as reasons based on the facts and evidence which have already been put forward (**T 131/01**, OJ 2003, 115). In **T 604/01**, facts in the legal sense are to be understood as the circumstances and incidents of a case, looked at apart from their legal bearing. In **T 926/07** the board stated that facts are claimed subject-matter which must, where applicable, be substantiated by evidence. Arguments, by contrast, are the expositions generated when the law is applied to facts and evidence filed on time. Arguments based on facts filed on time are therefore to be admitted at every stage of the opposition and opposition appeal proceedings.

Taking a similar line in **T 861/93**, the board ruled that decisions referred to by a party in support of its arguments were never citations which, under Art. 114(2) EPC 1973, could be rejected as being late. Decisions to which a party referred in support of its arguments should be regarded as part of these arguments and should not be rejected as being filed late.

#### b) Late submission of new arguments

According to the case law of the boards of appeal, Art. 114(2) EPC provides no legal basis for disregarding late-filed arguments. Art. 114(2) EPC refers to late-filed facts and evidence ("Tatsachen und Beweismittel" in German; "faits et preuves" in French), but not legal submissions and arguments (**T 861/93**, **T 386/01**). Late-filed arguments cannot therefore be disregarded on the grounds that they were submitted for the first time at the oral proceedings (**T 92/92**, **T 704/06**).

In **T 92/92**, the board held that the EPC in the English version made a clear distinction between "facts and evidence" on the one hand and "arguments" on the other in Art. 114(1) EPC 1973 and that Art. 114(2) EPC 1973 did not refer to arguments. Art. 114(2) EPC 1973 was to be interpreted such that the parties' right to argue their case was not unduly restricted.

Under R. 71a EPC 1973 (R. 116 EPC) new facts and evidence do not need to be considered after the time stated in the summons, unless they are admitted on the grounds that the subject of the proceedings has changed. R. 71a EPC 1973, and Art. 114(2) EPC 1973 on which it is based, refer to late-filed facts and evidence but not to new arguments, which can be made at any stage in the proceedings. In accordance with the jurisprudence, therefore, new arguments in support of facts already adduced have to be considered in accordance with R. 71a(1) EPC 1973, even if presented after the date specified in the summons, and equally cannot be rejected by citing Art. 114(2) EPC 1973 (**T 131/01**, OJ 2003, 115; **T 926/07**, **T 1553/07**).

According to **T 1553/07** arguments also included statements intended to rebut facts which had already been put forward (including evidence). In oral proceedings before the opposition division, the patent proprietor explained why in its opinion the public prior use claimed by the opponent had not been established beyond all doubt by the evidence which had been submitted late. The board did not regard the disputing of the prior use claimed by the opponent as constituting the presentation of new facts. Instead, the statements in question constituted a presentation of arguments concerning facts which had already been put forward and evidence submitted with respect to them.

### 1.3. Late-filed facts, arguments and evidence in appeal proceedings

#### 1.3.1 General

Further information on the filing of amended claims in appeal procedures is contained in Chapter IV.E.4.

In earlier case law it has been pointed out that the wording of Art. 114(1) EPC 1973 does not mean that the boards of appeal have to conduct rehearings of the first-instance proceedings, with unfettered right, and indeed obligation, to look at all fresh matter regardless of how late it was submitted. Art. 114(2) and Art. 111(1) EPC 1973 set a clear limit to the scope of any new matter that can be introduced into an appeal by the parties so that cases on appeal have to be, and remain, identical or closely similar to those on which decisions at first instance have been rendered (**T 97/90**, OJ 1993, 719; see also **T 26/88**, OJ 1991, 30, where it was stated that the essential function of the appeal procedure was to determine whether the decision issued by a department of first instance was correct on its merits; **T 326/87**, OJ 1992, 522; **T 229/90**; **T 611/90**, OJ 1993, 50; **T 339/06** and **T 931/06**).

Facts and evidence submitted for the first time in appeal proceedings may be disregarded by the boards of appeal as a matter of discretion under Article 114(2) EPC 1973, which limits the boards' inquisitorial duties under Article 114(1) EPC 1973 (**T 326/87**, OJ 1992, 522).

#### 1.3.2 Rules of Procedure of the Boards of Appeal

The Rules of Procedure of the Boards of Appeal give general directions on how the boards of appeal should exercise their power to admit or disregard material filed at different stages of the appeal proceedings. Account must be taken of Art. 12 and 13 RPBA in particular. Under Art. 12(2) RPBA, the statement of grounds of appeal and the reply must contain a party's complete case.

Under Art. 13(1) RPBA any amendment to a party's submissions after it has filed its statement of grounds of appeal or reply may be admitted and considered at the board's discretion. The discretion is exercised in view of inter alia the complexity of the new subject matter submitted, the current state of the proceedings and the need for procedural economy (for more details, see CA/133/02).

Art. 13(3) RPBA adds that amendments sought to be made after oral proceedings have been arranged may not be admitted "if they raise issues which the Board or the other party or parties cannot reasonably be expected to deal with without adjournment of the oral proceedings". Art. 12(4) RPBA points out that in exercising this discretion the board can also disregard late submissions which were not admitted as late filed in the first-instance proceedings. Art. 12(4) RPBA also instructs us that consideration is unlikely to be given to new submissions that should have been presented in the first-instance proceedings.

The criteria laid down in the RPBA for the admission of new submissions take account of the other parties' right to fair proceedings, and are aimed at having proceedings conducted more pragmatically and reliably. The parties' should concentrate their filing of submissions at an early stage of the proceedings and so help the board reach an appropriate decision within a reasonable period. The RPBA provisions on amendments to a party's case essentially codify the boards' comprehensive case law (on this point, see **T 87/05**).

### 1.3.3 The boards' discretion

Under Art. 13(1) RPBA any amendment to a party's submissions after it has filed its statement of grounds of appeal or reply may be admitted and considered at the board's discretion.

According to established case law, discretion has to be exercised equitably, i.e. all relevant factors which arise in the particular circumstances of the case have to be considered (see **G 7/93**, OJ 1994, 775; **R 11/11**, **T 931/06**, **T 936/09**, **T 23/10**).

In **T 188/05** the board did not share the appellant (opponent's) view that it was obliged to admit relevant evidence irrespective of how late it had been filed, provided that it cast doubt on the patent's validity. The case law of the boards of appeal establishes quite clearly that the first instance and the boards of appeal have a discretion to admit late-filed submissions and that the exercise of this discretion depends on the facts of each case but pertinent matters may include the relevance of the new material, whether it could have been produced before and if so why it was not, whether other parties and/or the board itself are taken by surprise, and how easily they can and whether they have adequate time to deal with it (see also **T 1774/07**, **T 424/11**).

In **T 874/03** the board, considering a prior-art document, which was first filed at the oral proceedings before the board, acknowledged that it was immediately apparent that this fresh material might represent the closest prior art. In accordance with Art. 10b(3) RPBA 2003 (Art. 13(3) RPBA), such facts and evidence might not in principle be admitted into the proceedings because their admission would lead to an adjournment of the proceedings. However, an exception to the above principle was justified if the patent proprietor agreed to the admission of the fresh material. The board stipulated that, as emphasised by the Enlarged Board in **G 9/91** (OJ 1993, 409), it might in some cases be in the patent proprietor's own interest that such facts and evidence were not excluded from consideration in the centralised procedure before the EPO. It pointed out that such

fresh material had to be prima facie highly relevant in order to be admitted into the proceedings exceptionally with the agreement of the patent proprietor (**T 369/08**).

In exercising its discretion the board takes account of the circumstances of the specific case, in particular the interests of the parties and the procedural economy of the appeal proceedings, having in mind the purpose of these proceedings (**T 123/08**).

#### 1.3.4 Procedural economy

Under Art. 13(1) RPBA any amendment to a party's submissions after it has filed its statement of grounds of appeal or reply may be admitted and considered at the board's discretion. The discretion is exercised in view of inter alia the complexity of the new subject matter submitted, the current state of the proceedings and the need for procedural economy.

As early as **T 117/86** (OJ 1989, 401), it was pointed out that facts and evidence in support of an opposition which were presented after the nine-month period had expired were out of time and late, and might or might not be admitted into the proceedings as a matter of discretion under Art. 114(2) EPC 1973. Boards had to ensure that proceedings were conducted expeditiously, and other parties fairly treated. The parties should submit all the facts, evidence and arguments relevant to their case as early and completely as possible, particularly when such an evidence was already known to the party concerned (see **T 101/87**, **T 237/89**, **T 951/91**, OJ 1995, 202, **T 34/01**, **T 1182/01**, **T 927/04**, **T 1029/05**).

There are restrictions on the admission of new submissions because parties cannot be given complete freedom in their conduct of proceedings given, in particular, the need in inter partes (adversarial) procedures to act fairly towards the other party and, more generally, the requirements of due process (**T 1685/07**).

In **T 1488/08** the patent had been opposed under Art. 100(a) and (c) EPC 1973. In their written statement setting out the grounds of appeal, however, the appellants had only invoked lack of inventive step. The board found that the new objections of added subject-matter and lack of novelty had only been raised after the respondents had submitted their reply and were therefore late filed. Their attempt to re-introduce them could therefore only be regarded as a change of position determined by procedural tactics ("salami" tactics). On that basis alone, the board considered, in view of procedural economy, that it should exercise its discretion not to admit the late filed objections.

#### 1.3.5 Complexity of new subject-matter

Some boards have held that new submissions should normally be disregarded if the **complexity of the technical or legal issues** raised is such that clearly neither the board nor the other party can be expected to deal with them without adjournment of the oral proceedings. Complex fresh subject-matter filed at short notice before or during oral proceedings runs the risk of being not admitted to the proceedings without any consideration of its relevance or allowability (see **T 633/97**, **T 1050/00**, **T 1213/05**).

In **T 1044/04** the board stated that the late-filed document was a relatively short document which did not raise further complex substantive questions with regard to technical or legal issues complicating the appeal proceedings. Thus the board decided to admit the late-filed document D6 into the appeal proceedings (see **T 633/97**, **T 787/00**).

In **T 609/99** the board stated that despite the proprietor's objection to the admission of evidence which had been disregarded in the opposition procedure pursuant to Art. 114(2) EPC 1973, the board might, in certain circumstances, take account of this evidence without any implication that it was prima facie highly relevant. This exercise of discretion was not inconsistent with the criteria set out in **T 1002/92**. In the circumstances of the case at issue the board's admission of evidence had not extended the legal and factual framework.

### 1.3.6 Legitimate reaction to the first-instance decision

#### a) General

According to the established case law of the boards of appeal, filing new facts, documents and evidence would be considered to be in due time, if the filing was occasioned by an argument or a point raised by another party or in the appealed decision and could not have been filed before under the circumstances of the case. However, in order not to deprive the other parties of their right to verify the new evidence or to prevent the board from ensuring that the proceedings are conducted expeditiously, such facts and evidence have to be submitted once they are available and once it has become clear that they were relevant (**T 201/92**, **T 951/91**, OJ 1995, 202; **T 502/98**, **T 730/07**, **T 320/08**, **T 976/10**). Late filing is justifiable if it is an appropriate and immediate reaction to developments in the previous proceedings (**T 855/96**). Late filing is also admissible in order to support the reasoning to date (**T 561/89**) and to prove claimed common general knowledge, if challenged (**T 106/97**, **T 1076/00**).

The delay is of less importance if the party was reacting to a finding in the contested decision (**T 101/87**, **T 1511/06**). An appellant who has lost the opposition proceedings should be given the opportunity to fill the gaps in its arguments by presenting further evidence in the second instance (**T 406/09**).

In **T 49/85** the board stated that a reference filed by an opponent for the first time with its statement of grounds was not submitted in due time unless representing the effective counter evidence to a newly emphasised reason given in the decision (see also **T 172/85** and **T 561/89**). It is however within the discretion of a board of appeal pursuant to Art. 114(1) EPC to admit such a document into the proceedings in view of its relevance (**T 339/08**). The same applied if the party reacted to its opponent's submission, e.g. in **T 705/90**, where documents I to N were cited by the appellant in its observations in support of an argument presented in response to the respondent's statement of grounds.

In **T 1045/08** the board stated that where a party files new requests in appeal proceedings the other party must have the possibility of responding to these including the filing of new prior art documents, particularly when some of the amendments to the

claims of the requests are based on features taken from the description of the patent. In this situation the concept of "late filed" must be considered relatively since the documents could not have been filed earlier because the party could not know the content of the future requests of the other party.

b) Documents admitted

Similarly, in **T 238/92** the board of appeal did not consider a document presented for the first time with the statement of grounds of appeal as "late-filed", since it served as the first evidence of a feature considered in the contested decision as essential for the assessment of inventive step (see also **T 117/92**). In **T 1380/04** the submission of D16 along with the statement of grounds was a justified reaction to the opposition division's decision. The document also appeared *prima facie* more relevant to inventive step than any other document already in the proceedings (see also **T 1146/06**).

In **T 666/09**, the board agreed with the appellants that the comparative study filed with the statement of grounds of appeal was a direct response to the opposition division's decision.

In **T 101/87** the board drew a distinction between (a) the case of an opponent attempting to find further prior art when the opposition division had decided that the original citations did not warrant revoking or restricting the patent, and (b) the case of an opponent making a further search in response to substantial amendments of a claim or to comments from the opposition division regarding a missing link in a chain of argument. In the latter case, new documents could be admitted into the proceedings, instead of being regarded as late-filed.

In **T 927/04** the board stated that it was legitimate for a party who had lost in opposition proceedings to try to improve its position in appeal by filling a presumed missing link, as in the case in point, with respect to the issue of prior use.

In **T 259/94** the appellants submitted new evidence two years after filing the appeal. The respondent did not object to their introduction into the appeal proceedings. The board held that in such circumstances the principle of "*volenti non fit iniuria*" empowered it to admit the late-filed evidence.

In **T 828/14** the board, citing Art. 12(4) RPBA, said a party to appeal proceedings was not entitled to expect that evidence it could have produced in the first-instance proceedings but had actually only produced in the statement of grounds of appeal would be admitted into the proceedings. Hence an appellant-opponent could challenge the patent in suit on the basis of such evidence only if it had been admitted by the board in the due exercise of its discretion. One of the things that needed to be considered in that respect was whether the change in the line of attack was justified as a direct and objectively appropriate response to developments in the first-instance proceedings, and in particular to findings in the contested decision. The document was admitted into the proceedings.

In **T 241/10** the board stated that the board has no power under Art. 12(4) RPBA to hold a document filed with the statement of grounds of appeal inadmissible if the filing of that document was a legitimate reaction to the submission of amended claims by the patent proprietor shortly before the first-instance oral proceedings and the opponent could not have been reasonably expected to present that document in the proceedings before the opposition division.

c) Evidence of common general knowledge

Belated submissions may be taken into account as evidence of alleged common general knowledge, where such knowledge has been disputed (**T 106/97**, **T 1076/00**).

In **T 85/93** (OJ 1998, 183) the board pointed out that evidence of common general knowledge, like any other evidence in support of an opponent's submissions, should be filed at an early stage in the proceedings before the opposition division, and might be rejected as inadmissible at the board's discretion if filed for the first time during appeal proceedings. In **T 274/99** the board considered the late-filed textbook under Art. 114(1) EPC 1973 – although late-filed documents, including those that prove common general knowledge, could be disregarded under the boards' case law – because it provided a better understanding of the state of the art, it was obviously relevant, its submission could be seen as reasonable as far as the respondent was concerned, and its consideration did not delay the proceedings in any way.

### 1.3.7 Relevance

According to the established jurisprudence of the boards of appeal a crucial criterion to be taken into account is whether a late-filed document is prima facie highly relevant and whether there is proper justification for its late filing to forestall tactical abuse. Such material should be prima facie highly relevant in the sense that it can reasonably be expected to change the eventual result and is thus highly likely to prejudice the maintenance of the European patent (see **T 1002/92**, OJ 1995, 605; **T 212/91**, **T 931/06**, **T 501/09**, **T 1306/09** and **T 2542/10**). In **T 887/11** the board admitted the (new) evidence as well as the offered witness testimony submitted with the appeal grounds into the proceedings because of its high relevance. In **T 182/09** likewise the board admitted a highly relevant document into the proceedings (see also **T 1404/10**, **T 605/11**). See also under chapter IV.C.1.1.4 "Examination as to relevance".

In **T 931/06** the board stated that when assessing inventive step, a late filed document may be considered if it belongs to the same or a closely related technical field and discloses subject-matter conceived for the same or a similar purpose as the contested patent. In the light of **T 1002/92** such a document would then be prima facie relevant in the sense that it might prejudice the maintenance of the patent, at least in unamended form.

In **T 1105/04** the board referred to **T 736/99** and admitted a late-filed document into the proceedings, because it was considered by both parties as the closest prior art document.

### 1.3.8 Complete case

According to Art. 12(2) RPBA, the statement of grounds of appeal and the reply must contain a party's complete case. They must set out clearly and concisely the reasons why it is requested that the decision under appeal be reversed, and should specify expressly all the facts, arguments and evidence. This provision provides a cut-off point after which any further submission is ipso facto late and subjected to the discretionary power of the board. The intended overall effect of this article is to require the parties to present a complete case at the outset of the proceedings in order to provide the board with an appeal file containing comprehensive submissions from each party and to prevent procedural tactical abuses (**T 1488/08**).

In **T 1544/08** the board stated in its catchword that the wish to avoid giving commercially valuable information to competitors was not necessarily a valid reason for not complying with the requirement of Art. 12(2) RPBA that the grounds of appeal should contain the appellant's complete case.

### 1.3.9 Communication of a board of appeal

The purpose of a communication of a board of appeal pursuant to Art. 15(1) RPBA is to prepare the oral proceedings; it is not an invitation to the parties to make further submissions or to file further requests (**T 1459/11**).

### 1.3.10 Reinforcement of arguments

Filing with the statement setting out the grounds of appeal new documents reinforcing the line of attack already taken before the department of first instance had to be considered as the normal behaviour of a losing party and did not constitute an abuse of procedure (**T 113/96**, **T 1034/01**, **T 1177/04**, **T 1267/05**).

In **T 875/06** the board found that the additional evidence D14 and D15 did not change the appellant's case but simply backed up the arguments made previously because these documents were more relevant with regard to the cited aspects of the invention than the documents already entered into the proceedings. Since the consideration of D14 and D15 did not significantly alter the legal framework and facts of the case in respect of the first-instance proceedings, the board admitted these documents into the proceedings under Art. 13(1) RPBA. In **T 113/96** and **T 426/97**, involving similar cases, the boards admitted new prior-art documents.

### 1.3.11 Submission of new arguments on appeal

#### a) General

Further information on "new arguments" is contained in chapter IV.C.1.2.3 a).

Art. 12(2) RPBA provides that the statement of grounds of appeal should specify expressly all the facts, **arguments** and evidence relied on by the party. To the extent

that the decision of the Enlarged Board of Appeal in **G 4/92** (OJ 1994, 149) deals with the general admissibility of new arguments in appeal proceedings, it must be taken to have been modified by the amendments to the RPBA introduced with effect from 1 May 2003 (**T 1621/09**).

In **T 1621/09** the board examined whether or not new arguments first brought forward during oral proceedings but based on citations already in the proceedings could constitute an amendment to a party's complete case within the meaning of Art. 13(1) RPBA. The board said they could, and concluded that the admissibility of such arguments was therefore prima facie a matter for the board's discretion. The boards in **T 232/08**, **T 1069/08**, **T 1732/10**, **T 1761/10** and **T 433/11** came to similar conclusions.

b) New arguments admitted

In **T 607/10** the board considered that, in deciding whether a new argument has the effect of amending a party's case within the meaning of Art. 13(1) RPBA, it must be established on a case-by-case basis whether the new argument is a departure from, or just a development of, the original arguments filed with the grounds of appeal or the reply thereto. In the case at hand, the new argument could not be seen as merely a further development or elaboration of the opponent's previous position. The new analysis was based on a different choice of the closest prior art. This new argument had therefore to be seen as constituting an amendment to the opponent's case within the meaning of Art. 13(1) RPBA, which might be admitted and considered only at the discretion of the board. In the case at hand, the board, in the exercise of its discretion, decided to admit the new arguments put forward by the opponent. See also **T 1941/10**, **T 216/10** and **T 174/12**, where the late-filed arguments were also admitted into the proceedings.

In the ex parte case **T 704/06**, the applicant (appellant) raised a new inventive step argument during the oral proceedings which the board admitted into the proceedings.

In **T 161/09** the board decided to use its discretionary power to admit the appellants' first line of argument to the proceedings, in support of their objection of lack of inventive step, despite these submissions having been made only during the oral proceedings and having been contested as being inadmissible by the respondent. In the view of the board these submissions did not alter the legal and factual framework of the proceedings.

Likewise in **T 671/08** the late filed argument was exceptionally admitted despite causing adjournment of the oral proceedings. The board considered the appellant's (opponent's) objection of insufficient disclosure to be a fundamental one that could not be ignored. The board stated that the fundamental nature of the new objection would render any discussions on novelty and inventive step meaningless, had it been left unresolved. This case was an exception to the principles set out in Art. 13(3) RPBA where amendments to a party's case should not be admitted into the proceedings when their admission would lead to an adjournment of the oral proceedings.

In **T 524/12** the case made by the appellant (opponent) was an extension of the case it had made before the opposition division. Since, in essence, similar features were

discussed, and the lines of argument put forward were largely those that had already been discussed, the appellant (opponent) was not making a substantially new case, but was simply basing the case it had made in support of its objection before the opposition division partly on new arguments. Art. 12(4) RPBA did not provide for not admitting mere arguments.

c) New arguments not admitted

In some decisions it has been observed that new arguments first put forward at the oral proceedings without any reasonable explanation or justification are to be regarded as late filed and not admitted into the proceedings (**T 1069/08**, **T 775/09**, **T 1621/09**).

In **T 1621/09** the board held that a new argument brought forward in appeal proceedings by a party which would have the effect of amending its case, even if the argument is based on evidence and facts already in the proceedings, can only be introduced into the proceedings at the discretion of the board of appeal by way of an amendment under Art. 13 RPBA. The board, in the exercise of this discretion, decided however not to allow the appellant to amend its case, inter alia because the new argument amounted to a new way of putting the appellant's case on novelty and was raised at the last stage of the appeal, namely during oral proceedings.

In **T 1761/10** the board also decided not to admit the new inventive step attack submitted at oral proceedings. The appellant's attack raised complex new issues and oral proceedings would have had to have been adjourned in order to give the board and the respondent sufficient time to address these issues.

In **T 1069/08** it was only at the oral proceedings that the appellant (opponent) asked the board to be allowed to present its arguments on the lack of obviousness of the claimed subject-matter. This request was refused by the board for the following reasons: The appellant's statement of grounds of appeal did not include any argument regarding the obviousness of the claimed subject-matter. Hence, the introduction of this new argument at oral proceedings represented an amendment to the appellant's case (Art. 13(1) RPBA). The appellant's failure to submit the new argument in reply to the board's communication deprived the respondents of the opportunity to present their comments thereon and/or of the opportunity to reconsider their intention not to attend the oral proceedings.

In **T 775/09**, the party as of right's second line of argument was based on a number of citations first referred to at the oral proceedings on appeal. The board observed that such an amendment to the party's case at this stage gave rise to combinations and facts of a complex nature which had not previously been addressed during the written proceedings. Therefore the board exercised its discretion under Art. 13(1) RPBA and refused to admit the new argument at such a late stage of the appeal proceedings.

### 1.3.12 Adjournment of oral proceedings

Strict criteria are applied to amendments sought to be made after oral proceedings have been arranged. According to Art. 13(3) RPBA these amendments "shall not be admitted if they raise issues which the board or the other party or parties cannot reasonably be expected to deal with without adjournment of the oral proceedings." Thus, the parties' right to be heard and/or procedural economy take precedence over other considerations (**T 232/08**).

In **T 188/05** the board held that the admission of the appellant's new submission would alter his case in a way that would raise issues which the board and the respondent could not reasonably be expected to deal with without adjournment of the oral proceedings. The material was therefore not admitted to the proceedings.

In **T 1774/07** the introduction of the new documents into the proceedings without adjourning oral proceedings would have been contrary to the principle of equal treatment of the parties. The board thus concluded that the documents, independently on their relevance, were not to be introduced into the proceedings.

In **T 232/08** the objection of lack of novelty based on document D11 was raised for the first time during appeal proceedings at the oral proceedings. In the board's view, the respondent had every reason to believe that novelty was no longer pursued as a ground of opposition in the appeal. The board considered that the respondent's right to be heard with regard to the novelty-objection based on document D11 would have been respected only if the oral proceedings had been adjourned or the case had been remitted to the department of first instance in order to allow the respondent adequate consideration of the appellant's objection. Consequently the board had decided not to allow the appellant to present its novelty objection based on document D11.

### 1.3.13 Absence of a party from oral proceedings (Art. 15(3) RPBA)

In **T 1949/09** the board refused to admit test results filed by the proprietor (appellant) before the oral proceedings. Apart from the unjustified, late filing, the tests raised in the board's view a number of questions about their significance, which could not be answered without an adjournment of the proceedings. Art. 15(3) RPBA, which provides that the board is not obliged to delay any step in the proceedings, including its decision, by reason only of the absence at the oral proceedings of any party, does not go so far as to nullify Art. 113(1) EPC. On that basis, the respondent, who chose not to attend the oral proceedings, could rely on the procedural provisions, namely that the decision would be made on the basis of the written case within the meaning of Art. 12 RPBA and that no significant amendment of the case would be admitted which would go beyond what is provided by Art. 13 RPBA.

In **T 1621/09** the board likewise dealt with the following question: where a new argument is put forward for the first time at oral proceedings, how is the exercise of the board's discretion to admit the amendment affected if the party prejudiced is not present at the oral proceedings? The board stated that Art. 13(2) RPBA must be read subject to

Art. 15(3) RPBA, with the result that the absence of a duly summoned party does not prevent a board from allowing an amendment to another party's case and reaching a decision on the basis of the amended case. The absence of the party is nevertheless a factor to be taken into account in the exercise of the discretion. In the case at issue the board decided however not to allow the appellant to amend its case.

In **T 607/10** the board referred to **T 1621/09**, according to which a party's absence from oral proceedings had to be taken into account in the exercise of discretion, but did not prevent the board from allowing an amendment and reaching a decision on the basis of the amended case.

#### 1.3.14 Article 12(4) RPBA

According to Art. 12(2) RPBA, the statement of grounds of appeal shall contain a party's complete case. Art. 12(4) RPBA requires the board to take into account everything presented by the parties under Art. 12(1) RPBA if and to the extent that it relates to the case under appeal and meets the requirements in Art. 12(2) RPBA. However, according to Art. 12(4) RPBA, the board has the discretionary power to hold inadmissible facts, evidence and requests which could have been presented or were not admitted in the first instance proceedings.

Art. 12(4) RPBA enables the boards to penalise an infringement of the duty to facilitate the first-instance proceedings, i.e. a failure to display due co-operation through the submission of facts, evidence and requests in the manner required up to a certain point in the proceedings, and so serves to ensure compliance with the requirement of a fair procedure and to expedite processing of the case. Moreover, it does not entail any arbitrary different treatment of similar cases of belated submissions which is incompatible with the procedural scheme. The duty to facilitate proceedings applies equally to opponents (with respect to the submission of their objections) and patentees (with respect to their means of defence) (**T 2102/08**).

In **T 432/12** the decisive issue was whether the documents could have been presented before the opposition division, i.e. whether there was a sound and plausible reason in this specific case for filing them only in the appeal proceedings. In principle, documents could be admitted in the case of e.g. a normal reaction to a late turn of events in the opposition (oral) proceedings, an exceptional interpretation by the opposition division at a late stage or in the decision, or evident non-allowability in view of the newly cited documents and/or objections, (see also **T 169/12**). However, none of these exceptions applied to the case at hand.

#### a) Documents and evidence withheld at first instance

In **J 5/11** the Legal Board stated that the Office's duty to examine evidence of its own motion is more stringent in relation to evidence that is in the public domain, and the case for admitting such evidence when it is filed out of time by the parties is correspondingly stronger. The Office's duty to examine of its own motion evidence that is in the private sphere of the party concerned is obviously limited. Such evidence can only be taken into

consideration by the Office if it is brought to the Office's notice by the party concerned. If evidence of that type is not put forward in the proceedings before the first-instance department of the Office, it is difficult to see any compelling reason why the Board of Appeal should exercise its discretionary power under Art. 114(2) EPC and Art. 12(4) RPBA in such a way as to admit the evidence when it is filed with the grounds of appeal or a fortiori at a later stage of the appeal proceedings. That is particularly true when, as in the present case, the first-instance department has expressly drawn the appellant's attention to the need for supporting evidence, indicated precisely what type of evidence is needed and given the appellant an adequate time limit within which to file the evidence.

In **T 724/08** the board observed that it had the power under Art. 12(4) RPBA to refuse to admit into the proceedings documents D10/D10a and D11/D11a, which the appellant (opponent) had cited as novelty-destroying for the first time in the statement setting out the grounds of appeal, if that evidence could have been presented in the first-instance proceedings. The appellant had already raised a novelty objection in its opposition and therefore could have submitted these documents during the first-instance proceedings or even during the period for opposition. It was immaterial whether the appellant had indeed only come across these Japanese patent specifications or the corresponding Patent Abstracts of Japan by chance later or whether said documents had genuinely been difficult to find, because it was not permissible to use these issues to slow down proceedings or gain an unfair advantage over the other party. In exercising this power, the board could make admitting a citation into appeal proceedings dependent on whether it is prima facie relevant but the board was not obliged to do so, because otherwise an opponent could easily submit a (highly) relevant citation for the first time in the statement setting out the grounds of appeal and expect the citation to be admitted into the appeal proceedings on grounds of relevance.

In **T 1314/12** the board added that this would mean that a proprietor could be obliged to repeatedly defend its patent against new attacks throughout the entire opposition and opposition appeal procedure. However, this was clearly incompatible with the requirement under the EPC and the RPBA that all relevant information be presented within certain time limits.

In **T 910/11** the appellant (opponent) raised a new line of attack under Art. 123(2) EPC against claim 4, which had been held to be allowable by the department of first instance. An objection could therefore clearly have been raised at first instance. Nor was any explanation offered as to why this objection had not been raised earlier. In view of the absence of justification for the late filing of this new attack the board decided not to admit it into the proceedings (see also **T 169/12**).

b) Documents and evidence not admitted by the opposition division

In **T 876/05** the board rejected the opponent's argument that filing new documents a few days before the oral proceedings before the department of first instance was destined for failure and that it was therefore preferable for him not to file those documents until the appeal stage. The board held that Art. 10a(4) RPBA 2003 (Art. 12(4) RPBA) put

documents that could have been submitted before the department of first instance and documents which had been submitted but had not been admitted on an equal footing. Had these documents been filed in the opposition proceedings, the worst that could have happened was that they would have been regarded as inadmissible by the opposition division, so the consequences would have been no different than if they had not been filed. The board decided, when examining the patentability of the filed requests, to consider only the documents that appeared immediately relevant (**T 624/04**).

In **T 229/08** the opposition division had disregarded evidence designated as M12 because it was late-filed and because prima facie availability to the public could not be established. M12 had been filed on the last working day before the oral proceedings. The board considered that it was primarily charged with reviewing the opposition division's exercise of its discretion. The provision of Art. 12(4) RPBA related to evidence which not only was not admitted but which also "could have been presented" in first instance proceedings. It was therefore evident that in both cases the board would have equal power to hold late-filed evidence inadmissible, whereby the party filing the evidence during appeal would have to overcome the additional hurdle of satisfying the board that its action in first presenting it in the statement setting out the grounds of appeal did not amount to tactical abuse.

In **T 305/07** the appellant filed the experimental evidence which had not been admitted by the opposition division with its statement of the grounds of appeal and requested its admission. The board stated that the claims at issue differed from those dealt with by the opposition division and in relation to which it considered the experimental evidence as irrelevant. The board came to the conclusion that none of the experimental evidence submitted with the statement of the grounds of appeal was relevant to the present case. Hence, in accordance with Art. 12(4) RPBA, second half-sentence the board decided not to admit the experimental evidence filed with the statement of the grounds of appeal.

c) Documents and evidence admitted under Art. 12(4) RPBA

In **T 1830/11** the board admitted evidence produced with the statement of grounds of appeal. It found that there were no provisions in the EPC which obliged the opponent to provide evidence against every possible fallback position defined in the dependent claims. Thus when amendments were made to the claims during oral proceedings before the opposition division (as in the case at issue, claim 1 having been amended to include the features of a dependent claim in the patent as granted), the requirement under Art. 114(2) EPC that evidence be submitted "in due time" might, depending on the circumstances, arise only when the statement of grounds of appeal was filed.

In **T 79/11**, various sets of experimental data were submitted with the statement of grounds of appeal, clearly in response to the decision under appeal and with a view to supporting the appellant's (patentee's) arguments on inventive step. Although the data could already have been submitted at first instance, their later submission was not an unreasonable response to the reasons given for the decision under appeal.

### 1.3.15 Cases of abuse of procedure

#### a) No abuse of procedure

In some decisions, the boards of appeal have held that there has been no tactical abuse and taken late-filed documents into account under the principle of examination by the EPO of its own motion, since these might have put maintenance of the patent at risk (see **T 110/89**, **T 315/92**). An abuse of procedure presumes a deliberate withholding of information (see **T 534/89**). In **T 1029/05** the board stated that the issue of admissibility of the late-filed document boiled down to the following questions: (i) whether the late filing is to be seen as an abuse of proceedings, and, if question (i) is answered in the negative, (ii) whether the relevance of the document is prima facie such as to justify its introduction into the proceedings (see also **T 2020/09**).

In **T 1019/92** the board reached the conclusion that the fact that an opponent, after the end of the opposition period, subsequently submitted prior art material originating from itself, did not constitute an abuse of the proceedings in the absence of evidence that this was done deliberately for tactical reasons. The board admitted the late-filed document into the proceedings.

In **T 330/88** the board held that the right to be heard (Art. 113(1) EPC 1973) had not been contravened by virtue of a relevant document being submitted late during oral proceedings. The representative was given sufficient time during the oral proceedings held on two consecutive days to consider this document, consisting of only seven pages including the claim page and two figure sheets. He could be expected to be able to react to this new situation either by rejecting the document as irrelevant or by filing amended claims.

In **T 671/03** the opposition division did not admit documents D6 to D16 into the proceedings, stating that they had been filed more than two years after the expiry of the opposition period and were prima facie not so complete as to substantiate the alleged prior use. Three more documents were filed during the appeal proceedings. The board regarded all these documents as late-filed, and it was at its discretion to admit them. However, it was not apparent to the board that the submission of documents D6 to D19 had been deliberately delayed for tactical reasons. It therefore held that the late filing was not an abuse of procedure. Documents D6 to D19 could therefore not be disregarded without considering their relevance. Following a detailed examination of the relevance of the various documents, the board concluded that only D18 could be admitted into the proceedings under Art. 114(2) EPC 1973 because it was prima facie highly relevant, i.e. most likely prejudiced the maintenance of the European patent (**T 1182/01**, **T 1029/05**).

In **T 151/05** the fact that the appellant relied first on prior use 2 and then, after having realised that this argument was not sufficiently substantiated, on other evidence for demonstrating the common general knowledge was seen by the board as a misjudgement but not as an abuse of the proceedings. Consequently, the board considered the relevance of the documents.

In **T 1757/06** the opponent (Dow chemical) submitted a patent publication filed by Dow Italia two months before the oral proceedings before the board of appeal. The board held that the opponent and the applicant were separate corporate entities, but nevertheless it would be expected that companies of the same commercial group would have knowledge of their own patent documents. Normally the attempt of a party to file at a late stage one of its own publications will fail, as this is considered to be an abuse of procedure. Although in this case the board did not find that there had been an abuse, it pointed out that the filing at a very late stage of a document that the opponent should have been aware of from the outset of the proceedings could not be condoned.

b) Abuse of procedure (yes)

In some cases the boards of appeal have disregarded late-filed material on the grounds of abuse of procedure.

In **T 951/91** (OJ 1995, 202) the board refused to take account of late-filed evidence **even before it was actually submitted** and pointed out that the discretionary power given to the departments of the EPO pursuant to Art. 114(2) EPC 1973 served to ensure that proceedings could be concluded swiftly in the interests of the parties, the general public and the EPO, and to forestall tactical abuse. Parties had to take into account the possibility that late-filed material would be disregarded and do their best to submit the facts, evidence and arguments relevant to their case as early and completely as possible. If a party failed to do so without adequate excuse, and admitting the evidence would lead to an excessive delay in the proceedings, the boards of appeal were fully justified in refusing to admit it in exercise of the discretion provided by Art. 114(2) EPC 1973. The board held that the submission of further fresh experimental data proposed to be filed by the appellant (opponent) some 20 months after the statement of grounds of appeal had been filed as an abuse of procedure.

In **T 496/89** the board pointed out that the late introduction of documents and of other matter into the appeal proceedings is inimical and contrary to the public interest, quite apart from being unfair to the other party. Attempts by either party to spring a surprise on the other by deliberate late-filing, as well as inadvertent omissions to present arguments and the evidence needed to support them, ran counter to the spirit and intent of the Convention (see also **T 430/89**, **T 270/90**, **T 741/91**, **T 135/98**).

The board in **T 718/98** decided that a party's introduction, at a very late stage of the proceedings, of evidence which could have been filed much earlier, as a strategic measure to improve its own case against the opposing party, amounted to an abuse of procedural rights and was therefore rejected independently of the possible relevance of the evidence (see also **T 169/04**).

In **T 446/00**, the board identified various forms of behaviour as abuses of procedure, including non-compliance with a procedural direction of the board requiring a party to take a certain step or steps. It was also an abuse of procedure for a party to adopt an unequivocal position on an issue and subsequently to depart from that position without explanation. That applied particularly, but not solely, in contested inter partes

proceedings, in which another party was entitled to rely on that position as part of the case it had to meet (see also **T 762/07**).

In **T 215/03** the appellant (opponent) sought to rely on a document (D24) filed approximately one year after commencing the appeal proceedings together with 25 other documents (in total about 450 pages of technical literature). The board stated that under the particular circumstances of the case, that the belated submission of evidence was not justified. To submerge, at such a late stage of proceedings, the other party and the board under a deluge of paper amounted to an abuse of procedure. The board thus decided not to admit this evidence into the proceedings regardless of its possible technical relevance.

#### 1.3.16 Late submission of experimental data

##### a) Test reports admitted into the proceedings

In **T 192/09** the late filing of the additional experimental report could not be seen as an abuse of procedure. The new results had been submitted one month before the oral proceedings, in accordance with the instructions of the board. This had provided the respondent with adequate time to examine the data, decide if counterexperiments were necessary and assess whether it was feasible to provide these within the available time.

In **T 317/10** the board admitted into the proceedings a late-filed test report which had been filed shortly before the scheduled oral proceedings, finding that its late submission did not raise issues which the board or the respondent could not reasonably be expected to deal with without adjournment of the oral proceedings. Similarly, in **T 596/11**, in view of the prima facie highly relevant nature of the results in a test report, and the fact that no objections to their lateness, correctness or admittance had been raised by the respondent, the board admitted them into the proceedings.

##### b) Test reports not admitted into the proceedings

In some cases, experimental data submitted shortly before the oral proceedings before the boards of appeal was found to be late filed and so inadmissible under Art. 114(2) EPC. The reason invoked was that the handling of such data was more cumbersome and time-consuming than that of scientific publications, since it usually called for counter-experiments (**T 342/98**, **T 120/00**, **T 157/03**, **T 311/10**). In **T 760/05** the board confirmed that filing an experimental report shortly before the date indicated by the board as the ultimate date for filing submissions ran counter to the principle that sufficient time should remain for the adversary to study it and perform counter-experiments. Similarly, in **T 569/02**, the board held that comparative experiments normally required careful consideration by the other party, including discussions with technical experts, who could not be expected to be immediately available. It might also be necessary for the other party to repeat the tests or perform other tests themselves. The board did not consider that the **relevance of the tests** played a role, since even relevant evidence of this type should not be filed at such a late stage in the proceedings.

The comparative tests filed one month before the oral proceedings were found inadmissible regardless of their possible relevance.

Moreover, if oral proceedings have been arranged in inter partes proceedings, experiment results must be submitted sufficiently well in advance for the other party to have the opportunity to perform counter-experiments (e.g. **T 270/90**, OJ 1993, 725; **T 939/90**, **T 375/91**, **T 685/91**, **T 305/94**, **T 245/10**). Very late submission of experiment results (seven weeks before the oral proceedings) is contrary to a fair and expedient procedure (**T 375/91**, **T 1008/05**). In **T 832/08**, the board found that, where comparative experiments were submitted, the other parties had to be afforded sufficient time, so as not to breach their right to equal treatment.

In **T 356/94** the board pointed out that any late-filed facts or evidence could be admitted in the opposition proceedings in so far as such facts or evidence were subsequently discussed by the parties concerned in accordance with Art. 113(1) EPC 1973, which meant allowing the parties sufficient time, depending on the nature of the facts or evidence submitted, to provide explanations. Taking into consideration comparative tests presented on the same day as oral proceedings were held could constitute an infringement of the other party's right to be heard, since the latter had had no material opportunity to check them (see also **T 481/00**, **T 567/02**).

#### 1.3.17 Public prior use

##### a) No consideration of late-filed evidence of public prior use

The boards began early on in their case law to set strict standards for the admissibility of late-filed evidence of public prior use by the opponent. On the basis of Art. 114(2) EPC 1973, they refused to include late-filed evidence in the proceedings where, in the specific circumstances, there had been an abuse of procedure and a breach of the principle of good faith. In such cases they chose to refrain from examining the **potential relevance** of the submission (see **T 17/91**, **T 534/89**, OJ 1994, 464 and **T 211/90**). In **T 985/91** the board took the view, with reference to **T 17/91**, that late-filed documents should only be admitted into the proceedings under certain circumstances if they related to alleged prior use.

In **T 17/91** an allegation of prior use based on the opponents' own activities had been filed two years after the expiry of the opposition period, with no good reason for the delay. This, in the board's view, constituted an abuse of the proceedings and a breach of the principle of good faith. Irrespective of its potential relevance, the allegation was therefore to be disregarded under Art. 114(2) EPC 1973.

Taking a similar line, the board ruled in **T 534/89** (OJ 1994, 464) that an objection based on prior use by the opponents themselves which was raised only after the expiry of the opposition period, although the factual circumstances were known to the opponents and there was nothing to prevent the objection being raised during that period, constituted an abuse of procedure. From this, the board concluded that when abuse of procedure was manifest, in view of the fact that a party deliberately refrained from raising an issue even

though the necessary supporting evidence was available, it would be contrary to the principle of good faith to admit such evidence by applying Art. 114(2) EPC 1973 in that party's favour.

Four weeks before the oral proceedings in **T 211/90** the appellant alleged public prior use for the first time. However, the evidence was already familiar to the appellant before expiry of the opposition period. The board held that the fact that the appellant was unaware of the relevance of this evidence, even though familiar with it at the time of filing the opposition, did not justify its introducing the evidence into the proceedings for the first time at such a late stage - irrespective of the reasons why it did not become aware of the potential relevance of this material until then. The board therefore decided not to consider this material in the further proceedings, without examining its potential relevance.

In **T 481/99** the board said that the principle that late-filed facts, evidence and related arguments should only exceptionally be admitted into the proceedings by the opposition division (see e.g. **G 9/91**, OJ 1993, 408 and **T 1002/92**, OJ 1995, 605) did not imply that a late-filed allegation of prior use, which would be relevant if proven, was to be automatically disregarded on the ground that the new facts first needed to be established by taking evidence. However, if the submissions and/or documents relating to the late allegation of prior use showed inconsistencies or even contradictions, the deciding body was entitled to disregard the alleged prior use pursuant to Art. 114(2) EPC 1973 without further enquiries.

In **T 380/00** the appellant (opponent) relied for the first time in the statement of the grounds of appeal on the non-confidential disclosure of technical features of the invention by an engineer during a job interview. The board considered that the alleged public prior use by the engineer was too poorly substantiated to justify further investigation of the matter.

On the issue of documents relating to prior use submitted during appeal proceedings, the board in **T 508/00** ruled that poor communications within a company or a group of subsidiary companies did not constitute adequate and acceptable grounds for allowing the late submission of evidence concerning alleged prior use (see also **T 443/09**).

In **T 1914/08**, justifying why these documents had not been submitted until more than two years later and only shortly before the date set for oral proceedings, the respondent stated that it had been experiencing financial difficulties in the interim period. The board exercised its discretion in this regard and considered that, given the documents had been referred to and therefore available to the respondent from early on, their late filing without a justification which was causally linked to the proceedings was not in keeping with a proper conduct of the procedure. The late-filed documents were thus not admitted into the proceedings.

In **T 691/12** the board observed that a prior-use allegation first submitted in the appeal proceedings could not be admitted and considered as prior art unless it met at least the following three conditions: (a) it did not involve an evident abuse of procedure; (b) the

prior use as alleged had prima facie to be so relevant that it cast doubt on the validity of the patent; and (c) the prior use had to be fully proven, requiring no further investigation to establish its nature or context. In the case in point these conditions were not met. Therefore, exercising its discretion under Art. 114(2) EPC and Art. 12(4) RPBA, the board concluded that the new challenge, being based on public prior use first alleged in the statement of grounds of appeal, should not be considered.

In **T 1835/11**, in its statement of grounds the appellant submitted new prior art - an alleged public prior use - without explaining why it had not filed it earlier. As the claims had not been amended in substance and the alleged prior use concerned sales of the appellant's own products, the board took the view that the appellant should have been able to file this prior art during the opposition proceedings. It therefore decided under Art. 12(4) RPBA not to admit it in to the proceedings.

In **T 450/13** the board stated that not substantiating a public prior use in opposition proceedings but attempting to substantiate it in the statement of grounds of appeal could lead to the inadmissibility of such a line of attack under Art. 12(4) RPBA.

Likewise in **T 444/09**, **T 12/11** and **T 1295/12** no account was taken of a public prior use alleged for the first time in appeal proceedings.

#### b) Consideration of late-filed evidence of public prior use

In **T 628/90** an allegation of public prior use, which was filed for the first time in appeal proceedings and was adequately substantiated, was taken into account because of its possible relevance to enable thorough consideration to be given to the patentability of the subject-matter of the contested patent (see also **T 150/93**, **T 947/99**).

In **T 947/99** the appellant submitted with regard to the circumstances of the late claim concerning public prior use that he had only become aware of the possibility that there might have been public prior use in the course of proceedings conducted in parallel before the Patents Court in London at a meeting on 17 May 1999. In the board's opinion, the appellant had given a very clear explanation and sound reasons as to why the claim of public prior use had been made and why it could not have been made any earlier.

In **T 571/08**, the board held that documents submitted by the appellant to support a new prior use, as part of a challenge to one of a set of new auxiliary requests filed shortly before the oral proceedings before the opposition division, had not been filed belatedly. The appellant had, in response to the opposition division's decision to allow the auxiliary request with the additional feature in question, filed the documents at the earliest possible opportunity, namely with its notice of appeal.

#### 1.3.18 Change of representative

In **T 430/89** the explanation for the late submission of arguments and a document was that the representative had only recently taken over the case. The board held that this could not be accepted as a justification for tardiness (see also **T 736/99**).

In **T 785/96**, under cover of a letter sent just one month before the oral proceedings before the board, the appellant filed additional experiments. The appellant stated that the reason for this late filing was a change of representative, after which the necessity of the experiments had appeared. The board confirmed the decision **T 97/94** (OJ 1998, 467) and stated that a change of representative did not form an acceptable ground for late filing unless it was due to force majeure. The new representative was obliged to continue the proceedings from the point they had reached when he took over from his predecessor (see also **T 552/98**).

### 1.3.19 New submissions in proceedings resumed before the boards

In review case **R 16/13** the Enlarged Board set the contested decision aside and ordered that the proceedings (in **T 379/10**) be resumed. On doing so, the board held that such resumptions of appeal proceedings were confined to rectifying the defect identified on review. The appellant took the view that filing comparative tests was an essential part of the comments that **R 16/13** had allowed it to make. But the newly filed tests raised an admissibility issue: whether they merely helped the appellant to overcome the board's objection – which **R 16/13** had said it could comment on – or whether they went further and would thus extend the subject-matter of the resumed proceedings beyond that specified in the petition for review decided on in **R 16/13**. The board held that the new tests and line of argument would indeed extend the subject matter, and therefore declined to admit them into the resumed proceedings.

## 2. Transfer of party status

### 2.1. Party status as patent proprietor

Where the European patent is transferred during opposition proceedings the new patent proprietor entered in the Register of Patents takes the place of the previous patent proprietor both in the opposition and in the appeal proceedings. His entitlement may not be questioned in these proceedings (**T 553/90**, OJ 1993, 666).

For a transferee of a patent to be entitled to appeal, the necessary documents establishing the transfer, the transfer application and the transfer fee pursuant to R. 22 EPC must be filed **before** expiry of the period for appeal under Art. 108 EPC. Later recordal of the transfer does not retroactively validate the appeal (**T 656/98**, OJ 2003, 385). In appeal proceedings, substitution of another party for the patent proprietor is possible only once the relevant department of first instance has made the entry in the register or where there is clear cut evidence of a transfer (**J 26/95**, OJ 1999, 668, **T 593/04**). The procedural requirements to be fulfilled for recording the transfer of a European Patent in the register (filing of a request, providing evidence, payment of a fee) need not be fulfilled at the same time. If they are met at different times, the transfer takes effect vis-à-vis the EPO from the date on which all of these requirements are fulfilled (**T 128/10**). The original party remains, as long as the transfer has not been proven, a party to the proceedings, with all its rights and obligations (see **T 870/92** of 8 August 1997). A name change does not result in a change of legal identity (see **T 19/97**).

In **T 15/01** (OJ 2006, 153) the board distinguished between the situation where a party acquired a patent through a transfer, as in **T 656/98** and through a merger, as in the case before the board. It held that R. 20(3) EPC 1973 (now R. 22(3) EPC) did not apply in the latter case, where the change of proprietor status was caused by universal succession of law. The universal successor of a patent applicant or patentee automatically acquired party status in proceedings pending before the EPO.

The transfer of party status as patent proprietor must be distinguished from a "transfer" of the legal entity from one jurisdiction to another. In **T 786/11** the patent proprietor (respondent) had requested that the address of the "applicant (patentee)" be changed from one in the British Virgin Islands to one in Mauritius and submitted a "certificate of discontinuance" and a "certificate of registration by continuation" from the authorities of the British Virgin Islands and the Republic of Mauritius, respectively, as evidence that it had merely changed its address.

The board studied the applicable legal provisions of the British Virgin Islands and of the Republic of Mauritius. These jurisdictions – unlike many others – allow a legal entity to be transferred from one jurisdiction to the other without any effect on its identity. The board therefore concluded that the respondent had not changed its legal identity and, in particular, had not ceased to exist at any time. Rather, it had been "transferred" from the British Virgin Islands to Mauritius and had continued as a legal entity under Mauritian law (see also **T 2330/10** and **T 1458/12**).

## **2.2. Party status as opponent**

### **2.2.1 General principles**

The status as an opponent cannot be freely transferred (**G 2/04**, OJ 2005, 549). The opponent does not have a right of disposition over his status as a party. If he has met the requirements for an admissible opposition, he is an opponent and remains such until the end of the proceedings or his involvement in them. He cannot offload his status onto a third party (**G 3/97**, OJ 1999, 245, **T 298/97**, OJ 2002, 83).

However, in the following two circumstances the status as an opponent may be transferred:

- in the case of universal succession of the opponent (**G 4/88**, OJ 1989, 480, **T 475/88**, **T 1091/02**, OJ 2005,14); or

- when a relevant part of the opponent's business has been transferred (**G 2/04**, **T 670/95**). The transfer or assignment of the opposition to a third party has to be made as part of the transfer or assignment of the opponent's business assets together with the assets in the interests of which the opposition was filed (**G 4/88**, OJ 1989, 480).

Opponent status may also be transferred in opposition appeal proceedings (**T 659/92**, OJ 1995, 519, **T 670/95**, **T 19/97**). In **T 563/89** the board held that the right to lodge an

appeal may also be transferred to a third party, based on the same reasons as developed in case **G 4/88**.

A transfer of an opposition has to be requested at the EPO together with supporting evidence before it can take effect (**T 1137/97**, **T 19/97**, **T 1911/09**). This does not apply to cases of universal succession where the opponent status is automatically acquired from the date of the effective succession (**T 6/05**, **T 425/05**, **T 2382/10**).

The EPO has a duty to examine, *ex officio*, the status of the opponent at all stages of the proceedings. This duty not only extends to the admissibility of the original opposition, but also to the validity of any purported transfer of the status of opponent as a new party (**T 1178/04**, OJ 2008, 80).

### 2.2.2 Universal succession

In **T 349/86** of 29 April 1988 (OJ 1988, 345) the board referred to R. 60(2) EPC 1973, which stated that in the event of the death of the opponent the opposition proceedings could be continued by the EPO of its own motion, even without the participation of the heirs. According to the board this may be read as definitely stating that an opposition may be transferred to a deceased opponent's heirs and, by analogy, to a company absorbing the opposing company by merger or takeover (see also **T 1091/02**, OJ 2005,14). In **G 4/88** the Enlarged Board confirmed that the opposition may be transferred to the opponent's universal successor in law (point 4 of the Reasons). In **T 475/88**, the board held that the appeal filed in the name of Hoechst AG was admissible, as opponent status had been transferred to that company on its merger with Ruhrchemie AG.

In **T 2357/12** the board was concerned with a situation in which the transfer of all assets of an enterprise had been made whose legal entity had subsequently been dissolved. In its assessment of this situation, the board noted that "universal succession" as an exception to R. 22(3) EPC was a concept of procedural law under the EPC and was to be construed autonomously by the EPO, independent from national law. Under the case law of the boards of appeal, the main considerations for acknowledging that a universal succession has taken place were legal certainty as to the person of the successor and the need to avoid a legal vacuum. Under that case law, the transfer of all assets of an enterprise, immediately followed by its dissolution as a legal entity, could constitute universal succession.

The board applied these principles to the facts of the case and concluded that although there was no genuine concept of "universal succession" under the national law in question (State of Delaware), the case at hand was to be considered one of universal succession under EPC case law.

In **T 659/92** (OJ 1995, 519), there had been no universal succession. There was nothing to indicate that the opponent's business assets had been contractually transferred. The board concluded that a unilateral declaration by the owner of rights that he had transferred industrial property rights and opponent status in proceedings relating to a

particular right could not of itself effect universal succession by transfer of business assets.

An excerpt from a purchase contract stating that a company has been acquired "through sale of individual business assets" shows that under the terms of the contract there has been no universal succession (**T 531/11**).

### 2.2.3 Transfer together with the business assets to which the opposition relates

In **T 349/86** of 29 April 1988 the board considered a request filed by the universal successor in title of the original opponent for transfer of opponent status to the singular successor of part of its industrial and commercial activity (operations in the commercial vehicle field) to which the opposition related. The board asked the Enlarged Board to decide whether an opposition instituted before the EPO is transferable only to the opponent's heirs or whether it may be transferred freely either with the opponent's enterprise or with a part of that enterprise operating in a technical field in which the invention to which the patent in suit relates can be exploited.

In **G 4/88** the Enlarge Board examined the situation in which the opposition has been instituted in the interest of the opponent's business or part of that business. The term "business" was understood in a broad sense as describing the an economic activity which is or could be carried on by the opponent and which constituted a specific part of his business assets. In such a situation, the opposition constituted an inseparable part of those business assets. Insofar as those assets were assignable under applicable national laws, the opposition which was part of them had also to be regarded as transferable. The Enlarged Board answered the referred question by stating that an opposition pending before the EPO may be transferred or assigned to a third party as part of the opponent's business assets together with the assets in the interests of which the opposition was filed. Applying **G 4/88** to the facts of the case the board in **T 349/86** thus held in its decision of 30 November 1989 that the universal successor in title of the original opponent had transferred its opponent status to the singular successor of part of its industrial and commercial activity (operations in the commercial vehicle field) to which the opposition related.

In **T 9/00** (OJ 2002, 275), the board found as follows: If, as in the present case, the subject of an opposition is assigned to two different parts of the opponent's company, the status of opponent can pass to a third party only if both parts or the entire company are transferred to it. In **T 1982/09** the board concluded that the declaration submitted by the purported transferee in support of the transfer of opposition did not constitute sufficient evidence in order to conclude that the transferred business part comprised all of the technology to which the patent in suit related.

In **T 298/97** (OJ 2002, 83) the board held that to preserve admissibility the transfer of an opposition, or opposition appeal, must be subject not only to a number of conditions including the condition that it is accompanied by the transfer of the relevant related business assets of the opponent, but also to the condition that such transfer is to one, and one only, successor party or transferee.

In **T 799/97**, the opponent had gone bankrupt during the first-instance opposition proceedings. The board held that the opponent's entire business, and so the activities to which the opposition related, had been transferred to the company with which the administrator had concluded a contract of sale. Not all receivables and liabilities had been acquired, but that had not been established as an essential prerequisite for the transfer of opponent status in **G 4/88** and **T 659/92**. In **T 384/08** the board confirmed that the mere fact that certain assets were explicitly excluded in an assignment contract was as such not sufficient for concluding that the contract did not result in the transfer of a business or a specific part of it.

In **T 423/11** the board was concerned with the validity of the transfer of the opposition from SAGEM SA to SAGEM Défense Sécurité. According to the board it resulted sufficiently from the "reiterative agreement" that the assets transferred to SAGEM Défense Sécurité were those in whose interest the opposition had been filed. The opposed patent related to the field of aircraft flight data systems. This meant that the field of the opposed patent fell within the assets transferred, namely in the "navigation and aeronautical systems" division. The objection that not all the corresponding assets had been transferred, because exceptions had been made for some patents, had no bearing. It was true that some patents had not been transferred and only a licence had been given. However a licence conferred on the licensee the necessary rights to undertake any action to defend the patent under licence. Therefore those exceptions did not deprive the transferee of the general rights conferred on it by the transfer of the other assets.

In **T 1421/05** the board held that where the business assets in relation to which an opposition was filed have been transferred and at the same time the transferor has contractually agreed to transfer the opposition to the transferee, the status of opponent remains with the transferor in the absence of there being filed with the Office (a) evidence sufficiently evidencing the transfer and (b) a request to recognise the transfer of opponent status. Where in such a case the transferor subsequently ceases to exist but has a universal successor, the status of opponent is capable of passing to that successor.

#### 2.2.4 No transfer: sale of opponent's subsidiary company

In **T 711/99** (OJ 2004, 550) the board emphasised that the exception stated in **G 4/88** to the general principle that an opposition was not freely transferable should be construed narrowly. In **G 4/88** the Enlarged Board had considered a situation where the commercial vehicles department, which was subsequently sold, was without legal personality. The company which filed the opposition was the only one entitled to do so. In **T 711/99**, by contrast, the issue was whether the opponent parent company should be recognised, in the event of the sale of a subsidiary that has always been entitled itself to file oppositions, as having the right to transfer its opponent status. The board denied this and held that the opponent status could only be transferred together with the assignment of part of the commercial activity of an opponent with sole legal authority where the transferred company division or department did not have that status and therefore lacked legal personality. It added that the notion of legitimate interest in the proceedings, which

was irrelevant for the admissibility of an opposition at the time of its filing, likewise had no bearing on the opponent's status at any subsequent stage.

In **T 1091/02** (OJ 2005, 14) the board challenged the case law subsequent to **G 4/88** which required, for a transfer of opponent status outside universal succession, a transfer of the relevant business or part of it (**T 659/92**, **T 670/95**, **T 298/97**, **T 711/99**). It referred to the Enlarged Board questions which included the following: Can a legal person who was a wholly owned subsidiary of the opponent when the opposition was filed and who carries on the business to which the opposed patent relates acquire opponent status if all its shares are assigned by the opponent to another company and if the persons involved in the transaction agree to the transfer of the opposition? The board noted that this factual situation was rather similar to the situation in which **G 4/88** accepted a transfer of opponent status, but that the conditions for a transfer of opponent status according to the case law following **G 4/88** were not met. The application of this case law would make the transferability of opponent status dependent on the corporate structure of the opponent.

In **G 2/04** (OJ 2005, 549) the Enlarged Board decided that there was no convincing reason, in particular not any overriding interest of the parties or the public, to extend the application of the rationale of **G 4/88** to the case where a subsidiary company was sold in whose interest the opposition had been filed by the parent company. Thus, a legal person who was a subsidiary of the opponent at the time when the opposition was filed and who carries on the business to which the opposed patent relates cannot acquire the status as opponent if all its shares are assigned to another company.

In its reasoning, the Enlarged Board emphasised that in **G 4/88** the Enlarged Board was faced with a situation in which, for legal reasons, it was not possible from the outset to attribute the procedural status of opponent to the business in whose interest the opposition was filed, whereas the Enlarged Board in **G 2/04** was concerned with the situation in which the holding company did not want to attribute the procedural status of opponent to the entity in whose interest the opposition was filed. The opponent could easily have made provision for a future eventuality that its subsidiary should take over the responsibility for the opposition. If the holding company and subsidiary had filed the opposition as common opponents, the holding company could have withdrawn from the opposition at any time, leaving the subsidiary as the sole opponent.

The Enlarged Board noted that a liberal admission of transfers could often result in the need to examine contested questions of fact or difficult questions of company law. This would broaden the possible procedural battle-fields for the parties and give rise to complications and delays in opposition proceedings.

### 2.2.5 Legal uncertainty as to who is the correct party

In **G 2/04** the Enlarged Board also considered the issue of what could be done if there was a justifiable legal uncertainty as to how the law was to be interpreted in respect of the question of who the correct party to the proceedings is. It decided that in such a situation it was legitimate that the appeal was filed in the name of the person whom the person acting considers, according to his interpretation, to be the correct party, and at

the same time, as an auxiliary request, in the name of a different person who might, according to another possible interpretation, also be considered the correct party to the proceedings.

For an example of a case where a justifiable legal uncertainty as to the person entitled to appeal existed, see **T 1091/02** of 28 June 2006.

#### 2.2.6 Evidence for and effect of a transfer

The EPC does not contain any explicit provisions regarding the formal requirements for the transfer of opponent status. Nevertheless, the boards of appeal have consistently held that formal requirements have to be fulfilled for the opponent status to be considered as transferred (see **T 960/08** with reference to case law, see also **T 261/03** of 24 November 2005).

A transfer of an opposition is something that has to be requested at the EPO together with supporting evidence before it can take effect. The effective date of the transfer of an opposition must be taken as the date when the transfer has been requested at the EPO and adequate evidence provided (**T 1137/97**, **T 19/97**, **T 1421/05**, **T 1032/10**). Pursuant to **T 261/03** (of 24 November 2005) such a request may also be an implicit one.

Until evidence of the transfer has been provided, the original party to the proceedings continues to have the relevant rights and obligations (**T 870/92**, **T 1137/97**, **T 413/02**). In case of a universal succession, however, there is necessarily and automatically a continuation of the existing legal status as opponent from the date of merger (**T 6/05**, see further below).

##### a) Date of effective transfer

The board in **T 19/97** emphasised that there was a clear distinction between the substantive transfer of opponent status as a business asset and its procedural validity in the case at issue. As a formal requirement, the procedural validity of a transfer of opponent status was dependent on the submission of a duly substantiated request within the proceedings. On grounds of procedural certainty, a change of party based on an assignment could not take place outside the proceedings without the formal cognisance of the board and also could not have retroactive effect, as otherwise procedural acts or decisions could be respectively performed or taken without the involvement of the new opponent as the only legitimate party.

In **T 956/03** the board considered the question of the time limit for filing evidence of a transfer. According to the board, the case law showed a definite balance in favour of the view that a transfer could only be acknowledged from, at the earliest, the date when adequate evidence to prove the transfer had been filed. This was desirable in the interest of legal certainty and, within that principle, to ensure that the identity of an opposing party was known. If the transfer took place before the appeal period expired, then the entitlement of the transferee to replace the opponent had to be established by filing the necessary evidence before the appeal period expired. In **T 428/08** the appellant had

argued that it ought to be admissible to submit evidence of legal succession after the appeal period had expired, as evidence of prior use could also be submitted after the opposition period had expired without being rejected as grounds for opposition. The board did not follow this argument and relied on case law which made the date when the transfer became valid explicitly dependent on the date when evidence of it was supplied, in keeping with the procedural certainty requirement for the identities of the parties to the proceedings to be clear at all times.

In **T 184/11** the board could not share the appellant's view that, following **T 956/03**, any transfer occurring before the appeal period expired also had to be substantiated by the end of that period. In **T 956/03** the board had had to rule on the admissibility of an appeal filed by a party which maintained that it was successor in title to one of the opponents in the first-instance proceedings but failed to provide evidence of that within the appeal period. It was in that light that the principle set out in **T 956/03** – that if a transfer occurred before expiry of the appeal period, then the evidence showing that the transferee was entitled to take the opponent's place also had to be submitted by the end of that period – was to be understood.

In the case at issue, however, a party that had been opponent in the first-instance proceedings had initially been respondent in the appeal proceedings, and only during the latter was transfer of party status requested. This request was granted during the oral proceedings before the board, once the requisite evidence of the transfer of opposition had been provided.

The board in **T 6/05** drew a distinction between those cases where the opponent status is transferred together with the assignment of business assets and the cases of universal succession via merger - like the case at issue. Whereas in the former cases, the party status might either remain with the original opponent or be transferred to the new one, the universal successor of a patent proprietor automatically acquired party status in proceedings pending before the EPO, since R. 20(3) EPC 1973 did not apply in the context of universal succession in law. The successor acquired party status from the date on which the merger became effective and not only once sufficient evidence to this effect had been produced. The principles for transferring a European patent were to be applied *mutatis mutandis* to the transfer of opponent status. In the case of the universal succession of the opponent, there could only be one (legal) person who had rights and obligations, with the consequence that there was necessarily and automatically a continuation of the existing legal status as opponent from the date of merger. It could thus be established unambiguously and without any legal uncertainty, at any point in time in the proceedings who in fact was the opponent having party status, regardless of the date when sufficient evidence to this effect was filed (see also **T 425/05** and **T 2382/10**).

In **T 1514/06**, the board considered it established that opponent status had been transferred from JB TEC (A) to JB TEC (C), as it was clear from the draft demerger agreement that JB TEC (A) had divested its business activities relating to conventional sealed mechanical transmission agitators to AGITEC SAS and those relating to magnetic drive agitators for mainly pharmaceutical and biological use to JB TEC (C).

Nevertheless, the board observed that the change in party to the appeal proceedings could not take effect unless it were brought to its attention (see **T 19/97**). Having been dissolved on 16 September 2010, JB TEC (A) had ceased to have legal personality and the authorisation issued to its representative had therefore lapsed. The representative had been designated as JB TEC (C)'s representative in an authorisation dated 8 September 2011, i.e. issued a year later, but the board had not been notified of this or of the request for a transfer of opponent status to JB TEC (C) until 14 September 2011. Consequently, the documents in question sent on 5 August 2011 were removed from the proceedings on the ground that they had not been duly filed. Nevertheless, at JB TEC (C)'s request, their content was readmitted at the oral proceedings as an integral part of its oral submissions.

b) What kind of evidence suffices

If no evidence of legal succession is produced, the mere declaration by a company designated as legal successor to the original opponent that it is the original opponent's legal successor is not sufficient to substantiate the transfer of the status of opponent and of party to the appeal proceedings (**T 670/95**).

In **T 261/03** (of 24 November 2005) the board of appeal considered what kind of evidence was required to establish a valid transfer. The board made a parallel to the requirements of R. 20 EPC 1973 and noted that it was not aware of any appeal decision that had held that the documents to be submitted according to this provision have to prove the alleged transfer "up to the hilt". Such a yardstick of full and absolute proof would indeed be overly strict since in many situations documentary evidence alone could then hardly suffice. As the wording of R. 20(1) EPC 1973 suggested, something less was required. The board took the view that the requirements of R. 20 EPC 1973 were complied with if the documents submitted were such as to render it credible to the competent organ of the EPO, evaluating the documents in a reasonable way and in the light of all the circumstances, that the alleged facts are true. The mere fact that another document might have been a more direct piece of evidence than the one submitted by the appellant does not invalidate the proof actually offered (see **T 273/02**, applied in **T 1178/04**).

c) Natural heir

In the case of a transfer of an opposition from a deceased natural opponent to his or her heir, the heir can only be ascertained by reference to the particular national laws of succession applicable to the estate of the deceased opponent. It follows that the person seeking to establish that they have the right to succeed to an opposition must produce satisfactory evidence that he, she or they have done so under the relevant national law (**T 74/00**).

### 2.2.7 Effect of finding that no transfer took place

In **T 1178/04** (OJ 2008, 80) the opposition division had decided, among other issues, that the transfer of opponent status in the course of the opposition proceedings was valid.

The board held that even if the transfer of the opponent status during the opposition proceedings was invalid, the appeal by the opponent was nevertheless admissible. The board explained that "party" simply meant someone who takes part in the proceedings before the EPO. If it was decided by the department of first instance that he was entitled to take part in the proceedings he remained a party even though this decision was later reversed on appeal; such a decision on appeal had the effect that he was no longer entitled to take part in the proceedings, but not that he had never been a party to the proceedings. His position could not change retrospectively from that of having been a party to that of never having been a party.

After reviewing the evidence the board held that no valid transfer of the status of opponent had taken place. The only means of correcting this error was to set aside the decision of the opposition division as a whole. The opposition division was thus not bound by its previous decision. It was only bound by the ratio decidendi of the board's decision as regards the transfer of opposition status (see also **T 1081/06**).

### **3. Intervention**

Under Art. 105 EPC, to intervene admissibly in opposition proceedings a party must show either that proceedings for infringement of the same patent have been instituted against him, or that following a request of the proprietor of the patent to cease alleged infringement, the third party has instituted proceedings for a ruling that he is not infringing the patent. Under Art. 105(2) EPC, an admissible intervention shall be treated as an opposition.

In the course of the revision of the EPC, Art. 105 EPC was redrafted to clarify its meaning. The word 'court' has been deleted entirely, since an action for declaration of non-infringement need not be instituted before a court in all states. The details relating to intervention are now contained in R. 89 EPC; under R. 89(2) EPC, the filing requirements for oppositions, as laid down in R. 76 and 77 EPC, apply *mutatis mutandis*.

#### **3.1. Admissibility**

##### **3.1.1 Any third party**

In the case before the board in **T 305/08**, the appellant (opponent I) had filed an appeal against the decision of the opposition division to reject the opposition. Two separate interventions were subsequently filed (by opponents II and III), which also raised fresh grounds of opposition under Art. 100(c) EPC 1973. The board stated that the term 'any third party' in Art. 105(1) EPC could not be given an interpretation other than that each party had to be a separate legal entity and that it was irrelevant whether they belonged to the same group of companies. Nor was allowing the interventions tantamount to allowing the appellant to late-file oppositions via opponents II and III under its control and thus introduce new evidence. The interventions were therefore admissible.

### 3.1.2 Relevant patent

In **T 446/95**, in which an infringement action had been based on a French **national patent**, the board held that the intention and purpose of an intervention in accordance with Art. 105 EPC 1973 was to enable the assumed infringer to defend himself against the action by the patentee based on the opposed **European patent**, in order to prevent the EPO and the national courts handing down contradictory decisions on the validity of European patents. In the case in question, the fact that the European patent had claimed priority from the French patent and that France had been designated was irrelevant, as there was no legal basis for intervening in the European patent on the basis of an infringement action relating to the French patent. The admissibility of an intervention before the EPO could not depend on a provision of national law. The intervention was therefore inadmissible.

In **T 7/07** the board held that the patent in suit was not granted for Lithuania under the EPC, as Lithuania was an extension state and therefore could not be designated for a European patent. The national law of the extension state governs the extension proceedings and the legal effects of the extension. The infringement proceedings were based on a patent which had been granted for a number of EPC contracting states and which, under Lithuanian law, also took effect in Lithuania, but exclusively on the basis of Lithuanian national law, which conferred the same effect on this patent as on a national patent. As a result, the infringement proceedings were not based on the European patent in suit in the opposition proceedings. The board agreed with the findings in **T 1196/08** that an intervention based on proceedings for infringement of a patent that has effect in a particular state solely on the basis of national law is inadmissible because it fails to meet one of the requirements under Art. 105(1)(a) EPC. It therefore regarded the intervener's submissions as third-party observations under Art. 115 EPC.

### 3.1.3 National infringement proceedings

Under Art. 105 EPC, third parties may intervene only if they prove either that proceedings for infringement of the opposed European patent have been instituted against them or that, following a request by that patent's proprietor that they cease the alleged infringement, they have instituted proceedings for a ruling that they are not infringing the patent (**G 4/91**, OJ 1993, 707 in conjunction with Art. 105 EPC). The principle that the assessment of the nature of a procedural act taken by a party before the EPO is to be made with consideration of its actual substance rather than with consideration of its form or name applies equally when deciding whether national infringement proceedings have been commenced (**T 188/97**).

In **T 195/93** the board held that if a patentee simply sent a legal warning letter asking the intervener to stop production and sale of a product covered by the patent, this could not be regarded as institution of proceedings for a court ruling even if under national law the addressee became liable for damages 30 days after receiving the letter. The intervention was therefore rejected as inadmissible.

In **T 898/07**, the board found the intervention admissible. It was apparent from the documents submitted by the opponent that the respondent had repeatedly informed it that it considered its actions to infringe the patent and, with reference to infringement proceedings already pending against third parties, invited it to enter licensing negotiations. The board considered this a request to cease patent infringement by concluding a licensing agreement which would render the allegedly unlawful conduct (patent infringement) lawful (licensed use). This met the first requirement under Art. 105(1)(b) EPC, the wording of which related not only to a request to refrain from using the invention altogether, but also generally to a request to cease the alleged patent infringement. Since, in addition, the opponent had instituted proceedings against the respondent for a declaration of non-infringement of the patent before the Rome Court, the board found the intervention admissible.

Similarly, according to **T 392/97**, Art. 105 EPC 1973 required that an intervener should prove both that the patentee had requested that he cease alleged infringement of the patent **and** that he had instituted proceedings for a court ruling that he was not infringing the patent. Thus where the letter was sent not to the allegedly infringing company, but to an unrelated one which it was assumed was about to acquire it, the first requirement was not fulfilled and their interventions were inadmissible. The first requirement was also not fulfilled in **T 446/95**, where the letter merely set out a position adopted in response to a letter from the purported intervener, and did not give notice to cease infringement. According to **T 887/04** of 14.11.06, it was for the assumed infringer to prove, first, that he had received a "request" to cease the infringement, i.e. that he had been expressly asked to do so, and, second, that he had been required to "cease", i.e. put an end to, the infringement. Proof of mere warnings or threats of legal action had therefore to be considered insufficient.

In **T 223/11** the board held that it is internationally a widely accepted principle that the submission of a request on the national level for a marketing authorisation for a pharmaceutical product by a generic company does not constitute patent infringement (the so-called Bolar exemption). Such proceedings, no matter how obstructive these may have been to a future market entry of the intervener's product, cannot be considered as equivalent to infringement proceedings, irrespective of whether the Bolar exemption has been codified in the relevant national law or not.

In **T 1713/11** the board stated that the EPC can give no specific definition of what constitutes proceedings for infringement. Furthermore, it is clear that intervention was conceived as a procedurally exceptional situation, which is justified only by a substantial legitimate interest of the assumed infringer to enter the opposition proceedings. Therefore it does not appear likely that there was a legislative intent to create an elaborate and intricate system of procedural provisions for the admissibility of interventions, and the boards too should refrain from creating such a system through their case law, and focus instead on whether the substantive conditions for admitting an intervention are fulfilled. Nullity proceedings concerning the patent at issue would not qualify and neither would *saisie contrefaçon* proceedings (see also **T 305/08**). However, the definition of "proceedings for infringement" is not limited to civil proceedings, to proceedings that allow for certain remedies to be claimed, or two party proceedings. The

board therefore concluded that as long as a patent proprietor or any other party entitled to do so initiates proceedings which aim to establish whether a third party is commercially active in an area that falls within the patent proprietor's right to exclude, such proceedings are "proceedings for infringement" within the meaning of Art. 105 EPC.

### 3.1.4 Proceedings pending before the EPO

#### a) Intervention in opposition proceedings

In **G 4/91** (OJ 1993, 707) the Enlarged Board held that the intervention under Art. 105 EPC 1973 of an assumed infringer in the opposition proceedings presupposed that opposition proceedings were pending at the time he gave notice of intervention. Moreover, a decision of the opposition division on the relief sought had to be regarded as conclusive in the sense that the opposition division no longer had the power thereafter to amend its decision. The Enlarged Board further held that proceedings before an opposition division were terminated when such a conclusive decision was issued, irrespective of when this decision became final. Thus, if, after an opposition division had issued a decision terminating the proceedings, and none of the parties to the opposition proceedings filed an appeal, any notice of intervention filed during the two-month period for appeal under Art. 108 EPC 1973 was invalidated. See also **T 791/06**, where an intervention was filed after the oral proceedings before the opposition division when the decision was pronounced but before notification of the written decision. The board held that it had not been filed during pending opposition proceedings but considered the intervention to have been filed during the appeal proceedings.

In **T 631/94** (OJ 1996, 67) the board noted that when a decision to terminate opposition proceedings, taken in written proceedings, was handed over to the EPO postal service, it became public and effective and had therefore been issued. If the parties to the proceedings leading to that decision did not appeal, the opposition proceedings were completed at that point in time and thereafter intervention based on Art. 105 EPC 1973 was no longer possible.

#### b) Intervention in appeal proceedings

In **G 1/94** (OJ 1994, 787) the Enlarged Board concluded that Art. 105 EPC 1973 should apply to appeal proceedings. The term "opposition proceedings" was not restricted to the department of first instance, but could also refer to such proceedings at second instance. Intervention during appeal proceedings was therefore admissible (see also **T 694/01**). A notice of intervention filed during the two-month period for appeal has no legal effect if no appeal is filed (**G 4/91**, OJ 1993, 707; see also 3.1.4 a) above).

In **T 694/01** the board found that intervention depended on how far the opposition or appeal was still pending. An intervener could not challenge issues on which a final decision had already been taken (in earlier appeal proceedings).

In **T 1961/09** the board held in the catchword that while an intervention under Art. 105 EPC shortly before oral proceedings in an appeal, raising new issues, will

normally require the oral proceedings to be adjourned if not the remittal of the case altogether (**G 1/94**, OJ 1994, 787), the oral proceedings may be continued if and so far as this can be done without unfairness to the other parties, in particular the proprietor.

### 3.1.5 Time limit for intervention

Under R. 89 EPC, intervention is not possible until the opposition period has expired (this was previously laid down in Art. 105 EPC 1973), but notice of it must be filed within three months of the date on which proceedings referred to in Art. 105 EPC were instituted.

In **T 452/05**, the board considered three dates which could possibly have triggered the three month period: the date on which the request for an interim injunction was made, the date on which the request was granted, or the date when the injunction order was served upon the opponent. In the board's view, only the last date should be regarded as the decisive point in time, as only from that date onwards could the opponent provide evidence of the proceedings that entitled it to intervene.

If multiple proceedings are under way, the three-month time limit for intervening is always triggered by the date on which the **first** proceedings were instituted (**T 296/93**, **T 1143/00**).

The two alternative starting points under Art. 105(1) EPC 1973 for calculating the three-month period for intervention were mutually exclusive (**T 296/93**, OJ 1995, 627). See also **T 144/95**. Art. 105 EPC 1973 could not be used to give an opponent who failed to file an appeal in time a second chance, as the opponent does not fulfil the requirement of being a third party (**T 1038/00**).

### 3.1.6 Fees

Under Art. 105(2) EPC in conjunction with Art. 2(1) No. 10 RFees, interveners must pay the opposition fee (**T 27/92**). Where a party intervenes only at the appeal stage, several decisions have stated that no appeal fee need be paid if the party is not seeking appellant status in his own right (see **T 27/92**, **T 684/92**, **T 467/93**, **T 471/93**, **T 590/94**, **T 144/95**, **T 886/96** and **T 989/96**). In **T 1011/92** and **T 517/97** (OJ 2000, 515) the board ruled that an intervener must pay the fee if he wants to have his own right to appeal proceedings, in the sense that he can continue them if the original appellant withdraws his appeal. However, in **T 144/95**, where an intervention was filed during appeal proceedings and an appeal fee paid, the board ordered the appeal fee to be refunded (at the request of the intervener) - under Art. 107 EPC 1973, an admissible appeal could only be filed by a party who was already a party to the proceedings leading to the decision and who was adversely affected by it. Where the intervention was filed during appeal proceedings, the intervener could not satisfy these conditions, and, (referring to **G 1/94**, OJ 1994, 787), could not be considered as an appellant. Whilst Art. 105 EPC 1973 provided an exception to the time limit for payment of the opposition fee under Art. 99 EPC 1973, no such exception was made concerning the appeal fee.

### 3.1.7 Substantiation requirement

Under R. 89 in conjunction with R. 76 EPC, the notice of intervention must give the grounds for the intervention, and the facts and evidence submitted to substantiate them.

In **T 1659/07**, the board found that the substantiation requirement under R. 89(2) EPC in conjunction with R. 76(2)(c) EPC was met by a reference to an existing statement of grounds for appeal or notice of opposition. The purpose of the requirement was to ensure that the intervener's arguments could be objectively understood, i.e. that the intervener's position was set out clearly enough that both the patentee and the opposition division or board of appeal could identify the reasons for the intervention. Reference to the arguments of another opponent already on file was sufficient to that end. Accordingly, an intervener need not repeat those arguments in detail or contest the patent on the basis of new, independent reasoning or facts.

## 3.2. Legal status of intervener

### 3.2.1 In opposition proceedings

In **G 3/04** (OJ 2006, 118), the Enlarged Board concluded, inter alia, that the valid intervener acquired the status of an opponent, irrespective of whether the intervention occurred during the proceedings before the opposition division or at the appeal stage. In either case his rights and obligations were the same as those of other opponents. An intervener in proceedings before the opposition division has a right of appeal under Art. 107 EPC. For the appeal to be validly filed, he must pay the appeal fee under Art. 108, second sentence, EPC. Furthermore, the board held that an intervener in proceedings before the opposition division, where all the opponents have withdrawn their oppositions, can continue the proceedings alone and, if need be, file an appeal, since he has the same status as an opponent under Art. 99 EPC 1973.

In **T 614/13**, the board had to rule on the admissibility of an intervener's appeal against the opposition division's decision to reject its opposition because it had not shown that it had intervened in the opposition proceedings in time. The board held that, even if it upheld the opposition division's decision, that would not mean the intervener had never been a party to the proceedings, but only that as from the date on which decision on appeal took effect it would no longer be entitled to take part in the (further) proceedings. Until that point in time its procedural status would be confined to obtaining clarification as to whether it was entitled to take part.

### 3.2.2 In appeal proceedings

Also in **G 3/04** (OJ 2006, 118; see in this chapter IV.C.3.2.1), the Enlarged Board ruled that an intervener, if the appeal is filed by someone other than him, is a party as of right according to Art. 107, second sentence, EPC. If the intervention is filed during the appeal proceedings, the intervener, again because he can only acquire the status of an opponent, has the same rights and obligations – apart from the right to raise new grounds of opposition – as any opponent who has not filed an appeal. If in this case the

sole, or each, appeal has been withdrawn, the appeal proceedings are terminated in respect of all the substantive issues, including the new grounds for opposition raised by the intervener, for all the parties (see also **T 694/01**, OJ 2003, 250).

In **G 1/94** (see in this chapter IV.C.3.1.4 b)), the Enlarged Board also examined the question of whether an intervener during appeal proceedings could raise any of the grounds for opposition under Art. 100 EPC 1973 even if they had not yet been examined by the opposition division, and found in the affirmative. If a fresh ground for opposition was raised, the case should be remitted to the department of first instance unless the patent proprietor wished the board to rule on it there and then. In **T 694/01** (OJ 2003, 250), it was made clear that where a board has decided to maintain a patent on the basis of a given set of claims and a description to be added to them, in subsequent appeal proceedings confined to the issue of the adaptation of the description the previous decision is *res judicata* and the intervener cannot therefore challenge this decision by introducing a new ground of opposition.

### 3.2.3 Time limits in pending proceedings

In **T 392/97** the would-be interveners requested that the date for the appointed oral proceedings be postponed and submitted that they had not been duly summoned to the oral proceedings in accordance with R. 71(1), second sentence, EPC 1973 which stipulated at least two months' notice. In the board's view, R. 71(1) EPC 1973 did not stipulate that the requirement of a two-month period also applied if, subsequent to a duly effected summons, there was an intervention by a third party. As a general principle, an intervener entered the proceedings at the stage they were at on the date of intervention, including **pending time limits**. Issuing a further summons or adjourning the date in this case was therefore rejected.

## 4. Continuation of the opposition proceedings by the EPO

R. 84 EPC provides for the continuation of opposition proceedings by the EPO of its own motion. This may happen in the following circumstances: where the patent has lapsed or been surrendered and the opponent requests continuation of the opposition proceedings (R. 84(1) EPC); in the event of the death or legal incapacity of an opponent and where the opposition has been withdrawn (R. 84(2) EPC). In the case of a withdrawal of the opposition during the opposition appeal proceedings, there are a number of procedural consequences which depend on the party status of the opponent and which do not permit the exercise of discretion as to whether or not opposition appeal proceedings are continued (see in this chapter IV.C.4.3.3).

### 4.1. Surrender and lapse of the patent

#### 4.1.1 Surrender of patent

Under the provisions of the EPC 1973, the patent proprietor was unable to terminate the proceedings by informing the EPO of his surrender of the European patent, since this was not provided for in the EPC 1973; at this stage in the proceedings, notices of

surrender had to be addressed, as far as national law permitted, to the national authorities of the designated contracting states (**T 73/84**, OJ 1985, 241; **G 1/90**, OJ 1991, 275; see **T 123/85**, OJ 1989, 336 and **T 196/91**). Under the provisions of the EPC 2000 the patent proprietor may request that the European patent be revoked pursuant to Art. 105a EPC. The existence of this procedure does however not preclude patent proprietors from giving notices of surrender to national authorities.

Neither the surrender of a patent nor its lapse has retroactive effect. Both therefore have to be distinguished from revocation, which takes effect from the outset (Art. 68 EPC).

#### 4.1.2 Continuation of the opposition proceedings after lapse or surrender (Rule 84(1) EPC)

If a European patent has lapsed or been surrendered in all the designated states, the opposition proceedings may, under R. 84(1) EPC (R. 60(1) EPC 1973), be continued at the request of the opponent, provided the request is filed within two months of a communication from the EPO informing the opponent of the surrender or lapse. R. 84(1) EPC is limited to the situation where the opposed patent has been surrendered or has lapsed during ongoing opposition proceedings. Where the patent had already lapsed prior to the filing of the opposition R. 75 EPC applies, which states that an opposition may be filed even if the opposed patent has been surrendered or has lapsed in all the designated contracting states (**T 606/10**).

R. 84(1) EPC also applies, pursuant to R. 100(1) EPC, to opposition appeal proceedings and the boards have applied it regularly.

The board in **T 740/15** interpreted R. 84(1) EPC to mean that if the opponent files a request for continuation of the opposition proceedings within the given time limit, the scope of discretion of the opposition division provided in R. 84(1) EPC was thereby limited to only one possible lawful decision and this was the continuation of the opposition proceedings. The board noted that this understanding found support in the Travaux Préparatoires of the EPC 1973.

Where the European patent expires during ongoing appeal proceedings in all the contracting states and the appellant (opponent) does **not** request continuation of the proceedings, the proceedings are terminated without any decision on the issues (**T 329/88**, followed by numerous decisions, including **T 762/89**, **T 749/01**, **T 289/06**, **T 949/09**, **T 480/13** and **T 977/14**).

R. 84(1) EPC establishes no legal obligation on the EPO to ascertain of its own motion the legal status of a European patent and does not apply in the event of an alleged surrender or lapse of a European patent, unless confirmation thereof has been received by the EPO from the appropriate authorities of all the designated contracting states (**T 194/88**, **T 809/96**, **T 201/04**). However, in some exceptional circumstances, the proceedings have been terminated where such evidence was missing. In **T 762/89** the respondent (patent proprietor) had submitted that the patent had lapsed following non-payment of the national renewal fees in the designated contracting states (AT, BE,

DE, FR, GB, IT, LU, NL und SE). EPO records showed that the European patent had lapsed in 1990 in all the designated contracting states except Italy and Luxembourg, and the respondent provided confirmation that the patent had lapsed in Italy with a letter of 7 January 1992. Since the respondent had expressly declared on a number of occasions that the patent had lapsed in all the designated states, the board held that, with a view to procedural economy, there was no valid reason why the respondent should be required to show that it had lapsed in Luxembourg as well. In **T 607/00** the board accepted the respondent's statement, which was not challenged by the appellant, that the patent had lapsed in Italy.

If the appellant (opponent) expressed doubts concerning a respondent's (patent proprietor's) claim that a patent had lapsed or been surrendered, then the lapse had to be registered with the EPO or properly proved. Otherwise, R. 60(1) EPC 1973 was not applicable and the appeal procedure continued (**T 194/88**, **T 682/91**, **T 833/94**, **T 201/04**).

a) Request for continuation of the proceedings made by the opponent

In **T 1213/97** the patent had expired for all designated contracting states during the opposition appeal proceedings. The appellant (opponent) requested a decision on the state of the file which implied a request for the continuation of the appeal proceedings for the purpose of issuing a decision. The board exercised its power under R. 60(1) EPC 1973 to continue the appeal proceedings.

In **T 598/98** too the patent had lapsed for all designated contracting states since a time subsequent to the opponent's filing of the appeal, and the appellant (opponent) had requested continuation of the proceedings. The request was allowed. The board maintained that the opponent's legitimate interest in retroactive revocation was one of the elements that could be a factor in the board's decision to terminate or continue the proceedings under R. 60 EPC 1973. It also stated that the general interest in a central ruling on the patentability of an invention claimed in a patent did at any rate justify continuing the proceedings until a final decision was taken if the case was essentially ready for decision at the time when the patent lapsed and if it also made a significant difference to the patent's fate whether a decision was taken on the merits or the proceedings were simply terminated.

In **T 500/12** the board granted the request filed by the appellant (opponent) for continuation of the appeal proceedings. The appellant had provided evidence from several national patent registers showing that the opposed patent had not lapsed in all contracting states and was still in force. The appellant further submitted that the annuity fees could be paid not only by the patentees but also by a third party. Furthermore, annuity fees could still be validly paid with a surcharge in many of the contracting states and, even if they were not paid with a surcharge in due time, reinstatement periods also had to be considered.

b) Request for continuation of the proceedings made by the patent proprietor

In contrast to the case law cited above, **T 708/01** concerns the situation where the patent proprietor had appealed against the decision of the opposition division to revoke the patent. The patent had expired in all the designated contracting states. The board decided that R. 60(1) EPC 1973 only applied, if at all, to the extent that the appellants were required to state whether they wished to maintain the appeal. The proprietors could also apply to have the patent maintained in amended form with effect only for the past. In the case in point the appellants stated that they wished to maintain the appeal. The board decided to continue the proceedings.

In **T 520/10** the board noted that if a European patent has lapsed in all designated contracting states, opposition proceedings may be continued at the request of the opponent. However, if - as in the present case - the patent proprietor was the appellant, it would be inappropriate to allow one or more of the opponents (respondents) to decide whether the appeal proceedings should be continued. For this reason, R. 84(1) EPC had to be applied mutatis mutandis in such opposition appeal proceedings so that it was the patent proprietor who could request that the appeal proceedings be continued (see also **T 2536/10**). As no such request had been made, the appeal proceedings were terminated.

A mere statement confirming that the patent had been allowed to lapse in all designated states in response to the board's communication asking the appellant (patent proprietor) whether it requested continuation of the appeal proceedings was interpreted by the board to mean that the appellant did not wish to request continuation. The appeal proceedings were terminated (**T 2536/10**).

#### **4.2. Death or legal incapacity of an opponent**

R. 84(2), first sentence, EPC provides that in the event of the death or legal incapacity of an opponent the opposition proceedings may be continued by the EPO of its own motion. This means that, with a view to ensuring expeditious handling of the case, they can be continued even without the participation of the opponent's heirs or legal representatives. There is therefore no need to wait for the heirs to be identified and the inheritance to be accepted or for a legal representative to be appointed (**T 1533/07**).

The appointment by the courts of an insolvency administrator under German law does not mean that the opponent is legally incapacitated within the meaning of R. 84(2), first sentence, EPC. Rather, under German insolvency law the administrator is an ex officio party. By way of a change of party by operation of law, he thus becomes a party to the proceedings, and takes the place of the opponent (**T 1533/07**, **T 917/01**).

#### **4.3. Withdrawal of opposition**

R. 84(2), second sentence, EPC provides that the opposition proceedings may be continued by the EPO of its own motion if the opposition is withdrawn.

#### 4.3.1 Form and effect of withdrawal on party status

A withdrawal requires an unambiguous statement. An opponent's statement explaining his lack of interest in the fate of the European patent to which his opposition relates cannot be construed as a withdrawal of the opposition (**T 798/93**, OJ 1997, 363). A declaration by the opponent that he has decided to "discontinue the opposition" clearly indicates that he wants to cease his opposition and is to be interpreted in the sense that the opposition has been withdrawn (**T 789/89**, OJ 1994, 482).

An opponent who withdraws his opposition ceases to be a party to the proceedings (**T 283/02**). Where the proceedings continue and there are questions concerning the apportionment of costs, the opponent ceases to be a party with respect to the substantive issues, but remains a party as regards apportionment of costs (**T 789/89**, see also recent decisions **T 1397/10**, **T 2350/10** and **T 2061/11**).

It is not possible to request that a withdrawal of an opposition be cancelled. The withdrawal is a procedural declaration by a party which takes effect on receipt by the EPO. An opponent who withdraws his opposition and as a result ceases to be an active party to the proceedings can no longer take procedural steps himself (**T 283/02**).

In **T 558/95** the board noted that the main request had been refused by the opposition division before the opposition was withdrawn. The decision concerning this request was thus final; even after the withdrawal of the opposition, it could no longer be reviewed by the department of first instance. The continuation of the proceedings by the EPO of its own motion under R. 60(2), second sentence EPC 1973 (R. 84(2) EPC) therefore applied only to the auxiliary request, which had not been the subject of a final decision.

#### 4.3.2 Effect of withdrawal on opposition proceedings before the departments of first instance

After withdrawal of an opposition, the opposition proceedings should be continued if they have reached such a stage that they are likely to result in a limitation or revocation of the European patent without further assistance from the opponent and without the opposition division itself having to undertake extensive investigations (**T 197/88**, OJ 1989, 412; see also the more recent decision **T 36/11** and Guidelines D-VII, 5.3 – November 2015 version). The continuation of the opposition proceedings under these circumstances follows from the EPO's general duty towards the public not to maintain patents which it is convinced are not legally valid at all or would be legally valid only with the necessary limitations (**T 156/84**, OJ 1988, 372; **T 197/88**).

In **T 1668/08** the respondent (opponent) withdrew its opposition during the appeal proceedings and was hence no longer a party to those proceedings. The board decided to remit the case to the department of first instance for further prosecution. The board emphasised that during that further prosecution the opposition division would first need to decide, in accordance with R. 84(2) EPC, whether or not to continue the opposition proceedings of its own motion in view of the withdrawal of the opposition. It warned that

its decision to remit should not be taken as indicative of the conclusion to be reached in this respect.

In **T 36/11** the board held that an appeal by the patent proprietor against the decision of the opposition division to discontinue opposition proceedings after the withdrawal of the opposition was inadmissible because the patent proprietor had not been adversely affected by that decision.

#### 4.3.3 Effect of withdrawal on opposition appeal proceedings

The discretionary nature of an opposition division's decision whether or not to continue the proceedings pursuant to R. 84(2) EPC has to be distinguished from the much more narrow framework within which the boards of appeal decide on the effect of a withdrawal of an opposition. The effect of a withdrawal on the opposition appeal proceedings depends on whether or not the opponent is the sole appellant.

In **G 8/93** (OJ 1994, 887) the Enlarged Board held that if the **opponent as sole appellant** filed a statement withdrawing his opposition, this could only be regarded as a withdrawal of the appeal which immediately and automatically terminated the appeal proceedings as far as all substantive issues were concerned (**G 7/91**, **G 8/91**, OJ 1993, 356 and 346). This was irrespective of the patentee's consent. The proceedings were terminated even if in the board's view the requirements under the EPC for maintaining the patent were not met. The Enlarged Board emphasised the distinction between the power to initiate and continue proceedings and the power to clarify the facts in pending proceedings. According to its case law, in appeal proceedings the former was **exclusively** the province of the appellant, whereas the latter might be exercised by the board subject to Art. 114 EPC 1973 provided proceedings were pending.

In contrast, according to established case law the withdrawal of an opposition has no direct procedural consequences for the appeal proceedings if the opponent was the **respondent** and the contested patent was revoked by the contested decision (**T 629/90**, OJ 1992, 654; followed by numerous other decisions, including **T 789/89**, OJ 1994, 482, **T 194/90** and **T 627/92**, as well as, more recently, **T 46/10** and **T 2061/11**). In such cases, the board must carry out a substantive examination of the opposition division's decision, and can only set aside this decision and reject the opposition if the grounds for opposition do not prejudice the maintenance of the granted patent. The board's examination can include the examination of evidence submitted by the respondent prior to the withdrawal of the opposition (**T 629/90**, OJ 1992, 654; see also **T 900/03**, **T 340/05** and **T 46/10**).

The opposition appeal proceedings are also continued if both the patent proprietor and the opponent have appealed but the opponent withdraws his opposition in the course of the appeal proceedings. The effect of the withdrawal of the opposition is that the appeal is regarded as withdrawn and the opponent ceases to be a party to the appeal proceedings as regards the substantive issues (**T 922/01**, **T 1346/10**).

## 5. Limitation/revocation

### 5.1. Limitation/revocation - Article 105a-105c EPC

With the entry into force of the EPC 2000, Art. 105a EPC has been introduced, pursuant to which a European patent may be revoked or limited at the request of the proprietor. Limitation can be achieved by an amendment of the claims. The effect of a successful limitation or revocation is that the patent is limited or revoked ab initio (Art. 68 EPC) and in respect of all the Contracting States in which it has been granted. It takes effect on the date on which the mention of the decision to limit or revoke is published in the European Patent Bulletin (Art. 105b(3) EPC, **T 646/08**, **T 2177/12**). The nature of this procedure, which is ex parte, lies somewhere between the examination and opposition proceedings (**G 3/14**, OJ 2015, A102).

There is no time limit as to when the request for limitation/revocation can be made. However, it is a precondition that no opposition proceedings (including opposition appeal proceedings) in respect of the patent are pending (Art. 105a(2) EPC). If they are, then the request is deemed not to have been filed (R. 93(1) EPC). If limitation proceedings are pending at the time of the filing of an opposition, the limitation proceedings are terminated (R. 93(2) EPC). If a patentee wishes to revoke his patent whilst opposition proceedings are ongoing, he may do so but not by using the procedure set out in Art. 105a-105c EPC (see in this chapter IV.C.5.2). If he wishes to limit his patent, he may be able to do so by amending it in the course of the opposition and opposition appeal procedure.

The decision as to whether a request for limitation or revocation under Art. 105a EPC is granted is taken by the examining division (R. 91 EPC). If the request is admissible, the examining division examines whether the amended claims constitute a limitation of the claims of the European patent as granted or amended, and whether they comply with Art. 84, 123(2) and 123(3) EPC (R. 95(2) EPC). No examination of the claims with regard to Art. 52-57 EPC is foreseen. The decision of the examining division is appealable before the technical boards of appeal. As at 31.03.2016 no decision of the boards of appeal concerns an appeal against such a decision of the examining division.

### 5.2. Requests for revocation during opposition and opposition appeal proceedings

The procedure for limitation/revocation pursuant to Art. 105a-105c EPC is not available during opposition and opposition appeal proceedings. However, a patent may still be revoked during such proceedings at the request of the patent proprietor (see e.g. **T 2177/12**).

If the patent proprietor states in opposition or appeal proceedings that he no longer approves the text in which the patent was granted and will not be submitting an amended text, the patent is to be revoked. This is supported by Art. 113(2) EPC, which provides that a patent may be maintained only in a version approved by the patent proprietor. If there is no such version, one of the requirements for maintaining the patent is lacking

(**T 73/84**, OJ 1985, 241, followed by numerous decisions, see e.g. recent decisions **T 307/13** and **T 1536/14**).

If the patent proprietor himself requests that the patent be revoked, the decision to revoke the patent is given without substantive examination as to patentability. The examination as to whether the grounds for opposition laid down in Art. 100 EPC prejudice the maintenance of the patent becomes impossible since the absence of a valid text of the patent precludes any substantive examination of the alleged impediments to patentability (**T 186/84**, OJ 1986, 79; see also **T 157/85**, **T 1659/07**, **T 124/08**, **T 1287/08**, **T 1111/10**).

In **T 237/86** (OJ 1988, 261) the board stated that a direct request for revocation sufficed, whatever the form of the words, when it was made clear to the boards that appellant and respondent agreed that the patent should be revoked. In **T 459/88** (OJ 1990, 425) the board stated that if, in proceedings before the EPO, the patent proprietor himself requested that his patent be revoked, there could scarcely be any more cogent reason for revoking it since it could not be in the public interest to maintain a patent against its proprietor's will. The patent was thus revoked by the board exercising its powers under Art. 111(1) EPC 1973 (see also the more recent decisions **T 655/01**, **T 1187/05**, **T 1526/06**, **T 1610/07**, **T 1541/09**).

There must be no doubt that the proprietor applying to have the patent revoked is requesting revocation with the consequences specified in Art. 68 EPC 1973 (Art. 68 EPC), namely the cancelling of the effects of the European patent application and the resulting patent as from the outset (**T 186/84**, **T 347/90**, **T 386/01**). Where the respondent (patent proprietor) states that the patent has been abandoned 'since' a particular date, this cannot be considered to be a request for revocation, as it does not indicate that the patent has been abandoned ab initio. The case law on requests for revocation therefore does not apply and the appeal must be examined as to its merits (**T 973/92**).

In **T 237/86** (OJ 1988, 261), the statement "We herewith abandon the above patent" was held to be equivalent to a request for revocation to which the board could accede under Art. 111(1) EPC 1973 (see also **T 347/90**). In **T 92/88** the words "the patent has been allowed to lapse in all designated states" were held to amount to a request for revocation. In a number of cases the boards have decided that a request by a patent proprietor to withdraw "the application" amounted to a request to revoke the patent (**T 264/84**, **T 415/87**, **T 68/90** and **T 322/91**).

In **T 646/08** the appellant, in a letter, withdrew its appeal and at the same time withdrew its approval of the text of the patent as maintained by the opposition division in its interlocutory decision. The board held that the letter did not contain an unequivocal statement of the proprietor that he accepted the revocation of the patent with all the consequences specified in Art. 68 EPC. The appeal proceedings were terminated.

In **T 2573/12** the proprietor had stated during proceedings before the opposition division that it wished to abandon the patent. The board held that the **wish** to abandon the patent

did not constitute a clear and unambiguous request for abandonment, which would be construed as equivalent to a request for revocation (see **T 237/86**, OJ 1988, 261).

A number of cases concern the situation in which the opposition division revoked the patent, and the patent proprietor appealed, and then, in the course of the appeal proceedings, requested revocation of the patent. In **T 347/90** the board dismissed the appeal without going into the substantive issues, so that the revocation of the patent by the department of first instance was confirmed. In **T 18/92**, by contrast, the request by the patent proprietor (appellant) for revocation of the patent was interpreted by the board as a withdrawal of the appeal. Withdrawal of the appeal meant that the first-instance decision revoking the patent took effect. In **T 481/96** the board examined the two solutions and endorsed **T 18/92**. In **T 1244/08** the board confirmed that according to established case law (see also **T 1003/01** and **T 53/03**), if an appellant holding a patent revoked by an opposition division states clearly and unambiguously that it is no longer interested in pursuing the appeal proceedings, that is tantamount to a statement withdrawing the appeal. The withdrawal had the effect of immediately terminating the appeal proceedings, such that the opposition division's revocation decision became final. Any later request to retract the withdrawal and continue appeal proceedings was inadmissible.

## **6. Apportionment of costs**

### **6.1. Principle that each party must bear its own costs**

Under Art. 104(1) EPC, each party to opposition proceedings must, as a rule, meet the costs it has incurred. However, the opposition division or board of appeal may, for reasons of equity, order a different apportionment of the costs incurred during taking of evidence or in oral proceedings. At the appeal stage Art. 16(1) RPBA also applies, allowing the board, subject to Art. 104(1) EPC, to order a different apportionment. It lists typical cases where costs arise as a result of: (a) amendments pursuant to Art. 13 RPBA to a party's case as filed pursuant to Art. 12(1) RPBA; (b) extension of a time limit; (c) acts or omissions prejudicing the timely and efficient conduct of oral proceedings; (d) failure to comply with a direction of the board; or (e) abuse of procedure.

As part of the revision process, Art. 104(1) EPC was slightly redrafted and together with Art. 104(2) EPC was amended such that the details of a decision ordering a different apportionment of costs and the procedure for fixing them were transferred to the Implementing Regulations (see R. 88 EPC, formerly R. 63 EPC 1973).

In its decision of 28 June 2001 the Administrative Council established transitional provisions *inter alia* for Art. 104 EPC (see OJ SE 1/2007, 197), according to which the revised Art. 104 EPC applies to:

- European patents already granted at the time of the EPC 2000's entry into force
- European patents granted in respect of European patent applications pending at that time.

In **T 133/06** the board added that Art. 104 EPC belonged to the procedural provisions and so was subject to the general principle of law that a new procedural law was immediately applicable but had no retrospective effect unless otherwise provided. Hence when deciding whether the new Art. 104 EPC is applicable in appeal proceedings initiated under EPC 1973, the board must take into consideration not only the fact that, according to the transitional provisions, the new Art. 104 EPC is applicable to granted patents, but also the date of the event which gives rise to the application of this article. This is the only way to give the new procedural provision an immediate application without giving it a retrospective effect.

The phrase "taking of evidence" used in Art. 104(1) EPC 1973 referred generally to the receiving of evidence by an opposition division or a board of appeal (**T 117/86**, OJ 1989, 401; **T 101/87**, **T 416/87**, **T 323/89**, OJ 1992, 169; **T 596/89** and **T 719/93**). The boards' case law refers to Art. 117(1) EPC (unchanged in substance), according to which "taking of evidence" covers the giving or obtaining of evidence generally in proceedings before departments of the EPO, whatever the form of such evidence, and includes, in particular, the production of documents and sworn statements in writing. The EPC revision transferred the details of the procedure for taking evidence to the Implementing Regulations (R. 118-120 EPC; see Chapter III.G "Law of evidence").

## **6.2. Equity of a different apportionment of costs – case groups**

There is no definition of equity in the EPC. The boards of appeal therefore had to develop the criteria determining whether costs were to be apportioned on a case-by-case basis. In a number of decisions it has generally been stated that apportionment of costs is justified if the conduct of one party is not in keeping with the care required, that is if costs arise from culpable actions of an irresponsible or even malicious nature (see, for example, **T 765/89**, **T 26/92** and **T 432/92**). The boards' case law identifies instances of such actions, the board in **T 1771/08** for example finding that an apportionment of costs under Art. 104(1) EPC could be ruled out from the outset for lack of equity if the representative of the party requesting a different apportionment owing to postponement of the oral proceedings had unreservedly agreed to their postponement.

A thorough examination of the decisions of the boards of appeal reveals that requests for a different apportionment of costs are often filed in various scenarios in which costs are incurred for:

- late submission of documents and/or requests (see in this chapter IV.C.6.2.1);
- acts or omissions prejudicing the timely and efficient conduct of oral proceedings (see in this chapter IV.C.6.2.2);
- filing of opposition or appeal (see in this chapter IV.C.6.2.3);
- withdrawal of opposition or appeal at short notice (see in this chapter IV.C.6.2.4);
- other cases (see in this chapter IV.C.6.2.5).

### 6.2.1 Late submission of documents and/or requests

Fresh grounds for opposition submitted in appeal proceedings may be considered only with the approval of the patentee (**G 10/91**, OJ 1993, 420). In **T 1002/92** (OJ 1995, 605), however, the board focused on the issue of the late submission of facts and evidence to substantiate the original grounds for opposition cited in the proceedings before the opposition division. In interpreting Art. 114(2) EPC 1973, the board applied the principles laid down in **G 10/91** and held that late-filed facts, evidence and related arguments should only exceptionally be admitted into the proceedings if, prima facie, there were clear reasons to suspect that such late-filed material would prejudice the maintenance of the European patent (see chapter IV.C.1).

Where facts and evidence supporting the opposition are submitted at a late stage in the proceedings and another party incurs considerably higher costs as a result, a different apportionment of the costs may be ordered for reasons of equity (see **T 10/82**, OJ 1983, 407; **T 117/86**, OJ 1989, 401; **T 101/87**, **T 326/87**, OJ 1992, 522; **T 416/87**, OJ 1990, 415; **T 323/89**, OJ 1992, 169; **T 596/89**, **T 622/89**, **T 503/90**, **T 611/90**, OJ 1993, 50; **T 755/90**, **T 110/91**, **T 867/92**, OJ 1995, 126; **T 719/93** and **T 970/93**). The relevant factor in deciding on the costs is whether or not there are cogent reasons justifying the late submission; it is regarded as irrelevant whether the material in question has any bearing on the merits of the decision. However, it should be pointed out that, in several cases, requests for apportionment of costs have been refused, despite an unjustified delay, because there was no proof that higher costs had been incurred (see, for example, **T 212/88**, OJ 1992, 28; **T 582/90**, **T 267/92**, **T 9/95** and **T 207/03**).

According to board of appeal case law, if a party introduces important facts or evidence at a late stage of the proceedings, without cogent reasons for the delay, this may be taken into account in the apportionment of costs (see **T 117/86**, OJ 1989, 401; **T 326/87**, OJ 1992, 522; **T 97/90**, **T 611/90**, OJ 1993, 50; **T 847/93**, **T 1016/93** and **T 574/02**). If the reasons for the late citing of a document do not point towards negligence or other circumstances that would amount to an abuse of procedure, there is no reason of equity which would justify an apportionment of costs in the other party's favour (**T 1016/93**).

#### a) Late submission was unjustified

In principle, submissions at a late stage in the proceedings justify a different apportionment of the costs for reasons of equity if there is no justification for the late filing. In the absence of cogent reasons to justify the late submission, a different apportionment of costs will usually be ordered unless the late submission is shown not to have been disadvantageous to the other party. As a rule, though, late submission will cause the other party to incur additional expenses which would not have arisen if the submission had been made on time.

#### (i) Different apportionment of costs ordered

In **T 117/86** (OJ 1989, 401) the appellants had produced, together with their statement of grounds, two new documents and an affidavit in support of the contention that the

opposed patent lacked an inventive step. The board concluded that the fact that new documents were presented after the nine-month period for filing opposition could itself give rise to additional expenditure for the other party, and that the costs should be apportioned differently for reasons of equity.

The board in **T 416/87**, expressly referring to **T 117/86**, regarded it as an abuse of the opposition procedure that the appellant had in its statement of grounds of appeal relied exclusively on three new documents and had even raised for the first time the **issue of novelty** on the basis of a document already discussed in the patent in suit. By introducing arguments and documents which bore little relation to the content of those filed in the original opposition, the appellant had produced virtually a new opposition at the appeal stage. This could not, by definition, be the purpose of an appeal. Although the respondent clearly envisaged requesting a decision on costs in the event of oral proceedings only, the abuse of procedure justified the apportionment of costs incurred during the taking of evidence.

The board in **T 83/93** held that it was also an abuse of the appeal procedure to submit **five new documents** as evidence 40 months after the end of the opposition period (without giving reasons) and to revive an objection under Art. 100(c) EPC 1973 on the basis of new facts and evidence 51 months after the end of the opposition period.

In **T 493/11** the respondent introduced important evidence at a late stage of the proceedings, namely only two months before the date of the scheduled oral proceedings, without cogent reasons for the delay and without submitting all the necessary information. The board found that the respondent could have come forward with the above-mentioned supporting submissions at an earlier stage of the proceedings and it was evident that the purpose of postponing the oral proceedings was to follow the respondent's submissions. Consequently, the fact that the appellant itself had submitted new requests quite late in the appeal proceedings obviously was not the decisive factor. The board stressed that the responsibility for stating its complete case lies exclusively within the respondent's own sphere. As a consequence, any delay causing the incurring of additional costs by the other party remains within the respondent's sphere and liability and in this case justified an apportionment of costs.

In **T 867/92** (OJ 1995, 126) the claims had been amended during the opposition proceedings. Eighteen months after the claims had been amended the appellant (opponent) cited in the statement of grounds of appeal a **new prior art** document. The board held that the EPC does not impose a time limit for citing new prior art in response to an amendment of the claims. However, an opponent who cites new prior art with a considerable delay with no special reason justifying the delay runs the risk of having to bear the proprietor's costs incurred in attending oral proceedings which cannot bring the case to an end because of the new citation. However, as there was no suggestion that the appellant (opponent) wilfully abused the procedure in the case at issue, the board considered that it would be equitable to order the appellant to pay only half those costs.

In **T 514/01**, the board found that the late allegation of **public prior use** during the first oral proceedings before the opposition division had given rise to additional costs

because second oral proceedings before the opposition division had been needed to investigate the alleged prior public use.

In **T 416/00** the appellant (opponent) submitted a document which had been cited in the patent in suit and mentioned in the opposition proceedings but **had never been discussed between the parties** until the appeal proceedings, and had even been expressly excluded before the opposition division. The board found that the opponent's attempt to make surprising use of a document that it had disregarded in the oral opposition proceedings ran counter to the speedy conclusion of the proceedings before the two departments. Even if this was not a deliberate tactic on the opponent's part, the result was the same in terms of the principle of fairness governing proceedings. The respondent's request for a different apportionment of costs was granted.

In **T 671/03** document D18 was first filed in the appeal proceedings and deemed to constitute an **amendment to the appellant's submissions** pursuant to Art. 10b RPBA 2003 (now Art. 13 RPBA). If it had been filed within the opposition period, there would have been no need to discuss its admission during the oral proceedings in the appeal. The costs for preparing and attending the oral proceedings before the board, which mainly discussed the admission of D18, could have been avoided. For reasons of equity the board ordered a suitably modified apportionment of costs.

In **T 1033/09**, the oral proceedings had been adjourned following the admission of an auxiliary request submitted by the respondent during those proceedings. For the board, there was no doubt that this auxiliary request constituted an amendment to the respondent's case after it had filed its reply to the statement of the grounds of appeal, and so one within the meaning of Art. 13(1) RPBA. The board therefore found it equitable to apportion the costs in the appellant's favour.

Similarly, in **T 1071/06**, the appellant (patent proprietor) filed its auxiliary requests 1 to 3 one month before the oral proceedings and further supporting documents even closer to the oral proceedings. The board stated that it would always be unacceptable for a party to produce evidence without any explanation - unless conceivably its relevance was self-evident. But to produce evidence at the virtual end of the proceedings accompanied only by a statement that the explanation would be provided even later was not only discourteous but a clear, and apparently deliberate, attempt to frustrate the respondent's preparation for the oral proceedings. That was both an act prejudicing the efficient conduct of oral proceedings and an abuse of procedure, which merited an apportionment of costs.

Remittal to the department of first instance does not mean that the late filing of documents by the respondent gives rise to a disproportionate cost burden in relation to the appeal at issue (**T 1182/01**). Where a document successfully introduced at a late stage is of such relevance that the board decides to remit the case to the department of first instance in order to allow the patentee to have his case decided by two instances of jurisdiction, then in the absence of any convincing explanation for the late introduction of that document, the costs between the parties should be apportioned in such a way that the late-filing party should bear all the additional costs caused by his tardiness. Costs

should only be shared between the parties if there exist strong mitigating circumstances for the late filing of facts, evidence or other matter, for example, where the document introduced was obscure and therefore difficult to get hold of (**T 326/87**, OJ 1992, 522 and **T 611/90**, OJ 1993, 50).

The board in **T 874/03** ruled that when late filing of facts and evidence necessitated remitting the case to the department of first instance, the costs of any oral proceedings in the appeal proceedings were normally to be borne by the party responsible for the late filing.

In **T 2233/09** the board concluded that it would have been possible for the appellant to submit the evidence necessary to prove transfer of appellant status well ahead of the oral proceedings and that it was its conduct that had caused the adjourning of the oral proceedings. Therefore, for reasons of equity, the respondent's costs for the new oral proceedings had to be borne by the appellant.

(ii) No different apportionment of costs ordered - no disadvantage

In a number of cases the boards have refused a different apportionment of costs despite unjustified late submission because they were of the opinion that the belated introduction of new documents was not disadvantageous to the other party.

In **T 28/91** three documents which had already been submitted to the opposition division were re-submitted at a later stage in the appeal proceedings. The board ruled that the late submission was not disadvantageous as no new arguments had been introduced, and therefore no additional work had been necessary (see also **T 133/06**).

In **T 525/88**, the late filing was unjustified, but the request for apportionment of costs was rejected because the documents were of **no relevance** and did not affect the decision. The same applied in **T 534/89** (OJ 1994, 464) and **T 876/90**. In **T 882/91**, the board did not look into whether the unjustified late submission had led to higher costs because it was of the opinion that the other party had not had to spend very **much additional time and energy** on the documents which had been submitted late and that there was therefore no reason to apportion costs (see the decisions on similar cases in **T 737/89**, **T 685/91**, **T 556/90**, **T 231/90** and **T 875/91**).

In **T 330/88** the respondents filed a new document two days prior to the oral proceedings. The board took the view that the late filing was unjustified but that an apportionment of costs would not be equitable as the appellants had had **sufficient time** to deal with the document, especially since the decision was not taken until four months after the oral proceedings and following the opportunity to present comments.

In **T 336/86** the appellants submitted a prior patent belonging to the respondents for the first time in the appeal proceedings, which destroyed the novelty of the patent in suit. The respondents requested an apportionment of costs as the oral proceedings would not have been necessary had the patent been presented earlier. The board agreed that the late submission was not justified and that higher costs had been incurred as a result.

However, as the respondents either had - or should have - been aware of the **existence of their own patent**, it took the view that an apportionment of costs was not justified.

In **T 931/97**, the opponent had submitted new evidence in appeal proceedings, which was already **known** to the patentee from earlier proceedings before the German Patent Office. The board held that where the patentee knew the documents and could assess their prospects a different apportionment of costs was not justified.

In **T 633/05**, the appellant referred for the first time in the statement of grounds of appeal to a document which had been cited in the European search report but not considered in the opposition proceedings. In the board's view, the appellant sought to provide new evidence in support of a line of argument already put forward in the opposition proceedings, namely the fact that certain features of the present invention were known in the art. As the said document was cited in the statement of grounds of appeal and was anyway part of the examination file, the respondent had had ample time to study the content of this fairly short document and prepare a rebuttal against the appellant's allegation that it disclosed some key features of the contested patent. Thus, the board had no reason to suspect that the appellant's late filing might have been aimed at delaying the appeal proceedings, or that it resulted in the respondent being burdened with unreasonable additional costs.

In **T 273/10**, the board found that the opponent had abusively withheld the document in question, which ought to have been submitted for adversarial scrutiny in good time. However, it also observed that this had not been the only reason why further oral proceedings had been necessary. At the stage when the initial proceedings had been adjourned, it would anyway have been impossible to close them the same day. The board noted that a full day had been needed for the second set of proceedings and, moreover, that continuation of the proceedings had given the proprietor an opportunity to put forward new auxiliary requests. It followed that, since both parties had benefited from the holding of further oral proceedings, it would not be equitable to order the opponent to bear the costs alone.

b) Late submission was justified

In principle, costs are not apportioned differently if the late submission of facts and evidence appears justified. The boards have assumed in particular that belated submission is justified or that no abuse of procedure has taken place if new documents are filed for the first time at a later stage in the proceedings as a reaction to communications from the board, comments from the other party or amendments of the patent or decisions of the department of first instance which make such documents necessary in the first place (see **T 582/88**, **T 638/89**, **T 765/89**, **T 472/90**, **T 556/90**, **T 334/91**, **T 875/91**, **T 81/92** and **T 585/95**).

(i) No different apportionment of costs ordered

In **T 712/94** the board allowed the appellant (opponent) to introduce facts and evidence on alleged prior use at the appeal stage, whilst refusing the respondent's (patentee's)

request for apportionment of costs. The patentee had been made aware of the prior-use documents during negotiations conducted well before the first-instance decision was taken; so they had not taken him by surprise when submitted after the failure of those negotiations.

In **T 1167/06** the board did not consider it an abuse of procedure that two weeks before the oral proceedings the appellant filed three further auxiliary requests, additional arguments and four short documents, the latter illustrating common general knowledge on issues that had already been discussed. The need to **translate the requests and documents** and the resultant costs were in the nature of the European procedure with three official languages and affected all parties in equal measure. As the language of the proceedings for the patent was German, the respondent had to expect many submissions to be made in that language. The respondent stated that an additional representative had had to deal with the late filing and travel to the oral proceedings because the **representative assigned the case had been on leave** at the time in question. In the board's view, however, the representative's absence on leave was not the fault of the other party. Moreover, the respondent (opponent) had been represented by the same two representatives before the opposition division, so the additional representative had not needed much time to familiarise himself with the latest dossier updates.

Similarly, in **T 29/96** the request for a different apportionment of costs was refused. A new document which was fairly simple and straightforward in content had been filed together with the statement of grounds of appeal. The board ruled that this was the earliest possible moment that the document could have been submitted. In any event, the introduction of the new document could not be regarded as having given rise to a new opposition; it had not introduced new closest prior art, but was merely a new secondary information source. In the case before the board, it was logical for the appellant, as the losing party in the opposition proceedings, to introduce the document into the appeal proceedings in an effort to **improve his position** by **filling a gap** referred to in the impugned decision.

In **T 554/01**, the applicant submitted a number of documents following the negative decision taken by the opposition division. The board held that the mere fact that certain documents had been submitted at a late stage did not justify a finding that there had been an abuse on the part of the applicant, especially where they had been submitted as a result of a legitimate desire **to supplement the line of argument** which had been unsuccessful before the department of first instance. Moreover, the respondents had not shown that they had incurred additional costs as a result of the documents' introduction into the proceedings.

In **T 1171/97** the board rejected a request for apportionment of costs because it was satisfied that the new documents which had become known to the appellants (opponents) in the course of another search had not been filed in order to obstruct the proceedings, but because they contained aspects which, **according to the statement of the opposition division**, had not been found in the previously available references.

In **T 507/03** the opposition division had regarded the claimed invention as being patentable over the documents cited by the opponent. As a reaction to the reasons given in the impugned decision, the opponent (appellant) filed a new set of documents in the appeal proceedings, after the nine-month period for filing opposition. Refusing the request for a different apportionment of costs due to the late filing, the board argued that, according to Art. 108 EPC 1973 (minor editorial changes only) and R. 65 EPC 1973 (now R. 101 EPC), a statement of grounds of appeal had to identify the extent to which amendment or cancellation of the decision was requested. This, however, did not forbid a losing opponent from filing new pieces of prior art if it was felt that they could counter the reasons given in the appealed decision. Further, the new documents were all **easily understandable** and had not caused **an unreasonable amount of extra work** such as to justify departure from the normal rule that each party meets its own costs pursuant to Art. 104 EPC 1973.

In case **T 242/04**, the board held that the respondent's late filing was made **in response to a communication of the opposition division** for making written submissions and took place roughly one month before expiry of the final date accorded in the communication as well as roughly two months before the date for oral proceedings. The circumstances were therefore not such that there was no justification for the late filing or that it could be held that the respondent acted in bad faith. In addition, the appellant who requested an apportionment of costs and, in particular, reimbursement of the travel costs of a technical expert, neither gave any reasons let alone any evidence for the necessity of the technical expert's presence at the hearing before the opposition division, nor provided any evidence that the respective trip was caused only by the said late filing. Therefore, a different apportionment of costs was not regarded as justified.

The board in **T 333/06** found that the appellant's maintenance of his request for admission of the fresh ground for opposition - lack of inventive step - and of the new supporting documents after being notified of the board's preliminary negative opinion did not constitute abuse, as that opinion was not a final decision. Furthermore, while the appellant might have acknowledged that the new documents were not relevant to novelty, objectively he could not be censured for having maintained them in the hope that his oral presentation would result in the admission of lack of inventive step as a fresh ground for opposition and hence of the new documents relevant to inventive step. Thus while this had admittedly made the respondent's preparations for oral proceedings more difficult than they would have been if the appellant had withdrawn the new documents, the procedural conduct on the part of the appellant which had necessitated those preparations was not abusive but one of the appellant's legitimate prerogatives.

(ii) Different apportionment of costs ordered for reasons of equity

In **T 847/93**, the board admitted a statement of grounds of appeal documenting new prior art. Mitigating circumstances for the late filing of new facts and evidence were put forward by the appellants and were held to be credible by the board. On the other hand, the board was also of the opinion that it was credible that the costs incurred by the respondents were higher as a result of the introduction of an entirely fresh case than if the facts and evidence had not been filed at a late stage. It therefore decided to order an

apportionment of costs under Art. 104(1) EPC 1973 according to which the appellant had to pay the respondents 50% of the costs incurred by the respondents - after remittal to the department of first instance - in respect of the subsequent oral proceedings and the taking of evidence as well as in any subsequent appeal. In **T 1137/97**, a belatedly submitted document was likewise admitted into the proceedings and a different apportionment of costs was ordered. In determining the costs, the board itself, exercising its discretion under Art. 111(1) EPC 1973, awarded a fixed sum of EUR 2 500 to avoid the need for an exact investigation of the amount, which would have been more burdensome for the parties.

In **T 937/00**, the board found that all the requests presented by the appellant in writing in advance of the oral proceedings were clearly inadmissible and their filing could hardly be considered appropriate in the circumstances of the case, in which the appellant had chosen to file an exceptionally high number of independent claims in response to the notice of opposition. At the very end of the oral proceedings, he had even filed a third auxiliary request according to which all the claims which had been contested in the appeal procedure were simply abandoned. In these circumstances, the board felt compelled to admit the belated auxiliary request, as had the board rejected the appellant's third auxiliary request, the appeal would have been dismissed and the revocation of the patent would have become final. The board also remitted the case to the department of first instance, none of the remaining claims having ever been considered by the opposition division. However, the board ordered for reasons of equity an apportionment of the costs of the oral proceedings such that the appellant bore 50% of the costs incurred by the respondent in travel expenses and remuneration for his representative for the purpose of attending the oral proceedings.

#### 6.2.2 Acts or omissions prejudicing the timely and efficient conduct of oral proceedings

##### a) Failure of a party to appear at oral proceedings

A party requesting oral proceedings is not obliged to be represented at them. Its duly announced absence could not be considered as improper behaviour (**T 1071/06**).

However, the boards consider it highly undesirable for summoned parties to announce too late, unclearly or not at all that they will not be attending. Such conduct is inconsistent both with the responsible exercise of rights and with the basic rules of courtesy (see for example **T 434/95**, **T 65/05**).

There is an equitable obligation on every party summoned to oral proceedings to inform the EPO as soon as he knows that he will not be attending as summoned (**T 212/07**), regardless of whether he himself or another party requested the oral proceedings and of whether or not a communication accompanied the summons to oral proceedings. If a party who has been summoned to oral proceedings fails to attend as summoned without notifying the EPO in advance, an apportionment of costs in favour of another party, who has attended as summoned, may be justified for reasons of equity in accordance with Art. 104(1) EPC 1973 (established case law, see for example **T 930/92**, OJ 1996, 191; **T 123/05**, **T 972/13**). As one party's non-attendance does not automatically put the other

party at a disadvantage (**T 273/07**, **T 544/94** and **T 507/89**), one essential question here is whether the appellant's failure to attend rendered the oral proceedings unnecessary (**T 10/82**, OJ 1983, 407; **T 275/89**, OJ 1992, 126).

(i) Different apportionment of costs ordered

In **T 909/90** oral proceedings had been appointed at the appellants' request. Without giving the board or opponents any advance notice, the appellants did not attend the oral proceedings. Nor did they comment on the board's communication. For this reason in particular the oral proceedings contributed nothing new to the case. The board ordered the apportionment of costs without examining whether higher costs had been incurred as a result of the appellants' failure to appear. The appellants' failure to advise the board **in time or at all** that they would not be appearing at the oral proceedings was likewise the reason for ordering them to bear the costs in **T 434/95**, **T 641/94** and **T 123/05**.

In **T 937/04** the appellant (patent proprietor), by fax sent only to the EPO after its business hours on Friday, 17 February 2006, informed the board, without giving reasons, that it would not be attending the oral proceedings on 21 February 2006. The board stated that the appellant, in informing only the EPO and not the other parties, had failed to exercise all due care required and concluded that, for reasons of equity, an apportionment of costs should be accorded in favour of the respondent.

In **T 91/99**, the board stated that, where an appellant failed to give notice that he would not be attending the oral proceedings until two working days before the date set for the proceedings, this could constitute negligent or wilful conduct; however, in the case at issue, there was no culpable conduct on the part of the appellant which could justify an apportionment of costs under Art. 104(1) EPC 1973. In **T 693/95** and **T 338/90** costs were awarded because notice of the appellant's absence had been given, in the former case, only an hour before the oral proceedings and, in the latter, at the time when the oral proceedings were due to start.

According to the board in **T 1079/07**, to inform the EPO and any other party to the proceedings about the intention not to attend oral proceedings in due time is a matter of courtesy and respect rather than a procedural obligation to be met (see also **T 69/07**). In cases where a party **delays** his decision not to attend oral proceedings or the communication of this decision to the board, an apportionment of costs in favour of the other party may be justified.

In **T 53/06** the appellant requested oral proceedings "in case the board considers not to set the decision aside". As soon as it received the board's summons to oral proceedings and communication, the appellant knew not only that oral proceedings would take place but also that the condition it had itself placed on its own request for oral proceedings had been fulfilled, since the communication clearly indicated that the board's provisional opinion was that the decision under appeal would not be set aside. However, the appellant neither replied to the communication nor indicated at all, let alone as soon as it knew, that it would not attend oral proceedings. Since the respondent had, in the absence of any submissions from the appellant additional to those in the grounds of

appeal, nothing to add to its own case in its reply to the grounds of appeal, the **oral proceedings proved to be unnecessary**. In those circumstances, an apportionment of costs in favour of the respondent was held to be appropriate under Art. 16(1)(c) RPBA as well as under Art. 16(1)(e) RPBA (see also **T 212/07**, **T 2179/09**).

(ii) Refusal of a request for apportionment of costs

The non-appearance of a party generally does not adversely affect the party which did attend. As a rule, a different apportionment of costs will not be ordered if the parties which are affected have neither shown nor claimed that they incurred additional costs because the other party was not present (**T 544/94**, **T 632/88** and **T 507/89**).

In **T 591/88** both parties had requested that oral proceedings be held - both in fact filing an "**unconditional**" request. Without giving any advance notice, the respondents failed to appear. The appellants requested apportionment of costs on the grounds that the oral proceedings would not have been necessary had they known that the respondents would not be attending. The board rejected a different apportionment of costs because the appellants had made an "unconditional" request for oral proceedings, i.e. also covering the eventuality that the other party would not appear.

In **T 1441/06**, the respondents had not asked for oral proceedings. They had not reacted to the board's communication, nor had they apparently had the intention to come or to notify the EPO of their intended absence at all. It was the appellant who had requested oral proceedings, albeit conditionally. In addition, the oral proceedings were not only arranged at the request of the appellants, but also because the board itself wished to be in a position to give a decision on the case. The oral proceedings would therefore not have been cancelled by the board even if the respondents had at an early time indicated that they would not attend. In these circumstances the board saw no sufficient reason to depart from the ordinary rule that each party bears its own costs.

In **T 65/05** the respondent maintained that, like the appellant, it would not have attended the oral proceedings if it had been informed in time that the opposing party would not be appearing. In the case in point the board considered it doubtful that the oral proceedings could therefore have been waived or that the respondent would then at any rate not have attended them or would have withdrawn its request for oral proceedings. Both parties had submitted auxiliary requests for oral proceedings. The board had issued the summons without an opinion on the merits, in particular without any announcement or intimation that it was likely to decide in the respondent's favour. Therefore the respondent could not rely on a favourable decision purely on the basis of its written submissions if it stayed away from the oral proceedings. In these specific circumstances the board deemed it likely that that respondent (patent proprietor) would have appeared at the oral proceedings to defend its interests even if it had known that the opposing party would not be there. The request for a different apportionment of costs was therefore rejected (see also **T 190/06** and **T 1361/09**).

In **T 435/02**, both the appellant and the respondent had filed an **auxiliary request** for oral proceedings. When filing its request, the respondent had wanted to attend the oral

proceedings to ensure that the board would not overturn the decision under appeal without its having the opportunity to present its case orally. In response to the appellant's decision not to attend the proceedings, the respondent gave notice that it too would not be attending and commented that it had wished to attend "merely to rebut statements/arguments made by the patentee during these proceedings". Although the board expressly informed the parties that the oral proceedings would be held as planned, the respondent failed to attend. The respondent requested a different apportionment of costs because the appellant had withdrawn its request for oral proceedings so late that the respondent had incurred costs which no longer could be recovered. The board refused the request on the grounds that, contrary to the respondent's claim, its failure to appear was not a response to the appellant's decision not to attend but the result of a choice not to take the opportunity which it had requested to present its case orally.

In **T 275/89** (OJ 1992, 126) the appellant's representative filed a request that the oral proceedings scheduled for 09.00 on 3 May be adjourned, on the grounds that the appellant was unable to attend the oral proceedings owing to illness. The request was submitted so late, i.e. in the afternoon of 30 April, that it was **impossible** in view of the public holiday the following day to notify the respondents **in time**: they had already set out during the afternoon of 1 May. The request for adjournment was refused however and the oral proceedings took place without the appellant. The respondents requested a different apportionment of costs on the grounds that they would not have attended either had they known that the appellant would not be appearing. The board, however, took the view that the appellant could not be made responsible for the fact that the respondents had chosen to make an early start to the journey. Furthermore, the only matter of importance was whether the appellant's absence rendered the oral proceedings unnecessary. This question had to be answered in the negative. The request for costs was therefore rejected. The same decision was reached in **T 1856/10**, where a medically certified, sudden and unexpected illness of the appellant's representative had made him unable to attend. Here it was deemed acceptable that the board and the other party had not been informed of the first signs of his illness on the morning of the day before the oral proceedings, but only on the afternoon of that day, after he had seen a doctor. The request for costs was therefore rejected.

In **T 849/95** the respondent submitted a request for apportionment of costs, as the appellant had not informed the EPO in good time that he would not be taking part in the oral proceedings which he too had requested. The board rejected the request, as the oral proceedings were arranged not only at the request of both parties, but also because the board itself required further airing of facts on the part of the respondent. The oral proceedings would not have been cancelled even if the appellant had informed the EPO in good time.

In **T 838/92** too, the appellants stayed away from the oral proceedings. The respondents requested a different apportionment of costs as they had appeared with **seven witnesses**. The board rejected the request because the witnesses had been summoned at the respondents' instigation in order to prove the prior uses alleged by the latter. There was therefore no reason to impose the costs on the appellant (cf. also **T 273/07**).

- b) Request for scheduling or postponement of oral proceedings; withdrawal of request for oral proceedings

Nothing in the EPC prevents a party from **withdrawing a request for oral proceedings** at any stage of the procedure. The withdrawal of such a request is not culpable conduct as such and cannot be a factor in assessing whether reasons of equity exist in accordance with Art. 104(1) EPC 1973 (**T 91/99**).

On the basis of Art. 116(1) EPC 1973 any party has the exclusive right to request oral proceedings if it considers them to be necessary. The fact that one of the parties has to travel a longer distance than the other does not make the request for oral proceedings abusive. Furthermore, an objection of abuse based on the fact that the problems to be discussed in oral proceedings are simple ones and could easily be presented in writing cannot be sustained (**T 79/88**).

In **T 297/91** it had, for a number of reasons, not been possible to decide all the issues during the first oral proceedings, with the result that the respondent (patent proprietor) had requested that oral proceedings be held for the second time and that the costs incurred be borne by the appellant. The board rejected the request for apportionment of costs because the further oral proceedings had become necessary for reasons beyond the patent proprietor's control.

In **T 432/92 postponement** of the oral proceedings was requested two days prior to the agreed date as the father of the respondents' representative had died on the previous day. The appellants requested a different apportionment of costs because their representative had already travelled from America to the EPO, thereby incurring unnecessary costs. They argued that the respondents could have been represented by someone else from their patent attorney's firm. The board refused the request because there had been no recognisably wrongful or irresponsible conduct on the part of the other party. The board was of the opinion in particular that the respondents could not be expected to be represented by a different patent attorney, who would have had to prepare two oral proceedings in one day (one for an ongoing parallel case) and to travel as well.

In **T 154/90** (OJ 1993, 505) the opponents had initially insisted on oral proceedings, although the opposition division did not consider that they were necessary. However, **eight days** before the arranged date the opponents informed the opposition division that they wished to cancel the oral proceedings. For reasons of internal organisation at the EPO, the opposition division did not receive this letter until after the date of the oral proceedings. The board of appeal ruled that eight days was a sufficient period of time for the oral proceedings to be cancelled, since no evaluation of new facts or arguments was needed (the case was different in **T 10/82**, OJ 1983, 407). Since the letter was received too late for purely internal reasons, the opponents were not at fault. They were not obliged to bear a part of the costs of the other party. A change of opinion regarding the necessity of oral proceedings could not be regarded as culpable conduct either (see also **T 383/05**).

In **T 29/96** the respondent informed the board and appellant, **four working days** before the date set for oral proceedings, that it was abandoning the patent and no longer requesting oral proceedings. However, the declaration abandoning the patent was not completely unambiguous. The board refused the appellant's request that costs be awarded against the respondent; it had been clear that the oral proceedings would probably be superfluous and the appellant could have contacted the DG 3 Registry to find out about the course the proceedings would be taking.

In **T 490/05**, on the day before oral proceedings, the proprietor had withdrawn both his request for oral proceedings and his request to have the impugned decision set aside. Thus, even before oral proceedings it was clear that the impugned decision revoking the patent was sure to be made final. This gave him the advantage of being able to focus his preparations for the oral proceedings on the proprietor's request for apportionment of costs. Thus there were no reasons of equity for sharing the costs incurred by the opponent.

In **T 42/99**, appellant I announced, as early as one month prior to oral proceedings, that experts would attend those proceedings. Only shortly before the appointed date for the proceedings, appellant II submitted a request that statements by an expert be admitted at the oral proceedings. Appellant II also requested the postponement of the oral proceedings so that its expert would have enough time to prepare. The board decided to postpone the appointed date, however, in doing so, the board also regarded it as equitable to order a different apportionment of costs. In its reasons the board took the view that, although a reply from appellant II to the announcement by appellant I that experts would attend the oral proceedings would not have been possible within the time limit set by the board, a "response" to the aforementioned announcement should have followed immediately and not shortly before the appointed date for oral proceedings. At this late stage, it was plausible that the representative of appellant I had made arrangements for the trip to Munich and a hotel reservation, which could not be cancelled without a financial loss.

In **T 99/05**, the appellant submitted, 13 days before the oral proceedings, a new experimental report in view of which the respondent asked for postponement of the oral proceedings. The appellant strongly objected to such a postponement. Since, in the board's view, the question of postponing the oral proceedings was linked to the question of whether the late-filed experimental report should be introduced into the proceedings, the board deemed it appropriate to maintain the oral proceedings in order to hear the arguments of the parties concerning the relevance of the late-filed experimental report of the appellant, and hence to decide on the introduction or not of this report into the proceedings. However, the oral proceedings did not result in a final decision with regard to patentability and second oral proceedings were scheduled in order for the respondent to be allowed sufficient time to file counter-experiments. Whilst the late filing did not represent an abuse of proceedings, it was evident that the final outcome of the proceedings had been delayed. Therefore, the board found it appropriate for reasons of equity to order a different apportionment of costs.

In **T 556/96**, the appellant withdrew his request for oral proceedings **early in the afternoon preceding** the oral proceeding. By that time, the opposing party's representative had already set off. The board ruled that the appellant had withdrawn his request too late. The fact that the other party had also unconditionally requested oral proceedings was irrelevant; it too could have withdrawn the request, had it known in time that the appellant would not be attending. The board therefore ordered the appellant to pay the costs incurred by the respondent in preparing and attending the oral proceedings.

c) Other cases

An apportionment of costs is justified if excessive costs are incurred for the oral proceedings and caused mainly by one party (see **T 49/86**). The right to oral proceedings is absolute and therefore not subject to any conditions (**T 614/89**, **T 26/92**, **T 81/92** and **T 408/02**). If the party that requested oral proceedings fails to produce new arguments during them, that does not constitute abuse of procedure and is not a reason for awarding of costs, as consistently ruled in **T 303/86**, **T 305/86**, **T 383/87**, **T 125/89** and **T 918/92** (but not in **T 167/84**, OJ 1987, 369).

In **T 1022/93** the oral proceedings, which only the appellant had requested, were superfluous. Even in the written appeal procedure the appellant had refrained from communicating why, in its opinion, the amended process claims should be considered inventive and from specifying that the additional example described a process according to the amended set of claims. This made it impossible either to remit the case without oral proceedings or to deal with the substance of the case at the oral proceedings. For reasons of equity, therefore, the appellant was required pursuant to Art. 104(1) EPC 1973 to reimburse to the respondent the costs incurred as a result of the participation at the oral proceedings before the board.

In **T 905/91** the respondents had requested a different apportionment of costs on the grounds that the appellants had not brought prepared auxiliary requests to the oral proceedings, which had therefore continued into the afternoon. The board rejected the request for the following reasons. Firstly, the appellants had endeavoured to take account of the reservations expressed by the board and had filed new documents. Secondly, oral proceedings served specifically to clarify the situation completely through the direct exchange of arguments and, if necessary, to rephrase the patent application in the light of the outcome of the discussion. The duration of oral proceedings depended on the particular case; at any rate it was not unusual for such proceedings to continue into the afternoon, and the parties should be prepared for this.

In **T 210/98**, the respondent requested an apportionment of costs on the ground that the appellant had withdrawn three auxiliary requests at the beginning of the oral proceedings for which the preparation had been time-consuming. The board refused the request, stating that it was normal for parties to prepare themselves thoroughly for oral proceedings. A change of view was one of the situations with which a professional representative could be confronted during oral proceedings. As it was not exceptional for requests to be changed or withdrawn during oral proceedings as a result of the

discussion held, no abuse of procedure could be seen in the withdrawal of requests at the beginning of the oral proceedings, which had apparently been a reaction to convincing written arguments.

In **T 461/88** (OJ 1993, 295) the board decided that the appellants' insistence on hearing witnesses was clearly compatible with the principle of the responsible exercise of rights, as this may well have been the only means of proving the alleged public nature of the prior use. The board refused the request for apportionment of costs.

In **T 668/03** the appellant requested an apportionment of costs in view of the fact that oral proceedings had to be held for a second time. As a matter of fact, the former oral proceedings had to be adjourned because the identity of one of the opponents had been drawn into doubt by the appellant during the first oral proceedings. The board pointed out that it was the duty of the respondent to make it clear throughout the procedure who belonged to the group of common opponents. However, had the appellant raised this issue before the first oral proceedings, it could have been dealt with in writing and thus the costs for further oral proceedings could have been avoided. Therefore, the board could not detect any reasons of equity which could be used to order a different apportionment of costs (likewise **T 1404/10**).

### 6.2.3 Filing of opposition or appeal

Exceptions to the principle that each party must bear its own costs may also be made in cases of abusive conduct in which it is equitable to make an award of costs against one of the parties. An apportionment of costs is often requested on the grounds that the notice of opposition or appeal has been incorrectly filed. The fact that an appeal proves clearly inadmissible does not justify an award of costs if the appellant evidently has the subjective impression that he is adversely affected. A party which is of the opinion that the first-instance department has not acceded to its request may consider that it is adversely affected by the decision and may consequently decide to file an appeal. This is no more than its legitimate right to make use of the appeal procedure provided for in the EPC and to have the decision reviewed. Occasionally having to seek defence against unfounded or even inadmissible appeals is just one of the general risks of life and thus, in the absence of any further circumstances, does not justify a different apportionment of costs. The EPC makes no distinction between successful and unsuccessful appeals for the purposes of cost apportionment; so it cannot be argued that apportionment is justified if an appeal appears to be clearly inadmissible (**T 964/14**, **T 2177/12**, **T 614/89**, **T 772/95**).

In **T 170/83** the opponents had used an incorrect form for payment of the opposition fee, thereby giving rise to a decision by formalities to reject the opposition; the opponents thereupon filed an appeal against this decision. The patent proprietors (respondents) requested that the appeal costs be awarded against the appellants, since it was their error which had rendered the proceedings necessary. The board rejected the request, taking the view that the appeal proceedings were not improper. An abuse justifying the apportionment of costs could only be rooted in the party's conduct **during the proceedings**.

In a number of cases the boards took the admissibility or allowability of an opposition or an appeal to be an indication that no abuse had taken place (e.g. **T 7/88** and **T 525/88**). Similarly, in **T 506/89**, the board found that the opponent's filing of an appeal did not constitute an abuse of procedure and therefore rejected the request for a different apportionment of costs, since it had decided, in the oral proceedings, to maintain the patent as amended. Nor was there an abuse of procedure where the appeal was filed without new arguments (**T 605/92**) or where the appellant's chances of success were considered to be low (**T 318/91**). According to **T 717/95** no abuse has taken place if a party to the proceedings misinterpreted the content of a citation when comparing it with the subject-matter claimed in the disputed patent.

In **J 22/12**, it was disputed whether an appeal against a communication issued on behalf of the examining division could be admissible. The board found that this was not the case. It considered that the filing of an opposition and of a subsequent appeal in the matter could not be considered as an abuse of procedure as they were actions which used the provisions of the EPC for the ends envisaged by those provisions. Thus the board found it appropriate that each party should bear its own costs.

#### 6.2.4 Withdrawal of opposition or appeal at short notice

An appellant is entitled to withdraw his appeal at any time. Based on the principle of free party disposition, this right may not be restricted, even implicitly by the threat of cost apportionment, on the grounds that oral proceedings have been scheduled and the opposing party cannot be notified in time. As a rule, the benefits that respondents derive from the withdrawal of the appeal will offset the costs that they incur, even if they are avoidable. That is the case even if the appeal is only formally pending on account of the request for cost apportionment (**T 490/05**).

In **T 85/84** the appellants withdrew the appeal in a telex to the EPO and the respondents' representative **48 hours** before the date of the oral proceedings. By the time the respondents' representative found out, he had already departed in order to prepare for the oral proceedings in Munich. The board conceded that the appeal had been withdrawn at extremely short notice but did not order apportionment of the costs, as the respondents' representative had still been informed in due time that the oral proceedings would not be taking place. Internal delays in forwarding the communication were not the fault of the appellants. The representative's departure for Munich a day before the oral proceedings was not warranted by the distance and therefore not necessary from the point of view of the oral proceedings.

In **T 614/89** and **T 772/95**, in which the appeals were withdrawn respectively four and three days before the date set for oral proceedings, the boards ruled that the short notice alone did not constitute an abuse of procedure. The same decision was reached in **T 674/03**, where the opponent withdrew its appeal **nine days** before the date set for the oral proceedings. The board held that the exercise of an absolute procedural right did not, in principle, constitute abuse and that there was no evidence of improper or negligent conduct.

### 6.2.5 Other cases

In **T 952/00**, the board found that the wrongful act, whether intentional or simply the result of culpable negligence, had to be judged in the light of the normal behaviour of an ordinarily diligent party. It also had to be the direct cause of the costs in suit. In the case in point, it transpired that the proprietor had culpably made inaccurate statements in the course of the proceedings. The board concluded that without those false statements the opponent (appellant) would not have been required to go to the expense of gathering further evidence. Its request for an apportionment of the costs it had incurred during taking of evidence after notification of the decision at first instance was therefore granted.

In **T 269/02** the appellant had been given sufficient opportunity during the protracted written proceedings and at the oral proceedings before the opposition division to amend its claims to alleviate the problem under Art. 123(2) EPC 1973. However, the appellant had chosen not to do this, with the result that the patent was revoked on the ground of Art. 123(2) EPC 1973, rendering necessary the present appeal proceedings which dealt solely with the issue of amendment. In view of this, the respondent argued that the appellant's conduct had been far from exemplary and, if the appeal were to be allowed, and the case remitted to the opposition division, the appellant should be made to bear the costs incurred as a result of the present appeal proceedings. Contrary to the respondent's assertions, the board stated that in cases such as the present, where the patent had been revoked in opposition proceedings, the appellant must be given the opportunity to study the decision of the opposition division duly substantiated in writing in order to enable it to decide on the **formulation of appropriate requests** for the appeal proceedings. In these circumstances, the board did not find that the appellant had abused or exceeded its legitimate rights, thereby arbitrarily causing the respondents to incur costs which, in all fairness, ought to be reimbursed. The request for an apportionment of costs was therefore refused.

Similarly, the circumstances underlying **T 916/05** did not, according to the board, justify a different apportionment of costs. The fact that some of the arguments had not been presented before and could have been filed in oral proceedings before the opposition division, had such proceedings taken place, was in the board's opinion irrelevant and could not be regarded as an abuse of procedure. In fact, an appellant could not be prevented from choosing a **different line of arguments** when making its case before a board of appeal.

In **T 162/04** the respondent requested a different apportionment of costs because it had had to invest a considerable amount of time and effort in considering the numerous requests submitted by the appellant during the appeal proceedings. However, the appellant's requests were later **withdrawn** rendering the time and effort of the respondent, in its view, useless. In the board's judgment, such conduct did not amount to an abuse of procedure. Indeed, the conduct of the appellant, who by withdrawing the contested requests and by **replacing** them with other requests was apparently trying to overcome the objections which had been raised, was not as such objectionable but had

to be considered as a legitimate defence of its case. The request for an apportionment of costs was therefore refused (likewise **T 967/12**).

The request for apportionment of costs made by the respondent in case **T 248/05** was mainly based on the alleged **lack of clarity** of the category of claim 1 as granted and the vagueness in this respect of the appellant's submissions in the statement setting out the grounds of appeal. The board held, however, that the alleged lack of clarity of the category of the claimed subject-matter and the possible associated additional costs which could be incurred by a clarification of this subject-matter would not justify an apportionment of the respondent's costs on the appellant. Firstly, the criticised elements of claim 1 and the alleged vagueness of the statement setting out the grounds of appeal were entirely irrelevant for the subject-matter of the appeal in point, i.e. the findings of the opposition division on added subject-matter. Secondly, lack of clarity of a claim or of a submission could hardly be regarded as an abuse of procedure unless this were intentional. The board therefore saw no legal basis for any apportionment of costs.

### 6.3. Procedural aspects

#### 6.3.1 Filing a request for apportionment of costs

The practice before the boards of appeal is that all requests by parties, including any requests as to costs, should be made before any decision is announced in oral proceedings, as the decision on apportionment is part of the final decision (see R. 88(1) EPC re opposition proceedings). In **T 212/88** (OJ 1992, 28), though, **by way of exception** the request for apportionment was also considered later, because at that time this practice had not been published and the parties were therefore unaware of it.

The decision on costs may also be taken in isolation if the opposition and the appeal have been withdrawn (**T 85/84**, **T 765/89**).

There is no basis for deciding on a different apportionment of costs if the party which would benefit from the decision did not request apportionment and even made it known that it would not enforce any such decision (**T 408/91**, **T 125/93**).

A request for apportionment of costs submitted by the respondent merely as a party to the appeal proceedings as of right (Art. 107, second sentence, EPC 1973) must be rejected as inadmissible as it would otherwise contravene the principle of equal treatment (**T 753/92**, **T 514/01**, **T 1237/05**).

In several decisions, the boards of appeal have stressed the importance of submitting evidence to support a request for a different apportionment of costs (e.g. **T 49/86**, **T 193/87**, **T 212/88**, OJ 1992, 28; **T 404/89**, **T 523/89**, **T 705/90**, **T 776/90**, **T 306/93**). Thus in **T 896/92** the request for a different apportionment of costs was rejected for lack of substantiation and because of the absence of obvious reasons. In **T 193/87** (OJ 1993, 207) the board likewise refused to apportion costs because the respondents had provided no evidence and it was unable to see any reasons of equity that might have justified such an apportionment.

### 6.3.2 Competence issues

In **T 765/89** it was stressed that the board was still responsible for deciding on the request that costs be awarded against the appellants even if the latter had withdrawn their appeal. Where an opponent (respondent) withdraws his opposition during appeal proceedings, he ceases to be a party to the appeal proceedings as far as the substantive issues are concerned but retains his party status in so far as the question of apportionment of costs is still at issue (**T 789/89**, OJ 1994, 482).

According to the board in **T 1059/98**, apportionment of the costs of proceedings before the opposition division could not be requested for the first time on appeal, because the boards of appeal could only review decisions taken by a department of first instance and so had no competence to decide on such requests (see also **T 1273/11**). As a matter of principle costs are not apportioned in transfer proceedings (**J 38/92**, OJ 1995, 8).

### 6.3.3 Apportionment of costs

Under R. 88(1) EPC (R. 63(1) EPC 1973) the decision on **apportionment of costs in opposition proceedings** may consider only the expenses necessary to ensure proper protection of the rights involved (**T 167/84**, OJ 1987, 369; **T 117/86**, OJ 1989, 401; **T 416/87**, OJ 1990, 415; **T 323/89**, OJ 1992, 169). The order for apportionment of costs should be such as to compensate the other party for the unnecessary costs which it has incurred as the direct result of the appellant's failure in its duty (**T 212/07**, **T 952/00**). On the costs of interpreting at oral proceedings, see Chapter III.C.5.2.

Under R. 88(1), third sentence, EPC, the costs include the remuneration of the parties' representatives. In **T 854/09** the board stated that the costs concerned were those reasonably incurred by the opponent. In this case, where an adjournment of oral proceedings was necessary, this included the expense of a single representative preparing for and attending the second proceedings, including travel and accommodation. Under R. 88(2), last sentence, EPC, costs may be fixed once they have been established as credible. The request must be accompanied by a bill of costs and supporting evidence. The board in **T 475/07** exceptionally took the view that a detailed cost calculation was superfluous. It worked on the assumption that the representative could calculate on the basis of one day for preparing the additional oral proceedings and one day for attending them. The cost estimate of EUR 2 300 thus seemed credible.

In **T 930/92** (OJ 1996, 191) the board held that, when fixing the amount of costs to be paid to a party, in addition to the remuneration of the professional representative of that party, the expenses incurred by an employee of that party in order to instruct the professional representative before and during oral proceedings could be taken into consideration under R. 63(1) EPC 1973, if such instruction was necessary to assure proper protection of the rights involved. In **T 326/87** (OJ 1992, 522), all the costs incurred as a result of the remittal to the department of first instance were deemed to be apportionable.

According to Art. 16 RPBA, **the costs ordered to be paid in appeal proceedings** may be all or part of those incurred by the receiving party and may inter alia be expressed as a percentage or as a specific sum. In the latter event, the board's decision is a final decision for the purposes of Art. 104(3) EPC. The costs ordered may include costs charged to a party by its professional representative, costs incurred by a party itself whether or not acting through a professional representative, and the costs of witnesses or experts paid by a party but shall be limited to costs necessarily and reasonably incurred.

a) Future costs

The prevailing view in the boards' case law is that they should not take a decision on the apportionment of future costs because they have no basis for assessing them and lack jurisdiction (**T 1178/04**, OJ 2008, 80). Thus the board in **T 758/99** held that a decision on the apportionment of **future** costs in appeal proceedings caused by the late filing of documents depended on the course of the subsequent procedure and, in the absence of the necessary facts, could not be decided at that stage (see also **T 133/06**). For these reasons the board deviated from the judgment given in **T 611/90**, in which the legitimately incurred future costs had been apportioned. The board remitted the case to the department of first instance and ordered that a decision on the request for apportionment of costs would be taken at a later stage (see also **T 223/95**, **T 758/99**, **T 890/00**, **T 1182/01**, **T 48/00** and **T 758/99**).

In **T 369/08** the board also stated that it was apparent that the costs arising would depend on the course of the future proceedings. According to the board, the consequence of this is that the board necessarily is not in possession of the necessary facts to decide upon an apportionment of costs. Consequently the Board considered it appropriate not to make an open-ended order of apportionment of costs as had been done in the aforementioned **T 611/90**.

In **T 1282/08** the board noted that in some cases some boards of appeal ordered the apportionment of future costs (see **T 847/93**, **T 715/95**) and the scenarios facing these other boards might have been different in the above-cited cases. Nevertheless, the board had difficulty seeing how it could make a decision, at the remittal stage, on the apportionment of costs yet to be incurred in subsequent proceedings, the course and outcome of which were still open to speculation. Hence the possible apportionment of opposition costs was to be decided by the opposition division at the end of the opposition proceedings.

b) Procedure for fixing costs

Under R. 88(2) EPC, costs will be fixed by an apportionment decision under Art. 104(1) EPC only at the written request of the entitled party. The request must be filed with the registry of the opposition division and is not subject to a time limit. Under R. 88(3) EPC, a request for a decision by the opposition division on the amount fixed by the registry must be filed within one month of the **communication** on the fixing of costs. It must be filed in writing and state the grounds on which it is based. It is not deemed to

be filed until the fee prescribed in Art. 2(16) RFEes has been paid. Thus the requirements are largely the same as for appeals.

In **T 668/99**, the question was raised as to whether the prohibition of *reformatio in peius* also applies if the proceedings are not referred to a higher level of jurisdiction but are continued within the same level of jurisdiction, as is the case with a **legal remedy against the fixing of the costs** by the opposition division registry. The board recalled that an appeal and a request for an opposition division decision have far more similarities (suspensive and devolutive effect) than differences, and so the position of the sole requester is comparable to that of the sole appellant. The board was therefore satisfied that the prohibition of *reformatio in peius* also had to apply to a request under Art. 104(2), second sentence, EPC 1973.

Where the **boards of appeal** have to rule on the apportionment of costs, they have the power under Art. 104 EPC (Art. 111(1) EPC 1973) and having due regard to Art. 113(1) EPC 1973, not only to apportion but also to fix the costs (see e.g. **T 934/91**, OJ 1994, 184; **T 323/89**, OJ 1992, 169; **T 930/92**, OJ 1996, 191). The scope of the apportionment depends on the specific circumstances of the individual case. The party to the proceedings who caused the additional costs may be ordered to pay all or a part of those costs (**T 323/89**, OJ 1992, 169).

Since the filing of new material after expiry of the opposition period may cause the other party to incur additional costs, the board, in **T 117/86** (OJ 1989, 401), ordered that the appellant should pay the respondent 50% of his representative's costs in preparing and filing the response to the appeal (see also **T 83/93**).

In **T 715/95**, new documents were submitted only in the appeal proceedings, and the delay was not justified. However, the board admitted the documents, remitted the case to the department of first instance and ordered the late-filing party to bear 50% of the cost of the oral proceedings. Similarly, in **T 45/98**, the appellant submitted new documents only in the appeal proceedings, and they were admitted. The case was not remitted to the department of first instance, but the appellant was ordered to pay 45% of the costs incurred in the appeal proceedings by the respondent's representative.

#### 6.3.4 Appeal solely against the decision on costs inadmissible

R. 97(1) EPC (Art. 106(4) EPC 1973) states that the apportionment of costs of opposition proceedings cannot be the sole subject of an appeal. As a rule, therefore, an appeal relating to apportionment of costs must be regarded as inadmissible if the appeal relating to the revocation of a patent is rejected as inadmissible for lack of merit and there is no other admissible request. However, if the impugned decision did not take into account the withdrawal of the request for oral proceedings and is thus based on a substantial procedural violation, the part of the impugned decision relating to apportionment of costs must be set aside (see e.g. **T 154/90**, OJ 1993, 505).

In **T 1237/05** the board found that the opponent, not being adversely affected by the patent's revocation, was not entitled to appeal solely against the apportionment of costs.

The opponent's appeal, in view of Art. 106(4) EPC 1973, was inadmissible on that count alone. The mere fact that an appeal, in this case the proprietor's, was admissible did not in itself make the opponent's appeal admissible (the opponent in any case not being adversely affected by the first-instance decision on the merits) because it related only to cost apportionment. A distinction had to be drawn between appeal proceedings (initiated by at least one admissible appeal) and an appeal lodged by a party; the wording of Art. 106(4) EPC 1973 clearly referred to an appeal lodged by one of the parties to the proceedings, regardless of the existence of other appeals lodged by the other parties.

In **T 753/92** respondents I were adversely affected by the decision under appeal only in so far as their request for apportionment of costs was rejected. If respondents I had lodged an appeal against this decision, the appeal, with the apportionment of costs as its sole subject, would have been inadmissible under Art. 106(4) EPC 1973.

In **T 668/99**, the board took the view that, since no appeal had been lodged against the opposition division's decision on costs, that decision had become final upon expiry of the time limit for filing a notice of appeal. It found that the decision on costs mentioned in the request had not been submitted with the appeal, nor was there any indication of an implicit challenge to that decision. The board held that, unlike general procedural requirements, which - as had been consistently held - had to be reviewed at all times, including in the appeal procedure, the issuance of a decision on costs by the EPO did not necessarily mean that a decision had also to be reviewed by the EPO. The review of a decision at a higher level of jurisdiction required an appeal by one of the parties.

In **T 420/03** the question arose whether the "additional decision" concerning the apportionment of costs fell within the scope of appeal. While the notice of appeal remained completely silent as regards the decision on the apportionment of costs, the request for cancellation of this decision was contained in the statement setting out the grounds of appeal. In the case before it, the board found that the notice of appeal did not contain any explicit statement concerning the apportionment of costs, and there was no other statement in the notice of appeal which could be interpreted - at least indirectly - that this was also the subject of the appeal.

---

## 1. Legal character of opposition proceedings and applicable principles

According to Art. 99(1) EPC, within nine months of the publication of the mention of grant of the European patent any person may give notice to the EPO of opposition to that patent. Opposition proceedings (see Art. 99 to 105 and R. 75 to 89 EPC) constitute an exception to the general rule under the EPC that after grant a European patent is no longer within the competence of the EPO but becomes a bundle of patents within the jurisdiction of the designated contracting states. They allow, during a limited period of time, a centralised action for revocation of a European patent to be brought before and decided by the EPO.

Opposition is an independent procedure following the grant procedure (T 198/88, OJ 1991, 254). It is not designed to be an extension of the examination procedure (G 1/84, OJ 1985, 299). As explained in G 9/91 and G 10/91 (OJ 1993, 408 and 420), it takes place at a point in time when the proprietor is enjoying in each designated contracting state the same rights as would be conferred by a national patent granted in that state

(Art. 64 EPC). The relief sought by the opponent is not, as in traditional pre-grant opposition, refusal of the patent application but revocation of the patent as granted (in its entirety or in part) with effect *ex tunc* in all designated contracting states (Art. 68 EPC). Furthermore, the grounds for opposition (Art. 100 EPC) being limited to and essentially the same as the grounds for revocation under national law (Art. 138 EPC), the concept of post-grant opposition under the EPC differs considerably from that of pre-grant opposition. The opposition procedure before the EPO thus has several important features more in common with the concept of the traditional revocation procedure and its effect is more similar to that of such a procedure. This characteristic is further emphasised by the addition at a late stage in the preparation of the EPC of the possibility to oppose a European patent even if it has been surrendered or has lapsed for all contracting states (Art. 99(3) EPC 1973; see now R. 75 EPC and also **T 606/10**).

Post-grant opposition proceedings under the EPC are in principle to be considered as contentious proceedings between parties who normally represent opposing interests and who should be treated equally fairly (**G 9/91** and **G 10/91**, OJ 1993, 408 and 420). As soon as the notice of opposition has been filed, the procedure automatically becomes bilateral, no matter whether the opposition is valid, admissible or allowable. The Convention does not provide for a decision by an opposition division "to end the *ex parte* proceedings" (**T 263/00**). R. 79(1) EPC (cf. R. 57(1) EPC 1973) requires the opposition division to communicate the opposition to the proprietor of the patent, and the Guidelines D-IV, 1.5 (November 2015 version) provide that communications and decisions about whether the opposition is deemed to have been filed and is admissible are also to be notified to the patent proprietor. Concerning the contentious nature of opposition proceedings, see also parallel cases **T 1553/06** and **T 2/09** in this chapter IV.D.2.1.4.

The opposition procedure is a purely administrative procedure. It differs fundamentally from the appeal procedure, which must be regarded as a judicial procedure and is, by its very nature, less investigative (see **G 7/91** and **G 8/91**, OJ 1993, 356 and 346; **G 9/91**, OJ 1993, 408). Unlike an appeal, opposition has neither suspensive effect nor the effect of transferring the case to a superior instance (see **T 695/89**, OJ 1993, 152).

According to the principle of party disposition (cf. **G 2/92** and **G 4/93**, OJ 1994, 875), the request of the opponent determines the extent to which the patented subject-matter may be examined in opposition.

In opposition proceedings, the EPO must investigate the facts of its own motion (Art. 114(1) EPC). However, certain restrictions have been placed on this principle of *ex officio* examination in order to make such proceedings clearer, to shorten and accelerate cases, and to limit the risks to the parties (**G 2/92** and **G 4/93**, OJ 1994, 875).

Under the EPC, there is no legal obligation for the patent proprietor to take an active part in opposition proceedings. However, the patent proprietor is not free to present or complete his case at any time that he wishes during the opposition or opposition appeal proceedings (**T 936/09** – see also summary in Chapter IV.E.4.3.2c) and decision **T 167/11**).

As opposition is an independent procedure which takes place after the grant procedure, a document considered in examination proceedings is not automatically scrutinised in opposition or opposition appeal proceedings, even if quoted and acknowledged in the contested European patent (**T 198/88**, OJ 1991, 254).

## 2. Filing and admissibility requirements

### 2.1. Entitlement to file an opposition

#### 2.1.1 General

In **G 3/97** and **G 4/97** (OJ 1999, 245 and 270) it was held that the legislator explicitly designed the opposition procedure as a legal remedy in the public interest which, according to Art. 99(1) EPC, is open to "any person".

According to the Enlarged Board, an opponent's status is a procedural status, and the basis on which it is obtained is a matter of procedural law. This is addressed in Art. 99(1) EPC in conjunction with Art. 100, R. 76 and R. 77(1) EPC (cf. R. 55 and R. 56(1) EPC 1973). The opponent is the person who fulfils the requirements set out therein for filing an opposition; in particular the person must be identifiable (R. 76(2)(a), R. 41(2)(c) EPC; cf. R. 55(a) EPC 1973; see also in this Chapter IV.D.2.2.4). The EPC does not specify any further formal conditions to be met by the opponent. A person who fulfils the said requirements becomes a party to the opposition proceedings (Art. 99(3) EPC; cf. Art. 99(4) EPC 1973).

Thus, the EPC does not require that the opponent have his own interest in the outcome of the opposition proceedings. As early as in **G 1/84** (OJ 1985, 299) the Enlarged Board held that the motives of the opponent were in principle irrelevant (otherwise, no doubt, the phrase "any person" would have been rendered as "any person interested"), whilst his identity was primarily of procedural importance (similarly in **T 635/88**, OJ 1993, 608; **T 590/93**, OJ 1995, 337). Following that case law, the board in **T 798/93** (OJ 1997, 363) found that the EPC and its attendant provisions contained no requirements as to the opponent's personal circumstances or motives for acting. Requests for the opposition to be declared inadmissible therefore had to be refused if, as in the case under consideration, they were based on either an objection regarding a particular aspect of the opponent's status, such as his profession (professional representative before the EPO) or his field of technical expertise (different from that of the opposed patent), or on his lack of motives for acting (statement by the opponent saying that his only reason for acting was to complete his training).

According to **T 353/95**, only an existing natural or legal person can be a party to opposition proceedings and this applies also at the appeal stage since Art. 107, first sentence, EPC makes no different provision (R. 66(1) EPC 1973; cf. R. 100(1) EPC).

### 2.1.2 Examination at any stage in the proceedings of entitlement to oppose

An objection that an opposition is inadmissible because the opponent was not entitled to file it may be raised at any stage of the proceedings, i.e. even at a late stage before the board of appeal, because the admissibility of the opposition is an indispensable procedural requirement for any substantive examination of the opposition submissions and is therefore to be examined *ex officio* (see **T 289/91**, OJ 1994, 649; **T 590/94**, **T 522/94**, OJ 1998, 421; **T 1178/04**, **T 384/08**). Following the principle established by board of appeal case law that the admissibility of an opposition is examined by the EPO of its own motion, if the board has good reasons for examining the admissibility of an opposition (**T 199/92**), it may and is obliged to do so, even if the patent proprietor has not challenged admissibility during either opposition or appeal proceedings (**T 541/92**). In **G 3/97** and **G 4/97** (OJ 1999, 245 and 270), the Enlarged Board of Appeal reaffirmed that the admissibility of an opposition could be challenged during the appeal proceedings on grounds relating to the identity of an opponent, even if no such objection had been raised before the opposition division.

During the appeal underlying **G 1/13** (OJ 2015, A42), the proprietor had challenged the admissibility of the opposition because the opponent company had ceased to exist during the proceedings before the opposition division. By court order, the company was then restored with retrospective effect. The Enlarged Board held that where an opposition is filed by a company which subsequently, under the relevant national law, ceases to exist, but is subsequently restored to existence under a provision of that national law, by virtue of which the company is deemed to have continued in existence as if it had not ceased to exist, all these events taking place before a decision of the opposition division maintaining the opposed patent in amended form becomes final, the EPO must recognise the retroactive effect of that provision of national law and allow the opposition proceedings to be continued by the restored company (see also Chapter IV.E.2.4.3c) "Retrospective restoration of a company").

For decisions concerning **transfer of opponent status**, see Chapter IV.C.2.2.

The status of opponent can also be acquired by an **assumed infringer** who has **intervened** in pending opposition proceedings (see Chapter IV.C.3 "Intervention").

### 2.1.3 Filing of opposition by patent proprietor or inventor

Given the purpose and special nature of the opposition procedure, patent proprietors may not oppose their own patent. In **G 9/93** (OJ 1994, 891), the Enlarged Board of Appeal departed from the view taken in **G 1/84** (OJ 1985, 299) and held that patent proprietors were not covered by the expression "any person" used in Art. 99(1) EPC 1973. The provisions of Part V of the EPC and the corresponding Implementing Regulations were clearly based on the assumption that the opponent was a person other than the patent proprietor and that the opposition proceedings were always *inter partes*. The case law established in **G 1/84** on this point is thus obsolete.

In **T 3/06** the patentee argued, with reference to **G 9/93** (OJ 1994, 891), that opponent 2 as the inventor of the patent in suit, being a shareholder of the patent proprietor, could not validly file an opposition even if the plain language definition of "any person" in Art. 99(1) EPC did not prevent inventors from filing an opposition. The board held the patent proprietor and the opposing inventor to be different persons. The inventor, although a shareholder in the patent proprietor, was not an executive of the company, nor did he have any substantial influence on commercial and judicial decisions concerning the business of the patent proprietor. In particular, the patent assignment contracts constituted evidence that this right lay exclusively with the patent proprietor.

A procedure for limitation or revocation of a European patent at the request of the patent proprietor is now provided for under Art. 105a to 105c EPC (see also Chapter IV.C.5).

#### 2.1.4 Filing of opposition on behalf of a third party - straw man

With regard to the question whether an opposition is inadmissible if the opponent is a "straw man" acting for some other person, the Enlarged Board of Appeal clarified in **G 3/97** and **G 4/97** (OJ 1999, 245 and 270) that the opponent is the person who fulfils the requirements of Art. 99(1) in conjunction with Art. 100 EPC, R. 55 and 56(1) EPC 1973 (now R. 76 and 77(1) EPC). Filing the opposition renders this person formally the legitimate opponent. The fact that the opponent is acting on behalf of a third party does not render the opposition inadmissible. It is however inadmissible if the opponent's involvement is to be regarded as circumventing the law by abuse of due process. Such circumvention of the law arises, **in particular**, if:

- the opponent is acting on behalf of the patent proprietor. According to **G 9/93** (OJ 1994, 891), a proprietor cannot oppose his own patent; opposition is an inter partes procedure, so the patentee and opponent must be different persons.

- if the opponent is acting on behalf of a client in the context of activities which, taken as a whole, are typically associated with professional representatives, without possessing the necessary qualifications (Art. 134 EPC 1973). This would be the case if a person not entitled to act as a professional representative were acting on a client's behalf and carrying out all the activities typically carried out by professional representatives, while himself assuming the role of a party in order to circumvent the prohibition on his acting as a professional representative.

However, circumvention of the law by abuse of process **does not arise merely** because a professional representative files an opposition in his own name on behalf of a client. In any case, the principle of the free evaluation of evidence applies. The burden of proof lies with the person alleging that the opposition is inadmissible. The deciding body has to be satisfied, on the basis of clear and convincing evidence, that such abuse is occurring.

Previously relevant case law (see **T 10/82**, OJ 1983, 407; **T 635/88**, OJ 1993, 608; **T 25/85**, OJ 1996, 81; **T 582/90**, **T 289/91**, OJ 1994, 649; **T 548/91**, **T 339/93**, **T 590/93**, OJ 1995, 337; **T 798/93**, OJ 1997, 363) has been superseded by **G 3/97** and **G 4/97**.

Parallel cases **T 1553/06** and **T 2/09**, involving the same parties but different patents, were heard by the same board. Considering the admissibility of the respective oppositions, the board examined in particular whether the parties and their representatives had worked together on a test case in order to obtain answers from the EPO to specific legal questions regarding prior art. Following the principles set out in **G 9/93** and **G 3/97**, the board emphasised the contentious nature of opposition proceedings as a necessary condition for the admissibility of the opposition and examined whether an abuse of procedure, i.e. because the opponent acted on behalf of the patent proprietor ("straw man"), rendered the opposition inadmissible. The board could not find a circumvention of the law by abuse of process as it saw no reason to doubt the parties' submissions that the opponent was not bound by any instructions from the patentee or the study committee. Nor did the board see any reason to question that the proceedings were contentious in nature. An opposition filed within the framework of a test case was not inadmissible for that sole reason, provided that the prosecution of the proceedings thereby instituted was contentious because the parties defended mainly opposing positions. The respective oppositions were therefore deemed admissible.

#### 2.1.5 Repeated filing of an opposition by the same person

According to **T 9/00** (OJ 2002, 275), the repeated filing of an opposition by the same person could be objected to for lack of legitimate interest. A (legal) person who filed two different notices of opposition against the same patent acquired party status as an opponent only once, even if both notices complied with the requirements of Art. 99(1) EPC and R. 55 EPC 1973 (now R. 76 EPC). Both oppositions in question gave lack of novelty and lack of inventive step as grounds. Since the later opposition did not entail any change in the legal situation in the opposition proceedings compared to the earlier one, the board dismissed it as inadmissible for lack of a general legitimate interest. Nor could such an interest be inferred from the fact that the later opposition was assigned to a different part of the company and only that part of the company had been transferred to a third party. The status of opponent could pass to a third party only if both parts or the entire company were transferred to it.

In **T 774/05**, a notice of opposition was filed on one day, enclosing a cheque for the opposition fee but no reasoned statement. On the following day further documents were filed which included patent documents and a reasoned statement referring to a notice of opposition. According to the board, the opponent's intention was to maintain a single opposition, as evidenced by the statement in the faxes that the cheque for the opposition fee presented the day before should be used for the opposition. The only indication of separate oppositions was the fact that both the document filed initially and the faxes of the following day each stated that they were an opposition. This was not an indication, however, of an intention on the part of the opponent to file two oppositions but rather an indication of their content. Taking all these documents together, the board considered that the opponent had filed only one opposition, for which the requirements for a valid filing were completed within the opposition period. The opposition was therefore admissible.

In **T 966/02**, the same opponent had filed two oppositions, the second of which cited document D1, on which the opposition division based its decision. The main issue was whether the opposition division had been competent to use the document cited in the second opposition. The board stated that, irrespective of whether or not the second opposition filed had to be regarded as admissible, the first opposition had been filed in due form and time and was therefore admissible. Hence there was no need to decide whether the second opposition was admissible, since the department of first instance was, in any event, competent to take account of both document D1 and any other relevant material of its own motion (Art. 114 (1) EPC).

#### 2.1.6 Filing of multiple oppositions by different persons

According to Art. 99(3) EPC, opponents are parties to the opposition proceedings as well as the patent proprietor. It is clear from this provision that multiple admissible oppositions do not initiate a corresponding number of parallel opposition proceedings but only a single one. Each opponent can rely on an opposition ground duly submitted by other opponents and communicated to all parties in accordance with R. 79(2) EPC, both in the opposition proceedings and in any subsequent appeal proceedings (**T 270/94**, **T 620/99**, **T 774/05**).

#### 2.1.7 Filing a joint opposition - multiple opponents

##### a) Payment of a single opposition fee

In **G 3/99** (OJ 2002, 347), the Enlarged Board of Appeal held that an opposition filed in common by two or more persons, which otherwise met the requirements of Art. 99 EPC and R. 1 EPC 1973 (cf. R. 3 EPC) and R. 55 EPC 1973 (cf. R. 76 EPC), was admissible on payment of a single opposition fee. The payment of the opposition fee was linked to the filing of an opposition and not to the number of persons who filed the opposition. There was no procedural difference with respect to an opposition filed by a single natural person, by a single legal person or by a single body equivalent to a legal person by virtue of the law governing it. With respect to the wording "any person" in Art. 99(1) EPC and its interpretation in line with Art. 58 EPC, the Enlarged Board held that, as regards an opposition filed in common by a plurality of persons, the common opponents had to be either a natural person, a legal person, a body equivalent to a legal person by virtue of the law governing it or a combination thereof.

##### b) Representation, legal status and composition of a multiple opponent

In **G 3/99** (OJ 2002, 347), the Enlarged Board also held that, in an opposition filed in common, there had to be in all cases a **common representative** (Art. 133(4) and R. 100 EPC). Only that common representative is entitled to act in the opposition proceedings on behalf of all the common opponents taken as a whole and to sign the filed documents. Since the EPO treats a procedural act performed by a non-entitled person in the same way as a missing signature (see **T 665/89**), each common opponent or any other person acting on his behalf could perform such an act to avoid missing a deadline, provided the deficiency is remedied within an additional period set by the board

in the communication under R. 36(3) EPC 1973 (cf. R. 50(3) EPC), notified to the common representative and sent for information to the non-entitled person who performed the act. The deficiency is remedied once the procedural act is signed by the common representative.

According to the Enlarged Board, in order to safeguard the rights of the patent proprietor and in the interests of procedural efficiency, it had to be clear throughout the proceedings who belonged to the group of common opponents or common appellants. If either a common opponent or appellant (including the common representative) intended to withdraw from the proceedings, the EPO had to be notified accordingly by the common representative or by a new common representative determined under R. 100(1) EPC in order for the withdrawal to take effect.

Referring to this case law in its interlocutory decision in **T 482/02** of 9.02.2005, the board stated that, where it was doubtful whether an opposition had been filed on behalf of a body which enjoyed legal personality in its own right or on behalf of several natural persons acting in common, the opponents (here a UK partnership) should be invited to establish that the body was a legal person or an equivalent thereto. If this was not established, the opposition was to be considered as having been filed on behalf of the several natural persons as common opponents (see also **T 866/01**). In that case the opponents still had to furnish the names and addresses of the partners in order to comply with R. 55(a) EPC 1973 (cf. R. 76(2)(a) EPC). If this information was not received within a period specified by the board, the opposition had to be rejected as inadmissible under R. 56(2) EPC 1973 (cf. R. 77(2) EPC), irrespective of whether or not such information would have been sufficient to prevent rejection under R. 56(1) EPC 1973 (cf. R. 77(1) EPC).

Similarly, in **T 315/03** (OJ 2005, 246), the board followed **G 3/99**, adding that, while the admissibility of an opposition by multiple opponents had to be kept under review throughout the proceedings, parties could not expect the opposition division or board to do this alone. It was clear that the board had neither the resources nor the knowledge of the relevant laws of all the contracting states necessary to police the composition of, and the legal status of all members of, multiple opponents. Once prima facie admissibility was acknowledged, it had to be up to the party or parties seeking to challenge admissibility to make a case of inadmissibility.

With regard to changes over time in the **composition** of a multiple opponent, the board agreed with the respondent that the absence over eleven and a half years of any notification concerning the 1200 members of opponent 6 ("opposition club") could in itself be considered an indication that the "clear throughout" condition had not been complied with. On the other hand, the fact that certain opponents only came into being for the purpose of filing opposition to one patent could not in itself be an objection to admissibility; an opponent's motive or lack of motive was irrelevant (see **G 3/97**, OJ 1999, 245). Similarly, it appeared to the board to be wholly irrelevant that an opponent, whether individual or multiple, might be supported by others (e.g. employees or shareholders of a company which was a party). Such supporters clearly could not take

any part in the proceedings and could not affect its outcome. Moreover, the support for a party could not per se be a reason to challenge admissibility.

## 2.2. Formal requirements for opposition and filing in due time

### 2.2.1 Introduction

According to Art. 99(1) EPC notice of opposition must be filed within nine months of the publication of the mention of the grant of the European patent in the European Patent Bulletin. Notice of opposition is not deemed to have been filed until the opposition fee has been paid. In the interests of legal certainty, the Convention lays down certain further requirements that must be met before the opposition period expires, in particular that the notice of opposition is filed in a written reasoned statement (R. 76(1) EPC) and that it sufficiently identifies the opponent (R. 76(2)(a) EPC) and the patent opposed (R. 76(2)(b) EPC), that it states the extent to which the patent is opposed and the specific grounds, and that it indicates the facts and evidence presented in support of these grounds (R. 76(2)(c) EPC). Fulfilment of the requirements of R. 76(2)(c) EPC (cf. R. 55(c) EPC 1973) is not only essential for the admissibility of the opposition. They also establish the legal and factual framework of the opposition (see **G 9/91** and **G 10/91**, OJ 1993, 408 and 420).

### 2.2.2 Start of opposition period

In **T 438/87** the question addressed was whether a delay in **publication** of the European patent specification could affect the calculation of the nine-month period for filing an opposition. The board concluded that, since the mention of the grant of the patent in suit had been brought to the public's attention in the normal way, it was from this date that the opposition period had begun, irrespective of what problems may have affected publication of the patent specification and what consequences such untoward event might have for certain third parties owing to their geographical location.

According to **T 1644/10**, the opposition period is triggered solely by the grant of a European patent and publication of the mention of its grant in the European Patent Bulletin. The mention in the European Patent Bulletin that a correction of the patent specification has been issued does not trigger either a first or any "further" opposition period, even if the corrected specification confers a broader scope of protection than that conferred by the one originally published.

### 2.2.3 Payment of opposition fee

Art. 99(1), last sentence, EPC states that a notice of opposition is not deemed to have been filed until the opposition fee has been paid. According to the board in **T 152/85** (OJ 1987, 191), payment of an opposition fee is a factual requirement, which must be fulfilled within the nine-month opposition period if an opposition is to be admitted. Failure to pay an opposition fee within the required period where the filing of an opposition is intended is a factual mistake which cannot be rectified once the time limit for filing an opposition has passed. In the board's view, it could not be corrected under R. 88 EPC 1973

(cf. R. 139 EPC). It was apparent from the wording of that rule that the clear policy of the EPO was to distinguish between a mistake in a document and other kinds of mistakes, such as failure to pay a fee in time, and only to allow correction of mistakes in a document. Art. 99(1) EPC 1973 provided a nine-month period during which notice of opposition could be filed and the opposition fee paid, payment of the fee being essential for the opposition. Until the requirements of Art. 99(1) EPC 1973 were met, a potential opponent was not party to any proceedings before the EPO.

#### 2.2.4 Identity of opponent and correction of opponent's name

Under R. 76(2)(a) EPC and R. 41(2)(c) EPC, the notice of opposition must contain the name, address and nationality of the opponent and the state where his residence or principal place of business is located. R. 41(2)(c) EPC also gives precise particulars by which such identity needs to be established. If the **identity** of an opponent is not sufficiently established before expiry of the opposition period, the opposition is inadmissible (**T 25/85**, OJ 1986, 81). This defect cannot be remedied (**T 590/94**).

In **T 870/92** the board emphasised that, when indicating a legal entity, failure to use its exact official designation (R. 26(2)(c) and 61a EPC 1973; cf. R. 41(2)(c) and 86 EPC) did not necessarily mean that the opposition was inadmissible. An incorrect designation which nevertheless sufficed to indicate the party's identity had to be distinguished from the absence of such information. Errors in a designation could be corrected at any time (R. 88, first sentence, EPC 1973; cf. R. 139, first sentence, EPC; see also **T 828/98**).

In principle, the use of an abbreviation instead of the full name of a legal entity does not render an opposition inadmissible as long as the party's identity can be established. In **T 1034/08**, the board had no reasonable doubt that the abbreviation GSK stood for GlaxoSmithKline with regard to the identity of the Belgium-based opponent GSK Biologicals. Given that Belgian company law allows the co-existence of more than one company name and that GlaxoSmithKline Biologicals was the company's sole primary name, the board concluded that abbreviation GSK Biologicals did not constitute an incorrect designation of the opponent.

In **T 1165/03** the board regarded an identity card or passport as the best evidence of identity but with the same proviso as applies to all evidence, i.e. that its value could be offset or even negated by other evidence. In this case, two different photocopy identity cards had been filed: the first had been sent to the opposition division and, although even less legible than the copy later faxed to the board, it was clearly not a copy of the same document as that shown in the fax and subsequently filed during the oral proceedings. The letter signed in the opponent's name said his name had only been used accidentally in relation to the proceedings and that he was more often at his work address than the home address shown on the identity card. However, there was no legible address on the earlier photocopy card on file. Moreover, the work address in the letter was not that shown on the second photocopy card filed with the board. The board therefore held that the identity card evidence was inherently unreliable and inconclusive.

Questioning the identity of an opponent is not enough to render the opposition inadmissible; cogent evidence must be put forward. In **T 4/05** no such case was made. The appellant had not filed the extract from the commercial register which, it submitted during oral proceedings before the board, showed a different company name. This could therefore not be cited as evidence that the opponent's identity was unclear. The appellant's objection that two other companies were trading at the same address as the opponent also failed; this was merely an observation which could not affect the party status of an opponent who had been unambiguously identified.

In **T 1426/13** the opposition had been filed on behalf of "Isarpatent GbR". The board noted that the lack of public registration of a GbR ("Gesellschaft bürgerlichen Rechts") could contribute to uncertainty or even confusion about the name and/or identity of a GbR at specific points in time. However, the EPO had to accept that such unregistered legal entities may be a party in proceedings before the EPO. Any relevant evidence had to be evaluated according to the principle of free and unfettered consideration of evidence (e.g. **T 482/89**, OJ 1992, 646). From the documents submitted the board was satisfied that a name change had occurred before the opposition was filed and that no other entity than Isarpatent GbR could have been the opponent. Nor was the admissibility of the opposition affected by any changes in the composition of the GbR after the opposition had been filed. A GbR may be held liable for its obligations, including costs which may be awarded to another party in EPO opposition proceedings. Therefore it was not necessary to determine the individual members (**T 482/02** distinguished).

According to **T 1551/10**, for an opposition to be admissible, the opponent has to be identifiable by expiry of the opposition period (**T 25/85**, OJ 1986, 81), and provided this is the case, wrong information can be corrected (**T 219/86**, OJ 1988, 254; **T 870/92**). Extracts from the commercial register showed that Swisscom (Schweiz) AG was the (sole) universal successor in title to Swisscom Mobile AG, which was originally named as the opponent, although it had already been removed from the register before the opposition was filed. It was not apparent that any of Swisscom Mobile AG's business assets had been taken over by any other legal entity. Therefore, even though its predecessor in title had been wrongly named in the notice of opposition, Swisscom (Schweiz) AG was clearly and unambiguously identifiable as the opponent by the time the opposition period ended. Procedural statements mistakenly made in the name of a deceased party or of a legal person that no longer existed following a merger could be regarded as having been made in the name of their universal successor in title (**T 15/01**, OJ 2006, 153). The mistake in the opponent's name could therefore be corrected under R. 139 EPC. The public could not be misled because the register extracts showed only one successor in title at the time the opposition was filed, namely Swisscom (Schweiz) AG.

In **T 1269/11** the board held that both R. 77 and R. 139 EPC were available in principle to rectify errors in the name of the respondent (opponent) as given in the notice of opposition (by analogy with **G 1/12**, OJ 2014, A114, concerning correction of the wrong identification of the appellant and summarised in Chapter IV.E.2.5.2 a)). However, there was not sufficient evidence to allow a correction in this case.

The availability of R. 139 EPC to correct the name of the opponent was confirmed by **T 615/14** as follows. A request to correct the designation of the opponent in the notice of opposition is allowable under Rule 139, first sentence, EPC provided that it complies with the principles endorsed in **G 1/12** (OJ 2014, A114), in particular that it reflects what was originally intended when filing the notice of opposition, that it does not give effect to a change of mind or development of plans and that it represents the opponent's actual rather than ostensible intention. The original intention at the time of filing the opposition can also be established on the basis of evidence submitted after the expiry of the opposition period.

Further deficiencies such as a wrong postal code or lack of signature may be subsumed under R. 76(2)(a) and R. 50(3) EPC, respectively, and can thus be remedied within a time limit set by the opposition division in accordance with R. 77(2) EPC. The opposition division can extend this time limit or set a new time limit if deemed appropriate (**T 1632/06**).

#### 2.2.5 Title of invention

Under R. 76(2)(b) EPC, the notice of opposition must contain, inter alia, the number of the patent, the name of the proprietor and the title of the invention. If the patent is not sufficiently **identified**, the opposition must be rejected as inadmissible under R. 77(1) EPC, unless the deficiency has been remedied before expiry of the opposition period.

In **T 317/86** (OJ 1989, 378) the opponent had not indicated the title of the invention within the period specified under R. 56(2) EPC 1973 (R. 77(2) EPC) for remedying deficiencies other than those falling under R. 56(1) EPC 1973 (R. 77(1) EPC). The board decided that omission from the notice of opposition of the title of the invention - merely an item of bibliographical data identifying the contested patent - did not constitute a deficiency within the meaning of R. 56(2) EPC 1973, if the other particulars available to the EPO were together sufficient to identify easily and beyond doubt the patent being contested by means of an opposition.

In **T 335/00** and **T 336/00**, the R. 55(b) EPC 1973 (R. 76(2)(b) EPC) requirements were not strictly fulfilled. Among other things, the title of the invention was missing, and the opposition was directed to the application. The board nonetheless deemed the opposition admissible because the contested patent was identifiable uniquely and fairly easily on the basis of the specified publication number. Even the mistake of opposing an application and the omission of the title did not seem serious enough to the board to render the opposition inadmissible.

#### 2.2.6 Statement of extent of opposition

The Enlarged Board of Appeal remarked in **G 9/91** (OJ 1993, 408) that in practice it is rather unusual that the opposition is limited to only a certain part (subject-matter) of the patent. Normally, the whole of the patent is opposed. Addressing the situation where it was clear from the statement under R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC) that the

patent was opposed only to a certain extent, the Enlarged Board held that by limiting the extent to which the patent is opposed to only certain subject-matters, the opponent deliberately refrains from making use of his right under the EPC to oppose remaining subject-matters covered by the patent. Such subject-matters are therefore, strictly speaking, not subject to any "opposition" in the sense of Art. 101 and 102 EPC, nor are there any "proceedings" in the sense of Art. 114 and 115 EPC concerning such non-opposed subject-matters.

According to **T 114/95**, If an opponent requests revocation of the patent in its entirety, it is sufficient to substantiate the ground(s) of opposition in respect of **at least one claim** of the patent for the requirements of R. 76(2)(c) EPC (cf. R. 55(c) EPC 1973) to be met (**T 926/93**, OJ 1997, 447; **T 1180/97**, **T 1900/07**; see also in this chapter IV.D.3.2).

### 2.2.7 Statement of grounds for opposition

The notice of opposition must also state the grounds on which the opposition is based (R. 76(2)(c) EPC; cf. R. 55(c) EPC 1973). The grounds for opposition which can form the legal basis of an opposition are contained in an exhaustive list in Art. 100 EPC. Accordingly, an opposition may only be filed on the grounds that (a) the subject-matter of the European patent is not patentable, (b) the European patent does not sufficiently disclose the invention or (c) the subject-matter of the European patent goes beyond what was originally disclosed. Each ground for opposition listed in Art. 100 EPC corresponds to a requirement for grant laid down elsewhere in the EPC.

The Enlarged Board of Appeal set out a number of fundamental principles in **G 1/95** (OJ 1996, 615):

Whereas the grounds for opposition in Art. 100(b) and (c) EPC 1973 each relate to a single, separate and clearly delimited legal basis on which an opposition can be based, i.e. insufficient disclosure or unallowable amendment before grant, the same does not apply to Art. 100(a) EPC 1973. Art. 100(a) EPC 1973 not only refers to the general definition of patentable inventions under Art. 52(1) EPC 1973 and the exceptions to patentability under Art. 53 EPC 1973; it also refers to a number of definitions given in Art. 52(2) to (4) and 54 to 57 EPC 1973 for the terms "invention", "novelty", "inventive step" and "industrial application", which, when used in conjunction with Art. 52(1) EPC 1973, set specific requirements and therefore constitute separate grounds for opposition. Taken together, Art. 52 to 57 EPC 1973 therefore do not, for the purposes of Art. 100(a) EPC 1973, constitute a single objection to the maintenance of the patent, but a collection of different objections. Some of these are completely independent of each other (e.g. Art. 53 and 52(1) EPC 1973, Art. 54 EPC 1973) whereas others might be more closely related (e.g. Art. 52(1) and 54 EPC; Art. 52(1) and 56 EPC 1973). For an opposition to be admissible under Art. 100(a) EPC 1973, it has to be based on **at least one of the grounds for opposition** set out in Art. 52 to 57 EPC 1973.

Following the reasoning of **G 1/95**, one function of R. 55 and 56 EPC 1973 (cf. R. 76 and 77 EPC) is to establish what the notice of opposition has to contain in order to be

admissible. R. 76(2)(c) EPC specifies that the notice of opposition has to contain a statement of the extent to which the European patent was opposed and of the grounds (i.e. the legal reasons mentioned above) on which the opposition is based and an indication of the facts, evidence and arguments presented in support of these grounds, i.e. the substantiation. The wording of (c) shows clearly the distinction made between the grounds, meaning the legal reasons or legal bases such as those under Art. 100(a) EPC and the substantiation. Accordingly, in the context of Art. 99 and 100 EPC and of R. 76(2)(c) EPC, a "ground for opposition" has to be interpreted as meaning an individual legal basis for an objection to the maintenance of a patent. It follows in particular that Art. 100(a) EPC contained a collection of different legal objections (i.e. legal bases), or different grounds for opposition, and is not directed to a single ground for opposition.

Non-compliance with Art. 84 EPC is not a ground for opposition, but is a matter to be considered in the context of Art. 101(3) EPC (see also **G 3/14**, OJ 2015, A102 and in this chapter IV.D.4.2.

In **T 600/08** the board observed that the EPC did not provide for reviewing, as part of opposition proceedings, the legality of a decision by the Receiving Section to correct an applicant's name in a divisional application. The grounds for opposition were set out exhaustively in Art. 100 EPC. Objections to the text of a patent as granted could not be raised on other grounds. It made no difference that the text of the patent in suit had been amended.

#### 2.2.8 Indication of facts, evidence and arguments – substantiation of grounds for opposition

The third requirement of R. 76(2)(c) EPC for the admissibility of the opposition is the substantiation of the specified ground, i.e. an indication of the facts, evidence and arguments presented in support of it. The fulfilment of this latter requirement in respect of **one** of the grounds for opposition is enough to render admissible the opposition as a whole. Nowhere in the EPC is there any basis for the concept of partial admissibility of oppositions. The concept of "inadmissibility" is only applicable to the notice of opposition as a whole (**T 653/99**; see also **T 212/97** and **T 65/00**). If the third requirement of R. 76(2)(c) EPC is also met, the opposition is deemed to be sufficiently "substantiated" and thus admissible.

The question whether the requirements in R. 76(2)(c) EPC are met must be determined on expiry of the nine-month opposition period (R. 77(1) EPC). A notice objectively complying with the requirements **on the relevant date** is not rendered inadmissible where the opponent later cites prior art not mentioned in it to support his line of argument (**T 1019/92**; see also **T 104/06**).

In **T 222/85** (OJ 1988, 128) the board of appeal held that the third requirement was only satisfied if the contents of the notice of opposition were sufficient for the opponent's case to be **properly understood on an objective basis**. The board reasoned that the purpose of the third requirement of R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC), in combination with the first two requirements, was to ensure that the notice of opposition

set out the opponent's case sufficiently so that both the patentee and the opposition division knew what that case was. Whereas the requirements of R. 55(a) and (b) EPC 1973 (cf. R. 76(2)(a) and (b) EPC) and the requirements (1) and (2) of R. 55(c) EPC 1973 could be considered as **formal** in nature, requirement (3) of R. 55(c) EPC 1973, in combination with Art. 99(1) EPC, was **substantive** in nature, and called for reasoning which went to the merits of the opponent's case. A well-drafted opposition ought to contain reasoning that was full but concise. And in general, the less reasoning that a notice of opposition contained, the greater the risk that it would be rejected as inadmissible (similarly **T 925/91**, OJ 1995, 469; see also **T 2/89**, OJ 1991, 51; **T 448/89**, OJ 1992, 361; **T 545/91**, **T 204/91**). According to the board, the question whether a particular notice of opposition meets the minimum substantive requirements of Art. 99(1) EPC 1973 and R. 55(c) EPC 1973 could only be decided in the context of the particular case (since various relevant factors, such as the complexity of the issues raised, vary from case to case) – see also e.g. **T 534/98**, **T 1097/98**, **T 934/99**.

In **T 204/91** the board stated in particular that the term "indication" in R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC) had to be construed as requiring **more than a mere hint** at a number of possible attacks upon the patent and at the likely support for each such possible attack, which indication or hint might then be augmented by the subsequent late filing, possibly even at the appeal stage, of further evidence, arguments or other matter - even of fresh grounds of objection. Rather, the scope and depth of "indication" needed to be such as to enable the patentee and the opposition division to see clearly just what attack was being mounted against the patent, and what evidential support was being adduced for that attack. In other words, the patentee and the opposition division had to be put in a position of understanding clearly the nature of the objection submitted as well as the evidence and arguments in its support. This required the elaboration of the relevant circumstances of the case to such an extent that the patentee and the opposition division were able to form a definitive opinion on at least one ground for opposition raised, without the need to make further investigations (see **T 453/87** and **T 279/88**; see further **T 1069/96**). The fact that a patentee must be able to understand, without undue burden, the case made against his patent in the notice of opposition does not, however, exclude the possibility that he may have to undertake a **certain amount of interpretation** (**T 199/92**).

In **T 934/99** the board stated that R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC) did not imply the requirement of a logical line of reasoning in the sense that the arguments brought forward in the notice of opposition had to be cogent or convincing. Rather, the criterion was whether the arguments presented were relevant and, where necessary as the result of a reasonable interpretative effort, specific enough to allow a person skilled in the art to form a reasoned opinion of whether the line of reasoning on which the opponent apparently relies was (logically) correct ("convincing") or not (i.e. wrong).

The sufficiency of the notice of opposition had to be distinguished from the **strength** of the opponent's case. On the one hand, an unconvincing ground for opposition might have been clearly presented and argued. Conversely, a deficient submission may be rejected as inadmissible even though, if properly drafted, it would have succeeded (**T 222/85**, OJ 1988, 128; **T 621/91**, **T 3/95**, **T 1069/96**). Assessing the evidence is part of

the process of ascertaining whether the opposition is well founded in substance (**T 234/86**, OJ 1989, 79). Thus, in **T 353/06** the board identified the appellants' arguments for the inadmissibility of the opposition as concerning the corroborative value of the facts and evidence, rather than a failure to indicate such facts and evidence in support of the grounds of opposition.

Similarly, the board in **T 1194/07** referred to the established case law, according to which the indication of facts, evidence and arguments need not be conclusive or correct. That is an issue of merit. However, the board also emphasised that the merits of a case can only be assessed in a meaningful manner if the case has been stated fully, by an adequate indication of the relevant facts, evidence and arguments. Key elements linking the cited prior art to the claim or relating to their validity as evidence, as well as crucial arguments informing the reader why the skilled person might have considered combining the features of such prior art with those of the accompanying evidence, should not be missing in the notice's chain of logic leading from the prior art to the invention. The omission of key facts and elements in the notice's reasoning may amount to little more than speculation or an outline of a possible case against the patent (see also **T 1856/11**).

In **T 344/88** the opponent had given the wrong number for a patent specification which it had cited against the patent in suit. The board considered whether R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC) was contravened if the mistake was not corrected until after expiry of the opposition period. While the patent cited bore no relation to the invention under consideration, the notice of opposition contained enough information to identify the actual patent intended and so the board allowed the number to be corrected. Given such a detailed submission of facts, it would have been taking formal requirements too far to reject the opposition simply because the wrong number had been given for a cited patent specification. The error was recognisable within the period for opposition and the opposition division was able, on the basis of the description of the citation, to establish the latter's identity beyond all doubt.

In **T 426/08**, the respondent argued that, although **evidence** need not be produced but merely indicated by expiry of the opposition period, the admissibility of the opposition was not determined solely on the basis of the notice of opposition, but rather on the basis of the notice and the evidence indicated in it and produced either before or after the opposition deadline. The board drew a distinction between evidence produced before and after the deadline and between indication and proof. The content of evidence merely referred to within the opposition period but not produced until after it could not, for the purpose of examining admissibility, be taken into account either as an **indication** of facts or evidence or as **proof** of facts.

In **T 1022/09** the opposition division had confused the criteria for admissibility of late-filed documents with those for documents filed with and referred to in an admissible notice of opposition. According to the board, the content and publication date of the documents filed with the notice of opposition did not come into play for the question of admissibility. Since their filing was substantiated, they were automatically admitted to the opposition proceedings.

## 2.2.9 Groups of cases

### a) Sufficient substantiation of grounds for opposition

In **T 134/88** the opposition did not deal with all the features of the contested claim, but still satisfied the requirements of R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC). The board summed up by saying that an opposition directed against alleged lack of inventive step in the case of a combination invention was generally inadmissible if it related only to the assessment of one individual feature - to be admissible, it would have to deal with the invention as a whole, or at least with its **essential** content, so that when the facts on which the opposition was based were indicated, circumstances became recognisable which enabled the patent proprietor and the assessing body to pass conclusive judgment on the asserted grounds for opposition without having to make enquiries of their own. Allegations which could not be subsumed under one of the opposition grounds have to be left out of consideration (see also e.g. **T 1279/05**, **T 114/07**, **T 521/00**, **T 1074/05**). A detailed and exhaustive discussion of matters which were implicit to such skilled persons was not needed to understand the opponent's case and, therefore, not an admissibility requirement. (See also **T 534/98**, in which it was held, contrary to the patent proprietor's assertion, that evidence of the common general knowledge was not required to substantiate an opposition. In accordance with the prevailing view in the case law, proof that something belonged to the common general knowledge was only necessary if this was called into question by another party or by the EPO).

In **T 1014/09** the opposition was based on the inadmissibility of an amendment "because it was not covered by the original disclosure". The board had to establish to what extent this **general reference** to the original disclosure could be regarded as a due indication of the facts, evidence and arguments within the meaning of R. 55(c) EPC (cf. R. 76(2)(c) EPC), and to what extent the assessment of the amendment to the claims could be construed as an indication that the amendment had unlawfully changed or extended the technical information. The board concluded that the facts of the case at issue and the accompanying legal analysis set out in the notice of opposition had to be regarded as duly substantiating the ground for opposition under Art. 100(c) EPC.

In **T 185/88** (OJ 1990, 451) the board ruled that grounds for opposition are deemed to be in due form if the only document cited in support of the sole assertion of lack of inventive step (here: German patent specification), while itself published **after** the date of filing or priority, nevertheless contained a reference to a document published **before** the date of filing or priority (here: German unexamined application or "Offenlegungsschrift" – cf. the different circumstances in **T 864/04**).

### b) Insufficient substantiation of grounds for opposition

In **T 182/89** (OJ 1991, 391) the opposition contained formal allegations concerning Art. 100(b) EPC 1973. The board first observed that in order to establish insufficiency, a **mere statement** by an opponent that one example in a patent had been repeated once "exactly as described" without obtaining exactly the described results as set out and claimed in the patent was clearly inadequate. On the question of substantiation, the

board took the view that, indeed, if a notice of opposition alleging insufficiency under Art. 100(b) EPC 1973 as the sole ground for opposition contained such a statement as the only indication of "facts, evidence and arguments" in support of this ground, then the notice of opposition should be regarded as inadmissible even if the alleged facts were subsequently proved.

In **T 550/88** (OJ 1992, 117) the board of appeal considered whether **national prior rights** could as a matter of law constitute "facts or evidence" relevant to the ground of lack of novelty under Art. 54(1) and (3) EPC. If not, such facts and evidence did not support the ground for opposition which had been alleged and therefore did not satisfy the requirement of R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC). In the board's judgment, on the proper interpretation of Art. 54(3) EPC, national prior rights were not comprised in the state of the art, and only prior European patent applications filed under the Convention could be considered as such under Art. 54(3) EPC. The board decided that the opposition was inadmissible because the only facts and evidence indicated in the notice of opposition were references to national prior rights.

According to **T 613/10**, the admissibility of the opposition has to be decided in the light of the circumstances of the case, especially if the requirements of R. 76(2)(c) EPC are not clearly and unambiguously met. Those circumstances include not just the technical complexity of the subject-matter in the opposed patent and the citations but also the number of claims and the number of citations – even if in principle an opposition can contain any number of attacks or citations. The patent proprietor should not have to try and work out the opponent's case for himself, from inadequate information given in the notice of opposition. In the case before the board, notice of opposition had been filed within the opposition period on the official form and two additional sheets. These listed 26 items of evidence, which however were filed, together with a detailed statement, only after the period expired. The notice had indicated the grounds of lack of novelty and lack of inventive step but did not say which citations related to which. None of the cited passages or drawings had been compared with the features of any of the 26 claims; nor had any technical connection been established between the citations and the claims. The board concluded that the notice of opposition did not properly indicate the facts presented in support of either of the two grounds, so that the requirements of R. 76(2)(c) EPC were not fulfilled.

c) Alleged public prior use

- Adequate substantiation of relevant circumstances

In accordance with **G 1/95** (OJ 1996, 615), alleged public prior use does not constitute a ground for opposition under Art. 100(a) EPC but is a fact cited to substantiate such a ground (**T 190/05**).

An allegation of public prior use will generally only be considered if it is sufficiently substantiated, i.e. where it can be readily seen how the public prior use took place (this was not the case in e.g. **T 6/86**, **T 329/86** and **T 78/90**). If an opponent wishes to rely upon prior use as being part of the state of the art for the purpose of Art. 54(2) EPC and

as part of the legal and factual framework within which the substantive examination of the opposition is to be conducted, the notice of opposition must indicate within the opposition period all the facts which make it possible to determine the date of prior use, what has been used, and the circumstances relating to the prior use. An abstract indication of the subject-matter of the prior use is generally insufficient. Statements made within the period for opposition regarding the time, subject-matter and circumstances of the alleged public prior use must be intelligible enough from the viewpoint of the skilled person to enable their substantive legal merits to be reviewed.

In cases of alleged public prior use, particular substantiation is required in the notice of opposition. However, a distinction must still be made between examining the admissibility of the opposition and its substantive merit. It is settled case law (see e.g. **T 194/86**, **T 328/87** (OJ 1992, 701), **T 93/89** (OJ 1992, 718), **T 232/89**, **T 538/89**, **T 754/89**, **T 78/90**, **T 600/90**, **T 877/90**, **T 441/91**, **T 602/91**, **T 988/91**, **T 541/92** and **T 927/98**) that to be able to determine whether an invention has been made available to the public by prior use, the following circumstances have to be clarified:

- (i) when the act of prior use occurred
- (ii) what was made available to the public through that use
- (iii) the circumstances of the act of use, i.e. where, how and by whom the subject-matter was made public through that use

The information relating to the "when", the "what" and the "how" of the circumstances surrounding prior use is all that the patent proprietor and the opposition division need in order to understand the case of the opponent and for the opposition to be admissible. The rest, i.e. whether the alleged facts were or would be sufficiently proven through additional filings in the course of the opposition proceedings, is a question of allowability in terms of substantive law. Thus, establishing that the alleged prior use is indeed public has little bearing on the **admissibility** of the opposition, but could be significant for assessing its **allowability** in terms of substantive law (see **T 406/92**, **T 786/95**, **T 1022/99**; cf. also **T 533/94**, **T 534/94**, **T 1553/07**, **T 25/08**, **T 1856/11**).

In **T 241/99**, for instance, the board considered it insufficient for the purposes of R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC) that, in the event of a purported **sale to a small, closed group of customers**, these were identified only by a coded indication (list of numbers). This was different from the sale of mass-produced goods to anonymous buyers and resembled rather the case of a single sale, for which the requirements of R. 76(2)(c) EPC were met only if the name and address of the sole buyer were indicated within the opposition period.

In **T 511/02**, concerning the opponent's duty of substantiation, it had not been indicated when and how fitting and installation instructions cited against the patent had been made available to the public. Since this factor was crucial to the establishment of whether they formed part of the prior art and thus whether they could actually be cited against the

patent, no adequate indication had been given of the relevant facts and evidence (see also **T 1271/06**).

In **T 538/89** the board stressed that the evidence offered in support of public prior use could be submitted after expiry of the period for opposition since R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC) only required that it be indicated (see also **T 752/95**, **T 249/98**).

According to the board, **nomination of a witness** for subsequent examination is deemed to constitute indication of evidence (see also **T 28/93**, **T 988/93** and **T 241/99**). Although a general offer of a witness testimony cannot compensate for an inadequate presentation of facts, for the opposition to be admissible it is only necessary to name the witnesses. The naming of a witness to be heard later is therefore to be regarded as a sufficient indication of evidence as long as it is clear for what assertions of facts the witness is being named. It is neither necessary to indicate a specific subject in connection with evidence nor to indicate what the witness could say about a given assertion (**T 1553/07**).

The evaluation of evidence in cases of alleged public prior use is dealt with in detail in Chapter III.G.4.3.2.

#### - Examination by the EPO of its own motion

Under Art. 114 EPC the EPO has a limited obligation to undertake an examination of its own motion with regard to public prior use.

In **T 129/88** (OJ 1993, 598) the board noted that although a board of appeal had an obligation under Art. 114(1) EPC to investigate matters of its own motion, that obligation did not extend as far as investigating an allegation of public prior use, where the party previously making that allegation had withdrawn from proceedings and it was difficult to establish all the relevant facts without that party's co-operation. The reason for this was that the obligation to investigate of its own motion imposed on the EPO by Art. 114(1) EPC was not unlimited in its scope, but was confined by considerations of reasonableness and expediency. Therefore, if the opponents withdrew the opposition, thereby indicating that they were no longer interested in the outcome of the opposition, then, although the EPO might have the power, depending on the state of residence of relevant witnesses, to compel them to give evidence, either before the EPO or before the court of a contracting state, in the interests of procedural economy it should not normally investigate the issue any further. It would be different if a relevant public prior use had already been substantiated by documents of undisputed authenticity, or if the material facts with respect to the alleged public prior use were undisputed (see **T 830/90**, OJ 1994, 713; **T 887/90**, **T 634/91**, **T 252/93** and **T 34/94**).

#### 2.2.10 Other requirements for notice of opposition

In **T 193/87** (OJ 1993, 207) the board found that if a notice of opposition was filed in a language of a contracting state other than an official language of the EPO and the prescribed **translation** was not filed in due time (Art. 14(4) and (5) EPC 1973;

cf. Art. 14(4) EPC), the notice should be deemed not to have been received, and the opposition fee was to be refunded (following **T 323/87**, OJ 1989, 343). Since the opposition had not come into effect, there was no question of examining its admissibility under R. 56(1) EPC 1973 (cf. R. 77(1) EPC).

In **T 960/95** the notice of opposition was filed **without having been signed**. The board stated that a notice of opposition should be duly signed (R. 36(3), first sentence, EPC 1973, R. 61a EPC 1973; cf. R. 50(3), first sentence, EPC, R. 86 EPC). The omission of the signature was remedied within the time limit set by the opposition division, and the notice of opposition therefore retained its original date of receipt (R. 36(3), third sentence, EPC 1973; cf. R. 50(3), third sentence, EPC; see also **T 1165/03**).

### **2.3. Procedural aspects of examination of admissibility**

#### 2.3.1 Formalities officers' powers in opposition proceedings

In opinion **G 1/02** (OJ 2003, 165), the Enlarged Board of Appeal examined the powers and duties of formalities officers in opposition proceedings, the underlying question being their competence to decide on the consequences of late payment of the opposition fee. Taking the view that **T 295/01** (OJ 2002, 251) and **T 1062/99** were divergent, the President asked the Enlarged Board of Appeal to consider whether points 4 and 6 of the Notice of 28.04.1999 conflicted with provisions of a higher level (OJ 2002, 466). The Enlarged Board stated that the provisions of the Notices of the Vice-President DG 2 were valid on the basis of R. 9(3) EPC 1973 (cf. R. 11(3) EPC), under which formalities officers could be entrusted with duties falling to the examining and opposition divisions and involving no technical or legal difficulties. It therefore concluded that points 4 and 6 of the Notice of 28.04.1999 did not conflict with provisions of a higher level.

#### 2.3.2 Admissibility of opposition to be checked at every stage

The admissibility of the opposition must be checked *ex officio* in every phase of the opposition and ensuing appeal proceedings. It can and, where appropriate, must be raised by the board in appeal proceedings even if this is the first time this matter is addressed (**T 289/91**, OJ 1994, 649). On the other hand, the requirement of admissibility must not be circumvented by overemphasising the *ex officio* principle and shifting the burden of establishing the case from the opponent to the opposition division. In this context, the substantiation of the opposition is not a requirement *per se*, but has a clear purpose: that the opposition division can clearly set out the case just on the points at issue. The (minimum) requirements for substantiation of the opposition have their counter-part in the (minimum) requirements for the reasons to be given in the decision of the opposition division. There is insufficient reasoning in a decision if the "when, where and what" is not set out in detail, leaving the reader to guess what the facts underlying the decision are, why and on what evidence they were based, and how the evidence was evaluated (cf. **T 522/94**, OJ 1998, 421).

### 2.3.3 Rejection of opposition as inadmissible

In **T 222/85** (OJ 1988, 128) the board stated that a communication under R. 57(1) EPC 1973 (cf. R. 79(1) EPC) indicating the admissibility of an opposition was not a decision of the opposition division, and the sending of such a communication did not prevent the subsequent rejection of the notice of opposition as inadmissible under R. 56(1) EPC 1973 (cf. R. 77(1) EPC), for example if the admissibility was challenged by the patent proprietor (see also **T 621/91**).

As soon as an opposition had been rejected as inadmissible, the opposition procedure was regarded as legally terminated and substantive examination could no longer be initiated. The inadmissibility of an opposition, when finally decided, or an appeal, had the effect of transferring the European patent to the national jurisdiction of the designated states, which then assumed sole responsibility for assessing the patent's validity with reference to their own legislation. The board therefore came to the conclusion that it was inconsistent with the procedural principle referred to above for the decision rejecting the opposition as inadmissible to consider that opposition's merits. Remarks on substantive matters in a decision rejecting the opposition as inadmissible had no legal effect. However such remarks should, in principle, be avoided, as a procedural deficiency of this kind could result in legal uncertainty during the national phase and could disadvantage either the proprietor or the opponent (**T 925/91**, OJ 1995, 469; see also **T 328/87**, OJ 1992, 701).

## 3. Substantive examination of opposition

### 3.1. Introduction

In **G 9/91** and **G 10/91** (OJ 1993, 408 and 420) the Enlarged Board held that R. 76(2)(c) EPC (cf. R. 55(c) EPC 1973) made sense only when interpreted as having the **double function** of governing (together with other provisions) the admissibility of the opposition and of simultaneously establishing the legal and factual framework within which the substantive examination of the opposition was in principle to be conducted.

The **legal framework** of an opposition case is defined solely by (i) the extent to which the patent is actually opposed and (ii) the grounds upon which it is opposed, whilst its **factual framework** is determined by the facts, evidence and arguments adduced and set out in the notice of opposition pursuant to R. 76(2)(c) EPC. It is thus self-evident that neither grounds not actually supported by such facts, evidence and arguments, nor claims not actually opposed (as distinct from being merely formally mentioned in the notice of opposition) can be properly regarded as making up the "legal and factual framework" of the opposition (**T 737/92**). Moreover, a distinction has to be made between the two main requirements of R. 76(2)(c) EPC, i.e. the indication of the **extent** to which the European patent is opposed and the **grounds** for opposition.

### 3.2. Extent of opposition

R. 76(1) EPC (cf. Art. 99(1) EPC 1973) provides, *inter alia*, that "notice of opposition shall be filed in a written reasoned statement". R. 76(2)(c) EPC (cf. R. 55(c) EPC 1973) requires the notice of opposition to contain, *inter alia*, "a statement of the extent to which the European patent is opposed" (see also in this chapter IV.D.2.2.6).

In **G 9/91** (OJ 1993, 408) the Enlarged Board clarified that the power of an opposition division or a board of appeal to examine and decide on the maintenance of a European patent under Art. 101 and 102 EPC 1973 (now merged in Art. 101 EPC) depends on the extent to which the patent is opposed in the notice of opposition (R. 55(c) EPC 1973; cf. R. 76(2)(c) EPC). However, this principle is subject to a restriction: even if the opposition is expressly directed only against the subject-matter of an independent claim in a European patent, claims which depend on any such independent claim can nonetheless also be examined as to their patentability if the independent claim is eliminated in opposition or appeal proceedings, provided that the validity of these dependent claims is put in doubt *prima facie* by the information which is already available (cf. also **T 443/93**, **T 31/08**; the principles set out in **G 9/91** have been followed by subsequent case law, e.g. **T 1019/92**, **T 1066/92**, **T 1350/09**; see also **T 525/96** and **T 907/03** in respect of claims of an auxiliary request).

The statements in the notice of opposition relevant to the extent to which the European patent is opposed should be interpreted in such a way that an addressee would understand them, taking into account the surrounding circumstances. However, the general practice of interpreting the absence of such statements as an indication of the opponent's intention to oppose the patent concerned in its entirety, has been subject to scrutiny in the light of **G 9/91**. In the extreme, where the extent to which a patent is opposed is in serious doubt, such a "liberal" practice may lead to a rejection of the opposition as inadmissible (**T 376/90**, OJ 1994, 906; see also **T 1/88**, in which the board based its interpretation of equivocal procedural acts on the "objective value of the explanation").

In **T 114/95** the board held that if an opponent requested revocation of the patent in its entirety, it was sufficient to substantiate the ground(s) for opposition in respect of **at least one claim** of the patent for the requirements of R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC) to be met. R. 55(c) EPC 1973 did not refer to claims but rather required that the notice of opposition should contain a statement of the extent to which the patent was opposed.

### 3.3. Scope of examination of grounds for opposition

According to the Enlarged Board in its opinion **G 10/91** (OJ 1993, 420; see also **G 9/91**, OJ 1993, 408), an opposition division or a board of appeal is not obliged to consider all the grounds for opposition referred to in Art. 100 EPC, going beyond the grounds covered by the statement under R. 55(c) EPC 1973 (R. 76(2)(c) EPC), but may exceptionally do so. In **opposition proceedings**, the opposition division may, in application of Art. 114(1) EPC, raise a ground for opposition not covered by the opposition statement or consider such a ground raised by the opponent (or referred to by

a third party under Art. 115 EPC) after the expiry of the time limit of Art. 99(1) EPC in cases where, prima facie, there are clear reasons to believe that it is relevant and would in whole or in part prejudice the maintenance of the European patent. However, in **opposition appeal proceedings** a more restrictive application of Art. 114(1) EPC is generally justified. It is not in conformity with the purpose of these proceedings, which is mainly to give the losing party the possibility of challenging the decision of the opposition division, to consider grounds for opposition on which that decision was not based. Furthermore, in contrast to the merely administrative character of the opposition procedure, the appeal procedure is to be considered a judicial procedure (**G 7/91** and **G 8/91**, OJ 1993, 356 and 346), which is by its very nature less investigative. Therefore, a fresh ground for opposition should only be raised by the board of appeal or admitted into the proceedings if the board considers it already prima facie highly relevant and the patentee agrees to its introduction.

The wording of Art. 101(1) EPC ("at least one ground for opposition") now makes it clear that the opposition division is not obliged to examine all the grounds for opposition. Reference is also made to this chapter IV.D.3.4 "Fresh grounds for opposition".

Following **G 10/91**, the board in **T 274/95** (OJ 1997, 99) held that, if a ground for opposition was substantiated in the notice of opposition but was subsequently not maintained during the opposition division proceedings (in the case in question, a statement to that effect had been made by the opponent during oral proceedings), the opposition division was under no obligation to consider this ground further or to deal with it in its decision, unless the ground was sufficiently relevant to be likely to prejudice maintenance of the patent.

In **T 223/95** the appellant had argued that the opposition division should take steps of its own motion to establish by investigation the level of knowledge of the person skilled in the art. The board observed that such an investigative approach would not be consistent with the character of the post-grant opposition proceedings under the EPC, which were in principle to be considered as contentious proceedings between parties normally representing opposite interests, who should be given equally fair treatment. In the board's opinion, it was unrealistic to suppose that the opposition division could seek, gather and select evidence in an entirely impartial fashion; herein lay an essential distinction between the functions of the examining divisions and the opposition divisions. It was the responsibility of the opponent himself to present to the opposition division the facts, evidence and arguments in support of the grounds on which the opposition was based.

As regards the investigative power of the **boards of appeal** under Art. 114(1) EPC, read in conjunction with in R. 66(1) EPC 1973 (R. 100(1) EPC), it is their judicial character that sets the limits to this power. To permit the shifting of the legal and factual framework of the opposition in appeal, in a mistaken reliance on the wording of Art. 114(1) EPC, read in isolation from the rest of the EPC, and in particular R. 66(1) EPC 1973, would offend the legal principles contained and expressed in the EPC and explained in the case law of the Enlarged Board (see e.g. **T 737/92**).

### 3.4. Fresh grounds for opposition

#### 3.4.1 General

In **G 1/95** and **G 7/95** ("Fresh grounds for opposition", OJ 1996, 615 and 626; consolidated proceedings), the Enlarged Board first defined the meaning of "grounds for opposition" within the framework of Art. 100 EPC, and paragraph (a) in particular, as well as in the light of **G 10/91** (OJ 1993, 408 and 420 – see also summary of **G 10/91** in this chapter IV.D.3.3). It noted that the function of Art. 100 EPC is to provide a limited number of legal bases i.e. a limited number of objections, on which an opposition can be based, all "grounds for opposition" in Art. 100 EPC having their counterparts in other articles of the EPC which have to be met during the procedure up to grant. Whereas the grounds in Art. 100(b) EPC and 100(c) EPC each relate to a separate and clearly delimited legal basis for an opposition, the totality of the articles (Art. 52 to 57 EPC) within the meaning of Art. 100(a) EPC constitute a collection of different objections to the maintenance of the patent.

The Enlarged Board had, in **G 10/91**, explained that, in application of Article 114(1) EPC, an opposition division may introduce a ground for opposition not covered by the notice for opposition, either of its own motion or upon application by an opponent, if such a ground is considered sufficiently relevant. If an opposition division does introduce such a ground into the proceedings before it, it will of course decide whether such ground prejudices the maintenance of the patent, in the decision that it issues. The Enlarged Board in **G 10/91** had first used the term "a fresh ground for opposition" in the context of considering the proper application of Art. 114(1) EPC during opposition appeal proceedings, and the term as used there must be interpreted as intended to refer to a new legal basis for objecting to the maintenance of the patent, which was neither raised and substantiated in the notice of opposition nor introduced by the opposition division.

In **G 1/95** (OJ 1996, 615), the Enlarged Board went on to hold that, in a case where a patent had been opposed on the grounds set out in Art. 100(a) EPC, but the opposition had only been substantiated on the grounds of lack of novelty and lack of inventive step, the ground of unpatentable subject-matter based on Art. 52(1) and (2) EPC was a fresh ground for opposition and accordingly could not be introduced into the appeal proceedings without the agreement of the patentee.

In **G 7/95** (OJ 1996, 626), it was held that in a case where a patent had been opposed under Art. 100(a) EPC on the ground that the claims lacked an inventive step in view of documents cited in the notice of opposition, the ground of lack of novelty vis-à-vis the said documents based on Art. 52(1) and 54 EPC was a fresh ground for opposition and accordingly could not be introduced into the appeal proceedings without the agreement of the patentee. However, the allegation that the claims lacked novelty in view of the closest prior art document could be considered in the context of deciding on the ground of lack of inventive step.

In **T 1549/07**, the ground for opposition under Art. 100(b) EPC had been raised after expiry of the opposition period. The opposition division had admitted this ground into the

proceedings without stating its reasons for doing so. It had then rejected the opposition and maintained the patent as granted. The patent proprietor (respondent) requested that the board refrain from examining this ground in the appeal proceedings. The board found that, while the opposition division's inadequately reasoned decision constituted a procedural error, the patent proprietor had not objected to it at any time during the oral proceedings. Nor had it led in the course of the opposition proceedings to any final decision adversely affecting the patent proprietor. The board thus deemed the patent proprietor's request inadmissible. There were no EPC provisions under which a ground for opposition admitted to and examined during the proceedings could be eliminated at the appeal stage. Since, in the case at issue, the opposition division had decided to admit said ground for opposition, it had become part of the contested decision and, as a result, was not "a fresh ground for opposition" introduced on appeal within the meaning of **G 10/91**. The board therefore had no need to obtain the patent proprietor's consent to its introduction and was entitled to consider it further.

In **T 2449/12**, the decision of the opposition division did not deal with the merits of a ground for opposition which had been both raised for the first time and withdrawn during the oral proceedings before it. According to the board, when neither the merits nor the admittance of a ground for opposition which was later raised and withdrawn during the opposition proceedings were addressed in the decision under appeal, this ground is considered a fresh ground for opposition which cannot be introduced into the appeal proceedings without the consent of the patent proprietor. The fact that the opposition division did not raise this ground of its own motion did not imply that it took a decision – subject to review of the board of appeal – to disregard it, as might have been the case if this late-filed ground had been maintained. Taking a different position on this point and accepting that all the grounds not introduced ex officio have been the subject of a discretionary decision to disregard them would open the possibility to circumvent the principle laid down in decision **G 9/91** that fresh grounds for opposition may not be introduced at the appeal stage without the consent of the patent proprietor.

#### 3.4.2 Objections of lack of novelty and lack of inventive step

In **T 135/01**, the board took the view that the mere observation in the course of an opposition procedure, whether by a party or the opposition division, that the subject-matter of a claim was new having regard to the prior art did not mean that **lack of novelty** was thereby introduced **as a ground for opposition**. Thus an assessment of inventive step generally began with a determination of the point of novelty, which implied a finding that the subject-matter of the claim was new. Treating such a routine affirmation of novelty as introducing the opposition ground of lack of novelty would be tantamount to including the latter ground as an invariant concomitant of the opposition ground of lack of inventive step, which would be contrary to decision **G 7/95** (OJ 1996, 626 – see in this chapter IV.D.3.4.1).

If a patent has been opposed on the grounds of lack of novelty and lack of inventive step and if only the ground of novelty has been substantiated, a specific substantiation of the ground of lack of inventive step is not necessary. Under such circumstances a specific substantiation of the ground of lack of inventive step is not even generally possible since

- given that novelty, i.e. the presence of a difference between the claimed subject-matter and a prior art, is a prerequisite for determining whether an invention involves an inventive step in view of that prior art - this would contradict the reasons in support of lack of novelty. Therefore, the objection of lack of inventive step does not constitute a fresh ground for opposition and can therefore be examined in the appeal proceedings without the agreement of the patentee (**T 597/07**; see also **T 131/01**, OJ 2003, 115).

In **T 635/06** the notice of opposition specified that the patent in suit was opposed for lack of novelty and lack of inventive step as the respective boxes of the standard EPO form had been crossed and as the notice explicitly indicated both grounds. In the circumstances of the case it was not possible for the opponent to substantiate the ground of lack of inventive step by any analysis going beyond its arguments against novelty. The opponent was thus limited to the position that a comparison of the disclosed composition and the claimed subject-matter revealed no distinguishing feature, the presence of which would, however, be necessary for a detailed objection to inventive step. Hence, the ground of lack of inventive step was considered by the board to be sufficiently addressed and, thus, properly raised in the notice of opposition.

According to the board in **T 514/04**, the lack of novelty objection originally raised against claim 5, relating to a process for the preparation of a product, **could not extend to the products obtained from this process**, including the products to claims 1 to 4, and that consequently the lack of novelty objection raised against claims 1 to 4 for the first time before the board was a fresh ground for opposition.

In **T 1959/09** the patentee (respondent) had requested the board to refer to the Enlarged Board of Appeal the question whether an existing ground for opposition raised in respect of a different independent claim amounts to a fresh ground of opposition as set out in **G 10/91**. In this respect, reference was made to **T 514/04** (see above), where the board had stated that the extent and ground for opposition mentioned in R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC) were connected in the sense that a specific claim(s) is/are objected to under a specific ground or grounds. The patentee argued that it was inadmissible without the approval of the patentee to extend the opposition over and above this basic concept which defined both the extent to which the patent was originally opposed (cf. **G 9/91**) and the grounds originally submitted with respect to subject-matter opposed under Art. 99 (1) EPC and R. 55(c) EPC (cf. **G 10/91**). The board did not recognise the necessity for such a referral since the ground for opposition pursuant to Art. 100(c) EPC as well as the question whether the requirements of Art. 123(2) EPC were clearly considered in the impugned decision. In addition, the board distinguished the present case, where claims 1 and 17 of the main request both belonged to the same category and virtually included the same subject-matter, from the case in **T 514/04**, where the question posed was whether a ground for opposition raised against a claim to a process applied equally to a claim to a product produced by said process. Hence, **T 514/04** had no bearing on the case at issue.

The board noted in passing that there was no basis in **G 10/91** for the general assumption that a ground for opposition raised against an independent claim may not subsequently be raised by the opponent against another independent claim, falling within

the scope of the opposition, since otherwise a new ground for opposition would thereby be introduced. According to the board, **T 514/04** neither mentioned nor elucidated the relevant passages in **G 10/91** which supported that assumption. Actually, **G 10/91** appeared to regard a new ground for opposition as being a "ground for opposition not covered by the statement pursuant to R. 55(c) EPC", no indication being given in that decision which would justify the inference that this should be construed far more broadly as meaning any ground for opposition in respect of a specific given claim which was not covered by the statement pursuant to R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC).

#### 3.4.3 Grounds raised against amended claims

Amendments must be examined fully for compatibility with the EPC (Art. 101(3) EPC; see also in this chapter IV.D.4.2). Thus, where the respondents (opponents) first raise an objection under Art. 100(b) EPC during the appeal proceedings to an amended claim, the appellants cannot refuse permission to discuss the new ground (**T 27/95**).

In **T 922/94**, the board recalled that Art. 102(3) EPC 1973, R. 66(1) EPC 1973 (cf. Art. 101(3)(a), R. 82, and R. 100(1) EPC) conferred wide powers upon the boards to consider all possible objections under the EPC, pleaded or not pleaded, that might arise from an amendment of the claims originally filed. In case objections concerning the requirements of Art. 123(2) EPC were not expressly pleaded under R. 55(c) EPC 1973 (cf. R. 76(2)(c) EPC), but formed part of the opposition division's decision, the objection under Art. 123(2) EPC formed part of the legal framework of the decision under appeal and the patentee (appellant) could not rely on **G 10/91** for its request not to admit this ground into the appeal proceedings (see **T 227/88**, OJ 1990, 292).

The fact that amendments have been made to a claim in the course of the opposition proceedings does not allow an opponent to raise an admissible objection under Art. 123(2) EPC at the appeal stage in the absence of the patentee's agreement, if such objection results from an amendment made before grant and has not been originally raised as a ground for opposition under Art. 100(c) EPC pursuant to R. 55(c) EPC (**T 693/98**).

The introduction of a feature into an independent claim, which feature was present in the claims and in the description as granted, could not be considered as an amendment which legitimated the admittance of Art. 100(b) EPC as a fresh ground of opposition, which required that a European patent as a whole had to disclose the invention in a manner sufficiently clear and complete for it to be carried out by a person skilled in the art (**T 1053/05**; cf. **T 739/08**).

#### 3.4.4 Scope of examination of new grounds for opposition by opposition division

In **T 736/95** (OJ 2001, 191) the ground referred to by the appellant under Art. 100(c) EPC had not been raised in the notice of opposition. The opposition division had decided not to admit the newly submitted ground, without giving the parties any indication that it considered it to be less pertinent. The question which then arose was whether the fresh ground could be examined at all under Art. 114(1) EPC. Having regard

to **G 10/91** (OJ 1993, 420) and **G 1/95** (OJ 1996, 615) and the Guidelines for Examination, the board concluded that the department of first instance at least had to examine whether a fresh ground was relevant and could therefore prejudice maintenance of the patent. Since it did not do so, but based its refusal to admit the ground only on the fact that it had been raised late, the opposition division deprived the appellants of the opportunity to have the relevance of this ground, and thus its admissibility, examined on appeal.

According to the board in **T 520/01**, where a ground was substantiated within the opposition period and the party which had raised the ground neither appeared at the opposition oral proceedings nor withdrew the ground, the ground had to be dealt with by the opposition division and could be taken up by other appellants in subsequent appeal proceedings.

In **T 433/93** the board held that, in all normal cases, if an opposition division decided to introduce a new ground for opposition into the proceedings in addition to the ground(s) for opposition raised and substantiated in the notice of opposition, this should be done in writing as early as possible in the proceedings. The written notification to the patent proprietor from the opposition division informing the proprietor that a new ground for opposition would be introduced into the proceedings should at the same time ensure that the proprietor was informed not only of the new ground for opposition (i.e. the new legal basis for the opposition), but also of the legal and factual reasons (i.e. its substantiation) that would in effect substantiate the new ground which would lead to a finding of invalidity and revocation, so that the proprietor was fully informed of the case which he had to meet, and had a proper opportunity to present comments in reply. If, in a very exceptional case, an opposition division decided for the first time during oral proceedings that a new ground for opposition should be introduced, it would in principle be appropriate, even during oral proceedings, for the opposition division to notify the proprietor in writing both of the introduction of the new ground and of the legal and factual reasons which substantiated such a new ground. In this way, possible misunderstandings would be avoided, and the notification would be part of the written file record of the case.

In **T 620/08** the opposition was originally based on the ground of lack of inventive step alone but, later in the opposition proceedings, the opponent submitted documents and arguments that the subject-matter of the patent lacked novelty. In its decision, the opposition division set out in detail under the point "Novelty" the reasons why it considered that the subject-matter of the patent was novel over these documents, which then led to its decision not to admit the late-filed ground for opposition. The patentee argued before the board of appeal that, since it had not been admitted into the proceedings by the opposition division, the objection of lack of novelty was a fresh ground for opposition which could not be introduced without the agreement of the patentee. Approval was not given. Citing **T 986/93** (OJ 1993, 215), the board took the view that the term "fresh ground of opposition" in **G 10/91** meant a ground which is relied upon for the first time in appeal proceedings. This, however, was not the case here. Novelty as a ground for opposition was relied upon and discussed during the opposition proceedings, thus forming a major part of the decision under appeal. Furthermore, a

board of appeal was at least not barred from considering a late-filed ground for opposition which had been disregarded by the opposition division pursuant to Art. 114(2) EPC, if it was of the opinion that the opposition division exercised its discretion wrongly in this respect. The procedural decision of an opposition division to disregard submissions formed an essential element of its decision-making process and belonged as such to the issues subject to review when the final decision of the opposition division was challenged on its merits.

#### 3.4.5 Examination of fresh facts and evidence

In **T 1002/92** (OJ 1995, 605) the board stated that, when considering the admissibility of a further ground for opposition not covered by the notice of opposition after expiry of the opposition period, both before an opposition division and before a board of appeal, the Enlarged Board was necessarily implicitly considering the admissibility of such a fresh ground in combination with at least an indication of the **fresh facts and evidence** intended to support it. The mere stating of a fresh ground without any indication of the fresh facts, evidence and argument supporting it would obviously be inadmissible, either within or after expiry of the opposition period. It would be illogical to have one criterion for the admissibility of late-filed new facts, evidence and arguments in combination with a fresh ground, and a different criterion for judging the admissibility of late-filed new facts, evidence and arguments in support of a ground for opposition already covered by the opposition statement. Hence, in the board's view, it followed that the principles set out by the Enlarged Board in the opinion **G 10/91** (OJ 1993, 420) as underlying the admissibility of fresh grounds for opposition, were also generally applicable to the admissibility of late-filed new facts, evidence and arguments intended to support grounds for opposition already covered by the opposition statement.

Likewise, where amended claims were introduced in the opposition proceedings there could be no objection to the opponent's submitting new citations and new arguments against the new claims (**T 623/93**). The examination by the opposition division of a new submission justified in this way was in keeping with **G 9/91** (OJ 1993, 408, point 19 of the Reasons).

In **T 154/95** the board ruled that in opposition or appeal proceedings it was basically irrelevant how an opponent came across documents or other evidence made available to the public. Thus there was nothing to stop an opponent from citing a prior use invoked in the same case by another opponent whose opposition was inadmissible because it had been filed after expiry of the opposition period.

#### 3.4.6 Opportunity to comment on new grounds for opposition

Art. 113(1) EPC, in which the requirement that the parties be heard is enshrined, provides that decisions of the EPO may only be based on grounds or evidence on which the parties have had an opportunity to present their comments. The term "grounds or evidence" in Art. 113(1) EPC should not be narrowly interpreted. In particular, in the context of the examination procedure the word "grounds" does not refer merely to a ground of objection to the application in the narrow sense of a requirement of the

Convention which is considered not to be met. The word "grounds" should rather be interpreted as referring to the essential reasoning, both legal and factual, which leads to a refusal of the application. In other words, before a decision is issued, an applicant must be informed of the case which he has to meet, and must have an opportunity of meeting it (see **T 951/92**, OJ 1996, 53; see also **T 105/93**). This interpretation of Art. 113(1) EPC is equally applicable in the context of opposition proceedings: thus the patent proprietor must be informed (normally in writing) not only of the new ground for opposition (i.e. the new legal basis for the opposition), but also of the **essential legal and factual reasons** (i.e. its substantiation) which could lead to a finding of invalidity and revocation. Thereafter the patent proprietor must have a proper opportunity to present comments in reply to the new ground and its substantiation (see **T 433/93**; also **T 1283/11**).

In **T 656/96**, the opponent had based his opposition solely on the invention's purported lack of inventive step. However, lack of novelty was advanced as a ground for opposition for the first time in the oral proceedings and in the absence of the patent proprietor, who had previously informed the division that he would not be attending oral proceedings. The opposition division revoked the contested patent, even though it had not originally raised a novelty objection in its communication under Art. 101(2) EPC 1973 (cf. Art. 101(1) EPC). In such circumstances, the board referred to the case law of the Enlarged Board of Appeal distinguishing between the opposition ground of lack of novelty and that of lack of inventive step (**G 7/95**, OJ 1996, 626) and recognising the opposition division's competence to consider, exceptionally under Art. 114(1) EPC, fresh grounds for opposition which, prima facie, appear, either in whole or in part, to prejudice maintenance of the European patent (**G 10/91**, OJ 1993, 420). In the case in hand, the board held that, particularly in the light of the opinion on novelty expressed in the communication from the opposition division, no prima facie case against maintenance of the patent could be gathered from the file, so that the appellant had been entitled to consider that the question of novelty would play no part before the opposition division. The appellant must therefore have been taken by surprise by the decision taken in his absence by the opposition division at the oral proceedings to revoke the patent on the grounds of lack of novelty, grounds on which he had not been asked, nor had any reason, to express an opinion.

In **T 270/94**, the board found that the opposition division had infringed Art. 113(1) EPC by preventing opponent 1, who had based its opposition solely on lack of novelty, from commenting on an opposition ground of lack of inventive step duly submitted by opponent 2 and communicated to all the parties in accordance with R. 57(2) EPC 1973 (cf. R. 79(2) EPC). Furthermore, the board observed that Art. 114(2) EPC, relied on by the opposition division, was not applicable to the case, because it indicated only that the EPO could disregard late-filed facts or evidence, whereas the case in hand involved arguments put forward by one of the parties to the proceedings in relation to a ground for opposition submitted in due time by another party.

In **T 1164/00**, the board held that the **opposition division** was in principle entitled to introduce a new ground for opposition even at the late stage of oral proceedings, since, in its view, it was apparent that the patent in suit did not comply with the requirements of Art. 83 EPC. However, in this case, the annex to the summons to oral proceedings did

not contain any indication of the opposition division's intention to introduce a new ground for opposition, which meant that the appellant was made aware of the factual and legal reasons supporting the introduction of this new ground for the first time during the oral proceedings. The board therefore concluded that the appellant had not been notified in writing as early as possible and, not having been informed beforehand of the factual and legal reasons, had been taken by surprise and had not had a fair opportunity during the oral proceedings to prepare a proper defence against this new objection. In those circumstances, the opposition division ought to have adjourned the oral proceedings in order to give the appellant sufficient time, in accordance with Art. 113 EPC, to prepare a suitable defence against the new objections (see also **T 433/93**, OJ 1997, 509 and **T 817/93**).

In **T 2362/08**, the board had to determine whether the patent proprietors' right to be heard according to Art. 113(1) EPC had been safeguarded with regard to the decision of the opposition division on insufficiency of disclosure. While the ground of insufficiency appeared in the notice of opposition, the objections of the opponents were merely based on two lines of argument. No further submission on insufficiency was filed by the opponents in writing and, before the oral proceedings took place, no further issue was raised by the opposition division. Specifically, in its communication accompanying the invitation to oral proceedings, the opposition division did not agree with the objections of the opponents, placed the burden of proof on them to establish that the skilled person would be unable to carry out the invention and noted that the opponents had not submitted any experimental evidence. In its decision on insufficiency, however, the opposition division developed a completely different line of argument on a substantive issue of insufficiency which was raised for the first time at the oral proceedings. Furthermore, the patent proprietors had to face an unexpected reversal of opinion from the opposition division, which discharged the opponents of the burden of proof, thereby shifting it to the patent proprietors. The board could not consider the simple formal hearing of the patent proprietors on the issue at the oral proceedings to have been a proper opportunity for them to present their comments. By presenting the new legal and factual framework only at the oral proceedings and by coming to a final decision on the issue without first having given the patent proprietors a proper opportunity to respond, the opposition division did not respect their right to be heard. Therefore a causal link existed between the non-observance of the right to be heard and the decision made, amounting to a substantial procedural violation.

## **4. Amendments in opposition proceedings**

### **4.1. Admissibility of amendments**

#### **4.1.1 General**

The extent to which amendments may be admissible in opposition proceedings was discussed in **T 1149/97** (OJ 2000, 259). Once a decision to grant has been issued, the European examination procedure is closed and its results become binding on the applicant and the EPO in that no further amendments may be made. However, if an opposition is filed, the patent in suit may be amended. Such amendments are not left to

the general discretion of the patent proprietor, since opposition proceedings are not a continuation of the examination proceedings (cf. **G 1/84**, OJ 1985, 299). However, the patent proprietor may, pursuant to R. 80 EPC (cf. R. 57a EPC 1973) – without prejudice to R. 138 EPC (cf. R. 87 EPC 1973) – react to the opponent's objections by amending the description, claims and drawings, provided that the amendments are occasioned by the grounds for opposition specified in Art. 100 EPC, even if the respective ground has not been invoked by the opponent. In addition, amendments occasioned by national rights of earlier date are admissible pursuant to R. 138 EPC (see also in this chapter IV.D.4.1.2).

According to the board, those regulations could be seen to reflect the formal aspects of a procedural cut-off effect associated with the grant of a patent in the opposition phase. Compliance with the restrictions imposed by R. 57a and 87 EPC 1973 (R. 80 and 138 EPC) was thus a prerequisite for any further considerations as to possible substantive cut-off effects for amendments after grant during opposition proceedings which, in the board's view, could only be based on Art. 123(3) EPC (see also Chapter II.E "Amendments").

According to **T 323/05**, which concerned a request to adapt the description, R. 80 EPC (cf. R. 57a EPC 1973) establishes a limit to the amendments which can be made to the patent in suit. Art. 84 EPC and R. 80 EPC are the two provisions which have to guide the patent proprietor when he is invited by the opposition division to adapt the description. In other words, the amendments have to be appropriate and necessary, and nothing more.

In **T 993/07** the board recalled that R. 80 EPC is *lex specialis* for amendments during opposition proceedings, analogous to R. 137 EPC for amendments during examination proceedings. The board interpreted the rule to mean that in opposition proceedings the proprietor's right to amend the patent, e.g. the claims as granted, is limited to making amendments in order to overcome an objection based on a ground for opposition as specified in Art. 100 EPC, thereby possibly avoiding revocation of the patent. In line with this interpretation, the board stated that opposition proceedings were not to be understood as an opportunity for the proprietor to fix any, from his perspective, shortcomings in the patent, such as an insufficient number of independent and/or dependent claims in order to define all commercially valuable embodiments. The fact that the addition of one or more independent and/or dependent claims may improve the fall-back positions in any future revocation proceedings before a national court was clearly not the scope and purpose of either R. 80 EPC or the opposition procedure. The board also observed that a limitation procedure pursuant to Art. 105a EPC is not subject to the same requirement as set out in R. 80 EPC.

The opposition division's decision to admit into the proceedings an auxiliary request (main request in the appeal proceedings) filed during the oral proceedings was challenged before the board in **T 491/09**. In its decision the board concluded that the opposition division had exercised its discretion according to R. 116(1) and (2) EPC by taking into account the following criteria:

a) prima facie allowability: contrary to the opponent's/appellant's argument that the opposition division should have examined the prima facie clarity of the claims, it was evident from the minutes of the oral proceedings that no such objections had been raised. Also, the board could not share the appellant's view that the opposition division should ex officio have examined the entire claim for clarity, following **T 1459/05** and **T 656/07** (on this issue, see now **G 3/14**, OJ 2015, A102, in this chapter IV.D.4.2.2). Apart from the fact that **T 656/07** was issued after the oral proceedings at the opposition stage and that, in general, the opposition division could hardly be expected to receive knowledge of any single decision immediately after its deliverance, the board could not find any fault with the opposition division not following a decision which expressly stated that it concerned a very particular case and thus warranted a departure from otherwise consistent case law.

b) procedural expediency/abuse of procedure: the board recognised that the respondent (patent owner) needed quite some prompting to finally come up with its late-filed request which addressed the point under discussion during the oral proceedings before the opposition division, but could not see an abuse of procedure therein, nor an unwarranted advantage for the respondent.

c) reasonable expectation that the opponents familiarise themselves with the proposed amendments in the time available: the minutes revealed that the oral proceedings had been conducted properly and towards the resolving of the outstanding issues, giving the opponent ample opportunity to familiarise itself with the amended subject-matter.

Since the EPC does not provide for surrender of the patent in opposition proceedings, so that - even if they issue an express statement to that effect - patent proprietors cannot surrender their patent either wholly or in part during such proceedings, they can merely request that the patent be amended. In requesting that the **patent be maintained in a limited form**, a patent proprietor is merely attempting to delimit it to meet objections raised by the EPO or the opponents and does not, by virtue of such limitation, irrevocably surrender subject-matter not covered by the request as limited. In principle, the patent proprietor is free to withdraw such a request at any time during opposition proceedings or to amend it subsequently and, in particular, to resume a defence of the patent as granted, unless this would constitute an abuse of procedural law or the proprietor is prevented from doing so by the prohibition of reformatio in peius (see **T 123/85**, OJ 1989, 336; **T 296/87**, OJ 1990, 195; **T 155/88**, **T 225/88**, **T 217/90**, **T 715/92**, **T 752/93**, **T 1037/96**, **T 445/97**, **T 473/99**, **T 880/01**, **T 794/02**, **T 934/02**, **T 1213/05**, **T 1394/05**).

According to the case law in **T 123/85** (OJ 1989, 336), there is nothing to stop patent proprietors who have defended only a limited version of their patent in opposition proceedings from seeking to reinstate the patent as granted in any subsequent appeal proceedings. However, this is subject to the conditions laid down in **G 9/92** and **G 4/93** (OJ 1994, 875; accordingly, the position taken in **T 369/91**, OJ 1993, 561, is obsolete).

In **G 1/10** (OJ 2013, 194), the Enlarged Board of Appeal held that R. 140 EPC is not available for correcting patents, including during opposition or limitation proceedings.

However, it is always open to a patent proprietor to seek to amend his patent during opposition or limitation proceedings and such an amendment could remove a perceived error. Such an amendment would have to satisfy all the legal requirements for amendments including those of Art. 123 EPC (see also full summary of **G 1/10** in Chapter III.L.1).

#### 4.1.2 Amendments occasioned by national prior rights

Amendments occasioned by national prior rights - which are not included in the grounds for opposition specified in Art. 100 EPC - are also admissible during opposition proceedings. The reference in R. 80 EPC to R. 138 EPC (former R. 87 EPC 1973), which as a general provision of the EPC 1973 also applies to opposition proceedings, makes this absolutely clear (see prior practice in **T 550/88**, OJ 1992, 117).

This was also confirmed by the board in **T 15/01** (OJ 2006, 153). In that case, the appellant had justified the filing of separate claims for Spain and Greece on the grounds that a number of claims as granted might be ineffective in Spain and Greece, since the reservations made by both contracting states under former Art. 167(2)(a) EPC 1973 (now deleted) were still in force on the date of filing of the application. The board held that, although the EPC 1973 did not contain an explicit provision for the corresponding situation where an applicant or proprietor wished to take into account the reservation made by an EPC contracting state under Art. 167(2)(a) EPC 1973, it had been the established practice of the EPO from the very beginning to accept the filing of separate sets of claims for such contracting states. This practice had also been confirmed in **G 7/93** (OJ 1994, 775), in which the Enlarged Board of Appeal regarded such situations as an exceptional case in which amendments might be appropriate at a very late stage of the examination procedure. The technical board further made it clear that the general purpose of R. 57a EPC 1973 (cf. R. 80 EPC) was to allow amendments only where they were made to overcome an objection against the validity of the European patent. It followed from the reference to R. 87 EPC 1973 (cf. R. 138 EPC) that, within the framework of the centralised opposition procedure before the EPO, amendments were also to be allowed where the patentee intended to overcome a possible ground of invalidity which only existed in respect of a particular contracting state. Thus, R. 57a EPC 1973 was not infringed by the formulation of a separate set of claims for a contracting state in which, due to a reservation made under Art. 167(2)(a) EPC 1973, certain product claims as granted would be considered invalid or ineffective.

#### 4.1.3 Time frame for filing amendments

R. 80 EPC (cf. R. 57a EPC 1973) does not specify the point in time up to which amendment is allowed; here existing practice remains unchanged. This restriction of the right to amend is in line with the object and purpose of opposition proceedings, and does away with the need for a discretionary provision like R. 137(3) EPC (former R. 86(3) EPC 1973) (see notes on introduction of R. 57a EPC 1973 in Notice dated 01.06.1995, OJ 1995, 409).

As already mentioned, the boards of appeal have derived, in particular from R. 79(1) EPC (cf. R. 57(1) EPC 1973), the principle that the proprietor has no right to have amendments admitted at any stage of opposition proceedings. At the discretion of the opposition division or the board of appeal, amendments can be refused if they are neither appropriate nor necessary. In particular, late-filed amendments can be refused if they are not a fair attempt to overcome an objection made. In general, the question whether an amendment is appropriate can only be answered on the basis of its content, i.e. after it has actually been submitted. To refuse any further amendment is only appropriate if it is evident after various unsuccessful amendments that the proprietor is not seriously trying to overcome the objections but is only delaying the proceedings (**T 132/92**).

In **T 648/96** the amendments requested during the oral proceedings before the opposition division were simply a response to arguments put forward. The board said EPO deciding instances have a discretion to consider documents (including claims) filed in particular during oral proceedings, if they respond to the instance's or the opponent's objections, or are clearly grantable. Undesirable delays in the proceedings should, however, be avoided.

In **T 382/97** the appellant (patentee) had submitted three auxiliary requests only at the beginning of oral proceedings. It tried to justify disregarding the time limit set by the opposition division under R. 71a EPC 1973 (cf. R. 116 EPC) by citing R. 57a EPC 1973 (cf. R. 80 EPC) which, it asserted, "was created as a *lex specialis* for amendments during opposition proceedings" and did not "specify the point in time up to which the amendment is allowed". Indeed, the board agreed that R. 57a EPC 1973 explicitly established the patent owner's right to amend its patent according to the criteria laid down in that rule, but it could not accept the argument that the absence of a time limit in R. 57a EPC 1973 entitled a patent proprietor to submit amendments to its patent at any time, i.e. also during oral proceedings, without good reason. In the board's judgment, R. 57a EPC 1973 and R. 71a EPC 1973 (cf. R. 116 EPC) together governed the procedural preconditions for amendments to a patent by its proprietor before the opposition division, which amendments of course had to comply with Art. 123(2) and (3) EPC 1973: R. 57a EPC 1973 created the legal basis for amendment, and R. 71a EPC 1973 governed the deadline for doing so. The board emphasised that amendments not complying with a time limit set under R. 71a EPC 1973 might nevertheless be admissible if there were good reasons for their late submission. Finally, the board noted that the patent owner's right to amend its patent under R. 57a EPC 1973 did not equate to an automatic right to file additional auxiliary requests. Any amendment had to be carried out in the most expedient manner, which had to be established by the opposition division, taking into due account the interests of all parties.

In **T 2415/13** the opposition division had admitted an auxiliary request filed only at the oral proceedings since, as stated in its decision, the amendment made in it was "neither unforeseeable nor difficult to grasp". In the board's view, this implied that, according to the opposition division, the opponent could be expected to deal with the amendment during the oral proceedings. This was an appropriate criterion to apply when deciding on

the admissibility of late-filed requests and the board has no reason to assume that the opposition division applied it in an unreasonable way.

#### 4.1.4 Filing amendments

The opposition division exercises a discretionary power in relation to requests for amendment. Consideration of a new or amended independent claim could reasonably be expected when such a new or amended claim results from a combination of features taken from granted claims which has been specifically opposed, since the opponents should already be familiar with the subject-matter (**T 463/95**). The principles for dealing with amendments to opposed patents developed by the boards of appeal also apply to the filing of additional dependent or independent claims in opposition or subsequent appeal proceedings.

##### a) Filing new dependent claims (sub-claims)

The addition of new dependent claims which do not correspond to any claims as granted is not appropriate or necessary to overcome a ground for opposition and therefore impermissible (see e.g. **T 794/94**, **T 674/96**, **T 24/96**). As explained in **T 829/93** and **T 317/90**, the addition of a dependent claim is not a response to an objection that the claimed subject-matter is not patentable because it neither limits nor amends the subject-matter claimed in the relevant independent claim. The fact that dependent claims can serve as an important safety net should the corresponding independent claim ultimately be refused does not render it legitimate to add them to a remaining, broader independent claim in opposition proceedings.

In **T 711/04**, the board took the view that the decision in **G 9/91** (OJ 1993, 408) did not answer the question to what extent a patent proprietor may amend a non-opposed claim in opposition or appeal proceedings. Rather, it merely set out the legal and factual framework for substantive examination of the patent in suit. In accordance with those principles, not even the patent proprietor could propose amendments because the subject-matter of a non-opposed claim was not the subject of an "opposition" within the meaning of Art. 101 and Art. 102 EPC 1973 (Art. 101 EPC combines Art. 101(1) and (2) with Art. 102(1) to (3) EPC 1973; R. 82 EPC) or "proceedings" within the meaning Art. 114 and Art. 115 EPC. The Enlarged Board of Appeal had also found, however, that this basic principle was not directly applicable where the only subject-matter outside the specified scope of the opposition were dependent claims which had to be regarded as implicitly covered. This exception for sub-claims was, the board found, entirely justified by the fact that a sub-claim combined with a main claim and requested as a new main claim had to be examined as to its form and substance in order to ascertain whether or not the combination of the claims had extended the protection sought. This also showed that the theoretical legal construct underlying the **G 9/91** decision, i.e. that there were no proceedings within the meaning of Art. 114 or Art. 115 EPC, was untenable in the case in hand. A patent proprietor wishing to limit the patent to the subject-matter of a non-opposed sub-claim had to combine that sub-claim with the corresponding main claim. The non-opposed sub-claim was inevitably amended as a result, even if the amendment might appear to be a mere technicality.

## b) Filing new independent claims

In **T 610/95** the appellant failed to provide a reasoned argument to show that the filing of new independent claim 5 was indeed necessitated by a ground for opposition. The board referred to **G 1/84** (OJ 1985, 299), which made it clear that the opposition procedure was not designed to be, and was not to be misused as, an extension of the examination procedure. It would, in the board's opinion, contravene the principles set out in **G 1/84** if it was considered admissible to amend the text of a granted patent during opposition proceedings, while maintaining the sole independent claim under opposition, by incorporating an additional new independent claim which as such had no counterpart in the granted patent and, accordingly, was neither the subject of substantive examination in the examination procedure nor open to opposition owing to its non-existence in the granted patent.

In **T 223/97** the board confirmed that the addition during opposition proceedings of one or more independent claims while maintaining the main claim in question could not be considered to be a restriction to the main claim in order to meet the ground for opposition raised against it. These new claims were therefore inadmissible because such amendments could not be said to meet a ground for opposition, even if they otherwise satisfied the dual conditions of Art. 123(2) and (3) EPC. However, the replacement of one independent claim as granted by several, for example two, independent claims each directed to a respective specific embodiment covered by the independent claim as granted was admissible if the replacement was occasioned by grounds for opposition (see also **T 428/12**).

Referring to the above decision, the board held in **T 181/02** that only in exceptional cases could the replacement of a granted single independent claim by two or more independent claims be occasioned by a ground for opposition, for example where a granted independent claim covered two specific embodiments. Such a situation might also arise if two granted dependent claims (e.g. claims 2 and 3) were linked in parallel to a single independent claim (claim 1). Then the filing of two independent claims (e.g. including the features of claims 1 and 2, and 1 and 3) might be possible (moreover thereby decreasing the number of claims). However, it was normally sufficient for the patentee to remain with a single independent claim solely by modifying the granted claim once, i.e. by adding one or more features to the granted single independent claim. Adding a second independent claim was in normal cases not needed to avoid revocation of the patent on the basis of the unmodified or modified granted single independent claim, and furthermore did not do anything to help avoid revocation (see **T 610/95**).

Citing the above case law, the board in **T 263/05** (OJ 2008, 329) added that, when examining the amendments, it did not have to decide whether the ground for opposition would occasion the replacement of a granted single independent claim by two or more independent claims only in "exceptional cases". Rather, it had to be asked in each individual case whether the proposed amendments were an appropriate and necessary response designed to avoid revocation of the patent and could thus be regarded as occasioned by the grounds for opposition.

In **T 937/00** the board noted that the filing of multiple independent claims directed to **different inventions** might unduly complicate and delay the opposition procedure, in particular when this filing was followed by a series of further amendments. An efficient and possibly complete examination of the opposition might for instance become virtually impossible if subsequent amendments were proposed in a piecemeal way rather than addressing all the objections raised by the other party as soon as these objections arose, if they manifestly gave rise to new issues, in particular if they introduced new claims which did not result from any combination of the claims in the granted version, or if they introduced features for which there was no unambiguous support in the application documents as originally filed.

In **T 1/05** the board did not regard the introduction of product-by-process claims as an amendment occasioned by a ground for opposition. The submission of such claims demonstrated that these amendments were not directed addressing a ground for opposition but were intended to compensate for the effects of an amendment that had been made to address such a ground, namely deletion of the product claims.

c) Applicability of Rule 43(2) EPC in opposition proceedings

R. 43(2) EPC (cf. R. 29(2) EPC 1973) provides that a European patent application may not contain more than one independent claim in the same category unless they involve (i) a plurality of interrelated products, (ii) different uses of a product or apparatus or (iii) alternative solutions to a particular problem, where it is inappropriate to cover these alternatives by a single claim.

The scope and potential applicability of R. 43(2) EPC in opposition proceedings was addressed in **T 263/05** (OJ 2008, 329). Having considered the purpose and legislative history of the rule, the board concluded that it could not apply across the board to all amendments made during opposition proceedings. If it did, it would be impermissible to make any amendment introducing non-unitary claims, something which was not only permissible in opposition proceedings but also clearly appropriate given that the patent proprietor was no longer able to file a divisional application. To conclude that R. 43(2) EPC applied across the board in opposition proceedings would have watered down the decision in **G 1/91** (OJ 1992, 253). R. 43(2) EPC could not be applied in opposition proceedings to prohibit the amendment of a patent as granted where it would be unreasonable to demand that the amended claims comply with it. This was the case where, otherwise, R. 43(2) EPC would force the patent proprietor to abandon potentially valid subject-matter already contained in the claims as granted. The board could not envisage any circumstances in opposition proceedings in which R. 43(2) EPC would be of any application because, once it had been established that an amendment to the claims was necessary and appropriate having regard to grounds for opposition, it would inevitably be unreasonable to impose the additional requirement that the amendment complied with the purely administrative provisions of R. 43(2) EPC.

According to the board in **T 1416/04**, a request containing a plurality of independent product claims might be allowable under R. 57a EPC 1973 (cf. R. 80 EPC) in order to provide an amendment of a granted set of claims containing only one independent

product claim, if the amended independent claims arose from the deletion of previous claims. With regard to the form of the claims, the board did not consider it relevant for the case before it to decide whether R. 43(2) EPC applied to opposition cases or not: even if R. 43(2) EPC should be considered applicable, the subject-matter in the granted claims could not appropriately be covered by one independent claim so that the requirements of this rule would have been met anyway. If R. 43(2) EPC were not considered applicable to opposition cases at all, by virtue of its wording which relates to a European patent "application" and not to a granted patent, then there could be no objection under this rule against the form of the claims.

#### 4.1.5 Amendments intended to remedy a lack of clarity

Objections to the clarity of claims (here equivocality of the term "average particle size") or any consequent requests for amendment are only relevant to opposition proceedings in so far as they can influence the decisions on issues under Art. 100 EPC or arise in relation to the subject-matter to be amended as a consequence of such issues. This was the view taken by the board in **T 127/85** (OJ 1989, 271), to which it added that it would be an abuse of opposition proceedings if the patent proprietor were allowed merely to tidy up and improve the disclosure by amendments not specifically necessitated by the grounds advanced for the opposition, even if those amendments were to comply with Art. 123 EPC.

According to R. 81(3) EPC (R. 58(2) EPC 1973) limited consideration of amendments is intended to help expedite and streamline opposition proceedings (see e.g. **T 406/86**, OJ 1989, 302; see also **T 24/88**, **T 324/89** and **T 50/90**). According to the established case law of the boards of appeal, Art. 84 EPC is an EPC requirement that has to be taken into account in opposition proceedings whenever the patent proprietor files any amendments. However, Art. 84 EPC is not itself a ground for opposition under Art. 100 EPC. Irrespective of how the granted claims are formulated, and be they dependent or independent, an opposition cannot be lodged on the basis that they lack clarity. Consequently, merely formal, syntactical reformulations of the claims do not give rise to a new objection outside Art. 100 EPC, i.e. under Art. 84 EPC (**T 23/86**, OJ 1987, 316; see further **T 565/89**, **T 89/89**, **T 62/88**, **T 16/87**, OJ 1992, 212, **T 1835/08**, **T 1855/07**, **T 630/09**). In **T 792/95**, another board confirmed the principle that, in opposition proceedings and subsequent appeal proceedings, only such amendments could be made as were necessary in the light of the grounds for opposition under Art. 100 EPC.

In **T 113/86** the board of appeal followed this principle, ruling against the admissibility of amendments proposed by the patent proprietor which were not necessary to take account of the grounds for opposition invoked by the opponent under Art. 100 EPC or by the board under Art. 114 EPC, if there were the slightest possibility of a different interpretation being given to the patent specification before and after the amendments. The protection conferred by the patent would actually be extended if, as a result of amendments to clarify the granted claims, the claims could be more widely construed than a court would have construed them by the application of Art. 69 EPC. However, the board was of the opinion that the removal of an inconsistency between a claim and the

description should be allowed if the inconsistency arose from an error, provided that the error was so obvious to a skilled person in the light of the patent specification as a whole that an interested third party could have anticipated the extent of protection conferred by the amended claim. In these circumstances the request for the correction of an error did not represent an abuse of opposition proceedings. Moreover, the removal of the discrepancy was in the interests of legal certainty.

However, where a deficiency results from a discrepancy between the description and the claim, lack of clarity in the invention's disclosure can be objected to because that requirement comes under Art. 83 EPC, not Art. 84 EPC, and may therefore be taken into consideration in opposition proceedings (see e.g. **T 175/86**).

In **T 684/02** the board considered whether subject-matter which had been deleted during the examination procedure in order to avoid inconsistencies in the patent specification could be **reinstated** in subsequent opposition proceedings. Reference was made to the previous case law in **T 1149/97** (OJ 2000, 259) and **T 37/99**, where the boards had concluded that the reinstatement of subject-matter which, in view of Art. 84 and Art. 69 EPC, had been deleted or indicated as no longer relating to the invention before grant in order to avoid inconsistencies in the patent specification should as a rule not be admissible under Art. 123(3) EPC after grant. Based on the reasons and considerations set out in the above decisions, the board stated that the particulars deleted from the patent application before grant and considered in the case at issue could not be reinstated with regard to Art. 123(3) EPC.

## 4.2. Scope of examination of amendments

### 4.2.1 General

According to **T 472/88**, in all cases in which amendments are requested by a patentee which were compatible with Art. 123 EPC, Art. 102(3) EPC 1973 (now Art. 101(3)(a) and R. 82 EPC) conferred on the opposition division and the board of appeal jurisdiction, and thus the power, to decide on the amended patent in the light of the requirements of the EPC as a whole. This jurisdiction was thus wider than that conferred by Art. 102(1) and (2) EPC 1973 (both now Art. 101(2) EPC) which expressly limited jurisdiction to the grounds of opposition mentioned in Art. 100 EPC. When substantive amendments were made to a patent, both instances have the power to deal with grounds and issues arising from those amendments even if they were not (and could not be) specifically raised by an opponent pursuant to R. 55(c) EPC 1973 (now R. 76(2)(c) EPC) (**T 227/88**, OJ 1990, 292; **G 9/91**, OJ 1993, 408; **T 472/88** and **T 922/94**; also **T 459/09**).

In **T 503/96** the board considered the criteria for the need for an **additional search** in relation to restrictive amendments. It referred to the Guidelines B-III, 3.5, then applicable, which state, "In principle, and in so far as possible and reasonable, the search should cover the entire subject-matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended...". The board stated that whether or not to commission an additional search in a particular case was a matter for the administrative discretion of the opposition division, but if an inappropriate

criterion was invoked when exercising this discretion, doubt would inevitably be raised as to whether the discretion was reasonably exercised. Since, in the case of amendment of the claims in the course of opposition or appeal proceedings, such amendments are to be fully examined as to their compatibility with the requirements of the EPC (**G 9/91**, OJ 1993, 408), it was not inappropriate for an opponent to make observations on a possible need for an additional search to enable this full examination to be carried out (Guidelines D-VI, 5, then applicable). The judgment on whether an additional search was necessary and the obligation to perform this search if it was judged to be necessary were administrative matters for the EPO.

In **T 648/96** the board found that the opposition division's failure, in the contested decision, to address the substance of the opponent's "lack of clarity" objections to the amended documents was a substantial procedural violation; under Art. 102(3) EPC 1973 (now Art. 101(3)(a) and R. 82 EPC), it should have examined of its own motion whether the amendments complied with Art. 84 EPC and Art. 123(2) and (3) EPC 1973 (see also **T 740/94**).

#### 4.2.2 Extent of power to examine amended claims for compliance with Article 84 EPC

The extent to which the opposition division or a board of appeal may examine clarity for the purpose of Art. 101(3) EPC was the subject of questions put to the Enlarged Board of Appeal in referral **G 3/14** (OJ 2015, A102). In the case underlying the referral (**T 373/12**, OJ 2014, A115) claim 1 of auxiliary request 1, submitted during opposition proceedings, consisted of a combination of the features of claim 1 as granted and of dependent claim 3 as granted.

As a preliminary point, the Enlarged Board identified the following main types of case: amendments which encompass a literal insertion of elements of dependent claims as granted into an independent claim (type A); these include amendments in which a dependent claim contains within it alternative embodiments, one of which is then combined with its independent claim (Type A(i)), and amendments in which a feature is introduced into an independent claim from a dependent claim, being a feature which was previously connected with other features of that dependent claim from which it is now disconnected (Type A(ii)); furthermore, amendments which encompass a literal insertion of complete dependent claims as granted into an independent claim (Type B, this being the case with which the referring board was confronted).

The Enlarged Board first considered its previous jurisprudence, i.e. **G 1/91** (OJ 1992, 253), **G 9/91** (OJ 1993, 408) and **G 10/91** (OJ 1993, 420). Citing the statement in point 19 of the Reasons in **G 9/91** and **G 10/91** that "[...] in case of amendments of the claims or other parts of a patent in the course of opposition or appeal proceedings, such amendments are to be fully examined as to their compatibility with the requirements of the EPC", it noted that if the Enlarged Board had at the time considered that the opposition division and the boards of appeal were given wide powers to examine amended claims, it would have said so. Therefore, the term "amendments" had to be understood in the sense that the subject-matter to be examined must have some direct nexus with the amendment.

The Enlarged Board identified three main lines in the jurisprudence of the technical boards: the "conventional" approach, based on the test whether the amendment introduces any contravention of Art. 84 EPC, and the principle that Art. 101(3) EPC does not allow objections to be based upon Art. 84 EPC if they do not arise out of the amendments made (see **T 301/87** and **T 227/88**, applied in many further cases, see e.g. **T 381/02**, **T 1855/07**, **T 367/96** and **T 326/02**). Secondly, there was a wider interpretation, according to which a lack of clarity could be examined if the amendment "highlights and focuses attention" on a previously existing ambiguity (**T 472/88**; see also **T 681/00** and **T 1484/07**). The third line of jurisprudence was considered "diverging". According to **T 1459/05** (see also **T 1440/08** and **T 656/07**), clarity may be examined on a case-by-case basis as a matter of discretion when the added feature is the only feature that distinguishes the subject-matter of the claim from the prior art. **T 459/09** was the most far-reaching of these diverging cases, stating that amended claims may generally be examined for clarity on a case-by-case basis irrespective of the kind of amendment.

On the interpretation of Art. 101(3) EPC, the Enlarged Board pointed out that the requirements of Art. 84 EPC are part of the "requirements of the Convention" for the purposes of Art. 101(3) EPC. There was, however, no indication that the object and purpose of Art. 101(3) EPC was to open up the patent to a complete re-examination, whether for clarity or the other requirements of the EPC. It was rather the amendment itself which was relevant, and its effect for the ground for opposition in question. Self-evidently, the amendment must not itself give rise to new objections.

As apparent from the travaux préparatoires to the EPC 1973, the legislator had deliberately chosen not to make Art. 84 EPC a ground for opposition. It would be unsatisfactory if an opponent could cause delays whenever an amendment was made, by raising all kinds of Art. 84 EPC objections. Moreover, a lack of clarity could still be relevant in opposition proceedings in that it could influence the decision on issues under Art. 100 EPC (sufficiency, novelty, inventive step), or impact on the grounds of invalidity alleged in national proceedings relating to a European patent. Furthermore, when the EPC 2000 was drafted, no suggestion was made for a change to reverse the effect of the then established case law, i.e. the conventional approach based on **T 301/87**. If the deletion of an independent claim with its dependent claims permitted examination of the remaining claims for lack of clarity, Art. 84 EPC would effectively become a ground for opposition in a large number of cases, which would be contrary to the legislator's intention. To conclude otherwise for a combination of claims which actually consists of striking out the original independent claim and then writing out the previously dependent claim in full, would be arbitrary and unjustified.

In conclusion, the Enlarged Board approved the conventional line of jurisprudence as exemplified by **T 301/87**, and answered the referred questions as follows:

"In considering whether, for the purposes of Art. 101(3) EPC, a patent as amended meets the requirements of the EPC, the claims of the patent may be examined for compliance with the requirements of Art. 84 EPC only when, and then only to the extent that, the amendment introduces non-compliance with Art. 84 EPC."

In **T 616/12** (issued before decision **G 3/14** above) the board held the appellant's objections to lack of clarity in amended claim 1 to be inadmissible. An objection to the clarity of granted claims was not foreseen in the opposition procedure, as lack of clarity was not a ground for opposition. Since claim 1 was a combination of granted claims 1 and 15, a clarity objection to it was tantamount to raising an objection of lack of clarity to the claims as granted. Furthermore, it was not apparent how a lack of clarity resulted from an amendment caused by combining the granted claims. In the granted patent, claim 15 was directly and truly dependent on claim 1 and thus, in accordance with e.g. R. 43(4) EPC, included all the features of that claim. Claim 15 as granted was thus nothing more than an abbreviated form of the combination of features defined in both claims 1 and 15. Since claim 15 was dependent on any of claims 1 to 14, the amendment of claim 1 to include the features of only claims 1 and 15 could not be understood as anything more than a deletion of claim 1 and its substitution by claim 15. The deletion of the back-reference to claim 1 in granted claim 15 could not be regarded as anything but an appropriate and indeed necessary adaptation for reasons of linguistic correctness when moving from the abbreviated form to the full text. The replacement of the words "characterised in that" by "wherein" and the deletion of reference numerals which were no longer applicable were not changes implying any amendment to the claim in a substantive sense, whereby the clarity of granted claim 15, dependent then on claim 1, also could not be affected. See also e.g. **T 1577/10**.

Considering the different types of amendment distinguished in **G 3/14**, the board in **T 1112/12** observed that a common theme underlying the Enlarged Board's ruling appeared to be that modifying a claim by merely deleting or excluding embodiments from the claimed subject-matter does not result in an amendment which is open to an objection under Art. 84 EPC (see also **T 1977/13** and **T 260/13**).

### **4.3. Removal of error (in claim) in opposition proceedings**

According to **T 657/11**, in opposition proceedings mistakes or errors concerning the claims, the description or the drawings of the patent as granted may be removed either by an amendment occasioned by a ground for opposition under Art. 100 EPC or, as far as the mistakes or errors concern texts or drawings which remain unamended, by way of a correction pursuant to R. 139 EPC.

The claims according to the main request before the opposition division and the appellant's initial request in the appeal proceedings differed from the granted claims only in that the wording "NF permeate" in the last process step of claim 6 was replaced by "NF concentrate". The board had communicated that R. 140 EPC was not available to correct the text of a granted patent (**G 1/10**, OJ 2013, 194). However, the claims according to the appellant's final (sole) request were, as compared to the claims as granted, amended beyond the mere removal of an error, namely by limiting them to those granted as (process) claims 6 to 11. Hence the basis for the decision on the appeal (and, thereby, on the opposition) was no longer that for the decision to grant, which would definitely lose its effect and be replaced by a new decision. In such a situation any (further) amendment of the claims, even if aimed at removing an obvious mistake in the claims as granted, did not constitute a correction of an error in a decision

of the EPO within the meaning of R. 140 EPC. As pointed out in **G 1/10**, it was always open to a patent proprietor to seek to amend his patent during opposition or limitation proceedings and such amendment could remove a perceived error. However, an amendment with the (sole) aim of removing a mistake or error in the claims, but also in the description and drawings of the patent as granted, could not be said to be "occasioned by a ground for opposition under Art. 100" (R. 80 EPC). It followed that such mistakes or errors – here the expression "[nanofiltration] permeate"- in the unamended part of the text could only be removed by a correction pursuant to R. 139 EPC, which provision and the specific requirements defined therein applied independently of R. 80 EPC. The proposed correction was in accordance with those requirements.

## **5. Right to be heard in opposition proceedings**

### **5.1. Principle of equal treatment**

In inter partes proceedings such as opposition proceedings the right to be heard is inextricably linked to the **principle of equal treatment**: no party should be given preferential treatment in the number of times it is allowed to present its case orally or in writing. The opposition division is therefore required to ensure that the parties can exchange their submissions in full and have equal opportunity to comment on them. If the opposition division considers a multiple exchange of submissions expedient, it must give each party equal opportunity to comment. Thus, the opposition division may invite a party to submit a **rejoinder to the reply** to the notice of opposition, but in that case it is obliged to invite the other party to **respond to that rejoinder**, after which it must decide again whether a third exchange of submissions is expedient. The fact that R. 79(3) EPC (R. 57(3) EPC 1973) leaves it to the opposition division ("if it considers it expedient") to invite the opponents to reply cannot be interpreted as an authorisation to derogate from the fundamental principle of equal treatment (see **T 190/90**, **T 682/89** and **T 439/91**). According to **T 669/90**, (OJ 1992, 739), if the opposition division misleads a party into believing that it is not necessary to defend its interests by filing observations in reply to new facts and evidence filed by an adverse party, and if such new facts and evidence then form the basis for a decision adversely affecting the misled party, the latter has not had "an opportunity to present its comments" within the meaning of Art. 113(1) EPC. Such a procedure is also not a fair procedure and is contrary to the principle of good faith governing relations between the EPO and parties to proceedings before it (cf. **T 532/91**, **T 678/06**). Such inequality of treatment constitutes a substantial procedural violation.

In addition to the cases that follow, see in this chapter IV.D.3.4.6 "Opportunity to comment on new grounds for opposition".

### **5.2. Invitation to file observations under Article 101(1) EPC**

Art. 101(1) EPC (Art. 101(2) EPC 1973) reinforces the right to be heard laid down in Art. 113 EPC by requiring the opposition division, when examining an opposition, to invite the parties **"as often as necessary"** to comment, within specified periods, on its own communications or those filed by other parties. Where necessary, any communication to the proprietor of the European patent must contain a reasoned

statement covering all the grounds against the maintenance of the European patent (R. 81(3) EPC; R. 58(3) EPC 1973).

Art. 101(1) EPC does not require as a rule that the grounds for not maintaining the patent invariably be set out in a communication, but only if this is "necessary". Such "necessity" can arise only in efforts to establish the facts or in view of Art. 113(1) EPC. So the opposition division **must issue a communication only** if it considers this necessary, e.g. to take up **new** substantive or legal arguments or draw attention to points still requiring clarification. R. 81(3) EPC, which merely contains instructions concerning the content of any communications that may have to be issued, adds nothing to the above consideration of principle. Accordingly, the provisions of Art. 101(1) EPC and R. 81(3) EPC cannot be interpreted as meaning that the opposition division is obliged in every case to issue at least one communication before giving its decision, unless it is necessary to do so on the basis of Art. 113(1) EPC (see e.g. **T 275/89**, OJ 1992, 126; **T 538/89**, **T 682/89** and **T 532/91**).

Not issuing at least one communication under Art. 101(1) EPC cannot in itself substantiate an allegation of infringement of the right to be heard under Art. 113 EPC (see e.g. **T 774/97** and **T 781/08**). In **T 165/93**, for example, the board saw no need under Art. 113(1) EPC for the opposition division, before revoking the patent, to announce its opinion in a communication or to give a further opportunity to the patentee to declare whether he was interested in a limited patent if, despite having been informed of an additional objection of the opponent, he did not react but maintained his sole request for maintenance of the patent with the amended claims. Nor is it necessary under Art. 113(1) EPC to give a party a **repeated opportunity** to comment on the argumentation of the EPO body, so long as the decisive objection against the contested procedural action remains the same (see e.g. **T 161/82**, OJ 1984, 551; **T 621/91**).

According to **T 295/87** (OJ 1990, 470), in opposition proceedings, under Art. 101(2) and R. 57(1) EPC 1973 (cf. Art. 101(1) and R. 79(1) EPC) the proprietor has a right to file observations upon a notice of opposition. Thereafter, observations from the parties are only admissible in the exercise of the discretion of the opposition division or a board of appeal, if such observations are necessary and expedient in the sense of Art. 101(2) and R. 57(3) EPC 1973 (cf. Art. 101(1), R. 79(3) EPC). The board specified that following communication of the patentee's observations (and any amendments), other parties are only to be invited by the opposition division to reply to such observations "if it considers it expedient". It was clearly desirable in the interest of the smooth and efficient conduct of opposition proceedings, and in the public interest, that observations by parties should be properly limited to what is necessary and expedient. This in turn required the exercise of a proper control by the opposition division (and by a board of appeal). Of course, the extent to which further observations are necessary or expedient depended upon various factors, including the complexity of the issues, and could only be decided in the context of each case. Nevertheless, in appropriate cases, the opposition division and the boards of appeal had the power, and indeed the duty, to refuse to admit observations and/or supporting documents for consideration, in the exercise of discretion under Art. 101(2) and 114(2) and R. 57(3) EPC 1973 (cf. Art. 101(1) and 114(2) and R. 79(3) EPC).

### 5.3. Invitation to file observations under Rule 82(1) EPC

R. 82(1) EPC (R. 58(4) EPC 1973) provides that the opposition division is to inform the parties of the text in which it intends to maintain the patent and invite them to state their observations **within two months** if they disapprove of that text. The boards of appeal have frequently addressed the issue of when it is necessary to send the parties such a communication.

In **T 219/83** (OJ 1986, 211) and **T 185/84** (OJ 1986, 373) the board stated that, after oral proceedings in an appeal from opposition proceedings, the parties had to be sent a communication pursuant to R. 58(4) EPC 1973 only if they could not reasonably be expected to state their observations concerning the maintenance of the European patent in the amended form definitively during the oral proceedings. This case law was confirmed in several decisions (e.g. **T 75/90**, **T 895/90** and **T 570/91**).

In **T 446/92** it was stated that, in a case where a duly summoned opponent was not represented at oral proceedings, the decision of the board to maintain the contested patent in amended form in accordance with a request of the patentee submitted during those proceedings could nevertheless be given orally (R. 68(1) EPC 1973; cf. R. 111(1) EPC) at the end of the proceedings, if no new facts or evidence were dealt with during the proceedings. Under these circumstances, the application of R. 58(4) EPC 1973 could be dispensed with because the patent in suit was maintained with an amended text emanating from and approved by the patentee (see, in this respect, **G 1/88**, OJ 1989, 189) and, furthermore, because the opponent's deliberate decision to refrain from being represented at oral proceedings before the board was to be regarded as being tantamount to a tacit abandoning of his right to present comments pursuant to Art. 113(1) and R. 58(4) EPC 1973. In the previous decisions **T 424/88**, **T 561/89** and **T 210/90** the board did not send the parties/participants a communication pursuant to R. 58(4) EPC 1973, even though the appellants (opponents) had not attended the oral proceedings.

### 5.4. EPO communication concerning submissions by the other party - adequate opportunity to reply

Communications signed by the formalities officer and inviting the appellants to "take note" of the opponents' submissions are not communications of the opposition division within the meaning of Art. 101(1) EPC (Art. 101(2) EPC 1973), which require a period to be fixed for reply (normally four months; see Guidelines E-VII, 1.2 - November 2015 version). It is at the discretion of the recipient to reply to this communication if he finds it necessary, having reviewed the significance of the material sent to him. If he intends to reply but for any reason is prevented from doing so within a reasonable period of time, then the appropriate action is to inform the opposition division of his difficulties (see **T 582/95**).

The boards of appeal have dealt in a series of decisions with the issue of fixing a reasonable period which provides the recipient of an EPO communication with an adequate opportunity to reply:

The right to be heard enshrined in Art. 113(1) EPC requires that the party concerned be given **sufficient time** to submit an adequate response if the EPO decides to communicate to a party to proceedings before it an objection raised by another party without an express invitation to reply within a specified time limit. The question regarding what period of time is sufficient for this purpose is a **question of fact** which has to be answered on the basis of the merits of each individual case. As a rule, the time limit set by the EPO should not be shorter than **two months** (see R. 132 EPC, former R. 84 EPC 1973).

Exceptional circumstances in which a shorter period of time was held to be acceptable were mentioned in **T 275/89** (OJ 1992, 126). In this case, the objection was made that the interval between the notification to the patentee of a submission from the opponents and the date the decision was issued was too short to allow the appellant (patentee) to file observations. The board noted that the opposition division had waited for somewhat longer than a month before taking its decision. In the board's view, in the case of a communication which was issued for information purposes only and which did not set a time limit for response, a period of **one month** (which in the present case was exceeded) sufficed as a rule to comply with the requirements of Art. 113 EPC. Moreover, the documents on which the decision under appeal was based had already been mentioned in the notice of opposition together with an assessment of their substantive and legal significance, so that the decision under appeal was not based on fresh matter.

In **T 494/95**, the board took the view that the interval of **more than one month** between the notification of the patent proprietor's reply to the opposition and the date of issuing the decision was sufficient to allow the appellant (opponent) a reasonable opportunity to present his comments, or at least to indicate an intention of so doing, or to request oral proceedings. In the board's view, it was clear from R. 57(3) EPC 1973 (cf. R. 79(3) EPC), from the EPO information "Opposition Procedure in the EPO" (OJ 1989, 417) and from previous decisions that, if oral proceedings did not take place and the decision was based solely on grounds on which the parties concerned had had an opportunity to present their comments, a decision could be taken without further notice upon expiry of the period allowed to the patent proprietor for submitting observations. Here, the board could not see that any procedural violation had occurred, as the decision was neither based on grounds unknown to the appellant (Art. 113(1) EPC), nor was the opposition division invariably obliged under the EPC to set a time limit for the appellant's response to the patent proprietor's observations or to suggest that any such response should be made.

By contrast, another board held in a case involving difficult technical questions that a period of about one month did not provide the appellant with a realistic opportunity to inform the opposition division of his intention to file a substantive reply and to ask for an appropriate time limit for this purpose, let alone to present substantive comments (**T 263/93**; see also **T 494/95**).

In **T 914/98** the board stated that the **seventeen-day** period which elapsed between the appellants receiving the reply of the respondents and the handing over of the decision to the EPO internal postal service was manifestly **too short** to give the appellants an

adequate opportunity for comment. According to the board, in view of the case law the appellants could not reasonably have expected a decision to be issued so quickly.

### 5.5. Opportunity to present comments

In **T 293/88** (OJ 1992, 220) the board found that the decision of the opposition division to revoke the patent without issuing any communication in advance disregarded the fact that the validity of the **uncontested claims** 7, 9 and 10 had not been challenged at all, and a further opportunity to fall back at least to such position was reasonably to be expected in such circumstances. The onus of raising such related additional matter with the parties was on the opposition division under Art. 113(1) EPC - which it had not done in this case (unlike **T 9/87**, OJ 1989, 438; here it was held that the opposition division had no obligation to examine uncontested claims in different categories which related to different inventions).

In **T 558/95** the opposition division had issued two written communications before the oral proceedings stating that, "in the **provisional opinion of the opposition division**", the subject-matter described in the public prior use did not prejudice the contested patent within the terms of Art. 100(a) EPC. The patent proprietor therefore found it "surprising" that detailed consideration was given to the public prior use during the oral proceedings. However, the board held that provisional opinions of this kind were not binding on the further proceedings. Especially in view of the fact that the opponent continued to elaborate his arguments against these comments by the opposition division, the possibility of a different assessment by the opposition division could not be ruled out from the start.

The opposition division that rejects an opposition as **inadmissible** without providing a reasoning prior to its decision prevents the opponent from responding with comments, thus violating the right to be heard (**T 1056/98**).

Normally, where a document has been sent to one of the parties, that party is given sufficient time to respond thereto before a department of the EPO takes a decision (**T 263/93**). If the case is to be **remitted to the department of first instance** for further prosecution, the recipient of a document still has, in view of the remittal, the opportunity to contest the arguments put forward by the other party (see **T 832/92**).

Under Art. 113(1) EPC, the opposition division must expressly give the parties an opportunity to present observations after remittal to it of a case by a board of appeal for further prosecution on the basis of new evidence, even if submissions with respect to this new evidence have already been made during the preceding appeal proceedings (see **T 892/92**, OJ 1994, 664; see also **T 769/91**). In **T 120/96** another board shared this view and added that the term "opportunity" in Art. 113(1) EPC could only be given effective meaning by applying the principles of good faith and the right to a fair hearing. For such an opportunity to exist, it is necessary that the parties be expressly asked whether or not they wish to present, within a fixed period of time, their comments, or if, as in the case at issue, the parties have already made detailed submissions during the previous appeal proceedings, whether or not these submissions should be regarded as complete. On

these grounds alone, the board found that the immediate termination of the opposition proceedings following the remittal, without any intervening communication announcing the resumption of proceedings, was inconsistent with Art. 113(1) EPC.

In **T 1027/13**, a case in which an accompanying person had not been allowed to speak in oral proceedings before the opposition division, the board held that an effective and efficient conduct of oral proceedings, although subject to the discretionary power exercised by the Chairman in oral proceedings with regard to specific issues, must nevertheless guarantee that the fundamental procedural rights of each party in adversarial proceedings, i.e. the right to fair and equal treatment, including the right to present comments in oral proceedings (Art. 113(1) and 116 EPC), are respected (see also Chapter III.R.5.2).

## **6. Acceleration of opposition proceedings in the case of pending infringement proceedings**

If the opposition division is unable to process an opposition speedily on account of the amount of work in hand, it should, in principle, process submissions in order of receipt (Guidelines D-VII, 1.1 – November 2015 version). One exceptional case in which an opposition must be given priority is where a party has submitted a reasoned request for accelerated processing because an infringement action is pending before a national court of a contracting state, or a national court or competent authority of a contracting state informs the EPO that infringement actions are pending (Notice of 17 March 2008, OJ 2008, 221; Guidelines, D-VII, 1.2(iii) and E-VII, 4 – November 2015 version).

The case underlying **T 290/90** (OJ 1992, 368) involved seven oppositions. One of these was deemed not filed, and the opponent appealed against the decision issued in respect of it under R. 69(2) EPC 1973 (R. 112(2) EPC). The patent proprietor requested accelerated processing of the appeal because an infringement action was pending and, in view of the probable number of infringing products on the market, the longer the opposition proceedings took, the more difficult it would be to enforce the patent if maintained.

According to the board, a "raison d'être" for obtaining and maintaining a patent was to enforce it where appropriate. The timing of enforcement proceedings could be of real importance and delays could be prejudicial to the proprietor's interests and those of his competitors. In the case of infringement proceedings the speedy processing of opposition proceedings in respect of the relevant European patent became especially important. It was therefore important to decide quickly not only on the appeal but also on the complete substantive opposition. In the case of multiple oppositions, as here, the board considered, in view of the suspensive effect of the appeal, that the opponent (appellant) should be treated as having duly filed an opposition unless and until the board decided otherwise. With an appeal concerning the existence or admissibility of one of the oppositions, the examination stage of the opposition proceedings should be prepared and processed in parallel, with the participation of all the opponents, up to the point when it was ready to be decided: as soon as the appeal was decided, the opposition could also be decided (see Headnote II.).

See also Chapter IV.E.1.3 "Accelerated processing before the boards of appeal".

## 7. Decisions of opposition division

### 7.1. Revocation of a European patent by way of decision

It had been held in **T 26/88** (OJ 1991, 30) that the revocation of the patent for failure to fulfil the formal requirements of paying the printing fee and filing the translations of the amended claims (Art. 102(4) and (5) EPC 1973; cf. R. 82(3), second sentence, EPC) had occurred by operation of law ("automatically").

However, according to **G 1/90** (OJ 1991, 275), the revocation of a patent under Art. 102(4) and (5) EPC 1973 **required a decision**. The Enlarged Board compared the various procedural stages (grant, opposition and revocation, in connection with the future Community patent) and concluded that the wording of the regulations clearly indicated in each case whether a decision or a communication had to be issued concerning the loss of rights under R. 69(1) EPC 1973 (R. 112(1) EPC)). It also considered the issue of legal certainty and, in the light of the "travaux préparatoires", discussed the question of when a loss of rights noted in accordance with that provision became non-appealable. It found that the procedure of pronouncing revocation by way of a decision led neither to legal uncertainty nor to misunderstandings. Whereas, in the grant procedure, there was a clear basis for the deemed withdrawal of an application, no such possibility existed with oppositions because the patent proprietor was unable to abandon his granted patent by making a declaration to the EPO. The Enlarged Board confirmed that it was up to the legislator to decide when to issue a communication pursuant to R. 69(1) EPC 1973, which is followed on request by a decision (R. 69(2) EPC 1973), and when a decision was not preceded by such a communication. If the EPC had laid down different provisions for grant and opposition, that did not constitute an inherent contradiction.

### 7.2. Interlocutory decisions

#### 7.2.1 General

In case **T 376/90** (OJ 1994, 906) the opposition division had held that the opposition was **admissible** in an interlocutory decision within the meaning of Art. 106(3) EPC 1973 (Art. 106(2) EPC), i.e. a decision which did not terminate the proceedings as regards one of the parties, without, however, allowing separate appeal. In the board's view, according to the clear language of the provision, such an interlocutory decision could only be appealed together with the final decision, unless the decision allowed separate appeal. Whether to allow a separate appeal was within the discretion of the opposition division. This discretion had been properly exercised by the opposition division with a view to enabling a decision on the substantive issues to be reached as soon as possible.

### 7.2.2 Maintenance of European patent as amended

The long-established practice of the EPO of delivering interlocutory decisions subject to appeal when a patent is maintained as amended was described in detail by the Enlarged Board of Appeal in **G 1/88** (OJ 1989, 189).

According to Art. 101(2) and (3)(a) EPC (former Art. 102(1) to (3) EPC 1973) a decision on an opposition to a European patent can involve revocation of the patent, rejection of the opposition or maintenance of the patent as amended, the latter requiring the publication of a new European patent specification. Under R. 82(2) EPC (former Art. 102(3)(b) EPC 1973) a prerequisite for maintenance of the patent as amended is that the fee for publishing (former printing fee) be paid. With these regulations in mind, the EPO very early on adopted the device of an interlocutory decision, for which there is no express provision, in order to establish in the first place the text of the amended specification. Only after this interlocutory decision has come into force are the fee for publishing (formerly printing) and a translation of the claims in the other official languages requested pursuant to R. 82(2) EPC (former R. 58(5) EPC 1973). Once these requirements have been fulfilled what is then a non-appealable final decision on maintenance of the patent as amended is given and the new patent specification is published.

A decision to maintain the European patent - even an interlocutory decision - can of course only be given if there is a text "submitted or agreed" by the patent proprietor pursuant to Art. 113(2) EPC 1973. In that connection R. 82(1) EPC (Art. 102(3)(a) EPC 1973) states that it must be established, "in accordance with the provisions of the Implementing Regulations", that the patent proprietor approves the text. It has accordingly been standard practice for the EPO's opposition divisions always to proceed in accordance with the relevant R. 82(1) EPC (R. 58(4) EPC 1973) even where the text has already been "submitted or agreed" by the patent proprietor during the proceedings and rejected by the opponent.

Prior to that, it had been held in **T 390/86** (OJ 1989, 30) that Art. 102(3) EPC 1973 and R. 58(4) EPC 1973 did not preclude that an opposition division could, in the course of opposition proceedings, make a (final) interlocutory decision in respect of a substantive issue raised by the opposition, before sending any R. 58(4) EPC 1973 communication. What was precluded by R. 58(4) EPC 1973 was that the opposition division should "decide on the maintenance of the European patent" in an amended form without first informing the parties of the amended text in which it was intended to maintain the patent and inviting their observations. However, neither Art. 102(3) EPC 1973 (now Art. 101(3)(a) and R. 82 EPC) nor R. 58(4) EPC 1973 precluded an opposition division from giving **decisions on substantive issues** in the opposition before sending a communication under R. 58(4) EPC 1973, and before "deciding to maintain the patent in amended form". For example, an opposition division could during the course of an opposition make a (final) interlocutory decision (either orally or in writing) that a particular proposed amendment contravened Art. 123 EPC. Similarly, an opposition division could make a (final) interlocutory decision during an opposition that the main claim, for example, of the opposed patent could not be maintained. Such a **substantive**

**interlocutory decision** was not a decision actually to maintain the patent in amended form, but was preliminary to such a decision. The taking of such substantive interlocutory decisions during the course of opposition proceedings was desirable both in order to move the proceedings forward towards a conclusion, and, in appropriate cases as envisaged in Art. 106(3) EPC 1973 (cf. Art. 106(2) EPC), to allow a party to appeal such an interlocutory decision before the opposition proceedings were terminated. It was further held that where a final substantive decision had been given, an opposition division had no power thereafter to continue examination of the opposition in relation to the issues which were the subject of that decision, either under R. 58(5) EPC 1973 (cf. R. 82(2) EPC) or at all. Further submissions from the parties relating to such issues were inadmissible.

In **T 89/90** (OJ 1992, 456) the opponents had lodged objections to an interlocutory decision which maintained the patent as amended. The board observed that the EPC contained no general rules as to when an interlocutory decision could or should be delivered. The relevant department therefore had to use its discretion in judging whether an interlocutory decision was appropriate in an individual case or whether the matter could only be settled in a decision terminating proceedings. This involved weighing up various considerations such as whether an interlocutory decision would accelerate or simplify the proceedings as a whole (clarifying a disputed question of priority, for example, could be of key importance for the form and length of the subsequent proceedings) and clearly also included the issue of costs. In the board's view, it was clear that the established practice of delivering appealable interlocutory decisions under Art. 106(3) EPC 1973 (cf. Art. 106(2) EPC) where a patent was maintained as amended was based on the weighing up of such cost aspects. The board concluded that this practice was both formally and substantively acceptable.

In **G 9/92** (OJ 1994, 875), the Enlarged Board of Appeal set out the implications of an admissible appeal against an interlocutory decision of the opposition division maintaining the patent in amended form, first, where the sole appellant is the patent proprietor and, secondly, where the sole appellant is the opponent. In the first case, neither the board nor the non-appealing opponent as a party as of right may challenge the maintenance of the patent as amended in accordance with the interlocutory decision. In the second case, the patent proprietor is primarily restricted to defending the patent in the form in which it was maintained by the opposition division. The board may reject as inadmissible any amendments proposed by the patent proprietor as a party as of right if they are neither appropriate nor necessary. For further details of the prohibition on *reformatio in peius* and its application in board decisions, see Chapter IV.E.3.1.

**E. Appeal procedure**

1.	Legal character of appeal procedure	1065
1.1.	Suspensive effect of the appeal	1066
1.2.	Devolutive effect of the appeal	1067
1.3.	Accelerated processing before the boards of appeal	1068
2.	Filing and admissibility of the appeal	1069

e)	Observations not forwarded to other party	1205
f)	Appointment of professional representative	1206
g)	Warning in relation to grace period	1206
8.5.	Reimbursement of appeal fee in case of interlocutory revision	1206
8.5.1	Requirements	1206
8.5.2	Competence to decide on reimbursement	1206
8.5.3	Examining division should have rectified decision	1207
8.5.4	Rectification decision maintaining earlier decision	1209
8.5.5	Re-opening examination after rectification	1209
8.6.	Reimbursement must be equitable	1209
8.6.1	Causal link between substantial procedural violation and filing of appeal	1209
8.6.2	Conduct of appellants	1212

a)	Reimbursement held not to be equitable	1212
b)	Reimbursement held to be equitable	1213
8.6.3	Violation of the principle of the protection of legitimate expectations	1213

## 1. Legal character of appeal procedure

The provisions governing the appeal procedure are set out in Art. 106 EPC to Art. 111 EPC and R. 99 EPC to R. 103 EPC and in the Rules of Procedure of the Boards of Appeal. R. 100(1) EPC plays an important role since it stipulates that, unless otherwise provided, the provisions relating to proceedings before the department which had taken the decision impugned shall apply to appeal proceedings. This application by analogy is, however, not automatically permissible in every case and for every provision (**G 1/94**, OJ 1994, 787). Criteria therefore had to be established for when such an analogy was permissible and when not. To this end it was necessary to analyse the legal nature of the appeal procedure.

Appeal proceedings are wholly separate and independent from the proceedings at first instance. Their function is to give a judicial decision upon the correctness of a separate earlier decision taken by a department (**T 34/90**, OJ 1992, 454; **G 9/91**, OJ 1993, 408; **G 10/91**, OJ 1993, 420; **T 534/89**, OJ 1994, 464; **T 506/91**). In **T 501/92** (OJ 1996, 261) the board deduced from this principle that any procedural request or statement made by a party during proceedings in the first instance was not applicable in any subsequent appeal proceedings, and had to be repeated during the latter if it was to remain procedurally effective.

In decision **G 1/99** (OJ 2001, 381) the Enlarged Board held that the appeal procedure is to be considered as a judicial procedure (see **G 9/91**, OJ 1993, 408, point 18 of the Reasons) proper to an administrative court (see **G 8/91**, OJ 1993, 346, point 7 of the Reasons; likewise **G 7/91**, OJ 1993, 356). In an older decision (**G 1/86**, OJ 1987, 447), the Enlarged Board also addressed this question. In **G 9/92** and **G 4/93** (both OJ 1994, 875) it was decided that the extent of appeal proceedings is determined by the appeal.

These characteristics of the appeals procedure not only serve as criteria when assessing whether a provision may be applied analogously in individual cases; they also have general legal consequences in many respects. It follows from the characteristics set out by the Enlarged Board that the general principles of court procedure, such as the entitlement of parties to direct the course of the proceedings themselves ("principle of party disposition"), also apply to appeals (see **G 2/91**, OJ 1992, 206; **G 8/91**, **G 8/93**, OJ 1994, 887; **G 9/92** and **G 4/93**), that a review of the decision taken by the department of first instance can, in principle, only be based on the reasons already submitted before that department (**G 9/91**, **G 10/91**), and that the proceedings are determined by the petition initiating them (ne ultra petita) (see **G 9/92** and **G 4/93**). The Enlarged Board has also made it clear that the decision-making powers of opposition divisions, and of the boards in opposition appeal proceedings, are circumscribed by the statement under

R. 55(c) EPC 1973 of the extent to which the European patent is opposed. They have no powers to decide and thus investigate anything extending beyond that statement (see **G 9/91**). This defined the sphere of application of Art. 114(1) EPC 1973, and clarified the distinction between the power to initiate and determine the object of proceedings, on the one hand, and the power to examine the facts then relevant, on the other. The individual procedural consequences and the Enlarged Board's decisions are discussed in greater detail below.

It is established jurisprudence that the boards of appeal and the Enlarged Board of Appeal respectively act as judicial bodies, which were established by law, and apply general principles of procedural law (see **G 3/08**, OJ 2011, 10 and **G 2/08**, OJ 2010, 456) (see **T 1676/08**).

In **T 1676/08** the board agreed and went on to say that one of these principles is laid down in Art. 6(1) ECHR, relying on principles of law common to the member states of the European Patent Organisation and applying to all EPO departments of the said organisation, which requires inter alia in "... the determination of his civil rights and obligations ... everyone is entitled to **a fair and public hearing** within a reasonable time by an independent and impartial tribunal established by law". It is also established jurisprudence that, for **inter partes** proceedings before a board of appeal to be fair, the board must be neutral (see for example decisions **R 12/09**, and **T 253/95**).

### **1.1. Suspensive effect of the appeal**

Under Art. 106(1) EPC, an appeal has suspensive effect. The Legal Board of Appeal defined this effect in **J 28/94** (OJ 1995, 742), in which a third party claimed entitlement to the grant of the patent and requested suspension of the proceedings for grant under R. 13(1) EPC 1973. The board took the view that the appeal's suspensive effect meant the contested decision had no legal effect until the appeal was resolved. Otherwise the appeal would be nugatory.

Thus, if a decision refusing to suspend the publication of the mention of grant of a patent were appealed, publication should be deferred until the appeal was decided. If (as here) this was not possible for technical reasons, the EPO should take all necessary steps to advise the public that the mention of grant was no longer valid (see also **T 1/92**, OJ 1993, 685).

According to **J 28/03** (OJ 2005, 597), suspensive effect means that the consequences following from an appealed decision do not immediately occur after the decision has been taken. Actions normally taking place after a decision are "frozen". Suspensive effect does not have the meaning of cancellation of the appealed decision. Even after an appeal the decision as such remains and can only be set aside or confirmed by the board of appeal. Moreover, the status of a divisional application filed while an appeal against the decision to grant a patent on the parent application is pending depends on the outcome of that appeal.

In **T 591/05**, the suspensive effect of an appeal was said to be a direct consequence of, and was subordinate to the appeal itself (Art. 106(1) EPC 1973) and, consequently, no circumstance directly arising from the suspensive effect of the appeal could be invoked in support of the admissibility of the appeal itself.

In **J 18/08** the applicant failed to appoint a professional representative (Art. 133(2) EPC) and the application was refused by the Receiving Section under Art. 90(5) EPC. A notice of appeal was filed by a professional representative, who notified the EPO at the same time that he had been appointed as the representative in this application. It was submitted that the deficiency on which the refusal was based had been rectified by the appointment. The board held that when the appeal was filed, the deficiency (on which the refusal was based) was corrected. Thus the underlying ground for the refusal had been overcome and the reasoning in the decision under appeal no longer applied. It was noted that this case was different from the situation where the non-observance of a time limit automatically leads to the application being deemed to be withdrawn. In such a case the legal consequence automatically ensues when an act required within a specific time limit is not performed, without any decision to be taken concerning the refusal of the application. By contrast, if the application is refused under Art. 90(5) EPC the deficiency on which the decision is based can be corrected at the appeal stage. Accordingly, the appeal was allowed.

The board in **T 1674/12** found that, in keeping with the spirit of Art. 106 EPC, suspensive effect applied to decisions which terminated proceedings before a particular department - to prevent the contested decision having legal effects (Art. 106(2), first sentence, EPC) - and to decisions for which the competent department itself allowed separate appeal (Art. 106(2), second sentence, EPC). This second sentence made clear that the department taking the decision remained in charge of the proceedings until a decision terminating them was taken or until it allowed a separate appeal. Otherwise the parties would be free to obstruct the efficient handling of cases by the competent department. Under Art. 106 EPC, in procedural situations like that at issue, it was up to the opposition division to decide whether to allow a separate appeal. The parties had no rights in that respect. If, as in the case in question, the opposition division had not expressly allowed a separate appeal in its decision, it was entitled to find that an appeal nevertheless filed did not meet any of the conditions of Art. 106(2) EPC, and in particular those of its second sentence.

## **1.2. Devolutive effect of the appeal**

On appeal, the department of first instance loses its competence for the further prosecution of the application for all contracting states - the appeal does not leave a part of the application pending in the first instance. Thus, deemed withdrawal of the application pursuant to Art. 110(3) EPC 1973 applied in the case of a failure to reply to a communication pursuant to Art. 110(2) EPC 1973 in ex parte appeal proceedings, even where the decision under appeal did not refuse the application, but only a particular request. The board reasoned that even if the appealed decision concerned only the designation of a state and not the application as a whole, according to the principle of

unity of the application and of the patent in the proceedings the suspensive effect of the appeal affected the application as a whole (**J 29/94**, OJ 1998, 147).

The devolutive effect of the appeal does not affect the competence of the department of first instance to decide on a request concerning the contents of the minutes of the oral proceedings held before it. What is devolved is the subject-matter decided by the appealed decision (**T 1198/97**).

According to **T 1382/08**, the devolutive effect of an appeal before a board extends only to that part of the impugned decision which is indicated in the statement of grounds for appeal and actually challenged by the appeal. For the board, therefore, the extent to which the impugned decision is to be amended, as defined under R. 99(2) EPC, is simultaneously the limit of the devolutive effect. This in turn implies that the impugned decision's part not covered by the statement of grounds of appeal also cannot be part of the appeal proceedings and consequently becomes final on expiry of the time limit for appeal. This approach was also adopted by the same board in **T 448/09**. However, the board in **T 689/09** noted that, whilst it was aware of case law, according to which the distinction between different legal effects of a decision also fell under the "extent to which the impugned decision is to be amended" pursuant to R. 99(2) EPC, (**T 1382/08**), this approach left the notion of the "subject of the appeal" even more diffuse and elusive.

See also in this chapter IV.E.3.2 "Subject-matter under examination".

### **1.3. Accelerated processing before the boards of appeal**

Parties with a legitimate interest may ask the boards of appeal to deal with their appeals rapidly (see Notice from the Vice-President Directorate-General 3 dated 17 March 2008 concerning accelerated processing before the boards of appeal (OJ 2008, 220)).

The appellant (patentee) in **T 734/12** requested acceleration of the appeal proceedings on the basis of three arguments: the possibility of remittal; the suggestion that the decision under appeal related to an important point of law the resolution of which might take additional time; and the commercial and medical importance of the patented and approved treatment. In the board's opinion these reasons did not in themselves justify acceleration. Whilst acceleration had been acknowledged as appropriate when infringement proceedings were threatened or pending, which was not the case here. However, it was clear there was a substantial measure of agreement between the parties and the public had an interest in the early resolution of disputes. The interests of the parties and of the public would therefore best be served by an expedited procedure.

In **T 895/13** the board confirmed that, under the Notice from the Vice-President Directorate-General 3 dated 17 March 2008 (OJ 2008, 220), acceleration is always a matter for the exercise of the board's discretion. While trivial reasons would clearly not warrant acceleration, there was no fixed standard of proof. Acceleration is not limited to the examples given in the Notice, but is a matter to be decided in the discretion of the board on the particular facts of the case before it. It was clear in the case at issue that the board could have accelerated the procedure ex officio under the notice, in view of the

disadvantage which could ensue before the Belgian courts from the suspensive effect of the appeal in question. (On application by patentees for preliminary measures, the Belgian courts do not consider the validity of patents even in cases where a revocation decision is suspended pending appeal.) If the board could allow acceleration on that basis of its own motion, it could clearly do so on the request of a party (in this case the respondent (opponent)). The board ordered the appeal proceedings to be accelerated. It added that its views related only to the particular facts of this case and the co-pending appeal in **T 1125/13** between the same parties and were not intended to set any precedent for application beyond those facts.

See also Chapter IV.D.6 "Acceleration of opposition proceedings in the case of pending infringement proceedings".

## **2. Filing and admissibility of the appeal**

According to Art. 108 EPC a notice of appeal shall be filed in accordance with the Implementing Regulations within two months after the date of notification of the decision. Notice of appeal shall not be deemed to have been filed until the fee for appeal has been paid. The content of the notice of appeal is set out in R. 99 EPC. In view of the future use of electronic means of communication, it was found useful to avoid references to 'in writing' or 'in written form' and leave such regulation to the Implementing Regulations.

The admissibility of an appeal can only be assessed as a whole (**T 382/96**, **T 1763/06**, **T 509/07**, **T 23/10**, **T 2001/14**). There is no support in the EPC for a notion of 'partial admissibility' of an appeal (**T 774/97**, **T 509/07**).

See also Chapter IV.E.8.2.2 "Distinction between an appeal deemed not to have been filed and an inadmissible appeal".

### **2.1. Transitional provisions**

If notice of appeal was filed before the revised EPC entered into force, the appeal's admissibility must be assessed under the provisions of the EPC 1973, in line with the principle (*tempus regit actum*) that entitlement to perform a procedural act is governed by the law in force when the act took place (**T 1366/04**).

The decision whether an appeal is admissible according to the relevant provisions, geared to the fulfilment of the requirements for admissibility within a certain legally defined period, depends entirely on the substantive and legal position at the time of expiry of the time limits. Since the belated fulfilment of admissibility requirements after the expiry of the time limit cannot be taken into account in the examination of admissibility, so too a change in the legal position occurring after the expiry of the time limit for fulfilling the admissibility requirements can have no impact, either to the appellant's advantage or to his detriment, on the assessment of admissibility (**J 10/07**; OJ 2008, 567). In **T 2052/08**, the board, citing the finding in **J 10/07** that R. 103 EPC should not be applied to appeal cases concerning patent applications filed before the entry into force of the EPC 2000, found that, as **J 10/07** concerned the reimbursement of

the appeal fee in situations where a substantial procedural violation had occurred at first instance, its conclusions should not be taken as implying a statement on the applicability of R. 103 EPC.

In **T 616/08**, the board found that, to the extent that it was relevant whether an aligned or the original version of a rule applied, there was a gap in the law which needed to be closed by case law as long as the legislator was not active. Art. 107, 109 and 111 EPC were not mentioned in the decision of the Administrative Council of 28 June 2001 on the transitional provisions under Art. 7 of the Act revising the European Patent Convention of 29 November 2000 ("transitional provisions"), although Art. 106, 108 and 110 EPC were. The board took into account the purpose of the transitional provisions (namely, to avoid the use of different versions of the EPC over a prolonged period), and the fact that there was nothing to indicate any intention to use new and old versions of Articles covering appeal proceedings in parallel. It therefore decided to apply Art. 107, 109 and 111 EPC and the rules appertaining to them where Art. 106, 108 and 110 EPC were applicable.

The board referred to **J 10/07** (OJ 2008, 567), where the Legal Board had concluded that Art. 107 and 111 EPC 1973 should be applied to applications filed before the cut-off date, but considered that the continued application of all EPC 1973 articles which had not been addressed in the transitional provisions did not appear to be in line with the legislators' objectives that the revised provisions should quickly take effect in practice and that the use of different variations of the EPC over a prolonged period should be avoided.

## 2.2. Appealable decisions

Under Art. 106(1), first sentence, EPC appeals lie against decisions of the Receiving Section, examining divisions, opposition divisions and the Legal Division.

### 2.2.1 Departments

The boards can hear appeals only against the decisions taken by other EPO departments (**J 12/85**, OJ 1986, 155). There is thus no right of recourse to the boards of appeal in respect of extensions of patent applications and patents to the extension states. Instead, it is the respective national jurisdiction which is responsible (**J 14/00**, OJ 2002, 432; **J 19/00**, **J 9/04**, **J 2/05**, **J 4/05**, **J 22/10** and **J 9/11**). The board in **T 506/08** considered that it was not competent to hear a request for a (partial) refund of the international search fee where no search had been performed.

### 2.2.2 Decisions

Whether a document constitutes a 'decision' or not depends on the substance of its content and not on its form (**J 8/81**, OJ 1982, 10; see also **J 26/87**, OJ 1989, 329; **J 13/92**, **T 263/00** and **T 713/02**, OJ 2006, 267). It is, therefore, not relevant that the text in question is in the form of a mere letter, nor does it matter if it states "... it is decided" to allow the request. Nor is the fact decisive that the Notice of the Vice-President DG2 dated 28.4.99 uses the wording "Decisions concerning the correction of errors ..."

(**T 713/02**, OJ 2006, 267). A "decision" needs to involve a reasoned choice between legally viable alternatives (**T 934/91**, OJ 1994, 184).

Notification of the case number and the responsible board of appeal by the registry did not constitute a decision under R. 69(2) EPC 1973 recognising that an appeal was pending (**T 371/92**, OJ 1995, 324; see also **T 1100/97** and **T 266/97**). See now R. 112 EPC.

a) Examples of appealable decisions

(i) A formalities officer's letter rejecting the opposition as inadmissible was held to be an appealable decision in **T 1062/99**. (See **G 1/02**, OJ 2003, 165, a referral occasioned by diverging decisions **T 1062/99** and **T 295/01**, OJ 2002, 251) on a formalities officer's competence to decide on the admissibility of an opposition).

(ii) A document (EPO Form 2901) concerned with the applicant's request for re-establishment in respect of the period for payment of the third renewal fee plus additional fee was deemed to be a decision in **J 7/08**.

b) Examples where the communication was not an appealable decision

The case law of the boards of appeal has established that the following are **not** regarded as appealable decisions taken by other EPO departments:

(i) A request under R. 89 EPC 1973 for correction of a contested decision. Not until the request has been decided at first instance can the matter be referred to the board (**J 12/85**, OJ 1986, 155).

(ii) The preparatory steps referred to in Art. 96(2) EPC 1973 and R. 51(3) EPC 1973 (**T 5/81**, OJ 1982, 249).

(iii) A communication under R. 57(1) EPC 1973 (**T 222/85**, OJ 1988, 128), or R. 69(1) EPC 1973 (**J 13/83**). See also Chapter III.K "Formal aspects of decisions of EPO departments".

(iv) A communication from the opposition division finding that an opposition has been validly filed, and stating that the decision will be taken on that point at the oral proceedings (**T 263/00**).

(v) An order by a director of a department of first instance (such as an opposition division) rejecting an objection to a member of the division on the ground of suspected partiality. The composition of the division could, however, be challenged on such a ground in an appeal against its final decision or against a separately appealable interlocutory decision under Art. 106(3) EPC 1973 (**G 5/91**, OJ 1992, 617).

(vi) A "decision" by a director on a request for inspection of file. Only the examining division charged with the technical opinion (Art. 25 EPC 1973) or the formalities officer

pursuant to the Notice of the DG2 Vice-President (OJ 1984, 317, revised and supplemented in OJ 1989, 178 and OJ 1999, 504) has the competence to decide on a request for inspection of file. Such a 'decision' under appeal is therefore void ab initio and the appeal inadmissible (**J 38/97**; see also **T 382/92**).

(vii) A letter bearing the letterhead of an EPO Directorate-General and signed by an EPO Vice-President, if it is evident from its content that it does not constitute a decision and from its form that it does not emanate from any of the departments listed in Art. 21(1) EPC 1973 (**J 2/93**, OJ 1995, 675).

(viii) The minutes of oral proceedings (**T 838/92**). A correction to minutes of oral proceedings made on the initiative of the opposition division was held not directly appealable in **T 231/99**.

(ix) A communication from a formalities officer primarily dealing with the patentee's request to stay the opposition proceedings and to remit the case to the examination division for a decision on the request for correction under R. 89 EPC 1973 (**T 165/07**).

(x) A communication under R. 71(3) EPC. This is not intended to terminate the examination procedure but is rather a preparatory action and is therefore as such not appealable (**T 1182/04** and **T 1226/07**).

(xi) When not acceding to a request to hold oral proceedings in Munich instead of The Hague, the examining division does not take a decision but only expresses the way the EPO is managed. Consequently, that issue is not subject to appeal, nor can the board refer a question on the venue of oral proceedings to the Enlarged Board of Appeal (**T 1142/12**).

(xii) A communication of information by which the appellant was informed that, as the decision to grant had been rectified under Art. 109 EPC, the examination procedure was resumed, and it was not possible to file an opposition during this part of the procedure. The appeal was rejected as inadmissible under Art. 107 EPC (**J 22/12**).

The board in **T 1676/08** found that to comply with Art. 21(4)(b) EPC 1973, it was sufficient for the board to indicate in EPO Form 3303.15 that the complexity of the case was the reason for enlarging the board from three to five members; it was not obliged to give detailed reasoning why it considered the case at issue complex. A change in a board's composition with regard either to the number of its members under Art. 21(4)(b) EPC 1973 or to the replacement of a member under Art. 4 of the Business Distribution Scheme of the Technical Boards of Appeal was not a decision within the meaning of Art. 106 EPC and Art. 113(1) EPC 1973.

**T 26/88** (OJ 1991, 30), which held that a document stating that the patent was revoked under Art. 102(4) and (5) EPC 1973 did not constitute a decision, was overruled by **G 1/90** (OJ 1991, 275).

### 2.2.3 Interlocutory decisions

Under Art. 106(2) EPC (formerly Art. 106(3) EPC 1973) a decision which does not terminate proceedings as regards one of the parties (interlocutory decision) can only be appealed together with the final decision, unless the decision allows a separate appeal. Separate appeal is possible against interlocutory decisions regarding admissibility of the opposition (see e.g. **T 10/82**, OJ 1983, 407) or maintenance of a patent in amended form (see e.g. **T 247/85** and **T 89/90**, OJ 1992, 456).

In **T 857/06**, the opposition division had attempted to incorporate the content of its first (non-appealable) interlocutory decision into its second (appealable) interlocutory decision. No final decision had yet been taken and in its absence it could be argued that only the second interlocutory decision could be appealed and not the first. The board found that this would lead to a nonsensical procedural situation, where the board, while prevented from dealing with the appellant's main request, had to decide on lower-ranking requests. Art. 106(2) EPC had therefore to be construed in a purposive manner in this case, where the second interlocutory decision did not leave any substantive issues outstanding and was intended to form the complete basis for the maintenance of the patent in amended form. The first interlocutory decision had to be appealable together with the second (citing **T 762/90** of 23 January 1991).

### 2.2.4 Appeals against decisions of the boards of appeal

See also in this chapter IV.E.7.7 "Binding effect of decision remitting case to department of first instance".

It was established by the Enlarged Board in **G 1/97** (OJ 2000, 322) that:

1. In the context of the EPC 1973, the jurisdictional measure to be taken in response to requests based on the alleged violation of a fundamental procedural principle and aimed at the revision of a final decision of a board of appeal having the force of *res judicata* should be the refusal of the requests as inadmissible.
2. The decision on inadmissibility is to be issued by the board of appeal which took the decision forming the subject of the request for revision. The decision may be issued immediately and without further procedural formalities.
3. This jurisdictional measure applies only to requests directed against a decision of a board of appeal bearing a date after that of the present decision.
4. If the Legal Division of the EPO is asked to decide on the entry in the Register of European Patents of a request directed against a decision of a board of appeal, it must refrain from ordering that the entry be made if the request, in whatever form, is based on the alleged violation of a fundamental procedural principle and aimed at the revision of a final decision of a board of appeal.

These principles have since been followed in several decisions, for example **J 16/98**, **J 3/98** and **T 431/04**.

This situation has not been changed by the introduction of a petition for review in Art. 112a EPC (**T 365/09**). According to the board, a first difference between appeal and petition evidently lay in the fact that, unlike Art. 106(1) EPC, Art. 112a(3) EPC clearly excludes a suspensive effect of the petition. Moreover, a petition for review can, according to Art. 112a EPC, only be based on fundamental procedural violations or defects during the appeal proceedings, which do not include questions relating to patentability. This can be derived from the exhaustive list of fundamental procedural violations and defects in Art. 112a(2) EPC and R. 104 and 105 EPC. This view has, in the meantime, been confirmed in **G 3/08** (OJ 2011, 10).

In **T 846/01** it was clear that the appellants were not contesting the substance of the opposition division's interlocutory decision, which dealt with the renumbering of the claims and the adaptation of the description, but were actually trying to reopen the issue of validity which had already been decided in an earlier decision of a board of appeal. Under Art. 106 EPC 1973 and in view of the principle of *res judicata*, this finding in the decision was not open to challenge, even though the opposition division decision was accompanied by a form stating the decision was appealable.

A limited judicial review of decisions of the boards of appeal was introduced into the EPC 2000, in Art. 112a EPC. See Chapter IV.F.3 "Petition for review under Article 112a EPC".

### **2.3. Board competent to hear a case**

#### 2.3.1 Technical or Legal Board of Appeal

##### a) General

The responsibilities and composition of boards are laid down in Art. 21 EPC. In **G 2/90** (OJ 1992, 10) the Enlarged Board made it clear that under Art. 21(3)(c) EPC 1973, the Legal Board of Appeal was competent only for appeals against decisions taken by an examining division consisting of fewer than four members and which did not concern refusal of the application or grant. In all other cases, i.e. those covered by Art. 21(3)(a), 21(3)(b) and 21(4) EPC 1973, the technical boards were competent. The provisions of Art. 21(3) and (4) EPC 1973 governing responsibilities and composition were not affected by R. 9(3) EPC 1973.

In **G 3/03** (OJ 2005, 343), the Enlarged Board of Appeal held that in the event of interlocutory revision under Art. 109(1) EPC 1973, the department of first instance whose decision had been appealed was not competent to refuse a request of the appellant for reimbursement of the appeal fee. It was the board of appeal which would have been competent under Art. 21 EPC 1973 to deal with the substantive issues of the appeal if no interlocutory revision had been granted which was competent to decide on the request.

In **G 1/11** (OJ 2014, A122) the Enlarged Board of Appeal held that a technical board of appeal was competent to hear an appeal against an EPO examining division's decision – taken separately from its decision granting a patent or refusing the application – not to refund search fees under R. 64(2) EPC.

b) Technical board of appeal competent

Art. 21(3)(a) EPC expressly states that appeals against decisions concerning the limitation or revocation of European patents should be heard by the technical boards of appeal.

An appeal against a decision of an examining division refusing a request under R. 89 EPC 1973 for correction of the decision to grant was to be decided by a technical board of appeal (**G 8/95**, OJ 1996, 481, overruling **J 30/94**). (A board, however, has no appellate competence, in inter partes opposition appeal proceedings, to review the decision on correction of the grant decision taken in ex parte examination proceedings under R. 89 EPC 1973, since that decision does not form the subject of the appeal proceedings before it; see **T 79/07**, deviating from **T 268/02**).

According to **T 1382/08**, for the purpose of determining competence under Art. 21(3) EPC 1973, a contradictory or unclear impugned decision is to be considered in the light of its legal consequences vis-à-vis the applicant or the impression given to the public as to its legal nature. In the case at issue, it was unclear whether the contested decision of the examining division was actually a refusal of the application or, instead, merely a refusal of a request for a refund of the search fee or confirmation of the loss of rights established in the R. 69(1) EPC 1973 communication. In the latter two cases, the Legal Board of Appeal would have been competent to hear the appeal under Art. 21(3)(c) EPC 1973. The board found that the decision had the effect of a refusal, which meant that the technical board of appeal was competent.

However, in **J 16/13**, the board held that, where the formal order of an appealed decision is obviously erroneous to such an extent that it is essentially incomprehensible when compared with the reasons in the body of the decision, in particular when it plainly does not correspond to any of the foreseen possible legal effects flowing from the substantive issue underlying the appealed decision, and if the competence pursuant to Art. 21(3) EPC is supposed to change from one board to another only because of such an "impossible" order, the formal order can be disregarded for the purposes of Art. 21(3)(a) and (c) EPC, and rather the substantive request underlying the decision must be guiding in determining the board competent to decide the case (**T 1382/08** not followed).

c) Legal Board of Appeal competent

An appeal against the decision of the examining division refusing a request for corrections under R. 88 EPC 1973 filed after grant of the patent, on the other hand, is to be decided by the Legal Board of Appeal. The appeal concerned the preliminary question of whether a request under R. 88 EPC 1973 could be made after grant. This

was purely a question of law, and did not concern the refusal of a European patent application or the grant of a European patent. It was also consistent with **G 8/95**, as answering the preliminary question did not involve any consideration of the text with which the patent should be granted (**J 42/92**).

## **2.4. Entitlement to appeal**

### **2.4.1 Formal aspects under Article 107 EPC**

Under Art. 107, first sentence, EPC, an EPO decision can be appealed only by a party to the proceedings which gave rise to it. Concerning the entitlement to appeal of a transferee of a patent, see Chapter IV.C.2.1 "Party status as patent proprietor".

#### **a) Appeal filed in name of representative**

An appeal filed in the name of the representative instead of the party adversely affected by the decision impugned was rejected as inadmissible in **J 1/92**.

#### **b) Appeal filed by wrong company**

In **T 340/92** the appellant was a company which had obviously been named in the notice of appeal by mistake, instead of a subsidiary, which was the real opponent. The actual appellant was the only party adversely affected by refusal of the opposition, and was readily identifiable through its representative, who was named in the appeal dossier. The board held that this deficiency could be remedied under R. 65(2) EPC 1973. See also **T 875/06**.

However, if the notice of appeal was filed by an adversely affected party, but the grounds of appeal were filed by a different company which was not a party to the opposition proceedings, let alone a party adversely affected by the outcome of those proceedings, the appeal could not be held admissible. No provision having been made in the Implementing Regulations pursuant to Art. 133(3), last sentence, EPC 1973 the EPC 1973 did not allow the representation of one legal person by the employee of another economically related legal person, who could not therefore file the grounds of appeal on the other's behalf (**T 298/97**, OJ 2002, 83).

In the absence of any clear indication to the contrary, a professional representative who was authorised to act for a party adversely affected by a decision and then filed an appeal against this decision had to be presumed to be acting on behalf of the very same party that he acted for in the first instance proceedings, and not on behalf of someone else not entitled to appeal (**T 920/97**). Although the notice of appeal did not indicate the name and address of the appellant as required by R. 64(a) EPC 1973, the appellant corrected the notice of appeal in time and the appeal was thus admissible. See also **T 1911/09**.

## c) Party consisting of plurality of persons

If a party consists of a plurality of persons, an appeal against a decision which adversely affects this party has to be filed on behalf of all these persons through their duly determined common representative (see **G 3/99**, OJ 2002, 347, where multiple opponents file a joint opposition; **T 1154/06**, with respect to joint proprietors of a European patent; see also **R 18/09**, with respect to joint proprietors and a petition for review) (**T 755/09**).

In **G 3/99** (OJ 2002, 347), the Enlarged Board of Appeal held that where the opposing party consisted of a plurality of persons, an appeal had to be filed by the common representative under R. 100 EPC 1973. Where the appeal was filed by a non-entitled person, the board of appeal was to consider it not to be duly signed and consequently invite the common representative to sign it within a given time limit. The non-entitled person who filed the appeal should be informed of this invitation. If the previous common representative was no longer participating in the proceedings, a new common representative should be determined pursuant to R. 100 EPC 1973 (see also **R 18/09**).

In order to safeguard the rights of the patent proprietor and in the interests of procedural efficiency, it had to be clear throughout the procedure who belonged to the group of common opponents or common appellants. **If either a common opponent or appellant (including the common representative) intended to withdraw from the proceedings**, the EPO had to be notified accordingly by the common representative or by a new common representative determined under R. 100(1) EPC 1973 in order for the withdrawal to take effect (for example see **T 562/13**).

Where an appeal is filed by **only one of several joint members** of a party and where this member is not the common representative, the board of appeal should send the common representative a communication giving him the opportunity to fulfil the necessary requirements of the EPC (see **G 3/99**; **T 1154/06**). If the common representative does not do so, the notice of appeal is deemed not to have been filed. Such an appeal is thus treated in the same way as an appeal filed but not signed by an authorised person (**G 3/99**; **R 18/09**) (see **T 755/09**; see also **T 979/12**).

In **T 755/09** the appeal was filed only on behalf of one of several persons who, at the time of filing the appeal, were the joint applicants of the application in suit (see Art. 59 EPC). In principle the appeal had therefore to be held inadmissible in accordance with R. 101(1) EPC. The board pointed out that the case did not come under the category calling for a communication under R. 101(2) EPC inviting the appellant to remedy deficiencies under R. 99(1)(a) EPC within a specified period (see decision **G 1/12**, OJ 2014, A114). The notice of appeal was unambiguous nor did the appellant ever claim that the notice of appeal contained a deficiency under R. 101(2) EPC. The legal remedy foreseen in R. 101(2) EPC therefore could not apply (see also **T 656/98**, OJ 2003, 385).

d) Company in receivership

A company that has gone into receivership can no longer validly file an appeal; only the insolvency administrator can do so on its behalf. In **T 693/05**, the insolvency administrator had authorised the representative to file an appeal, which was held admissible. In **T 1324/06**, the authorised representative of a company which had previously been declared bankrupt filed an appeal on behalf of the company. Relying on R. 101(6) EPC 1973 and R. 152(8) EPC, under which the authorised representative shall be deemed to be authorised until the termination of his authorisation has been communicated to the EPO, the board held the appeal admissible, no such notification having been received from the insolvency administrator or representative.

2.4.2 Party adversely affected (Article 107 EPC)

a) General

Under Art. 107 EPC, any party to proceedings adversely affected by a decision may appeal. A party is adversely affected within the meaning of Art. 107 EPC if the decision fails to meet that party's wishes (see **T 244/85**, OJ 1988, 216; **T 1682/13**). According to **T 234/86** (OJ 1989, 79) a party is adversely affected if the decision does not accede to his main requests or to auxiliary requests preceding the allowed auxiliary request (see also **T 392/91**). This is not the case if the patent proprietor withdraws his main request or preceding auxiliary requests and agrees with the allowed auxiliary request (**T 506/91**, **T 528/93**, **T 613/97**, **T 54/00**, **T 434/00**). In these cases the patent had been maintained in amended form by the opposition division (for more details about the relationship between main and auxiliary requests, see also Chapter III.I. "Main and auxiliary requests").

The question of whether or not a party is adversely affected by a decision taken by an authority as defined in Art. 106 EPC arises in connection with Art. 107 EPC in order to establish who may appeal.

An appeal is inadmissible where the appellant is seeking only to amend not the decision itself but the reasons for it (**T 84/02**) or the sole aim is to settle a point of law not relevant to the case (**J 7/00**), although here the board did decide to rule on the issue (see also **T 1790/08**). Abandoning claims to have a prompt decision in order to be in a position to appeal also results in the appeal being inadmissible where the patentee's requests were actually granted (**T 848/00**).

In **T 298/97** (OJ 2002, 83), the board held that where the notice of appeal is filed by an adversely affected party but the grounds of appeal are filed by a natural or legal person who, although having economic connections with that adversely affected party, is not itself that party, the appeal cannot be held admissible.

## b) Patent applicant

## (i) Patent applicant adversely affected

In **J 12/83** (OJ 1985, 6) the board found that an applicant for a European patent might be "adversely affected" within the meaning of Art. 107 EPC 1973 by a decision to grant the patent, if the patent was granted with a text not approved by him under Art. 97(2)(a) EPC 1973 and R. 51(4) EPC 1973. In **J 12/85** (OJ 1986, 155) the board held that he could be "adversely affected" within the meaning of Art. 107 EPC 1973 only if the grant decision was inconsistent with what he had specifically requested (see also **T 114/82** and **T 115/82**, both OJ 1983, 323 and **T 1/92**, OJ 1993, 685).

In **T 1682/13** the admissibility of an appeal was challenged on the grounds that the only request filed with the statement of grounds had not been the subject of the contested decision. In the board's view, under Art. 107 EPC any party adversely affected by a decision was entitled to appeal. A party was always adversely affected if the contested decision failed to meet that party's wishes at first instance, in other words if it granted the party less than it had requested. This had to be assessed by comparing the request at first instance with the substance of the decision (cf. **T 244/85**, OJ 1988, 216).

In **T 528/93** a request was withdrawn during opposition proceedings and was thus not the subject of the contested decision. The board decided that a virtually identical request filed during appeal proceedings was not the subject of the appeal, because the appellant was not adversely affected by the decision of the opposition division as far as this request was concerned.

In **T 327/13** the board found that **T 528/93** was not relevant to the facts at issue. The function of appeal proceedings is to give a judicial decision upon the correctness of the decision under appeal and not to reopen the opposition proceedings to add an independent claim to a claim set already allowed by the opposition division.

The board went on to say that, to establish whether a party has been adversely affected by a decision, it is not enough to consider the end result in isolation, but to consider the party's complete case, as is defined in Art. 12(2) RPBA, in conjunction with the substance of the decision. Although the board noted that it was clear that the appellants were adversely affected by the opposition division's decision not to accede to the then main request, the decision had not been contested with the appeal. The board therefore concluded that they could not be regarded as "adversely affected" under Art. 107 EPC.

An applicant was 'adversely affected' and thus able to file an appeal where the examining division had rectified its decision but refused to grant reimbursement of the appeal fee (**J 32/95**, OJ 1999, 733).

The grounds forming the basis of a decision on rectification should not be interpreted to mean only the legal basis of the decision, but also the factual reasons supporting the legal basis. An applicant adversely affected by the **factual basis** was thus considered adversely affected in **T 142/96**.

(ii) Patent applicant not adversely affected

In **J 5/79** (OJ 1980, 71) the board ruled that an applicant whose priority right was found to have lapsed because he failed to file the priority documents was no longer adversely affected if re-established in his rights before the application was published.

c) Patent proprietor

(i) Patent proprietor adversely affected

In **T 457/89**, by analogy with **G 1/88** (OJ 1989, 189), the board took the view that the appellant (patentee) was adversely affected by the decision revoking his patent, despite failing to comment on a communication within the time specified in an opposition division's invitation under Art. 101(2) EPC 1973 and R. 58(1) to (3) EPC 1973. For, according to **G 1/88**, wherever non-compliance could lead to loss of rights, the EPC 1973 always expressly indicated this and Art. 101(2) EPC 1973 made no provision for any loss of rights.

In **J 17/04** the board found that although the notice of appeal only referred to a correction of the decision under appeal under R. 88 and 89 EPC 1973 (see **T 824/00** below), it made therewith (implicitly) the allegation that the decision under appeal incorrectly limited the regional scope of the patent and that this decision should be set aside. The board was therefore satisfied that the appellant had sufficiently claimed to be adversely affected and the appeal was admissible.

In **T 537/05** the appellant was held adversely affected by the decision under appeal granting the patent in an amended form on the basis of the appellant's main request, because this request was not submitted until after the opposition division had 'decided' that the subject-matter did not meet the requirements of Art. 56 EPC 1973. Giving the wording its true meaning, the opposition division had thus revoked the patent, its actions after the decision were ultra vires, and the patent proprietor thus adversely affected and entitled to appeal.

According to **T 1351/06**, a subsidiary request is only valid if the main request or higher-ranking subsidiary requests are not granted. Under Art. 113(2) EPC 1973, the EPO was bound by the applicant's requests. In the case in point, the main request had not been withdrawn and therefore remained pending. Consequently, the decision to grant a patent on the basis of the subsidiary request was contrary to Art. 113(2) EPC 1973. The appellant had therefore been adversely affected under Art. 107 EPC 1973.

(ii) Patent proprietor not adversely affected

In **T 73/88** (OJ 1992, 557) the board ruled that if a patentee's request that his patent be maintained was upheld by a decision of the opposition division, he could not appeal against adverse reasoning in the decision (here, regarding his claim to priority) because he was not adversely affected by it within the meaning of Art. 107 EPC 1973.

One of the principles representing the fundamental value of legal procedural certainty was that a party was not to be regarded as adversely affected within the meaning of Art. 107 EPC 1973 by a decision which granted his final request. A request under R. 88 EPC 1973 for correction of a document as the sole reason for the appeal was inadmissible (**T 824/00**, OJ 2004, 5). In this case the proprietor had requested correction under R. 88 EPC 1973 of his letter withdrawing all requests (see also **T 961/00** and **J 17/04**).

The argument that the discovery of a prior art disclosure in national proceedings meant that the patent proprietor had subsequently become adversely affected was rejected in **T 591/05** - by granting the patent the department of first instance had acceded to the then valid request of the appellant. Furthermore, the suspensive effect of the appeal was a direct consequence of, and was subordinate to the appeal itself (Art. 106(1) EPC 1973) and, consequently, no circumstance directly arising from the suspensive effect of the appeal could be invoked in support of the admissibility of the appeal itself.

In **T 332/06** the patent proprietor's appeal was admissible at the time it was filed but became inadmissible when the statement of grounds was received, as the patent proprietor only contested that portion of the decision relating to the claims for the contracting state DE. These claims, had been allowed by the opposition division for DE but rejected with respect to the remaining contracting states. The patent proprietor was therefore not adversely affected with respect to DE.

d) Opponent

(i) Rule 82(1) EPC

Under R. 82(1) EPC (previously R. 58(4) EPC 1973), before the opposition division decides to maintain the patent as amended, it shall inform the parties of the text in which it intends to maintain the patent and shall invite them to file their observations within two months if they disapprove of that text.

The Enlarged Board found in **G 1/88** (OJ 1989, 189) that the fact that an opponent had failed, within the time allowed, to make any observations on the text despite an invitation to do so under R. 58(4) EPC 1973 did not render his appeal inadmissible.

To regard silence as betokening consent would be tantamount to withdrawal of the opposition with consequent surrender of the right to appeal. Surrender of a right could not be simply presumed. Deeming silence to be equivalent to surrender would also be inconsistent with the logic of how the EPC operated, since it would be at odds with the way in which it dealt with the loss of rights. Where the legal consequence of an omission was to be a loss of rights, this was expressly stated. Furthermore, under Art. 164(2) EPC 1973 the Implementing Regulations had always to be interpreted in the light of the EPC.

The interpretation of the Implementing Regulations which corresponded most closely to the principles of the EPC thus prevailed. It was a principle of the EPC, however, that

parties' rights were safeguarded by the possibility of appeal to at least one higher-ranking tribunal. The Implementing Regulations should therefore be construed in such a way that R. 58(4) EPC 1973 was not allowed to interfere with the right of appeal under Art. 106 and 107 EPC 1973. The interpretation in the light of the sense and purpose of the procedure under R. 58(4) EPC 1973, lead to the same goal.

In **T 156/90** the opponent had stated that he would have no objection to maintenance of the patent if the claims were amended in a specified way, which they were. His subsequent appeal was dismissed as inadmissible; his argument that the circumstances had changed and he was no longer bound by his consent failed.

In **T 266/92**, on the other hand, the opponent had declared in opposition proceedings that he would withdraw his request for **oral proceedings** if the patentee agreed to an amended wording of the patent, as he did. The board held that the appellant was adversely affected within the meaning of Art. 107 EPC 1973, and was entitled to appeal; withdrawal of a request for oral proceedings did not in itself imply withdrawal of any other existing request. There might be reasons other than consent - such as a wish to save costs or obtain a quicker decision - for a party who originally asked for oral proceedings to drop his request.

In **T 833/90** the board held that an appeal should be considered admissible if it was not clear or ascertainable whether the opponent (appellant) had agreed to maintenance of the patent. This was followed in **T 616/08**.

(ii) Opponent adversely affected

In **T 273/90** the board concluded that legal uncertainty arising from **inadequate adjustment of the description** to amended claims constituted sufficient grievance under Art. 107 EPC 1973, as the commercial interests of the appellant (opponent) could be adversely affected (likewise **T 996/92**).

In **T 1178/04** (OJ 2008, 80) the board found the appeal filed by the opponent admissible even where the **validity of the opponent's status** was challenged following a disputed transfer, as a person was a party to proceedings for the purposes of Art. 107 EPC 1973 even if his entitlement to take part in such proceedings was brought into question. A decision that he was not entitled to take part in the proceedings would have the effect that he was no longer entitled to take part in the proceedings, but not that he had never been a party. See also **T 1982/09**.

It is not necessary for an opponent to have a **continuing interest**, financial or otherwise, in the prosecution of the opposition or appeal; it suffices that the decision does not accede to one of its substantive requests (**T 1421/05** following **T 234/86**; OJ 1989, 79).

(iii) Opponent not adversely affected

In **T 299/89** the board considered the extent of entitlement to appeal of an opponent who in his opposition had requested only partial revocation but in his appeal wanted the

whole patent revoked. It decided that this was determined by the scope of the original request made in the opposition. The opponent was only adversely affected within the meaning of Art. 107 EPC 1973 **to the extent that this request was not granted**, and he could not on appeal file a wider request.

An opponent is not adversely affected by **obiter dicta reasons** given in a revocation decision and favourable to the patent proprietor, and which it is appropriate for the opposition division to include to obviate remittal in the event of revocation being reversed on appeal (**T 473/98**, OJ 2001, 231).

A respondent (opponent) which is not adversely affected by a decision revoking the patent is not entitled to file an appeal for the sake of **acquiring an independent appellat status** instead of the status of a respondent (party as of right) (**T 193/07**). The board considered that its conclusion was in accordance with the established jurisprudence of the boards of appeal (see e.g. **T 854/02**, **T 981/01**, **T 1147/01**, **T 1341/04** and **T 473/98**). The board also pointed out that purely hypothetical considerations put forward by the opponent in support of the admissibility of its appeal concerning potentially disadvantageous situations that might occur (in the future) in related national litigation proceedings had no legal relevance under Art. 107 EPC.

In **T 1569/11** the opponents did not seek to challenge the decision of the opposition division (i.e. revocation of the patent) but the reasons for the decision. In particular, the opponents wanted the patent to be found invalid under Art. 100(c) EPC. The board noted that, in doing so, they misunderstood the nature and purpose of opposition appeal proceedings, which are not to re-examine a patent but to decide whether or not a first instance decision is correct (cf. **T 854/02**; **T 437/98**, OJ 2001, 231; **T 193/07**).

#### 2.4.3 Procedural status of the parties

##### a) Parties to appeal proceedings

Under Art. 107, second sentence, EPC the parties to proceedings before the department of first instance are also parties to the ensuing appeal proceedings, even if they have not personally filed an appeal. Pursuant to Art. 99(3) EPC, opponents as well as the patentee are parties to opposition proceedings. In addition, Art. 105 EPC makes provision for intervention by the assumed infringer. For further details, see Chapter IV.C.3 "Intervention".

For other proceedings, the general principle applies that the parties to them are those whose legal interests are affected by the decision at issue. In **T 811/90** (OJ 1993, 728), for example, opposition proceedings had been concluded and the time limit for lodging an appeal had expired. Only the patent proprietor lodged an appeal, but against a separate decision on a point incidental to the opposition. It was held that the other party had no right to be a party to the appeal as he had not been a party to the relevant decision. However, in a decision concerning an appeal against a Legal Division decision refusing to suspend grant proceedings under R. 13 EPC 1973, the applicant was to be treated as a party to the proceedings. The request for suspension could not be

separated from the grant proceedings. The applicant's legal position was directly affected by suspension, because for its duration he was denied the rights under Art. 64(1) EPC 1973 (**J 33/95**). According to **T 838/92**, nothing in the EPC 1973 enabled an opposition division or board of appeal to exclude a party from ongoing proceedings.

A patent applicant who was not heard when grant proceedings were suspended at a third party's request pursuant to R. 13 EPC 1973 could still challenge the justification for that suspension. He was a party as of right to any appeal proceedings initiated by the third party against rejection of the latter's request by the EPO (**J 28/94**, OJ 1997, 400).

In **T 643/91** the **appeal** of opponent 1 was rejected as inadmissible. Opponent 2 filed an admissible appeal. Opponent 1 was considered by the board to be "any other party to the proceedings" under Art. 107 EPC 1973 and, as a consequence, to be a party as of right in the appeal proceedings of opponent 2. However, in **T 898/91** it was held that an opponent whose **opposition** has been rejected as inadmissible by the opposition division and who has not filed an appeal against this decision is not entitled to be a party to any appeal by the patent proprietor, because he ceases to be a party to the opposition proceedings once the decision on the admissibility of its opposition takes full legal effect.

Where two opponents lodge appeals contesting different sets of claims and one subsequently withdraws its appeal, it becomes a party as of right under Art. 107 EPC and the other opponent becomes the sole appellant (see e.g. **T 233/93**).

Where a company is dissolved and thus ceases to be a legal person, it loses its capacity to be a party to any proceedings. If it was the original appellant, the appeal consequently lapses (**T 353/95** and **T 2334/08**). However, a party's opponent or appellant status does not lapse merely as a result of bankruptcy proceedings being issued (**T 696/02**).

Third parties commenting under Art. 115 EPC 1973 on the patentability of the invention claimed are not parties to the proceedings before the EPO. See also Chapter III.N "Observations by third parties".

#### b) Rights of parties under Article 107 EPC

In appeal proceedings, the case law recognises the right of all parties to be heard (see **J 20/85**, OJ 1987, 102; **J 3/90**, OJ 1991, 550; **T 18/81**, OJ 1985, 166; **T 94/84**, OJ 1986, 337; **T 716/89**, OJ 1992, 132), albeit within the limits of expediency (see **T 295/87**, OJ 1990, 470). The parties also have a right to oral proceedings.

Furthermore, **G 1/86** (OJ 1987, 447) recognised the validity of the principle that all parties must be treated equally in similar legal situations in proceedings before the boards of appeal.

Decision **T 73/88** (OJ 1992, 557) deduced from this that all parties to proceedings had the right to continue appeal proceedings. If there was already one valid appeal, no further appeals were needed and the fees paid for appeals filed later had to be refunded. However, in decision **G 2/91** (OJ 1992, 206) the Enlarged Board disagreed. It took the

view that from the legal point of view the status of parties who had filed an appeal was not comparable with that of those who had not. It was clear from generally recognised principles of procedural law that the appellant alone could decide whether the appeal filed by him was to stand. Art. 107, second sentence, EPC 1973 only guaranteed non-appellants who were party to proceedings of the first instance that they were parties to **existing** appeal proceedings. A person who was entitled to appeal but did not do so, settling instead for being "automatically" a party to the appeal proceedings, had no independent right of his own to continue those proceedings if the appellant withdrew his appeal. He acquired that right only by filing an appeal himself and paying the associated appeal fee. By the same token, there was also no reason to refund the fee for any appeals filed after the first, unless the requirements of R. 67 EPC 1973 were met. The related issue of whether non-appealing parties can file substantive requests is dealt with in **G 9/92** and **G 4/93** (both OJ 1994, 875; see Chapter IV.E.3.1 "Reformatio in peius"). (NB. The requirements of R. 67 EPC 1973, now R. 103 EPC, have been altered.)

In **T 864/02**, the board found that, according to some case law, a non-appealing party as of right did not have the same procedural status in all respects as did an appellant e.g., it did not have an independent right to continue appeal proceedings if the appellant withdrew its appeal (see **G 2/91**, OJ 1992, 206 and **G 9/92**, OJ 1994, 875). However, the case law also confirmed the right to be heard of all parties to pending proceedings, a specific aspect of the principle that all parties to proceedings pending before the EPO must be treated fairly and equally, as confirmed by **G 1/86** (OJ 1987, 447). According to the board, the only basic legal difference between an appellant and a party as of right lay in the way they became parties to the appeal procedure, the former by notice of appeal and the latter under Art. 107 EPC 1973. Once they were parties to the appeal procedure they had exactly the same rights. The party as of right was thus entitled to raise a novelty objection where the notice of opposition had raised this ground and the submission therefore lay within the framework of the opposition procedure. In **T 591/01** and **T 475/97** the respective parties as of right were allowed to submit requests.

Post-grant opposition proceedings under the EPC are in principle to be considered as contentious proceedings between parties normally representing opposite interests, who should be given equally fair treatment (**G 9/91**, OJ 1993, 408, point 2 of the Reasons).

In **T 1072/93** the board held that the freedom of the board to offer specific advice to one of the parties as to how an objection might be overcome, even when such an objection stemmed from the board itself, was severely limited, especially in inter partes proceedings where the preservation of judicial impartiality was a paramount requirement. In **T 253/95**, the same board confirmed that boards of appeal in inter partes proceedings must be strictly impartial and found that alerting a party to a possible argument against him and on a ground on which the burden of proof rested on him, in advance of the oral proceedings, would amount to a clear violation of the principle of impartiality, irrespective of the fact that the communication setting out such an argument would also be sent to the other party. In **T 394/03** the board held that, even though the opposition division's decision to reject the opposition had been annulled, it was not necessary, in the absence of a request, to give the patentee and respondent another opportunity to comment, nor, given the impartiality of the board, was there any requirement on principle to do so.

Following **T 394/03**, the board in **T 902/04** having regard to procedural economy, the principle of party disposition and the requirement for judicial impartiality in inter partes proceedings, found it appropriate to decide the case. Since the opponent's request was allowed, there was no need to hold the oral proceedings which only the opponent had requested on a purely auxiliary basis.

c) Retrospective restoration of a company

In the case underlying **G 1/13** (OJ 2015, A42) an opposition had been filed by a company which subsequently, under the relevant national law governing the company, for all purposes had ceased to exist. However, the company was subsequently restored to existence under a provision of that governing national law, by virtue of which the company was deemed to have continued in existence as if it had not ceased to exist. The Enlarged Board held that the EPO had to recognise the retroactive effect of that provision of national law. Thus, where a valid appeal was filed in due time in the name of the non-existent opponent and the restoration of the company to existence with retroactive effect took place after the expiry of the time limit for filing the notice of appeal under Art. 108 EPC, the board of appeal had to treat the appeal as admissible. The Enlarged Board referred to the clearly established principle under the EPC that national law should be referred to in order to determine whether a legal entity existed or had ceased to exist, and had capacity to act. The Enlarged Board also considered that the EPO should follow national law as regards the deemed retrospective existence of such a legal entity. This was merely to apply the general principle that such issues are the exclusive concern of national law.

## 2.5. Form and time limit of appeal

### 2.5.1 Electronic filing of appeal

Pursuant to the Decision of the President dated 10 November 2015 (OJ 11/2015, A91), appeals too may now be filed in electronic form. The case law below relates to cases decided prior to the date this decision entered into force (on 16 November 2015).

Under Art. 108 EPC 1973, notice of appeal was filed in **writing**. Thus an appeal filed via electronic means (epoline<sup>®</sup>), not being "in writing" was rejected as inadmissible in **T 781/04** and **T 991/04**, referring to the EPO Notice dated 9.12.2003 concerning the My epoline<sup>®</sup> portal. Referring to **T 781/04**, **T 991/04** and **T 514/05** (OJ 2006, 526), the board in **T 765/08** stated that documents purporting to be documents filed subsequently for the purposes of R. 2(1) EPC (here the notice of appeal) must be deemed not to have been received if they are filed by technical means not approved by the President of the EPO (here, electronically transmitted). This applies even if the means of transmission is subsequently allowed (**T 331/08**, following **T 514/05**); the board was not entitled to exercise discretionary power to consider whether the appeal, filed via epoline<sup>®</sup>, might nonetheless be deemed to have been filed, since i) to do so would be tantamount to exercising legislative power; 2) such legislative power was however clearly delegated in R. 36(5) EPC1973 to another authority within the EPO, namely the President; 3) thus pursuant to Art. 23(3) EPC1973 the board was precluded from examining whether this

purported notice of appeal could be deemed to have been received, since such a procedure would be *ultra vires*; 4) it was immaterial that this means of communication was now permitted for the filing of appeals. It was the law and instructions in place at the time of filing which had to be applied.

The board in **T 1090/08** also found the appeal inadmissible, as the statement of grounds of appeal were filed via *epoline*<sup>®</sup> prior to the entry into force of the 2009 Decision, but on the facts of the case granted re-establishment of rights in a decision dated subsequent to the entry into of force of the 2009 Decision.

In **T 1427/09** the notice of appeal and statement of grounds were filed in due time but the electronic signatures were not issued to a person authorised to act in the proceedings, in contravention of Art. 8(2) of the 2009 Decision, which is silent on the legal consequences of non-compliance. The board held that the principle that the signature of an unauthorised person should be treated like a missing signature, as set out in **T 665/89**, should apply not only to handwritten signatures, but also to electronic signatures. The electronic filing of a document in appeal proceedings accompanied by the electronic signature of an unauthorised person should therefore be treated under R. 50(3) EPC like the filing of an unsigned document per mail or telefax in the same proceedings.

#### 2.5.2 Form and content of notice of appeal (Rule 99(1) EPC)

R. 99(1) EPC defines the content of the notice of appeal to be filed within the period specified in Art. 108 EPC, taking up the requirements mentioned in R. 64(a) and (b) EPC 1973. Under R. 99(1) EPC the notice of appeal shall contain, under R. 99(1)(a) EPC, the **name and address of the appellant**, under R. 99(1)(b) EPC an **indication of the decision impugned** and under R. 99(1)(c) EPC, a **request** defining the **subject** of the appeal.

However, under R. 64(b) EPC 1973, the appellant already had to include in the notice of appeal a statement identifying the **extent** to which amendment of the impugned decision was requested. This rarely presented a problem in appeals filed by an opponent; as a rule, an opponent would request that the decision impugned be set aside and the patent revoked (partially or in its entirety). However, where the appellant is the patent proprietor, the amended claims are nearly always filed with the statement of grounds of appeal, and it is only then that the precise nature of the requested amendment of the decision impugned becomes apparent. Consequently, this requirement has been moved to R. 99(2) EPC, which defines the content of the statement of grounds of appeal; before, this had been left to board of appeal case law under Art. 108, third sentence, EPC 1973.

The requirement of R. 99(1)(c) EPC takes into account the fact that the appellant's initial request, according to **G 9/92** and **G 4/93** (OJ 1994, 875) and **G 1/99** (OJ 2001, 381) defines the subject of the appeal and thereby the framework of the appeal proceedings.

a) Rule 99(1)(a) EPC

Under R. 99(1)(a) EPC the notice of appeal shall contain the name and address of the appellant.

In **T 2330/10** the board stated that there was a difference between establishing the identity of an appellant and knowing the address where the appellant could be found. The deficiencies concerning the indication of the appellant's name and address as prescribed by R. 99(1)(a) EPC did not necessarily have to be remedied within the two-month time limit pursuant to Art. 108 EPC, but could be remedied later following an invitation under R. 101(2) EPC if there was a reason to issue such invitation. Whether or not the opponent knew the appellant's new address by the end of the two-month period was not relevant, nor was the degree of difficulty the opponent could have had in finding it out. The notice of appeal was therefore filed on behalf of a clearly identified legal person that was party to the first instance proceedings.

According to **T 624/09** it has become standard case law that the provisions of R. 99(1)(a) EPC are satisfied if the notice of appeal contains sufficient information for identification of a party (see e.g. **T 483/90**; **T 613/91** and **T 867/91**). In **T 483/90** the appellant's name was incorrectly given and its address was missing but the number of the contested patent and the name and address of the professional representative were the same as those cited in previous proceedings. In **T 613/91** the appellant's precise address was missing from the notice of appeal, but was known to the parties and the board from the opposition proceedings. In **T 867/91** the notice of appeal did not contain the address of the appellant and did not expressly state that the patentee was the appellant. In **T 624/09** the notice of appeal did not contain the appellant's address.

Similar conclusions were reached in **T 899/95**, citing **J 25/86**, (OJ 1987, 475), which was explicitly concerned with R. 26(2)(c) EPC 1973, as well as **T 483/90**, **T 613/91**, **T 867/91** and **J 39/92**. (Under R. 64(a) EPC 1973 the notice of appeal was required to contain the name and address of the appellant in accordance with the provisions of R. 26(2)(c) EPC 1973. The relevant provisions are now R. 99 EPC and R. 41 EPC respectively). It was alleged in **T 899/95** that the opponent was a legal entity but was not identified by its official designation; its identity was, however, clear. In **T 786/11**, the board held that "IS Limited" did not change its legal identity by being transferred to Mauritius.

An appeal filed by an appellant whose name was changed before the appeal was filed without indicating the change of name met the requirements of R. 64(a) EPC 1973, provided that the appellant was identifiable (**T 157/07**). See also **T 1/97**, **T 786/00** and **T 866/01**. In the latter decision the board agreed that the applicability of R. 65(2) EPC 1973 in conjunction with R. 64(a) EPC 1973 was to be defined as the requirement that deficiencies and omissions in information concerning the appellant were to be remedied on invitation in accordance with R. 65(2) EPC 1973, while the identity of the appellant had to be known and verifiable from the outset of proceedings. However, the requirement regarding sufficient identification of the appellant was to be considered to be met whenever it is possible to establish beyond reasonable doubt the identity of the

appellant on the basis of all information provided by the appellant or his legal representative within the time limit under Art. 108 EPC or in the previous proceedings, including any such information contained in the decision under appeal.

However, in **T 938/94**, where the appellant's name and address were not stated in the notice of appeal and it failed to give this information within the time limit set by the invitation pursuant to R. 65(2) EPC 1973, the appeal was rejected as inadmissible. The board considered **T 483/90** (see above), but noted that in that case no invitation pursuant to R. 65(2) EPC 1973 appeared to have been issued, nor did it seem to have been considered whether a specific invitation to provide the address should not first have been sent.

Similarly, in **T 774/05**, the appeal was rejected as inadmissible, as the appellant's address was not given in the notice of appeal. In accordance with R. 65(2) EPC 1973, the board had invited the appellant to remedy the deficiency within a time limit set by the board, but the appellant failed to do this within the set time limit. The effect of the failure to observe the time limit was clearly set out in R. 65(2) EPC 1973. This rule obliged the board to reject the appeal as inadmissible.

Several decisions have allowed correction of the name of the appellant to substitute a natural or legal person other than the one indicated in the appeal under R. 65(2) EPC 1973 in conjunction with R. 64(a) EPC 1973, if it was the true intention to file the appeal in the name of the said person and if it could be derived from the information in the appeal, if necessary with the help of other information on file, with a sufficient degree of probability that the appeal should have been filed in the name of that person (**T 97/98**, OJ 2002, 183; see also **T 15/01**, OJ 2006, 153, **T 715/01**, **T 707/04** and **T 875/06**). Where there is objectively a deficiency in the notice of appeal indicating a genuine error as regards the identity of the appellant and there is objective evidence in the file indicating with a sufficient degree of probability who the appellant should be, then the notice of appeal may be corrected under R. 101(2) EPC (**T 1961/09**, following **T 97/98**, OJ 2002, 183) (see also **T 540/09**, **T 662/09**).

In **G 1/12** (OJ 2014, A114) the Enlarged Board of Appeal reformulated the question originally posed to ask whether, when a notice of appeal, in compliance with R. 99(1)(a) EPC, contains the name and the address of the appellant as provided in R. 41(2)(c) EPC and it is alleged that the identification is wrong due to an error, the **true intention** having been to file on behalf of the legal person which should have filed the appeal, it is possible to correct this error under R. 101(2) EPC by a request for substitution by the name of the true appellant.

The Enlarged Board answered that it was possible, provided the requirements of R. 101(1) EPC had been met. Given the explicit reference in R. 101(1) EPC to Art. 107 EPC and the possibility of remedying deficiencies only within the two-month appeal period under Art. 108, first sentence, EPC, the identity of the appellant, i.e. the person entitled to appeal, had to be established by expiry of the two-month period prescribed in Art. 108, first sentence, EPC at the latest. R. 101(2) EPC concerns deficiencies concerning the indication of the appellant's name and address as prescribed

by R. 99(1)(a) EPC. They may be remedied irrespective of the time limits pursuant to Art. 108 EPC, upon invitation by the board of appeal (see also **T 755/09**).

The Enlarged Board fully endorsed the case law, in which it was considered that an incorrect indication of the appellant's identity is a deficiency which can be remedied, provided "its correction does not reflect a later change of mind as to whom the appellant should be, but on the contrary only expresses what was intended when filing the appeal" (see **T 97/98**).

The Enlarged Board also found that in cases of an error in the appellant's name, the general procedure for correcting errors under R. 139, first sentence, EPC was available under the conditions established by the case law of the boards of appeal. The following principles have been established:

(1) The correction must introduce what was originally intended. It is the party's actual rather than ostensible intention which must be considered.

(2) Where the original intention is not immediately apparent, the requester bears the burden of proof, which must be a heavy one (**J 8/80**).

(3) The error to be remedied may be an incorrect statement or an omission.

(4) The request for correction must be filed without delay.

Furthermore, an allowable correction under R. 139 EPC has retrospective effect (**J 4/85** as endorsed in several subsequent decisions, for example **J 2/92**, OJ 1994, 375; **J 27/96**; **J 6/02**; **J 23/03** and **J 19/03**).

Thus, an appeal filed by mistake in the name of an opponent who no longer exists but who has a universal successor, and which was obviously **intended** to be filed on behalf of the person who is the actual opponent and who was prejudiced by the decision, namely the universal successor, is admissible; if necessary the notice of appeal and statement of grounds of appeal may be corrected to record the name of the true appellant (opponent) (**T 1421/05**).

However, where the effective date of transfer of the patent to the appellant named in the notice of appeal had not actually occurred until after the period for filing a notice of appeal-and it was the appellant's **true intention** to file an appeal on behalf of the name given in the notice of appeal, there is no deficiency in the notice concerning the name of the appellant which may be remedied in accordance with R. 99(1)(a) EPC in conjunction with R. 101(2) EPC nor an error which may be corrected pursuant to R. 139, first sentence, EPC and the appeal is thus inadmissible (**T 128/10** following **T 97/98**; see also **T 2045/09**).

In **T 979/12** the board noted that according to **G 1/12**, which fully endorsed decision **T 97/98** (OJ 2002, 183), the board must establish the true intention of the appellant "on

the basis of the information in the appeal or otherwise on file, i.e. ascertain who must be deemed in all likelihood to have filed the appeal...".

In **T 445/08** of 26.03.2015 the board noted that it was not immediately clear that the appeal filed on behalf of the appellant, a company fully identified with its address and nationality and different from the patent proprietor, was actually intended to be filed on behalf of the appellant and stated that, regarding the requirements listed in **G 1/12**, it could not accept that the mere fact that the appellant was the party adversely affected during the opposition proceedings was sufficient to establish the true intention. The board stated that if it was indisputable that the notice of appeal was to be considered in the context of the file history, the true intention needed to be confirmed by external facts, at least to prevent requirements such as those of Art. 107 EPC being circumvented. It found that in applying R. 139 EPC to a party's request to correct a mistake in the notice of appeal in respect of the identity of the appellant, the principle of legal certainty, according to which parties are bound by their procedural acts, needed to be taken into consideration. The board came to the conclusion that the interests of the respondent were not sacrificed in this case because, apart from the fact that the true intention was to file an appeal on behalf of the entitled person, the request for correction was filed five days after the expiry of the two-month time limit for filing the notice of appeal. The board concluded that the requirements for the correction requested had been met, and thus that the correction was to be allowed.

In **T 445/08** (OJ 2012, 586) it was undisputed that the notice of appeal as filed was not admissible because the appellant company had not been a party to the opposition proceedings and accordingly was not adversely affected by the appealed decision. It was no longer the patent proprietor. The question arose whether the request for correction, which would result in the appeal being admissible, was possible pursuant to R. 101(2) or 139 EPC. The request was filed only after expiry of the relevant two-month period provided for by R. 101(1) EPC.

#### b) Rule 99(1)(b) EPC

Under R. 99(1)(b) EPC, the notice of appeal shall contain an indication of the decision impugned.

According to **J 16/94**, (OJ 1997, 331), for a notice of appeal to comply with Art. 108, first sentence, EPC 1973 and R. 64(b) EPC 1973, it had to express the definite intention to contest an appealable decision. An appeal filed as a subsidiary request, i.e. **conditional** on the main request not being allowed by the department of first instance, was therefore inadmissible. This was because there should be legal certainty as to whether or not a decision was contested in view of, firstly, the time limit under Art. 108 EPC 1973, secondly, the further steps to be taken by the department of first instance under Art. 109 EPC 1973, and particularly in view of the suspensive nature of the appeal under Art. 106(1) EPC 1973. This was confirmed by **T 460/95** (OJ 1998, 588).

c) Rule 99(1)(c) EPC

The notice of appeal shall contain **a request defining the subject** of the appeal (R. 99(1)(c) EPC).

In decision **G 1/99** (OJ 2001, 381), the Enlarged Board of Appeal pointed out that issues outside the subject-matter of the decision under appeal are not part of the appeal. It also noted that within the limits of what in the subject-matter of the decision under appeal adversely affects it, it is the appellant who in the notice of appeal determines the extent to which amendment or cancellation of the decision under appeal is requested.

Under R. 64(b) EPC 1973, the notice of appeal had also to contain a statement identifying the decision which was impugned and the **extent** to which amendment or cancellation of the decision was requested. If the extent to which cancellation of the decision was requested was not expressly stated in the notice of appeal, the board would examine whether the relevant information could be determined from the totality of the appellant's submissions (see **T 7/81**, OJ 1983, 98 and **T 32/81**, OJ 1982, 225; see also **T 925/91**, **T 932/93** and **T 372/94**). However, this requirement now applies to the statement of grounds and no longer to the notice of appeal and can be found, reworded, in R. 99(2) EPC.

According to the board in **T 358/08**, R. 99 EPC has not altered the previous law as to the requirements of either the notice of appeal or the statement of the grounds of appeal as regards the appellant's requests. R. 99(1)(c) EPC is satisfied if the notice of appeal contains a request, which may be implicit, to set aside the decision in whole or, (where appropriate) only as to part. Such a request has the effect of 'defining the subject of the appeal' within the meaning of R. 99(1)(c) EPC. Nor is it necessary in the case of an appeal by an applicant or proprietor for the notice of appeal to contain a request for maintenance of the patent in any particular form. This is something which relates to 'the extent to which [the decision] is to be amended', and which is therefore a matter for the statement of grounds of appeal under R. 99(2) EPC. This has been confirmed in many decisions, e.g. **T 844/05**, **T 509/07**, **T 9/08**, **T 226/09**, **T 689/09** and **T 648/10**.

In **T 620/13** the board pointed out that the notice of appeal is a legal declaration or legal statement made by a party to a proceeding before the EPO, and as such it must contain an unambiguous, clear and most of all, explicit statement, which is recognisable as a legal statement, concerning both the identification of the impugned decision and the subject of the appeal (see also **J 19/90**). It was immaterial that the registrar was able to establish which decision was appealed. Furthermore, according to the correct reading of **T 358/08**, what might be "implicit" was that part of the request which indicates whether the decision is to be set aside in whole or only in part. Decision **T 358/08** lent no authority to the argument that there need not be any request at all. The appeal was rejected as inadmissible.

Many of the decisions below concern the application of R. 64(b) EPC 1973, in particular the requirement concerning the extent to which amendment or cancellation of the

decision was requested in the notice of appeal. (This request, reworded, now forms part of the statement of grounds; R. 99(2) EPC).

It was sufficient to fulfil the requirements of R. 64(b) EPC 1973 if the extent of the request made on appeal could be inferred interpreting the notice of appeal in an objective way (T 85/88, see also e.g. T 32/81, OJ 1982, 225; T 7/81, OJ 1983, 98; T 1/88, T 533/93, T 141/95 and T 308/97).

T 631/91, T 727/91 and T 273/92 confirmed the principle that the appeal's scope could be ascertained from the appellant's overall submissions if the request filed in the appeal proceedings did not make this clear. Since no indication was made to the contrary in the appellant's submissions, the board of appeal assumed that he wished to file a request in the appeal proceedings along the same lines as that filed in the opposition proceedings (see also T 925/91, OJ 1995, 469; T 194/90 and T 281/95).

The wording "... we hereby file notice of appeal to the decision ..." was construed in T 632/91 as a request to set aside entirely the decision under appeal and to grant a patent on the basis of the documents of the European patent application to which the decision under appeal referred. This was followed in T 49/99 and T 1785/06). See also T 9/08 for a corresponding application under R. 99(2) EPC.

If the only ruling in an opposition division decision was that the patent was revoked, a statement by the patent proprietor that he was appealing against the decision was invariably tantamount to his stating that he wished and hence requested that the decision be set aside in its entirety, because setting aside had to be unitary. Hence the content of the notice of appeal was what R. 64(b) EPC 1973 demanded as one of its requirements for an admissible appeal, i.e. a statement identifying the extent to which cancellation of the decision was requested (T 407/02). This has also been applied under R. 99 EPC; see T 912/08, T 624/09, T 689/09 and T 1188/09.

However, where the decision under appeal related to more than one different legal issue, the statement identifying the extent of the appeal as prescribed by R. 64(b) EPC 1973 had to make it clear which issue(s) of the decision were also subjects of the appeal (T 420/03). In the case before the board the two issues were the revocation of the patent and the apportionment of costs. As the notice of appeal was completely silent on the latter and there was nothing which indicated that the decision should be set aside in its entirety, this issue was not within the extent of the appeal.

#### d) Rule 99(3) EPC

Under R. 99(3) EPC Part III of the Implementing Regulations applies *mutatis mutandis* to the notice of appeal, the statement of grounds and the documents filed in appeal proceedings.

R. 99(3) and 41(2)(h) EPC together make it clear that a notice of appeal must be signed by the appellant or his representative, but not that every single document in the notice has to be signed or that the signature has to be appended at a particular place or page.

In **T 783/08**, the debit order had been part of the notice of appeal, so the board held that the signature on it fulfilled the EPC requirements in question. The appeal had therefore been validly filed.

### 2.5.3 Appeal filed within the time limit

In **T 389/86** (OJ 1988, 87) the board stated that an appeal which was filed after pronouncement of a decision in oral proceedings but **before notification** of the decision duly substantiated in writing complied with the time limit pursuant to Art. 108, first sentence, EPC 1973. See also **T 427/99** and **T 1125/07**.

Where the translation of the notice of appeal in an **official language** of the EPO was not filed in due time, the notice was deemed not to have been received according to Art. 14(5) EPC 1973 and the appeal not to have been filed (**T 323/87**, OJ 1989, 343; see also **T 126/04**). Where the notice of appeal was filed in a non-official language by a company not entitled to benefit from the provisions of Art. 14(4) EPC 1973 and a translation into an official language was filed on the same day, the notice of appeal was nonetheless deemed not to have been filed. In view of **G 6/91** (OJ 1992, 491), where the translation was filed at the same time as the original, the EPO could not take it as the "official" notice of appeal and ignore the original as superfluous. As further stated in **G 6/91** "a translation cannot become the original; whatever the date on which it is filed it remains a translation, with all ensuing legal consequences, including the possibility of correction to bring it into conformity with the original" (**T 1152/05** and **T 41/09**). The residence or principal place of business of the professional representative used was irrelevant (**T 149/85**, OJ 1986, 103 and **T 41/09**).

According to **T 1281/01** the legal fiction that the decision (under appeal) had been delivered on the tenth day following its posting (R. 78(2) EPC 1973) did not apply when it had actually been delivered to a previously authorised representative **after** she had notified the EPO that the file had been transferred to another representative. Pursuant to R. 82 EPC 1973, the decision under appeal was deemed to have been notified on the date it was received by the authorised representative and the appeal had thus been filed in due time.

Similarly, where an appellant was **misled** by the EPO into thinking that the decision issued was only a draft, being replaced by a second one, it was sufficient if he filed the appeal within four months of notification of the second written decision (**T 830/03**).

Where the opposition division misleadingly issued two decisions, it sufficed if the statement of grounds of appeal was filed within the time limit applicable to the second decision, even if it was outside the time limit for the first decision (**T 993/06**).

In **T 124/93** the parties were misled by the re-dating of the decision by the opposition division. Following the principle of good faith governing the relationship between the EPO and the parties acting before it, their submissions received after expiration of the normal terms were considered to have been made in due time (see e.g. **T 124/93**, **T 1176/00** and **T 1694/12** in comparable cases).

#### 2.5.4 Payment of appeal fee

If no written notice of appeal has been filed within the time limit the question has arisen whether merely paying the fee for appeal constitutes a valid means of lodging an appeal. In **T 275/86** the board had held that payment with EPO Form 4212 05.80 should be accepted as such a notice since it contained essentially the same information as was required in a notice of appeal within the meaning of R. 64 EPC 1973. However, the board in **J 19/90** stated that merely paying the fee for appeal did not constitute a valid means of lodging an appeal. This applied even if the object of the payment was indicated as being a "fee for appeal" relating to an identified patent application and the form for payment of fees and costs was used. This was confirmed in **T 371/92** (OJ 1995, 324), **T 445/98**, **T 514/05** (OJ 2006, 526) and **T 778/00** (OJ 2001, 554), where the board also added that the failure to indicate the provisions of R. 65 EPC 1973 in the annex to the communication dealing with the possibility of appeal did not make this incomplete or misleading. This applies equally to inter partes proceedings (**T 1926/09**); it is in the public interest in both ex parte and inter partes proceedings to be informed with certainty about the applicant's intention of challenging a first-instance decision.

In **T 595/11** the board held that fee payment is not an issue of admissibility of the appeal, but rather a precondition for the very existence of the appeal, i.e. its deemed filing. If the appeal fee is not paid, the appeal need not be examined at all for admissibility and even less on its merits. Otherwise, it plays no role in the merits of the case, and also has no bearing on those issues that normally affect the admissibility of an appeal, such as timeliness, substantiation, party status or even competence of the deciding body. In fact, an appeal fee may even be reimbursed (see R. 103 EPC), further demonstrating that an appeal fee per se is not indispensable for the delivery of justice. Therefore, in order to avoid any misunderstanding, the board emphasised that the present finding in no way affects the established jurisprudence of the boards that the issue of admissibility of an appeal can be expected to be raised ex officio and at any stage of the proceedings.

In **T 1943/09**, the board held that the only possible conclusion in the light of the provisions of the EPC was that payment of the appeal fee did not suffice to lodge a valid appeal. The legislative amendment under the EPC 2000 whereby R. 99(1) EPC lists the items making up the obligatory content of the notice of appeal removed any doubt there might have been as to the fact that the mere payment of the appeal fee cannot replace the notice of appeal, even if it is effected within two months of notification of the decision against which an appeal is to be filed.

### 2.6. Statement of grounds of appeal

#### 2.6.1 Legal provisions

Under Art. 108 EPC a statement setting out the grounds of appeal shall be filed within four months after the date of notification of the decision in accordance with the Implementing Regulations (see R. 99 EPC).

Under R. 64(b) EPC 1973 a statement identifying the extent to which amendment of the impugned decision was requested had to be included in the **notice of appeal**. Under the EPC 2000 the appellant must indicate 'the reasons for setting aside the decision impugned, or the extent to which it is to be amended' in the **statement of grounds** (R. 99(2) EPC; see also **T 358/08**); up to now this had been left to board of appeal case law under Art. 108, third sentence, EPC 1973.

If the notice of appeal does not contain anything that can be regarded as a statement of grounds, the appeal is inadmissible unless a written statement of grounds is received by the EPO within the time limit set in Art. 108 EPC (R. 99(2) EPC and R. 101(1) EPC). If an appeal is to be rejected as inadmissible solely because the statement of grounds was not filed in due time the fee for appeal is not refundable (**T 13/82**, OJ 1983, 411).

### 2.6.2 Form of statement of grounds of appeal

Whether a document complies with Art. 108 EPC, third sentence, is considered to depend on its substance and not upon its heading or form (**T 145/88**, OJ 1991, 251, where the document headed "Statement of Grounds" was found not to contain even the minimum of reasoning and thus was not a statement of grounds at all). The mere existence of some argumentation and carrying the heading "Statement of the Grounds of Appeal" or "Grounds" does not automatically pass the threshold of Art. 108 EPC, even if clearly relating to the substance of the impugned decision (**T 1581/08**, referring to **T 145/88**). The board went on to point out that sufficiency is also not a question of volume. There is no minimum requirement as to the length or the fullness of detail of the argumentation which is necessary for an admissible appeal. In this context a distinction is to be drawn between insufficiency for the purposes of admissibility and insufficiency as far as the persuasiveness of the grounds is concerned which - if the arguments are not convincing - results in the dismissal of the appeal (see **T 922/05** and below). See also e.g. **T 23/03** and **T 613/07**.

The board in **T 74/12** pointed out that R. 99(2) EPC did not require a case number to be indicated in the statement of grounds of appeal. That logically implied that an appeal could not be found inadmissible simply because the case number was missing, as only the law, viz. the EPC and its implementing regulations, could define the conditions for taking certain procedural steps and the consequences to be expected if those steps were not taken. A procedural principle stated that rights or a means of redress could be lost only if such a consequence was clearly and precisely prescribed.

### 2.6.3 General principles

The examination of whether the requirements of Art. 108, third sentence, EPC are met has to be made on the basis of the contents of both the statement of grounds of appeal and of the decision under appeal (**T 162/97**). Whether a statement of grounds meets the requirements of Art. 108 EPC 1973 can only be decided on a case-by-case basis (**T 165/00**).

In **T 23/10** the board stated that, whether or not sufficient grounds relating to the requests submitted, was immaterial for the purposes of the admissibility of the appeal, because an appeal can only be assessed as a whole. In other words, if the admissibility requirements of Art. 108, third sentence, EPC are fulfilled in respect of at least one request, let alone of several requests, the appeal as a whole will be admissible (**T 509/07**, **T 1763/06**). The fact that the appellant, in the course of appeal proceedings, withdrew the main and auxiliary request and thereby abandoned its refutation of the reasoning of the impugned decision under Art. 100(c) EPC, had no bearing on the assessment of the admissibility of the appeal as filed. The admissibility requirements of Art. 108, third sentence, EPC concerning the appeal filed by the patentee were met within the time limit for filing the statement of grounds of appeal at least as far as the main request and auxiliary requests were concerned. As a consequence, the appeal of the patentee was admissible.

a) Legal or factual reasons to be specified

In **J 10/11** the board reviewed the case law of the boards of appeal on the requirements to be fulfilled in the statement of grounds. If the appellant submits that the decision under appeal is incorrect, then the statement setting out the grounds of appeal must enable the board to understand immediately why the decision is alleged to be incorrect and on what facts the appellant bases its arguments, without first having to make investigations of its own (see **T 220/83**, OJ 1986, 249, and **T 177/97**; affirmed by numerous decisions, and in particular recently by **T 573/09**).

Whether the requirements of Art. 108, third sentence, EPC in conjunction with R. 99(2) EPC are met has to be decided on the basis of the statement of grounds of appeal and of the reasons given in the contested decision, taking into account any amendments made to the claims (see e.g. **J 22/86**, OJ 1987, 280; **T 162/97**, **T 2001/14**). Exceptionally, it has been acknowledged that the requirement for admissibility may be regarded as satisfied if it is immediately apparent upon reading the decision under appeal and the written statement of grounds that the decision should be set aside (see **J 22/86**). The appellant had made no submissions regarding the causal relationship between the reasons given in the statement of grounds of appeal and the asserted invalidity of the findings of the decision impugned. If no causal relationship were required, any submission, even one not connected with the reasons on which the decision impugned is based, would be acceptable. This would render the provisions of Art. 108 EPC moot. Whilst the grounds do not have to be conclusive in themselves, i.e. justify the setting aside of the decision impugned, they must enable the board to assess whether or not the decision is incorrect. The appeal was rejected as inadmissible.

In **T 395/12** the appeal was also held inadmissible; the applicant's only statement that directly addressed the decision under appeal was that the examining division was "wrong", with no explanation why. Decisions **T 213/85** (OJ 1987, 482) and **T 95/10** clarify that the appeal procedure is not a mere continuation of the examination procedure (in accordance with decisions **G 10/91**, OJ 1993, 420; **G 9/92**, OJ 1994, 875 and **G 4/93**, OJ 1994, 875), but separate therefrom. Where the applicant in the grounds of appeal repeats its arguments set out during the examination phase without taking into account

the decision under appeal, it mistakes the function of the boards of appeal; they are not a second go at the examination procedure, but are meant to review decisions made by the examining divisions, based on the objections raised against the decision in the grounds of appeal, which must therefore relate to the reasons on which the decision under appeal is based. The appeal had also to be considered inadmissible because the grounds failed to deal with all the reasons the examination division advanced for refusing the application. According to **T 213/85** and **T 1045/02**, the grounds of appeal must deal with all those reasons on which the decision under appeal is based. This is consistent with the requirement of Art. 12(2) RPBA, according to which, "The statement of grounds of appeal and the reply shall contain a party's complete case". See also **T 473/09**, where the appeal was also held inadmissible as the grounds failed to deal with all the reasons for refusing the application.

In **T 2532/11** the appeal was found inadmissible as the appellant's statement of grounds did not contain any reference to the impugned decision, let alone any explanation as to why it was wrong and should be set aside.

In **T 220/83** (OJ 1986, 249) the board ruled that the grounds for appeal should specify the legal or factual reasons on which the case for setting aside the decision was based. The arguments had to be clearly and concisely presented to enable the board and the other party or parties to understand immediately why the decision was alleged to be incorrect, and on what facts the appellant based his arguments, without first having to make investigations of their own. Whilst passages from the literature setting out the state of the art might - provided sufficiently precise reference was made to them in the grounds of appeal - be considered an integral part of the grounds, they could not by themselves form a sufficient statement of grounds. This principle was expressly confirmed in many decisions, for example **T 250/89** (OJ 1992, 355), **T 1/88**, **T 145/88** (OJ 1991, 251), **T 102/91**, **T 706/91**, **T 493/95**, **T 283/97**, **T 500/97**, **T 1045/02**, **T 809/06**, **T 2346/10**, **T 294/11** and **T 2001/14** (see also **T 12/00**, where the case was contrasted with **T 220/83** and found to differ on the facts).

In **T 22/88** (OJ 1993, 143), the board held that a written statement announcing only that the appellant would complete an omitted act (here the filing of the translations of the revised claims) did not comprise sufficient reasons, and therefore did not constitute a valid statement of the grounds of appeal.

Where, as a result of contradictions and inexactitudes in an anyway very brief statement of grounds, it is left to the board to make sense of it, the appeal is usually inadmissible (**T 760/08**).

b) Grounds to be analysed vis-à-vis reasons in decision

In **T 213/85** (OJ 1987, 482) the board stated that grounds sufficient for the admissibility of an appeal had to be analysed in detail vis-à-vis the main reasons given for the contested decision. If an opposition had been dismissed on the grounds of insufficient substantiation and the grounds for appeal merely disputed patentability without elaborating on the admissibility of the opposition, the appeal was inadmissible for lack of

adequate substantiation (see also **T 169/89**, **T 2001/14**). According to the board in **T 95/10**, there were three reasons for this:

- First, the appeal procedure is not a continuation of the opposition procedure, but a distinct procedure in which any facts, evidence or arguments considered relevant must, if need be, be resubmitted (see **G 10/91**, OJ 1993, 420; **G 9/92** and **G 4/93**, both in OJ 1994, 875).

- Second, the appellant's analysis of the contested decision is needed in its statement of grounds of appeal because the legal dialogue between the board of appeal, the appellant and the respondent which is being sought on appeal can take place only if the appellant has at least addressed those reasons for the contested decision which it considers incorrect.

- The third reason is that, in the absence of such an analysis, neither the board of appeal nor the respondent can establish why the appellant regards the contested decision as incorrect. It is, however, only based on this knowledge that the respondent can counter the appellant's arguments and that the board is in a position to reach an objective decision. This does not apply if the opposition division's decision itself failed to analyse the facts and arguments submitted by the appellant during the opposition proceedings (see also **T 1188/08**; **T 720/12**)

In **T 501/09** the board was aware that other boards of appeal had found that an appeal based entirely on new evidence may be admissible when the grounds for opposition have remained the same (see **T 1557/05**). The board pointed out that the purpose of the inter partes appeal procedure is mainly to give the losing party a possibility to challenge the decision of the opposition division on its merits. The appeal proceedings are thus largely determined by the factual and legal scope of the preceding opposition proceedings (see **G 9/91** and **G 10/91**, OJ 1993, 408 and 420), and the parties have limited scope to amend the subject of the dispute on appeal. This is reflected in Art. 12(4) RPBA. The board did not admit the fresh evidence, concluded that the appeal was not substantiated and rejected it as inadmissible.

Similarly, in **T 727/09** there was an entirely new set of facts, albeit based on the same ground for opposition. The board noted that if the statement of grounds of appeal is exclusively based on these new documents, there must be a direct and clear link between the contested decision and the grounds for appeal. In the case at issue, the factual basis was, however, entirely new. The appeal was rejected as inadmissible.

Where there had been several independent reasons for the decision to refuse the application and at least one of those reasons was not addressed in the statement of grounds at all or only in insufficient detail, the board could not normally reverse the contested decision, even if it concurred with the appellant in relation to all the reasons for refusal addressed in the statement of grounds. The request of Art. 108, R. 99(2) EPC were not met (**T 899/13**).

However, the case underlying **T 395/13** was different. Although the statement of grounds of appeal contained no substantive arguments addressing the reasoning of the decision under appeal, it nonetheless met the requirements of Art. 108 EPC in combination with R. 99(2) EPC. This was because the main objection of the appellant in the grounds of appeal was that the decision under appeal did not contain sufficient reasoning to enable the appellant to file such arguments. The grounds of appeal contained reasoning as to why the appellant considered the decision under appeal to be deficient in this manner, and hence why that decision should be set aside. R. 99(2) EPC required no more than this and in particular did not specifically require that the statement of grounds of appeal addresses the arguments in the decision under appeal. The board therefore concluded that the appeal was admissible.

In **T 1/88** the board considered that the criteria of **T 220/83** and **T 213/85** were satisfied by a statement of grounds in which it was merely argued by the appellant that a document, which allegedly showed that the process of the patent in suit was obvious, had not been properly evaluated. The question of inventive step, on the lack of which the contested decision had been partly based, was not dealt with in detail. However, as was pointed out in **T 349/09**, where the appeal was found inadmissible for lack of substantiation, the appeal in **T 1/88**, for all its substantiation was minimal, did attack the decision under appeal.

In **T 950/99**, the statement setting out the grounds of appeal included the legal and factual reasons why the decision under appeal should be set aside with respect to at least one ground, namely lack of inventive step. Therefore, even if it did not contain a full reasoning with respect to each and every ground, it nevertheless met the minimum requirement of Art. 108 EPC (referring to **J 22/86**, OJ 1987, 280). In **T 808/01**, the board held that, where the statement of grounds contained several lines of argument and reasons sufficient to render the appeal admissible had been given in support of at least one of them, the appeal was admissible and it did not matter that no such reasoning had been given in support of one of others.

In **T 846/01**, the board held that, for an appeal to be admissible, at least one of the grounds in the written statement of grounds of appeal must relate to a point which could at least arguably have been decided in the appellant's favour by the instance appealed from but which point had not been so decided, and such favourable decision on this point would have produced a different outcome. Following **T 846/01**, the board in **T 1178/04** confirmed that an appeal does not lie against part of a decision of a first instance tribunal if the result would have been the same even if the point had been decided in the appellant's favour.

However, according to the board in **T 1045/02**, a statement of grounds failed to meet the minimum requirements if it dealt with only one of several grounds for refusal. Similarly, in **T 1187/04**, where the appellant had dealt only with the novelty objections and not addressed inventive step, the appeal was held inadmissible.

See also **T 922/05** in Chapter IV.E.2.6.3 c) "Duty of board to be impartial", below.

In **T 760/08**, the appellant had left it to the board to clarify inconsistencies, define the state of the art and consider which of the two features in the characterising portion, either by itself or in combination, the appellant regarded as apt to establish novelty and patentability. In support of its submissions as to the requirements to be met by the statement of grounds, the appellant had cited several decisions, including **T 563/91**, **T 729/90** and **T 162/97**. While those decisions tended to support the appellant's position, they could be countered by a series of other decisions, not cited by it, which set more stringent requirements, above all **T 220/83** (OJ 1986, 249) and **T 1045/02**. On this point, the board had already stated in **T 922/05** that, in its view, the principles set out in Art. 12(2) RPBA, as a generalisation of the relevant case law, which was not entirely consistent and had mostly resulted from the specific circumstances of the individual cases concerned, served as a suitable standard for assessing the admissibility of an appeal. The statement of grounds in question did not meet the standard set by those principles.

In **T 733/98**, where an application was refused under Art. 97 EPC 1973 and R. 51(5) EPC 1973, on the grounds that the applicant neither communicated his approval of the text proposed for grant within the period according to R. 51(4) EPC 1973 nor proposed amendments within the meaning of R. 51(5) EPC 1973 within this period, the statement of the grounds of appeal was inadmissible, as it dealt only with the issues of the admissibility and allowability of new claims filed with the statement of grounds.

c) Duty of board to be impartial

The case law of the boards of appeal was reviewed in **T 922/05** and much of it found to take a relatively lenient position in the sense that the appeals were deemed to be admissible if the competent board was able to infer from the particulars of the case the presumed intentions of the applicant and the probable reasons underlying its actions (see **T 563/91**, **T 574/91**, **T 162/97**, **T 729/90**). However, excessive leniency towards one party would rightly be perceived as an injustice towards the other. The board was of the opinion that submissions of a party which only made it possible for a board to **infer** a line of argumentation did not fulfil the requirements of either the "**clear** reasons" or the "**express** specification of facts and arguments" as prescribed by the RPBA. The statement of the grounds of appeal filed by the appellant remained silent on at least two issues, which would have been clearly relevant for deciding on the appeal, and therefore should have been addressed by the grounds of appeal in order to be complete. The silence of the appellant on these issues was seen by the board as a serious defect of the appeal. This was not changed by the fact that both issues could have been easily dispensed with in just a few sentences, without lengthy argumentation. The appeal was rejected as inadmissible (see also e.g. **T 760/08**, **T 727/09**, **T 450/13**, **T 460/13**).

In **T 450/13** the board pointed out that the statement of grounds of appeal was not sufficiently substantiated with regard to the alleged public prior use attacks. A reference back to first instance proceedings was not a sufficient reasoning to render a submission in the statement of grounds of appeal admissible (see **T 473/09**). The submissions in the statement of grounds of appeal had to be such as to enable the board (and any other party) to understand immediately why the decision was alleged to be incorrect, without

first having to make investigations on its own. To ask the board to do this would mean that the board had to make up the appellant's case in breach of the principle of impartiality (see also **T 1676/08**).

#### 2.6.4 References

##### a) References to earlier submissions

The boards have frequently held that a statement of grounds referring generally to submissions made at first instance, as a rule, cannot be considered sufficient for the purposes of Art. 108, third sentence, EPC (see e.g. **T 254/88**, **T 432/88**, **T 534/89**, **T 90/90**, **T 154/90**, OJ 1993, 505; **T 287/90**, **T 188/92**, **T 646/92**, **T 473/09**, **T 450/13**).

In **T 432/88** the appeal filed only made a general reference to the appellant's submissions in the preceding opposition proceedings and thus amounted to no more than a mere assertion that the contested decision was incorrect, without stating the legal or factual reasons why that decision should be set aside. Consequently, the appellant had left it entirely to the board and the respondent to conjecture in what respect the appellant might consider the decision under appeal to be defective. This was just what the requirement that grounds for appeal be filed is designed to prevent. This was followed in **T 534/89**, where the board pointed out that otherwise the respondent is at a loss to know how to prepare his case and the board cannot direct the appeal proceedings in an efficient way.

Merely referring to one's own first-instance submissions could not normally replace an explicit account of the legal and factual reasons for the appeal. Only exceptionally did the case law allow substantiation to take that form. References to earlier submissions, even when taken together with the contested decision, did not as a rule clearly indicate which grounds of the decision were regarded as mistaken, and why. The board and the opposing party could not then consider the merits of the appeal without making investigations of their own (**T 349/00**). See also **T 165/00**, where the case law was reviewed. Here the board could not share the appellant's view that reference on appeal to pleadings filed at the preceding instance had to be interpreted as a fresh filing of those pleadings and that the statement of grounds therefore had to be regarded as adequately reasoned. This ran counter to the rule highlighted in the boards' case law that grounds of appeal should state the legal and factual reasons why the appeal should be allowed and the contested decision set aside and that it was not enough merely to seek fresh examination of the patentability requirement found not to be met at the previous instance by indicating disagreement with that finding (see **T 220/83**, OJ 1986, 249; **T 213/85**, OJ 1987, 482; **T 145/88**, OJ 1991, 251; **T 1462/08**; **T 2077/11**).

In a small number of isolated decisions, however, the boards have accepted a general reference to submissions at first instance as potentially constituting grounds for an admissible appeal (**T 355/86**, **T 140/88**, **T 216/10**), but these decisions were given in special cases in which those submissions already adequately addressed the grounds underlying the contested decision.

In **T 725/89**, submissions filed with the opposition division before despatch of the contested decision and commenting on the outcome of the oral proceedings directly preceding the decision were deemed to constitute admissible grounds for appeal, even though the actual statement of grounds referred to them only generally.

b) References to other documents

In **T 869/91**, the statement of grounds referred only generally to certain documents, but as the board could gather from further arguments in the statement what the appellant sought to assert on the basis of those documents, it was considered admissible.

Precisely cited passages from the relevant literature become an integral part of the grounds but cannot by themselves form a sufficient statement of grounds (**T 1402/10**, citing **T 922/05**).

#### 2.6.5 New case raised

a) By opponent (appellant)

An appeal unconnected with the reasons given in the appealed decision (lack of inventive step) and directed only to a new ground for opposition (lack of novelty) based on a new document is contrary to the principles laid down in decisions **G 9/91** and **G 10/91** (OJ 1993, 408 and 420), according to which an appeal should be within the same legal and factual framework as the opposition proceedings. It is tantamount to a new opposition and is thus inadmissible (**T 1007/95**, OJ 1999, 733).

However, under Art. 106(1) EPC 1973, appeals lie from decisions rather than from the grounds of such decisions. Apart from other deficiencies, an appeal raising a case entirely different from that on which the decision under appeal was based is still admissible if it is based on the **same** opposition ground (**T 611/90**, OJ 1993, 50, where the opponent, on appealing the finding of the opposition division that the patent was novel and inventive, went on to develop what was in effect an entirely fresh case on lack of novelty). Similarly, the appeal was found admissible in **T 938/91**, where the opponent (appellant) introduced a new alleged public prior use and citation; although a "fresh case" was presented by the appellant to the board, the fresh reasons still fell within the same ground for opposition.

Other decisions where the appeal was found admissible where the opponent (appellant) introduced a fresh case on appeal concerning the same ground for opposition include **T 3/92**, **T 219/92**, **T 229/92**, **T 847/93**, **T 708/95** and **T 191/96**.

In **T 219/92**, although the statement of grounds did not address the reasons given in the contested decision for rejecting the opposition (under Art. 100(a) EPC) as inadequately substantiated, but sought to support that opposition with "better" material. The board pointed out that this could not alter the fact that the admissibility requirements, including indication of an adverse effect and the requisite identification of the extent of the request

(R. 64(b) EPC 1973), were met. In line with the boards' case law, it therefore held that there was no reason to consider the appeal inadmissible.

Following **T 611/90**, the board in **T 252/95** held that grounds within the meaning of Art. 108 EPC 1973 could be deemed to be sufficient if new facts were submitted which removed the legal basis from the decision. That also applied where the grounds for opposition were based on new facts and there was no discussion whatsoever of the grounds for the opposition division's decision. In **T 801/00** the board also found that an admissible appeal can be entirely based on new facts. The arguments presented by the appellant in respect of the new citations were sufficiently clear to enable the board and the other party to understand immediately why the attacked decision was alleged to be incorrect and to which extent it should be cancelled.

According to the case law of the boards of appeal of the EPO (see e.g. decisions **T 389/95**; **T 1063/98**, **T 1029/05**, **T 1915/09**, **T 1314/12**), an appeal invoking a ground for opposition already invoked in opposition proceedings, i.e. remaining within the same legal framework, albeit being based on a completely fresh factual framework does not ipso facto lead to an inadmissible appeal. However, this finding does not necessarily mean that the new items of evidence only filed during the appeal procedure may not be disregarded by the board pursuant to Art. 114(2) EPC (see e.g. **T 389/95**).

In **T 389/95** an appeal was filed on existing grounds for opposition but based solely on new evidence introduced in the grounds of appeal. The board found the appeal to be admissible because the issue of new factual framework was one of fact to be determined objectively as part of the substantive examination of the appeal. Opinion **G 10/91** allowed even a fresh legal ground for opposition to be considered in appeal proceedings if the patentee approved and it followed from this, that an appeal based solely on such a ground was not ipso facto inadmissible; by the same token an appeal based on the same legal ground, albeit on a completely fresh factual framework, might be admissible. See also **T 932/99**. According to **T 1029/05**, it was the consistent jurisdiction of the boards of appeal that an appeal was not to be considered inadmissible merely because it was based on evidence submitted for the first time with the grounds for appeal. See also **T 1082/05**.

In **T 27/13** the board held that the objection under Art. 83 EPC in the statement of grounds constituted a fresh ground for opposition under Art. 100(b) EPC that was outside the legal framework of the opposition proceedings. **T 389/95** as cited in **T 1007/95** found in an obiter dictum that it followed from **G 10/91** – which allowed even fresh grounds for opposition to be considered in appeal proceedings if the patentee approved – that an appeal based solely on such grounds was not ipso facto inadmissible. However, in the light of **G 10/91**'s observations on the legal character of opposition and opposition appeal proceedings and the particular importance it attached to grounds for opposition in that they established the legal framework within which substantive examination of the opposition was in principle to be conducted, the board did point out that it could find the present appeal admissible only if the same ground for opposition was raised when the appeal was filed. Only then could there be any discussion of the possibility of introducing a fresh, additional ground for opposition. The

board therefore took the view that the above-mentioned finding in **T 389/95** lacked any basis in **G 10/91**, such that it was not applicable to cases like the present in which the appeal was based solely on an entirely new ground for opposition. As this finding had not been reflected in subsequent relevant case law even though **T 389/95** had been cited quite frequently, the board regarded it as an isolated decision in this respect that should not be followed, and it followed **T 1007/95** instead. Hence the appeal was inadmissible.

b) By patent proprietor or applicant and appellant

An appeal by the patent proprietor is to be considered as sufficiently substantiated to satisfy the requirements of Art. 108 EPC, third sentence, even if it does not state any specific reason why the decision is contested, provided that two criteria are met:

- there is a change in the subject of the proceedings due to the filing of amended claims together with the statement setting out the grounds of appeal,

- the reasons for the decision are no longer relevant in view of the amended claims (see e.g. **T 105/87**, **T 563/91**, **T 717/01**, **T 934/02**, **T 655/03** and **T 1708/08**).

The board in **T 934/02** added that it was therefore not necessary and would also be pointless for the purposes of adequately substantiating an appeal, to file grounds in support of a version of a claim that the appellant (patent proprietor) was no longer defending in the appeal proceedings. See also **T 1197/03** and **T 642/05**. However, where the application was not refused on the basis that the previous set of claims on file could not be allowed, i.e. for lack of clarity, novelty or inventive step, rather on the ground that there was no agreed set of claims, filing new claims was not an adequate response (**T 573/09**); the statement of grounds should have set out why the appellant should be given the opportunity to have the proceedings continued before the board.

If an appellant desires that the allowability of alternative sets of claims should be considered in an appeal, such alternative claims should normally be filed with the statement of grounds of appeal or as soon as possible thereafter (**T 153/85**, OJ 1988, 1).

In line with the case law, the board in **T 760/08** began by observing that grounds for appeal could be also deemed sufficient where new facts had been submitted which deprived the decision of its legal basis (**T 252/95**), particularly through the filing of new sets of claims (**T 934/02**). Appellants had two options when it came to submitting their statement of grounds: they could attack the opposition division's decision as flawed, so that, provided they made a convincing case with respect to all reasons underlying the decision and the board accepted that case, it would be able and obliged to set the decision aside on all counts.

Alternatively, they could file amended claims which they considered apt to remedy the deficiencies identified by the opposition division in the decision.

In the latter case, however, it was not enough merely to file a new set of claims without comment. Rather, appellants had to set out why and to what extent the amended set of

claims was a response to the factual and legal assessment on which the opposition division had based its decision (**T 220/83**, OJ 1986, 249; and **T 145/88**). What mattered in this connection was not the length of the statement of grounds but its substance: "The requirement of Art. 108 EPC is for a statement which sets out the substance of the Appellant's case; that is, the reasons why the appeal should be allowed and the decision under appeal should be set aside. ... a well-drafted statement of grounds of appeal should contain reasoning that is full but concise. And, in general, it is obvious that the less reasoning that a Statement contains, the greater will be the risk that the appeal will be rejected as inadmissible for non-compliance with Art. 108 EPC." (**J 22/86**, OJ 1987, 280). In **T 933/09** the board considered that the mere filing of amended claims did not exonerate the appellant from the task of expressly specifying in the statement of grounds of appeal the relevance of the amendments for overcoming the objections on which the decision under appeal was based. The appeal was rejected as inadmissible.

**T 2453/09** also confirmed that it is established case law (see e.g. **T 760/08**) that an appeal can be based on new amended claims in so far as the amendments are intended to address the grounds of the impugned decision. See also **T 1538/09**. However, the mere fact of filing amended claims with the statement of grounds of appeal is not sufficient if it does not overcome the reasons for the refusal in the case at issue.

The appellant in **T 1707/07** did not address the reasons given in the decision under appeal and it was thus not clear to the board why the decision under appeal was alleged to be incorrect. The appeal was rejected as inadmissible. See also **T 502/02** and **T 132/03**.

In **T 23/03** the factual basis of the contested decision remained unchanged and the amendments made to the claims filed with the statement of grounds of appeal did not add anything which implicitly could clarify as to why the appellant might be of the opinion that the contested decision no longer applied to the new dependent claims. The appeal was therefore inadmissible.

In **T 295/04**, the statement of grounds contained only a general reference to pleadings submitted during the proceedings at first instance and a set of new claims. Since such a general reference could not be regarded as setting out why the department of first instance's decision should be amended, the appeal was dismissed as inadmissible.

In **T 257/03**, since all the board could gather from the statement of grounds was that the appellant sought the reopening of the entire opposition proceedings, but not why it considered that the opposition division's decision should be amended, it dismissed the appeal as inadmissible.

In **T 1276/05** the patent proprietor/appellant reverted back to a form of claim which had been effectively withdrawn during the opposition proceedings, i.e. the patent as granted, without explaining why the contested decision was wrong. The board noted that the lack of a need for explanation was based on the specific situation of the case before it, wherein - unusually - the offered amendments self-evidently overcame the grounds for the decision and the appeal was thus admissible.

In **T 2532/11** the question also arose whether newly filed requests could be seen as implicit grounds of appeal. A statement of grounds of appeal supported by amended claims may define, at least implicitly, the extent to which the appellant wishes the decision under appeal to be set aside. Many decisions have adopted a lenient position and deemed appeals admissible if the competent board was able to infer from the particulars of the case the presumed intentions of the appellant and the probable reasons underlying its actions (**T 729/90**, **T 563/91**, **T 574/91**, **T 162/97**). Appeals have also been held admissible where there was a change in the subject of the proceedings due to the filing of new claims together with the statement of grounds and the latter set out in detail why the raised grounds for opposition did not prejudice the maintenance of the patent as amended on the basis of these new claims (**T 717/01**, **T 934/02** referring to **J xx/87** (= **J 902/87**), OJ 1988, 323 and **T 105/87**). According to the board, the purpose of the statement of grounds, together with the notice of appeal is to define the scope of the appeal. This definition lies within the discretion of the appellants as a part of the principle of free disposition. Without prejudice to the provisions of Art. 114 EPC, which are of limited application in opposition proceedings, the board of appeal has the duty to assess whether the appeal is well-founded within the frame of the case as presented by the appellants but it cannot guess what the arguments are, let alone, provide arguments in lieu of the appellants. Conversely, the principle of free disposition does not extend such that it should allow the appellants to build a new case, so as to render the decision under appeal purposeless. A direct link must be maintained between the decision under appeal and the statement of grounds of appeal.

#### 2.6.6 Arguments need not be new or relevant

In **T 3/95** the board found that the fact that the points made in the statement of grounds of appeal did not go beyond those made before the opposition division did not detract from the admissibility of an appeal. A requirement that new arguments be submitted to render an appeal admissible would have implied that the appealed decision must have been correct. Nor did the appeal need to have a strong prospect of success.

Irrelevancy and lack of cogency might lead to an unsuccessful outcome of the appeal, but did not of themselves render it inadmissible (**T 65/96**). See also **T 922/05**.

#### 2.6.7 Subsequent withdrawal of relevant objection

The subsequent withdrawal of a relevant objection already substantiated in the statement of grounds of appeal could not retrospectively detract from the admissibility of the appeal as filed (**T 644/97**).

#### 2.6.8 Exceptional circumstances warranting admissibility of appeal

##### a) Immediately apparent the contested decision cannot be supported

In **J 22/86** (OJ 1987, 280) the board made it clear that where the written statement did not contain such full reasons, the requirement for admissibility might be regarded as satisfied if it was immediately apparent upon reading the decision under appeal and the

written statement that the decision should be set aside. According to the board, a well-drafted statement of grounds should contain reasoning that is full but concise. And, in general, it is obvious that the less reasoning that a statement contains, the greater will be the risk that the appeal will be rejected as inadmissible for non-compliance with Art. 108 EPC. The question whether a particular statement alleged to be a statement of grounds of appeal in a particular case meets the minimum requirement of Art. 108 EPC could only be decided in the context of that particular case; and the context of a particular case will normally include the contents of the decision under appeal. In a wholly exceptional case such as the one before the board, it might be immediately apparent to the board upon reading the decision under appeal and the statement of grounds that such decision cannot properly be supported, even though the grounds contained in such statement can fairly be described as minimal. See also **J 2/87** (OJ 1988, 330), **J 6/88**, **T 195/90**, **T 729/90** and **J 1/14**.

b) Patent proprietor requests revocation

An opponent's appeal is admissible when the written statement of grounds is based solely on the fact that the patent proprietor himself filed the request for revocation of the patent after the appeal was filed (**T 459/88**, OJ 1990, 425 and **T 961/93**).

c) Substantial procedural violation

In **T 1020/13** the board held that, if a substantial procedural violation is alleged and adequately substantiated in the statement of grounds of appeal, it is irrelevant for the decision on admissibility of the appeal whether the challenge to the substantive reasons for the decision can likewise be regarded as adequately substantiated.

#### 2.6.9 No partial admissibility of appeal

The admissibility of an appeal can only be assessed as a whole (**T 382/96**, **T 1763/06**, **T 509/07**, **T 2001/14**). There is no support in the EPC for a notion of 'partial admissibility' of an appeal (**T 774/97**, **T 509/07**). The board in **T 509/07** thus found it immaterial for the purposes of the admissibility of the appeal whether or not sufficient grounds relating to the main request had been submitted, where the first auxiliary request clearly complied with the admissibility requirements of Art. 108, third sentence, EPC - where these requirements are fulfilled at least in respect of one request, the appeal as a whole will be admissible. However, it is a different question whether a request in relation to which the admissibility requirements of Art. 108, third sentence, EPC are not met is admitted into the appeal proceedings. In **T 382/96** and **T 509/07**, such unsubstantiated requests were not admitted. See also **T 1763/06** and **T 2001/14**.

#### 2.7. Admissibility of appeal to be checked in every phase of appeal proceedings

The admissibility of the opposition must be checked ex officio in every phase of the opposition and ensuing appeal proceedings. It can and, where appropriate, must be raised by the board in appeal proceedings even if this is the first time this matter is addressed (**T 289/91**, OJ 1994, 649; **T 28/93** and **T 522/94**, OJ 1998, 421).

The board in **T 15/01** (OJ 2006, 153) held that the same principles applied a fortiori to the examination of the admissibility of an appeal. The appellant's procedural objection against the late introduction of the issue at a rather late stage of the appeal proceedings could not therefore succeed; admissibility issues can and have to be examined at every stage of the appeal procedure. The admissibility of an appeal had been called into question with the argument that the appeal was filed on behalf of a legal entity which had already ceased to exist due to a merger.

This was confirmed in **T 1668/07**, where the board therefore had to consider the respondent's new main request that the appeal be deemed inadmissible, although it was filed long after the periods for filing an appeal had expired and after oral proceedings had been arranged.

In **T 670/09**, the respondent did not challenge the appeal's admissibility until two days before the oral proceedings. The board observed that, under Art. 12(2) RPBA, the reply to an appeal had to contain the respondent's entire case. As a rule, respondents had to object to the appeal's admissibility or the board's competence in limine litis, i.e. before submitting their substantive defence. The respondent's objection to admissibility was therefore disregarded.

## **2.8. Cases where admissibility of appeal need not be considered**

In appeal proceedings in which the question of allowability of an appeal can be readily decided (i.e. the appeal is clearly unallowable) but no decision on its admissibility can be taken yet, the issue of admissibility of the appeal can be left open. Similarly, in a number of decision on petitions for review under Art. 112a EPC, the Enlarged Board of Appeal did not arrive at a final conclusion as to whether the petition in question was clearly inadmissible, because it found the petition to be clearly unallowable (**T 1467/11** and **T 2023/09**).

## **2.9. Interlocutory revision**

Under Art. 109(1) EPC, in **ex-parte** proceedings the department whose decision is contested must rectify its decision if it considers the appeal to be admissible and well-founded. Inter-partes proceedings are excluded from rectification. However, this does not prevent the department of first instance rectifying its decision where it erroneously revokes, on grounds of non-compliance, a patent it had decided to maintain in amended form (see **T 168/03**). On expiry of the three-month period under Art. 109(2) EPC 1973, the department of first instance whose decision is contested ceases to be responsible for the matter. Rectification of the decision is then no longer possible (**T 778/06**).

Art. 109(1) EPC provides an exception to the principle of general devolutive effect of the appeal, in order to allow an interlocutory revision. This exception has to be construed narrowly in connection with the interlocutory revision, and not as a broader entitlement for the department of first instance to decide whether an appeal is admissible (**T 1973/09**) (see also **T 473/91**, OJ 1993, 630, **T 808/03**).

In **T 638/01** a form was wrongly filled in and the appeal was sent by the formalities officer acting for the opposition division directly to the boards of appeal, bypassing the procedural step prescribed by Art. 109(1) EPC, viz. consideration for interlocutory revision. The board pointed out that since the granting of interlocutory revision in an appropriate case is **mandatory**, it followed a fortiori that considering a case for interlocutory revision in circumstances where the latter is possible is itself a **mandatory procedural step**. Since, however, the legislative purpose of Art. 109 EPC is overall procedural economy, it made no sense for the board to remit the case to the department of first instance for performance of this omitted step.

### 2.9.1 General

In case **T 139/87** (OJ 1990, 68) the board of appeal made it clear that an appeal by an applicant for a European patent was to be considered well-founded within the meaning of Art. 109(1) EPC 1973 if the main request of the appeal included amendments which clearly met the objections on which the refusal of the application had been based as indicated by the examining division. In such a case, the department that issued the contested decision **must** rectify the decision. Irregularities other than those that gave rise to the contested decision do not preclude rectification of the decision (see also **T 47/90**, OJ 1991, 486; **T 690/90**, **T 1042/92**, **T 1097/92**, **T 219/93**, **T 647/93**, OJ 1995, 132; **T 648/94**, **T 180/95**, **T 794/95**). However, in **T 615/95**, where the examining division considered that interlocutory revision would only be possible on condition several objections were overcome and these objections were unrelated to the refusal and clearly had no link at all to the decision under appeal, the board held that such an approach had no legal basis.

According to **T 1060/13** it is established case law of the boards of appeal that, in the event that the appeal is objectively to be considered as admissible and well-founded, the department of first instance is obliged to grant interlocutory revision (**T 139/87**, OJ 1990, 68; **T 180/95**; **T 2528/12**, **T 1362/13**); there is no room for discretion in the interests of procedural efficiency (**G 3/03**, OJ 2005, 344; **J 32/95**, OJ 1999, 713; **T 919/95**). An appeal is to be considered "well-founded" if at least the main request submitted with the appeal includes amendments which clearly meet the objections on which the decision relies, such that the department of the first instance could reasonably be expected to recognise this and thus rectify its decision. That there are other objections which have not been removed but which were not the subject of the contested decision cannot preclude the application of Art. 109(1) EPC 1973 (**T 139/87**; **T 47/90**, OJ 1991, 486; **T 219/93**; **T 919/95**). Thus, even if the amendments raise new objections not yet discussed, interlocutory revision must be allowed since an applicant should have the right to two instances. Objections or remarks made in an obiter dictum of a decision under appeal cannot be taken into account (see e.g. **T 1640/06** and **T 726/10**; the board disagreed with **T 1034/11**). Refusing interlocutory revision in the case of an admissible and well-founded appeal constitutes a breach of the duty to grant interlocutory revision in such a case and thus a breach of the principle of procedural efficiency (contrary to the finding in **T 704/05**) and cannot be regarded as a substantial procedural violation within the meaning of R. 103 EPC (see e.g. **T 794/95**).

In **T 473/91** (OJ 1993, 630) the board made it clear that the admissibility question under Art. 109 EPC 1973 fell under the jurisdiction of the department of first instance only when this question could be decided immediately on the basis of the appeal submissions themselves. Consequently, the appellate instance had exclusive jurisdiction over a request for restitutio in integrum into a time limit relating to the appeal itself.

In **T 919/95** the appellant was of the opinion that an interlocutory revision had to result in the appeal being allowed. A "cassatory" revision that merely set aside the contested decision and resumed the suspended proceedings was not compatible with the EPC. The interlocutory revision had to be a 'reformatory' revision, i.e. one that conferred on the appellant something that the contested decision deprived him of. The board stated that the requirements of Art. 109 EPC 1973 were met if the reason for the contested decision were removed as a result of an admissible appeal; once the contested decision had been set aside the requested decision could be taken, or the proceedings could be resumed, since further examination was required of new grounds or facts. The latter did not rule out a subsequent refusal. The purpose of interlocutory revision was to speed up the procedure. If an examining division rectified a decision under Art. 109 EPC 1973 merely in order to grant a patent according to an auxiliary request, even though the applicant insisted on his main request, the procedure was not thereby accelerated but slowed down and this would constitute a substantial procedural violation (see also **T 142/96**).

#### 2.9.2 Reimbursement of appeal fee

For further details, see Chapter IV.E.8 "Reimbursement of appeal fees".

Under Art. 109(2) EPC 1973 a case had to be remitted to the boards of appeal without delay and without comments as to its merits if the decision under appeal was not rectified within a specified time after receipt of the statement of grounds of the appeal. Therefore, if further separate issues - such as the reimbursement of the appeal fee - arose out of the appeal, the department in charge of the case was obliged under Art. 109(2) EPC 1973 to take a separate decision on rectification before the end of this time limit as soon as it realised that a decision on any further issue could not be taken within that period (**T 939/95**, OJ 1998, 481). The time limit is currently three months.

Under R. 103(1)(b) EPC, the appeal fee shall be reimbursed if the appeal is withdrawn before the filing of the statement of grounds and before the period for filing that statement has expired. This is intended to go some way towards compensating for the lack of a cross-appeal facility - appeals filed as a precaution in case the other party appeals may be withdrawn if the other party does not file an appeal.

### 3. Substantive examination of the appeal

#### 3.1. Binding effect of requests - no reformatio in peius

The question of law referred to the Enlarged Board of Appeal in **G 9/92** and **G 4/93** (both OJ 1994, 875) asked whether and to what extent a board of appeal could depart from the

request formulated in the notice of appeal when deciding opposition appeal proceedings, to the disadvantage of the appellant.

The Enlarged Board took several factors into account. The aim of the appeal was to eliminate an 'adverse effect'. As the filing of an appeal was subject to a time limit, it would not be consistent to allow non-appealing parties the unrestricted right to alter the extent of the proceedings by submitting their own requests without limitation of time. A non-appealing party as a respondent had the opportunity to make what it considered to be appropriate and necessary submissions in the appeal proceedings to defend the result obtained before the department of first instance.

The Enlarged Board thus concluded that:

1. If the **patentee** was **sole appellant** against an interlocutory decision maintaining his patent in amended form, neither the board of appeal nor the non-appealing opponent (as party to the proceedings as of right under Art. 107, second sentence, EPC 1973) could challenge maintenance of the patent as thus amended.
2. If the **opponent** was **sole appellant** against an interlocutory decision by an opposition division maintaining the patent in amended form, the patentee was primarily restricted in the appeal proceedings to defending the patent as thus maintained. Amendments proposed by the patentee (as party to the proceedings as of right under Art. 107 EPC 1973, second sentence) could be rejected by the board as inadmissible if they were neither appropriate nor necessary (see e.g. **T 321/93**).

As legal uncertainty was created by the fact that the case law of the boards of appeal has not been uniform as regards the principle of prohibition of reformatio in peius when applying or interpreting decision **G 9/92** (OJ 1994, 875), a further question was referred to the Enlarged Board, which was answered in **G 1/99** (OJ 2001, 381). See in this chapter IV.E.3.1.8.

### 3.1.1 Reformatio in peius does not apply separately to each point

According to the established case law of the boards of appeal, the doctrine of prohibition of reformatio in peius cannot be construed to apply separately to each point or issue decided, or the reasoning leading to the impugned decision (see e.g. **T 149/02**, headnote). If an appeal is lodged against an adverse decision of the department of first instance about the main request, then "the whole request is before the board of appeal and within its jurisdiction", and "the board is empowered to reopen and to decide upon matters which have been an issue before the opposition division" (see **T 327/92**, **T 401/95**, **T 583/95**, **T 576/12**).

### 3.1.2 Reformatio in peius and devolutive effect of appeal

In **T 149/02** the board stated that the two general principles of procedure - prohibition of reformatio in peius and the devolutive effect of the appeal, which conferred on the board

the power to consider its subject-matter - were complementary and had to be implemented in such a way that they did not exclude each other.

### 3.1.3 Cases where reformatio in peius does not apply

In **T 1178/04** (OJ 2008, 80) the board held that where the issue was a person's right to be a party, the principle of no reformatio in peius was of no application, bearing in mind the fact that the principle of no reformatio in peius was taken mainly from the well-established principle in German law ("Verschlechterungsverbot"). This principle has no application in those cases where (a) there exist procedural preconditions for making relevant requests to the court ("Verfahrensvoraussetzungen") and (b) these preconditions are of a kind that cannot be waived or dispensed with ("unverzichtbare Verfahrensvoraussetzungen"), such that the court must itself be satisfied that they have been fulfilled. According to the board, in the context of patent proceedings such as these, preconditions of this kind included the admissibility of the opposition itself and the capacity of a person to be a party to the proceedings in the first place.

Referring to **T 1178/04**, the board in **T 384/08** found that the admissibility of the opposition is an indispensable procedural requirement for the substantive examination of the opposition submissions at every stage of the proceedings. The approach adopted in **T 898/91** (see in this chapter IV.E.2.4.3 a) "Parties to appeal proceedings") resulted in an exception to these general principles. If this approach were to be followed, a distinction with respect to the binding effect of findings of the department of first instance would have to be made between a situation where the admissibility of an opposition was accepted by the opposition division and a situation where it was not accepted. The board had difficulties in finding a legal justification for such a distinction. The board therefore had to examine the question of the transfer of status of the opponent ex officio before dealing with the substance of the case.

### 3.1.4 Exceptions to reformatio in peius to be construed narrowly

The respondent (patent proprietor) in **T 1194/06** admitted that a limitation according to the first route mentioned in the decision **G 1/99** (OJ 2001,381) (see in this chapter IV.E.3.1.h)) was possible, but argued that this would result in a substantial restriction of the scope of the claims. The board was aware of the fact that the respondent would lose part of the protection afforded by the patent as maintained by the Opposition Division. It was, however, clear from **G 1/99** that the principle of reformatio in peius had to be respected by the boards of appeal and that an exception to this principle should be construed narrowly. There was no reason to assume that the Enlarged Board of Appeal in **G 1/99** considered even a substantial limitation of the scope of protection unacceptable. Nor did **G 1/99** distinguish between different "types" of unallowable amendment. The board could thus see no reason to assume that an amendment concerning an unallowable disclaimer should be treated in any way differently than other unallowable amendments, even if the question of what was considered to be an unallowable disclaimer was clarified after the decision **G 1/99**.

### 3.1.5 Patentee as sole appellant

Applying the principles expounded in **G 9/92** and **G 4/93** (OJ 1994, 875) the board concluded in **T 856/92** that in a case where the patentee and sole appellant appealed only in respect of some of the claims held allowable in the opposition division's interlocutory decision, neither the board nor the opponent might challenge those claims not questioned by the appellant.

In **T 598/99** the board observed that the principle of *reformatio in peius* applied so as to prevent a sole appellant being put in a worse situation than he was in before he appealed. Where the patentee was the sole appellant, the principle could not serve to protect the opponent (respondent) from being put in a worse situation than he was in before the appeal (**G 9/92**, OJ 1994, 875 and **G 4/93**, OJ 1994, 875). Indeed, whenever a sole patentee was successful in his appeal against the revocation of his patent, the opponent would be in a worse position than before. The fact that the opponent was not entitled to appeal against the decision to revoke the patent was immaterial in that respect.

The board in **T 659/07** found that the applicability of the legal principle of the prohibition of *reformatio in peius* depends on the procedural status of a case, which had therefore to be examined prior to the substantive merits of a request. Where the patentee is the sole appellant, the board further held that the patent as maintained by the opposition division in its interlocutory decisions, cannot be objected to by the board, either at the request of the respondent (opponent) or *ex officio*, even if the patent as maintained would otherwise have to be revoked on the ground that a feature present in both claim 1 as granted and as maintained introduces added subject-matter contrary to Art. 123(2) EPC 1973.

### 3.1.6 Opponent as sole appellant

In **T 752/93**, **T 637/96**, and **T 1002/95** the opposition division had maintained the patent in amended form and only the opponent had appealed. The non-appealing patentee proposed amendments during the appeal proceedings. In **T 752/93** and **T 1002/95** the board found that amendments proposed by a non-appealing patentee could, according to **G 9/92** (OJ 1994, 875), be rejected as inadmissible by the board of appeal if they were neither appropriate nor necessary, i.e. had not been occasioned by the appeal. According to **T 752/93** the patentee should therefore have the opportunity to correct erroneous amendments if these were detected later in the proceedings. Similarly, in **T 637/96**, the respondent (patentee) was able to request restoration of the claim as granted, as the amendment made to it in opposition proceedings did not change its subject-matter (i.e. the claim as granted and amended meant the same thing) and was therefore unnecessary. In **T 752/93** and **T 637/96** the amendments were found not to worsen the sole appellant's position and the board thus considered them appropriate and necessary. In **T 1002/95** the board pointed out that under R. 57a EPC 1973, which came into force after decisions **G 9/92** and **G 4/93**, a patentee was entitled to make "appropriate and necessary" amendments occasioned by grounds for opposition specified in Art. 100 EPC 1973, even if the respective ground was not invoked by the opponent.

In **T 23/04** the board made it clear that the requirements of *reformatio in peius* do not imply any right of the appealing party (opponent) to dictate the form any proposed amendments may take, and certainly to prescribe a form of amendment which would be maximally disadvantageous to the patent proprietor.

In **T 1380/04** the board, referring to **G 1/99** (OJ 2001, 381), held that the deletion of a term by the patentee/respondent could not be allowed, as this would have worsened the legal position of the appellant, contrary to the prohibition of *reformatio in peius*. It was immaterial that the term had only been introduced at the suggestion of the opposition division, as this did not alter the fact that approval of this amendment was the responsibility of the proprietor.

However, if the opponent and sole appellant deliberately refrains from invoking the prohibition of *reformatio in peius* against a claim request submitted by the respondent (patentee) which extended the scope beyond that of the claims as maintained by the department of first instance, the board need not apply the principle of the prohibition of *reformatio in peius* of its own motion. Following the principle of party disposition, any right protecting an appellant against an outcome that puts it in a worse position than if it had not appealed, may be waived (**T 1544/07**).

The board observed in **T 111/10** that the exceptional possibilities for amendment foreseen by **G 1/99** in application of the principle of the prohibition of *reformatio in peius* only applied if the patent would otherwise have to be revoked, i.e. the patent proprietor (respondent) did not have any other possibility of amendment which would allow rescue of even part of the opposed patent. In the case at issue, however, such a possibility existed. Although this would have resulted in a restriction of scope, it could not be considered unduly inequitable for a patent proprietor who, not having appealed, could not from the outset expect to get more than what was already maintained by the opposition division. Decision **T 1979/11** was not relevant as an amendment restricting rather than broadening the scope was not available. Moreover, the broadening of scope was a reaction by the respondent (patentee) to an objection by the appellant (opponent) which had been raised for the first time in the statement of the grounds of appeal. The request was therefore not admitted.

### 3.1.7 Revocation of patent

The principles of **G 9/92** were applied in **T 169/93** to the situation where the patent had been revoked, not amended. The patentee appealed against the decision to revoke (for lack of inventive step). The opposition division had found the patent sufficiently disclosed and novel. The appellant submitted that these issues could not be reopened, as none of the opponents had appealed this finding, relying on decisions **G 9/91** (OJ 1993, 408), **G 10/91** (OJ 1993, 420) and **G 9/92** (OJ 1994, 875). The board disagreed, pointing out that the respondents were unable to file an appeal, not being adversely affected under Art. 107 EPC 1973, their request for revocation having been granted. Moreover, as the patent had been revoked, it was not possible for the appellant to have an even worse outcome. It was thus open to the respondents to re-argue matters which had already been at issue before the opposition division. See also **T 1341/04**, where the board further

noted that the situation arising from a decision to revoke a patent was legally different from the one in which the patent had been maintained by the opposition division in amended form, where the decision could be appealed by both patentee and opponent. It was this situation which led to the conclusion in **G 9/92** and **G 4/93** that the patent proprietor is primarily restricted during the appeal proceedings to defending the patent in the form in which it was maintained by the opposition division, in a case where the opponent is the sole appellant.

### 3.1.8 Exceptions to the rule

Limited exceptions to the rule against *reformatio in peius* exist. In **G 1/99** (OJ 2001, 381) the Enlarged Board of Appeal answered the question referred to it in **T 315/97** (OJ 1999, 554), namely, "Must an amended claim which would put the opponent and sole appellant in a worse situation than if he had not appealed - e.g. by deleting a limiting feature of the claim - be rejected?".

The Enlarged Board held that **in principle** such a claim must be rejected. However, an exception to this principle might be made where the opposition division had allowed an inadmissible amendment. In the case at issue the opposition division had done just that with the agreement of the proprietor, who was thus not adversely affected by the decision and unable to appeal. The patent proprietor (respondent) had filed during the appeal proceedings a main request including the added (and unallowable) limiting feature, and an auxiliary request deleting it (and thus widening the claim). The Enlarged Board found that the main request had to be rejected because it did not meet the requirements of the EPC. Moreover, if the principle of *reformatio in peius* were to be applied without considering the specific circumstances of the case, the auxiliary request would also have to be rejected because it would put the opponent (appellant) in a worse situation than if it had not appealed. The only possible course the board could then take would be to revoke the patent, there being no further remedy for the proprietor. The proprietor would thus definitively lose any protection as a direct consequence of an inadmissible amendment being held allowable by the opposition division. The Enlarged Board considered it inequitable for the patent proprietor not to be given a fair opportunity to mitigate the consequences of errors of judgment made by the opposition division. The patent proprietor should thus be allowed to file requests in order to overcome this deficiency, as follows:

- in the first place, for an amendment introducing one or more originally disclosed features which limited the scope of the patent as amended;
- if such a limitation was not possible, for an amendment introducing one or more originally disclosed features which extended the scope of the patent as maintained, but within the limits of Art. 123(3) EPC 1973;
- finally, if such amendments were not possible, for deletion of the inadmissible amendment, but within the limits of Art. 123(3) EPC 1973, even if, as a result, the situation of the opponent was made worse.

See **T 594/97**, **T 994/97**, **T 590/98**, **T 76/99** and **T 724/99** for application of the principles enunciated in **G 1/99**.

According to **T 809/99** a non-appealing patent proprietor is primarily restricted on appeal to defending the claims as maintained by the opposition division. If these claims are not allowable, the principle of prohibition of reformatio in peius applies, i.e. an amended claim which would put the opponent and sole appellant in a worse situation than if it had not appealed must be rejected.

The board went on to say that the only exception to this principle as set out in **G 1/99** requires consideration of a particular sequence of possibilities for overcoming the deficiency presented by the claim(s). The first solution for overcoming the deficiency to be considered (an amendment introducing one or more originally disclosed limiting features which would not put the opponent (appellant) in a worse situation than it was in before it appealed) in fact concerns a limitation of the scope of the claim. Such limitation can also be achieved by deleting the alternative embodiment in the claim, which led to the deficiency.

The proprietor's argument that the limitation to only one of the two alternatives would render the scope of protection too narrow for it to be commercially interesting is not a valid reason for dismissing this solution and proceeding to the next possible solution indicated in **G 1/99**.

The board in **T 1033/08** made it clear that **G 1/99** (OJ 2001, 381) did not supersede **G 9/92** and **G 4/93** (both in OJ 1994, 875), but was complementary thereto in that it gave directions for allowing an exception to the principle of prohibition of reformatio in peius as defined in these decisions. Certain conditions had to be fulfilled. A limiting feature introduced during the opposition procedure had to be deleted. The necessity for its deletion had to be caused by the appeal. This meant that the deletion was necessary and appropriate because it was related to a ground of opposition and caused by new facts, evidence or arguments put forward by the appellant, or because of a different evaluation of the situation by the board of appeal. Without the deletion, the patent would have to be revoked. It was not possible to overcome the objection by introducing new features which limit the scope of the patent as maintained. Only if these preconditions were fulfilled, might an objection be overcome by introducing new features which extended the scope of the patent as maintained, but within the limits of Art. 123(3) EPC according to the second option of **G 1/99**.

In **T 974/10** the board emphasised that the Enlarged Board of Appeal had stated in **G 1/99** that, "... if the patent cannot be maintained **for reasons which were not raised at the first instance**, the non-appealing proprietor deserves protection for reasons of equity" (emphasis added by the board in **T 974/10**). As, in the case at issue, the clarity objection was raised by the board for the first time in the appeal, the respondent had to be allowed to file amendments as foreseen in decision **G 1/99**, which decision gave due regard to the principle of equity.

According to **T 1843/09** the prohibition of reformatio in peius as far as it entails a procedural limitation of the proprietor's liberty to change by way of amendments the scope of protection sought prevails "in principle" (**G 4/93**, OJ 1994, 875) until the final settlement of the opposition case and, therefore, also in any proceedings, including further appeal proceedings, subsequent to a remittal under Art. 111 EPC.

The board went on to say that it is clear from **G 1/99** that exceptions to the principle of the prohibition of reformatio in peius are a matter of equity in order to protect the non-appealing proprietor against procedural discrimination in circumstances where that prohibition would impair the legitimate defence of its patent. Therefore, exceptions are not limited to the situation specifically dealt with in **G 1/99**. Rather, the equity approach as taken by the Enlarged Board of Appeal covers, beyond an error of judgment by the opposition division, any change of the factual and/or legal basis on which limitations have been made by the proprietor prior to the appeal by the opponent as the sole appellant, provided the proprietor would be prevented by the prohibition on reformatio in peius from adequately defending its patent against new facts and objections introduced into the proceedings at the appeal stage.

In **T 61/10** the board pointed out that the existence of a causal link between the limiting feature to be deleted and the new situation arising on appeal was a necessary precondition for justifying an exception to the principle of prohibition of reformatio in peius for reasons of equity. In **G 1/99**, **T 1843/09** and **T 1979/11** this condition was fulfilled. However, in the case before the board, the precondition was not fulfilled, so a departure from the principle of prohibition of reformatio in peius based on analogies with the cases cited was not justified.

### 3.1.9 Reformatio in peius and lack of cross-appeal in the EPC

According to an obiter dictum in **T 239/96**, the board took the view that, in the absence of a provision on cross-appeal (in German "Anschlussbeschwerde"), reformatio in peius could not be ruled out altogether under the EPC, as it might serve as a means of avoiding unnecessary litigation, while still satisfying the legitimate expectations of the parties for a fair hearing. The board found that this deficiency in the EPC (i.e. the lack of a cross-appeal) was of prime importance when considering the respondent's procedural position and the issue of reformatio in peius.

## 3.2. Subject-matter under examination

### 3.2.1 Opposition appeal proceedings

#### a) Admissibility of opposition

The admissibility of the opposition, being an indispensable procedural requirement for any substantive examination of the opposition submissions, must be checked ex officio in every phase, including any ensuing appeal proceedings (**T 240/99**).

## b) The notice of appeal

In **T 226/09** the board decided that the request in the notice of appeal for the patent to be maintained on the basis of the first auxiliary request did not limit the subject of the appeal within the meaning of R. 99(1)(c) EPC for the appellant-proprietor and therefore did not rule out a broader request in the statement of grounds.

## c) Unopposed subject-matter not reviewed

No part of a patent's subject-matter (e.g. individual claims) not opposed within the nine-month time limit can be reviewed in either opposition or appeal proceedings. The opponent's statement under R. 76(2)(c) EPC (R. 55(c) EPC 1973) establishes the extent to which the patent is contested and thus the formal competence of the opposition division or board of appeal. The only exception to this principle concerns an opposition explicitly directed **only** to the subject-matter of an independent claim. In such a case, subject-matter covered by claims which depend on the independent claim can also be examined as to patentability (see e.g. **G 9/91**, OJ 1993, 408; see also **T 323/94**).

According to **T 896/90**, detailed grounds for opposition for a single granted independent claim do not mean that only that part of the patent is being contested, if the opponent has indicated that he wants the whole patent revoked. However, in **T 737/92** (in which only arguments against process claims and not against composition claims were submitted) the board found that an opposition was filed only to the extent that it was substantiated (see also **T 318/01**).

Where two opponents lodge appeals contesting different sets of claims and one subsequently withdraws its appeal, it becomes a party as of right under Art. 107 EPC 1973 and the other opponent becomes the sole appellant. The scope of the appeal is defined by the latter's request, which the non-appealing party may not exceed and which binds the board (**T 233/93**).

In **T 653/02** it was held that a board has no competence to examine a newly formulated claim derived by combination of granted claim 1 with a sub-claim not being within the extent to which the patent had been opposed; this did not fall within the exception allowed by **G 9/91** (OJ 1993, 408). In **T 646/02** the board found that the case at issue differed from the facts before the board in **T 653/02**, in that the subject-matter not opposed was described in the patent and was part of the independent claim as granted but was not itself the subject-matter of a dependent claim of the patent as granted. Whether or not the board had competence to examine depended, however, only on whether the patent was clearly restricted to a subject-matter not covered by the notice of opposition. This was done in **T 646/02** by restriction to the subject-matter of the **deliberately excluded dependent claim** and, in the case at issue, by restriction to **deliberately excluded variants** of the invention. The board held that the exception in **G 9/91** was not therefore applicable in the case before it either, since it was applicable only to subject-matter implicitly covered by the notice of opposition and not to those explicitly excluded.

In line with **G 9/91**, a patent proprietor could, in appeal proceedings, amend an uncontested **dependent** claim in accordance with R. 57a EPC 1973 (**T 711/04**).

Although the appeal procedure is to be considered as a judicial procedure in accordance with **G 9/91** (OJ 1993, 408), this does not mean that a board in examining an appeal within the framework of the legal grounds and facts submitted by the parties is limited to only considering passages in documents indicated and facts submitted by the parties. Examination of the appeal may raise further relevant questions within this framework and parties thus be invited to file observations. Moreover, where amendments of the claims were made during opposition proceedings, these are to be fully examined as to their compatibility with the requirements of the EPC (**T 1355/04**).

d) Appeal by patentee against revocation

Where the patentee appeals the revocation of the patent, the board is not bound by the findings of the opposition division; the whole case, including those claims considered novel by the opposition division, and objected to by the non-appealing opponent, must be considered (**T 396/89**). Furthermore, if the patent proprietor as the sole appellant in the opposition appeal proceedings makes amendments to the version of the patent adopted in accordance with an interlocutory decision of the opposition division, the board is both competent and obliged *ex officio* to examine those amendments from both a formal and a substantive point of view, even if the respondents expressly agree to them (**T 1098/01**). Similarly, where the patent proprietor was respondent on appeal against the decision of the opposition division as a whole, it was the board's power and duty to decide for itself on each issue addressed and it was not bound by any finding of that decision (in the respondent's favour) (**T 36/02**).

e) Removal of references in dependent claims

Claims which remain unchanged after the removal of the references in dependent claims need not be examined in opposition appeal proceedings to see if they contain grounds for opposition raised for the first time in those proceedings, unless the patentee consents (**T 968/92**).

f) Abandonment of subject-matter

See also Chapter IV.E.4. "Filing of amended claims in appeal proceedings".

According to **T 123/85** (OJ 1989, 336), the EPC makes no provision for patentees to surrender their patents during opposition proceedings (referring to **T 73/84**, OJ 1985, 241; **T 186/84**, OJ 1986, 79) nor surrender part of the patent so as to limit it. Thus a request withdrawn during opposition proceedings may nonetheless be considered in any ensuing opposition appeal proceedings. This view was followed in many decisions, including **T 296/87** (OJ 1990, 195), **T 934/02**, **T 699/00**, **T 794/02**, **T 1276/05** and **T 1188/09**.

In **T 1018/02**, it was stated that amendments of a European patent had to comply with R. 57a EPC 1973. According to this rule, amendments were possible provided that they were occasioned by grounds for opposition. However, this did not mean that, if a patent proprietor in the first instance chose to defend a main request which was limited in scope compared with the claims as granted, then he could not during the appeal proceedings go beyond the limits of that request. In accordance with **T 407/02**, a patent proprietor who had only defended his patent in limited form before an opposition division, was in principle allowed on appeal to return to a broader version or even to the patent as granted. Following **T 407/02**, the board in **T 1188/09** pointed out that opponents must therefore always be prepared for the possibility that a patent proprietor whose patent has been revoked by the opposition division will seek its restoration as granted on appeal. According to the board in **T 1188/09**, **T 1018/02** expressly followed this approach, which was again upheld in **T 386/04**, where it was explained that supposedly contrary decisions had always been concerned with circumstances in which the amendment to the claim amounted to an abuse of the procedure.

According to **T 386/04**, an appellant (proprietor), whose patent has been revoked, is entitled to seek maintenance of the patent as granted even though its main request before the opposition division had only been the maintenance of the patent in more limited form. The exception to this is where to allow the proprietor to revert to the amended claims would amount to an abuse of procedure. According to the board, this long-standing principle is not contradicted by decisions **T 528/93** or **T 840/93** (OJ 1996, 335), which are concerned with new claims raising new issues, and is not contrary to the statement by the Enlarged Board of Appeal in decision **G 9/91** (OJ 1993, 408), concerning the purpose of an appeal. In this context, there is no procedural logic in distinguishing between cases in which the patent has been revoked and cases in which the patent has been maintained.

The board in **T 28/10** extensively discussed **T 123/85** (OJ 1989, 336) and the case law based on it (including **T 386/04**). The board in that case had observed that the EPC 1973 made no provision for patent proprietors to surrender their patents during opposition proceedings. Given that patents could not be surrendered with effect for the EPO in opposition proceedings, it had rejected the opponent's argument that limited sets of claims filed in the course of the opposition proceedings were to be understood as a surrender. In the circumstances of **T 123/85**, this finding had to be considered to mean only that a European patent, as a subjective right, could not be altered with legal effect - i.e. irrevocably limited - during opposition proceedings by way of a unilateral waiver by the proprietor (see, in this connection, **G 1/90**, OJ 1991, 275; **T 386/01**) and that, therefore, claims amended for the purpose of opposition proceedings could not be deemed a surrender. Nevertheless, it could not be inferred from this that it was necessarily unreservedly permissible under procedural law to revert to a broader version of the claims not initially defended in the opposition proceedings, this constituting an amendment of submissions relevant to the case.

In **T 28/10** the patentee had sought to introduce into the appeal proceedings claims which had not been the basis of discussion before the opposition division. The board found that the legal situation had changed since **T 123/85** and Art. 12(4) RPBA was now

the relevant legal provision rather than case law based on that decision (see Chapter IV.E.4 "Filing of amended claims in appeal proceedings"). It observed that the decision in **T 123/85** had been based on **T 64/85**, in which the board had considered that abusive exercise of the right to make subsequent amendments to submissions could be sanctioned on the basis of Art. 114(2) or R. 86(3) EPC 1973 and so taken the view that the principle of concentration, which underlay those provisions, had restrictive effect. The board in **T 28/10** endorsed this finding that, in addition to the prohibitions on procedural abuse and *reformatio in peius* (see e.g. **T 934/02**), the principle of concentration likewise limited the principle of free party disposition. As far as amendments to claims in opposition or opposition appeal proceedings were concerned, the principle of concentration rule was enshrined in R. 116(2) EPC and in Art. 12(4) and Art. 13 RPBA. Whilst those provisions did not preclude such subsequent amendments entirely by imposing strict time limits on certain submissions, they left it to the decision making department's discretion whether or not to allow them.

g) Withdrawal of request during opposition proceedings

In **T 528/93**, the board had held that where a request was withdrawn during opposition proceedings and was thus not the subject of the contested decision, a virtually identical request filed during appeal proceedings was not the subject of the appeal, because the appellant was not adversely affected by the decision of the opposition division as far as this request was concerned.

h) Ground not properly substantiated by the patentee

In **T 1649/10**, the opposition division held that the subject-matter of claim 1 of the patent as granted did not involve an inventive step within the meaning of Art. 56 EPC 1973 and decided to maintain the patent as amended according to the first auxiliary request then pending. On appeal, appellant I (opponent) raised the issue of the admissibility of appellant II's (patentee) appeal, i.e., lack of substantiation. In this regard, the board held that the mere indication by appellant II that the subject-matter of granted claim 1 was inventive, starting from document D4 as the closest prior art, whereas the impugned decision based its analysis on a combination of D10 as the closest prior art and document D4, did not fulfil the requirements of R. 99(2) EPC as to the necessity for the appellant to indicate the reasons for setting aside the decision. The board was thus not in a position to recognise in the reasoning put forward by appellant II, which relied on D4 as the closest prior art, why the reasoning of the opposition division, which relied on document D10 as closest prior art, had to be rejected. It recalled, in this respect, that in *inter partes* proceedings, it is up to the parties to substantiate their views and not for the board to do so. The appeal filed by appellant II was, hence, rejected as inadmissible (R. 101(1) EPC). Its role in the appeal proceedings was then that of a party as of right under Art. 107 EPC.

i) Ground not properly substantiated by the opponent

In **T 1799/08** the board stated that it is not the function of the boards of appeal to carry out a general review of decisions at first instance, regardless of whether such a review

has been sought by the parties. In view of the character of the inter partes appeal proceedings, it could not be expected that the board, independently of its preliminary opinion on some of the critical issues for deciding on a ground not properly substantiated by the opponent which had initially raised it, would fully investigate that ground, in breach of the principle of equal treatment of the parties, and provide its own reasoning, substituting itself for an opponent which remained passive. The board thus accepted, in the absence of any evidence to the contrary, the patent proprietors' arguments.

j) Ambiguities in the claims

Reviewing and eliminating any ambiguities in the claims and description which are not necessary to refute substantiated grounds of opposition is not part of the review of the contested decision carried out during opposition appeal proceedings. In the event of ambiguities in the claims which are not connected to changes in the granted documents, Art. 69 EPC 1973 stipulates that the description and drawings must be used to interpret the claims, not that the claims must be changed (**T 481/95**).

### 3.3. Patentability requirements under examination in ex parte proceedings

#### 3.3.1 Ex parte proceedings

In **G 10/93** (OJ 1995, 172) the Enlarged Board ruled that, where the examining division had refused an application, the board had the power to examine whether the application or the invention to which it related met the requirements of the EPC 1973. This also held good for requirements the division had not considered in the examination proceedings or had regarded as fulfilled. The board should then, where appropriate, decide either to rule on the case itself or send it back to the examining division.

This followed from the fact that ex parte review was not of a contentious nature. It involved examination of the patentability requirements in proceedings in which only one party (patent applicant) was involved. The departments involved at every instance had to ensure that these requirements were fulfilled. In ex parte proceedings, therefore, the boards of appeal were not restricted either to examination of the grounds for the contested decision or to the facts and evidence on which that decision was based, and could include new grounds even though in ex parte cases too the main aim of appeal proceedings was to review the contested decision.

This decision was based on case **T 933/92**, in which an examining division had refused an application for non-compliance with Art. 123(2) EPC 1973. Whilst sharing the examining division's view with respect to Art. 123(2) EPC 1973, the board felt the application should be refused for lack of inventive step. In the board's view, the question whether grounds could be added or replaced was not resolved by **G 9/91** and **G 10/91**.

If an application for which no search had been carried out in accordance with R. 45 EPC 1973, inter alia for lack of clarity of the claims, had been refused for the same reason, a board of appeal need only examine whether the claims failed to comply with the clarity requirement of Art. 84 EPC 1973 to such an extent that it was not possible to

carry out a meaningful search. Having found that the claims fulfilled the requirements of the EPC to such an extent that it should have been possible to carry out a search, the board in **T 1873/06** remitted the application to the examining division for an additional search to be performed and the substantive examination to be continued. R. 45 EPC 1973 has been streamlined and is now R. 63 EPC. Art. 84 EPC has been subject to minor editorial amendment in English and German only.

In **T 1367/09**, when preparing the communication pursuant to Art. 15(1) RPBA the board did not raise the issue of Art. 84 EPC 1973. Nevertheless, when reconsidering the case in preparation for the oral proceedings the board noted that Art. 84 EPC 1973 should indeed be addressed in the oral proceedings. The board noted that in the light of **G 10/93** (OJ 1995, 172) the board had the power, in ex parte appeal proceedings, to enforce any grounds for refusal of an application, in particular grounds which the examining division did not consider at all or held to be satisfied.

The extent of the obligation to review a case where the appeal is partially withdrawn is discussed in Chapter IV.E.6.3.5 "Partial withdrawal of appeal by sole appellant and opponent".

### **3.4. Facts under examination - applying Article 114 EPC in appeal proceedings**

#### **3.4.1 Boards to examine facts of own motion**

Parties have no right to determine what facts will be taken into account in a board's decision. On the contrary, Art. 114(1) EPC, which also applies in appeal proceedings, requires the board to establish the facts of its own motion (see **T 89/84**, OJ 1984, 562 and **J 4/85**, OJ 1986, 205; the former superseded in so far as the view was taken that a respondent's "cross-appeal" was not necessary).

As the Enlarged Board made clear in **G 8/93** (OJ 1994, 887), the board's obligation under Art. 114(1) EPC 1973 existed only once proceedings were pending (see also **T 690/98**). Earlier, **T 328/87** (OJ 1992, 701) had already ruled that the facts could be investigated only if the appeal was admissible. There were, however, limits to this obligation, for example under Art. 114(2) EPC 1973, where facts and evidence are submitted late. The same applied if an opponent (respondent) withdraws his opposition: in **T 34/94** the board found that, "if in the event of withdrawal of the opposition the opponent is the respondent, the board may take into account evidence which was submitted by the opponent prior to withdrawal of the opposition. However, for reasons of procedural economy, the duty of the EPO to examine the facts of its own motion pursuant to Art. 114(1) EPC 1973 does not extend to its having to examine the submission of the opponent that a previous oral disclosure took place if the crucial facts were difficult to ascertain without his co-operation" (this confirmed the case law in **T 129/88**, OJ 1993, 598; **T 830/90**, OJ 1994, 713; **T 887/90**, **T 420/91** and **T 634/91**; see also **T 252/93**).

In **T 1574/11** the board observed that the principle of examination by the EPO of its own motion (Art. 114 EPC) also applied to appeal proceedings. Hence it was not restricted to

the facts, evidence or arguments provided by the parties. As the primary purpose of the appeal procedure was to check that the contested decision was correct, the board was in principle entitled to consider the evidence provided therein if it deemed it to be relevant to its own decision. The contested decision had taken E6 into account. It followed that the board was entitled to take E6 into consideration in the appeal proceedings.

**T 182/89** (OJ 1991, 391) sets out what the obligation to investigate involves; Art. 114(1) EPC 1973 should not be interpreted as requiring the opposition division or board of appeal to ascertain whether there was support for grounds for opposition not properly substantiated by an opponent, but as enabling the EPO to investigate fully the grounds for opposition which were both alleged and properly substantiated pursuant to R. 55(c) EPC 1973 (see also **T 441/91** and **T 327/92**). In **T 263/05** (OJ 2008, 329) the board accepted that it had an ex officio duty under Art. 114(1) EPC 1973 to examine amended claims, but only for prima facie non-compliance with the EPC, e.g. lack of clarity or conciseness.

If departments of first instance and/or parties fail to take account of highly relevant matter which is clearly available in the EPO file and which relates to a ground of opposition, the board's competence extends to rectifying the position by consideration of that matter provided, of course, the parties' procedural rights to fair and equal treatment are respected. This is not only consistent with Enlarged Board decisions **G 9/91** (OJ 1993, 408) and **G 10/91** (OJ 1993, 420), but incumbent on the board as the last instance in proceedings concerning the grant or maintenance under opposition of European patents (**T 385/97**). It enhances acceptance of the boards' decisions and their standing as the only judicial body ruling on patentability with effect for all the designated contracting states, if those decisions based on all material are submitted during the appeal proceedings. A document presented in such proceedings should therefore be taken into account if it is not completely irrelevant or at odds with considerations of procedural economy (**T 855/96**).

In **T 715/94** the board held that it was entitled to find novelty-destroying a document submitted but considered irrelevant before the examining and opposition divisions, as novelty had already been questioned and the document cited in the appellant's notice of opposition.

#### 3.4.2 Circumstances where the board need not examine facts of its own motion

**T 60/89** (OJ 1992, 268) held that when alleged facts put forward without proof as causing lack of novelty had occurred a long time previously and the question was no longer pursued by the parties it was not obliged to investigate the matter ex officio under Art. 114(1) EPC 1973. Nor did the board in **T 505/93** consider itself obliged to carry out any further investigation when the opponents refused to take part in oral proceedings where the content of a prior use was to be clarified.

In the context of an appeal by an appellant (opponent) from an opposition division decision maintaining the patent in amended form, the board of appeal only has to consider the appeal as regards claims upon which the appellant (opponent) has

advanced arguments and those claims that are dependent, either wholly or partially, on these claims, and has to apply the provisions of Art. 114(1) EPC 1973 in a restricted manner (**T 223/05**).

### **3.5. Arguments under examination**

The question of whether a party has discharged its onus of proof in relation to the availability to the public of a document is an argument and not a new ground of appeal. The prohibitions or restrictions on additions to the extent to which a patent is opposed, the raising of a new ground for opposition or the introduction of new facts or evidence, do not apply to the admission of a new argument. Indeed, the very purpose of appeal proceedings, particularly oral proceedings, is to provide an opportunity for a losing party to throw new light on relevant aspects of matters which have been decided to his detriment and/or to draw attention to facts in the reasoning of the department of first instance that resulted in a decision adverse to him. This can, in practice, best be achieved by reliance on new arguments. Whilst it is desirable that all relevant arguments be brought at the earliest possible stage of the proceedings, there is no requirement in Art. 108 EPC 1973 that the statement of grounds of appeal be exhaustive as to the arguments to be brought (**T 86/94**).

Similarly, in **T 432/94** the appellant was allowed to redefine the problem to be solved by the invention. The board stated that it could not be concluded from Art. 108, third sentence, EPC 1973 that an appellant was bound to the line of argument he used in the statement of grounds for the whole appeal proceedings; this dealt with an admissibility requirement and did not limit the matter in dispute in appeal proceedings.

### **3.6. Review of first-instance discretionary decisions**

If the way in which a department of first instance has exercised its discretion on a procedural matter is challenged in an appeal, it is not the function of a board of appeal to review all the facts and circumstances of the case as if it were in the place of the department of first instance, and to decide whether or not it would have exercised such discretion in the same way as the department of first instance. A board of appeal should only overrule the way in which a department of first instance has exercised its discretion if the board concludes it has done so according to the wrong principles, or without taking into account the right principles, or in an unreasonable way (**T 640/91**, OJ 1994, 918; see also **T 182/88**, OJ 1990, 287; **T 986/93**, OJ 1996, 215; **T 237/96** and **G 7/93**, OJ 1994, 775, **T 1119/05** and **T 1707/07**).

A board of appeal, when reviewing the opposition division's exercise of discretion under Art. 114(2) EPC, has the power to overrule a decision not to admit a late-filed ground of opposition, if the board concludes that the opposition division based its decision on manifestly incorrect technical assumptions or on an erroneous approach to applying said ground of opposition since this amounts to a misuse of the discretionary power under Art. 114(2) EPC (**T 109/08**).

In **T 1849/12** the impugned communication of the examining division under R. 71(3) EPC which was qualified as a decision had not terminated the proceedings as regards the appellant. Thus, it had adversely affected the appellant by issuing its communication in a way that could not be remedied by means of an appeal after the final decision. The examining division therefore ought to have allowed a separate appeal, especially since the EPC made no provision for an appeal against inaction of the EPO (see, to that effect, also **J 26/87**, OJ 1989, 329). The examining division had failed in its deliberations to take proper account of a crucial factor and so exercised its discretion improperly. Its communication therefore had to be regarded as a separately appealable decision.

#### **4. Filing of amended claims in appeal proceedings**

##### **4.1. Introduction**

See Chapter IV.C.1.3 for decisions on late-filed facts, arguments and evidence in appeal proceedings.

##### **4.1.1 Legal basis**

It is settled case law of the boards of appeal that new requests containing amended claims may exceptionally be admitted in appeal proceedings. According to R. 100(1) EPC, the provisions in R. 137(3) EPC, relating to examination, and in R. 80 EPC, relating to opposition, apply by analogy in appeal proceedings. Under R. 137(3) EPC, further amendments of a European patent application may not be made without the consent of the examining division, while R. 80 EPC provides, in essence, that the description, claims and drawings may be amended if this is occasioned by a ground for opposition under Art. 100 EPC. Moreover, the Rules of Procedure of the Boards of Appeal (RPBA), which were thoroughly revised in 2003, contain detailed provisions placing the admission of subsequent amendments at the boards' discretion. The admissibility of subsequent amendments to a party's submissions (whether they be facts, evidence or requests) was expressly rendered a matter for the board's discretion (see, for a comprehensive account, CA/133/02). When the RPBA were revised again in 2007, the provisions on subsequent amendments were retained, albeit renumbered; on this point, see Chapter IV.C.1 "Late submission".

##### **4.1.2 Rules of Procedure of the Boards of Appeal (RPBA)**

The provisions of the RPBA governing the admissibility of late requests essentially codify the boards' settled case law on this point (**T 87/05**, **R 5/11**). Art. 12 and Art. 13 RPBA (formerly Art. 10a and Art. 10b RPBA 2003, entry into force on 1 May 2003) are essentially aimed at concentrating the parties' submissions at an early stage of the proceedings, to ensure that the case is as complete as possible when it is processed. In particular, amendments which would lead to an adjournment of the oral proceedings should not be admitted. Their purpose is therefore to expedite the proceedings and implement the principle of fairness towards the other party or parties. It follows from this that parties to appeal proceedings are subject to certain restrictions as far as their procedural conduct is concerned. For example, it is a matter for each party himself to

submit all facts, evidence, arguments and requests relevant for the enforcement or defence of his rights as early and completely as possible (**T 162/09**).

Under Art. 12(2) RPBA, the statement of grounds of appeal and the reply must contain a party's complete case and should, inter alia, specify expressly all the facts, arguments and evidence relied on. Under Art. 13(1) RPBA, the boards have discretion to admit and consider any amendment to a party's case after it has filed its grounds of appeal or reply. This discretion must be exercised in view of, inter alia, the complexity of the new subject-matter, the current state of the proceedings and the need for procedural economy. Art. 13(3) RPBA adds that amendments sought to be made after oral proceedings have been arranged may not be admitted "if they raise issues which the Board or the other party or parties cannot reasonably be expected to deal with without adjournment of the oral proceedings".

Art. 13(1) RPBA thus governs the implications of an initially incomplete case and the admission of later amendments. Art. 12(4) RPBA expressly refers to the boards' power to exclude requests which could have been filed in the first-instance proceedings.

#### 4.1.3 Historical development

It already became apparent in early decisions that the boards do admit amended requests or auxiliary requests in appeal proceedings because they are serious attempts at overcoming objections, or if their late filing can be justified and admitting them does not involve the board or the other party, as the case may be, in an examination which would significantly delay the proceedings. However, requests filed shortly before or during oral proceedings, in particular, may be refused if they are not clearly allowable (**T 95/83**, OJ 1985, 75; **T 153/85**, OJ 1988, 1; **T 406/86**, OJ 1989, 302; **T 295/87**, OJ 1990, 470; **T 381/87**, OJ 1990, 213; **T 831/92**).

In other decisions too, the boards have observed that, when exercising their discretion, they must weigh up all the circumstances of the case. The later the claims are submitted, the stricter the criteria to be applied. The subject-matter of the new claims should not diverge considerably from the claims already filed, in particular they should not contain subject matter which has not previously been claimed. The new claims should be clearly allowable in the sense that they do not introduce new objections under the EPC and overcome all outstanding objections under the EPC (**T 1126/97**, **T 52/99**, **T 468/99**, **T 397/01**, **T 411/02**, **T 81/03**, **T 989/03**, **T 515/06**).

New requests may exceptionally be admitted for reasons of procedural economy, even where not filed until a very late stage (e.g. during the oral proceedings), if the amendments are justified, e.g. where filed in response to objections or comments which were not part contained in the decision under appeal but were raised in writing during the appeal proceedings and moreover do not extend the scope of discussion as determined by the decision under appeal and the statement of grounds of appeal (**T 1126/97**, **T 52/99**, **T 468/99**, **T 397/01**, **T 846/04**, **T 1109/05**).

With regard to the proper exercise of discretion in deciding whether to admit requests filed by the appellant patentee which were not submitted before the opposition division, the crucial questions to be considered are whether or not the amended claims of those requests are clearly allowable, whether they give rise to new objections, whether or not there is proper justification for their late filing (so as to forestall tactical abuse) and whether the board can deal with them without undue procedural delay (**T 153/85**, OJ 1988, 1; **T 206/93**, **T 396/97**, **T 196/00**, **T 50/02**, **T 455/03**, **T 1333/05**).

#### 4.1.4 Principles applicable to amended claims on appeal

In the context of the late filing of amended claims, several decisions refer to the principles developed by the Enlarged Board of Appeal in relation to the inter partes appeal procedure provided for in the EPC, according to which such an appeal primarily serves the parties' right to a review of the first-instance decision in proceedings of a judicial nature. In **G 9/91** and **G 10/91** (OJ 1993, 408, 420) in particular, it was held that the main purpose of the inter partes appeal procedure is to conduct a final review of the decision given at the previous instance and thereby provide the losing party with an opportunity to challenge the decision against it and obtain a judicial ruling on whether it is correct. The appeal proceedings are thus largely determined by the factual and legal scope of the preceding opposition proceedings.

It is settled case law that an appellant patentee who has lost before the opposition division thus has the right to have the rejected requests reconsidered by the appeal board or to file new requests at a timely stage of the appeal proceedings, in particular together with the statement of grounds of appeal or the reply. However, if the patentee wants other (further) requests to be considered, the admission of these requests is a matter for the board's discretion, and not a matter of right (**T 840/93**, OJ 1996, 335; **T 427/99**, **T 50/02**, **T 455/03**, **T 651/03**, **T 240/04**, **T 339/06**).

Given that the aim of opposition-appeal proceedings is to obtain judicial review of the administrative opposition decision, it follows that the board must as a rule take their decision on the basis of the issues in dispute before the opposition division. It can be directly inferred from the above that the parties have only limited scope to amend the subject of the dispute in second-instance proceedings, and this principle is reflected in Art. 12(4) RPBA. The appeal proceedings are not about bringing an entirely fresh case (**T 1705/07**, **T 356/08**, **T 1067/08**, **T 2102/08**, **T 144/09**, **T 881/09**, **T 936/09**, **T 23/10**, **T 935/12**).

The parties are subject to certain restrictions on their procedural conduct, given, in particular, the need in inter partes proceedings to act fairly towards the other party and, more generally, the requirements of due process. The parties to inter partes proceedings are subject to a particular duty to facilitate due and swift conduct of the proceedings, which includes submitting all relevant facts, evidence, arguments and requests as early and completely as possible (**T 1685/07**, **T 2102/08**, **T 253/10**, **T 1364/12**). Admitting subsequent amendments to a party's case must not adversely affect the counterparty's right to submit observations on them (Art. 13(2) RPBA), for example because it cannot duly exercise that right in the time then left (**T 253/10**, **T 1466/12**).

In **ex parte** cases it is established case law that proceedings before the boards of appeal are primarily concerned with examining the contested decision (**G 10/93**, OJ 1995, 172). Since the judicial examination in *ex parte* proceedings concerns the stage prior to grant and lacks a contentious nature, the boards are restricted, in their review of the decision under appeal, neither to an examination of the grounds for the contested decision nor to the facts and evidence on which the decision is based. In **T 980/08** the board stated that this absence of restriction does not amount to a positive obligation for the boards to consider any request filed in appeal especially when the requests bring about a new case. The appeal proceedings are intended to review the correctness of the decision of the first instance rather than to continue examination by other means (see also **T 65/11**).

## 4.2. State of proceedings

### 4.2.1 General

It is the established case law of the boards of appeal that the appeal procedure is designed to ensure that the proceedings are as brief and concentrated as possible and ready for decision at the conclusion of oral proceedings, if scheduled. An important aim of Art. 12 and 13 RPBA is that the parties' submissions are concentrated at as early a stage as possible so that the case is as complete as possible when it comes to processing it (**T 1315/08**). Therefore, amendments to the claims are to be filed at the earliest possible moment (**T 214/05**, **T 382/05**).

Under Art. 12(2) RPBA, the statement of grounds of appeal and the reply must contain the party's complete case. In addition to all facts, arguments and evidence, they should include all requests (**T 764/03**). Art. 13 RPBA leaves it to the board's discretion to consider amendments made to a party's case after filing of the statement of grounds of appeal. In particular, new submissions will not be considered if this would require an adjournment of already scheduled oral proceedings (Art. 13(3) RPBA). The subject-matter to be examined on appeal is thus determined by the statement of grounds for appeal and the reply.

### 4.2.2 Procedural economy

Under Art. 13(1) RPBA, the board must exercise its discretion in view of the need for procedural economy, that is, the need to conclude proceedings swiftly and to create legal certainty. It also follows from the inter-relationship between Art. 12 and 13 RPBA that amendments made to a party's case after filing of the grounds of appeal do not form part of the subject of the appeal and so must be admitted in order to be considered (**T 253/10**). The state of the proceedings and the need for procedural economy taken together imply a requirement for a party to present appropriate requests as soon as possible if such requests are to be admitted and considered (**T 1033/10**, **T 375/11**, **T 1245/11**, **T 2219/12**). Requests filed very late (i.e. shortly before or during the oral proceedings) will therefore be admitted only if they are *prima facie* allowable. The admission of new requests at a very late procedural stage (shortly before the oral proceedings) is only in keeping with the principle of procedural economy if the requests are not unsuitable from the outset to overcome the doubts as to the allowability of the

claims (**T 978/05**, **T 1731/06**, **T 33/07**, **T 321/07**, **T 1650/08**). As far as procedural economy is concerned, an amendment at a late stage in the proceedings is justifiable if it is an appropriate and immediate reaction to unforeseeable developments in the previous proceedings which do not lie in the responsibility of the party submitting the amendment (**T 1990/07**, **T 1354/11**).

The amended claims must not give rise to circumstances relevant for the assessment of patentability which are so new that the other party cannot reasonably be expected to address them without the proceedings being unduly prolonged (**T 651/03**).

Both the timing of the filing of amended claims or auxiliary requests and the difficulty entailed in examining them are important criteria for deciding whether they can be admitted to the proceedings (**T 397/01**): the later the requests are filed, the less likely they are to be held admissible (**T 942/05**); and the more complex the issues raised by amendments and the later those amendments are filed, the greater the risk that the remaining time is insufficient to consider them properly (**T 81/03**).

In **T 1449/05** the board stated that the discretion to permit amendment of a party's case may be exercised against a proprietor who seeks to resile at a late stage in the opposition appeal procedure from a previous long-standing acknowledgement or persistent tacit admission of prior art. Admitting this resilement would require in all fairness the adjournment of the oral proceedings to allow the appellant opponent to search for adequate evidence. This could have been done at an earlier stage of the proceedings (likewise **T 1682/09**).

If an objection (made by a party and/or by the board) is not fully understood in a particular case, it is then, at the very least, incumbent on the party having difficulties in understanding an objection to indicate this at the earliest possible stage and make the appropriate effort to have the objection clarified. A lack of understanding alone cannot justify postponing amendments to a party's case until a later stage in the proceedings (**T 1033/10**).

#### 4.2.3 Parties' right to submit observations on amendments – Article 13(2) RPBA

In **R 9/11** the Enlarged Board held that Art. 13(2) RPBA, which gives parties a right to comment on new submissions filed by others, does not inevitably extend to having all auxiliary requests - without any further examination of their prima facie allowability - automatically admitted into the proceedings. In **R 1/13** the Enlarged Board stated that the petitioner's suggestion that the right to be heard carries with it, in the case of requests filed in response to late objections, a right to a full discussion which transcends the requirement of admissibility is simply incorrect. A late objection may lead to more latitude in the filing of requests in response but there is no certainty of admissibility, let alone of a more thorough discussion if admissibility is achieved. If the petitioner was correct, any request filed in response to a late objection would be admissible even if it clearly had no prospect of overcoming the objection. There can be no such right of automatic admissibility for those making the new submissions.

#### 4.2.4 Unsubstantiated requests

In some decisions, it has been observed that unsubstantiated auxiliary requests cannot be considered in appeal proceedings.

Under Art. 12(2) RPBA, the statement of grounds of appeal and the reply must set out the parties' complete case. In particular, it must be set out why it is requested that the decision under appeal be amended or upheld. Taken as a whole, the RPBA make it clear that appeal proceedings are primarily written in nature, with Art. 12(2) RPBA requiring that the parties' complete case be submitted at the outset. The purpose of this provision is to ensure fair proceedings for all concerned and to enable the board to start working on the case on the basis of both parties' complete submissions. In inter partes proceedings, both rights and obligations should be divided equally among the parties so that the board can perform its independent judicial function (**T 217/10**, **T 1732/10**, **T 1890/09**).

In **T 217/10** the board observed that it was not only for the appellant to substantiate its appeal but equally for the respondent to show at an early stage why it considered that the objections raised in the grounds of appeal did not withstand scrutiny. If auxiliary requests were submitted, reasons usually had to be given to explain how they overcame those objections (at least if this was not obvious from the amendments made). In the case in question, the auxiliary requests had not been accompanied by any reasons, so it was not immediately apparent to the board how they could overcome the objections raised. The board therefore refused to consider them.

In **T 1732/10** the board held that not reacting in substance to the appeal of the opponent, but waiting for the board's preliminary opinion before any substantive reaction is filed, is regarded as an abuse of procedure. This is all the more so if the substantiation for all the requests, which were filed after summons to oral proceedings have been sent, is filed only shortly before the oral proceedings before the board. Such requests – which are not self-explanatory – are considered by the board as submitted only on the date of their substantiation. Such very late requests are contrary to procedural economy, do not take account of the state of the proceedings and cannot be reasonably dealt with by the board without adjournment of the proceedings or remittal to the department of first instance, contrary to Art. 13(1) and 13(3) RPBA (see also **T 1134/11**).

In **T 1836/12** the board held that filing new requests without addressing all the points raised in the annex to the summons to oral proceedings made the procedure inefficient, contrary to the principle of procedural economy. Simply filing unsubstantiated requests did not overcome any objections that had already been raised by the board in the annex to the summons or that were to be expected in the light of the contested decision. Given the lack of substantiation, the board had informed the appellant well in advance that the admissibility of these new requests would have to be discussed at the oral proceedings and that they would be considered filed only on the date of their substantiation (**T 1732/10**).

In **T 1890/09** the board concurred with the previous case law and held that unsubstantiated requests were to be disregarded under Art. 12(4) RPBA because the requirements under Art. 12(2) RPBA were not met. In the case in question, no reasons supporting the auxiliary requests had been filed either with them or at a later stage. In the board's view, it was therefore unnecessary for it to exercise its discretion under Art. 13(1) RPBA and examine whether or not these auxiliary should still be taken into consideration (similarly **T 1732/10**, **T 162/12**, **T 1836/12**).

#### 4.2.5 Amendments after arrangement of the oral proceedings

According to an approach frequently adopted by the boards a request after arrangement of the oral proceedings may be admitted and considered at the board's discretion (i) if sound reasons exist for filing this request so far into the proceedings (this may be the case when amendments are occasioned by developments during the proceedings), (ii) if the auxiliary request does not extend the scope of discussion as determined by the grounds of appeal and the respondent's (iii) if the auxiliary request is clearly or obviously allowable (this means that it must be immediately apparent to the board, with little investigative effort on its part, that the amendments made successfully address the issue raised without giving rise to new ones) (see in particular **T 1634/09** and **T 484/07**, **T 447/09**, **T 2344/09**, **T 1925/10**. Such amendments should in principle allow the granting of a patent based thereon (**T 1748/08**, **T 2250/08**).

However, amendments made after oral proceedings have been arranged (Art. 13(3) RPBA) cannot be admitted if they raise issues which the board or the other party or parties cannot reasonably be expected to address without an adjournment of the oral proceedings. This provision therefore leaves the decision-making board no room for discretion (**T 253/10**).

In **T 81/03**, the board found that requests filed shortly before the minimum deadline set by it in the summons to the oral proceedings had to be regarded as belated where they contained points which could only be dealt with properly in an additional written phase (**T 518/08**).

In **T 253/06**, the board held that it was permissible under Art. 13(3) RPBA to regard as belated auxiliary requests filed after oral proceedings had been arranged but within the prescribed period, if those requests were not substantiated, i.e. not accompanied by reasons explaining why the amendments had been made and how they were intended to overcome the objections raised in the course of the proceedings. In such cases, neither the board nor the other parties to the proceedings could reasonably be expected to consider these points, especially if there were a large number of requests and the features of the claims raised new aspects (**T 2422/09**, **T 351/10**, **T 2497/10**). This conclusion holds all the more true, if such an unsubstantiated request is filed only shortly before the oral proceedings. In this respect an ex-parte is not different from an inter-partes case (**T 1278/10**).

Amended claims filed at such a late stage should be clearly allowable in the sense that it can be quickly ascertained that they overcome all outstanding issues without raising new ones (**T 1126/97**, **T 1993/07**, **T 183/09**).

In **T 133/04**, the appellant had not provided satisfactory evidence that the late-filed requests were apt to take better account of the reasons for the decision than those filed with the statement of grounds of appeal (see also **T 50/98**).

Similarly, in **T 1443/05**, the board refused to admit the auxiliary request under Art. 13(3) RPBA because, as a result of its late filing, the question whether it met the requirements of Art. 123(3) EPC 1973 could not be answered without adjourning the oral proceedings (see also **T 1026/03**, **T 1305/05**, **T 455/06**).

#### 4.2.6 Filing of requests during the oral proceedings

##### a) Efficient conduct of the proceedings

Under Art. 15(6) RPBA, the case should be ready for decision at the conclusion of the oral proceedings before the board, unless there are special reasons to prevent this. The board of appeals have developed several criteria in exercising its discretionary power to admit amended claims submitted for the first time during oral proceedings without any legally relevant excuse for the lateness. An amendment at a late stage is justifiable if it is an appropriate reaction to unforeseeable developments in the proceedings, - for example if it addresses comments or objections first raised in those proceedings (**T 391/11**). New requests can be considered only in exceptional cases, for example if a party is confronted with unexpected developments during the proceedings (**T 1869/10**, **T 2219/12**) or if it would be immediately apparent to the board, with little or no investigative effort on its part, that the new requests are clearly and obviously allowable (**T 5/10**, **T 1912/09**, **T 2219/12**). It is established case law that claims which are clearly not allowable will not normally be admitted. Thus, the general principle is that in order to be admissible, an amended claim belatedly filed in oral proceedings must be clearly allowable by virtue of a clearly permissible amendment (**T 1273/04**, **T 1311/05**, **T 2238/09**). It must be immediately apparent to the board, with little or no investigative effort on its part, that amendments successfully address the issues raised without giving rise to new ones (**T 5/10**). According to **T 1315/08** (ex parte) an especially strict standard should be applied to such requests. As a rule, new requests not filed until the oral proceedings could only be admitted if they eliminated minor objections to an otherwise allowable claim or if they were a reaction to debate in the oral proceedings, especially where this reaction was to limit the claim even further.

In **T 183/09** auxiliary requests 2 to 4 were filed at the oral proceedings. The board summarised by stating that unless an amendment is justified by developments in the appeal proceedings - for example if it addresses objections or comments first raised in the proceedings - it will be admitted only if it does not extend the scope or framework of discussion as determined by the decision under appeal and the statement of the grounds of appeal, and is moreover clearly allowable. From the above the board inferred that procedural economy, that is the need to conclude proceedings swiftly and so create legal

certainty, plays an increasingly dominant role as appeal proceedings progress towards their end. In the final stages of an appeal procedure it may in fact come to outweigh all other factors in the balance of interests that the board must strike when deciding on the admissibility of new requests or of new facts and evidence (**T 1993/07**, **T 532/08**, **T 562/09**, **T 1227/10**, **T 1354/11**).

R. 116 EPC (R. 71a(2) EPC 1973) and Art. 13(3) RPBA have considerably restricted the scope for admitting in opposition appeal proceedings new requests first filed by the patentee in oral proceedings despite specification of a deadline for filing such requests in the summons notice. Such auxiliary requests could be refused as belated under R. 116 EPC, unless they had to be admitted on the grounds that the subject of the proceedings has changed (**T 1105/98**, **T 913/03**, **T 494/04**).

In **T 1617/08** the board stated that the purpose of an oral hearing in appeal proceedings is to give the parties an opportunity to argue their case but not to give an appellant (patentee) the opportunity to repeatedly modify its requests until an acceptable set of claims is found.

In **T 1790/06**, in exercising its discretion the board also took account of the conduct of the respondent (patentee) during the oral proceedings. A party's obligations included taking care not to act in a manner detrimental to the efficient conduct of oral proceedings. At such proceedings, it should not for example submit requests willy-nilly, withdraw them and then resubmit them later. That was unacceptable, for both the board and other parties. Similarly, in **T 2540/12** the respondent's behaviour impaired the efficient conduct of the oral proceedings and the board stated that this in itself was sufficient reason not to admit the new auxiliary request.

b) Amended claims not admitted

In **T 1105/98** the auxiliary request was not submitted until the start of oral proceedings before the board. The board had to make sure that the amended claims fulfilled the formal requirements and appeared likely to succeed, bearing in mind the time needed to ascertain this but also the right to be heard. These conditions were not fulfilled if a further search was needed, so that either the oral proceedings had to be postponed or the matter remitted to the department of first instance for further prosecution. The board in **T 681/02** adopted the view taken in **T 1105/98**, where the board had held that, if the said request was intended as a response to the board's preliminary opinion in preparation for the oral proceedings, it could have been submitted prior to the time limit specified in that opinion, that is to say, up to one month before the oral proceedings.

In **T 162/12** the discussion during the oral proceedings had been essentially limited to the objection raised in the board's annex to the summons, without any new issues coming up which could have left the appellant facing a new situation. Claim 1 of the auxiliary request 1 corresponded to the combination of claims 1 and 2 of the main request. However, the Board had already expressed in its annex to the summons its preliminary opinion that the subject-matter of claim 2 of the main request did not involve an inventive step. The appellant therefore could have filed said auxiliary request,

properly supported by arguments, sufficiently in advance for the board to prepare itself for the oral proceedings. In acting as it did, the appellant kept all its cards to itself whereas the board with its annex to the summons has laid its cards on the table. That could not be considered conducive to efficient proceedings.

In **T 831/92**, the board held that it was contrary to the principle of procedural fairness to file an auxiliary request during oral proceedings before a board of appeal because it was difficult for an opponent to deal with a request not submitted in good time before the oral proceedings (**T 1333/05**). In **T 667/04** the board stated that no exceptional circumstances were put forward excusing the late filing of the request. To have admitted it would have run counter to the principle of procedural fairness (see also **T 233/05**).

During the oral proceedings in **T 14/02**, the respondent (patentee) requested the board's leave to file additional requests in order to limit the claimed subject-matter. The board refused the request on two grounds: firstly, the need for a new request had already been apparent before the oral proceedings since the board had already issued a communication containing a negative provisional opinion setting out why the main request did not appear to be inventive; secondly, the proposed subject-matter of the new requests would have required the other party to perform another search and might have resulted in a remittal.

In **T 236/11** the amended claim consisted of a combination of features that had not been claimed in the proceedings before that. In view of the many different sets of claims filed during the proceedings before the opposition division, the board found the claiming of this combination at this late stage surprising, with the result that neither it nor the appellant was in a position to deal with the claim without postponing the oral proceedings or remitting the case to the department of first instance.

c) Amended claims admitted

In **T 1067/03** (inter partes), the board admitted an auxiliary request first filed during the oral proceedings. It regarded the clarifications in the auxiliary request as a response to the preceding discussion in the oral proceedings. Moreover, the amendment was not so complex that it would have made it impossible to reach a definitive decision in the oral proceedings.

In **T 1045/08** the board considered that the auxiliary requests filed in the oral proceedings responded to objections to the earlier filed requests in particular in view of the newly introduced documents so that it admitted them into the proceedings. In filing a relevant document shortly before oral proceedings a party must accept that the other party may file appropriate new requests also during the oral proceedings, which may raise issues not previously addressed in the proceedings. This may not apply to requests which could reasonably have been filed before the new document was filed.

In **T 2097/10**, the amendment entailed deletion of claim 1 and so eliminated the objections raised. Moreover, the then remaining independent claim, which was already in auxiliary request 1, was *prima facie* allowable. Since the amendment was restricted to

deletion of a claim, it would not unnecessarily delay the proceedings. The appellant could already have filed the relevant request with the statement of grounds of appeal, but the board decided to admit it in the circumstances (withdrawals of opposition; appellant's last chance to save its patent).

In **T 1589/11** the board raised no objection to the introduction by the opponent of new arguments not contained in the statement of grounds of appeal, even though new arguments may, in principle, also represent an amendment to a party's case within the meaning of Art. 13(1) RPBA. That the board found these new arguments convincing only became apparent to the proprietor during the oral proceedings. Under these circumstances the board considered it equitable to allow the proprietor to formulate a response to this finding, especially as the new request could not be seen as adding greatly to the complexity of the case.

In **T 2284/12** (ex parte) the board accepted that the auxiliary requests were filed in reaction to detailed comments and objections of the board that were debated in the course of the oral proceedings. The amendments made could be considered as an attempt by the appellant to overcome all pending objections. They did not raise new issues of particular complexity and contributed to the convergence of the debate. See also similar cases **T 2485/10**, **T 391/11**, **T 1306/11** and **T 1995/12**.

d) Applicant (proprietor) absent from oral proceedings

The EPO can consider and decide only on the text of the European patent submitted to it, or agreed, by the proprietor (Art. 113(2) EPC). Moreover, any party duly summoned to oral proceedings cannot rely on the proceedings being continued in writing or the case being remitted to the department of first instance solely because he failed to appear at the oral proceedings, see Art. 15(3) and (6) RPBA). Under those provisions, the board is not obliged to delay any step in the proceedings, including its decision, by reason only of the absence at the oral proceedings of any party duly summoned; that party may then be treated as relying only on its written case. The board must also ensure that each case is ready for decision at the conclusion of the oral proceedings. The explanatory notes to Art. 15(3) RPBA state that this provision does not contradict the principle of the right to be heard pursuant to Art. 113(1) EPC since that Article only affords the opportunity to be heard and, by absenting itself from the oral proceedings, a party gives up that opportunity (see the explanatory note to Art. 15(3) RPBA in CA/133/02 dated 12.11.2002, quoted in **T 1704/06**, **T 1278/10**, **T 2281/12**, **T 1245/14**).

The purpose of oral proceedings is to give parties the opportunity to present their case and to be heard. However, they give up that opportunity if they do not attend the oral proceedings. It is established case law of the boards of appeal that appellants who submit amended claims shortly before the oral proceedings and subsequently do not attend these proceedings must expect a decision based on objections which might arise against such claims in their absence. It is to be expected, for example, that the board will hold the new claims to be unallowable for lack of inventive step (**T 602/03**, **T 991/07**, **T 1403/07**, **T 1587/07**, **T 1867/07**, **T 546/08**, **T 680/10**, **T 795/11**).

Hence, a patent proprietor has to make sure, in the event that he decides not to attend oral proceedings, that all the required documents, including a description adapted to the claims, on the basis of which the maintenance of the patent could be ordered are on file, so that a decision can be taken by the board at the end of the oral proceedings if a given request is found allowable (**T 986/00**, OJ 2003, 554; **T 181/02**, **T 109/02**, **T 776/05**, **T 651/08**). Amended claims filed without an amended description may lead to revocation (**T 1194/08**).

In **T 979/02**, the appellants filed an amended set of claims as a "single main request". The board found that, for reasons of procedural economy, it had no choice but to decide on the admissibility of the request on the basis of whether the request documents were clearly admissible *prima facie*. It concluded that, *prima facie*, both the description and the claims taken alone revealed a number of formal deficiencies.

In the situation where an appellant submits new claims after oral proceedings have been arranged but does not attend these proceedings, the board can refuse the new claims for substantive reasons, specifically lack of inventive step, even if the claims have not been discussed before and were filed in good time before the oral proceedings. This will in particular be the case if an examination of these substantive requirements is to be expected in the light of the prevailing legal and factual situation (**T 1704/06**).

In **T 1867/07** the board concurred with this view and added that a duly summoned party who by its own volition is absent at oral proceedings cannot be in a more advantageous position than this party would have been, had it been present. The voluntary absence of the appellant cannot be a reason for the board not to raise issues it could have and would have raised had the appellant been present, and to decide accordingly (**T 680/10**).

In **T 1587/07**, it was held that the appellant had had to expect that, in its absence, the board would refuse under Art. 13 RPBA to admit its new request, such a refusal being particularly likely where an appellant's attention had been drawn to Art. 13 RPBA in the board's communication. The board explained that, given the appellant's absence from the oral proceedings in this *ex parte* case, it had been unable to discuss with it issues relevant for the purposes of Art. 13 RPBA, such as why features deleted during the proceedings at first instance had been reintroduced at a late stage of the appeal proceedings. Its voluntary absence was not a reason for the board not to raise issues it would have addressed if it had been present (see the similar case in **T 1403/07**).

e) Absence of opponent from oral proceedings

In **T 470/04**, the appellant patentee filed an amended set of 15 claims during the oral proceedings, which were not attended by the respondent (opponent). Since the amended set of claims was based on a combination of claims already on file, had been filed as a response to objections raised by the board during the oral proceedings, did not modify the main point of discussion defined by the decision under appeal and by the statement of the grounds of appeal, i.e. lack of inventive step, and could be easily dealt with by the board at the oral proceedings, the board concluded that the requests were admissible under the circumstances.

In **T 2471/10** the respondents could have reasonably expected amendments like those made in the claims of the appellant's new request and thus they could not have been taken by surprise. Accordingly, the respondents' absence was no obstacle to admitting the appellant's new request into the proceedings and taking a decision on it.

### **4.3. Article 12(4) RPBA - requests not examined at first instance**

#### 4.3.1 General principles

Art. 12(4) RPBA empowers the boards to refuse to admit requests which could have been presented or were not admitted in the first-instance proceedings. In several decisions, they have cited the principles developed by the Enlarged Board of Appeal in **G 9/91** and **G 10/91** (OJ 1993, 408, 420) for the *inter partes* appeal procedure provided for in the EPC (see point 4.3.2). Art. 12(4) RPBA is consistent with the principles developed by the Enlarged Board in relation to the application of Art. 113 and 114 EPC in opposition-appeal procedures (**T 2102/08**). The boards of appeal thus retain, as a review instance, discretion to refuse new material, including requests (claim sets) not submitted during opposition proceedings (**T 240/04**, **T 1705/07**, **T 23/10**, **T 1525/10**). This ensures the fair and reliable conduct of the judicial appeal proceedings (**T 23/10**, **T 1165/10**, **T 301/11**). The admission of new claim requests thus remains a matter of discretion, which may or may not be exercised in a party's favour, on the basis of the facts of the individual case. This legal principle has also been confirmed by the Enlarged Board of Appeal (**R 10/09**, **R 11/11**).

Art. 12(4) RPBA instructs us that consideration is unlikely to be given to new submissions that should have been presented in the first-instance proceedings (**T 339/06**, **T 416/07**). This provision penalises an infringement of the duty to facilitate the first-instance proceedings, i.e. a failure to display due co-operation by submitting facts, evidence and requests as required by a certain point in the proceedings, and so serves to ensure compliance with the requirement of a fair procedure and to expedite processing of the case (**T 28/10**).

In **T 301/11** the board observed that requiring all parties to complete their relevant submissions during opposition proceedings meant that the moment in time when their case had to be complete was not determined by the procedural strategy chosen by them. According to Art. 12(4) RPBA, admission of auxiliary requests into proceedings hinged on the question whether a party to appeal proceedings was in a position to make its submission earlier, and whether it could have been expected to do so under the circumstances (see also **T 23/10**).

Since, in fact, almost every claim request could have been presented before the department of first instance, the question within that context is whether the situation was such that the filing of this request should already have taken place at that stage (**T 273/11**).

In **T 419/12** the board observed that refusing under Art. 12(4) RPBA to admit a request first submitted in appeal proceedings entailed indicating a specific reason why that particular request not only could but should have been submitted at first instance.

The discretionary power under Art. 12(4) RPBA has to be exercised appropriately, which requires the appeal board to consider and weigh up the relevant factors having regard to the particular circumstances of each case (**T 23/10**, **T 1525/10**).

In **T 144/09**, the board noted that the applicability of Art. 12(4) RPBA is not restricted by the time limit for filing the grounds of appeal or any reply thereto. Indeed, a restriction in that sense would not seem to serve any useful purpose and might even result in a possibility of artificially circumventing Art. 12(4) RPBA, irrespective of whether Art. 13(1) RPBA might be a further provision of the rules of procedure which could provide a different barrier to filing such requests.

In both **R 11/11** and **R 13/11** the respective petitioners complained that the board of appeal decided in its discretion under Art. 12(4) RPBA not to admit the petitioner's auxiliary requests. The Enlarged Board held that its case-law clearly showed that petition proceedings may not be used to review the exercise by a board of appeal of a discretionary power if that would involve an impermissible consideration of substantive issues. This has also been confirmed in the specific context of the discretion in Art. 12(4) RPBA.

In **R 4/13** the Enlarged Board stated that in cases where the discretion not to admit requests is exercised by a board in reliance on Art. 12(4) RPBA it is inevitably a matter of speculation whether and in what circumstances the party would have filed such requests. Such speculation is however irrelevant as regards the existence and exercise of the discretion and the board quite correctly did not enter into such speculation. In reality it was not therefore in dispute that the board had jurisdiction not to admit the requests.

#### 4.3.2 Inter partes appeal procedure

##### a) Admission of requests already refused by the opposition division

In the cases below, the opposition division had refused to admit amended claims (as also e.g. in **T 2102/08**, **T 1467/11**).

In **T 28/10**, the board held that, where it had to be decided under Art. 12(4) RPBA whether to admit on appeal submissions already refused at first instance, this amounted to a review of the opposition division's exercise of its discretion under R. 116(2) EPC. Where the way in which a department of first instance had exercised its discretion was challenged on appeal, it was not, according to the Enlarged Board of Appeal's decision in **G 7/93** (OJ 1994, 775), the board's function to review all the facts and circumstances of the case as if it were in that department's place and to decide whether or not it would have exercised such discretion in the same way. If a department of first instance was required under the EPC to exercise its discretion in certain circumstances, it had to have a certain degree of freedom when doing so, without interference from the boards of

appeal. In such cases, a board was only to overrule the way in which the department had exercised its discretion if it came to the conclusion either that it had not done so in accordance with the proper principles or had done so in an unreasonable way, and had thus exceeded the proper limits of its discretion. Only in the event of an improper exercise of discretion was the board to set aside the department of first instance's decision. It would otherwise undermine the discretion conferred on the opposition division under R. 116 EPC (see also **T 902/09**, **T 936/09**, **T 484/11**, **T 241/13**).

In **T 1067/08** the appellant filed a main request which was identical to the sole request not admitted in opposition proceedings. The board stated that appeal proceedings were not just an alternative way of dealing with and deciding upon an opposition and that parties to first-instance proceedings were not at liberty to bring about the shifting of their case to the second instance as they pleased, and so compel the board of appeal either to give a first ruling on the critical issues or to remit the case to the department of first instance. Conceding such freedom to a party (and/or to the department of first instance) would run counter to orderly and efficient proceedings. In effect, it would allow a kind of "forum shopping" which would jeopardise the proper distribution of functions between the departments of first instance and the boards of appeal and would be absolutely unacceptable for procedural economy generally. The board decided not to admit the main request into the appeal proceedings and stated that the exercise of the powers under Art. 12(4) RPBA might also be justified where a party's conduct - e.g. maintaining a single request which the opposition division had declined to admit into the proceedings as an abuse of procedure, and refusing to file amended and/or auxiliary requests - had in effect prevented the department of first instance from giving a reasoned decision on the critical issues, thereby compelling the board of appeal either to give a first ruling on those issues or to remit the case to the department of first instance (see also **T 936/09**, **T 495/10**, **T 2017/14**).

b) Broadening of claims considered by the opposition division

The appeal proceedings do not have the purpose of starting a new examination of different subject-matter, in particular where such subject-matter involves the broadening of claims considered by an opposition division (**T 144/09**, **T 1616/10**).

In **T 144/09**, about one month before oral proceedings in opposition proceedings the patent proprietor added a new feature "space requirement..." into the requests. During the oral proceedings the opposition division raised an objection under Art. 123(2) EPC concerning the inclusion of this feature. It asked the patent proprietor explicitly whether he would file any request that would overcome the objection. However, he didn't file any amended or auxiliary requests. Thus, the patent was revoked. With the statement of grounds of appeal the patent proprietor filed new requests without the space requirement feature. The board stated that no reason could be seen for not having simply deleted the objected feature by way of an auxiliary request during the oral proceedings before the opposition division. A request can be held inadmissible under Art. 12(4) RPBA when added subject-matter held unallowable during proceedings before the opposition division is not removed at least by way of an auxiliary request filed in those proceedings, but only

by way of a request filed during the appeal proceedings (see also **R 11/11** regarding the appellant's petition for review on this matter; see also **T 154/12**).

Also in **T 1616/10** the main request and auxiliary request 1 were not admitted into the proceedings, because claim 1 was broader than all requests underlying the appealed decision and the requests could have been filed in first-instance proceedings.

In **T 1964/12** in view of the objections of lack of novelty and/or lack of an inventive step raised by the opponents, the patent proprietor had decided not to argue novelty and inventiveness of the process claims as granted and had instead, intentionally limited their subject-matter. The board found that, by doing so, it had deliberately chosen not to obtain a decision from the opposition division on the process claims as granted. Allowing it to revert on appeal to the process claims as granted would go against the need for procedural economy. Accordingly, the board decided not to admit the main request into the proceedings.

c) Requests not submitted by proprietor in opposition proceedings

According to established case law it is clear from the wording of Art. 12(4) RPBA that the board in inter partes proceedings has discretion over whether or not to admit requests which could have been presented by the patent proprietor in first-instance proceedings, but were not. The precondition of whether the request at issue could have been presented in the first-instance proceedings relates to the question of whether the presenting party could have been expected to present its request in the first-instance proceedings in the circumstances of the specific case (**T 1538/10**).

In **T 240/04**, the board refused to consider the third auxiliary request because the appellant could have submitted it before the opposition division. Indeed, it even ought to have done so because the amended independent claim concerned a technical problem which was only remotely related to the original one and presented facts not previously examined. The appellant therefore had to expect that the board would be unable to decide the matter. To admit a new request in those circumstances would practically give patentees the opportunity to compel a remittal to the department of first instance as they pleased, which would not only put the opponent at a disadvantage but would also run counter to the principle of procedural economy.

In **T 339/06**, the patent granted comprised several independent claims in the same category. The board found that the new request might force it to give in the appeal proceedings a first ruling concerning only subject-matter relating to a fundamentally different embodiment from those which had been the subject of the opposition division's decision. Thus, in particular, the admissibility of a request first submitted in appeal proceedings and relating solely to an independent claim which, although within the scope of the opposition, had not been considered in the first-instance decision had to be decided on in the light of whether it could also have been submitted earlier (see also similar case **T 38/13**).

In **T 1705/07** the appellant for the first time in the appeal proceedings submitted requests which no longer contained the process claims on which the contested decision was based, but which now only comprised claims of another category, namely product and use claims. The board found that the auxiliary requests submitted for the first time in the appeal proceedings related to fundamentally different subject-matter. Consequently, admitting them into the proceedings would mean that the matters in dispute were fundamentally different from both a substantive and a patent-law point of view, so that the upshot would normally be a remittal to the department of first instance. As a result, the proceedings would last longer and the public would be deprived of legal certainty regarding the validity of the contested patent, which would not be compatible with the principle of procedural economy. If these claims were to be discussed and decided upon in the appeal proceedings, that would enable the appellant to make good this omission - for which it itself bore responsibility - solely for its own benefit. In accordance with the legal principle "*nemo auditur propriam turpitudinem allegans*", however, it was not permissible for any party, in this case the appellant, to benefit from an omission of its own, since this would be unjust to the opposing parties.

In **T 1125/10** the appellant had not reacted to the obviously relevant documents filed shortly before the oral proceedings before the opposition division and had not attended those proceedings. In deciding whether to exercise its power to hold inadmissible requests first submitted in appeal proceedings, what the board had to determine was whether the fact that the new requests had not already been examined at first instance was down to the opposition division or whether the conduct of the appellant had in fact prevented such an examination (as had been found in **T 1067/08**). The board held that it was the appellant's total inaction in the face of obviously relevant new documents which had prevented the opposition division from taking a reasoned decision on the subject-matter of the amended claims based on those documents, meaning that, even though the appellant had again chosen not to attend the proceedings, it now had to decide on the matter at first and final instance or remit the case to the department of first instance. The board therefore decided not to admit the appellant's new requests into the proceedings.

In **T 379/09** the patent proprietor filed, only one month before the oral proceedings before the board of the appeal, a new request aimed at overcoming an objection raised by the opposition division, although the nature of the objection had been set out in the summons to oral proceedings issued by the opposition division. Furthermore, admitting the request would have caused a considerable delay of the procedure.

In **T 936/09** the board stated that under the EPC, there is no legal obligation for the patent proprietor to take an active part in opposition proceedings. However, the patent proprietor is not free to present or complete his case at any time that he wishes during the opposition or opposition appeal proceedings, depending, for example, on his procedural strategy or his financial situation. If a patent proprietor chooses not to respond in substance at all to the opposition, for example by filing arguments or amended claims, or chooses not to complete his submissions at the stage of the first-instance proceedings, but rather presents or completes his case only in the notice of appeal or the statement setting out the grounds of appeal, then he will need to face the

prospect of being held to account for such conduct by the board when, for example, exercising its discretion under Art. 12(4) RPBA. This applies in particular if, as in the present case, all the reasons for revocation of the opposed patent were known to the patent proprietor before it received the impugned decision.

Likewise in **T 1400/11** the appellant (patent proprietor) had not reacted to the opposition filed against its patent, despite having been made aware of all the reasons ultimately leading to its revocation, and had only mounted a defence on appeal. Its approach amounted to circumventing the opposition proceedings in an attempt to shift the whole case to the appeal stage and compel the board to give a first ruling or remit the case to the opposition division. This would also have put the respondent at an unfair disadvantage: if the appellant's main request were admitted and decided upon by the board, the respondent would in effect be deprived of the opportunity to have the matter reviewed at two instances. Since the appellant had not submitted an admissible request on which to base the appeal proceedings, the appeal was dismissed.

In **T 23/10** the board stated that a patentee withholding claim requests in opposition proceedings is precluded from having those requests admitted on appeal, since the patentee would otherwise be permitted to disadvantage the adverse parties by conducting appeal proceedings contrary to its actions before the opposition division (endorsed in **R 13/11**).

Following the decision in **T 23/10**, the board in **T 1165/10** found that, since the patent proprietors could, in the knowledge of the objections of the opponents and the opinion of the opposition division, have submitted further requests in the first-instance proceedings but had deliberately refrained from doing so, the introduction of new requests during appeal proceedings could only be seen as an attempt to start the opposition anew, which amounted to a clear abuse of procedure.

In **T 872/09** none of the patentee's auxiliary requests was admitted into the proceedings because it had deliberately chosen not to defend any of them during the first-instance opposition proceedings, even though it was aware that the opposition division had found its main request unallowable.

In **T 301/11** the board stated that the fact that no auxiliary request was filed in opposition proceedings after time had been requested by and allotted to the appellant could only be seen as a deliberate choice not to have any further request decided upon by the opposition division on any other issue (see also **T 144/09**). The appellant had thereby deliberately prevented a decision of the opposition division on the other grounds of opposition.

d) Resubmission of requests withdrawn at opposition stage

Under Art. 12(4) RPBA, a board of appeal has discretion to refuse to admit requests which could have been presented or were not admitted in the first- instance proceedings. In the boards' view, this applies all the more to requests that were filed and subsequently withdrawn during the first-instance proceedings, since such a course of events clearly

shows that these requests could have been presented in those proceedings. The purpose of an appeal is to review what was decided at first instance and, as a logical consequence, not what was not decided (**T 528/93**, **T 1186/06**, **T 390/07**, **T 1587/07**, **T 361/08**, **T 340/10**, **T 1525/10**, **T 140/12**).

A request which has been withdrawn can, in principle, if admitted by the department or board hearing the case, be reintroduced to the proceedings, whereas a request which has been **abandoned** cannot be resubmitted at a later stage (**T 926/12**).

(i) Request not admitted

One criterion to be considered by a board of appeal in exercising its discretion is whether the withdrawal of a request has prevented the department of first instance from giving a reasoned decision on the critical issues, thereby compelling the board either to give a first ruling on those issues or to remit the case to the department of first instance. In **T 679/09** the withdrawal of auxiliary requests I to IV in the opposition proceedings had exactly this effect. While the appellant may not have intended to avoid a decision of the opposition division on the admissibility of inter alia auxiliary request III, this was the inevitable result of its withdrawal (**T 495/10**, see also **T 933/04**, **T 1067/08**, **T 935/12**).

In **T 1525/10** the board stated that if the appellants had wanted to preserve their right to have any of auxiliary requests I to III considered by a board of appeal, they should have maintained them in opposition proceedings. It is incumbent on both the EPO and users of the European patent system who are parties to proceedings before it to act in good faith. A proprietor who files auxiliary requests by which it delimits the framework of the opposition proceedings and then deliberately withdraws them in order to avoid any adverse decision being reached infringes this general principle by seeking to introduce these requests into appeal proceedings.

The claim request which had been replaced by another request in the proceedings before the opposition division because it was manifest that it would fail, thereby avoiding a formal decision, but which had then been filed again on appeal, was considered inadmissible by the board (**T 390/07**).

In **T 691/09**, the board deemed the belated introduction of a request which had been withdrawn during the oral proceedings before the opposition division to be an abuse of procedure.

In **T 1697/12** the board did not admit the main request into the appeal proceedings which had been withdrawn during oral proceedings before the opposition division. The board stated that even though it might not have been the proprietor's intention to avoid a decision by the opposition division, the inevitable result of the withdrawal of the request was that a decision thereon was avoided since it was not thereby the subject of the reasoned decision of the opposition division. The patent proprietor had argued that in **T 937/11** an auxiliary request, which had been withdrawn before the opposition division, was re-filed and admitted in appeal. The board held that the case underlying **T 937/11** was different from the present one. The auxiliary request in that case contained the

same critical issue as the main request before the opposition division; the withdrawal of the auxiliary request did not therefore have the effect of avoiding a decision of the opposition division on this issue, since it was decided when issuing a reasoned decision on the main request.

(ii) Request admitted

In **T 2599/11** the board admitted the sole request into the appeal proceedings that was withdrawn in opposition proceedings. The board was of the opinion that the purpose of the appeal proceedings as defined in **G 9/91** and **G 10/91** (OJ 1993, 408, 420) did not prevent the appellant from submissions and requests which, after revocation of its patent by the opposition division, reverted to a more broadly worded version in appeal proceedings than the claims defended in opposition proceedings, if these broader claims did not amount to a completely fresh case. With respect to Art. 12(4) RPBA the board had to consider whether the non-filing of the sole request or the withdrawal of the similar request A in the opposition proceedings prevented the opposition division from giving a reasoned decision on the critical issues. The board referred to **T 361/08** according to which it is not the patentee's right to revert to granted claims if these claims did not form a basis for the decision under appeal because the request comprising these claims was withdrawn in the first-instance proceedings. In the case at issue, the board concluded that the critical issues in the opposition and the appeal proceedings were identical in so far as the question had to be answered whether the claimed subject-matter involved an inventive step. Hence, the sole request of the appellant did not bring an entirely fresh case and was admitted into the proceedings (see also **T 467/13**).

In **T 937/11** the main request was identical to auxiliary request 1 which was withdrawn before the opposition division. The board stated that the circumstances of the present case had to be distinguished from the situation underlying **T 1525/10** and **T 390/07** (see above). Because the opposition division's reasons for rejecting the main request evidently applied likewise to the claims of auxiliary request 1, the appellant did not avoid a decision on the ground for opposition when it withdrew auxiliary request 1. Moreover, the appellant neither surprised nor disadvantaged the opposing parties on appeal when it turned the withdrawn auxiliary request 1 into its main request before the board. The appellant maintained the claims that had been rejected by the opposition division, took issue with the ground for revocation upon which the decision on the main request was based and gave reasons as to why the decision taken by the opposition division was incorrect. The appellant thus did not change its case on appeal but sought to obtain a judicial ruling on whether the contested decision with respect to Art. 100(c) EPC was correct.

In **T 883/12** the request was very similar to the request which was withdrawn. The proprietor argued convincingly why it had not been unreasonable to withdraw a number of the auxiliary requests before the opposition division without a decision having been taken on them, namely because the opposition division had deemed, with respect to a higher ranking request, that a particular feature was required in order to allow an inventive step to be recognised; the claims of the withdrawn auxiliary requests did not include this feature. The board stated that the current request was not one which could

reasonably have been filed in the first instance proceedings (i.e. in the sense of being both submitted and maintained, such that a decision on it would be taken by the department of first instance).

e) Request admitted as a normal procedural development

According to established case law, amendments, including amended requests, are usually admitted into appeal proceedings if they are justified by the normal development of the proceedings or can under the circumstances be considered a normal reaction of a losing party (**T 1072/98**, **T 540/01**, **T 848/09**, **T 2485/11**).

In **T 848/09** the board considered the filing of the present main request to be a legitimate and normal reaction to the decision to revoke the patent, because the amendment concerned the addition of a feature of a dependent claim which further limited the subject-matter. Moreover, the request was filed at the earliest possible stage of the appeal proceedings, namely with the statement of grounds (see also **T 881/09**). Even if, theoretically, the patent proprietor might have been able to file this request at the end of the oral proceedings before the opposition division, the board considered the situation to be different from **T 144/09** (see above), since it did not appear that the patent proprietor made a "considered and deliberate choice" not to file the request. Rather, the reasons for the revocation of the patent were not so explicitly known as in case **T 144/09** and plausibly the formulation of a suitable new request overcoming the objection was not immediately evident.

In **T 134/11** the board observed that the mere fact that a request could have been filed in the first-instance proceedings as such does not lead automatically to the inadmissibility of this request (as in this case there would be no discretionary power of the board). On the contrary, normally such a request is inadmissible only in exceptional circumstances. For example, such circumstances may arise where, by the filing of a request only at the appeal stage, a decision by the opposition division on certain issues is avoided and the decision is shifted to the second instance (this is referred to as "forum shopping" in decision **T 1067/08**). In the case at issue it was credible that it was not the appellant's intention to avoid any decision of the opposition division on the current main request. Furthermore the current main request did not raise any new issues but represented merely a continuation of the approach chosen by the appellant all through the first-instance opposition proceedings. The main request thus was admissible. Contrary to the respondent's view, this finding was not at variance with decisions **T 144/09** and **T 936/09**. The reason for not admitting certain requests in these decisions was essentially that the proprietor had not filed any request in the first-instance opposition proceedings which could have overcome the opposition division's objection and in fact had done so only in the appeal.

In **T 2485/11**, the appellant had filed an amended main request and an auxiliary request during first-instance proceedings in an attempt to overcome objections of lack of novelty and inventive step raised in the notice of opposition. At the oral proceedings, the opposition division concluded that the amended requests did not comply with Art. 123(2) EPC. The appellant, unlike in **T 144/09** and **T 936/09**, took the opportunity

offered to it and filed further requests modifying the amendments in the main request, in order to overcome the opposition division's objection under Art. 123(2) EPC. The fact that, after these requests had also been considered to contravene Art. 123(2) EPC, the appellant did not file a further request could not be regarded as an abuse simply because, theoretically, it could have filed amendments. Moreover, the auxiliary requests were filed at the earliest possible stage in the appeal proceedings, namely with the statement of grounds of appeal. Hence, given the circumstances of the case, the appellant's submission of auxiliary requests 1 to 5 was considered to be a normal and legitimate reaction of a losing party (see also similar case **T 2244/11**).

#### 4.3.3 Ex parte appeal procedure

##### a) Admission of requests already refused by the examining division

Art. 123(1) EPC provides that the applicant shall be given at least one opportunity to amend the application of his own volition. R. 137(3) EPC subjects any other amendments to the examining division's consent. As made clear by R. 100(1) EPC, this provision applies analogously on appeal against examining division decisions (**T 1969/08**). According to Art. 12(4) RPBA, the board has the power to hold inadmissible requests which were not admitted in the first instance proceedings.

It is the established jurisprudence of the boards of appeal that the power of the examining division to consent to amendments under R. 137(3) EPC is a discretionary power. According to **G 7/93** (OJ 1994, 775) the way in which the examining division should exercise its discretion to allow an amendment of an application must depend upon the circumstances of each individual case, and must also depend upon the stage of the pre-grant procedure which the application has reached. A board of appeal should only overrule the way in which a department of first instance has exercised its discretion if it comes to the conclusion either that the department of first instance, in its decision, has not exercised its discretion in accordance with the right principles or that it has exercised its discretion in an unreasonable way. The exercise of a discretionary power has to strike a balance between, in particular, the applicant's interest in obtaining adequate protection for his invention and the EPO's interest in bringing the examination to a close in an effective and speedy way. Moreover, the exercise of a discretionary power has to be reasoned, otherwise it would be arbitrary (**T 246/08**). The board in **T 1929/13** referred to further criteria, also set out in the Guidelines: (a) the amendments remedy a deficiency in response to the preceding communication, provided they do not give rise to new deficiencies; (b) the amendments improve the clarity of the description or claims in a clearly desirable manner; (c) need to avoid unnecessary delay and excessive and unjustified additional work for the EPO (Guidelines, H-II, 2.3 – November 2015 version).

##### b) Requests not submitted in examination proceedings

In **T 1178/08** the board pointed out that a board in an ex parte case has discretion over whether or not to admit requests which could have been presented to the first instance, but were not (Art. 12(4) RPBA). It must exercise that discretion having regard to the

particular circumstances of the individual case. The board considered that this view is consistent with the view taken in previous decisions in the different context of inter partes cases (see **R 10/09**, **T 144/09** and **R 11/11**, which rejected the petition for review of **T 144/09** as clearly unallowable, and **T 1007/05**). The board was aware that amended claims filed together with the statement of grounds of appeal have in many cases been admitted into appeal proceedings if they constituted a legitimate reaction to the reasoning underlying the appealed decision. Indeed, such amended claims filed with the statement of grounds of appeal may achieve the goal of "a more defined and controlled initial phase of proceedings" (see **T 1007/05**), in particular if they serve to avoid later amendments. But this does not mean that the board is obliged to admit amended claims solely because they were filed with the statement of grounds of appeal. In the present case, the applicant had been given several opportunities to file amended claims in the first-instance proceedings. No auxiliary requests were filed. In reply to the summons to oral proceedings, which already set out the essential reasons for the later decision, the applicant merely requested a decision according to the file. By presenting its sole and amended request only in appeal proceedings the applicant was making it impossible for the board to examine the contested decision.

In **T 1802/12** the applicant had been given several opportunities to file amended claims in the first-instance proceedings. The board concluded that the auxiliary request could and should have been submitted during the first-instance proceedings. Although the examining division issued only one communication pursuant to Art. 94(3) EPC, the clarity objections raised therein had been reiterated in great detail in the annex to the summons to oral proceedings. In reply to the summons to oral proceedings which had been postponed twice as requested by the appellant, the appellant reacted by not attending them. No new arguments were put forward and the application was ultimately refused by the examining division (see also similar case **T 892/11**).

In **T 1472/08**, the board concluded that the purpose of examination-appeal proceedings could not be to completely reopen the examination proceedings by admitting claims defining features more broadly if those claims could already have been presented in those proceedings and the broader definitions were not apt to overcome the objections raised in the contested decision or by the board (see also **T 2000/09**).

In **T 1212/08**, the examining division had raised objections as to the clarity, novelty and inventive step of the claimed subject-matter in its summons to oral proceedings, prompting the applicant to request a decision on the basis of the documents on file. Auxiliary request 2 having first been filed with the grounds of appeal, the board considered whether this new subject-matter should be examined and decided on for the first time on appeal, or whether it should remit the case to the department of first instance for further prosecution. It found, however, that neither of these procedural options was appropriate and acceptable, taking the view that the feature derived from the description was a new aspect which had no equivalent in the original claims, while remittal of the case would make the proceedings considerably longer. It observed that these two inappropriate options would never have arisen if auxiliary request 2 had been presented on time before the examining division. The applicant ought to have had the examining division exhaustively assess and then decide on all subject-matter for which it

intended to seek protection, even if only on a subsidiary basis, especially if, as it conceded, it wished the board to rule on it. However, it had consciously waived the right to such assessment and decision by the examining division by requesting a decision on the basis of the file immediately after receiving the summons to oral proceedings (see also **T 892/11**).

The board in **T 1108/10** endorsed **T 1212/08**, finding that the two inappropriate procedural options would not have arisen if the sets of claims in the auxiliary requests had been presented on time at first instance. Appeal proceedings were not a continuation of examination at first instance or a second, parallel procedure for the substantive examination otherwise to be carried out by the examining division which applicants could freely opt to launch depending on the circumstances.

In **T 1841/08** the board stated that as the auxiliary requests had not been filed before the examining division, although the examining division repeatedly pointed out deficiencies, admitting these requests into the appeal proceedings would mean that the board would have to examine them for the first time in appeal proceedings, or refer the matter back to the examining division.

c) Resubmission of requests withdrawn during examination

In **T 902/10** the board held that it is established case law that the Boards of Appeal do not admit requests that were withdrawn during first instance proceedings (**T 922/08**); if the board were to admit such a request, it would be contrary to the main purpose of *ex parte* appeal proceedings, which are primarily concerned with examining the contested decision (cf. **G 10/93**, OJ 1995, 172), i.e. with providing the adversely affected party (the applicant) with the opportunity to challenge the decision on its merits and to obtain a judicial ruling as to whether the first-instance decision was correct (see also **T 2278/08**, **T 1306/10**).

In **T 922/08** claim 1 of the main request filed with the statement of grounds of appeal was identical to claim 1 filed as a first auxiliary request before the examining division. During the oral proceedings before the examining division, the applicant withdrew this request of its own volition. The board stated that even if the withdrawal of the present main request during the examination procedure was not considered an abandonment of this request for subsequent appeal proceedings as argued by the appellant, the fact that the request was withdrawn in the first-instance proceedings precluded the issue of a reasoned decision on its merits by the examining division. Reinstating this request upon appeal would compel the board either to give a first ruling on the critical issues, which runs contrary to the purpose of a second-instance ruling, or to remit the case to the department of first instance, which is clearly contrary to procedural economy. It is precisely with the purpose of forestalling these unsatisfactory options that Art. 12(4) RPBA provides the board with the discretionary power to hold inadmissible requests which could have been presented (or were not admitted) in the first-instance proceedings (see also **T 1156/09**, **T 1231/09**, **T 902/10**, **T 184/13**).

In **T 122/10** the auxiliary requests 2 - 4 were filed during the oral proceedings. The claimed subject-matter of the auxiliary requests was identical to the subject-matter of the requests filed with the grounds of appeal which were withdrawn by the applicant in the course of the proceedings. The board stated that although reference was made to Art. 12(4) RPBA which sets out that the board shall take into account everything presented with the grounds of appeal, and thus in this case the auxiliary requests 2 to 4 as presented during oral proceedings, such provision can only be understood to apply if such requests have not previously been **withdrawn** as was the case here. Once the appellant chose to withdraw its earlier filed requests, the provisions of Art. 13(1) RPBA apply since an amendment to the party's case has been made.

d) Feature re-introduced on appeal

In **T 1969/08** the board stated that if a feature objected to as "obscure" by the examining division and omitted from all requests subsequently filed by the applicant is then reintroduced in the claims filed one month before oral proceedings in the appeal proceedings without commenting on the objection raised earlier against this feature, the board may refuse to admit these claims into the proceedings at its discretion under Art. 12(4) RPBA.

e) Interlocutory revision

In **T 1832/10** the board stated that notwithstanding the amendments contained in the claims and carried out by the appellant in an attempt to overcome the objections raised, the examination division did not make use of the possibility of granting interlocutory revision pursuant to Art. 109(1) EPC. However, according to the established case law (**T 139/87**, OJ 1990, 68), an appeal by an applicant was to be considered well-founded within the meaning of Art. 109(1) EPC if the main request included amendments which clearly met the objections on which the refusal of the application has been based. In view of the fact that it is not normally the function of the appeal board to consider and decide upon claims which were filed during the prosecution of the examination but were neither commented nor decided upon by the examining division and in order to give the appellant an opportunity to have the issue decided upon by two instances, the board remitted the case to the first instance.

#### **4.4. Criteria for consideration of amended claims**

##### 4.4.1 Introduction

Under Art. 13(1) RPBA, it is at the board's discretion to admit any amendment to a party's case after it has filed its grounds of appeal or reply. Art. 13(1) RPBA merely lists examples of factors to be considered by the board in exercising its discretion (complexity of the new subject-matter, current state of proceedings and procedural economy) and not an exhaustive set of criteria which must be cumulatively met, such that other considerations and well-established criteria relevant to the admissibility issue can also be taken into account (**R 16/09**, **R 1/13**, **T 253/10**, **T 484/11**). As a rule, the boards' decisions should be based on the issues in dispute at first instance, which does not rule

out the admission of new submissions, but does subject it to the fulfilment of certain criteria, given that no entirely "fresh case" should be created on appeal (on this point, see also **T 356/08**, **T 1685/07**, **T 162/09**).

Thus, in addition to the factors referred to in Art. 13(1) RPBA, the following criteria may, according to settled case law, likewise be decisive: there must be sound reasons for filing a request at a late stage in the proceedings, as may be the case where amendments are occasioned by developments during the proceedings or where the request addresses still outstanding objections. The amendments must be prima facie clearly allowable, and their introduction must not constitute an abuse of procedure. They must not extend the scope of discussion determined by the grounds of appeal and the respondent's reply or introduce new facts on which the other party has had no opportunity to comment. Nor may they lead to an excessive delay in the proceedings. The time at which requests comprising amended claims were filed and the number of amended claim sets are also factors to be considered. Besides the timing of the request, an important factor is whether the various claim versions "converge" or "diverge", in other words whether they develop and increasingly limit the subject-matter of the independent claim of a main request in the same direction and/or in the direction of a single inventive idea, or whether they entail different lines of development because, for instance, they each incorporate different features. The scope of the amendment and the degree of difficulty or complexity involved in examining it are relevant, while the request's chances of success may also be important (see, on the last point, **T 951/91**, OJ 1995, 202; **T 81/03**, **T 942/05**, **T 1474/06**, **T 162/09**, **T 1634/09**, **T 376/10**, **T 683/10**, **T 484/11**, **T 409/12**).

#### 4.4.2 Clear allowability of amended claims

##### a) General

In accordance with the case law, the boards refuse to consider late-filed auxiliary requests on the ground that they are inadmissible where they are directed to subject-matter which prima facie is not allowable. The subject-matter must be so clear and straightforward that it can be easily understood and regarded as allowable. Claims are clearly allowable if the board can quickly ascertain that they do not give rise to new objections and overcome all outstanding objections under the EPC and their patentability could be assessed without giving rise to any difficulty or delay (on this point, see **T 153/85**, OJ 1988, 1; **T 270/90**, OJ 1993, 725; **T 955/91**, **T 92/93**, **T 401/95**, **T 862/00**, **T 1004/01**, **T 1202/02**, **T 922/03**, **T 87/05**, **T 1785/07**, **T 824/07**, **T 615/08**, **T 421/09**). It must be immediately apparent to the board, with little investigative effort on its part, that the amendments made successfully address the issue raised, without giving rise to new ones (**T 1634/09**, **T 1743/09**). There must be no doubt that the late-filed requests meet the formal requirement and that they constitute a promising attempt to counter all outstanding objections (**T 33/07**, **T 321/07**, **T 1650/08**, **T 1168/08**, **T 1634/09**).

## b) Examples

In **T 1004/01**, the amendments to the claims related solely to a narrower definition of features and values which were so clear and straightforward that a person skilled in the art could easily understand them. It was not unusual, the board found, for several auxiliary requests to be submitted in appeal proceedings, since they were the patentee's last opportunity to have the patent maintained.

In **T 1128/10**, it was immediately apparent that the amendments made successfully addressed the issue raised without giving rise to new ones. Therefore, they were admitted into the proceedings.

In **T 70/04**, the board refused to admit an auxiliary request for maintenance of the patent in a further amended form. Although the amendment indicated was a combination of two claims, it was quite extensive and raised new issues which had not yet been considered in the opposition or appeal proceedings, mainly because of a greatly increased number of variables compared to claim 1 as maintained.

In **T 708/05** the board stated that the fact that a board of appeal reverses a conclusion reached in a decision at first instance is a matter which a party must always be prepared for. In the present circumstances the introduction of a disclaimer to establish novelty at this late stage, a proposal which had previously been on the table but which had been abandoned in the meantime by the appellant, is not conduct which warrants the exercise of the board's discretion in the appellant's favour. Furthermore, the subject matter of this new request would still give rise to several objections and would therefore not amount to clearly allowable subject-matter.

In **T 1650/08** the board did not limit the preliminary assessment of the allowability of the late filed requests to issues under Art. 123 EPC but also considered issues of novelty and inventive step on which the opposition was based but which were not dealt within those proceedings. The board did not consider it as a necessary prerequisite that the proposed amendments overcome all outstanding objections with certainty but that they result at least in an arguable case. The board saw no reason in admitting amendments which would result in clearly non-allowable request as this would only lead to unnecessary delays.

### 4.4.3 Response to objections

In general, the boards admit amendments filed in response to comments and objections made by the rapporteur or the other party. However, undesirable procedural delays should be avoided (see **T 38/89**, **T 459/91**, **T 1059/92**, **T 648/96**). Amended claims may be admitted into the proceedings if the introduced amendments are properly justified, e.g. have been filed as a response to objections, evidence or comments which were not part of the decision under appeal but have been raised in writing during the appeal proceedings (**T 397/01**, **T 253/10**). They must also constitute a promising attempt to counter the objection raised (**T 1859/06**).

In the cases below, the amended requests were admitted:

In **T 93/11** the amendments were the direct result of the board's communication. Furthermore, they also overcame the formal objections of the board, which was procedurally expedient. Finally, they simply narrowed down the subject-matter claimed to the core of the invention. The board further considered that there was no general prohibition on reacting to a board's communication by submitting new requests, let alone when these took account of all the objections raised or repeated therein. Furthermore, the number of issues to be discussed at the oral proceedings was substantially reduced.

In **T 794/94**, the board recognised that patents in the field of genetic engineering sometimes gave rise to exceptional problems which made it difficult to formulate a suitable request and therefore amounted to exceptional circumstances justifying late submission of requests designed to meet objections which had already been considered at length. However, there was no right to file an endless succession of new requests in substitution for requests found inadmissible or unallowable by the board (see also **T 607/05**, **T 516/06**).

In **T 1148/97**, the board took the view that late-filed claims could still be admitted if the amendments to the wording of the claims limited the scope of the subject-matter claimed to such an extent that revocation of the patent could be avoided and maintenance of the patent as amended ordered after swiftly conducted proceedings (**T 710/99**, **T 30/03**).

In **T 385/06** the patent proprietor filed amendments before the final date set in the board's communication. In the judgment of the board, these amendments might be seen as a response to the board's observations relating to two grounds for opposition. Hence these amendments were allowable under R. 80 EPC, since they were occasioned by grounds for opposition invoked by the opponents. Since the amendments were filed two months before the oral proceedings and since the patent proprietor specified in detail the passages of the patent specification, essentially dependent claims, on which these amendments were based, the board considered that the parties and the board could reasonably be expected to deal with the amendments without adjournment of the oral proceedings.

In **T 610/94** too, the board admitted sets of claims filed during the oral proceedings because they had been limited and took account of the deficiencies it had identified. In **T 626/90**, there was no question of the appellants having been unfairly taken by surprise, because the amendments in both requests were nothing more than a limitation of the claimed subject-matter to preferred embodiments of the invention as described in the patent in suit (**T 1097/99**). Likewise, in the ex parte proceedings **T 1400/04**, the amended claims were admitted because the oral proceedings did not need to be adjourned.

#### 4.4.4 Converging or diverging versions of claims

It is settled case law that the admissibility of amendments depends, among other things, on whether the amended claims converge with or diverge from the subject-matter previously claimed, i.e. whether they develop and increasingly limit the subject-matter of

the independent claim of a main request in the same direction and/or in the direction of a single inventive idea, or whether they entail different lines of development because, for instance, they each incorporate different features (**T 240/04**, **T 1685/07**, **T 980/08**, **T 1589/08**, **T 1690/08**, **T 1969/08**, **T 162/09**, **T 2513/11**). Whether the claims of auxiliary requests converge is to be understood in the sense that the subject-matter of the lower ranking requests is further defined i.e. with the intention to counter objections with regard to the preceding requests (**T 1134/11**).

In **T 565/07** the board ruled that although patentees too should be able in principle, under R. 80 EPC, to limit a patent's subject-matter by including the features of a dependent claim in response to objections that the granted independent claim was not patentable, if they exercised that right repeatedly in a variety of directions – e.g. by filing requests in parallel or in sequence – the board would end up having to decide in which of several versions the patent was to be maintained. That would be at odds with Art. 113(2) EPC, which required the board to decide upon "the text submitted to it ... by the applicant". In other words, it was up to the patentee to decide the text for further prosecution and also one or more sets of claims which in any event had to be in line with that decision and thus its chosen direction of limitation (on this point, see **T 382/96**, **T 446/00**, **T 1685/07**).

In **T 1685/07**, the auxiliary requests, which had not been filed until after the summons to oral proceedings, said completely different things. The board ruled that, when deciding whether to admit new requests first introduced during the appeal proceedings, it was particularly important to ascertain whether the applicant or patent proprietor submitting more than one request was following a consistent line of defence in its various requests and not, particularly towards the end of the proceedings, using a "screen" of different versions of claims to create, for both the other party and the board of appeal, an obscure and unacceptable procedural situation in which they were obliged to select from a multiplicity of varying versions the one which could in the final analysis be valid.

In **T 1750/08** the board admitted the auxiliary request because the amendment as a further limitation of a feature that underlay the opposition division's decision to maintain the patent in amended form and that was already central to the discussions in the appeal (converging request).

#### 4.4.5 Discretion to admit amended claims at any stage of the appeal proceedings

The board in **T 577/97** found that decisions not to admit auxiliary requests ought, in principle, to be limited to exceptional cases in which the filing of the auxiliary requests could be said to amount to an abuse of procedural rights (see also **T 148/05**). In **T 681/02**, the board observed that, in the specific case underlying the decision in **T 577/97**, the auxiliary request had contained a single amendment in the form of a new claim which corresponded to a granted claim with a further restriction. It could therefore be assumed that the subject-matter of the auxiliary request had been searched, so that, in contrast to the case now in hand, it could be examined definitively in the oral proceedings. In some decisions, the boards cite **T 577/97** in relation to their discretion to accept amended claims at any stage of the appeal proceedings. In **T 1124/04** the board

was confronted at a very late stage in the oral proceedings with the filing of further auxiliary requests. According to the appellant, the necessity of further restricting the claimed subject-matter had become apparent during the oral proceedings, in particular because the board considered D2 as the closest prior art. In line with **T 577/97**, the board held that it has at least the discretion to accept amended claims even at a late stage of the appeal proceedings, thus also during the oral proceedings. Of course, it has to be ascertained that the procedural fairness is not jeopardised by the admission of such late filed claims (**T 952/99**, **T 360/01**, **T 500/01**, **T 872/01**, **T 45/03**, **T 696/04**, **T 148/05**).

#### 4.4.6 Last chance

Some decisions considered whether a patentee should always be given a "last chance" to save its patent. It has been thoroughly discussed and clearly established by the boards of appeal that there is no absolute right for a patentee to such a "last chance" request. On the contrary, the admissibility of a late-filed request is always a matter for the board's discretion (**T 837/07**). Moreover, as stated inter alia in decision **T 446/00**, the concept of a "last chance" suggests one last chance at the end of the proceedings and not multiple "last chances" on numerous occasions during the course of the appeal. However, a patentee is normally given an opportunity to limit his claims even at the oral proceedings, so that he is given a last chance to obtain a patent (**T 577/97**, **T 707/08**).

In **T 1067/10** the board stated that the argument of its being the patentee's last chance in view of the non-admission of requests cannot be accepted since the appellant had had ample opportunity to file amended sets of claims at an earlier stage in the proceedings and did not need to wait until the oral proceedings to do so.

#### 4.4.7 Change of subject-matter

In **T 1273/04**, the board held that an amended claim belatedly filed in oral proceedings could only be admitted if it was clearly allowable by virtue of a clearly permissible amendment. However, this principle had to be tempered in examination appeal proceedings by having regard to the extent to which the application had been examined. Applying this to the case in hand, the board found that claim 1 of the main request had been amended in a clearly permissible manner. However, the amendment had shifted the subject-matter claimed in a divergent manner which would require a new study of the prior art and potentially even review of the search in order to assess novelty. The main request was therefore refused.

In **T 651/03**, the board found that claim 1 of the first auxiliary request had been amended in such a way that its category had been changed from a product claim to a use claim. The board concluded that this change extended the patent protection and therefore ran counter to Art. 123(3) EPC 1973. The late-filed request was therefore clearly non-allowable.

In **T 267/09** the board pointed out while the whole discussion in the opposition proceedings and in the appeal proceedings up to and including the oral proceedings

before the board was focused only on the independent product claims. The late filed auxiliary requests were directed to method claims. With this change in the category the appellant shifted its case in an unexpected manner in an entirely different direction and in fact created another case. Admitting these requests into the proceedings, taking the respondent and the board by surprise, would run counter to the need for procedural economy and to the principle of procedural fairness.

#### 4.4.8 Need for additional search

##### a) General

It was already apparent from the boards' early decisions that late-filed claims that might have required an additional search would not be admitted into the proceedings. In **T 14/02**, intended requests as suggested by the respondent in the oral proceedings would not just have involved a minor change in the wording of claim 1 but rather major limitations of the claim which in all likelihood would have required a new search by the appellant and could have caused a remittal to the first instance (see also **T 51/90**, **T 270/90**, OJ 1993, 725; **T 25/91**). In **T 48/91**, the board refused the amended claims as inadmissible because they contained additional features the impact of which was either unclear or impossible to assess without further investigations such as carrying out proper comparison tests (see also **T 234/92**, in which a feature from the description was introduced to claim 1, so that an additional search might have been required, and **T 1105/98**, in which an additional search was needed).

In **T 870/07**, the board admitted the main request filed during the oral proceedings as it was in no doubt that the additionally claimed subject-matter had also been searched. The situation was not new in the sense that the board was faced with an incomplete search preventing it from examining the claimed subject-matter.

##### b) Features taken from the description – Art. 13(3) RPBA

In some cases, requests filed after the scheduling of oral proceedings refer to features derived solely from the description. This raises the question of whether such features were included in the original search, or whether an additional search is necessary. It cannot be automatically assumed that they were considered in the original search or that the opponent is responsible for carrying out such a search (**T 1732/10**, see also **T 447/09**, **T 1273/11**). In **T 1650/12** and **T 2482/10** the question was raised of whether it was the opponent's duty to carry out a search with regard to late-filed amendments taken from the description or whether it was a matter for the opposition division to do so in accordance with the Guidelines. According to the consistent case law of the boards of appeal, if an additional search is needed to assess the patentability of claims amended with features from the description at such a late stage that either the oral proceedings must be adjourned or the case must be remitted to the department of first instance for further prosecution, Art. 13(3) RPBA is against the admissibility of such claim requests. Under Art. 13(3) RPBA, amendments to submissions after oral proceedings have been arranged are not admitted when they raise questions that the board or the other party cannot be expected to address without adjourning those proceedings. Remittal of the

matter to the opposition division to conduct such a search would amount to the same thing as adjourning oral proceedings, and this would also be necessary if the opponent were obliged to carry out such a search (**T 1273/11**, **T 2575/11**).

If an additional search is needed to assess the lack of patentability asserted as the ground for opposition, so that either the oral proceedings must be adjourned or the case must be remitted to the first-instance department for further prosecution, it is unreasonable to expect the other parties to accept this (**T 494/04**).

In ex parte case **T 979/07**, the board said that admitting a set of claims filed only in oral proceedings and necessitating an additional search because it shifted the claimed invention to other technical matter would de facto give applicants in appeal proceedings carte blanche to get oral proceedings postponed or the whole examination procedure reopened. That would be at odds with the requisite procedural economy (see also **T 407/05**, **T 1123/05** and **T 764/07**).

c) Carrying out an additional search

In **T 2127/09**, the search division considered that the claimed subject-matter was merely an obvious implementation of game rules on known hardware and did not carry out a search. At the oral proceedings before the board the appellants (applicant) submitted an amended set of claims as sole request in response to the board's objections. The board stated that it was necessary to carry out an additional search in accordance with R. 63 EPC. The board emphasised that remittal should be seen as an exceptional procedural possibility, and that it had also to be examined whether the applicant could have been expected to have made earlier the amendments which were made during the appeal before the board (see Art. 12(4) RPBA), and thereby could have requested the examining division to perform the necessary search. The board decided to admit the amendments to the claims.

#### 4.4.9 Dependent claims

In **T 1060/04**, the amended claim 1 resulted from a combination of claim 1 as granted and features of a number of dependent claims as granted. The appellant patentee had submitted the relevant claims to the board during the oral proceedings. On the question whether the patentability of the dependent claims had to be examined, the board held, inter alia, that the fact that an opposition directed to the subject-matter of an independent claim also implicitly covered subject-matter defined in claims dependent on the independent claim (see **G 9/91**, OJ 1993, 408, point 11 of the Reasons) did not necessarily mean that the parties and the board had to be prepared to assess the allowability and patentability of amended independent claims as granted, including the subject-matter of claims dependent on them, at any time during the proceedings (see also **T 794/94**).

In **T 67/09**, the board rejected the appellants' view that auxiliary requests 1 and 2 were admissible because the amendments were essentially limited to a combination of granted claims the subject-matter of which had already been challenged in the

proceedings at first instance. Given that only the patent as granted had been discussed in both the opposition and the appeal proceedings, neither the board nor the respondent had had any reason to look at the subject-matter of dependent claims when preparing for the oral proceedings, especially since no request directed to them had previously been filed (see also **T 1752/09**).

In the *ex parte* case **T 569/08**, the belatedly filed auxiliary request resulted from a combination of features derived from a number of original claims. The board observed that original dependent claims which had been searched were normally predestined to serve as fallbacks in the event that an independent claim was not allowable. However, that was not so throughout the entire proceedings since, depending on the procedural stage, amendments to the application might be subject to the discretion of the examining division or board. In the case at issue, the board considered it incompatible with due procedural economy to shift the subject-matter to be decided on in the appeal proceedings to subject-matter which could have been presented to the examining division and which would have to be examined as to inventive step for the first time by the board. Thus, even a combination of originally filed claims could be disregarded on appeal.

#### 4.4.10 Number of auxiliary requests

In **T 516/06** the board stated that there is no right to file an endless succession of new requests in substitution for requests found inadmissible or unallowable by the board. Proceedings must come to an end some time. If the contrary was true, oral proceedings could easily be misused, in particular in *ex parte* proceedings, to test the board's opinion as to what subject matter might be patentable and to tailor claims accordingly. In such cases, while not "holding the pen", the board would nonetheless be the ghost-writer of what was ultimately claimed.

In **T 309/09**, the board had doubts as to whether the number of auxiliary requests could generally be considered a factor on the basis of which their admission under R. 137(3) EPC could properly be denied outright. Whilst it did not wish to rule out that a large number of auxiliary requests might be a sufficient reason in specific cases, it decided that the question could be left unanswered in the case before it, as in any event six auxiliary requests could not automatically be considered excessive.

In **T 280/11** the board found that the patent proprietor, which in written proceedings had filed a very high number of requests (a main request and 681 auxiliary requests, 454 of them just three days before the oral proceedings) and had submitted a further four auxiliary requests during the oral proceedings, had to expect a significant portion of the time available on the day of the proceedings to be taken up solely with the administrative handling of all the 686 requests. After the board had discussed and rejected these requests at the oral proceedings, or (in the case of new auxiliary requests 682 to 685) after lengthy debate had refused to admit them into the proceedings, the proprietor could not reasonably expect to be granted a further break late in the afternoon of the same day to allow further requests to be drafted and submitted.

#### 4.4.11 Amended claims not admitted with divisional applications pending

In **T 840/93** (OJ 1996, 335) the board held that in the light of **G 9/91** and **G 10/91** (OJ 1993, 408 and 420), special attention must be given to late-filed requests at the appeal stage when divisional applications are still pending. If the distinction between the subject-matter of the divisional applications was unclear and some of them were still pending before the department of first instance, it was inappropriate to admit, during oral proceedings at the appeal stage after opposition, new requests which are neither immediately allowable nor bona fide attempts to overcome objections raised.

In **T 28/92** the claims were not obviously allowable and the alternative of admitting the requests, but referring the matter back to the department of first instance for further examination, was not acceptable, particularly as there were still pending divisional applications of the application on which the patent in suit was based. The board would not wish to increase the number of proceedings in which much the same subject-matter was already being considered by various instances of the EPO.

#### 4.4.12 Board's communication

In **T 1168/08**, the board stated that the appellants' justification for the late filing of the new requests, namely that they had been filed in reaction to the board's communication, was not acceptable here, because the argumentation in support of the board's preliminary opinion that the claimed subject-matter had no basis in the application as originally filed and lacked novelty corresponded in substance to the reasoning of the respondent in reply to the grounds of appeal. A board communication under Art. 15(1) RPBA is intended as guidance for the oral proceedings. It helps the parties to focus their argumentation on issues that the board considers crucial for reaching its decision. Where the board's communication contains a preliminary opinion based solely on the issues raised by the parties and their arguments, that communication cannot be taken as a justification for submitting new requests that the parties could have filed earlier (see also **T 253/10**, **T 582/12**).

### 4.5. Reinstating broader claims in appeal proceedings

#### 4.5.1 General

The limitation of claims may represent attempts to respond to objections by the EPO or an opponent without necessarily involving any immediate intentions of substantive abandonment. In this case the question arises of whether the applicant or patent proprietor can reinstate broader claims which had been proposed at an earlier stage of the proceedings.

Previously, the boards consistently ruled that a proprietor who has defended his patent to only a limited extent in opposition proceedings is not prohibited a priori (i.e. except in specific cases where the *reformatio in peius* prohibition applies or there has been abuse of procedure) from returning to a broader version of his patent, including the granted version, in subsequent appeal proceedings. Intervening limitations of the patent do not

imply any express abandonment of parts of it but are to be regarded merely as attempts to word the patent so as to delimit it against objections (see inter alia **T 123/85**, OJ 1989, 336; **T 296/87**, OJ 1990, 195; **T 331/89**, **T 900/94**, **T 699/00**, **T 880/01**, **T 794/02**, **T 934/02**, **T 1018/02**, **T 386/04**, **T 1276/05**). In **T 331/89**, the board found the reactivation of earlier claims to be an abuse of procedure because the request had not been filed until the oral proceedings and, in view of its content, was not immediately allowable.

This case law must, however, be interpreted in the light of Art. 12(4) RPBA.

Since adoption of R. 116(2) EPC and Art. 12(4) and 13 RPBA, the relevant legislation differs from that applicable at the time of the decision in **T 123/85**. Whether sets of claims presented on appeal are to be considered is therefore not to be determined in accordance with the case law established in that decision, but rather in accordance with the procedural rules now applicable to appeal procedures and the specific circumstances of the case. Accordingly, the admission of auxiliary requests is subject to Art. 12(4) RPBA, which provides that the boards may at their discretion disregard sets of claims which were found to be late filed and not admitted at first instance or which ought already to have been presented at first instance. This discretion also applies to sets of claims presented for the first time on appeal as a means of defending a broader version of the patent than that at issue in the opposition proceedings (**T 28/10**, **T 36/12**, **T 467/13**).

Referring to **T 28/10**, the board stated in **T 671/08** that there was no absolute right of the patent proprietor to revert in appeal to the patent as granted nor that he is in principle hindered from doing so. There will be cases, as the present case shows, in which the admission of such a request poses no additional work and other cases in which such a request may even constitute an abuse of the proceedings. It follows thus that if such a request is submitted in appeal the board has to exercise its discretion under Art. 12(4) RPBA and decide whether to admit or not such a request.

In **T 1282/05**, on being summoned to oral proceedings the appellants had filed new requests, the claims in the amended requests relating to matter not previously claimed or discussed in the appeal proceedings. The independent claims in these requests were worded far more broadly than the matter previously claimed in the appeal proceedings and essentially constituted a return to the original claim 1. The board found that the amendments could not be regarded as a response to objections in the summons, nor had the appellants given any reasons for them. Moreover, the statement of grounds gave no indication that such a return towards the originally claimed matter was intended. Hence the appellants' actions constituted an infringement of Art. 12(2) RPBA. Furthermore, comparable requests could have been submitted before the department of first instance (**T 1420/06**).

In **T 2075/11** the patent as granted could clearly have been defended in the opposition proceedings but the appellant (patent proprietor) had instead chosen to limit it, which meant that no first-instance decision had been taken on the granted version (see also similar case **T 933/04**). The board did not regard the appellant as having abandoned the patent as granted but it was of the firm view that admitting the request for maintenance as granted at the appeal stage went against the principle of procedural economy. If

admitted, the board would be compelled to give a first ruling on the request, a task incompatible with its role as a review body, or to remit the case, which would considerably delay the proceedings and make them more costly for the other party. The very purpose of Art. 12(4) RPBA was to avert such a situation.

In **T 796/02**, the board held that it amounted to an abuse of procedure to withdraw a request with broader claims in appeal proceedings in order to prevent the board from taking a negative decision on it, but then re-introduce those broader claims before the opposition division, after a remittal of the case for further prosecution on the basis of much more limited claims was obtained.

#### 4.5.2 Patent revocation

According to **G 9/92** and **G 4/93** (OJ 1994, 875), in opposition appeal proceedings the extent to which the patent proprietor is entitled to make amendments depends on the result of the first instance proceedings and on whether the patent proprietor himself filed an admissible appeal or is merely the respondent (on this point, see Chapter IV.E.3.1 "Binding effect of requests - no reformatio in peius").

Where the patent proprietor is appealing against the revocation of his patent, he is entitled to revert to a more broadly worded version of the patent, and in particular the one as granted, even if he had filed a restricted version at the commencement of appeal proceedings (**T 89/85**; **T 296/87**, OJ 1990, 195; **T 373/96**, **T 65/97**, **T 564/98**, **T 2285/08** and **T 476/09**). According to **T 386/04** an appellant-proprietor, whose patent has been revoked, is entitled to seek maintenance of the patent as granted even though its main request before the opposition division had only been the maintenance of the patent in a more limited form. Only in exceptional circumstances, where it would amount to an abuse of procedure, it should not be allowed to revert to the granted claims. This long standing principle is not contradicted by decisions **T 528/93** or **T 840/93** (OJ 1996, 335), which are concerned with new claims raising new issues, and is not contrary to the statement by the Enlarged Board of Appeal in decision **G 9/91** (OJ 1993, 408) concerning the purpose of an appeal (see also **T 1276/05**).

In **T 933/04**, the appellant's main request was derived from the patent as granted. This granted version had not, however, been the subject of the opposition division's decision. It had indicated that the patent as granted (now the main request) was not novel, with the result that it had not been pursued. The board refused to admit the main request because the appellant ought not to have withdrawn it from the proceedings if it had intended to pursue it (see also **T 1067/08**, **T 2075/11**).

In **T 476/09** the conduct of the appellant did not amount to an abuse of procedure. It was true that the claims of the request before the opposition division were more restricted than the claims of the present requests submitted by the appellant with the statement of grounds of appeal in that the claims before the opposition division defined the external additive to include hydrophobic titanium oxide and hydrophobic silica. However, this definition of the external additive had no bearing on the opposition division's decision. Therefore, the fact that this definition was not contained in the claims of the present

requests did not raise any new issues which have not yet been dealt with by the opposition division. Hence, the appellant did not leave the factual and legal scope of the first instance opposition proceedings with its new requests in appeal proceedings.

## **4.6. Circumstances extraneous to proceedings**

### **4.6.1 Introduction**

In some cases, the parties justify the amendment of claims with circumstances extraneous to the proceedings. The boards have refused to accept the following justifications: **T 160/89** (heavy workload); **T 148/92** (doubts as to the definitive embodiment of the invention; appellant's frequent need to travel); **T 626/90** (lack of timely instructions), **T 583/93** (OJ 1996, 496; lack of communication between the patentee and the licensee); **T 575/94** (new instructions); **T 1697/13** (necessary consultation of the applicant) and **T 2575/11** (transfer of the patent and change of representative).

In **T 764/03**, the only reason given by the appellant for the failure to introduce the auxiliary requests at an earlier stage of the proceedings was that the patentee had taken so long to reach a decision on the patent content which it considered useful to prosecute from a competition point of view. The board observed that only the rules and the circumstances of the appeal proceedings in question could be considered when determining at what stage of appeal proceedings requests had to be filed, when they had to be regarded as belated and what the legal consequences of such belatedness were. Circumstances extraneous to the proceedings, such as e.g. licensing negotiations with competitors or infringement proceedings were not factors which could be taken into account in assessing when in the appeal proceedings requests affecting the patent's content had to be filed, unless they were put forward as grounds for a request for accelerated handling of a case (see also **T 356/08**, **T 28/10**).

### **4.6.2 Change of party or representative**

According to the established case law of the boards of appeal, a change of representative usually results from the party's own decision and is generally not an acceptable ground for late filing (**T 1748/08**).

In **T 830/90**, the board refused to accept a change of representative as justification for the late filing of the requests. The same view was taken by the board in **T 382/97**, in which it held that the mere change of a representative was not a valid ground justifying the late filing of requests since it was an arbitrary move by the relevant party by which it could influence which procedural actions had to be considered as belated and which as timely. It was evident that such a situation would be contrary to any reasonable procedural conduct. Only if the change of representative was necessitated by proven exceptional and extraordinary circumstances might the board come to different conclusions.

In **T 1032/96**, the board held that the late transfer of the case to the representative owing to the illness of a colleague was not sufficient justification for the failure to submit the set of claims until just three days before the date of the oral proceedings. The claims were deemed to be late.

In **T 1282/05**, the board held, *inter alia*, that a withdrawal of the representative did not justify the late return to broader subject-matter which had not yet been discussed in the appeal proceedings because the board had to assume that all actions of the former representative had been performed in consultation with and with the approval of the appellant, to whom they therefore had to be imputed.

In **T 1585/05** the board noted that the fact that the late filed requests were filed by a new representative bore no weight on the admissibility of the claims, since the ultimate responsibility for filing requests always remains that of the proprietors, so that the Board has to consider that, unless otherwise proven, all actions undertaken by the former representative were undertaken in agreement with the proprietors and thus expressed their desires (see **T 1420/06**). The new representative was therefore bound to continue the proceedings from the point they had reached when he took over from his predecessor.

A change in the person handling the case is not an extraordinary circumstance justifying the filing of a request at a late stage in appeal proceedings, especially where the objections to be overcome were raised at the outset (**T 1457/08**).

A change of professional representative is not an objective excuse for not filing appropriate requests along with the statement of grounds of appeal, and in particular for not maintaining the main request underlying the decision under appeal. In fact, this rather presupposes a deliberate choice by the appellant. In any case, a change of representative at the time of filing the statement of grounds of appeal certainly cannot justify the filing of the main request only one month before the date of oral proceedings before the board (**T 1351/10**).

## **5. Parallel proceedings**

The board in **T 18/09** stressed that, in the case of parallel proceedings before a national court and the boards of appeal, parties should inform both tribunals of the position as early as possible and ask the appropriate tribunal for acceleration in order to avoid duplication of proceedings. Whether acceleration is requested by one party, or both or all parties in agreement, or by a national court, all parties must accept a strict procedural framework including short time limits. It must also be understood that acceleration can have no effect on the equal treatment of all parties and cannot confer any advantage on any one party.

## **6. Termination of appeal proceedings**

Under the EPC it is possible to withdraw a patent application, opposition or appeal. Decision **J 19/82** (OJ 1984, 6) ruled that partial withdrawal is also possible. The

consequences of such a withdrawal for pending appeal proceedings are considered below.

### **6.1. Closure of the substantive debate**

The EPC does not prescribe when the substantive debate should be regarded as closed. Particularly if oral proceedings take place but end without a decision being delivered, it has often had to be decided whether or not subsequently filed documents should be taken into consideration. A distinction needs to be made between the following situations:

- (i) the board does not announce its decision at the end of the oral proceedings, but reserves the right to deliver its decision subsequently in writing, but without explicitly stating that the debate is closed;
- (ii) the board declares at the end of the oral proceedings that the debate is closed and announces that the decision will follow in writing.

In the first case, the boards have generally found that submissions filed after the oral proceedings were out of time and could be considered only if they were relevant (Art. 114(2) EPC 1973). See, for example, **T 456/90** and **T 253/92**.

In the second case, two solutions have been adopted by the boards. One - adopted in **T 762/90** - consists of stating under "Summary of facts and submissions" that a document was filed after closure of the debate and that the board would not consider it. Under this option, the document was automatically excluded from the file. This solution was also adopted in **T 411/91**.

The other solution - adopted in **T 595/90** (OJ 1994, 695) - is to rule that submissions filed after closure of the debate could not be taken into account unless the board decided to reopen the debate. Under this option the submission had by implication to be examined.

In **T 1629/06**, the day before the oral proceedings, the appellant announced its intention not to attend the oral proceedings and requested, without reasons, that the procedure be continued in writing. The board dismissed the request.

#### **6.1.1 Decision taken as the file stands**

In **T 784/91** the board took the view that if in ex parte proceedings the appellant indicated that he did not wish to comment on the case, this could be construed as signifying agreement to a decision being taken on the case as the file stood.

#### **6.1.2 Proceedings after delivery of the decision**

In **T 843/91** (OJ 1994, 818) it was stated that once a decision had been taken the board was no longer empowered or competent to take any further action apart from drafting the written decision (see also **T 296/93**, OJ 1995, 627, where the board disregarded

statements filed after the announcement of the decision, and **T 515/94**). In **T 304/92** the respondent's request to file new claims after the chairman had announced the board's decision was rejected, but recorded (with the response) in the summary of facts.

However, in **T 212/88** (OJ 1992, 28) a request for apportionment of costs submitted after the substantive decision had been announced at the end of the oral proceedings had been, exceptionally, admitted. Although the practice of the boards was that all requests by parties, including any request as to costs, should be made before any decision was announced in oral proceedings, this practice had not been published and so there was no reason why parties or their representatives should have been aware of it. In **T 598/92** an error in a claim was corrected at the request of the appellant one day after the decision was delivered at the end of oral proceedings.

After the board in **T 1518/11** had announced its decision to dismiss the appeal against the refusal of the application in suit and closed the oral proceedings, the appellant stated by letter that the appeal was withdrawn. However, since the decision had already been announced at the oral proceedings and thereby became effective on that day, the appeal proceedings had already terminated (following **T 843/91**, OJ 1994, 818) and the appellant's submission made after the announcement of the board's decision was without any legal effect. Furthermore, a statement of withdrawal of appeal made by the (sole) appellant after the final decision of the board had been announced at oral proceedings did not relieve the board of its duty to issue the decision in writing, setting out the reasons for the decision, and notify the appellant of it (following **T 1033/04**).

## **6.2. Interlocutory decisions of a board**

The finding that an appeal is admissible may be given in an interlocutory decision. Art. 110 EPC and R. 101 EPC show that the boards have to examine whether an appeal is admissible before considering its merits. An interlocutory decision might be appropriate where the points of law concerning admissibility are of general significance and require a speedy decision (see **T 152/82**, OJ 1984, 301; and also **T 109/86** of 20.7.1987). (There is an exception where the appeal is clearly unallowable but admissibility cannot be checked, see IV.E.2.8 "Cases where admissibility of appeal need not be considered").

The boards have also issued interlocutory decisions on re-establishment in respect of the time limits for appeal (**T 315/87** of 14.2.1989 and **T 369/91**, OJ 1993, 561), on the admissibility of an opposition (**T 152/95** of 3.7.1996), and to inform the public rapidly (pending the final decision) that a mention of grant in the European Patent Bulletin was incorrect because of the appeal's suspensive effect (**J 28/94**, OJ 1995, 742). Referral of a point of law to the Enlarged Board is also an interlocutory decision.

### 6.3. Withdrawal of the appeal

#### 6.3.1 Article 114(1) EPC and withdrawal of the appeal

Under Art. 114(1) EPC the EPO shall examine the facts of its own motion in proceedings before it. The question has arisen whether this is relevant in the event of the withdrawal of the appeal.

In **G 7/91** and **G 8/91** (OJ 1993, 346 and 356) the Enlarged Board of Appeal ruled that as far as the substantive issues settled by the contested decision at first instance were concerned, appeal proceedings - whether ex parte or inter partes - were terminated when the sole appellant withdrew his appeal. The Enlarged Board found that the provision of Art. 114(1) EPC 1973 did not allow for continuation of the proceedings once the appeal had been withdrawn. This was evident from the legislative rationale of the EPC. If Art. 114(1) EPC 1973 applied to all withdrawal situations, then the R. 60(2) EPC 1973 exception for oppositions would be superfluous. Nor was withdrawal of the appeal covered by "relief sought" within the meaning of Art. 114(1), second part of sentence, EPC 1973 to which the EPO would not be restricted in examining the facts; it constituted a procedural act not requiring the consent of the relevant board (point 8 of the Reasons). The appeal procedure was that proper to an administrative court, so any exception from general procedural principles such as the "principle of party disposition" had to be supported by much weightier grounds than in administrative proceedings. Neither Art. 114(1) EPC 1973 nor the interests of the general public or the respondent constituted arguments against this interpretation. Art. 114(1) EPC 1973 was restricted to the examination of the facts. The interests of the general public were primarily safeguarded by the opposition system. It could be assumed that the patent did not disturb those who had not filed an opposition, so there was no need to continue the appeal proceedings in order to safeguard their interests. Nor were the respondents' interests any more in need of protection if they had not themselves filed an appeal, as was explained in detail in **G 2/91** (OJ 1992, 206). Finally, the Enlarged Board pointed out that when the sole appellant withdrew his appeal, the suspensive effect of the appeal lapsed and the opposition division's decision thus became final as regards the substantive issue.

#### 6.3.2 Board's duty to issue decision when appeal is withdrawn after the decision is announced

A statement of withdrawal of appeal made by the (sole) appellant after the final decision of the board has been announced at oral proceedings does not relieve the board of its duty to issue and notify to the appellant the decision in writing setting out the reasons for the decision in order to conclude the decision-taking procedure triggered by the announcement of the final decision at the oral proceedings, which had already become effective under **G 12/91** (OJ 1994, 285) (**T 1033/04**).

### 6.3.3 Board's powers to decide on issues after withdrawal of the appeal

If the sole appellant says he has withdrawn his appeal, but the parties are in dispute as to whether he did so admissibly, then the board is empowered to rule on that issue (**T 659/92**, OJ 1995, 519).

After withdrawal of an appeal it is still permissible to decide on ancillary questions (**T 85/84**). Thus in **T 21/82** (OJ 1982, 256), **J 12/86** (OJ 1988, 83), **T 41/82** (OJ 1982, 256) and **T 773/91**, the board of appeal dealt with requests for reimbursement of the appeal fee filed after withdrawal of the appeal, and in **T 117/86** (OJ 1989, 401), **T 323/89** (OJ 1992, 169), **T 614/89** and **T 765/89** with requests for apportionment of costs.

### 6.3.4 Withdrawal of appeal after filing of intervention

According to **T 195/93**, the fact that the appellant withdrew his appeal after an intervention was filed could not immediately lead to termination of the proceedings. The board had to consider the admissibility of the intervention (see also Chapter IV.C.3. "Intervention").

### 6.3.5 Partial withdrawal of appeal by sole appellant and opponent

Partial withdrawal of an appeal by the sole appellant (opponent) following an allowable limitation of the patent's subject-matter under Art. 123 EPC 1973 during appeal proceedings deprived the board of its discretionary power to examine the substantive merits of the remaining, limited subject-matter. The patent had to therefore be granted in its amended form (**T 6/92** and **T 304/99**). In **T 127/05** the board recalled that an opponent who was the sole appellant had the possibility of withdrawing his appeal if he found that the outcome would be disadvantageous to himself. In **G 7/91** and **G 8/91** (OJ 1993, 346 and 356) the Enlarged Board of Appeal ruled that as far as the substantive issues settled by the decision at first instance were concerned, appeal proceedings were terminated when the sole appellant withdrew his appeal. It followed that an opponent who was the sole appellant could, if he so wished, force the non-appealing patent proprietor to "live with" a deficiency which he had introduced. A patent proprietor who filed an appeal could prevent himself from being placed in such a situation. The board also did not agree that decision **G 1/99** (OJ 2001, 381) restricted amendment to a response to an objection first raised in appeal proceedings.

### 6.3.6 No withdrawal of appeal with retrospective effect

The mere fact that a representative had filed a notice of appeal before taking note of the appellant's adverse instruction did not justify a correction to the effect that no appeal had been filed. The request amounted to a withdrawal of the appeal with retrospective effect, which was not provided for in the EPC (**T 309/03**, OJ 2004, 91).

### 6.3.7 Request for withdrawal of appeal to be unambiguous

A notice of abandonment of the patent was held to be tantamount to withdrawing the appeal in **T 1003/01**. In **T 60/00**, however, the appellant's statement that it had decided not to pursue the appeal was not regarded as unambiguous withdrawal of the appeal, derived from the principles laid down in earlier case law: effective withdrawal does not depend on the term "withdrawal" being used (**J 7/87**, OJ 1988, 422); a request for withdrawal should only be accepted without question if it is completely unqualified and unambiguous (**J 11/80**, OJ 1981, 141); and where any doubt as to a party's intent exists, the declaration made can be construed as a withdrawal only if the related subsequent facts confirm that such is the party's true intent (**J 11/87**, OJ 1988, 367). In **T 2347/11** the letter of "withdrawal" of an application in this case did not relate unambiguously and without doubt to the case at issue and thus could not be understood as withdrawal of the appeal.

According to the board in **T 1244/08**, where an appellant holding a patent revoked by an opposition division stated that it did not agree with the text of the patent as granted and was not proposing an amended one, this was tantamount to a withdrawal of the appeal and immediately brought the proceedings to an end.

### 6.3.8 Conditional withdrawal of appeal

Procedural declarations may be made with the proviso that certain conditions are met, as long as a case is already pending (**J 16/94**, referring to Art. 108, first sentence, and R. 64(b) EPC 1973; **T 854/02**) and these conditions do not concern facts outside the proceedings (**T 502/02**). Thus, whereas a conditional appeal is not possible, the conditional withdrawal of an appeal may be valid (**T 6/92**; **T 304/99**). However, the withdrawal of an appeal can take effect only if the appeal is still pending (**T 1402/13**).

When an appellant has clearly withdrawn his appeal, the appeal proceedings can be closed without a reasoned written decision, even if the appellant has appended to his declaration of withdrawal an obviously non-allowable request for a refund of the appeal fee (**T 1142/04**).

## 6.4. Deemed withdrawal of patent application

If a European patent application is finally deemed to be withdrawn after an admissible appeal against a decision refusing it has been filed, the appeal can usually be considered disposed of, because there is no possibility of a European patent being granted for the application. However, where, as in the case before the board, the sole aim of the appeal is to obtain a finding by the board that a substantial procedural violation occurred in the first instance proceedings, such that the appealed decision is to be set aside and the appeal fee reimbursed, the appeal cannot be dealt with in this way. In these circumstances the appellant has a legitimate interest in receiving a decision on the merits of the appeal (**T 2434/09**).

## **7. Remittal to the department of first instance**

### **7.1. General**

Under Art. 111(1) EPC the board of appeal may either decide on the appeal or remit the case to the department which was responsible for the decision appealed. The appropriateness of remittal to the department of first instance is a matter for decision by the boards of appeal, which assess each case on its merits.

### **7.2. Remittal following filing or late submission of relevant new document**

#### **7.2.1 Opposition appeal proceedings**

If a new citation (such as an anticipatory document) is filed during opposition appeal proceedings, the question arises whether the case is to be remitted to the department of first instance. In board of appeal case law (see **T 258/84**, OJ 1987, 119; **T 273/84**, OJ 1986, 346; **T 215/88**, **T 611/90**, OJ 1993, 50; **T 621/90**, **T 166/91**, **T 223/95**), the prevailing view is that, if a document filed for the first time in opposition appeal proceedings is relevant enough to be taken into consideration, the case should as a rule be remitted under Art. 111(1) EPC 1973 to the department of first instance so that the document can be examined at two levels of jurisdiction and the patent proprietor is not deprived of the possibility of subsequent review. However, it is established board of appeal practice that where the board comes to the conclusion that the document is not such as to prejudice the maintenance of the patent, the board may itself examine and decide the matter under Art. 111(1) EPC 1973 (**T 326/87**, OJ 1992, 522; **T 416/87**, OJ 1990, 415; **T 626/88**, **T 457/92**, **T 527/93**, **T 97/90**, OJ 1993, 719).

In **T 611/00** the appellant relied on the same grounds of opposition as it had at first instance, but it based its appeal on completely new evidence. The board held that in order to admit this new evidence it had to balance two demands of public interest, that of procedural fairness and that of preventing unwarranted monopolies. If the board found that the documents should be taken into account, it had to ensure that the respondent received fair procedural treatment in the further conduct of the case. Therefore the request for the case to be remitted to the department of first instance had to be allowed.

In **T 736/01** the board stated that since it was not the function of an appeal to examine and decide upon a fresh case resulting from the newly submitted and admitted prior art (see **T 26/88**, OJ 1991, 30; **T 611/90**), it would exercise its discretion under Art. 111(1) EPC 1973 and remit the case to the opposition division.

In **T 361/03** a document submitted by the appellant (opponent) one month before the oral proceedings fundamentally altered the factual framework of the case under appeal. The board admitted the document but held remittal justified. This had the twofold purpose of allowing this fresh case to be examined at two levels of jurisdiction and of giving the respondent a reasonable opportunity to consider possible fallback amendments and possible evidence that could be produced in defence of such amended requests.

However, according to the board in **T 764/07** it is the established jurisprudence of the boards of appeal that an appellant has no absolute right to have each individual issue considered by two instances, Art. 111(1) EPC leaving it to the discretion of the board whether to exercise any power within the competence of the department of first instance or to remit the case to that department. In **T 1913/06**, for example, documents filed with the opponent's (appellant's) grounds of appeal were admitted into the proceedings and the respondent's request for remittal refused, taking into consideration the imperative of procedural efficiency and the public interest in a streamlined and efficient procedure. The patent (which had been granted 4 years earlier) was revoked on the basis of the admitted documents. See also **T 1007/05**.

In **T 1070/96** the board stated that even though, as a rule, a case should be remitted to the department of first instance if a new document is so relevant that it has considerable influence on the decision to be taken, a remittal is not appropriate if the board is able to deduce from the reasoning of the decision under appeal how the opposition division would have decided had it known of the late-filed document.

In **T 111/98** the board held that the amendment of the claims in response to the citation of a new document during appeal proceedings was not as such a sufficient reason to remit the case to the department of first instance. Remittal remained at the discretion of the board.

#### 7.2.2 Ex parte appeal proceedings

In ex parte appeal proceedings too, if a document is relied upon for the first time during the appeal proceedings and it is admitted because it is relevant, the case has often been remitted to the department of first instance (see e.g. **T 28/81**, **T 147/84**, **T 170/86**, **T 198/87**, **T 205/87**).

The board in **T 963/09** had raised certain objections to the application based on a document it had introduced. The appellant requested that the case be immediately remitted to the examining division for further prosecution. The board refused. In **G 10/93** the Enlarged Board had decided that a board of appeal in ex parte appeal proceedings had the power to raise new objections and to introduce new documents, stating that this did not mean that boards of appeal carried out a full examination of the application as to patentability requirements. If, however, there was reason to believe that a condition for patentability might not have been satisfied, the board either incorporated it into the appeal proceedings or ensured by way of referral to the examining division that it was included when examination was resumed. First, it was clear that an objection raised by a board in the form of a non-binding preliminary opinion did not bind that board and so did not bind an examining division to which the case was later remitted. Secondly, if the case was eventually remitted to the examining division with the instruction to examine the new objection, it might be necessary to include an indication of the relevant grounds, facts and evidence to be considered. Thirdly, where a board of appeal was willing to decide on a new objection itself, it was only fair for the board to fully disclose its concerns to the appellant in order to give it the best possible opportunity to either convince the board that the case should be remitted or argue against the new objection.

In **T 991/01** the examining division sent the appellant a computer-generated translation of a Japanese patent application after the oral proceedings before it, and no copy was kept in the file, so that the board of appeal was unaware of its existence until the appellant referred to it in the oral proceedings before the board. The case was remitted.

In **T 1343/12** since it appeared that the assessment of inventive step hinged to a great extent on the true disclosure of D1, the case was remitted to the examining division for re-consideration of the issue of inventive step in the light of a certified translation thereof.

### 7.2.3 Patent in jeopardy

In **T 326/87** (OJ 1992, 522) the board added that remittal to the department of first instance is particularly desirable if the new citation puts the maintenance of the patent at risk: where this is not the case, the board itself may decide on the matter, as for example in **T 253/85**, **T 49/89**, **T 565/89** and **T 881/91**.

In **T 638/89** the board of appeal followed this line of argument in remitting the case to the opposition division because a document cited for the first time in the statement of grounds for appeal was highly relevant and should therefore be admitted into the proceedings.

That remittal is not automatic where the patent is at risk is shown by **T 1060/96**. Here the respondent had had one year to challenge consideration of a document submitted by the appellant (opponent) during the appeal procedure and one year prior to oral proceedings. Moreover, the document was technically very simple and merely reinforced the teaching of known documents. The board refused the respondent's request for remittal and revoked the patent. See also **T 111/98**, **T 416/00** and **T 642/01**.

### 7.2.4 New facts or evidence

In **T 125/93**, where a highly relevant document was filed by the patentee shortly before the date appointed for oral proceedings, the board admitted it into the proceedings pursuant to Art. 114(1) EPC 1973, which had the concomitant effect of altering the factual framework of the case under appeal compared with that upon which the decision under appeal had been based. The legal consequence of such a shift in the framework being well settled, and there being no "special reasons" of the kind referred to by the Enlarged Board in **G 9/91** and **G 10/91** (OJ 1993, 408 and 420), the board referred the case back to the opposition division for further prosecution.

Many decisions have confirmed that if fresh evidence, arguments or other matter filed late in the appeal proceedings raise a case substantially different from that on which the contested decision was based, the case should be remitted to the department of first instance where this was demanded by fairness to both parties. See, for example, **T 611/90**, **T 97/90**, **T 847/93**. The board in **T 611/90** pointed out that the public's and the parties' interest in having the proceedings speedily concluded may then be overridden by the requirement that appeal proceedings should not become a mere continuation of first-instance proceedings. In **T 852/90** the board, although it rejected the request for remittal,

stated that the need to remit should the case alter followed from the immutability of the legal requirement that appeals should remain appeals, despite the investigative powers conferred upon the boards by Art. 114(1) EPC 1973, as well as the principle that appeals under the EPC are judicial proceedings, whose task is to decide whether an appealed decision was right on its merits. (The late-filed evidence amounted to no more than an amplification - albeit a significant one - of the case already canvassed before the opposition division).

However, the board in **T 97/90**, found that it did not follow from **T 611/90** that all cases in which a new ground of objection was raised late in the appeal must be remitted to the department of first instance. On the contrary, this should only be done if the admission of the new ground into the appeal proceedings would lead to revocation of the patent. The board therefore decided that there was no need to remit the case. See also **T 113/96** and **T 577/97** for decisions where remittal was refused.

In **T 1469/07** the appellant and interveners observed that it was in the interest of the public and of legal certainty to have a final decision as quickly as possible. However, the board noted that the fresh case was caused not by the respondent but by the new evidence filed by the appellant and the interveners. Accordingly, in the exercise of its discretion, the board considered that the case against the patent had altered to such an extent that the respondent had a legitimate reason to have its full case considered at two instances. Therefore remittal of the case to the department of first instance was appropriate (Art. 111(1) EPC) (see also **T 78/11**).

The board in **T 402/01** of 21.2.2005 pointed out that a patent proprietor had no automatic right of remittal after the citation of a new document with the grounds of appeal, even if there was a change in factual framework, at least in cases where the document was filed in reaction to amendment of the claim, providing that both parties' right to a fair hearing (Art. 113(1) EPC 1973) was not jeopardised. See also **T 133/87** and **T 1252/05**.

Referring to **T 402/01** and also **T 111/98**, the board in **T 1493/06** agreed; in **T 111/98**, implicitly referring to the right to be heard pursuant to Art. 113(1) EPC 1973, it was considered that remittal due to the admission of a new document should rather be an exception, for example if, without remittal, a party would not have had sufficient opportunity to defend itself against an attack based on the new document. In the case before the board in **T 1493/06**, the board had introduced document D7 at an early stage in the appeal procedure in a first communication, and subsequently issued another fully reasoned objection based on document D7 in the communication accompanying the summons to oral proceedings. The board, applying the criterion of **T 111/98**, therefore considered that the appellant had had sufficient opportunity to react to the introduction of document D7, so that remittal was not necessary in order to comply with Art. 113(1) EPC.

Nonetheless, citing **T 402/01**, the board in **T 1600/06** found that even if the patent proprietor has no automatic right of remittal after the citation of a new document, the patent proprietor's right to be heard in accordance with Art. 113(1) EPC may require

remittal when, as in the case before it, the new document alters the legal and factual framework of the case significantly and a "fresh case" results.

In the absence of strong mitigating circumstances for the late filing of a fresh case, the late-filing party should bear all the additional costs incurred by his tardiness (**T 611/90**, OJ 1993, 50; **T 97/90**).

### **7.3. Remittal following substantial amendment to claims in the appeal proceedings**

The amendment of claims during an appeal from a decision to refuse a European patent application is a matter of discretion under R. 137(3), last sentence, EPC (previous R. 86(3), last sentence, EPC 1973).

According to **T 63/86** (OJ 1988, 224), where substantial amendments to the claims are proposed on appeal, which require substantial further examination, the case should be remitted to the examining division. In this way, the applicant's right to appeal to a department of second instance is maintained, both in relation to the exercise of discretion under (the then) R. 86(3) EPC 1973, and in relation to the formal and substantive allowability of the amended claims. Several boards of appeal have applied this case law in their decisions; e.g. **T 200/86**, **T 296/86**, **T 341/86**, **T 98/88**, **T 423/88**, **T 501/88**, **T 47/90** (OJ 1991, 486), **T 184/91**, **T 919/91**, **T 599/92**, **T 1032/92**, **T 1067/92**, **T 96/93**, **T 186/93**, **T 462/94**, **T 1628/08**, **T 1818/08** and **T 2287/08**).

In **T 746/91** the board applied the principles laid down in **T 63/86** and remitted the case to the opposition division for it to examine and decide whether discretion should be exercised in favour of the appellant, and if so, whether the claims complied with the provisions of the EPC. The board took this view in the particular circumstances because the opposition proceedings had themselves been comparatively brief and had not involved the holding of oral proceedings. It had thus adhered to the principle whereby it should be established swiftly whether or not a patent can be maintained. Moreover, the amended claims had been filed with the statement of grounds, i.e. at the earliest possible stage in the appeal proceedings.

In **T 125/94** the board remitted the case to the department of first instance because the amended claims had not only substantially changed the factual framework of the contested decision, but could also require a search in an additional classification unit to determine the closest prior art.

According to the board in **T 1201/00**, if a case is likely to have to be remitted to the opposition division for it to assess the unexamined issue of inventive step, a new auxiliary request first submitted during oral proceedings before the board designed to overcome an objection of lack of novelty compared with a cited document may exceptionally be admitted and also remitted to the opposition division for final novelty examination against that document if none of the requests that took precedence can be granted for lack of novelty. The need for the department of first instance to assess inventive step against all the cited prior art means that novelty examination against one cited document would not entail a significant delay in the opposition proceedings.

However, the amendment of the claims in response to the citation of a new document during appeal proceedings is not as such a sufficient reason to remit the case to the department of first instance (**T 111/98**). Following this decision, the board in **T 98/00** did not remit the case despite the appellant's request to do so, finding that it would make no sense if the boards were ipso facto obliged to remit the case whenever new matter was raised in appeal proceedings, irrespective of the nature of such matter. In **T 893/07** the board interpreted **T 111/98** to mean that what actually appears to be essential when a board exercises its discretion to remit a case is whether the factual framework has substantially changed during the appeal proceedings. As it had not, remittal was refused. The board in **T 1493/06** stated that in decision **T 111/98**, implicitly referring to the right to be heard pursuant to Art. 113(1) EPC 1973, it was considered that remittal due to the admission of a new document should rather be an exception, for example if, without remittal, a party would not have had sufficient opportunity to defend itself against an attack based on the new document. In the case before it, the board introduced document D7 at an early stage in the appeal procedure in a first communication, and subsequently issued another fully reasoned objection based on document D7 in the communication accompanying the summons to oral proceedings. The appellant had thus had sufficient opportunity to react to the introduction of document D7, so that remittal was not necessary in order to comply with Art. 113(1) EPC 1973.

In **T 908/07**, the board held that a late-filed claim admitted in the exercise of the board's discretion mainly because the board and the opponent could be clearly expected to deal with the issues raised without adjournment of the oral proceedings, should not normally be remitted to the department of first-instance for examination in respect of the grounds for opposition on which the first instance decision was based.

In **T 1300/06** the board recalled that, in accordance with **G 9/91** (OJ 1993, 408), in cases where Art. 100(c) EPC 1973 was not an original ground of opposition and the opposition division did not consider it necessary to use its discretion to introduce it into the opposition proceedings, the consideration of this Article for the granted claims at appeal stage was possible only with the patentee's consent. This, however, did not prevent the board from examining anew the formal requirements of the EPC in respect of any other request containing amendments and filed in order to overcome original grounds of opposition. The fact that objections raised under these articles - and the arguments submitted therefore - might also have been relevant to the granted claims could not prevent the board from considering them in the context of the new amended request, since each request had to be considered on its own. The case was therefore remitted.

#### **7.4. Remittal following a substantial procedural violation**

##### **7.4.1 Legal basis**

A board shall remit a case to the department of first instance if fundamental deficiencies are apparent in the first instance proceedings, unless special reasons present themselves for doing otherwise (Art. 11 RPBA).

Remittal to the department of first instance is therefore normally also ordered where a substantial procedural violation occurred in the first instance proceedings (**T 125/91**, **T 135/96** and **T 1065/99**), even where the violation affects only one of two opponents (**T 125/91**).

#### 7.4.2 Violation of right to be heard

The violation of the principle of the right to be heard is considered as a fundamental deficiency of first instance proceedings and remittal is often ordered accordingly (**T 125/91**, **T 808/94**, **T 1399/04**). The board in **T 1399/04** pointed out that it is, however, also acknowledged that there is no absolute right for a party to have every aspect of a case examined in two instances (referring to **T 133/87**). Other criteria, e.g. the general interest that proceedings are brought to a close within an appropriate period of time, have also to be taken into account. See also e.g. **T 594/00** and **T 343/01**. For further details, see Chapter III.B. "Right to be heard".

Where a remittal by a board of appeal for further prosecution on the basis of new evidence was immediately, i.e. without an intervening communication announcing the resumption of the proceedings, followed by the revocation of the patent, then the party had had no opportunity to present comments. It was necessary that the parties be expressly asked whether or not they wished to present their comments or in the case where the parties had already made detailed submissions during the preceding appeal proceedings, whether or not these submissions should be regarded as complete. The board in **T 1425/05** pointed out that these principles had been followed in decisions **T 769/91**, **T 120/96**, **T 679/97**, **T 742/04** for opposition proceedings and in decisions **T 922/02** and **T 1494/05** for examination proceedings.

In **T 1077/06**, the board could not identify a legal basis in the EPC from which it could be concluded that a party, appealing against a decision of a department of first instance, which had been taken in violation of its right to be heard, had retrospectively abandoned its right to be heard before the department of first instance when it did not appear at oral proceedings before the department of second instance. Since the appellant whose right to be heard had been violated requested the remittal of the case to the department of first instance, in the specific situation of the case at issue, this request took precedence over apprehensions regarding an undue delay of the procedure (see also **T 594/00**).

In **T 1505/06** the board was faced with reviewing a decision of the opposition division on an issue in respect of which it did not know the reasons for the decision. No review of the decision of the opposition division in this respect was therefore possible and the board was unable to ascertain whether the right to be heard of the proprietor/appellant had been respected. It therefore had no choice but to remit the case to the opposition division for further prosecution pursuant to Art. 111(1) EPC 1973 so that the proprietor had a renewed opportunity to present its case at oral proceedings.

### 7.4.3 Violations of Article 19(2) EPC (composition of the opposition division)

The board in **T 1349/10** pointed out that violations of Art. 19(2) EPC concerning the composition of the opposition division are considered to be substantial procedural violations which have led to a remittal of the case under Art. 111(1) EPC and to the reimbursement of the appeal fee in several cases (see **T 251/88**, **T 939/91**, **T 382/92**, **T 476/95**, **T 838/02**). In two of these cases (**T 251/88** and **T 838/02**), the boards had asked the appellant or all parties whether they invoked the procedural violation before they decided on the remittal. In both cases, the patent had been revoked by the opposition division. However, in the judgment of the board in **T 1349/10**, violations of Art. 19(2) EPC should lead to a remittal regardless of the parties' position at least in situations where third parties were affected by the outcome of the defective first instance proceedings.

### 7.4.4 Unclear whether appellant adversely affected

Where the decision of the opposition division contained obvious mistakes, causing the decision under appeal to be contradictory and legally obscure such that it was unclear whether the appellant was adversely affected, this constituted a substantial procedural violation and the board remitted the case to the department of first instance for further prosecution (**T 616/08**).

### 7.4.5 Special reasons not to remit under Article 11 RPBA

Under Art. 11 RPBA, if there are 'special reasons', a board need not remit a case to the department of first instance even where there were fundamental deficiencies in the first instance proceedings.

#### a) Circumstances held not to constitute special reasons under Article 11 RPBA

See **T 1399/04** in Chapter IV.E.7.4.2 "Violation of right to be heard" above.

In **T 48/00** the substantial procedural violation before the department of first instance had clearly amounted to a fundamental deficiency - the patent was revoked without any discussion at the oral proceedings of the grounds of opposition. The only reason advanced as to why remittal would not be appropriate was the respondent's argument that this would delay the final decision in the case and it would therefore be prejudiced by the continued existence of a patent it considered invalid. The board agreed that remittal would undoubtedly delay the case, although the degree of prejudice to the respondent was difficult to assess. It was also beyond doubt that the respondent bore no blame for the situation. The respondent did, however, have the opportunity to challenge the validity of the patent in national courts whereas, for the appellant, revocation as a result of opposition proceedings would represent a final loss of its rights in all the designated states. Taking into account the interest, to the public as well as to the parties, in ensuring justice is done - and seen to be done - the board considered that delay was an insufficient reason not to order remittal.

Infringement proceedings before the German courts did not constitute a special reason in **T 914/98**, where the board held that the fundamental right of the appellants to a fair hearing before the opposition division had to outweigh any advantage that might accrue to the respondents by having the board deal fully with the case rather than remit it.

In **T 515/05**, although the board found that the appellant's right to be heard had been violated at first instance, it considered that remittal was not appropriate, essentially because (i) the arguments of the appellant had been taken into account in the decision under appeal, (ii) the appellant in the meantime had had the opportunity, and indeed availed itself of it, to expand its argumentation before the board, and (iii) no concrete reason was given by the appellant for the necessity for remittal (e.g. no intention was declared to produce further evidence which would need more time for preparation). In the circumstances a remittal to the opposition division would only unnecessarily delay the proceedings.

b) Circumstances held to constitute special reasons under Article 11 RPBA

Art. 11 of the Rules of Procedure of the Boards of Appeal (RPBA) provides that a case shall be remitted to the department of first instance if fundamental deficiencies are apparent in the first instance proceedings, unless special reasons present themselves for doing otherwise. Violation of the principle of the right to be heard is considered to be a fundamental deficiency of first-instance proceedings, and remittal is often ordered accordingly. It is, however, generally acknowledged that there is no absolute right for a party to have every aspect of a case examined in two instances. Other criteria, in particular the general interest that proceedings are brought to a close within an appropriate period of time, have also to be taken into account. There is no obligation for the board to remit the case at issue to the department of first instance (**T 1548/11**).

In **T 1548/11** in the judgment of the board, special reasons spoke against a further remittal of the present case to the opposition division, in particular the length of the opposition (appeal) proceedings to date (including two appeal procedures) and the considerable further delay which would ensue from a remittal. Moreover, it was observed that the appellant whose right to be heard had been violated requested the board not to remit the case to the opposition division but to decide itself on the remaining issue of inventive step. In these circumstances, remittal of the case to the department of first instance would be inequitable. The board thus exercised its discretion under Art. 111(1) EPC 1973 and Art. 11 RPBA in the sense that it would decide itself on the merits of the appeal.

In **T 1254/11**, the board assumed, *arguendo*, that both the fact that no decision to enlarge or reduce the opposition division had been added to the publicly available file and the fact that the appointment of the new chairman could only be traced from the internal register of the EPO constituted fundamental deficiencies in the proceedings before the opposition division. However, unlike the situation in **T 990/06**, it was possible to determine from the file that the division had been lawfully enlarged and, at a later stage, lawfully reduced again. The board considered that these circumstances constituted special reasons for not remitting the case within the meaning of Art. 11

RPBA. The aforementioned fundamental deficiencies, assumed merely for the sake of argument, were of a formal nature. They would not, in the board's view, justify substantially delaying the proceedings.

In **T 274/88** the board agreed that where an irregularity has been remedied during appeal proceedings, the matter should still normally be remitted to the department of first instance. However, in this particular case, which was *ex parte*, the board did not remit because, after correction, the subject-matter of the application was patentable, the appellants had expressly waived their right to have the issues considered at two instances, and the examining division had already indicated that it was favourably disposed on the question of patentability.

Similarly, where the board was able, in *ex parte* proceedings, to decide in the appellant's favour, remittal was not considered necessary (**T 749/02**).

In **T 1929/12**, even though the decision under appeal suffered from a fundamental deficiency within the meaning of Art. 11 RPBA, the board found that no purpose would be served by remitting the case to the examining division, which would most likely eventually have issued another, better reasoned decision to the same effect. This consideration, combined with the fact that both the board and the appellant were able to deal with the decision under appeal in view of the minutes, constituted, in the board's view, special reasons for not remitting the case under Art. 11 RPBA.

In **T 2068/14** the board argued that although in this case a fundamental deficiency in the sense of Art. 11 RPBA had taken place, the clarity objection raised by the board with respect to the appellant's claims (Art. 84 EPC) was immediately apparent upon examination of the disclosure of the claimed subject-matter. This constituted a "special reason" justifying not remitting the case to the department of first instance. The board pointed out that it would be contrary to the principles of legal certainty and efficiency to remit a case when the appellant had not adequately dealt with objections raised by the board that would prejudice the grant of a European patent.

In **T 427/11** the board held that special reasons spoke against a remittal of the present case to the opposition division, in particular the length of the proceedings to date and the considerable further delay which would ensue from a remittal. Additionally, the opposition division had evidently taken note of all the inventive step objections raised, even though the corresponding reasoning in the decision under appeal was incomplete. Consequently, considering all the relevant facts, the board concluded that a remittal of the case to the department of first instance would be inequitable. The board thus exercised its discretion under Art. 111(1) EPC 1973 and Art. 11 RPBA in the sense that it would itself decide on the merits of the appeals.

In **T 679/97** a remittal by a board of appeal for further prosecution on the basis of new evidence was immediately, i.e. without any intervening communication announcing the resumption of proceedings, followed by the rejection of the opposition. Despite this substantial procedural violation by the opposition division, the board decided not to remit, in view of the interest of the parties in having the case finally decided. Under similar

circumstances, however, cases have been remitted to the department of first instance, see e.g. **T 742/04** and **T 1425/05** and in this chapter IV.E.7.4.2 "Violation of right to be heard".

## **7.5. Introduction of new arguments and amendment of the description**

If no new documents are introduced, but merely arguments presented from a different point of view, or if the claims are maintained on the basis of an auxiliary request which the department of first instance has already indicated that it would be prepared to accept, then the desideratum of keeping the procedure as short as possible requires that there should be no remittal (**T 5/89**, OJ 1992, 348; **T 392/89** of 3.7.1990 and **T 137/90**). See also **T 1210/05**.

The board in **T 1913/06** made it clear that a case should not be remitted to the department of first instance for consideration of submissions made at the oral proceedings which the board or the other party could not reasonably be expected to deal with without adjournment of the oral proceedings and which had not been admitted under Art. 13(3) RPBA). See also **T 764/07**.

Remittal to the department of first instance to bring the description into line with amended claims should be avoided if at all possible for reasons of procedural economy, and although Art. 111(1) EPC 1973 permits it (**T 977/94**). However, remittal in such circumstances may still be necessary; in **T 1149/97**, although the appellant had also submitted amendments to the description at the oral proceedings, the board considered it expedient to remit the case to the department of first instance for further prosecution in accordance with the discretion under Art. 111(1) EPC 1973. Adaptation of the description and the drawings to the more restricted subject-matter now claimed needed careful consideration so that full consistency with the amended claim was guaranteed.

## **7.6. Exercise of discretion to remit**

### **7.6.1 No absolute right to have issue decided on by two instances**

It is established case law that there is no absolute right to have an issue decided upon by two instances. See, for example, **T 133/87**, **T 249/93**, **T 83/97**, **T 402/01**, **T 399/04** and **T 1252/05**. This is the case even if as a consequence the patent is revoked for the first time by the board of appeal (see e.g. **T 557/94**, **T 839/05**). Other criteria, e.g. the general interest that proceedings are brought to a close within an appropriate period of time, have also to be taken into account by the board when deciding whether or not to remit a case (**T 839/05**).

### **7.6.2 Function of appeal**

Although both the appellant and the respondents wished the board to make a final decision rather than remit the case to the opposition division, the board in **T 869/98** refused, pointing out that it is not normally the function of the appeal board to consider and decide upon questions which were raised for the first time during the appeal

proceedings. As there had been no assessment of inventive step at all during the written appeal proceedings, the board exercised its discretion under Art. 111(1) EPC 1973 and referred the case back to the opposition division.

### 7.6.3 Interests of procedural economy

In **T 887/98** the board held that remittal was not justified: the appellant (patent applicant) had indeed been able to put forward his arguments in proceedings at both first and second instance, and had been given plenty of time to study a document D2 before the oral proceedings. Furthermore, the examining division had found another document to be prejudicial to inventive step, so introducing D2 into the proceedings before it would not affect its decision. For these reasons, plus considerations of procedural economy, the board refused the appellant's request for remittal.

In the interests of overall procedural economy and effectiveness, the board in **T 473/98** (OJ 2001, 231) also found it entirely appropriate and desirable that an opposition division should include in the reasons for a revocation decision pursuant to Art. 102(1) EPC 1973 employing the standard decision formula, by way of obiter dicta, findings which could obviate a remittal in the event of the revocation being reversed on appeal. See also **T 915/98**. In **T 275/99** the board stated that, from a purely procedural point of view, no objection could be made to the fact that the examining division had left open the issue of inventive step in the appealed decision, and the case was remitted.

In **T 839/05**, since the amendments were of a different nature for each auxiliary request, a possible consequence of remittal could have been further remittals on subsequent appeal proceedings, which would unduly lengthen the proceedings. Thus, with due consideration made for procedural economy and to avoid further delay, the board decided not to remit the case but to decide on it itself in accordance with Art. 111(1) EPC 1973.

### 7.6.4 Final decision reached after expiry of patent

In **T 249/93** the board confirmed that remittal lay within the discretion of the board. Where remittal might mean that a final decision was not reached until after the expiry of the patent, the board would be inclined to decide the issue itself, unless there were strong reasons for not doing so.

### 7.6.5 Fresh case

See also in this chapter IV.E.7.4.2 "Violation of right to be heard".

According to **T 83/97** it is not mandatory for the appellate instance to remit every time a fresh case is raised before it, i.e. the right to two instances might not in each and every procedural situation be an absolute right of the parties concerned. (In fact, the matter was remitted as the board found that it would have been a violation of Art. 113 EPC 1973 to have given a final decision on all outstanding substantive matters against the requests

of the parties, who had had no advance warning of such a procedural possibility, and in view of the long-standing practice of the boards of appeal).

In **T 1007/05** new documents had been introduced into the proceedings and discussed. Under these circumstances the board held that it would only be reasonable to remit a case which had been extensively discussed if exceptional circumstances justified this action, for instance if the introduction of documents into the proceedings had created an entirely new situation. See also **T 1864/09**.

#### 7.6.6 Article 32 TRIPS

Nor does Art. 32 TRIPS limit the board's discretion concerning remittal. In **T 557/94** the board held that Art. 32 TRIPS (which provides for the judicial review of any decision to revoke a patent) did not oblige the reviewing instance to remit the case to the department of first instance, where the department of first instance did not revoke the patent and the reviewing instance intended to deviate from the decision of the first instance. Art. 111 EPC 1973 empowered the board to decide on the merits of the case without restriction and it would be alien to at least the majority of legal systems in the EPC contracting states to limit the power of the reviewing instance in such a way that - dependent upon the "result" of the decision under attack - it would be bound to remit the case to the department of first instance. Nor could it be assumed that the states negotiating TRIPS intended the introduction of such a limitation. This was approved in **G 1/97** (OJ 2000, 322).

#### 7.6.7 Circumstances to be taken into account

In **T 265/05**, the board explained that, when exercising its discretion under Art. 111(1) EPC 1973 either to decide or to remit the case, the board should take account of its particular circumstances and the parties' wishes (here the parties requested the board to decide the case). Given that the opposition division would have had to carry out any further examination of its own motion without the participation of the respondents, the only compelling reason the board could see for not allowing the request immediately itself would be a situation of prima facie lack of patentability based on the available information, or a situation of fundamental uncertainty because of lack of information. As this was not the case, the board chose to exercise its discretion under Art. 111(1) EPC 1973 to decide the case itself.

### **7.7. Binding effect of decision remitting case to department of first instance**

#### 7.7.1 General

Under Art. 111(2) EPC the EPO department of first instance is bound by the ratio decidendi of the board of appeal if the case is remitted to the department whose decision was appealed in so far as the facts are the same. If the decision under appeal was taken by the Receiving Section, the Examining Division shall also be bound by the ratio decidendi of the board of appeal.

The ratio decidendi of a decision under Art. 111(2) EPC 1973 is the ground or the reason for making it - in other words, the point in a case which determines the outcome of the judgment (**T 934/91**, OJ 1994, 184). It is not contained in the order but in the section "Reasons for the Decision" and it is thus of no importance for its binding effect that a particular matter is not mentioned in the order (**T 436/95**).

"Res judicata" means a matter finally settled by a court of competent jurisdiction, rendering that matter conclusive as to the rights of the parties and their privies, such a final judgment constituting an absolute bar to a subsequent legal action involving the same claim, demand or cause of action, and the same parties or their privies (**T 934/91**, OJ 1994, 184).

The fact that the boards of appeal are courts was established in **G 1/86** (OJ 1987, 447, point 14 of the Reasons, German and French versions - the Enlarged Board of Appeal held that the English translation, "act as courts", was inaccurate).

#### 7.7.2 Department of first instance bound by decision of board of appeal

Under Art. 111(2) EPC the EPO department of first instance is bound by the ratio decidendi of the board of appeal if the case is remitted to the department whose decision was appealed. Thus, when after remittal the proprietor files new requests which require examination to be re-opened on issues that have already been judged upon by the board of appeal, without the justification that might be provided, for example, by the proprietor's being faced with a new situation, then such requests should be deemed inadmissible (**T 383/11**).

For the avoidance of doubt, the board in **T 366/92** pointed out that according to Art. 111(2) EPC 1973 the examining division was bound by the board's decision only to the extent that it had been decided that the subject-matter of Claim 1 was novel when compared with the prior art known from D2 and that the claim met the requirements of Art. 84 and 123(2) EPC 1973. See also **T 255/92**.

According to **T 934/91** (OJ 1994, 184), boards of appeal have the power to apportion and also to fix costs: Art. 104(1) and (2) and 111(1) EPC 1973, having due regard to Art. 113(1) EPC 1973. Such a decision constituted an absolute bar to the opposition division's considering afresh, let alone deciding upon, either the fact or the quantum of the apportionment, or their reviewing the reasons (ratio decidendi) for which the apportionment had been made. The board found that the purported decision of the opposition division on this point was in law a mere communication of the clear and immutable legal position brought about by the earlier decision of a final court of competent jurisdiction, namely, the technical board of appeal.

However, a board of appeal decision has the binding effect referred to in Art. 111(2) EPC only if the case is remitted to the department of first instance. A board of appeal decision in another case is not binding on the department of first instance (see **T 288/92**; and also **J 27/94**, OJ 1995, 831).

### 7.7.3 Opposition proceedings following remittal to examining division

A decision by a board of appeal on an appeal from an examining division decision is not binding in subsequent opposition proceedings or on appeals therefrom, having regard both to the EPC and to the principle of *res judicata* (**T 167/93**, OJ 1997, 229). The binding effect is also not restricted to cases where the composition of the board remained unchanged (**T 436/95**). Following **T 167/93**, the board in **T 1099/06** pointed out that opposition proceedings are separate and distinct from examination proceedings and are characterised by the nature of the public interest. The legislative and procedural framework has quite clearly been designed to allow the public interest in challenging granted patents by opposition to take priority over any considerations of certainty or apparent consistency. The board pointed out that to the extent this principle is recognised in the law of the EPC, it is of extremely narrow scope and must meet the six criteria set out in **T 167/93** (OJ 1997, 229) - the issue must have been (a) judicially determined; (b) in a final manner, (c) by a tribunal of competent jurisdiction; (d) where the issues of fact are the same; (e) the parties (or successors in title) are the same; and (f) the legal capacities of the parties are the same. Thus a decision in earlier examination appeal proceedings could not be *res judicata* in subsequent opposition appeal proceedings, the criteria (c), (e) and (f) not being satisfied.

Under Art. 111(2) EPC 1973, if a board of appeal remitted a case for further prosecution to the department whose decision was appealed, that department was bound by the *ratio decidendi* of the board in so far as the facts were the same. After grant, however, the opposition division was in no way legally bound by the previous decision of the board, on an appeal from the examining division, even in so far as the facts were the same, although it should not deviate from a previous decision of a board of appeal on such a point, unless there appeared to be very clear reasons for doing so (**T 26/93**).

### 7.7.4 Board of appeal bound in subsequent appeal proceedings following remittal

See also in this chapter IV.E. 2.2.4 "Appeals against decisions of the boards of appeal".

The problem of being bound by an earlier board of appeal decision where a case is remitted also arises in connection with a subsequent appeal against the ensuing decision.

The boards of appeal take the view that a binding effect also exists in this case (see, for example, **T 21/89**, **T 78/89**, **T 55/90**, **T 757/91**, **T 113/92**, **T 1063/92**, **T 153/93** and **T 1545/08**), often on the basis that board of appeal decisions are final and without appeal, so that no EPO body - not even boards of appeal - can take a new decision on facts which have already been decided. In **T 690/91** the argument was that the same binding effect applied to any subsequent appeal proceedings since, according to Art. 111(1) EPC 1973, the board might exercise the same power as was within the competence of the department which was responsible for the decision appealed. Art. 111(1) EPC remains unchanged. The board found that a board was bound in the second of two successive *ex parte* appeal proceedings by the *ratio decidendi* of the decision in the first appeal proceedings where the facts remained the same. It was to be

assumed that this was the case where there was no connection between a feature amended during the second proceedings and findings of the first board of appeal playing a key role in the decision.

See also **T 720/93** for the extent to which a board considered itself bound by an earlier board of appeal decision in the same case. Although the claim pending before the board represented different facts from in the first proceedings since it was a different type of claim and contained a number of different features, the board found some findings of the first decision binding for the second proceedings.

The board in **T 843/91** (OJ 1994, 818) pointed out that there were no provisions in the EPC 1973 allowing an appeal against a decision of a board of appeal. Decisions of the boards of appeal were final, as a decision can only be contested where it is expressly provided for under statute. When the first board of appeal delivered its decision, the content and text of the patent claims became *res judicata* and could no longer be amended in proceedings before the EPO (see also **T 153/93**). Under the EPC 2000, the Enlarged Board of Appeal has been given competence to decide on petitions for review under Art. 112a EPC, in order to make possible a limited judicial review. Thus decisions of the boards of appeal can now be contested, but only on limited grounds (see Chapter IV.F.3 "Petition for review under Article 112a").

#### 7.7.5 Type of remittal

##### a) Divisional applications

The principle of *res judicata* also applied in the case of a divisional application when a decision on the same subject matter had been taken by a board of appeal in the case of the parent application (**T 51/08**). Thus, subject matter on which a final decision had been taken by a board of appeal in the parent application could not be pursued in the divisional application. Furthermore, if the statement setting out the grounds of appeal in a case did not go beyond submitting and arguing for a set of claims which constituted such subject matter, the appeal was not sufficiently substantiated.

##### b) Remittal only for adaptation of the description

In **T 757/91** the board decided that if, after the case was remitted, the only issue still outstanding was the adaptation of the description to the amended claims which were held valid in the first appeal proceedings, that issue was the only one which could be considered in further appeal proceedings. When the first board of appeal delivered its decision, the content and the text of the patent claims became *res judicata* and could no longer be amended in proceedings before the EPO (see also **T 55/90**, **T 843/91**, OJ 1994, 832 and **T 113/92**).

Remittal for the description to be amended does not render it possible for an opponent to challenge substantive patentability again by appealing the opposition division's decision after remittal, where a final decision has been taken on this and the scope of the patent (**T 1063/92**).

On remittal the board had made no mention of any adaptation of the description that might be necessary. The patentee proposed amendments to the description which were accepted by the opposition division. The opponent appealed against this decision, challenging the novelty and clarity of the claims as already decided upon by the board of appeal. Following **T 843/91** (OJ 1994, 832), the board in **T 153/93** found that all findings of fact that were a *conditio sine qua non* of the finally binding parts of the decision were *res judicata* with the result that new facts, evidence or arguments seeking to cast doubt upon these facts could not be considered either by the opposition division or the board of appeal.

c) Board's silence on adaptation of description

Where the board, in the decision remitting the case to the department of first instance, is silent on the question of the adaptation of the description, this does not necessarily imply that no adaptation is required, but merely that the matter was not considered or decided. The point is therefore not *res judicata* and so can be raised in a subsequent appeal (**T 636/97**).

d) Remittal for the continuation of proceedings

Where a board of appeal issued a decision rejecting certain claimed subject-matter as not allowable and remitted the case for further prosecution in accordance with an auxiliary request, under Art. 111(2) EPC 1973, the examination for allowability of the rejected claimed subject-matter could not be re-opened, either by the examining division during its further prosecution of the case, or by the board of appeal in any subsequent appeal proceedings (**T 79/89**, OJ 1992, 283; see also **T 21/89**).

In the opposition proceedings following the remittal for continuation of the proceedings, an amendment of the patent claims could change the actual basis of an appeal decision. In such a case the binding effect of Art. 111(2) EPC 1973 no longer applied. This differed from the situation where the case was remitted for adaptation of the description - here the previous instance was bound by the *ratio decidendi* of the board's decision, and the decision on the patentability of the claims was final, even if the facts had changed (**T 27/94**).

Art. 111(2) EPC 1973 stated unambiguously that the department of first instance and the board of appeal which was again concerned with the case were bound by the *ratio decidendi* of the remitting decision only "in so far as the facts are the same". The opposition division was thus not bound by the first decision if new claims were submitted which were not in conflict with the *ratio decidendi* of the decision. The situation was different if the board had dismissed the decision under appeal and remitted the case to the department of first instance with the order to maintain a patent with claims whose wording had been defined by the board. In such a case the department of first instance was not entitled to admit amended claims, since they were part of the *res judicata* of the decision of the board (**T 609/94**).

## 8. Reimbursement of appeal fees

### 8.1. Introduction

According to R. 103(1)(a) EPC (R. 67 EPC 1973) the reimbursement of appeal fees shall be ordered in the event of interlocutory revision or where the board of appeal deems an appeal allowable, if such reimbursement is **equitable** by reason of a **substantial procedural violation**.

R. 103(1)(b) EPC, introduced with the EPC 2000, goes some way towards compensating for the lack of a cross-appeal facility. Appeals filed as a precaution – in case the other party appeals – can be withdrawn if the other party does not file an appeal, at an early stage of the proceedings, during the period between the expiry of the respective periods for filing the notice of appeal and filing the statement of grounds of appeal, i.e. before any great expense or effort on the part of the parties or the EPO.

R. 103(2) EPC, introduced by decision of the Administrative Council of 13 December 2013 (CA/D 16/13; OJ 2014, A3), provides for a reimbursement of the appeal fee at 50% if the appeal is withdrawn after expiry of the period under R. 103(1)(b) EPC, provided withdrawal occurs (a) if a date for oral proceedings has been set, at least four weeks before that date or (b) if no date for oral proceedings has been set, and the board has issued a communication inviting the appellant to file observations, before expiry of the period set by the board for filing observations.

R. 103(3) EPC (formerly R. 103(2) EPC) governs the competence of the department of first instance and of the board of appeal in the matter of the reimbursement of the appeal fee and codifies the case law of the Legal Board of Appeal (**J 32/95**, OJ 1999, 733; see in this chapter IV.E.8.5.2 "Competence to decide on reimbursement").

For the rules formally applicable to patent applications pending on the date of entry into force of the EPC 2000, see **J 10/07** (OJ 2008, 567); for the applicability of R. 103(1)(b) EPC see **T 2052/08**.

### 8.2. General issues

#### 8.2.1 Absence of request for reimbursement – examination ex officio

The boards may, even in the absence of a request to this effect, examine ex officio whether the reimbursement of the appeal fee is equitable by reason of a substantial procedural violation (**J 7/82**, OJ 1982, 391; **T 271/85** of 22.3.1989; **T 346/88**, **T 598/88**, **T 484/90**, OJ 1993, 448, and **T 736/14**).

## 8.2.2 Distinction between an appeal deemed not to have been filed and an inadmissible appeal

For the issue of reimbursement of the appeal fee the distinction between an appeal not deemed to have been filed and an inadmissible appeal is relevant. As a general rule, in the former case, the appeal fee is reimbursed; in the latter case, it is not.

### a) Appeal deemed not to have been filed due to late payment of the appeal fee

Reimbursement of the appeal fee is ordered if an appeal is deemed not to have been filed because the **appeal fee** was not paid in due time in accordance with Art. 108, second sentence, EPC 1973. In this case, since the purpose of the fee cannot be achieved, the fee must be repaid without the board of appeal having to make any specific order to that effect (**J 21/80**, OJ 1981, 101; **J 16/82**, OJ 1983, 262; **T 324/90**, OJ 1993, 33 and **T 239/92**). However, in **T 79/01**, **T 1289/10**, **T 1535/10** and **T 2210/10**, where the appeal fee had also been paid late, reimbursement of the appeal fee was not ordered (see **T 1553/13**, OJ 2014, A84). See also in this chapter IV.E.8.2.4.

In **J 18/12** the Legal Board held that the final non-existence of the patent application in a substantive sense did not mean that the appeal proceedings had not come into existence (as opposed to the legal fiction of non-existence when an appeal was deemed not to have been filed). This situation regularly arose in proceedings before the EPO, e.g. where a decision of the Receiving Section not to accord a filing date was appealed.

### b) Notice of appeal not filed in due time

An appeal can only be said to have been filed, i.e. has come into existence, if the notice of appeal was filed in due time and the appeal fee was paid in due time (see **T 445/98**). The appeal fee is reimbursed in a case where only the appeal fee was paid but the **notice of appeal** was not filed in due time because in such a case no appeal has ever existed (**T 696/95** citing **T 371/92**, OJ 1995, 324; see also **T 41/82**, **T 778/00**, **T 1479/09**, **T 377/11**; see also **T 2274/11**).

### c) Appeal inadmissible

When an appeal is filed but inadmissible it has come into existence and it is in principle not possible to repay the appeal fee (**T 445/98**, see also **J 16/94**, **T 372/99**; **T 752/05**). For the distinction between the existence of an appeal and the admissibility of an appeal, see also **T 460/95** (20.10.1997) and **T 778/00**, OJ 2001, 554.

The appeal fee cannot be refunded on the basis that no statement of grounds was filed, or it was filed too late (**T 13/82**, OJ 1983, 411; **T 324/90**, OJ 1993, 33, **T 576/93**). This also applies where the grounds of appeal have deliberately not been filed in order to make the appeal inadmissible (**T 89/84**, OJ 1984, 562; **T 543/99**).

In **J 15/01** the board ruled that the fact that an appeal was against a communication, as opposed to a decision under Art. 106(1) EPC 1973, did not justify refunding the appeal

fee. If - as in the case before it - the board concluded that there had not been an appealable decision under Art. 106(1) EPC 1973, this made the appeal inadmissible but did not mean it had never existed, the requirements under Art. 108 EPC 1973 having been met. The appeal fee could not therefore be refunded.

Only in exceptional circumstances can the appeal fee be reimbursed in the case of an inadmissible appeal (see **J 38/97** concerning a violation of the principle of the protection of legitimate expectation, see in this chapter IV.E.8.6.3).

#### d) Translation of notice of appeal

In **T 323/87** (OJ 1989, 343) the translation of the notice of appeal had not been filed in due time. The board held that, pursuant to Art. 14(5) EPC 1973, the notice of appeal was deemed not to have been filed, and ordered reimbursement of the appeal fee. In **T 1152/05** it was also decided that, since the appeal of the patent proprietor was deemed not to have been filed, it followed that the appeal fee was paid without reason and had to be reimbursed. In **T 126/04**, on the other hand, the board decided that failure to file a translation of the notice of appeal in due time meant that the appeal was inadmissible.

#### 8.2.3 No legal ground for payment

The grounds for reimbursement listed in R. 103(1) EPC aside, fees may also be refunded if there was no legal ground for their payment, e.g. in the event of payment by mistake or overpayment, see Art. 12 RFees e contrario (**T 1284/09**).

#### 8.2.4 Reimbursement of the appeal fee in case of a request for re-establishment

In **T 1192/07** the request for re-establishment in respect of the time limit for paying the **appeal fee** was refused. As a result, the appeal was deemed not filed because the appeal fee had not been paid in time. Therefore, the appeal fee had to be refunded. In **T 1465/08** the board refunded the appeal fee in a case where the request for re-establishment in respect of the time limit for paying the appeal fee was deemed not to have been filed with the consequence that the appeal was deemed not to have been filed. In **T 257/07** the request for re-establishment in respect of the time limit for filing the **notice of appeal** was refused, and therefore the appeal was deemed not to have been filed and the appeal fee reimbursed (see also **T 1962/08**). In **T 1289/10** the board rejected the request for re-establishment in respect of the time limit to file a notice of appeal and pay the appeal fee. The appeal was dismissed as inadmissible; the appeal fee was not reimbursed.

#### 8.2.5 Appeal withdrawn

Under the EPC 1973, when appeal proceedings were terminated by the withdrawal of the appeal, R. 67 EPC 1973 was in general not applicable (see **J 12/86**, OJ 1988, 83; **T 41/82**, OJ 1982, 256; **T 773/91**, **J 30/94**; **T 372/99**; **T 543/99**; **T 1216/04**, **T 552/07**; for exceptions to this rule in case of a violation of the principle of the protection of legitimate expectations see **J 30/94** and **T 308/05**).

Under the EPC 2000, however, the appeal fee is reimbursed if the appeal is withdrawn before the filing of the statement of grounds of appeal and before the period for filing that statement has expired (R. 103(1)(b) EPC). For cases where this provision was first applied, see **T 1495/08**, **T 2052/08**, **T 1822/09**. If the withdrawal of the appeal occurs after the expiration of the period for filing the statement of grounds, reimbursement is not possible under R. 103(1)(b) EPC (**T 1527/09**), even if the withdrawal was only one day late (**T 1613/08**). For a case in which the **application** was withdrawn after the expiration of the period for filing the statement of grounds and the appeal fee was thus not reimbursed, see **T 683/08**.

According to R. 103(2) EPC, as amended on 13 December 2013 (CA/D 16/13; OJ 2014, A3), the appeal fee is reimbursed at 50% if the appeal is withdrawn after expiry of the period under R. 103(1)(b) EPC and certain conditions are met (see in this chapter IV.E.8.1). These rules apply to appeals pending at their entry into force, i.e. on 1 April 2014, and to appeals filed thereafter. In **T 1086/09** the board held that a letter received on 28 March 2014 stating that the appeal should be withdrawn "hereby" would mean that the appeal was withdrawn on 28 March 2014, and thus no longer pending on 1 April 2014. In **T 370/11** the board held that the 50% are to be calculated on the basis of the appeal fee actually paid, and not on the basis of the rate of the appeal fee applicable on the date of withdrawal or reimbursement.

#### 8.2.6 Intervention in opposition appeal proceedings

In **T 791/06** the intervention of appellant III was considered, by the board, to be an admissible intervention in opposition appeal proceedings, and so only the required opposition fee needed to be paid, as established by **G 3/04**. Hence there was no legal basis for retaining the appeal fee, which in any case had been paid as a precaution. The board concluded that the appeal fee paid by the intervener should be reimbursed.

#### 8.2.7 Several appellants

In **T 552/97** the board interpreted R. 67 EPC 1973, looking in particular at the English text, as meaning that, where several appeals have been filed, each appellant's appeal fee may be reimbursed if such reimbursement was equitable.

### 8.3. Allowability of the appeal

R. 103 EPC stipulates as a precondition for reimbursement that the appeal must be allowable. It is clear from the wording and purpose of the provision that "allowable" is to be understood to mean that the board of appeal, in substance at least, "follows" the relief sought by the appellants, in other words allows their requests (**J 37/89**, OJ 1993, 201; **T 863/08**; **T 1111/09**). The fact that the appeal is allowed only in part is no impediment to a refund (**J 18/84**, OJ 1987, 215; see also **T 129/01**; **T 604/01**; **T 863/08**, **J 1/13**). However, in special circumstances the appeal fee is reimbursed even if the appeal is not allowed (see in this chapter IV.E.8.2.2.a)).

## 8.4. Substantial procedural violation

According to R. 103 EPC (R. 67 EPC 1973) it is one of the preconditions for reimbursement of the appeal fee that a substantial procedural violation has taken place.

### 8.4.1 Definition

A "substantial procedural violation" is an objective deficiency affecting the entire proceedings (**J 7/83**, OJ 1984, 211). Whether or not there is a substantial procedural violation is to be determined on an objective basis (**J 32/95**, OJ 1999, 733; **T 160/09**).

#### a) Violation must be of procedural nature

In **T 12/03** the board stated that a substantial procedural violation is an objective deficiency in the procedure in the sense that the rules of procedure have not been applied in the manner prescribed by the Convention. According to **J 6/79** (OJ 1980, 225), the giving of incorrect information by the EPO about the rules of procedure, which, if followed by the applicant, could lead to the same consequences as the incorrect application of those rules, could also be considered as lying within the scope of a "procedural violation". In **T 690/06** the board held that an error of judgment on substantive issues by the examining division did not constitute a "procedural" violation (see also **T 698/11**). See also in this chapter IV.E.8.4.5.

#### b) Violation must be substantial and affect the entire proceedings

In **T 682/91** the board of appeal emphasised that a procedural violation which did not adversely affect the rights of the parties could not be considered substantial. The seriousness of a procedural violation derived from its adverse effects.

In **J 14/99**, as in **J 15/99**, **J 21/98** (OJ 2000, 406), **J 22/98** and **J 6/99**, it was decided that a procedural violation which had not played any part in the decision could not be considered substantial (see also **T 2385/10**). In **T 2249/08** the board found it a requirement that the criticised discretionary decision of the department of first instance was decisive for the outcome of the decision under appeal (see also **T 1340/10**).

In **T 1740/06** the board held that the procedural violation of the right to be heard in the case at issue was not substantial. None of the cited circumstances suggested that the examining division could have arrived at any other outcome than the rejection of the application if the proceedings had been conducted correctly.

In **T 5/81** (OJ 1982, 249) it was stated that an alleged violation affecting a part of the decision other than its ratio decidendi could not be a substantial violation within the meaning of R. 67 EPC 1973 (see also **T 959/00**).

In **T 990/91** the board held that, since there was no need for the examining division to put the new argument, which was supererogatory and incidental, forward in its decision in order to refuse the application, the lack of opportunity to reply to it could not be

considered to be a procedural violation, let alone a substantial one sufficient to warrant the reimbursement of the appeal fee (see also **T 1085/06**).

In **T 725/05** the board examined whether or not a party to inter partes proceedings can be adversely affected by an obiter dictum contained in a decision of an opposition division. The board referred to **T 473/98** (OJ 2001, 231) where it was decided this was not the case and that the inclusion of an obiter dictum was appropriate for an opposition division as it may obviate the need for remittal.

In **T 712/97** the board held that the opposition division had considered the respondent's experimental report, but had not relied on it in a way adverse to the appellant. Therefore, the refusal to admit the appellant's experimental report into the proceedings, while a violation of the appellant's right to present comments on the respondent's experimental report, had no substantive effect on the outcome of the proceedings and did not amount to a substantial procedural violation.

In **T 219/93** the board remitted the case to the department of first instance since it clearly called for revision under Art. 109 EPC 1973. The contested decision had also been inadequately reasoned on one point within the meaning of R. 68(2) EPC 1973. Nevertheless, the board decided not to reimburse the appeal fee because the refusal had been made principally on other grounds, and the board did not consider the procedural violation to be so substantial within the meaning of R. 67 EPC 1973 that the reimbursement would be equitable.

In **T 107/05** the board held that the opposition division had overlooked the opponent's arguments as regards E5. The lack of consideration of the opponent's arguments on this document had not been conclusive for the outcome of the appealed decision (this distinguished the case at issue from **T 135/96**). The mistake made by the opposition division could be regarded as a procedural violation but in this particular case not as a substantial one.

In **T 689/05** and **T 933/10** the boards held that the examining division's rejection of the applicant's request that the oral proceedings be held in Munich instead of The Hague had to be reasoned, R. 111(2) EPC, R. 68(2) EPC 1973. In **T 933/10** it was held that this violation justified the reimbursement of the appeal fee. However, in **T 689/05** the board held that the established procedural violation did not affect the entire proceedings before the examining division. The missing part of the reasoning concerning the transfer of the oral proceedings to Munich had no influence on the reasons for refusing the application. It would have been disproportionate to set aside the entire impugned decision because of the partial lack of reasoning of the decision under appeal. In **T 1142/12** the board rejected the appellant's argument that under Art. 116 EPC the parties have not only a right to oral proceedings but also the right to have their case heard at the proper place (here, Munich instead of The Hague). Therefore, according to the board no substantial procedural violation occurred.

In **T 677/08** the board held that, by not allowing the video conference, the examining division took a procedural decision by which the appellant was adversely affected.

Failing to address some of the appellant's arguments was a procedural violation. However, the board did not consider the procedural violation to be fundamental. In the communication, the examining division gave a reason why the video conference was not allowed, namely that there was no video conference room available on the given date. The request was thus not refused arbitrarily but based on a legitimate criterion. Failing to address the appellant's arguments was not a deficiency affecting the entire procedure.

In **T 1607/08** (see also **T 2246/13**) a procedural violation of the principle of the protection of legitimate expectation occurred. Since this violation led to the revocation of the patent and came as a surprise to the patent proprietor, it constituted a substantial procedural violation. In **T 2321/08**, the examining division violated the procedure foreseen in Art. 94(3) EPC. This procedural violation was considered substantial because its immediate consequence was the refusal of the application.

c) Procedural violation must be committed by the department whose decision is under appeal

In **T 469/92** the alleged procedural violation was not an act of the opposition division, whose decision was the subject of the appeal, but instead that of the examining division. Even if such an act were in breach of the procedural requirements of the Convention, a board of appeal would not have the power to order reimbursement.

In **T 1875/07** the board stated that a substantial procedural violation can only be committed by one of the departments charged with the procedure mentioned in Art. 15 EPC 1973 but not by the President acting under Art. 10 EPC 1973. Therefore, the non-disclosure to the public of the details of a system for performance evaluation for examiners cannot amount to a substantial procedural violation.

#### 8.4.2 Oral proceedings

a) Request for oral proceedings

The refusal of a request for oral proceedings usually amounts to a breach of the right to be heard, and as such, a violation justifying the reimbursement of the appeal fee (**T 209/88**, **T 283/88**, **T 598/88**, **T 668/89**, **T 663/90**, **T 766/90**, **T 795/91**, **T 35/92**, **T 686/92**, **T 556/95**, **T 647/99**).

According to **T 405/96**, there is a substantial procedural violation justifying the reimbursement of the appeal fee where, despite a request by the appellants, no oral proceedings have been convened. In the case in point, receipt of the request by the EPO was proven by the appellants' producing a duly stamped acknowledgment of receipt. The fact that the department of first instance could not be held responsible for the loss within the Office was irrelevant. The same applied to the failure by the opposition division, because of an oversight, to hold oral proceedings in response to a clear request by the appellants (**T 671/95**).

Failure to summon the parties to oral proceedings was considered to be a substantial procedural violation in **T 209/88** and **T 93/88** (see also **J 16/02**). In **T 560/88** the board of appeal held that there was a substantial procedural violation where a clear auxiliary request by the appellant for oral proceedings had not been granted (see also **T 543/92**).

In **T 19/87** (OJ 1988, 268), however, the board held that the finding - albeit wrong - that there had been no request for oral proceedings was not a procedural violation within the meaning of R. 67 EPC 1973. Furthermore, failure to seek clarification from the appellant did not constitute a breach of any procedure.

In **T 731/93** the board held that the refusal of a request for **further** oral proceedings constituted a substantial procedural violation where fresh evidence had been admitted.

b) Submissions of parties as response to summons

In **T 1183/02** (OJ 2003, 404) the board held that a response to a summons to oral proceedings before the examining division which contained good faith responsive amendments and arguments did not stay the summons. Hence omitting to confirm that the summons remained valid did not constitute a substantial procedural violation within the meaning of R. 67 EPC 1973.

In **T 343/08** the board stated that there is no general duty for an examining division to provide feedback on an applicant's reply to a summons to oral proceedings, in advance of such oral proceedings.

c) Request for interview

In **T 182/90** (OJ 1994, 641), **T 119/91**, **T 523/91**, **T 366/92**, **T 397/94** and **T 245/15** the boards of appeal stated that it was not a substantial procedural violation within the meaning of R. 67 EPC 1973 if a request to be called back by or have an interview with the primary examiner was ignored. It was for the examiner's discretion whether to conduct such informal discussions in accordance with the Guidelines, bearing in mind the particular circumstances of the case (see also **T 300/89**, OJ 1991, 480).

d) No reasons for refusal of request for postponement

In **T 1505/06** the board held that the failure of the opposition division to include in its decision its reasons for refusing the request for postponement was a substantial procedural violation.

e) Minutes

In **T 642/97** a party alleged that the minutes were incomplete or wrong since essential submissions were not reflected in the file. The board held that the party could request the opposition division to correct the minutes to preserve its rights (**T 231/99**). In the absence of such a request, the allegation of a substantial procedural violation could not be justified (see also **T 99/08**).

In **T 835/10** (referring to **T 437/98**) the appellant alleged that new arguments had been given in the decision of the examining division. The board did not agree and stated that the minutes gave a summary of what was discussed and did not have to expand the different steps of the reasoning given in writing later.

In **T 685/14** the appellant stated that it had not, contrary to R. 124 EPC, received a copy of the minutes of the oral proceedings before the examining division. Therefore, he had not known to which auxiliary request the appealed decision referred. The board took the view that the failure to transmit the minutes was a procedural deficiency but, per se, not a fundamental one. A party should be in a position to file an appeal based on its own notes. Although the decision did not contain the complete wording of the auxiliary request, some features were reproduced, which allowed the appellant to assess whether these reasons applied to its personal copy of the auxiliary request. Moreover, even after having received the minutes, the appellant had neither challenged their consistency with the decision, nor extended its case by any additional considerations. The board dismissed the appeal and refused the request for reimbursement of the appeal fee.

In **T 853/10** the board held that, when judging whether a substantial procedural violation occurred during the oral proceedings, the board could rely only on the minutes of the oral proceedings, which were not disputed by the patent proprietor (see also **T 642/97**), and on the facts agreed upon by all parties.

#### 8.4.3 Right to be heard

The right to be heard (see Chapter III.B) is an important procedural right intended to ensure that no party is caught unawares by reasons given in a decision turning down his request on which he has not had the opportunity to comment. A decision which fails to take into account the arguments submitted by a party and which is based on a ground on which the party had had no opportunity to present its comments, contravenes Art. 113(1) EPC and constitutes a substantial procedural violation, see among many other cases **J 7/82** (OJ 1982, 391); **J 14/82** (OJ 1983, 121), **T 197/88** (OJ 1989, 412), **T 716/89** (OJ 1992, 132), **T 197/91**, **T 640/91** (OJ 1994, 918), **T 734/91**, **T 880/91**, **T 392/92**, **T 892/92** (OJ 1994, 664), **T 951/92** (OJ 1996, 53), **T 1045/92**, **T 1101/92**, **T 220/93**, **T 479/94**, **T 778/98**, **T 594/00**, **T 1039/00** and **T 203/15**.

Other violations of Art. 113(1) EPC may also constitute a substantial procedural violation, see the various cases listed in Chapter III.B.2. For a case in which the board found a violation of the right to be heard but held that a reimbursement was not equitable, see **T 433/08** (see in this chapter IV.E.8.6.1).

The infringement of Art. 113(2) EPC has, in principle, also to be considered to be a substantial procedural violation justifying the reimbursement of the appeal fee (see **T 647/93**, OJ 1995, 132; see also **T 32/82** and **J 19/84**), for example when the final requests were not clarified (**T 666/90**, **T 552/97**, **T 1439/05**, **T 382/10**) or when the opposition division overlooked amended claims presented in a submission **T 543/92** and **T 89/94**). See Chapter III.B.3 "Text submitted or agreed by applicant (patent proprietor) - Article 113(2) EPC".

#### 8.4.4 Inadequate reasons given in the decision at first instance

The obligation to provide adequate reasoning in a decision in accordance with R. 111(2) EPC (R. 68(2) EPC 1973) is closely linked to the principle of the right to be heard under Art. 113 EPC (**T 1340/10**). A failure to do so is to be considered a substantial procedural violation justifying the reimbursement of the fee for appeal (see among many other cases **T 493/88**, OJ 1991, 380; **T 522/90**, **T 360/91** and **T 392/91**, **T 142/95**, **T 648/96**, **T 278/00**, **T 1016/00**, **T 604/01**, **T 362/02**, **T 749/02**, **T 427/03**, **T 571/03**, **T 897/03**, **T 316/05**, **T 1366/05**, **T 1612/07**, **T 1870/07**, **T 87/08**, **T 353/11**, **T 2366/11** and **T 129/14**).

In **T 75/91** the board stated that the impugned decision enabled the reader to follow a line of argument for refusing the application. Whether these reasons were convincing and had to be accepted by the board had nothing to do with a procedural violation. See also **T 698/10**, where the board added that the examining division was under no obligation to explicitly address every argument presented by the applicant as long as the reasoning given enabled the appellant and the board to examine whether the decision was justified or not. See also Chapter III.B.2.4 "Consideration of the parties' arguments in the written decision".

For cases concerning the obligation under R. 111(2) EPC, R. 68(2) EPC 1973, see Chapter III.K.4.2 "Reasons for the decision", and in particular Chapter III.K.4.2.3.

#### 8.4.5 Error of judgment by a department of first instance

A number of decisions discussed whether an error of judgment by a department of first instance could be regarded as a substantial procedural violation justifying reimbursement of the appeal fee (**T 19/87**, OJ 1988, 268; **T 863/93**; **T 107/05**; **T 1078/07**). See also IV.F.3.3.3 "Review of substantive law excluded".

In **T 367/91** the board stated that to base a decision only on a wrong assessment of prior art and/or the claimed invention had to be regarded as a substantive error, not a procedural violation (see also **T 144/94**, **T 12/03** and **T 1340/10**). In **T 17/97**, the appellant's request for reimbursement of the appeal fee was based on the fact that the opposition division had disregarded a document. In the board's judgment an erroneous assessment of the relevance of a document did not, by its very nature, constitute a procedural violation within the meaning of R. 67 EPC 1973.

The misinterpretation of a document does not constitute a procedural violation (**T 1049/92**, **T 162/82**, OJ 1987, 533, **T 1031/12**). In **T 588/92** the board pointed out that a different opinion on the specialist knowledge to be applied when interpreting the technical content did not amount to a procedural violation. Even a gross error of judgment on the part of the examining division does not justify reimbursement of the appeal fee (**T 860/93**, OJ 1995, 47). Misinterpretation of a letter to an EPO department constitutes an error of judgment and not a substantial procedural violation (**T 621/91**). In **T 970/10** the board held that an incorrect assessment of a document with regard to its

date of availability to the public related to a factual error in respect of the substantive requirements under Art. 54(2) EPC, and not to an error in respect of procedural law.

In **T 687/05** the board held that the fact that the decision under appeal was based on an incorrect interpretation of Art. 100(c) EPC 1973 did not constitute a "procedural" violation, but was simply an error in the application of the law (see also **J 8/13** and **T 378/14**). Nor does it amount to a procedural violation if the examining division wrongly finds that a claim is not sufficiently clear to comply with the requirements of Art. 84 EPC 1973, even where there has been a possible error of judgment and failure to seek clarification from the appellant (**T 680/89**).

The fact that a board comes to a different conclusion from the department of first instance does not by itself mean that the latter has committed a substantial procedural violation (**T 87/88**, OJ 1993, 430; **T 538/89**, **T 182/92**, **J 14/12**, **T 203/15**). In **T 208/00** the board considered that the department of first instance had to be granted a certain degree of latitude in exercising its power of discretion, which in this case it had not overstepped in a clearly inappropriate manner. It stated that it was not equitable to reimburse the appeal fee, especially as under the established case law of the boards of appeal (see **T 860/93**) not even "a gross error of judgment" by the department of first instance was regarded as justifying such reimbursement. In **T 248/00** the board decided that, where a late submission was not admitted, an irregularity had taken place if the department had exercised its discretion incorrectly, that is to say on the basis of irrelevant or arbitrary considerations (see also **T 1651/10**). The board held that, even if the non-admission might ultimately prove to be incorrect, such application of the law did not amount to a substantial procedural violation. The issue was, rather, whether the opposition division's discretion had been incorrectly exercised in not admitting a late-filed request.

Normally there is no procedural violation justifying reimbursement of the appeal fee if the wrong procedure is adopted in a situation where the EPC does not lay down clearly what procedure is to be followed and the case law has not yet established any settled practice (**T 234/86**, OJ 1989, 79). In **T 208/88**, OJ 1992, 22 the board held that taking a different line from an as yet isolated appeal decision - as opposed to established board of appeal case law - could not be regarded as a substantial procedural violation. In **T 494/07** the board held that if two apparently similar case constellations were decided differently, this could at most be regarded as an error of judgment. In the case at issue, the board held that not following an earlier board decision did not constitute a substantial procedural violation. In decision **T 875/98** the board noted that the Convention did not contain any rule of procedure which imposed on an opposition division an obligation to abide, in its decision concerning a certain case, by a decision in a different case. It held that a single decision did not establish a "case law" which had to be adhered to in another opposition case, not even if the subject-matter of the two respective cases was closely related. In **J 9/05** and **J 18/05** the board had to decide on the examining division's decisions that R. 69(1) EPC 1973 communications were deemed to have been duly delivered to the addressees on the tenth day following its posting. The board held in each case that whilst the examining division had evaluated the evidence as to the postal delivery incorrectly, this amounted to an error of judgment and could not be characterised as a procedural non-compliance, a prerequisite for the application of R. 67 EPC 1973.

#### 8.4.6 Cases concerning the decision-making process and the decision

##### a) Issuing of decision

###### (i) Issuing of decision before expiry of time-limit to comment

In **T 804/94** the board ruled that there had been a substantial procedural violation as the opposition division had issued a decision rejecting the opposition before **expiry of the four-month period** it had set for responding to its communication (see also **T 663/99**; see also Chapter III.B.2.5.2).

###### (ii) Excessive length of proceedings

In **T 823/11** the board held that the length of the proceedings before the examining division had been affected by unacceptable delays, in particular the delay of more than five years between the supplementary European search report and the examining division's first communication, and the delay of more than two years between the applicant's reply to the examining division's third communication and the summons to oral proceedings. The board considered the duration of the proceedings before the department of first instance of more than twelve years after entry into the European phase as excessive. According to the board, in **T 315/03** even a shorter delay of ten years in a much more complex opposition case had amounted to a substantial procedural violation. The board also referred to the judgment of the European Court of Human Rights in *Kristiansen and Tyvik AS v. Norway* (application No. 25498/08), in which the examination and (administrative) appeal proceedings of a patent application had taken a total of eighteen years. Taking into account the duration of patent protection of twenty years, the Court had found "the length of the administrative proceedings before the patent authorities" to be excessive because it "in effect rendered meaningless any exercise by them [the applicants] of their right of access to a court".

In **T 900/02** the board found that the extreme length of the delay - three years and seven months - between oral proceedings and the issue of a written decision amounted to a substantial procedural violation.

In **T 358/10**, the board found that it had taken an inordinately long time to draw up the contested decision and the minutes of the oral proceedings in writing and issue them to the parties. Sending the minutes 19 months after the oral proceedings had taken place and notifying the decision 22 months after its pronouncement at the end of those proceedings were inherently unacceptable procedural violations which, by themselves, sufficed to justify refunding the appeal fee (see also **T 243/87**, **T 563/11**).

In **T 1131/12** the board stated that, although a delay of five years between a last communication and the written decision would be wholly unacceptable, there was no causal link between this excessive delay and the outcome of the examining division's decision. Moreover, the appellant had only filed and substantiated the request for reimbursement shortly before the oral proceedings. For these reasons, the board refused the reimbursement request under Art. 12(1)(a) and (2) RPBA.

## (iii) Lack of competence

A decision taken by a department that is not competent amounts to a substantial procedural violation justifying the reimbursement of the appeal fee (see **T 2411/10** where the Receiving Section, and not the examining division, was competent to decide). A substantial procedural violation is deemed to have occurred if the decision has been taken by a formalities officer who was not competent to decide (**J 10/82**, OJ 1983, 94; **T 114/82**, OJ 1983, 323; **T 790/93**, **T 749/02**).

## (iv) Decision not approved by all members

In **T 225/96** the board ruled that to issue the parties with a draft decision not approved by all opposition division members present at the oral proceedings was a substantial procedural violation.

## b) Content of decision

## (i) Written decision deviates from oral decision

In **T 425/97** the board decided that any substantive deviation of the decision notified in writing from that given orally at the oral proceedings amounted to a procedural violation. **T 1365/09** held that a contradiction between the decision rendered at the oral proceedings and the written decision as sent to the parties contravened R. 111(1) EPC and amounted to a substantial procedural violation.

## (ii) Decision deviates from previous communication

In **T 2006/08** the board found that although the opposition division had expressed an opinion on the issue of sufficiency of disclosure in favour of the patentee in two communications, this opinion was clearly labelled as being preliminary and non-binding. The board also held that a preliminary, provisional opinion did not prevent a party from making its complete case. It was the responsibility of a party to ensure that the facts and evidence filed were not only unequivocally clear but also as complete as possible. If a party decided to retain or not to file further evidence to support its case, it would run the risk that an adverse decision might be issued based on the available (incomplete) evidence on file. The board rejected the request for reimbursement of the appeal fee.

In **T 980/06**, the contested decision had regarded a claim as patentable, whereas in the sole previous communication the examining division had taken a negative view. In such circumstances, a second communication would have been useful. However, its absence was not a "substantial" procedural violation.

## (iii) Failure to deal with objection

The board of appeal in **T 740/94** held that the failure of the opposition division to deal with an objection under Art. 100(b) EPC 1973 against an amended claim in its decision

to maintain the patent in amended form clearly constituted a substantial procedural violation (see **G 10/91**, OJ 1993, 420, point 19 of the Reasons).

(iv) Board decision containing similar facts not followed

In **T 494/07** the board held that the strict legal obligation to follow the ratio decidendi of a decision of a board (Art. 111(2) EPC 1973) was limited to the same application and the same instance whose decision has been contested in the appeal, but did not extend to other applications (or even to other instances in the same application). This was so even if the subject-matter of the two applications was highly similar (see **J 27/94**, OJ 1995, 831).

(v) Remarks on substantive matters in decision on admissibility

Remarks on substantive matters in a decision rejecting the opposition as inadmissible have no legal effect. Even if misleading, they do not represent a substantial procedural violation justifying the reimbursement of the appeal fee (**T 925/91**, OJ 1995, 469; see also **T 1051/92**).

(vi) Applying legal provision not yet in force

In **T 991/02** an opposition division decision was set aside for lack of a legal basis. The opposition division's application of a new rule, not yet in force in this case, constituted a substantial procedural violation.

c) Signature on decision and minutes

In **T 390/86** the board held that the written reasons for a decision delivered during oral proceedings could only be signed by members of the deciding body who had taken part in the oral proceedings (see also **T 563/11**). In **T 2076/11** the appeal fee was reimbursed as the written decision and the minutes of the oral proceedings were signed by the director of the organisational unit. See also Chapter III.B.2.8 "Changes in the composition of the opposition division after oral proceedings".

In **T 211/05**, the board took the view that for a person to take part in a decision when not entitled to do so (here the director signing the decision instead of the second examiner), resulting in failure to comply with the principle that the power to examine a patent application must not only be exercised personally but also be seen – by both the applicant and the public – to be exercised personally, constituted a substantial procedural violation, in particular because it deprived the applicant of his right to be heard by the full examining division.

d) Composition of opposition division under Art. 19(2) EPC

The board of appeal ordered reimbursement of the appeal fee in **T 382/92** because the composition of the opposition division had not complied with the requirements of Art. 19(2) EPC 1973. The chairman and one member of the opposition division had

already been members of the examining division which had decided on the application leading to the patent concerned (see also **T 939/91**, **T 960/94**, **T 825/08**, **T 1349/10**, **T 1700/10**, **T 79/12**).

e) Requests

(i) Obligation to reason refusal of request

According to **T 961/00**, it is a party's procedural right to file and maintain such requests as are regarded by the competent organ as unallowable or even inadmissible. If a party does so, then the competent organ has to give a decision on it (see **T 1105/96**, OJ 1998, 249), but cannot simply disregard it and deal with the case as if the request did not exist. This would constitute a substantial procedural violation (see also **T 234/86**, **T 484/88**, **T 155/88**).

In **T 1157/01** the decision under appeal had omitted to give reasons for the refusal of the higher ranking requests still pending before the examining division; this amounted to a substantial procedural violation (see also **T 488/94**; for opposition procedure see **T 234/86**, OJ 1989, 79).

(ii) Auxiliary requests and order of requests

In **T 883/07** the board held that in accordance with generally recognised procedural requirements, albeit not codified specifically in the EPC, once a higher order request was refused that request was off the table and the next request in the order chosen by the requester had to be considered as if it were the sole request. The examining division's failure to examine the auxiliary requests independently of the main request amounted to a substantial procedural violation within the meaning of R. 67 EPC 1973.

In **J 23/96** the board held that an auxiliary request was filed in case the main request was refused; the auxiliary request then took its place and had to be dealt with in the same decision. The examining division's failure to deal with the auxiliary request for re-establishment in the decision under R. 69(2) EPC 1973 (R. 112(2) EPC) amounted to a substantial procedural violation.

In **T 320/99** (referring to **T 1105/96**) the examining division considered the auxiliary request allowable, but nonetheless issued a decision refusing the main request and thus the application. The correct course of action would have been to issue a communication under R. 51(4) EPC 1973 based on the auxiliary request. The issue of the decision was a substantial procedural violation which justified the reimbursement of the appeal fee.

(iii) Requests not taken into account because of delay within EPO

In **T 231/85** (OJ 1989, 74) the board held that failure to take the applicant's requests into account as a result of a delay within the EPO (in this case six weeks) constituted a substantial procedural violation (see also **T 598/88**). In **T 205/89**, owing to a mistake by a formalities officer, a request for an extension of the time for submitting comments in

opposition proceedings never reached the opposition division, which therefore took its decision without considering the argument presented in the subsequently filed submission.

(iv) Requests not filed by correct party

In **T 1178/04** a procedural violation within the meaning of R. 67 EPC 1973 had occurred, in that the requests relating to the patentability of the claimed invention were made in the oral proceedings before the opposition division by a party to whom the opposition had been purportedly but invalidly transferred. These requests were inadmissible.

f) Amendments

In **T 246/08** the board stated that a refusal to allow amendments made in advance of any amendment being submitted could not be a reasonable exercise of discretion pursuant to R. 137(3) EPC (former R. 86(3) EPC 1973) and was ipso facto a substantial procedural violation (see also **T 872/90**).

In **T 121/06** the board held that issuing a communication under R. 51(4) EPC 1973 in which amendments were proposed which the applicant could not reasonably be expected to accept without further discussion constituted a substantial procedural violation.

In **T 901/10** the appellant implied that the way in which the examining division had applied R. 137(3) and (4) EPC amounted to a substantial procedural violation. The board agreed that it was an undesirably long delay that, after the application had entered the European phase, no examination report had been issued for six years. Nevertheless such delays, undesirable as they may be, do not oblige the examining division to be more lenient under R. 137 (3) EPC. The appeal fee was not reimbursed.

In **T 1354/13** the appellant argued that it was only informed during the oral proceedings before the examining division about the objection under R. 137(4) EPC, which did not leave sufficient time to prepare comments. The board held that an applicant who presents extensively revised claims at a late stage of the proceedings has to be prepared for the possibility that the admissibility of these claims will be considered under Art. 123 and R. 137 EPC. The request for reimbursement of the appeal fee was refused.

g) Partiality

In **T 900/02** the board stated that a suspicion of partiality must inevitably arise if a member of an opposition division, or any other first instance body, first solicits and then accepts employment with a firm in which a partner or other employee is conducting a case pending before that member, even if it occurred after oral proceedings had been held. This amounted to a substantial procedural violation.

In **T 585/06** the appellant (opponent) considered that the presence of a former member of the boards of appeal, as a consultant of the patent proprietor, at the oral proceedings

before the opposition division led to partiality of the opposition division. The board stated that the former member did not act as an authorised representative but only as consultant of the patent proprietor. He did not address the opposition division, not even under the control of the representative of the respondent. This amounted to an important difference to the facts underlying case **G 2/94**. In the case at issue, the former member only gave hints by whispering to the authorised representative, who was absolutely free to accept them or not, but did not make any intervention of his own motion. The appellant's representative accepted at the beginning of the oral proceedings that the former member would sit beside the representative of the respondent and assist him. Even during the oral proceedings no objection was made to his presence. Moreover, no substantiated reasons of partiality of the opposition division were submitted by the appellant. The request for the reimbursement of the appeal fee was refused.

h) Suspensive effect of appeal

In **J 5/81** (OJ 1982, 155) it was held that there was a substantial procedural violation where the Receiving Section had ignored the suspensive effect of an appeal in contravention of Art. 106(1) EPC 1973.

i) Non-compliance with board order

**T 227/95** related to a situation where a decision was taken by a board to remit the case to the department of first instance (opposition division) for further prosecution and not, as assumed by the division, with instructions to maintain the patent. The fact that the opposition division had not carried out the board's order amounted to a substantial procedural violation with regard to Art. 111 EPC 1973. The case was remitted again to the department of first instance, and the appeal fee was reimbursed.

j) Search

In **T 1411/08** and **T 1515/07** the boards considered that the examining division had to be held to have committed a substantial procedural violation because it had not performed an additional search that was manifestly necessary (see also **T 1924/07**). In **T 1924/07** the board held that a distinction had to be drawn between, on the one hand, whether the examining division had acted despite realising that the features were technical and not notorious, thereby indicating a situation where a search was "manifestly necessary" (cf. **T 1515/07** and **T 1411/08**), and on the other hand, whether the features had been erroneously overlooked or misjudged, i.e. an "error of judgment" had occurred (cf. **T 690/06** and **T 698/11**); the latter case could not be considered a procedural violation.

In **T 291/93** it was held that a simple reference by the appellant to an inadequate search of the prior art could not be taken as sufficiently supporting an allegation that a substantial procedural violation had occurred.

k) Guidelines

The examining division's failure to follow a procedure set out in the Guidelines is not in itself a substantial procedural violation unless it also constitutes a violation of a rule or principle of procedure governed by an Article of the Convention or one of the Implementing Regulations. This is because the Guidelines are not legally binding (**T 42/84**, OJ 1988, 251; **T 51/94**, **J 24/96**, OJ 2001, 434).

In **T 647/93** (OJ 1995, 132) the board stated that it was normally desirable for examining divisions to act in accordance with the Guidelines, but pointed out that these were not rules of law, so failure to follow a procedure set out in them was not in itself a substantial procedural violation (**T 51/94**, **T 937/97**).

l) Third party observations not mentioned in decision

In **T 283/02**, the opposition division had duly forwarded the observations by third parties to the patentee, who had made no comment. The failure of the opposition division to mention these observations in its decision did not constitute a substantial procedural violation, even though a mention would have been desirable.

m) Referral pending before Enlarged Board

Where a decision of the examining division depended entirely on the outcome of proceedings before the Enlarged Board of Appeal on a legal question or point of law raised under Art. 112 EPC 1973 - and this was known to the examining division - the further examination of the application had to be suspended until the matter had been decided by the Enlarged Board of Appeal. Failure to do so amounted to a substantial procedural violation under R. 67 EPC 1973 (**T 166/84**, OJ 1984, 489). See also Chapter IV.F.2.5.3 "Stay of first instance proceedings following a referral".

n) Refusal of application on one ground only

In **T 859/97** the board took the view that it was sufficient for the examining division, when deciding to refuse a European patent application under Art. 97(1) EPC 1973, to state one ground only which in their opinion would prejudice the grant of a European patent. In the case in point, the examining division was unable to grant a patent because it had concluded that the subject-matter of claim 7 was not new. Consequently, it was under no obligation to comment on the patentability of claims 1 to 6. The requirements of R. 67 EPC 1973 were thus not met.

#### 8.4.7 Cases concerning documentation and communications passing between the EPO and the parties

a) Ambiguous communication or wrong form

In **J 3/87** (OJ 1989, 3) it was stated that if an EPO communication was not as clear and unambiguous as it ought to be, and led a reasonable recipient into error, that amounted

to a substantial procedural violation, even if the ambiguity of the communication was partly due to an unfortunate provision of the law.

In **J 17/92** the appellants complained that the examining division had used the wrong form for its communication, namely a form threatening that the application would be refused if a response was not filed. The board considered that the failure of the examining division to withdraw the wrong form and the threatened sanction of a possible refusal of the application amounted to a substantial procedural violation.

b) No reply to communication under Article 101 EPC

In **T 362/02** the opposition division had revoked the patent for the sole reason that the appellant had not replied to a communication under Art. 101(2) EPC 1973 inviting him to file observations. The board found that this decision was a substantial procedural violation because the EPC did not provide any sanction for a party's failure to reply to a communication under Art. 101(2) EPC 1973. Further, revocation of a patent for mere failure to reply to a communication was contrary to the clear intention of the law, which required a proprietor to agree to the form in which a patent was granted or amended and to use clear and unambiguous words if he wished to abandon a patent.

c) Wrong type of communication

In **J 10/07** (OJ 2008, 567), the board found that, although the Receiving Section was not to be blamed for issuing a communication under R. 43(2) EPC 1973, as the drawings could not have been in the file on that date, it should not have issued the notification under R. 43(3) EPC 1973 but a communication pursuant to R. 43(1) EPC 1973. This amounted to a substantial procedural violation. If the Receiving Section had followed the legally correct procedure, an appeal would not have been necessary.

d) Period set for opponent to reply to patentee's response

In **T 138/08** the appellant (opponent) complained that he had not been given sufficient time to reply to the patentee's observations filed in response to the opposition. The question before the board was whether two months and 21 days was sufficient time to present comments. The board observed that the communication of the observations of the patentee had been made merely for information and the opposition division had not raised any matter of substance in the communication. The opponent had been free to decide whether to comment on it or to remain silent. Had he decided to remain silent, no act would have been required; had he decided to react to the letter of the patentee, sending a request for the time considered necessary for the reply would have sufficed. For that simple act a period of two months was considered sufficient. Therefore, the reimbursement of the appeal fee under R. 103(1)(a) EPC was not justified.

e) Observations not forwarded to other party

In **T 789/95** the file contained no indication that a copy of the opponent's observations had been forwarded to the patent proprietor. It was therefore to be assumed that the

communication of the observations to the patent proprietor had been omitted, in contravention of the Guidelines. In the board's view, this constituted a substantial procedural violation, as it infringed the principle that all parties to proceedings must be accorded the same procedural rights.

f) Appointment of professional representative

In **J 20/96** the EPO had waited one year and three months before requesting the appointment of a professional representative and nearly another year before asking for the appellant's new address. Although conceding that the Receiving Section had been slow to request the appointment of a professional representative, the Legal Board ruled that this was not a substantial procedural violation because such appointments were a matter for the appellant; similarly, it was also up to him or his representative to provide his address.

g) Warning in relation to grace period

As to the EPO's obligation to issue a warning in relation to the grace period of R. 85a EPC 1973 (this provision was deleted in the EPC 2000), and the question of whether or not this warning constituted a "courtesy service", see **J 17/04** and **J 32/97**.

## **8.5. Reimbursement of appeal fee in case of interlocutory revision**

### 8.5.1 Requirements

Pursuant to Art. 109 EPC a department whose decision is contested must rectify its decision if it considers the appeal admissible and well founded; this applies in ex parte cases only. R. 103 EPC (R. 67 EPC 1973) allows for reimbursement of the appeal fee in the case of interlocutory revision. The grant of interlocutory revision constitutes a necessary, but not sufficient, prerequisite for the department of first instance to allow a request for the reimbursement of appeal fees (**T 1222/04**). The words "if such reimbursement" in R. 103 EPC refer both to interlocutory revisions and appeals; this means that in the event of interlocutory revision, too, it is a prerequisite that a substantial procedural violation has occurred and that reimbursement is found equitable in the discretion of the deciding body (**T 939/95**, OJ 1998, 481; see also **T 79/91**, **T 536/92**).

### 8.5.2 Competence to decide on reimbursement

As to the question which department is competent to decide on the request for reimbursement in cases of interlocutory revision, the legal situation defined by **G 3/03** (OJ 2005, 344) and **J 32/95** (OJ 1999, 733) is now enshrined in R. 103(3) EPC (see **T 625/09**, **T 206/10**). Decision **J 32/95** held that if the department of first instance considered the request for reimbursement of the appeal fee not to be well-founded in the event of interlocutory revision, it had to remit the request to the board of appeal for a decision. In **G 3/03** the Enlarged Board of Appeal held that in the event of interlocutory revision under Art. 109(1) EPC 1973, the department of first instance whose decision had been appealed was not competent to refuse a request from the appellant for

reimbursement of the appeal fee. The board of appeal which would have been competent under Art. 21 EPC 1973 to deal with the substantive issues of the appeal if no interlocutory revision had been granted was competent to decide on the request. **G 3/03** was, for example, applied in **T 1379/05**, **T 1315/04**, **T 245/05**, **T 1863/07** and **T 2352/13**.

In **T 21/02** an appeal had been fully dealt with by interlocutory revision by the department of first instance and was thus no longer pending when a request for reimbursement of the appeal fee was submitted. The board held that the facts of the case differed from those underlying decisions **G 3/03** and **J 32/95** and that in the case before it, the request had been submitted in the absence of a pending appeal and hence could not constitute an ancillary issue to be dealt with in appeal proceedings. The board was thus not empowered to decide on the request for reimbursement of the appeal fee (see also **T 1703/12**, **T 2134/12**, **T 2008/14**).

The board in **T 242/05** added that once interlocutory revision had been granted, the appeal was *res judicata*. In the absence of a pending appeal, any request for reimbursement of the appeal fee filed after the decision to grant interlocutory revision will be considered inadmissible, regardless of whether the decision was taken by the examining division or the board of appeal as the body competent to consider the appeal (see also **T 70/08**). The board also commented that the first-instance department should decide such matters itself; there was no point referring them to the boards of appeal.

In **T 893/13** the board disagreed with **T 21/02** and **T 242/05**, in particular with the finding that non-reimbursement of the appeal fee by the examining division in the case of interlocutory revision must be equated with the situation in which the board of appeal has refused a corresponding request. Since the examining division was not competent to decide that the appeal fee was not to be reimbursed, an interlocutory revision without an order for reimbursement could not be construed as a decision not to reimburse. A request for reimbursement of the appeal fee could be validly filed even after interlocutory revision, since R. 103 EPC entrusted the boards with the decision on "all other ... matters of reimbursement" based on only two conditions: that the decision was rectified and that the appeal fee was not reimbursed by the examining division.

### 8.5.3 Examining division should have rectified decision

In **T 647/93** (OJ 1995, 132) it was pointed out that when the examining division did not make use of the possibility of granting interlocutory revision after the mistake had been pointed out in the grounds of appeal, this was normally deemed to constitute a procedural violation justifying the reimbursement of the appeal fee (see also **T 808/94**, **T 898/96**, **T 861/03**, **T 1113/06**, **T 971/06**, **J 7/07**; see also **T 685/98**, OJ 1999, 346). In **T 183/95** no reimbursement was ordered, however. The board in this case pointed out that interlocutory revision could be granted at the discretion of the department of first instance when it was considering whether the appeal was "well founded". In this case, the remittal of the appeal could not be said to have been manifestly wrong from a procedural point of view (see also **T 536/92**). In **T 2528/12** too the board declined to order reimbursement, because although interlocutory revision had not been granted, as it should have been, that was not a substantial procedural error. That the grant

proceedings had taken longer as a result had not adversely affected the appellant in a legal sense.

In **T 794/95** the board took the view that, under the circumstances of the case, the examining division should have rectified its decision under Art. 109(1) EPC 1973. The board did not, however, consider it equitable to order the reimbursement of the appeal fee, since the examination procedure up to the decision under appeal was not tainted with any failure and the necessity for the appellant to file an appeal emerged exclusively from the substance of the decision, not because of any procedural shortcomings up to this stage and equally not from the later incorrect handling of the appeal by the examining division (i.e. the failure to rectify its decision).

In **T 685/98** (OJ 1999, 346) the board held that where a fundamental procedural right had manifestly been violated in a refusal pursuant to Art. 97(1) EPC 1973, or in the foregoing examination procedure, a further substantial procedural violation occurred if the examining division failed to grant interlocutory revision on appeal (following **T 647/93**, OJ 1995, 132; see also **T 1765/13**), since such a right had to be safeguarded irrespective of the substantive merits of the case.

In **T 898/96** the board took the view that, as soon as the applicant approved in the notice of appeal the text of the application as specified previously in a communication under R. 51(4) EPC 1973, there was no reason why the patent should not have been granted, even if the applicant did not approve this text before filing the appeal. Thus the decision of the examining division to refuse the application having regard to Art. 113(2) EPC 1973 should have been rectified by way of interlocutory revision. The failure to rectify such a decision in this way was a substantial procedural violation. However, the board did not consider the refund of the appeal fee to be equitable, for the very reason that the applicant did not approve this text of the application until he filed an appeal.

In **T 704/05** the board found that the examining division could have set its decision aside by way of interlocutory decision pursuant to Art. 109(1) EPC 1973. However, given that the examining division was expressly precluded from giving its reasons for not granting interlocutory revision, it was not open to the board to criticise this omission. The mandatory but necessarily silent judgment made pursuant to Art. 109(1) EPC 1973 as to whether an appeal refuted the reasons for a refusal was not an exercise of discretion and ipso facto left no room for an inquiry as to whether discretion had been properly exercised. The board was aware that a number of decisions of the boards of appeal had taken a different view on this point - to the extent of sometimes castigating such omission as a substantial procedural violation - but respectfully suggested that these decisions had not given sufficient weight to the implications of the silence imposed on the examining division by Art. 109(2) EPC 1973.

The board in case **T 1982/07** said that it is fundamental to the principle of fair trial that in the examination an applicant, when confronted with new prior art documents, is not only given the right to be heard, but also the right to react thereto by amending the claims in order to overcome the prior art references. In the case at issue, when confronted with a highly relevant document, it would have been necessary to give the applicant the

opportunity to amend the claims, if need be by introducing features of the description. The way the examining division exercised its discretion under R. 86(3) EPC 1973 (now R. 137(3) EPC) was therefore erroneous, as this did not allow the applicant to react appropriately, but rather tied its hands to an extent neither mandated by procedural efficiency nor justified in the light of the prior art documents. The examining division thus exercised its discretion in an unduly restrictive manner, thereby committing a substantial procedural violation. Therefore, it would have been incumbent on the examining division to rectify the decision pursuant to Art. 109(1) EPC, but this was not done. The board ordered the remittal to an examining division that had not previously dealt with this case.

#### 8.5.4 Rectification decision maintaining earlier decision

According to **T 691/91**, Art. 109 EPC 1973 provided for two legally viable alternatives: to maintain or to annul the decision which was appealed. In the case at issue, the examining division had chosen a third way; maintaining the earlier decision by issuing a decision on rectification. This alternative was not covered by the provisions of Art. 109 EPC 1973. The way in which the examining division proceeded resulted in the appellant having to file a second appeal against the decision on rectification. The board ordered reimbursement of the second appeal fee because the decision on rectification was *ultra vires*, and reimbursement of the first appeal fee because a violation of the right to be heard had occurred during the examination proceedings (see also **T 252/91**).

#### 8.5.5 Re-opening examination after rectification

In **T 142/96** the practice of re-opening examination after rectification was held to be contrary to the principle of procedural economy underlying Art. 109 EPC 1973 and so constituted a substantial procedural violation.

In **T 2247/09** the examining division had granted interlocutory revision, proceeded with the examination of the new subject-matter put forward with the appeal, and refused the application again in its second decision. The appellant claimed that he had had to pay two appeal fees in order to have the claims considered by a board of appeal. The board noted that the reasons given in the examination division's second decision differed from those given in its first decision. Moreover, the decision to grant interlocutory revision had been correct because the applicant's new request had removed the reasons for the decision under appeal. The examining division then had to proceed with the examination of the new subject-matter. The mere fact that this further examination again resulted in the refusal of the application did not constitute a substantial procedural violation.

### 8.6. Reimbursement must be equitable

#### 8.6.1 Causal link between substantial procedural violation and filing of appeal

For the reimbursement of the appeal fee to be equitable the boards require a causal link between the substantial procedural violation and the filing of the appeal (**T 388/09**, **J 9/10**, **T 2373/11**). In **T 281/03** the board held that for the reimbursement to be equitable the appeal had to be at least in part caused by the substantial procedural violation. In

**T 1198/97** and **T 1101/92** the board expressly observed that there was a causal link between the violation of the appellant's right to be heard and the necessity to appeal; thus reimbursement of the appeal fee was equitable.

In **T 2111/13** the board held that, according to established case law, for the reimbursement of the appeal fee to be equitable a causal link between the substantial procedural violation and the filing of the appeal is required. According to an alternative approach, a procedural violation is not to be deemed substantial if the outcome of the proceedings would not have been different had the violation not occurred (see in this chapter IV.E.8.4.1.b)). In the case at hand, the board saw no need to choose between these two approaches and rejected the appellant's request for reimbursement.

In the cases that follow the boards held that reimbursement was not equitable because no causal link could be established.

In **T 2106/10** the board acknowledged that several deficiencies occurred in the first instance proceedings, but reiterated that any reimbursement of the appeal fee has to be equitable and depends on the question whether these procedural deficiencies are 1) substantial and 2) forced the appellant to file the present appeal. As none of the alleged procedural deficiencies raised by the appellant were specifically related to the refusal of the main request, the appellant had had to file the appeal irrespective of whether or not the alleged substantial procedural violations had occurred. In **T 41/97**, a refund was not equitable because the procedural error (refusal of interlocutory revision prior to receipt of the statement of grounds of appeal and before the expiry of the period for filing it) was not the reason the appeal had been filed (see also **T 1891/07**, **T 1994/11**, **T 2227/09**).

In **T 711/11** the appellant alleged that the examining division found a lack of unity without providing adequate reasoning. The board stated that lack of unity was not the sole ground given in the contested decision for refusing the application. The appellant would in any case have had to file an appeal in view of the ground of lack of inventive step. Therefore, the board considered the reimbursement of the appeal fee not equitable.

In **T 893/90** the contested decision to refuse the application on the grounds of lack of novelty was based primarily on document 1, on which, in contrast to document 2, the appellant had had adequate opportunity to put forward comments. The board stated that the decision under appeal had been fully reasoned, and that the procedural violation as regards the reliance on document 2 was thus not sufficiently closely linked to the need to pay an appeal fee for it to be equitable to reimburse the fee.

In **T 601/92** the opposition division had not commented, either in a communication or in its decision, on auxiliary request (5) submitted by the patent proprietor in good time before the decision was issued. Because auxiliary request (2), which had been submitted in the appeal proceedings and which preceded auxiliary request (5), was allowed, the board did not see any reason, despite the procedural violation, to reimburse the appeal fee, as this would not have been equitable.

In **T 2377/09** the board took the view that reimbursement of the appeal fee solely on the grounds of the established procedural violation would not be in accordance with the equitability requirement of R. 67 EPC 1973 (R. 103 EPC). This was because the rejection decision was based on additional, alternative grounds which had given the appellant no cause to claim a substantial procedural violation and against which it would in any case have had to appeal to get the decision set aside (with reference to **T 893/90**, **T 219/93**, **T 4/98** (OJ 2002, 139) and **T 978/04**).

In **T 272/05** a substantial procedural violation occurred but had no influence on the outcome of the proceedings; since the party had to appeal anyway, refund of the appeal fee was not equitable.

In **T 840/07** the appellant's request which had succeeded in the appeal was the same as the main request which it had filed before the examining division but had later replaced. The appellant had not pursued that request to the point where it became the subject of a decision. The board concluded that the appellant had had no choice but to appeal if it wanted the result it had eventually obtained before the board. To reimburse the appeal fee would have given the appellant a fee-free appeal which would be inequitable (see also **T 784/11**, referring to **T 4/98**).

In **T 1891/07** the board held that despite the presence of a substantial procedural violation it would not be equitable to reimburse the appeal fee because the violation could not have been causative in filing the appeal since it occurred after the notice of appeal had been filed.

In **T 1990/08** the appellant submitted that the examining division had committed a procedural violation as it had not provided a translation of D1 but had used it to deny inventive step. The board held that even if the inventive step objection including the appraisal of document D1 in the decision were disregarded, the contested decision would still be negative as it had also relied on Art. 84 and 123(2) EPC to refuse the application. Regardless of whether a substantial procedural violation had occurred or not, the appellant had had to appeal in order to obtain a reversal of the first-instance decision. The alleged procedural violation could not have been the immediate and only cause of the need to appeal and to pay an appeal fee.

In **T 433/08** the board and the parties agreed that a violation of Art. 113(1) EPC had occurred because the opposition division had relied in its decision on a document, which had not been referred to in the course of the opposition proceedings. The board refused, however, the request of the opponent (appellant) to reimburse the appeal fee because it found the reimbursement not equitable. The opposition division would not have reached a decision more favourable to the opponent if it had not taken into account said document. Thus, the opposition division had not acted to the detriment of the opponent. The board concluded that the rights of the opponent (appellant) were not curtailed to an extent that would make the reimbursement of its appeal fee equitable by reason of a substantial procedural violation.

In **T 1680/11** the board held that an alleged procedural violation with respect to a decision to rectify under Art. 109 EPC could not justify refunding the appeal fee. A decision to grant an appeal could not be the reason for filing the appeal, as it was - by its very definition - taken after the appeal had been filed.

#### 8.6.2 Conduct of appellant

The conduct of the appellant may render the reimbursement of the appeal fee not equitable even if a substantial procedural violation occurred, in particular if the appellant made no use of opportunities given to it to participate in the initial proceedings (**J 4/09**, **T 1500/10**).

##### a) Reimbursement held not to be equitable

In **J 22/85** (OJ 1987, 455) the board did not consider a reimbursement of the appeal fee to be justified because the appellant had failed to provide the Receiving Section with the evidence subsequently submitted in the appeal proceedings.

In **J 4/09**, the board said that, as a rule, an applicant could be regarded as behaving inequitably if it made no use of opportunities to participate in the initial proceedings. In this case, it had not reacted to the Receiving Section's communication; only in its statement of grounds for appeal had it drawn attention to an obvious inconsistency.

In **J 18/96** (OJ 1998, 403) the Receiving Section had failed to observe the provisions concerning examination on filing. Although the appeal was allowed on the ground, *inter alia*, of a procedural violation, the reimbursement of the appeal fee was not equitable because the appellants themselves had contributed to the failure of the proceedings before the Receiving Section.

In **T 674/12** the board held that the appellant, by filing different unclear requests, did not help to expedite the proceedings and contributed to the fact that the decision of the examining division was based on a request which was no longer in the proceedings. The board considered the reimbursement of the appeal fee not to be equitable.

In **T 167/96** the impugned decision did not meet the minimum requirements for a reasoned decision. Although there was no doubt that this lack of reasoning amounted to a substantial procedural violation, the board did not consider that a refund of the appeal fee was equitable. Indeed, it was clear from the file history that the proprietor had been afforded a very considerable period of time by the department of first instance to file appropriate amendments, but had not replied. The appellant had availed himself of the appeal procedure to file necessary amendments which the opposition division had sought in vain over a period of years to elicit from him (see also **T 908/91**).

In **T 1216/02** the search division had sent a supplementary European search report to the applicant (appellant) with a wrong citation which was deceptively similar to the correct one. The examining division had refused the application because of the applicant's "incomprehensible" response to its second communication. The appellant had

requested that the examination procedure be resumed to enable him to provide a response based on the right document. The board held that, albeit for reasons outside the knowledge and control of the examining division, the refusal decision had been based on evidence on which the applicant had not had an opportunity - viewed objectively - to present his comments. This constituted an objective substantial procedural violation under R. 67 EPC 1973. However, the board did not deem reimbursement of the appeal fee equitable, because the appellant should have facilitated further substantive examination in the event of remittal or interlocutory revision by including in his statement of grounds of appeal a substantive response to the examining division's communication, based on the document which, at the time when the appeal was filed, he had known to be correct.

In **T 1500/10** the board held that if oral proceedings took place at the instance of the EPO because it considered this to be expedient under Art. 116(1) EPC and the duly summoned party does not attend them without serious reasons, this conduct might have the consequence that it would not be equitable to reimburse the appeal fee.

#### b) Reimbursement held to be equitable

In **T 281/03** dated 17 May 2006 the board held that reimbursement of the appeal fee was equitable despite the fact that the appellant had continuously delayed his case on inventive step until the last moment. The board noted that delaying detailed substantiation of the ground of inventive step raised in the notice of opposition until the last moment of opposition proceedings should be avoided if possible, since it created an unexpected situation for the other parties and the opposition division. However, where the inventive step argument was based on the same document as the novelty argument, and the novelty of the features in question depended on how the document was interpreted as a whole, it might be difficult, if not impossible, for an opponent to argue lack of inventive step without a precise statement of how the document was understood, and the features actually found to be different by the opposition division.

#### 8.6.3 Violation of the principle of the protection of legitimate expectations

In **T 308/05** the board ruled that the appeal fee was to be reimbursed even though the appeal had been withdrawn. The board referred to **J 30/94** and **J 38/97** (see below) and held that, in exceptional cases it was possible - outside the scope of R. 67 EPC 1973 - to consider refunding the appeal fee for reasons of equity. A refund had been ordered, for instance, in cases where the principle of the protection of legitimate expectations had been violated. The fact that in the case in point the EPO had been found to have breached the principle of the protection of legitimate expectations, and that the consequence had been the filing of an appeal which was objectively superfluous, made it necessary for reasons of equity to refund the appeal fee paid by the appellant.

In **J 30/94** the board held that Art. 109(2) EPC creates a legitimate expectation of the parties that an appeal is remitted to the board of appeal within a reasonable time after the decision of the department of first instance not to allow the appeal. In the case at hand it took seven years for the appeal to be remitted to the board of appeal. The board

found it equitable under these exceptional circumstances to order the reimbursement of the appeal fee although the appeal had been withdrawn. In **J 38/97** the appeal was found inadmissible but the appeal fee was nevertheless refunded. The board took the view that the appellant, having requested an appealable decision, could legitimately expect the impugned decision to be issued by the competent department and not by a person lacking legal authority. In accordance with the principle of good faith, it was equitable in these circumstances to order the reimbursement of the appeal fee.

## 1. Introduction

The Enlarged Board of Appeal is responsible for proceedings under Art. 112 EPC (referral of points of law by boards of appeal or the President of the EPO), proceedings under Art. 112a EPC (petitions for review against decisions of the boards of appeal) and proceedings under Art. 23(1), first sentence, EPC (removal from office of a member of the boards of appeal).

The provisions governing the procedure before the Enlarged Board are set out in the EPC, the Implementing Regulations and the RPEBA. The latter are binding upon the

Enlarged Board, provided that they do not lead to a situation which would be incompatible with the spirit and purpose of the Convention (Art. 19 RPEBA).

The members of the Enlarged Board are mainly appointed from among the members of the boards of appeal, who continue to exercise their functions in the Legal Board or their respective technical boards ('internal members'). This double function is in itself not a reason for exclusion or objection under Art. 24 EPC (see **R 12/09** of 3.12.2009, **R 19/12** of 25.04.2014 and **R 2/14** of 17.02.2015 for petition for review proceedings). Legally qualified members of national courts or quasi-judicial authorities may also be appointed as members of the Enlarged Board ('external members'), and may continue their judicial activities at national level (Art. 11(5) EPC).

## **2. Referral under Article 112 EPC**

### **2.1. General**

Art. 112 EPC defines the conditions in which legal uniformity within the European patent system may be established by means of a referral to the Enlarged Board of Appeal. It requires the boards (Art. 112(1)(a) EPC) or the President (Art. 112(1)(b) EPC) to deem the referral necessary, either in order to ensure uniform application of the law or if points of law of fundamental importance arise. For a referral by the President, a further admissibility criterion is that two boards of appeal must have given different decisions on the question referred (**G 3/08**, OJ 2011, 10).

This chapter concerns Art. 112 EPC as such. The Enlarged Board's answers to referred questions of law are covered in the chapters corresponding to these questions.

### **2.2. Composition**

In proceedings under Art. 112 EPC, the Enlarged Board consists of five legally and two technically qualified members; chairman must be a legally qualified member (Art. 22(2) EPC). If a board of appeal refers a question to the Enlarged Board, at least four members of the Enlarged Board must not have taken part in the proceedings before the referring board (Art. 2(4) RPEBA).

### **2.3. Referral by a board of appeal**

#### **2.3.1 General**

Under Art. 112(1)(a) EPC a board of appeal *shall* refer a question to the Enlarged Board of Appeal if it considers that a decision is required, in order to ensure uniform application of the law or because a 'point of law of fundamental importance' arises. With the EPC 2000, the English wording was changed from "important" to "fundamental importance" in order to bring it into line with the French and German versions (see **G 1/12**, OJ 2014, A114).

Only questions on a specific point, not entire cases, may be referred to the Enlarged Board (e.g. **T 184/91**, **T 198/12**). The Enlarged Board of Appeal is not a third instance within the EPO, but part of the second instance constituted by the boards of appeal (**T 79/89**, OJ 1992, 283). However, the Enlarged Board's answers to the referred points of law are binding on the referring board in respect of the appeal in question (Art. 112(3) EPC; see also **J 8/07**).

The Enlarged Board of Appeal is not bound by the way the referring board formulated the question, and may redraft the referred question (see, for example, **G 2/08**, OJ 2010, 456, **G 2/10**, OJ 2012, 376, and **G 1/13**, OJ 2015, A42). The Enlarged Board does not consider referred questions narrowly, but in a way as to clarify the points of law which lie behind them (**G 3/14**, referring to **G 2/88** and **G 6/88**, OJ 1990, 93 and 114).

The Enlarged Board of Appeal in petition for review proceedings under Art. 112a EPC is not a "Board of Appeal" within the meaning of Art. 112(1)(a) EPC that could initiate referral proceedings under that provision (**R 7/08**, **R 1/11**, **R 7/12**). The Disciplinary Board of Appeal has no power to refer questions to the Enlarged Board of Appeal either (**D 5/82**, **D 7/82**, **D 9/91**, **D 30/05**).

If a board is not empowered to decide a question (here: whether to hold oral proceedings before the examining division in Munich instead of in The Hague), it is not empowered to refer that question to the Enlarged Board (**T 1142/12**).

Questions can be referred by a board either of its own motion or following a request from a party. If a board rejects a party's request for referral, it must give reasons in its final decision (Art. 112(1)(a) EPC). This was considered necessary to provide the parties with a certain guarantee, on the one hand, and to enable a certain degree of standardisation of the jurisprudence on the other (travaux préparatoires, BR/177/72, p. 31). Providing parties with a right of reference was, however, rejected (BR/168/72, p. 51).

The parties to the appeal proceedings are parties to the proceedings before the Enlarged Board (Art. 112(2) EPC). The Enlarged Board may invite the President of the EPO to comment on questions of general interest; the parties are entitled to submit their observations on the President's comments (Art. 9 RPEBA). Third parties may send written statements (*amicus curiae* briefs) to the Enlarged Board (Art. 10 RPEBA).

### 2.3.2 Discretion of the board

Several decisions state that referring a question under Art. 112(1)(a) EPC lies within the discretion of the boards (e.g. **T 1016/10**: "established jurisprudence"; **T 365/05**, **T 1242/04**, OJ 2007, 421; **T 390/90**, OJ 1994, 808: even if a point of law of fundamental importance is concerned). However, while the view of the referring board is decisive for assessing whether a referral is required, such assessment should be made on objective criteria and should be plausible (**G 3/98**, OJ 2001, 62; **G 2/99**, OJ 2001, 83). One of the criteria identified in **T 1242/04** was whether the question can be answered beyond all doubt by the board itself, in which case it does not need to be referred to the Enlarged Board (see also in this chapter IV.F.2.3.7).

Under Art. 21 RPBA, a referral of questions to the Enlarged Board of Appeal must be made in cases where the board considers it necessary to deviate from an interpretation of the EPC contained in an earlier opinion or decision of the Enlarged Board of Appeal. According to Art. 20(1) RPBA, if a board wishes to deviate from an earlier decision taken by a board of appeal, a referral is not compulsory, but the board must give the grounds for deviation unless such grounds are in accordance with an earlier opinion or decision of the Enlarged Board (**T 560/13**; see also **T 1676/08** and **T 1020/03**, OJ 2007, 204). Moreover, the President of the EPO must be informed of the diverging decision (Art. 20(1) RPBA), in order to enable the President to make use of its own right of referral if appropriate (**G 1/89**).

### 2.3.3 Relevance of the referred question for the underlying case

The referred question must not have a merely theoretical significance for the original proceedings which would be the case if the referring board were to reach the same decision regardless of the answer to the referred question (**G 3/98**, OJ 2001, 62, **G 2/99**, OJ 2001, 83; see also **T 547/08**). In other instances the Enlarged Board stated that "the referred point of law is relevant for deciding the case underlying the referral" (**G 2/04**, OJ 2005, 549) or that "answers to the questions referred are necessary for each Board of Appeal to be able to dispose of their respective appeals on the correct legal basis" (**G 1/05**, OJ 2008, 271, **G 1/06**, OJ 2008, 307; see also **G 2/06**, OJ 2009, 306). In **T 154/04** (OJ 2008, 46; see also **J 16/90**, OJ 1992, 260; and **T 1044/07**) the board held that the answer to the referred question must be "essential to reach a decision on the appeal in question".

In **T 520/01** (see also **T 787/06**) the board referred to **G 3/98**, did not maintain the patent on grounds other than those to which the question related, and thus refused the party's referral request. In **T 469/92**, the board granted the appellant's main request, and therefore did not consider its auxiliary referral request.

In **G 1/98** (OJ 2000, 111) one of the questions referred by the board concerned objections of which the appellant had not been made aware before, and the appellant expressed its intention to the Enlarged Board to make the required amendments. As a result, the Enlarged Board doubted the relevance of the referred question and deemed it inappropriate to offer guidance. In **G 7/95** (OJ 1996, 626, see also **G 9/92**, not published in OJ) the Enlarged Board, having regard to the particular facts of the case before the referring board, deemed it not necessary to answer the referred question either.

In **G 1/09** (OJ 2011, 336) a board referred a question on whether a *rejected* patent application was still pending under R. 25 EPC 1973 (R. 36 EPC; divisional applications) when no appeal had been filed but the time limit for filing an appeal had not yet expired. In his comments under Art. 9 RPEBA, the President of the EPO raised two additional questions, namely whether a *granted* application was still pending in such a situation, and whether the filing of an inadmissible appeal could maintain the pendency of the application beyond the expiry of the time limit for filing an appeal. The first additional question was – although not relevant for the decision in the underlying case – answered

by the Enlarged Board in an *obiter dictum*, whereas the second was considered not to be covered by the referral decision.

In **G 2/03** (OJ 2004, 448) the Enlarged Board stated that not all substantive requirements had been examined by the referring Board and that the referred question could, in the end, turn out to be irrelevant. Taking into account the usual order of examination according to which the referred question (on the allowability of disclaimers) was examined before substantive requirements such as inventive step, the Enlarged Board considered the referral nevertheless admissible. In **G 2/99** (OJ 2001, 83), the Enlarged Board had doubts whether the answer to the referred question would have an impact on the decision in the underlying proceedings, but deemed the referral nevertheless admissible, for reasons of procedural efficiency. In **G 2/07** (OJ 2012, 130) the referrals were considered admissible "irrespective of whether an answer is actually required on all aspects which the referred questions might in theory be seen as embracing".

In **G 1/14** the question referred to the Enlarged Board was whether an appeal is inadmissible or deemed not to have been filed if the notice of appeal is filed and the fee for appeal paid after expiry of the time limit (see Chapter IV.E.8.2.2 "Distinction between an appeal deemed not to have been filed and an inadmissible appeal). Until 1 April 2015 the wording of R. 126(1) EPC was limited to "Notification by post ... by registered letter with advice of delivery" (since amended to: "Notification by postal services ... by registered letter with advice of delivery or equivalent"). In the Enlarged Board's view notification of first-instance decisions by the postal service UPS was not covered by R. 126(1) EPC as formerly in force, so the referring board's finding that the appeal had not been lodged in time was inoperative. As this meant there was no need to refer the question, the Enlarged Board dismissed the referral as inadmissible.

#### 2.3.4 Question of law

Only questions of law, not technical issues (e.g. **T 287/11**: the interpretation of technical features of a specific claim; **T 181/82**: whether the person skilled in the art can understand the technical content of a prior art document; see also **T 1798/08**) may be referred to the Enlarged Board. Similarly, in **T 118/89** the board stressed that only questions of law, not questions of fact may be referred.

#### 2.3.5 Pending proceedings

A board may only refer a point of law to the Enlarged Board of Appeal "during proceedings on a case" (Art. 112(1)(a) EPC). If the underlying appeal is withdrawn (see **T 1040/04** and **G 3/06**, Declaratory order of 26 April 2007), or the underlying application deemed to be withdrawn (**G 2/14**; see OJ 2015, A13), the proceedings before the Enlarged Board are terminated.

The referral to the Enlarged Board must precede the decision of the board of appeal (**T 2271/08**). After a board has issued a decision in respect of certain issues, it has no power to refer a question to the Enlarged Board in connection with the issues already

decided, even though other issues are still pending in proceedings on the same case (**T 79/89**, OJ 1992, 283).

For a referral to be admissible, the appeal has to be admissible. This principle does, however, not apply if the referral itself concerns the admissibility of the appeal. Without this exception, the boards would be denied the opportunity to refer questions on important points of law concerning the admissibility of an appeal. This would contradict Art. 112(1)(a) EPC where no restrictions of that kind appear (**G 1/12**, OJ 2014, A114; see also **G 8/92**, not published in the OJ; **G 3/99**, OJ 2002, 347; **G 2/90**, OJ 1992, 10 and **G 2/04**, OJ 2005, 549).

### 2.3.6 Ensuring uniform application of the law

In order to be admissible, the referred question must either concern a non-uniform application of the law by the boards or, alternatively, a point of law of fundamental importance. According to Art. 112 EPC, this requirement concerns not only referrals by a board but also referrals by the President, which, however, must in any case concern 'different decisions' of the boards (see in this chapter IV.F.2.4.1).

Non-uniform application of the law under Art. 112(1)(a) EPC refers to non-uniform application of the law by the boards of appeal. A lack of uniformity between the law as applied by the boards of appeal and national courts can, in theory, bring to the fore a point of law of fundamental importance (**T 712/10**). Allegedly non-uniform decisions concerning "a different legal situation" (here: filing claims of a different category in the appeal) do not qualify under Art. 112(1)(a) EPC (**T 137/09**). The application of the same legal principles may, because of the specific facts of each individual case, lead to different results in different cases (**T 2477/12**).

In **G 1/12** (OJ 2014, A114), the Enlarged Board considered the requirement of non-uniform application of the law to be fulfilled because some decisions allowed deficiencies in the appellant's name to be remedied under R. 101(2) EPC, whereas in other decisions on analogous situations the boards applied R. 139 EPC. A minority of the members of the Enlarged Board (see Art. 18(2) RPEBA) was of the opinion that this merely demonstrated that, as long as the removal of the deficiency does not lead to a change of the appellant's true identity, both procedures are available according to consistent case law.

In **T 154/04** (OJ 2008, 46) the board found that deviating from an opinion given in another decision of a board of appeal or a deviation from national jurisprudence are not per se valid reasons for referral under Art. 112(1)(a) EPC. According to the board, the legal system of the EPC allows for the evolution of the case law, which is not case law in the Anglo-Saxon meaning of the term. In **T 15/01** (OJ 2006, 153) the board did not consider a referral to the Enlarged Board necessary, because only one previous decision of the boards deviated from its own conclusion as to the exhaustion of priority rights. In **T 248/88** the board also held that a single and isolated non-uniform decision does not qualify under Art. 112(1)(a) EPC.

### 2.3.7 Point of law of fundamental importance

The requirement that the referred question must either concern a lack of uniform application of the law by the boards or a point of law of fundamental importance concerns both referrals by a board and referrals by the President (see in this chapter IV.F.2.4.1).

**G 1/12** (OJ 2014, A114) concerned the correction of errors regarding the identity of the appellant and, in this context, the admissibility of an appeal. The Enlarged Board held that the referred question related to a "point of law of fundamental importance" because it was relevant to a large number of similar cases (see also **T 271/85**, OJ 1988, 341, **T 1242/04**, OJ 2007, 421 and **T 1676/08**: "a substantial number of similar cases") and therefore of great interest not only to the parties to the specific appeal proceedings in question. Settling this point of law was important not only to the users of the European patent system but also to the boards of appeal and the department of first instance in examination and opposition proceedings. A minority of the members of the Enlarged Board disagreed (see Art. 18(2) RPEBA) and considered the referral inadmissible. According to the minority, the majority's view implied that "importance" within the meaning of Art. 112 EPC was nothing more than mere relevance. The number of cases affected, however, was neither a suitable nor an appropriate criterion for establishing the admissibility of a referral. In **G 1/13** (OJ 2015, A42), the Enlarged Board confirmed the view of the majority in **G 1/12**.

In **T 26/88** (OJ 1991, 30), it was held that a question is not sufficiently important when the legal framework on which the question is based (here: R. 58(5) EPC 1973) has changed in the interim and the question is therefore unlikely to arise again very often. Similarly, in **T 2459/12**, the board stated that a question regarding a point of law the answer to which would affect only a relatively small number of applicants for a limited period of time, after which it would become obsolete (here: due to an amendment to R. 164 EPC), was not a question relating to a point of law of fundamental importance.

The lack of case law on a particular issue is in itself not a sufficient reason to refer a question to the Enlarged Board (**T 998/99**).

In **J 5/81** (OJ 1982, 155) the appellant requested the referral of a question which the board considered an important point of law. The board refused the appellant's request nevertheless, as the question could be answered by reference to the EPC without doubt (see, for example, also **J 14/91** (OJ 1993, 479), **T 1196/08**, **T 1676/08**, **T 2477/12**). In **T 39/05**, the board already denied the existence of an important point of law if a question could be answered by reference to the EPC without doubt.

## 2.4. Referral by the President of the EPO

### 2.4.1 General

Under Art. Art. 112(1)(b) EPC, in order to ensure uniform application of the law (see in this chapter IV.F.2.3.6) or if a point of law of fundamental importance (see in this chapter

IV.F.2.3.7) arises, the President of the EPO may refer a point of law to the Enlarged Board "where two boards of appeal haven given different decisions on that question".

#### 2.4.2 Discretion of the President

Under Art. 112(1)(b) EPC, the President of the EPO *may* refer a point of law. In exercising his or her right of referral, a President of the EPO is entitled to make full use of the discretion granted by Art. 112(1)(b) EPC. His appreciation of the need for a referral may change even after a relatively short time, for example because his assessment of the case law of the Boards of Appeal has changed, or a change in the presidency has taken place (**G 3/08**, OJ 2011, 10).

#### 2.4.3 Different decisions

According to the Enlarged Board in **G 3/08** (OJ 2011, 10), the term "different/abweichende/divergentes" decisions in Art. 112(1)(b) EPC has to be interpreted in the light of the provision's object and purpose according to Art. 31 of the Vienna Convention on the Law of Treaties. The purpose of the presidential referral right under Art. 112(1)(b) EPC is to establish uniformity of law within the European patent system. Having regard to this purpose, the notion "different decisions" has to be understood restrictively in the sense of "conflicting decisions". Legal development is an additional factor which must be carefully considered. Development of the law is an essential aspect of its application and inherent in all judicial activity. Consequently, legal development as such cannot on its own form the basis for a referral, because case law does not always develop in linear fashion, and earlier approaches may be abandoned or modified.

Legal rulings are characterised not by their verdicts, but by their grounds. The Enlarged Board of Appeal may thus take obiter dicta into account in examining whether two decisions satisfy the requirements of Art. 112(1)(b) EPC (**G 3/08**; see also **G 3/93**, OJ 1995, 18).

A discrepancy between Office practice of the EPO and the case law of the boards of appeal is not in itself not sufficient to justify a referral by the President, unless the practice of the EPO is warranted by the case law (**G 4/98**, OJ 2001, 131).

In **G 3/95** (OJ 1996, 169), the Enlarged Board considered the President's referral inadmissible due to the absence of different, i.e. conflicting decisions. In **G 3/08** (concerning Art. 52(2) EPC, computer programs), the Enlarged Board said that **T 424/03** indeed deviated from **T 1173/97**, but that this was a legitimate development of the case law and that there was no divergence which would make the referral admissible.

#### 2.4.4 Two boards of appeal

Different decisions by a single technical board in differing compositions may be the basis of an admissible referral by the President (**G 3/08**, OJ 2011, 10). In **G 1/04** (OJ 2006, 334), the Enlarged Board found the President's referral, based on two different decisions of the same technical board of appeal, admissible and stressed that the

decisions were rendered by the board in completely different compositions, and that other technical boards had adopted the findings of one of the conflicting decisions.

In **G 4/98** (OJ 2001, 131) the Enlarged Board stated that, if the President's power of referral were to be defined by a restrictive reading of "two Boards of Appeal", no referrals would be possible with respect to the Legal Board of Appeal. This would unduly restrict the effect of Art. 112 EPC, since conflicting decisions could also occur within that board.

## 2.5. Procedural issues

### 2.5.1 Question already decided by the Enlarged Board

Should a board consider it necessary to deviate from an earlier opinion or decision of the Enlarged Board, the question must be referred to the Enlarged Board (Art. 21 RPBA).

In **T 297/88** the board examined under which circumstances it was possible to re-refer a question which had already been decided by the Enlarged Board. It took the view that a board may only refer the same point of law another time to the Enlarged Board if the Enlarged Board's arguments were so weak that doubts as to the correctness of the decision were unavoidable. This was also the case where the arguments were based on a false premise so that there were doubts about the conclusion drawn. Finally, a decision of the Enlarged Board could also be questioned where the premise was correct, the arguments were conclusive and the conclusion therefore also correct, but where legal or technical developments occurring in the interim made it desirable in the public interest to have the question reviewed again by the Enlarged Board.

In **T 82/93** (OJ 1996, 274; see also **T 80/05**, **T 1213/05**) the board rejected the requested referral because the question had already been decided by the Enlarged Board.

In **G 9/93** (OJ 1994, 891), the Enlarged Board confirmed the referring board's view that the concept of opposition proceedings set out in **G 1/84** differed fundamentally from that in **G 9/91** and **G 10/91**, which it endorsed.

### 2.5.2 Question already pending before the Enlarged Board

In **T 208/88** of 20 July 1988, the board referred a question already pending once again to the Enlarged Board, because new aspects had emerged which it deemed useful for the Enlarged Board's decision. The same questions, supplemented by an additional question, were also referred again in **J 15/90** (see also **T 83/05** of 08.07.2013), because the board wished to give the Enlarged Board the opportunity to consider another type of case. In **T 803/93** (OJ 1996, 204) the board complemented the questions already pending and said that important questions of law should, if possible, be considered in the context of proceedings involving parties having opposing interests in relation to these questions. In **T 184/91** the President of the EPO had referred questions to the Enlarged Board. The board referred the already pending questions again, stating that nothing prevented a board from reiterating questions that are pending, in order that the parties to an appeal may enjoy being parties to the proceedings before the Enlarged Board. In

**T 1553/13** of 20 February 2014 and **T 2017/12** of 24 February 2014 two different technical boards referred an almost identical question to the Enlarged Board.

### 2.5.3 Stay of first instance proceedings following a referral

According to the board in **T 166/84** (OJ 1984, 489), where a decision of the examining division depends entirely on the outcome of proceedings before the Enlarged Board of Appeal on a legal question raised under Art. 112 EPC 1973 - and this was known to the examining division - the further examination of the application must be suspended until the matter is decided by the Enlarged Board of Appeal. Failure to do so amounts to a substantial procedural violation under R. 67 EPC 1973 (R. 103(1)(a) EPC).

According to the Guidelines for Examination (E-VI, 3 – November 2015 version), where the outcome of examination or opposition proceedings depends entirely on the answer to questions referred to the Enlarged Board, the proceedings *may* be stayed by the examining or opposition division on its own initiative or on request of a party. Under a previous version of the guidelines (E-VI, 3 – September 2013 version), the proceedings were to be stayed "only upon request of at least one of the parties" (see also Notice from the EPO dated 1 September 2006 concerning staying of proceedings, OJ 2006, 538).

When **G 3/14** (concerning clarity objections in opposition proceedings) was pending before the Enlarged Board, the President of the EPO decided that all proceedings before the opposition divisions where the decision depended entirely on the outcome of the Enlarged Board's decision were to be stayed *ex officio*, thereby superseding the then general practice under the guidelines to stay proceedings only upon request of a party (Notice from the EPO dated 7 August 2014 concerning the staying of proceedings due to referral **G 3/14**, OJ 2014, A87, see also Notice from the EPO dated 2 October 2015 concerning the staying of proceedings due to referral **G 1/15**).

### 2.5.4 Stay of appeal proceedings following a referral

It follows from Art. 112(3) EPC that the proceedings before the referring board are stayed until the Enlarged Board gives its decision. Proceedings before other boards of appeal may also be stayed.

In **T 426/00** of 27 June 2003, the board had to answer questions that were identical to the questions raised in a referral pending before the Enlarged Board (concerning Art. 123(2) EPC, disclaimers). The board raised the purpose of ensuring a uniform application of the law under Art. 112 EPC and the need to comply with the spirit of Art. 16 RPBA 1980 (Art. 21 RPBA 2007; see in this chapter IV.F.2.3.2). In order not to anticipate the Enlarged Board's evaluation of the questions before it, the board suspended the appeal proceedings.

In **T 1875/07**, the board acknowledged the patentability of the invention under Art. 52(2) EPC but did not consider the claimed subject-matter to be inventive. A referral on Art. 52(2) EPC was pending before the Enlarged Board. According to the board, the legal basis on which an application is refused (here: Art. 52(2) or Art. 56 EPC)

determines only the reasons for the decision, but not the decision itself. Since the decision in the appeal proceedings did not depend entirely on the outcome of the referral, the board refused the request to suspend the appeal proceedings (see also **T 787/06**, **T 1044/07** and **T 1961/09**).

### **3. Petition for review under Article 112a EPC**

#### **3.1. General**

Art. 112a EPC was introduced with the EPC 2000, following a suggestion of the Enlarged Board of Appeal (**G 1/97**; OJ 2000, 322). Its purpose is not to make the Enlarged Board of Appeal a third instance but to provide for a limited judicial review of decisions of the boards of appeal. The grounds on which a petition for review can be based have been exhaustively defined by the legislator. These are, firstly, fundamental procedural defects which occurred in appeal proceedings and, secondly, the existence of a criminal act which may have had an impact on a decision (Art. 112a(2) EPC).

Art. 112a EPC expands on the right to a fair trial guaranteed by Art. 6 EHRC (**R 9/14**). The examples in Art. 112a(2)(a) to (c) EPC and particularly the wording of Art. 112a(2)(d) EPC make it clear that only fundamental (but not minor) procedural defects can be the basis for a petition for review (explanatory remarks in OJ SE 4/2007, 126; see also **R 8/14**). Review proceedings are confined to procedural defects so fundamental as to be intolerable for the legal system and overriding the principle that proceedings which have led to a final decision should not be re-opened in the interest of legal certainty (**R 16/12**). Article 112a EPC provides an "exceptional means of redress" (**R 1/08**, **R 2/12**, **R 5/14**, **R 18/11**, **R 3/14**; see also **R 9/14**), an "extraordinary legal remedy" (travaux préparatoires, MR/21/00; see also **R 1/08**, **R 20/10**, **R 1/11**, **R 3/11**), the provisions of which have to be applied strictly (**R 1/08**, **R 23/10**). A petition for review has no suspensive effect (Art. 112a(3) EPC).

From 13 December 2007 (the entry into force of Art. 112a EPC) to 1 May 2016, 114 decisions of the Enlarged Board on petitions for review (petitions withdrawn or deemed not to have been filed excluded) have been published on the Internet. In five cases (**R 7/09**, **R 3/10**, **R 15/11**, **R 21/11**, **R 16/13**) the decision under review was set aside and the appeal proceedings re-opened; the remaining petitions were rejected.

#### **3.2. Transitional provisions**

The decision of the Administrative Council of 28 June 2001 on the transitional provisions under Art. 7 of the Act revising the EPC of 29 November 2000 provides that "Article 112a EPC shall apply to decisions of the Boards of Appeal taken as from the date of its entry into force" (see **R 2/08**). Referring to **G 12/91** (OJ 1994, 285), the Enlarged Board in **R 5/08** interpreted 'taken' to be the date a decision given orally is pronounced, not the date of notification. A petition based on a decision dated prior to, yet not notified to the parties until after entry into force of the EPC 2000, is therefore inadmissible.

### 3.3. Scope of review by the Enlarged Board of Appeal

#### 3.3.1 Grounds for a petition for review

A petition for review may only be filed on the grounds listed in Art. 112a(2) EPC. Those defined in Art. 112a(2)(a) to (c) EPC concern a breach of Art. 24 EPC governing exclusion of and objection to members of a board of appeal; the participation of persons not appointed as a member of the boards of appeal; and the fundamental violation of Art. 113 EPC. In addition, Art. 112a(2)(d) EPC opens up the possibility of using the Implementing Regulations to define further fundamental procedural defects on which a petition for review might be based (explanatory remarks in OJ SE 4/2007, 126). Currently, two such defects have been listed in R. 104(a) and (b) EPC, which provide that a petition may also be based on a fundamental procedural defect arising from either a failure to arrange for the holding of oral proceedings requested by a party, or a failure to decide on a request relevant for the board's decision. Finally, a petition for review may also be filed on the ground that a criminal act may have had an impact on the decision (Art. 112a(2)(e) EPC).

#### 3.3.2 Grounds listed exhaustively

The grounds for a petition for review have been exhaustively defined by the legislator, namely in Art. 112a(2) EPC in conjunction with R. 104 EPC (**R 1/08**; see also **R 10/09**, **R 14/09**, **R 16/09**, **R 17/09**, **R 18/09**, **R 20/09**, **R 20/10**, **R 6/11**, **R 13/11**, **R 19/11**, **R 20/11**, **R 2/12**, **R 18/12**, **R 4/13**, **R 5/13**, **R 5/14**, **R 7/14**, **R 9/14**, **R 6/15**). What is not defined by the Implementing Regulations does not qualify as a procedural defect under Art. 112a(2)(d) EPC (**R 16/09**). The erroneous application of a procedural rule, which does not in itself belong to the grounds for review enumerated in the EPC, can only be considered if it results in one of the procedural defects listed in Art. 112a(2) EPC in conjunction with R. 104 EPC (**R 2/08**, **R 20/10**, **R 18/12**).

In particular, the following issues cannot be considered in review proceedings:

- allegedly insufficient reasoning (**R 6/11**; see also **R 1/08**, **R 19/11**, **R 5/13**), unless this involves a fundamental violation of Art. 113 EPC
- the alleged violation of Art. 114 EPC in conjunction with R. 116(1) and (2) EPC or, respectively, R. 101 and 99(2) EPC (**R 14/09**)
- the refusal to allow the recording of oral proceedings, the use of a different (but equivalent) terminology than the one used in the EPC during the oral proceedings or the non-validation of the minutes at the end of the oral proceedings (**R 17/09**)
- the alleged inadequate keeping of minutes, the alleged incompetence to decide on the exclusion from file inspection or the alleged misunderstanding of a party submission (**R 20/09**)
- the alleged violation of Art. 6 ECHR (**R 18/09**), unless this involves a fundamental violation of Art. 113 EPC (see **G 3/08**, OJ 2011, 010, as to the general applicability of fundamental procedural rights in EPO proceedings)
- the alleged violation of the principle of legitimate expectations (**R 13/11**)
- the allegedly incorrect reversal of the burden of proof (**R 21/10**)

- alleged irrationality or "Wednesbury unreasonableness" (**R 19/11**)
- allegedly insufficient time allowed for the oral proceedings (**R 2/12**)
- the alleged violation of the right to be heard in respect of another party (**R 5/14**)
- the alleged lack of technical understanding of a board member, so that the board did not consist of two "technically qualified members" as required by Art. 21(4)(a) EPC (**R 3/12**)
- the alleged violation of Art. 4(3) EPC, or of Art. 11, 15(4) and 20 RPBA (**R 9/14**)
- the alleged violation of Art. 15(5) and 15(6) RPBA, unless this involves a fundamental violation of Art. 113 EPC or a fundamental procedural defect under Art. 112a(2)(d) EPC in combination with R. 104(b) EPC (**R 7/14**; see also **R 10/08**)
- the alleged violation of Art. 114 EPC, of Art. 13 RPBA, or the alleged lack of impartiality (**R 10/14**).

As R. 106 EPC implies, only procedural defects actually attributable to a board of appeal can be reviewed under Art. 112a EPC. Procedural defects that occurred in first instance proceedings may not be the subject of a petition for review (**R 20/10**, **R 8/11**; see also **R 19/12** of 12.04.2016).

### 3.3.3 Review of substantive law excluded

Under no circumstances may the petition for review be a means to review the application of substantive law. This restriction is justified because the function of the petition for review is to remedy intolerable deficiencies occurring in individual appeal proceedings, not to further the development of EPO procedural practice or to ensure the uniform application of the law (explanatory remarks in OJ SE 4/2007, p. 126; **R 13/10**: "established case law" since **R 1/08**). The Enlarged Board has no competence under Art. 112a EPC to examine the merits of the decision and to go into the substance of a case (**R 4/09**, **R 13/10**), not even indirectly (**R 19/11**, **R 6/13**). A review of the correct application of substantive law would amount to the Enlarged Board being a third instance which has been explicitly excluded (**R 3/09**; see also **R 13/09**). The Enlarged Board cannot act as a third instance or second-tier appellate tribunal in petition proceedings (**R 9/10**, **R 11/11**, **R 5/13**; see also **R 1/08**, **R 3/09**, **R 13/09**).

Not being competent to decide on the merits of a case necessarily implies that the Enlarged Board has no power to control the normal exercise a board makes of its discretion (**R 10/09**). The exercise of discretion is only subject to review if arbitrary or manifestly illegal (**R 10/11**), thereby involving a fundamental violation of the right to be heard (**R 9/11**; see also **R 17/11**).

In **R 13/12** the Enlarged Board stated that it had to remain vigilant and thwart any attempt to blur the frontier between what might clearly be a matter for a violation of the right to be heard under Art. 113 and 112a(2)(c) EPC, and anything else presented as a violation of the right to be heard but which actually pertained to the substantive merits of the decision under review.

Thus, the following issues cannot be considered in review proceedings:

- the assessment of inventive step (**R 1/08**, **R 12/09**, **R 6/11**, **R 14/13**, **R 6/15**), including the determination of the closest prior art (**R 5/13**)
- the interpretation of a prior art document (**R 9/08**, **R 8/09**, **R 4/11**)
- the assessment of clarity (**R 15/10**)
- the assessment of public prior use (**R 19/10**)
- the assessment of evidence (**R 21/09**)
- whether to remit a case to the department of first instance (**R 10/09**, **R 9/10**, **R 12/09**)
- whether to admit a new request (**R 10/11**, **R 11/11**, **R 13/11**, **R 4/13**) or a new document (**R 10/09**, **R 17/11**) under Art. 12 RPBA; or under Art. 13(1) RPBA (**R 1/13**)
- whether an appeal is admissible (**R 10/14**, **R 10/09**)
- whether or not the exception to reformatio in peius mentioned in **G 1/99** (OJ 2001, 381) applies to a particular case (**R 4/09**; see also **R 10/14**)
- whether to refer a question to the Enlarged Board of Appeal under Art. 112 EPC (**R 17/14**)
- whether the boards are empowered to decide on a request to hold oral proceedings before the examining division in Munich instead of in The Hague (**R 13/14**).

#### **3.4. Article 112a(1) EPC - party entitled to file a petition for review**

Under Art. 112a(1) EPC, any party adversely affected by the decision of a board may file a petition for review. In the case underlying **R 1/11**, the patent had been transferred and the transferee had filed an appeal against the decision of the opposition division to revoke the patent. The transfer of the patent had, however, not been registered in line with R. 22 EPC before the expiry of the period for filing the notice of appeal. Therefore, the decision under review had rejected the transferee's appeal as inadmissible. The transferor's appeal, filed after the expiry of the period for filing a notice of appeal, had also been considered inadmissible. Both the transferee and the transferor filed a petition for review. The Enlarged Board held that the requirement of Art. 112a(1) EPC that the petitioner be adversely affected for a petition to be admissible was fulfilled with respect to the transferee, irrespectively of its party status before the board of appeal, since the adverse effect resulted from the refusal to acknowledge that it had the status of appellant (his petition was, however, considered clearly unallowable in the end). The transferor's petition, on the other hand, was considered clearly inadmissible because, not being the current proprietor, the transferor was not adversely affected by the impugned decision.

#### **3.5. Rule 106 EPC - obligation to raise objections**

Under R. 106 EPC, a petition under Art. 112a(2)(a) to (d) EPC is only admissible where an objection in respect of the procedural defect was raised during appeal proceedings and dismissed by the board, except where such objection could not be raised. A large number of petitions for review are (at least partly) rejected as inadmissible because the petitioner failed to raise a valid objection under R. 106 EPC.

### 3.5.1 Purpose

The purpose of R. 106 EPC is to give the board a chance to react immediately and appropriately by either removing the cause of the objection or by dismissing it (see e.g. **T 1544/08, T 144/09, T 1977/13**), thereby ensuring legal certainty for the parties and the public as to whether the ensuing substantive decision of the board is open to review under Art. 112a EPC (**R 4/08, R 1/10, R 14/11, R 16/12**). By ensuring that errors can be corrected by a board before a final decision is taken, R. 106 EPC also ensures that unnecessary petitions for review are avoided (**R 14/11, R 18/12**).

### 3.5.2 Requirements of a valid objection

Raising an objection under R. 106 EPC is a procedural act and a precondition for access to the extraordinary legal remedy under Art. 112a EPC (**R 4/08, R 7/08, R 3/11, R 7/11, R 16/12**). Its validity depends on the fulfilment of two criteria (**R 4/08, R 7/08, R 8/08, R 1/10, R 17/10, R 7/11, R 5/12, R 6/12, R 16/12**: "established jurisprudence", **R 3/14**):

- **form**: the objection must be expressed by the party in such a form that the board is able to recognise immediately and without doubt that an objection under R. 106 EPC is intended;
- **content**: the objection must be specific, indicating clearly and unambiguously on which procedural defect the petitioner intends to rely.

An objection under R. 106 EPC is additional to and distinct from other statements, such as arguing or even protesting against the conduct of the proceedings or against an individual procedural finding (**R 2/08, R 7/08, R 9/09, R 1/10, R 14/11, R 21/11, R 16/12**). An objection must be expressly described as such (**R 8/08, R 21/11**). However, even if an objection does not contain an explicit reference to R. 106 EPC, it can qualify as an objection under R. 106 (**R 21/09**; see also **R 17/14**).

Only an objection which, in substance, raises a procedural defect which can be the subject of a petition for review under Art. 112a(2)(a) to (d) EPC can be regarded as an objection within the meaning of R. 106 EPC. Objecting, in substance, to the board's conclusion on clarity does not qualify as such an objection, even if the petitioner explicitly refers to Art. 113 EPC (**R 18/12**).

An objection cannot be formulated prematurely, i.e. before a procedural defect has come into existence (**R 14/11**; see also **R 8/08, R 17/10**). If, on the other hand, an objection is made during oral proceedings, the fact that it is only raised after further requests have been discussed has no bearing on the admissibility of the petition (**R 21/09**). In **R 1/14** the Enlarged Board held that it is an indispensable prerequisite for the admissibility of a petition that an objection is raised "in good time", i.e. at a time when the board can still rectify the alleged violation. An objection to a refusal to postpone the date of oral proceedings must therefore be made before or, at the latest, at the beginning of these oral proceedings.

An accompanying person cannot validly make procedural declarations, such as an objection under R. 106 EPC (**R 9/09**; see also **R 3/08**).

Different alleged procedural defects must be objected to separately under R. 106 EPC (**R 5/13**; see also **R 10/14**), and also have to be considered separately by the Enlarged Board (**R 3/08**, **R 17/11**).

### 3.5.3 Examples of invalid objections

Examples of acts not qualifying as an objection under R. 106 are:

- contesting insufficiency of disclosure or offering new documents (**R 7/08**)
- requesting that a late-filed document is not admitted into the proceedings (**R 9/09**, **R 17/10**)
- protesting against the hearing of an expert (**R 2/11**)
- an objection against the board raising a new line of argument or a request for remittal or postponement (**R 14/11**)
- requesting a board to make a statement on the scope of a claim, which request is repeatedly refused (**R 3/14**)

### 3.5.4 Minutes as evidence that the objection was raised

The test whether an objection was validly raised during oral proceedings is normally the minutes which, as prescribed by R. 124(1) EPC, must contain the relevant statements of the parties (**R 4/08**, **R 17/10**). The absence in the minutes of an objection under R. 106 EPC and of any request for correction of the minutes is a strong indication, that such objection, if any, was at least not duly qualified (**R 3/11**; see also **R 5/14**, **R 6/13**, **R 3/14**). Unless duly corrected, the minutes of the oral proceedings authenticate the facts they relate (**R 7/11**). If a party is convinced that a violation of its right to be heard has occurred during the oral proceedings it will require this to be recorded in the minutes (**R 2/12**). However, in **R 3/08** the Enlarged Board also took private minutes taken by an employee of the petitioner into account.

### 3.5.5 Objection could not have been raised

Under R. 106 EPC, last subset, an objection is not a requirement for the petition to be admissible where such objection could not be raised during the appeal proceedings. Therefore, if the alleged procedural defect becomes apparent to the parties only through the written reasons for the decision (in **R 3/10**: through the announcement of the decision), the admissibility of the petition is not conditional upon a corresponding objection having been raised during the oral proceedings (**R 4/08**; see, by way of example, also **R 1/08**, **R 2/08** (written procedure), **R 9/08**, **R 3/09**, **R 4/09**, **R 7/09**, **R 11/09**, **R 19/10**, **R 8/11**, **R 21/11**, **R 14/13**). If a petition addresses mostly the reasoning of a decision, the benefit of the doubt is given to the petitioner as to its possibility to raise an objection before the end of appeal proceedings (**R 1/11**, see also **R 18/14**).

If the petitioner requested the correction of the minutes of oral proceedings in order to establish what, in its view, had been the order of the procedural steps followed by the board, the lack of possibility for the petitioner to raise an objection cannot be excluded, even if the request to correct the minutes was rejected (**R 16/09**).

In the proceedings underlying **R 10/08**, the petitioner wanted to submit a new auxiliary request, allegedly during the announcement of the decision at the oral proceedings, but the board had declared itself formally bound by the decision as announced. The petitioner could thus no longer raise an objection "during the appeal proceedings".

#### 3.5.6 Compliance with Rule 106 left open

If a request is unallowable, it can be left open whether the petitioner complied with R. 106 EPC (**R 15/09**, **R 18/09**, **R 20/09**, **R 16/11**, **R 2/12**, **R 16/12**, **R 1/13**, **R 15/13**, **R 7/14**, **R 17/14**).

#### 3.6. Rule 107 EPC - contents of the petition for review and time limits

R. 107 EPC corresponds to the similar provisions requiring substantiation of an opposition or an appeal. The contents of a petition must be sufficient for the petitioner's case to be properly understood on an objective basis and must enable the Enlarged Board (and any other parties) to understand immediately why the decision in question suffers from a fundamental procedural defect. The petition must thus set out the reasons why it requests that the impugned decision be set aside, specify the facts, arguments and evidence relied on and must do so within the time limit for filing the petition, namely two months after notification (**R 5/08**; see also **R 4/13**, **R 17/13**). The time limit of two months after notification (Art. 112a(4) EPC) is mandatory (**R 3/14**). Filing a petition and paying the fee before the orally announced decision has been notified to the petitioner in writing does not make it inadmissible under Art. 112a(4) EPC (**R 20/09**, **R 5/14**).

With regard to requests, the only requirement which can be derived from the wording of R. 107(2) EPC is that the petition must make it clear that the petitioner wants the decision of the board of appeal to be set aside (**R 5/08**). An implicit request to set aside the decision is sufficient (**R 9/10**).

The obligation to file a reasoned statement cannot be construed so narrowly as to mean that any kind of reasoning is sufficient to fulfil this requirement, as long as it is only extensive enough (**R 20/10**). For the petition to be admissible, it is however sufficient that one ground is sufficiently reasoned in the request (**R 2/08**).

If a petition does not comply with R. 107(2) EPC (requiring substantiation of the request), it must be rejected as inadmissible (**R 6/10**). Equally, in case of failure to remedy a deficiency under R. 107(1)(a) EPC (here: the missing name and address of the petitioner), the petition is rejected as inadmissible under R. 108(2) EPC (**R 6/09**). The established jurisprudence of the boards of appeal that mere payment of the appeal fee is not an act which suffices for the admissible filing of an appeal applies *mutatis mutandis* to petition for review proceedings (**R 2/10**).

### 3.7. Article 12(1) RPEBA - late-filed submissions in the review procedure

Pursuant to Art. 12(1) RPEBA the Enlarged Board may consider new submissions made by the petitioner after expiry of the time limit for filing the petition for review, if this is justified for special reasons. In **R 12/10** and **R 4/13** no such reasons were advanced by the petitioner, and the Enlarged Board rejected the late-filed submissions. In **R 15/13** the Enlarged Board stated that "special reasons" could not extend to the late introduction of grounds not relied on unless or until the grounds in the petition proved insufficient. In **R 4/12** and in **R 16/12** the Enlarged Board said that an entirely new complaint submitted for the first time during the oral proceedings before the Enlarged Board had no bearing whatsoever on the findings as to the petition's admissibility and merits reached on the basis of the grounds, facts, arguments and evidence set out in the petition.

In **R 2/08** the Enlarged Board accepted the petitioner's additional explanations in response to its communication, and in **R 18/09** a late-filed external legal opinion on the admissibility of the petition.

### 3.8. Rule 109 EPC - composition of the Enlarged Board and review procedure

Unless otherwise provided, the provisions relating to proceedings before the boards of appeal apply (R. 109(1) EPC). The RPEBA also apply in proceedings under Art. 112a EPC (Art. 1 RPEBA).

Petition for review proceedings consist of two stages. In the first stage, a panel of the Enlarged Board composed of three members (two legally qualified, one technically qualified) examines all petitions for review and rejects those which are clearly inadmissible or clearly unallowable (unanimity is required; R. 109(2)(a) EPC). Those not rejected are considered by a panel composed of five members (four legally qualified, one technically qualified; R. 109(2)(b) EPC). In these cases, the three-member panel under R. 109(2)(a) is supplemented by two further legally qualified members (Art. 2(3) RPEBA). The chairman of the board against whose decision the petition was filed may not take part in the proceedings (Art. 2(6) RPEBA).

The travaux préparatoires stress the need for a quick screening process to be conducted by a three-member panel of the Enlarged Board in order to reject petitions which clearly cannot succeed. In the basic proposal for the revision of the EPC it was even stated that no oral proceedings should take place before the three-member panel (CA/100/00, p. 139). However, this sentence was deleted (see explanatory remarks on the revision of the EPC, OJ SE 4/2007, p. 126) and, as far as the petitioner is concerned, Art. 116 EPC also applies in the first stage of the proceedings (**R 5/08**).

Parties other than the petitioner are not to be involved in the first stage of petition for review proceedings (R. 109(3) EPC; **R 7/14**). In **R 5/08** the Enlarged Board held that non-petitioner parties, as long as they are not involved, have no right to be heard that could be violated. Although not summoned to oral proceedings in the first stage, non-petitioner parties may, however, attend such proceedings which are public.

Petition for review proceedings should by their nature be dealt with as speedily as possible, acceleration requests are therefore unnecessary (**R 18/09**, **R 15/13**). In **R 11/12** the board also stated that petitions for review should, in the interest of legal certainty, be dealt with expeditiously, and did not consider a planned birthday party a reason justifying the fixing of a new date for oral proceedings before the Enlarged Board.

R. 109(1) EPC provides that certain specific procedural time limits do not apply to petition for review proceedings. This allows the Enlarged Board to shorten these time periods in the interest of procedural efficiency. However, it clearly provides no justification for parties to disregard time limits set by the Enlarged Board itself (**R 5/08**).

In **R 18/09** the Enlarged Board held that the principles set out in **G 3/99** (OJ 2002, 347), also apply to petition for review proceedings, namely that a plurality of persons acting in common must be treated as a single party (a "group party") and that such a group party must act through a common representative.

In **R 21/11**, the Enlarged Board stated that the only condition for the fee for a petition for review to be reimbursed under R. 110 EPC is that the proceedings before the board of appeal are re-opened (a reimbursement request is not required).

### **3.9. Factual bases for the review - minutes and grounds for the decision**

The factual bases for a review procedure under Art. 112a EPC are the minutes of the oral proceedings and the grounds for the decision under review (**R 15/09**, **R 6/14**). However, in **R 3/10** the Enlarged Board also took signed declarations of persons who had attended the oral proceedings into account.

### **3.10. Burden of proof**

The petitioner bears the burden of proving its allegations (**R 4/09**). However, in **R 15/11** the petition was allowed and the Enlarged Board stated that it is not for the party which alleges a breach of its right under Art. 113(1) EPC to prove that it has not been heard (*negativa non sunt probanda*). It would rather be the task of the boards to draft their own texts in a way that enables the reader, taking into account all documents on file, to conclude that the right to be heard was respected with regard to the grounds on which the decision is based.

### **3.11. Article 112a(2)(a) EPC - alleged breach of Article 24 EPC**

For general information on Art. 24 EPC, see Chapter III.J "Suspected Partiality". The present chapter deals with decisions of the Enlarged Board under Art. 112a(2)(a) EPC.

In **R 16/10** the Enlarged Board rejected the petitioner's argument that Art. 24(1) EPC, concerning the exclusion of members from a board, includes not only the specific situation where one of the members has represented a party in the case in question but also the general situation where a member has previously acted as representative of that party in any matter. In **R 20/09** the Enlarged Board confirmed that, in cases of suspected

partiality of a board member, Art. 112a(2)(a) EPC requires that a decision has been taken on the suspected impartiality (Art. 24(4) EPC).

In **R 17/09** the Enlarged Board found that in English the term "man in the street" has no pejorative associations, but is commonly used to describe an average citizen.

### **3.12. Article 112a(2)(b) EPC - person not appointed as a board member**

The Enlarged Board has not yet ruled on a petition for review alleging that a board of appeal included a person not appointed as a board member.

According to Art. 19(1), second sentence, RPBA only members of the Board shall participate in the deliberations; the Chairman may, however, authorise other officers to attend. In **T 857/06** the board held that, under this provision, a board's assistant may attend and take part in the deliberations.

### **3.13. Article 112a(2)(c) EPC - alleged fundamental violation of Article 113 EPC**

#### 3.13.1 General

The decisions of a board of appeal may only be based on grounds or evidence on which the parties have had an opportunity to present their comments (Art. 113(1) EPC), and a patent application or a patent may only be examined in the text submitted or agreed by the applicant or proprietor of the patent (Art. 113(2) EPC). For general information on the right to be heard under Art. 113 EPC, see Chapter III.B "Right to be heard".

In most petitions for review, the alleged fundamental violation of Art. 113(1) EPC is among the grounds on which the petition is based. All petitions for review that have been successful so far concern a fundamental violation of Art. 113 EPC (see in this chapter IV.F.3.13.19 and in this chapter IV.F.3.14.3).

#### 3.13.2 "Fundamental" violation of Article 113 EPC - causal link

A violation of Art. 113 EPC can only be considered fundamental within the meaning of Art. 112a(2)(c) EPC if there is a causal link between the alleged violation and the final decision (**R 1/08**, **R 11/08**, **R 11/09**, **R 13/09**, **R 6/13**, **R 17/14**). Such a necessary causal link does not exist when, even if a procedural violation can be demonstrated, the same decision would have been taken for other reasons (**R 22/10**, **R 19/09**).

#### 3.13.3 No prior assessment of the merits of a submission

When determining whether a party's right to be heard has been violated, it is irrelevant whether a party's standpoint, which it alleges it would have taken had it been given the opportunity, would have been well-founded. The right to be heard is a fundamental right of the parties which has to be safeguarded irrespective of the merits of a submission. The necessity to respect it is absolute and cannot be made dependent on a prior assessment of the likelihood that the petitioner's arguments would have convinced the

board (**R 3/10**, **R 5/13**). In **R 21/11** the Enlarged Board stated that it could not be ruled out that a different decision would have been reached if the party had been heard on the point on which it alleged its right to be heard had been infringed.

#### 3.13.4 Objective approach - board's intention irrelevant

When determining whether a fundamental violation of the petitioner's right to be heard occurred, an objective approach must be applied. It is not relevant whether the board deliberately refused an opportunity to comment or acted in good faith (**R 3/10**).

#### 3.13.5 No obligation to provide detailed reasons for a decision in advance

It is settled case law that a board of appeal is not required to provide the parties in advance with all foreseeable arguments in favour of or against a request (**R 1/08**; see, by way of example, also **R 13/09**, **R 18/09**, **R 4/13**). In other words, parties are not entitled to advance indications of all reasons for a decision in detail (see, by way of example, **R 12/09**, **R 15/09**, **R 4/11**, **R 18/12**, **R 2/13**, **R 9/14**). This principle also applies to an interpretation of a passage in the state of the art forming only part of such reasons (**R 19/11**, **R 15/12**, **R 16/13**).

#### 3.13.6 Boards' obligation to remain neutral

According to settled case law, a board must remain neutral in *inter partes* proceedings, both in its communications to the parties and in oral proceedings (**R 15/09**; see also **R 11/08**), especially when the opposing party is not present (**R 9/14**). By giving a party possible reasons to decide against its requests (**R 18/09**, **R 15/10**), by prompting a party to make further submissions (**R 9/11**, **R 3/13**, **R 17/13**), by informing a party of a possible different interpretation of a passage in a prior art document (**R 19/11**; see also **R 18/09**), or by suggesting a possible wording of a claim (**R 4/09**, **R 22/10**; see also **R 7/14**) a board would assist a party and compromise its neutrality.

#### 3.13.7 Parties' obligation to participate actively in the appeal proceedings

Corresponding to a board's obligation to remain neutral (see in this chapter IV.F.3.13.6), parties are obliged to participate actively in the appeal proceedings (**R 2/08**, **R 6/12**, **R 12/12**), in particular in *inter partes* proceedings (**R 15/09**, **R 12/09**). Parties and their representatives are responsible for the conduct of their case and it is for them to submit the necessary arguments to support their case on their own initiative and at the appropriate time (**R 17/12**; see, by way of example, also **R 18/09**, **R 13/11**, **R 17/12**, **R 1/13**, **R 15/13**). It is for the parties to address any point they consider relevant and fear may be overlooked and to insist, if necessary by way of a formal request, that it be discussed in the oral proceedings (**R 17/11**).

#### 3.13.8 Reasons for a decision allegedly surprising

While the boards are not obliged to provide the parties in advance with all reasons for a decision in detail (see in this chapter IV.F.3.13.5), Art. 113(1) EPC requires that

decisions may only be based on grounds or evidence on which the parties concerned have had an opportunity to present their comments, which implies that a party may not be taken by surprise by the reasons of a decision, referring to unknown grounds or evidence (**R 3/13**; see also **R 15/09**, **R 21/10**). "Grounds or evidence" under Art. 113(1) EPC is understood as the essential legal and factual reasoning on which a decision is based (see Chapter III.B.2.3.2 "The meaning of 'grounds or evidence'"). In **R 3/10**, **R 15/11** and **R 16/13** the petition was allowed because of surprising reasons on which the parties had not been given an opportunity to comment (see in this chapter IV.F.3.13.19).

Grounds or evidence within the meaning of Art. 113(1) EPC need not emanate from the board, it is sufficient if another party raises the objection (**R 2/08**; see also **R 1/08**, **R 1/13**). If the reason given in a decision corresponds to an argument put forward by the other party, the petitioner was aware of it and thus not taken by surprise (**R 4/08**, **R 12/09**; see also **R 8/14**), unless the board clearly indicated that it regarded those arguments as not convincing (**R 11/12**).

A subjective surprise (in **R 6/11**, **R 1/13**: the petitioner's belief that the board would decide in its favour) has no bearing on whether a party knew the issues which might be raised and had an adequate opportunity to comment thereon (**R 13/11**, **R 17/12**; see, by way of example, also **R 12/09**, **R 22/10**, **R 1/13**, **R 3/13**).

To determine which subject matter (grounds, facts and evidence) could have been expected to be discussed, and whether new facts and grounds were introduced ex officio by a board of appeal in its decision, the Enlarged Board has to check the file history (**R 8/13**).

Establishing the closest prior art is part of the process of arriving at a decision and takes place only after all arguments have been heard, in the final deliberations of the board. If the closest prior art is redefined because of an amendment to a claim, the board is not obliged to address this at oral proceedings (**R 8/14**).

Dismissing a party's interpretation of a document in a decision in a way which does not introduce any change in the factual and legal framework of the debate does not infringe the right to be heard, in the same way as "arguments" can be put forward by a party in the absence of the other party, as stated in **G 4/92 (R 2/13)**.

Several further cases in which the petitioner claimed that the decision under review took it by surprise were rejected by the Enlarged Board, stating that

- the decision was "based on a line of reasoning that can be said to have been in the proceedings" (**R 4/11**, **R 11/12**, **R 18/12**);
- the argument in question was "part of the appeal proceedings" (**R 7/12**);
- the document in question "formed part of the debate" (**R 8/09**);
- it is sufficient that the "relevance [of a factor] becomes clear during the proceedings" (**R 9/14**);
- the decision did "not contain any reasons which could not be objectively foreseen" (**R 22/10**);

- "a representative with normal experience and training could foresee what the crucial issues were for the board" (**R 8/13**).

### 3.13.9 Timing of a decision allegedly surprising

Reading out the opponent's request "that the decision under appeal be set aside and that the European patent [...] be revoked" indicates that the board intends to deliberate on patentability and that it can pronounce the revocation of the patent as a whole (**R 14/10**, **R 7/14**). When a board, after discussing novelty, interrupts oral proceedings for deliberation, a party should be aware that the board could take a negative decision on novelty (**R 4/12**). It can, however, be surprising for a party if only novelty was discussed and a request is then rejected due to lack of inventive step (**R 3/10**; see in this chapter IV.F.3.13.19).

It is not sufficient to claim that the duration of the oral proceedings resulted in a violation of the right to be heard. The petitioner must rather establish that, for reasons of lack of time, it was deprived of the possibility to properly defend its case, resulting in a decision based on grounds that it did not have an opportunity to comment upon (**R 2/12**).

### 3.13.10 Consideration of the parties' arguments in the written decision

The right to be heard under Art. 113(1) EPC requires that those involved be given an opportunity not only to present comments (on the facts and considerations pertinent to the decision) but also to have those comments considered, that is reviewed, with respect to their relevance for the decision in the matter (**R 23/10**; see also **R 13/12**). Art. 113 (1) EPC obliges the decision-making body to allow the parties to present the necessary arguments on all essential aspects of the case, to take note of these arguments and to acknowledge them in its decision (**R 8/11** and **R 19/12** of 12.04.2016).

It is, however, not necessary to consider each and every argument of the parties in detail in a decision (**R 19/10**, **R 17/11**, **R 6/12**, **R 15/12**, **R 2/13**, **R 19/12** of 12.04.2016). The boards may also refute arguments implicitly, and may disregard irrelevant arguments (**R 13/12**, **R 21/10**).

Issues and arguments relevant for the decision must be considered, whereas irrelevant arguments may be disregarded (**R 13/12**). The allegedly insufficient consideration, by a board, of arguments concerning a procedural defect before the department of first instance can only constitute a fundamental violation of the right to be heard when the alleged procedural defect impacted on the decision at first instance (**R 19/12** of 12.04.2016).

Oral remarks made by a chairman directly before a decision is pronounced do not form part of the reasons that must reflect, within certain limits, a party's arguments (**R 4/12**).

Decisions of boards of appeal are open only to review but not to appeal, and thus not covered by R. 111(2) EPC which requires that decisions which are open to appeal be reasoned (**R 6/11**; see, however, also **R 12/10**; see also in this chapter IV.F.3.3.2).

### 3.13.11 Parties' obligation to know the case law, references to decisions

Even under the assumption that the information given by a technical board of appeal on a decision of the Enlarged Board of Appeal was unclear, parties are deemed to know the case law, at least when represented by an authorised representative. Thus, a party cannot plead lack of such knowledge as an excuse (**R 4/09**).

The reference to decisions in a decision, even decisions not cited to the party earlier in writing or at the oral proceedings, also does not constitute a fundamental violation of the right to be heard (**R 17/09**).

A qualified professional representative can be assumed to be familiar with the analytical sequence of the problem-solution approach (here: the submission of comparative test results to prove an effect). Special guidance from the board is not necessary (**R 9/14**).

### 3.13.12 No right to be heard separately on all requests

A party has no absolute right to be heard separately on each and every one of its auxiliary requests. The right to be heard is satisfied if a party had the opportunity to comment on the grounds for a decision on the main request, and the remaining requests are not allowed on the same grounds (**R 6/11**; see also **R 11/08**, **R 3/12**, **R 14/10**).

### 3.13.13 No right to a further hearing at first instance

As there is no right to remittal, there is no right to a further hearing before the department of first instance that could be violated (**R 9/10**; see also **R 12/09**).

### 3.13.14 No right to a referral under Article 112 EPC

The right to be heard is not infringed if a board decides, after having heard the parties, not to refer a particular question to the Enlarged Board of Appeal (**R 8/11**; see also **R 17/14**).

### 3.13.15 No right to a communication; communication allegedly misleading

The communication of a board, if any, is a means at the board's disposal to streamline the appeal proceedings and above all the oral proceedings. Not issuing a communication does not constitute a violation of the right to be heard (**R 16/09**). If a board decides not to issue a communication, it can be assumed that it regards the whole file as relevant for discussion at the oral proceedings (**R 14/12**).

While a preliminary opinion can be criticised for not mentioning the issue whether auxiliary requests are admissible, the omission of an issue which the petitioner and the board knew could arise (here: because of the other party's submission) cannot be characterised as misleading (**R 13/11**). Discrepancies between a board's provisional opinion as expressed in a communication preparing oral proceedings and its analysis in its final decision is in itself not a fundamental procedural defect (**R 3/09**).

### 3.13.16 Late-filed submissions - boards' discretion under Article 13 RPBA

There is no obligation to hear a party on substantive issues before deciding on the admissibility of a proposed auxiliary request. In the proceedings under review in **R 16/09** the petitioner had expressed its intention to present an auxiliary request in the closing stages of the oral proceedings without having prepared a set of amended claims. The Enlarged Board stated that requiring a board to always invite a party to supply a text of amended claims before a decision on the admissibility of a proposed auxiliary request is taken, would deprive it of the discretion explicitly provided by Art. 13 RPBA.

The mere fact that a board takes into account the lateness of an auxiliary request when exercising its discretion under Art. 13 RPBA - although it did not explicitly raise this issue in the oral proceedings - does not infringe the right to be heard (**R 5/11**).

### 3.13.17 Alleged violation of Article 113(2) EPC

Art. 113(2) EPC does not give a right to the applicant to have a request for amendment considered. It merely forbids the EPO from considering and deciding upon any text of an application other than that submitted or agreed by the applicant or proprietor. If the petitioner did not indicate, before the debate was closed, a wish to amend the requests on file or to file a further request, the board did not decide upon any text other than that submitted by the proprietor (**R 10/08**, referring to **G 7/93**; see also **R 11/11**).

### 3.13.18 Further examples of unsuccessful petitions

If a party informs the board that it will not be attending the oral proceedings and the case is then decided in the party's absence, the party's right to be heard is not infringed (**R 17/13**).

The principle of efficiency requires a board of appeal to focus on what is relevant for the decision. If a case can be decided on the basis of sufficiency of disclosure, discussing any other ground such as inventive step would concern an obiter dictum (**R 16/12**).

The assertion that the petitioner learned during the break in the oral proceedings, from a third party who had presented himself as the examiner who had taken the decision, that its appeal was going to be dismissed has no bearing on an alleged infringement of the right to be heard (**R 4/12**).

National judgments and documents submitted in national proceedings may be introduced into appeal proceedings. Accepting such documents as evidence - to be freely assessed by the board - does not, as such, violate the right to be heard (**R 21/09**).

An infringement of Art. 15(5) RPBA, by not stating the final requests before declaring the debate closed, does not necessarily involve a violation of Art. 113 (1) EPC (**R 10/08**; with regard to Art. 15(4) RPBA, see also **R 6/15**).

Oral submissions made by an accompanying person are under the discretionary control of the EPO. The denial of a request - made shortly before the oral proceedings - for an accompanying person to present oral submissions (requiring interpretation) is not a fundamental violation of Art. 113(1) EPC (**R 3/08**, referring to **G 4/95**).

### 3.13.19 Successful petitions under Article 112a(2)(c) EPC

In the *inter partes* proceedings under review in **R 16/13** the petitioner had filed a document with comparative test results. In its written decision, the board of appeal stated that this document did not prove the advantages of the claimed substance because some of the parameters referred to in the claim had not been specified in the document. This issue had not been raised in the proceedings and according to the Enlarged Board it had not been possible for the petitioner to infer the board's reasoning, on the basis of his own expertise, from the way the proceedings developed. The Enlarged Board allowed the petition, stating that the right to be heard is violated when a board gives, *ex officio*, reasons in its decision without having given the party adversely affected an opportunity to comment on these reasons, and, as far as the patentee is concerned, an opportunity to submit new requests. In **T 1378/11** the board stated that **R 16/13** could not be understood to give the parties the right to find out from the deciding body how it assesses the facts and arguments on which its decision is likely to be based. In **R 8/13** the petitioner relied on **R 16/13** and argued that the board's claim construction had come as a surprise. The Enlarged Board highlighted the differences between the cases and rejected the petition for review.

In the *ex parte* proceedings under review in **R 15/11** the board had held that the request did not comply with the requirements of Art. 84 EPC. According to the Enlarged Board, there was no explicit or implicit indication in the file of the appeal procedure from which it could be derived that a possible lack of clarity was at any time discussed with the petitioner or that at least an objection was raised in this respect. The Enlarged Board allowed the petition and held that a minimum prerequisite for an opportunity to comment on a specific ground (here: Art. 84 EPC) was that the petitioner was aware or could have been aware that compliance with that ground was at issue. A statement in the communication concerning a potential discussion of, *inter alia*, Art. 84 EPC did not amount to a specific objection regarding the request at issue.

In the *inter partes* proceedings under review in **R 3/10** the chairman had stated after the parties' submissions on novelty "that the Board will decide on patentability". The board had then closed the debate and held that the main request was novel but lacked an inventive step. According to the Enlarged Board, the term "patentability" covered a variety of potential objections and the chairman could not have meant to address all of them. Thus, the petitioner had no reason to assume that the board's decision would address more than what had been previously discussed, *i.e.* novelty. As the petitioner had not been given the opportunity to comment on inventive step, the Enlarged Board allowed the petition.

In **R 7/09** the petition was allowed, as the EPO was not able to establish delivery of the opponent's statement of grounds of appeal to the patentee and subsequent petitioner.

The petitioner had therefore been unaware of the grounds on which the decision of the board of appeal revoking his patent was based. The fact that the statement of grounds became available to the public and, thus, also to the petitioner by way of electronic file inspection had no bearing on the right of parties to be individually and specifically informed by the Office.

### **3.14. Article 112a(2)(d) EPC - any other fundamental procedural defect**

Under R. 104 EPC, a fundamental procedural defect may have occurred where the board of appeal, contrary to Art. 116 EPC, failed to arrange for the holding of oral proceedings requested by the petitioner, or decided on the appeal without deciding on a request relevant to that decision. What is not defined by the Implementing Regulations does not qualify as a procedural defect within the meaning of Art. 112a(2)(d) EPC (**R 16/09**; see in this chapter IV.F.3.3.2).

#### **3.14.1 Rule 104(a) EPC - failure to arrange requested oral proceedings**

The right to oral proceedings under Art. 116(1) EPC forms a substantial part of the right to be heard under Art. 113(1) EPC. Non-compliance with a request for oral proceedings deprives the party of an important opportunity for presenting its case (**T 1050/09**) and may constitute a fundamental procedural defect which merits the same treatment as the cases covered by Art. 112a(2)(a) to (c) EPC (CA/PL 5/02 Rev. 1 Add. 1, p. 26).

In **R 2/12** the petitioner argued that R. 104(a) EPC should be understood not only as an obligation to arrange oral proceedings but also to give the parties enough time to exercise their right to be heard. The board held that the duration of oral proceedings is, as such, not listed among the procedural defects that might justify filing a petition for review (see also **R 21/10**).

#### **3.14.2 Rule 104(b) EPC - failure to decide on a party's request**

According to R. 104(b) EPC, a fundamental procedural defect under Art. 112a(2)(d) EPC may have occurred where the board decided on the appeal without deciding on a request relevant to that decision. Like R. 104(a) EPC (see in this chapter IV.F.3.14.1), R. 104(b) EPC also reflects an aspect of the right to be heard (**R 21/11**).

While not explicitly defined in the EPC, requests are in general directed to legal consequences sought by the parties. The arguments provided by the parties in support of these legal consequences do not normally belong to the legally binding requests (**R 19/10**; see also **R 17/11**). Only requests submitted in writing or requests which the party had recorded in the minutes of the oral proceedings fall under R. 104(b) EPC (**R 3/14**; see also travaux préparatoires, CA/PL 5/02 Rev. 1 Add. 1, p. 27). It is not a procedural duty of the boards of appeal under R. 104(b) EPC to analyse the submissions of the parties in order to identify potential requests which were not explicitly made (**R 19/10**, **R 17/11**).

A request "relevant to that decision" within the meaning of R. 104(b) EPC is a request that could possibly have led to a different decision (**R 21/11**). If a board refuses a party's request for maintenance of the patent and for reimbursement of the appeal fee, the party's request for remittal is no longer relevant (**R 17/13**). The decision to revoke a patent necessarily includes the rejection of all auxiliary requests (**R 15/09**).

In the appeal proceedings under review in **R 13/14** the appellant had requested that the examining division's refusal of its request to hold oral proceedings in Munich instead of in The Hague be set aside. The board had stated, in the reasons for the decision, that it was not empowered to decide on this request. The Enlarged Board held that this statement, even if not expressed in the usual and formal terminology, had to be considered as a decision on the appellant's request.

In **R 10/08** (see also **R 6/14**), the Enlarged Board referred to **G 12/91** (OJ 1994, 285) and stated that the last point in time to intervene is not the moment a decision is announced but the moment at which the chairman declares the debate closed for deliberation. The petitioner should then have requested that the debate be re-opened if it intended to file a further request. Whether the petitioner intervened during or after the announcement of the decision is not relevant.

In **R 11/08** the Enlarged Board dismissed the petitioner's allegation that the board had not ruled on a request which it had considered too general.

In **R 14/10** the Enlarged Board confirmed that, if a party's request is unclear, it is the duty of the deciding body to ask for clarification before deliberation (see also **R 7/14**). However, if the requests as read out by the chairman in conformity with Art. 15(5) RPBA do not correspond to a party's intention, it is that party's duty to intervene at that point.

### 3.14.3 Successful petition under Rule 104(b) EPC

In **R 21/11**, so far the only allowable petition based on R. 104(b) EPC, the petitioner (patentee) claimed that the board had decided on the appeal without deciding a request for admission of a second expert testimony filed by fax. The Enlarged Board found that R. 104(b) EPC was a specific manifestation of the right to be heard which applied regardless of whether the party's submission might have persuaded the board. The argument that the undecided request was irrelevant because its admission would not have made a difference could only be accepted if it could be shown that all aspects "lost" as a result of its non-admission had been taken into account in the decision under review. According to the Enlarged Board, the procedural defect asserted by the petitioner constituted an infringement of its right to be heard, both under Art. 112a(2)(d) in conjunction with R. 104 EPC and under Art. 112a(2)(c) in conjunction with Art. 113(1) EPC. While the petitioner had argued that this infringement consisted in the board's failure to take account of the second testimony in its decision, the Enlarged Board saw the infringement in the board's failure to consider the request for its admission. Had that request been granted, it could have influenced the outcome, so that there was a causal link between the denied opportunity to comment and the board's

decision (see in this chapter IV.F.3.13.2). The contested decision was therefore set aside.

### **3.15. Article 112a(2)(e) EPC - criminal act having an impact on a decision**

Under Art. 112a(2)(e) EPC, a petition for review may be based on the ground that a criminal act may have had an impact on a decision. A competent court or authority must have finally established that the criminal act occurred; a conviction is not necessary (R. 105 EPC). Deviating from the general rule, the time limit for filing the petition is two months after the criminal act has been established, and in any event not later than five years after notification of the decision (Art. 112a(4) EPC).

In **R 2/10** the petitioner referred to alleged criminal acts which had, however, not been established by a criminal court or authority. The Enlarged Board rejected the petition as clearly inadmissible, due to failure to observe the time-limit for filing the petition.

### **3.16. Rule 108(3) EPC - effects of a successful petition for review**

If the petition is allowable, the Enlarged Board sets aside the decision of the board of appeal and orders the re-opening of the proceedings before the board (R. 108(3) EPC). The limitation of the petition for review to a particular part of the decision (e.g. the non-reimbursement of the appeal fee) is admissible. Although Art. 112a(5) and R. 108(3) EPC do not explicitly provide for setting a decision aside only partially, this possibility follows from general procedural principles (**R 19/12** of 12.04.2016).

The replacement of board members under R. 108(3) EPC after a petition for review has been held allowable lies in the discretion of the Enlarged Board, to be exercised fairly and proportionately in the light of the facts (**R 21/11**). Unless there is a compelling reason for proceeding otherwise, the Business Distribution Scheme must be adhered to and applied to a case re-opened before the board (**R 15/11**).

In **R 16/13**, the Enlarged Board rejected the request that members be replaced because it was not substantiated. In **R 21/11**, the Enlarged Board also rejected the petitioner's request that members be replaced, stating inter alia that such a replacement would necessitate the repetition of the whole appeal proceedings, which would be disproportionate. However, after the decision in **R 21/11** had been taken, the chairman of the technical board concerned retired, and the appeal proceedings had, in any event, to be repeated. As a consequence, both the technically and the legally qualified member recused themselves under Art. 24(2) EPC (**T 584/09** of 1 March 2013).

In **T 379/10** (decision of 21 September 2015), the board cited **R 21/11**, in which it was held that the re-opening of appeal proceedings did not mean that the parties had to be given another opportunity to comment on all the matters in dispute. Rather, proceedings re-opened after a successful petition for review had to be restricted to rectifying the defect found in the review decision.

## **4. Removal from office of a board member**

### **4.1. General**

According to Art. 23(1) EPC, first sentence, members of the Enlarged Board of Appeal and the boards of appeal may not be removed from office during their term of appointment, except if there are serious grounds for such removal and if the Administrative Council, on a proposal from the Enlarged Board of Appeal, takes a decision to this effect. According to Art. 12a RPEBA, the Administrative Council or the Vice-President of the EPO in charge of the boards of appeal may make a request to the Enlarged Board to make a proposal, to the Administrative Council, for the removal from office of a board member.

### **4.2. Composition**

According to Art. 2(5) RPEBA (see also Art. 10 BDS/EBA), the Enlarged Board in proceedings under Art. 23(1) EPC consists of five legally and two technically qualified members. The chairman of the Enlarged Board who is, under current practice, also Vice-President of the EPO in charge of the boards of appeal must be replaced by his alternate, and two of the legally qualified members must be external members of the Enlarged Board (see Art. 11(5) EPC).

In **G 2301/15** the Enlarged Board held that the arrangements laid down in Art. 2(5) RPEBA and Art. 10 BDS/EBA for the composition of the Enlarged Board in proceedings under Art. 23(1) EPC were compatible with the EPC and general principles of law. It could not be inferred from Art. 23(1) EPC that a proposal to remove a member from office must be decided by the full Enlarged Board (consisting of all internal and external members under Art. 1 BDS/EBA).

### **4.3. Removal and judicial independence**

The Enlarged Board stated in **G 2301/15** that removing an irksome judge from office could be used to indirectly influence decisions. It was crucial to judicial independence that judges cannot be removed without special institutional safeguards. The requirement that a board member may only exceptionally be removed from office on a proposal from the Enlarged Board intended to make sure that unsubstantiated or groundless allegations could not be used as pretext for getting rid of an irksome judge.

### **4.4. Independence from disciplinary proceedings**

According to Art. 12a(8) RPEBA, proceedings under Art. 23(1) EPC are to be conducted independently of any disciplinary or national proceedings. According to the Enlarged Board in **G 2301/15**, Art. 23(1) EPC requires that the Administrative Council may apply to a board member the most severe disciplinary sanction available (dismissal) only if it has first received a proposal for his or her removal from office from the Enlarged Board. The administrative disciplinary proceedings before the appointing authority are separate from

the judicial proceedings before the Enlarged Board, which must satisfy itself that the allegations are true, and so serious as to require the removal from office.

#### **4.5. Adversarial judicial proceedings**

In **G 2301/15** the Enlarged Board held that proceedings under Art. 23(1) EPC were to be conducted in proper judicial form. A request by the Administrative Council initiated adversarial proceedings to which the board member concerned is a party as respondent (Art. 12a(4) RPEBA). The Administrative Council's request must set out all the facts, arguments and evidence relied on; all documents referred to must be attached (Art. 12a(5) RPEBA). According to the Enlarged Board, this provision requires that the Administrative Council's request specify individual incidents and the evidence for them, and give reasons why they constitute a serious ground within the meaning of Art. 23(1) EPC. It was not be up to the Enlarged Board to define of its own motion which facts may be derived from documents and exhibits. Simply referring to facts and evidence and leaving the Enlarged Board to reconstruct the events for itself neither satisfied the requirements of Art. 12a(5) RPEBA nor the respondent's right to know the charges against him. As the Administrative Council's request was not substantiated as prescribed by Art. 12a(5) RPEBA, the Enlarged Board rejected the request as inadmissible.

#### **4.6. Publication of the decision**

According to Art. 18(3) RPEBA, the final decision of the Enlarged Board in proceedings under Art. 23(1), first sentence, EPC may be published, due regard being taken of the confidentiality of the proceedings. Case **G 2302/15** was terminated following the Administrative Council's withdrawal of its request that the Enlarged Board make a proposal for the removal from office of a board member. The Enlarged Board's decision was final in that it terminated the proceedings, albeit for non-substantive reasons. The Enlarged Board decided that the decision be published.

#### **4.7. Reimbursement of costs**

According to Art. 12a(10) RPEBA the Enlarged Board may on request propose the reimbursement of some or all costs incurred in the proceedings by the respondent if the request to make a proposal for their removal from office has been rejected (see **G 2301/15**). In **G 2302/15** the proceedings were terminated following the Administrative Council's withdrawal of its request during oral proceedings. The Enlarged Board proposed the reimbursement of all costs incurred by the respondent, as the costs for preparing his defence had turned out to be unnecessary as a result of the withdrawal.

## V. PROCEEDINGS BEFORE THE DISCIPLINARY BOARD OF APPEAL

1.	Introduction	1247
2.	European qualifying examination	1249
2.1.	Formalities and conditions for enrolment	1249
2.1.1	Required qualification or equivalent knowledge	1249
2.1.2	Professional experience	1250

5.	Appeals against decisions of the Disciplinary Board of Appeal	1263

---

### 1. Introduction

Representation of natural or legal persons in proceedings established by the EPC may only be undertaken by professional representatives whose names appear on a list maintained for this purpose by the EPO (Art. 134(1) EPC). Any natural person who is a national of a contracting state, has his place of business or employment in a contracting state and has passed the European qualifying examination may be entered on the list (Art. 134(2) EPC). Under Art. 134(8) EPC (cf. Art. 134(7) EPC 1973), legal practitioners from the contracting states are also entitled to act as representatives, subject to the conditions specified therein.

Art. 134a EPC, introduced under the EPC 2000, incorporates the substance of former Art. 134(8) EPC 1973 and anchors in the Convention the existence of the Institute of Professional Representatives before the EPO ("*epi*").

For further information on representation before the EPO, see Chapter III.R. "Representation". For more details of the changes introduced by the EPC 2000, see also OJ SE 4 and 5/2007.

All persons on the list of professional representatives must be members of the *epi* (Art. 134a(2) EPC; see also Art. 5(1) of the Regulation on the Establishment of an Institute of Professional Representatives before the EPO, OJ 1997, 350; for amendments to the Regulation, see OJ 2002, 429, OJ 2004, 361 and OJ 2007, 12), and are subject to the Regulation on Discipline for Professional Representatives, adopted by the Administrative Council of the European Patent Organisation (RDR, OJ 1978, 91; as amended: OJ 2008, 14), and to the Code of Conduct of the Institute of Professional Representatives before the EPO, adopted by the *epi* (OJ 2003, 523). These provisions are also published in Supplementary publication – OJ 1 of each year.

The first instance bodies which rule on infringements of the rules of professional conduct are the *epi* Disciplinary Committee and the EPO Disciplinary Board (Art. 5 RDR; see also Additional Rules of Procedure of the Disciplinary Committee and of the Disciplinary Board, OJ 1980, 176, and 177 and 183, respectively; for amendments, see OJ 2007, 552; also published in Supplementary publication – OJ 1 of each year).

The Disciplinary Board of Appeal (DBA) hears appeals against decisions of the *epi* Disciplinary Committee and the EPO Disciplinary Board (Art. 5, 8 RDR). See also Additional Rules of Procedure of the Disciplinary Board of Appeal, OJ 1980, 176 and 188; for amendments, see OJ 2007, 548; for consolidated version, see Supplementary publication – OJ 1 of each year.

The European qualifying examination (EQE), referred to in Art. 134(2)(c) EPC, is governed in particular by the Regulation on the European qualifying examination for professional representatives before the EPO (REE, OJ 2009, 9; also Supplementary publication 2, OJ 2014, 2), which entered into force on 1.1.2009, and by its Implementing provisions (IPREE, Supplement to OJ 5/2009, 20; as amended: Supplementary publication 2, OJ 2014, 18). These provisions replace the REE 1994, (last published: Supplement to OJ 12/2008, 1), and the IPREE 1994 (last published: Supplement to OJ 12/2008, 15). The content of the former Instructions (Instructions concerning the qualifications required for enrolment for the EQE, Supplement to OJ 12/2008, 19; Instructions to candidates concerning the conduct of the examination, Supplement to OJ 12/2008, 24; Instructions to candidates for preparing their answers, Supplement to OJ 12/2008, 29; and Instructions to invigilators, Supplement to OJ 12/2008, 35) has been largely incorporated into the IPREE and the current Instructions to candidates concerning the conduct of the EQE (Supplementary publication 2, OJ 2014, 38).

A number of substantive changes were introduced by the REE which entered into force on 1.1.2009 and its IPREE. These include first the creation of a Supervisory Board (Art. 1(6), 2, 3 REE), which is responsible for adopting the IPREE (Art. 3(7) REE), and the introduction of a pre-examination from 2012 (Art. 1(7), 11(7) REE, R. 10 IPREE). Other modifications are: simplification of the enrolment requirements in respect of academic qualifications and professional experience (Art. 11 REE, R. 11 to 15 IPREE);

replacement of the rules on modular sitting by the option to take one or more papers at one sitting (Art. 15 REE); extension of the compensation system to all candidates (Art. 14 REE, R. 6 IPREE); streamlining of the appeal procedure (Art. 24 REE).

Under Art. 24 REE (cf. Art. 27 REE 1994), the DBA hears appeals against decisions of the EQE Examination Board and Secretariat.

Appeals against Examination Board and Secretariat decisions which were decided by the DBA under earlier provisions are referred to below if considered still relevant. For more detailed information on the old rules and related DBA decisions, see the 5th edition of the Case Law of the Boards of Appeal.

## 2. European qualifying examination

In principle, only persons who have passed the EQE may be entered on the list of professional representatives (Art. 134(2)(c) EPC; see also Art. 134(3) EPC).

### 2.1. Formalities and conditions for enrolment

In **D 4/08** the board confirmed the Examination Secretariat's strict application of the published closing date for enrolment for the EQE, stressing its importance for the timely and orderly preparation of the examination. According to **D 7/08**, it was the candidate's responsibility to file the complete application, including the enrolment form and all necessary supporting evidence, by the closing date (see also **D 12/08**, **D 15/09**).

#### 2.1.1 Required qualification or equivalent knowledge

To qualify for registration and enrolment, candidates must normally possess a university-level scientific or technical qualification, i.e. a bachelor's degree or equivalent academic degree awarded at the end of a full-time course of a minimum of three years, with at least 80% of the course hours taken to obtain this degree having been devoted to scientific and/or technical subjects (Art. 11(1)(a) REE, R. 11 IPREE, also R. 12 IPREE). The qualifying subjects include biology, biochemistry, construction technology, electricity, electronics, information technology, mathematics, mechanics, medicine, pharmacology and physics (R. 13 IPREE). There is no legal requirement as to the minimum number of course hours required; to establish if a candidate's degree can be considered as having been devoted mostly (80%) to science/technology, the legislator chose the number of years (a "minimum" benchmark easier to establish than the number of hours) and the percentage of courses devoted to technical and/or scientific subjects (**D 13/14**). The board in **D 9/14** emphasised that the 80% is always to be calculated from the required course hours for the particular degree under scrutiny (which in the case in hand required four years of study). It furthermore accepted that a calculation based on credits may be suitable for the purposes of R. 11(2) IPREE but that, in the case of any discrepancy between the calculations based on course hours and those based on credits, the former is authoritative.

Otherwise, under R. 14 IPREE, equivalent knowledge may be demonstrated on the basis of at least ten years' experience in the activities defined in Art. 11(2)(a) REE – see also in this chapter V.2.1.2 and furthermore the board's interpretation of R. 14 IPREE in **D 9/14**.

In similar cases **D 1/12**, **D 2/12**, **D 3/12** and **D 4/12** (see also **D 9/14**), the DBA concluded that the appellant possessed neither a university-level qualification meeting the above criteria (in particular because the required 80% of course hours in scientific and/or technical subjects was not met) nor sufficient professional experience to provide a basis for equivalent knowledge. However, while the appellants in cases **D 1/12** to **D 4/12** had started their practical training (see in this chapter V.2.1.2) after the amended REE entered into force on 1.1.2009, the respective appellants in **D 7/14** and **D 8/14** had already started it before then. In the latter two cases, the DBA held that, on the basis of the principles of good faith and equal treatment, the REE 1994 with its IPREE and Instructions should be applied, in accordance with the practice of the Examination Secretariat before 1.1.2009 (see e.g. **D 1/12**). Also taking into account the relevant jurisprudence (in particular **D 5/08**), the board was satisfied in both cases that the appellant was suitably qualified under the 1994 provisions.

Earlier decisions relating to the REE 1994 and its Instructions concerning the qualifications required for enrolment for the EQE are **D 15/04**, **D 17/04**, **D 18/04** and **D 8/04**, reported in the "Case Law of the Boards of Appeal", 5th ed. 2006, and also **D 5/08**, **D 10/08**.

### 2.1.2 Professional experience

A further requirement for enrolment is that at the date of the examination a candidate must normally have worked full-time for at least three years in the field of European patent applications and European patents in a contracting state, as set out in Art. 11(2) to (5) REE and R. 15 IPREE. For the pre-examination the period is reduced by one year (Art. 11(7) REE). The period may be reduced by six months for candidates who have successfully completed specialised studies of at least one academic year in the field of industrial property (R. 16(1) IPREE).

One way of acquiring this work experience is to complete a training period under the supervision of and as an assistant to one or more professional representatives before the EPO, in accordance with Art. 11(2)(a)(i) REE.

The following three cases, decided under the earlier law, remain of interest. According to **D 4/86** (OJ 1988, 26), for the condition stipulated in previous Art. 7(1)(b)(i) REE 1977, as amended, to be met, the trainee had to have completed his training period under conditions likely to ensure that he had actually assisted a professional representative by constantly taking part in activities pertaining to patent application procedures of which the representative was in fact in charge. **D 14/93** (OJ 1997, 561) ruled that the training period could not be served with a legal practitioner whose name did not appear on the list of professional representatives, even if the said practitioner was a patent attorney under national law (see Art. 134(7) EPC 1973, see now Art. 134(8) EPC). According to the board, the activities referred to in Art. 7(1)(b) REE 1991 presupposed the scientific or

technical knowledge required with a view to activities pertaining to European patent applications and patents; persons training EQE candidates needed to possess such knowledge, and legal practitioners did not normally do so. **D 25/96** (OJ 1998, 45) ruled that the period of professional activity required for the EQE enrolment could not be served with a self-employed German patent agent who was not on the list of professional representatives.

A candidate may alternatively complete the prescribed period of professional activities as an employee in accordance with the requirements of Art. 11(2)(a)(ii) REE. The relevant conditions are not met where the candidate's employer is not represented before the EPO by the candidate in accordance with Art. 133(3) EPC but by external patent attorneys, or where the candidate's main activity has been in the field of national or international applications and patents (**D 6/10**, with reference to **D 12/06** and **D 13/06**; see also **D 11/11**, with reference to **D 32/07**; furthermore **D 1/12** to **D 4/12**).

Given the tenor of Art. 11(2)(a)(ii) REE, (mere) professional activity and activities pertaining to patent law cannot be treated as two distinct requirements. Professional activity can be recognised only if and for such time as candidates were able to represent their employer before the EPO and in fact did so. They must have been authorised to act as representative by their employer, but formal authorisation is not enough by itself, as it does not show whether, as required, they have actually worked in that capacity (**D 1/13**).

In **D 16/04** the board confirmed the practice of the Examination Secretariat of allowing only periods of professional activity completed after the required degree was obtained as not being in conflict with Art. 10 REE 1994. Art. 10(1) REE 1994 mentioned the requirement of possessing a university-level scientific or technical or equivalent qualification first, followed by a reference to the conditions set out in paragraph 2, i.e. the three-year full-time training period to be completed by the date of the examination. The ordinary meaning to be given to this grammatical order reflected the common understanding that studies normally precede practical training. The required length of the training period was a consequence of the candidate's technical or scientific degree acquired before starting the training period rather than vice versa. See also **D 6/08**.

This is now a requirement under Art. 11(3) REE, which, in conjunction with R. 15(2) IPREE, also specifies how periods of professional activity may be aggregated to make up a full-time training period.

Art. 11(2)(b) REE allows candidates who at the date of the examination have performed full-time the duties of an examiner at the EPO for at least four years to enrol for the EQE without having previously worked in accordance with Art. 11(2)(a) REE. In **D 19/04** the appellant, an examiner of many years' standing at the German Patent and Trade Mark Office, had cited the corresponding Art. 10(2)(b) REE 1994 when submitting his candidature for the examination, without providing evidence that he had worked in accordance with Art. 10(2)(a) REE 1994. The board pointed out that Art. 10(2)(b) REE 1994 related to EPO examiners, who in view of their professional experience could be assumed to have a comprehensive knowledge of the European patent grant procedure. The professional experience of long-serving examiners in national offices could not be

equated with that of EPO examiners. Given the different professional circumstances of EPO examiners and those in national offices, the means represented by the provision were in reasonable proportion to the end it served.

According to R. 16(2) IPREE, the period of professional activity under Art. 11(2)(a) REE may be reduced by up to one year if a candidate has been a patent examiner at the EPO or the national patent office of a contracting state.

## 2.2. Examination conditions

In **D 2/95** the DBA found against an appellant alleging discrimination; the fact that certain other candidates had been allowed to use normal as opposed to copy paper for the examination was not in breach of the provisions governing its conduct. Some candidates might find copy paper more awkward, but others might well prefer it. Nor did other arguments along similar lines - e.g. that too little time was allowed for the papers, or that candidates whose mother tongue was not an EPO official language were at a disadvantage and should therefore be given more time than the others - convince the DBA that the relevant provisions had been infringed (**D 11/00**).

In **D 1/94** (OJ 1996, 468) the board did however rule that a translation error might constitute a violation of Art. 11(3) REE 1991 (cf. Art. 12(3) REE, R. 5 IPREE), since this provision assumed that the translation from the language selected by the candidate into one of the EPO official languages was totally correct. In its decision, the Examination Board therefore had to give reasons why the translation errors had not been found to be serious.

In **D 14/95** the appellant alleged infringement of the principle of equal treatment because he, as a specialist in biochemistry, had been placed at a disadvantage in Paper C (taken from mechanical engineering) compared with a specialist in that field. The board found against any breach of equal treatment; the appellant's position was no different from that of any other candidate whose specialist field did not happen to be used in the paper as set. True, the examination procedure did in effect involve a certain "inequality". The Examination Board set a limited number of papers, and therefore had to make a choice amongst the different technical fields. So there would always be candidates who happened to be more specialised than others in the particular field selected. This however was inherent in any general examination, and thus did not constitute arbitrary unequal treatment. Furthermore, Paper C was less concerned with testing specialist technical knowledge than the ability to draft a notice of opposition to a European patent.

In **D 9/96** a candidate alleged unequal treatment in connection with the language rules under Art. 15 REE 1994 (cf. Art. 12 REE). The board conceded that not all candidates were treated equally since not all of them received examination papers in their mother tongue. However, this differentiation was a direct consequence of the linguistic regime of the EPC 1973 itself. According to Art. 14(1) EPC 1973 the official languages of the EPO were English, French and German. Each professional representative was inevitably confronted with documents and notifications in one of the three official languages of the EPO. Thus, any professional representative had to be expected, in the public interest

and the interest of his clients, to understand at least one of the official languages and to be able to work on documents and notifications drafted in this language.

The background to several appeals (**D 10/97**, **D 15/97**, **D 17/97** and **D 5/97**) against Examination Board decisions failing candidates in Paper D of the 1996 EQE was that some (but not all) of the copies of the paper given to candidates did not contain Question 11. The Examination Board therefore automatically gave all candidates full marks for Question 11. On this point the DBA reaffirmed **D 14/95**, which had stated that equal treatment did not have to be absolute, provided the nature and extent of any unequal treatment was justifiable in the circumstances. It would be wrong in law, however, if the examination conditions put certain candidates at a disadvantage for no good reason. The Examination Board had compensated the affected candidates in a way which appeared entirely appropriate given the circumstances. This necessarily involved a certain unequal treatment, which however was limited in its extent and acceptable in this special situation. In particular, it ensured that no candidate was worse off than if his answer had been marked objectively. So, in the DBA's view, the way in which the Examination Board had corrected the error was appropriate to the circumstances and did not constitute unlawfully unequal treatment.

### **2.3. Marking the answer papers**

Art. 6(2)(c) REE requires the Examination Board to give the members of the examination committees instructions for marking candidates' answers consistently (cf. Art. 16 REE 1994).

Under Art. 8(1)(d) and (e) REE, the examination committees mark the answer papers, each paper being marked by two committee members (examiners) separately (cf. Art. 8(b) REE 1994).

In **D 4/99** the appellant's complaint concerned the fact that the two examiners had marked Paper D differently. The board stated that the appellant's starting point that in case of non-identical marks only one value could be the correct one was irreconcilable with the fact that marking was an individual assessment of the candidate's work. Rather, more or less strict standards were possible and different aspects might be considered essential or less important even within the general instructions to the examiner for marking the papers contained in the IPREE 1994. Examiners must have some latitude of evaluation when awarding marks and individual examiners might arrive at different marks, both results being justifiable. Therefore, differences in marking did not violate the REE 1994 and its Implementing provisions (**D 5/94**, **D 6/98**). In order to safeguard the principle of equal treatment, harmonisation of marking was provided for in the marking sheets. If the marking was different, the two examiners might revise their marks on the basis of a discussion between them. The examination committee recommended the grade, and the Examination Board adopted it or otherwise, in full knowledge of the different marks awarded by the two examiners. This system ensured uniformity of marking (Art. 16 REE 1994). See also in this chapter V.2.6.3.

In **D 6/99** the DBA confirmed that small differences in marking did not, as such, violate the REE 1994 and its Implementing provisions. They were an unavoidable consequence of the provision, in Art. 8(b) REE 1994, that each answer was marked separately by two examiners. The board was not aware of any provision supporting the appellant's submission that in such cases only the better mark awarded in each category of the paper should be counted.

In **D 10/02** (OJ 2003, 275) it was noted that neither the REE 1994 nor its Implementing provisions regulated the procedure to follow in the exceptional cases where a committee was unable to agree on the marking; nor did they provide for calling in a third or fourth examiner. The DBA pointed out that those were the very cases in which an express provision was needed in order for a candidate to satisfy himself that his paper had not been marked arbitrarily or the procedure influenced by irrelevant circumstances. Hence the appointment of a third examiner without any basis in the REE 1994 or its Implementing provisions had to be deemed a substantial procedural violation.

In **D 3/04** the appellant had complained about unsuitable conditions during the examination. The appealed decision, however, did not show that the appellant's complaint had been taken into consideration by the Examination Board. In the view of the DBA, where the Examination Board found the circumstances referred to in a complaint not to justify the allocation of additional marks, brief reasons should be given explaining why this was so.

In **D 7/05** (OJ 2007, 378), which concerned Paper D, the DBA deemed that details of the marking include sufficient sub-division of the maximum achievable mark and the candidate's overall mark into sub-marks, and an indication of the substantive and legal issues for which those sub-marks were awarded. In producing schedules of marks there had to be a trade-off between their purpose of ensuring uniform marking (Art. 16 REE 1994) and the need also to allow for fair marking of answers which deviated from the scheme but were at least reasonable and competently substantiated. The schedules therefore had to leave some room for manoeuvre and - merely - be sufficiently detailed to constitute details of the marking within the meaning of R. 6(1) IPREE 1994 (cf. now R. 4(1) IPREE) allowing candidates to verify, on the basis of the documents published or made accessible, whether the marking of their answers infringed marking principles the respect of which was subject to review by the DBA. See also in this chapter V.2.5 and decisions **D 11/07**, **D 23/08** and **D 8/12**.

#### **2.4. Grades / passing the examination**

To pass the examination, a candidate must have passed each paper or obtained the minimum grades as specified in the IPREE (Art. 14(1) REE, R. 6(1), (3) and (4) IPREE). The possibility of being awarded the grade "Compensable fail" in an individual paper (R. 6(3)(c) IPREE) is no longer restricted to first sitters. If, despite this compensatory measure, a candidate fails the examination, he must resit those papers which he did not pass (Art. 16(1) REE). Borderline case assessments of candidates' fitness to practise as professional representatives before the EPO are therefore not possible under the REE

and IPREE. For earlier decisions relating to this point, see "Case Law of the Boards of Appeal", 5<sup>th</sup> ed. 2006, V.2.4 "Borderline cases", and also **D 23/08**.

## **2.5. Substantiation of EQE decisions**

At issue in **D 12/97** (OJ 1999, 566) was whether EQE Examination Board decisions informing candidates that they have failed the examination have to be reasoned. The DBA pointed out that this was not required by the REE 1994. The board also found the appellant's constitutional arguments - that substantiation of such decisions was a generally recognised principle of procedural law within the meaning of Art. 125 EPC 1973 - to be unfounded. For this to be so, it had to be shown that substantiation of such decisions was required in the EPC contracting states.

In **D 3/03** the DBA confirmed its case law (**D 12/97**, OJ 1999, 566), whereby the REE 1994 neither required EQE decisions to be reasoned nor made reference to R. 68(2) EPC 1973 (cf. now R. 111(2) EPC), which therefore did not apply. The Guidelines for Examination were likewise not applicable for the same reasons. The REE and its Implementing provisions were *lex specialis* for the EPC. In other words, unless they expressly referred to the EPC, then only they and not the EPC applied. The subsidiary nature of these provisions was justified by the fact that they governed a particular matter unrelated to the EPC *stricto sensu*, since their purpose was to establish whether a candidate was considered fit to practise as a professional representative before the EPO. With regard to the review by the courts of decisions concerning the European qualifying examination for professional representatives before the EPO, the German Federal Constitutional Court had also held that the obligation to give reasons for examination decisions cannot be regarded as an expression of the structural elements of any protection of basic rights intended by the Basic Law (see decision 2 BvR 2368/99 of 4 April 2001).

This case law was again confirmed by the DBA in **D 7/05** (OJ 2007, 378). In its extensive reasoning the Board also held that, apart from the fact that the marking sheets under R. 6(1) IPREE 1994 already had a decision substantiation function, the extent to which the principles of rule-of-law process also demanded individual substantiation of examination decisions could not be assessed without consideration of the extent of the Board's powers of review under Art. 27(1) REE 1994. The absence of an obligation to provide individual substantiation was to be seen in connection with the fact that Examination Board decisions in EQE proceedings were subject to only limited judicial review (as to this see also chapters V.2.6.1 and V.2.6.3).

## **2.6. Appeals against decisions of the Examination Board and the Examination Secretariat**

### **2.6.1 Competence of the board of appeal**

Under Art. 24(1) REE (cf. Art. 27(1) REE 1994), an appeal lies from decisions of the Examination Board and the Secretariat only on grounds of infringement of the Regulation or of any provision relating to its application.

However, the board of appeal has only very limited scope for reviewing the legal validity of implementing provisions drawn up by the Administrative Council or, in the case of delegation, by the relevant subsidiary body.

In **D 3/89** (OJ 1991, 257) the board of appeal stated in justification of the limited scope of the examination that the relevant bodies had discretionary powers in drawing up such provisions. As long as the legislative organ and subsidiary bodies had not misused their discretionary powers, the DBA could apply the provisions concerning examinations only to the case in point (see also **D 1/81**, OJ 1982, 258, **D 5/89**, OJ 1991, 210, **D 14/96**, **D 11/99** and **D 7/05**, OJ 2007, 378). Concerning the Examination Secretariat's discretion to decide on the sufficiency of a candidate's professional experience, see e.g. **D 32/07** and **D 1/13**.

#### 2.6.2 Time limit for appeal / rectification of decisions

The notice of appeal, to be filed within one month from notification of the contested decision, must already include the statement setting out the grounds (cf. Art. 24(2) REE). Under Art. 24(3) REE, if the Examination Board or the Secretariat considers the appeal to be admissible and well-founded it must rectify its decision and order reimbursement of the appeal fee. If the appeal is not allowed within two months from notification of the decision, it is remitted to the DBA. The procedure according to Art. 27 REE 1994, which was the subject of the following two decisions, has therefore been streamlined.

In **D 38/05** of 17.1.2007 and **D 4/06** the DBA found that the provision for rectification of decisions of the Examination Board was modelled on Art. 109(1) EPC and designed to serve the same purpose in comparable situations. The aim, in either case, was that the department of first instance be able to set aside a decision of its own if it found an appeal against that decision, filed by the (sole) party, to be (admissible and) allowable. This was a quick and simple way of cancelling flawed decisions. Art. 27(3) REE 1994 (analogous to Art. 109(1) EPC) provided that the department whose decision was contested - in this case, the Examination Board - must rectify its decision if it considered the relevant requirements to be fulfilled. This also meant that the Examination Board was obliged to assess carefully whether or not these requirements were met before deciding to grant or refuse rectification and, in the latter case, referring the matter to the board of appeal. The two-month time limit for considering the appeal and deciding whether it must be allowed therefore only started to run on receipt of the statement of grounds for appeal, even though this was not expressly provided in Art. 27(3) REE 1994 - in contrast to Art. 109(2) EPC. See, however, the current provisions of Art. 24(2) and (3) REE, referred to in the previous paragraph. See also **D 3/14** in this chapter V.2.6.3, which concerned the pre-examination.

#### 2.6.3 Objective review of the marks awarded

In accordance with the DBA's consistent case law (in particular **D 1/92**, OJ 1993, 357, **D 6/92**, OJ 1993, 361, and **D 7/05**, OJ 2007, 378), decisions of the Examination Board may in principle only be reviewed for the purposes of establishing that they do not infringe the REE, the provisions relating to its application or higher-ranking law. In **D 1/92**

and **D 6/92**, the DBA therefore concluded that its functions did **not** include reconsidering the examination procedure **on its merits**. Accordingly, the Examination Board's value judgment concerning the number of marks that an examination paper deserved was not subject to review by the board. Only if the appellant could show that the contested decision was based on serious and obvious mistakes could the board take this into account. The alleged mistake must be so obvious that it could be established without re-opening the entire marking procedure, for instance if an examiner was alleged to have based his evaluation on a technically or legally incorrect premise on which the contested decision rested. Any further claims regarding alleged defects in the assessment of candidates' work fell outside the DBA's jurisdiction, since value judgments were not subject to judicial review. These findings were confirmed in **D 7/05** (OJ 2007, 378). See also, for example, **D 9/00**, **D 7/01**, **D 11/01**, **D 16/02**, **D 6/04**, **D 14/08**, **D 23/08**, **D 1/13** and **D 5/13**.

In **D 6/98**, the DBA added that these conditions were in line with those for correcting errors under R. 89 EPC 1973 (cf. now R. 140 EPC), particularly in the case of errors of transcription or calculation in the marking. Under Art. 27(1) REE 1994 (cf. Art. 24(1) REE), the DBA was not empowered to reopen the assessment procedure (**D 15/97**). The DBA was not intended to be a department of second instance empowered to examine whether the marks awarded for a candidate's examination were justified on their merits or correct, and thus to superimpose its own value judgment on that of the Examination Board (**D 20/96** and **D 6/02**).

In **D 13/02** the board stated that obvious mistakes as referred to above were those which could be identified without a re-evaluation of the examination paper. That would be the case, for instance, if one and the same paper had been marked **very** differently by the two examiners, since the marking discrepancy alone would indicate an infringement of the principle of uniform marking, irrespective of the level of the marks awarded. Another example of an obvious mistake would be a question whose wording was ambiguous or incomprehensible. That would be clear straight away, without any reference to marks awarded, from the meaning that common sense would ascribe to the wording of the question concerned.

**D 17/05** cited **D 13/02** to point out that the existence of a mistake within the meaning of **D 1/92** could not be deduced from a comparison of the candidate's answer with another answer. The board also cited the statement that the disclosure of marking instructions which may have been used by the examiner was not required for a decision on an appeal and that under the established case law no other entitlement existed to any such disclosure.

In **D 3/00** (OJ 2003, 365) the appellant claimed that for each question in paper D, parts 1 and 2, he should have been awarded the highest number of marks awarded by one of the two examiners who had marked his paper. In **D 12/00**, too, the appellant claimed that the higher number of marks should count. Any discrepancy between the markings of each examiner showed gross disregard for the principle of uniformity within the meaning of Art. 16 REE 1994 (Art. 6(2)(c) REE, English text, now provides for consistency of marking). The board confirmed its established case law, adding that differences of

opinion over the number of marks to be awarded for a given answer were a reflection of value judgments which were not, in principle, subject to judicial review. It had also already been explained in **D 4/99** (see point 2.3 above) that the marking of examination papers was an individual assessment and that, within the general instructions to the examiners for marking the papers (IPREE 1994), more or less strict standards were possible and different aspects might be considered essential or less important. Hence it was consistent with the ratio legis of Art. 8(b) REE 1994 (cf. Art. 8(1)(e) REE) that the examiners had some (limited) latitude of evaluation when awarding marks and might therefore arrive at different marks, both results being justifiable (**D 5/94** and **D 6/98**). The fact that two independent examiners had arrived at different marks was not per se a violation of the applicable provisions (**D 12/00**). In **D 3/00** the board drew attention to the fact that, with regard to the evaluation of the merits of a candidate's answer in an examination paper, a candidate was not per se entitled to claim the highest mark awarded by one of the examiners for each answer to a sub-question or sub-element whenever the two examiners who marked the paper in accordance with Art. 8(b) REE 1994 differed in their marking.

**D 6/07** and **D 7/07** were among a number of appeal decisions concerning the marking of paper C of the 2007 examination. A large number of candidates had taken as the starting point for their attack on the claims a document which the examination committee did not consider to represent the closest prior art and had been awarded no points in this regard. The Examination Board took the view that, in keeping with long-standing practice, some credit should be given for properly drafted problem and solution approaches even where the wrong starting document for assessing inventive step had been used. Given the lateness of the proceedings and the impossibility of re-marking all the papers, it decided, as an exceptional measure, that the fairest option would be to award ten additional points (being the maximum number possible) to all candidates having sat the paper. The DBA held first that the awarding of no points by the examination committee infringed the requirements of R. 4(2) and (3) IPREE 1994: the "fit to practise" criterion required the examiners in marking the individual parts of a candidate's answers not to disregard their merit in the context of the whole answer paper (**D 3/00**, OJ 2003, 365) and the need to allow for the fair marking of answers which, although deviating from the marking scheme, were nonetheless reasonable and competently substantiated (**D 7/05**, OJ 2007, 378). The board further ruled that, under Art. 7(3) REE 1994, it fell to the Examination Board to award the grades "pass", "fail", or "compensable fail" and formally to decide whether the whole examination had been passed or not. Its powers did not extend to the preceding marking of candidates' individual papers on a scale of zero to 100, and therefore the alteration of the marks awarded by the examination committee (in accordance with Art. 8(b) REE 1994 and R. 4(1) IPREE 1994) by the blanket addition of ten marks per paper had been ultra vires. The abstract awarding of marks without regard to the "fit to practise" criterion of R. 4 IPREE 1994 in the individual candidates' examination papers infringed the principle of objectivity as well as Art. 8(b) REE 1994 and R. 4 IPREE 1994. In conclusion the DBA ordered a new marking of paper C of each appellant in accordance with R. 4 IPREE 1994, with the ten additional points already awarded to be retained by the appellant.

In **D 3/14** the appellant had obtained the grade "fail" (with 68 marks) in the 2014 **pre-examination** for the European qualifying examination. She argued that the answer to statement 10.4 in the question paper should have been "false", rather than "true", as given in the Examiner's Report, and requested that the decision of the Examination Board be set aside and that she be awarded a "pass".

In accordance with the settled case law (e.g. **D 1/92**, see above), the board examined whether the alleged mistake was so obvious that it could be established without reopening the entire marking procedure. It found that statement 10.4 should have been formulated differently in order to express the aim intended. Candidates could not be expected to make an assumption in this respect (cf. R. 22(3) IPREE, providing that candidates must limit themselves to the facts given). The appellant's understanding of statement 10.4 was justified from an objective point of view. The answer to it was "false" and not "true" as indicated in the examiner's report. The examiners had based their evaluation on an incorrect premise and therefore the contested decision was based on serious and obvious mistakes which could be established without reopening the entire marking procedure. The decision had to be set aside and the appeal fee reimbursed (Art. 24(4) REE). Concerning the requested award of a "pass", the appeal board was not empowered by Art. 24(4), second sentence, REE to correct the decision, i.e. to review the marks and grade of an examination paper. It therefore considered whether special reasons provided a legal basis for not remitting the case to the Examination Board (cf. Art. 12 Additional Rules of Procedure of the DBA, Supplementary publication 1, OJ 2014, 54). Only in a few exceptional cases had the DBA found such special reasons (**D 5/86**, **D 11/91**, **D 8/08** and **D 9/08**), but in appeals against decisions of the Examination Board it had not made use of this power to review the contested decision on its merits (on the limits of the board's power see **D 7/05**). However, the pre-examination was a multiple choice paper. The marks were awarded according to a strict scheme not involving any discretion and the award of a "pass" or "fail" was merely the arithmetical outcome of the marks achieved. From a limited review, the board was able to establish the correct marks on the basis of the appellant's answer paper without interfering with any value judgment of the Examination Committee or Examination Board. Also taken into account were the matter's urgency, since a "pass" in the pre-examination was a precondition for the main examination, and the fact that the Examining Board, by not rectifying its decision, even though the discrepancy had been comprehensively substantiated, had burdened the appellant with appeal proceedings. With the correction, the total marks rose from 68 to 70 and a "pass" was therefore awarded.

#### 2.6.4 Legitimate interest

According to the established case law, a candidate who appealed against failing the EQE but resat and passed it before the appeal had been decided still retained a legitimate interest in pursuing the appeal. This was confirmed in **D 3/98**. Any other view would amount to denying him recourse to the law; legitimate interest would then depend on how long proceedings took. However, appellants could exert little influence over that, and should therefore not have to suffer the consequences. Whether there was a legitimate interest was to be determined with reference to the date the proceedings were initiated (in this case, on the day the appeal was filed).

## 2.6.5 Complaints about the conduct of the examination - duties of the Examination Board

In several decisions, the DBA pointed out that, under point 7 of the former Instructions to candidates (OJ 1995, 145) and point 7 of the former Instructions to invigilators (OJ 1995, 153), a timely and formally correct complaint about the conduct of the examination was to be submitted to the Examination Board, which was then supposed to issue a provisional opinion, together with an invitation to comment. Failure to do so put it in breach of generally recognised principles of procedural law (Art. 125 EPC), notably the right to be heard (Art. 113(1) EPC; see **D 17/96**, **D 2/97**, **D 2/99** and **D 3/99**).

The corresponding provisions of R. 19(3) and (4) IPREE were considered in case **D 3/10**, in which the appellant had raised a complaint about disturbances during the examination only with the appeal. The DBA held that it would be inadmissible to examine the alleged disturbances in the context of an appeal without any prior decision of the Examination Board in this regard. By not submitting a complaint immediately after the examination, as foreseen by R. 19(3) IPREE, the appellant had deprived the Examination Board of the opportunity to determine the exact circumstances involved and to react accordingly, if necessary with a decision pursuant to R. 19(4) IPREE, or to deal with the allegations in its decision on the result of the examination under Art. 6(5) REE (cf. **D 3/04**).

## 3. Disciplinary matters

The Regulation on Discipline for Professional Representatives (RDR) of 21.10.1977 (OJ 1978, 91), adopted by the Administrative Council in accordance with Art. 134(8)(c) EPC 1973 and amended by AC Decision of 14.12.2007 in accordance with Art. 134a(1)(c) EPC (OJ 2008, 14; also in Supplementary publication - OJ 1 of each year), contains not only provisions on general professional obligations, professional secrecy and conduct towards clients but also provisions relating to the disciplinary bodies responsible for imposing disciplinary measures (see also Additional Rules of Procedure of the Disciplinary Committee and of the Disciplinary Board, OJ 1980, 176, and 177 and 183, respectively; for amendments see OJ 2007, 552; Additional Rules of Procedure of the Disciplinary Board of Appeal, OJ 1980, 176 and 188; for amendments see OJ 2007, 548; for consolidated version, see Supplementary publication to OJ 1 of each year).

### 3.1. Disciplinary measures

According to **D 5/86** (OJ 1989, 210), an infringement of the rules of professional conduct must be established to the satisfaction of the disciplinary body before it can impose a disciplinary measure. Absolute certainty is not required, but a degree of probability which in human experience verges on certainty. A disciplinary measure cannot be imposed if there is reasonable doubt as to whether the infringement has occurred.

In **D 11/91** (OJ 1995, 721) the EPO Disciplinary Board had ordered the deletion of the appellant from the list of professional representatives for an indefinite period. In his appeal, the appellant contested the disciplinary measure and held that the procedure

before the DBA did not comply with the provisions of the European Convention for the Protection of Human Rights, in particular because the DBA had been established not by national law but by the Administrative Council of the EPO, the disciplinary bodies did not constitute an independent court, the DBA was not a national authority, and its decisions could not be referred to a higher court of appeal.

The DBA decided that the European Convention for the Protection of Human Rights contained provisions which expressed general principles of law common to the member states of the EPO. As such these provisions should be considered part of the legal system of this Organisation and should be observed by all its departments. This therefore applied to Art. 13 ECHR, which guaranteed the protection by the judiciary of the rights of the individual. The "national authority" mentioned in this article was clearly meant to be understood as a competent authority in accordance with the law of the state concerned. However, in ratifying the Munich Convention, the contracting states accepted a transfer of prerogatives whereby professional representatives before the EPO became subject to the same set of professional regulations, controlled by a central body whose decisions were open to effective remedy before a body of second instance whose independence was guaranteed by the rules governing its composition. The drafting of these regulations and the establishment of these bodies was thus consistent with general principles of law, in particular those enshrined in the European Convention for the Protection of Human Rights.

The board took the view that, in order to ensure that the penalty was proportionate to the seriousness of the charges and that the maxim whereby penalties should not be arbitrary but fixed or predetermined was respected, Art. 4(1)(e) RDR should be understood as meaning "for a period not defined by the text", that is for a discretionary period to be decided by the competent disciplinary body. In its decision, the latter should fix the said period and give reasons for its choice.

In **D 20/99** (OJ 2002, 19), appellant X filed an appeal against the EPO Disciplinary Board's decision to issue him with a reprimand. The DBA, reviewing the penalty imposed in respect of the first charge only, held that X's actions, for which he had been prosecuted in France, were in breach of Art. 1(1) and (2) RDR. It was clear that D had been involved in drawing up European patent applications in consultancy L, owned by the appellant, while being paid by company P. However, it was evident from the file that this contractual arrangement had never been the subject of invoicing.

That gave an advantage to consultancy L by cutting the cost of drawing up patent applications. As it inevitably entailed unfair distortion of competition in relation to other European patent attorneys, this was an undue advantage. The board concluded that the misuse of corporate assets was tantamount to unfair competition in relation to fellow European patent attorneys and thus represented a breach of the rules of professional conduct governing representatives before the EPO.

### **3.2. Appealability of decisions in disciplinary matters**

In **D 15/95** (OJ 1998, 297) the board ruled that a Disciplinary Committee decision dismissing a complaint was a decision in the legal sense only as regards the persons referred to in Art. 8(2) RDR, and only they could appeal against it. Thus the person who made the complaint had no right of appeal. Review on appeal was limited to safeguarding the rights of the "accused", i.e. the "professional representative concerned" within the meaning of the RDR (see also **D 1/98**). In **D 28/97** and **D 24/99** the DBA added that the purpose of disciplinary proceedings was not for individuals to pursue their interests vis-à-vis others (although these might be affected in individual cases) but rather to serve the public interest in orderly and proper exercise of professional representation before the EPO. Any claims by individuals arising from a representative's infringement of the rules of professional conduct were exclusively a matter for the competent (civil) courts (see also **D 25/05** and **D 3/13**).

## **4. Code of Professional Conduct**

The general principles are laid down in the current version (OJ 2003, 523; also published in Supplement to OJ 1 of each year). Point 1(a) of the Code refers in turn, as regards the general requirements for *epi* members, to the RDR (OJ 1978, 91, also OJ 2008, 14; also published in Supplementary publication - OJ 1 of each year).

### **4.1. General professional obligations**

In **D 16/95** the board ruled that, although drafting and filing translations and paying fees in the national phase in a contracting state were not directly related to grant, opposition or appeal proceedings, such activities were still covered by Art. 1 RDR. They were, after all, activities in connection with a European patent (see Art. 65 and 141 EPC 1973) and as such part of a professional representative's job. Regarding them as covered by Art. 1 RDR was also justified by the fact that it was difficult for outsiders (e.g. persons commissioned to translate patent specifications) to distinguish between those of a representative's activities which were directly related to grant, opposition or appeal proceedings and those which were not. Since national-phase-related activities were thus covered by Art. 1 RDR, reprehensible conduct in connection with them constituted a breach of a representative's general professional obligations under that provision (see also **D 25/05**).

### **4.2. Professional secrecy**

In **D 11/91** (OJ 1994, 401), the appellant had requested the removal of various documents placed on file by the complainant. The appellant argued that his request was justified because, inter alia, their inclusion contravened the rule of confidentiality to which professional representatives were subject. The documents were items of correspondence between the complainant and the disciplinary bodies and correspondence pertaining to an opposition case.

The board decided that the professional secrecy referred to in Art. 2 RDR set limits on the disciplinary bodies' powers of investigation and on the obligation under Art. 18 RDR for a professional representative before the EPO to supply all relevant information. However, the mere obligation of confidentiality deriving from the principle enshrined in Part I RDR could not be invoked to resist a request under Art. 18 RDR.

#### **4.3. Advertising**

The adoption of the Code of Conduct (current version, OJ 2003, 523; also published in Supplementary publication – OJ 1 of each year) entailed the rescindment of the ban contained in point 2(b)(1) on the comparison of the professional services of a member with those of another member, as laid down in the version published in OJ 1999, 537.

The original advertising ban had already been replaced in the previous version (OJ 1999, 537) by the new provision point 2(a), which states that advertising is generally permitted provided that it is true and objective.

#### **5. Appeals against decisions of the Disciplinary Board of Appeal**

In **D 5/82** (OJ 1983, 175) the DBA already noted that it has no power to refer questions to the Enlarged Board of Appeal. In **D 7/05** of 2.1.2007 and **D 2/06** of 31.8.2006 the DBA had to consider requests seeking a review of its final decisions. The board stated that decisions of the boards of appeal and the DBA became final when issued, and were no longer subject to appeal, nor could they be set aside by the board itself. It refused the requests as inadmissible, with reference to the principles set out by the Enlarged Board of Appeal in **G 1/97** (OJ 2000, 322), according to which the decision on inadmissibility is to be issued by the board of appeal which took the decision forming the subject of the request for revision. The decision on the request could be issued immediately and without further procedural formalities.

## VI. THE EPO ACTING AS A PCT AUTHORITY - EURO-PCT APPLICATIONS

1.	Introduction	1265
2.	Jurisdiction of the boards of appeal	1265
3.	Competence of the EPO acting as designated or elected Office	1266
4.	Language of the proceedings	1268

### 1. Introduction

The EPC provisions governing "international applications filed under the Patent Cooperation Treaty - Euro-PCT applications" are contained in Part X of the Convention (Art. 150 to 153 EPC) and Part IX of the Implementing Regulations (R. 157 to 165 EPC). Pursuant to Art. 150(2) EPC, international applications filed under the PCT may be the subject of proceedings before the EPO. In such proceedings, the provisions of the PCT and its Regulations apply, supplemented by the provisions of the EPC. In case of conflict, the provisions of the PCT or its Regulations prevail. An international application for which the EPO is a designated Office (or, optionally, an elected Office), and which has been accorded an international filing date, is equivalent to a regular European application ("Euro-PCT application", Art. 153(2) EPC).

The Guidelines for Search and Examination at the EPO as PCT authority (November 2015 edition) set out the practice and procedures to be followed for international applications before the EPO in the course of the international phase, while Chapter E-VIII of the Guidelines for Examination in the EPO (November 2015 edition) focuses on aspects particular to the handling of Euro-PCT applications in the European phase. Reference is also made to the comprehensive overview in the current "Euro-PCT Guide: PCT procedure at the EPO", Part A of which lists relevant official texts and further important sources of information.

### 2. Jurisdiction of the boards of appeal

The PCT does not expressly provide for appeal or petition during the international phase (cf. WIPO PCT Applicant's Guide – International Phase, para. 6.054). The sole exception under the EPC 1973 was the boards' competence to decide on protests against additional search or examination fees charged by the EPO acting as ISA (Art. 17(3)(a) PCT and Art. 154(3) EPC 1973) or IPEA (Art. 34(3)(a) PCT and Art. 155(3) EPC 1973) after a finding of lack of unity of invention. Thus, in **J 24/99** the Legal Board of Appeal confirmed that, apart from protest cases for which the boards' responsibility explicitly derived from Art. 154(3) and 155(3) EPC 1973, the jurisdiction of the boards was limited by the EPC, in particular Art. 21 and 106 EPC, which do not confer any jurisdiction on them to review actions taken by the EPO as IPEA (see also **J 15/91**, OJ 1994, 296).

Once the Euro-PCT application enters the regional phase before the EPO the appeal procedures provided for under the EPC supplement the provisions of the PCT (**J 20/89**, OJ 1991, 375; see also in this chapter VI.3.).

Board of Appeal decisions on protests according to the former procedure are to be found in Chapter II.B. "Unity of Invention". The current protest procedure under R. 158(3) EPC and preceding interim procedure are referred to in chapter II.B.1.

### 3. Competence of the EPO acting as designated or elected Office

In **J 26/87** (OJ 1989, 329) the board held that if, on the proper interpretation of the request for grant of an international application, an applicant designated an EPC contracting state for which the PCT was in force on the filing date of the international application, the EPO was bound by the provisions of Art. 153 EPC 1973 to act as the designated Office for that contracting state, even if the international application was published by the International Bureau without mentioning that contracting state as a designated state.

**J 19/93** also concerned the designation of EPC contracting states in an international application for the purpose of obtaining a European patent. The board pointed out that the EPO as elected or designated Office is fully competent to interpret applications appointing it to act in these capacities. The Office is not bound by the interpretation of the receiving Office or of the International Bureau (see also **J 4/94**, **J 26/87**).

In **J 7/93** the International Bureau did not inform the EPO of its election (in the demand for international preliminary examination) within the 21-month time limit under R. 104b(1) EPC 1973 (version valid prior to 1.3.2000). The EPO issued a communication pursuant to the then applicable R. 85a EPC 1973 concerning the grace period for late payment of the fees upon entry into the European phase and then a notification of loss of rights pursuant to R. 69(1) EPC 1973. The board pointed out that both referred to the 21-month period under R. 104b(1) EPC 1973, although, in the circumstances, the 31-month period was applicable. They were considered to be legally non-existent because they could not be based on any provision contained in the EPC or in the PCT. These communications, being legally non-existent, could not have any legal effect to the party's detriment.

In the PCT request in case **J 3/94** the applicant had **designated** a European patent under "Regional Patent" and five PCT contracting states including Germany and the United Kingdom under "National Patent". However, in the demand for international preliminary examination, filed with the EPO as IPEA, only the five PCT member states were **elected**; under "Regional Patent" there was no cross indicating the European patent. The applicant argued inter alia that the election of DE and GB made the EPO an elected Office by operation of law. However, the board held that the EPO did not become an elected Office in this case. One of the principles implemented by Art. 31(4)(a) PCT was that it was the applicant's choice for which office he intended to use the results of the international preliminary examination. Furthermore, it was not only a matter for the EPC to decide whether an election made for the national route was also valid for the

EPO. The validity of an election had to be decided during the international phase in order to give effect to the election. The IPEA had to examine the demand and the international authorities had to fulfil their obligations resulting from a valid election. The validity and scope of an election had to be clear not only for the applicant and the elected Office but also for the Authorities in the international phase. Its validity had to be assessed on a uniform basis by the Authorities concerned.

In **J 4/94** the board had to consider whether the EPO was competent to interpret the applicant's demand for international preliminary examination differently from the United Kingdom Patent Office acting as IPEA. The board conceded that the demand was addressed to the IPEA, the competent body to deal with it. However, **J 26/87** (OJ 1989, 329) had decided that the interpretation of the request for grant form by the receiving Office and the International Bureau was not binding on the EPO in its function as designated Office. The valid designation put the matter within the competence of the EPO as designated Office (Art. 2(xiii) PCT and Art. 153(1) EPC 1973). In the present case there was a defect in the demand, which the applicant should have been invited under R. 60 PCT to correct. A clear deviation by the IPEA from the intention expressed in the demand was not binding on the EPO. It was therefore possible for the EPO to regard itself as a validly elected Office. Consequently, under R. 104b(1) EPC 1973 (as in force prior to 1.3.2000) the time limit of 31 months applied.

A decision of an **examining division** of 5.6.1984 (OJ 1984, 565) pursuant to Art. 153(2) EPC 1973 (see now R. 159(2) EPC) in conjunction with Art. 25 PCT and Art. 24(2) PCT concerned the authority of a designated Office under Art. 24(2) PCT to maintain the effect of an international application. The applicant had missed the time limit for filing the representative's authorisation set by the Japanese Patent Office acting as receiving Office. The EPO, acting as designated Office, excused the non-observance of time limits which had been set by the receiving Office for the correction of formal deficiencies in accordance with Art. 14(1)(b) PCT in conjunction with R. 26.2 PCT (Art. 24(2) and 48(2)(a) PCT). The examining division found that the time limit under R. 26.2 PCT was comparable to time limits set by the EPO under Art. 121 EPC 1973 and granted re-establishment of rights according to Art. 122 EPC 1973 in respect of the time limit under Art. 121(2) EPC 1973.

**J 17/99** also concerned the application of Art. 24(2) PCT. The formerly applicable precautionary designation of EP in the international application was not confirmed within the prescribed period and was therefore regarded as withdrawn (former R. 4.9(b)(ii), (c) PCT, and Art. 24(1)(i) PCT), with the consequence that the effect of the international application under Art. 11(3) PCT - i.e. that of a European filing - ended on the same date. The board declined to exercise its discretion under Art. 24(2) PCT to maintain the effect provided for under Art. 11(3) PCT: when exercising that discretion as designated Office, the EPO had to apply the same rules and principles as for identical or comparable situations arising with direct European applications (here concerning correction of designations). This non-discriminatory approach was not only a fundamental principle of the PCT itself (see, for example, Art. 26 and 48(2)(a) PCT) but also a direct consequence of Art. 150(3) EPC 1973 (see now Art. 153(2) EPC; see also **J 3/81**, OJ 1982, 100; **J 8/01**, OJ 2003, 3).

The appeal in **J 3/00** concerned the question whether the Receiving Section should have rectified, under R. 82ter PCT, a purported error of the RO/EPO for the purposes of the regional phase before the EPO. The international application had been filed two days before expiry of the priority period with the description and claims in Swedish by mistake. The RO/EPO accorded as the international filing date the day of receipt of the corrected, i.e. English-language, documents (Art. 11(2)(b) PCT) and furthermore cancelled the priority claim. The applicant argued that the RO/EPO should have warned it of the deficiency. The board examined whether the filing date of the international application was incorrect due to an error made by the RO/EPO which was such that, had it been made by the EPO (as designated Office) itself, it would have to be rectified under the EPC (R. 82ter PCT). Thus, according to the constant jurisprudence of the boards of appeal concerning the protection of legitimate expectations, as confirmed in **G 2/97** (OJ 1999, 123), the EPO was required to warn the applicant of any loss of rights if such a warning could be expected in all good faith. The board found the relevant conditions to be met: the deficiency was immediately identifiable on the face of the application in the course of the Art. 11(1) PCT check and the applicant was in a position to correct it at very short notice. For a further case relating to R. 82ter PCT, see **J 10/04**.

In case **T 506/08** the EPO, acting as ISA, had issued a declaration of non-establishment of the ISR under Art. 17(2)(a) PCT. The examining division did not carry out a further search on the amended application, which it subsequently refused for lack of inventive step. At the appeal stage the applicant filed a request for a (partial) refund of the international search fee. However, the board declined jurisdiction to deal with the request. The guarantee of due process of law (cf. **G 3/08**, OJ 2011, 10), as invoked by the appellant, did not mean that each and every claim against the EPO was a matter for the boards (e.g. **J 14/87**, OJ 1988, 295; with reference to Art. 9 EPC 1973). Neither the PCT nor the Agreement between the European Patent Organisation and WIPO of 31 October 2001 provided for a refund in such a case.

#### **4. Language of the proceedings**

In decision **G 4/08** (OJ 2010, 572), the Enlarged Board of Appeal ruled on the first referred question that if an international application has been filed and published under the PCT in one official language of the EPO, it is not possible, on entry into the European phase, to file a translation of the application into one of the other two EPO official languages, which would then become the language of the proceedings. Neither the EPC 1973 nor the EPC 2000 can be interpreted as allowing that. Nor is there any conflict between EPC and PCT provisions. On the second question, the Enlarged Board decided that EPO departments cannot use, in written proceedings on a European patent application or an international application in the regional phase, an EPO official language other than the language of proceedings used for the application under Art. 14(3) EPC.

## VII. INSTITUTIONAL MATTERS

1.	Legal status of the EPO boards of appeal	1269
1.1.	The judiciary of the European Patent Organisation	1269
1.2.	Boards of appeal as judicial authorities	1270
1.2.1	Courts of law under the EPC	1270
1.2.2	Tribunals under Article 6 of the European Convention on Human Rights	1270
1.2.3	Judicial or quasi-judicial authorities under the TRIPS Agreement	1271
1.2.4	Courts according to national case law	1272
1.3.	Not a court or tribunal of an EU Member State	1272
1.4.	Power to amend the RPBA under Article 23(4) EPC	1273
1.5.	Nature of the case law of the boards of appeal – no binding precedents	1274
2.	Extension agreements and ordinances	1274
2.1.	Legal nature	1274
2.2.	No jurisdiction of the boards of appeal	1275
2.3.	Non-applicability of Article 105(1)(a) EPC	1276
3.	Administrative agreements under Article 10(2)(a) EPC	1276

### 1. Legal status of the EPO boards of appeal

#### 1.1. The judiciary of the European Patent Organisation

In **G 3/08** (OJ 2011, 10) the Enlarged Board held that the European Patent Organisation is an international, intergovernmental organisation, based on the separation of powers principle, which the sovereign contracting states have entrusted with the exercise of some of their national powers in the field of patents. The EPC assigns executive power to the Office to grant patents and to its President to manage the Office in organisational respects (Art. 4(3) and 10 EPC), while to the Administrative Council it assigns limited legislative powers restricted to lower-ranking rules (Art. 33 EPC), along with financial and supervisory powers. The boards of appeal, which in their decisions are bound only by the EPC (Art. 23(3) EPC), are assigned the role of an independent judiciary in this patent system (Art. 21 to 23 EPC; see also **G 6/95**, OJ 1996, 649, points 2ff of the Reasons), even if for the present they are not an independent organ of the Organisation (Art. 4(2) EPC) but structurally integrated departments of the Office (Art. 15 EPC; see also **R 19/12** of 25 April 2014 and **R 2/14** of 17 February 2015). Like the judiciary of any democratic entity based on the separation of powers principle, the boards of appeal guarantee the due process of law within the Organisation. They are also assigned interpretative supremacy with regard to the EPC in terms of its scope of application (see Art. 23(3) EPC). Under Art. 21(1) EPC they are responsible for reviewing decisions taken by the Office in grant and opposition proceedings. Their interpretation of the EPC is the basis for the practice established by the Office for the examination of patent applications and oppositions to granted patents.

## 1.2. Boards of appeal as judicial authorities

### 1.2.1 Courts of law under the EPC

In **G 1/86** the Enlarged Board held that those EPC provisions governing the independence of members of the boards of appeal (Art. 23 EPC), their competence and method of work and the nature of the decisions they take, indicate that the boards act as courts with the task of ensuring that the law is respected when the EPC is applied. Moreover, there is no appeal against decisions of the boards. In the member states of the European Patent Organisation decisions by departments of last instance, i.e. those terminating proceedings concerned with checking the legality of administrative actions and the protection of the rights of the individual, can only be taken by courts of law.

In **T 1400/11** the board stated that according to the Enlarged Board in **G 7/91** and **G 8/91** (OJ 1993, 356, 346, point 7 of the Reasons), **G 9/91** and **G 10/91** (OJ 1993, 408, 420, point 18 of the Reasons) and **G 1/99** (OJ 2001, 381, point 6.6 of the Reasons), the appeal procedure is to be considered as a judicial procedure proper to an administrative court. See also Chapter IV.E.1 "Legal character of the appeal procedure". In **G 2301/15** the Enlarged Board stated that the board members' function as judges was generally recognised.

### 1.2.2 Tribunals under Article 6 of the European Convention on Human Rights

According to the first sentence of Art. 6(1) of the European Convention on Human Rights (ECHR), "[i]n the determination of his civil rights and obligations ... everyone is entitled to a fair and public hearing within a reasonable time by an independent and impartial tribunal established by law."

In **R 8/13** of 20 March 2015 the Enlarged Board of Appeal stated that it was established case law of the Enlarged Board (**R 2/14** of 17 February 2015: and of the boards of appeal) that the EPC, which had been signed by contracting parties to the ECHR, must be applied in a way which supports the fundamental principles of Art. 6(1) ECHR (**G 1/05**, OJ 2007, 362, point 22 of the Reasons; **G 2/08** of 15 June 2009, point 3.3 of the Reasons). It further stated that the Enlarged Board fell within the definition laid down by the European Court of Human Rights (hereinafter "ECtHR") in *Campbell and Fell v. the United Kingdom* (28 June 1984, No 7819/77, paragraph 76): "the word 'Tribunal' in Article 6 paragraph 1 is not necessarily to be understood as signifying a court of law of the classic kind, integrated within the standard judicial machinery of the country". A tribunal may also be set up to deal with specific subject-matter which can be appropriately administered outside the ordinary court system. What is important, to ensure compliance with Art. 6(1) ECHR, are the guarantees, both substantive and procedural, which are in place (ECtHR, *Rolf Gustafson v. Sweden*, 1 July 1997, No. 23196/94, paragraph 45).

### 1.2.3 Judicial or quasi-judicial authorities under the TRIPS Agreement

As to the applicability of the TRIPS Agreement in proceedings before the EPO, see Chapter III.H.2 "Interpretation of the EPC affected by TRIPS Agreement".

Art. 62(5) TRIPS provides that final administrative decisions in procedures concerning the acquisition or maintenance of intellectual property rights and, where a member's law provides for such procedures, administrative revocation and inter partes procedures such as opposition, revocation and cancellation, must be subject to review by a **judicial or quasi-judicial** authority. Art. 32 TRIPS requires member countries to provide an opportunity for **judicial** review of any decision to revoke or forfeit a patent.

In **G 1/97** (OJ 2000, 322) the Enlarged Board of Appeal noted that boards of appeal may be seen as having the status of judicial authorities, since they embody all the features of such an authority: in their decisions, the members of the boards are not bound by any instructions and are obliged to comply only with the provisions of the EPC (Art. 23(3) EPC 1973; see also **R 19/12**, where the Enlarged Board stressed that the Service Regulations for EPO employees provide in Art. 1(4) that they only apply to board members in so far as they are not prejudicial to their independence); they are appointed for a fixed term, during which they may not be removed from office except if there are serious grounds for so doing (Art. 23(1) EPC 1973); the EPC contains provisions for safeguarding the impartiality of board members (Art. 24 EPC 1973); the boards always include at least one legally qualified member (Art. 21 EPC 1973); they have their own rules of procedure; and finally, they issue written decisions containing a statement of reasons (R. 66(2) EPC 1973). Regarding the judicial nature of the boards of appeal, reference was also made to the House of Lords' decision of 26 October 1995 in *Merrel Dow v. Norton*, [1996] R.P.C. 76, and to the decision of the United Kingdom High Court of Justice dated 20 December 1996, in the case of *Lenzing AG's European Patent (UK)*, [1997] R.P.C., 245). Even if the status of a judicial authority were to be contested, it would be clear that, in the light of the foregoing, the boards of appeal constitute at least a quasi-judicial authority as referred to in Art. 62(5) TRIPS. The Enlarged Board also examined the relationship between Art. 62(5) TRIPS and Art. 32 TRIPS. Art. 32 appears in Part II of TRIPS, which does not contain rules of procedure concerning the acquisition of patent rights but provisions concerning the exercise of rights conferred by a patent, together with certain rules on substantive patent law. By contrast, Part IV of TRIPS, containing Art. 62 as its sole provision, deals with the acquisition and maintenance of intellectual property rights, which include patent rights. Applying the principle of *lex specialis derogat legi generali*, the Enlarged Board held that this aspect was much more specific than the fact that Art. 32 TRIPS only concerns patents whereas Art. 62 TRIPS also deals with other types of intellectual property rights. The Enlarged Board concluded that Art. 62(5) TRIPS takes precedence over Art. 32 TRIPS in matters relating to the grant of European patents (see also **J 3/98**).

In **T 557/94** the appellant (patentee) referred to Art. 32 TRIPS, which guarantees an opportunity for judicial review of any decision to revoke a patent, and requested that the case be remitted to the department of first instance if the patent were revoked on the basis of a prior art document introduced during appeal proceedings. The board

investigated whether the basic principle of judicial review under Art. 32 TRIPS was satisfied by the EPC 1973. It found that, under Art. 111(1), second sentence, EPC 1973, the board of appeal was empowered either to decide on the merits of the case **or** to remit the case; it was not restricted to the latter alternative if the opposition division maintained the patent and the board was considering revoking the patent for the first time (see Chapter IV.E.7. "Remittal to the department of first instance"). Reading Art. 32 TRIPS in the context of the usual structure of judicial review in the EPC contracting states and the EPC 1973 itself, this provision guaranteed an instance for judicial review in revocation proceedings, but did not oblige the reviewing instance to remit the case to the department of first instance for continuation of proceedings when revocation was being considered by the judicial instance for the first time.

#### 1.2.4 Courts according to national case law

In **R 1/10** the Enlarged Board of Appeal confirmed that the EPO boards of appeal were set up as required by the rule of law. Several high-ranking national courts of EPC contracting states (in particular, the UK's Patents Court and Germany's Federal Court of Justice (Bundesgerichtshof) and Federal Constitutional Court (Bundesverfassungsgericht)) had declared the boards of appeal to be independent courts based on the rule of law (see also **R 19/12** of 25 April 2014) and recognised their decisions as those of such a court which they took into consideration when developing their case law.

In **J 3/95** (OJ 1997, 493) the Legal Board of Appeal stated that the status of the boards of appeal had been addressed by the High Court of Justice in the United Kingdom (Patents Court) in *R. v The Comptroller of Patents, Designs and Trade Marks ex parte Lenzing AG*. The High Court held that "the final arbiter of revocation under the new legal system [of the EPC] is to be the Board of Appeal of the EPO", and that "the UK and the other Member States have agreed at an international level via the EPC that the BoA is the final arbiter of oppositions. It is the agreed EPO equivalent of the House of Lords, Cour de Cassation or Bundesgerichtshof... Those who apply for patents in the EPO must accept the results of its findings and its methods of procedure". This decision also acknowledged that the boards of appeal constitute a specialised court exercising judicial authority within the meaning of Art. 32 TRIPS (see in this chapter VII.1.2.3).

#### 1.3. Not a court or tribunal of an EU Member State

In **T 276/99** the board noted that under the EC Treaty referrals to the Court of Justice of the European Communities (now Court of Justice of the European Union) were governed by Art. 234 ECT (now Art. 267 TFEU). The board pointed out that, *prima facie*, as the EPO boards of appeal were not a court or tribunal of an EU Member State, they did not have the status to refer a question to the Court of Justice of the European Communities.

The German Constitutional Court's decision of 4 April 2001 (2 BvR 2368/99, published in GRUR 2001, 728 - 730) referred to the delegation of powers to the EPO directly by the EPC contracting states who were also members of the EU, and not to any delegation from the EU itself. Since the European Patent Organisation was not part of the European

Union institutions, and since the delegation of powers by the non-EU contracting states was to the EPO but not to the European Union or its institutions, there was no obvious basis for referring a question to the Court of Justice of the European Communities from an EPO board of appeal.

In **G 2/06** (OJ 2009, 306) the appellant had requested a referral of questions to the Court of Justice of the European Union (CJEU) on the argument that, since R. 28(c) EPC repeats the wording of Art. 6(2)(c) of Directive 98/44/EC, the Enlarged Board of Appeal in interpreting R. 28(c) EPC was interpreting European Union law. The request was rejected as inadmissible. The Enlarged Board made it clear that neither the EPC nor the Implementing Regulations thereto contain any provision for a referral by any instance of the EPO of questions of law to the CJEU. The boards of appeal are a creation of the EPC, and their powers are limited to those given in the EPC. Art. 234 of the EC Treaty gives the CJEU jurisdiction to give preliminary rulings concerning the interpretation of acts of the institutions of the European Community, such as the Directive, but does not appear to provide any basis for a board of appeal of the EPO to request the CJEU to give a ruling on any questions before a board of appeal. Art. 234 ECT requires the question to be raised in a case pending before a court or tribunal of an EU member state. Whereas EPO boards of appeal have been recognised as courts or tribunals, they are not courts or tribunals of an EU member state but of an international organization whose contracting states are not all members of the EU. The seat of the boards of appeal in an EU member state, Germany, could not alter their status as part of an international organisation with jurisdiction conferred under the EPC. The boards of appeal are not and have never been treated as courts or tribunals of their host country.

In **R 1/10**, the Enlarged Board held that not even a CJEU finding that the boards of appeal lacked the independence required of a judicial body adhering to the rule of law (see opinion of the Advocate-General of 2 July 2010 and CJEU opinion of 8 March 2011 in Case 1/09) would be binding on the boards. The European Patent Organisation was an autonomous subject of international law and inherently independent of the EU.

#### **1.4. Power to amend the RPBA under Article 23(4) EPC**

The Rules of Procedure of the Boards of Appeal (RPBA) and of the Enlarged Board of Appeal (RPEBA) are adopted in accordance with the Implementing Regulations and subject to the approval of the Administrative Council (Art. 23(4) EPC; see OJ 2007, 536 and OJ 2007, 303). According to R. 12(3) EPC the Presidium of the Boards of Appeal adopts the RPBA. Pursuant to R. 13(2) EPC the members of the Enlarged Board of Appeal adopt the RPEBA. In **T 1400/11** the board stated that proceedings before the boards of appeal are governed by the RPBA in order to guarantee their judicial function.

In 1994 the Administrative Council adopted R. 71a EPC 1973 to the effect that a communication must be issued by the EPO at the same time as a summons to oral proceedings is issued (OJ 1995, 409). In contrast to this requirement, Art. 11(2) RPBA 1980 (Art. 15(1) RPBA 2007) leaves it to the discretion of the boards of appeal whether or not to send a communication with such a summons. In **G 6/95** (OJ 1996, 649) the Enlarged Board held that R. 71a(1) EPC 1973 did not apply to the boards of appeal. The

Enlarged Board pointed out that Art. 23(4) EPC 1973 states that the RPBA "shall be adopted in accordance with the provisions of the Implementing Regulations". In the view of the Enlarged Board this was clearly directed to the mechanism set out in R. 11 EPC 1973, which states that the authority referred to in R. 10(2) EPC 1973 (the "Presidium") "shall adopt" the RPBA. The Enlarged Board concluded that the power under Art. 23(4) EPC 1973 to amend the RPBA belonged to the Presidium of the boards of appeal, subject to the approval of the Administrative Council. The Enlarged Board further stated that, according to Art. 33(1)(b) EPC 1973, the Administrative Council was competent to amend the Implementing Regulations. However, the Administrative Council was not entitled to amend the Implementing Regulations in such a way that the effect of an amended rule would be in conflict with the EPC 1973 itself (Art. 164(2) EPC 1973). If R. 71a(1) EPC 1973 were to be interpreted as applying to all departments of the EPO, including the boards of appeal, its effect would be directly contradictory to and in conflict with the effect of Art. 11(2) RPBA 1980, which was adopted pursuant to Art. 23(4) EPC 1973 as the emanation of the independence of the boards of appeal. The Administrative Council must be presumed to know the limits of its own power. It was therefore reasonable to assume that the Administrative Council did not intend to amend R. 71 EPC 1973 so as to provide a conflict with a rule of procedure of the boards of appeal which it had itself previously approved.

### **1.5. Nature of the case law of the boards of appeal – no binding precedents**

In **R 14/11** the Enlarged Board stated that, like any other decisions of boards of appeal, its decisions in petition for review cases do not have the legal nature of creating a precedent in the sense that it would have to show in which respect a later decision differs from an earlier one in order for that later decision to be legally justified. Referring to **R 11/08** the Enlarged Board stated that such differences are normal and that the usefulness of case law is not confined to similar or identical facts but lies in the principles or guidance (such as interpretation of legislative provisions) which, whether the facts are similar or not, can be extracted from earlier cases.

## **2. Extension agreements and ordinances**

### **2.1. Legal nature**

An extension agreement is an international treaty between the European Patent Organisation and an extension state which the President of the EPO is authorised by the Administrative Council to conclude with the Council's approval (Art. 33(4) EPC). Such an agreement serves the interests not only of applicants, by providing a simple route to patent protection in the extension states, but also those of the extension state, by enabling it to offer patent protection for its territory by extending the effects of European and Euro-PCT applications and patents (**J 9/04**; see also **J 14/00**, OJ 2002, 432).

In **T 7/07** the board stated that the extension system largely corresponds to the EPC system operating in the EPC contracting states, except that it is not based on direct application of the EPC but on national law modelled on the EPC. The national law of the extension state governs the proceedings and the legal effects of the extension.

In **J 9/04** the board noted that, as a bilateral ordinance, the Extension Ordinances essentially deal - exhaustively and strictly separately from the Convention - with matters pertaining to the integration of extended European applications and protective rights into the respective national law and their relationship to national applications and rights. This includes, in particular, the conferral of the same effects on extended applications and patents as on national ones, the obligation to provide the national patent offices with a translation of the claims into the respective language, the national authentic text of extended applications and patents, their prior-art effect with respect to national applications and patents, and, finally, simultaneous protection. According to the board, none of these provisions give rise to any obligations on the part of the EPO. The EPO merely undertakes vis-à-vis the national patent authorities to assist with the administrative tasks associated with the extension of European patents, namely receiving requests for extension, levying extension fees and, after deducting an amount to cover its expenses, forwarding the remaining amount to the national patent offices. There is no right of recourse to the boards of appeal in respect of extensions of patent applications and patents to the extension states. Instead, the respective national jurisdiction is responsible. For example, Art. 6(2) of the Slovenian Law provides for appeals against decisions of the Slovenian Patent Office (see also **J 2/05**).

## **2.2. No jurisdiction of the boards of appeal**

In **J 22/10** the board stated that decisions taken by the EPO when carrying out its obligations under the co-operation agreements with certain states extending the protection conferred by European patents (extension agreements) were based not on the EPC itself but solely on the co-operation agreements between the European Patent Organisation and the extension states; it therefore rejected the respective appeals as inadmissible (see also **J 14/00**, OJ 2002, 432; **J 19/00**; **J 9/04** of 1 March 2005; **J 2/05**; **J 4/05**). Any decisions based on such international treaties did not fall within the scope of the EPC and, as a result of this, were not subject to the jurisdiction of the boards of appeal. The extension agreements made it absolutely clear that references to provisions of the EPC were exhaustive and, thus, that there could be no corresponding application of other provisions, including those of Art. 106 EPC concerning the appeals procedure. In other words, the Legal Board of Appeal was not competent to decide a case that was governed solely by a "foreign" legal system.

In **J 14/00** (OJ 2002, 432) the Legal Board of Appeal decided on the admissibility of an appeal directed against a letter issued by an EPO formalities officer applying the Extension Ordinance (OJ 1994, 75) associated with the Extension Agreement with the Republic of Slovenia. It held that, according to the exhaustive provision in Art. 106(1) EPC 1973, only those decisions of the EPO could be contested which were taken, within the framework of their duties under the EPC 1973, by the departments listed therein. This was not the case for decisions taken by the EPO when carrying out its obligations under the Extension Agreement. The Legal Board found that there was nothing in the structure or legal nature of the Extension Ordinance to support the appealability of the letter issued by an EPO formalities officer. The board held that the extension procedure generated legal effects exclusively on the basis of Slovenian national law. The Extension Ordinance thus made it absolutely clear that its references

to provisions of the EPC 1973 were exhaustive and that there could be no application of other provisions, including those of Art. 106 EPC 1973 on the appeals procedure.

### **2.3. Non-applicability of Article 105(1)(a) EPC**

In **T 1196/08** an assumed infringer intervened under Art. 105(1)(a) EPC and claimed that the Romanian patent resulting from the extension of a European patent had to be seen as a European patent granted under the EPC. The board did not agree. The term "the same patent" in Art. 105(1)(a) EPC meant a European patent within the meaning of Art. 2(1) EPC 1973. While there were certain parallels between the extension system and the European patent system, fundamental differences still existed. The extension system, including all the conditions and legal effects of extension, was based exclusively on the application of national law unless express reference was made to the EPC. By contrast, the European patent system and the effects of a European patent in the contracting states relied solely on the direct application of the EPC, even if certain provisions of the EPC referred to national law. According to the board, the extension of a European patent under the national law of the extension state meant that the European patent had the effect of a national patent, while designation under Art. 79 EPC 1973 meant that the patent was granted by the EPO on the basis of the EPC and with effect for the designated contracting state. The board concluded that a patent extended to the territory of an extension state was not a European patent within the meaning of Art. 2(1) EPC 1973. Furthermore, the Romanian extension ordinance did not refer to Art. 105 EPC. The references in the Romanian extension ordinance to the provisions of the EPC being exhaustive, there could be no question of applying Art. 105 EPC by analogy.

### **3. Administrative agreements under Article 10(2)(a) EPC**

According to Art. 10(1) EPC the European Patent Office is managed by the President, who is responsible for its activities to the Administrative Council. To this end, Art. 10(2)(a) EPC empowers and requires the President to "take all necessary steps to ensure the functioning of the European Patent Office".

On 29 June 1981 the Presidents of the German Patent Office (GPO) and the EPO entered into an Administrative Agreement concerning the filing of documents and payments (OJ 1981, 381). In **G 5/88**, **G 7/88** and **G 8/88** (OJ 1991, 137) the Enlarged Board of Appeal considered the validity of this Administrative Agreement. The primary object and purpose of the agreement was to provide a mechanism whereby documents which are sent to the EPO, but delivered by error to the GPO (and vice versa), should be marked with the date of receipt at the wrong office and treated accordingly by the office for which they are intended.

The Enlarged Board noted that the extent of the power given to the President under Art. 10(2)(a) EPC to "take all necessary steps to ensure the functioning of the European Patent Office" was not capable of exact definition. In each case it had to be considered how far a particular step was necessary for ensuring the functioning of the EPO. So far as the agreement was concerned with the problem of incorrect delivery of documents in

Munich (at the EPO and the GPO premises there), the conclusion of the agreement was a necessary step in order to avoid unjustified loss of rights to parties, and thus to ensure the proper functioning of the EPO. However, as far as the EPO sub-office in Berlin was concerned, there had been no basis for such an agreement until 1 July 1989. Before that date the sub-office in Berlin had not been a filing office, nor had a letterbox been installed. As far as documents and payments which reached the EPO via the GPO's office in Berlin were concerned, the administrative agreement was therefore invalid. The Enlarged Board applied, however, the principle of good faith and the protection of the legitimate expectations of users of the EPO in favour of the opponent, who had filed a notice of opposition against a European patent via the GPO's Berlin office, relying on the agreement published in the Official Journal.

In **T 485/89** (OJ 1993, 214), the board held that a notice of opposition filed by fax at the GPO in Munich on the last day of the opposition period and forwarded to the EPO the next day was admissible; the opposition fee had already been paid some days earlier. Oppositions filed within the prescribed time by fax at the GPO in Munich while intended for the EPO were covered by the Administrative Agreement of 29 June 1981 and should be treated by the EPO as if it had received them directly, irrespective of whether or not they had been wrongly delivered.

Following talks between the Presidents of the German Patent and Trademark Office (GPTO, formerly the GPO) and the EPO, both offices agreed, in the interests of legal certainty, that the Administrative Agreement dated 29 June 1981 concerning procedure on receipt of documents and payments would, with effect from 1 September 2005, no longer be applied (OJ 2005, 444).

## TABLE OF CASES

In the table of cases, the bibliographic data of all cited decisions are listed according to the reference number, giving details of the relevant board and the date of the decision. Board of appeal decisions published in the OJ include a reference to the year and page number of publication.

## **ANNEXES**

### **1. Rules of Procedure of the Enlarged Board of Appeal of the European Patent Office**

Decision of the Administrative Council of 25 March 2015 approving amendments to the Rules of Procedure of the Enlarged Board of Appeal of the European Patent Office (CA/D 3/15, OJ EPO 2015, A35).

THE ADMINISTRATIVE COUNCIL OF THE EUROPEAN PATENT ORGANISATION,

Having regard to the European Patent Convention, and in particular Article 23, paragraph 4, thereof,

Having regard to the amendments to the Rules of Procedure of the Enlarged Board of Appeal, adopted on 19 March 2015 under Rule 13, paragraph 2, of the Implementing Regulations to the European Patent Convention,

HAS DECIDED AS FOLLOWS:

The amendments to the Rules of Procedure of the Enlarged Board of Appeal, as shown in the Annex to this decision, are hereby approved.

This decision shall enter into force on 25 March 2015.

Done at Munich, 25 March 2015

For the Administrative Council  
The Chairman

Jesper KONGSTAD

## ANNEX

### DECISION

Amendments to the Rules of Procedure of the Enlarged Board of Appeal, OJ EPO 1983, 3, as amended in OJ EPO 1989, 362, OJ EPO 1994, 443, OJ EPO 2003, 58, and OJ EPO 2007, 303

In accordance with Rule 13 of the Implementing Regulations to the Convention on the Grant of European Patents, the Enlarged Board of Appeal amends its Rules of Procedure. These amended Rules of Procedure read as follows:

#### **Article 1**

##### Field of application

These Rules of Procedure shall apply in proceedings before the Enlarged Board of Appeal under Article 23, paragraph 1, first sentence, EPC, Article 112 EPC, and Article 112a EPC.

#### **Article 2**

##### Business distribution and composition

(1) Before the beginning of each working year the members of the Enlarged Board of appeal appointed under Article 11, paragraph 3, EPC shall draw up a business distribution scheme. This scheme shall designate the regular members and their alternates in proceedings under Article 23, paragraph 1, first sentence, EPC, Article 112 EPC and Article 112a EPC initiated during the year. The scheme may be amended during the working year.

(2) The Chairman of the Enlarged Board of Appeal shall determine the composition of the Board for each particular case in accordance with the business distribution scheme. In proceedings under Article 23, paragraph 1, first sentence, EPC, in accordance with paragraph 5 the composition of the Board shall be determined by the alternate of the Chairman of the Enlarged Board of Appeal.

(3) For the examination of a petition under Article 112a EPC conducted in the composition under Rule 109, paragraph 2(b), EPC, two legally qualified members shall supplement the composition specified in Rule 109, paragraph 2(a), EPC.

(4) In proceedings before the Enlarged Board of Appeal under Article 112, paragraph 1(a), EPC at least four of the members shall not have taken part in the proceedings before the Board of Appeal referring the point of law.

(5) In proceedings under Article 23, paragraph 1, first sentence, EPC the Enlarged Board of Appeal shall be composed according to the provisions of Article 22, paragraph 2, first sentence, EPC, the Chairman being replaced by his alternate, and two of the legally qualified members being external members of the Enlarged Board of Appeal.

(6) Article 24 EPC shall apply to proceedings under Article 112a EPC. The Chairman, appointed under Article 11, paragraph 3, EPC, of the Board against whose decision the petition for review has been filed may not take part in the review proceedings.

(7) The parties shall be informed of the Board's composition as soon as it has been determined or changed.

### **Article 3**

#### Replacement of members

(1) Members shall be replaced by alternates if they are prevented from participating, particularly as a result of sickness, excessive workload, and commitments which cannot be avoided.

(2) Any member who wishes to be replaced by an alternate shall inform the Chairman of the Board of his unavailability without delay.

(3) The Chairman of the Enlarged Board of Appeal may, in accordance with the business distribution scheme, designate another regular legally qualified member of the Board to act as Chairman in his stead.

### **Article 4**

#### Exclusion and objection

(1) If the Board has knowledge of a possible reason for exclusion or objection which does not originate from a member himself or from any party to the proceedings, then the procedure of Article 24, paragraph 4, EPC shall be applied.

(2) The member concerned shall be invited to present his comments as to whether there is a reason for exclusion.

(3) Before a decision is taken on the exclusion of the member, there shall be no further proceedings in the case.

### **Article 5**

#### Rapporteurs

(1) The Chairman of the Board shall for each case designate a member of the Board, or himself, as rapporteur. The Chairman may appoint an additional rapporteur. The rapporteur of the Board as composed under Rule 109, paragraph 2(a), EPC shall generally go on to be the rapporteur for proceedings conducted in the composition under Rule 109, paragraph 2(b), EPC.

(2) If an additional rapporteur is appointed, the steps referred to in paragraphs 3 to 5 shall be taken by the rapporteur and additional rapporteur jointly unless the Chairman directs otherwise.

(3) The rapporteur shall carry out a preliminary study of the case and may prepare communications to the eligible parties subject to the direction of the Chairman of the Board. Communications shall be signed by the rapporteur on behalf of the Board.

(4) The rapporteur shall make the preparations for meetings of the Board and for oral proceedings.

(5) The rapporteur shall draft decisions or opinions.

(6) If a rapporteur or additional rapporteur considers that his knowledge of the language of the proceedings is insufficient for drafting communications or decisions or opinions, he may draft these in one of the other official languages. His drafts shall be translated by the European Patent Office into the language of the proceedings and the translations shall be checked by the rapporteur or by another member of the Board.

### **Article 6**

#### **Registry**

(1) A Registry shall be established for the Enlarged Board of Appeal. The Senior Registrar of the Boards of Appeal or the registrars assigned to him for this purpose shall be responsible for the discharge of its functions.

(2) The members of the Enlarged Board of Appeal appointed under Article 11, paragraph 3, EPC may entrust to the Registry tasks which involve no technical or legal difficulties, in particular in relation to arranging for inspection of files, issuing summonses to oral proceedings and notifications and granting requests for further processing of applications.

(3) Minutes of oral proceedings and of the taking of evidence shall be drawn up by the Senior Registrar, a registrar assigned to him for this purpose or such other employee of the Office as the Chairman may designate.

### **Article 7**

#### **Change in the composition of the Board**

(1) If the composition of the Board is changed after oral proceedings, the parties eligible to take part in the proceedings shall be informed that, at the request of any party, fresh oral proceedings shall be held before the Board in its new composition. Fresh oral proceedings shall also be held if so requested by the new member and if the other members of the Board have given their agreement.

(2) Paragraph 1 shall not apply to a change in composition under Article 2, paragraph 3. In this event, a request for oral proceedings shall continue to apply even where oral proceedings have already taken place.

(3) Each new member shall be bound to the same extent as the other members by an interim decision which has already been taken.

(4) If, when the Board has already reached a final decision, a member is unable to act, he shall not be replaced by an alternate. If the Chairman is unable to act, the legally qualified member of the Board having the longest service on the Board or, in the case where members have the same length of service, the eldest member shall sign the decision on behalf of the Chairman.

#### **Article 8**

##### Consolidation of proceedings

If two or more points of law with the same or similar subject-matter have been submitted, or two or more petitions to review the same appeal decision, the Board may consider them in consolidated proceedings.

#### **Article 9**

##### EPO President's right to comment

In proceedings under Article 112 EPC the Board may, on its own initiative or at the written, reasoned request of the President of the European Patent Office, invite him to comment in writing or orally on questions of general interest which arise in the course of proceedings pending before it. The parties shall be entitled to submit their observations on the President's comments.

#### **Article 10**

##### Statements by third parties

(1) In the course of proceedings under Article 112 EPC, any written statement concerning the points of law raised in such proceedings which is sent to the Board by a third party may be dealt with as the Board thinks fit.

(2) The Board may announce further provisions concerning such statements in the Official Journal of the European Patent Office if it seems appropriate.

#### **Article 11**

##### Special communications to parties in proceedings under Article 112a EPC

Notwithstanding notifications or communications required under other provisions,

(a) the other parties shall be informed of the receipt of a petition for review and shall receive a copy of the petition, reference being made to Rule 109, paragraph 3, EPC;

(b) the parties shall be informed that a clearly inadmissible or unallowable petition for review has been rejected in oral proceedings;

(c) the parties shall be informed that a petition for review has been forwarded to the Board as composed under Rule 109, paragraph 2(b), EPC.

### **Article 12**

#### **New submissions filed after expiry of the time limit in proceedings under Article 112a EPC**

(1) Notwithstanding Rule 109, paragraph 3, EPC the Board may consider new submissions made by the petitioner after expiry of the time limit for filing petitions for review, if this is justified for special reasons.

(2) The same shall apply in proceedings conducted in the composition under Rule 109, paragraph 2(b), EPC to new submissions from the other parties filed subsequently to their reply.

### **Article 12a**

#### **Proceedings under Article 23, paragraph 1, first sentence, EPC**

(1) A request that the Enlarged Board of Appeal make a proposal for the removal from office of a member under Article 23, paragraph 1, first sentence, EPC may be made to the Enlarged Board either by the Administrative Council of the European Patent Organisation or by the Vice-President of the European Patent Office in charge of the Boards of Appeal.

(2) In the case of such a request being made by the Administrative Council, the Administrative Council shall be represented in the proceedings. The Vice-President of the European Patent Office in charge of the Boards of Appeal shall also be entitled to be heard in such proceedings.

(3) In the case of such a request being made by the Vice-President in charge of the Boards of Appeal, he shall be a party to the proceedings.

(4) The member who is the subject of a request to make a proposal for their removal from office under Article 23, paragraph 1, first sentence, EPC shall be a party to the proceedings as respondent.

(5) The request referred to in paragraph 1 shall set out all the facts, arguments and evidence relied on. All documents referred to shall be attached.

(6) The proceedings shall be conducted in writing, where necessary or requested supplemented by oral proceedings according to Article 14, and may not be concluded without the respondent being informed of the facts, arguments and evidence underlying the request and having had the opportunity to be heard on them. The respondent may appoint a person to advise or represent him.

(7) Article 117, paragraph 1, EPC shall be applicable.

(8) The proceedings shall be conducted independently of any disciplinary or national proceedings.

(9) Unless and to the extent that the Enlarged Board decides otherwise, the proceedings shall not be public and shall be confidential.

(10) The Enlarged Board of Appeal may on request propose the reimbursement of some or all costs incurred in the proceedings by the respondent if the request to make a proposal for their removal from office has been rejected.

### **Article 13**

#### Non-binding communications from the Board

If the Board deems it expedient to communicate with the eligible parties regarding a possible appreciation of substantive or legal matters, such communication shall be made in such a way as not to imply that the Board is in any way bound by it.

### **Article 14**

#### Oral proceedings

(1) If oral proceedings are to take place, the Board shall endeavour to ensure that the eligible parties have provided all relevant information and documents before the hearing.

(2) The Board's communication under Article 13 may draw attention to matters which seem to be of special significance, or to the fact that questions appear no longer to be contentious, or may contain other observations that may help concentration on essentials during the oral proceedings.

(3) A change of date for oral proceedings may exceptionally be allowed in the Board's discretion following receipt of a written and reasoned request made as far in advance of the appointed date as possible.

(4) The Board shall not be obliged to delay any step in the proceedings, including its decision, by reason only of the absence at the oral proceedings of any party duly summoned who may then be treated as relying only on its written case.

(5) The Chairman presides over the oral proceedings and ensures their fair, orderly and efficient conduct.

(6) When a case is ready for decision during oral proceedings, the Chairman shall state the final requests of the eligible parties and declare the debate closed. No submissions may be made by the parties after the closure of the debate unless the Board decides to re-open the debate.

(7) The Board shall ensure that each case is ready for decision at the conclusion of the oral proceedings, unless there are special reasons to the contrary. Before the oral proceedings are closed, the Board's decision or opinion may be announced orally by the Chairman.

### **Article 15**

#### Attendance of interpreters

If required, the Chairman of the Board shall make arrangements for interpreting during oral proceedings, the taking of evidence or the deliberations of the Board.

### **Article 16**

#### Deliberation and voting

(1) Only members of the Board shall participate in deliberations; the Chairman may, however, authorise other officers to attend. Deliberations shall be secret.

(2) During the deliberations between members of the Board, the opinion of the rapporteur shall be heard first, followed by that of the additional rapporteur if one has been appointed and, if the rapporteur is not the Chairman, the Chairman's last.

(3) If voting is necessary, votes shall be taken in the same sequence; even if the Chairman is the rapporteur, he shall vote last. Abstentions shall not be permitted.

### **Article 17**

Submission of case by the Board as composed under Rule 109, paragraph 2(a), EPC to the Board as composed under Rule 109, paragraph 2(b), EPC

If, in proceedings under Article 112a EPC, the Board as composed under Rule 109, paragraph 2(a), EPC fails after deliberation to reach the unanimous conclusion that the petition for review should be rejected as clearly inadmissible or unallowable, it shall submit the petition without delay and without comment as to its merit to the Board as composed under Rule 109, paragraph 2(b), EPC for decision.

### **Article 18**

#### Reasons for the decision or opinion

(1) Subject to Rule 109, paragraph 2(a), EPC the decision or opinion of the Board shall be in accordance with the votes of the majority of its members.

(2) In proceedings under Article 23, paragraph 1, first sentence, EPC or Article 112 EPC, the reasons for such decision or opinion may also indicate the opinions held by a minority of the members if a majority of the members of the Board agrees. Neither the names of the members forming any such minority nor the size of such minority may be indicated.

(3) The final decision of the Enlarged Board of Appeal in proceedings under Article 23, paragraph 1, first sentence, EPC may be published, due regard being taken of the confidentiality of the proceedings.

**Article 19**

Binding nature of the Rules of Procedure

These Rules of Procedure shall be binding upon the Enlarged Board of Appeal, provided that they do not lead to a situation which would be incompatible with the spirit and purpose of the Convention.

**Article 20**

Entry into force

These Rules of Procedure shall enter into force on 1 April 2015.

Done at Munich, 19 March 2015

For the Enlarged Board of Appeal

Wim VAN DER EIJK

## **2. Rules of Procedure of the Boards of Appeal of the European Patent Office**

Decision of the Administrative Council of 25 October 2007 approving amendments to the Rules of Procedure of the Boards of Appeal of the European Patent Office, OJ EPO 2007, 536

THE ADMINISTRATIVE COUNCIL OF THE EUROPEAN PATENT ORGANISATION,

Having regard to the European Patent Convention, and in particular Article 23, paragraph 4, thereof,

Having regard to the amendments to the Rules of Procedure of the Boards of Appeal, adopted on 12 September 2007 under Rule 10, paragraph 3, of the Implementing Regulations to the European Patent Convention,

Having regard to the opinion of the Committee on Patent Law,

HAS DECIDED AS FOLLOWS:

The amendments to the Rules of Procedure of the Boards of Appeal, as shown in the Annex to this decision, are hereby approved.

Done at Munich, 25 October 2007

For the Administrative Council  
The Chairman

Roland GROSSENBACHER

## ANNEX

### DECISION

Amendments to the Rules of Procedure of the Boards of Appeal, OJ EPO 1983, 7 as amended in OJ EPO 1989, 361, OJ EPO 2000, 316, OJ EPO 2003, 61, OJ EPO 2003, 89 and OJ EPO 2004, 541

In accordance with Rule 10, paragraph 3, of the Implementing Regulations to the European Patent Convention, the Presidium amends the Rules of Procedure of the Boards of Appeal. These amended Rules of Procedure read as follows:

#### **Article 1**

##### Business distribution and composition

(1) The Presidium referred to in Rule 12, paragraph 4, EPC, shall before the beginning of each working year draw up a business distribution scheme for the distribution among the Boards of Appeal of all appeals that may be filed during the year, designating the members who may serve on each Board and their respective alternates. The scheme may be amended during the working year.

(2) The Chairman of each Board of Appeal shall determine the composition of the Board for each particular case in accordance with the business distribution scheme.

#### **Article 2**

##### Replacement of members

(1) Members shall be replaced by alternates if they are prevented from participating, particularly as a result of sickness, excessive workload, and commitments which cannot be avoided.

(2) Any member requesting to be replaced by an alternate shall inform the Chairman of the Board concerned of his unavailability without delay.

(3) The Chairman of the Board may designate another member of the Board to replace him or her as Chairman in a particular appeal in accordance with the business distribution scheme.

#### **Article 3**

##### Exclusion and objection

(1) If a Board has knowledge of a possible reason for exclusion or objection which does not originate from a member himself or from any party to the proceedings, then the procedure of Article 24, paragraph 4, EPC shall be applied.

(2) The member concerned shall be invited to present his comments as to whether there is a reason for exclusion.

(3) Before a decision is taken on the exclusion of the member, there shall be no further proceedings in the case.

#### **Article 4**

##### Procedural compliance

(1) The Chairman shall for each appeal designate a member of the Board or himself to consider the admissibility of the appeal.

(2) The Chairman or a member designated by him shall ensure that the parties comply with these Rules and with directions of the Board and shall propose action to be taken as appropriate.

#### **Article 5**

##### Rapporteurs

(1) The Chairman of each Board shall for each appeal designate a member of his Board, or himself, as rapporteur. If appropriate in the light of the subject-matter of the case, the Chairman may designate an additional rapporteur.

(2) If an additional rapporteur is appointed, the steps referred to in paragraphs 3 to 5 shall be taken by the rapporteur and additional rapporteur jointly unless the Chairman directs otherwise.

(3) The rapporteur shall carry out a preliminary study of the appeal and may prepare communications to the parties subject to the direction of the Chairman of the Board. Communications shall be signed by the rapporteur on behalf of the Board.

(4) The rapporteur shall make the preparations for meetings of the Board and for oral proceedings.

(5) The rapporteur shall draft decisions.

(6) If a rapporteur or additional rapporteur considers that his knowledge of the language of the proceedings is insufficient for drafting communications or decisions, he may draft these in one of the other official languages. His drafts shall be translated by the European Patent Office into the language of the proceedings and the translations shall be checked by the rapporteur or by another member of the Board concerned.

#### **Article 6**

##### Registries

(1) Registries shall be established for the Boards of Appeal. Registrars shall be responsible for the discharge of the functions of the Registries. One of the Registrars shall be designated Senior Registrar.

(2) The Presidium referred to in Rule 12, paragraph 1, EPC may entrust to the Registrars the execution of functions which involve no technical or legal difficulties, in particular in relation to arranging for inspection of files, issuing summonses to oral proceedings and notifications and granting requests for further processing of applications.

(3) The Registrar shall report to the Chairman of the Board concerned on the admissibility of each newly filed appeal.

(4) Minutes of oral proceedings and of the taking of evidence shall be drawn up by the Registrar or such other employee of the Office as the Chairman may designate.

#### **Article 7**

##### Attendance of interpreters

If required, the Chairman of any Board shall make arrangements for interpretation during oral proceedings, the taking of evidence or the deliberations of his Board.

#### **Article 8**

##### Change in the composition of the Board

(1) If the composition of a Board is changed after oral proceedings, the parties to the proceedings shall be informed that, at the request of any party, fresh oral proceedings shall be held before the Board in its new composition. Fresh oral proceedings shall also be held if so requested by the new member and if the other members of the Board concerned have given their agreement.

(2) Each new member shall be bound to the same extent as the other members by an interim decision which has already been taken.

(3) If, when a Board has already reached a final decision, a member is unable to act, he shall not be replaced by an alternate. If the Chairman is unable to act, the member of the Board concerned having the longer or longest service on the Boards of Appeal, or in the case where members have the same length of service, the elder or eldest member, shall sign the decision on behalf of the Chairman.

#### **Article 9**

##### Enlargement of a Board of Appeal

If a Board of Appeal consisting of two technically qualified members and one legally qualified member considers that the nature of the appeal requires that the Board should consist of three technically qualified members and two legally qualified members, the decision to enlarge the Board shall be taken at the earliest possible stage in the examination of that appeal.

### **Article 10**

#### Consolidation of appeal proceedings

(1) If several appeals are filed from a decision, these appeals shall be considered in the same proceedings.

(2) If appeals are filed from separate decisions and all the appeals are designated to be examined by one Board in a common composition, that Board may deal with those appeals in consolidated proceedings with the consent of the parties.

### **Article 11**

#### Remission to the department of first instance

A Board shall remit a case to the department of first instance if fundamental deficiencies are apparent in the first instance proceedings, unless special reasons present themselves for doing otherwise.

### **Article 12**

#### Basis of Proceedings

(1) Appeal proceedings shall be based on

(a) the notice of appeal and statement of grounds of appeal filed pursuant to Article 108 EPC;

(b) in cases where there is more than one party, any written reply of the other party or parties to be filed within four months of notification of the grounds of appeal;

(c) any communication sent by the Board and any answer thereto filed pursuant to directions of the Board.

(2) The statement of grounds of appeal and the reply shall contain a party's complete case. They shall set out clearly and concisely the reasons why it is requested that the decision under appeal be reversed, amended or upheld, and should specify expressly all the facts, arguments and evidence relied on. All documents referred to shall be

(a) attached as annexes insofar as they have not already been filed in the course of the grant, opposition or appeal proceedings or produced by the Office in said proceedings;

(b) filed in any event to the extent that the Board so directs in a particular case.

(3) Subject to Articles 113 and 116 EPC the Board may decide the case at any time after filing of the statement of grounds of appeal or, in cases where there is more than one party, after the expiry of the time limit in (1)(b).

(4) Without prejudice to the power of the Board to hold inadmissible facts, evidence or requests which could have been presented or were not admitted in the first instance

proceedings, everything presented by the parties under (1) shall be taken into account by the Board if and to the extent it relates to the case under appeal and meets the requirements in (2).

(5) Extension of time limits may exceptionally be allowed in the Board's discretion following receipt of a written and reasoned request.

### **Article 13**

#### Amendment to a party's case

(1) Any amendment to a party's case after it has filed its grounds of appeal or reply may be admitted and considered at the Board's discretion. The discretion shall be exercised in view of inter alia the complexity of the new subject matter submitted, the current state of the proceedings and the need for procedural economy.

(2) Other parties shall be entitled to submit their observations on any amendment not held inadmissible by the Board ex officio.

(3) Amendments sought to be made after oral proceedings have been arranged shall not be admitted if they raise issues which the Board or the other party or parties cannot reasonably be expected to deal with without adjournment of the oral proceedings.

### **Article 14**

#### Interventions

Articles 12 and 13 shall apply mutatis mutandis to interventions commenced while an appeal is pending.

### **Article 15**

#### Oral Proceedings

(1) If oral proceedings are to take place, the Board may send a communication drawing attention to matters which seem to be of special significance, or to the fact that questions appear no longer to be contentious, or containing other observations that may help concentration on essentials during the oral proceedings.

(2) A change of date for oral proceedings may exceptionally be allowed in the Board's discretion following receipt of a written and reasoned request made as far in advance of the appointed date as possible.

(3) The Board shall not be obliged to delay any step in the proceedings, including its decision, by reason only of the absence at the oral proceedings of any party duly summoned who may then be treated as relying only on its written case.

(4) The Chairman presides over the oral proceedings and ensures their fair, orderly and efficient conduct.

(5) When a case is ready for decision during oral proceedings, the Chairman shall state the final requests of the parties and declare the debate closed. No submissions may be made by the parties after the closure of the debate unless the Board decides to re-open the debate.

(6) The Board shall ensure that each case is ready for decision at the conclusion of the oral proceedings, unless there are special reasons to the contrary. Before the oral proceedings are closed, the decision may be announced orally by the Chairman.

### **Article 16**

#### Costs

(1) Subject to Article 104, paragraph 1, EPC, the Board may on request order a party to pay some or all of another party's costs which shall, without limiting the Board's discretion, include those incurred by any .

(a) amendment pursuant to Article 13 to a party's case as filed pursuant to Article 12, paragraph 1;

(b) extension of a time limit;

(c) acts or omissions prejudicing the timely and efficient conduct of oral proceedings;

(d) failure to comply with a direction of the Board;

(e) abuse of procedure.

(2) The costs ordered to be paid may be all or part of those incurred by the receiving party and may inter alia be expressed as a percentage or as a specific sum. In the latter event, the Board's decision shall be a final decision for the purposes of Article 104, paragraph 3, EPC. The costs ordered may include costs charged to a party by its professional representative, costs incurred by a party itself whether or not acting through a professional representative, and the costs of witnesses or experts paid by a party but shall be limited to costs necessarily and reasonably incurred.

### **Article 17**

#### Communications to the parties

(1) In the written phase of proceedings, replies to requests and directions on matters of procedure shall be given by means of communications.

(2) If a Board deems it expedient to communicate with the parties regarding a possible appreciation of substantive or legal matters, such communication shall be made in such a way as not to imply that the Board is in any way bound by it.

### **Article 18**

#### EPO President's right to comment

The Board may, on its own initiative or at the written, reasoned request of the President of the European Patent Office, invite him to comment in writing or orally on questions of general interest which arise in the course of proceedings pending before it. The parties shall be entitled to submit their observations on the President's comments.

### **Article 19**

#### Deliberation and voting

(1) If the members of a Board are not all of the same opinion, the Board shall meet to deliberate regarding the decision to be taken. Only members of the Board shall participate in the deliberations; the Chairman may, however, authorise other officers to attend. Deliberations shall be secret.

(2) During the deliberations between members of the Board, the opinion of the rapporteur shall be heard first, followed by that of the additional rapporteur if one has been appointed and, if the rapporteur is not the Chairman, the Chairman's last.

(3) If voting is necessary, votes shall be taken in the same sequence; even if the Chairman is the rapporteur, he shall vote last. Abstentions shall not be permitted.

### **Article 20**

#### Deviations from an earlier decision of any Board or from the Guidelines

(1) Should a Board consider it necessary to deviate from an interpretation or explanation of the Convention given in an earlier decision of any Board, the grounds for this deviation shall be given, unless such grounds are in accordance with an earlier opinion or decision of the Enlarged Board of Appeal. The President of the European Patent Office shall be informed of the Board's decision.

(2) If, in its decision, a Board gives a different interpretation of the Convention to that provided for in the Guidelines, it shall state the grounds for its action if it considers that this decision will be more readily understood in the light of such grounds.

### **Article 21**

#### Deviation from an earlier decision or opinion of the Enlarged Board of Appeal I

Should a Board consider it necessary to deviate from an interpretation or explanation of the Convention contained in an earlier opinion or decision of the Enlarged Board of Appeal, the question shall be referred to the Enlarged Board of Appeal.

**Article 22**

Referral of a question to the Enlarged Board of Appeal

(1) If a point is to be referred to the Enlarged Board of Appeal, a decision to this effect shall be taken by the Board concerned.

(2) The decision shall contain the items specified in Rule 102, sub-paragraphs (a), (b), (c), (d) and (f), EPC and the point which the Board refers to the Enlarged Board of Appeal. The context in which the point originated shall also be stated.

(3) The decision shall be communicated to the parties.

**Article 23**

Binding nature of the Rules of Procedure

These Rules of Procedure shall be binding upon the Boards of Appeal, provided that they do not lead to a situation which would be incompatible with the spirit and purpose of the Convention.

**Article 24**

Entry into force

These Rules of Procedure shall enter into force upon entry into force of the revised text of the European Patent Convention in accordance with Article 8 of the Revision Act.

Done at Munich on 12 September 2007

For the Presidium

The Chairman

Peter MESSERLI

### 3. Transitional provisions

Article 7 of the Act revising the EPC of 29 November 2000

#### **Article 7**

##### Transitional provisions

(1) The revised version of the Convention shall apply to all European patent applications filed after its entry into force, as well as to all patents granted in respect of such applications. It shall not apply to European patents already granted at the time of its entry into force, or to European patent applications pending at that time, unless otherwise decided by the Administrative Council of the European Patent Organisation.

(2) The Administrative Council of the European Patent Organisation shall take a decision under paragraph 1 no later than 30 June 2001, by a majority of three quarters of the Contracting States represented and voting. Such decision shall become an integral part of this Revision Act.

#### **Decision of the Administrative Council of 28 June 2001 on the transitional provisions under Article 7 of the Act revising the European Patent Convention of 29 November 2000**

The Administrative Council of the European Patent Organisation, having regard to Article 7, paragraph 2, of the Act revising the European Patent Convention of 29 November 2000 ("Revision Act"), on a proposal from the President of the European Patent Office, having regard to the opinion of the Committee on Patent Law, has decided as follows:

#### **Article 1**

In accordance with Article 7, paragraph 1, second sentence, of the Revision Act, the following transitional provisions shall apply to the amended and new provisions of the European Patent Convention specified below:

1. Articles 14(3) to (6), 51, 52, 53, 54(3) and (4), 61, 67, 68 and 69, the Protocol on the Interpretation of Article 69, and Articles 70, 86, 88, 90, 92, 93, 94, 97, 98, 106, 108, 110, 115, 117, 119, 120, 123, 124, 127, 128, 129, 133, 135, 137 and 141 shall apply to European patent applications pending at the time of their entry into force and to European patents already granted at that time. However, Article 54(4) of the version of the Convention in force before that time shall continue to apply to these applications and patents.

2. Articles 65, 99, 101, 103, 104, 105, 105a-c and 138 shall apply to European patents already granted at the time of their entry into force and to European patents granted in respect of European patent applications pending at that time.

3. Article 54(5) shall apply to European patent applications pending at the time of its entry into force, in so far as a decision on the grant of the patent has not yet been taken.

4. Article 112a shall apply to decisions of the Boards of Appeal taken as from the date of its entry into force.

5. Articles 121 and 122 shall apply to European patent applications pending at the time of their entry into force and to European patents already granted at that time, in so far as the time limits for requesting further processing or reestablishment of rights have not yet expired at that time.

6. Articles 150 to 153 shall apply to international applications pending at the time of their entry into force. However, Articles 154(3) and 155(3) of the version of the Convention in force before that time shall continue to apply to these applications.

## **Article 2**

This decision shall enter into force upon the entry into force of the revised text of the Convention in accordance with Article 8 of the Revision Act.

## 4. Cross-reference list EPC 1973 - EPC 2000

The concordance list compares the thematically corresponding provisions of the current Convention and Implementing Regulations with the Articles and Rules of the EPC 2000.

### Article EPC 1973:

Convention on the Grant of European Patents of 5.10.1973, text as amended by the Act revising Article 63 EPC and by decisions of the Administrative Council of 21.12.1978, 13.12.1994, 20.12.1995, 5.12.1995, 10.12.1998 and 27.10.2005

### Article EPC 2000:

European Patent Convention 2000 as adopted by decision of the Administrative Council of 28.6.2001

### Rule EPC 1973:

Implementing Regulations to the EPC 1973, as last amended by decision of the Administrative Council of 9.12.2004

### Rule EPC 2000:

Implementing Regulations to the EPC 2000 as adopted by decision of the Administrative Council of 7.12.2006

### elmts:

Only certain elements of the provisions correspond
