Under Art. 113(2) EPC the EPO may consider and decide upon the European patent application or the European patent only in the text submitted to it, or agreed, by the applicant for or proprietor of the patent. See also chapter IV.B.3.2.3 "Decisions with no text submitted or agreed by the applicant (Art. 113(2) EPC)".

When taking its decision a board of appeal (or department of first instance) has no authority to order the grant of a European patent containing claims which are different in their content or interdependency from those submitted by the applicant (T 32/82, OJ 1984, 354). Art. 113(2) EPC is a fundamental procedural principle, being part of the right to be heard, and is of such prime importance that any infringement of it, even as the result of a mistaken interpretation of a request, has, in principle, to be considered to be a substantial procedural violation (T 647/93, OJ 1995, 132; see also T 996/12, T 690/09, T 32/82 and J 19/84). In any case, such violation occurs when the examining division does not make use of the possibility of granting interlocutory revision under Art. 109 EPC 1973 after the mistake has been pointed out in the grounds of appeal (T 647/93).

According to the board in T 996/12, Art. 113(2) EPC guarantees the fundamental principle of party disposition (*ne ultra petita*; see also R 14/10).

Art. 113(2) EPC does not give any right to an applicant in the sense that the EPO is bound to consider a request for amendment put forward by the applicant. The effect of the provision is merely to forbid the EPO from considering and deciding upon any text of an application other than that submitted to it or agreed by the applicant or proprietor (G 7/93, OJ 1994, 775; see also chapter V.B.4.3.17 "Alleged violation of Article 113(2) EPC"). The board in T 1104/14 held that this had to be understood to refer only to the decision on whether to admit the (filed) request; it did not mean the boards had the power to refuse to permit the filing of a request or not to record or accept a request during oral proceedings. That would generally constitute a serious breach of the autonomy granted by Art. 113(2) EPC to the applicant or patent proprietor to determine the text of its patent ("principle of free party disposition").

In R 8/16 the Enlarged Board held that, as a matter of principle, the board was free to examine the (pending) claim requests in any order, and therefore it was also free to conduct the discussion on them in any order, without having to give reasons. It further stated that the principle of party disposition expressed in Art. 113(2) EPC did not extend so as to permit a party to dictate how and in which order a deciding body of the EPO may examine the subject-matter before it. The only obligation on the EPO was not to overlook any still pending request in the final decision. The order of examination or discussion is a question of procedural economy, for which mainly the deciding body is responsible. A board has no particular duty to give reasons why it chose to proceed as it did.

In [T.1477/15](#) the board stated that it is generally accepted that in appeal proceedings the principle of party disposition applies (see e.g. [R.13/13](#), point 15 of the Reasons), meaning that parties can put forward, withhold or withdraw their requests as they see fit. In other words, if a patent proprietor withdraws or no longer agrees to a text (two auxiliary requests, in this case), this principle prevents the board of appeal from deciding on these issues.

3.2. The requirement of a text submitted by the applicant

In [T.1440/12](#) the board held that in the case of opposition, the intention behind [Art. 113\(2\) EPC 1973](#) is that the EPO may not maintain a patent according to a particular text unless the proprietor has consented unambiguously to the patent being maintained in that form. The "text submitted" is to be understood to mean a text submitted by the proprietor with the clear intention that the patent be maintained according to that text, at least as an auxiliary measure. In the case in issue, although six new requests were enclosed with the reply to the statement of grounds of appeal, the proprietor/respondent did not actually request maintenance of the patent on the basis of any of them, but merely described them as "six auxiliary requests that the proprietor may subsequently choose to rely upon". This phrase, although the submissions in question were termed "requests", made it clear that the proprietor was not at that point requesting maintenance of the patent based on them, but merely leaving open the possibility that it might choose to make such a request subsequently.

3.3. The requirement of a text agreed by the applicant

In [T.73/84](#) (OJ 1985, 241) the board held that the European patent was to be revoked if the patent proprietor stated in opposition or appeal proceedings that he no longer approved the text in which the patent was granted and would not be submitting an amended text (see also [T.2405/12](#), [T.655/01](#), [T.1526/06](#) and the cited case law, [T.203/14](#)). According to [T.1244/08](#), such a statement immediately terminates the appeal proceedings, and it is not possible to retract it and continue the proceedings (see chapter [IV.D.2](#). "Requests for revocation during opposition and opposition appeal proceedings").

In [T.454/15](#) the proprietor lodged an appeal against the opposition division's decision to revoke its patent, but prior to the oral proceedings stated that it no longer approved of the text of the patent as granted and would not be proposing an amended text. The board stated that where a fundamental requirement for allowing the appeal of the patent proprietor against a decision of the opposition division to revoke the patent was lacking, the proceedings should be terminated by a decision ordering the dismissal of the appeal, without going into the substantive issues (see also [T.163/99](#), [T.1637/06](#), [T.784/14](#), and [T.2524/12](#)). The board stressed that its order could not be the same as in [T.2405/12](#) (revocation) because unlike in that case the patent had already been revoked by the opposition division and thus could not be revoked again. However, the order to dismiss the appeal ultimately had the same outcome, namely that the decision to revoke the patent became final.

The board in [T.706/00](#) pointed out that the EPO cannot depart from a request once made. It can only grant or deny the request; it cannot grant more, less or even something different.

Unless a grantable text is submitted, at least auxiliarily, the request is rejected in full. In T. 549/96, the board noted that an applicant had to unambiguously indicate, at the end of the proceedings, which text he proposed. Otherwise, the examining division would be unable to decide on the basis of which version it should proceed and the application would eventually have to be refused, since there would be no clear request at all. Thus, if an applicant failed to indicate his approval of the text of an allowable subsidiary request, e.g. by express disapproval or by maintaining one or more unallowable higher-preference requests, the examining division could refuse the application under Art. 97(1) EPC 1973 (see also T. 976/97).

In T. 237/96 the board held that Art. 113(2) EPC 1973 could not be interpreted in the sense that the examining division was bound to accept any amendment which the applicant might propose, only to ensure that there was a version approved by him. In circumstances in which, as in the case in question, amendments proposed by the applicant after the R. 51(4) EPC 1973 communication were with good reason not allowed by the examining division by virtue of R. 86(3) EPC 1973 and the applicant did not give its agreement to any other version, the established practice of the EPO, sanctioned by consistent case law, was to refuse the application on the ground that there was no version approved by the applicant within the meaning of Art. 113(2) EPC 1973.

In the inter partes case T. 917/95 a patent proprietor had submitted a new claim but no amended description or drawing. The descriptions and drawings relating to the previous claims were incompatible with the new claim. Because the proprietor failed to appear at the oral proceedings, no documents were available on the basis of which the patent could have been maintained (see also T. 725/00 and T. 1174/01).

In T. 255/05 the board held that under Art. 113(2) EPC 1973, it is the applicant's responsibility to define the text on the basis of which it requests a patent to be granted. When the appellant, even after having been invited to do so by the board, does not clearly indicate the order in which its requests are submitted and what the exact content of each of these requests is, there is no text submitted or agreed by the applicant within the meaning of Art. 113(2) EPC 1973, and no request which could be considered by the board.

In T. 690/09 the examining division had refused to consent to the latest submitted set of claims under R. 137(3) EPC, despite these being maintained by the applicant. The board held that this would not automatically revive the previous set of claims that the examining division had consented to consider, unless the applicant had indicated that he was relying on these as an auxiliary request. According to the board, deciding to refuse an application on the ground that claims are not allowable contravenes Art. 113(2) EPC 1973 if the applicant is no longer putting forward these claims and amounts to a substantial procedural violation (see for example T. 946/96). Similarly, in T. 996/12 the board held that, unlike the situation in which an applicant submitted one or more auxiliary requests, submitting a new main request automatically leads to the replacement of any previous main request(s). By basing its decision explicitly on an earlier set of claims, the examining division decided upon a text to which the appellant (no longer) agreed.

In T.1227/14 the appellant (patent proprietor) submitted that, contrary to what was indicated in the minutes of the oral proceedings, it had not delegated the adaptation of the description to the opposition division. It had instead requested a return to written proceedings for the adaptation of the description, but that had been omitted from the minutes. In spite of this, it had not requested the correction of that omission by the opposition division. The opposition division, however, had issued the impugned interlocutory decision on the text in which the opposed patent could be maintained without first submitting that text – containing the division's adapted description – to the patent proprietor. It had thus violated the principle of the right to be heard laid down in Art. 113(2) EPC. Even and especially where adaptation of the description is delegated to an EPO department, there is no scope for releasing it from this obligation.

The board in T.861/16 noted that there was no mention anywhere, in either the minutes or the decision, that the patent proprietor had approved the amended text. Nor had the respondent (opponent) offered any evidence that the patent proprietor had explicitly approved a text submitted before the opposition division's decision. The board held that since the principle of tacit acceptance (*qui tacet consentire videtur*) was not established in the EPC, it was not enough to ask the patent proprietor if it wished to comment on the amendments to the description carried out by the opposition division. The opposition division had to ensure that the patent proprietor had given its agreement. The board held that in the absence of the patent proprietor's approval of the version as maintained, the proceedings before the opposition division were vitiated by a substantial procedural violation (Art. 113(2) EPC).

In T.536/13 the board held that the "decision according to the state of the file" evidently did not take into account the comments and amended application documents filed by the applicant (appellant) in response to the examining division's second communication. The board found that the decision consequently did not comply with the requirement of Art. 113(2) EPC. The board also found that the decision was not reasoned within the meaning of R. 111(2) EPC. In the absence of any reasoning in respect of the applicant's latest comments and amendments, the board and the appellant were left in doubt as to which of the previously-raised objections still applied. See also chapters III.B.2.4.4 "Failure to consider submissions made after a communication", III.K.3.5. "Decisions according to the state of the file".

3.4. Cases where the EPO is uncertain or mistaken about the approval of the text

In T.382/10 the board held that, to avoid any misunderstanding, in particular when requests were amended during oral proceedings, the examining division should clarify the final requests before pronouncing its decision at the conclusion of oral proceedings (see also chapter V.B.4.4.2 "Rule 104(b) EPC – failure to decide on a party's request"). In accordance with prevailing case law (T.666/90, T.552/97 and T.1439/05, see below), the fact that the final requests were not established contravened Art. 113(2) EPC and was considered a substantial procedural violation. In T.1104/14 it was held that failure to obtain clarification where needed also amounted to a procedural violation because it was then not clear which version of the patent was being put forward by the patent proprietor for decision, resulting in a breach of Art. 113(2) EPC. Basing a decision on the wrong requests

constituted a substantial procedural violation because freedom of disposition was cardinal and disregarding it adversely impacted the entire proceedings.

In T. 666/90 the status of the requests was not clarified during oral proceedings before the opposition division. This resulted in a disagreement between the patentee and the opposition division in the period between oral proceedings and the drafting of the decision. According to the board, the appropriate action would have been to request, prior to the decision being issued, a written copy of the final version of the requests and a clarification of their order. In T. 552/97 the opposition division had taken no decision on the main request, incorrectly assuming that it was no longer in the proceedings. The board pointed out that EPO departments should clarify the position before issuing decisions, especially if requests had been amended in oral proceedings. In T. 355/03 it was unclear which text the applicant wished to have as the basis for grant. The board held that the examining division should have established what the applicant really wanted.

In T. 1653/16, the appellant (applicant) argued that its main request had not been addressed in the examining division's decision. Instead, the decision was based on a version of a claim "unofficially submitted" by e-mail as a basis for discussion, of which there was no record on the file. From the minutes of the oral proceedings, it was not clear whether the main request was still maintained or whether the applicant even requested a decision on the amended claim since it appeared that at the end of the proceedings, before announcing the decision, the applicant was not asked to state its final requests. The board concluded that as the examining division had not established whether the main request which it refused was the version agreed by the applicant, it had violated Art. 113(2) EPC thereby committing a substantial procedural violation.

In T. 1439/05 it was held that if there were several requests in the form of a main request and successive auxiliary requests submitted in order of relevance, the examining division was bound in its decision by the order in which the requests had been submitted.

In T. 425/97, the text of the single claim attached to the written decision of the opposition division was different from the text apparently held patentable at the oral proceedings. From the original minutes of the oral proceedings, the history of the case and further circumstances, the board concluded that the opposition division, in violation of Art. 113(2) EPC 1973, had taken a decision on the patent on the basis of a text which had neither been submitted nor agreed by the proprietor of the patent.

In T. 543/92 and T. 89/94 the opposition division unintentionally failed to take account of a document introducing amended claims. In both cases the patent was revoked. The board ruled that once an item of mail had been received at the EPO it had to be considered to have been received by the organ deciding the case. Responsibility for the correct processing of mail thereafter lay with the relevant departments within the EPO. The decision under appeal was thus in breach of Art. 113(2) EPC 1973.

In T. 1351/06, the main request had not been withdrawn and had therefore remained pending. As a result, the decision to grant the patent on the basis of the text approved by the applicant as an auxiliary request was contrary to Art. 113(2) EPC 1973.

In **T. 736/14** the board held that, if an applicant whose application is non-unitary responds unclearly and/or in a misleading way to an invitation from the examining division to designate which searched invention it wishes to prosecute further, it could not be automatically assumed that the applicant selected the invention covered by the main request for examination. Rather, the examining division had to clarify, e.g. via a further communication, which of the searched inventions the applicant actually wanted it to examine. Confronting the applicant with an irrevocable decision not to admit an auxiliary request covering one of the inventions searched constituted a substantial procedural violation of the applicant's right to be heard. The examining division had presented the applicant with a *fait accompli*.

1. Introduction

According to [Art. 116\(1\) EPC](#), oral proceedings shall take place either at the instance of the EPO if it considers this to be expedient or at the request of any party to the proceedings. In other words, oral proceedings are not held automatically in each case. The purpose of oral proceedings is to safeguard a party's right to be heard as well as to settle as far as possible all outstanding questions relevant to the decision and to speed up the procedure.

Besides [Art. 116 EPC](#), there are also other provisions relevant for the preparation and conduct of oral proceedings: [R. 115 EPC](#) – summons to oral proceedings (see in this chapter [III.C.6.2.](#)), [R. 116 EPC](#) – preparation of oral proceedings (see in this chapter [III.C.6.3.](#)), [R. 124 EPC](#) – minutes of oral proceedings (see in this chapter [III.C.7.10.](#)), as well as various notices concerning the practice for fixing the date of oral proceedings (see in this chapter [III.C.6.1.1.](#)). For the boards of appeal, see also [Art. 15 RPBA 2007](#).

2. Right to oral proceedings

2.1. Right to oral proceedings in examination, opposition and appeal proceedings

The right to an oral hearing is an extremely important procedural right which the EPO should take all reasonable steps to safeguard ([T 668/89](#); [T 808/94](#); [T 556/95](#), OJ 1997, 205; [T 996/09](#); [T 740/15](#)). If a request for oral proceedings (see in this chapter [III.C.4.](#)) has been made, such proceedings have to be appointed. This provision is mandatory and leaves no room for discretion ([T 283/88](#), [T 795/91](#), [T 556/95](#), [T 1048/00](#), [T 740/15](#)), i.e. parties have an **absolute right** to oral proceedings ([T 552/06](#), [T 189/06](#), [T 263/07](#), [T 1426/07](#), [T 653/08](#), [T 1251/08](#), [T 1829/10](#)). Considerations such as the speedy conduct of the proceedings, equity or procedural economy cannot take precedence over this right ([T 598/88](#), [T 731/93](#), [T 777/06](#)). The right to be heard in oral proceedings subsists so long as proceedings are pending before the EPO ([T 556/95](#), [T 114/09](#)).

The board in [T 831/17](#) referred the following points of law to the Enlarged Board: 1. In appeal proceedings, is the right to oral proceedings under [Art. 116 EPC](#) limited if the appeal is manifestly inadmissible? 2. If the answer to the first question is yes, is an appeal against the grant of a patent filed by a third party within the meaning of [Art. 115 EPC](#), relying on the argument that there is no alternative legal remedy under the EPC against the examining division's decision to disregard its observations concerning an alleged infringement of [Art. 84 EPC](#), such a case of an appeal which is manifestly inadmissible?" The board's referral, which included an additional, third question (see in this chapter [III.C.6.5.](#) "Location of oral proceedings"), is now pending as **G 2/19**.

Where several parties are involved, e.g. in opposition proceedings, the EPC provides only for oral proceedings to which all the parties are invited, so as to respect the principles of judicial impartiality and the equal rights of parties (T 693/95).

2.1.1 Right to oral proceedings even after a Rule 71(3) EPC communication

The board in T 556/95 (OJ 1997, 205) held that the discretion of an examining division to allow amendments up to the decision to grant the patent did not mean that that department had discretion to refuse a request for oral proceedings dealing with such amendments. The examining division had to have regard to Art. 116(1) EPC 1973 when exercising its discretion under R. 86(3) EPC 1973 in case of amendments requested after the issue of a communication under R. 51(6) EPC 1973 (equivalent in substance to R. 71(3) EPC). The Enlarged Board of Appeal – which in G 7/93 (OJ 1994, 775) had given some guidance as to how an examining division should exercise such discretion – could not limit the application of Art. 116(1) EPC 1973 by means of such guidance.

2.1.2 Right to oral proceedings even if no new arguments are presented

In T 383/87 the board pointed out that Art. 116(1) EPC 1973 guaranteed the right of any party to request oral proceedings, i.e. to argue its case orally before the relevant department of the EPO. A party might feel that it could present its case better orally than in writing, even if it had no new arguments. It was then its genuine right to request oral proceedings without being inhibited by the fear of having to pay additional costs, unless the request for oral proceedings was a clear abuse of the law. See also T 125/89, T 318/91, T 1051/92, T 6/98. However, the lack of introduction of new points in oral proceedings was an aspect considered in T 167/84 (OJ 1987, 369) for the board making an award on costs. On the apportionment of costs, see chapter III.R.2.2. "Acts or omissions prejudicing the timely and efficient conduct of oral proceedings".

2.1.3 No right to telephone conversation

According to the established case law, the EPC foresees the absolute right to oral proceedings under Art. 116(1) EPC, but not the right to a telephone interview or an informal telephone consultation. This applies to the procedure before the examining division (see chapter IV.B.2.9. "Informal communications"), as well as to the proceedings before the boards of appeal (see decisions cited below).

A board is not required to contact the appellant by holding a telephone interview, for instance with the rapporteur, either after receipt of the response to the summons, or on the day of the oral proceedings (T 552/06, T 189/06, T 1984/07, T 578/14).

In T 263/07 the appellant had requested that the rapporteur of the board telephone the appellant's representative to discuss the case so that the oral proceedings could possibly be cancelled. The board held that it was important that the same case was presented to all the board's members. For one of the board's members to be privy to evidence or arguments not available to the other members would be a breach of the principle of collective decision-making and in conflict with Art. 21 EPC 1973. Since the requested

telephone interview could have led the rapporteur to take a position on an issue where a collective decision would have been required, or to commit the board without preliminary discussion, the request was refused. See also [T 1109/02](#), [T 653/08](#), [T 911/10](#). This was confirmed in [T 1251/08](#), in which the board added it wished to avoid giving the impression that it was never appropriate for parties in ex parte proceedings to telephone the rapporteur.

In [T 1984/07](#) the board did not rule out that there may be circumstances in which a telephone call may be appropriate: for example, if only minor objections remain which could be easily attended to by straightforward amendments. However, in the case in hand, the objections were of such nature that any further amendments were likely to entail more than just a simple modification to the wording of the claims or a straightforward adaptation of the description. Examples of cases in which the rapporteur contacted the applicant by phone are: [T 329/90](#), [T 182/90](#) (OJ 1994, 641), [T 594/94](#), [T 931/99](#), [T 845/10](#), [T 680/13](#).

2.2. Right to oral proceedings before the Receiving Section

Under [Art. 116\(2\) EPC](#) oral proceedings must take place before the Receiving Section at the request of the applicant only where the Receiving Section considers this to be expedient or where it envisages refusing the European patent application. The Legal Board, exercising the powers within the competence of the Receiving Section, can refuse a request for oral proceedings made by an applicant in the course of an appeal against a decision of the Receiving Section for the same reasons ([J 20/87](#), OJ 1989, 67).

Although according to [Art. 116\(2\) EPC](#) the Receiving Section is entitled not to grant a request for oral proceedings, the applicant has the right to a decision on that request ([J 16/02](#)). The discretion foreseen in [Art. 116\(2\) EPC](#) in dealing with the request for oral proceedings is not without limits and has to be exercised in light of recognised procedural principles such as the right to be heard set out in [Art. 113\(1\) EPC](#) ([J 17/03](#)).

The decision confirming a loss of a right ([R. 69\(2\) EPC 1973](#), [R. 112\(2\) EPC](#)) is not a case in which the Receiving Section "envisages refusing the European patent application" within the meaning of [Art. 116\(2\) EPC 1973](#) ([J xx/xx=J 900/85](#), OJ 1985, 159; [J 17/03](#)).

3. Oral proceedings at the instance of the EPO

Oral proceedings may take place even if they were not requested, as according to [Art. 116\(1\) EPC](#) oral proceedings shall take place at the instance of the EPO if it considers this to be expedient.

3.1. Expediency of oral proceedings

In [T 660/12](#) the board held that the wording of both [Art. 116\(1\) EPC](#) and the Guidelines made it clear that the only criterion for oral proceedings to take place at the instance of the EPO was that the examining division considered it expedient. Even if it were at all possible to argue in retrospect that the holding of oral proceedings was not "expedient", such

argument would ignore the wording of Art. 116(1) EPC, which makes the decision to hold oral proceedings dependent on the subjective assessment of the division.

In T 1734/10 the board held that evaluating whether oral proceedings were indeed expedient was part of the examining division's discretion, which was to be exercised taking into account the progress made in the examination proceedings. For assessing expediency, the main consideration in the Guidelines was procedural economy and certainly not the condition of a complete lack of progress in the examination ("last resort situation").

In T 120/12 the board held that it was up to the examining division to decide, taking the circumstances of the case into account, whether or not it considered it to be expedient to summon the applicant to oral proceedings under R 115(1) EPC. Neither the EPC nor the Guidelines required that reasons for this decision be given with the summons.

In T 446/09, in view of its decision not to remit the case to the first instance, the board considered it to be expedient to hold oral proceedings in order to bring the case to a conclusion, and therefore refused the appellant's request to cancel the oral proceedings.

In T 166/04 the board held that, in particular, clarity problems could be handled expediently during oral proceedings.

In T 1388/10 the board held that it was not expedient to hold oral proceedings where an applicant merely submitted that it considered a particular objection overcome without putting forward any arguments in support of its position.

3.2. Obligation to attend oral proceedings taking place at the instance of the EPO

In T 1500/10 the board held that, if oral proceedings take place at the instance of the EPO because it considers this to be expedient, the party has an obligation to attend the oral proceedings. Parties do not have the right to decide in which way the proceedings as a whole are to be conducted. There is no right to a solely written procedure.

3.3. Effects of withdrawal of a request for oral proceedings in case of oral proceedings at the instance of the EPO

The withdrawal by a party of its request for oral proceedings, with its further request for continuation of the proceedings in writing have no effect in a case where the oral proceedings are held at the instance of the EPO (T 556/07, T 1578/05).

4. Request for oral proceedings

A party's right to oral proceedings is subject to a clear and unambiguous request for such proceedings (T 352/89, T 663/90, T 1976/08, T 1500/13). The refusal of a request for oral proceedings normally constitutes a violation of the right to present comments. If the request for oral proceedings is ignored, even due to an oversight, the decision must be set

aside as null and void (T.19/87, OJ 1988, 268; T.93/88; T.766/90; T.556/95, OJ 1997, 205; T.996/09; T.740/15; J.12/15; T.1951/16).

4.1. Doubt as to the nature of the request for oral proceedings

The question whether a request for oral proceedings has been made must be decided on the individual facts of each case. Whether a request in the legal sense has been made does not merely depend upon the actual use of the word "request" (T.283/88, T.263/91, T.1829/10). If there is the slightest doubt, clarification should be sought from the party concerned (see e.g. T.299/86, OJ 1988, 88; T.19/87, OJ 1988, 268; T.870/93; T.417/00; T.1829/10; T.2373/11; T.2557/12; T.1500/13).

If an EPO department has any doubt as to whether a party has requested oral proceedings (e.g. if the request is for a "hearing"), it must clarify the matter in order to avoid committing a substantial procedural violation (T.1829/10, T.2373/11, T.1972/13). As a request for an "interview" is different from a request for oral proceedings, the examining division can refuse such a request without seeking clarification (T.1606/07, T.1976/08).

Nevertheless, in T.528/96, the board explained that, although the opposition division might reasonably have been expected to query whether a request for oral proceedings was in fact intended, the fact that it failed to do so did not constitute a procedural violation, since the onus to make a clear request was on the party itself (see also T.26/07).

4.2. Wording of request

4.2.1 Wording constituting a request

In T.19/87 (OJ 1988, 268) the board considered that the request for "an interview as a preliminary to oral proceedings" could only be construed as both a request for an interview (which might or might not be granted) and request for oral proceedings.

In T.668/89 the phrase "applicant's representative claims his right to appear and argue the case orally" was deemed to be a valid request for oral proceedings.

In T.494/90 the wording "We request that we be given the opportunity to attend an oral hearing which may be appointed" was accepted as request for oral proceedings in the circumstances of the case.

In the ex parte case T.95/04 the appellant's request for a telephone call from the examiner was followed by a further request "in any event" for an opportunity to be heard before an adverse decision was taken. In the board's view, the expression "in any event" implied that, if the examiner was to exercise his discretion and not to communicate further with the applicant, then the applicant wished to have a further opportunity to be heard which under the circumstances could only be provided by appointing oral proceedings.

In T.1829/10 the applicant's response to the examining division's first communication was that a hearing would be "expedient" (German: "sachdienlich") if basic concerns regarding

patentability persisted. The board of appeal held that the term "hearing" was synonymous with "oral proceedings".

In T 2557/12 the examining division had considered that the following phrase did not constitute a request for oral proceedings: "In the case of the Examining division would decide to reject the application, an oral proceeding would be requested pursuant to article 116 EPC". The board held that the phrase in question left little doubt about the applicant's intention to avoid an immediate refusal of its application. It should be considered more likely as a request for oral proceedings than not.

4.2.2 Wording not constituting a request

In T 528/96, the final paragraph of the patentee's response to the opposition – the last document on the file before the opposition division took its decision – read as follows: "Should the opposition division feel that further information is required, the patentee will be pleased to respond in due course, either in writing or during the oral hearing". The statement did not constitute a formal request for oral proceedings.

In T 299/86 (OJ 1988, 88) a party "reserved the right to request oral proceedings". This was interpreted as meaning that the party had not yet decided whether to request oral proceedings. See also T 263/91.

In T 433/87 the board interpreted the patent proprietor's request "to conclude the opposition proceedings and if necessary arrange oral proceedings as soon as possible" to mean that oral proceedings were requested only in the event of their being considered necessary by the opposition division. See also T 650/94.

The statement "if there are any outstanding problems, the writer would welcome an opportunity to discuss the case with the examiner" could not be understood as a valid request for oral proceedings either (T 88/87). See also T 454/93, T 1606/07, T 1500/13.

In T 60/13 the board did not consider the respondent's statement that "if an oral hearing was to take place we wish to attend" to constitute a request for oral proceedings. Furthermore, the indication regarding the language used in "possible oral proceedings" and the request to use Swedish in oral proceedings, after the statement that "we find it unnecessary to attend an oral proceeding" were not seen to constitute a clear request for oral proceedings.

4.3. Withdrawal of request for oral proceedings

4.3.1 General principle: withdrawal only by virtue of a clearly expressed intention not to proceed with the request

A party's request for oral proceedings can be withdrawn only by virtue of a clearly expressed intention not to proceed with the request, for example in the form of an unambiguous written statement to that effect on the file (T 1548/11). Silence on the part of a party cannot be interpreted as withdrawal of the request for oral proceedings (T 766/90,

T 35/92, T 686/92, J 12/15, T 1951/16). A withdrawal of the request for oral proceedings requires an unambiguous expression of the party's wish to withdraw (T 795/91, T 879/92). If there is no unequivocal proof of the withdrawal of the request, it has to be assumed that the request, once submitted, remains valid and was therefore also valid at the time of the contested decision (see T 283/88, T 598/88, T 663/90, T 1951/16).

A considerable number of decisions treat the announcement of non-attendance of the oral proceedings (see below in this chapter III.C.4.3.2) and the lack of statement of grounds of appeal followed by lack of response to a notification of the inadmissibility of the appeal (see below in this chapter III.C.4.3.3) as equivalent to a withdrawal of the request. For the question of whether a withdrawal of a request for oral proceedings can lead to a different apportionment of costs under Art. 104 EPC, see chapter III.R.2.2. "Acts or omissions prejudicing the timely and efficient conduct of oral proceedings".

4.3.2 Announcing non-attendance

In T 3/90 (OJ 1992, 737) oral proceedings were appointed as a result of a party's request. The party subsequently stated that it would not be represented at the oral proceedings. The board held that such a statement should normally be treated as equivalent to a withdrawal of the request for oral proceedings (see also T 696/02, T 1027/03, T 1482/05, T 871/07, T 1229/12, T 2188/12). By stating that it will not attend oral proceedings and by requesting a decision on the record, a party unequivocally expresses that it is interested in an immediate decision on the file as stood and that it does not wish to present his arguments orally in the requested oral proceedings (T 1482/05).

In T 910/02 the board remitted the case to the department of first instance for further prosecution without oral proceedings, since all the parties who had presented their comments in the appeal proceedings had either withdrawn their request for oral proceedings or had stated that they would not attend oral proceedings. In such a case the board has discretion either to abide by the date for the oral proceedings in order to announce a decision, or to cancel the oral proceedings and issue a decision based on written proceedings. T 663/10 confirmed T 910/02, adding that the board was not obliged to hold oral proceedings in the absence of the party, even if the appellant had explicitly maintained its request for oral proceedings. In T 671/12 the board followed these decisions and held that it could not be the purpose of Art. 116 EPC that a party could oblige a board to hold oral proceedings in its absence.

4.3.3 Lack of any statement of grounds of appeal followed by lack of response to a notification of the inadmissibility of the appeal

In the absence of anything that can be regarded as a statement of grounds of appeal, the lack of any substantive response to a notification of the inadmissibility of the appeal is considered as equivalent to an abandonment of a request for oral proceedings initially made in the notice of appeal (see inter alia T 1042/07, T 234/10, T 179/11, T 1012/13, T 2162/14, T 95/17, T 1293/18, T 1321/18).

4.4. Further oral proceedings before the same department

According to Art. 116(1), second sentence, EPC the EPO may reject a request for further oral proceedings before the same department where the parties and the subject of the proceedings are the same.

4.4.1 Same subject of proceedings

In T 298/97 (OJ 2002, 83) the board observed that the right to oral proceedings was not to two oral proceedings on the same subject. Any further oral proceedings on the issue of admissibility would therefore be a matter for the board's discretion.

If no substantially new situation has arisen, no further oral proceedings is justified (see T 748/91, T 692/90, T 755/90, T 25/91, T 327/91).

In T 547/88 the board rejected the request for further oral proceedings. The purpose of continuing the proceedings in writing after the first oral hearing was merely to provide further clarification of the same facts. In addition, in T 614/90 the board rejected the request to comment in writing on the board's reasons for refusing further oral proceedings because the reasons for the refusal had already been given in a communication.

In T 529/94 the examining division, in exercising its discretionary power under R. 86(3) EPC 1973, had considered newly filed claims 3 and 4 as inadmissible. The board held that the legal consequence of this was that claims 3 and 4 were never integrated into the text of the application and never became part of it. For this reason, refusing to hold oral proceedings a second time, during which proceedings it was intended to discuss the allowability of proposed amendments already judged as inadmissible, could not constitute a procedural violation.

4.4.2 Not the same subject of proceedings

In T 731/93 the board stated that where fresh evidence had been admitted into the proceedings, the "subject" of such proceedings, as construed by reference to the text of Art. 116(1) EPC 1973 in all three official languages, could no longer be the same.

In T 194/96 new citations were submitted after the first oral proceedings that were more pertinent than the documents on file and which could and in fact did radically change the nature of the decision. The board held that in such a case the subject of the proceedings could no longer be the same.

In T 1880/11 after the board had in a first decision ordered a patent to be granted on the basis of the main request and the description to be adapted accordingly, the examining division refused the application a second time without holding oral proceedings. The board held that there had been a new subject before the examining division, namely how to adapt the description and the figures in order to fulfil the board's order. It could at least have been discussed during oral proceedings whether the section of the first appeal decision

on which there was disagreement between the division and the applicant belonged to the ratio decidendi of that decision and how this section should be interpreted.

In T 2106/09 the board had in a previous decision remitted the case to the opposition division. In its statement of grounds for the earlier appeal, the appellant had changed the subject of the proceedings by introducing a new citation and claiming a lack of inventive step on the basis of a combination of the teachings of various citations. The opposition division had thus been wrong to consider that the subject of the proceedings was the same and, by issuing the contested decision without holding oral proceedings, as requested by the appellant, it had infringed the right to be heard. See T 120/96, T 679/97, T 1548/11.

In T 1775/12 the board held that the procedural issue of admission under R 137(3) EPC of amendments filed in response to a communication under R 71(3) EPC constituted a "subject of the proceedings" within the meaning of Art. 116(1) EPC, second sentence, EPC which was distinct from the discussion of matters of substantive law that had previously taken place at oral proceedings.

4.5. Auxiliary request for oral proceedings

There is no requirement in the EPC or in the case law that only unconditional requests to oral proceedings are admissible. It is normal practice to request oral proceedings e.g. only for the eventuality of an imminent adverse decision (see inter alia T 870/93, T 1136/10). According to the established practice of the boards of appeal, a request for oral proceedings on an auxiliary basis is interpreted as a request for oral proceedings unless the board intends to decide the case in favour of this party (see T 3/90, OJ 1992, 737).

In T 344/88 the appellants requested that oral proceedings be held if the opposition division intended to maintain the patent in whole or in part. The opposition division rejected the opposition as inadmissible without appointing oral proceedings. The board found that while it was true that, in rejecting the opposition as inadmissible, no formal decision had been taken to maintain the patent, this was nevertheless the consequence of the decision.

According to the established case law, a party is not adversely affected by a decision to remit a case for further prosecution, and for this reason there is no need to grant an auxiliary request for oral proceedings (see inter alia T 147/84, T 222/87, T 42/90, T 924/91, T 47/94, T 1434/06, T 1367/12, T 1727/12, T 1205/13).

In T 902/04 the board held that, since the opponent's request was allowed, there was no need to hold the oral proceedings which only the opponent had requested on a purely auxiliary basis (see also T 545/08).

4.6. No oral proceedings in spite of unconditional request

In their statement of grounds of appeal the appellants in T 494/92 made an unconditional request for oral proceedings. The board stated that in view of the positive conclusion it had reached regarding the question of inventive step, and in the absence of any other substantive and/or procedural issues, such oral proceedings would serve no purpose. The

board thus treated the request as merely conditional (see also [T 2445/11](#)). In [T 1050/09](#), the opposition division, referring to [T 494/92](#), had treated the opponent's unconditional request for oral proceedings as merely conditional as it had decided in favour of the opponent. The board agreed and added that a successful party had no reason to doubt the correctness of the procedure leading to the decision in its favour.

4.7. Request for oral proceedings in relation to further prosecution proceedings after remittal

According to the established case law, "further prosecution" proceedings on remittal by the board of appeal are to be regarded as a continuation of the original opposition proceedings, particularly where the original interlocutory decision had been set aside by the board and was therefore no longer legally effective. Thus, with remittal, parties' requests valid in the opposition proceedings, including any auxiliary request for oral proceedings, become effective again, if they were not withdrawn ([T 892/92](#), [T 120/96](#), [T 742/04](#), [T 1425/05](#), [T 1548/11](#)).

In [T 1866/08](#) the board considered that the appeal procedure was separate from the examination procedure (see, for example, [G 8/91](#), [T 34/90](#)). It followed that a request for oral proceedings to be held before the examining division could not validly be made during the appeal proceedings. As a consequence, the appellant would have to file a new request for oral proceedings after the procedure was resumed by the examining division. [T 901/10](#) confirmed [T 1866/08](#), adding that a request for oral proceedings in possible further appeal proceedings in the future would have to be requested again during such proceedings.

4.8. Request for oral proceedings as a reply to a communication

In [T 1382/04](#) the appellant had been invited to file observations on the board's communication under [R 100\(2\) EPC](#). Failure to reply to such an invitation in due time would result in the application being deemed withdrawn ([R 100\(3\) EPC](#)). The appellant had not made any substantive observations on the board's communication but had filed a request for oral proceedings. The board considered the request for oral proceedings as a reply avoiding a deemed withdrawal under [R 100\(3\) EPC](#). Similarly, the board in [T 861/03](#) stated that a request for oral proceedings could be a valid reply to a communication under [Art. 96\(2\) EPC 1973](#) (now [Art. 94\(3\) EPC](#)).

5. Non-attendance at oral proceedings

The absence of parties from oral proceedings is in general governed by [R 115\(2\) EPC](#) and – for the boards of appeal – by [Art. 15\(3\) RPBA 2007](#). Concerning non-attendance at oral proceedings before the examining division, see also the notice from the EPO published in OJ 2008, 471.

5.1. Right to present comments and non-attendance of a party by choice

According to [T 1500/10](#), the notice in OJ 2008, 471 together with [R 115\(2\) EPC](#) make it clear that the oral proceedings are themselves an opportunity for the applicant to present

its comments, in accordance with Art. 113(1), EPC. If a party decides not to attend the oral proceedings without a serious reason, it chooses not to make use of the opportunity to comment at the oral proceedings on any of the objections raised during them, and it has no right to make additional written submissions. Serious reasons are the same reasons that could justify postponement of oral proceedings (see in this chapter III.C.6.1.4).

On the question of whether a decision pronounced against a party who has chosen not to attend oral proceedings may be based on new facts, evidence and/or arguments introduced during those oral proceedings, see chapter III.B.2.7. "The right to be heard in case of the non-attendance at oral proceedings". As to the case law where the appellant (applicant) submits new claims after oral proceedings have been arranged by the board of appeal and then does not attend those proceedings, see the chapter V.A.4.5.3.a) "Absence of applicant (patent proprietor) from oral proceedings".

5.2. Non-attendance of party who filed new claims without amended description before oral proceedings; no reason for postponement of ruling

In T.917/95 the board held that a patentee who, in inter partes proceedings, filed a new claim but no amended description prior to the oral proceedings before the board of appeal and who failed to attend the oral proceedings could not rely on the board's postponing its ruling simply to permit amendment of the description, even if the new claim was grantable (see also T.725/00, T.109/02, T.181/02, T.776/05, T.651/08, T.2294/08; however see also T.985/11). In T.1810/06 the board extended this finding of T.917/95 to an ex parte case.

5.3. Obligation to give notice if not attending oral proceedings

In T.653/91 the board held that if, having been summoned to oral proceedings, a party did not wish to attend such proceedings, both the board (through its registrar) and any other parties to the proceedings should be notified in writing of this fact as early as possible before the appointed day. Except in special circumstances, telephone communications concerning such matters were inappropriate, especially in inter partes proceedings. See also T.692/00.

In T.692/00 the board held that for the appellant (patent proprietor) to announce shortly before the appointed date for oral proceedings that it might or might not attend while maintaining its request for oral proceedings could only be an abuse of procedure.

In T.69/07 the respondent had requested oral proceedings but did not appear at the oral proceedings at the appointed time. The board noted that, in accordance with Art. 6 of the Code of Conduct of Members of the EPO, of which the representative is obligatorily a member, the members are required to act courteously in their dealings with the EPO. The representative of the respondent had had sufficient time to inform the board of its intended non-appearance at the oral proceedings. This would have avoided keeping the other party and the board first of all courteously waiting for the representative in case he had unintentionally been delayed, and then obliging the registrar of the board to carry out enquiries to establish if the representative intended to attend the oral proceedings. See also T.954/93, T.1760/09, T.1939/10.

In T.930/92 (OJ 1996, 191) the board also pointed out that there was an equitable obligation on every party summoned to oral proceedings to inform the EPO as soon as it knew that it would not attend as summoned. This was the case whether or not that party had itself requested oral proceedings, and whether or not a communication had accompanied the summons to oral proceedings. See also T.556/96, T.258/13. In these inter partes cases, the boards held that an apportionment of costs in favour of the attending party was justified. See also chapter III.R.2.2. "Acts or omissions prejudicing the timely and efficient conduct of oral proceedings".

See also ex parte cases T.1485/06, T.1930/07, T.218/11, in which the boards noted that a professional representative has a duty to inform the EPO, as soon as possible, of a party's intention not to be represented at oral proceedings.

6. Preparation of oral proceedings

6.1. Fixing or changing the date for oral proceedings

6.1.1 Legal provisions and notices

The practice for fixing the date of oral proceedings before the departments of first instance and the boards of appeal was published in a notice in OJ 2000, 456 ("the 2000 Notice"). For proceedings before the boards of appeal, the content of this notice was confirmed by the notice from the Vice-President DG 3 of 16 July 2007 (OJ SE 3/2007, 115) ("the 2007 Notice"). The EPO's notice of 18 December 2008 (OJ 2009, 68) ("the 2008 Notice") adjusted the procedure for changing the date before the departments of first instance.

6.1.2 Request for changing the date of oral proceedings

Parties can request a change of date of oral proceedings. For as long as a request for postponement of oral proceedings has not been granted, the requesting party cannot simply assume that it will be. The party has to consider the possibility of a refusal of the request and has to prepare the case accordingly to minimise the risk of time pressure (T.1102/03, T.2526/11).

According to the above-mentioned notices, a change in the date of oral proceedings can only be requested in case of "serious reasons" justifying the fixing of a new date, see point 2 of the 2007 Notice (boards of appeal) and point 2.1 of the 2008 Notice (departments of first instance); the case law on grounds for postponement is summarised in chapter III.C.6.1.4. The request must be filed as soon as possible after the grounds preventing the party concerned from attending the oral proceedings have arisen, and must be accompanied by a sufficiently substantiated written statement indicating these reasons.

Where a request for postponement of oral proceedings is refused on the ground that the request was not sufficiently substantiated, the decision of the examining division should state in clear terms what should have been submitted or explained (T.447/13).

The decision to change the date for oral proceedings is a discretionary one (concerning the departments of first instance see [T.1505/06](#), [T.2526/11](#), [T.447/13](#); concerning the boards of appeal, see [Art. 15\(2\) RPBA 2007](#)). It is inherent from the discretionary nature of the decision whether to change (or not) a date for oral proceedings that a request will not succeed simply because the reasons for it fall within the examples of acceptable reasons in the 2007 Notice ([T.699/06](#), [T.861/12](#)).

For the question of whether a request for postponement of oral proceedings can lead to a different apportionment of costs under [Art. 104 EPC](#), see chapter [III.R.2.2](#). "Acts or omissions prejudicing the timely and efficient conduct of oral proceedings".

6.1.3 Request or reasons for postponement filed too late

The provisions of [Art. 15\(2\) RPBA 2007](#) and the 2007 Notice balance the interests of the parties and the public taking into account, among other factors, an efficient use of resources and capacities of the Office. Thus, a request for postponing the date of oral proceedings may be refused if it is late filed ([T.601/06](#), [T.1053/06](#), [T.518/10](#), [T.1101/13](#), [T.1663/13](#)).

In [T.1080/99](#) (OJ 2002, 568) the board had made it clear in a letter sent almost three months before appointed oral proceedings that a request by a party for postponement of the oral proceedings did not meet all the requirements of the 2000 Notice. The party, instead of attempting to supplement its original request as soon as possible, chose to react to the board's letter only one week before the appointed oral proceedings. The board held that the additional reasons and evidence for the request for postponement were received too late and could therefore not be accepted.

In [T.601/06](#) the board considered the request to postpone the oral proceedings to be late filed. The representative should have been aware when receiving the summons that he would be prevented from attending the oral proceedings and should have filed his request immediately. Filing the request more than one month later was not considered to fulfil the respective requirements of [Art. 15\(2\) RPBA 2007](#) or of the 2007 Notice (see also [T.485/09](#), [T.182/14](#)). The board also referred to [T.514/06](#), in which a request for postponement was made a couple of days before the set date was granted. The board in [T.601/06](#) considered that, taking into account the circumstances of [T.514/06](#) (a case of death within the family), the request had not been late filed. See also [T.231/13](#).

6.1.4 Reasons submitted in a request for postponement

According to the Notices of 2007 (boards of appeal) and 2008 (departments of first instance), a change in the date of oral proceedings can only be requested in case of "serious reasons" justifying the fixing of a new date. The notices give examples of serious reasons including "a previously notified summons [...]"; "holidays which have already been firmly booked"; and "serious illness"; however, differences in detail exist between the two Notices, compare point 2.1 of the 2007 Notice and point 2.3 of the 2008 Notice. Grounds mentioned in the two Notices as not acceptable are, for instance: excessive work pressure,

or a summons to oral proceedings before the EPO or a national court notified after the summons in the relevant proceedings.

If the party is represented, the serious reasons must relate to the representative, and not the client (see T 1916/09, T 2125/11, T 231/13).

a) Serious illness

In T 447/13 the board held that, for the purposes of deciding whether to grant a request for postponement of oral proceedings on grounds of illness, "serious illness" means an illness which is sufficiently serious to prevent the representative travelling to oral proceedings and satisfactorily presenting the case on the appointed day.

In T 1246/10 the board accepted a first postponement of the oral proceedings in view of the exacerbation of the appellant's serious illness and the fact that the respondent did not object to a postponement. However, the board refused the second request to postpone oral proceedings filed less than one month before the scheduled date. The respondent opposed any postponement thereof. Furthermore, the board had no indication that a further postponement for a few months could change the appellant's personal health situation. The appellant should have appointed a representative if he could not attend the oral proceedings himself.

Regarding the illness of a duly represented party or inventor, see chapter III.C.6.1.4 h).

b) Booked holidays

The board in T 1102/03 stated that, while a holiday was a possible valid basis for a request, it was not necessarily a sufficient reason for postponement. The board held that the case in hand presented circumstances which entailed a special organisational burden. The effort of postponing fixed oral proceedings until a date might be found which would suit numerous parties, the members of an extended board, and the facility management of the EPO, outweighed the effort of postponing or interrupting one representative's holiday booked to a destination within Europe. See also T 601/06, T 1610/08.

In R 11/12 the request for postponement was rejected since the representative's holidays ended three days before the scheduled oral proceedings; in addition, the planned birthday party for the day after the oral proceedings could not be regarded as being a serious reason justifying the postponing of the oral proceedings.

c) Speaking at a conference

In T 699/06 the board held that if European representatives wished to speak at conferences (even with the approval of clients whose cases are thereby delayed), the work of the boards of appeal and the interests of their clients' adversaries and the public should not be affected as a result. A representative who undertook such a commitment did so in the knowledge that this would make him unavailable to his clients, and unavailable to appear at any oral proceedings, on the date in question. See also T 2526/11. However,

see T.902/07, in which the board referred to T.699/06, but granted the request to postpone oral proceedings after considering the agreement of the adversarial party's representative.

d) Business trips

Point 2.3 of the 2008 Notice lists "business trips which have been firmly booked before the notification of the summons to oral proceedings" as a serious reason for changing the date of oral proceedings.

Concerning appeal proceedings, the board in T.869/06 accepted such a reason for changing the date of oral proceedings. However, in T.1080/99 (OJ 2002, 568) the board rejected a request to postpone oral proceedings due to a business trip.

e) National holiday

In T.664/00 the appellant (patent proprietor) had requested an adjournment of oral proceedings due to a public holiday in the USA. The board rejected the request as national holidays in individual contracting states are not recognised by the EPO for practical reasons (see J.5/98). To allow for national holidays in non-contracting states throughout the world would be even less practical. See also T.2125/11.

f) Newly appointed representative

In T.37/97 a new representative had been appointed after the summons to oral proceedings had been duly issued. The board rejected the request for postponement and held that the new representative, before taking on the mandate, could be expected to have made sure he was available on the appointed date or to arrange for alternative representation. Furthermore, a professional representative could be expected to be able to prepare for oral proceedings with all due care within a month unless the case was exceptionally difficult, which it was not. See also J.4/03.

g) No legal representative appointed

In T.693/95 the board had waited for two years to give the appellants time to find a legal representative of their choice. This they had failed to do. After such a long delay there was no valid reason for postponing oral proceedings.

h) Absence of duly represented party or of inventor

In T.275/89 (OJ 1992, 126) the board considered that the illness of a duly represented party was not a sufficient reason for postponing appointed oral proceedings unless the party who was ill needed to be present. A request to change an appointment could only be allowed if unforeseen, exceptional circumstances had arisen, which either made oral proceedings impossible (such as a representative's or unrepresented party's sudden illness) or could have a decisive impact on the course of the proceedings (such as unforeseen unavailability of an important witness or expert). See also T.1923/06.

In J.4/03 the Legal Board decided that the desire of the appellant to be present himself at oral proceedings did not in itself amount to a serious ground for postponing the oral proceedings, in the absence of other special circumstances. The appeal turned essentially on how the law was to be applied to facts which were not in dispute, and so the presence or absence of a party who was duly represented in the proceedings should have no impact on the course of the proceedings or the final decision.

In T.231/13 the board held that the aim of Art. 15(2) RPBA 2007 and of the 2007 Notice was to fulfil the need for procedural economy while ensuring that the party could be duly represented during the oral proceedings. Attendance of one of the inventors was not relevant for the discussion of formal and substantive points in the oral proceedings, unless special issues arose, for example, in connection with a particular technical point. See also T.1212/04.

i) Postponement because of late receipt of board's communication

In T.569/11 the fact that the appellant became aware of the board's communication only shortly before the oral proceedings was not per se a reason that obliged the board to postpone the proceedings. Nevertheless, it was necessary to verify whether, in the light of the content of the communication, a postponement should be made in order to allow time for the appellant to react to the comments made by the board. This required an analysis of the points covered in the communication. In the case in hand, the board's communication did not include any new objection or any new evidence in comparison with the decision of the examining division. The facts of the case did not constitute an extraordinary circumstance (see T.1610/08) that would justify a postponement of the oral proceedings.

j) New evidence or requests

In J.4/03 the Legal Board held that the desire of an applicant to file unspecified new evidence at an unspecified future date could not amount to a serious reason for postponing oral proceedings. Even in ex parte proceedings the appellant had to attempt to file any facts or evidence he wished to rely on before the set date of oral proceedings so that the board could exercise its discretion under Art. 114(2) EPC 1973 whether to admit the further evidence or not, on the basis of the relevant material.

In T.881/95 the request for postponement was refused because the evidence, which could only have been provided later, was not such as to affect the decision.

In T.427/05 the appellant filed one new main and 71 new auxiliary requests approximately six weeks before the oral proceedings. The respondent (opponent) submitted that none of these requests should be admitted into the proceedings; they were late-filed and too voluminous. Failing that, the oral proceedings should be postponed. The board decided there was no reason to postpone the oral proceedings in view of its decision to admit only those late-filed requests which related (albeit narrowed down in some cases) to the subject-matter which had been central to the discussions from the outset.

k) Proceedings before a national court

In T.392/97 the board ruled that the **subsequent** appointment of oral proceedings by a national patent court to take place on the same date as the previously appointed oral proceedings before the board was not in itself a sufficient reason for adjournment.

In T.228/09 the board considered, having regard to Art. 2.2 of the 2007 Notice, that unforeseen infringement proceedings could not generally be regarded as an acceptable ground for adjournment.

l) Postponement in order to avoid adverse decision of the board

In T.1053/06 the reasons given by the appellant (applicant) for requesting postponement of the oral proceedings clearly indicated that the appellant had chosen not to pursue the case further and would prefer its patent application to be lost for non-payment of the next renewal fee at a later date rather than by an adverse decision of the board at that time. Those reasons had to do solely with the convenience of the appellant, which, until it received the board's negative preliminary opinion, had preferred to pursue the appeal proceedings. The board refused the request for postponement.

m) Ongoing takeover negotiations between both parties

In T.1535/14 the board held that the reasons put forward, namely the existence of ongoing merger proceedings between both parties, did not prevent the parties attending the oral proceedings, but rather concerned their economic interests. Since both parties were appellants it appeared likely that oral proceedings would have to be held even in the event of the merger taking place. Postponement would be against procedural efficiency.

n) Expected childbirth by the partner of the professional representative

According to T.1101/13, that the partner of a professional representative was expected to give birth on a date close to the fixed oral proceedings could be accepted as a substantive reason for requesting a change of the date for oral proceedings. In the circumstances of the case, the board decided to maintain the date fixed for the oral proceedings.

6.1.5 Obligation to give reasons why representative cannot be substituted

The 2000 and 2007 Notices (points 2.5 and 2.3 respectively) state that any request to set another date for oral proceedings should indicate why another representative cannot stand in for the one unable to attend. This means that if and when the board is satisfied that the representative is prevented from attending, it must therefore be considered whether another representative, who does not have to be from the same firm, can substitute for the prevented representative (T.699/06, T.861/12). If the appellant has signed a general authorisation to a law firm, the representative has to provide convincing reasons why no other representative of this firm could substitute for the representative (T.518/10).

In T.1067/03 the representative requested that the oral proceedings be postponed because of a prior appointment for a medical operation. The representative said that his client was opposed to a change of representative on the grounds that, in addition to the appeal in question, a further opposition and a patent infringement case were pending which together formed an intricate ensemble. In the board's opinion, these circumstances justified postponing the oral proceedings.

In T.1011/09 the board found that the statement prescribed in point 2.5 of the 2000 Notice had to contain more than a mere expression by the appellant of its general desire to be represented at oral proceedings by its usual representative, and that specific reasons had to be given as to why it was impossible, or at least unreasonably difficult, to arrange a replacement for the representative unable to attend (citing T.1080/99, OJ 2002, 568; T.1067/03; T.300/04; T.178/03). Moreover, point 2.5 of the 2000 Notice required that the reasons had to go beyond referring to the additional cost of replacing a representative. Such costs had to be accepted, at least up to a reasonable amount, given the new representative's need to familiarise himself with the case. See also T.861/12.

In T.1610/08 the board held that point 2.1 of the 2007 Notice, which lists pre-booked holidays as a potential reason for postponement, had to be balanced against point 2.3 of the Notice, according to which every request should explain why the representative could not be substituted. The board was of the opinion that the circumstances indicated by the respondent with respect to point 2.3 of the Notice (namely, the representative had a long-standing relationship of trust with the client, he was the only one with knowledge of the client's business or technology, and his knowledge of the earlier proceedings before the opposition division was unique and irreplaceable) were in fact common to all cases in which substitution was involved. In the board's view, only extraordinary circumstances, i.e. those which were not common to every case of substitution, should be accepted.

In T.861/12 the board held that the opponent violated the principle of good faith by withdrawing the authorisation of five of the six representatives originally authorised, despite being unable to show a legitimate interest in doing so and knowing full well that the remaining professional representative could not attend oral proceedings on the date scheduled. This withdrawal of the authorisation could not be considered under point 2.3 of the 2007 Notice.

6.1.6 Postponement of the oral hearing at the instigation of the EPO

In T.679/14 the board found that it was unacceptable to repeatedly postpone oral proceedings without serious reasons, especially if it was done several times in the same examination proceedings after long delays had already occurred. The postponement of oral proceedings on five occasions at the instigation of the examining division without serious reasons constituted a procedural deficiency in the circumstances of the case.

6.2. Notice of two months in the summons

Under R. 115(1), second sentence EPC (R. 71(1), second sentence EPC 1973) the notice given in the summons to oral proceedings must be at least two months, unless the parties agree to a shorter period.

In J 14/91 (OJ 1993, 479) the Legal Board ruled that a dispute about a third party's right to inspect the application dossier before publication had to be decided promptly (i.e. before publication), otherwise Art. 128(2) EPC 1973 became null and void. If oral proceedings would facilitate a prompt decision, the summons under R. 71(1) EPC 1973 could give shorter notice – even without the other party's agreement – provided the parties were given enough time to prepare. The Legal Board referred to Art. 125 EPC 1973 and stated that it was a generally recognised principle of procedural law that notice could be curtailed in urgent cases. The degree of curtailment should be decided on a case-by-case basis.

In T. 111/95 the board stated that the examining division had no right simply to set a date for oral proceedings about two weeks after despatch of the summons. The board found that there was nothing on file to establish that the applicants' representative, at any time and unconditionally, accepted the date set. The onus of proving that an agreement for a shorter notice period was reached lay with the examining division. The board thus held that the summons was null and void, as were the actions following and resulting from it. See also T. 772/03.

In T. 601/06 and T. 869/06 the boards offered an alternative date within a period of about two months from the date of the request in view of the balance of interests of the parties and the public. The period of about two months arose from the fact that, except for when the parties consent, new summons had to be issued at least two months in advance of a hearing, so that dates within the two-month period from the date of the request could not be used for other cases.

According to the board in T. 2534/10, R. 115 EPC equally applied where oral proceedings were continued on a date other than that fixed in the summons and that a fresh summons for that date therefore had to be issued. See also T. 1674/12.

6.3. Final date for written submissions in the preparation for oral proceedings and late submission of new facts and evidence – Rule 116 EPC

R. 116(1) EPC (R. 71a(1) EPC 1973) stipulates, inter alia, that, when the EPO issues the summons to oral proceedings, a final date for making written submissions in preparation for the oral proceedings must be fixed. New facts and evidence submitted after this date need not be considered, unless admitted on the grounds that the subject of the proceedings has changed. The same is true for applicants or patentees invited under R. 116(2) EPC (R. 71a(2) EPC 1973) to submit documents which meet the requirements of the EPC.

As construed according to its **object and purpose**, R. 116 EPC (R. 71a EPC 1973) is intended to give the decision-making department and other procedural parties enough time

to prepare thoroughly for the oral proceedings and so ensure that they are not faced with surprising new facts and do not take potentially inappropriate decisions in undue haste (T 765/06; as to the reasons for the introduction of R 71a EPC see T 343/08). The purpose of R 116(1) EPC is to provide the EPO with a case management framework for the preparation of oral proceedings (T 798/05, T 66/14). In T 1067/08 the board held that the purpose of this provision was in particular to prevent parties from seeking unjustified procedural advantages by abusive tactics in disregard of procedural economy and to the disadvantage of other parties.

In T 1750/14 the board interpreted R 116(1) EPC in conjunction with R 132(2) EPC. From the wording of R 116(1) EPC it was not clear whether the non-applicability of R 132(2) EPC to R 116(1) EPC also precluded the possibility of extending specified periods, implying that the final date for making submissions in preparation for the oral proceedings set under R 116(1) EPC could not be changed. The board considered that a **change of the final date** should normally be allowable when the date for oral proceedings is postponed. At least in cases where a final date is specified relative to the date for oral proceedings (usually one month before the scheduled oral proceedings), it could even be argued that the final date was postponed automatically when the oral proceedings were postponed.

According to the established case law, R 116(1) EPC (former R 71a EPC 1973) should **not be construed as an invitation to submit further evidence** (see T 39/93, OJ 1997, 134; T 452/96; T 628/14; T 710/15). There is no general duty for an examining division to provide feedback on an applicant's reply to a summons to oral proceedings, in advance of such oral proceedings (T 343/08, T 462/06, R 2/13). In T 462/06 the board also stated that R 116 EPC did not mean that already in the communication all lines of arguments or a detailed reasoning for the decision should be set out. In T 601/06 the board held that R 71a(1) EPC 1973 did not impose an obligation on the EPO to give a preliminary opinion on the allowability of individual claims when issuing the summons.

In T 355/13 the board held that nothing in the expression "**the points to be discussed**" could lead to the conclusion that reasons for a preliminary opinion of an opposition division on the matter related to the points to be discussed should be given. The annex to the summons could legitimately only mention the points that needed to be discussed. The annex to the summons in an adversarial inter-partes procedure such as opposition proceedings should not give rise to the impression that the case was decided without having heard the parties, and thus it should not comprise any definite opinion on the final conclusion of the case. However, an opposition division could express a preliminary opinion on the case.

R 116 EPC (R 71a EPC 1973), and Art. 114(2) EPC on which it is based, refer to late-filed facts and evidence but not to new **arguments**, which can be made at any stage in the first-instance proceedings (T 131/01, OJ 2003, 115; T 926/07; T 1553/07; T 2430/09; T 2238/15).

For a comprehensive overview of the case law regarding late submissions in general (independent of the preparation of oral proceedings governed by R 116 EPC), see

chapter IV.C.4. "Late submission". For case law when the applicant files amended claims in appeal proceedings after the oral proceedings have been arranged and then does not attend them, see chapter V.A.4.5.3.a) "Absence of applicant (patent proprietor) from oral proceedings".

6.3.1 Examination and opposition proceedings

In T.755/96 (OJ 2000, 174) the board observed that R.71a EPC 1973 gave the EPO a discretionary power. The EPO's power to accept or refuse late-filed new facts or evidence was in fact governed by Art.114(2) EPC 1973, and the discretionary power to refuse new requests for amendments was governed by Art.123 EPC 1973 and the corresponding Implementing Regulations. As to the exercise of discretion under R.71a EPC 1973 to admit or refuse amended claims, the board held that the discretion was to be exercised by considering all relevant factors which arose in a particular case and by balancing the applicant's interest in obtaining proper patent protection for his claimed invention and the EPO's interest in bringing the examination procedure to a speedy close by the issue of a decision (following G.7/93, OJ 1994, 775). See also T.545/08.

In T.755/96 the board also drew a **distinction** between the **application stage** and the **opposition stage**. The reasons given for introducing R.71a EPC 1973 made it clear that a particular concern was that in opposition proceedings other parties were not taken by surprise. Parties to opposition proceedings were often represented by professional representatives, who would need to consult their clients and technical experts for further instructions to deal with new requests or evidence. Thus there could be good reasons to refuse material filed after the final date set under R.71a EPC 1973, or to postpone oral proceedings. However, the same considerations did not apply to an examining division which had its own technical expertise and did not have to obtain instructions from third parties. If prepared for oral proceedings, it should normally, even in relation to requests filed at the oral proceedings, be in a position to assess whether a new request was clearly not allowable. An examining division which in exercising such discretion does not admit amended claims must give the reasons therefore.

In T.712/97 the respondent (opponent) had filed a report of comparative experiments on the last day of the period set for filing comments pursuant to R.71a(1) EPC 1973. The opposition division allowed this experimental report into the proceedings, but not the appellant's experimental report in response thereto. The board held that admitting the respondent's experimental report into the proceedings meant that the subject of the proceedings had changed within the meaning of R.71a(1) EPC 1973 and that the report in question should therefore also have been admitted into the proceedings. That this report would not affect the outcome of the proceedings was in these circumstances not a valid consideration. A party was entitled to know that its response was admitted into the proceedings, even if it proved not to be decisive for the outcome before that instance.

In T.484/99 the appellant (patentee) alleged that the refusal, under R.71a EPC 1973, by the opposition division to consider or even look at amendments to the requests presented on the day of the oral proceedings before them amounted to a procedural violation. The board disagreed because it was clear from the wording of R.71a(2) EPC 1973, that

submissions by the patent proprietor presented after the final date did not need to be considered. In T 64/02 the board stated that R. 71a(2) EPC 1973 also applied to the belated submission of amended patent claims in an auxiliary request, even if those claims had not been requested in the summons (see also T 1067/08).

In T 951/97 (OJ 1998, 440) the board held that the subject of the proceedings was changed within the meaning of R. 71a(1) and (2) EPC 1973, inter alia, where the examining division itself introduced a new document, which was pertinent new material, into the proceedings for the first time during oral proceedings convened following a R. 71a EPC 1973 notification. In T 2434/09 the board held that the applicant did not have a right to continuation in writing if the department of first instance introduced a new document in oral proceedings and thereby changed the subject of the proceedings. The party's right to be heard under Art. 113(1) EPC 1973 was observed if the applicant was given an adequate amount of time to study the document and present comments.

In T 765/06 the examining division had pointed out in the summons that preparatory submissions and new claims should not be filed later than one month before the date of oral proceedings. Six days before the oral proceedings, the applicant filed new requests which the rapporteur, in a telephone conversation with the applicant, regarded as prima facie non-protectable and which were not admitted in the oral proceedings pursuant to R. 71a EPC 1973. The board found that conceding permission to file new claims did not comprise an assurance that such claims would be considered in the proceedings, with a considerable restriction of the time available for examination.

In T 798/05 the board held that R. 71a EPC 1973 did not constitute an absolute bar on late submissions in opposition proceedings, which would rule out prima facie examination. R. 71a EPC 1973 did not override or restrict the principle of ex officio examination enshrined in Art. 114(1) EPC 1973, since an implementing regulation ranked lower than an EPC Article. The actual wording of R. 71a EPC 1973 using the expressions "brauchen, need not, peuvent" left room for discretion over the admission of late submissions.

In T 937/09 the board held that, if the applicant filed amendments to the application before the final date set by the examining division under R. 116(1) EPC, the examining division could still refuse such amendments under R. 137(3) EPC. See also T 2355/09.

6.3.2 Appeal proceedings

In G 6/95 (OJ 1996, 649) the Enlarged Board of Appeal held that the mandatory procedural requirements in R. 71a(1) EPC 1973 (R. 116(1) EPC) did not apply to the boards of appeal. See inter alia T 48/00, T 382/02, T 1621/09, T 2182/10, T 355/13, R 8/13 of 15 September 2015. In G 1/12 (OJ 2014, A114) the Enlarged Board stated it had decided in G 6/95 that the provisions of R. 71a(1) EPC 1973 (now R. 116(1) EPC) relating to the first-instance procedure were not applicable within appeal proceedings, since the procedure before the boards was otherwise provided for, namely in the RPBA.

However, in T 97/94 (OJ 1998, 467) the board ruled that if a board decided to send the parties a communication under R. 71a(1) EPC 1973, the parties were obliged to comply

with it, particularly as regards the deadline for reply. R. 71a(1) EPC 1973 was thus binding on the parties. The board in T 1105/98 stated that R. 71a(2) EPC 1973 was applicable to proceedings before the boards of appeal (see also T 813/99, T 401/02, T 681/02, T 1124/02, T 913/03, T 494/04).

In T 999/07 the board noted that the fact that requests were filed before the time limit indicated in the board's communication for filing any further submissions had no bearing on their admissibility. R. 116 EPC (old R. 71a EPC 1973) did not apply to the boards.

In T 1600/06 the board stated that Art. 13 RPBA 2007 set out the procedural provisions applicable to the boards of appeal rather than R. 71a(1) EPC 1973 (R. 116(1) EPC). In T 1100/10 the board stated that Art. 13(1) and 12(4) RPBA 2007 were directly derived from inter alia Art. 114(2) EPC and R. 116(1) EPC, which enshrine the well-established procedural principle requiring the filing of the parties' facts, evidence and arguments at the early stages of the proceedings.

6.4. Communication under Article 15(1) RPBA 2007

Art. 15(1) RPBA 2007 reads as follows: "If oral proceedings are to take place, the board may send a communication drawing attention to matters which seem to be of special significance, or to the fact that questions appeal no longer to be contentious, or containing other observations that may help concentration on essentials during the oral proceedings."

6.4.1 Purpose of communication under Article 15(1) RPBA 2007

In T 1459/11 the board held that the purpose of the communication under Art. 15(1) RPBA 2007 was to establish the framework of the oral proceedings (see also T 2006/13). The communication did not – explicitly or implicitly – represent an invitation or opportunity to file further written submissions or to shift the focus of the case to be heard at oral proceedings (see also T 751/16). The terms of the appeal were rather determined by the statement of grounds of the appeal and the reply thereto (Art. 12(2) RPBA 2007). Consequently there was no legal basis in either the EPC or the RPBA for the filing of a "response" to a communication pursuant to Art. 15(1) RPBA 2007. A board was under no obligation to take such a "response" into account. Any submissions – whether arguments or requests – contained in such a "response" might constitute an amendment to the case presented.

6.4.2 Boards not bound by communication under Article 15(1) RPBA 2007

In T 1635/13 the board held that it was clearly set out in the board's communication that it expressed the "preliminary and non-binding" opinion of the board to streamline and prepare the oral proceedings. Therefore it was self-evident that the board could come to a different evaluation of the facts and submissions during the subsequent proceedings, in particular the oral proceedings, for whatever reason. Such a different evaluation was in itself neither a sufficient reason for admitting subsequently filed requests nor a fundamental procedural defect (see R. 3/09). See also T 614/89 (in relation to Art. 11(2) RPBA 1980), T 2006/13.

6.4.3 Boards' discretion to send communication under Article 15(1) RPBA 2007

In G 6/95 (OJ 1996, 649) the Enlarged Board held that the boards continued to have discretion as to whether or not to send a communication when issuing a summons to oral proceedings, as provided for in Art. 11(2) RPBA 1980, since the then newly introduced R. 71a(1) EPC 1973 (now R. 116(1) EPC) did not apply to the boards of appeal. The Administrative Council could not amend the Implementing Regulations in such a way that the effect of an amended rule was in conflict with the RPBA – adopted under Art. 23(4) EPC 1973 by the Presidium of the boards of appeal and approved by the Council as reflecting the boards' independence. See inter alia T 382/02, T 355/13.

6.5. Location of oral proceedings

In T 1012/03 the applicant, having been summoned to oral proceedings before the examining division in The Hague, had requested that oral proceedings take place in Munich instead. The board noted that Art. 116 EPC 1973 did not expressly stipulate the location where oral proceedings had to take place. The board examined whether the President had the power to establish examining divisions in The Hague and concluded that such a power was provided for by Art. 10(1), (2)(a) and (b) EPC 1973. The board concluded that in the case in hand the justification for conducting oral proceedings in The Hague could be deduced from Art. 116 EPC 1973 in conjunction with Art. 10(1), (2)(a) and (b) EPC 1973. See also T 689/05, T 933/10, T 1142/12.

The examining division's rejection of the applicant's request that the oral proceedings be held in Munich instead of The Hague must be reasoned, R. 111(2) EPC, R. 68(2) EPC 1973 (see T 689/05, T 933/10).

In T 1142/12 the board considered that the practical aspects of the organisation of oral proceedings were matters of EPO management, which came under the power of the President of the EPO as provided by Art. 10(2) EPC. The board held that the examining divisions were clearly not allowed to take a decision on this matter. When not acceding to a request to hold oral proceedings in Munich instead of The Hague, the examining division did not take a decision but only expressed the way the EPO was managed. Consequently, that issue was not subject to appeal, nor could the board refer a question on the venue of oral proceedings to the Enlarged Board. In R 13/14 the Enlarged Board clarified that the wording used in T 1142/12 did not mean that the board had refused to decide on the issue; rather, the board had implicitly decided on the request and refused it.

In 2017, following reforms adopted in 2016, the boards moved to a building in Haar, on the outskirts of Munich. The third of a number of points of law on the right to oral proceedings referred to the Enlarged Board by the board in T 831/17 (see also in this chapter III.C.2.1. "Right to oral proceedings in examination, opposition and appeal proceedings") was: "If the answer to either of the first two questions is no, can a board hold oral proceedings in Haar without infringing Art. 116 EPC if the appellant objects to this site as not being in conformity with the EPC and requests that the oral proceedings be held in Munich instead?" The board's referral is now pending as G 2/19.

7. Conduct of oral proceedings

7.1. Length and structuring of oral proceedings

7.1.1 Speaking time during oral proceedings and interruptions by the board

In T 601/05 of 2 December 2009, in the evening of the second day of the oral proceedings, the board had limited the speaking time to ten minutes for each party for a "final round" of discussion with respect to a particular argument. In the board's view, the limitation of time was a necessary procedural measure by which the right to be heard pursuant to Art. 113(1) and 116 EPC had not been violated. On the one hand, it was the attorneys' responsibility to structure their pleadings in such a way that the time frame of the oral proceedings, which had been communicated to the parties with the summons and had not been objected by them, can be complied with. On the other hand, it was the board's responsibility to conduct oral proceedings in such a way that the time frame was kept to and to ensure that the case was ready for decision at the end of the oral proceedings. It followed from Art. 15(4) and (6) RPBA 2007 that the structuring of the oral proceedings was within the discretion of the board.

In T 792/12 the board held that a chairman may interject in a party's submissions to ensure that the proceedings are efficiently conducted, in particular to avoid a party repeating arguments. Any member of the board may interrupt to ask questions which are considered important for reaching a decision.

7.1.2 Oral proceedings scheduled from the start for more than one day

In T 1642/11 the board held that when oral proceedings were scheduled for more than one day, a party could not have the expectation that the hearing would finish on the first day. If a party was absent on the second day, the oral proceedings could continue without that party (R. 115(2) EPC and Art. 15(3) RPBA 2007).

7.1.3 Continuation of oral proceedings beyond the last scheduled day

In case T 2534/10 the chairman of the opposition division had proposed, late in the evening of the only scheduled hearing date, that the oral proceedings be continued the next day. Although the patent proprietor had objected to this proposal, the proceedings had been continued the next day, and both parties had attended. The board observed that the two months' notice to be given in summons to oral proceedings under R. 115 EPC met the parties' fundamental need to be able to plan for and estimate the likely course of those proceedings. They had the same need when it came to continuing proceedings on a calendar day other than that specified in the summons. Accordingly, a fresh summons had to be issued if proceedings were to be continued beyond the calendar day specified in the original summons.

In T 1674/12 the opposition division had continued the oral proceedings on 9 September 2011, even though the summons was only for 8 September and two opponents had objected. The board held that, in the light of T 2534/10, the opposition division had

committed a procedural error, irrespective of the opponents' objections: to continue the proceedings on 9 September, it had to have the express consent of all parties. T. 2534/10 had also ruled that remittal was necessary only if the error had affected the final decision; a case could be remitted only to recommence procedural acts performed on the second day, not covered by the summons. In the case in hand, the proceedings would have taken essentially the same course, even if the division had adjourned the oral proceedings on the evening of 8 September rather than continuing them the following day.

7.1.4 Duration of deliberations

In T. 1138/12 the board pointed out that the EPC did not prescribe for how long an opposition division had to deliberate to reach a decision. It was therefore conceivable that the members, having discussed the case in advance, might find their preliminary opinion confirmed by the submissions at the oral proceedings and then agree that that was the case by, for instance, simply making eye contact or nodding at the end of the discussion with the parties. Both the duration and the form of an opposition division's deliberations depended on the scope and complexity of the case in hand, the degree of compatibility of the members' opinions, which might diverge, playing a major role in this regard.

7.2. Excluding the public from oral proceedings

In T. 1401/05 of 20 September 2006 the board excluded the public from that part of the oral proceedings which concerned the exclusion of certain documents from file inspection. Under Art. 116(4) EPC, oral proceedings shall in principle be public in so far as the board does not decide otherwise in cases where admission of the public could have serious and unjustified disadvantages, in particular for a party to the proceedings. The board held that as the debate dealt with the request for exclusion of certain documents from file inspection, which had been excluded provisionally, the public could not be admitted to the hearing on this point. Otherwise the purpose of the provisional exclusion would have been frustrated. In such a situation, the danger of serious and unjustified disadvantages had to be deemed to exist.

In J. 2/01 (OJ 2005, 88), at the beginning of the oral proceedings, the Legal Board informed the appellant that these proceedings were not public. Although the requirements of R. 48(2) EPC 1973 for non-publication of the application appeared not to have been met, the application in suit had in fact not been published. Since Art. 116 EPC required publication as a prerequisite for oral proceedings to be public, the Legal Board had corrected its original summons to public oral proceedings.

Referring to R. 144(a) EPC (R. 93(a) EPC 1973), boards excluded the public from oral proceedings on the matter of objections to members of the boards in T. 190/03 (OJ 2006, 502), R. 2/14 of 17 February 2015, R. 8/13 of 20 March 2015 and T. 1938/09 of 2 October 2014. In T. 190/03, at the end of the oral proceedings, the public was readmitted and the decision was given.

7.3. Oral proceedings held by video-conference

Oral proceedings can be held by video-conference before the examining division according to the Updated notice from the European Patent Office dated 15 November 2018 concerning interviews and oral proceedings to be held as a video-conference (OJ 2018, A96). The examining division's rejection of the applicant's request to hold oral proceedings by video-conference must be reasoned, R. 111(2) EPC (T 677/08).

Before the boards, several requests for oral proceedings to be held by video-conference have been made. When rejecting these requests, boards (starting with T 1266/07) have pointed to the lack of general framework on this matter. In particular, no provisions (e.g. in the RPBA) exist on this matter. In addition, oral proceedings held before the examining division are, in accordance with Art. 116(3) EPC, not public, whereas those before the boards of appeal are public, Art. 116(4) EPC. It would be necessary to ensure that the use of video conferencing is reconciled with the requirement that oral proceedings before the boards be public. See inter alia T 37/08, T 663/10, T 1930/12, T 1942/12, T 1081/12, T 2313/12, T 1529/14.

In T 2068/14 the board held that it had a discretion regarding the organisation of oral proceedings, including, in principle, holding them by video conference. This discretion was exercised according to the circumstances of the case, including, in particular, whether the case in hand was ex parte or inter partes. A further important issue was the availability of suitable rooms for oral proceedings before the board by video conference. This would typically require that provision also be made for the public (see T 1266/07). A video conference contained the essence of oral proceedings, namely that the board and the parties/representatives could communicate with each other simultaneously. The onus was on the appellant to persuade the board that conventional oral proceedings were not appropriate to properly present the appellant's case. In the case in hand, the board rejected the request (see also T 2468/10, T 928/11, T 1081/12, T 2313/12).

7.4. Computer-generated presentations and other visual aids

According to established case law, a computer-generated slideshow presentation is in essence the presentation of written material (T 1122/01; T 1110/03, OJ 2005, 302; T 1556/06; T 601/06). It is also established case law that the principles relating to the use of visual aids such as flip charts should also be applied to PowerPoint presentations. Therefore, a party wishing to use such a presentation should announce this intention early enough before the oral proceedings and should send both the board and the other parties a copy. Any objections could then be raised and considered at the oral proceedings before the presentation was given, and a decision could be made if need be (T 1122/01, T 1110/03, T 555/06, T 608/08).

In T 1122/01 the board pointed out that a PowerPoint presentation could be a way of introducing new means of evidence, or it could lead to a completely new and unexpected presentation of the case by a party. There was therefore a risk of the other parties being

caught unawares by this, of new procedural issues being raised, and of the oral proceedings becoming protracted. See also T.1110/03, T.555/06.

In T.373/05, a few days prior to oral proceedings before the board the appellant (patent proprietor) asked for a screen for showing PowerPoint slides at the hearing, without however saying what the slides were about. At the start of the oral proceedings, it distributed paper versions of the slides, setting out arguments about the admissibility of the respondent's opposition and regarding sufficiency of disclosure. The board took the view that since they contained no new facts, their late submission was no reason to disregard them under Art. 114(2) EPC 1973. On the contrary, it felt that presenting the appellant's arguments visually on paper had also helped the respondents to prepare their responses. See also T.1528/12.

In the board's view in T.1556/06, the opposition division has discretion as to the way oral proceedings were conducted. It was not a wrongful exercise of this discretion, and thus not a procedural violation, to refuse to allow a party to use a PowerPoint presentation during oral proceedings if the party was not thereby prevented from presenting its arguments orally. See also T.608/08.

7.5. Sound recording

In R.17/09 the Enlarged Board held that to allow or refuse a recording of the oral proceedings was a matter of discretion for the board concerned (see also T.1938/09 of 9 March 2015). Refusal to allow recording could not be treated as a procedural violation.

In T.1938/09 of 9 March 2015 the board held that, even if a sound recording of the proceedings were made, there would have been no legal basis for making it available to the parties.

In T.8/13 the appellant had requested to be given authorisation to make a sound recording of the oral proceedings. The board stated that sound recordings were not allowed and referred to the corresponding notice of the Vice-President of DG 3 (OJ SE 3/2007, 117).

7.6. Handwritten amendments during oral proceedings before the board

In T.1635/10 the board took note of the notice from the EPO of 8 November 2013 (OJ 2013, 603) regarding the practice on handwritten amendments to patent documents. In the case in hand, the documents as proposed for the maintenance of the patent contained handwritten amendments, carried out at the oral proceedings before the board. For the board to do what was required by the above notice would, in the case in hand, be detrimental to the principles of due process and procedural economy. The board therefore found that the documents as presented at the oral proceedings, for which the above checks could easily be performed and on which the appellant had had the opportunity to comment, were sufficient to base its (final) decision on. Since the department of first instance in any case would have to perform further formal steps before it actually maintained the patent in accordance with the board's order, it could apply its new practice to the relevant documents. See also T.37/12.

7.7. Interpreting in oral proceedings

As to the issue of interpreting costs during oral proceedings, see in this chapter [III.C.8.2.](#); for the application of [R. 4 EPC](#) see chapter [III.F.3.](#) "Derogations from the language of the proceedings in written proceedings and in oral proceedings".

7.8. Oral submissions by an accompanying person

Reference is made to chapter [III.V.5.](#), "Oral submissions by an accompanying person".

7.9. Closing the debate

According to the established practice, the closing of the debate marks the last moment in the oral proceedings at which parties can still make submissions ([G 12/91](#), OJ 1994, 285; [R 10/08](#); [R 14/10](#)).

In [T 577/11](#) the board held that if the debate on a particular topic had been closed without announcement of a decision on the matter, the board had discretion over whether it would re-open the debate and over the extent to which it would do so. A decision given orally by a board became effective and binding by virtue of being pronounced (see [G 12/91](#)). It excluded any re-opening of the debate. In addition to announcing a decision or re-opening the debate, the board could announce conclusions of its deliberations or invite the parties to discuss the next topic. A re-opening of the debate was an exception (cf. [R 10/08](#)) and there was no right of a party to have the debate re-opened.

7.10. Minutes of oral proceedings ([Rule 124 EPC](#))

According to [R. 124\(1\) EPC](#), minutes of oral proceedings and of the taking of evidence shall be drawn up, containing the essentials of the oral proceedings or of the taking of evidence, the relevant statements made by the parties, the testimony of the parties, witnesses or experts and the result of any inspection.

7.10.1 Content of minutes

In [T 642/97](#) the board stated that [R. 76 EPC 1973](#) ([R. 124 EPC](#)) did not require that the minutes reflect the full arguments of the parties. It was within the discretion of the minute-writer to decide what he considered "essential" or "relevant" (see [T 212/97](#); see also [T 468/99](#): the board was responsible for deciding upon what was necessary to be recorded in the minutes). Whereas minutes were required to contain the requests or similarly important procedural statements, most of the arguments concerning patentability were normally apparent from the previous written submissions or from the facts and submissions in the written decision and did not need to be contained in the minutes.

In [T 263/05](#) (OJ 2008, 329) the board held that the minutes of oral proceedings before the boards of appeal should record the requests of the parties on which a decision of the board is required, such as the allowability or otherwise of the appeal, the form in which the patent proprietor seeks maintenance of the patent, requests for remittal of the case or relating to

appeal fees or costs. The minutes should also record specific statements which have an impact on the definition of the subject-matter, such as statements of surrender or abandonment of subject-matter, where these are relevant to the decision to be taken (see also [T 212/97](#), [T 928/98](#), [T 550/04](#), [T 71/06](#), [T 2351/08](#), [T 1934/14](#) of 8 October 2018). The arguments of the parties concerning patentability should not be recorded. They will be apparent from the facts and submissions set out in the written decision.

According to the board in [T 1934/14](#) of 8 October 2018, a request for interruption of the oral proceedings belonged to the essentials of the oral proceedings.

In [T 397/03](#) the board held that the **text of requests** filed by a party at oral proceedings before the opposition division was an essential element that should be contained in the minutes. In [T 240/09](#) the board held that, as far as the parties' requests were concerned, only the final requests to be stated by the chairman before declaring the debate closed (Art. 15(5) RPBA 2007) were essential for the oral proceedings **on appeal**. Requests which had been withdrawn were usually irrelevant for the board's decision, and therefore not "essential". See also [T 957/99](#), [T 966/99](#).

In [T 231/99](#) the board held that an **essential function** of the minutes was to record for the appellate body the essentials of the oral proceedings at the previous instance.

In [T 396/89](#) the board held that if an important matter of fact was conceded, that **concession** ought to be carefully recorded in the minutes.

In [T 1735/08](#) of 27 September 2012 the board held that there was no need under [R. 124\(1\) EPC](#), nor was it usual practice in proceedings before the boards of appeal, to record in the minutes that the board had expressed a **provisional opinion on patentability** before announcing its decision. Where it was decided to set aside the contested decision and remit the case to the department of first instance for further prosecution, the set of claims on which that department was to base its fresh decision and the reasons why, in the board's opinion, that set of claims met some of the patentability requirements were not set out in the minutes, but rather in the reasons for the decision.

According to [T 317/09](#) the relevance required under [R. 124 EPC](#) related to the decision to be taken by the board. The appellant's statement describing how it understood certain features of the invention neither affected the course of the proceedings, nor was it, as the **appellant's subjective assessment**, relevant for the decision to be taken by the board. See also [T 468/99](#).

In [T 281/03](#) of 17 May 2006 the board held that, in order to guarantee the right to be heard, there should have been an explicit step, recorded in the minutes of the **opposition division**, giving the opponent an opportunity to **comment on inventive step** before the final deliberation, or alternatively an opportunity after the deliberation to comment on the opposition division's conclusion that such an objection was not prima facie apparent. The fact that before the final deliberation "the floor was given to the opponent again" or that the opponent made a "last submission", reported in the minutes, was not enough to meet this requirement.

In T.1359/04 the board observed that the **examining division's introduction of new documents** only at the oral proceedings was an unusual step, and that the utmost care therefore had to be taken to safeguard the applicant's right to be heard. The proceedings should normally be interrupted to give the affected party sufficient opportunity to study the new evidence and reconsider how to present his case. The very function of the minutes in such cases was to document that the proper procedural steps had been duly taken.

In T.1798/08 the board held that it was not the function of the minutes to record statements which a party considers to be possibly relevant, such as the statement relating to the board's **alleged denial of the legal right to be heard**. This statement did not relate to the surrender or abandonment of subject-matter and did not otherwise have any impact on the definition of the subject-matter to be dealt with by board. It did not form part of the essentials of the oral proceedings and was not relevant for the present decision, either.

In R.14/09 the Enlarged Board of Appeal held that an **objection under R. 106 EPC** must be recorded in the minutes since it was a relevant statement of a party (see R.17/10; see also R.2/12 of 17 October 2012 "at least at a party's request"; T.1934/14 of 8 October 2018). See chapter V.B.3.6.4 "Minutes as evidence that the objection was raised".

In T.2405/10 the appellant's request to include a statement regarding the problem-solution approach was made **after the proceedings had been closed**. As this statement was not part of the oral proceedings, there was no reason to include it in the minutes.

7.10.2 No recording of statements for use in subsequent national proceedings

According to T.928/98, T.263/05 (OJ 2008, 329), T.550/04, T.71/06, T.61/07 and T.916/09 it is not the function of the minutes to record statements which a party considers will be of use to it in any subsequent proceedings in national courts, for example in infringement proceedings as to the extent of protection conferred by the patent in suit. This is because such statements are not "relevant" to the decision which the board has to take, within the meaning of R.124(1)EPC. Such matters are within the exclusive jurisdiction of the national courts. On this basis the board in T.550/04 concerning the opponent's request to record in the minutes that the expression "oxygen-free atmosphere" in claim 1 had the meaning of "completely oxygen-free atmosphere" stated that this statement would not have an impact on the definition of the subject-matter of the patent for the questions the board had to decide and was thus not proper subject-matter for the minutes. Concerning requests for recording statements of parties in the minutes, see also T.966/99, T.468/99, T.957/99, T.459/01, T.2009/08, T.1824/09.

7.10.3 Correction of minutes

If a party was of the opinion that the minutes were incomplete or wrong, since essential submissions were not reflected at all in the file, it might request the opposition division to correct the minutes to preserve its rights (T.642/97, T.231/99, T.898/99, T.68/02, T.99/08). The same is true in proceedings before the examining division (T.937/07, T.2434/09). Concerning the boards of appeal, see T.1934/14 of 8 October 2018.

In T. 162/09 the board held that the parties and their representatives could be expected to check the minutes carefully, especially to ensure that nothing was missing, immediately on receipt and to point out any deficiency promptly, since the minutes were the only means of ascertaining what had occurred during the oral proceedings. See also R. 6/14

In T. 690/09 the appellant had not questioned the correctness of the minutes; the board held that the correctness of the minutes was therefore not formally in doubt and it had to consider the minutes as correctly reflecting the course of the oral proceedings. See also T. 162/09, T. 1138/12, T. 1227/14, T. 320/15.

In T. 1005/08 the board held that, according to the consistent jurisprudence of the boards of appeal, it was in principle the department before which oral proceedings had been held which was competent to correct its minutes of the oral proceedings (see also T. 2150/15).

In T. 231/99 it was held that the board's responsibility for the decision on the validity of the patent did not extend to deciding on the accuracy of the minutes of first instance proceedings (see also T. 1198/97, T. 162/09, T. 2150/15). In T. 508/08 the board stated that if the department of first instance (opposition division) saw fit to ignore its obligations (to respond to a request for correction of the minutes) there was nothing the board could do; it had no power to compel the division to fulfil them (see also T. 803/12, T. 2150/15).

In T. 212/97 the board explained that only decisions could be contested. Since the minutes of oral proceedings were neither a decision nor part of the decision, they could not be "annulled" by the board of appeal (see also T. 838/92, T. 68/02). A procedural violation could be said to have occurred if the limits of the minute-writer's discretion as to what he considered "essential" or "relevant" were overstepped, e.g. if a party's unambiguous statement of surrender were omitted from the minutes.

In T. 1063/02 the board held that it could not order the amendment of the opposition division's minutes of oral proceedings unless they manifestly and definitely differed from the actual course of the proceedings.

In T. 740/00 the appellant informed the opposition division of its opinion that the minutes did not reflect the actual conduct of the proceedings. Instead of examining whether the minutes actually fulfilled the requirements of R. 76(1) EPC 1973 and then deciding whether or not to correct them, the opposition division argued in essence that the minutes were correct because the minutes said so. The board considered such a reasoning circular and thus as not fulfilling the requirements of R. 68(2) EPC 1973, which required decisions of the EPO to be reasoned. This constituted a procedural violation (cf. T. 819/96).

In T. 4/00 the board held that the decisions on the correction could not be taken by the formalities officer as that would be contrary to the requirements of R. 76(3) EPC 1973 (R. 124(3) EPC), from which it was clear that only members of the opposition division bore responsibility for the minutes.

In T. 1721/07 the board refused the appellants' request that a summary they had drawn up of the parties' various arguments and the board's conclusions be added to the minutes of

the oral proceedings. It observed that preparation of the minutes of oral proceedings was a task entrusted to the boards. This task could not be transferred or delegated, in whole or in part, to the parties, let alone just one of them (see also T.433/11).

7.10.4 Signing of minutes

According to R.124(3)EPC, the minutes shall be authenticated by the employee responsible for drawing them up and by the employee who conducted the oral proceedings or taking of evidence, either by signature or by any other appropriate means.

In case T.2076/11 the minutes were signed by a director rather than by the chairman who had presided over the oral proceedings before the opposition division. This was a substantial procedural violation.

7.10.5 Refusal to record statement not an infringement of the right to be heard

According to T.1055/05 the refusal of the division to record statements made by a party at the oral proceedings could not constitute an infringement of the right to be heard.

7.11. Presence of assistants during deliberations of the board

According to Art.19(1), second sentence, RPBA 2007 only members of the board may participate in the deliberations; the chairman may, however, authorise other officers to attend. In T.857/06 the board stated that in several EPC contracting states the judicial work of courts, in particular supreme courts and constitutional courts, is supported by assistants. Also the active involvement of assistants in preparing the ground for judicial decisions appeared to be widely accepted. In accordance with this practice, a limited number of assistants supports the EPO's boards of appeal. The board concluded that the discretion under Art.19(1), second sentence, RPBA 2007 may be exercised to allow the board's assistant to attend and to take part in the deliberations.

8. Costs

8.1. Apportionment of costs

A different apportionment of costs may be ordered in accordance with Art.104 EPC and Art.16 RPBA 2007, if a party, for example, withdraws a request for oral proceedings, asks for their postponement, or fails to attend them (see chapter III.R.2.2. "Acts or omissions prejudicing the timely and efficient conduct of oral proceedings").

8.2. Interpreting costs during oral proceedings

Under R.4(1)EPC (R.2(1)EPC 1973), "any party to oral proceedings before the EPO may use an official language of the EPO other than the language of the proceedings, if such party gives notice to the EPO at least one month before the date of such oral proceedings or provides for interpretation into the language of the proceedings" (see also Communication dated 16 July 2007, OJ SE 3/2007, 118).

In T.473/92 the respondents asked the EPO, three days before the oral proceedings, to arrange for and bear the cost of interpreting services. According to the respondents, the period of one month stipulated in R.2(1)EPC.1973 had not been observed because the EPO had failed to draw their attention to the period of notice mentioned in R.2(1)EPC.1973. The board, however, decided that the respondents had to bear the costs of interpreting at the oral proceedings. If the parties were being offered a free interpreting service, the EPO should at least be enabled to minimise its costs by having sufficient time to organise the interpreting efficiently. Nor was the EPO under any obligation to draw the respondents' attention to the notice period of one month.

In T.44/92 the board came to the conclusion that if a patent proprietor with several appointed representatives chose to use another official language for the oral proceedings in addition to the language of proceedings, the EPO would not bear the costs of interpreting (R.2(1) and (5)EPC.1973). See also T.131/07.

D. Time limits, further processing and interruption of proceedings

1.	Calculation, determination and extension of time limits	648
1.1.	Calculation of time limits under Rule 131 EPC	648
1.2.	Determination and extension of periods under Rule 132 EPC	649
1.2.1.	Relevant criteria when time limits are extended upon request (R. 132(2), second sentence, EPC)	649

3.7.	Consequences of interruption of proceedings (Rule 142(4) EPC)	657

1. Calculation, determination and extension of time limits

Time limits in the EPC have two conceptual elements: firstly, a period of time determined in years, months or days, and secondly, a relevant date, which serves as the starting date of the time limit, and from which the period of time is counted (**J.18/04**, OJ 2006, 560). The term "deadline" is broader than the terms "time limit" and "period" as it encompasses any last date for validly performing an action and says nothing about the nature of the underlying time restriction (**J.10/12**).

1.1. Calculation of time limits under Rule 131 EPC

In **J.14/86** (OJ 1988, 85) the Legal Board held that the fact that **R. 83(2) EPC 1973** (**R. 131(2) EPC**) fixed the point in time from which all the time limits ran and defined this

point as the day following that on which the event giving rise to the time limit occurred, could not be interpreted as requiring the addition of a day to time limits expressed in years, months and weeks, hence the grant of an additional day for reasons of equity. The expiry date of time limits expressed in years, months or weeks was derived from R. 83(3) to (5) EPC 1973. These paragraphs, in conjunction with paragraph 2 of the same rule, established unequivocally that the time limits were fixed in full years, months and weeks, without any possibility of their being reduced or extended (see also J 9/82, OJ 1983, 57).

In J 13/88 the Legal Board demonstrated how to calculate the 12-month priority period referred to in Art. 87 EPC. The event representing the point in time from which a time limit started to run was the filing date of the application in respect of which priority was claimed, which was 5 May 1986. The period expired in the relevant subsequent month on the day which had the same number as the day on which the said event occurred, which was 5 May 1987 (R. 83(2) EPC 1973 in combination with R. 83(4) EPC 1973).

T 2056/08 concerns the calculation of the period for filing an appeal when combined with a ten-day period for postal delivery. The board noted that the two-month period stipulated in Art. 108 EPC started from the day of the presumed or actual notification. If any rule of thumb could be suggested to calculate the appeal period, it should be "ten days plus two months" rather than "two months plus ten days."

R 18/10 concerned the calculation of the two-month time limit under Art. 112a(4) EPC. The relevant decision had been posted on 31 August 2010 and the actual notification occurred on 6 September 2010. According to R. 131(2) EPC, where a procedural step is a notification, the relevant event shall be the receipt of the document notified, unless otherwise provided. According to R. 126(2) EPC, in cases where notification is effected by registered letter such a letter is deemed to be delivered to the addressee on the tenth day following its posting. Therefore, regardless of the fact that actual notification occurred on 6 September 2010 the time limit ended pursuant to R. 126(2) EPC on 10 November 2010.

For events which trigger the start of a time limit in connection with re-establishment of rights, see below chapter III.E.4.1.1 "Two-month time limit from the removal of the cause of non-compliance"; for "notification" as an event which triggers the start of a time limit, see chapter III.S.; for the relevant event for calculating the time limit under Art. 78(2) EPC 1973 (R. 38 EPC), see J 13/04.

1.2. Determination and extension of periods under Rule 132 EPC

1.2.1 Relevant criteria when time limits are extended upon request (R. 132(2), second sentence, EPC)

According to R. 132(2), second sentence, EPC (R. 84, second sentence, EPC 1973), in special cases, a certain period may be extended upon request. This provision gives discretionary power to departments of the EPO to decide on the request (T 954/98 of 9 December 1999, J 12/07, J 29/10). The Guidelines set out examples of special cases, see Guidelines E-VIII, 1.6 – November 2018 version. Only a narrow definition of acceptable

grounds for further extensions of time limits beyond a total period of six months is justified (J 12/07, J 29/10, see also T 79/99).

In T 79/99 the board held that when considering requests for additional time, it would take into account not only any reasons put forward but also the number of previous extensions (if any), the views of the other party or parties (if known), the effect of delays on other appeals pending before it and the general principle that all delays are to be avoided where possible.

The application of Art. 120 EPC 1973 and R. 84 EPC 1973 to cases where the time limits had expired before the entry into force of EPC 2000 is considered in J 12/07.

1.2.2 Applicability of Rule 132 EPC to the Rules relating to Fees

In case J 7/07 the Receiving Section had given the appellant a period of one month to submit evidence and pay the surcharge under Art. 8(4) RFees (now Art. 7(4) RFees). The appellant argued that this one-month time limit was too short and amounted to a substantial procedural violation as it was not in compliance with R. 84 EPC 1973. Though R. 84 EPC 1973 referred only to the Convention and the Implementing Regulations, the board concluded that R. 84 EPC 1973 applied to the time limit in the then Art. 8(4) RFees.

1.3. Extension of time limits ipso jure on account of public holidays or dislocation in delivery of mail (Rule 134 EPC)

1.3.1 Public holidays (Rule 134(1) EPC)

According to R. 134(1) EPC, if a period expires on a day on which one of the filing offices of the EPO is not open for receipt of documents or on which mail is not delivered there, the period shall extend to the first day thereafter on which all the filing offices are open for receipt of documents and on which mail is delivered. This also applies to periods concerning payments (J 1/81).

1.3.2 General dislocation or interruption in delivery or transmission of mail in a Contracting State (R. 134(2) EPC)

R. 134(2) EPC provides for a time limit to be extended if it expires on a day on which there is a general dislocation in the delivery or transmission of mail in a contracting state or between a contracting state and the EPO. The duration of the period of dislocation shall be as stated by the European Patent Office. The term "general interruption" was deleted in the process of revising R. 85(2) EPC 1973. However, as evidenced by the preparatory documents, the retained term "dislocation" also refers to interruptions (CA/PL 17/06, p. 356). Decisions which interpret the term "general interruption" are still cited in the following as an aid to interpreting the "general dislocation" referred to in R. 134(2) EPC.

In J 4/87 (OJ 1988, 172) the board reaffirmed that in the event of an unforeseeable postal delay causing non-compliance with a time limit, the EPO had no discretion to extend the time limit other than in the cases referred to in R. 85(2) EPC 1973.

In J.11/88 (OJ 1989, 433) the board held that any time limit under the EPC 1973 which expired within the period of interruption or dislocation was extended **by operation of law**. Accordingly, if the President of the EPO did not issue a statement as to the duration of that period, because he did not have the relevant information at the right time, this could not affect the rights of a person adversely affected by the interruption or dislocation. Whether or not an interruption qualified as a "general interruption" was a question of fact, which had to be decided in the light of any credible information available; in case of doubt, the EPO should make official enquiries of its own motion in application of Art. 114(1) EPC 1973.

In J.3/90 (OJ 1991, 550) the Legal Board interpreted the concept of a **general** interruption, explaining that R. 85(2) EPC 1973 was not restricted to nationwide interruptions. In the case in hand, the board decided that the limited geographical extent of the disruption did not disqualify the interruption from being general. Whether or not a representative had undertaken all possible measures to avoid the effects of a postal strike was not a relevant test under R. 85(2) EPC 1973.

In J.1/93 the Legal Board again stated that for an interruption in the delivery of mail under R. 85(2) EPC 1973 to be considered general in character **the public in general** residing in an area of some magnitude, even if of limited geographical extent, had to be affected. The loss of a single mailbag might affect a number of individual addressees but not the public in general.

In J.14/03 the board confirmed that evidence of a disruption within the meaning of R. 85(2) EPC 1973 provided by the appellant can lead to a retrospective extension of time in a particular case, as occurred in J.11/88, if this evidence, had it been known at the time, would have been such as to warrant a Presidential statement under R. 85(2) EPC 1973. However, in contrast to the probative value of the evidence in J.11/88, in the case in hand the evidence was inconclusive.

1.3.3 Dislocation of a mail service outside the contracting states (Rule 134(5) EPC)

In J.13/05 the board highlighted that R. 85(5) EPC 1973 was inserted into the EPO following the events of 11 September 2001 because the legal remedies available at that time were inadequate. It was decided not to extend R. 85(2) EPC 1973 to postal interruptions outside the contracting states, as only for those states could the EPO be sure of obtaining the information necessary to enable the President to announce a general interruption or dislocation. Therefore, unlike the preceding paragraphs, R. 85(5) EPC 1973 was drafted so as to place the **burden of proof** on the party asserting a general interruption or dislocation of the mail service. Like R. 85(2) EPC 1973, R. 85(5) EPC 1973 required that more than one person using the mail service be affected or theoretically capable of being affected by the interruption or dislocation, even if a merely minor or geographically limited interruption might be sufficient.

1.4. Statutory periods of grace, additional period for payment of renewal fees and the fiction of observance of a time limit for fee payments

1.4.1 Additional period for payment of renewal fees under Rule 51(2) EPC

The substance of Art. 86(2) EPC 1973 (late payment of renewal fee and payment of additional fee) is now contained in R. 51(2) EPC.

In decision **J.4/91** (OJ 1992, 402) the Legal Board held that when calculating the six-month period for the payment of a renewal fee with additional fee under Art. 86(2) EPC 1973, R. 83(4) EPC 1973 should be applied mutatis mutandis in the light of R. 37(1), first sentence, EPC 1973. This meant that the six-month period did not end on the day of the subsequent sixth month corresponding "in number" to the due date according to R. 37(1), first sentence, EPC 1973 but on the day which was equivalent to this due date by virtue of its being the "last day of the month". For the purposes of calculating the additional period under Art. 86(2) EPC 1973, therefore, R. 83(4) EPC 1973, in the context of R. 37(1), first sentence, EPC 1973, resulted in a period running "from the last day of the month to the last day of the month". The additional period started on the last day of the month specified in R. 37(1), first sentence, EPC 1973 even in the circumstances mentioned in R. 85(1), (2) and (4) EPC 1973. The occurrence of such circumstances at the beginning of the period did not result in the end of the period being postponed beyond the end of the sixth month and into the seventh month.

1.4.2 Period of grace for payment of fees under Rule 85a EPC 1973

In the context of the EPC revision exercise (EPC 2000), R. 85a and 85b EPC 1973 were deleted to take account of the extended application of further processing under Art. 121 EPC (OJ SE 1/2003, 190). See "Case Law of the Boards of Appeal", 5th ed. 2006, VI.D.1.3.2, for a detailed, or "Case Law of the Boards of Appeal", 6th ed. 2010, VI.D.1.4.2, for a short, overview of the case law on this provision.

1.4.3 Fiction of fee payment in due time pursuant to Article 7(3) and (4) RFees

Reference is made to chapter III.U.3.1.

2. Further processing under Article 121 EPC

Under Art. 121(1) EPC, the applicant can apply for the further processing of his application if he fails to observe a time limit vis-à-vis the Office. However, Art. 121(4) and R. 135(2) EPC lay down exceptions to this general rule, especially with regard to the time limits for priority, remedies and the request for further processing and re-establishment of rights, and with regard to the non-observance of certain time limits for which a special remedy provision exists in the Implementing Regulations (e.g. R. 58 and 59 EPC). Hence, in contrast to the provisions under the EPC 1973, further processing can be applied to the time limits for the payment of filing, search and designation fees, the national basic fees and the examination fees, and to the time limit for filing the request for examination

(OJ SE 4/2007; MR/2/00, 157). The request is made simply by payment of the prescribed fee (OJ SE 5/2007).

In **J 37/89** (OJ 1993, 201) the Legal Board pointed out that the applicants could overcome a loss of rights under Art. 96(3) EPC 1973 (which corresponds to Art. 94(4) EPC) resulting from the **refusal of a request for a time-limit extension** by requesting further processing in accordance with Art. 121 EPC 1973. At the same time, they could request reimbursement of the fee for further processing. This secondary request had to be decided on in connection with the final decision. Under Art. 106(3) EPC 1973 (Art. 106(2) EPC), the decision on the secondary request could be appealed together with the final decision. The appeal could also be confined to contesting the decision on the secondary request (see also **J 29/10**).

In **J 47/92** (OJ 1995, 180) the Legal Board stated that further processing under Art. 121 EPC 1973 was available only in respect of those time limits the duration of which was to be determined or set by the EPO. This question has been overtaken by the new version of Art. 121 EPC which applies irrespective of whether the time limits are set by the EPO or are specified in the Convention or Implementing Regulations (MR/2/00, p. 157).

In **J 16/92** the Legal Board held that the omitted act within the meaning of Art. 121(2) EPC 1973 (R. 135(1) EPC) consisted in filing a reply in substance to a first communication. It was not completed by filing a request for an extension of time for submitting that reply, since a request for a time limit was not equivalent to the act the party in question had proposed performing within the time limit requested.

3. Interruption of proceedings under Rule 142 EPC

3.1. Application of Rule 142 EPC by the EPO of its own motion

The EPO must apply the provisions of R. 142 EPC (R. 90 EPC 1973) of its own motion (**J 87/87=J 902/87**, OJ 1988, 323; **J 23/88**; **T 315/87** of 14 February 1989; **J 49/92**; **T 854/12**; **J 7/16**). In appeal proceedings, the boards need not await a decision of the Legal Division (**T 854/12**). Such a decision finding that they have been interrupted, and to enter this in the register, has only declaratory effect and is not constitutive (**T 854/12**). The consequence of an interruption in the proceedings is that the time limits in force as regards the applicant or patentee at the date of interruption of the proceedings, shall begin again as from the day on which the proceedings were resumed (see R. 142(4) EPC). However, the time limit for making the request for examination and the time limit for paying renewal fees are only suspended (see in this chapter III.D.3.7. "Consequences of interruption of proceedings (R. 142(4) EPC)").

3.2. Concept of legal incapacity (Rule 142(1)(a) and (c) EPC)

The EPC does not define the concept of "legal incapacity", which is assessed differently according to whether the person concerned is the applicant or patentee or a professional representative: In **J xx/xx** (= **J 900/85**, OJ 1985, 159) and **J 87/87** (= **J 903/87**, OJ 1988, 177) the Legal Board held that the capacity of the **applicant or patent**

proprietor to carry out legal transactions relating to his application or patent must be determined in accordance with the relevant **national law** because the interest in the patent application or the patent is an interest in property (see Art. 74 and Art. 2(2) EPC; see also J 49/92). On the other hand, J xx/xx (= J 900/85, OJ 1985, 159) states that a **uniform standard** of judging legal incapacity of **representatives** shall apply in order to avoid differences in the application of R. 90(1)(c) EPC 1973 (R. 142(1)(c) EPC) depending on the nationality of domicile of the representative.

3.3. Determining legal incapacity of the applicant or patent proprietor for the purpose of Rule 142(1)(a) EPC

In J ./87 (= J 903/87, OJ 1988, 177) the board ruled that a brief medical certificate attesting that the applicant had been in a state of physical and mental exhaustion and depression, was not sufficient to establish incapacity within the meaning of R. 90(1)(a) EPC 1973 since the certificate said nothing about the seriousness and duration of this condition. Cf. T 1680/13.

In J 49/92 the Legal Board had no evidence – such as a medical certificate – to suggest that the applicant's health, according to German legal practice, was in such a condition as to exclude the rational exercising of his will, since he had still managed to transfer the fees for the application, even if they had been sent by mistake to the German Patent Office instead of the EPO.

3.4. Determining legal incapacity of the representative for the purpose of Rule 142(1)(c) EPC

The basic consideration for a decision on R. 142(1)(c) EPC is whether the representative concerned was either in a fit mental state to do the work required of him at the material time or whether he lacked the capacity to make rational decisions and to take the necessary actions, see J xx/xx (= J 900/85, OJ 1985, 159), J 7/99, J 7/16. In J 5/99 the Legal Board stated that that meant carefully weighing up all reliable relevant information. Also indispensable was a reliable medical opinion taking account of all material facts (see also J 7/16).

In J xx/xx (= J 900/85, OJ 1985, 159) the Legal Board noted that, although there were differences in the national laws of contracting states as to the concept of "legal incapacity" and as to its consequences, there seemed to be a broad agreement that a person of full age was legally incapacitated when he was suffering from such a disturbance of his mind that he was unable to form the necessary voluntary intention to carry out legal transactions which would be binding upon him, e.g. to make valid contracts. Such a disturbance of his mind could be recognised by national law even if it was temporary only (e.g. a disturbance caused by physical injury or by the influence of alcohol or other drugs) or occurred from time to time, as was the case with some mental illnesses in which the patient had lucid intervals. Disturbance of the mind causing legal incapacity was always recognised by law if it was of long duration, a fortiori if it was permanent and irreversible. Since there was a unified European profession of representatives before the EPO, there should be a uniform standard of judging legal incapacity, in order to avoid differences in the application of

R. 90(1)(c) EPC 1973 (R. 142(1)(c) EPC) depending on the nationality or domicile of the representative. The question of determining the legal incapacity of a representative for the purposes of R. 90(1)(c) EPC 1973 (R. 142(1)(c) EPC) was one for the EPO, applying its own standards, developed in the light of experience and taking into consideration principles applied in the national laws of the contracting states. See also J 5/99, J 7/99.

The legal incapacity had to be of a persistent nature (J ./86 = J 901/86, OJ 1987, 528). For the purposes of R. 90(1)(c) EPC 1973 (R. 142(1)(c) EPC), the EPO must establish whether and if so when the representative was legally incapacitated, and in the light of its findings specify the time limits which might have been interrupted (J ./87 = J 902/87, OJ 1988, 323).

In J 7/99 the Legal Board held that legal incapacity pursuant to R. 90(1)(c) EPC 1973 (R. 142(1)(c) EPC) meant a mental state in which the representative was so totally or nearly totally unable to take rational decisions that all his professional duties, and not just one isolated case, were affected by his mental state. In the case in hand, legal incapacity was not established. See also J 2/98, J 7/16.

In T 315/87 of 14 February 1989 the board accepted that the previous representative had been suffering from physical and mental disorders. Indeed, the medical documents submitted by the previous representative himself pointed to a psychosomatic condition.

3.5. Legal incapacity of a representative from outside the contracting states

In J 23/88 the Legal Board accepted the finding of the Receiving Section that an American patent attorney was not covered by R. 90(1)(a) EPC 1973 (R. 142(1)(a) EPC), being neither the applicant nor the proprietor of a European patent, nor a person authorised by national law to act on his behalf. "Person authorised by national law" covered legal representatives of the applicant or proprietor, but did not extend to a patent attorney authorised under the laws of a non-Contracting State. However, the board held that the US patent attorney in the case in hand was, at the relevant time, a legally incapacitated representative of the applicant within the meaning of R. 90(1)(c) EPC 1973 (R. 142(1)(c) EPC). This interpretation was fully consonant with the preparatory documents regarding the desirability of equal treatment of applicants from contracting and non-contracting states. The difference in the wording of R. 90(1)(c) EPC 1973 (R. 142(1)(c) EPC) from that of R. 90(1)(a) EPC 1973 (R. 142(1)(a) EPC) was deliberately chosen so as to create equal treatment between applicants in the contracting and in non-contracting states. The board observed that Art. 133(2) EPC 1973 provided a limited exception to the normal requirement for professional representation within the meaning of Art. 134 EPC 1973 in the case, and only in the case, of the filing of the European patent application. Such a filing could validly be made by the applicant himself or by any representative duly authorised by him. Once the processing of the international application had properly started in the EPO, any interruption in proceedings occasioned by the death or legal incapacity of the American patent attorney would no longer be covered by R. 90(1)(c) EPC 1973.

3.6. Interruption of proceedings because of insolvency (Rule 142(1)(b) EPC)

According to R. 142(1)(b) EPC (R. 90(1)(b) EPC 1973) proceedings before the EPO shall be interrupted in the event of the applicant for a European patent, as a result of some action taken against his property, being prevented by legal reasons from continuing the proceedings before the EPO. An interruption under R. 142(1)(b) EPC serves the protection not only of the interests of the patent proprietor but also those of its creditors. This rule protects these interests by preventing any measure with legal effect from being taken, be it by the proprietor or the EPO, that is liable to adversely affect the patent's value as an asset (T. 1389/18). For a case in which an **opponent** requested interruption of proceedings because of insolvency, see T. 1533/07.

The decisive criterion for interruption under R. 142(1)(b) EPC is whether the action against the property was such as to make it legally impossible for the applicant to continue with the proceedings (J. 26/95, J. 16/05).

In T. 854/12 the board held that R. 142(1)(b) EPC was applicable where a proprietor initially unrestricted in his procedural conduct was later "prevented from continuing the proceedings", but not where a patent was transferred with the administrator's consent to another proprietor who was already insolvent and therefore did not become a party to the proceedings but was instead represented from the outset by the administrator, whose powers of disposal were unlimited.

In J. 9/90 the Legal Board held that for R. 90(1)(b) EPC 1973 to be applied in the light of Art. 60(3) EPC 1973 and R. 20(3) EPC 1973, the applicant entered in the Register of European Patents and the insolvent person (here a limited company) had to be legally identical. Cf. J. 16/05.

In the cases J. 9/94 and J. 10/94, it was regarded as being analogous to a case of legal impossibility where the applicant, as a consequence of an action against his property, did not have at his disposal any remaining property by means of which he could have effected the required payment and he was thus, as a result of the action against his property, placed in a situation where it was factually and legally impossible for him to continue the proceedings before the EPO. In such a case it had, however, to be examined whether the actions taken effectively made it impossible for the applicant to continue the proceedings.

In J. 18/12 the appellant company (applicant) had applied to the Legal Division for interruption of the proceedings, arguing that a court judgment had been issued – erroneously – against it, of which it had not been aware. This circumstance had only surfaced when it had applied for a bank loan, which had been refused due to its adverse credit rating, this latter being the direct consequence of the court judgment, which then directly resulted in its being left without any financial means. The Legal Board held that the correct interpretation of R. 142(1)(b) EPC required that there be a close relationship between the action taken against the property of the applicant and the condition that this action should be the cause of the applicant being prevented by legal reasons from continuing the proceedings. This requirement of causality would normally only be fulfilled

if the "action" was a legal action and was directed against the property of the applicant as a whole, i.e. against the totality of the applicant's assets.

In J.26/95 (OJ 1999, 668) the Legal Board held that, in the absence of specific circumstances, proceedings against the applicant under Chapter 11 of the US Bankruptcy Code did not interrupt proceedings before the EPO within the meaning of R. 90(1)(b) EPC 1973 (R. 142(1)(b) EPC) (see also J.11/98). Being placed under Chapter 11 of the US Bankruptcy Code was an action taken against the property of the debtor. It did not, however, constitute a case where, as a result of such action, it was impossible for the debtor to continue the proceedings before the EPO. On the contrary, it was the very nature of proceedings under Chapter 11 that it was the debtor who continued to act for his business. Chapter 11 bankruptcy proceedings were therefore not comparable to the cases which had been recognised in the case law of the boards of appeal as leading to interruption of proceedings, i.e. where parties had been placed under receivership under French law (J.7/83, OJ 1984, 211) or been declared bankrupt under German law (J.9/90). A situation which could be compared to the exceptional case underlying decisions J.9/94 and J.10/94 (see above) had also not been substantiated.

In case J.11/95 the applicant had continued the proceedings before the EPO even after it had gone bankrupt. In particular, it had filed a request for entry into the regional phase before the EPO and paid the corresponding fees. The Legal Board held that from these facts and since no evidence to the contrary had been filed it had to be concluded that the applicant (in bankruptcy) was not prevented by legal reasons from continuing the proceedings before the EPO.

In J.16/05 the Legal Board held that R. 90 EPC 1973 did not provide for any time limit within which the circumstances establishing an interruption of proceedings would have to be brought to the attention of the EPO. The ratio legis of R. 90(1)(b) EPC 1973 was to protect parties not able to act in the proceedings for the defined legal reasons against a loss of rights which would otherwise occur, until such time as the EPO could resume the proceedings under R. 90(2) EPC 1973. The Legal Board also pointed out that in the interest of legal certainty, R. 90(1)(b) EPC could not be applied without any time restriction at all. Parties had to act in good faith and in due time and could not have an interruption of the proceedings established years after they had become aware of the facts justifying an earlier interruption.

In T.1389/18 the board held that the Legal Division generally had the power to establish that proceedings had been interrupted under R. 142(1)(b) EPC with retrospective effect too.

3.7. Consequences of interruption of proceedings (Rule 142(4) EPC)

R. 142(4), first sentence, EPC (R. 90(4), first sentence, EPC 1973) states that the time limits in force as regards the applicant for or proprietor of the patent at the time of interruption of the proceedings shall begin again as from the day on which the proceedings are resumed. R. 142(4) EPC includes two exceptions in this respect, namely the time limits for making a request for examination and for paying renewal fees. R. 142(4) EPC does

not, however, constitute an exception to the general principle that all time limits are interrupted. Its sole purpose is to specify how time limits are to be calculated when proceedings resume (J 7/83, OJ 1984, 211).

The board in T 1389/18 (citing J 9/06) observed that proceedings could only be resumed with ex nunc effect.

In J 7/83 (OJ 1984, 211) the Legal Board held that in the event of proceedings for grant of a European patent being interrupted because the applicant company has gone into receivership (R 90(1)(b) EPC 1973), the period prescribed by Art 94(2) EPC 1973 for payment of the **examination fee** is suspended as from the date on which payments were discontinued by court order up to the date on which proceedings for grant are resumed (R 90(2) EPC 1973). The period then resumes for the part remaining to elapse, or for at least the two months prescribed by R 90(4), second sentence, EPC 1973. In J ..87 (= J 902/87, OJ 1988, 323) the Legal Board stated that such an interpretation could not be applied to **renewal fees**, for which the EPC did not prescribe a time limit for payment but simply dates on which they fell due. The only time limit affecting renewal fees that might be suspended was the six-month period for paying the renewal fee together with an additional fee referred to in Art 86 EPC 1973. R 90(4) EPC 1973 had to be interpreted as deferring, until the date proceedings are resumed, the payment date for renewal fees which had fallen due during the period of the representative's or applicant's incapacity.

The board in T 854/12 held that, if a board was satisfied that the proceedings had been interrupted, this meant not only that any periods running at the time were suspended (R 142(4) EPC) but also that the board could not hold oral proceedings or issue a decision in written proceedings. The board in T 1389/18 ruled that any oral proceedings taking place during an interruption and any decision announced at them by the opposition division had to be retrospectively deemed non-existent.

E. Re-establishment of rights

4.1.1.	Two-month time limit from the removal of the cause of non-compliance	666
	a) Removal of the cause of non-compliance	666
	b) Responsible person	668
	c) Legal fiction of deemed notification	670
4.1.2.	One-year time limit following the expiry of the unobserved time limit	671
4.2.	Inability to observe a time limit	672
4.2.1.	Deliberate act missing a time limit; tactical considerations	672
4.2.2.	Financial difficulties	673
4.3.	Making good the omitted act	673
4.4.	Substantiation of the request for re-establishment	674
4.5.	Number of re-establishment fees due where more than one time limit is missed	675
4.6.	Correction of deficiencies in the request for re-establishment	676
5.	Merit of request for re-establishment of rights	676
5.1.	Submissions to be taken into account	676
5.2.	General comments on due care	677
5.3.	Exceptional circumstances	678
5.3.1.	Organisational restructuring	678
5.3.2.	Change to or withdrawal of representation	678
5.3.3.	Complex transfers of company ownership	679
5.3.4.	Monitoring or computer systems matters	679
5.3.5.	Sudden serious illness and severe psychological stress	679
5.4.	Isolated mistake within a satisfactory system for monitoring time limits or for processing mail	680
5.4.1.	"Isolated mistake" by representative	680
5.4.2.	A system operating efficiently for many years as evidence that it is normally satisfactory	680
5.4.3.	Cause of mistake remains unclear	681

5.4.4	Requirement for a cross-check	681
a)	Cross-check should be independent in a large firm	681
b)	Control mechanisms in small firms	683
5.4.5	All due care in making provisions for staff absences	684
5.4.6	Second mistake by responsible person	685
5.4.7	Deficiencies in computerised systems	686
5.5	Persons required to exercise due care; requirements regarding due care	686
5.5.1	Due care on the part of the applicant	686
a)	General principles	686
b)	Unrepresented individual applicant	687
c)	Choosing a sufficiently competent representative	688
5.5.2	Due care on the part of the professional representative	688
a)	Communication between professional representatives and their clients, the EPO or other representatives	689
b)	Payment of renewal fees	690
c)	Ignorance of or erroneous interpretation of a provision of the EPC	691
d)	Requesting and acting on information from the EPO	692
e)	Starting work on a case close to the expiry of the time limit	693
f)	Designation of receiving offices	694
g)	Abandonment of application	694
5.5.3	Due care on the part of a non-authorised representative	694
5.5.4	Due care in dealing with assistants	695
a)	Introduction	695
b)	Selection, instruction and supervision	696
c)	Technically qualified assistants	699
d)	Substitutes replacing assistants	699
e)	Ultimate responsibility of the representative	699
5.5.5	Due care in using mail delivery services	701
6	Procedural treatment of requests for re-establishment	702
6.1	Department competent to decide upon the request	702
6.2	Request for re-establishment as auxiliary request	703
6.3	Parties to re-establishment proceedings and the right to be heard	704
6.4	Concurrent request for interruption of proceedings	704
6.5	Re-establishment in the context of the President's extension of time limits during general disruption	704
6.6	Redundant request for re-establishment	705
7	Rights of use under Article 122(5) EPC	705
8	Principle of proportionality	705
9	Reimbursement of the fee for re-establishment	707
9.1	Legal reason for payment of fee	707
9.2	Reimbursement where request for re-establishment found to be redundant	707
9.3	Request for re-establishment due to mistakes made by EPO	708
9.4	Reimbursement where more than one fee for re-establishment has been paid	708

1. Introduction

Re-establishment of rights constitutes a legal remedy for curing a loss of rights in proceedings before the EPO. If the requirements of [Art. 122 EPC](#) and [R. 136 EPC](#) are fulfilled and the request for re-establishment is granted, the requester will be treated as if the loss of rights had not occurred (see [Art. 122\(3\) EPC](#)). After the revision of the EPC, further processing has become the standard legal remedy in cases of failure to observe time limits in the European patent grant procedure (see also chapter [III.D.2. "Further processing under Article 121 EPC"](#)) and thus in some cases has replaced re-establishment (for a synopsis of the changes see "Case Law of the Boards of Appeal", 6th edition 2010, VI.E.1, and OJ SE 4/2007).

The main requirements for a re-establishment of rights are that the requester has the right to file the request (see in this chapter [III.E.2.](#)), he was unable to observe a time limit within the meaning of [Art. 122\(1\) EPC](#) (which is not excluded under [Art. 122\(4\)](#) and [R. 136\(3\) EPC](#)) and this failure had the direct consequence of causing a loss of rights (chapter [III.E.3.](#)), the request was filed in time and in due form and the omitted act was made good within the time limit (chapter [III.E.4.](#)), and the substantive conditions were met, in particular all due care required by the circumstances had been taken (chapter [III.E.5.](#)).

2. Right to file request for re-establishment of rights

Under [Art. 122\(1\) EPC](#) re-establishment of rights may be granted to both the applicant and the proprietor of a European patent. Accordingly, it is a legal remedy that is, in general, not available to opponents.

2.1. Exception for opponent – time limit for filing statement of grounds of appeal

Opponents are not entitled to request re-establishment of rights in respect of the two-month time limit for filing an **appeal** under [Art. 108, first sentence, EPC](#) (see [T 210/89](#), OJ 1991, 433; see also [T 323/87](#), OJ 1989, 343; [T 128/87](#), OJ 1989, 406; [T 314/01](#); [T 2454/11](#); [T 1946/15](#)); nor in respect of the nine-month time limit under [Art. 99\(1\) EPC](#) for filing the **notice of opposition** and paying the appropriate fee ([T 702/89](#), OJ 1994, 472; [T 748/93](#); [T 2254/11](#)).

In [G 1/86](#) (OJ 1987, 447) the Enlarged Board of Appeal held, however, that an **opponent as appellante** might have his rights re-established under [Art. 122 EPC](#) if he had failed to observe the time limit for filing the statement of grounds of appeal under [Art. 108, third sentence, EPC](#) (established case law, see [T 335/06](#), [T 1545/16](#)). The reasons justifying the exclusion of opponents from re-establishment of rights in respect of the time limit for appeal – in particular the patent proprietor's interest in no longer being left uncertain as to whether an appeal had been lodged once this time limit had expired – could not be extended to the time limit for filing the statement of grounds of appeal, because this uncertainty no longer existed. The Enlarged Board applied the general legal principle recognised in the contracting states of the EPC that all parties to proceedings before a court must be accorded the same procedural rights, as a principle deriving from the general principle of equality before the law. Under this principle an opponent must not be

treated differently from the patent proprietor as that would result in unjustifiable discrimination against him.

In T 181/14, the appellant (opponent), having filed notice of appeal and a statement of grounds of appeal but failed to pay the appeal fee in due time, was seeking re-establishment of its rights in respect of the time limit for payment. The board saw no reason to depart from the settled case law that Art. 122(1) EPC was applicable only where an appellant-opponent had failed to observe the time limit for filing its statement of grounds of appeal. When it came to re-establishment of rights, there was good reason to treat such a failure to file the statement of grounds of appeal differently from late payment of the appeal fee. Appellants-opponents who failed to observe the time limit for filing the statement of grounds of appeal could have their rights re-established because there was an appeal having legal effects; that is to say, appeal proceedings had been validly initiated. By contrast, if the appeal fee was not paid on time, there was no appeal. It made no difference, the board held, that, in this case, the patent proprietor had replied to the statement of grounds of appeal.

2.2. Re-establishment only in cases of failure to observe a time limit for which it was for the applicant to observe

In J 3/80 (OJ 1980, 92) the Legal Board made it clear that if the **national industrial property office** concerned **failed to forward a European patent application** filed with that national office to the EPO **in time**, with the result that the application was deemed to be withdrawn (Art. 77(5) EPC 1973), the applicant could not claim restitution of rights, since the EPC provided only for restitution of rights where there had been a failure to observe a time limit which it was for the applicant to observe. See also J 1/12.

3. Non-observance of time limit directly causing a loss of right

3.1. The meaning of "time limit"

For re-establishment of rights to be possible, there must be a failure to meet a time limit vis-à-vis the EPO (Art. 122(1) EPC), i.e. a time limit given specifically to the applicant pursuant to the Convention or by an official of the EPO within which he must accomplish a certain act (consolidated cases J 11/91 and J 16/91, OJ 1994, 28; J 21/96). Not every "time limit", "time limitation" or "time restriction" under the EPC is also a time limit pursuant to Art. 122 EPC (J 10/01).

Time limits in the EPC have **two conceptual elements**: (1) a period of time determined in years, months or days, and (2) a relevant date, which serves as the starting date of the time limit, and from which the period of time is counted. Time restrictions imposed on applicants by the EPC, but not having these conceptual elements cannot be regarded as time limits for the purposes of Art. 122 EPC 1973 (J 18/04, OJ 2006, 560).

3.1.1 Requirement of pendency when filing divisional application is not a time limit

According to the established case law (see J 19/10) of the boards of appeal, R. 36(1) EPC (and R. 25(1) EPC 1973 in its version since 2002) sets a condition, not a time limit, for filing a divisional application to any pending earlier European application, namely that the earlier European patent application is pending. In procedural law, the fact that a conditional act can only be accomplished before a particular set of circumstances foreseen by legal provisions occurs (condition), is conceptually different from a set period of time imposed for doing an act (time limit) (J 24/03, OJ 2004, 544; J 3/04; see also J 10/01; J 18/04, OJ 2006, 560; G 1/09, OJ 2011, 336; J 19/10; J 10/12). R. 25(1) EPC 1973 in its version prior to 2002 also did not contain a time limit but identified a point in the grant procedure after which a divisional application could no longer be filed, namely the approval of the text according to R. 51(4) EPC 1973 (J 21/96, J 4/02).

3.1.2 Designation of States

In J 3/83 the Legal Board explained that the concept of a time limit within Art. 122 EPC 1973 involved a period of time of a certain duration. In the case of designation of states, there was no such period. States had to be designated at a particular time, see Art. 79(1) EPC 1973. With the EPC 2000 this is no longer an issue, as under the current Art. 79(1) EPC all contracting states party to the EPC at the time when the application is filed are deemed to be designated in the request for grant of a European patent.

3.1.3 "Time limitation" condition for requests for correction

In J 7/90 (OJ 1993, 133) the Legal Board found that the "time limitation" condition imposed under board of appeal case law, which required that, in general, a request for correction of the designation of a state or priority data had to be refused in the public interest if it was not made early enough to enable publication of a warning together with the European patent application, was not a "time limit" within the meaning of Art. 122(1) EPC 1973.

3.2. Time limits excluded from re-establishment under Article 122(4) EPC and Rule 136(3) EPC

Under Art. 122(4) EPC in conjunction with R. 136(3) EPC, re-establishment is ruled out in respect of time limits for which further processing is available under Art. 121 EPC, such as the time limits for paying the filing fee, search fee, designation fees and examination fee, and for the time limit for filing the request for examination, as well as any time limit set by the EPO (see also OJ SE 4/2007; for the situation under the EPC 1973, see J 11/86). See also III.E.1. in this chapter.

Re-establishment is also excluded in respect of the time limit for requesting re-establishment (R. 136(3) EPC; this was also the case under the EPC 1973, see T 900/90), but is possible for the time limit for requesting further processing (see Art. 121(4) EPC; this was also the case under the EPC 1973, see J 12/92; J ./87 (idem J 902/87), OJ 1988, 323; J 29/94, OJ 1998, 147).

In contrast to the situation under the EPC 1973, re-establishment in respect of the priority period (Art. 87(1) EPC) is possible under the EPC 2000. This change to the EPC has no implications for the interpretation of Art. 122(5) EPC 1973, which clearly rules out the time limit under Art. 87(1) EPC 1973 (see J 9/07). The case law which excluded the grace periods under R. 85a and R. 85b EPC 1973 from re-establishment is now obsolete as these provisions have been deleted. Issues concerning the exclusion of PCT time limits under Art. 122(5) EPC 1973 are no longer likely to arise since the coming into force of the EPC 2000; for a detailed summary of the case law (G 3/91, OJ 1993, 8; G 5/92 and G 6/92, OJ 1994, 22 and 25; G 5/93, OJ 1994, 447; J 1/03; T 227/97, OJ 1999, 495) see "Case Law of the Boards of Appeal", 5th ed. 2006, VI.E.3; for a short summary see "Case Law of the Boards of Appeal", 6th ed. 2010, VI.E.4

3.3. Time limits concerning the PCT proceedings

Art. 48(2)(a) PCT states that any contracting state shall, as far as that state is concerned, excuse, for reasons admitted under its national law, any delay in meeting any time limit (see also R. 82bis.2 PCT). Consequently, a Euro-PCT applicant who has not carried out a certain procedural act within the time limit prescribed in the PCT can take advantage of the relevant provisions of the EPC concerning re-establishment of rights in all cases where the direct European applicant too may invoke them if he fails to observe the relevant time limit (see G 3/91, OJ 1993, 8; G 5/93, OJ 1994, 447; J 13/16).

In J 13/16 the Legal Board held that it would be inconsistent with the well-established principle of equal treatment between direct European applicants and Euro-PCT applicants if Euro-PCT applicants could be re-established in respect of the period under R. 49ter.2(b)(i) PCT for filing a request for restoration of the right of priority when, for direct European applicants, re-establishment is ruled out in respect of the period for requesting re-establishment under Art. 122(4) and R. 136(3) EPC. Therefore, in proceedings before the EPO, re-establishment of rights under Art. 122 EPC is ruled out in respect of the period under R. 49ter.2(b)(i) PCT for filing a request for restoration of right of priority.

In J 6/79 the Legal Board held that restitutio in integrum was not excluded, so far as the time limit for presentation of the request for examination is concerned, in the case of an international application transmitted to the EPO.

In W 4/87 (OJ 1988, 425) the board decided that an application for restitutio in integrum could be submitted in cases where the statement of grounds supporting the protest under R. 40.2(c) PCT was submitted late, since Art. 122 EPC 1973 applied in conjunction with Art. 48(2) PCT.

In T 227/97 (OJ 1999, 495), the board held that the provisions of Art. 122 EPC 1973 were applicable to the time limit set by R. 13bis.4 PCT. For re-establishment in respect of the time limit, set under former R. 40.3 PCT, for the protest against the invitation to pay an additional search fee, see W 3/93 (OJ 1994, 931).

3.4. Loss of rights as a direct consequence by virtue of the EPC

Under Art. 122(1) EPC rights cannot be re-established unless they have previously been lost as a direct consequence of the non-observance of a time limit vis-à-vis the EPO.

In J 1/80 (OJ 1980, 289) certified copies of priority documents had not been filed within the 16-month period provided for in R. 38(3) EPC 1973. The Legal Board of Appeal found that, according to the Convention, there was a deficiency only if the priority documents had not been filed by the end of the period. It could only be said that there was a deficiency thereafter and the applicant should have been given an opportunity to remedy that deficiency within a further period (Art. 91(2), R. 41(1), 84 EPC 1973). There could only be a loss of rights if the applicant did not then take advantage of this opportunity.

In J 23/14 the Legal Board held that, notwithstanding the wording of Art. 86(1) EPC 2000 and R. 51 EPC (in the version in force until 31 December 2016), and for the sake of the protection of legitimate expectations of the users of the European patent system, a patent application was deemed to be withdrawn only upon expiry of the six-month grace period for paying the renewal fee with additional fee under R. 51(2) EPC, in accordance with the case law that prevailed before decision T 1402/13 of 31 May 2016. See also J 7/16.

In T 1403/16 the board found that one of the basic preconditions for applying Art. 122(1) EPC was not fulfilled in the case in hand, namely that non-compliance with the time limit lead directly to a loss of rights. In opposition proceedings, in the event of a failure to reply in due time to a communication from the opposition division, there is no loss of rights which occurs automatically by operation of law. The board held that re-establishment of rights was not available in the event of non-compliance with a time limit set in a communication under Art. 101(1) EPC. This conclusion equally applied to the time limit under R. 84(1) EPC.

4. Admissibility of requests for re-establishment of rights

4.1. Time limits for filing a request for re-establishment (Rule 136(1) EPC)

The time limits for filing a request for re-establishment are set out in R. 136(1) EPC (see also Art. 122(2) EPC 1973). In principle, a request must be filed within two months of removal of the cause of non-compliance and, at the latest, within one year after expiry of the unobserved time limit; R. 136(1), second sentence, EPC provides for two exceptions: a request for re-establishment in respect of the periods specified in Art. 87(1) EPC (priority) and Art. 112a(4) EPC (petition for review by the Enlarged Board of Appeal) must be filed within two months of expiry of the unobserved time limit. Hence the case law summarised in this chapter III.E.4.1.1 is not applicable to such cases, but the principles laid down in this chapter III.E.4.1.2 are likely to be transferable to the two-month period under R. 136(1), second sentence, EPC. Under R. 136(1), third sentence, EPC, the request for re-establishment of rights is not deemed to have been filed until the prescribed fee has been paid.

4.1.1 Two-month time limit from the removal of the cause of non-compliance

The one-year period is not an alternative to the two-month period; a request has to be filed within two months of the removal of the cause of non-compliance, and no request can be filed more than one year after expiry of the unobserved time limit (J.11/17).

The two-month time limit also applies if the time limits under Art. 102(4) and (5) EPC 1973 have been missed, even if no decision has yet been handed down concerning revocation (G.1/90, OJ 1991, 275). The omitted act must be completed within the same period. The fee for re-establishment of rights is also payable within the same time limit as that stipulated by Art. 122(2) EPC 1973 for the filing of an application for re-establishment (J.18/03).

a) Removal of the cause of non-compliance

In most cases the "cause of non-compliance with the time limit" involves some error in the carrying-out of the party's intention to comply with the time limit (J.29/86, OJ 1988, 84; regarding other possible causes of non-compliance see also in this chapter III.E.4.2. "Inability to observe a time limit").

The removal of the cause of non-compliance occurs on the date on which the person responsible for the application (the patent applicant or his professional representative) is made aware of the fact that a time limit has not been observed (see T.191/82, OJ 1985, 189; T.287/84, OJ 1985, 333; J.29/86, OJ 1988, 84; J.27/88, J.27/90, OJ 1993, 422).

(i) Date the error ought to have been noticed is decisive

The decisive factor is the time when the person concerned ought to have noticed the error if he had taken all due care (established case law, see e.g. J.27/88, J.5/94, T.315/90, T.840/94, J.24/97, J.27/01, T.1026/06, T.493/08, J.1/13, T.1588/15).

In T.261/07, relying on T.949/94 of 24 March 1995, the patentee argued that it had only become aware of an oversight once it was established that the decision of the opposition division had indeed been received. The board however took the view that the cause of non-compliance was removed as soon as the patentee noticed via a file inspection "that something was amiss" (see J.9/86, J.17/89, T.191/82).

In J.21/10 the Legal Board held that, in cases of a request for re-establishment of rights, the existence of some factor having a causal nexus with the failure to observe the deadline in question was a procedural requirement and, as such, a prerequisite for any decision on the merits, and therefore had to be verified when examining admissibility. The same applied where such causal factor was denied, as in the case in hand, on legal grounds because the error leading to the failure to perform a procedural act subject to a deadline ought to have been discovered by a person exercising due care. Where the cause asserted in a request for re-establishment of rights consisted of an error but could be deemed to have been removed before expiry of the non-observed deadline because the

error was attributable to a breach of the duty of care imputable to a responsible party, such removal resulted in the inadmissibility of the request.

In T 1486/11 the appeal fee was not paid with the notice of appeal; the authorisation to debit the appeal fee from the representative's account was filed only with the statement of grounds of appeal. The board rejected the appellant's argument that the two-month time limit started with the reception of the communication noting the loss of rights. The start of the two-month period was the moment at which the appellant – exercising the due care stipulated by Art. 122(1) EPC – was no longer prevented from performing the payment of the appeal fee. The board held that had all due care been exercised in the case in hand, the payment of the appeal fee could not have been made without its belatedness being noticed.

In T 198/16 the board stated that the current practice of applying the due-care requirement in the context of removal of the cause of non-compliance with a period within the meaning of R. 136(1) EPC could well be seen as extending the meaning of the due-care requirement in a way that enlarges the scope of the essentially substantive criterion by adding to it the function of an extraordinary preliminary admissibility/applicability hurdle. The board stated that this approach to the "removal" criterion, which could not be based on the letter of the law, was therefore doubtful. The board left open the question as to the approach to be followed.

(ii) Removal not necessarily date of receipt of R. 112(1) EPC communication

In J 27/90 (OJ 1993, 422), the Legal Board stated that the removal of the cause of non-compliance was a matter of fact which had to be determined in the individual circumstances of each case (see also J 7/82, OJ 1982, 391; J 16/93; T 900/90; T 832/99; J 21/10; T 387/11; T 1588/15). In the case of an error of facts the removal occurs on the date on which any person responsible for a patent application should have discovered the error made. This is not necessarily the date of receipt of the communication under R. 112(1) EPC (R. 69(1) EPC 1973) (see T 315/90, J 21/10). If, however, such a communication has duly been served, it may, in the absence of circumstances to the contrary, be assumed that the removal was effected by this communication (see also J 7/82, OJ 1982, 391; J 29/86, OJ 1988, 84; T 900/90; J 27/90; J 16/93; T 428/98, OJ 2001, 494; T 832/99; J 11/03).

In J 29/86 (OJ 1988, 84) the Legal Board assumed a later date in view of the special circumstances of the case. In T 900/90 the board emphasised that in all cases in which the receipt of the notification under R. 69(1) EPC 1973 could be regarded as the removal of the cause of non-compliance it had to be clearly established that neither the representative nor the applicant was aware that the application had been deemed to be withdrawn before the receipt of that notification. Other cases in which the boards agreed to a date different from that of the receipt of the communication under R. 69(1) EPC 1973 include J 16/93, J 22/97, J 7/99, J 19/04, T 24/04 and T 170/04.

In J 27/01 the Legal Board decided that persons absent from their residence for a lengthy period are obliged to ensure that legally important documents are forwarded to them so

that they can note their contents within a time limit appropriate to the technology available in the particular case. The obstacle to completion of the omitted act was therefore overcome on the date on which the individual applicant could have noted the content of the EPO communication under R. 69(1) EPC 1973 if he had had it duly forwarded to him.

In J 7/16 the Legal Board held that the relevant cause of non-compliance with the two-month time limit of R. 136(1) EPC lay in the fact that the former representative was not in a position to act properly in the proceedings due to his state of health. Thus, the date of removal of the cause of non-compliance could only be the date on which the applicant had inspected the file and realised that its former representative had not acted properly.

(iii) Time limit not observed due to an error of law

In T 493/08 the board considered that, where a time limit was not observed due to an error of law, the removal of the cause of non-compliance with that time limit occurs on the date on which the applicant actually became aware of the error of law. The board noted that, in an apparent contrast to this view, in T 1026/06 the date when the applicant should have made investigations was considered to be critical, even though the applicant apparently failed to undertake such investigations as a consequence of what was considered to be an error of law.

b) Responsible person

In several decisions the boards considered the question of the responsible person who could or should have detected the omission.

In T 812/04 the board held that the person to be taken into account for the purposes of establishing the point in time when the appellant was no longer prevented from carrying out an unperformed act was the duly appointed representative.

In T 32/04 the board considered that in the absence of a duly registered transfer of the application, the person responsible for the purpose of the EPO remained the applicant or his representative. Hence an alleged assignment of the application to a third party in the absence of such a registration was "res inter alios acta", i.e. outside the ambit of the legal relationship between the applicant and the EPO.

In T 191/82 (OJ 1985, 189) the board held that in a case in which non-compliance with a time limit was discovered by an employee of a representative, the cause of non-compliance, i.e. failure to appreciate that the time limit had not been complied with, could not be considered to have been removed until the representative concerned had himself been made aware of the facts, since it had to be his responsibility to decide whether an application for re-establishment of rights should be made and, if it was to be made, to determine the grounds and supporting facts to be presented to the EPO (see also J 7/82, OJ 1982, 391; J 9/86; T 381/93 of 12 August 1994).

In J 1/13 the Legal Board considered that within a law or patent attorney's firm the relevant person was the representative and not his or her employee (T 191/82); however, it was

not up to the representative to extend the time period of R. 136(1) EPC at will by keeping him- or herself intentionally uninformed (see T. 1985/11, where the board found it irrelevant that the representative had not read the letter when acknowledging its receipt). In addition, although most cases regarding the removal of the cause of non-compliance deal with the point in time when a representative discovered (or ought to have discovered) the error, the Legal Board stated it was recognised that the person whose knowledge was relevant might also be the applicant himself (see J 27/88; J 27/90, OJ, 1993, 422; T 840/94, OJ 1996, 680; T. 32/04).

In T. 840/94 (OJ 1996, 680) the board held that if a party instructed the authorised representative not to pass on any further communication from the EPO, it could not then rely on the fact that information notified to the representative and necessary for continuing the proceedings was lacking. See also T. 1908/09.

In T. 1588/15 the finding of the board differed from the line taken by J. 1/13. The board saw no good reasons for the representative being uninformed and not taking immediate action in the knowledge (or merely belief) of being uninformed. It held that an applicant had a specific duty to positively inform its representative about an intended abandonment of an application. The board held that even when a representative was explicitly exempted from looking after a fee payment, at least he could be expected to be informed at all times about the applicant's intention as to whether or not the application was to be maintained. It decided that receipt of the noting of loss of rights by the representative triggered the time limit of two months foreseen in R. 136(1) EPC.

In J. 27/88 the Legal Board held that the responsible person in the case at issue was neither the appellant nor the European representative but the **US patent attorney** who was the authorised agent of the appellant and was duly empowered to take all necessary measures. The date of removal of the cause of non-compliance was the date on which the US patent attorney became aware of the omission.

In J. 27/90 (OJ 1993, 422) the applicant, a US company, properly appointed a European professional representative. For the payment of renewal fees it used a computerised service firm, a so-called "**renewal fee payment agency**". The Legal Board held that in the absence of circumstances to the contrary a communication under R. 69(1) EPC 1973 to the professional representative removed the cause of non-compliance. This also applied when parties instructed the (European) professional representatives via their (national) patent attorney. The appointment of an independent service firm for the payment of renewal fees did not constitute circumstances to the contrary.

In T. 1908/09 the board observed that if there was more than one applicant the co-applicants had to name a common representative (Art. 133(4) and R. 151(1) EPC). If they failed to do so and one of the applicants was obliged to appoint a professional representative under Art. 133(2) EPC, this representative was deemed to be the common representative. In the case at issue, with the notification of the loss of rights (R. 126(2) EPC) to their common representative (Rule 130(3) EPC) both applicants were made aware of the fact that the time limit had expired.

In J.16/93 the Legal Board held that in the event of exceptional circumstances the cause of non-compliance with a time limit may persist even though the applicant's representatives were duly informed of the loss of rights resulting therefrom. This is the case when a combination of circumstances, which cannot be blamed on either the applicant or its representatives, and which arose in particular from the fact that they had both moved to new addresses and from the illness of a director of the company applying for a European patent, made it impossible for the professional representatives to contact the applicant in due time. This combination of circumstances prevented the representatives from performing the omitted act – i.e. paying the renewal fee for the third year – since they had not received any advance. A representative whose authorisation is silent in this respect and who has not received any funds for this purpose is not expected to advance moneys on behalf of his client out of his own pocket.

c) Legal fiction of deemed notification

In J.7/82 (OJ 1982, 391) the Legal Board held that in a case in which the receipt of a notification was relevant to the question of when the cause of non-compliance with a time limit had been removed, the significant date was the **date of actual receipt** by the applicant. In J.22/92 the Legal Board emphasised that the removal of the cause of non-compliance was a matter of fact and therefore had to be established beyond any reasonable doubt. This was not the case where under R. 78(2) EPC 1973 (in the version in force until 31 December 1998) the notification was only deemed to have been made when despatch had taken place and when the receipt of the letter could not be proved. Thus, the Legal Board considered the date on which the responsible representative of the appellant first became aware of the missed time limit to be the date on which the removal of the cause of non-compliance with the time limit had occurred (see T.191/82, OJ 1985, 189).

In T.428/98 (OJ 2001, 485) it was stated that where a communication from the EPO notified an applicant that he had missed a time limit, the cause of failure to complete the omitted act within the meaning of Art. 122(2), first sentence, EPC 1973 was as a rule removed on the date when the applicant actually received the communication, provided that failure to complete the act was purely due to previous unawareness that the act had not been completed. The legal fiction of deemed notification under R. 78(3) EPC 1973 (in the version in force until 31 December 1998, now R. 126(2) EPC) had no effect on the date of removal of the cause of non-compliance, even if this worked against the applicant because the actual date of receipt of the communication preceded the date calculated according to R. 78(3) EPC 1973 (see also T.1063/03).

In J.11/03, however, the Legal Board agreed with the appellant that the removal of the cause of non-compliance had not taken place before deemed notification in accordance with R. 78(2) EPC 1973, since there was no indication that the communication concerning loss of rights had already been received before that date (see also J.10/99).

4.1.2 One-year time limit following the expiry of the unobserved time limit

A request for re-establishment of rights is only admissible within the year immediately following the expiry of the unobserved time limit (R. 136(1), first sentence, EPC; Art. 122(2), third sentence, EPC 1973). Under R. 136(1), third sentence, EPC, the request for re-establishment of rights is not deemed to have been filed until the prescribed fee has been paid.

In J. 16/86 the Legal Board ruled that a request for re-establishment filed over a year after expiry of the non-observed time limit was inadmissible whatever the reasons for its late submission (see also J. 2/87, OJ 1988, 330; J. 34/92). In J. 12/98 the Legal Board held that the words "within the year immediately following the expiry of the unobserved time limit" in Art. 122(2), third sentence, EPC 1973 could not be construed to mean "within one year of the applicant having knowledge of the unobserved time limit". This interpretation would make the starting point for calculating the two-month period referred to in Art. 122(2), first and second sentence, EPC 1973 the same as that for calculating the one-year time limit referred to in Art. 122(2), third sentence, EPC 1973, which would thus deprive Art. 122(2), third sentence, EPC 1973 of any function.

In J. 6/90 (OJ 1993, 714) the statement of grounds was not submitted until shortly after the end of the period of one year stipulated in Art. 122(2), first sentence, EPC 1973 but within the period of two months specified in Art. 122(2) EPC 1973, which in the case at issue expired later. The Legal Board of Appeal pointed out that the one-year period served to provide legal certainty. If this period had elapsed, any party could confidently assume that a patent application or patent which had been rendered invalid by the non-observance of a time limit would not be revived. However, if on inspecting the file a third party noted that an application for re-establishment had been made within the one-year time limit, he would have adequate notice. Therefore, to make a valid request for re-establishment of rights within the year immediately following the expiry of the unobserved time limit, it was sufficient if the files contained a clearly documented statement of intent from which any third party could infer that the applicant was endeavouring to maintain the patent application. See also T. 270/91, T. 493/95, J. 6/98.

In J. 6/08 the fee for re-establishment of rights was not paid until after the one-year period had expired. The Legal Board referred to the case law (J. 16/86, J. 34/92, J. 26/95, OJ 1999, 668; J. 6/98, J. 35/03), under which the one-year period fulfils the function of a deadline whose purpose is to ensure legal certainty for the public and the completion of proceedings before the EPO within a sensible and appropriate period of time. In view of the particular circumstances of the case, however, the Legal Board considered that re-establishment was not ruled out since the fact that the conditions for re-establishment had not been met in due time – i.e. payment of the fee for re-establishment within the one-year period – was largely to be laid at the door of the Office itself. Where the Office has failed to meet its obligation to provide clarifications or advice, a request for re-establishment filed within the period of one year can, when the principle of the protection of legitimate expectations is taken into account, be treated as valid even though the fee for re-establishment was not paid until after the period of one year had expired. In the case in hand, the requester's right to be treated as though the non-observance had not occurred took precedence over

third parties' interest in legal certainty, which the one-year period in Art. 122(2), third sentence, EPC 1973 is intended to ensure.

4.2. Inability to observe a time limit

The word "unable" in Art. 122(1) EPC implies an objective fact or obstacle preventing the required action, e.g. a wrong date inadvertently being entered into a monitoring system (T 413/91, see also T 1054/03, T 1026/06, T 493/08, T 1962/08, T 836/09 of 17 February 2010, T 592/11, T 578/14). Unawareness of the expiry of the time limit must be distinguished from a deliberate act on the part of the applicant (representative) which is, for example, attributable to tactical considerations (see in this chapter III.E.4.2.1). Persistent financial difficulties incurred by the persons concerned through no fault of their own have also been recognised as such an obstacle (see in this chapter III.E.4.2.2).

4.2.1 Deliberate act missing a time limit; tactical considerations

In T 413/91 the appellant's reasons for not filing any statement of grounds were that he had expected an agreement with the proprietor, which, however, did not come about. The board stated that such a reason did not justify re-establishment of rights, pointing out that it was an extraordinary means of judicial remedy. A party who had deliberately chosen not to file a statement of grounds for the appeal could not achieve an appellate review through the back door of a request for re-establishment. See also T 2331/14, T 578/14.

In J 2/02 the Legal Board stated that Art. 122 EPC 1973 did not imply for an applicant any right to have the final effect of an intentional action cancelled. Holding back the payment of the fee for a reason other than being unable to comply with the legal provisions – particularly as a matter of strategy in the circumstances and for tactical considerations – is outside the scope of Art. 122 EPC 1973, and deprives the applicant of the possibility to invoke this article.

In T 1026/06 the board distinguished its case from the situation in T 413/91 and J 2/02, in which the boards had not recognised the act of intentionally allowing a time limit to expire as an obstacle. These two cases differed from the current case, in so far as the parties concerned had deliberately refrained, for motives extraneous to the proceedings, from performing the required actions, whereas the appellant in the current case had been unable to file an appeal because of a mistake of law.

In J 11/09 the representative omitted to make payment of the third renewal fee because he was unwilling to advance the renewal fee on account of unpaid invoices. Accordingly, the renewal fee remained unpaid not inadvertently, but on purpose. Given that payment had been refused on purpose, it was not possible to say that a one-off error had occurred in an otherwise well functioning system in the professional representative's office.

In T 250/89 (OJ 1992, 355) the opponent claimed that he could not have filed the statement of grounds in due time because he would have needed to refer to documents withheld by a third party. The board confirmed the line taken in earlier decisions (see G 1/86, OJ 1987, 447; T 287/84, OJ 1985, 333). When determining whether all due care

required by the circumstances had been taken, the word "all" was important and failure to observe a time limit had to be the result of an oversight, not a **culpable error**. The board rejected the application for re-establishment of rights on the ground that the opponent had had sufficient material at his disposal to be able to draw up the statement of grounds in due time in accordance with Art. 108, third sentence, EPC 1973 and R. 64 EPC 1973.

4.2.2 Financial difficulties

In J.22/88 (OJ 1990, 244) the Legal Board held that financial difficulties experienced through no fault of one's own and leading to failure to observe time limits for the payment of fees could constitute grounds for granting re-establishment of rights. A prerequisite for granting the request was that the applicant should have tried with all due care to obtain financial support. The board also made it clear that for "all due care" to be proven, it had, of course, to be clear that the financial difficulties were genuine and were due to circumstances beyond the reasonable control of the applicant (see also J.31/89, T.822/93). In J.9/89 the Legal Board noted that there was no evidence before the board of any effort having been made by or on behalf of the appellant to find financial support during the critical period.

In J.11/98 the applicant requested re-establishment in respect of the time limit for paying the renewal fee, on the grounds that at the relevant times the appellant had been seeking protection under Chapter 11 of US bankruptcy law. The Legal Board confirmed the examining division's decision refusing the request. The applicant had not shown that at the relevant time it had been so lacking in funds as to be absolutely unable to make the payment (see also J.26/95, OJ 1999, 668, in chapter III.D.3.6. "Interruption of proceedings because of insolvency").

In J.6/14 the Legal Board held that it was clear from the events described and from all the evidence adduced that the appellant, an individual applicant who had been faced with serious health problems, had been in a very difficult financial situation for several years. He had proven the genuine existence of his difficulties to justify his failure to pay the renewal fee plus additional fee. The board consequently found that he had satisfied the requirements of Art. 122 EPC.

4.3. Making good the omitted act

The omitted act must be performed within two months from removal of the cause of non-compliance (R. 136(2) EPC; Art. 122(2), second sentence, EPC 1973).

According to T.167/97 (OJ 1999, 488), the requirement of Art. 122(2), second sentence, EPC 1973 implies that the completed act likewise must meet the requirements of the EPC - i.e. in the case at issue that the statement of grounds of appeal be admissible for the purpose of Art. 108, last sentence, EPC 1973. Where the statement of grounds filed with the request for re-establishment is insufficient for the appeal to be declared admissible, the request for re-establishment must itself be declared inadmissible.

4.4. Substantiation of the request for re-establishment

Under R. 136(2) EPC (Art. 122(3) EPC 1973) the request for re-establishment has to state the grounds on which it is based, and set out the facts on which it relies. The boards consider this requirement in relation either to the admissibility of the request or to the submissions that must be taken into account when analysing the merits of the request (see in this chapter III.E.5.1. "Submissions to be taken into account").

It is a condition for the admissibility of a request for re-establishment of rights that a duly substantiated statement of grounds be submitted within the time limit for filing the request (J 15/10, see also J 19/05). A request for re-establishment of rights complies with the requirement of R. 136(2), first sentence, EPC if a conclusive case is made, setting out and substantiating the grounds and facts on which the request relies (J 15/10; T 13/82, OJ 1983, 411). Thereby it is ascertained that the factual basis for the requested decision is not altered after the expiry of the time limit for the request (J 15/10, J 19/05, T 585/08, T 479/10). Therefore, the request for re-establishment of rights must set forth the precise cause of non-compliance with the time limit concerned, specify at what time and under which circumstances the cause occurred and was removed, and present the core facts making it possible to consider whether all due care required by the circumstances had been taken in order to comply with the time limit concerned (J 15/10, T 479/10, see also J 18/98). A request for re-establishment of rights which relies on general statements only and contains no specific facts does not satisfy the requirement for a duly substantiated request under R. 136(2), first sentence, EPC (J 19/05, T 1465/08, J 15/10). The mere payment of the fee does not meet the requirements of R. 136(2) EPC (T 1465/08).

In J 19/05 the Legal Board held that the request for re-establishment of rights was not sufficiently substantiated. The request was couched in purely general terms and contained no concrete facts identifying a reason for non-observance, the chronological sequence of events or the causes underlying the action or inaction of the persons involved concerning non-payment of a renewal fee.

In T 13/82 (OJ 1983, 411) the board held that a conclusive case must be made, setting out and substantiating the facts, for the probability - at least - that a wrongful act or omission on the part of an assistant was the cause of the failure to meet the time limit: the mere possibility was not sufficient to exculpate the applicant.

In T 287/84 (OJ 1985, 333) the board decided that an application for re-establishment of rights could be considered as complying with the requirement that it had to set out the facts on which it relied (Art. 122(3) EPC 1973) if the initially filed application in writing, which did not contain such facts, could be read together with a further document, which contained them and was filed before the expiry of the period within which the application had to be filed.

In T 324/90 (OJ 1993, 33) the board held that **evidence** proving the facts set out in the application could be filed after expiry of the two-month time limit laid down in Art. 122(2) EPC 1973. Only the grounds and a statement of the facts had to be filed within the two-month period. It was not necessary to indicate in an application for re-

establishment the means (e.g. medical certificates, sworn statements and the like) by which the facts relied on would be proved. Such evidence could be submitted after the time limit, if so required (see also T 667/92 of 10 March 1994, T 261/07, T 1764/08).

In J 8/95 the appellants argued that the German-language version of Art. 122(3) EPC 1973 did not stipulate that the statement of grounds for an application for re-establishment of rights had to be filed within the time limit laid down in Art. 122(2) EPC 1973. The Legal Board decided that Art. 177(1) EPC 1973 assumed a uniform legislative intent, which could only be identified on the basis of all three texts of the EPC 1973 (see also T 324/90, OJ 1993, 33).

4.5. Number of re-establishment fees due where more than one time limit is missed

In J 26/95 (OJ 1999, 668) the Legal Board held that where time limits expiring independently of one another have been missed by the applicant, each resulting in the application being deemed withdrawn, a request for re-establishment has to be filed in respect of each unobserved time limit. In accordance with Art. 122(3), second sentence, EPC 1973, a fee for re-establishment has to be paid in respect of each request. It is irrelevant whether the requests for re-establishment are filed in the same letter or in different letters and whether they are based on the same or different grounds.

In T 2017/12 (OJ 2014, A76) the appellant had missed the time limits for filing the appeal and the statement of grounds of appeal. It had paid the fee for re-establishment of rights twice, once for each missed time limit. The board refused the request for refund of one of the fees. There were no explicit provisions in the EPC dealing with the case in which several time limits had been missed. This was an indication that each time limit had to be considered separately and that, in the absence of any hint to the contrary, for the number of fees to be paid the number of missed time limits was decisive. In line with decision J 26/95, the board considered that the corresponding time limits expired independently of one another, notwithstanding the fact that they were triggered by the same event. In addition, the failure to meet either of these time limits individually results in a loss of the right to appeal. Failure to comply with either one of the two time limits would cause the appeal to be rejected as inadmissible, provided that the appeal fee was paid. Consequently, two fees for re-establishment were indeed due.

In T 1823/16 despite missing both the time limit for filing the notice and the time limit for filing the statement of grounds of appeal, the applicant only paid one re-establishment fee. However, the board held that both periods were triggered by the same event, i.e. the notification of the decision, and the hindrance to complying with them was based on one unitary factual basis. The board stated that re-establishment in respect of both periods had to be examined together and that the result would inevitably be the same. In this situation, the board considered one re-establishment fee to be sufficient. See also T 315/87 of 14 February 1989; T 832/99.

4.6. Correction of deficiencies in the request for re-establishment

If the request for re-establishment is deficient, the principle of legitimate expectation may oblige the EPO to draw attention to the deficiency if it is readily identifiable by the EPO and the party can still correct it within the absolute time limit under R. 136(1) EPC (Art. 122(2) EPC 1973) – see chapter III.A.3. "Obligation to draw attention to easily remediable deficiencies"; see e.g. T 14/89, OJ 1990, 432; J 13/90, OJ 1994, 456; J 2/94; see also T 585/08). If a warning can be expected but is not issued to the applicant within the relevant time limit, the EPO must set a period within which the applicant can correct the deficiency and perform the procedural act in due time (J 13/90, OJ 1994, 456). However, this obligation to set a new time limit does not apply to absolute time limits (such as the one year time limit under R. 136(1) EPC, Art. 122(2), third sentence, EPC 1973), which by definition are non-extendable (J 34/92).

5. Merit of request for re-establishment of rights

Under Art. 122(1) EPC, for re-establishment to be allowed the requester must show that he missed the time limit despite taking all the due care required by the circumstances.

5.1. Submissions to be taken into account

In J 5/94 it was decided that the grounds on which a request for re-establishment of rights was based could be elaborated on, provided this completed the submission that had been filed in due time and thus did not alter the basis on which the original request for re-establishment had been filed (see also J 19/05, T 585/08, J 15/10, T 592/11).

In T 324/90 (OJ 1993, 33) the board held that evidence proving the facts set out in the application could be filed after expiry of the two-month time limit laid down in Art. 122(2) EPC 1973. Only the grounds and a statement of the facts had to be filed within the two-month period. Likewise in T 261/07 the board allowed the patentee, who had initially given an account of all the relevant facts to the best of its knowledge, to subsequently adduce further clarifying evidence supporting the case.

In J 5/11 the Legal Board held that the applicant for re-establishment of rights who failed to substantiate his request adequately in the first instance proceedings, in particular after being expressly invited to do so, could not normally make good that failure by submitting additional evidence with the grounds of appeal. While it was true that the primary function of the boards was to give a judicial decision on the correctness of a first-instance decision of the Office (see J 18/98), that does not necessarily mean that new evidence submitted for the first time on appeal was automatically inadmissible. A rigid rule excluding all new evidence on appeal might lead to injustice and unfairness in some cases and would not be compatible with the principles of procedural law generally recognised in the contracting states (cf. Art. 125 EPC).

In J 18/98 the examining division had refused the applicant's application for restitutio in integrum. An appeal was filed against that decision. From the established case law on Art. 122(3) EPC 1973 the Legal Board concluded that facts submitted only with the

statement of grounds of appeal could not be taken into account, since the function of appeal proceedings was only to give a judicial decision upon the correctness of an earlier decision of the department of first instance (T 34/90, OJ 1992, 454).

In T 257/07 the board stated that it had been only one year after the removal of the cause for non-compliance that the appellant qualified certain statements previously made and added new facts that previously went unmentioned, in particular regarding the system for managing files and deadlines. This omission could not be subsequently remedied by the addition of further facts, as case law would only allow the appellant to "submit further evidence which clarifies the facts which were set out in the application for re-establishment" (J 2/86, OJ 1987, 362; T 261/07; see also T 742/11, T 2274/11, J 6/14).

In J 16/11 the Legal Board pointed out that the boards of appeal had consistently ruled that facts pleaded for the first time during the appeal proceedings should in principle not be taken into consideration (see J 18/98, T 257/07). In the case at issue, the board had, by its communication, informed the appellant that the evidence currently on file did not seem convincing enough and, exceptionally, gave the appellant an opportunity to improve its case at this late stage of the proceedings. However, the representative, instead of filing evidence, produced a "sworn statement" written by the appellant himself. Given that the new submission did not complement the already existing facts, but presented a new situation, these facts and evidence had to be disregarded.

5.2. General comments on due care

In numerous decisions the boards have ruled on whether "all due care required by the circumstances" had been taken. In considering this issue, the circumstances of each case must be looked at as a whole (T 287/84, OJ 1985, 333; J 17/16). The obligation to exercise due care must be considered in the light of the situation as it stood before the time limit expired. In other words, the steps the party took to comply with the time limit are to be assessed solely on the basis of the circumstances applying at that time (see e.g. T 667/92 of 10 March 1994, T 381/93 of 12 August 1994, T 743/05, J 1/07, T 1465/07, J 14/16, T 578/14). The requirements of re-establishment, and in particular of due care, **must not be interpreted in an excessive manner** that unreasonably restricts access to the board and thus prevents the board from deciding on the merits of the case (T 1465/07).

In T 30/90 the board held that the allowability of applications for re-establishment hinged on whether the conduct of the appellant and/or his representative, during the entire period after the relevant decision, was indicative of "all due care required by the circumstances". In this connection, "all due care" meant all appropriate care, i.e. as much as would be taken under the circumstances by the **average reasonably competent patentee/representative** (see also J 11/09). The board in T 1289/10 held that as a general rule, a representative acting reasonably would at least take account of known problems and apply known solutions to avoid them.

For cases where the cause of non-compliance with a time limit involves some error in the carrying out of the party's intention to comply with the time limit, the case law has established the criterion that due care is considered to have been taken if non-compliance

with the time limit results either from **exceptional circumstances** (see in this chapter [III.E.5.3.](#)) or from an **isolated mistake within a normally satisfactory monitoring system** (see in this chapter [III.E.5.4.](#)).

The party requesting re-establishment of rights bears the burden of making the case and proving that the requirements are met ([J 5/80](#), OJ 1981, 343; [J 18/98](#); [T 592/11](#); [J 3/13](#); [J 14/16](#); [T 2016/16](#); [T 2331/14](#); [T 2406/16](#)).

5.3. Exceptional circumstances

5.3.1 Organisational restructuring

In [T 14/89](#) (OJ 1990, 432), due to internal reorganisation and removals, the [R. 58\(5\) EPC 1973](#) communication did not reach the responsible department of the patent proprietor. The board found that this fact, which led to non-observance of the time limit, constituted an isolated mistake such as could not be ruled out despite careful company organisation.

5.3.2 Change to or withdrawal of representation

In [J 13/90](#) (OJ 1994, 456) the applicant, a small firm employing about 15 people, was in takeover negotiations with another company. In the course of the negotiations a change of attorney took place. As a result of the unforeseeable breakdown in negotiations plus the fact that action had already been taken to replace the previous attorney, payment of the fourth-year renewal fee had been overlooked. This isolated mistake in a special situation was, in the Legal Board's opinion, excusable.

In [J 11/06](#) the appellant submitted that, due to the removal and later change of the US representative, there was some confusion caused by this reorganisation. However, the Legal Board noted that no details at all had been given as to why this affected the payment of the renewal fee. Likewise in [J 4/07](#) the Legal Board did not recognise the presence of exceptional circumstances where the responsibility of the law firm for the payment of the renewal fee ceased to exist roughly one month before the end of the time limit. The board considered a period of about one month to be largely sufficient for effecting payment, even in the wake of an attorney's move from one firm to another. The representative's submissions were also inadequate.

In [T 1201/10](#) the board was convinced that there were exceptional circumstances prior to the due date which could not reasonably have been foreseen by the appellant (applicant). In the period leading up to the due date the appellant was unrepresented, as the firm representing the firm had withdrawn from representation and with this withdrawal, the sub-authorisation for the person who eventually became the new representative also ceased. These circumstances, which were predominantly outside the appellant's control, directly resulted in the appellant being unable to observe the time limit for payment of the renewal fee.

5.3.3 Complex transfers of company ownership

In T 469/93 the board found that even if all due care required by the circumstances were to be exercised, the occasional error during complex transfers of company ownership could not entirely be avoided. The error in this case being an exceptional one, the causes of which were remedied, the appellant's request for re-establishment of rights was allowed.

5.3.4 Monitoring or computer systems matters

In J 21/92 and J 24/92 the applicant and his representative (both Americans) had each changed their fee-monitoring system, independently of each other. The situation was further complicated by the fact that the representative was no longer responsible for paying the appellant's renewal fees.

In T 369/91 (OJ 1993, 561) the relevant circumstances involved moving from a manual to a computerised time-limit monitoring system. Here "due care" meant ensuring that during the changeover period the representatives handling the various kinds of cases were told which system – manual or computerised – had generated the reminder in question. Only then could they reliably know if and when a further reminder was likely.

In T 489/04 the board did not recognise the installation of a new computer system as an extraordinary circumstance. On the contrary, it considered the resulting burden on employees as foreseeable and containable, had appropriate measures been taken in good time. In J 14/16 the Legal Board was not convinced that a computer-system breakdown and the ensuing substantial data loss and organisational disruption, qualified as exceptional circumstances.

5.3.5 Sudden serious illness and severe psychological stress

In T 525/91 of 25 March 1992 the board found it credible that the sudden and unforeseen diagnosis of illness and the announcement of the urgent need for a major operation caused the appellant's representative not only great physical weakness but also severe psychological stress. In those circumstances, and in view of the short period between diagnosis and hospital admission (two working days) and the proven absence of the secretary on one of those working days, it had to be acknowledged that even on the days between diagnosis and admission the representative had been in an exceptional situation which impeded him from devoting the necessary attention to the imminent time limit and from taking the precautions needed to ensure that it was observed. In the circumstances the board deemed the conditions for re-establishment to have been met. See also T 558/02 of 9 August 2002.

In T 387/11 the representative put forward a credible case that he had failed to observe the time limit for filing the statement of grounds because of severe psychological stress caused by a sudden and unexpected bereavement (see also T 970/12).

In J 17/16 the Legal Board was satisfied that the appellant's executive manager had been suffering from unusually severe psychological stress owing to the demands on her time

and the emotional distress associated with caring for her seriously ill father-in-law and with her mother's death (more than six months before expiry of the time limit at issue) and so, despite having taken due care, had not been in a position to observe the time limit for claiming priority.

However, in this context, the case law also requires an **effective system of staff substitution in case of absence** (see in this chapter III.E.5.4.5 "All due care in making provisions for staff absences").

5.4. Isolated mistake within a satisfactory system for monitoring time limits or for processing mail

An isolated mistake by an assistant that happens in a normally satisfactory system is excusable; for cases in which such a mistake occurred and the request for re-establishment was granted see, for example, T 612/90 of 20 February 1992, T 281/96, T 1001/95, T 72/99, T 1024/02, T 462/02 of 11 February 2003, T 165/04, T 221/04 of 5 May 2004, T 836/09 of 17 February 2010, T 1355/09, T 1171/13, T 1269/13 of 4 February 2015, T 1815/15, T 2023/14. The appellant or his representative must plausibly show that a normally effective system for monitoring time limits prescribed by the EPC was established at the relevant time in the office in question (J 2/86, J 3/86, OJ 1987, 362; J 23/92; T 428/98, OJ 2001, 494; J 13/07; J 3/12; J 4/12).

5.4.1 "Isolated mistake" by representative

The case law on "an isolated mistake in an otherwise satisfactory system" cannot be relied on to ignore a failure to act by the professional representative himself, unless there are special circumstances (T 1095/06).

In T 592/11 the board held that an isolated mistake by a professional representative in performing his check on the time limit once he has received the file to deal with was – as a rule at least – inexcusable (see also R 18/13 with reference to the travaux préparatoires).

In T 198/16 the representative did not notice that payment of the appeal fee had not been made. Different from an isolated mistake that an assistant may make, the board found that such a mistake was not excusable in a representative.

See also chapter III.E.5.5.4.e) "Ultimate responsibility of the representative".

5.4.2 A system operating efficiently for many years as evidence that it is normally satisfactory

The fact that a system had operated efficiently for many years has been put forward as evidence in many decisions that it was normally satisfactory (see J 31/90, J 32/90, T 309/88 of 28 February 1990, T 30/90, J 7/15). In T 130/83 of 8 May 1984 the board stated that if a proper reminder system was instituted by a representative in order to guard against the consequences of oversight in a busy office, this was itself strong prima facie

evidence of the taking of care by the representative (see also T 869/90 of 15 March 1991, T 715/91, T 111/92 of 3 August 1992).

However, in T 1465/07, the board disagreed with the view that a monitoring system of time limits can be held to have been normally satisfactory because it worked without previous problems even though doubts existed. Evidence that such a monitoring system operated efficiently for many years will weigh in favour of a finding of a normally satisfactory character but will be counterbalanced by evidence that main features of such a satisfactory character, such as an independent cross-check, are missing. In that case a satisfactory character will be excluded (see also T 1962/08, J 14/16, J 9/16).

In T 1764/08 the board considered that the mere allegation that the case at issue was the first instance of unintended failure in filing an appeal does not show that all due care was normally observed and does not prove that a satisfactory system was in place in the representative's office.

5.4.3 Cause of mistake remains unclear

In T 529/09 the board allowed the request for re-establishment of rights. The board accepted that the representative's firm had a well-functioning and reliable system in place for processing incoming mail and monitoring time limits. The fact that in the case at issue the communication was apparently misplaced (since it did not reach the representative in charge and the time limit set in it was not entered in the computer system of the firm) had to be regarded as an isolated mistake in an otherwise satisfactory system. While the **precise circumstances of the mistake could not be elucidated any further**, this was not a sufficient reason for denying that all due care required by the circumstances had been observed in the present case. See also T 580/06, T 1355/09.

In J 7/15 the Legal Board could not determine with any degree of certitude what caused the non-payment of the renewal fee. The applicant had used the services of an external company for paying the renewal fees, a system which had worked flawlessly for more than 15 years, but failed in the case in hand. In the circumstances the board followed the reasoning of T 529/09 and gave the benefit of the doubt to the appellant, granting the request for re-establishment of rights.

5.4.4 Requirement for a cross-check

a) Cross-check should be independent in a large firm

In J 9/86 the Legal Board was of the opinion that in a large firm where a large number of dates had to be monitored at any given time, it was normally to be expected that at least one effective cross-check was built into the system (T 223/88, J 26/92, T 808/03 of 12 February 2004, T 1149/11).

In T 828/94 the board held that given the size of the representative's office, a proper monitoring system should have contained some form of cross-check, for example that someone would be responsible for checking independently of the representative and the

assistant whether any notice of appeal had been filed or was being prepared, and for raising the alarm if no data concerning such a notice – or a decision not to appeal – had been entered into the computer near the due date. In T.257/07 the board emphasised that an independent cross-check must necessarily include either another person or an automated system alerting another person (see also J.9/16).

In T.686/97 of 12 May 1998 the board held that the provision of a "redundant" or "failsafe system" was an essential component of a normally satisfactory reminder system in corporate patent departments. The failure to provide administrative reminders to the responsible patent attorneys of the time limits applying to the filing of statements of grounds of appeal was incompatible with the operation of a normally satisfactory system.

In T.428/98 (OJ 2001, 494) the board stressed the exceptional nature of the ruling in J.31/90 and T.166/87 of 16 May 1988 (which concerned cross check mechanisms in small offices; see chapter III.E.5.4.4.b) below) and said that according to the appellant's submission his representatives' office was staffed by two patent agents, two lawyers, a partly qualified patent lawyer ("Patentassessor") and a law graduate, i.e. six people dealing in their main professional capacity with cases relating to intellectual property rights. Such cases being commonly subject to time limits, with immediate negative legal consequences for the client if they were missed, time-limit monitoring in such an office was a major undertaking in terms of both significance and scale. The board therefore deemed a cross-checking mechanism to be essential. See also T.1962/08, T.1726/08 (a firm with 40 attorneys at four locations is not small), T.479/10.

In T.283/01 of 3 September 2002 the board pointed out that the applicant's system was not properly designed to handle the appeal in question, involving partial responsibility of an external representative. The deviation from the normal way of filing and prosecuting an appeal had been the applicant's deliberate decision in the particular circumstances of the case. Taking all due care required by the circumstances of the case should have implied installing an individual control mechanism, offering a realistic possibility of detecting and correcting the failure to note and calculate the time limit for filing the statement of grounds.

T.261/07 concerned a case in which an intermediary delivery service received and distributed mail within the patentee's premises. The board held that there had been no effective cross-check. Such a failsafe system would have required a regular comparison between the mail room database and the database of the Central Intellectual Property Department in order to discover discrepancies.

In T.1962/08 the representative argued before the board that an independent cross-check in the system for monitoring time limits was not obligatory. The board confirmed what had been said in T.428/98, namely that the requirements to be met by a system for monitoring time limits in general included making sure that monitoring duties were not left to one person alone, but that the system incorporated an overall checking mechanism which was independent of the person responsible for monitoring time limits. This checking mechanism could be provided within a single system for monitoring time limits. If the checking mechanism involved a second system for monitoring time limits, the latter had to be independent of the former ("redundant"). See also T.1465/07 in which the board held

that the additional burden of an independent cross-check was not disproportionate for a large firm, where the cross-check can be organised more economically than in a smaller one. In T 1149/11 the board held that the duty of care concerning supervision of the assistant required that an effective cross-check was implemented, at least in a firm where a large number of time limits have to be monitored.

In T 836/09 of 17 February 2010 there was an isolated mistake by an assistant within an otherwise satisfactory system of **processing outbound mail**. The board held that in such a situation, irrespective of whether or not a large firm was concerned, the duty of having at least one effective cross check built into such a system was dispensed with. This applied even to important letters such as those whose improper treatment may entail the loss of a right or means of redress. The reason was that, in contrast to the monitoring of time limits, the risk of an error in the processing of outbound mail was low because such processing generally involved the execution of straightforward steps (with reference to T 178/07; see also T 1171/13 and T 2023/14 in relation to the sending of a fax by an assistant).

Concerning the need for an independent cross-checking mechanism and the form it should take, see also T 1172/00, T 785/01 of 30 September 2003, T 36/97, T 622/01, J 1/07, J 13/07.

b) Control mechanisms in small firms

In relation to small firms and offices, the boards have at times dispensed with the requirement for a cross-check (see e.g. J 31/90, T 166/87 of 16 May 1988, J 11/03, T 1355/09). As to the representative's own responsibility for performing an additional check when receiving the file to deal with, see T 1561/05, T 592/11, R 18/13 as summarised in this chapter III.E.5.4.e) "Ultimate responsibility of the representative".

In T 1355/09 the board held that no control mechanism had to be in place because the firm involved was very small and it had not overlooked a time limit, but rather the mistake had been made **during payment** of the appeal fee, i.e. whilst performing the act needed to observe the time limit. In these circumstances, no control mechanism was required, the likelihood of error being comparatively low. Insisting on one would in practice reduce the time limit: to be effective, any checks would have to be made after payment, but also within the time limit.

In T 166/87 the board held that in a relatively small office, normally working in an efficient and personal manner, employing normally reliable personnel, a cross-check mechanism, especially in relation to one-off payments such as an appeal fee, could fairly be regarded as superfluous.

In J 31/90 the Legal Board took the view that the system used for observing the time limit, while far from perfect, could be considered in the special circumstances of the case to be normally satisfactory. The system combined the giving of specific oral instructions to the secretary on a case by case basis, with notations on the file to indicate which documents should be filed with the EPO. The board emphasised, however, that the system could only be so considered because of the particular conditions in which the representative and her

secretary worked. Over a period of ten years, working together alone in a small office they had built up an excellent working relationship and mutual trust.

In J 11/03 the Legal Board confirmed that the organisational requirements for a generally efficient time-limit monitoring system were subject to variation on account of the firm's size and nature and the number of time limits that had to be monitored. A cross-checking mechanism may in certain circumstances be regarded as superfluous in a small firm employing normally reliable personnel and normally working in an efficient and personal manner, but not in a large company with its own patent department (T 166/87). The appellant was a very small firm with a commercial division essentially comprising only the commercial manager and the book-keeper. In the circumstances additional checking that payments had actually been made might be deemed superfluous without impairing the functioning of the system.

5.4.5 All due care in making provisions for staff absences

In T 324/90 (OJ 1993, 33) the board held that in a large firm, where a considerable number of deadlines had to be monitored at any given time, it had normally to be expected that at least **an effective system of staff substitution** in the case of illness and for absences in general was in operation in order to ensure that official documents such as decisions by the EPO, which started periods within which procedural steps had to be carried out, were properly complied with.

In T 1401/05 of 20 September 2006 the board followed decisions T 324/90, J 41/92 and J 5/94 and deemed it necessary that reasonable provisions for absence due to the illness of a person who is in charge of monitoring time limits are made, unless in the particular circumstances of a case imposing such provisions would have to be considered as an undue burden. Only where any necessary provisions have been taken will it be possible to deem the monitoring system of time limits to be "normally satisfactory" (see T 324/90), and thus for considering illness to be an excuse for not meeting a deadline. Regarding the need for a back-up in the specific case, the board considered it of relevance that the number of time-limits to be complied with was small (the appellant filed only a few patent applications per year). Under these circumstances, the board accepted that it was not necessary for meeting the standard of due care to make specific provisions for the unforeseeable two-day illness of the sole employee in charge of monitoring of time limits; more specifically, no substitute for him had to be appointed.

In T 122/91 the board held that due care had not been exercised if the head of an office went off on a journey without informing his deputy of matters requiring immediate attention because a time limit was involved.

In J 41/92 (OJ 1995, 93) the Legal Board found that if a professional representative ran a one-person office, appropriate provisions needed to be made so that, in the case of an absence through illness, the observance of time limits could be ensured with the help of other persons. If there was no substitute or assistant at the representative's office, co-operation with colleagues or with a professional association could, for example, be sought for this purpose. See also T 387/11, in which the representative, who ran a one-person

office, had taken precautions to ensure that another representative could cover for him if he were absent owing to illness, so that deadlines would normally be met. In taking such organisational measures, he had met the requisite standard of "all due care".

In T 677/02 the board decided that a large enterprise had not exercised all due care required by the circumstances if, when the representative actually responsible was on short time working, **no deputy** had been designated to cross-check the input of time limits into the system for monitoring time limits.

5.4.6 Second mistake by responsible person

In T 447/00 and T 448/00 the board was not convinced that the approach taken by the department of first instance, that the admitted existence of four mistakes in respect of the same procedural act could not, by definition, be qualified as "isolated", took sufficient account of the issues to be considered in connection with Art. 122(1)EPC 1973. The board stated that the case law of the boards of appeal referring to an "isolated mistake within a normally satisfactory system" did not normally require that only a "single" error had occurred in relation to a case for which re-establishment of rights was sought. It was not excluded that, in certain circumstances, a chain of errors could well be qualified as "isolated".

In T 808/03 of 12 February 2004 the board held that the condition of "an isolated mistake by a usually reliable person" was not met in the present case, as the responsible person had made a second mistake when processing the reminder of a system for monitoring time limits. See also T 1149/11, T 1325/15.

In T 1325/15 the appellant argued that since a system with a cross-check would identify any single mistake, the term "an isolated mistake" had to be understood as encompassing more than one mistake. In the case in hand, the failure to file the notice of appeal in time had been caused by a combination of isolated mistakes and the appellant argued the requirement of all due care was therefore complied with. The board rejected the appellant's proposition; having a satisfactory system in place does not relieve a representative of his duty to take all due care required by the circumstances when performing procedural steps forming part of that system.

In T 1815/15 the first employee (an attorney's clerk) made a mistake by mentioning the wrong paragraph of R. 82 EPC in the heading of the accompanying letter to the EPO, overlooking the surcharge required by R. 82(3) EPC. It appeared to the board that the firm of attorneys representing the patent proprietor was equipped with a monitoring system which would normally detect this kind of mistake. Therefore the mistake by the second employee when comparing the communication from the EPO with the actions performed by the first employee may be ascribed to an isolated error of the second employee, which the board ascribed to a personal and isolated error in a system which normally should prevent such deficiency.

5.4.7 Deficiencies in computerised systems

In T 473/07 the board held that the representative's practice of checking only the dates entered by his records clerks while relying on the resulting time limits calculated by the computerised system did not rule out errors. Modern real-world offices comprised computerised systems but **program deficiencies** were also a well-known part of that reality and could not be absolutely ruled out. Therefore, relying exclusively on a time limit generated by a computer program and refraining even from a plausibility check did not meet the all-due-care requirement.

In T 902/05 the board held that whether the systems used in a particular firm to ensure that procedural acts were completed in due time fulfilled the requirement of the taking of "all due care" depended upon the individual circumstances of each case (see also T 1663/12). Where an applicant relied solely on electronic means to record and monitor time limits, the regular making of back-up copies, or some equivalent form of securing data, would generally be an elementary precaution.

For a case in which the computerised system was deemed satisfactory, see T 1269/13 of 4 February 2015.

5.5. Persons required to exercise due care; requirements regarding due care

Primarily it is up to the applicant (patent proprietor) to show due care. The applicant has to accept the actions of his representative, including the actions of the attorney's assistants and employees, on his behalf (J 5/13 with reference to J 5/80, OJ 1981, 343; J 1/07). The "due-care" obligation is assessed differently, depending on whether an applicant, his representative or an assistant is involved.

5.5.1 Due care on the part of the applicant

a) General principles

In J 3/93 the Legal Board ruled that the duty to exercise all due care stipulated by Art. 122 EPC 1973 applied first and foremost to the applicant and then, by virtue of the delegation implicit in his appointment, to the professional representative authorised to represent the applicant before the EPO. The fact that the representative had acted correctly did not exempt his client from suffering the consequences of his own mistakes, or even negligence (see also J 16/93, J 17/03, J 1/07, J 1/13).

In J 7/16 the Legal Board held that, in principle, negligence on the part of a professional representative would prevent a finding that all due care had been taken. However, in the case in hand the procedural behaviour of the former representative was not due to negligence, but to his state of health. For reasons beyond his control, the former representative had not been capable of running the case in a proper way although he had taken every effort to fulfil his duties. This finding prevented the applicant from suffering from the inappropriate procedural conduct of its former representative as it had no reason to suspect that he could not be relied on.

In T 381/93 of 12 August 1994 the board observed that the applicant was entitled to rely on his duly authorised professional representative to deal with the EPO. However, the board held that to the extent that he was on notice that a time limit had not been met and/or that instructions were required in order to meet it, an applicant had a duty to take all due care in the circumstances to meet the time limit.

In J 22/92 the Legal Board held that the applicant, who had appointed US attorneys for the purpose of the PCT application, was entitled to believe that a copy of a communication had been sent to the US attorneys as well. The board referred to the principle of proportionality and stated that the loss of the patent application as a result of what may be considered at most a minor procedural irregularity would otherwise appear an extremely severe result. The board held that, in the case in point, the due care to be considered was in fact not that which was expected from a professional representative but that which was expected from an applicant unaware of the proceedings.

In T 2120/14 the board found the examining division's finding of lack of due care by the applicant to be justified in the circumstances, in which the observance of a time limit depended entirely on a single person who, in view of his impending extensive workload and travel, did not take the necessary precautions to ensure that the time limit could be met in case he was prevented from giving timely instructions. The board held that it was clear from the travaux préparatoires to Art. 122 EPC that the possibility of excusing the negligence of an employee who normally carries out his work in a satisfactory manner was not intended to be extended to the applicant or its professional representative (see R 18/13). In the case in hand it was an executive of the company who had failed to exercise all due care, who the board found was acting on behalf of the appellant.

In T 1954/13 the appellant (applicant) issued its US representative with an order to "stop work". It appeared to the board that the appellant could not expect that the "stop work" order would have no consequence at all, i.e. that work continued as usual. Yet, there was nothing on file which would suggest that measures had been taken by the appellant in order to somehow compensate for the issuance of the "stop work" order. If instructions had been given by the appellant to the effect that no information should be sent to it, the board found this would be an additional aspect for a finding that the appellant itself had not acted with all due care required by the circumstances.

b) Unrepresented individual applicant

In J 5/94 the Legal Board made allowance for the fact that the appellant was an individual applicant who had not appointed a representative and who was neither familiar with the requirements of the EPC nor in possession of an established office organisation attuned to ensuring that procedural deadlines were met. The board pointed out that in such a case the **same standards** of care as those required of a professional representative or the patent department of a large firm **could not be applied**. See also T 1201/10.

At the same time, an individual applicant was also obliged to exercise due care in the course of the procedure. Accordingly, when not using the services of a professional representative, he must himself take all possible steps to ensure that he can do, properly

and punctually, whatever is required during the grant procedure to prevent any loss of rights. He is not entitled either to invoke **general ignorance of the law** or to leave undone anything which may reasonably be expected of him with a view to observing time limits (J 5/94, J 27/01, J 2/02, J 6/07, T 493/08, T 555/08, J 8/09, J 7/12, J 17/16).

In T 1444/15 the board held that an applicant who employed the services of a payment service provider for monitoring the time limits for renewal fees could not be considered to be an unrepresented individual.

In J 23/87 the Legal Board ruled that exercising due care under Art. 122 EPC 1973 meant that an applicant, when deciding whether to pursue his application, could not rely entirely on information provided voluntarily by PCT authorities and the EPO at various stages of the procedure, and instead had to ensure that he was normally able to comply with the basic PCT and EPC 1973 time limits even if he received this information late or not at all.

In T 601/93 the appellant was not aware of the need to file a statement of grounds within the time limit. The board held that any **legal error** which might have led the appellant to believe that the requirement was not to be observed would exclude the application of due care, considering the unequivocal provision in Art. 108 EPC 1973.

With regard to re-establishment in respect of disciplinary proceedings and the European Qualifying Examination, the board ruled in D 6/82 (OJ 1983, 337) that a mistake of law, particularly one regarding the provisions on notification and calculation of time limits, did not, as a general rule, constitute grounds for re-establishment of rights. The obligation to take "all due care required by the circumstances" meant that persons engaged in proceedings before or involving the EPO had to acquaint themselves with the relevant procedural rules.

c) Choosing a sufficiently competent representative

In J 23/87 the applicant failed to furnish a translation of an international application within the prescribed time limit. The appellant, a small Japanese firm with limited financial resources, submitted that a Japanese patent attorney without special knowledge of PCT matters had been consulted, and that this attorney had misinformed the appellant. The Legal Board held that for an applicant who lacked the necessary knowledge of the PCT and the EPC procedures, it was obviously necessary to consult a competent professional representative in order to cope with the procedures involved in such a patent application. Thus, the Legal Board was not satisfied that the appellant, being completely ignorant about the special procedure to be observed in this case, had chosen a sufficiently competent professional representative and let him properly advise the appellant on the matters involved having had an opportunity to study the details concerning the present application.

5.5.2 Due care on the part of the professional representative

When an applicant is represented by a professional representative, a request for restitution in integrum cannot be acceded to unless the representative himself can show that he has

taken all due care required of an applicant or proprietor by Art. 122(1) EPC (J 5/80, OJ 1981, 343). In other words, what Art. 122 EPC requires from an applicant also applies to an applicant's representative (T 1149/11).

The extensive case law on a professional representative's duty of care in **dealing with assistants** is dealt with below in this chapter III.E.5.5.4.

a) Communication between professional representatives and their clients, the EPO or other representatives

In T 112/89 the board stated that, regarding the due care required by Art. 122(1) EPC 1973, the obligations of the applicant and those of his representative were clearly distinct and that the due care to be exercised by the representative might depend on the relationship which existed between him and his client. The board noted that it was clear that both the representative and the applicant had to exercise all due care in order to observe all the time limits during patent granting procedures. In the case at issue, the board was not convinced that the duty of the representative was fully discharged when he notified his client that a time limit was to be observed and was satisfied that the client had received the notification. On the contrary, when a representative has been instructed to lodge an appeal and has not received in due time from his client the necessary additional instructions needed to discharge his duty, he should take all necessary measures to try to obtain from his client these instructions.

In T 1401/05 of 20 September 2006 the board stated that the communication between the representative and his client (applicant) had worked efficiently. The representative was therefore entitled to rely on his client's awareness of the expiry of the time limit. The representative was not required to issue a further reminder to meet his obligations of due care.

In T 1289/10 the board held that if a European representative provided a contact email address for all kinds of mail, including mail that may require immediate action by the representative, it was **essential to perform a mail check** at least at the end of each business day. Given the known problem that legitimate mail from time to time was wrongly marked as a possible threat it was evident that this check must include the quarantine area of the email system.

In T 1101/14 the board considered that the **signing of documents** was an act that required particular care on the representative's part, especially when the signature related to the last legal remedy against an adverse decision. A representative who had mistakenly signed a statement of grounds of appeal having most of its pages missing had, in the absence of special circumstances which could justify the representative's mistake, to be considered not to have taken all due care required by the circumstances.

In J 15/14 the Legal Board held that in a proper workflow between two representative's offices where one had the function to give instructions to the other, a confirmation from the other representative that a particular instruction had been received and followed was

required; if no confirmation was received a follow-up e-mail should be sent in order to safeguard the rights of the client.

b) Payment of renewal fees

In J 11/06 the Legal Board held that according to the established jurisprudence of the Legal Board following decision J 27/90, even if renewal fees were paid by someone else, the appointed professional representative remained responsible in the procedure before the EPO, and had to **take the necessary steps to ensure payment** if intended (likewise J 1/07, J 4/07, J 12/10, J 5/13).

In J 4/07 the European representative had every reason to believe that it was the appellant's intention to continue prosecution of the application in suit. Under these circumstances the Legal Board did not consider that it was sufficient for the European representative only to send a single reminder more than four months prior to the expiry of the critical term.

In J 12/10 the Legal Board confirmed that it was established jurisprudence of the boards of appeal that a representative, once appointed – even if the renewal fees were paid by someone else – remained otherwise fully responsible for the application, and that this included a continuing obligation to monitor time limits, send reminders to the applicant, etc.

In J 5/13 the Legal Board considered that the extent of the duties of the representative depended on the agreement between the representative and his client. An appointed representative whose authorisation was silent concerning the payment of the renewal fees and who had not received any funds for this purpose was **not expected to pay the fee by advancing money** on behalf of the applicant out of his own pocket (J 16/93, J 19/04, J 1/07). Instead, he retained only a "**secondary responsibility**" (see J 1/07). Thus the representative's responsibility, above all, consists in finding out what his client really intends to do with respect to payment of the renewal fees (see J 16/93). The scope of duties of a representative who retains only such a "secondary responsibility" to inform and advise his client with respect to the due date for renewal fees cannot be the same as it would be if he were responsible for the payment itself. In the case in question, the representative had fulfilled his responsibility by sending repeated letters to the responsible person within the appellant's company.

In J 19/04 the board held that the representative's conduct has to be assessed according to the extent to which he has done all that is necessary to ascertain the **client's true wishes** (see also J 1/07). It is not the number of (unanswered) reminders that is decisive, but when those reminders were sent in relation to the date on which the time limit expired, how the reminders were formulated and what the representative's duties were in relation to the client.

In T 942/12 the board held that if a European representative was **expressly instructed** that he was not required to monitor the payment of renewal fees, the duty of due care did

not involve that he nevertheless monitored the payment. It could not be expected that the European representative monitors renewal fee payments at his own expense.

In T 629/15, the board distinguished the facts underlying it from T 942/12, as no express instruction to not monitor the payment of fees was given. In these circumstances, the board decided that the European representative remained responsible for ensuring the payment, despite the fact that the US applicant used a US representative as well as a service firm for the payment of renewal fees.

In T 338/98 the appellant was first represented by professional representative A, but later asked him to transfer all files to a new representative B. One European patent application failed to be transmitted. Although the representatives were aware that the renewal fee was due for this application, they did not reach clear agreement about paying it, with the result that the fee was not paid and the application was deemed to be withdrawn. The board held that in these circumstances it did not appear appropriate formally to delimit the individual responsibilities of each of the representatives during a transfer of cases requiring, by its very nature, close co-operation between the persons involved and naturally leading to overlapping responsibilities. The fact that in these circumstances the representatives had been unable to reach agreement about the way to proceed and that the appellant had not been informed of the outstanding renewal fee and of the disappearance of the file in question was not an indication that all due care required by the circumstances had been taken at that moment.

c) Ignorance of or erroneous interpretation of a provision of the EPC

(i) Error of law or erroneous interpretation cannot be excused

In J 3/88 the Legal Board noted that account should be taken of the fact that under Art. 134(1) EPC 1973 the contracting states had in principle confined representation of applicants before the EPO to "professional representatives" who, by virtue of their qualification should guarantee the best possible representation. The Legal Board stated that it followed that a representative could not relieve himself of responsibility for carrying out tasks which, by reason of his qualification, fell upon him personally, such as, for example, the interpretation of laws and treaties. If he delegated such tasks to an employee and if the latter made an error in the course of that work which resulted in the failure to observe a time limit, the representative could not claim that he had taken all due care required by the circumstances (see also J 33/90).

In J 31/89 the Legal Board confirmed that erroneous interpretation of the EPC owing to a mistake of law on the part of the duly authorised representative with regard to the rules for calculating time limits (in the case in point, regarding the late payment of a renewal fee together with the additional fee) could not be excused. The appellant and the representative failed to determine correctly the last date for valid payment of the renewal fee (see J 42/89, T 853/90, T 493/95, T 881/98, T 578/14).

In T 516/91 the board considered that by mistakenly believing that an extension of the time limits set by Art. 108 EPC 1973 was possible, the representative had failed to exercise due care (see also T 248/91, T 853/90, T 316/13).

According to T 316/13, a European patent attorney is expected to know the EPC provisions concerning the legal remedies available in the event of failure to observe time limits, even if he has never been faced with the problem before, without waiting for the board of appeal to tell him exactly what he needs to do.

(ii) Exceptions to the rule that an error of law or erroneous interpretation cannot be excused

In T 624/96 the board expressed doubts about the nature of the original mistake, which concerned calculation of the time limit for filing the statement of grounds of appeal. This was possibly a "mistake of law" caused by ignorance or misinterpretation of the provisions of the EPC, as in e.g. J 31/89 or T 853/90. The board found that in the circumstances of the case at issue, however, the agent had not made a "mistake of law" of this kind. The agent cited an earlier appeal in which he had represented the same applicant, showing that he indeed had some familiarity with the appeals procedure. He also submitted programmes of training courses, at which he had given talks on European patents and EPO proceedings. It could be therefore be ruled out that a legal error in calculating the period for lodging the statement of grounds of appeal might have arisen from his ignorance of the EPC.

In J 28/92 the Legal Board held that the misinterpretation of a provision of the EPC by a representative was not without basis or unreasonable and considered that there was no basis for penalising the representative for having arrived at a **not unreasonable interpretation** of a rule of the EPC, which subsequently turned out to be wrong. The representative's interpretation of a legal provision of the EPC was not the result of, and did not lead to, a failure to exercise all due care required by the circumstances. In T 493/08 the board shared the view expressed in J 28/92 and stated that there might be exceptions to the rule that an error of law could not be excused, which, however, could be acknowledged only under rigorous criteria.

In J 13/13 the Legal Board confirmed that an error of law could be excused if rigorous criteria were met, namely where there were genuine doubts and differences of opinion as to how a provision was to be interpreted. Such doubts and differences of opinion could be considered legitimate only if, after scrupulous attempts to clarify the matter, including by reference to the boards' case law, the right interpretation remained objectively unclear and the view later found to be erroneous was reasonable.

d) Requesting and acting on information from the EPO

In T 460/95 of 16 July 1996 the representative requested an extension of the time limit, although, in his professional capacity, he should have known that time limits under Art. 108 EPC 1973 could not be extended. The board noted that representatives were expected to be acquainted with the provisions of the EPC regarding time limits, and that the representatives in question had not been as vigilant as the situation demanded. In this

specific case, however, the representative had taken the precaution of contacting the Registry of the Boards of Appeal beforehand, and had received information from that body which had led him to take action prejudicial to his interests. The board held that appellants should not suffer injury merely because they had relied on **information received from the EPO** which later proved to be mistaken or likely to have been misunderstood.

In T 881/98 the appellant's professional representative had written to the Registry of the boards of appeal requesting a two-month extension to a time limit, without giving reasons or indicating that the time limit in question was for submitting the statement of grounds of appeal. He added that if not notified to the contrary he would assume his request was allowed. The board refused the request for re-establishment. The Registry had not fallen short of legitimate expectations, as in this case (in contrast to T 460/95) the appellant had not been misled to his detriment by wrong information from the Registry but had himself made the mistake of thinking that the time limit could be extended.

In T 733/98 the board informed the appellants that the statement setting out the grounds of appeal did not comply with Art. 108, third sentence, EPC 1973. The appellants requested re-establishment in respect of the time limit for filing the statement of grounds, arguing that they had relied on Legal Advice No. 15/84 of the EPO, which had still been in force when they had received the communication under R. 51(4) EPC 1973. The board held that the appellants had misinterpreted the Legal Advice in question, having failed to realise that the procedure for handling main and auxiliary requests which it described no longer applied once amended R. 51 EPC 1973 entered into force. The board decided that the requirement of all due care required by the circumstances was not met in this case.

In T 744/11 the statement setting out the grounds of appeal was received in electronic form three minutes after expiry of the four-month time limit. The representative argued that his office was based in Cambridge and that, since the clocks in the United Kingdom were one hour behind Central European Time (CET), he had sent the statement of grounds within the time limit. The board could not accept this argument for the simple reason that the relevant time for the purpose of the law was the time at the EPO (i.e. the time at Munich or The Hague) and not the time in the United Kingdom. However, the board considered the appellant's request allowable, in particular because the appellant had shown that the non-observance of the time limit was not caused by lack of due care but rather by a justifiable human error on the part of the representative.

e) Starting work on a case close to the expiry of the time limit

In J 16/92 the Legal Board made it clear that anyone getting himself into a situation where he could not be sure of being able to complete the omitted act ran the risk of his request for further processing being ruled inadmissible for failure to complete the omitted act in good time. In the case in hand the representative had not started working on the file until four days before expiry of the time limit for further processing and hence had discovered too late that he was unable to find the first communication to which he was to respond. See also J 7/12 (where a payment order was transmitted late in the afternoon of the last day of the grace period for paying a renewal fee plus additional fee).

f) Designation of receiving offices

In J 1/03 the Legal Board emphasised the paramount importance of the designation of receiving Offices and the difficulty or even impossibility, in many cases, of correcting wrong or missing designations. Consequently, the benchmark for what "all due care" meant in those cases, was very high. Likewise the check of the content of the international application on the basis of the "Notification of Receipt of Record Copy" issued by the International Bureau had to be made very carefully.

g) Abandonment of application

In T 1022/14 the board observed that abandonment of an application was a final action with serious consequences if misapplied. Thus for a decision to close a file and to abandon an application the utmost care had to be taken to establish whether the client had without any doubt issued instructions to that effect. The decision to abandon an application had to be taken by the representative himself, on the basis of his own observations and knowledge. This responsibility could not be delegated to employees, as decisions of this kind required the special knowledge of the representative for which he had to assume personal responsibility as a professional.

5.5.3 Due care on the part of a non-authorised representative

In determining whether all due care has been taken, the acts of all those persons the appellant has asked to act on its behalf must be considered, which also applies to non-authorised representatives instructed by the appellant (T 2274/11 with reference to J 4/07).

In J 25/96 the Legal Board held that where a US applicant availed himself of the services of a US patent attorney for matters which in relation to the EPO fell within the applicant's responsibility, the **US patent attorney** had to be regarded as the agent of the applicant. Thus, to meet the "all due care" requirement, the US patent attorney had to show he had taken the due care required of an applicant (see also J 3/88, T 1401/05 of 20 September 2006).

In J 4/07 the Legal Board pointed out that a non-European representative can be held responsible for meeting the obligations of any representative whose duty it is to care for his client's interests, irrespective of whether such representative is entitled to represent before the EPO or any other patent office (see J 25/96). The monitoring of specific time limits that were set expressly does not depend on knowledge of EPC law. Thus a non-European representative must also establish a reliable monitoring system for such time limits. Furthermore, any representative, whether European or non-European, moving from one law firm to another must take provisions upon entry in that firm that those filed that he carries over are integrated into a time limit monitoring system.

In J 3/08 the Legal Board held that according to the established jurisprudence, if an agent was appointed, the agent had also to observe all due care and if he did not act accordingly this was imputed to the applicant. In the case at issue, it was clear that the agent, by not

acting as instructed, had not properly handled the case. According to the Legal Board, if **fraud by an agent** were to be accepted as a reason for re-establishment of rights, by derogation from the general principle that an agent's behaviour was imputed to the applicant, the evidence presented must be so conclusive as to convince the board that a fraud took place as opposed to just unprofessional behaviour.

In T 742/11 the board held that the actions of an agent, who acted as an intermediary between the appellant and the professional representative, must be imputed to the party he is acting for, and the same level of care is expected from the agent as from a professional representative, or at least as from the party itself. Indeed, requiring a certain level of care from a professional representative and a party using his services would become utterly pointless if an intermediary acting between the party and the professional representative were not required to show the same level of care.

In T 1954/13 after the applicant (appellant) issued the US attorney with an order to "stop work", communication between the appellant and the US attorney was "reduced to a minimum". In the absence of evidence that the appellant had explicitly instructed the US attorney not to pass on any information about the status of the application to the appellant, the board could not establish that, by remaining inactive with respect to the application in suit, albeit having received relevant information from the European representative, the US attorney had complied with the requirement of "all due care". Although the appellant asserted an email had been sent by the US attorney to inform the applicant about the final deadline for filing an appeal shortly before the date both the US attorney and European representative considered to be the last date for filing an appeal, the mere sending of a single e-mail to the applicant without seeking confirmation of receipt or a follow-up enquiry, did not, in the board's view, meet the standard of all due care required by the circumstances (see also T 2274/11, J 15/14, J 19/04).

5.5.4 Due care in dealing with assistants

a) Introduction

According to the case law of the boards of appeal, where an assistant has been entrusted with carrying out routine tasks, such as typing dictated documents, posting letters and parcels and noting time limits, the same rigorous standard of care is not expected as is demanded of an applicant or his professional representative (J 5/80, OJ 1981, 343; see also J 33/90, J 26/92, T 43/96 of 5 July 1996, T 221/04 of 5 May 2004, T 1465/07, T 1663/12).

J 5/80 (OJ 1981, 343) is the key ruling in this regard. It established that a request for re-establishment of rights can be acceded to in the event of a culpable error on the part of the assistant, if the professional representative is able to show that he has **chosen** for the work a suitable person **properly instructed in the tasks to be performed**, and that he has himself exercise reasonable supervision over the work (see also T 191/82, OJ 1985, 189; T 105/85; T 110/85 of 10 September 1987; T 11/87 of 14 April 1988; T 176/91 of 8 April 1991; T 949/94 of 24 March 1995; T 221/04 of 5 May 2004; T 1149/11; T 1171/13).

The Legal Board further stated in J.5/80 that a representative cannot relieve himself of responsibility for carrying out tasks which, by reason of his qualification, fall upon him personally, such as, for example, the interpretation of laws and treaties. If a representative delegates such tasks to an employee and if the latter makes an error in the course of that work which results in the failure to observe a time limit, the representative cannot establish that he took all due care required by the circumstances (see also J.33/90 and T.715/91).

More recent decisions stress that responsibility in every respect passes to the representative as soon as he is presented with the file for processing, and that to that extent he is not justified in relying on an assistant's calculation of a time limit (see in this chapter III.E.5.5.4 e) "Ultimate responsibility of the representative"). For a case where an unrepresented individual applicant entrusted a third person with the payment of renewal fees and other administrative tasks, see T.555/08.

Regarding the **burden of proof** in the form of an adequately detailed statement in connection with the duty of care in the selection, instruction and supervision of assistants, see J.18/98.

b) Selection, instruction and supervision

It is incumbent upon the representative to choose for the work a suitable person, properly instructed in the tasks to be performed, and to exercise reasonable supervision over the work (J.5/80, OJ 1981, 343; J.16/82, OJ 1983, 262; J.26/92; T.2016/16). An "assistant" within the meaning of J.5/80 (OJ EPO 1981, 343) includes a **substitute replacing an assistant** who is on leave, ill or absent for some other reason. The same standard of care must be exercised as regards the choice, instruction and supervision of the substitute as of the assistant himself (J.16/82, OJ 1983, 262). New assistants must be supervised on a regular basis for a period of at least some months (see J.3/88, T.715/91).

The case law cited above applies equally to a **patent attorney residing in the USA** (or his assistants) if he acts in collaboration with the duly appointed professional representative. In J.3/88 the US patent attorney of a "non-resident" applicant acted in collaboration with the duly appointed professional representative. The "docket clerks" (assistants of the US patent attorney) were entrusted with the performance of routine tasks such as noting time limits and checking due dates. The Legal Board stated that in order to be able to carry out these admittedly rather simple tasks properly, they needed nevertheless some **basic knowledge**. The Legal Board concluded that, although no special qualifications were required, it was fairly impossible for a docket clerk to perform these routine tasks satisfactorily without having previously been given appropriate instruction and being supervised closely until he was familiar with the job. A reasonable **supervision** of the activity of a newly engaged docket clerk implied that his work be periodically checked. In order to be effective and avoid culpable errors, these periodic checks should be performed systematically, at least during an initial training period of several months.

(i) Routine tasks

In T 1062/96 of 11 December 1997, the board found that the **posting of a letter** prepared and signed by the representative was a typical routine task which the representative could entrust to an assistant (see also T 335/06). In the case in question the assistant was expressly instructed to send the letter by fax on the same day. In a properly organised office the representative could rely on the correct execution of such an instruction. The sending of the fax did not require any specialised knowledge or qualification. Therefore, the assistant, here a secretary, who had proven to be reliable in the daily work of the representative's office, could have been expected to do this job within her own responsibility. Since the order was to be carried out more or less immediately, a later check whether the fax had actually been despatched was not necessary. See also T 2023/14.

In T 2253/13 the representative tasked an assistant with sending the statement of grounds of appeal to the EPO by fax on the final date of the relevant time limit, however the assistant overlooked that the fax transmission had not been successful. The board was satisfied that the appellant was unable to observe a time limit in spite of all due care. The representative was entitled to transfer such a routine task to an assistant without infringing all due care in dealing with the filing of the grounds of appeal, and there had been an excusable isolated mistake by the assistant.

In T 2450/16 the board held that, at least in the case in hand, the preparation of a notice of appeal by the representative's assistant could not be considered to constitute a routine task that could rightfully be entrusted to her by the representative.

(ii) Choosing a suitable person for the task

In T 191/82 (OJ 1985, 189) the non-payment in due time of an additional fee was found to be clearly attributable to an unfortunate concatenation of errors by nevertheless properly selected and experienced employees.

In J 12/84 (OJ 1985, 108) the due care required in the circumstances was not observed when the **employees of another company** were instructed to sign for registered mail addressed to the representative, as he was not able to supervise the work of such persons not employed by his firm.

In T 309/88 of 28 February 1990 the board stated that even **employees without formal training** as patent attorney's assistants could perform the task of recording and monitoring time limits. This was routine work which did not require specialised knowledge and professional qualifications. However, the assistant had to be properly instructed in the tasks to be performed and a trained employee had to be on hand to give advice.

(iii) Properly instructing the assistant

In T 1764/08 the board held that **filing an admissible appeal was not a routine task**, but rather a complicated task which needed clear instructions from the professional representative to his assistant.

In T 2336/10 the board held that the representative did not appear to have issued proper instructions as regards the correct way to deal with the time limit for **filing a statement of grounds of appeal**. An assistant to whom that task was entrusted had to be instructed to work on the assumption that, once the notice of appeal had been filed and the appeal fee paid, a statement of grounds of appeal would in principle have to be filed within the four-month time limit laid down in Art. 108 EPC.

In T 198/16 the board held that a representative must give express and clear instructions to an assistant to the effect that the **appeal fee** had to be paid. It was not enough to rely on the assistant's deducing the duty to file the payment form from the notice of appeal.

In T 2450/16 the board noted that *epoline*[®] mainly dealt with the **electronic filing** of documents with the EPO. In the board's understanding, it was not an electronic guide supposed to convey knowledge about the right document(s) to file in a given situation. Rather the use of *epoline*[®] presupposed such knowledge. In other words, the assistant's use of *epoline*[®] could by no means replace the need for proper instructions from the representative.

(iv) Reasonable supervision

In T 949/94 of 24 March 1995 the board stated that a representative was expected to exercise reasonable supervision over the work delegated. This did not mean that he had to supervise the posting of every letter. Once he had signed a letter and ordered his secretary to post it, he was entitled to assume that it had been posted. In the light of that, the board was satisfied that the representative had exercised due care in dealing with his secretary (J 31/90, T 1171/13).

In T 1465/07 the secretary of the representative had previously worked for another partner and after her taking up her new job the instructions given in relation to the backup check consisted of little more than the order to continue to perform that check in the same way as she had done in her former position. The board considered that this was insufficient and that she required supervision at shorter intervals during the period immediately following her taking up the new job. Requiring such supervision was not only appropriate and necessary but also not disproportionate, as supervision does not require a substantial amount of time.

In T 1149/11 the board held that the duty of care concerning supervision of the assistant required that an effective cross-check was implemented, at least in a firm where a large number of time limits have to be monitored. This was particularly so in the case at issue because the time limit for filing a notice of appeal and paying the appeal fee pursuant to Art. 108 EPC was absolutely critical; if the time limit was missed, there was no further ordinary remedy and the contested decision had legal effect (see also T 439/06, OJ 2007, 491).

In T 555/08 the board found that the requisite **standard of due care was not met by uncritically accepting the accuracy of an assistant's oral statements** although they must have been open to doubt (see T 602/94). Failure to query or check such statements

had to be viewed in the context of the obligation to supervise assistants. Especially where there were signs that mistakes might have been made, it was essential to check whether assistants were correctly performing the duties assigned to them.

In T. 2016/16 the board observed that the representative was not discharged from his or her duty to properly instruct and supervise the assistant, even if the time limits entered by the assistant in the docketing system were normally double-checked by a patent attorney.

c) Technically qualified assistants

In T. 715/91 the board held that the consequences of an error by a technically qualified assistant (an engineer training for the European qualifying examination) imputed to the representative would also have to be borne by the appellants. The task of writing, or at least supervising, the despatch of important submissions, such as grounds of appeal, would normally fall to the representative himself. Furthermore, given that the assistant had only recently been taken on, the representative could not be expected to have been able to ascertain in such a short time to what degree the assistant did know the rules and regulations of the EPC.

In T. 828/94 the board found inter alia that the technical assistant in charge was not supervised well enough and had not been properly instructed.

In T. 832/99 the board, referring to the required standard in exercising due care, decided that a technical employee working in a firm of patent attorneys was not an assistant but was carrying out de facto the work of a patent attorney. This meant that the **same strict requirements** for due care would have to be applied to the technical employee as were applied to the appellant and the appellant's representative.

d) Substitutes replacing assistants

In J. 16/82 (OJ 1983, 262) the Legal Board stated that the conditions relating to assistants also applied in the case of a substitute replacing an assistant who was on holiday, ill or otherwise absent. Where a qualified assistant was absent, therefore, the applicant or representative had either to be able to call on a similarly qualified substitute or else must himself take over the work assigned to the assistant. The **same standard of care** had to be exercised as regards the choice, instruction and supervision of the substitute as of the assistant himself (see also T. 105/85).

e) Ultimate responsibility of the representative

In J. 25/96 the statement of grounds for the request for re-establishment of rights explained inter alia that non-observance of the time limit had been caused by the assistant entrusted with monitoring time limits. The Legal Board held that the case law according to which a representative could entrust suitably qualified and supervised personnel with monitoring time limits had been developed for routine tasks and normal cases. It did not mean that a representative could also entirely leave such staff to monitor cases which (i) were **particularly urgent**, (ii) needed **particular attention** and further steps by the

representative himself to ensure that the necessary acts were still performed in time, and (iii) could result in an **irrevocable loss of rights** if any error or delay occurred.

In T 719/03 the board did not accept the appellant's argument that the failure to comply with the time limit had been an isolated mistake by the qualified secretary who had noted on the cover page of the revocation decision only the time limit for appeal but not the time limit for filing the statement of grounds of appeal. The board held that the appellant's representative had himself failed to exercise due care, since the contested decision had been shown to him twice without his noticing the incompleteness of the note concerning the mandatory time limit that had to be monitored. The board took the view that, with the **careful handling** of a dossier involving statutory time limits, a representative was so often faced with the time limits to be observed that **compliance with the time limit was ensured**.

In T 439/06 (OJ 2007, 491), the board emphasised that fulfilling the requirements of proper selection, instruction and supervision only meant that the assistant's error in dealing with the delegated task could not be imputed to the representative. It did not mean that the representative's responsibility ended once and for all with the proper selection, instruction and supervision of the assistant, and that he need not take further care with respect to the delegated task (see also T 1149/11). What all-due-care calls for depends on the specific circumstances of the case. It is not necessary to perform a triple check from the outset, once such a decision is received in the representative's office and when the time limit is noted. This still belongs to the administrative treatment of the file where the representative does not yet need to be involved if he has installed a satisfactory system. However, once the representative gets the file on his desk for his own action, in order to comply with the relevant time limit, **responsibility** passes over to him **in all respects**. All due care under these circumstances requires the representative to verify the time limit calculated by his records department when he receives the file for dealing with it. He cannot simply rely on having delegated this task once and for all to his records department (see also J 1/07, T 719/03, T 473/07).

Likewise in T 1561/05 the board held that the representative was personally at fault in failing, when signing the statement of grounds for appeal, to check the calculation of the time limits by his support staff and therefore to notice that the calculation was wrong. A task forming part of the representative's **core duties**, such as performing a **final check** when signing a submission which is subject to a time limit, cannot be delegated in a way that absolves the representative of responsibility.

In T 1095/06 the board stated that aif the professional representative failed to act because he had not received a reminder due to some error of a properly chosen, properly instructed, and reasonably supervised assistant this could be regarded as "an isolated error in an otherwise satisfactory system" which would still allow re-establishment to be granted. However, a professional representative must be presumed to be **supervising his own work continuously**. The case law on "an isolated mistake in an otherwise satisfactory system" could not be relied on to ignore a failure to act by the professional representative himself, unless there were special circumstances which made the failure to act compatible with taking all due care.

In T.592/11 the board held that, where a double check was carried out by the representative and an assistant, the former was liable for any negligence in performing his own part of this check. This was because, where double checks were carried out by assistants only, the representative had to perform an additional, third check (see T.439/06, T.1561/05). If, however, they were carried out by an assistant and the representative himself, the latter had to be subject to the same standard of care with respect to his part of the check. An isolated mistake by a professional representative in performing his check was then – as a rule at least – inexcusable.

In R.18/13 two "isolated" mistakes had been made, one by the professional representative, the other by his assistant. The Enlarged Board considered the travaux préparatoires and found that an "isolated mistake", such as assistants might make, was not excusable in a representative. If he was given a file to deal with, he could not simply assume that his assistants had reliably done all their work on it so far; he had to make sure, through appropriate control mechanisms before the file reached him, that time limits arising were complied with, or – at the latest when he was given the file to deal with – check for any time limits himself. The request for re-establishment was refused.

5.5.5 Due care in using mail delivery services

In T.667/92 of 10 March 1994 the board considered whether the appellant could be said to have taken all the due care required by the circumstances when allowing only two days for delivery from the UK to Germany and whether, in these circumstances, the choice of using a special carrier for the delivery was in keeping with the due care requirement. The board pointed out that a party who missed a time limit had also to show due care in its **choice of method of delivery** and that the use of outside agents might be held against the applicant under Art. 122 EPC 1973 owing to a lack of proper safeguards. The board added that in parallel situations telefaxing should preferably be used, but accepted the explanation of the appellant why this means was not used. The board took into account the very extraordinary circumstances regarding the withholding of the item by the customs in Munich for 36 hours, an incident which could not reasonably be foreseen, and allowed the request.

In T.381/93 of 12 August 1994 the problem arose from the failure of the private courier service to deliver the package containing the corresponding documents to the EPO as instructed. Referring to T.667/92 of 10 March 1994 the board held that once a reliable carrier had been chosen and commissioned for the delivery, a party was entitled to rely on them, provided that the party had given all the necessary and proper instructions to the carrier.

In T.777/98 (OJ 2001, 509) the board held (see headnote) that if a party to proceedings requested re-establishment of rights on the basis that a document missed an EPO time limit because it did not arrive within the **standard delivery time**, that party would have to prove that the form of postage used would normally have ensured that the document would reach the EPO on time. The board left open the question whether a party who relies on the usual delivery time has exercised all due care with regard to the time limit.

6. Procedural treatment of requests for re-establishment

6.1. Department competent to decide upon the request

The department competent to decide on the omitted act shall decide upon the application (R. 136(4) EPC, Art. 122(4) EPC 1973).

The boards of appeal are competent to decide on the request for re-establishment in respect of the **time limit for filing a notice of appeal** (Art. 108 EPC), since the department competent to decide whether the appeal was inadmissible for non-compliance with Art. 108 EPC is, under R. 101(1) EPC, the board of appeal (T 1973/09; T 808/03 of 12 February 2004; T 949/94 of 24 March 1995; T 473/91, OJ 1993, 630). The boards of appeal are also competent to decide on the request for re-establishment in respect of the time limit for filing the written **statement setting out the grounds of appeal** (T 624/96).

While this competence in relation to admissibility of an appeal is subject to the exception of Art. 109(1) EPC (interlocutory revision), this provision confers only the limited power to set aside the department's own decision if the appeal was considered admissible **and** well founded (T 808/03, T 1973/09). The admissibility of an appeal under Art. 109 EPC only falls under the jurisdiction of the department of first instance when this question can be decided immediately on the basis of the appeal submissions themselves (notice of appeal and statement of grounds, date of payment of the appeal fee). The boards of appeal have exclusive jurisdiction over a request for restitutio in respect of a time limit relating to the appeal itself (T 473/91, T 949/94, T 65/11).

In W 3/93 (OJ 1994, 931) the board held that as the board had to decide on the protest, it was also competent to examine the request for re-establishment of rights (Art. 122(4) EPC 1973).

In T 555/08 loss of rights (deemed withdrawal of the application due to **non-payment of a renewal fee**) occurred **while appeal proceedings were pending**. When appeal proceedings start, responsibility for the case passes from the department of first instance to the boards of appeal (the devolutive effect, see T 473/91, OJ 1993, 630). Hence in the case in point jurisdiction to decide on the request for re-establishment lay with the board hearing the pending appeal (see T 191/82, OJ 1985, 189; T 936/90 of 22 July 1993; T 708/08; T 1935/08).

In T 1381/11 the board referred to T 555/08 and held that a loss of rights due to the non-payment of renewal fees automatically terminated the appeal proceedings. The issue of whether or not an appeal was pending was therefore directly linked to a request for re-establishment of rights regarding failure to pay the renewal fee made at the appeal stage. The formalities officer should therefore have acted on behalf of the board of appeal rather than the examining division, before which the case was no longer pending. The board thus took the view that it had jurisdiction to decide over the request for re-establishment of rights according to Art. 111(1), second sentence, EPC (see also T 649/13).

In T. 1815/15 the appellant (patent proprietor) filed a request for re-establishment of rights with respect to the non-observation of the time limit according to R. 82(3) EPC. In line with the reasoning in G. 1/90 and by making use of the discretion provided by Art. 111(1) EPC, the board stated it would decide on the request for re-establishment of rights filed while the appeal was pending.

In J. 22/86 (OJ 1987, 280) the Legal Board stated in relation to the **failure to pay grant and printing fees** and to file translations that the examining division was in the first instance competent to decide upon such omitted act. However, in view of the special circumstances of this case, the Legal Board decided, pursuant to Art. 111(1) EPC 1973, to exercise the power of the examining division to decide upon the application for restitutio (see also J. 9/86).

In T. 26/88 (OJ 1991, 30) the appellant failed to comply with the request (pursuant to R. 58(5) EPC 1973) to pay the printing fee and to file translations of the claims within three months of notification of the request. The board found that the circumstances of decision J. 22/86 were quite different from the case at issue and justified the exceptional exercise of the power of the examining division to decide on the application for re-establishment. In the case before the board the **opposition division's formalities officer** was responsible (see also T. 522/88).

In J. 10/93 (OJ 1997, 91) the Legal Division not only decided on the request for recording the transfer of a patent application, for which it was competent according to Art. 20(1) EPC 1973, but also dealt with the appellants' application for re-establishment of rights which it rejected as inadmissible. Since the omitted act was the applicant's **failure to reply to a communication of the examining division** issued pursuant to Art. 96(2) EPC 1973, the department competent to decide on the application for restitutio was the **examining division** (Art. 122(4) EPC 1973). The Legal Board set aside the decision finding that the Legal Division had exceeded its powers. It stated that this could not be justified by any need to decide on the request for restitutio as a preliminary issue to be answered before examining the request for registering the transfer.

6.2. Request for re-establishment as auxiliary request

In J. 23/96 the applicant had applied for a decision under R. 69(2) EPC 1973 (R. 112(2) EPC) and, as an **auxiliary request**, asked for re-establishment of rights. The examining division issued a brief communication saying that the request for re-establishment would be decided once the decision under R. 69(2) EPC 1973 was final, or during any ensuing appeal. The Legal Board held that the examining division had been wrong not to decide on this auxiliary request. It noted that auxiliary requests were filed in case the main request was refused; they then took its place and had to be dealt with in the **same decision**. The course taken by the examining division was at odds with procedural economy, and might also oblige the applicant to appeal twice. This amounted to a substantial procedural violation (see also J. 1/80). The Legal Board referred the matter back, without considering the merits, for the division to decide on the two requests together, the examining division being the "competent department" within the meaning of Art. 122(4) EPC 1973.

6.3. Parties to re-establishment proceedings and the right to be heard

In T. 552/02 the board held that the response to be given to the application for re-establishment was of the utmost importance for the respondents, as it affected the actual admissibility of the appeal and hence the reviewability of the opposition division's decision to revoke the patent in suit. From this the board deduced that it would be a breach of Art. 113(1) EPC 1973 to take a decision concerning the interests not only of the appellants but also of the respondents without giving the latter an opportunity to present comments (see also T. 1561/05).

6.4. Concurrent request for interruption of proceedings

In J. /87 (= J. 902/87, OJ 1988, 323) the Legal Board decided that, in accordance with R. 90 EPC 1973 (R. 142 EPC), which the EPO must apply of its own motion, the legal incapacity of an applicant or his representative has the effect of interrupting proceedings and, where appropriate, the one-year time limit referred to in Art. 122(2) EPC 1973 (now R. 136(1) EPC).

In T. 315/87 of 14 February 1989 the board stated that, in case a request for interruption was filed together with a request for re-establishment, preference should be given to the application of Art. 122 EPC 1973, under which less severe impairment could also be grounds for re-establishment of rights. The question of any interruption of proceedings under R. 90 EPC 1973 could be left open provided that all the losses of rights which had occurred could be overcome by restitutio in integrum.

In J. 9/90 the Legal Board of Appeal held that for R. 90(1)(b) EPC 1973 (interruption of proceedings because of insolvency) to be applied in the light of Art. 60(3) EPC 1973 (unchanged) and R. 20(3) EPC 1973 (R. 22(3) EPC), the applicant entered in the Register of European Patents and the insolvent person (here, a limited company) had to be **legally identical**. However, the fact that the persons involved were not identical did not necessarily rule out re-establishment of rights under Art. 122 EPC 1973. Someone who was only indirectly affected by an event, such as insolvency, could be "unable" within the meaning of Art. 122(1) EPC 1973. In such a case however the persons so affected had to prove that they had exercised all the due care that could have been expected of them in the circumstances of such an insolvency.

6.5. Re-establishment in the context of the President's extension of time limits during general disruption

In T. 192/84 (OJ 1985, 39) it was held that if the President of the EPO extended time limits expiring during a period of general interruption in the delivery of mail in a contracting state (R. 85(2) EPC 1973; now R. 134 EPC, reworded), a pending application for re-establishment of rights considered to have been lost during that period, which had been filed by a representative having his place of business within that state, had to be deemed to have been made without purpose ab initio, even though the non-observance of the time limit was due to causes other than the interruption in the delivery of mail. Accordingly, it

could be declared that no rights were lost and the fee for re-establishment of rights could be refunded.

6.6. Redundant request for re-establishment

In T 1198/03 the respondent (opponent) sent his reply to the appellant's statement of grounds of appeal one day late and requested that, if the board did not otherwise consider the reply, he be re-established into the time limit for filing the reply. The board decided to consider the respondent's reply. The request for re-establishment was therefore redundant.

In T 2317/13 the board held that the re-establishment request was redundant since the delay in filing the statement of grounds of appeal had been only of minutes and the **lateness of the filing was truly minimal** (the first four pages of the statement of grounds were in fact received before the time limit expired). According to the board, the discretion given to the board by Art. 13(1) RPBA 2007 to admit and consider late-filed submissions which amended a party's previously filed written case extended to the late admission and consideration of the written case itself (see T 1198/03).

7. Rights of use under Article 122(5) EPC

In J 5/79 (OJ 1980, 71) the Legal Board stated that according to Art. 122(6) EPC 1973 (Art. 122(5) EPC), third party rights of use arose only where the restoration of rights related to an already published European patent application or a European patent; those whose commercial interests were at stake should be entitled to be sure that protection, the existence of which was public knowledge, and which had fallen into the public domain, no longer had effect. Third party rights to continue use of an invention where an applicant's rights have been lost and restored cannot arise if the loss and restoration of the applicant's rights occur before publication of the European patent application.

8. Principle of proportionality

In T 111/92 of 3 August 1992 the statement of grounds of appeal were filed two days late due to an error of calculation of the due date on the part of the representative. The board held that the mistake in calculating the ten-day period due to human error at a time when the person in question was under pressure was an isolated mistake in an otherwise satisfactory system. The board referred to the principle of proportionality and stated that, in accordance with general principles of law, as applied in the context of administrative law, a procedural means used to achieve a given end (e.g. a sanction following a procedural non-compliance) should be no more than that which is appropriate and necessary to achieve that end. Bearing the principle of proportionality in mind, the loss of the patent application because of the procedural irregularity which had occurred in the case at issue would be a severe result. Moreover, the interests of any third party misled within the meaning of Art. 122(6) EPC 1973 by the fact that the statement of grounds of appeal was filed two days late would be protected by Art. 122(6) EPC 1973. The board allowed thus the application for re-establishment (see also J 22/92, T 869/90 of 15 March 1991, T 635/94 of 25 April 1995, T 804/95, T 27/98 of 7 May 1999).

In J 44/92 and J 48/92 the Legal Board noted that the principle of proportionality only applied in borderline cases, **in support of other grounds** already substantiating to a certain extent the allowance of the appeal. Usually it had been applied where a time limit had been missed by one or two days due to some miscalculation (see below). The Legal Board considered that the principle of proportionality did not assist the appellant as there had been a major system fault, which could not be excused by reliance on the principle of proportionality.

In decision T 971/99 and T 1070/97 the boards stated that Art. 122(1) EPC 1973 did not leave any room for the application of the principle of proportionality, so that the number of days by which a time limit had been missed was irrelevant for deciding whether all due care was applied or not. Only the character of the conduct before the time limit expires was decisive for the consideration of the issue of due care, not the length of the ensuing delay (see also T 439/06, OJ 2007, 491; T 1561/05; T 1465/07).

In T 1465/07 the board interpreted Art. 122 EPC 1973 in the context of the right of access to a court taking into account the case law of the European Court of Human Rights and the European Court of Justice (ECJ). The board was of the opinion that the ECJ's interpretation of the general principle of proportionality could be applied to limitations of the right of access to the boards of appeal, such as rules on time limits, by legislative measures or their application. This means that those measures or their application must not exceed the limits of what is appropriate and necessary in order to attain the objectives legitimately pursued by the legislation in question; when there is a choice among several appropriate measures or ways of applying them recourse must be had to the least onerous, and the disadvantages caused must not be disproportionate to the aims pursued. As for the application of Art. 108 EPC 1973 in conjunction with Art. 122 EPC 1973, the board stated that the principle of proportionality had the consequence that the interpretation of those provisions must not impose means that are inappropriate, unnecessary or disproportionate in relation to the aim to be achieved, namely legal certainty and the proper administration of justice by avoiding any discrimination or arbitrary treatment. Correspondingly, the **conditions for granting re-establishment**, in particular the requirement of due care, **must not be interpreted in an excessive manner** that unreasonably restricts access to the board and thus prevents the board from deciding on the merits of the case.

In J 8/09 the appellant had failed to pay a renewal fee and requested re-establishment of rights. He put forward the principle of proportionality, citing the fact that a company was already producing the system to which the application related and that the consequence of a single late payment of the renewal fee would be disproportionate. The Legal Board rejected this argument. The principle of proportionality could be defined as a duty for a court or an administration to find a balance between a party's error and the legally ensuing consequences when a margin of weighing the importance of the circumstances existed (see J 5/97). However, when the boards of appeal referred to the principle of proportionality in the case law, it was never as a main ground but in support of other grounds already substantiating, to a certain extent, the allowability of the appeal especially when a reliable system for managing the time limits and an isolated mistake within such a system could be assessed (see J 44/92 and J 48/92).

In J 13/11 the Legal Board stated that the time limits in the EPC aim to serve legal certainty and the proper administration of justice by avoiding any discrimination or arbitrary treatment (see also T 1465/07, T 592/11). The severe consequence of a loss of a patent application in the case at issue could not be considered in isolation but had to be assessed against the values of legal certainty and proper administration of justice that are embodied by the time limits appropriate to Art. 122 EPC. The application of the principle of proportionality would empty the time limits of Art. 122 EPC of any content and would make the provisions of this article uncertain. In addition the boards of appeal do not have the power to apply provisions of the EPC contra legem, that is contrary to their unambiguous meaning and purpose.

9. Reimbursement of the fee for re-establishment

9.1. Legal reason for payment of fee

In T 46/07, the board found that, if the fee for re-establishment of rights is paid after expiry of the two-month period laid down in Art. 122(2) EPC 1973, the application for re-establishment of rights does not come into existence and therefore the fee must be refunded even without a respective request.

In T 2454/11, the board observed that, in earlier board decisions taken in the light of G 1/86, requests from an **appealing opponent** for re-establishment of rights had been regarded as "devoid of purpose" or "not validly filed" and the fee refunded (see e.g. T 520/89, T 266/97). In the case in hand the board endorsed the view taken more recently in T 1026/06 that the fee was not refundable. It could only be reimbursed if it had been paid for no legal reason or if a refund was required by a legislative provision. Under Art. 122(3) EPC, a request for re-establishment of rights was not deemed to be filed until the fee had been paid, so payment was required for the request to have effect. There had therefore been a legal reason for its payment and there was no provision requiring a refund.

9.2. Reimbursement where request for re-establishment found to be redundant

In both T 1198/03 and T 2317/13 the respective requests for re-establishment of rights were found to be redundant (see also chapter III.E.6.6. above for details on these cases).

In T 1198/03, distinguishing the case in hand from other cases where an application for re-establishment of rights was equally redundant but the boards did reimburse the corresponding fee, the board stated that, in the case in hand, restitutio was not, as a matter of principle, applicable as a remedy, and that a party should not be able to reap cost benefits from the redundancy of a restitutio request filed on an auxiliary basis. Otherwise parties might be encouraged to file such inapplicable requests.

In T 2317/13 the board decided to reimburse the fee for re-establishment. It compared the case with the one in T 152/82 (OJ 1984, 301), in which the fee had been reimbursed after it became apparent that the re-establishment request would not have become effective.

9.3. Request for re-establishment due to mistakes made by EPO

In J 7/93 the EPO did not tell the appellant to ignore its previous communications issued in connection with a time limit supposed to have been missed; this would have enabled the appellant to recognise that its request for re-establishment was unnecessary. Instead, the EPO continued the proceedings for re-establishment of rights and finally refused restitutio without taking into account the fact that these proceedings had been unnecessary from the very beginning. The Legal Board found that this amounted to a substantial procedural violation within the meaning of R 67 EPC 1973. The Legal Board held that it was equitable to order reimbursement of the appeal fee, even though the appellant had not applied for this (J 7/82, OJ 1982, 391). The Legal Board held that since there was no longer any legal ground to request re-establishment of rights, the fee for re-establishment was wrongly accepted by the EPO and, therefore, had to be refunded to the appellant (confirming J 1/80 and T 522/88).

In T 971/06 as the appealed decision of the examining division did not comply with Art. 97(2) EPC 1973, it was considered invalid by the board. The examination should therefore have been re-opened without an appeal. Furthermore, the appellant was misled by the examining division for several months as to the procedure for remedying the mistake. When the examining division finally issued a communication refusing its request to correct the decision, the appellant filed an appeal, a statement of grounds of appeal and requests for re-establishment. The board considered these requests unnecessary, but an understandable reaction. It found that the fees paid in respect of these requests had to be refunded.

9.4. Reimbursement where more than one fee for re-establishment has been paid

In T 315/87 of 14 February 1989, the appellant's former representative had paid two fees for re-establishment of rights, one in respect of the time limit for filing notice of appeal and the other in respect of the time limit for filing the statement of grounds. The board, however, considered that the case involved a single event because the two time limits had been missed for the same reason and therefore held that one of the fees had to be reimbursed.

In T 2017/12 (OJ 2014, A76) the appellant had missed the time limits for filing the appeal and the statement of grounds of appeal. It had **paid the fee** for re-establishment of rights **twice**, once for each missed time limit. The board refused the request for refund of one of the fees. In line with decision J 26/95, the board considered that the corresponding time limits expired independently of one another, notwithstanding the fact that they were triggered by the same event. Consequently, two fees for re-establishment were indeed due and hence a refund of one of those fees was not possible.

See also chapter III.E.4.5. "Number of re-establishment fees due where more than one time limit is missed".

F. Languages

1.	Language of filing and date of filing of a European patent application	709
2.	Language of the proceedings	710
3.	Derogations from the language of the proceedings in written proceedings and in oral proceedings	710
4.	Language privilege	712
5.	Translations	712
6.	Language-related fee reductions	714
6.1.	European patent application	714
6.2.	Request for examination	714

The central provisions of the language regime of the EPC are to be found in [Art. 14 EPC](#) and [R. 3 to 7 EPC](#).

Attention is also drawn to the Guidelines for Examination, A-VII and E-V – November 2018 version.

1. Language of filing and date of filing of a European patent application

[Art. 14\(2\) EPC](#) requires that a European patent application is filed in one of the official languages of the EPO – i.e. English, French or German ([Art. 14\(1\) EPC](#)) – or, if filed in any other language, translated into one of the official languages. It is therefore possible to file an application in any language, in compliance with [Art. 5 PLT](#), which states that, for the purpose of obtaining a filing date, a description of the invention in a language of the applicant's choice must be accepted (see also [R. 40\(1\)\(c\) EPC](#)). If a required translation is not filed in due time (see [R. 6\(1\)](#), [36\(2\)](#), [40\(3\)](#), [57\(a\)](#), [58 EPC](#)), the application shall be deemed to be withdrawn ([Art. 14\(2\) EPC](#); cf. [Art. 90\(3\) EPC 1973](#) and [J 18/01](#)).

Under the former law, a European patent application could only be filed in an official EPO language ([Art. 14\(1\) EPC 1973](#)) or, by persons benefiting from the "language privilege", in an official language of a contracting state other than English, French or German ("admissible non-EPO language"), with a translation to be filed in an official EPO language ([Art. 14\(2\) EPC 1973](#); see also [J 15/98](#), OJ 2001, 183; [J 6/05](#) and [J 9/01](#)). To be accorded a date of filing, an application had to contain one or more claims, in addition to a description, in one of the languages referred to in [Art. 14\(1\)](#) and [\(2\) EPC 1973](#) ([Art. 80\(d\) EPC 1973](#); see also [J 18/96](#), OJ 1998, 403 and [J 22/03](#)). For the current scope of the "language privilege" see [Art. 14\(4\) EPC](#) and [R. 6\(3\) - \(7\) EPC](#) and also in this chapter [III.F.4, 6](#).

In [J 7/80](#) (OJ 1981, 137) the Legal Board held that where documents making up an application were partly in an official language of the EPO, and partly in another language which was an official language of a contracting state, then, for the purposes of deciding whether the application complied with [Art. 14\(1\)](#) or [\(2\) EPC 1973](#), in accordance with [Art. 80\(d\) EPC 1973](#), the significant language was that used for the description and claims.

Other documents making up the application should normally be corrected by translation into that language.

In T 382/94 (OJ 1998, 24) the board held that if the drawings were filed in full on the date of filing, they formed part of the application as filed, even if they contained text matter in an official language other than the language of the proceedings. There was nothing to prevent the application being amended on the basis of a translation of this text matter into the language of the proceedings.

For a case concerning an application which was filed as a European divisional application but not in the language of the proceedings of the earlier application (cf. R 36(2), first sentence, EPC), see J 13/14, reported in chapter II.F.3.3.

2. Language of the proceedings

The official language in which the application is filed or into which it is translated is the language of the proceedings in all proceedings before the Office, unless the Implementing Regulations provide otherwise (Art. 14(3) EPC).

In G 4/08 (OJ 2010, 572) the Enlarged Board of Appeal ruled that if an international application has been filed and published under the PCT in one official language of the EPO, it is not possible, on entry into the European phase, to file a translation of the application into one of the other two EPO official languages.

3. Derogations from the language of the proceedings in written proceedings and in oral proceedings

Under R 3(1) EPC (R 1(1) EPC 1973) any party may use any EPO official language in written proceedings.

In T 706/91 the appeal had been drawn up in accordance with R 1(1) EPC 1973 in one of the official languages, namely German. The appellant had therefore cited passages from the disputed European patent's claims and description in that language, even though they had been drawn up in French as the language of the proceedings. The board decided that these references were admissible.

In G 4/08 (OJ 2010, 572) the Enlarged Board of Appeal clarified that EPO departments cannot use, in written proceedings on a European patent application or an international application in the regional phase, an EPO official language other than the language of the proceedings used for the application under Art. 14(3) EPC (thereby overruling J 18/90, OJ 1992, 511).

R 4(1) EPC (cf. R 2(1) EPC 1973) allows any party to oral proceedings to use an official language of the EPO other than the language of the proceedings, provided he either gives the EPO at least one month's notice or arranges for interpreting into the language of the proceedings. Under R 4(5) EPC the EPO must, if necessary, provide at its own expense

interpretation into the language of the proceedings, or, where appropriate, into its other official languages, unless such interpretation is the responsibility of one of the parties.

In **T. 34/90** (OJ 1992, 454) the respondent did not give notice that he wished to use another official language in the oral proceedings and also failed to provide interpretation. His representative argued that because he had lawfully used an alternative official language in oral proceedings before the opposition division, he should be allowed to use the same language in the hearing before the board. The board reiterated the principle that appeal proceedings are not a mere continuation of first-instance proceedings, but are, for the purpose of deciding the permissibility of using an alternative official language under R. 2(1) EPC 1973 (R. 4(1) EPC), as for other procedural purposes, wholly separate and independent from those. Accordingly, the respondent's attempt to use the other language, without fulfilling the requirements of R. 2(1) EPC 1973 as they applied to the pending appeal proceedings, was rejected.

See also the communication from the Vice-President of DG 3, OJ SE 3/2007, 118.

In **T. 774/05** the board stated that R. 2(1) EPC 1973 (R. 4(1) EPC) implied that a party could choose to use one of the official languages set out in Art. 14(1) EPC 1973 and was entitled to speak and hear that language. However, a party had to be clear as to which official language it wished to use. The party then had a right to both speak and hear in that language, so long as the conditions of R. 2(1) EPC 1973 were fulfilled. The party did not, however, have a right to have a language in which it would speak and a different language in which it would listen.

In **T. 418/07** the respondent announced that it would use German at the oral proceedings (language of the proceedings being English) and requested the board to provide translation from German into English for the benefit of one of its employees who would attend the oral proceedings and who did not speak German. The board acknowledged the right of any party to use any of the three official languages in oral proceedings, but stated that the right to interpreting from either of the two other languages was circumscribed by R. 4 EPC. A party which elected to use a language which was not understood by one of its own representatives or employees could not for that reason request a free translation. The board could not provide translation merely to suit the convenience of a party.

In **T. 2422/10** the board rejected the respondent's argument that it had an absolute right to interpreting into English as the language of the proceedings. The general rule needed to be set against the principle of efficiency of the proceedings and the duty of all services of the EPO, including the boards of appeal, to observe the finances of the EPO. The wording of R. 4(5) EPC allowed the board to assess the necessity of such interpreting (cf. **T. 131/07**). It was evident that the respondent's representative was quite capable of understanding any oral submissions of the appellant in German without interpretation.

The respondent was also accompanied by an expert, whom the board decided not to hear following the criteria of G. 4/95 (OJ 1996, 412). In these circumstances the board considered that interpretation into English for the expert at the expense of the EPO would not be justified. Accompanying persons did not have an automatic right to it.

The matter of the language arrangements in oral proceedings in relation to an accompanying person also arose in T.131/07 and R.3/08 (for the latter see chapter V.B.4.3.18).

For a case which concerns the discretion given to the EPO under R.4(1), last sentence, EPC to derogate from the provisions of this Rule, see T.982/08.

On the costs of interpreting in oral proceedings see also chapter III.C.8.2. and T.2109/15.

4. Language privilege

According to Art.14(4) EPC, natural or legal persons having their residence or principal place of business within the territory of a contracting state having a language other than English, French or German as an official language, and nationals of that state who are resident abroad, may file documents which have to be submitted within a given time limit in an official language of that state (these languages are sometimes referred to as "admissible non-EPO languages"). A translation in an official EPO language must also be filed (see R.6(2) EPC). The scope of the fee reductions available in respect of documents filed in accordance with Art.14(4) EPC has been limited with effect from 1 April 2014 (see in this chapter III.F.6.). For the language provisions with respect to the filing of the European patent application itself, see in this chapter III.F.1.

The board in T.149/85 (OJ 1986, 103) decided that it is inadmissible for a German opponent to file an opposition in Dutch even if represented by a Dutch patent attorney.

In T.1152/05 the notice of appeal was filed in Dutch by a company which had its principal place of business in the US and thus could not benefit from the provisions of Art.14(4) EPC. A translation into French was filed on the same day. The notice of appeal was deemed not to have been filed. Following G.6/91 (OJ 1992, 491), if the translation was filed at the same time as the original, the EPO could not take it as the "official" notice of appeal and ignore the original as superfluous. See also T.41/09 and chapter III.A.3.2.1.

5. Translations

Concerning the filing of a required translation of a European patent application, see in this chapter III.F.1.

Under Art.14(4) EPC, if any required translation of a document filed in accordance with that provision is not supplied in due time (see R.6(2) EPC), the document is deemed not to have been filed (cf. Art.14(5) EPC 1973).

In T.323/87 (OJ 1989, 343), the translation of the notice of appeal required under Art.14(4) EPC 1973 was not filed in due time in accordance with R.6(2) EPC 1973. The notice of appeal was therefore deemed not to have been received (Art.14(5) EPC 1973), and the appeal was held not to have been filed. See also T.193/87 (OJ 1993, 207), which concerned a notice of opposition.

However, in T.126/04 the board did not follow T.323/87 with respect to the legal consequence of failure to comply with the time limit. It held that the only possible interpretation of the reference in R.65(1)EPC 1973 to R.1(1)EPC 1973, which itself referred to Art.14(4)EPC 1973, was that R.65(1)EPC 1973 determined the legal consequence of failure to file a translation of the notice of appeal as required by Art.14(4)EPC 1973. The legal consequence was therefore the **inadmissibility of the appeal**. It was not a case of conflict within the meaning of Art.164(2)EPC 1973, since R.65(1)EPC 1973 was a *lex specialis*. The provisions of R.65(1)EPC 1973 are now to be found in R.101(1)EPC, which does not refer to R.3(1)EPC, the equivalent to R.1(1)EPC 1973.

In T.170/83 (OJ 1984, 605) a debit order was filed in error in Dutch. The board held that Art.14EPC 1973 did not apply – a debit order did not have to contain text in a language at all, whilst remaining quite clear. The question whether a debit order in a non-official language was effective therefore did not arise.

In T.700/05, the board found that, taking into account that Euro-PCT applications were deemed by Art.153(2)EPC to be European applications and the principle that they thus had to be treated as favourably as applications made in a contracting state, a PCT application originally filed in Japanese had to be treated in the same way as an application filed in the language of a contracting state which was not an official language of the EPC. Art.14(2)EPC 1973 had thus to be applied by analogy to allow also the translation into English of an original PCT application in Japanese to be brought into conformity with the original Japanese text of the application throughout the proceedings before the EPO, i.e. including opposition and appeal proceedings. See also T.1483/10 and T.2410/11.

Shortly before the oral proceedings before the board in case T.265/11, the appellant (opponent) filed an uncertified translation of the claims of the international application underlying the patent. It argued that it was evident from this translation that certain features were different in the originally filed claims with respect to the English translation filed on entry into the European phase (Art.158(2)EPC 1973), and requested that the newly filed translation be used as a basis for the analysis under Art.123(2)EPC. The board affirmed that an international application for which the EPO is a designated or elected Office, and which has been accorded an international date of filing, is equivalent to a regular European application (Art.150(3)EPC 1973; now Art.153(2)EPC). R.7EPC 1973 applied *mutatis mutandis* to the translation filed under Art.158(2)EPC 1973. As no evidence had been provided that the translation already on file was not in conformity with the original text of the application, the board, in accordance with R.7EPC 1973, assumed that translation to be in conformity with the original text of the application for the aforementioned purpose.

In T.1332/12, the board applied the same reasoning to admit a corrected (machine) translation, submitted by the patent proprietor, of a Japanese prior-art document which the opposing party had filed along with a – now contested – translation, as evidence of lack of inventive step. As to the provision of a translation of a crucial prior-art document in examination proceedings, see T.1343/12 and T.655/13.

Concerning translation points in relation to amendments see chapter II.E.1.2.3.

6. Language-related fee reductions

Under R. 6(3) - (7) EPC (as in force from 1 April 2014 – see Decision of the Administrative Council of 13 December 2013, OJ 2014, A4) certain categories of applicants fulfilling the requirements of Art. 14(4) EPC are eligible for a fee reduction when filing a European patent application or request for examination (see also Notice of 10 January 2014, OJ 2014, A23; and J 4/18). A corresponding language-related fee reduction is no longer available for oppositions, appeals, requests for limitation or for revocation, or petitions for review (for earlier decisions concerning the former reduction of the opposition and appeal fees, see "Case Law of the Boards of Appeal", 7th ed. 2013, III.F.5).

In G 6/91 (OJ 1992, 491) the Enlarged Board of Appeal ruled that the persons concerned were only entitled to the fee reduction under R. 6(3) EPC 1973 if they filed the **essential item of the first act** in filing, examination, opposition or appeal proceedings (note: the last two cases are no longer relevant – see previous paragraph) in an official language of the state concerned other than English, French or German, and supplied the necessary translation **no earlier than simultaneously** with the original. According to T 905/90 (OJ 1994, 306, Corr. 556), neither a request for a fee reduction, nor a notification that only a reduced fee had been paid, was an essential part of the first act of the relevant proceedings (see also J 4/88, OJ 1989, 483).

6.1. European patent application

Under the EPC 1973, an application could be filed in an official EPO language (Art. 14(1) EPC 1973) or, by persons benefiting from the "language privilege", in an official language of a contracting state other than English, French or German (Art. 14(2) EPC 1973).

According to J 4/88 (OJ 1989, 483, see headnote), for the purposes of Art. 14(2) EPC 1973 and R. 6(3) EPC 1973 it was sufficient if the description and claims were filed in an official language of a contracting state other than English, French or German; it was not significant for this purpose that other parts of the European patent application were filed in one of the official languages of the EPO only (further to J 7/80, OJ 1981, 137 – see in this chapter III.F.1.). If the applicant availed himself of the option provided in Art. 14(2) EPC 1973 both the filing fee and the examination fee were reduced (R. 6(3) EPC 1973).

6.2. Request for examination

J 4/88 (OJ 1989, 483) (see in this chapter III.F.6.1.) deals with the reduction of both the filing fee and the examination fee.

In J 21/98 (OJ 2000, 406) the applicant, who had filed a **request for examination** in Italian within the time limit provided for under Art. 94(2) EPC 1973 (see now R. 70(1) EPC), and simultaneously an English translation, had been refused the reduction in the examination fee pursuant to Art. 14 EPC 1973. According to the Receiving Section, the written request for examination in Italian should have been filed together with the request for grant.

However, according to the board, Art. 94(2) EPC 1973, in conjunction with Art. 75, Art. 92 and Art. 94(1) EPC 1973, was to be interpreted such that, within the grant procedure, the request for examination constituted an **autonomous step** quite separate from the (previous) step of filing the patent application, enabling the applicant to consider whether to continue the grant procedure in the light of the search report. Since the EPC 1973 gave the applicant the right to file the request for examination after the publication of the search report, it followed that the same right had to be owed to the applicant who wanted to avail himself of the option provided for in Art. 14(2) and (4) EPC 1973 (see also J 22/98, J 6/99, J 14/99 and J 15/99).

In J 36/03 the board held that the examination fee should be reduced if the request for examination was filed in an authorised non-official language, even in cases where the **application was transferred, before the examination fee was paid**, to an applicant who was not one of the persons referred to in Art. 14(2) EPC 1973.

J 4/18 concerned the application of the examination fee reduction (R. 6(3) – (7) EPC, Art. 14(1) RFees) to multiple applicants.

G. Law of evidence

1.	Introduction	717
2.	Admissible evidence	720

5.2. Shifting the burden of proof	775
5.2.1 General	775
5.2.2 Cases in which the burden of proof was reversed	777
5.2.3 Cases in which the burden of proof was not reversed	779

1. Introduction

Before an administrative authority or a court takes a decision, it is required to establish the existence of the material facts, i.e. the facts from which, under the relevant legal provision, the legal effect ensues. The facts are established by taking evidence. The purpose of all evidence, whatever its nature, is to confirm a party's assertions.

The main provisions governing evidence, the means and taking of evidence and the conservation of evidence are Art. 117 EPC, Art. 131(2) EPC, R. 117 to 124 EPC (the last rule as amended by decision CA/D 6/14 of the Administrative Council (OJ 2015, A17), which entered into force on 1 April 2015) and R. 150 EPC.

In the revised EPC 2000, the content of Art. 117(2) to (6) EPC 1973 was rephrased in the new Art. 117(2) EPC. The procedural aspects concerning the taking of evidence were transferred to the Implementing Regulations (see OJ SE 5/2007, Part II, pp. 176-192). Furthermore, the revised Art. 117(1) EPC no longer lists the EPO departments which may take evidence; it now includes a general reference to "proceedings before the European Patent Office".

Art. 117 EPC, entitled "Means and taking of evidence", provides for the submission of evidence before all EPO departments, including the Receiving Section, examining divisions, opposition divisions, the Legal Division and the boards of appeal.

Beyond the letter of the EPC, the boards of appeal have addressed multiple issues of admissibility and taking of evidence in their case law. In addition, they have elaborated specific principles governing the evaluation of evidence and the allocation of the burden of proof in order to ensure that EPO proceedings are conducted in a fair and consistent manner.

In accordance with the principle of free evaluation of evidence, any kind of evidence, regardless of its nature, is admissible (T 482/89, OJ 1992, 646).

That proceedings before the EPO are conducted in accordance with the principle of free evaluation of evidence was reiterated by the Enlarged Board (G 1/12, OJ 2014, A114).

Parties can freely choose the evidence they wish to submit – the kinds listed in Art. 117(1) EPC are merely examples (T 543/95, T 142/97, OJ 2000, 358).

Art. 117(1) EPC and Art. 113(1) EPC embody a basic procedural right generally recognised in the EPC contracting states, viz. the right to give evidence in appropriate form (specifically by producing documents under Art. 117(1)(c) EPC) and the right to have that evidence heard (T 1110/03, OJ 2005, 302). A decision should discuss the facts, evidence and arguments which are essential to the decision in detail (see for example T 278/00, OJ 2003, 546, in chapter III.K.3.4.4 b)).

Whether or not a fact can be regarded as proven has to be assessed by the department hearing the case having taken all the relevant evidence into consideration (T 474/04, OJ 2006, 129 and T 545/08 citing G 3/97, OJ 1999, 245, point 5 of the Reasons).

All the means of giving or obtaining evidence covered by Art. 117 EPC are subject to the discretion of the EPO department concerned, which will order it to be taken only if it considers this necessary (T 798/93, OJ 1997, 363).

If the evidence offered as proof of contested facts essential to the settlement of the dispute is decisive, the department hearing the case must, as a rule, order that it be taken (see T 474/04, OJ 2006, 129, about witnesses). All appropriate offers of evidence made by the parties should be taken up (T 329/02).

The principle of unfettered consideration of the evidence does not apply until after it had been taken and could not be used to justify not taking evidence offered (T 2238/15, alleged prior use – offer of witnesses; see also the principles laid down in T 1363/14).

The EPC does not provide a legal basis for excluding, in appeal proceedings, documents which were correctly admitted into the first-instance proceedings, in particular when the impugned decision is based on them (T 1201/14, T 26/13, T 931/14, T 564/12; see also T 95/07, point 4.2.12 of the Reasons, T 1277/12 of 7 April 2017).

As for the standard of proof, the EPO generally applies the "balance of probabilities" (see J.20/85, OJ 1987, 102, point 4 of the Reasons). The balance of probabilities standard is met if, after evaluating the evidence, the boards are persuaded one way or the other (T.286/10). However, especially in cases where only one party – the opponent – had access to information about an alleged public prior use, the case law has tended toward expecting that the public prior use be proved beyond any reasonable doubt or "up to the hilt" (see e.g. T.55/01, point 4.1 of the Reasons; and T.472/92, OJ 1998, 161, point 3.1 of the Reasons; T.2451/13, Catchword). Summary of the case law concerning the standard of proof can be found e.g. in the following relatively recent cases: T.738/04, point 3.4 of the Reasons; T.286/10, point 2.2 of the Reasons; T.918/11, point 3.3 of the Reasons; T.2054/11, points 2.2 and 2.3 of the Reasons; T.2227/11, point 2 of the Reasons; T.274/12, point 4.2.1 of the Reasons; T.202/13, point 15.6.1 of the Reasons; T.2451/13, point 3.2 of the Reasons; T.545/08, points 7-11 of the Reasons.

The standard of proof for **internet citations** now seems to have been established by the decisions in T.286/10 and T.2227/11, which were endorsed more recently in T.1711/11, T.353/14 and T.545/08. The appropriate standard of proof for internet citations is the **"balance of probabilities"**. The conclusion reached in the earlier decision T.1134/06 (followed by T.19/05 and T.1875/06) that the stricter standard of proof "beyond reasonable doubt" had to be applied to internet disclosures has been refuted.

Examining the evidence a board took into account would amount to revisiting the substance of the case and so falls outside the ambit of the review procedure (R.21/09, R.6/12). A reversal of the burden of proof is not covered by the exhaustive list of possible grounds for a petition for review (R.21/10).

R.3(3)EPC provides that documentary evidence may be filed in any language. The EPO may, however, require that a translation in one of its official languages be filed within a specified period. If the required translation is not filed in due time, the EPO may disregard the document in question, as for example in T.276/07. The language to be used for taking evidence and writing the minutes is governed by Art.14(3)EPC (language of the proceedings) and R.4EPC (derogations from the provisions on use of the language of the proceedings in oral proceedings); (Guidelines E-IV, 1.3 "Taking of evidence" – November 2018 version; see also chapter III.F.2. "Language of the proceedings").

Cross-references: evidential matters permeate all aspects of patent law; it is thus recommended to refer also to the following chapters, which deal specifically with these matters: I.C.3.2.3 "Internet disclosures"; I.C.3.2.2 "Lectures and oral disclosure"; I.C.3.5. "Issues of proof"; I.C.3.5.1 "Burden of proof"; I.C.3.5.2 "Standard of proof"; I.C.3.5.2.c) "Internet – proof of the date of availability"; I.D.4.6. "Solving a technical problem – post-published documents"; II.A.2.2.2 "Burden of proof"; II.C.6.6.7. "Experiments"; II.C.6.8 "Post-published documents"; II.C.9. "Evidence"; II.E.5. "Evidence and standard of proof for allowing amendments and corrections"; III.A.1.3. "Causal link and the requirement of proof"; III.B.2.3. "Surprising grounds or evidence"; III.B.2.4.5 "Failure to consider evidence"; III.B.2.6.4 "Hearing witnesses"; III.B.2.7.1 "Facts and evidence put forward for the first time during oral proceedings in inter partes cases"; III.C.6.3. "Final date for written submissions in the preparation for oral proceedings and late submission of new facts and

evidence – Rule 116 EPC"; III.E.4.4. See also Guidelines E-IV "Taking and conservation of evidence" – November 2018 version.

2. Admissible evidence

2.1. Non-exhaustive list of admissible means of evidence

Art. 117(1) EPC does not contain an exhaustive list of admissible evidence, only mere examples. Parties to the proceedings are thus free in their choice of evidence. **Any kind of evidence** is admissible during proceedings before the EPO.

The EPC does not provide that certain questions of fact may only be proved by certain forms of evidence. Questions of fact must be settled on the basis of any credible information available (see e.g. J.11/88, OJ 1989, 433).

The admissibility of evidence should be clearly **distinguished** from the weight of evidence: whereas admissibility involves the question whether a piece of evidence should be considered at all, the probative value of evidence refers to the question whether the evidence to be considered provides sufficient proof of the alleged facts (see e.g. T.1698/08 on the distinction between admission of evidence and probative value of a document, T.1363/14 and T.838/92 about witness). The allegation that a witness might be biased does not itself render the testimony inadmissible; rather, suspicion of bias is a matter to be considered during the evaluation of evidence (T.838/92). See also IV.C.2.2.8 "Indication of facts, evidence and arguments – substantiation of grounds for opposition" and the case law reported there, for example T.234/86 (OJ 1989, 79), which stated that assessing the evidence is part of the process of ascertaining whether the opposition is well founded in substance (cf. T.353/06, T.1194/07). The principle of free evaluation of evidence applies only once evidence has been taken and cannot be used to justify not taking evidence offered. Moreover, no EPC provision requires that the facts adduced in support of an alleged prior use actually be proven within the opposition period in order to substantiate the allegation (T.1363/14, T.2238/15).

In T.1710/12, in the board's view, Art. 117(1) EPC gives **no order of preference** regarding the means of giving or obtaining evidence in proceedings before the EPO and it remains the **free choice of a party** to rely on the hearing of a witness (Art. 117(1)(d) EPC) or on production of a sworn statement in writing (Art. 117(1)(g) EPC). For other findings that witness testimony do not necessarily carry less weight than documentary evidence, see also T.918/11 and T.2565/11, reported below, and T.441/04 (in which, however, the board

first observed that documentary evidence was generally preferable to witness testimony for proving long-ago events); cf. however T. 329/02.

The board in T. 885/02 observed that the opinion of an expert does not necessarily reflect the view of the skilled reader for various reasons. Those **experts** who were in the case at issue **eminent scientists** had their own experience which was not necessarily common general knowledge. Those observations did not mean that those declarations were to be disregarded.

2.2. Witness testimonies and expert opinions

2.2.1 Hearing witnesses

By way of introduction to this topic, the following sets out some of the principles that have emerged from the case law reported in the sub-sections below. The EPC requires **clear requests** with regard to testimonies which a party wishes witnesses to give. A party who wishes to adduce witness evidence should indicate what **factual details** it wishes to prove by this means. The function of a witness is to corroborate what has been alleged and not to fill in the gaps in facts. Additional clarifications provided by a witness to close a potential gap in the documentary evidence on file cannot be considered per se new facts; hearing a witness would otherwise be futile. The parties must be given an opportunity to comment on the results of the witness hearing. The EPC does not preclude the parties to the proceedings from offering their employees as witnesses. An allegation that a witness might be biased does not in itself render their testimony inadmissible; rather, suspicion of bias is a matter to be considered when evaluating the evidence. All the means of giving or taking evidence covered by Art. 117 EPC are subject to the discretion of the department concerned but if the evidence offered is decisive for proving contested facts on which the case turns, the department must, as a rule, order that it be taken.

a) Role of witnesses and wording of request

It is the function of a witness to corroborate what has been alleged (T. 543/95) and not to fill in the gaps in facts brought forward to support the case (T. 374/02; confirmed more recently in e.g. T. 1100/07, T. 1028/11 and T. 2054/11). It is necessary that a party who wishes to adduce evidence by means of a witness should indicate what **factual details** it wishes to prove by this means (T. 374/02). The principle of free evaluation of evidence also applies to the hearing of witnesses under Art. 117(1)(d) EPC (T. 482/89, OJ 1992, 646).

The EPC requires **clear requests** with regard to testimonies a party wishes witnesses to give, since the responsible department of the EPO must issue a decision regarding the taking of oral evidence (see Art. 117(1)(d) and R. 72(1) EPC). The board in T. 374/02 was of the opinion that the "implicit offer of witnesses" did not specify what should be able to persuade the board to evaluate the evidence already existing in the file differently. Witnesses were meant to corroborate the facts, not to fill in gaps in the facts and arguments. The lack of an indication of the facts which were to be proven by testimonies of the three persons mentioned meant that the necessary conditions for the hearing of witnesses did not exist in the case before the board (other examples: T. 2054/11; T. 703/12,

general reference to the party's submissions in opposition; **T.1570/14**, implicit request and requirements of Art. 12(2) RPBA 2007). **T.1028/11**, cited below, deals with a – justified – refusal to hear a witness and an alleged infringement of the right to be heard. In **T.30/12**, the board refused a request to rehear a witness (see below on the relevance of evidence offered). The boards in **T.1363/14** and **T.2238/15**, ruling on alleged prior use, held that the opposition division should have ordered the hearing of the witnesses requested by the opponent to substantiate the facts set out in detail in the notice of opposition (see also **T.1553/07** and chapter IV.C.2.2.8 d) "Alleged public prior use").

b) Relationship between witness and party

The EPC does not preclude the parties to the proceedings from offering their **employees** (see e.g. **T.482/89**, OJ 1992, 646; **T.124/88**, **T.830/90**, OJ 1994, 713; **T.443/93**, **T.937/93**, **T.505/15** on assessing credibility in view of a bonus element in an employee's remuneration, and **T.523/14** on written statements) or **clients** (**T.575/94**) as witnesses. See also **T.327/91** (general manager of one party), **T.558/95**, **T.64/13** cited in this chapter III.G.2.3. concerning statements in writing, and **T.508/00** in chapter III.G.3.2. on when evidence should be submitted. The credibility of witnesses cannot be impugned merely because they had a **business relationship** with a party (**J.10/04**, referring to several other decisions). The allegation that a witness might be biased does not itself render the testimony inadmissible; suspicion of bias is rather a matter to be considered during the evaluation of evidence. The parties must be given an **opportunity to comment** on the results of the witness hearing (**T.838/92**; on this point also **T.582/90**). In the context of an alleged oral disclosure (lecture), evidence from the lecturer and a member of the audience, provided by them in the form of both affidavits and oral testimony, was not considered by the board in **T.2003/08 of 31 October 2012** to prove beyond reasonable doubt that the subject-matter of the claim was disclosed during the lecture; the board also observed that relations with the appellant-opponent's company could possibly have influenced their objectivity. In contrast to the opposition division the board considered it appropriate to hear the witnesses because their testimony **could affect the outcome of the proceedings**. The transcript of the witness hearing contained a point concerning their relationship to the appellant-opponent. In the end their oral testimony did not dispel the board's doubts as to the content of the lecture.

c) Statutory declarations and hearing witnesses

One object of producing written statements – which are an admissible form of evidence – is to avoid having to call those who made them as witnesses (**T.674/91**; see, however, **T.474/04**, in which it was held that the department of first instance ought to have heard the person who had made the written declaration in question, *infra* in this chapter III.G.2.3.).

If the Receiving Section had considered the circumstances described in the witness statement very unlikely, it ought to have heard the witness personally in order to evaluate her credibility (**J.10/04**).

d) Ranking of means of evidence

The board in T. 918/11 (prior use – long-ago events) considered that the opposition division's approach, that documents are of a more conclusive evidentiary value than witnesses, had no basis in the EPC, Art. 117 EPC containing **no ranking** of the means of evidence listed in it. The board was also of the opinion that the application of the standard of proof "beyond reasonable doubt" did not justify disregarding the testimonies.

e) Hearing a witness before a national court

In T. 582/90 the witness was heard by the competent court in Nantes, France (in T. 827/99, hearing of a witness by national tribunal was held not necessary). In T. 1043/93 a notarial statement by Italian witnesses duly summoned but not present was produced on the day of the oral proceedings before the board, with their age cited as the excuse for their failing to appear. The board observed that their age had already been known to the party and that the witnesses had not requested to be heard by the competent court of their country of residence (R. 72(2)(c) EPC 1973, now R. 118(2)(c) EPC).

Art. 131(2) EPC provides the basis for evidence to be taken by national courts or other competent authorities of contracting states (see also R. 120 EPC, R. 150 EPC, and Guidelines E-IV, 3 – November 2018 version).

2.2.2 Difference between witnesses and experts

The boards of appeal have drawn a distinction between the hearing of witnesses and the hearing of **opinions by experts**: a witness is put forward to substantiate facts of which he/she has personal knowledge. In T. 311/01 the appellant (opponent) offered witness testimony on the skilled person's knowledge and understanding of the cited prior art. However, the testimony was offered as evidence not of specific facts but of the knowledge and ideas of skilled persons in the technical field concerned, so that the appellant was in fact offering experts, not witnesses. Regarding itself expert enough with regard to the

features and advantages described in the prior art, the board refused to hear the proposed "witnesses" (see also [T.1511/06](#) and [T.32/10](#)).

In [T.480/11](#) the subject on which the proposed technical expert Mr J. intended to speak according to the appellant's request was not simply a technical issue but an event in the past, namely the performance of experiments and the results obtained thereby, which had taken place at the appellant's laboratory. So the appellant's request was actually directed to hearing Mr J. as a witness rather than as a technical expert. The board decided not to hear Mr J.

The board in [T.1676/08](#) (case with five members) stated that assessment in a case where the board including three technically qualified members assesses technical facts in the light of patent law and considers itself expert enough to decide upon a matter without technical assistance from an expert within the meaning of [Art. 117\(1\)\(e\) EPC](#), is a matter for the board and not for a technical expert. Such assessment does not mean that any member of the board becomes a witness or an expert.

2.2.3 Expert opinions ([Article 117\(1\)\(e\) EPC](#))

The decisions reported below concern requests that the board take evidence from an independent expert under [Art. 117\(1\)\(e\) EPC](#) and [R. 121 EPC](#) (the case law shows that the boards refused those requests). Such cases are to be distinguished from those where opinions of a party's expert are submitted as evidence (which are more common) and in which the department in question will evaluate the opinion's probative value; see in this chapter e.g. [T.1676/08](#); [T.658/04](#); [T.885/02](#); [T.276/07](#) (language); [T.74/00](#) (legal expert opinion, Japanese law); [T.517/14](#) (right of priority, legal expert opinion, Israeli law); [T.1201/14](#) (transfer of right of priority – legal opinion from legal expert on US law regarding nunc pro tunc assignment and from professor regarding Taiwanese law, but in this case the evidence adduced could not prove that the appellant was the owner of the right of priority, irrespective of the formal requirements of any relevant national law (US, German or Taiwanese) alleged); [R.18/09](#) (late-filed external legal opinion on the admissibility of the petition); [T.156/15](#) (opinion of a former board member submitted as expert evidence, addressing issues which had been part of the appeal proceedings from the start and filed two weeks before the oral proceedings); [T.2132/16](#) (new evidence filed at a late stage – not admitted – containing the opinion of different technical experts and a transcript of their cross examination in a UK court case; documents including no new technical facts; board in a position to decide without the further technical assistance provided by these experts).

An opinion of a party's expert is a means of evidence under [Art. 117\(1\) EPC](#) ([T.517/14](#), point 2.8.4 of the Reasons). [T.753/09](#) stated that an **expert declaration** had to be regarded **not just as an argument**, but as evidence pursuant to [Art. 117\(1\)\(e\) EPC](#).

In [T.375/00](#) the board, ruling on the opponent's request that it order an expert opinion under [Art. 117\(1\)\(e\) EPC](#), held that actively seeking experts to help the case of one of the parties could leave it open to an accusation of partiality and that it was for the parties to find the evidence they needed. **Only if** the board did not consider itself in a position to decide upon a matter without technical assistance would expert evidence within the

meaning of Art. 117(1)(e) EPC become appropriate (T. 1676/08, citing also T. 395/91, point 5.3 of the Reasons, T. 230/92, point 5.3 of the Reasons, T. 375/00, point 1.2.2 of the Reasons, and T. 311/01, point 5 of the Reasons). Other cases rejecting a request for an expert opinion: T. 1548/08, T. 1763/06.

In T. 443/93 too, the board refused a request for such an expert opinion made at the oral proceedings after a witness had been heard, noting that the appellant had neither filed the request on time, nor supplied specific grounds justifying such a request at that stage in the proceedings.

In T. 392/06, during oral proceedings the respondent (opponent) requested the appointment of an independent technical expert in view of the contradictory experimental results of the appellant (proprietor) and the respondents (opponents). The board had no reason to substitute for the respondents **to compensate for their deficiency** in the provision of the evidence which supported their objection of lack of novelty in allowing an independent expert. Furthermore, commissioning of an independent expert would have made postponement of the oral proceedings necessary, which was contrary to Art. 13(3) RPBA 2007 (see also the obiter dictum in T. 998/04, reported in this chapter III.G.5.1.1, on the burden of proof).

T. 8/13 addressed several procedural aspects. On the request formulated by the appellant (opponent) to hear an independent expert of a university, the board considered that the questions on which it had to decide did not require any further technical expertise to be gathered from outside the Office. The appellant did not provide any further argument as to why hearing an independent technical expert would have been required in order to decide on this case. There were thus no good reasons why the board should have exercised its discretionary power under R. 117 EPC as requested by the appellant.

2.3. Statements in writing

2.3.1 Sworn statements and affidavits

Art. 117(1)(g) EPC provides for sworn statements in writing as a means of evidence (rare in practice). However, since any kind of evidence is admissible in proceedings before the EPO, other, less solemn types of written statement (common in practice), e.g. statutory declarations, are also accepted. It is for the boards then to assess their probative value on a case-by-case basis. Such declarations consist of a witness's written statement, the main purpose of which is to avoid the need to hear that witness. The board may, however, decide to order such a hearing, for example if a party so requests. The terminology used in the case law includes "affidavits", "statutory declarations" and "unsworn statements" (French: "déclarations écrites", "déclarations sur l'honneur" and "attestations"; German: "eidesstattliche Versicherungen" and "eidesstattliche Erklärungen").

Sworn statements in writing, one of the means of giving evidence listed in Art. 117(1) EPC, are **not automatically ordered simply at the request of one party**. All the means of giving or obtaining evidence covered by Art. 117 EPC are subject to the discretion of the

department concerned, which will order their use only if it considers this necessary (T.798/93, OJ 1997, 363).

Sworn statements (Art.117(1)(g)EPC) are to be distinguished from "**statutory declarations**", which are not given on oath. Albeit not explicitly covered by Art.117(1)(g)EPC, statutory declarations are regarded as admissible means of evidence and are taken into account in accordance with the principle of the unfettered consideration of evidence (see e.g. T.770/91, J.10/04 and T.535/08; cf. T.1127/97, declaration submitted not a "eidesstattliche Versicherung" under German law).

A statutory declaration ("eidesstattliche Erklärung" or "déclaration tenant lieu de serment") is a means of giving evidence within the meaning of Art.117(1)EPC and as such is subject to the principle of free evaluation of evidence (T.558/95, cf. T.482/89, OJ 1992, 646, point 2.1 of the Reasons; T.575/94, point 3.7 of the Reasons). The board in T.443/93, which had French as the language of the proceedings, referred to a document entitled "eidesstattliche Erklärung" alternately as a "déclaration sous serment" (affidavit) and a "déclaration écrite" (written statement); T.563/02 referred to a document entitled "affidavit" as "déclaration sur l'honneur". The board in French-language case T.2338/13 explicitly referred to affidavits as "attestations". The board in T.474/04 (OJ 2006, 129), which had English as the language of the proceedings, referred to a document entitled "eidesstattliche Versicherung" as a "declaration in lieu of an oath" and an "unsworn witness declaration". In T.703/12, the board called a document of this kind entitled "eidesstattliche Versicherung" a "statutory declaration" and in T.1231/11 an "affidavit". In proceedings before the EPO even a simple declaration can be an admissible means of evidence within the meaning of Art.117(1)EPC (T.474/04, OJ 2006, 129 – a decision establishing a number of points relating to the law of evidence). The EPO accepts unsworn solemn declarations the same way it accepts other unsworn statements (T.970/93, T.313/04).

In T.915/12 the board considered that there was not sufficient evidence to prove that D16 – an extract from the encyclopedia- was made available to the public before the priority date (5 February 2001). The printing (2000) and copyright (1999) years indicated in D16 could **not alone** prove accessibility before early 2001. The hand-written annotation made by Ms S. – Head of Collections Department University – on the cover page did not fulfil the requirements of form and content which usually apply for affidavits or similar documents.

In R.3/10 the Enlarged Board took signed declarations of persons who had attended the oral proceedings into account.

2.3.2 Relationship between witness and party

The board may consider an affidavit to be admissible evidence even if it is signed by the general manager of the appellant (see T.327/91). In T.2003/08 of 31 October 2012 (reported in this chapter) the board observed that relations with the appellant's (opponent's) company could possibly have influenced Dr W's and Dr K's objectivity concerning their declarations ("Eidesstattliche Versicherung"). The board considered that its reservations concerning declarations E1 (declaration of Dr W, lecturer) and E2

(declaration of Dr K, member of the audience) could possibly be dispelled by hearing the authors of declarations E1 and E2 themselves.

In T. 523/14 the appellant (patent proprietor) objected to the credibility of statements written by two **employees** of the respondents concerning alleged prior publication D11 (an advertising newsletter sent by e-mail). In the board's view, while the written statements of independent persons would tend to carry more weight, the statements of employees of parties to the proceedings were not objectionable per se. In this case, the content of written statements was considered sufficiently credible because it was **corroborated** on its crucial points by other documents (a screenshot of Microsoft Outlook documenting the forwarding of the e-mail containing D11 as an attachment, and a magazine published comprising an article which reproduced statements of D11). In this respect, the present case was not comparable with T. 1257/04, in which an employee statement was the sole piece of evidence filed to prove the public availability of a brochure.

In T. 558/95 the board held that the fact that the statutory declarations produced by the opponent partly used the same wording and had been drawn up by employees of the opponent did not necessarily mean they should be excluded as inadmissible. The opposition division had discretion to decide whether to examine them, and to **determine whether or not** the evidence in them was **sufficient**.

2.3.3 Statutory declarations and hearing witnesses

According to the practice of the boards of appeal, affidavits or statutory declarations, whether in original or copy form, are considered as possible means of providing evidence. One purpose of written declarations is to avoid the need to hear the undersigning person as a witness. Where such declarations consist of answers to questions put forward by legal experts several declarations may have certain **stereotyped formulations** in common. The board is not obliged to check the signatures as long as no counter-opinion has been presented concerning those signatures (T. 674/91; see also T. 558/95).

In T. 474/04 (OJ 2006, 129), where one party invoked T. 674/91 to justify not having to hear the author of an unsworn witness declaration ("eidesstattliche Versicherung") as a witness, the board pointed out that the case before it was different in that the fundamental assertions made in the declaration were **contested**, the author had been offered as a witness, and the appellant had consistently demanded that he be heard. The opposition division's decision not to summon him as a witness although he was available had handicapped the appellant in its defence against what turned out to be the **decisive piece of evidence**. It was observed that this piece of evidence largely lay "within the power and knowledge of the opponent".

2.3.4 Ranking of means of evidence

Written statements by potential witnesses or parties typically have a lower probative value than oral evidence taken by the department deciding on the case. If a **disputed point** is **highly relevant** to the validity of the contested patent, it is, as a rule, not in keeping with good procedural practice for an opposition division not to take up an opportunity to hear a

witness or party in evidence and instead to require written statements and make do with their typically lower probative value. The board in T.329/02 could not identify any extraordinary circumstances that might have justified an exception to this rule in the case in point.

In T.918/11 the board found that it went against the general rules concerning the consideration of evidence to distinguish dogmatically between the evidentiary value of a witness testimony on the one hand and a document on the other hand. The opposition division had apparently considered documents to be of a more conclusive evidentiary value than witnesses. Such an approach had no basis in the EPC, Art. 117 EPC containing no ranking of the means of evidence it listed (see also T.2565/11, in which it was similarly found that witness testimony and documents were not ranked in this way).

2.3.5 Miscellaneous

In T.190/05, which contains extensive reasoning on the issue of evidence, the board ruled that, under R. 68(2) EPC 1973 (R. 111(2) EPC), the opposition division ought to have explained more clearly in the reasons for its decision why it had regarded the alleged prior use as substantiated and the statutory declaration as sufficient evidence. Neither the summons nor the brief communication, nor the minutes of oral proceedings, could substitute adequate reasoning in the decision.

On the probative value of witness testimony and written statements, see also in this chapter III.G.4.2.1.

2.4. Other documents

In any proceedings before, inter alia, an opposition division or a board of appeal, evidence may be given by producing documents, either in response to an order by the department hearing the case (Art. 117(1)(c) EPC) or – more commonly – on a party's own initiative in support of its claims. As the EPC neither defines the term "documents" nor gives any indication of the probative value of such documents, the principle of free evaluation of evidence applies. **Any kind of document**, regardless of its nature, is **admissible** during proceedings before the EPO, including appeal proceedings (T.482/89, OJ 1992, 646).

In T.1698/08 the respondent (patentee) objected to the admission of an (**internet**) extract from the Zürich Commercial Register as it stated at the end that the information was provided without warranty and had no legal effect whatsoever, which in its opinion had the consequence that the extract could not be considered as a means of evidence within the meaning of Art. 117(1) EPC. The board stated that a refusal to admit such a piece of evidence (an uncertified extract from a commercial register) could therefore not be based on Art. 117(1) EPC. The board decided that there was no reason to exercise its discretion to refuse to admit the evidence, as it could neither be said that it was irrelevant nor that it was unnecessary. A **refusal** to admit it could in any case **not be based** on statements in the document with respect to the **accuracy of the facts** it contained. Such statements relate to the probative value of a document.

In T.71/99 the minutes of the proceedings as taken by the opposition division did not provide a full account of the conduct of the oral proceedings. To show the board what had actually happened, the respondent submitted part of a copy of a **report of the opposition proceedings** which had been dictated by his representative in the course of those proceedings. The appellant argued that this document should not be admitted, albeit without disputing the facts set out in it. Since the submitted part of the report was significantly more precise and not difficult to understand, the board saw no reason to disregard the evidence. In R.3/08 the Enlarged Board, having taken private minutes into account, considered that there was no indication that the petitioner had raised any objection.

On **minutes** of oral proceedings as evidence of the course of the proceedings, see chapters III.C.7.10., V.B.3.6.4. and R.7/11. See also in this chapter: T.361/00 (minutes not contested), and T.2301/12, in which, the accuracy of the minutes of the oral proceedings having never been challenged, the board started from the position that they represented a faithful account of events. Similarly, the Enlarged Board in R.6/17 found that the petitioner had neither objected to nor requested a correction of the minutes. The minutes were to be considered a sound reproduction of the course of the oral proceedings before the board.

In various cases concerning prior use, **photographs** were submitted as evidence. In T.833/99 the photos filed as evidence were considered too unclear; in T.973/10, the late-filed photos were not admitted, because their probative value was found to be insufficient following an examination of their prima facie relevance. In T.1410/14, which concerned a device for connecting the wagons of a train that had been tested on a stretch of railway track, the opponent produced photos showing a passenger footbridge spanning the track from which an onlooker could see the transversal movement between the two wagons as evidence that photos or video equipment could have been used to record the lateral movement and that the feature at issue had thus been disclosed. In T.564/12 and T.453/02, the photos were filed as annexes to affidavits. In T.1647/15, the patent proprietor hinted as regards the photographs that the trailers might have been modified since the priority date of the patent; however, taking common sense in particular into account, the board decided that this was very unlikely and that a person skilled in the art could easily detect any inconsistencies between the original technical drawings and the photographs (see also e.g. T.1127/97, T.544/14).

T.523/14 concerned an advertising newsletter as an alleged prior publication. Of the evidence produced by the opponents, the appellant (patent proprietor) argued that D61 – a **screenshot** of Microsoft Outlook documenting the forwarding of the e-mail – might be a forged document. However, the appellant did not indicate, and the board could not find, any inconsistency or discrepancy in D61 which could suggest that this document was a forgery. The mere fact that it was a screenshot of Microsoft Outlook was insufficient to warrant the conclusion that it had been forged.

Where there is no evidence of forgery, it is not necessary to submit the originals of instruments of transfer. Failure to submit originals is not sufficient by itself to raise

reasonable doubt as to the validity of the transfer (T.2466/13, which concerned a transfer of priority right).

In T.518/10 (concerning a transfer of opponent status), opponent 2 had filed a copy of an extract from the Norwegian companies register from which it was clear that its name had changed following a merger. The board considered this evidence sufficient to demonstrate who was opponent 2's universal successor in law.

In T.301/94 a report by a "huissier de justice" (court bailiff) concerning champagne bottles had been submitted as evidence of alleged prior use. The evidential value of such official reports drawn up by a "huissier de justice" was no longer questioned at the appeal stage (see also T.838/92).

In T.801/98 lock designs had been deposited, under seal, with a court bailiff.

In T.1464/05 details of the composition of a product cited in support of alleged prior use (sale for testing) had been deposited with a notary (as a non-public document).

In T.1332/12 the respondent (opponent) filed a copy of Japanese application D7 as evidence of the prior art and a JPO **machine translation** into English (D7T). The appellant (patent proprietor) filed later D7JPO, in its view a more accurate machine translation of D7. The board pointed out that there was nothing in the EPC to prevent a party from filing a **corrected translation of a document filed as evidence**, even if the evidence and/or translation was filed by the other party to the proceedings. This also applied if the document was a patent application. See chapter III.F.5. "Translations".

For **internet publications**, see in particular T.286/10 and T.2227/11, reported in this chapter.

3. Taking of evidence

3.1. Relevance of the evidence

Art.117 EPC entitled "Means and taking of evidence" is applicable before all EPO departments, including the Receiving Section, examining divisions, opposition divisions, the Legal Division and the boards of appeal. The decision whether to order any of the means of taking evidence listed there depends on whether or not the evidence in question can be considered relevant (i.e. necessary or useful for settlement of the dispute). The decisions reported here deal, essentially, with requests that a witness be heard and it may also be useful to refer to the section in this chapter III.G.2.2., which concerns (refused) requests that an expert's opinion be obtained (Art.117(1)(e) EPC). Reference is also made to chapter III.G.3.2., which deals with situations when the giving or taking of evidence can be requested or should be ordered. See also in this chapter III.G.3.3., which deals with whether a failure to order that evidence be taken results in an infringement of the right to be heard.

The EPO departments must ascertain the **relevance of evidence submitted to them** before deciding whether to admit or reject it. EPO departments do indeed have some **discretion** in admitting evidence offered, for example where it is no longer needed because the fact at issue is **not contested** by the other party, where the decision will in any case go in favour of the party offering it, where it is submitted very late in the proceedings and is considered immaterial, or where for some other reason it cannot affect the outcome (e.g. evidence offered in an inadmissibly late-filed opposition) (T 142/97, OJ 2000, 358).

In T 798/93 (OJ 1997, 363) the board observed that all the **means of giving or taking evidence** covered by Art. 117 EPC are subject to the **discretion** of the department concerned, which will order their use only if it considers this necessary. It then refused the appellant's request for the taking of evidence as to the opponent's identity because it was couched in general terms and did not refer to any specific means. The only specific means requested was a sworn statement in writing but, in the absence of any legitimate doubt as to the opponent's identity, the board considered that this was neither useful nor necessary.

All appropriate offers of evidence made by the parties should be taken up. As a rule, it cannot be considered to be in keeping with good procedural practice for an opposition division not to take up an opportunity to hear a witness or party in evidence (T 329/02; see T 860/01 on the extent of the discretionary power of the first-instance department).

According to T 716/06, it is true that where **oral evidence of a witness** is requested by a party the competent EPO department should grant this request only if it considers this oral evidence necessary, i.e. when it is required to clarify matters that are decisive for the decision to be taken. If a request is made by an opponent to hear a witness on an alleged public prior use and on the disclosure of a certain feature by this prior use, the competent department of the EPO must as a rule grant this request before deciding that the alleged public prior use is neither established nor a novelty-destroying part of the state of the art because the feature in question is not found to be disclosed therein. In T 2003/08 of 31 October 2012 the board – in contrast to the opposition division – considered it appropriate to hear the witnesses because their testimony **could affect the outcome** of the proceedings.

In T 1100/07 (alleged prior use, sale of a vehicle with a given feature), the department of first instance had refused to hear two witnesses. The board held that it had been right to refuse to hear one of them, as he would merely have confirmed what he had said in his written statement about documents that anyway spoke for themselves and hearing him would have had no impact on the final decision. It should, however, have heard the other witness. It was true that the request that he be heard had been filed late and that granting it would have meant adjourning the oral proceedings, but the opposition division had based its final decision on a failure to establish the prior existence of a single given feature and the witness would allegedly have been able to give evidence on that very point. Thus, the refusal to hear him was wrong and might have affected the outcome of the decision. The case was remitted to the opposition division.

In T. 361/00 the board explained in detail why, given the circumstances of the case before it, hearing the witness would be unnecessary because it would in no way affect the outcome of its decision.

In T. 1231/11 the board refused the request to hear a witness in support of an allegation of prior use. The witness had been offered to confirm the contents of his statutory declaration, but the board concluded that since he had not made any written statement regarding the decisive issue, any information provided on this matter would amount to introducing new facts into the proceedings. In addition the board concluded that there had been no substantial procedural violation by the department of first instance since hearing the witness had not been considered relevant for the outcome of the case. The board found the circumstances to be different from those ruled on in three other cases, where the request to hear witnesses related to facts already on file: T. 267/06 (essential details referred to in the affidavit); T. 25/08 (hearing necessary in order to confirm what had been brought forward in writing); T. 448/07 (need to clarify inconsistencies in a written statement).

In T. 1410/14 (prior use – train – test drive) the board remarked in particular that, since the witness whose hearing the opponent had requested would not have been able to testify as to the decisive material facts, such a hearing would serve no purpose.

In T. 753/14 the opponent (appellant) requested that the board hear the proprietor of the patent in suit (respondent) under Art. 117(1)(a) EPC to clarify the scope of the disclosure in another of its patents (A10), which the opponent had cited as novelty-destroying prior art. In other words, the proprietor was to be heard with a view to obtaining information that had not been specified in A10 but, in the opponent's eyes, had to be known to the proprietor. The board did not order the requested hearing; it considered it unnecessary as it would provide new information that had not been publicly available on the basis of A10 at the time of filing of the patent in suit (point 1.4.9 of the Reasons).

In case T. 30/12, as evidence adduced for proving the invoked public prior use in opposition proceedings, the appellant (opponent) relied upon the drawing A9 and the testimony of Mr H, made before the opposition division. As regards the request for a renewed hearing of the witness Mr H before the board, the board noted that the appellant did not request that the witness be heard again to supplement his testimony by corroborating facts but only to clarify the statements made before the opposition division. However, the statements made by the witness as to whether document A9 was handed over to a member of the public were clear and unambiguous. The request to **rehear** Mr H was eventually rejected by the board.

In T. 544/14 re-hearing the witness was necessary. In view of the complication and the subsequent delay in the proceedings, the board decided first to clarify whether the alleged public prior use was novelty-destroying (without any doubt, no).

Decision T. 401/12 of 8 November 2017, in which the taking of evidence requested by both parties was considered necessary, is an example of an interlocutory decision ordering that evidence be taken by hearing witnesses at a future date (R. 117 EPC) and dealing with

the associated costs (R. 122(1) EPC) and the language issue (R. 4(3) EPC). The witnesses were given permission to bring any relevant documents. See also T. 738/04 of 22 August 2008 ordering the hearing of a witness under R. 117 EPC at the oral proceedings on 11 December 2008, at the end of which the final decision was taken.

3.2. Time frame for submitting evidence

This section concerns when the parties should submit evidence and when the taking of evidence should be requested or ordered. It should be read together with chapter III.G.3.3. below, which deals with the issue of respect of the right to be heard where the department decides not to consider the evidence offered.

While it has been accepted in the jurisprudence of the boards of appeal that EPO departments have some discretion in admitting evidence, e.g. where the evidence is unnecessary or of no relevance (cf. T. 142/97, OJ 2000, 358, point 2.2 of the Reasons), the **main legal basis for refusing the admission of evidence** is, as stated by the board in T. 1698/08, the provisions dealing with the late filing of evidence (Art. 114(2) EPC, Art. 12(4) and 13 RPBA 2007). See for consideration of late-filed evidence, chapter IV.C.4. "Late submission".

In ex parte case T. 545/08 when exercising its discretion, the examining division should have been aware that, although it had cited document D1 (internet publication from a commercial website) at the beginning of the examination proceedings, it had never provided any further explanations or evidence as to the document's public availability before the priority date, so that the objections based on this document had not been properly raised. Moreover, the arguments provided by the examining division for the exercise of its discretion were not persuasive. Under these circumstances, it was not permissible for the examining division to reject the appellant's further evidence as late-filed and to continue to rely on document D1 as prior art. It had thereby infringed the appellant's right to be heard (Art. 113(1) EPC in conjunction with Art. 117(1) EPC).

R. 116 EPC (former R. 71a EPC 1973) should not be construed as an invitation to file new evidence or other material departing from the legal and factual framework of issues and grounds pleaded and evidenced throughout the proceedings prior to the hearing of the appeal (T. 39/93, OJ 1997, 134, cited in e.g. T. 1932/12, T. 710/15, T. 628/14).

In T. 100/97 the board discussed in detail the criteria to be applied to late-filed evidence. Since a UK infringement action had been stayed pending the outcome of the EPO appeal, a swift settlement of the case was especially desirable, and admitting facts and evidence submitted at a late stage might have resulted in a remittal protracting the already lengthy proceedings and thus further delaying the UK proceedings. Moreover, for the contents of the statements to be considered sufficiently credible, they had to be **corroborated by documents of a definite date**. Taking into account the very late stage in the proceedings and in the absence of any such documents, it could not be established with a sufficient degree of certainty what had been made available to the public before the priority date of the opposed patent; the board therefore decided to disregard the late-filed evidence

(Art. 114(2) EPC). Compare with T.1057/09 (point 5.9 of the Reasons) concerning remaining doubts as to the authenticity of a late evidence.

In T.1830/11 the board observed that there are **no provisions** in the EPC **obliging** opponents to provide evidence against every possible fallback position defined in the dependent claims. Thus, if amendments were made to the claims during oral proceedings before the opposition division, the obligation to submit evidence "in due time" under Art. 114(2) EPC might, depending on the circumstances, arise first at the stage of filing the statement of grounds of appeal.

The board in T.574/02 found that documents could not be considered late-filed simply because they had only been submitted on appeal, and any board faced with a request that it refuse to admit a document or evidence as late-filed first of all had to verify whether it really was late or whether, in the particular circumstances of the case, it had been submitted **in due time** (for a detailed account of the relevant criteria, points 2.2.2 to 2.3 of the Reasons). Finding that the filing party had at all times acted and reacted promptly and with good judgment, the board held that the documents had been submitted in due time within the meaning of Art. 114 EPC.

That an effect is **implausible** owing to the absence of evidence in the patent application is not a sufficient reason for disregarding comparative tests filed subsequently to prove it. Disregarding them for that reason is incompatible with the problem-solution approach (T.2371/13).

In T.7/07 the respondent (patent proprietor) disputed the admissibility of the appeal due to the question of the identification of the appellant (opponent) (R. 64(a) EPC 1973 / R. 99(1)(a) EPC). The board observed that the universal successor to the opponent automatically acquires party status in proceedings pending before the EPO on the date on which a merger becomes effective, irrespective of when supporting evidence is filed (see T.6/05).

In T.1096/08 the board could not share the view of the opposition division. Exercising its discretion under Art. 12(4) and 13(1) RPBA 2007, the board considered it appropriate to take evidence from the two witnesses offered by the respondent (opponent) during the first oral proceedings. By contrast, the board did not admit to the first oral proceedings a further witness who had been offered **at a late stage**. On the consequences of such a piecemeal strategy, see also T.245/10.

The board in T.1100/07 held that, although the opponent's request that a witness be heard had been filed late and unsatisfactorily presented, the opposition division ought to have heard the witness, particularly since he could have provided testimony on a crucial point it had ultimately relied on in its decision (remittal).

In case T.703/12 the board stated that, in accordance with Art. 12(2) RPBA 2007, the appellant's statement of grounds of appeal **should contain its complete case**, inter alia it should specify expressly all the evidence relied on. The appellant (opponent) was aware from the impugned decision that it was questionable whether the alleged prior use had

been proven beyond any reasonable doubt. Therefore the board considered that there was no justification, such as a new development in the appeal proceedings, for the appellant to wait until the oral proceedings to request that Mr B (author of the statutory declaration D2) be heard as a witness in order to prove the alleged prior uses detailed in D2. Furthermore, consistent with established jurisprudence, the **generic reference** to the appellant's submissions in opposition in the notice of appeal could not be interpreted as expressly specifying the offer of Mr B as a witness. Accordingly, the witness offer made for the first time during the oral proceedings constituted an **amendment to the appellant's case** in accordance with Art. 13(1) RPBA 2007 and could only have been dealt with by an adjournment of the oral proceedings. In accordance with Art. 13(3) RPBA 2007, the board exercised its discretion not to hear Mr. B. On the issue of a party's complete case, refer also to T 30/15, T 1949/09 (late-filed tests).

In T 1760/10, a replacement witness, Mr S, was offered due to the death of the first witness proposed. During oral proceedings the board decided to hear Mr S as a witness. –The respondent (patentee) objected to the hearing of the witness: the nomination of Mr S as a witness was **late** (March 2013 / notice of appeal 2010 / oral proceedings October 2013) and the appellant (opponent) had not indicated the matters on which he should testify. In the board's view, nothing should have surprised the respondent in this regard.

When a party seeks to prove potentially relevant facts by means of the statement of a witness, it is particularly important that this statement be furnished early in the opposition phase so as to enable the witness to give oral evidence in accordance with Art. 117 EPC 1973 (T 953/90).

In appeal proceedings both parties are under a duty to submit all relevant facts in due time. In T 106/15 the appellant did not at any point in opposition (or opposition appeal) proceedings request that the author of the statutory declaration be heard (see also T 2010/08).

In T 753/09 an expert declaration had been late filed by the appellant (opponent), ostensibly to demonstrate how the skilled person would interpret documents E1 and E2. Having said that it would allow such belated evidence only if it were sufficiently relevant and if the other party could reasonably react to the late filing, the board ultimately refused to admit it into the proceedings. Firstly, the declaration did not provide more technical information than the documents E1 and E2 themselves, thus from a technical point of view it was not more relevant than the documents on file. Given that the technical teaching of both documents was relatively simple, and given that patent attorneys normally had a technical background themselves, the expert's explanations might as well be put forward in an equally convincing fashion by the authorised representatives of the appellants, with no less evidential weight before the board. Secondly, an **expert declaration** had to be considered **not just as an argument**, but as evidence pursuant to Art. 117(1)(e) EPC. The other party should be given the possibility to have such an expert declaration verified or possibly refuted by another expert with the same qualifications (as requested by the respondent as an auxiliary measure). Indeed, in the particular case, such a defence against the expert declaration required quite some time.

It is clear from the provisions of [Art. 13 RPBA 2007](#) that, in spite of the principle of the right to be heard under [Art. 113\(1\) EPC](#), a party does not have the right to have evidence which he filed or offered during appeal proceedings, in particular during inter partes proceedings, admitted into these proceedings ([T. 1676/08](#)). The patent proprietor had submitted as evidence – allegedly in response to expert opinions submitted by the opponent – a **large volume of documents** comprising more than a thousand pages and containing expert opinions only one month ahead of the oral proceedings, which the board had already postponed once at the proprietor's request. The board refused to admit one of those expert opinions (D100), finding that D100 was not identifiable as of particular relevance among submissions of over a thousand pages. It also refused to order at such a late stage an opinion by an expert pursuant [Art. 117\(1\)\(e\) EPC](#) or, since the relevant conditions set out in [G. 4/95](#) were not met, to hear the party's expert at the oral proceedings in the capacity of an accompanying person.

In [T. 245/10](#) the board held that the respondent (opponent) had had sufficient time to consider the results of comparative tests filed with the statement of the grounds of appeal, and admitted them into the appeal proceedings. The respondent had announced in 2010 that it would comment on those tests and in filing its own comparative tests only a month before the oral proceedings in 2012, the respondent had taken the risk of compromising the admissibility of its own tests, the board observing that a **piecemeal strategy** resulting in multiple rounds of oral proceedings devoted solely to the admissibility of late-filed evidence ran counter to **procedural economy** ([Art. 15\(6\) RPBA 2007](#); citing [T. 270/90](#), OJ 1993, 725, point 2.2 of the Reasons – **tactical abuse of procedure**). See also [T. 2010/08](#).

In case [T. 712/97](#) the opposition division did not allow the appellant's experimental report in response to the respondent-patentee's experimental report into the proceedings. To admit the experimental report of one party, but not the response of the other party gave the appearance of **discriminatory treatment**. The opposition division had committed a procedural violation.

The board in [T. 523/14](#) considered that it was contrary to the principles of **procedural fairness** and of **equal treatment** of the parties to admit late-filed D55 (written statement submitted by the opponent), while disregarding late-filed D54 (results of a search with internet wayback machine submitted two days later by the patent proprietor) because it lacked prima facie relevance for establishing the publication date of D11. In the board's opinion, D54 could serve to cast reasonable doubt on opponent's allegation that D11 was available on the Glasstech website in November 2007 or before and could thus have been admitted. However, in light of the opposition division's detailed consideration of D54, the board tended to conclude that its admission would not have altered the outcome. Nevertheless, in view of its potential impact on the most contentious issue in the proceedings, namely the public availability of D11, the board decided to consider D54 (see also [T. 1551/14](#)).

The board in [T. 508/00](#) (allegation of prior use) refused to admit **documents (large in number** and including technical drawings) submitted by the opponent. By contrast, it admitted written statements produced by the opponent because they related to the alleged

prior use, had been submitted relatively early in the appeal proceedings, giving the patent proprietor time to respond to them, and constituted a response to the opposition division's decision and to employee statements produced by the proprietor a month prior to the oral proceedings before the opposition division.

In T. 39/14, which concerned a method for improving foaming properties, comparative tests filed by the appellant (opponent) with its notice of appeal were considered **prima facie irrelevant** to inventive step and therefore not admitted (Art. 114(2) EPC and Art. 12(4) RPBA 2007). They could possibly have been used to support an objection under Art. 100(b) EPC but that ground for opposition had not been admitted either.

In T. 973/10 the board decided not to admit late-filed evidence of prior use. The board held inter alia that the evidence was anyway not prima facie relevant. The **photographs** produced were not sufficiently compelling evidence because they did not enable it to reach any objective conclusion as to the nature and structural details of the device allegedly disclosed at a meeting. It thus refused to admit the late-filed evidence into the appeal proceedings (Art. 114(2) EPC in conjunction with Art. 12(4) RPBA 2007).

In T. 1201/14, concerning a fourth line of argument (i.e. implied transfer under Taiwanese law) together with exhibits (opinion of a legal expert and excerpts from the Taiwanese Patent Act) the board concluded that even if Taiwanese law were to be accepted as the applicable law, the outcome would not be different from that of the appellant's second line of argument, as a result of a lack of substantiation regarding the content of the underlying evidence. Consequently, the board decided not to admit the fourth line of argument or the evidence submitted in support of it.

In J. 20/85 (OJ 1987, 102) the Legal Board held that evidence should be taken as soon as an issue arises. In a dispute between the appellant and the Receiving Section as to whether a particular document had been filed on a particular day, the post room staff could not have been expected to have a clear recollection of what had happened more than a year after the events in question. See also in this chapter: T. 1028/11 (late-filed request for a witness hearing); T. 2003/08 of 31 October 2012 (hearing of a duly summoned witness who had failed to confirm attendance but was present on the appointed day).

In T. 190/05 the board found that the opposition division had been wrong to base its finding that an alleged prior use had destroyed a patent's novelty solely on a statutory declaration, because the patent proprietor had expressly disputed both the allegations made by the opponent and those in the declaration, which represented, besides, a piece of evidence and not in itself prior art. That it would have been impossible to give the witness named by the opponent the minimum two months' advance notice of the already scheduled oral proceedings was not, in the board's view, an exceptional circumstance justifying the failure to invite him. The case was remitted to the opposition division for a hearing of the witness.

A party may be heard in the absence of his patent attorney if the latter has been duly informed (cf. T. 451/89 and T. 883/90, ex parte cases concerning apparatus that seemed to operate in a manner clearly contrary to well-established physical laws – taking of evidence ordered at oral proceedings).

3.3. Right to be heard

An opposition division's refusal to consider evidence filed **in due time** infringes a party's fundamental right to free choice of evidence and the right to be heard (T.142/97, OJ 2000, 358).

Pursuant to Art. 113(1) EPC each party must be allowed to comment on any evidence legitimately submitted in the proceedings. Allowing one party, even the party that originally submitted the evidence, to require unilaterally and arbitrarily that the evidence be withdrawn or **excluded** from consideration would infringe this right (T.95/07; cf. the case in T.760/89, OJ 1994, 797, concerning a return of documents filed as evidence).

As a rule, if assertions made in an unsworn witness declaration ("eidesstattliche Versicherung") remain **contested**, a request from a party to hear the witness must be **granted** before these assertions are made the basis of a decision against the contesting party. In T.474/04 (OJ 2006, 129), the opposition division had revoked the patent in suit because the invention did not involve an inventive step over the prior use evidenced in the declaration in lieu of an oath. Since fundamental assertions made in the declaration had been contested, the author was offered as a witness. Although the appellant (patentee) had consistently demanded that the author be heard, the opposition division decided not to summon him as a witness, even though he was available. In the board's view, the appellant had effectively been prevented from making use of a **decisive piece of evidence** (decision extensively cited in T.190/05).

Failure to consider evidence will normally constitute a substantial procedural violation in that it deprives a party of basic rights enshrined in Art. 117(1) and Art. 113(1) EPC (T.1098/07). In T.135/96 (point 3 of the Reasons), ignoring documents (and arguments) relevant to inventive step was found to violate the party's right to be heard. The board in T.1110/03 (OJ 2005, 302) made a similar finding where indirect evidence substantiating an allegation of fact relevant to novelty was disregarded. In T.1110/03 the board observed that Art. 117(1) EPC and Art. 113(1) EPC embody a basic procedural right generally recognised in the EPC contracting states, viz. the right to give evidence in appropriate form (specifically by producing documents under Art. 117(1)(c) EPC) and the right to **have that evidence heard** (T.1110/03); except to the extent that they were expressly excluded from the debate (T.2294/12). In T.1536/08 the opposition division had infringed the opponent's right to be heard by completely ignoring the unambiguous offer in its notice of opposition to provide the original printed versions of crucial prior-art documents (see also chapter III.B.2.4.5 "Failure to consider evidence").

In T.838/92 the board observed that in applying the principle of free evaluation of evidence, the opposition division or the board of appeal must exercise caution when evaluating the testimony of a witness whose impartiality is in doubt, with the parties of course being given an opportunity to comment on that testimony (Art. 113(1) EPC 1973). The board was not minded to sustain the appellant's objection to consideration of court bailiffs' reports on the basis that they had been established unilaterally. Such documents recording findings of fact were merely pieces of information which could be added to the file as evidence once they had been **submitted to the parties for comment**. In T.909/03, where one of the

appellants had objected to the manner in which a witness had been heard, the board held that it was not necessary for a party to be given a copy of the minuted testimony before questioning a witness. During the oral proceedings the party had been given sufficient opportunity to comment on the testimony of the witness.

In R 6/12 (case T 928/10) the Enlarged Board considered unfounded the assertion made by the petitioner (opponent) that it had been surprised by the board's failure to order that expert witnesses be heard. The petitioner could and should have taken an **active part in the proceedings** and, in particular, it was up to it to inform the board during the debate of any need to hear witness to support its line of argument. In its second ground for review, the petitioner contended that the board's decision did not take account of its arguments in general or, more specifically, the submissions of an assistant expert. The Enlarged Board dismissed the petitioner's claim to have been denied its right to be heard as unfounded. The board was **not obliged to address in detail each and every argument** presented by the party. The Enlarged Board had already found in R 21/09 that, on the pretext of an alleged infringement of the right to be heard, it was actually being asked to review the substance of the decision. This clearly fell outside the ambit of review proceedings, it being solely a matter for the board to decide whether to take a piece of evidence into account and, if so, to determine its probative value.

In T 267/06 an **affidavit** with an attached, **undated drawing** (item D12) and a witness hearing had been offered as evidence of the public prior use claimed in the notice of opposition. The opposition division had rejected the opposition to the European patent. The only reference it had made in its decision to the offer of a witness hearing as evidence was in the "Summary of facts and submissions", while the reasons dealt exclusively with the item D12 affidavit and drawing. In the board's view, essential details referred to in the affidavit and deemed to be illustrated in the drawing seemed not to have been taken sufficiently into account by the opposition division. In those circumstances, the witness hearing offered as further evidence should not have been disregarded for the purposes of assessing the claimed public prior use as per D12. This amounted to a fundamental procedural violation (Art. 113(1) EPC). This decision was cited in T 1231/11, but the board there held that the two cases differed.

In T 1363/14 the board pointed out that no EPC provision required that the facts adduced in support of alleged prior use actually be proven within the opposition period in order to substantiate the allegation; rather the requirement was for opponents to submit all the relevant facts and, should the other party **dispute** them, as a precaution offer suitable evidence. It was in the nature of offering witnesses to state that they would corroborate the facts (already) alleged. It was not permitted to speculate about what a witness would be able to remember and what not, thereby pre-empting the evidence's evaluation. The principle of unfettered consideration of the evidence did not apply until after it had been taken and could not be used to justify not taking evidence offered. Thus the opposition division's refusal to summon the witnesses had arbitrarily ruled out the possibility that they would be able to corroborate the opponent's allegations. Pre-empting the evidence's evaluation in this manner had been unjustified. See also T 2238/15.

Similarly, in T.906/98 the board found that the opposition division had applied the wrong criteria when exercising its discretion (not to order the hearing of witnesses on a prior use) by speculating instead of investigating before refusing to take the evidence on offer, which related to the aspect of the prior use in dispute, namely what had been used and so made available to the public.

The appellant in T.1028/11 alleged that the opposition division had infringed its right to be heard, and so committed a procedural violation, by refusing to hear the witness it had offered. The board disagreed: a witness's function was, in essence, simply to corroborate the alleged facts on which they were heard and not to fill in gaps in those facts. Parties therefore had to specify what legally relevant facts the witness's testimony was intended to prove. Based on the evidence available, the opposition division had taken the view that the public prior use was not prejudicial to patentability. The board found that there would have been little point in hearing the witness at that stage. Cited in T.444/09.

In T.2003/08 of 31 October 2012 witnesses were summoned in accordance with R.118 EPC and they were invited to confirm their attendance. Neither witness replied at all. But both witnesses were present. The appellant (patentee) requested the board to refrain from hearing them. The failure to react to the invitation in the summonses did not have any influence on the board's view that the witness evidence was necessary.

In T.361/00 the board ruled that there was no point hearing the author of statutory declarations as a witness at oral proceedings because, in view of the other aspects on file that had been discussed, it would not change its decision. Nor did the board agree that the opposition division had committed a substantial procedural violation by ignoring an offer to present the witness: the minutes of the oral proceedings – which the party concerned had not contested – did not record that it had made such an offer.

According to the case law of the boards of appeal and as mentioned in decision T.142/97 (see point 2 of the Reasons), a deciding body must ascertain the relevance of evidence submitted to it before deciding to admit or reject it. When relevant features of the prior art trailers as asserted by the opponents were questionable and remained contested, a request by the opponents **for the evidence to be secured**, e.g. by hearing witnesses proposed by the opponents or by inspection of the trailer in accordance with Art.117(1)(f) EPC, could not be rejected without justification. In case T.1647/15 the opposition division had rejected the evidence on the basis of mere suppositions, making no real attempt to definitely assess it or its relevance. Only if the opposition division knew enough about the evidence offered to ascertain that it was not relevant, would it have been justified in rejecting it. Because the opposition division did not grant the request for inspection on this issue, the right to be heard was violated. This refusal to consider evidence filed **in due time** infringed a party's fundamental rights to a free choice of evidence and to be heard (Art.117(1) and 113(1) EPC).

In T.1872/08 the board decided that in not admitting the additional comparative tests offered by the patentee, the opposition division had not taken into account that the patentee deemed further comparative data to be absolutely necessary in order to overcome its objections as to inventive step. The opposition division had thus **deprived**

the patentee **of the possibility to defend its case effectively**. See also T.2294/12, in which the examining division had disregarded comparative tests.

While it is well-established by case law that **third-party observations** (and accompanying evidence) can be considered, both at first instance and on appeal, there is no obligation on the board beyond such consideration and no right of a third party to be heard (T.390/07). As a rule, third parties have none of the procedural rights associated with status as a party to the proceedings, in particular the right to be heard (T.1756/11). Conversely, parties to the proceedings can comment **at any stage** on new facts and evidence emerging from third-party observations filed after expiry of the opposition period, if they think that these could influence the decision (T.1756/11; see also chapter III.N. "Third-party observations").

In G.4/92, concerning the case of a decision taken against a party who has been duly summoned but fails to appear at oral proceedings, the Enlarged Board established that **new evidence** may not be considered unless it has been previously notified and merely supports the assertions of the party who submits it, whereas **new arguments** may in principle be used to support the reasons for the decision (G.4/92, OJ 1994, 149, headnote 2). For more on non-attendance at oral proceedings, see chapter III.C.5.

In R.21/09, the party alleged an **infringement of the right to defence** on the basis that the board had refused to allow further discussion of **all the documents submitted to the English courts**. In the end, the Enlarged Board did not allow the petition.

See also chapter III.B.1. "Right to be heard".

4. Evaluation of evidence

4.1. Principle of free evaluation of evidence

Neither in the EPC nor in the case law of the board of appeal are formal rules laid down for the evaluation of evidence. The Enlarged Board of Appeal has recalled that proceedings before the EPO are conducted in accordance with the principle of the free evaluation of evidence (G.1/12, OJ 2014, A114, citing G.3/97, OJ 1999, 245, point 5 of the Reasons; and G.4/97, OJ 1999, 270, point 5 of the Reasons).

Thus the EPO departments have the power to assess whether the alleged facts are sufficiently established on a case-by-case basis. Under the principle of free evaluation of evidence, the respective body takes its decision on the basis of all of the evidence available in the proceedings, and in the light of its conviction arrived at freely on the evaluation whether an alleged fact has occurred or not (see e.g. T.482/89, OJ 1992, 646; T.592/98, T.972/02; see also e.g. T.838/92, in which the board found there was a detailed and consistent body of evidence establishing that a device had been on sale before the patent application was filed).

However, the principle of free evaluation of evidence in EPO proceedings cannot go so far as to justify the **refusal of a relevant and appropriate offer of evidence**. Free evaluation

of evidence means that there are no firm rules according to which certain types of evidence are, or are not, convincing. The deciding body must take all the relevant evidence before deciding whether or not a fact can be regarded as proven (T 474/04, OJ 2006, 129, citing G 3/97, OJ 1999, 245, point 5 of the Reasons). On the other hand, failure to submit evidence despite a board's request to do so may be viewed as a sign that the evidence would perhaps not confirm what has been claimed (see T 428/98).

When evaluating evidence, it is necessary to distinguish between a document which is alleged to be part of the state of the art within the meaning of Art. 54(2) EPC, in the sense that the document itself is alleged to represent an instance of what has been made available to the public before the priority date of the opposed patent, and a document which is not itself part of the state of the art, but which is submitted as evidence of the state of the art or in substantiation of any other allegation of fact relevant to issues of novelty and inventive step (T 1110/03, OJ 2005, 302). In the first situation, a document is **direct evidence** of the state of the art; its status as state of the art cannot normally be challenged except on authenticity. In the second situation, a document is also **evidence** albeit **indirect**; it provides a basis for an inference about, e.g. the state of the art, common general knowledge in the art, issues of interpretation or technical prejudice etc. – an inference which is subject to challenge as to its plausibility. Only a document of the first kind can be disregarded on the sole ground that it is published after the priority date. Documents of the second kind do not stand or fall by their publication date even on issues of novelty and inventive step. Disregarding indirect evidence would deprive the party of a basic legal procedural right generally recognised in the contracting states and enshrined in Art. 117(1) and Art. 113(1) EPC (T 1110/03 cited in T 1797/09 and T 419/12).

Ruling on a refusal to hear witnesses, the board in T 1363/14 held that the principle of free evaluation of the evidence did not apply until after it had been taken and could not be used to justify not taking evidence offered. See also T 2238/15 and all decisions cited there.

4.2. Probative value of evidence on a case-by-case basis

According to the principle of free evaluation of evidence, each piece of evidence is given an appropriate weighting according to its probative value. As the Enlarged Board of Appeal pointed out in G 3/97 (OJ 1999, 245, point 5 of the Reasons) and G 4/97 (OJ 1999, 270, point 5 of the Reasons), "(t)he principle of free evaluation would be contradicted by laying down firm rules of evidence defining the extent to which certain types of evidence were, or were not, convincing" (cited in G 1/12, OJ 2014, A114).

The following cases illustrate how the boards have evaluated various pieces of evidence in the light of the specific circumstances.

4.2.1 Witness testimony and written statements

See also in this chapter III.G.2.2 and III.G.2.3.

Witness testimony may be given in writing (written witness statements/statutory declarations) or orally (hearing of witness).

a) Credibility of allegedly linked witnesses

The probative value of the declarations of a witness depends on the circumstances of the particular case (T.937/93, cited in T.190/05). The **credibility of witnesses** cannot be impugned merely because they are related to one another and have a business relationship with one of the parties (T.363/90). An allegation based solely on suspicion cannot reasonably be expected to form a valid ground for casting doubt on the credibility of the evidence (see T.970/93 involving allegations of falsified evidence). The statements of employees of one of the parties were regarded as sufficient evidence in a series of appeal cases, e.g. T.162/87 and T.627/88; T.124/88; T.482/89, OJ 1992, 646; T.363/90; T.830/90, OJ 1994, 713; T.838/92 and T.327/91 (general manager of one party); T.190/05; J.10/04 (employee of representative's law firm).

While the written statements of independent persons would tend to carry more weight, the statements of employees of parties to the proceedings are not objectionable per se. In this respect, case T.523/14 was not comparable with T.1257/04, in which an **employee** statement was the sole piece of evidence filed to prove the public availability of a brochure. In T.523/14, the content of written statements by two employees of the opponents was considered sufficiently credible (public availability of an advertising newsletter sent by e-mail) because it was corroborated on its crucial points by other documents. Concerning the probative value of two expert reports submitted, one being from an employee of the opponent, see T.129/12.

A board may admit a statutory declaration as evidence even if it is signed by an opponent's senior manager. It is then to be considered in accordance with the principle of free evaluation of evidence (T.64/13).

In T.2057/13 the affidavit in respect of the contents of priority document P1, filed for the first time by the patent proprietor in reply to the board's communication under Art. 15(1) RPBA 2007, was not admitted. The affidavit was written by one of the inventors named in P1 and an employee of the appellant-patent proprietor. The board had to assess the contents of P1 in an impartial manner from the perspective of an independent skilled person.

In T.505/15 the opposition division had considered the witness to be credible and the board had no reason to depart from this assessment. The appellant (patent proprietor) attempted to cast doubt on the witness's credibility by referring to the fact that she was an employee of the appellant (opponent) and that there was a bonus element to her remuneration. The board took the view that bonus payments were not unusual and, according to the witness, had for years not related to a project concerning the alleged public prior use. In the board's view the **discrepancies** pointed out by the appellant (proprietor) did not call into question the reliability of the overall assertions made by the witness.

In J.10/04 the Receiving Section had doubted the credibility of sworn statements given by a legal assistant. It had not invited her to be heard in person as a witness because this would not have led to a different evaluation of the evidence. The Legal Board held, first of all, that a sworn statement was a form of evidence with a high probative value, especially

if it was given, as in the case in point, in the knowledge that wilfully false statements were punishable under the applicable law. Strong reasons were therefore needed to disregard this kind of evidence, for example a set of circumstances making the statement very unlikely. If the Receiving Section had considered the circumstances described in the statement very unlikely, it ought to have heard the witness personally in order to evaluate her credibility (ruling applied in e.g. [T.1100/07](#)).

See also [T.2338/13](#), a special case in which the doubt about the relationship between the opponent and a witness had implications for the applicable standard of proof (see in this chapter, [III.G.4.3.2](#) "Public prior use").

b) Evaluation of evidence by the department of first instance

The board in [T.2565/11](#) overturned the evaluation of evidence made by the department of first instance because the opposition division erred as regards the underlying facts and failed to give an evaluation that was free of contradictions. The board gave its own evaluation of the evidence regarding the relevant facts. The board also noted that further explanations given by a witness, in order to close a potential gap in the documentary evidence on file, could not be considered per se as **new facts**. Otherwise, hearing a witness would be meaningless, and evidence provided on the basis of documents would be given a higher evidentiary value than a witness testimony, for which no basis could be found in the EPC. [T.2565/11](#) is cited in [T.2398/12](#) in the context of an object submitted as evidence in support of an allegation of public prior use which had gone missing during the appeal but had already been examined by the opposition division.

The board in [T.1476/14](#) held there was no ground in the case in hand to overturn the opposition division's assessment of the testimony of two witnesses. The credibility of witnesses cannot be impugned because of **differences** in testimonies relating not to the essentials but to less important aspects of prior use.

In [T.1798/14](#) the opposition division had considered the witness reliable and his answers detailed, credible and consistent overall. The respondent (patent proprietor) had not voiced any concerns either; it had merely disputed that the machine witnesses may have seen comprised all the features of the claim. The board saw no reason to depart from this assessment and to doubt the accuracy of the witness's statements. In [T.544/14](#) the question of evaluating the evidence was again discussed in detail by the board (re-hearing the witness necessary but eventually not decisive – alleged public prior use not novelty-destroying).

According to the board in [T.621/14](#) appeal proceedings were not intended as a **second opportunity** to have evidence heard unless sufficiently substantiated grounds for appeal gave some reason for it. The mere desire for evidence to be evaluated differently did not result in a re-opening before the board of the procedure for taking evidence. The board saw no reason to deviate from the prior art identified by the opposition division through the hearing of witnesses.

In T 804/92 (OJ 1994, 862) the opposition division had, in a communication to the parties, suggested in detail the content of a statement under oath. Such a practice was firmly rejected by the board because it involved the risk of leading witnesses and could seriously undermine the probative value of such statements. This applied to departments at any instance in proceedings before the EPO.

c) Events long past

In T 1191/97 the appellant's criticism of the evaluation of evidence by the department of first instance did not pose a serious threat to the witness's credibility. The fact that the events at issue had taken place a long time ago could readily explain certain imprecisions in the witness's testimony. The board saw no indication that the witness had been in breach of his obligation to testify to the best of his recollection.

In T 61/07 the board made clear that the doubts cast by the respondent on the witness's memory about events which had happened 23 years ago concerned not the witness's credibility but the **credibility of the testimony**. However, it saw no reason to doubt that his testimony was credible. Just because the witnesses had each independently met a third witness before being heard did not automatically mean that their recollections had been influenced. Shortly before a party alleges prior use, witnesses are normally sounded out about what they actually remember. Such a **discussion with a potential witness** did not automatically imply that during it the party or one of its staff had influenced what the party remembered.

In the circumstances of case T 918/11, the board considered that the reasoning of the impugned decision that "... the mere declaration of one witness in connection with facts which occurred between 1992 and 1997, i.e. at least 14 years ago, is not sufficient to prove the details of prior use" was not well founded.

In T 905/94 the board held that the fact that one witness had made his declaration three years earlier than other witnesses was not sufficient reason to make his testimony more credible.

With regard to the credibility of witnesses, the board observed in T 1210/05 that even a person who was not being dishonest might make untrue statements. A person can be honestly mistaken in his recollection of an event, particularly if the event took place some time previously.

d) Contradictory or consistent testimony

In T 361/00, as to the two **statutory declarations** (relating to visits to a cement works), the board had no doubt that they had been made in good faith but found them to be **contradictory**. Having found that the appellant's (opponent's) submissions at the oral proceedings had not clarified the contradictions, it concluded that the appellant had failed to furnish conclusive proof of the alleged prior use. Lastly, it held that there was no need to hear the witness, giving reasons for this finding (on contradictory statements, see also T 833/99 and T 832/13, serious doubts due to the general nature of the statement).

In T.1266/16 the board stated that, notwithstanding that the two declarations submitted were "**word-for-word identical**", they did not contain any specific detail with respect to the suppliers they referred to, let alone any data regarding purchase or analysis performed. As such, these statements, **unsupported by any corroborating evidence**, could not be considered as proof of the appellant's argument.

In T.1914/08 the board – like the opposition division at first instance – regarded two witnesses' testimonies as the decisive evidence proving without any gaps the alleged prior public use. Each testimony, considered in isolation, gave a consistent and full picture of the process in question.

In T.1293/13, to overcome an objection of insufficient disclosure based on a reference to a machine that was no longer in existence, the proprietor had submitted a statement from the president of the company that manufactured machines of this kind attesting that the results would be the same irrespective of the machine used. The board was not persuaded by the statement as it was not based on any verifiable data.

On an alleged prior use, the board in T.453/02, disagreeing with the patent proprietor (respondent), held the content of three statements to be consistent and convincing. Furthermore, the impartiality of the first statement could not be doubted as it had been made by the patent proprietor itself. In any event, the proprietor could not plausibly argue that the alleged public prior use had been based solely on testimony given after the date of filing of the contested European patent application. That testimony had been corroborated by other evidence (original trade fair catalogue bearing a date).

In T.1043/93 the deposition of the witnesses (who did not bring documents as requested by the board) contained unclear answers, inconsistencies, and were in conflict with another, so that the board found that the related alleged public prior use was not proven and could not be considered to belong to the prior art (Art. 54(2) EPC)

In T.100/97, without casting doubt on the good faith of the submitted declaration, the board stated that for the content of such statements to be considered sufficiently credible, it had to be **corroborated by documents of a definite date**. In the absence of any such documents, the board decided that it could not be established with a sufficient degree of certainty what had been made available to the public before the priority date of the opposed patent.

In T.473/93 the board decided that the appellant's surmise that he had been in error in making his statutory declaration was not sufficient to allow orally presented facts which deviated from the declaration to appear more credible. The fact alleged orally therefore had to be regarded as not proven.

An **unsigned statement** by an unknown and unnamed person should in principle be given minimal weight (T.750/94, OJ 1998, 32; T.1818/12). In T.212/97, the board could not regard the citation of facts based on **hearsay** and not accompanied by a witness testimony as adequate evidence for the alleged prior uses.

e) Witness testimony and national proceedings

In **national proceedings** before the Dutch District Court and Court of Appeal, several witnesses had been heard, and written statements had been introduced by both parties. The Dutch Court of Appeal could not establish an uninterrupted chain of proof that the alleged public prior uses had indeed taken place before the priority date of the contested patent. After evaluating the Dutch Appeal Court's findings, the board's judgment in **T 665/95** was that no further investigations were necessary and that the conclusion of the Dutch Appeal Court could be followed, with the consequence that the subject-matter of the granted claim 1, contrary to the impugned decision of the opposition division, was considered to be novel. Other examples of cases in which findings made in national proceedings served as evidence include **T 760/89**, OJ 1994, 797 (USA); **T 582/90** (FR), **T 1043/93** (IT), **T 885/02** (NL); **T 276/07** (IT); **R 21/09** (UK); **T 1904/12** (DE) and **T 202/13** (NO).

In **T 407/08** the appellant (patent proprietor) filed a copy of an expert opinion which was ordered by a German Court in a patent dispute. A statement according to general experience in this expert opinion was taken into account by the board to conclude that a given feature was not implicit to a skilled person (Art. 100(c) EPC).

f) Obligation to raise objections under R. 106 EPC

In case **R 8/17** the Enlarged Board of Appeal recalled that an objection under R. 106 EPC must be expressed and specific. The petitioner claimed that it raised the objection in the oral proceedings but neither the minutes – it had not been requested that they be corrected because incomplete – nor the written reasons contained any indication of such an objection. Furthermore, the affidavit of the petitioner's representative submitted with the petition did not assist the petitioner on this crucial point.

4.2.2 Test and experimental evidence

a) Test methodology and probative value

In **T 702/99** the board made extensive remarks with regard to the probative value of test evidence. It noted that it was essential that **comparative tests** conducted by a number of persons as evidence for or against qualities such as an improved "feel" of a product (e.g. cosmetics) be made under conditions of maximum objectivity on the part of those conducting the tests. Parties to proceedings should adopt the same standards in the preparation of such test evidence as they should in the preparation of experimental evidence. While the use of independent persons would naturally tend to carry more weight, the use of employees might not be objectionable per se as long as the test conditions were designed to ensure that the employees were not biased by prior knowledge of either the tested products or of their employer's expectation of the test result. The presentation of test evidence also had to be accurate, but the format of the presentation was of secondary importance; a carefully prepared report and/or table might convey as much information as a large number of statements from the testers.

In T.275/11 (bleaching/highlighting composition for hair) in order to demonstrate that the problem was successfully solved, the appellant (patentee) referred to two comparative examples. The board cited T.702/99 and recalled that it was desirable to show that the tests had been **carried out under "blind" conditions** to avoid any suspicion of bias. The board found that there was no indication of the conditions under which these tests had been conducted. Therefore, any effects referred to by the appellant had to be disregarded.

In T.301/94, on the issue of novelty, the board stated that analyses produced by the opponent (Saint-Gobain Emballage) showed that the results obtained by two laboratories (the laboratories of the Institut National du Verre in Belgium and of Saint-Gobain Recherche) for the compositions and the optical properties of the glass bottles all fell within the ranges defined in claim 1 of the patent in suit and that the results of the analyses were in sufficient agreement with each other to be reliable.

b) Evaluation of tests cited to prove that problem solved (Art. 56 EPC)

In T.1872/08 which concerned inventive step and the non-obvious solution of a problem based on an advantageous effect demonstrated by means of comparative tests, the Opposition Division had not deemed the tests provided by the applicant (appellant) to be relevant because the tests had been made with one specific printer on one specific paper, both different from the paper and the printer used in example 18 of document (D9). The board stated that, according to the established jurisprudence of the boards of appeal, "in the case where comparative tests are chosen to demonstrate an inventive step with an improved effect over a claimed area, the nature of the comparison with the closest state of the art must be such that **the effect** is convincingly shown to have its **origin in the distinguishing feature of the invention**. For this purpose it may be necessary to modify the elements of comparison so that they differ only by such a distinguishing feature ..." (T.197/86, OJ 1989, 371, point 6.1.3 of the Reasons). The board concluded in T.1872/08 that the comparative tests provided sufficient evidence that the problem was solved.

In T.479/06 the board found that tests results cited by the proprietor to show that the problem was solved by the claimed solution and so established inventive step were **not conclusive**. It could not conclude on that basis that the technical problem had actually been solved, so the technical problem had to be redefined.

In T.568/11 the board stated that the technical problem needed to be reformulated. One of the arguments of the patent proprietor was that the additional differences between the compositions to be compared were so minimal that they would have no influence on the properties of the composition.

Concerning also an effect not **attributable to** the distinguishing of feature, in T.71/09, the mere comparison of the two compositions was insufficient to demonstrate that the alleged effect had been caused by the claimed solution or that this effect had been produced across the entire claimed area. Indeed, the improved resistance of hair dye to shampoos might **be caused by other factors**. Improved durability of hair dye had not been established for all the claimed compositions.

In T. 1127/10 (hair treatment), since there was no experimental data in any of the examples in the patent, the appellant had submitted a document reporting on two series of comparative tests. The board, however, found that the document's description of the test procedure and analysis of the results were deficient and insufficiently informative to demonstrate plausibly that such an improvement had been achieved (see also T. 1962/12 and T. 383/13: comparative examples deficient – improvement not plausibly demonstrated). See also T. 2371/13 (inventive step – **plausibility** of an effect alleged in the patent application – admissibility of comparative-test results filed after the filing date to demonstrate that effect).

The board in T. 578/06, noting that the EPC does not require experimental proof for patentability, considered that the disclosure of experimental data or results in the application as filed and/or post-published evidence was not always required to establish that the claimed subject-matter solved the objective technical problem. This was particularly true where no substantiated doubt had been raised. In T. 488/16 the board agreed with the appellant that it is not always required to include experimental data or results in an application (see T. 578/06). It is, however, a *conditio sine qua non* that it is shown that the technical problem underlying the invention was at least plausibly solved at the filing date. If, as in the present case, the nature of the invention was such that it relied on a technical effect which was neither self-evident nor predictable nor based on a conclusive theoretical concept at least some technical evidence was required to show that a technical problem had indeed been solved.

The Enlarged Board stated in R. 9/14 that the petitioner was mistaken in believing that the deciding board had committed a serious procedural violation by not informing it of the correct sequence to be followed in the problem-solution approach and in the way it had applied the substantive law. The submission of comparative-test results to prove an effect or improvement was part of the problem-solution approach when establishing the problem over the closest prior art that is effectively solved by the claimed subject-matter. The petitioner's specialist knowledge of patent law should have told it that. There could thus be no question of a "surprise" or infringement of the right to be heard.

In R. 16/13 the board – *ex officio* – questioned the probative value of comparative examples relied upon by the patent proprietor although their conclusiveness for demonstrating a technical effect of the claimed invention had not been disputed by the opponent. The decision of the board under review was set aside.

c) Evaluation – other tests

In *ex parte* case T. 2340/12 the application related to a space energy implosion unit. In relation to sufficiency of disclosure, the appellant (applicant) claimed without citing a specific internet citation that over 40 000 internet citations could be found concerning "Space Energy", and it only referred to "indirect" measurements carried out on white rats or patients, but did not elaborate on the nature of these experiments or on their relevance for the claimed invention, despite having been invited to do so in the provisional opinion issued by the board. The criticisms raised by the examining division regarding the absence of a control group for the patients treated, the doubts regarding the statistical relevance of

the experiments carried out, the absence of details as to the circumstances and the way the experiments were controlled, were justified.

In T.453/04 the board found the **experimental evidence** advanced by the appellant (opponent) to be defective for two reasons. Firstly, the teachings of the patent in suit were not accurately replicated. Secondly, the product presented as representative of the prior art had not been shown to belong to the prior art. Thus the experimental evidence of the appellant did not demonstrate that the process steps set out in claim 1 of the main request resulted in products indistinguishable from those of the prior art.

In T.1248/08, in the application as filed, a number pertaining to a value used in example 1 was illegible and indecipherable. It was not clear whether it should read "0.08" or "0.09", or even "0.05". The board held that the arguments of the appellant adopting proof "on the balance of probability", in particular **a survey** in favour of the value of "0.09", had to fail. According to the survey conducted amongst partners and staff at the firm of the appellant's representative these results demonstrated that the value in question could not be considered to be "0.09" with a certainty "beyond reasonable doubt", as required by the established jurisprudence. In any event, a question of accuracy and disclosure could not be decided by a **poll** (see also chapter II.E.5. "Evidence and standard of proof for allowing amendments and corrections").

4.2.3 Archives and internet publications

In T.314/99 concerning the availability to the public of a diploma degree paper ("Diplomarbeit"), the board took the view that the paper had not become publicly available by its mere arrival in the archive of the Chemistry Department **Library** of the University. The **logbook** produced in evidence was a handwritten note book in which the diploma degree papers received in the archive were entered by the librarians. The logbook itself was not an official publication of the library but essentially an internal document of the library staff. After closer examination of the annotations in the logbook, the board said that it could not be concluded with certainty that the relevant entries had actually been made before the relevant priority date and it could not be ruled out that they had been added at a later time, when for one reason or another the time frame had become relevant. See also, with respect to a diploma thesis allegedly disclosed during an oral presentation, T.1057/09; and with respect to the value of a hand-written annotation from a librarian, T.915/12.

In T.91/98 the respondent (opponent) had challenged inventive step on the basis of document (8) which was an **entry from the Lexis-Nexis database**. The document did not, however, provide any evidence as to when this information had been entered into the database, i.e. as to when it had been made available to the public. Nor could the date of availability be taken as the date mentioned in the heading of the entry (September 3, 1985) as this latter date could not be equated to the distribution date of the information and was not even necessarily correct. After detailed evaluation of the declarations and affidavits filed by the respondent the board arrived at the conclusion that the date on which the information contained in document (8) had been made available to the public could not be unambiguously defined.

T 2284/13 (Wayback machine as prior art) the board accepted a combination of D5, an incomplete archive version of a web page (on the Wayback Machine web.archive.org; publicly available on 2004 with only small images) and D5', a recent download (2009) of the webpage (with full images) as evidence of a prior art publication. Accordingly, when considering the prior art disclosure of D5, the expanded figure "the MRTT fuel system" shown in D5' also had to be regarded as forming part of that disclosure.

In T 1698/08 there was no reason for the board to exercise its discretion to refuse to admit the evidence, as it could neither be said that it was irrelevant nor that it was unnecessary. A refusal to admit could in any case not be based on statements in the document with respect to the **accuracy of the facts** it contained. Such statements related to the probative value of a document. Based on the principle of the free evaluation of evidence (G 3/97, OJ 1999, 245, point 5 of the Reasons), the board is free in assessing to what extent the information in a document is credible, whereby such a statement may play a role. Case T 1698/08, in respect of the disputed validity of an authorisation related to an (internet) **uncertified extract** from a commercial register.

In T 286/10 the board held that a merely general allegation that **digital libraries** were unreliable was not enough to cast doubt on the date on which a document stored with Internet Archive (www.archive.org) had become publicly available. It applied the usual standard of proof on the balance of probabilities (confirmed in T 2227/11, T 1711/11, T 353/14, T 545/08, T 1066/13). See also chapter I.C.3.2.3 "Internet disclosures".

4.2.4 Other written evidence

In T 332/87 a dated **internal paper**, marked as being confidential and not signed, was – together with an undated leaflet – not considered sufficient evidence. In T 595/89 the board decided that the opponent's in-house documents relating to the installation of a device in an aeroplane and to the sale thereof were not sufficient to prove public prior use.

In T 204/88 a **letter of tender** was not sufficient to prove public prior use because it was not discernible when and to whom the device was to be delivered and because the device was described in terms too general for anyone to identify whether it corresponded to the invention. In T 725/89 too, a dated tender was not regarded as sufficient evidence, as it was not proven when the tender had actually been presented, and the date of the tender was only one week prior to the priority date. By contrast, the board took the view in T 482/89 (OJ 1992, 646) that an **unsigned delivery note**, together with other documents, could constitute sufficient evidence of delivery.

In T 505/15 the board stated that the appellant's (opponent's) argument was credible that the original printed document was no longer available about 14 years after its creation, given that there was no obligation to keep the original paper version for more than 10 years. However, the board did not regard the lack of a signature as casting doubt on the content of the document. Firstly, the allegation of a legal requirement for signing such documents had not been substantiated. Secondly, even if the printed document was originally signed, it was unlikely that the electronically stored version of the document would contain such a signature. See also T 2466/13, which deals with both a failure to

provide the originals of contracts assigning the right of priority and a mere allegation that a signature might have been forged.

In T.48/96 the board decided not to accept copies of pages from a **catalogue** bearing a date as sufficient proof of availability to the public. In order to prove the allegation that a particular apparatus described in a catalogue had been available to the public before the priority date, it was not sufficient to show that the catalogue had been published on time, because a mere indication in a catalogue did not constitute absolute proof that the described product had in fact been available to anybody; for example, there could have been a delay (see in this chapter III.G.4.3.3 for examples of cases concerning catalogues and commercial brochures, including T.1710/12, in which the board addressed the implications for the standard of proof where such a catalogue has not been produced in support of alleged prior use).

In T.905/94 the patent proprietor had exhibited a blind at an exhibition. After having considered the evidence regarding the exhibition the board looked at the question of whether use of the same **trade name** for different models could constitute evidence of the fact that the patent proprietor had marketed or described the blinds according to the patent at issue before the date of priority. In the board's opinion, such use could not constitute sufficient evidence since it was common practice in industry for the same name to be used and retained for a product, the technical characteristics of which changed over time as improvements were made. See also T.2020/13 on a change of trade name for prior-art products defined by that trade name.

In T.2357/12, concerning the transfer of opponent status and the concept of "universal succession", the board commented on the evaluation of evidence. The proprietor questioned the probative force of **private documents**, as submitted in this case, rather than public registration documents, as evidence of the transfer of opponent status in inter partes proceedings. The board stated that whereas **public registers** often enjoyed public trust regarding the facts registered and other public documents might be more conclusive on formal questions, the identity of the issuer and the date and place of creation of a private document could be more easily contested. However, neither kind of document provided irrefutable evidence of the correctness of a document's content. Citing examples of the different types of documents accepted in individual cases, the board pointed out that the boards had always accepted public and/or private documents as evidence of the transfer of rights, whether by way of universal succession or a single transfer of assets. The level of proof required was credibility of the facts for which evidence was given, in the light of all circumstances.

The opponent having died, in T.74/00 in the board's view, the best evidence which could be provided was evidence of the relevant law of succession (here, Japanese law) by way of **legal opinion** from a Japanese attorney-at-law; the mere filing of copies of a party's correspondence with his instructing Japanese attorneys could not serve as substitute. In T.205/14 (and T.517/14) Israeli law (applicable) was proved to the satisfaction of the board by an expert opinion provided by the party (right of priority – assignment). In T.1201/14, which also concerned transfer of priority, legal opinions were provided but did not satisfy the board on their merits.

4.3. Standard of proof

Even though different concepts as to the standard of proof have developed in the case law of the boards, they all have in common that a judgement is to be made on the basis of the application of the principle of free evaluation of evidence.

The EPO standard of proof is generally the balance of probabilities. By way of exception, the standard of proof of the balance of probabilities is shifted to a standard of proof beyond reasonable doubt mainly in opposition where only the opponent has access to information (evidence) concerning, for example, an alleged public prior use.

Of note in particular are some relatively recent decisions containing lengthy observations on the standard of proof and the previous case law on this, namely: T. 2451/13 on the meaning of "beyond reasonable doubt" and T. 545/08 on the meaning of "balance of probabilities" in the boards' case law; the latter decision, the board considered the matter in the general context of the law of evidence, concluding that a probability as low 51% would not suffice.

4.3.1 General – "Balance of probabilities"

The EPO departments decide on the issues that arise before them on the basis of the evidence adduced by the parties. Their decisions need not, and in most cases cannot, be based on absolute conviction, but instead are to be arrived at on the basis of the overall balance of probabilities, in other words on the footing that one set of facts is more likely to be true than the other. If the result of the boards' evaluation of the evidence is such as to persuade them one way or another, then the **balance of probabilities** standard is met. This standard applies particularly in opposition appeal proceedings where the boards of appeal are called upon to reach a conclusion on the basis of the overall balance of probabilities, as distinct from "beyond all reasonable doubt" or "absolute conviction" (on the latter concept, refer to the more recent case T. 2451/13). Each of the parties must therefore seek to prove facts alleged by it to that degree of proof (see e.g. T. 182/89, OJ 1991, 391; T. 270/90, OJ 1993, 725; T. 859/90; T. 109/91; T. 409/91, OJ 1994, 653; T. 1054/92 of 20 June 1996; T. 296/93, OJ 1995, 627; T. 326/93; T. 343/95; T. 363/96). The standard of balance of probabilities applies also in decisions issued in ex parte proceedings (T. 381/87, OJ 1990, 213; T. 69/86; T. 128/87, OJ 1989, 406; T. 939/92, OJ 1996, 309; T. 545/08 on internet publications).

When an issue of fact is being examined and decided by the EPO on the balance of probabilities, **the more serious the issue** the more convincing must the evidence be to support it. If a decision on such an issue may result in refusal or revocation of a European patent, for example, in a case concerning alleged prior publication or prior use, the available evidence in relation to that issue must be very critically and strictly examined. A European patent should not be refused or revoked unless the grounds for refusal or revocation (that is, the legal and factual reasons) are fully and properly proved (T. 750/94, OJ 1998, 32; T. 329/02; T. 750/94 was cited and considered in the context of evidence by the board in T. 545/08). See Guidelines G-IV, 1 – November 2015 version): "If the applicant shows sound reasons for doubting whether the document forms part of the 'state of the

art' in relation to his application and any further investigation does not produce evidence sufficient to remove that doubt, the examiner should not pursue the matter further." See also the version currently in force, G-IV, 1 – November 2018 version.

The board in T. 286/10, citing T. 472/92, observed that it is settled case law that evidence is generally assessed in terms of what seems most probable; it made an **exception** only for public prior use objections where practically all the supporting evidence lay within the power and knowledge of the opponent (see in this chapter III.G.4.3.2 "Public prior use"). It considered the balance of probabilities standard to be met if, after evaluating the evidence, a board was **persuaded** one way or the other.

For **internet publications**, the standard of proof is the balance of probabilities (T. 286/10, T. 2227/11, T. 1711/11, T. 353/14, T. 545/08). See also chapters I.C.3.2.3 "Internet disclosures" and I.C.3.5.2.c "Internet – proof of the date of availability" with reference to the Guidelines and OJ 2009, 456-462).

In the board's judgment in T. 658/04, an expert's declaration which is not supported by verifiable facts but which merely constructs some hypotheses, cannot reflect the **common general knowledge** to be considered for assessing the sufficiency of disclosure within the meaning of Art. 83 EPC. For this reason, document (12) – declaration of U.K Pandit submitted by the appellant (patent proprietor) as an expert opinion – did not form part of the common general knowledge. T. 658/04 also summarised what is part of the common general knowledge according to the case law of the boards of appeal.

In cases concerning an application for re-establishment of rights in respect of the time limit for filing the statement of grounds according to R. 136 EPC (former Art. 122(2) and (3) EPC 1973), the application is regarded as duly supported only if it is clear from the facts set out and credibly substantiated ("glaubhaft gemacht") that the applicant took all due care required by the circumstances to observe the time limit (see T. 13/82, OJ 1983, 411; cf. also T. 243/86). It is not further specified whether this standard involves a lower degree of probability, as the term "Glaubhaftmachung" for the purposes of German, Austrian and Swiss law (see chapter III.E.4.4.).

4.3.2 Public prior use

Although the standard of proof is the same for all objections covered by Art. 100 EPC (cf. T. 270/90, OJ 1993, 725), the case law identifies two levels or standards of proof to be applied with regard to disputes around public prior use – either the "balance of probabilities" or "up to the hilt".

a) Both parties have access to the evidence : balance of probabilities

The standard of the **balance of probabilities** is applicable when both the patent proprietor and the opponent had access to the material of which public prior use is alleged (see e.g. T. 363/96, T. 12/00, T. 1105/00, T. 2043/07, T. 1464/05, point 4.3 of the Reasons; T. 202/13, point 15.6.2 of the Reasons; T. 1170/13, point 2.3 of the Reasons).

In the following cases, it was decided that the evidence did not lie within the sphere of the opponent and therefore that the **balance of probabilities** was the applicable standard of proof: T.918/11 (selling of containers outside the sphere of the opponent – mass production); T.55/01 (mass-produced goods offered for sale to customers); T.1170/13 (circumstances in relation with prior use showed that opponent did not easily dispose over all the necessary evidence); T.12/00 (in a case involving third parties, both parties could collect evidence); T.1464/05 (no relationship between the opponent and the third party involved in the prior use – sale for test); T.64/13 (prior use based on a purchase agreement between two companies neither of which, according to the respondent (opponent), had a business relationship with it – prior use originally cited by a third company before the German Federal Patent Court).

The **balance of probabilities** standard is applicable only if the patent proprietor and the opponent had equal access to the material allegedly in public prior use (T.1776/14).

In case T.473/13 the alleged public prior used was by the respondent and patent proprietor, who had initially to prove a confidentiality agreement (burden of proof). The board considered that the much-cited "up to the hilt" criterion did not apply in the present circumstances, since the case law in this respect had been developed for the situation in which a prior use was by the opponent, which was not the case here.

In T.12/00, T.254/98 and T.729/91 the opponent alleging the public prior use was not involved in the circumstances relating to it (T.202/13).

b) Evidence within the sphere of the opponent: beyond any reasonable doubt

By contrast, in cases where all **evidence** in support of an alleged public prior use lies **within the power and knowledge of the opponent**, while the patentee has barely any or no access to it at all, it is incumbent upon the opponent to prove the alleged prior use **up to the hilt** (T.472/92, OJ 1998, 161; cf. T.782/92 referring to proof "beyond any reasonable doubt"). The boards decided that the evidence lied within the **sphere of the opponent**: T.2451/13 and T.703/12 (prior use originating from a subsidiary of the opponent); T.202/13 (the opponent was the successor of the company directly involved in the alleged public prior disclosure); T.2338/13 (opponent bore consequences of lack of information on relationship between him, the witness whose testimony he was relying on and the person who had contacted the witness); T.703/12 (product presented at the Ambiente trade fair in Frankfurt); T.274/12 (subsidiary – talks between firms); T.544/14 (subsidiary); T.1469/08 (evidence presented involved opponent's company's sale); T.441/04 (witness testimony measured according to the high standard of proof beyond reasonable doubt); T.1682/09 ((the opponent's) packing system delivered to and mounted at a client's premises); T.1914/08, T.738/04, T.1776/14 (the two parties did not have equal access to evidence).

Decision T.918/11 (point 3.3 of the Reasons) summarised the case law on standards of proof and the conclusion drawn in T.750/94 (OJ 1998, 32), with the board also emphasising the need to take into consideration that the application of the strict standard of proof referred to in the impugned decision was not justified in view of the fact that the

actual production and the selling of the containers was clearly outside the sphere of the opponent. The board was also of the opinion that the application of the standard of proof "beyond reasonable doubt" did not justify disregarding the witness testimony (regarding facts which had occurred a long time ago). The more recent decision [T 2451/13](#) summarised the principles governing the standard of proof in case of public prior use and specified the meaning of "up to the hilt" (see Catchword) used in [T 472/92](#), which is to prove beyond reasonable doubt. All the evidence about the publication date of a brochure was essentially in the hands of the opponent (brochure originated from a subsidiary of the opponent, on this latter point see also [T 738/04](#)).

If any reasonable doubt exists as to what might or might not be the result of carrying out the literal disclosure and instructions of a prior art document, in other words if there remains a "grey area", then the case of anticipation based on such a document has to fail ([T 793/93](#); see also [T 464/94](#) and [T 95/07](#)).

In [T 2010/08](#), the board pointed out that the requirement to prove prior use beyond reasonable doubt could not be circumvented by overstressing the principle of ex officio investigation and so shifting the burden of proof from the opponent to the opposition division or the board of appeal.

The board in [T 703/12](#) stated that all the evidence in support of the alleged public prior use (of a water filter jug, presented at the Ambiente trade fair in Frankfurt) lay within the power and knowledge of the appellant (opponent). The respondent (patent proprietor) disputed that the "what" was disclosed and that the "circumstances" of the prior use were proven beyond any reasonable doubt. The board was not convinced that either what was disclosed or the circumstances of the alleged disclosure had been proven to the required degree of certainty, namely beyond any reasonable doubt.

[T 274/12](#) dealt with an alleged prior use (talks between firms), all the evidence being in the hands of the opponent. In this case the board had to also decide whether there was an implicit obligation to maintain secrecy.

In [T 202/13](#) several public prior disclosures were alleged by the respondents (opponents). The board agreed with the appellant that the standard "up to the hilt", or "beyond reasonable doubt", was appropriate in the present case. One of the joint respondents 2 was the successor of the company directly involved in the alleged public prior disclosure. Respondent 2, as successor, had full knowledge of the actions alleged to constitute the public prior disclosure and full access to the sources of evidence.

In [T 1469/08](#) the appellant (opponent) alleged a public prior use in the form of the sale of composite "PARP PU" prostheses before the patent's priority date. Although the public prior use stemmed from the opponent itself, it had provided only **sales records** to substantiate the prostheses' availability. In such circumstances, there were **serious doubts** that documents actually existed establishing the prostheses' availability to the public before the priority date. See also [T 71/09](#), setting out the case law and citing [T 750/94](#) and [T 97/94](#). The respondent (opponent) alleged public prior use prejudicial to the novelty and inventive step of the subject-matter claimed. Here too, the prior use was

its own: the evidence presented involved its company's sale of a certain product. The board held that the evidence submitted failed to establish the product's composition beyond any reasonable doubt.

In T. 1776/14 the opponent stated that disclosure had been in its interest and implied that it was very likely the prior use had been public; in view of the circumstances, however, the board rejected its position and concluded that the balance of probabilities was not applicable because the two parties had not had equal access to the evidence.

c) Miscellaneous – evaluation in the case law

In T. 674/91 the board stated that all the assertions (affidavits or declarations) made by different witnesses of the alleged prior use and which were in agreement with one another already provided **sufficient evidence** of the commercial nature of the tests mentioned. An obligation of confidentiality could not have existed, since the access to the new tool was not restricted to a particular group of persons. The board concluded that the prior use was prior art within the meaning of Art. 54(2) EPC 1973.

The board in T. 1682/09 held that evidence from an independent source corroborating an alleged prior use would have constituted strong evidence in support of the allegation, but the mere absence of such independent evidence was not a sufficient reason to dismiss it.

In T. 1452/16 the alleged prior use concerned a product which was commercially available as agreed by all parties. It was thus possible for the patent proprietor to simply obtain samples and test them. Even if the present case did fall into the category of "balance of probabilities", the board did not merely form its opinion on the basis of whether the alleged facts were just slightly more likely to have occurred than not, but on the basis of whether it was convinced that they had occurred.

In T. 225/03 the opposition division had not taken evidence by hearing the witness before revoking the patent because it had considered the allegation of public prior use to be adequately proven by the documentary evidence. The board found that level of proof to be insufficient, and held that the respondent's (opponent's) request – that the **documentary evidence be complemented by hearing the witness** – had to be granted, as only the witness could confirm the links between the individual pieces of evidence and the circumstances of use as explained in his statutory declaration. It therefore sent the case back to the department of first instance for further prosecution.

In T. 441/04 the board agreed with the respondent (patent proprietor) that evidence in document form was normally preferable to witness testimony about long-ago events. But that did not mean that in the case in point such testimony was necessarily excluded per se or less convincing than documentary evidence. Applying the (high) standard of proof beyond doubt, the board considered that it had taken due account of the fact that the alleged public prior use – proven by witness testimony – was attributable to the appellant. The evidence submitted (mainly witness testimony) had measured up to that standard, and therefore no new or additional proof (such as drawings) was needed.

In T.1914/08 the board – like the opposition division at first instance – regarded two witnesses' testimonies as the decisive evidence proving without any gaps the alleged prior public use. Each testimony, considered in isolation, gave a consistent and full picture of the process in question. Accordingly, it endorsed the opposition division's evaluation of the evidence, the standard of proof applied by it ("beyond all reasonable doubt") and the result of its analysis. It held, moreover, that the patent proprietor's (appellant's) request for additional evidence had to be refused. Since the opposition division had, in the course of its unfettered consideration of the evidence, concluded that the alleged prior public use had, essentially, been established by the two witnesses' testimonies and since the appellant had been unable to cast doubt on the probative value of those testimonies, there was no need for the opponent (respondent) to adduce further evidence in either the opposition or the appeal proceedings.

In T.833/99 the opponent (appellant) had raised a novelty objection, claiming that prior use had occurred following public disclosure of an identical process: grooved-rail frogs for tramlines had been sold and installed in various German towns over a specified period. The opposition division had found this disclosure to be insufficiently proven, and had duly dismissed the objection. In support of its contention that the manufacturing process lacked novelty, the opponent relied on two photos (showing the grooved-rail frogs) measuring 6 cm by 6 cm and appearing inside a **prospectus**. The **photos were not clear enough** to say that the edges could not have been the result of flame-cutting. Lastly, during **invitations to tender**, the municipal employees had been required to observe confidentiality. The appellant said they might have breached that confidentiality, e.g. by informing repair workers of certain steps in the process, but **did not back this up with firm facts** such as dates, circumstances, etc., or with other evidence. Mere suppositions could not be entertained; they were not proof, and the onus was on the appellant to show that its **allegations were well founded** (T.782/92; T.472/92, OJ 1998, 161). Lastly, the board observed that there was no law to the effect that the confidentiality governing **tender procedures** ends when they do.

Features of subject-matter that was visible only briefly can be considered to have been made publicly available only if it can be shown beyond doubt that they were clearly and directly apparent to the skilled person for that short time (T.1410/14: train – test drive).

In T.2565/11 the invention concerned a method of operating a ventilator and air conditioner for vehicles. It was not contested that the trains which were the subject of a prior use allegation were indeed delivered to DB Regio AG and operated in a public manner. However, it was disputed that information concerning the ventilation and air conditioning system of those trains was published in the sense of Art. 54 EPC by the delivery and operation of the trains and further that the structure and operation of the ventilation and air conditioning system had been adequately proved by the opponent. In its decision the opposition division held that the alleged public prior use had not been proven beyond reasonable doubt. The board, in the case at hand, overturned the evaluation of evidence made by the department of first instance because the opposition division erred as regards the underlying facts and failed to give an evaluation that was free of contradictions. The board gave its own evaluation of the evidence regarding the relevant facts. Even applying

a high standard of proof ("beyond any reasonable doubt"), the board found that the basic facts presented by the witness could not be questioned.

Decisions applying the boards' case law on the strict standard of proof – initially established for public prior use – to other matters include T.1107/12, on the accessibility of documents, and T.1201/14, on proof of the transfer of priority right.

See also chapter V.A.4.13.6 b) "Consideration of late-filed evidence of public prior use".

4.3.3 Posters and ephemeral presentations

In T.1210/05 the board concluded that the contested prior disclosure via the public display of a **poster** identical to document (1) at an Edinburgh congress had not been sufficiently established, i.e. beyond all reasonable doubt, based on the following considerations: the fact that the various means of evidence, namely the submitted documents, the affidavits of the witnesses as well as their oral testimony, did not contradict each other was not sufficient to meet the required standard of proof. Furthermore, the finding of the opposition division rested **exclusively on the testimony of one of the witnesses**. No independent evidence (in writing or by other persons) was available to support it. This did not mean that the written and oral testimony of the witness was per se insufficient. However, the board stated that there had to be good reasons for treating this evidence alone as having established the facts beyond any reasonable doubt. See also T.729/05, in which evidence in support of disclosure of a poster was found to fall within the patent proprietor's sphere of influence.

In T.2338/13, which likewise concerned information disclosed on a **poster** displayed at a conference, the primary evidence of the alleged prior use (A3, a copy of a PowerPoint presentation) was in the possession of a witness who had been contacted by an **anonymous friend** referred to by the appellant (opponent) as a third party. The appellant was unable to specify how the witness, this third party and he were connected and the board held that he had to bear the consequences of this lack of information and that A3 thus had to be deemed to lie within his power and knowledge. The witness being likewise considered to fall within his sphere of influence, he also bore the burden of proving that A3's content had been made publicly available beyond any reasonable doubt. The board concluded that A3's content had indeed been disclosed in the form of a poster, but discrepancies between the witness's statutory declarations and his oral testimony cast doubt on the reliability of his evidence. The appellant not having proved his case beyond reasonable doubt, the board disregarded A3 when assessing patentability.

T.1057/09 concerned a "diploma thesis" whose content was allegedly disclosed inter alia during an oral presentation before the priority date of the patent in suit (ephemeral – beyond any reasonable doubt).

In T.1212/97 the opponent had submitted that the invention had been made available to the public at a lecture given some days before the priority date to an audience of some 100 to 200 persons. The question to resolve was whether there was any safe and satisfactory evidence regarding the content of what had been made available to the public

at the lecture. The board did not consider **evidence from the lecturer alone** to be satisfactory evidence as to what had been made available to the public at the lecture. Even an audio or video tape recording made of the lecture, unless publicly available, would have to be treated with caution, if several hearings or viewings were necessary to extract all the information (see also T 428/13 and T 2003/08 of 31 October 2012 below).

In T 2003/08 of 31 October 2012 the board observed that, in contrast to a written document the contents of which are fixed and can be read again and again, an **oral presentation** is ephemeral. Therefore, the standard of proof for ascertaining the contents of an oral disclosure is high. T 1212/97 could not be interpreted as setting an absolute standard for the amount of evidence necessary to prove the contents of an oral disclosure. In the present case evidence from the lecturer and a member of the audience, provided by them in the form of both affidavits and oral testimony, was not considered by the board to prove beyond reasonable doubt that the subject-matter of the claim was disclosed during the lecture (see also T 12/01 about oral presentations; T 667/01 about declaration of the presenter as to the content of his oral presentation usually not sufficient and T 1057/09 about the alleged availability of a "diploma thesis" whose content was allegedly disclosed inter alia during an oral presentation before the priority date of the patent in suit).

The board in T 843/15 held that a copy of a PowerPoint presentation could establish a presumption as to the presentation's content but was not enough on its own to guarantee that the content had been presented in full and, if so, comprehensibly. It was therefore generally necessary to submit further evidence such as affidavits or written notes from attendees or a handout distributed to the audience.

4.3.4 Public availability of prior art documents

a) Commercial brochures

With regard to the public availability of **commercial brochures**, some boards adopt the less strict standard of the "balance of probabilities" (see e.g. T 743/89 (brochure produced by the patentee) and T 804/05 (prospectus issued by a third party)). Concerning a commercial brochure (prospectus) of a product produced by the opponent, in T 1748/10 the board considered it more appropriate to assess public availability on "the balance of probabilities" citing T 743/89 and T 1140/09 and not the standard "up to the hilt" as alleged by the patentee, in view of the fact that the brochure originated from the opponent. In the board's view, although D1 originated from the opponent, it was distributed to the public. Therefore both parties were able to access and adduce evidence relating to the availability of document D1. The board in T 1140/09 considered the "balance of probabilities" to be the proper standard of proof to be applied for the question of the public availability of document E3, a brochure that had been distributed by the appellant (opponent) to visitors at CeBIT and had therefore been made available to the public before the priority date. In the particular case, **however**, the evidence presented by the appellant was such that it also met the stricter standard of proof as proposed by the respondent. Given the importance of large industrial fairs such as CeBIT for doing business and the strong interest of the appellant in making its brochure as widely available as possible, the board found that the public availability of document E3 was proven beyond reasonable doubt.

In T.184/11 the board first had to decide whether the document was an advertising brochure or a product data sheet. It contained no detailed technical data, merely general technical information. After a detailed review of the case law on standards of proof and the public availability of advertising brochures, the board decided that nothing in the reasons given for the contested decision indicated that the opposition division, in assessing probability, had not critically and precisely evaluated the evidence before it.

In T.146/13 the proprietor maintained that it had not been proven beyond any doubt that an advertising brochure had been distributed before the patent's priority date. The board, citing settled case law on commercial brochures as prior art and in particular T.743/89 and T.804/05, held that enough time (two years) had elapsed between printing and the priority date to conclude that the brochure really had been made available to the public. Adding that in practice the whole point of printing advertising brochures was to attract the attention of potential clients, it therefore decided that the brochure was prior art within the meaning of Art. 54(2) EPC. Compare with T.738/04, point 4.1.1 of the Reasons.

In T.743/89 it had been proved that a **leaflet** disclosing the invention had been printed seven months before the priority date, but it was uncertain when the leaflet had been distributed. Based on the balance of probabilities, the board concluded that the leaflet was available to the public before the priority date of the patent in suit and was, consequently, comprised in the state of the art. Although the date of distribution could no longer, i.e. 10 years on, be ascertained, it could reasonably be assumed that it had taken place within less than 7 months and had thus been completed well before the priority date of the patent in suit. The opposite assumption that the brochure had been kept confidential was not very plausible since it was in the patentee's own interest to ensure wide-spread distribution of the brochure in order to inform as many potential customers as possible of this latest development in a highly competitive field. Hence, the onus of proof was incumbent on the patentee who incidentally, being the originator of the pamphlet, should be in the possession of the necessary information.

In T.2451/13 the board applied the standard "up to the hilt" as meaning beyond reasonable doubt concerning the publication date of a brochure (brochure originated from a subsidiary of the opponent – all evidence essentially in the hands of the opponent).

The board in T.1710/12 agreed that the rigorous standard of "up to the hilt" is typically applied in cases where a prior use is involved. However, in the case before it, catalogue E1 had **not been provided in support of an alleged prior use**, but as written evidence on its own. The board thus deemed it appropriate to judge the public availability of E1 using the "balance of probabilities" approach. Document E1 (catalogue published by a company not being a party) was considered prior art under Art. 54(2) EPC.

b) Convincing the board and discussion on the standard of proof

Even though different concepts as to the standard of proof have developed in the case law of the boards, they all have in common that a judgement is to be made on the basis of the application of the principle of free evaluation of evidence. In the case of published documents, the standard of proof for public availability is usually the less strict one of the

"balance of probabilities" (T.1140/09, point 3.2 of the Reasons). But even though the present case (date of availability in a public library of journal supplement disclosing meeting abstracts for a future conference) fell under the "balance of probabilities" standard for burden of proof, the board did not form its opinion solely on the basis of whether the alleged facts were just slightly more likely to have occurred than not, but on the basis of whether it was convinced that they had indeed occurred (T.1050/12).

The board in T.1107/12 found there was no indication that the opposition division had applied the wrong standard of proof, even if it had not explicitly discussed whether the strict standard of "beyond reasonable doubt" or the usual "balance of probabilities" standard should be applied. The case law requiring absolute certainty or proof beyond all reasonable doubt, which the respondent had cited in support of its position, was concerned with alleged public prior use (see T.441/04, T.472/92 and T.2451/13) and had applied that standard because, in such cases, the supporting evidence was almost always in the opponent's possession. The case in hand, however, turned on whether a document originating from one of the opponents had been publicly available on a particular date. Its availability was supported by witness testimony, the probative value of which was to be evaluated freely. Ultimately, there was no need for the board to decide whether the stricter standard of proof had to be applied in such circumstances too, since the opposition division's evaluation of the testimony had left it in no doubt as to its reliability or the witness's credibility as a person. Its evaluation of the evidence was not otherwise vitiated by any error in law. It was based on the right criteria, could be followed in all respects and did not contain any logical mistakes. It was therefore not open to the board to overrule its findings and re-evaluate the evidence in its place. See also T.2466/13 below, in which it was likewise found that there was no need to decide on the applicable standard of proof.

c) Archives and internet publications

In T.151/99 the board regarded it as **highly plausible** in the light of the available evidence that a **master's thesis** had become available to at least one member of the public. If the reference was in a document published before the priority date of the patent in suit then it could be assumed that the thesis had also been made available to the public before the said date (decision analysed more recently in T.538/09, which concerns a master's thesis of the first examiner as prior art; also citing T.1134/06 and T.750/94 in that an important criterion in evaluating evidence is the reliability of the source: fulfilled for University of Utah). The strict standard of proof (beyond reasonable doubt) laid down as the rule for internet publications in T.1134/06 no longer applies since T.286/10 and T.2227/11, both found the balance of probabilities to be the usually applicable standard.

In T.1469/10 the board held that the publication dates indicated on the documents published by the ETSI 3GPP organisation, which was regarded as a reputable standardisation body having clear and reliable rules for their publications, were of a high probative value and thus might serve as prima facie evidence that a document was published on the date indicated, and regarded the documents at issue thus as representing the state of the art under Art. 54(2) EPC.

As a matter of principle, if an adverse decision of an organ of the EPO is to rely on a certain fact that fact should be proven beyond any reasonable doubt. In T. 826/03, the board applied this principle when attempting to establish the publication date of a Canadian patent application, and whether it was prior art. It found that in view of the contradictory evidence on file and in the absence of any further clarifying information from the Canadian Intellectual Property Office, it was virtually impossible for the board to establish with certainty that the public had access to the application according to document D3 before the priority date claimed by the application in suit. It therefore considered document D3 as not belonging to the prior art within the meaning of Art. 54(2) EPC.

4.3.5 Claiming a valid priority

In T. 1056/01 the board pointed out that because of the crucial effect a valid priority date had on patentability, the date of filing of the application whose priority was claimed had to be proven in a formal way, namely by a certificate issued by the authority which had received that application (see R. 53(1) EPC and Art. 4D(3) Paris Convention). Even if no such **formal proof** was prescribed for the timely withdrawal of a previous application pursuant to Art. 87(4) EPC (see Art. 4C(4) Paris Convention), it appeared appropriate to require an equally high standard of proof, for once there existed a previous application concerning the same invention both dates were equally relevant for establishing the validity of the claimed priority. However, in the case at issue, the timely withdrawal of the UK application for the purposes of Art. 87(4) EPC could not be established. Unlike facts barring patentability (see for example T. 219/83 cited by the appellant), the timely withdrawal of a previous application was a positive precondition for claiming a valid priority from a subsequent application for the same invention. Hence, the date of the effect of the withdrawal was a fact which could act in the applicant's favour, and she had relied on it just as she had relied on the filing date (and the content) of the subsequent UK application (this decision was cited and applied in T. 62/05).

Case T. 493/06 involved the issue of the valid transfer of a priority application. According to the board, the submitted statutory declarations and notarial certifications provided sufficient evidence that the copy of the transfer agreement was the same as the original.

In T. 205/14 the board disagreed with the reasoning of T. 62/05 that the transfer had to be proven in a formal way, applying an equally high standard of proof as that required by Art. 72 EPC 1973. Art. 72 EPC 1973 set out formal requirements for a valid assignment of a European patent application and thereby limited the means of giving or obtaining evidence for determining such a transfer. Having regard to Art. 117 EPC and the principle of free evaluation of evidence, the rule should not be extended beyond its scope of application. Since the provisions of the EPC did not lend themselves to an autonomous determination of the requirements for transfer of the right of priority, the validity of such transfer was a matter of **national law** (cf. T. 1008/96 (two pieces of evidence mutually exclusive: declaration before a notary public and decision of Italian Court); cf. also approach in T. 160/13 (transfer of priority right within a corporate group – emails), J. 19/87, T. 493/06). T. 205/14, T. 517/14 and T. 1201/14 deal with numerous issues of proof, standard of proof and burden of proof.

In T.1201/14 the board stated that concerning the proof of a valid transfer of the right of priority, the probative value of the affidavits submitted was to be decided by the board in accordance with the established principle of free evaluation of evidence. As to the standard of proof to be applied, the board concurred with the respondent (opponent) that the circumstances of the case required proof "beyond reasonable doubt" (rather than proof based on the "balance of probabilities", as relied upon in T.205/14, point 3.6.1 of the Reasons and the almost identical case T.517/14, point 2.7.1 of the Reasons). This was because practically all the evidence lay within the knowledge and power of only one party to these inter partes proceedings within the meaning of T.472/92 (OJ 1998, 161, point 3.1 of the Reasons (concerning public prior use), i.e. the patent proprietor (appellant) here, whereas the other party (respondent) was not in a position to present any counter-evidence. In any event, regarding the alleged second transfer of the right of priority, the appellant's case failed for lack of sufficient evidence.

In T.2466/13, concerning the formal validity of a transfer of the right of priority and the required standard of proof, the board observed that the case law on this is not consistent: "balance of probabilities" in T.205/14 and T.517/14; stricter standard of proof in T.1201/14. In the end, the board concluded that there was no need to decide on the standard of proof as there was never any doubt that the transfer had taken place.

See also chapter II.D.2.2. "Right of priority of the applicant or his successor in title".

4.3.6 Abusive conduct

In G.3/97 and G.4/97 (OJ 1999, 245 and 270) the Enlarged Board of Appeal held that if the person named as opponent according to R.76(2)(a) EPC (former R.55(a) EPC 1973) was acting on behalf of a third party, such an opposition was inadmissible only if the involvement of the opponent was to be regarded as circumventing the law by abuse of process. The deciding body had to be satisfied on the basis of clear and convincing evidence that the law had been circumvented by abuse of process.

In T.291/97 the appellant had contended in the statement of grounds of appeal that the publication of document (1) had occurred in consequence of an evident abuse within the meaning of Art.55(1)(a) EPC, and thus did not constitute prior art citable against the claims at issue. The board decided that the above publication was to be taken into consideration for the application of Art.54 EPC. It observed in its decision that the finding of an **evident abuse** under Art.55(1)(a) EPC was a serious matter. An abuse was not lightly to be presumed. The standard of proof was identified by the words "evident abuse" (German: "offensichtlicher Missbrauch"; French: "un abus évident") as being high: the case had to be clear-cut, and a doubtful case would not be resolved in favour of the applicant. The evidence filed in the case at issue did not meet this standard (see also T.41/02).

In D.5/86 (OJ 1989, 210) the board held that an infringement of the rules of professional conduct had to be established to the satisfaction of the disciplinary body before it could impose a disciplinary measure. Absolute certainty was not required, but a **higher degree of probability** which in human experience verged on certainty. A disciplinary measure

could not be imposed if there was reasonable doubt as to whether the infringement had occurred.

4.3.7 Receipt of formal documents

See chapter III.S.4. "Spheres of risk and apportioning the burden of proof" and Administrative Council decision CA/D 6/14 dated 15 October 2014 (entry into force: 1 April 2015) amending R. 2, 124, 125, 126, 127, 129, 133 and 134 EPC (OJ 2015, A17; explanatory notice: OJ 2015, A36), discussed in the chapter on notification (R. 126(1) EPC was further amended by Administrative Council decision CA/D 2/19). With respect to the burden of proving receipt, see also chapter III.G.5.1.2.f) below.

The respondent (opponent) in T 1/12 argued that the boards' case law on the applicable standard of proof for proving receipt of documents by the EPO was contradictory. In that context, it cited T 1200/01, which suggested a balance of probabilities, and T 2454/11, which held that a stricter standard of proof was needed to convince the board. This prompted the opponent to draft points of law for referral. The board, however, refused its request for a referral, in particular because according to the principle of free evaluation of the evidence, that evaluation had to be done on a case-specific basis. The standard of proof that the balance of probabilities needed to reach to convince the board was thus left to the discretion of the board itself. The board found no clear contraction between T 1200/01 and T 2454/11. It dealt with the matter of the standard of proof in combination with, in particular, the principle established in the case law of free evaluation of the evidence.

The issue under appeal in T 1200/01 was whether an opposition of the appellant against the patent could be deemed to have been filed. According to Art. 99(1), last sentence, EPC, this was only the case if the opposition fee had been paid within the opposition period. However, in the case at issue no trace of a notice of opposition nor of a voucher for payment of the opposition fee allegedly filed by the appellant had been found within the EPO. The board noted that, concerning the standard of proof to be applied for establishing the receipt of documents not found within the EPO, it was the established case law of the boards of appeal that, even if proof to this effect could seldom lead to absolute certainty, it at least had to show to a **high degree of probability** that the alleged filing had taken place (see also T 128/87, OJ 1989, 406, cited by the board). It also noted that in some previous cases (see T 243/86 and T 69/86, cited by the board) it had been accepted that this standard was met if there were concrete traces of the item sought which, even if they did not show it for certain, indicated a high probability of the lost document having once been in the EPO. Nevertheless, any other means of giving evidence, such as witness testimony, could equally be considered in this context.

The communication noting the loss of rights under R. 112(1) EPC (former R. 69(1) EPC 1973) is deemed to have been delivered to the addressee on the tenth day following its posting, unless the letter failed to reach the addressee or reached him at a later date. In the event of any dispute, it is incumbent on the EPO to establish that the letter reached its destination (R. 126(2) EPC; CA/D 6/14 for the revised wording; former R. 78(2) EPC 1973). In J 9/05 and J 18/05, the only evidence provided by the examining division was a letter from the Deutsche Post referring to the information received from the

foreign postal service, according to which the letter had been delivered to an authorised recipient, who, however, was not specified. The board stated that the probative value of the submissions and evidence of the appellant had to be balanced against the probative value of evidence established by the EPO. Balancing the evidence of the examining division, which consisted of the rather vague letter from the Deutsche Post, against the evidence submitted by the appellant, and taking into account the serious consequences for the appellant, the board came to the conclusion that it had not been sufficiently proven that the applicant had received the R. 69(1) EPC communication. In such a situation, where the EPO bore the burden of proof, the applicant had to be given the benefit of the doubt.

In T 529/09 a communication pursuant to R. 82(3) EPC (invitation to parties to file observations with regard to the maintenance of patent in amended form) had been sent out on 8 September 2008 by registered letter addressed to the proprietor's representative. According to R. 126(2) EPC (see CA/D 6/14 for the revised wording) a registered letter was deemed to have been delivered to the addressee on the tenth day following its posting, unless it had failed to reach the addressee or reached him at a later date. In the board's view, "delivered to the addressee" did not mean that the notification in question had to be brought to the attention of the professional representative in person. It sufficed that the registered letter had been received by a person authorised to take delivery, e.g. an employee of the representative's office (see T 743/05). In the present case, the board regarded the evidence on file as sufficiently reliable and complete to prove the proper delivery of the letter. In this respect, the board highlighted a significant difference between this case and J 9/05 and J 18/05, in which the appellant had filed a considerable amount of counter-evidence pointing out specific reasons why the letter might not have been received by the representative's office.

In T 1934/16, since the appellant denied having received the communication under R. 82(3) EPC, the EPO had to establish that it reached its destination and the date on which it was delivered (R. 126(2) EPC). The result of the enquiry initiated by the board proved that the registered letter reached its destination and, as the appellant did not submit substantiated details that were apt to demonstrate a different course of events, no doubt existed that the letter was duly received by the appellant's representative.

See also J 10/04, reported above, which differed from the "ordinary" cases concerning lost mail in that the application had reached the USPTO and only some of the papers were missing, and T 1535/10, in which the board found that responsibility for obstacles and delays in receiving decisions having to be notified under R. 126(1) EPC had to be assigned according to spheres of risk (III.S.4. "Spheres of risk and apportioning the burden of proof").

5. Burden of proof

5.1. Apportioning the burden of proof

5.1.1 General

In the absence of relevant EPC provisions, the principles concerning the allocation of the burden of proof have been developed through the case law of the boards of appeal. **Each party bears the burden of proof for the facts it alleges.** At all events, a party cannot deny facts which related to its own actions or were the subject of its own perceptions on the ground of "ignorance", if the presentation of the facts in question is essentially the party's responsibility (T 247/98).

With regard to principles of procedural law generally recognised in the contracting states, a party relying on Art. 125 EPC and asserting that German law allows for the revision of a decision of a court of final jurisdiction in the case of a fundamental procedural violation, will also have to produce evidence that such a procedural principle exists in most EPC contracting states and is therefore "generally recognised" for the purpose of Art. 125 EPC (T 843/91, OJ 1994, 832). Following on from that, another board stated in T 833/94 that, when the evidence offered did not directly indicate the truth or falsity of the fact in issue, but required knowledge of the **national law** and patent practice, such law and practice had to be **proved, as did any other fact** on which a party based its arguments.

In T 1201/14 (transfer of right of priority), as regards the applicable rules for assessing the evidence adduced (affidavits), the board concluded the following: the burden of proving a valid transfer of the right of priority lay with the patent proprietor (appellant) since it was the one claiming that right (see e.g. T 1008/96, point 3.3 of the Reasons; T 1056/01, point 2.10 of the Reasons; T 493/06, point 8 of the Reasons; T 205/14, point 3.5 of the Reasons). This rule was all the more applicable taking into account that the patent proprietor (appellant) alone had access to the relevant evidence when it asserted a concluded transfer of rights.

In **ex parte proceedings** the applicant bears the burden of proof for the facts in his favour, e.g. the fact that a document cited by the examining division does not form part of the state of the art (T 160/92, OJ 1995, 35), the fact that the conditions laid down in Art. 123 EPC have been met (T 383/88) or the fact that a limitation of the claims is admissible (T 2/81, OJ 1982, 394). Sufficient disclosure also obliges the applicant to provide evidence of the skilled person's relevant knowledge if there is reason to believe it may not cover all the subject-matter claimed. If reasonable doubts exist about the scope or public nature of the specialist knowledge required for adequate disclosure of the invention, the applicant discharges his duty to disclose by submitting suitable evidence in support of the facts in his favour, in order to fulfil his duty to disclose the invention (T 82/07). In T 32/95, the board referred to a passage from the Guidelines (now G-IV, 1 "State of the art" – November 2018 version, which is cited in full in connection with T 750/94, under chapter III.G.4.3.1 above).

As far as issues relating to patentability requirements are concerned, the burden of proof in **examination proceedings** cannot lie initially with the applicant. If an examining division

raises an objection, it must be appropriately substantiated. In T.578/06 the examining division had failed to provide such substantiation. Also, the passage in the "Case Law of the Boards of Appeal of the EPO" (see paragraph immediately above) could not support its view that in *ex parte* proceedings the applicant has the burden of proof for facts in his favour, as it appeared to have been taken out of its context. In this respect, the board clarified that all the procedural situations referred to in this passage were those where, in response to a substantiated objection from the examining division, the applicant was required to support its contention.

It is not sufficient in **opposition proceedings** for the opponent to impugn a granted patent with an assertion which cannot be substantiated. And if the EPO is unable to establish the facts of its own motion, the proprietor is given the benefit of the doubt (T.219/83, OJ 1986, 211, 328; see also T.293/87 and T.459/87). According to T.200/94 (following established case law), if a board's investigation does not enable it to verify beyond reasonable doubt the facts alleged, this goes to the detriment of the party needing to prove them, i.e. the party who relies on these facts. In **appeal proceedings**, the party's status as opponent makes no difference when it comes to assigning the burden of proof (this follows also from T.740/90, T.270/90, OJ 1993, 725 and T.381/87, OJ 1990, 213). Parties to proceedings bear separate burdens of proving the facts they allege, and if a fact that is material to the decision is not proven, then the decision goes against the party that failed to discharge that burden. In T.1469/08, the appellant (opponent), who was alleging prior use, argued that all the prostheses in question, whatever their article code and batch of manufacture, had the same structure as the one submitted as evidence to the EPO, but failed to provide any evidence to support that (the board cited T.270/90, OJ 1993, 725, point 2.1 of the Reasons; T.355/97, point 2.5 of the Reasons).

In T.998/04 the board emphasised as an *obiter dictum* that the burden of proof for alleged lack of patentability lay with the opponent and could not be dispensed with by requesting the board to carry out its own investigations, in particular, by summoning four named witnesses, by commissioning an **independent expert** to carry out experimental tests and by allowing individuals from the appellant company to attend any tests and to question witnesses or experts. Moreover, granting these requests would not be consistent with the character of the post-grant opposition proceedings under the EPC which were in principle to be considered as contentious proceedings between parties normally representing opposite interests, who should be given equally fair treatment (see G.9/91, OJ 1993, 408, point 2 of the Reasons). If the opponent disputes the existence of novelty, an inventive step or the reproducibility of the invention, it bears the burden of proof in this respect at first and second instance (e.g. T.762/04; T.382/93; T.16/87, OJ 1992, 212; T.182/89, OJ 1991, 391). In case of uncertainty about a prior-art disclosure, the patentee should be given the benefit of the doubt (T.1003/96; see also T.230/92, T.345/86, T.601/91 and T.968/91).

A technical problem set out in a patent is considered to be credibly solved by a claimed invention if there are no reasons to assume the contrary. Under such circumstances, the burden is normally on the opponent to prove the opposite or at least provide evidence casting doubt on the alleged solution of the problem. If the opponent succeeds, the burden of proof shifts to the patent proprietor who must then prove its assertions (see e.g.

T.1797/09). Where, however, the opponent succeeds in casting serious doubt on the persuasiveness of the patentee's evidence merely by arguing that this evidence was subject to **erroneous evaluation** by the examining division, this allegation may render the patentee's evidence inappropriate but cannot justify the conclusion that the invention fails to solve the existing technical problem. Such allegation does not discharge the opponent from the burden of submitting convincing counter-evidence that the claimed subject-matter cannot solve the technical problem (T.596/99).

The appellant relied upon experimental reports. However, these tests did not prove its allegations beyond all reasonable doubt. The proprietor (appellant) submitted that the burden of proof lay with the respondents (opponents) to show that the amendments did in fact extend the protection conferred (Art.123(3) EPC). However, it was the proprietor (appellant), who had amended the patent as granted and who was responsible for demonstrating, beyond all reasonable doubt, that said amendment did not extend the protection conferred (T.2285/09).

Reversely, the patentee cannot relieve itself of the burden of providing **counter-evidence** for facts it alleges by simply stating that all the evidence was within the power of its opponent (with reference to T.472/92, OJ 1998, 161;), without providing proof for the contention that it is not within its power to obtain counter-evidence (T.254/98). As far as apportioning the burden of proof is concerned, it is irrelevant whether or not the patentee can access the requisite evidence more easily than the opponent (T.1162/07; see also T.1710/12).

5.1.2 Individual cases

a) Novelty

For the purpose of assessing novelty, the party alleging that the inevitable outcome of a prior art disclosure is in contradiction with the explicit disclosure of the cited prior art has not only the burden of reproducing the earlier disclosure in such a way as to demonstrate that the alleged inevitable outcome has occurred, but also the burden of proving convincingly that if any significant deviation from the conditions specified in the earlier disclosure are not material to the outcome (T.204/00; see also T.396/89).

In T.713/01 the appellant denied the existence of an "enabling" disclosure in D2 with regard to the preparation of polymers in the presence of a solubilised lithium pyrrolidide initiator by reference to T.124/87 (OJ 1989, 491) and T.206/83 (OJ 1987, 5). The board held that the only difference between D2 and the claim wording did not qualify as a distinguishing feature of the claimed product because that "**product-by-process**" feature was not detectable on the product by a reliably distinguishing property. In this context, the board added that in proceedings before the examining division the burden of proof for an allegedly distinguishing "product-by-process" feature lay with the applicant (see further T.205/83, OJ 1985, 363 and T.279/84). Decision T.713/01 was clearly concerned with the question of burden of proof in examination proceedings (T.1912/10).

See chapter I.C. "Novelty".

b) Inventive step

In T 547/88 inventive step was contested. Although the board had asked the parties to issue a joint protocol stating what **tests** had to be done and under what conditions, each party had in fact conducted its own experiments and obtained contradictory results. It was therefore not possible for the board, on the basis of these tests, to conclude definitively that no inventive step was involved. The board held that in such a case the patent proprietor should be given the benefit of the doubt with regard to the relevance of the claimed features to the problem to be solved. Moreover, since the prior art did not suggest the subject-matter of the contested claims, that subject-matter implied an inventive step. The patent was therefore maintained.

The burden of proving that the claimed method leads to the **advantageous effects** mentioned in the patent in suit rests with the patentee. In the absence of any corroborating evidence that these advantageous effects were obtained, the alleged effects are not to be taken into account when assessing inventive step (cf. T 97/00; see also T 1409/04).

In T 862/11 the appellant (opponent) failed to submit comparative tests in support of its own assertion that an improvement was implausible owing to the lack of any evidence. In the absence of such tests, however, it failed to convince the board, which therefore regarded the problem as solved, and saw no need to reformulate it (see also in this chapter III.G.4.2.2 "Test and experimental evidence").

In case T 655/13 the examining division did not precisely identify the passage of document D1 (technical journal in Japanese as a prior art publication) which disclosed the feature in dispute and at the same time did not provide a translation of at least the referenced longer section of said Japanese document. The board recalled that in examination proceedings, as far as issues relating to patentability requirements are concerned, the burden of proof – and consequently the onus of presentation of the relevant facts – lies initially with the examining division, which must provide evidence and facts to support its objection (see T 578/06). As a rule, the applicant can dispute in a general way a general statement made by the examining division, which then in turn is obliged to raise a more detailed objection. In order to give an applicant a fair chance to challenge the findings of the examining division, the latter should, as a rule, at least once identify where in the closest prior-art document each of the features of the claim in suit is disclosed (see e.g. the obiter dictum in T 70/02).

See chapter I.D. "Inventive step".

c) Sufficiency of disclosure

The burden of proof is determined by the legal cases which the respective parties are trying to make. Whether it is discharged or not is assessed by the board based on all the relevant evidence put before it. The burden of proof of insufficiency is as a general rule on the **opponents**, who should prove that despite making all reasonable efforts they were unable to put the invention into practice. If the patentee is claiming a result, which the prevailing technical opinion suggests is not achievable, and if the opponents are not able

to repeat the method in the patent, they **cannot be expected to do more than the patentee**. Then, the burden of proof is on the patentee to show that the extraction method in the patent works as stated so that at least one way of putting the invention into practice has been given to the skilled person (approach set out e.g. in T. 518/10, which in turn cited T. 792/00 and T. 1842/06).

In T. 1608/13, referring to T. 585/92, the respondent (opponent) argued that in appeal, after the opposition division had revoked the patent, the burden of proof shifted to the appellant to prove that the decision was wrong. However, the primary aim of appeal proceedings was to review the decision under appeal on the basis of the submissions and requests of the parties. This clearly encompassed the review of the opposition division's reasoning, in particular the assessment of the respondent's objections considered in the decision. If the reasoning as such was found to be wrong, there could not be any shift of the burden of proof on the substance. As regards the latter, it was established jurisprudence that a successful objection of lack of sufficiency presupposed that there were serious doubts substantiated by verifiable facts (T. 967/09). It was primarily the respondent's duty to provide such facts in support of its objections.

T. 30/15 (inter partes) contains extensive reasoning on the issue of burden of proof and on the submission of evidence in respect of Art. 83 EPC in conjunction with procedural aspects (RPBA 2007) especially at the appeal stage after a first instance decision revoking the patent for insufficiency of disclosure. The board found that, once the patent was revoked, it was up to the proprietor, as the appellant, to present a detailed line of argument in its statement of grounds of appeal, even if the grounds for the contested revocation seemed no longer to apply to a new set of claims. Thus, contrary to what was claimed by the proprietor, the respondents and former opponents were under no obligation to carry on proving the insufficiency of the disclosure of the invention if that was the reason for the patent's revocation. (Compare with T. 1329/11, point 3.9 of the Reasons, where the appellant was the opponent but in a case where the application as filed did not provide a single example or other technical information from which it was plausible that the claimed invention could be carried out).

In T. 1886/12, which also contains reasoning on the issue of burden of proof concerning alleged insufficiency of disclosure, the appellant (opponent) raised several objections but did not discharge the burden of proof.

In T. 275/16 the board recalled that the burden of proof of insufficiency of disclosure is, as a general rule, on the **opponent**. However, in the case of an invention which goes against the prevailing technical opinion, it is the patent proprietor who needs to prove that the invention is sufficiently disclosed (T. 792/00, points 3 to 5 of the Reasons; T. 1842/06, point 3.4 of the Reasons; T. 518/10, point 7.10.1 of the Reasons; cf. T. 419/12, point 1.1.4(6) of the Reasons). In the case at issue, it was the prevailing technical opinion that no processes existed which would allow the production of titanium dioxide particles in a gas phase reaction, the particles all having the same particle diameter, i.e. having a monodisperse particle size distribution. Moreover, the patent did not contain data for the contentious D_{top}/D₅₀ value of 1. It was the patent proprietor (appellant) who had to show that it was possible to arrive at a D_{top} (maximum particle diameter) / D₅₀ (median particle diameter)

ratio of 1, a value explicitly claimed, when using the process disclosed in the patent in suit. The board considered the requirements of sufficiency of disclosure not met, even with a skilled person construing the patent with a mind willing to understand (cf. T. 190/99).

In T. 2340/12, concerning the burden of proof, it was not contested that it is for the organ raising the objection of lack of sufficiency to justify its view. In **ex-parte** proceedings it is therefore up to the examining division or the board of appeal to substantiate the objection raised. Such objection should rely on concrete and verifiable knowledge or facts that question the reality of the effects provided for by the claimed invention. The lack of credibility could result, for example, from a conflict with established laws of physics. It was then for the applicant (appellant) to provide the arguments or evidence. The board remarked that the filing of experiments was **not** to be seen as **an obligation** imposed on the applicant **but**, in contrast, as a right, providing the applicant with the **opportunity to convince** that the examining division (or the board) had erred in its initial findings. In the case at issue, the invention related to fields of technology without any accepted theoretical or practical basis.

In T. 2571/12 the board disagreed with the conclusions of the opposition division that, because no evidence had been provided by the opponent to show that any neuropsychiatric disorder could not effectively be treated using a glutathione precursor, the patent in suit was considered to disclose the invention in a manner sufficiently clear and complete for it to be carried out by a person skilled in the art. It was the patent that has to demonstrate the suitability of the claimed treatment for the claimed therapeutic indication.

It was decided in T. 417/13 that physical and mathematical facts about particle size measurements were notorious. Therefore there was no need to discuss documents filed in order to establish the related facts.

See also chapter II.C.9. "Evidence"; T. 63/06 (summary of its contribution in T. 347/15), T. 338/10 and T. 967/09 in present chapter III.G.5.2.2.

d) Content of the priority document

In T. 1147/02 the board dealt with the issue of which party to the appeal proceedings bore the burden of proving the exact content of a priority document in order to establish the relevant priority date. Since the appellant was the one to challenge the priority date necessary for establishing prior art, the principles elaborated in the case law of the boards of appeal dictated that the appellant also bore the burden of convincingly proving that the relevant date was not the filing date of the priority document.

e) Specific case of internet citations of prior art

As a rule, each party bears the burden of proof for facts which it alleges. In the specific case of internet citations of prior art cited by the EPO, the burden of proof thus lies with the EPO. If however, the EPO is satisfied that, on the balance of probabilities, an internet

citation constitutes prior art, it is then up to the party to prove otherwise (ex parte cases T. 2227/11, T. 1589/13).

In ex parte case T. 545/08 the board stated that the commercial website from which document D1 was retrieved could not be considered, at least not without further investigations, as a source generally deemed to provide reliable publication dates, such as the websites of scientific publishers. It concluded that the examining division was not entitled to consider document D1 as prior art in its first substantive communication without providing further explanations and evidence as to the document's public availability before the priority date (see also T. 1961/13). Thus, the objection was not properly raised. It could not generate an obligation on the applicant's side to submit evidence against the assumed publication date in the written proceedings (see the observations on the burden of proof in T. 545/08, points 12 and 13 of the Reasons, see also T. 1066/13).

f) Receipt of formal documents

See also chapter III.S.4. "Spheres of risk and apportioning the burden of proof". R. 126 EPC (notification by post) and R. 127 EPC (electronic notification) lay down rules on the burden of proof in case of dispute (for the amended versions of these provisions, see CA/D 6/14 in OJ 2015, A17, and the explanatory notice in OJ 2015, A36, points 3.1 ff). On the requisite standard of proof, see also in chapter III.G.4.3.7.

In T. 632/95 the board pointed out that the burden of proving that a document had been received lay with the party submitting the document just as, vice versa, the EPO bore the burden of proving receipt of the documents it issued.

It has to be observed that a party submitting that something has not happened is faced with the difficulty of proving this allegation. The party can essentially presume what could have happened or what normally would have been done if a letter had been received, in order to cast doubt upon the EPO's evidence, but it is hardly ever possible to file compelling evidence that the letter was not received. The EPO is also in a difficult situation if an applicant submits that it has not received a communication. The EPO then has to start enquiries with the postal services and rely on the information obtained. Since details are not given, this information is usually unsatisfactory. After a certain period the relevant information may not even be obtainable at all. However, this ought not to be to the detriment of the applicant, specifically not where communication noting a loss of rights is concerned. These problems could be avoided if such communications were delivered by registered letter with advice of delivery (J. 9/05 and J. 18/05).

According to the German version of R. 126(2) EPC (former R. 78(2) EPC 1973), the EPO must in a case of doubt ("im Zweifel") establish the date on which the letter was delivered to the addressee. In T. 247/98 the board decided that, when establishing the meaning of the term "im Zweifel" in the German version, account should be taken of the French and English versions, which assumed that there was a dispute ("en cas de contestation", "in the event of any dispute"). From the general principles concerning the burden of presentation which fell on the parties, it followed that a party seeking the application of a legal provision favourable to its interests had to set out the facts justifying such application,

even if it did not ultimately bear the burden of proof for those facts. Although, in the event of a dispute within the meaning of said rule, the burden of proof for the date of delivery fell on the EPO, this could not be taken to mean that a party wishing to rely on the late delivery of a letter from the EPO had no obligation to contribute to the clarification of circumstances within its own sphere of activity but could sit back, as it were, and wait to see whether the EPO succeeded in ascertaining when the letter had been delivered to the party. A dispute ("Zweifel" in the German version) within the meaning of this rule could only arise if it was maintained that a letter had in fact been received more than ten days following its posting.

In J 3/14 the board stated that, in a situation where the representative submitted that he had not received a communication, the EPO bore the burden of proof. In the board's opinion, it had at least been **made plausible** that the postal authorities erroneously delivered the letter to an unauthorised person in view of an authorisation which seemed to allow the collection of "all registered mail". The appellant also brought evidence as to the absence of its representative from her place of business. The board concluded that, in cases where the EPO bore the burden of proof, the applicant had to be given the **benefit of the doubt**. If doubts remained about what had really happened, this could not be to the detriment of the applicant. This applied all the more in a situation like the one at issue where the refusal of the application was the immediate consequence for the applicant.

In T 50/12 the board held that, by producing the advice of delivery, the EPO had fulfilled its duty under R 126(2) EPC to assess the actual date of delivery to the addressee. Hence, the burden of proof lay with the appellant. To prove the later delivery, the appellant submitted two documents, neither of which convinced the board of appeal.

Under the EPC, the date of receipt of an item at the EPO is critical when assessing compliance with a time limit. The burden of proof that a filing has been effected falls on the filing party. The impossibility of furnishing proof of a higher probability that an item was filed than that it was not filed, must therefore count against the filing party – as found by the board in T 1200/01. In this particular case, the available evidence did not convince the board that there was a higher degree of probability that the alleged filing had taken place than that it had not. Contrary to the decision in T 1200/01, the board in T 2454/11 found that the strict allocation of the burden of proof to the sender of correspondence addressed to the EPO could not be mitigated by weighing up the probability of receipt. Such an approach to examining the issue would seriously jeopardise legal certainty and water down the standard of legal clarity required in formal procedures such as those before the EPO. The need in disputed cases to interpret the vague legal notion of probability and the judicial exercise of ascertaining whether a greater or lesser likelihood was to be presumed would result in a wide variety of possibly contradictory approaches to the issue. Such inconsistencies would run counter to the need for a transparent and straightforward procedure and therefore had to be avoided in the interests of the public and third parties involved in the proceedings. Consequently, a high probability of delivery could not be a factor in deciding whether correspondence had actually been received. Rather, it was for the sender to prove such receipt to the board's satisfaction.

In J 10/91 the board held that if a letter and attached cheque in payment of a fee₇ had been lost without further evidence or any high probability that it had been lost in the EPO,

the risk was then borne by the sender. Even conclusive evidence that something had been posted could not be treated as sufficient to prove that a document had been received by the EPO. In this respect, the board in J. 8/93 stated that if the post failed to deliver a document, the applicant would suffer the consequences for failing to file that document.

Under R. 125(4) EPC (former R. 82 EPC 1973; paragraph 4 not amended by CA/D 6/14) the burden of proof that documents have been duly notified to the parties lies with the EPO. In T. 580/06 the question was raised whether the "OK" reference on the transmission sheet of a faxed document was sufficient proof of receipt. In the absence of relevant EPO case law, the board drew on procedural principles developed for notification by fax in German law, the fax transmission in question having arisen in the territory of the Federal Republic of Germany. In line with the German case law on that issue, the board recognised that an up-to-date objective assessment of the question of **receipt of a fax** by the addressee needed to take into account the technology underlying faxes. The high reliability of this technology nowadays was based amongst other things on established technical protocols, according to which modern fax machines operated. On the basis of various considerations the board reached the conclusion that the "OK" reference on the transmission sheet of a fax was to be regarded as proof of an error-free and complete transmission, through which the fax had entered into the area of responsibility of the representative. Once the fax had entered the area of responsibility of the addressee indicated by the reference "OK", then a transfer of risk took place so that the recipient bore the risks in his own sphere.

Under R. 125(4) and 126(2) EPC the EPO has to bear not only the risks arising within its own sphere but also the "transport" risks, e.g. of post going astray on its way to the addressee. But here a distinction must be drawn between risks borne by the EPO and those for which the addressee has organisational responsibility and power (T. 1535/10, see headnote). See chapter III.S.4. "Spheres of risk and apportioning the burden of proof". This same division of risk applies also to newer, electronic means of notification under R. 127 EPC (see also the EPO's explanatory notice in OJ 2015, A36, especially as regards amendment of R. 124 to 127 and 129 EPC).

5.2. Shifting the burden of proof

5.2.1 General

Once a party has submitted conclusive proof of its allegations, it has complied with the requirement of the burden of proof. The evidence need not prove the facts with absolute certainty in order to be deemed conclusive; it suffices that it proves that they are highly probable. If a party has discharged its burden of proof, the counterparty seeking to refute the conclusively established facts by way of counter-arguments bears the burden of proving the alleged facts (T. 1162/07; see also T. 270/90, OJ 1993, 725). In T. 109/91 the board held that the burden of proof might shift constantly as a function of the weight of the evidence, i.e. if a party provided enough evidence to demonstrate a fact to the conviction of the board, the mere allegation of the contrary by the other party is not convincing (confirmed e.g. in T. 525/90, T. 239/92 and T. 838/92).

In **ex parte proceedings**, when the applicant challenges prima facie evidence concerning a fact, i.e. the nominal publication date of a document, and submits evidence to displace such prima facie evidence, the burden of proof shifts to the examining division to establish that the document was "made available to the public" within the meaning of Art. 54(2) EPC on that date (see T. 929/94 with reference to T. 750/94, OJ 1998, 32). According to T. 128/87 (OJ 1989, 406), a party presenting a cheque to the EPO bore the burden of proof for its receipt by the EPO. However, if the party furnished sufficient proof that a certain document had been filed, such evidence shifted to the EPO the burden of providing a greater weight of evidence to the contrary (T. 770/91 and J. 20/85, OJ 1987, 102). The more recent case T. 538/09 addressed this issue of burden of proof and standard of proof in its analysis of T. 750/94 and T. 151/99.

In ex parte case T. 545/08 the board said that it is a general principle that, when the examining division raises objections, the burden of proof lies initially with it. This means that objections must be reasoned and substantiated, and must show that, on the balance of probabilities, the objection is well-founded (see Guidelines, G-IV, 7.5.3 – November 2018 version). With respect to the publication date of a cited document, at least **prima facie evidence** is required. Prima facie evidence means evidence which is sufficient, on its own, to establish a fact or to raise a presumption of the truth of a fact unless controverted (see T. 750/94, point 6 of the Reasons; T. 526/12, point 1.4 of the Reasons; T. 1066/13, "directory listing" – no prima facie evidence). Thus, not every indication or hint qualifies as prima facie evidence. If the objection is properly raised, it is then up to the applicant to prove otherwise or at least to submit evidence to displace the prima facie evidence. If the applicant successfully challenges prima facie evidence concerning a fact, e.g. the nominal publication date of a document, the burden of proof shifts back to the examining division to establish that the document was made available to the public (see e.g. T. 929/94, point 2.1 of the Reasons). As to the case in hand in T. 545/08, the board found, among other things that, in the absence of prima facie evidence of the public availability of document D1, the examining division had not been entitled to consider it as prior art in its first substantive communication without providing further explanations and evidence as to its public availability before the priority date (see also T. 1961/13). Thus, the objection was not properly raised. It could not generate an obligation on the applicant's side to submit evidence against the assumed publication date.

In **opposition proceedings** the burden of proving that the objections raised under Art. 100 EPC have been substantiated lies with the opponent. Where the opposition division has decided to maintain the patent and the opponent has filed an appeal against this decision, the burden of demonstrating **on appeal** that the reasons for maintaining the patent were justified is not automatically shifted to the patent proprietor (T. 667/94). In other words, appeal proceedings do not result in a shift in the burden of proof to the detriment of the patentee; before the opposition division it is the opponent who bears the burden of proof of demonstrating that the patent does not fulfil the requirements of the EPC (T. 1210/05). However, once the opposition division has decided to revoke the patent, the burden shifts to the proprietor of the patent, who then has to demonstrate on appeal that the reasons for revoking the patent were not sound, i.e. that the opposition division's decision was wrong as to the merits (T. 585/92, OJ 1996, 129; point 3.2 of the Reasons).

5.2.2 Cases in which the burden of proof was reversed

In T. 570/08 the opponents had filed evidence in the form of comparative tests with the aim to support their argument that the claimed additive composition in the patent-in-suit did not solve the problem of improving lubricity and solubility of a diesel fuel oil. These results were in contrast to the tests which the patent proprietor had provided, so that the board was confronted with a series of tests leading to contradictory results. Therefore the board could not share the patent proprietor's argument that the burden of proof rested with the opponents, since the opponents' test results cast doubts on the effect allegedly achieved by the present invention. The patent proprietor could not convincingly eliminate those doubts and the patent was revoked.

In T. 473/13 the board considered the arguments and the supporting evidence (an affidavit by the project manager and inventor of the patent in suit) submitted by the respondent (patent proprietor) to be sufficient to discharge its initial burden of proving that there had been a confidentiality agreement. The burden of proof then shifted to the intervener, which had to establish that there had been no such confidentiality agreement. The intervener had, however, presented no arguments or evidence which objectively might cast doubt on the existence of a confidentiality agreement, but had merely presented speculation in this respect. The intervener did not try to contact the utility company V, with which the patent proprietor had a co-operation, to enquire of them whether they considered a confidentiality agreement to have been in place. The intervener also did not make enquiries of other organisations active in the technical field in order to address the question whether such confidentiality agreements represented normal practice. The board concluded that the public nature of the prior use was not proven, such that it did not form part of the prior art.

In T. 131/03 the board pointed out that, once the opponent had established a strong presumption that **unusual parameters** as those used to define the claimed subject-matter were inherently disclosed in the prior art, the patent proprietor could not merely claim the benefit of the doubt. It was incumbent upon the patentee to establish the extent to which the parameters used in the definition of its invention actually distinguished the claimed subject-matter from the prior art. See also T. 1452/16 (unusual parameters – alleged prior use – public availability of a product): as to the possibility for the patent proprietor to obtain samples and test them, the board stated that when testing samples manufactured after the priority date the legitimate question could arise of whether the results obtained were representative of the ratios present in the samples of the prior art. However, by using a **parameter** which had not been used in the prior art, the burden was on the patentee to prove that the prior art did not fall within the terms of the claim.

The burden of establishing insufficiency of disclosure generally lies with the opponent. When the patent does not give any information on how a feature of the invention can be put into practice, only a weak presumption exists that the invention is sufficiently disclosed. In such case, the opponent can discharge the burden of proof by plausibly arguing that common general knowledge would not enable the skilled person to put this feature into practice. The patent proprietor then bears the burden of establishing the contrary assertion that common general knowledge would indeed enable the skilled person to carry out the invention (T. 63/06, summary of this case law in T. 347/15). In T. 338/10, citing this

approach, the board held that the reasoned arguments submitted by the respondent (opponent) reversed the burden of proof, placing the onus on the appellant to show that the skilled person would have considered it likely that the claimed therapeutic effect was obtainable in the case in point, despite a lack of data and thus only a weak presumption. But since the appellant had not responded by submitting any arguments or evidence, the board held that the patent as granted did not comply with **Art. 83 EPC** (the principles applicable in the context of that article are recalled for example in **T 518/10**, see chapter II.C.9.).

In **T 1846/10** the board observed that example 5 of the patent provided verifiable facts which raised **serious doubts** that the invention could in fact be carried out by the average person skilled in the art without undue experimentation or inventive skills by following the guidance provided in the patent. Under these circumstances, no additional experimental evidence from the appellant (opponent) was required as it could rely on the evidence provided by the patent itself. The board concluded that the appellant had discharged its burden of proof.

In **T 2070/13**, as to the burden of proof, serious doubts were set out concerning whether the skilled person's common general knowledge would be sufficient to enable him to carry out the invention. As a consequence, the burden of proof shifted to the patentee. The mere assumption that anti-adherence of the claimed groups of compounds was known, and the reference to post-published D16 referring to a particular bacterial non-adhesion, was not convincing evidence that could discharge the respondent (patentee) from its burden of proof.

In **T 792/00** the board found that if the patent contained only an example with a hypothetical experimental protocol, and if this example was to be relied on for showing sufficiency, then the burden of proving that this protocol worked in practice as stated lay with the patentee. Evidence that a variation of the protocol worked was unlikely to be enough. However, if the example contained a complete experimental protocol and the patentee affirmed that the results reported had been obtained, a board was likely to accept that the patentee had done enough to shift the burden of proof to the opponent who would then have to provide a repeat of the experiment in order to convincingly demonstrate that the protocol did not, in fact, work as stated.

In **T 967/09** the board was satisfied that opponent III had substantiated, by means of verifiable facts, serious doubts that the patent did not disclose the invention as defined in claim 1 in a manner sufficiently clear and complete for it to be carried out by the skilled person. These doubts were considered not to be convincingly rebutted by the appellant (patent proprietor). Accordingly, the board considered that respondent (opponent III) had discharged its burden of proof in this respect. Therefore the patent, in respect of the subject-matter of claim 1, was insufficiently disclosed. **T 1842/06** sets out various evidential requirements under **Art. 83 EPC**, especially those applicable in ex parte proceedings. It states that if an examining division or board objects that the description's disclosure is insufficient, it bears the burden of proving that. If an invention is "revolutionary" (e.g. linked to the "memory of water"), reversing this burden of proof may be justified if the claimed invention's feasibility and reproducibility does not appear

sufficiently plausible on the basis of the application. Doubts might arise for example merely because a technical effect that is **a priori contrary to the laws of physics** is not adequately substantiated by experimental results.

In T. 518/10 the appellant (patent proprietor) argued that the burden of proof that an extract comprising compound (II) could be obtained from aquatic or marine biomass, in particular krill, did not shift to the appellant. The patent in suit provided at least one way as to how such an extract could be obtained. Furthermore, the extraction of compound (II) from krill was not against the laws of physics as argued by the respondents (opponents). The board was not convinced and stated that in the present case, assertion of the appellant was against the prevailing technical opinion. The respondents provided evidence that compound (II) could not be obtained when working according to the general method described in the patent. By their experimental reports, the respondents conclusively showed that, by following the extraction method described in the patent in suit, it was not possible for the skilled person to obtain the claimed extract comprising compound (II). Since this fact was neither disproved by documents filed by the appellant nor refuted by the appellant's counter-arguments, the board concluded that the ground of Art. 100(b) EPC was made out.

In R. 21/10 the Enlarged Board ruled that a board's alleged reversal of the burden of proof is not a ground for review, these being exhaustively listed in Art. 112a(2)(a) to (e) and R. 104 and 105 EPC. It found that, in any event, the technical board concerned – far from reversing the burden of proof – had merely applied the rule that each party bears the burden of proving the facts it asserts.

5.2.3 Cases in which the burden of proof was not reversed

In T. 954/93 the appellant (opponent) had put forward objections to the patent on the basis of lack of novelty, which would have had to be demonstrated by means of experiments. It had not, however, carried out any tests on the ground that they would have been very expensive. The board considered the allegation unproven and refused to reverse the burden of proof. The fact that experiments would have been very expensive did not shift the burden of proof onto the patent proprietor.

In T. 453/04 the opposition had been rejected, i.e. the grounds alleged pursuant to Art. 100 EPC had been found not to be substantiated. The board referred to the previous case law in T. 667/94 according to which, in such cases, the burden of showing that the decision of the opposition division was incorrect remained with the appellant (opponent). The burden is not automatically shifted to the proprietor to show on appeal that the reasons for maintaining the patent were justified was not automatically shifted to the proprietor.

According to T. 499/00, the burden of proof could not be reversed to rest with the patentee in cases where – as opposed to the situation in T. 585/92 – the patent had been revoked by the opposition division not on the strength of a real failure to disclose the information needed to reproduce the claimed subject-matter, but for reasons that the board elsewhere deemed erroneous.

H. Interpretation of the EPC

6.	Implementing Regulations	790
7.	Changes in relation to an established practice and interpretation	791
8.	Interpretation of the various language texts of the EPC (Article 177 EPC)	791

On the interpretation of provisions of the EPC, the EPC itself provides relatively little guidance. There is the Protocol on the Interpretation of [Art. 69 EPC](#) of 5 October 1973 as revised by the Act revising the EPC of 29 November 2000. This deals with the extent of protection under [Art. 69 EPC](#). Otherwise, the EPC contains only regulations like the hierarchy of legal provisions ([Art. 150\(2\)](#) and [164\(2\) EPC](#)) and the equal authenticity of the EPC in its three official language versions ([Art. 177 EPC](#)). [Art. 125 EPC](#) is not concerned with the interpretation of the EPC but serves merely as a "fill-in" in case of missing procedural provisions. The EPC itself thus contains no general rules for its interpretation, and one must look outside the terms of the Convention itself for such rules ([G 2/12](#), [G 2/13](#), [OJ 2016, A27](#) and [A28](#)).

As an international treaty, the EPC has to be interpreted in accordance with the rules of interpretation developed in the so-called "law of nations" or public international law. To the traditional kind of international treaty which regulates legal relations between States had to be added the treaty which directly creates and defines rights and duties for individuals and corporate bodies ([G 5/83](#), [OJ 1985, 64](#); [G 2/12](#), [G 2/13](#)).

In the interpretation of international treaties which provide the legal basis for the rights and duties of individuals and corporate bodies it is necessary to pay attention to questions of harmonisation of national and international rules of law. The boards of appeal may take into consideration decisions and opinions given by national courts in interpreting the law (see G 5/83, OJ 1985, 64; see also G 2/12, G 2/13). Nevertheless, in the proceedings before the European Patent Office, such considerations do not exonerate a board of appeal from its duty as an independent judicial body to interpret and apply the EPC and to decide in last instance in patent granting matters. TRIPS provisions, like decisions of the European and International Courts of Justice and national decisions, are elements to be taken into consideration by the boards of appeal but are not binding on them (T 154/04, OJ 2008, 46).

Although the European Patent Organisation is not a party to the Vienna Convention on the Law of Treaties concluded on 23 May 1969 (hereinafter Vienna Convention), the principles of interpretation of Arts. 31 and 32 of the Vienna Convention are to be applied to the interpretation of the EPC even though its provisions do not apply to the EPC ex lege (G 5/83, G 2/08, OJ 2010, 456). The boards of appeal refer to legal sources outside the EPC, including, for example, Vienna Convention and the TRIPS Agreement. Thus the boards of appeal may be guided in their decisions by the provisions of other international instruments. However, they have no obligation to apply them directly (G 2/02 and G 3/02, OJ 2004, 483).

1. The Vienna Convention on the Law of Treaties

In G 5/83 (OJ 1985, 64) the Enlarged Board stated that the provisions of the Vienna Convention do not apply to the EPC ex lege, since the former Convention applies only to treaties which are concluded by States after the entry into force of the Vienna Convention with regard to such States (Art. 4, Vienna Convention). At the time of conclusion of the EPC, the Vienna Convention was not in force. Nevertheless, there were convincing precedents for applying the rules for interpretation of treaties incorporated in the Vienna Convention to a treaty to which in terms they do not apply (see also G 2/12, G 2/13). The International Court of Justice did already apply principles expressed in the Vienna Convention to situations to which the Convention strictly did not apply, whilst the European Court of Human Rights, the Federal German Constitutional Court and the House of Lords (England) have also applied the principles of interpretation in Art. 31 and 32 of the Convention to treaties to which strictly they do not apply. After a careful study of the whole subject, the Enlarged Board of Appeal concluded that the European Patent Office had to do the same.

In J 10/98 (OJ 2003, 184) the Legal Board of Appeal stated that, although the Vienna Convention did not expressly apply to the interpretation of EPC, PCT or the Paris Convention, since it came into force at a later date than all of those treaties, in accordance with what had been recognised by the Enlarged Board of Appeal in decision G 5/83, its principles of interpretation were a valuable guide to the interpretation of all treaties executed both before and after it. In T 1173/97 (OJ 1999, 609) the board stated that although the Vienna Convention is not applicable to the EPC, it has considerable authority

and has frequently been cited by the boards of appeal when applying principles laid down in it.

1.1. Principles of interpretation of the Vienna Convention

It is established in the jurisprudence that the principles of interpretation provided for in Art. 31 and 32 Vienna Convention are to be applied when interpreting the EPC. Decisions and opinions given by national courts in interpreting the law may also be taken into consideration (G 2/12, G 2/13). These principles have been acknowledged and applied by the Enlarged Board and the boards of appeal alike (G 1/83; G 5/83; G 2/02 and G 3/02, OJ 2004, 483; G 2/08, OJ 2010, 456; G 3/14, OJ 2015, A102; G 1/16, OJ 2018, A70; J 10/98, OJ 2003, 184; T 128/82, OJ 1984, 164; T 1173/97, OJ 1999, 609).

1.1.1 The interpretation of good faith in accordance with the ordinary meaning

In G 2/08 (OJ 2010, 456) the Enlarged Board stated that from the reading of Art. 31 and 32 of the Vienna Convention taken together it follows that the provisions of a treaty (here the EPC) must first be construed according to the ordinary meaning of the terms in their context and in the light of its **object and purpose**, which means that the judge is not entitled to depart from clear provisions of law, this principle pertaining to the requirement of good faith. From the wording of Art. 32 Vienna Convention it can also be derived that **preparatory documents** are primarily to be drawn into consideration in order to confirm a meaning or to determine a meaning if the first and ordinary means of construction would lead to ambiguity or to an absurd result (see also decision G 1/07 of 15 February 2010, point 3.1 of the Reasons).

In G 2/12 and G 2/13 (OJ 2016, A27 and A28) the Enlarged Board stated that this objective method of interpretation is directed to establishing the "authentic" meaning of the relevant provision and its legal terms. The starting point of interpretation is thus the wording, i.e. the "objective" meaning, regardless of the original "subjective" intention of the contracting parties. To this end, the provisions are to be read in their context so that they comply with the object and purpose of the EPC.

In T 1173/97 the board analysed some aspects of the meaning of the expression "computer programs as such", with the emphasis on the "as such", and arrived at the conclusion that a computer program product is not excluded from patentability if it possesses the potential to bring about a "further" technical effect. The board was of the opinion that that interpretation to the exclusion of computer programs as such under Art. 52(2)(c) and (3) EPC 1973 was in full agreement with the provisions of the Vienna Convention. In its interpretation the board did not go beyond the ordinary meaning given to the terms of the EPC. The meaning it attributed to the expression "as such" in Art. 52(3) EPC 1973 was, in its opinion, not a special meaning within the meaning of Art. 31(4) Vienna Convention, which would have required the consent of the parties to the EPC.

1.1.2 Supplementary means of interpretation

It is a generally recognised rule of international law that when interpreting international treaties ancillary use may be made of material relating to their genesis. Under Art. 32 of the Vienna Convention, recourse may be had to supplementary means of interpretation, particularly the preparatory work for a treaty and the circumstances in which it was concluded, in order to confirm the meaning arrived at by application of Art. 31 or to determine the meaning when application of Art. 31(a) leaves the meaning ambiguous or obscure, or (b) produces a meaning which is obviously nonsensical or unreasonable (T 128/82, OJ 1984, 164; see also G 2/07, OJ 2012, 130; G 1/08, OJ 2012, 206, point 4.3 of the Reasons; G 2/12 and G 2/13).

In G 2/12 and G 2/13 the Enlarged Board stated that the preparatory work ("travaux préparatoires") and the circumstances of the conclusion of the EPC serve only as supplementary sources of evidence to confirm the result of the interpretation or if no reasonable meaning can be determined by applying the general rule of interpretation (Art. 32 Vienna Convention).

In J 8/82 (OJ 1984, 155) the board noted however that it was well recognised that Art. 31 and Art. 32 of the Vienna Convention on the interpretation of treaties merely codified existing public international law. In J 4/91 (OJ 1992, 402), for example, the Legal Board of Appeal drew on historical material relating to the EPC 1973 to support its view, arrived at from a teleological and systematic interpretation of the relevant provisions, regarding the additional period for paying renewal fees. G 1/98 (OJ 2000, 111) discussed the purpose of Art. 53(b) EPC 1973, its relationship to other international treaties and legal texts, and its legislative history. In G 3/98 and G 2/99 (OJ 2001, 62 and 83), the Enlarged Board reached its conclusions on Art. 55(1) EPC 1973 after interpreting the wording and considering also the legislator's intention and the aspects of systematic, historical and dynamic interpretation.

1.1.3 Interpretation of exclusions from patentability under the Vienna Convention

In G 1/07 (OJ 2011, 134) the appellant had submitted that exclusions to patentability had to be construed narrowly according to Art. 31 and 32 of the Vienna Convention.

The Enlarged Board held that no general principle of narrow interpretation of exclusions from patentability which would be applicable **a priori** to the interpretation of any such exclusions can be derived from the Vienna Convention. Rather, the general rule in Art. 31, point 1, of the Vienna Convention that a treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose must apply to the exclusion clauses contained in the EPC in the same manner as to any other provision. If the interpretation of the provision concerned according to these principles of interpretation leads to the result that a narrow interpretation is the right approach then and only then is such restrictive meaning to be given to it.

In G. 2/12 and G. 2/13 the Enlarged Board came to the conclusion that whilst there is no general notion of an obligatorily restrictive construction of exceptions to patentability, for example, such as that adopted by the Court of Justice of the European Union (CJEU) when insisting on a narrow interpretation of exceptions to or derogations from fundamental EC Treaty principles embodied in the four freedoms (Judgment of 21 June 1974, C 2-74, *Jean Reyners v. Belgian State*, ECJ 1974, 631), such a narrow interpretation might well result from applying the general principles of interpretation to a specific provision with regard to specific legal and factual circumstances.

G. 1/07 made reference to Opinion G. 1/04, OJ 2006, 334 (point 6 of the Reasons). In that Opinion, the Enlarged Board stated – with reference to decisions of the boards of appeal having acknowledged the existence of such an a priori principle – that the "frequently cited principle", according to which exclusion clauses from patentability laid down in the EPC are to be construed in a restrictive manner, does not apply without exception. In that Opinion concerning the definition of the term diagnostic methods practised on the human or animal body, the Enlarged Board came to its conclusion that the said exclusion was indeed to be interpreted narrowly only after a thorough examination of the wording and the purpose of the exclusion clause concerned. The same approach was also taken in the Enlarged Board's decision G. 2/06 (OJ 2009, 306). There, the Enlarged Board was concerned with the interpretation of the exclusion from patentability of biotechnological inventions relating to uses of human embryos for industrial or commercial purposes under R. 28(c) EPC (and the corresponding Art. 6(2) of the EC Directive on the legal protection of biotechnological inventions). The Enlarged Board made no reference to the existence of a principle of narrow construction of exceptions from patentability. Instead, as a method for interpreting the extent of the prohibition the Enlarged Board went directly to the rules of interpretation laid down in the Vienna Convention, i.e. it looked at the terms of the provision and its object and purpose (point 16 of the Reasons). No mention was made in that decision of any narrow or restrictive view which would have to be taken because the said prohibition was an exception to patentability. The Enlarged Board decided to proceed in the same way in G. 1/07.

1.2. Application of the rules of interpretation

In consolidated cases G. 2/12 and G. 2/13 (OJ 2016, A27 and A28) the term "essentially biological processes for the production of plants" in Art. 53(b) EPC needed to be construed pursuant to the general rules of interpretation. The Enlarged Board noted that it was established in the jurisprudence that the principles of interpretation provided for in Arts. 31 and 32 of the Vienna Convention were to be applied when interpreting the EPC. This question was to be analysed by means of a **methodical interpretation of Art. 53(b) EPC** in respect of, primarily, its wording and, secondarily, considering also the legislator's intention and the aspects of systematic and historical interpretation. In particular, it applied various methodical lines of interpretation which included grammatical, systematic and teleological interpretations as well as supplementary means of interpretation, principally, the preparatory work. None of these lines of interpretation led the Enlarged Board to conclude that the term "essentially biological processes for the production of plants" extended beyond the processes to products defined or obtained by such processes. This

result was confirmed when the preparatory work of the EPC was taken into account as a supplementary means of interpretation.

The supplementary means of interpretation have already been commented on above (see in this chapter III.H.1.1.2). Further arguments and the case law referred to by the Enlarged Board in G 2/12 and G 2/13 in applying the various **lines of interpretation** are reproduced below.

1.2.1 Grammatical interpretation

The Enlarged Board stated that when interpreting provisions of the EPC, it usually starts from the wording of the relevant provision and even if the wording of a provision reveals its meaning clearly, it is then to be examined whether the result of the literal interpretation is confirmed by the meaning of the words in their context. It could well be that the wording only superficially has a clear meaning. At any rate, a literal interpretation must not contradict the purpose of the provision (see G 1/90, OJ 1991, 275, 278, point 4 of the Reasons); G 6/91 (OJ 1992, 491, 499, point 15 of the Reasons); G 3/98 (OJ 2001, 62, 71, point 2.2 of the Reasons). However, in the case in point, more than one meaning could in principle be attributed to the wording (cf. G 1/88, OJ 1989, 189, 193, point 2.2 of the Reasons). Therefore, the true and intended meaning of the term "essentially biological processes for the production of plants" needed to be analysed further.

1.2.2 Systematic interpretation

The systematic interpretation formed a second pillar when construing a legal provision and its terms (see G 1/88, point 3 of the Reasons; G 9/92, OJ 1994, 875, point 1 of the Reasons; G 4/95, OJ 1996, 412, 421 et seq., points 4 and 5 of the Reasons; G 3/98, OJ 2001, 62, 71, point 2.2 of the Reasons; G 4/98, OJ 2001, 131, 143, point 4 of the Reasons). In applying this second method of interpretation the meaning of the wording in question was to be established in the context of the relevant provision itself. In addition, the provision as such had to be interpreted taking into account its position and function within a coherent group of related legal norms.

1.2.3 Teleological interpretation

Like national and international courts, the Enlarged Board applies the method of teleological interpretation in the construction of legislative provisions in the light of their purpose, values, and the legal, social and economic goals they aim to achieve. In this, the Enlarged Board examined their objective sense and purpose (e.g. G 1/88, point 5 of the Reasons; G 1/03, point 2.1.1 of the Reasons). The starting point was marked by determining the general object of the relevant provision (*ratio legis*) because the interpretation could not contradict the provision's spirit (G 6/91, point 8 of the Reasons).

1.2.4 Subsequent agreement or practice

The object and purpose of the exclusion under Art. 53(b) EPC was not, however, sufficiently obvious to answer the question whether or not the clause was to be construed

in a narrow or broad way. The Enlarged Board noted that under Art. 31(3) of the Vienna Convention any subsequent agreement between the parties regarding the interpretation of the treaty or its application, and any subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation is to be taken into account. It pointed out that R. 26(5) EPC (formerly R. 23b(5) EPC 1973) could be regarded as such subsequent agreement and practice. R. 26(1) EPC explicitly calls for due consideration of the Biotech Directive (see G 2/06, point 16 of the Reasons).

The interpretation of the Biotech Directive as put forward in the Commission Notice (2016) could not be seen as a relevant development because it has not been confirmed in a legally binding way. If the adoption in 2017 of R. 28(2) EPC – in accordance with the interpretation developed in the Notice – by the Administrative Council were to be considered a subsequent agreement in the sense of the Vienna Convention and used for the interpretation of Art. 53(b) EPC, this would reverse the meaning of Art. 53(b) EPC as interpreted by the EBA in decisions G 2/12 and G 2/13, i.e. it would represent an amendment of an Article of the Convention. However, the Administrative Council is not, in the light of Art. 33(1)(b) and 35(3) EPC, competent to amend the Convention, here Art. 53(b) EPC, by amendment of the Implementing Regulations, here R. 28(2) EPC. The decision to adopt R. 28(2) EPC could not be regarded as a subsequent agreement between the parties that shall be taken into account for the interpretation of the treaty, in the meaning of Art. 31(3)(a) of the Vienna Convention (T 1063/18). See also the pending referral under G 3/19.

1.2.5 Secondary considerations

The Enlarged Board stated that a "dynamic interpretation" might come into play where considerations have arisen since the Convention was signed which might give reason to believe that a literal interpretation of the wording of the relevant provision would conflict with the legislator's aims. Secondary considerations serve the purpose of testing the legal soundness of the conclusions reached in interpreting the scope of application of the process exclusion under Art. 53(b) EPC. The Enlarged Board concluded that the concept of a dynamic interpretation did not require revising the result of the interpretation established by applying traditional rules of construction (G 2/12, OJ 2016, A27, also cited in T 1063/18).

2. Interpretation of the EPC affected by TRIPS Agreement

2.1. General

The European Patent Organisation, established by the EPC, which constitutes a special agreement under Art. 19 of the Paris Convention, is not a party to the WTO/TRIPS Agreement. The Enlarged Board of Appeal observed in G 2/02 and G 3/02 (OJ 2004, 483) that although the EPO is not a party to TRIPS and not bound by it, the national legal systems of the EPC Contracting States might be affected by TRIPS and they may be under an obligation to see to it that the EPC is in conformity with TRIPS. The European Patent Organisation as an international organisation has an internal legal system of its own, the EPC. The boards of appeal of the EPO have the task of ensuring compliance with the

autonomous legal system established by the EPC and are bound by the provisions of the EPC alone (Art. 23(3) EPC).

2.2. Elements to be taken into consideration by the boards of appeal

The issue of the application of TRIPS in the context of the EPC has been considered on a number of occasions by the boards of appeal of the EPO (see for instance G 1/97, OJ 2000, 322, T 1173/97, OJ 1999, 609, J 10/98).

In T 1173/97 the board stated that although TRIPS may not be applied directly to the EPC, the board found it appropriate to take it into consideration, since it is aimed at setting common standards and principles concerning the availability, scope and use of trade-related intellectual property rights, and therefore of patent rights. Thus TRIPS gives a clear indication of current trends.

In G 2/02 and G 3/02 the Enlarged Board of Appeal noted that TRIPS provisions, like decisions of the European and International Courts of Justice and national decisions, are elements to be taken into consideration by the boards of appeal but are not binding on them. Whereas it is legitimate for the boards of appeal to use the TRIPS Agreement as a means to interpret provisions of the EPC 1973 which allow different interpretations, specific provisions of TRIPS cannot justify ignoring express and unambiguous provisions of the EPC 1973. To do so would usurp the role of the legislator. This was confirmed by the fact that the legislator of EPC 2000 found it necessary to revise Art. 87 EPC 1973 in order to implement the TRIPS Agreement. The law to be applied by the boards of appeal was governed by the provisions of the EPC only.

In T 1173/97 (OJ 1999, 609) the board decided that, although TRIPS could not be applied directly to the EPC 1973, it was appropriate to take it into consideration in connection with the patentability of computer program products, for TRIPS was aimed at setting common standards and principles concerning the availability, scope and use of trade-related intellectual property rights. It thus gave a clear indication of current trends. The appellant's reference to current practice at the US and Japanese patent offices caused the board to emphasise that the situation under these two legal systems (US, JP) differed greatly from that under the EPC 1973; only the EPC 1973 contained an exclusion such as that in Art. 52(2) and (3) EPC 1973. These developments nevertheless represented a useful indication of modern trends and, in the board's view, could contribute to the highly desirable further (worldwide) harmonisation of patent law.

3. The European Convention on Human Rights

In R 19/12 of 25 April 2014 the Enlarged Board of Appeal observed that Article 6 ECHR had been recognised in G 1/05 (OJ 2007, 362) and G 2/08 of 15 June 2009 as a binding standard for proceedings before the boards of appeal because it relied on principles of law common to all member states of the European Patent Organisation and applying to all its departments (see also D 11/91 of 14 September 1994 and chapter III.J.1.3. "The Convention for the Protection of Human Rights and Fundamental Freedoms"). That

justified applying both national case law and that of the European Court of Human Rights as a supplementary means of interpreting the EPC.

4. Impact of national decisions on the case law of the boards of appeal

4.1. The duty of the boards of appeal to interpret and apply the EPC

In G 2/02 and G 3/02 (OJ 2004, 483) the Enlarged Board of Appeal recognised that, in accordance with the aim of the EPC, as expressed in its preamble, to strengthen co-operation between the States of Europe in respect of the protection of inventions, there has always been the intention to harmonise the substantive patent law to be applied in the Contracting States and in the EPO.

In G 5/83 the Enlarged Board of Appeal stated that in the interpretation of international treaties which provide the legal basis for the rights and duties of individuals and corporate bodies it is, of course, necessary to pay attention to questions of harmonisation of national and international rules of law. This aspect of interpretation, not dealt with by the provisions of the Vienna Convention, is particularly important where, as is the case with European patent law, provisions of an international treaty have been taken over into national legislation. The establishment of harmonised patent legislation in the Contracting States must necessarily be accompanied by harmonised interpretation. For this reason, it is incumbent upon the European Patent Office, and particularly its boards of appeal, to take into consideration the decisions and expressions of opinion of courts and industrial property offices in the Contracting States. In T 154/04 (OJ 2008, 46) the board stated that in the proceedings before the European Patent Office, such considerations do not exonerate a board of appeal from its duty as an independent judicial body to interpret and apply the EPC and to decide in the last instance in patent granting matters. In addition, despite harmonised legal regulations it is not self-evident that their interpretation is also harmonised among different national courts, let alone courts of different contracting states, so that the boards of appeal would be at a loss as to which interpretation to follow if they did not exercise their own independent judgment.

4.2. Effects on the case law due to the differences between national legislation and the EPC

In J 9/07 the board stated that according to Art. 1 EPC 1973 the EPC established a system of law common to the contracting states for the grant of patents for inventions. This common system of law is applicable to all European patent applications irrespective of which contracting states have been designated in the European patent application. Although in general a high degree of harmonization between the EPC and national laws is desirable and has indeed been achieved, differences between national legislation and the EPC are not ruled out by Art. 2(2) EPC 1973 or Art. 66 EPC 1973 in this regard. The board stated that, save to the extent that the Convention expressly provides otherwise, the EPO is not allowed to take into consideration with respect to the designated state concerned a specific national legal provision which would be more favourable for the applicant than the provisions of the EPC. This is because this would have the consequence of giving European applications unequal treatment as regards the

requirements for grant depending on which state or states have been designated, contrary to Art. 1 EPC 1973. It would also go against the principle of the unity of the application enshrined in Art. 118 EPC 1973 since, if a more favourable national provision were to be applied in relation to the designated state concerned, distinguishing between a case in which the designated state concerned is the only one designated and a case in which further states have been designated as well would appear arbitrary and unjustifiable.

4.3. National decisions: no binding effect on the boards of appeal

In decision T 452/91 it was held that in proceedings before the instances of the EPO, questions of patentability were to be decided solely in accordance with the EPC. No national decision should be cited as if it were binding on the EPO, and claims should not be refused by the EPO on the ground that their "patentability cannot be upheld under the jurisdiction of one member state". It could be that the law in most or all other contracting states was different. The reasoning that led the national instance to its conclusion might well lead an EPO instance to a similar conclusion under the EPC, but this would first need a careful assessment of the EPC, and of relevant EPO board of appeal case law, a comparison with the legislation and jurisprudence on which the national instance reached its conclusion, and a study of the position in other contracting states (R 21/09, T 1753/06).

5. Decisions of the Administrative Council: boards of appeal not formally bound

In J 16/96 (OJ 1998, 347) the issue was whether an association of representatives within the meaning of R 101(9) EPC 1973 could also be formed by professional representatives who did not work in private practice. The Administrative Council of the European Patent Organisation had decided at its 4th meeting in 1978 that an association within the meaning of this rule could only be an association consisting of professional representatives in private practice. The Legal Board of Appeal pointed out that in their decisions the boards of appeal were not bound by any instructions and complied only with the provisions of the EPC 1973 (Art. 23(3) EPC 1973). The boards of appeal could not be formally bound by a decision of the Administrative Council concerning a question of interpretation, nor could such a decision be deemed to be an instruction for their decisions. However, such a decision was a relevant element in interpretation.

The board stated that according to consistent board of appeal case law, for the purpose of the interpretation of the EPC the rules of interpretation laid down in the Vienna Convention are to be applied (see G 5/83). Interpreting the case in accordance with Art. 31(1) of the Vienna Convention, the board concluded that an association within the meaning of R 101(9) EPC 1973 could also be an association of representatives not engaged in private practice. The intended aim of the Council's decision, which was to eliminate ambiguities in the application of R 101(9) EPC 1973, had, in the light of recent developments in the profession, not been achieved, and as such the decision was less important in relation to the other factors involved in interpretation.

Although the Administrative Council is competent to amend the Implementing Regulations pursuant to Art. 33(1)(c) EPC, this competence does not extend to amending an Article of

the Convention, here Art. 53(b) EPC (T.1063/18). In this regard, see the referral to the Enlarged Board by the President of the EPO, pending as **G 3/19**.

6. Implementing Regulations

In T.39/93 (OJ 1997, 134) the board held that, in view of Art. 164(2) EPC 1973, the meaning of an Article of the EPC on its true interpretation as established by a ruling of the Enlarged Board of Appeal could not, in the board's view, be overturned by a newly drafted Rule of the Implementing Regulations, the effect of which would be to conflict with this interpretation. This is because, according to Art. 164(2) EPC 1973, in the case of conflict between the provisions of this Convention (the EPC Article) and those of the Implementing Regulations, the provisions of this Convention shall prevail (see also T.885/93; T.83/05, OJ 2007, 644; G 2/07, OJ 2012, 130; see also T.1063/18 below).

In T.991/04 of 22 November 2005 the board stated that the Munich Diplomatic Conference (1973) as the legislator of the European patent system drafted the first versions of the EPC 1973 and the Implementing Rules as a legal unity which should be read in a consistent way. In this regard the Implementing Regulations had the function of an **authentic interpretation** of the EPC 1973.

In G 2/07 (OJ 2012, 130) the Enlarged Board of Appeal noted that the provisions of the Biotech Directive 98/44/EC, which were not yet contained in the Convention and related to substantive patentability requirements, were incorporated in the interest of uniformity in harmonised European patent law into the Implementing Regulations as they stood (see the Notice dated 1 July 1999 concerning the amendment of the Implementing Regulations to the EPC (OJ 1999, 573, point 19 of the Reasons, explanatory notes to R. 23b(5) EPC 1973)). The referring board (cf. T.83/05, OJ 2007, 644) had argued that the competence of the Administrative Council to amend the Implementing Regulations according to Art. 33(1)(b) EPC did not extend to core issues of substantive patent law, so that the introduction of provisions determining the boundaries of patentable subject-matter was ultra vires. Decisions J.11/91 and J.16/91 (OJ 1994, 28, point 2.3.4 of the Reasons) of the Legal Board of Appeal, cited in the referring decision, contained a sentence stating that the Regulations may deal only with procedural questions and not with matters of substantive law. No reason was given in these decisions as to why this should be so.

The Enlarged Board of Appeal in G 2/07 stated that it is the function of the Implementing Regulations to determine in more detail how the Articles should be applied and there is nothing in the Convention allowing the conclusion that this would not also apply in the case of Articles governing issues of substantive patent law. The limits to the Administrative Council's law-making powers by means of the Implementing Regulations could be inferred from Art. 164(2) EPC. According to that Article, in case of conflict between the provisions of the Convention and those of the Implementing Regulations, the provisions of the Convention shall prevail. In decision G 2/93 (OJ 1995, 275), the Enlarged Board of Appeal accepted that R. 28 EPC 1973 implemented Art. 83 EPC 1973 and was, at least in part, substantive in nature. Furthermore, in its more recent decision G 2/06 (OJ 2009, 306, points 12 and 13 of the Reasons), too, the Enlarged Board did not doubt the Administrative

Council's power to lay down provisions concerning substantive law in the Implementing Regulations.

Thus the Enlarged Board of Appeal held that the legislator is entitled to provide for issues of substantive law in the Rules of the Implementing Regulations. However, a Rule, not having a legal history of its own, must be clear enough to indicate to those applying it in what way the legislator intended the Article to be interpreted by means of that Rule. This, however, was not the case for R. 26(5) EPC. R. 26(5) EPC did not give any useful guidance on how to interpret the term "essentially biological process for the production of plants" in Art. 53(b) EPC and therefore that term had to be interpreted on its own authority. This was for the Enlarged Board to do (for further details on decision G 2/07 (OJ 2012, 130)).

In T 1063/18, the board considered that new R. 28(2) EPC was in conflict with Art. 53(b) EPC as interpreted by the EBA in decisions G 2/12 and G 2/13. In accordance with Art. 164(2) EPC, the provisions of the Convention prevail. The Administrative Council is not, in the light of Art. 33(1)(b) and 35(3) EPC, competent to amend the Convention, here Art. 53(b) EPC, by amendment of the Implementing Regulations, here R. 28(2) EPC. On 4 April 2019 the President of the European Patent Office referred to the Enlarged Board of Appeal points of law on the interpretation of Art. 164(2) EPC and the assessment of R. 28(2) EPC under said provision. The case is pending as G 3/19.

7. Changes in relation to an established practice and interpretation

In G 2/07 (OJ 2012, 130) the Enlarged Board of Appeal stated that there can be no "legitimate expectation" that an interpretation of a substantive provision governing patentability given in a decision of the boards of appeal will not be overruled in the future by the Enlarged Board, since recognising such an expectation as legitimate would undermine the function of the Enlarged Board of Appeal. This holds particularly true for issues on which there is no solid body of decisions all to the same effect but where instead the relevant jurisprudence consists only of a very limited number of individual decisions, as is presently the case. In the past, the Enlarged Board has granted a transitional period in cases in which the Enlarged Board's decision has brought about a change in relation to an established procedural practice which the parties could not be expected to foresee. By contrast, for the reasons given above, the existence of "legitimate expectations" has never been acknowledged for issues before the Enlarged Board concerning the correct application, i.e. interpretation, of substantive patent law.

8. Interpretation of the various language texts of the EPC (Article 177 EPC)

In J 8/95 it was held that even if one language version of a provision of the EPC were found to differ from the other two versions, no legal consequences could be derived from that version other than those which could be derived from the other two versions – regardless of the language of the proceedings. A difference in the wording in one language would have to be considered only in so far as it could form one element of the interpretation. In the case at issue, however, the provision under consideration, even in the allegedly different version, could readily be understood in context in the same way as

the other two official languages, with the result that all three versions of the provision corresponded as far as content was concerned (see also T.2321/08).

Observing that, while the EPC did not actually define the terms "fact" and "argument", Art. 114(1) EPC, albeit in its English version only, distinguished facts, evidence and arguments, the board in T.1914/12 concluded that the legislature must have considered them to be three distinct categories. Taking the English version of Art. 114(1) and (2) EPC, which seemed to it to reflect the legislative intention more accurately, it held that arguments had to be treated differently from facts and evidence and that the discretion provided for in paragraph 2 did not extend to late-filed arguments.

I. Main and auxiliary requests

1.	Possibility of filing auxiliary requests	793
2.	Order of requests	793
3.	Admissibility of requests	794
3.1.	Party's responsibility to define subject-matter by filing appropriate requests	794
3.2.	Requests of equal ranking	795
3.3.	Requesting further opportunity to formulate new requests	795
3.4.	Admissibility of late-filed requests	796
4.	Obligation to give reasons for refusal of each request	796
5.	Withdrawal of request	796
6.	Examination procedure	797
6.1.	Direct rejection of auxiliary request by examining division	797
6.2.	Rejection in advance of further request by examining division	797
6.3.	Practice of proposing one main and one or more auxiliary requests	797
7.	Interlocutory decision on allowable auxiliary request – distinction between examination proceedings and opposition proceedings	798
8.	Opposition procedure	798
9.	Appeal procedure	799

1. Possibility of filing auxiliary requests

In the proceedings before the EPO main and auxiliary requests are allowed (for grant proceedings see e.g. [T 79/89](#), OJ 1992, 283; for opposition proceedings see e.g. [T 234/86](#), OJ 1989, 79). An auxiliary request is a request for amendment which is contingent upon the main request (or preceding auxiliary requests) being held to be unallowable, [T 153/85](#) (OJ 1988, 1). It is also a request for amendment covered by [R. 86\(3\) EPC 1973](#) ([R. 137\(3\) EPC](#)), [Art. 96\(2\) EPC 1973](#) and [R. 51\(2\) EPC 1973](#) ([Art. 94\(3\) EPC](#) and [R. 71\(2\) EPC](#)), and, during appeal proceedings, [Art. 110\(2\) EPC 1973](#) and [R. 66\(1\) EPC 1973](#) ([R. 100\(1\) EPC](#)) ([T 79/89](#), OJ 1992, 283).

2. Order of requests

The established system of main and auxiliary requests in the proceedings before the EPO provides that parties, when filing alternative sets of claims, must indicate the order of preference for each set of claims ([R. 14/10](#), [T 1125/13](#) of 25 June 2015).

Before a decision can be taken on the basis of an auxiliary request, the main request has to be examined and decided upon ([T 484/88](#)). The board in [T 169/96](#) pointed out that, under [Art. 113\(2\) EPC 1973](#), the EPO was bound by the requests of the applicant or proprietor, and, in the case of main and auxiliary requests, this meant that the EPO was also **bound to the order of the requests** (see also [T 540/02](#)). However, in [T 911/06](#) (relating to examination of the correctness of the first instance decision as a lower ranking request) the board held that this principle did not necessarily apply to the proceedings before the boards, see in this chapter [III.1.9.](#), below.

In the proceedings underlying **R. 8/16** the board had revoked the patent. The Enlarged Board held that, as a matter of principle, the technical board was free to examine the (pending) claim requests in any order, and therefore it was also free to conduct the discussion on them in any order, without having to give reasons. The principle of party disposition expressed in Art. 113(2) EPC did not extend so as to permit a party to dictate how and in which order a deciding body of the EPO might examine the subject-matter before it. The only obligation on the EPO was not to overlook any still pending request before a final decision was taken. The order of examination or discussion was a question of procedural economy, for which mainly the deciding body was responsible. As long as a discussion on the substantive issues of the still pending requests was possible, even if only by reference to discussions on other requests (see **R. 6/11**), such a procedure was unobjectionable and the board had no particular duty to give reasons why it chose to proceed as it did.

In **T. 1439/05** the board held that to avoid misunderstanding, the examining division should clarify the status of the requests before pronouncing its decision at the conclusion of oral proceedings. In **T. 883/07** the board held that in accordance with generally recognised procedural requirements, albeit not codified specifically in the EPC, once a higher order request was refused that request was off the table and the next request in the order chosen by the requester had to be considered as if it were the sole request.

In **T. 412/12**, after its fourth auxiliary request had been debated, deliberated on and then found allowable, the patent proprietor, asserting that it had been taken by surprise by the board's finding earlier in the oral proceedings that claim 1 of its main request and first to third auxiliary requests was not allowable, filed an "auxiliary request 0" and asked that it be treated as ranking below its main request but above its first auxiliary request. The board regarded the proprietor's approach as an attempt to reopen the already closed discussion with a view to improving on the position it had obtained when its fourth auxiliary request had been allowed. That had to be considered unfair towards the other parties, especially as the supporting line of argument, unlike the proprietor's previous submissions, had not been developed until during the oral proceedings. The board refused to admit the new auxiliary request.

3. Admissibility of requests

3.1. Party's responsibility to define subject-matter by filing appropriate requests

In **T. 506/91** the board held that filing requests and deciding if several alternative requests were appropriate or not was a matter that in the end could only be decided by the party concerned and it should be routine for representatives to decide independently how to pursue their cases, including what requests to submit.

In **T. 382/96** the board stressed that one of the fundamental principles of European patent law was that responsibility for defining the subject-matter of a patent rested with the applicant (patent proprietor). The applicant (patent proprietor) could not offload this responsibility de facto on to the EPO or any other parties to the proceedings by filing a multitude of requests, let alone incompletely formulated request variants. Doing so

constituted an abuse of procedure, as it overburdened the EPO and any other parties to the proceedings with work not originally theirs to perform and thereby hampered the orderly conduct of proceedings. Auxiliary requests which had not been verbally specified in more detail were inadmissible for the purposes of R. 64(b) EPC 1973 (R. 99(2) EPC) because they did not identify the extent to which amendment or cancellation of the contested decision was requested; the same went for auxiliary requests for which no grounds had been set out (i.e. not substantiated) within the meaning of the third sentence of Art. 108 EPC 1973.

T. 446/00 concerned a case in which a large number of requests was filed with an offer to amend the claims further if the board so wished; the board held that a party could not in that manner abdicate its responsibility to present its case to the board and that such requests were both inadmissible and an abuse of procedure.

In T. 745/03 the board also pointed out that it was up to a party to decide on the presentation of its case. When filing several sets of claims, a party usually listed them in order of preference, the least limited claims being a main request, the more limited versions auxiliary requests, so that if a higher order request should fail, then a lower, more limited request would still have a chance of success. In the case before the board this had changed to an approach which could more aptly be designated as "pick and mix", as independent claims present in higher order requests were also to be found in lower order requests in differing permutations of independent claims. The "pick and mix" approach can both give an impression of fishing around for something patentable and mean that some independent claims are not even the subject of a decision. See also T. 221/06.

In R. 11/08 the Enlarged Board confirmed that adopting a "pick and mix" approach could run the risk of requests being found inadmissible, abuse of procedure, and disadvantages for the party in question.

In T. 1138/12 the board decided that an auxiliary request for maintenance of a patent on the basis of the claims it considered grantable from among those in a claim set was insufficiently defined and therefore inadmissible.

3.2. Requests of equal ranking

In T. 148/06 the board held several requests inadmissible which were submitted not as principle and auxiliary requests, but as requests of equal ranking. It was not the board's duty to give a legal opinion on the admissibility of several requests as guidance for appellants in defining the order in which they would like their requests to be examined.

3.3. Requesting further opportunity to formulate new requests

In T. 792/92 the board considered as inadmissible the appellant's request at the end of the oral proceedings that, should the outcome of the discussions be negative for him, he be given the opportunity to formulate new requests.

3.4. Admissibility of late-filed requests

On the late-filing of requests for amendment in examination proceedings, see chapter IV.B.3.3.3 "Criteria for admitting amendments filed in reply to the Rule 71(3) EPC communication"; in opposition proceedings, see chapter IV.C.5.1.3 "Time frame for filing amendments"; and in appeal proceedings, see chapter V.A.4. "New submissions on appeal".

4. Obligation to give reasons for refusal of each request

If a decision relates to several requests, it must give reasons for the rejection of each one. It must be clear from the decision which considerations led the division to its conclusions (T.234/86 (inter partes), T.169/96 (ex parte)).

According to T.961/00, it is a party's procedural right to file and maintain such requests as are regarded by the competent organ as unallowable or even inadmissible. If a party does so, then the competent organ has to give a decision on it, i.e. to refuse it if it is unallowable or inadmissible (see T.1105/96, OJ 1998, 249), but it cannot simply disregard it and deal with the case as if the request did not exist. On the contrary, this would constitute a substantial procedural violation.

5. Withdrawal of request

In T.1157/01 the applicant had maintained all its requests (main and three auxiliary requests). When it declared its non-approval of the text proposed for grant based on the third auxiliary request, however, the appellant did not explicitly repeat that it maintained all its previous and higher ranking requests. However, according to the general principle "A jure nemo recedere praesumitur" mentioned in G.1/88 (OJ 1989, 189), in the absence of an explicit withdrawal, surrender of a right could not be simply presumed and silence could not be deemed to be equivalent to surrender in the logic of how the Convention operated. The decision under appeal had omitted to give reasons for the refusal of the higher ranking requests still pending before the examining division, which amounted to a substantial procedural violation.

In T.388/12 the board confirmed that, as a general principle of law, surrender of a right could not be simply presumed (with reference to G.1/88). Relying on a strict application of the principle "a jure nemo recedere praesumitur", the withdrawal of a request could only result from acts of the party that manifestly establish such intention. Explicit withdrawal of a request would not be required insofar as the intention of the party, as it might result from its behaviour or comments made, was unequivocal.

In T.2301/12 the proprietor had replaced the initial requests with new requests before the opposition division. The board held that the use of the word "replace" implied that the initial main request was no longer the current main request, and since there was no attempt to retain it as a new auxiliary request either, it was difficult to avoid the conclusion that it had been simply withdrawn. The new requests had been annexed to the minutes and the first of them was clearly entitled "main request". The board did not accept the argument that

the titles of requests should be considered mere labels for identification. Where a proprietor filed multiple requests, there had to be a single main request, and it had to be apparent at every stage of the proceedings which request this was. One reason why this was essential was that where the main request was not allowed, the proprietor was adversely affected by the decision, whereas this would not normally be the case if the main request was allowed.

6. Examination procedure

6.1. Direct rejection of auxiliary request by examining division

In T 488/94, the board stated that before refusing an application in the case of main and auxiliary requests, the Examining Division in accordance with Art. 113(1) EPC 1973 would not only have to communicate its arguments regarding non-allowability of the main request to the applicant, but also regarding non-allowability of the auxiliary request, if the result of the subsequent examination of the auxiliary request was also negative. A "direct" rejection of an auxiliary request without preceding communication of the grounds on which the rejection was based would only comply with the requirements of Art. 113(1) EPC 1973 under rather exceptional circumstances.

6.2. Rejection in advance of further request by examining division

According to T 1105/96 (OJ 1998, 249), an applicant has a right both to file one or more auxiliary requests in addition to a main request, and to maintain all such requests even if the examining division communicated its view that all except the last auxiliary request were inadmissible or unallowable, and he was then entitled to a reasoned appealable decision in respect of rejection of each such request. Where an examining division had communicated its view that a further request in the form of an amended text of a claim would be allowable, the rejection in advance of such a further request unless all preceding requests were abandoned was an unlawful exercise of discretion under R. 86(3) EPC 1973 (R. 137(3) EPC) and a substantial procedural violation under R. 67 EPC 1973 (R. 103 EPC).

6.3. Practice of proposing one main and one or more auxiliary requests

The board in T 1351/06 referred to the decisions T 79/89 (OJ 1992, 283), T 169/96, T 1105/96, (OJ 1998, 249) and to Legal Advice No. 15/05 (rev. 2, OJ 2005, 357; now incorporated into the Guidelines, see Guidelines H-III, 3 – November 2018 version), where it was held that it was standard practice at the EPO that the applicant was able to propose one main and one or more auxiliary requests at the examination stage, to amend the text of the application. The board saw no reason why the applicant should not also be able to do so in response to a communication under R. 51(4) EPC 1973 (R. 71(3) EPC), especially in cases where that communication had not been preceded by a communication under Art. 96(2) EPC 1973 (Art. 94(3) EPC) and thus constituted a "first communication" within the meaning of R. 86(3) EPC 1973 (R. 137(3) EPC).

7. Interlocutory decision on allowable auxiliary request – distinction between examination proceedings and opposition proceedings

In T 549/96 it was noted that Art. 113(2) EPC 1973 required the examining division to decide upon an application only in the text agreed by the applicant. Thus an applicant had to indicate clearly at the end of the proceedings which text he wished to be used. If an applicant failed to indicate his approval of the text of an allowable subsidiary request, e.g. by express disapproval or by maintaining one or more unallowable higher-preference requests over one considered allowable by the examining division, the examining division could refuse the application under Art. 97(1) EPC 1973. The board **contrasted opposition and grant proceedings**. In the case of an allowable auxiliary request in opposition proceedings an interlocutory decision was taken under Art. 106(3) EPC 1973 (Art. 106(2) EPC) to the effect that the European patent met the requirements of the EPC 1973, account being taken of the amendments made by the patent proprietor. This interlocutory decision then also had to include the reasons why the preceding requests did not meet the requirements of the EPC 1973. This saved the proprietor the further costs of fulfilling the formal requirements under R. 58(5) EPC 1973 (R. 82(2) EPC) before there was a final decision on the version in which the patent could be maintained. No comparable situation existed in grant proceedings. On the contrary, in ex parte appeal proceedings the principle of examination ex officio applied. Up to the grant stage it had to be ensured that the conditions for patentability were met. An interlocutory decision, stating that the application in a certain version met the requirements of the EPC 1973, would be in conflict with this purpose. The board drew attention to Legal Advice No. 15/98 (OJ 1998, 113).

In T 482/06, the board found that decision T 549/96 was compatible with the updated Legal Advice No. 15/05 (rev. 2) (OJ 2005, 357), as it stated that "an applicant must unambiguously indicate at the end of the proceedings, which text he proposes". Legal Advice No. 15/05 set out the mechanism to provide this indication. See also T 976/97, also before the entry into force of Legal Advice 15/05, where the situation was similar to that in T 549/96. In T 1220/05 the board (referring to T 839/95 and T 549/96) confirmed that interlocutory decisions finding an auxiliary request allowable were not in keeping with standard first-instance practice in examination proceedings, as opposed to opposition proceedings (see Legal Advice No. 15/05 (rev. 2), point 1.1), and in appeal jurisprudence were deemed undesirable owing to possible repercussions (binding effect, no reformatio in peius).

8. Opposition procedure

According to T 234/86 (OJ 1989, 79), the opposition division can – and in certain circumstances must – maintain the patent as per the patentee's subordinate auxiliary request if he pursues main and auxiliary requests which are not allowable although taking precedence over the allowable one. Rejection of the requests which take precedence must be reasoned.

In T 5/89 (OJ 1992, 348) the board confirmed that a decision may confine itself to rejecting the main request only if all subordinate requests have been withdrawn. This principle was also confirmed in T 785/91 and T 81/93. Following T 5/89, the board in T 861/97 stated

that deciding to revoke a patent solely on the basis of the main request when there was an expressly maintained auxiliary request constituted an infringement of Art. 113(2) EPC 1973.

In T 155/88 the board made it clear that the patentee could not be required to withdraw any request. If he filed one or more auxiliary requests in addition to a main request and did not withdraw any of them, an opposition division was obliged in its decision to give reasons why each successive request was either not admissible (in the exercise of its discretion under R. 57(1) EPC 1973 and R. 58(2) EPC 1973, see T 406/86, OJ 1989, 302), or not allowable on substantive grounds (see T 234/86, OJ 1989, 79). If an opposition division allowed an auxiliary request without giving reasons in its decision as to why the main request or preceding auxiliary requests were not allowable, such decision would be set aside as void and of no legal effect, and the appeal fee refunded on the basis of a substantial procedural violation, as was the case in T 234/86 and T 484/88.

In T 848/00 the patentee had requested the deletion of the product claims from the main request in oral proceedings before the opposition division. In appeal proceedings the patentee argued that it had never abandoned the subject-matter of the product claims and that its actions in opposition had only introduced a new auxiliary request. The board agreed with the reasoning of decision T 155/88 that if a patentee proposed amendments to its claims which arose out of the opposition and which were intended to meet the grounds of objection raised in the opposition by limiting the scope of protection sought, this should **not** normally be interpreted as an **abandonment** of the subject-matter protected by the claims of the patent as granted. But this statement did not influence how the amended set of claims was to be read, because a **restriction** of claims was possible without abandoning the subject-matter of the patent specification as originally filed. Since the patentee had expressly requested an amendment of the main request, the board concluded that the opposition division had granted the patentee's main request and that the patentee was thus not adversely affected.

9. Appeal procedure

In T 1477/15 the board stated that it is generally accepted that in appeal proceedings the **principle of party disposition** applies (see e.g. R 13/13), meaning that parties can put forward, withhold or withdraw their requests as they see fit. In other words, if a patent proprietor withdraws or no longer agrees to a text (two auxiliary requests, in this case), this principle prevents the board of appeal from deciding on these issues.

In T 911/06 the board stated that applying the general principles of court procedure to the **order of the requests** of the appellant proprietor might be inconsistent with the purpose of the appeal procedure inter partes as expressed in the decision G 9/91 (OJ 1993, 408). In the board's opinion, examining new requests in the appeal, when the appellant proprietor had also requested examination of the correctness of the first instance decision as a lower ranking request, would effectively reduce the appeal procedure to a simple continuation of the first instance proceedings, although it was apparent from the general logic of the EPC, that the appeal proceedings were wholly separate and independent from the proceedings at first instance. The board noted that it had been established in several

decisions of the boards that in the case of main and auxiliary requests from the applicant or proprietor in first instance examination and opposition proceedings, the EPO was bound to the order of these requests. However, this principle did not necessarily apply to second instance proceedings before the boards of appeal. In view of the foregoing, the board considered that it was in line with the purpose of the appeal to examine first whether the department of first instance had correctly assessed the substance of the requests presented to it. Thus, in the case at issue, the correctness of the decision refusing the maintenance of the patent as granted had to be examined first, before examining the new amended claims. See also **R 8/16** where the Enlarged Board held that the principle of party disposition expressed in Art. 113(2) EPC did not extend so as to permit a party to dictate how and in which order a deciding body of the EPO may examine the subject-matter before it.

On principles established by case law with regard to the order of requests, see also chapter III.1.2.

J. Suspected partiality

1.	General principles	802
1.1.	Exclusion and objection	802
1.2.	Rationale and importance	803
1.3.	The European Convention on Human Rights	803
1.4.	"Subjective" and "objective" test, presumption of impartiality	803

5.2.	Grounds for objection under Article 24(3) EPC	815
5.2.1.	Expressions of opinions on legal issues	815
5.2.2.	Disqualifying partiality	815
5.2.3.	Discretionary procedural decisions negatively affecting a party	815
5.2.4.	Statement of grounds of objection defines the factual scope of the objection	816
5.2.5.	Article 24(3) EPC objection under Article 112a(2)(a) EPC	816
5.3.	Comments of the board member concerned	816
6.	Suspected partiality of members of the Enlarged Board of Appeal	817
6.1.	Referral proceedings under Article 112 EPC	817
6.1.1.	Previous participation in cases as members of the boards of appeal	817
6.1.2.	Expressions of opinion on legal issues	817
6.2.	Petition for review proceedings under Article 112a EPC	818
6.2.1.	Previous participation in cases as members of the boards of appeal	818

6.2.2	Expressions of opinion on legal issues	818
6.2.3	Suspected partiality of the Chairman of the Enlarged Board of Appeal who at the same time was Vice-President of Directorate-General 3 (VP3)	818
7	Legal restrictions for former board members	820

1. General principles

1.1. Exclusion and objection

Pursuant to [Art. 24\(1\) EPC](#), members of the boards of appeal or of the Enlarged Board of Appeal may not take part in a case in which they have any personal interest, or if they have previously been involved as representatives of one of the parties, or if they participated in the decision under appeal. [Art. 24\(3\) EPC](#) additionally provides that members of a board of appeal may be objected to by any party for one of the reasons mentioned in [Art. 24\(1\) EPC](#), or if suspected of partiality. According to [Art. 3\(3\) RPBA 2007](#) and [Art. 4\(3\) RPEBA](#) there shall be no further proceedings in the case before a decision on the exclusion of the member is taken. For the purposes of taking this decision, the member objected to is replaced ([Art. 24\(4\) EPC](#)).

While there are no provisions comparable to [Art. 24 EPC](#) that are applicable to members of the departments of first instance, the established case law of the boards of appeal has determined that the basic requirement of impartiality applies also to them (see [G 5/91](#), OJ 1992, 617; see also in this chapter [III.J.1.6](#) below).

According to the Enlarged Board in [G 2/08](#) of 15 June 2009, [Art. 24 EPC](#) envisages two different situations: exclusion and objection. The first, under paragraph 1, is exclusion ex officio of a member of the boards of appeal for specific reasons, primarily for having a personal interest or having been involved in the decision under appeal. The second, under paragraph 3, is objection by a party if it suspects a member of a board of partiality. In other words, under "Exclusion and objection" the legislator distinguishes between, on the one hand, an irrefutable presumption of law consisting in those compelling **grounds for exclusion** (see in this chapter [III.J.5.1](#).) that must apply ex officio, and may therefore be raised by anyone, i.e. the parties, the board or a third person, without their having to justify any personal interest as of right, and, on the other hand, the **grounds for objection** (see in this chapter [III.J.5.2](#).) that may be raised by any party to the proceedings if it suspects partiality of a member of a board of appeal or of the Enlarged Board of Appeal, since said party enjoys a personal and legitimate interest in the proceedings and is entitled to due process of law in respect of said interest. In such a case the burden of proof lies with the party who raises the objection, since board members, including those of the Enlarged Board of Appeal, are a priori **presumed to be impartial** (see in this chapter [III.J.1.4](#).) This distinction is also reflected in [Art. 112a\(2\)\(a\) EPC](#), which provides as a ground of petition for review that a member of a board of appeal took part in the decision in breach of [Art. 24\(1\) EPC](#) or despite having been excluded pursuant to a decision under [Art. 24\(4\) EPC](#). In other words, whereas the grounds under [Art. 24\(1\) EPC](#) are considered to be peremptory due to the violation of the legal principle that nobody should be a judge

in his own cause, the ground which could have justified an objection for suspicion of partiality is not directly envisaged as constituting a priori (i.e. unless proven and decided by the board; see also R 20/09) a cause of review (Art. 24(3) EPC).

1.2. Rationale and importance

According to the Enlarged Board in G 1/05 of 7 December 2006 (OJ 2007, 362), the right to object to a judge for reasons of suspicion of partiality is meant to prevent judges from being influenced in their decision-making – be it deliberately or inadvertently – by extraneous considerations, prejudices and predilections, i.e. by considerations other than the arguments they consider factually and legally relevant for the case under consideration.

In G 5/91 (OJ 1992, 617) and G 1/05 of 7 December 2006 the Enlarged Board underlined the importance of a very strict observance of the requirement of impartiality in proceedings before it and the other boards of appeal in view of their judicial functions at final instance within the European patent granting system.

1.3. The European Convention on Human Rights

In G 1/05 of 7 December 2006 (OJ 2007, 362) the Enlarged Board stated that the principle of equal treatment and the right of parties to a fair trial enshrined in Art. 6(1) of the European Convention for the Protection of Human Rights and Fundamental Freedoms (ECHR) oblige the boards of appeal to decide the individual cases pending before them according to uniformly applied criteria and not in an arbitrary manner. In interlocutory decision G 2/08 of 15 June 2009 the Enlarged Board also stressed that it and the other boards of appeal act as judicial bodies and apply general principles of procedural law.

In its decision R 19/12 of 25 April 2014, the Enlarged Board observed that Art. 6 ECHR had been recognised in G 1/05 and G 2/08 as the binding standard for proceedings before the boards of appeal because it relies on principles of law common to all the European Patent Organisation's member states and applying to all its departments (see also D 11/91, OJ 1995, 721). This justified applying both national case law and that of the European Court of Human Rights as a supplementary means of interpretation for the EPC.

1.4. "Subjective" and "objective" test, presumption of impartiality

In T 190/03 (OJ 2006, 502; see also R 8/13 of 20 March 2015; R 19/12 of 25 April 2014; T 283/03; T 572/03 of 18 March 2005; T 1193/02; T 1021/01 of 18 March 2005; T 281/03 of 18 March 2005 and T 281/03 of 30 March 2006) the board held that partiality had to be determined on the basis of the following **two tests**: firstly, a "subjective" test requiring proof of actual partiality of the member concerned; and secondly, an "objective" test according to which the deciding board judged whether the circumstances of the case gave rise to an objectively justified fear of partiality. The board stated that actual partiality was an internal characteristic of the member himself and its presence went against the principle of a fair trial. However, suspicion and appearances were not enough to show actual partiality. It was a fundamental duty of a board member acting in a judicial capacity to take

decisions objectively and not be swayed by personal interest or other peoples' comments or actions. Thus, the board held that a board member's personal impartiality was to be presumed until there was proof to the contrary (see also G 2/08 of 15 June 2009 and R 19/12 of 25 April 2014).

On the other hand, the board stated that the appearance of partiality involved external aspects and reflected, regardless of whether the member was actually biased or not, the confidence that the board inspired in the public; "Justice must not only be done; it must be seen to be done" (see also T 900/02, T 2291/08 and R 8/13 of 20 March 2015). The board held that this aspect of partiality did not need to be proved in the same way as actual partiality, but rather it had to be established whether the circumstances gave rise to an objectively justified fear of partiality (objective element). This essentially corresponded to the "objective" and "reasonable" grounds identified in the case law of the EPO. The board stated that the above was in line with generally acknowledged procedural principles in the contracting states, e.g. the jurisprudence of the European Court of Human Rights (ECtHR).

In G 1/05 of 7 December 2006 (OJ 2007, 362) the Enlarged Board of Appeal stated that, for an objection under Art. 24(3), first sentence, EPC to be justified, it was not necessary that the board member concerned actually be partial. It sufficed that there was a **suspicion** (see chapters III.J.4., III.J.5. and III.J.6. below), i.e. an appearance, of partiality (called the "objective test" in the ECtHR jurisprudence since Piersack v. Belgium (1982) of 1 October 1982, No 8692/79, paragraph 30). There should be no risk that the courts would not ensure that justice was both done and perceived by the public to have been done. What was at stake was the confidence that the boards of appeal inspired in the public (see also R 19/12 of 25 April 2014, T 190/03 of 18 March 2005, OJ 2006, 502, ECtHR: Puolitaival and Pirttiaho v. Finland of 23 November 2004, No. 54857/00, paragraph 42). The Enlarged Board noted that it was, however, also commonly recognised in the jurisprudence of the boards of appeal and elsewhere that the party's "suspicion" had to be justified on an objective basis. Purely subjective impressions or vague suspicions were not enough (see also G 3/08 of 16 October 2009, R 2/12 of 26 September 2012, T 1674/12, T 1020/06 of 28 November 2008, T 985/01 of 18 March 2005 and T 190/03 of 18 March 2005, OJ 2006, 502, point 7 of the Reasons). The standpoint of the person concerned was important but not decisive (ECtHR: Puolitaival, paragraph 42; see also T 241/98 of 22 March 1999 and R 8/13 of 20 March 2015). The question was whether a reasonable, objective and informed person would on the correct facts reasonably apprehend that the judge had not or would not bring an impartial mind to bear on the adjudication of the case. It was thus necessary that a reasonable onlooker considering the circumstances of the case would conclude that the party might have good reasons to doubt the impartiality of the member objected to (see also T 954/98 of 9 December 1999, T 1257/14 of 5 February 2018).

1.5. Parties' right to have their case decided by the judge designated by law

In G 1/05 of 7 December 2006 (OJ 2007, 362) the Enlarged Board of Appeal stated that it was very important that board members discharged their duty to sit in the cases allocated to them. Board members cannot withdraw from the proceedings at will, i.e. for reasons which have nothing to do with the purpose of the provisions on exclusion and objection (see in this chapter III.J.2.1.).

In G 2/08 of 15 June 2009 the Enlarged Board also pointed out that its members have a duty to sit on the cases allocated to them (see also G 3/08 of 16 October 2009) according to their jurisdiction both "*ratione legis*" and "*ratione materiae*". That is to say, parties to judicial proceedings have a right to have their case considered and decided by the judge designated or appointed by law. This essential principle is even enshrined at a constitutional level in some EPC contracting states, e.g. Germany, Austria and Switzerland (see T 954/98 of 9 December 1999, J 15/04, R 15/11). On the other hand, Art. 6(1) of the European Convention of Human Rights (ECHR) requires inter alia that "in the determination of his civil rights and obligations ... everyone is entitled to a fair and public hearing within a reasonable time by an independent and impartial tribunal established by law". These principles are not incompatible and have to be construed in such a way that they are not mutually exclusive.

In R 19/12 of 25 April 2014 the Enlarged Board likewise stressed that interpretation of the rules on objections of suspected partiality had to find a balance between two principles: no one may escape the jurisdiction of the judge appointed by law, but on the other hand everyone has a fundamental right to a fair trial before an independent and impartial tribunal (Art. 6(1) ECHR, Art. 47(2) of the Charter of Fundamental Rights of the European Union).

In R 15/11 the board, referring to G 1/05, held that not only can board members not withdraw from the proceedings at will, but also that the provisions on business distribution must apply for a case re-opened before the board, unless there was a compelling reason for proceeding otherwise. The Enlarged Board stated it was therefore appropriate, when exercising the power of discretion conveyed by R 108(3), second sentence, EPC, to consider the criteria and standards that have been developed for the replacement of members of the board of appeal following an objection of suspected partiality pursuant to Art. 24(3) and (4) EPC.

1.6. Applicability of Article 24 EPC to first-instance proceedings

In G 5/91 (OJ 1992, 617) the Enlarged Board stated that although Art. 24 EPC applied only to members of the boards of appeal and of the Enlarged Board of Appeal, it must be considered as a general principle of law that nobody should decide a case in respect of which a party may have good reasons to assume partiality. The basic requirement of impartiality therefore applies also to the members of the EPO's departments of first instance who take part in decision-making activities affecting the rights of any party (see also T 433/93, T 95/04, T 283/03, T 1193/02). The board noted, however, that Art. 24(1) EPC 1973 contained some provisions specifically aimed at safeguarding the impartiality of members of the boards of appeal and of the Enlarged Board of Appeal. For example, while no member of a board of appeal could take part in an appeal if he had participated in the decision under appeal (see in this chapter III.J.5.1.2), it was clearly permissible under Art. 19(2) EPC 1973 for one member of an opposition division to have taken part in the proceedings for grant of the patent to which the opposition related. In T 1674/12 the board observed that, whilst the rules applicable to board members were different, a member of an examining division which had granted a patent could take part in opposition proceedings concerning the same patent, provided he did not act as chairman (see Art. 19(2) EPC). In T 1647/15 the board, with reference to G 5/91 (OJ 1992,

617), stated that there was no legal basis for automatically applying Art. 24(3) and (4) EPC to an opposition division (as had been argued by the appellants).

T 990/06 concerned enlargement of the opposition division by the addition of a legally qualified examiner. The board stressed that the division's composition had to be clear at all times so that its compliance with Art. 19(2) EPC and its members' impartiality pursuant to G 5/91 could be verified.

See also chapter III.K.1. "Composition of the competent departments of first instance".

1.7. Applicability of Article 24 EPC to disciplinary proceedings

Art. 3 of the Additional Rules of Procedure of the DBA of the EPO (Supplementary publication 1, OJ 2018) contains rules on exclusion and objection in proceedings before the Disciplinary Board of Appeal. In D 7/82 (OJ 1983, 185) the Disciplinary Board applied Art. 24(3) EPC by analogy.

2. Initiation of partiality proceedings and other procedural issues

Art. 24 EPC provides for two procedural alternatives. First, under paragraph 2, the member concerned may inform the board of a reason for exclusion. Second, under paragraph 3, a party may raise an objection if it has reason to do so. Art. 3(1) RPBA 2007 and Art. 4(1) RPEBA additionally provide that the procedure under Art. 24(4) EPC is to be applied if a board has knowledge of a possible reason for exclusion or objection which does not originate from a member himself or from any party to the proceedings.

2.1. Notices of self-recusation

Under Art. 24(2) EPC, if, for one of the reasons mentioned in Art. 24(1) EPC, or for any other reason, a member of the Enlarged Board of Appeal considers that he should not take part in any appeal, he shall inform the Board accordingly.

In G 1/05 of 7 December 2006 (OJ 2007, 362) a member of the Enlarged Board of Appeal informed it that she ought not to be taking part in the referral, since one of the opponents in the underlying case was represented by the law firm in which her husband and her son were partners. The Enlarged Board held that if a member of a board of appeal in a notice of withdrawal under Art. 24(2) EPC 1973 gave a ground which could by its nature constitute a possible ground for an objection of partiality, that ground should normally be respected by the decision on replacement of the board member concerned because it could be expected that the member submitting the notice knew best whether or not a possible suspicion of partiality might arise.

In J 15/04 the board noted that board members' notices of self-recusation did not automatically effect their final exclusion from the proceedings (see also R 2/15 of 21 October 2015, T 1627/09 of 14 September 2018). A notice of self-recusation only initiated the procedure under Art. 24(4) EPC 1973 but did not pre-empt the outcome of the decision to be taken. If one accepted that a notice of self-recusation would immediately and

automatically exclude the member concerned, then the party's formal right to a hearing before a duly appointed member of the board as established by the EPC would be violated. The board stated that the grounds of possible partiality given by a board member in a notice of self-recusation should normally be respected by the decision. It could be expected that the member submitting a notice of self-recusation based on specific facts knew best whether or not a possible suspicion of partiality might arise. The public or a party should not suspect bias after a decision of a board of appeal finding no grounds of suspicion of partiality (see also T 584/09 of 1 March 2013).

In R 2/15 of 21 October 2015 the Enlarged Board held that in the case of a party's objection under Art. 24(3), first sentence, EPC (see in this chapter III.J.2.3.) it had to be established that there was subjective partiality or at least an appearance of partiality (objective partiality). In the case of self-recusation, however, it was sufficient that an appearance of partiality was at least arguable in the circumstances of the case.

In T 1627/09 of 14 September 2018 the board accepted the notices of recusation submitted by both the chair and the legal member of the board in accordance with Art. 24(2) EPC. They had both formed part of the board in T 1627/09 of 10 October 2013 (decision set aside by R 2/14 of 22 April 2016, which ordered the proceedings be reopened) and they held that if they remained as members of the board, they would have to decide for a second time on the same issues. The board referred to the jurisprudence of the boards of appeal mentioned above in this chapter and held further that this was in accordance with Art. 6(1) of the European Convention on Human Rights (ECHR) and Art. 47(2) of the Charter of Fundamental Rights of the European Union (CFR), both recognised as binding standards for proceedings before the boards. The board referred to the case law of the ECtHR on Art. 6(1) ECHR that only under very exceptional circumstances a notice of self-recusation shall not lead to a replacement (cf., inter alia, European Court of Human Rights, *Rudnichenko v. Ukraine*, no. 2775/07). As an example of national case law that followed the same lines the board referred to Austrian Supreme Court 4 Ob 186/11y EFSlg 131.987).

2.2. Objection by other board members of the same board of appeal

In J 15/04 the notices of self-recusation of the two legal members contained information concerning a possible reason for exclusion of the chairman (which did not originate from the chairman himself). The board stated that for one of the originally appointed members of the board to be replaced by his alternate, the individual member had to have informed the board that he should not take part in the appeal or have been objected to by one of the parties. However, according to Art. 3(1) RPBA 2003, the application of Art. 24(4) EPC 1973 extended to cases in which the board had knowledge of a possible reason for exclusion or objection which did not originate from a member himself or from any party to the proceedings. Thus, Art. 3 RPBA 2003 established the possibility of an objection by other members of the same board. In the case at hand, the replacement of the originally appointed chairman by an alternate chairman for the purposes of taking a decision under Art. 24(4) EPC 1973 was justified under Art. 3(1) RPBA 2003.

2.3. Objection by a party

Most partiality proceedings are initiated by a party objecting to a board member under Art. 24(3) EPC. According to the established jurisprudence of the boards of appeal, if a party is to receive a fair hearing before a tribunal, such a party should have no reasonable ground (on an objective basis) to suspect that any member of the tribunal is partial or prejudiced in relation to deciding the case (cf. G 5/91, OJ 1992, 617; G 1/05 of 7 December 2006, OJ 2007, 362; T 433/93, OJ 1997, 509; T 95/04, T 283/03, T 1193/02).

2.4. Objection by a third party

In R 2/14 of 17 February 2015 the Enlarged Board stated that grounds for exclusion under Art. 24(1) EPC must be applied ex officio and may be raised by anyone, i.e. the parties, the board, or a third party. In addition to this, members of a board of appeal or of the Enlarged Board of Appeal may be objected to by any party for suspected partiality pursuant to Art. 24(3) EPC.

In G 2/08 of 15 June 2009 the Enlarged Board of Appeal noted that objections of suspicion of partiality were the monopoly of parties to the proceedings. However, under Art. 4(1) RPBEA, if the Enlarged Board of Appeal had knowledge of a possible reason for exclusion or objection which did not originate from a member himself or from any party to the proceedings, then the procedure of Art. 24(4) EPC was to be applied (see also Art. 3(1) RPBA 2007). When construing the meaning of the wording "possible reason for exclusion or objection", one had to bear in mind the following distinction: (a) grounds that may be raised ex officio according to Art. 24(1) EPC and (b) an objection of partiality, reserved to the parties.

The Enlarged Board stated it might appear appropriate not to proceed any further with a complaint if an alleged reason for exclusion or objection not originating from a party to the proceedings or the Enlarged Board of Appeal itself would amount to an abuse of procedure. That would be the case where a complaint was not substantiated at all, ignored established case law, or had been filed maliciously in order to damage a member's reputation or with the purpose of delaying the proceedings, this list not being exhaustive.

3. Admissibility

According to Art. 24(3) EPC an objection on the ground of suspected partiality is not admissible if, while being aware of a reason for objection, the party has taken a procedural step. Nor may it be based on the nationality of members. Additionally, the boards have rejected objections as inadmissible because they were not reasoned or were a mere repetition of a previously rejected objection.

3.1. Competence of the board in its original composition

In T 1028/96 (OJ 2000, 475) the board stated that, if an objection under Art. 24(1) or (3) EPC 1973 was made by a party, Art. 24(3), second sentence, EPC 1973 clearly required a preliminary examination of admissibility (see also R 12/09 of 3 December 2009

and T.355/13). The board stated that the purpose of the preliminary examination for admissibility was to determine whether the objection could go forward for substantive examination and decision. If, from the point of view of the board in its original composition, the objection was admissible, then the procedure under Art. 24(4) EPC 1973 applied.

3.2. Obligation to raise the objection immediately

In G 5/91 (OJ 1992, 617) the Enlarged Board of Appeal stated that, although Art. 24(3) EPC 1973 was only applicable to appeal proceedings, an objection on the ground of suspected partiality could also be disregarded at first instance if it had not been raised immediately after the party had become aware of the reason for the objection (or if it was based on nationality). The system might otherwise be open to abuse.

In T 49/11 after having received the summons which had made the parties aware of the composition of the board, the respondent filed two letters with the board before raising the partiality objection. In the first letter, the respondent had expressed its intention to speak German at the oral proceedings. The board held that such a statement constituted a procedural step within the meaning of Art. 24(3), second sentence, EPC, because it was a formal notification under R. 4(1) EPC. The partiality objection was therefore rejected as inadmissible. After analysing the text of Art. 24(3), second sentence, EPC in the three official languages (Art. 177(1) EPC), the difference between Art. 24 EPC 2000 and Art. 24 EPC 1973, and the transitional provisions of the EPC 2000, the board stated that it would have come to the same result under the old and the new text of Art. 24(3) EPC.

In T.1677/11 the board noted that the respondents had been aware of the closely related parallel appeal T.1760/11, which had been decided by a board in an identical composition one week previously, right from the beginning of the current appeal proceedings. Nevertheless, it was only after an adverse decision in that case had been announced that the respondents raised their objections of suspected partiality in the case at issue. The board stated that regardless of whether the respondents had taken a specific procedural step in the current appeal proceedings, they had not submitted their objection immediately after having become aware of the reasons. It held that, in view of the fact that the objections raised were linked to both appeals, attendance at oral proceedings in T.1760/11 had to be regarded, in the factual context of the case now at issue, as a procedural step within the meaning of Art. 24(3) EPC. Thus, the objections under Art. 24(3) EPC were rejected as inadmissible.

In T.1020/06 of 15 May 2009 the board held that filing new requests after proceedings under Art. 24(4) EPC 1973 had been started did not render the partiality objection inadmissible.

In T.49/15 respondent 4 argued that the board's decision to admit the appellant's new main request had been a prerequisite for its partiality objection because it had only been then that the appellant had been favoured. The board rejected this argument: a party did not have to be adversely affected by a board decision before it could cite suspected partiality as a reason for objection.

3.3. Objection must be reasoned and substantiated

In T 1028/96 of 15 September 1999 (OJ 2000, 475) the board stated that, in addition to the two admissibility conditions prescribed in Art. 24(3) EPC, the EPC required, as a general rule, that objections be reasoned, i.e. indicated facts and arguments which were alleged to support such an objection. From this requirement it followed, firstly, that an objection based on purely subjective unreasonable doubts should be rejected as inadmissible. It also followed that if facts and arguments filed could not support the objection of suspected partiality raised, the objection was likewise inadmissible (see also T 355/13).

In R 12/09 of 3 December 2009 the Enlarged Board of Appeal referred to T 1028/96 and also held that, when determining admissibility, it had to be established whether the objection had been duly substantiated. However, according to the Enlarged Board, this merely meant ascertaining whether it met the minimum standard for objective reasoning, and not whether that reasoning was also persuasive.

3.4. Objection based on an obviously wrong understanding of the board's procedural obligations, the right to be heard and the principle of a fair trial

In T 355/13 the appellant suspected the board of partiality, inter alia because it had not provided a provisional opinion on decisive aspects of the case and because it had issued a summons to oral proceedings instead of remitting the case to the department of first instance. Referring to G 6/95 (OJ 1996, 649), the board stressed that there was no procedural obligation for the board to issue any provisional opinion, and that in inter partes proceedings it was not possible to automatically follow a party's request without giving the other parties the possibility to be heard on that request (in oral proceedings, if requested). The board considered the partiality objection inadmissible, as it was based on an obviously wrong interpretation of the board's procedural obligations, the right to be heard and the principle of a fair trial.

3.5. Repetition of a previous objection

In T 281/03 of 17 May 2006 the board found that the reason for the third partiality objection was essentially the same as that already decided by the replacement board in connection with the second partiality objection. Since the new objection had been made directly upon resumption of the oral proceedings after the respondent's previous objection to partiality had been refused, no new reason for objection could exist, so that the objection was simply a repetition of the previous objection and amounted to an abuse of the proceedings. Hence, the board decided that the request was inadmissible.

3.6. Dual function as members of the Enlarged Board and another board of appeal

In R 12/09 of 3 December 2009 the petitioner objected to the members of the Enlarged Board in petition for review proceedings, alleging that they inevitably had a personal interest owing to their capacity as members of a technical board or the Legal Board of

Appeal. The Enlarged Board rejected this objection as inadmissible (see in this chapter [III.J.6.2.1](#)).

4. Suspected partiality of members of the departments of first instance

4.1. Competence to decide

According to the Enlarged Board of Appeal in [G 5/91](#) (OJ 1992, 617) the practice that a partiality objection made at first instance is decided by the director of the department concerned cannot be considered illegal in view of the administrative character of the first-instance departments, which are subject to internal instructions by the President under [Art. 10\(2\)\(a\) EPC](#) (see also [T 2509/11](#) and [T 71/99](#)). Under the EPC there is no legal basis for any separate appeal against an order of a director rejecting a partiality objection to a member of a department of first instance such as an opposition division. However, the composition of the opposition division can be challenged on appeal against the final or interlocutory decision of the division. If not all the members of an opposition division fulfil the requirement of impartiality, there is a procedural violation which would normally render the decision void. The Enlarged Board of Appeal made it clear that it lay within the competence of the boards of appeal to decide whether this requirement had been fulfilled. This was also done in practice (cf. e.g. [T 251/88](#), [T 939/91](#), [T 382/92](#), [T 476/95](#), [T 838/02](#), [T 1349/10](#)). Such consideration might take place of the boards' own motion or at the request of a party to the appeal proceedings.

In [T 479/04](#) the board found that [G 5/91](#) did not prohibit an opposition division from deciding itself on an allegation of partiality made against it. Moreover, it could not be inferred from [G 5/91](#) that it was forbidden to decide on that matter together with the decision on the substance. The board concluded that the opposition division had not committed any procedural error by deciding itself, as part of the contested decision (see also [T 1647/15](#)).

4.2. Remittal and rehearing of a case

In [T 433/93](#) (OJ 1997, 509), following a substantial procedural violation, the decision was set aside, and the case remitted to the department of first instance for re-hearing. The board found that the remitted case had to be examined and decided by a different composition of opposition division (that is, by a composition of three new members). The board considered that if the case were re-heard and re-decided by the same composition of opposition division, the members would first have to attempt to put out of their minds the result of their previous decision on the case. The board noted that the important point was not whether the file record showed any previous evidence of actual partiality by the members of the opposition division during the previous conduct of the case (see [T 261/88](#) of 16 February 1993), or whether the present members of the opposition division would in fact be unprejudiced or impartial if they re-heard the case, but whether a party would have reasonable ground to suspect that they would not receive a fair hearing if the case was re-heard before the same composition of opposition division (see also [T 628/95](#) of 13 May 1996, and [T 611/01](#)). In [T 2362/08](#) the board also ordered a new composition of the opposition division after remittal, stating that after procedural irregularities in the first

proceedings it was fundamental that the parties had no ground to suspect that they had not received a fair hearing in the further proceedings, as they might well do if the same opposition division were again to revoke the patent even after conducting the proceedings in an impeccable way.

In T. 611/01 the board found a substantial procedural violation had occurred and remitted the case to the department of first instance for further prosecution to be conducted by a differently composed examining division (three new members). The board stated that this was typically done when there was a question of possible bias against a party. Although that was not the case here, a differently composed division could also be appropriate when a party had reasonable grounds for feeling it might not otherwise have a fair re-hearing (see T. 433/93, OJ 1997, 509; see also T. 628/95 of 13 May 1996). Even if the appellant had not requested a different composition the board stated there should not be any ground for dissatisfaction with the conduct of the further proceedings. This could be the case if the same examining division, even after impeccably conducted proceedings, refused the application again.

In T. 1647/15 the board observed that whereas under normal circumstances a potential suspicion of bias concerning a member of an opposition division might be a strong indication for a remittal, this was not the case here where this suspicion did not affect the whole process of decision-making but only arose out of an uncontrolled outburst at the end of exceptionally long and intense oral proceedings. The contested decision was based on reasons which were extensively discussed in oral proceedings before said incident occurred. The board doubted that a remittal to the department of first instance, even in a different composition, would serve the interests of justice, as the remittal would cause an excessive delay in having the case finally decided. Accordingly, the board decided not to remit the case to the opposition division.

4.3. Personal interest

In T. 143/91 the board held that a member of an opposition division was biased if he had a personal interest within the meaning of Art. 24(1) EPC 1973. The mere fact that the member had previously been employed by a company dependent on a party to the opposition proceedings was, however, not sufficient proof of such an interest.

Under Art. 17(3) and (4) of the Service Regulations for permanent and other employees of the EPO (August 2018 version) any permanent employee who, in the performance of his duties, is called upon to decide on a matter in which he has a personal interest such as to impair his independence shall inform the President of the Office, or the President of the Boards of Appeal in the case of members of the boards of appeal.

4.4. Disqualifying partiality

In T. 261/88 of 16 February 1993 the board stated that disqualifying partiality presumes that there is a preconceived attitude on the part of a deciding person towards a party to the case. When considering an allegation of partiality (in this case mainly based on the fact that the examiner was a former employee of the opponent), regard must be had to the

particular facts of the case (cf. [G. 5/91](#)). That the examiner's views differed from those held by the party was not disqualifying in itself. The board held that disqualifying partiality was limited to situations where the opinion of a person responsible for taking decisions affecting the right of parties was swayed by his attitude towards a party.

In [T. 900/02](#) the board stated that a suspicion of partiality inevitably arose if a member of an opposition division, or any other first-instance body, first solicited and then accepted employment with a firm in which a partner or other employee was conducting a case pending before that member. It stressed that, to be above all suspicion of partiality, every member had to avoid any such situation at any time during the proceedings. No-one could be seen as independent of both parties while in the employ of one of them. The board held that the second examiner's employment by the respondent's representative's firm was both a fundamental deficiency in the first instance proceedings under Art. 10 RPBA 1980 and a substantial procedural violation under [R. 67 EPC 1973](#).

In [T. 792/12](#) the appellant contended that the board did not want to listen to his arguments and appeared to lack impartiality because it interrupted him on several occasions. The board rejected this contention and referred to [Art. 15\(4\) RPBA 2007](#), according to which the chairman of the board presides over the oral proceedings and ensures their fair, orderly and efficient conduct. According to the board, a chairman may interject in a party's submissions to ensure that the proceedings are efficiently conducted, in particular to avoid a party repeating arguments. In the same way, a chairman, or indeed any member of the board, may interrupt to ask questions which are, for example, considered important for reaching a decision. The board held the appellant's insistence that the board should not make any interruption during its pleadings, which it considered to indicate a lack of impartiality, was a misconception of what constituted a fair hearing.

In [T. 1055/05](#) the board decided that the examining division's refusal to minute the submissions of a party's representative during oral proceedings did not infringe the right to be heard or constitute grounds for suspecting partiality.

In [T. 710/15](#) the opposition division had rejected a new argument under [Art. 114\(2\) EPC](#), which is only a basis for disregarding new facts or evidence. The board held that such an error of judgment did not prove the partiality of the chairman or the opposition division.

5. Suspected partiality of members of the boards of appeal

5.1. Grounds for exclusion under [Article 24\(1\) EPC](#)

5.1.1 Previous involvement of a board member as a party's representative

In [R. 16/10](#) the Enlarged Board held that the meaning of the English text of [Art. 24\(1\) EPC](#) taken as a whole, in its proper context and with respect to the text of the other two languages, was clear. It rejected the petitioner's argument that [Art. 24\(1\) EPC](#) included not only the specific situation where one of the members had represented a party in the case in question but also the general situation where a member had previously acted as representative of that party in any matter. [Art. 24\(1\) EPC](#) related to involvement in the

particular case in question and not to any past representation (see also chapter V.B.4.1. "Article 112a(2)(a) EPC – alleged breach of Article 24 EPC").

5.1.2 Participation in the decision under appeal

In T.1028/96 of 15 September 1999 (OJ 2000, 475) the board stated that a member of a board in opposition appeal proceedings who had participated in the decision to grant the patent had not "participated in the decision under appeal" within the meaning of Art. 24(1) EPC 1973. However, in certain special circumstances members of a board in opposition appeal proceedings may be "suspected of partiality" within the meaning of Art. 24(3) EPC if they participated in the decision to grant the patent in suit.

In J.15/04 the board considered whether it would be appropriate to exclude a member of the board from proceedings whenever he had played any role in a previous case which had any functional coherence with the one under consideration. Such functional coherency could be seen in the relationship of a divisional application to its parent application, as in the procedural situation at issue. The board noted that if members of a board were to be excluded because that board decided the same legal question in every case in an identical way, any established jurisprudence of a board would lead to exclusion of its members whenever the same legal question was at stake. The principle of judicial efficiency also constituted an essential element of the right to a fair trial and outweighed any allegation concerning a generally "possible" suspicion of partiality which was not based on the specific facts of the case. By the same token, the principle of a fair trial did not generally exclude a member of the boards of appeal from dealing with a party's case repeatedly, as might happen when a board referred a case back to the first instance and the appeal from the following decision established the competence of the same board. The essence of Art. 24(1) EPC 1973 was not to establish an assumption that any former involvement of a member of the board in a case dealing with the interests of a specific party established a suspicion of partiality of that member in all subsequent cases, but to exclude the participation of this member in reviewing a decision which had been dealt with by himself as part of the deciding body. In the case at issue, the board refused the partiality objection.

In T.1020/06 of 28 November 2008 the board found that there was no provision in the RPBA 2003 or the Business Distribution Scheme (BDS) for a member to be excluded from participation in an appeal case pending before a technical board if that member had already dealt with a similar legal or factual question in another case pending before the same or another technical board. On the contrary, Art. 7 BDS stipulated that, where appeals pending before the board were closely linked the chairman could order that the board decide in the same composition. The board rejected the objections of partiality under Art. 24(3) EPC 1973 against the original board members.

In T.1889/13 of 14 March 2017 the board stated, with reference to J.15/04, that the mere desire for a board which has not encountered any of the relevant factual and legal issues in a related case could not justify an obligation to appoint non-overlapping boards in cases concerning divisional and parent applications in the absence of specific facts which were sufficient to raise specific concrete doubts on the ability of the board members to hear the appeal with an objective judicial mind. Practical considerations and the procedural

framework not only give rise to a provision in the business distribution scheme encouraging identical compositions in closely linked cases, but may even require that overlapping or identical board compositions are established in cases which may involve closely linked questions. The board further considered that cases involving grant and opposition appeal proceedings for the same file had to be clearly distinguished from cases involving parent and divisional applications. The conflicts and limitations concerning cases involving grant and opposition appeal proceedings for the same file did not exist with regard to cases involving parent and divisional applications.

5.2. Grounds for objection under Article 24(3) EPC.

5.2.1 Expressions of opinions on legal issues

In T 241/98 of 22 March 1999 the board of appeal observed that forming an opinion is one of the most important tasks of a board. Issuing a preliminary opinion is to be seen within this context and therefore cannot be regarded as partial (see also in this chapter III.J.6.2.2).

5.2.2 Disqualifying partiality

In T 843/91 of 17 March 1993 the board noted that disqualifying partiality presumed a preconceived attitude on the part of a deciding person towards a party (see also T 1028/96 of 15 September 1999). More precisely, in the board's view, partiality would be willingly to favour one party by granting it rights to which it was not entitled, or by intentionally disregarding the rights of the other party (see also T 261/88 of 16 February 1993). The question whether an objection to board members on the ground of suspected partiality was justified could only be decided in the light of the particular circumstances of each individual case (see also G 5/91). The board found that, whatever their gravity, deficiencies, erroneous practices or procedural violations could not be regarded as a basis for an objection on the ground of partiality if they did not result from such a preconceived attitude or deliberate intention (see also T 1257/14 of 5 February 2018).

In the appeal proceedings underlying R 17/09 members of the board used the term "man in the street". The Enlarged Board found that in English this term had no pejorative associations but was commonly used to describe an average citizen. It could see no support for the allegation that members of the board were influenced in their decision by any bias against the petitioner.

5.2.3 Discretionary procedural decisions negatively affecting a party

According to T 954/98 of 9 December 1999 the mere fact of taking discretionary procedural steps which might disadvantage a particular party is not enough to justify exclusion, not even if the party interpreted those steps as expressing bias against it.

In T 190/03 (OJ 2006, 502; see also T 283/03, T 572/03 of 18 March 2005 and T 985/01 of 18 March 2005) the board held that not admitting amended claims, regardless of

whether the board had correctly used its power or discretion to do so, would not give rise to an objectively justified fear of partiality.

5.2.4 Statement of grounds of objection defines the factual scope of the objection

In R 2/14 of 22 April 2016 the Enlarged Board of Appeal held that the factual scope of an objection pursuant to Art. 24(3) EPC is defined in the statement of grounds of the objection initiating the interlocutory proceedings under Art. 24(4) EPC. Apart from a subsequent elaboration of said objection by supporting facts, evidence and arguments, the subject-matter of the proceedings, as a rule, cannot be extended or changed, whether by new facts or by a new objection. Accordingly, the Enlarged Board of Appeal did not admit a submission in which the petitioner referred to a new category of objections (personal or "subjective partiality" as opposed to structural or "objective partiality"). Moreover, the circumstances on which the petitioner relied had only arisen after the closure of the oral proceedings.

5.2.5 Article 24(3) EPC objection under Article 112a(2)(a) EPC

In T 49/15 respondent 4 argued that the reasons for an objection referred to in Art. 24(3) EPC, and so the suspected partiality too, were relevant for the purposes of Art. 112a(2)(a) EPC, asserting in support of its position that the Enlarged Board had cited them in R 17/09. The board found that it had overlooked that the Enlarged Board had rejected the petition for review under Art. 112a(2)(a) EPC in that case as clearly unallowable. That, in doing so, it had chosen to look at the merits of the objection under Art. 24(3) EPC did not mean that the reference in Art. 112a(2)(a) EPC to Art. 24(1) EPC could be interpreted as including Art. 24(3) EPC too.

In the decision under review in R 3/16, the petitioner argued that once an objection based on Art. 24(3) EPC had been raised, the member(s) objected to could not take part in the decision, whatsoever, be it on the admissibility or on the merits of the objection. The Enlarged Board noted that Art. 112a(2)(a) EPC foresaw the situation where a member of the board had taken part in the decision despite being excluded pursuant to a decision under Art. 24(4) EPC or in breach of Art. 24(1) EPC. The case in hand was not concerned with those two grounds since the members had not been excluded and no personal interest had been alleged. Therefore, by a mere application of the principles developed by the established case law of the Enlarged Board under Art. 112a EPC, the Enlarged Board held that if the alleged unlawfulness of the composition was not the consequence of a violation of the right to be heard or an omission of a request, this ground (an objection based on Art. 24(3) EPC) appeared to fall outside the scope of a review, since inter alia it was not on the list of grounds under Art. 112a EPC.

5.3. Comments of the board member concerned

Under Art. 3(2) RPBA 2007 and Art. 4(2) RPEBA the member concerned is to be invited to present his comments as to whether there is a reason for exclusion (as to the scope of Art. 3(2) RPBA 2003 and Art. 4(2) RPEBA, see T 985/01 of 18 March 2005).

In T 1938/09 of 2 October 2014 the appellant referred to R 19/12 of 25 April 2014 and objected to the chairman of the board, arguing he was a potential deputy for VP3 (see in this chapter III.J.6.2.3). The chairman had not provided details, as requested by the appellant, on whether he had deputised for VP3. The board acknowledged that there might be cases where a board would not be in a position to decide on the objection without having received the necessary information from the member objected to. However, in the case at hand the board deemed it irrelevant for the question of impartiality whether the chairman had deputised for VP3 and refused the partiality objection.

6. Suspected partiality of members of the Enlarged Board of Appeal

6.1. Referral proceedings under Article 112 EPC

6.1.1 Previous participation in cases as members of the boards of appeal

In G 1/05 (OJ 2007, 362) a member of the Enlarged Board of Appeal was objected to because he had been the chairman of a technical board which had given a prior decision related to the question of law referred to the Enlarged Board. The Enlarged Board held that to the extent that the participation in a referral of a board member who had already dealt with the matter as a member of a board of appeal was not excluded by the relevant provisions (Art. 1(2) RPEBA and Art. 2(3) BDS of the Enlarged Board of Appeal), an objection of partiality could not be based on that very fact alone (see also G 2/08 of 15 June 2009 and R 12/09 of 3 December 2009). On the contrary, unless there were specific circumstances casting doubt on the member's ability to approach the parties' submissions with an open mind on a later occasion, there could not be any objectively justified, i.e. reasonable, suspicion of partiality against a member of the Enlarged Board of Appeal. Moreover, if all members of the Enlarged Board of Appeal having once taken part in a decision expressing a view on a point of law which was then referred to the Enlarged Board were to be excluded from taking part in that referral, it could become impossible to allocate the number of Enlarged Board members needed to conduct the case. The Enlarged Board of Appeal noted that the situation could be viewed differently if there were deficiencies in the view expressed to such an extent that there was reason to believe that they were the result of a preconceived attitude. It would also have been different if a board member had pronounced on a matter to be decided with his or her participation in such outspoken, extreme or unbalanced terms, be it in the course of or outside the proceedings, that his or her ability to consider the arguments put forward by the parties with an open mind and without a preconceived attitude and to bring an objective judgment to bear on the issues before him or her, could be doubted.

6.1.2 Expressions of opinion on legal issues

In G 3/08 of 16 October 2009 the Enlarged Board noted that, according to established case law of the boards of appeal, of the Enlarged Board of Appeal and also of national courts of member states, the mere fact that a board member had expressed a view on the legal issue to be decided on a previous occasion, be it in a prior decision or in literature, be it in a prior position in the EPO or as an expert for external political institutions, could not lead to doubts as to impartiality.

6.2. Petition for review proceedings under Article 112a EPC

This chapter concerns partiality objections raised in petition for review proceedings against members of the Enlarged Board themselves. For decisions of the Enlarged Board on the alleged breach of Art. 24 EPC in appeal proceedings, see chapter V.B.4.1. "Article 112a(2)(a) EPC – alleged breach of Article 24 EPC". As to the replacement of board members after a petition for review has been held allowable, see chapter V.B.3.13. "Effects of a successful petition for review".

6.2.1 Previous participation in cases as members of the boards of appeal

In R 12/09 of 3 December 2009 (see also R 2/14 of 17 February 2015) the petitioner had objected to the Enlarged Board members, alleging that they inevitably had a personal interest owing to their capacity as members of a technical board or the Legal Board of Appeal. The board observed that the legislator had consciously decided to allocate the task of hearing petitions for review to the Enlarged Board as a pre-existing body with appointed members and, when doing so, had been fully aware that those members were for the most part also experienced members of technical boards or the Legal Board of Appeal. The legislator could thus only have intended that those members also be deployed in procedures under Art. 112a EPC. The legislator had demonstrated its intention that these members' dual function should not, by itself, constitute a reason for objecting to or excluding them when it came to performing this task. The objection was thus dismissed as inadmissible.

6.2.2 Expressions of opinion on legal issues

In R 2/12 of 26 September 2012 the objection of suspected partiality was derived exclusively from the communication by which the petitioner was informed of the Enlarged Board's provisional opinion on the petition. The Enlarged Board found it would be incompatible with an objective assessment of a case and with the principle of a fair trial in inter partes proceedings, if a board member could be 'deposed' on the ground that they did not opine in favour of a particular party right from the beginning of the proceedings. See also in this chapter III.J.5.2.1.

6.2.3 Suspected partiality of the Chairman of the Enlarged Board of Appeal who at the same time was Vice-President of Directorate-General 3 (VP3)

Previously, the boards of appeal, together with their administrative services, were integrated into the organisational structure of the European Patent Office as a Directorate-General (DG3) directed by a Vice-President (VP3). The case law of the boards of appeal outlined below in this chapter is relevant to this previous structure.

However, following a structural reform in 2016 (see Annual Report of the EPO 2016), the Boards of Appeal are now organised as a separate unit directed by the President of the Boards of Appeal (see Supplementary Publication 1. OJ 2017). The President of the Boards of Appeal also serves as the Chairman of the Enlarged Board of Appeal. For more information, see chapter VII.1.1. "The judiciary of the European Patent Organisation".

In R 19/12 of 25 April 2014 the petitioner objected to the chairman of the Enlarged Board of Appeal on account of his involvement, past and present, in the administration of the EPO. The Enlarged Board stressed that the rules on exclusion and objection were designed to maintain the necessary distance for the judge from the issues at stake and the parties thereto and also from the body whose decision was being reviewed. Such distance was especially important where it concerned the distance of the court and its judges from the administrative authority whose decisions were reviewed. The fact that a judge had previously held high office in an administrative hierarchy was not a sufficient ground that on its own justified a suspicion of partiality. However, the judge concerned had been appointed simultaneously as Vice-President DG 3 (VP3) and chairman of the Enlarged Board and remained, as VP3, part of the Office's administrative hierarchy. Under Art. 10(2)(f) EPC he remained subject to the supervisory authority of the President as his immediate superior. Under Art. 10(3) EPC the President was assisted by the vice-presidents, this being institutionalised in the form of the Management Committee (MAC) and the General Advisory Committee (GAC). VP3 might therefore be faced with conflicting demands. On the one hand, as a vice-president subordinate to the President he had to implement the latter's management and performance objectives, even in relation to the boards of appeal; on the other, as part of his managerial responsibility for the boards he had to ensure that their judicial independence was not prejudiced by measures taken by the President and his administrative hierarchy. If the Enlarged Board approved a review of first-instance decisions which was restrictive in terms of the right to be heard, the examining and opposition divisions would have more latitude to shape proceedings in accordance with prescribed efficiency objectives. There was good reason for a reasonable, objective and informed person to fear that the chairman might not be capable of exercising his judicial function uninfluenced by instructions given to him in his capacity as VP3. The Enlarged Board thus considered the partiality objection to its chairman to be well-founded.

In R 2/14 of 17 February 2015 the petitioner also requested that the chairman of the Enlarged Board be replaced due to partiality. The chairman stated that, following interlocutory decision R 19/12 of 25 April 2014, his managerial activities in the senior management committees of the Office, i.e. the MAC and the GAC, had been discontinued. The Enlarged Board thus considered that the factual circumstances clearly differed from those on which interlocutory decision R 19/12 had been based. What remained was that the chairman, in his function as VP3, continued to be subject to the provisions of Art. 10(2)(f) and (3) EPC, according to which the vice-presidents assist the President and are subject to his supervisory authority. These provisions could come into conflict with Art. 23(3) EPC, according to which the chairman, in his judicial function, is not bound by any instructions. Applying the concept of "normative concordance", the Enlarged Board of Appeal stated that the President's power to give instructions to the chairman in his function as VP3 pursuant to Art. 10(2)(f) and (3) EPC was limited by virtue of Art. 23(3) EPC. The chairman was accordingly relieved of any obligation (i) to obey any presidential instructions, (ii) to observe other administrative/executive directions or (iii) to assist the President pursuant to Art. 10(3) EPC, if and to the extent that any such instruction, direction or assistance might affect him and/or any other member of the boards of appeal in performing their judicial duties. When confronted with an unresolvable conflict between a managerial and a judicial obligation, his judicial duties under Art. 23(3) and 24 EPC and

under Art. 6(1) ECHR prevailed. The Enlarged Board of Appeal concluded that a reasonable, objective and informed person would, after the implementation of the institutional measures adopted following interlocutory decision R 19/12, no longer have good reason to suspect the chairman of partiality.

In R 8/13 of 20 March 2015 the Enlarged Board did not accept the petitioners' view that R 19/12 was generally binding for all petition proceedings that included VP3 as chairman of the Enlarged Board. The situation of VP3 had changed from the one prevailing under R 19/12 as a result of the termination of his active involvement in the MAC and the GAC/GCC. What remained was the argument that the dual function of VP3 and Chairman of the Enlarged Board within the EPO judiciary body was at odds with the principle of separation of powers. The Enlarged Board noted that the mere fact that a judicial organisation included a dual function which did not happen to coincide with a specific conceptual model of the separation of powers did not mean that it necessarily infringed Art. 6(1) ECHR. Thus, the Enlarged Board held that the dual function did not in itself give rise to suspicion of partiality and could not justify excluding the chairman objected to. The Enlarged Board concluded that, in the circumstances of the present case and in view of VP3's restricted duties, there were no ascertainable facts giving objective cause to believe that Art. 23 EPC could no longer fulfil its safeguard role vis-à-vis Art. 10(2)(f) and (3) EPC. As to whether the organisational arrangement remained the most appropriate after R 19/12, the Enlarged Board emphasised that only the EPO legislator had the power to make amendments to the structure of the Boards of Appeal under the EPC.

7. Legal restrictions for former board members

In accordance with Art. 20a(2) Service Regulations for permanent and other employees of the EPO (August 2018 version), a member of the boards or former member of the boards intending to engage in an occupational activity, whether gainful or not, within two years of leaving the service shall inform the Administrative Council thereof. If that activity is related to the work he carried out during the last three years of his service and could lead to a conflict with the integrity of the EPO's appeal system, the Administrative Council may, having regard to his interests and to those of the EPO's appeal system, either forbid him from undertaking it or give its approval subject to any conditions it thinks fit.

In G 2/94 (OJ 1996, 401) the Enlarged Board of Appeal noted that there was a potential conflict between what might be seen as a right of former board of appeal members to seek subsequent employment on the basis of their special knowledge by making oral submissions during proceedings before the EPO, and the need for proceedings before the EPO to be conducted free from any suspicion of partiality. The public interest in the proper conduct of proceedings before the EPO had to prevail over the personal interest of former board of appeal members wishing to make oral submissions on behalf of parties to such proceedings. The Enlarged Board found that, in the absence of specific legislation, the point in time following the termination of a former member's appointment to the boards of appeal after which he or she may make oral submissions in proceedings before the boards of appeal was a matter within the judicial discretion of the boards of appeal. The Enlarged Board held that three years should normally have elapsed before the former member

should be given permission to make oral submissions as an accompanying person. See also chapter III.V.5.3. "Oral submissions by former members of the boards of appeal".

In **T. 585/06** the board noted that the former member of the boards of appeal was no longer an EPO employee when he attended the oral proceedings. By virtue of the fundamental principle of freedom to exercise a profession, he was in principle not prevented from working as a consultant in the field of patent law. He had not acted as an authorised representative, and had not addressed the opposition division. This amounted to an important difference from the facts of case **G. 2/94**, where a former member of the boards of appeal had presented his case before his former colleagues. In the case at issue, the former member had given only hints by whispering to the authorised representative, who had been absolutely free to accept them or not, but had not made any intervention of his own motion. The appellant's representative had agreed at the beginning of the oral proceedings to his sitting beside and assisting the respondent's representative. The request for reimbursement of the appeal fee was thus refused.

5. Notification of decision under Rule 111(1) EPC	844

1. Composition of the competent departments of first instance

Art. 18(2) and Art. 19(2) EPC respectively govern the composition of examining divisions (see in this chapter III.K.1.2.) and opposition divisions (see in this chapter III.K.1.3.). Both examining and opposition divisions can add a legally qualified member to their number where they deem this to be necessary. General comments on changes in their composition appear in the next section (III.K.1.1.).

1.1. General comments on changes in composition of the competent departments of first instance

In T.390/86 (OJ 1989, 30) the board held that a decision given orally at the oral proceedings must be written up on behalf of – and represent the views of – the members appointed to decide the proceedings. The written reasons for a decision delivered during oral proceedings can only be signed by members of the deciding body who took part in the oral proceedings. The same principle applies if between the orally delivered decision and the written decision proceedings in accordance with R. 58(4) EPC 1973 have taken place. If the written decision is signed by persons who did not constitute the opposition division during the oral proceedings, the decision is invalid. In T.1652/08 the board held that where the change in the composition of the opposition division occurs **prior** to the oral proceedings, this is not by itself a breach of the right to a fair hearing (see also T.2365/11). Similarly, the board in T.160/09 read T.390/86 to mean that it did not prohibit the composition being changed. There was nothing to preclude changing the composition of an examining division, nor was the EPO required to follow a particular procedure to do this. In T.1207/09 the board went along with this reading of T.390/86, concluding that it

could not be construed as prohibiting a change in the examining division's original composition prior to oral proceedings.

1.2. Examining division

Art. 18(2) EPC stipulates that an examining division must consist of three technical qualified examiners. If the examining division considers that the nature of the decision so requires, it shall be enlarged by the addition of a legally qualified examiner.

In T 714/92 the board held that the taking of a decision on a date on which the examining division no longer existed in its stated composition, without the examining division ensuring that it be apparent from the part of the file open to public inspection that the member who left the examining division had agreed the text of the decision before leaving, had to be considered as a substantial procedural violation. Thus the impugned decision was set aside as void ab initio and without legal effect.

In T 160/09 the board found it permissible for the second examiner at oral proceedings to be different from the one who signed the summons. This was not at all comparable to the situation in T 390/86 (see in this chapter III.K.2.2.), where the written decision had not been signed by those members of the opposition division who had delivered the decision during oral proceedings. There is no prohibition on changing the composition of a division, nor is the EPO required to follow a particular procedure to do this.

1.3. Opposition division

Art. 19(2) EPC stipulates that an opposition division must consist of three technical examiners, at least two of whom must not have taken part in the proceedings for grant of the patent to which the opposition relates. An examiner who has taken part in the proceedings for grant of the patent may not be chairman of the opposition division.

1.3.1 Enlargement of the opposition division by addition of a legal member

Under Art. 19(2), fifth sentence, EPC, the opposition division can enlarge its composition by adding a legally qualified member where it deems this to be necessary.

In T 990/06 the board held that the opposition division's composition should be clear and transparent at all crucial stages of the proceedings so that the parties could verify compliance with Art. 19(2) EPC 1973 and check that the division members were impartial in keeping with G 5/91 (OJ 1992, 617). It is essential that the opposition division's composition is lawful. Any doubt surrounding this casts doubt on the lawfulness of the decision. In the case in question, there were discrepancies between the documents issued to the parties and an internal instruction. Although the division had apparently been first enlarged and then reduced again in size, there was no information about either of these measures on file, so the board was unable to verify whether the decision given at the oral proceedings had been made by a lawfully composed opposition division and whether the written reasons for the decision had been issued by the same panel. The procedure for

enlargement of the opposition division by addition of a legally qualified member under Art. 19(2) EPC 1973 – or their later withdrawal – must be verifiable.

In T 1254/11 the board held that an opposition division enlarged to four members pursuant to Art. 19(2) EPC 1973 could in principle be reduced again to three members. It was for the four-person panel to decide on the reduction. In this respect the board concurred with T 990/06. In deciding on the reduction, the opposition division consisting of four members must properly exercise its discretion. The board assumed *arguendo* that the fact that neither a decision to enlarge nor a decision to reduce the opposition division had been added to the publicly available file and the fact that the appointment of the new chairman could only be traced from the internal register of the EPO both constituted fundamental deficiencies of the proceedings before the opposition division. However, unlike in T 990/06, it was possible to determine from the file that the division had been lawfully enlarged and, at a later stage, lawfully reduced again.

In T 1088/11 the board held that in principle, an opposition division may set aside a decision to enlarge its composition. However, where an opposition division has been enlarged according to Art. 19(2) EPC, but the case is nevertheless decided in a composition of three members, there should be clear evidence on the public file that a decision to set aside enlargement was taken by the opposition division in its four member composition prior to the final decision.

1.3.2 Change in composition of opposition division during opposition proceedings

In T 390/86 (OJ 1989, 30) all three members of the opposition division were changed between the oral and written decision. The board held that a decision must at least be written on behalf of and represent the views of the members appointed to decide the proceedings, and must bear signatures which indicate this (see also T 243/87, T 960/94 and T 2076/11).

In T 243/87 the board of appeal developed the principles established in T 390/86, further holding that even though only **one** member of the opposition division had been replaced after the oral proceedings, there was no longer any guarantee that the reasoned decision signed subsequently accurately reflected the point of view of all three members who had taken part in the oral proceedings. The situation in which one of the appointed members was incapacitated (e.g. through illness) was quite different; in such cases one of them could sign on behalf of the member unable to do so after checking that the reasoned written decision represented the point of view of all the members who had taken part in the oral proceedings. This was followed in other cases where only one member of the opposition division had changed between the oral and written decision; see e.g. T 960/94, T 862/98 and T 2175/16.

In T 900/02 a number of procedural irregularities had occurred after the oral proceedings before the opposition division, including a delay of over three years before despatch of the written decision (in fact, two decisions were issued, in different compositions). The board followed T 390/86 and T 862/98 and held that if for any reason, (even quite acceptable

and understandable reasons such as illness or retirement), the same three members were not available, then the parties were to be offered new oral proceedings.

1.3.3 Composition of opposition division includes those who have taken part in proceedings for grant contrary to Art. 19(2) EPC

Art. 19(2), first and second sentence, EPC refers to the participation of members of the opposition division at **every stage** of the grant proceedings, not only to their involvement in the final decision (T 476/95). If only one examiner took part in the prior proceedings, that examiner may not be chairman in the subsequent opposition proceedings under Art. 19(2) EPC (T 939/91). It is established case law (T 251/88, T 939/91, T 382/92, T 476/95, T 838/02, T 825/08, T 1349/10, T 1700/10, T 234/11) that an improper composition of the opposition division is a substantial procedural violation.

In T 1788/14 the opposition division's decision had been taken in a composition that differed from the examining division only in that a new chairman had been appointed. The board regarded this to be a substantial procedural violation.

In T 382/92 the board held that in cases of a breach of Art. 19(2) EPC it follows from the lack of jurisdiction of the department of first instance that the impugned decision is void ab initio (see also J 38/97).

1.3.4 Remittal after breach of Article 19(2) EPC

Where the composition of an opposition division is in breach of Art. 19(2) EPC, this is deemed to be a substantial procedural violation that can warrant reimbursement of the appeal fee and remittal of the case (established case law, see T 251/88, T 939/91, T 382/92, T 476/95, T 838/02, T 825/08, T 1349/10, T 1700/10, T 135/12, T 285/11).

In T 838/02 the chairman of the opposition division ought to have been excluded as he had participated in the grant proceedings, yet he had been in place when the patent was revoked. The board held that it was immaterial for the purposes of Art. 19(2) EPC 1973 whether or not the opposition division had actually been aware of the circumstances justifying exclusion. If the composition of the opposition division was contrary to Art. 19(2) EPC 1973, the parties should be given the opportunity to comment before the board decided on the remittal of the case.

Although the facts in T 1349/10 were similar, the board distinguished the situation from that in T 838/02, as the patent had been maintained in the opposition proceedings, which meant that the public too was affected by the procedurally flawed decision. The board held that violations of Art. 19(2) EPC 1973 should lead to a remittal regardless of the parties' position at least in situations where third parties were affected by the outcome of the defective first-instance proceedings.

In T 234/11 the dossier showed that two members of the opposition division had taken part in the grant proceedings. The board ruled that the wording of Art. 19(2) EPC left no room for discretion. Nor did the conclusion reached in T 838/02 apply because here the

issue was the patent's maintenance in amended form and, besides, the parties to the proceedings had conflicting interests: one sought remittal to the opposition division; the others did not want that.

2. Date of decision

2.1. Entry into force of decisions

The Enlarged Board of Appeal in G 12/91 (OJ 1994, 285) distinguished between decisions taken after the closure of the debate in oral proceedings and decisions taken following written proceedings. Where oral proceedings are held, the decision may be given orally. The decision becomes effective by virtue of its being pronounced. The equivalent of that point in time in written proceedings is the moment the decision is notified. Once it has been pronounced and, in the case of written proceedings, notified, the decision enters into force and cannot be amended, even by the department that issued it. A decision may only be revoked by the department that issued it by way of an interlocutory revision under Art. 109 EPC 1973 if one of the parties has filed an admissible and well-founded appeal.

2.2. Completion of the internal decision-making process

According to G 12/91 (OJ 1994, 285) the point in time at which a decision enters into force, i.e. the moment it is pronounced or notified, is not the last moment at which parties could still submit observations. This had to be done **at an earlier point** in the proceedings to allow the decision-making department time to deliberate and then issue its decision based on the parties' submissions. Where oral proceedings are held, this moment is the closing of the debate, this point being fixed by the decision-making department – having first heard the parties' submissions – to allow itself time to consider its decision (see J 42/89; T 762/90 and T 595/90, OJ 1994, 695). In the case of decisions taken following **written** proceedings, the point in time at which the internal decision-making process was completed was the date on which the formalities section handed over the date-stamped, post-dated decision to the EPO postal service. This marks the completion of proceedings before the decision-making department, which can no longer amend its decision. This point in time should be clearly indicated in the decision.

In T 2573/11 the board decided that if it was clearly indicated in the decision on which date the formalities section handed the decision over to the EPO postal service, this date was thus the date on which written proceedings before the decision-making department were completed.

In T 798/95 the board held that a request for amendment filed after the completion of the proceedings up to grant before an examining division was to be disregarded even if the filing of the request and the completion of the proceedings occurred on the same date.

2.3. Date European patent takes effect and jurisdiction after pendency

Under Art. 97(3) EPC the decision to grant a European patent takes effect on the date on which the mention of the grant is published in the European Patent Bulletin (see also

chapter [IV.B.3.10](#). "Entry into force of a decision to grant a European patent"). A request under [R. 139 EPC](#) for amendments to the description or claims can only be filed during the pendency of application or opposition proceedings. In [J 42/92](#) the board held that there was no reason why, once no application or opposition proceedings were pending before the EPO, decisions on the question of corrections should not fall within the sole jurisdiction of the national courts or other authorities responsible for proceedings in which this question might arise (see also [T 777/97](#)).

3. Form of decisions

[R. 111 EPC](#) governs the form of decisions issued by the EPO. It must first of all be established whether a "decision" – as distinct from e.g. notices and communications (see in this chapter [III.K.3.1.](#)) – has in fact been taken. Decisions are to be put in writing – even those that have been announced at oral proceedings – and accompanied by a communication pointing out the possibility of appeal (see in this chapter [III.K.3.2.](#)). [R. 113 EPC](#) also stipulates that a signature is required, although this may be replaced by a seal in the case of computer-generated decisions (see in this chapter [III.K.3.3.](#)). Under [R. 111\(2\) EPC](#), appealable decisions must be reasoned (see in this chapter [III.K.3.4.](#)). Decisions must also be notified to the parties (see chapter [III.S.](#)).

3.1. When is there a decision?

On when a decision is open to appeal before the boards, see chapter [V.A.2.2.2](#) "Decisions".

Determining whether there is a decision depends on the **substance** of the document content and not its **form** ([J 8/81](#), OJ 1982, 10; [J 26/87](#), OJ 1989, 329; [J 43/92](#); [T 222/85](#), OJ 1988, 128, [T 713/02](#); [J 14/07](#) and [T 165/07](#)). The criterion of substance has to be assessed in its procedural context (see [T 713/02](#), OJ 2006, 267). The decisive question was whether the document at issue, when objectively interpreted in its context, could have been understood by its addressees as a final, i.e. not merely preliminary, and binding determination of substantive or procedural issues by the competent organ of the EPO ([T 165/07](#)). A decision of the EPO may be, but ought not to be, given in a document which in form appears to be merely a communication ([J 8/81](#), OJ 1982, 10).

In [T 1093/05](#) (OJ 2008, 430) the board expressly deviated from the view held in [T 971/06](#) that a flawed decision was void. A flawed decision could be set aside only following an admissible and allowable appeal (as in [G 12/91](#), OJ 1994, 285; [G 4/91](#), OJ 1993, 707; [T 371/92](#), OJ 1995, 324; [T 1081/02](#); [T 830/03](#); [T 222/85](#)).

In [T 222/85](#) (OJ 1988, 128) the board noted that the contents of a "communication" never constituted a "decision". This distinction was important, because only a "decision" could be the subject of an appeal - see [Art. 106\(1\) EPC 1973](#). In the case at issue the communication only represented a preliminary view, on an ex parte basis, and was not binding upon the department of the EPO which sent it. In contrast, the contents of a "decision" were always final and binding in relation to the department of the EPO which issued it, and could only be challenged by way of appeal.

In T 999/93 the annex to the minutes of the oral proceedings had been sent, but not the decision itself. The annex – although containing reasons – did not validly fulfil the function of a decision in writing since it did not bear any name or signature. If a decision of a particular division is to be legally valid, it must have been written on behalf of and represent the views of the members who were appointed to that division to decide the issues forming the subject of the decision, and it must bear signatures which indicate this (see T 390/86, OJ 1989, 30).

In J 14/07 the board held that the communication refusing the request for reimbursement of 50% of the examination fee constituted a decision within the meaning of Art. 106(1) EPC 1973. The mere indication of the name of the formalities officer without any signature, but which had been replaced by a seal, complied with the requirements of the then current R. 70(2), first sentence EPC 1973 because the communication was produced by using a computer. The formalities officer was also competent to decide on the request for reimbursement of the fee; see R. 9(2) EPC 1973 in conjunction with the Notice from the Vice-President of Directorate-General 2 of the European Patent Office dated 28 April 1999 concerning the entrustment to non-examining staff of certain duties normally the responsibility of the examining or opposition divisions, OJ 1999, 504. See now Decision of the President of the European Patent Office date 12 December 2013 (OJ 2014, A6).

3.1.1 Cases involving two decisions

In T 830/03 the opposition division had issued a second written decision intended to supersede a first written decision already sent. The board noted that the need for legal certainty required a presumption of validity in favour of a written decision which was notified to the parties by an opposition division in accordance with the formal requirements of the EPC 1973, in particular R. 68 to R. 70 EPC 1973 (R. 111 to 113 EPC). Once the decision was pronounced and the (first) written decision, in the case at issue, notified to the parties, the opposition division was bound by it even if it considered its decision not to "have any legal effect" (see T 371/92, OJ 1995, 324). The decision could be set aside only by the second instance on the condition that an allowable appeal was filed under Art. 106 EPC 1973 (see also T 1093/05). With the filing of the first notice of appeal, the power to deal with the issues involved in this case passed from the department of first instance to the appeal instance (devolutive effect of the appeal). All actions carried out by the opposition division after the notification of the (first) decision, and a fortiori after the filing of the first appeal, were ultra vires and thus had no legal effect.

In T 1257/08 the board, referring to T 830/03 stated that under the presumption of legal validity, the first written decision notified constitute the opposition division's only legally valid written decision. The opposition division was bound by it and could not itself set it aside. Furthermore, only the first written decision as legally valid decision was appealable.

In T 1972/13 the board held that the second decision issued by the examining division, refusing the applicant's request for refunding an additional search fee, was null and void. It held that it is not relevant whether or not a separate appeal against the second decision

was filed, given that an appeal against a legally void decision could logically have no legal effect.

3.1.2 Inconsistency between oral and written decisions

In T 425/97 the sole ground of appeal was the inconsistency existing between the written decision and the form of the patent held to be patentable by the opposition division at the oral proceedings. The board observed that R. 68(1) EPC 1973 (now R. 111(1) EPC) laid down that the decision announced at the oral proceedings and the written one had to be the same and so any discrepancy between the two was a procedural flaw (see also T 318/01, T 1590/06 and T 1698/06).

In T 850/95 (OJ 1997, 152) the board held that in examination proceedings, where the decision to grant the patent referred to the documents approved by the applicant under R. 51(4) EPC 1973 (now R. 71(3) EPC) these documents became an integral part of that decision.

In T 740/00 the board found that in opposition proceedings the documents referred to in the decision to maintain the patent in amended form also formed an integral part of that decision. Differences between the decision pronounced at the oral proceedings and the written decision were not mistakes which could be corrected under R. 89 EPC 1973, but amounted to a substantial procedural violation requiring immediate remittal of the case to the department of first instance.

3.2. Pointing out the right to appeal in accordance with Rule 111(2) EPC

Under R. 111(2) EPC appealable EPO decisions must be accompanied by a communication pointing out the possibility of appeal and drawing the attention of the parties to Art. 106 to 108 EPC, which specify how to file appeals.

However, the parties cannot invoke any omission to communicate this possibility; see R. 111(2), second sentence, EPC. According to T 42/84 (OJ 1988, 251), the EPO's failure to enclose the text of Art. 106 to 108 EPC with the decision neither invalidated the decision nor amounted to a substantial procedural violation. See also T 231/99 and T 493/08.

3.3. Signatures on a decision under Rule 113 EPC

Under R. 113 EPC EPO decisions must be signed by, and state the name of, the employee responsible. Under R. 113(2) EPC a seal may replace the signature when a decision is produced using a computer. The requirements for board decisions are set out in R. 102 EPC.

In J 16/17 the board held that the requirement laid down in R. 113(1) EPC, according to which decisions from the European Patent Office must be signed by and state the name of the employee responsible, is not just a mere formality but an essential procedural step in the decision-taking process. The name and the signature serve to identify the decision's authors and express that they unconditionally assume responsibility for its content. This

requirement is aimed at preventing arbitrariness and abuse and ensuring that it can be verified that the competent body has taken the decision. It therefore constitutes an embodiment of the rule of law.

3.3.1 Decisions to be signed

R. 113 EPC says that decisions, summonses, notices and communications from the EPO must be signed by, or bear the seal of, the employee responsible. In T. 390/86 the board decided that if the decision of a particular division was to be legally valid it had to bear the signatures of the members who had been appointed to that division to decide the issue.

3.3.2 Examples of invalid signatures

a) When decision is announced in oral proceedings

The written reasons for a decision delivered during oral proceedings can only be signed by members of the deciding body who took part in the oral proceedings. The same principle applies if between the orally delivered decision and the written decision proceedings in accordance with R. 58(4) EPC 1973 (R. 82(1) EPC) have taken place (T. 390/86, OJ 1989, 30). In T. 390/86 the board also stated that in a case where a final substantive decision has been given orally by an opposition division during oral proceedings, if the subsequent written decision giving the reasons for such oral substantive decision is signed by persons who did not constitute the opposition division during the oral proceedings, the decision is invalid.

In T. 243/87 the board declared a decision to be null and void where one of the three signatures was provided by a member who had not attended the oral proceedings.

b) Director's signature in place of examiner's signature

In T. 211/05 the board held that a director's signature purporting to be on behalf of the second examiner was invalid because nothing in the EPC 1973 authorised a director to sign on behalf of a member of an examining division to which he did not himself belong.

3.3.3 Examples of valid signatures

a) Computer-generated communications

Under R. 113(2) EPC the signature can be replaced by a seal when a computer is used to produce the decision.

In T. 225/96, the board noted that the forms accompanying the decisions are never signed, because they are computer-generated and therefore, under R. 70(2) EPC 1973 (R. 113(2) EPC), a seal may replace the signature.

In J. 14/07 a communication produced using a computer in which a request for reimbursement of 50% of the examination fee had been refused was found to constitute a

decision within the meaning of Art. 106(1) EPC 1973. Since it indicated the name of the formalities officer responsible and bore a seal, it complied with the requirements of the then applicable R. 70(2) EPC 1973 (now R. 113(2) EPC).

b) Death of examiner between oral proceedings and written decision

In T 1170/05 one of the examiners had died and so the decision of the first instance bore the signatures of only two of the three members of the division, the chairman signing on behalf of the deceased examiner. The chairman explicitly declared in a note that the written grounds reflected those which had been discussed during the deliberation of the examining division, and which had led to the decision announced at the end of the oral proceedings. This was held to comply with the case law of the boards of appeal, in particular, T 243/87 (see in this chapter III.K.1.3.2); the decision was valid.

c) Decision in written proceedings

In T 777/97, only two of the members of the opposition division had signed the contested decision refusing a request for correction, one purporting to sign on behalf of the absent chairman. According to the board, decisions T 390/86 and T 243/87 (see in this chapter III.K.1.3.2) were not directly applicable, because the case in hand concerned a decision taken in a written procedure on the basis of the evidence on file, whereas those two cases had been concerned with the opposition divisions' composition during the oral proceedings at which the decision was announced, in connection with the requirement that the subsequent written decisions giving the reasons for those oral decisions be signed by the same members. The conclusions reached in T 243/87 could nevertheless be applied by analogy. It went without saying that only those members who had taken the decision could decide on a request for its correction, but if one of the three members of the decision-making department was absent (here: the chairman), one of the others (here: the first examiner) could sign on that absent member's behalf.

d) Illegible signature

In D 8/82 (OJ 1983, 378) the surname of the signature appeared only as a mark in which one could still discern the first letter and which was recognisably intended as a signature. The board held that it was valid since in several contracting states of the EPO there is no requirement that a signature be legible or recognisably composed of letters. It is enough that it serves to identify the signatory.

e) Draft decisions

In T 225/96, only the first examiner on the opposition division had signed the contested decision. The board sent the case back to the division for regularisation, but the three non-signing members replied that they were not prepared to put their names to a text issued without their knowledge or approval. The board observed that, in general, the decision as notified to the parties was presumed to be authentic. See also T 837/01, where it was clear that the document sent to the parties was merely a draft. This amounted in the board's

view to a substantial procedural violation. Had the signatures simply been missing, this could have been corrected under R. 89 EPC 1973 (now R. 140 EPC).

3.4. Reasons for the decision

R. 111(2) EPC expressly stipulates that appealable decisions are to be reasoned.

3.4.1 Purpose of the duty to provide reasons

R. 111(2) EPC (formerly R. 68(2) EPC 1973) embodies the general principle of law that decisions must be reasoned and states: "Decisions of the European Patent Office which are open to appeal shall be reasoned ...". This principle is intended to ensure fairness between the EPO and parties to proceedings and enable the decision to be reviewed on appeal (T 70/02). The EPO can only properly issue a decision against a party if that decision is adequately reasoned (T 652/97). In T 292/90 the board found that the reasoning given in a decision open to appeal has to enable the appellants and the board of appeal to examine whether the decision was justified or not. In T 265/03, and in T 1356/05 and T 1360/05, both referring to T 278/00 (OJ 2003, 546), the boards held that also from the point of view of the practical functioning of the system envisaged in the EPC, they could not examine the appeal in the absence of a reasoned decision.

3.4.2 Right to be heard – right to have submissions taken into consideration

The right to be heard is enshrined in Art. 113 EPC and reads: "The decisions of the European Patent Office may only be based on grounds or evidence on which the parties concerned have had an opportunity to present their comments." The boards refer to this right in their case law on the duty to provide reasons under R. 111(2) EPC. The right to be heard under Art. 113(1) EPC is not just a right to present comments but also to have those comments **duly considered** (see, e.g. R 8/15; J 7/82, OJ 1982, 391; T 508/01; T 763/04; T 1123/04 and T 246/08). The comments presented must be considered in the ensuing decision (J 7/82, OJ 1982, 391 and T 246/08). In R 8/15 the Enlarged Board held that Art. 113(1) EPC implies that decisions of the EPO boards of appeal should adequately state the reasons on which they are based in order to show that the parties were heard. A party must be able to examine whether, in its view, the board has afforded it the right to be heard in order to be in a position to decide on whether or not to file a petition under Art. 112a(2) (c) EPC. However, Art. 113(1) EPC must be interpreted more narrowly than R. 102(g) EPC which requires a board to give reasons for its decision, but infringement thereof is not as such a ground for review. In other words: for the purpose of compliance with the right to be heard, reasons may be incomplete, but as long as they allow the conclusion to be drawn that the board, in the course of the appeal proceedings, substantively assessed a certain point arising in the procedure that it found to be relevant, there is no violation of Art. 113(1) EPC.

In T 1123/04 the board observed that the opportunity to present comments and arguments guaranteed by Art. 113(1) EPC is a fundamental principle of the examination, opposition and appeal procedures and cited the finding in T 508/01 that this is not just a right to present comments but also to have those comments duly considered.

In T.246/08 the board found that it had to be clear from the reasons that the core arguments had been addressed in substance in arriving at the decision. The decision had to show that all potentially refutative arguments adduced by a party were actually refutable. The board cited T.763/04 and said that merely repeating the parties' submissions was not enough. The board in T.1997/08 ruled that comments received in response to communications had to be taken into consideration too.

In T.420/86, for example, it was found that the opposition division had based its decision on factors on which the parties had been unable to comment because it had only emerged in the written reasons that a further document had been of central importance to the decision.

3.4.3 The requirement of sufficient reasoning

According to the case law of the boards of appeal (see e.g. T.740/93; T.1709/06; T.2352/13; T.278/00, OJ 2003, 546 and T.1182/05) a "reasoned" decision should deal with all important issues of dispute. The grounds upon which the decision was based and all decisive considerations in respect of the factual and legal aspects of the case must be discussed in detail in the decision.

In T.292/90 the board held that a decision should discuss the facts, evidence and arguments which are essential to the decision in detail. It also has to contain the logical chain of reasoning which led to the relevant conclusion.

On inventive step; confirmed in many decisions, e.g. T.951/92, T.740/93, T.698/94, T.278/00 (OJ 2003, 546); T.70/02, T.963/02, T.897/03, T.763/04, T.316/05, T.1366/05, T.1612/07, T.1870/07, T.1997/08 and T.2366/11).

In T.70/02 the board held that reasoning does not mean that all the arguments submitted should be dealt with in detail, but it is a general principle of good faith and fair proceedings that reasoned decisions contain, in addition to the logical chain of facts and reasons on which every decision is based, at least some motivation on crucial points of dispute in this line of argumentation in so far as this is not already apparent from other reasons given.

In T.1123/04 the board was of the view that it was not enough if a board of appeal had to reconstruct or even speculate as to the possible reasons for a negative decision in the first-instance proceedings. As a rule, a decision within the meaning of R.68(2)EPC.1973 should be complete and self-contained. The reasons were inadequate if the only arguments advanced by the examining division were unsubstantiated claims.

3.4.4 Deficient reasons

a) Deficient reasons sufficient for the purposes of Rule.111(2)EPC?

According to established case law (T.292/90; T.951/92; T.740/93; T.698/94; T.278/00, OJ 2003, 546, T.70/02; T.963/02; T.897/03; T.763/04; T.316/05; T.1366/05; T.1612/07; T.1870/07; T.1997/08 and T.2366/11), a decision should consider the essential facts,

evidence and arguments in detail and contain the logical chain of reasoning which led to the conclusion drawn.

However there are isolated decisions where deficient reasons have been treated as being sufficient as long as they amounted to some form of reasoning at all. In T 856/91 the board regarded incomplete and poor reasoning as being sufficient for the purposes of R. 68(2)EPC. In T 1231/03, it was decided that the contested decision contained an assessment of the main points in dispute and was therefore sufficiently reasoned. The decision's defects in terms of its content (incoherent line of argument, inaccurate formulation of the technical problem and allegedly erroneous assessments) were not an infringement of R. 68(2)EPC 1973 in this case. In T 647/93 (OJ 1995, 132) the board found that the reasons cited by the examining division in its refusal decision were somewhat "enigmatic" and without basis in the EPC 1973. However, even if those reasons were therefore ill-founded, this did not mean that the decision did not contain any at all within the meaning of R. 68(2)EPC 1973 or that there had been a substantial procedural violation. In T 374/12 the board found that no consideration whatsoever had been given to a line of attack considered to be important by the opponent, as distinct from T 856/91 and T 1231/03, where in each case there had been a gap in the reasoning. Also in T 1747/06 the board distinguished the case before it from that in T 856/91 because no reasons of any kind had been given. For other cases in which nothing akin to reasons were given, see in this chapter III.K.3.4.4 c) "No reasons for decision".

In T 2461/10 the board held that a distinction had to be made between cases where the examining division made an error of judgement on substantive issues and those where it based its decision without any legal basis on a non-existent ground for refusal. Only in the latter case was there a substantial procedural violation.

This distinction between acceptable but deficient reasoning and non-existent reasoning is not always made. The prevailing view in the case law is that the requirement of sufficient reasoning set out under chapter III.K.3.4.3 applies (T 292/90; T 951/92; T 740/93; T 698/94; T 278/00, OJ 2003, 546; T 70/02; T 963/02; T 897/03; T 763/04; T 316/05; T 1366/05; T 1612/07; T 1870/07; T 1997/08 and T 2366/11).

b) Deficient reasoning insufficient for the purposes of Rule 111(2)EPC

In T 70/02 the board found that simply stating "no convincing arguments have been found in your letter" in response to letters in which the objections put forward were exhaustively discussed by the applicant, did not comply with R. 68(2)EPC 1973. Whilst reasoning did not mean that all the arguments submitted should be dealt with in detail, it was a general principle of good faith and fair proceedings that reasoned decisions should contain at least some reasoning on crucial points of dispute, in order to give the party concerned a fair idea of why its submissions were not considered convincing and to enable it to base its grounds of appeal on relevant issues. In T 1291/13 the decision did not deal with crucial (and, on the face of it, plausible) counter-arguments presented by the applicant. The board referred to T 70/02 and held that the decision must contain at least some reasoning on crucial points of dispute, i.e. deal with at least the main counter-arguments presented by the applicant to be sufficiently reasoned.

In T.1366/05 the board held that the mere summary of a party's submissions does not constitute sufficient reasoning.

In T.534/08 it was not clear from the wording of the contested written decision why the opposition division had come to its conclusion, whether or not it had adopted the respondent's arguments entirely, or whether or not it had had its own objections. This too was regarded by the board as being insufficient.

In T.548/08 the board found that unsubstantiated assertions were made by the examining division. Instead of a logical chain of reasoning as to why e.g. the claims were not supported by the description, the entire burden of analysis and argument was put on the applicant and the board, who were expected to work out for himself the true nature of the examining division's objections.

In T.405/12 the board held that a decision is not reasoned if it is not unambiguously clear from it (possibly after consulting other parts of the file) which request(s) – including any items such as claims, description pages and drawings – it is based on.

In T.278/00 (OJ 2003, 546) the board decided that it was not up to it or the appellant to speculate as to what the intended meaning of unintelligible and therefore deficient reasoning might be. The reasoning of a decision under appeal had to be taken as it stood. The board had to be in a position to assess on the basis of the reasoning given in the decision under appeal whether the conclusion drawn by the department of first instance was justified or not. That requirement was not satisfied when the board was unable to decide which of the various inconsistent findings indicated in and justifying the decision under appeal were correct and which were false (see also T.316/05).

In T.655/13 the board held that in order for the examining division to make its reasoning on the basis of a pertinent prior-art document in a non-official EPO language comprehensible to the board, it must provide the translation used in the examination proceedings of at least the relevant sections of the document (or even of the whole document, if this is necessary for its overall understanding) into an official language of the EPO. Otherwise, the board is unable to examine the reasons for the decision, and in certain cases even whether the decision was justified or not, which amounts to a violation of the legal requirement for reasoned decisions under R.111(2) EPC.

In T.1840/13 the board held that including additional reasoning into the proceedings, to which the applicant had not had the opportunity to react constituted a violation of his right to be heard. Furthermore, these new arguments still did not provide a comprehensible reasoning according to the board, resulting in a substantial procedural violation.

In T.1929/12 the board found that a decision was fundamentally flawed if it did not indicate the features or combination of features in the claims in question that were considered to extend beyond the content of the originally filed application (Art.123(2) EPC). However, it decided against remitting the case in hand because the opposition division would probably take the same decision again, albeit with better reasoning.

In T.1351/12 the examining division had not appreciated that the main request was different from the auxiliary request. The reasoning of the examining division or parts of it might have been envisaged to also apply to the main request, however it could not be inferred from the decision whether this was the case and, if so, which arguments would apply correspondingly.

c) No reasons for decision

In T.493/88 (OJ 1991, 380) the board held that a decision of an opposition division rejecting an opposition had not been correctly reasoned within the meaning of R.68(2), first sentence, EPC 1973 if, after giving the reasons why it, unlike the opponent, considered the subject-matter of the patent to be new, it failed to state the reasons why it considered that the subject-matter also involved an inventive step.

In T.1411/07 the board found that the opposition division's failure to make any reference to its thinking on the factual and legal circumstances of the case, and the total absence of a logical train of thought, had left both the parties and the board in the dark as to what considerations had led it to the conclude that the opposition was to be regarded as adequately substantiated. The board was thus of the view that the contested decision was not reasoned within the meaning of R.68(2), EPC 1973 (see also T.2245/12).

In T.1553/07 the opposition division had not explained why it believed that there had been public prior use and how it had arrived at this conclusion. Nor was it apparent what its considerations had been in arriving at its conclusion regarding novelty. The board was thus precluded from reviewing whether or not its conclusions were justified and so ruled that the decision had not been reasoned within the meaning of R.68(2), first sentence, EPC 1973.

Where there was no explanation of how the examining division had arrived at its conclusion that the claimed process was an obvious juxtaposition of certain documents, this was held insufficient (T.292/90).

In T.708/00 (OJ 2004, 160) the board found that neither the communications nor the examining division's decision went beyond a list of the features appearing or lacking in the claimed inventions, which was obviously not an appropriate way to substantiate the lack of unity of invention. Since lack of unity was a central issue in these proceedings and an important reason for refusing the application, this lack of substantiation had to be regarded as a substantial procedural violation.

In T.153/89 the examining division had given no reasons for finding in its decision that the subject-matter of the dependent claims was not inventive. The board of appeal took the view that the perfunctory statement in the contested decision did not permit the board to judge whether this issue had been sufficiently investigated, or investigated at all. The examining division's decision on such grounds did not amount to a reasoned decision.

In T.698/94 neither the minutes of the oral proceedings before the opposition division nor the appealed decision itself contained the slightest hint at the arguments brought forward

by the parties. Nor did the reasons address the decisions of the Enlarged Board of Appeal that had been cited in the summary of facts and submissions. It was impossible for the parties to the proceedings to see how the opposition division had arrived at its conclusion of lack of novelty. The losing party was deprived of its legitimate right to challenge the reasoning on which the decision was based, which was the very purpose of proceedings before the boards of appeal (see G 9/91, OJ 1993, 408). See also T 135/96, T 652/97.

In T 1747/06 the board, distinguishing the situation before it from that in T 856/91, where it had been decided that even incomplete and deficient reasoning still amounted to reasoning for the purposes of R 68(2) EPC 1973, found that no reasons at all had been given since it was unclear whether or not any of the documents cited had been considered by the opposition division in arriving at their decision and proper reasoning for the conclusion drawn was lacking. Further, it was unclear whether the statements made in the "Grounds for decision" actually reflected the view of the opposition division or merely that of, e.g., the patent proprietor (see also T 1366/05).

In T 1724/10 the board held that the juxtaposition of seemingly contradictory conclusions (e.g. acknowledgement of technical differences but no possibility to define a technical problem), presented in the contested decision as apodictically evident and without any factual support, does not constitute a "reasoned decision" within the meaning of R 111(2) EPC.

3.4.5 Special cases

a) References to communications

See in this chapter III.K.3.5. "Decisions according to the state of the file".

b) Reference to a board decision or case law

In T 1205/12 and T 1206/12, which are worded identically, the board held that a mere reference to jurisprudence of the boards of appeal did not, by itself, constitute or replace an argument in a first instance decision. If a deciding body, in a decision, wanted to rely on an argument put forward in a decision of the boards, be it part of its ratio decidendi or an obiter dictum, it was insufficient merely to refer to it or to cite it. The deciding body also had to make clear that it adopted the argument and explain why, in what respect and to what extent this argument applied to the case at hand.

In T 227/95 the contested decision contained no reasons on the merits of the case but merely stated: "for the reasons it is referred to the decision of the board of appeal dated 24.01.94" (meaning T 527/92). However, T 527/92 contained no such reasons, since the case was remitted to the opposition division for further prosecution. The requirements of R 68(2) EPC 1973 were not met.

c) Assessment of inventive step without assessing the prior art

In T. 87/08 the board pointed out that Art. 56 EPC required that the assessment of inventive step be made "having regard to the state of the art". Accordingly, a decision was not sufficiently reasoned if the chain of reasoning to justify the finding of lack of inventive step merely stated that a purported effect had not been achieved, i.e. this technical problem had not been solved, without reformulating the problem in a less ambitious way and without assessing the obviousness of the claimed solution to that reformulated problem in the light of the cited prior art.

In T. 2375/10 the board found that since the requirement of inventive step under Art. 56 EPC had to be assessed in the light of the prior art, the decision of the examining division to conclude that there was a lack of inventive step without referring to the prior art was insufficiently reasoned within the meaning of R. 111(2) EPC. See also T. 306/09.

d) Identical decision after remittal for further prosecution

In T. 740/93 the case had been sent back to the department of first instance because of a procedural violation (incorrect composition of the opposition division). Because of the remittal with the order for further prosecution of the opposition, the first decision became nothing more than a communication and the first statement of grounds of appeal therefore had to be considered as a response to this communication. The new opposition division rendered a decision which was nearly identical to the first one. Although the decision under appeal contained a reasoning as to why the subject-matter of the patent in suit was considered to lack an inventive step and referred to points of dispute raised in the proceedings up to the first decision, it did not contain any direct reference to the important issues of dispute raised in the first statement of grounds of appeal and failed to comment upon the other issues of dispute. It thus did not meet the requirements of R. 68(2) EPC 1973.

e) Dealing with issues that go beyond the decision itself

In T. 473/98 (OJ 2001, 231) the board held that it is entirely appropriate and desirable in the interests of overall procedural efficiency and effectiveness that an opposition division should include in the reasons for a revocation decision pursuant to Art. 102(1) EPC 1973 employing the standard decision formula, by way of obiter dicta, findings which could obviate remittal in the event of the revocation being reversed on appeal. By contrast, the board in T. 615/95 decided that an examining division's decision should not normally be supplemented by annexes dealing with issues having no relation to the issues dealt with in the reasons for this decision.

3.5. Decisions according to the state of the file

3.5.1 Request for decision "according to the state of the file"

Applicants may request a decision "according to the state of the file" or based "on the file as it stands" during examination proceedings, e.g. when their arguments have already

been sufficiently put forward and they are interested in a speedy appealable decision. In such a case, a decision can be issued by way of a standard form (EPO Form 2061), simply referring to a previous communication (see Guidelines C-V, 15 – November 2018 version).

The Guidelines (C-V, 15.2 – November 2018 version) explain that a standard form referring to a previous communication (EPO Form 2061) can be used only where the previous communication properly identifies the application documents on file, is well-reasoned and complete with respect to the grounds and the reasons for refusing the currently pending request and addresses all the arguments raised by the applicant. A further condition is that the applicant has submitted no new arguments or amendments since the previous communication.

According to the boards' case law, a standard form may be used to issue a decision only if all the arguments put forward have already been sufficiently addressed in one or more previous communications and, moreover, no new objections have been raised since those communications were transmitted (T.1093/13, T.2364/09).

3.5.2 No absolute right to a decision issued by way of EPO Form 2061

In T.62/13 the board observed that a decision to refuse based on the file as it stands could be issued either by way of a form (EPO Form 2061) referring to an earlier communication, or alternatively by way of a fully reasoned decision. In T.1360/05 the board stated that the examining division is not obliged to restrict itself to a decision by reference using the standard form when the necessary reasons in relation to the latest filed claims have not been formulated in any document on file.

3.5.3 No waiver of right to a reasoned decision

A request for a decision on the state of the file thus cannot be construed as a waiver of the right to a fully reasoned first instance decision (T.265/03, T.583/04, T.1182/05, T.1356/05, T.1360/05, T.1309/05 and T.750/06). T.1356/05 goes further and states that even if an applicant were to waive his right to a reasoned first instance decision expressis verbis, it hardly authorises the examining division to dispense with it.

In T.952/07 the board made it clear that the duty to provide reasons in administrative decisions was a fundamental principle in all contracting states, R.68(2)EPC 1973 simply being an expression of this principle. The losing party must be in a position to understand the reasons for the negative decision taken against it so that it can consider the option of filing an appeal.

In T.2187/17 the impugned decision did not contain any reasons as to why the arguments presented by the appellant were not relevant and it was left to the appellant and to the board to speculate on the reasons for the refusal. It should be noted that a request for a decision based on the current state of the file is not to be understood as a waiver by the party of its right to a fully reasoned decision. The departments of the European Patent Office cannot omit to give reasons for their decisions when the EPC requires them to do so.

3.5.4 Reasons for a decision by way of EPO Form 2061

a) Requirements

In accordance with the boards' case law (e.g. T 278/00 (OJ 2003, 546), T 861/02, T 897/03, T 276/04, T 1182/05, T 1309/05, T 1356/05, T 1360/05, T 1709/06, T 952/07, T 1612/07, T 1442/09, T 177/15 and T 180/10), a standard decision based "on the state of the file" which refers to one or several communications only meets the "reasoned" requirement of R 68(2) EPC 1973 (now R 111(2) EPC) if the board of appeal is not left to reconstruct the applicable reasons by piecing together various arguments from the file and if it leaves no doubt as to which claim version the arguments relate to (see also Guidelines C-V, 15.2 – November 2018 version).

In T 963/02 the board held that a decision issued by way of EPO Form 2061 and referring to one or more earlier communications only met the criteria for a reasoned decision if the cited communication itself met those criteria as defined in T 897/03 and T 278/00 (see above), i.e. the reasons for the decision were clear (similarly T 1182/05).

In T 583/04 the board held that the decision by reference using a standard form is appropriate when the communication incorporated by reference contains a fully reasoned exposition of the examining division's objections to the current application text and refutation of any rebuttal by the applicant. This makes it transparent that the decision is being taken on the agreed text and that nothing is being said in the decision which has not already been communicated to the applicant with an opportunity to present comments, thus guaranteeing that the right to be heard is observed (Art. 113 EPC).

In J 18/16 the appealed decision merely referred to a preceding communication on deficiencies in the application, and the section of the form headed "Further comments on the remaining deficiency" gave no information on why the Receiving Section had considered the subsequently filed documents not to have corrected the deficiencies noted or to what extent those documents made amendments going beyond what would have been sufficient to correct them, thereby infringing R 58, second sentence, EPC. That, the board held, breached R 111(2) EPC. The board remitted the case to the department of first instance on account of a substantial procedural violation.

In T 353/11 the decision under appeal referred solely to a communication annexed to a summons to attend oral proceedings. The communication did no more than to identify the closest prior art and the distinguishing feature of the invention, indicate that it was "not clear" whether the examples of the application illustrated the distinguishing feature of the invention, state it would be examined whether or not the process was inventive, and invite the appellant to file a comparative example. It neither gave an explicit conclusion with respect to inventive step, nor any reasons as to why the claimed process was not inventive. Thus, the examining division did not issue a reasoned decision within the meaning of R 111(2) EPC.

The board in T 1998/10 held that the use of the standard form could be considered appropriate for decisions on the state of the file in exceptionally plain cases. In the case at

hand, the decision under appeal referred to a communication of the examining division, which in turn referred to the Written Opinion of the ISA. Although the board in would have preferred an independently, fully-reasoned, self-contained decision, it concluded that the objections leading to the refusal could be identified and understood from the references in an unambiguous manner and without undue guesswork.

b) Reference to more than one communication

The Guidelines (C-V, 15.2 – November 2018 version) state that reference can be made to more than one communication only in exceptional cases and that, especially if the various communications deal with different sets of claims and it is therefore unclear which of the reasons given in them by the examining division might be essential to its decision to refuse, a fully reasoned decision should be issued instead.

In T 897/03 the board held that a decision that leaves it to the appeal board and the appellant to speculate as to which of the reasons given by the examining division in different communications might have been decisive for the refusal of the application, could not be considered to meet the requirements of R. 68(2) EPC 1973 (see also T 177/15, T 652/97 and T 278/00, OJ 2003, 546).

In T 180/10 two communications had been referred to. However, contrary to what was stated in the second communication ("the applicant's explanations ... have been carefully considered"), it was apparent that the examining division had ignored all the appellant's arguments since this communication and, therefore, the decision were silent on them. The requirements of R. 68(2) EPC 1973 were not fulfilled.

In T 737/11 the board concluded that considerable uncertainty existed as to the precise reasons on which the contested decision was based. The claims were amended substantially between the two communications to which the written reasoning of the contested decision referred. Furthermore, oral proceedings had taken place in absence of the applicant, despite the applicant withdrawing the respective request and the minutes of these oral proceedings were not mentioned in the decision. This was held to amount to a substantial procedural violation and insufficient reasoning. In both T 406/15 and T 62/13 the examining division had refused an application based on the file as it stood, using a form referring to two earlier "communications". However, the file in each case revealed that these had not been "communications" as such. The examining division had issued only one formal communication that raised just one briefly reasoned objection to lack of novelty and did not clearly explain why the application had been refused. The board nevertheless held that it was just enough to fulfil the obligation to substantiate decisions, but only having taken into account that the appellants themselves had not argued on appeal that the reasoning was insufficient.

In T 1946/17 the board held that a blanket statement like "arguments were carefully considered" but "no new evidence" was provided, in the communications to which the decision refers cannot be considered to address the arguments raised and thus constitutes insufficient reasoning.

3.5.5 Documents included in the "state of the file"

The "state of the file" is not restricted to those documents on file which were issued by the EPO, but also includes all those documents and arguments which were filed by the applicant prior to (or even simultaneously with) his request for a decision "on the status of the file" (T 265/03, T 1360/05). It does not include the note of a telephone conversation (T 583/04). This was the summary record of a conversation. Whereas the phone call note is a record of a dialogue, a communication under Art. 96(2) EPC 1973 constitutes a unilateral legal notice to a party. This does not exclude the possibility of the statements made orally by phone being confirmed and adopted in a formal communication from the examining division inviting observations with a term set for reply. See also T 750/06. In T 1356/05 the board held that minutes of oral proceedings are most probably not meant to be included in the term "previous communications" and it is thus not appropriate to refer to them in the standard decision.

4. Loss of rights within the meaning of Rule 112(1) EPC

If a party to the proceedings or a third party fails to comply with a time limit laid down in the EPC or fixed by the EPO, this will result in a loss of rights in certain cases specified in the EPC. Pursuant to R. 112(1) EPC (formerly R. 69(1) EPC 1973), if the EPO notes that such a loss of any rights results from the EPC, it must communicate this to the party concerned. If the party disagrees with the finding of the EPO it may apply for a decision on the matter by the EPO (R. 112(2) EPC, formerly R. 69(2) EPC 1973) or it may request further processing or re-establishment of rights, as the case may be (J 14/94, OJ 1995, 824). By decision of the President of the EPO dated 12 December 2013 (OJ 2014, A6), responsibility for issuing the communication within the meaning of R. 112(1) EPC was entrusted to formalities officers working for the examining and opposition divisions.

4.1. Purpose of notification of loss of rights under Rule 112(1) EPC

In J 7/92 the board stated that the purpose of a notification under R. 69(1) EPC 1973 is not to give an applicant a chance to take at least remedial action by way of a request for re-establishment of rights. As stated by the Enlarged Board in its opinion G 1/90 (OJ 1991, 275), when, according to the EPC the European patent application shall be deemed to be withdrawn, the applicant must be "informed" of the loss of rights (R. 69(1) EPC 1973). According to R. 69(2) EPC 1973 he may then, within two months of notification of the communication, apply for a decision "if he considers that the finding of the EPO is inaccurate". Although it is the customary practice of the EPO to send renewal fee reminders, it is in no way compelled to issue such communications. By communicating such information, the EPO provides only a voluntary service from which no rights can be derived (following J 12/84 (OJ 1985, 108)). The EPC 1973 did not provide that the EPO should note the loss of rights mentioned in R. 69(1) EPC 1973 within a certain period. Nor did it provide any period of time for the ensuing communication. However, when incoming requests or documents contained clear deficiencies which were obviously easy to correct and could be expected to be remedied within the time limit to avoid a loss of rights, then

the principles of good faith might require the EPO to draw attention to such deficiencies (on the principle of the protection of legitimate expectations see chapter III.A.).

4.2. Form of notification of loss of rights under Rule 112(1) EPC

The board in J 43/92 noted that R. 69(1) EPC 1973 did not prescribe any particular form for the communications provided therein, distinguishing them from other communications or notifications under the EPC. A reference to a time limit to apply for a decision was not necessarily decisive as to the true nature of the communication. Whether a document constituted a communication pursuant to R. 69(1) EPC 1973 should be derived from its substantive content and its context (see also J 8/81, T 713/02, J 24/01).

4.3. Request for a decision under Rule 112(2) EPC subsequent to a communication

If the party concerned considers that the finding of the EPO is inaccurate, it may, within two months of notification of the communication, apply for a decision on the matter. In J 43/92 the board noted that a decision pursuant to R. 112(2) EPC could be applied for only if it was preceded by a communication under R. 112(1) EPC. Otherwise, there was no basis for the EPO to issue such a decision.

4.4. Responsibility for issuing decisions under Rule 112(2) EPC

By decision of the President of the EPO dated 12 December 2013 (OJ 2014, A6), responsibility for issuing communications and decisions within the meaning of R. 112(2) EPC was transferred to formalities officers working for the examination and opposition divisions.

4.5. Right to a decision under Rule 112(2) EPC

The right to a decision after notification of loss of rights is a substantial procedural right which cannot be ignored by the EPO. A party who applies for a decision under R. 112(2) EPC is entitled to receive one. If the correctness of a notification of loss of rights under R. 112(1) EPC is challenged, the EPO has a duty to reply within a **reasonable period of time** having regard to the subject-matter of the communication (see J 29/86, OJ 1988, 84; and J 34/92).

5. Notification of decision under Rule 111(1) EPC

Under R. 111(1) EPC, a decision delivered during oral proceedings must be put in writing and notified to the parties. The date of notification is relevant with regard to the filing of an appeal (Art. 108 EPC and R. 111 EPC). The legal fiction of deemed notification set out in R. 126(2) EPC applies whereby the letter is deemed to be delivered on the tenth day following its handover to the postal service provider.

L. Correction of errors in decisions

1.	Competence to correct a decision according to Rule 140 EPC	845
1.1.	Competence of opposition division or examining division	845
1.2.	Competence of the boards of appeal	845
1.2.1	Legal Board or Technical Boards	846
1.3.	Competence to correct if application is no longer pending	846
2.	Scope of Rule 140 EPC	846
2.1.	Correction of the text of a patent	847
3.	Obvious mistakes according to Rule 140 EPC	848
4.	Legal effect of corrections according to Rule 140 EPC	848
4.1.	Correction requests as opposed to appeals	849
5.	Correction of printing errors in the publication of the patent specification	849
6.	Procedural status of third parties	850

1. Competence to correct a decision according to Rule 140 EPC

The competence to correct errors under R. 140 EPC lies with the body which took the decision (see e.g. G 8/95, OJ 1996, 481, J 12/85, J 16/99) (Guidelines H-VI, 3.5 – November 2018 version). Hence, even during opposition proceedings, the examining division is competent for correcting errors according to R. 140 EPC (Guidelines H-VI, 3 – November 2018 version). In accordance with the Decision of the President of the EPO dated 23 November 2015 (OJ 2015, A104), decisions under R. 140 EPC are dealt with by formalities officers.

1.1. Competence of opposition division or examining division

In T 226/02 the board considered that the opposition division had acted *ultra vires* in taking a decision under R. 89 EPC 1973 to correct a decision of the examining division. The board held that only the body which had taken a decision was entitled to correct it so as to put it in the form which it had intended it to take. Thus, only the examining division was entitled to correct its own decision. This finding was endorsed by the board in T 1495/09, which held that, in the case at issue, pursuant to R. 140 EPC, the opposition division in opposition proceedings had no competence to correct the decision taken by the examining division and would thus have acted *ultra vires* if it had corrected the grant decision. The same applied to the board of appeal in opposition-appeal proceedings (Art. 111(1), second sentence, EPC 1973).

1.2. Competence of the boards of appeal

In J 12/85 (OJ 1986, 155) the board held that a board of appeal could only examine appeals from decisions of other instances of the EPO (Art. 21(1) EPC). Thus it cannot examine a request for a correction, based on R. 89 EPC 1973 (R. 140 EPC), of the decision under appeal. A decision on this request first had to be rendered by the examining division before the matter could be referred to the board of appeal.

In T 810/09 the board held that it was not competent to decide on a request for correction of a written decision taken by the opposition division and for this reason rejected the appellant's request for correction under R. 140 EPC.

1.2.1 Legal Board or Technical Boards

In G 8/95 (OJ 1996, 481) the Enlarged Board of Appeal held that the decision refusing a request for correction of the decision to grant concerned the grant of the patent. It was, therefore, the technical boards – not the Legal Board of Appeal – which had to decide on appeals from a decision of an examining division refusing a request under R. 89 EPC 1973 for correction of the decision to grant.

1.3. Competence to correct if application is no longer pending

In T 867/96 of 30 November 2000 the patentee had requested the correction under R. 89 EPC 1973 (R. 140 EPC) of a sentence in the reasons for a board of appeal decision, stating that all the parties had agreed that a certain document represented the closest prior art. The board pointed out that the case was closed, as res judicata, and therefore no longer before it. However, citing in particular G 8/95 (OJ 1996, 481) and G 1/97 (OJ 2000, 322), the board held that only the board which had taken a decision could decide whether it required correction. Furthermore, establishing whether correction was necessary involved studying the facts, implying in general and up to a certain point that such requests were admissible. The current board thus ruled that the request for correction was admissible. Nevertheless this particular request did not fulfil the requirements of R. 89 EPC 1973 and was therefore refused.

In J 16/99 the board held that when correction of the priority date of a granted patent is requested, there may be a case for correction under R. 89 EPC 1973 (R. 140 EPC) of the EPO's decision to grant. The board found that R. 89 EPC 1973 allowed the correction of errors in, inter alia, decisions to grant, without the limiting requirement that proceedings be pending.

2. Scope of Rule 140 EPC

According to the wording of R. 140 EPC, in EPO decisions, only linguistic errors, errors of transcription and obvious mistakes may be corrected. R. 140 EPC (formerly R. 89 EPC 1973) applies to both decisions of the Boards of Appeal and those of first-instance departments. Following G 1/10 (OJ 2013, 194) R. 140 EPC no longer covers the correction of the text of a patent. Neither is it applicable for the correction of legal errors, irrespective of whether they concern substantive or procedural aspects (G 1/97, OJ 2000, 322). This leaves only errors in bibliographic data contained in the decision to grant or formatting/editing errors during the preparation of the Druckexemplar (as well as printing errors in the publication of the granted patent) to fall under R. 140 EPC (Guidelines H-VI, 3.1 – November 2018 version).

Correction of errors in decisions must be distinguished from correction of errors in documents filed by the applicant (or patentee) which falls under R. 139 EPC.

2.1. Correction of the text of a patent

Under the boards' case law prior to G 1/10 (e.g. T 850/95, OJ 1997, 152; T 425/97, T 965/98) the text of a patent could be corrected under R. 140 EPC if it was not, and obviously could not be, in the form intended by the decision-making department.

T 367/96 of 21 June 2001 and G 1/97 introduced a narrower interpretation of R. 140 EPC. According to this, R. 89 EPC 1973 had to be interpreted narrowly and only allowed for the correction of formal errors in the written text of the decision notified to the parties in accordance with R. 111 EPC (R. 68 EPC 1973). It did not, however, pave the way for re-examination of the factual or legal issues on which a decision was based, nor for reversal of any conclusion derived by the decision-making department from a consideration of these issues.

In G 1/10 (OJ 2013, 194), the Enlarged Board went further, holding that, although patent documents referred to in a grant decision become an integral part of the decision, they cannot be corrected under R. 140 EPC. Since R. 140 EPC is not available to correct the text of a patent, a patent proprietor's request for such a correction is inadmissible whenever made, including during opposition or limitation proceedings (now established case law of the Boards of Appeal, see e.g. T 657/11, T 2051/10, T 164/14, T 1578/13). The Enlarged Board's decision was limited to corrections within grant decisions of the description, claims and drawings (patent documents), and not concerned with corrections of bibliographic data.

The Enlarged Board stated that the absence of a possibility to request patent corrections under R. 140 EPC should not prejudice patent proprietors. If a correction is obvious (as it should be to satisfy R. 140 EPC) then there will be no surprise or adverse effect on opponents or others, because all concerned should read the patent as if corrected and an actual correction is unnecessary. If, however a correction is less than immediately obvious, it should not be allowed under R. 140 EPC anyway, which is confined to correction of "obvious mistakes". If, given the opportunity to check the patent text before approving it, an applicant does not draw any errors to the attention of the examining division and thus ensures that his approval is limited to the correct text, then the responsibility for any errors remaining in that text after grant should be his alone, whether the error was made (or introduced) by him or by the examining division.

If however the examining division proceeds to make a decision to grant which contains an error subsequently made by it, so that the granted text is not that approved by the proprietor, then the proprietor is adversely affected by that decision and is entitled to appeal. A patent proprietor may seek to amend his patent during opposition or limitation proceedings and such an amendment could remove a perceived error, however, it would have to satisfy all the legal requirements for amendments including Art. 123 EPC.

In T 506/16 the board held that according to G 1/10, the obligation to check the text in which the patent is to be granted lies with the applicant, and if it does not draw the examining division's attention to any errors, then the appellant alone bears the

responsibility for any errors remaining in the text, regardless of who is responsible for the error.

In T 2051/10, the appellant asserted that there was an erroneous discrepancy between the wording of the granted patent and that of the *Druckexemplar* and requested its "correction". Citing G 1/10, the board held that such a "correction" could not be made under either R. 139 EPC or R. 140 EPC and treated the appellant's request as a "normal" request for amendment under Art. 123(1) EPC.

3. Obvious mistakes according to Rule 140 EPC

In T 450/97 (OJ 1999, 67), the board held that there was an obvious mistake within the meaning of R. 140 EPC if the text of a decision did not reflect the decision-making department's real intention. In T 715/14 the contested decision had referred to a communication dated 3 October 2013 although, undisputedly, the last-issued communication dated 19 April 2013 had been meant. Its correction had then introduced an additional reference to two other communications, which led the appellant to contend that it amounted to a subsequent change in the decision's content and the underlying reasons. The board, however, considered the correction permissible under R. 140 EPC because the communication dated 19 April 2013 was clearly and undisputedly meant and that communication referred to the other two.

In T 683/06, the board held that a correction under R. 140 EPC was not available for re-dating an application where its filing date had been deliberately chosen in a decision-making process (even if that process turned out to be mistaken).

In T 212/88 (OJ 1992, 28) the board held that the absence of a chairman's or minute-writer's signature at the end of an opposition division's decision was a rectifiable, obvious error within the meaning of R. 89 EPC 1973 (R. 140 EPC). In the case in question a second examiner had been referred to in the minutes as a member of the opposition division, although in fact he was not a member and did not take part in the oral proceedings (see also T 212/97).

In T 212/97 the board pointed out that R. 89 EPC 1973 (R. 140 EPC) permitted the opposition division to correct an obvious mistake in the copy of the decision notified to the parties. In the case at issue, a fourth person had been named as a member of the opposition division although no such person had been mentioned in the original document.

4. Legal effect of corrections according to Rule 140 EPC

The EPO makes corrections on request or of its own motion (T 150/89). In T 212/88 the board held that correction of errors under R. 89 EPC 1973 (R. 140 EPC) had to be done by means of a decision, with retrospective effect from the date of the original decision. In T 116/90 of 3 December 1990 it was held that it was unnecessary to re-date the decision as from the date of correction.

In T 130/07, the board reiterated that a correction made no difference to either the date of the corrected decision or the appeal period triggered by its service (as previously held in T 212/88 and T 1176/00). It nevertheless reprimanded the EPO for its continued failure, despite the case law already established on the point, to avoid issuing such "second decisions" bearing a seemingly new date and so seemingly triggering a fresh appeal period and instead issue properly reasoned correction decisions clearly marked as such (similarly T 105/11). On the issue of the distinction from genuine second decisions, see III.A.2.6.

In T 105/11 the board held that in application of the principle of the protection of legitimate expectations, the statement of grounds of appeal was deemed to have been filed in time, even though the appellant directed the notice of appeal and the statement of grounds of appeal against the correction decision with an alleged new date.

4.1. Correction requests as opposed to appeals

In T 425/97 the board referred to G 8/95 (OJ 1996, 481), which dealt with the scope of R. 89 EPC 1973 (now R. 140 EPC), stating that the difference between an appeal against a decision and a request for correction of a decision might be seen in the fact that in the first case the remedy was directed against the substance of the decision and in the latter case against the form in which the decision was expressed. In another decision issued prior to G 1/10, the board in T 1093/05 (OJ 2008, 430) similarly held that, if a grant decision was defective, the patent proprietor had to consider carefully the nature of the defect and how it could best be rectified. If it involved a substantial procedural violation, rectification was possible only on appeal.

In T 1869/12 the board stated that in case of procedural violations in the granting procedure, rectification is only possible via appeal against the decision to grant. A correction of the published European patent specification or of the decision to grant cannot be allowed when this specification corresponds to the true intention of the Examining Division when granting the patent.

In T 1869/12 the appellant (applicant) lodged an appeal against the decision of the examining division refusing to correct the published European patent specification. It tried to achieve, via correction of the decision to grant, the patent to be comprising the set of claims proposed by the examining division with a communication under R. 71(3) EPC, however, with substantive amendments as subsequently proposed by the appellant. The board based its decision on G 1/10 and also stated that the appellant's request could not be granted, since it was clear that the examining division intended – and maintained that intention – to grant the patent with its own proposed claims. Therefore, the appellant should have filed an appeal against the decision to grant the patent.

5. Correction of printing errors in the publication of the patent specification

Errors in publication occur where the content of the printed specification differs from the documents (Druckexemplar) transmitted to the applicant, if these documents form the basis of the decision to grant. Such errors in publication can be corrected at any time. The competence to correct errors in publication lies with the body before which proceedings

are or were last pending (Guidelines for Examination H-VI, 4 – November 2018 version). Mistakes in the specification of a European patent arising in the course of its production have no effect on the content of the patent granted (Guidelines for Examination C-V, 10 – November 2018 version).

In T. 84/16 the board noted that the text of the patent specification had no binding character. Its function is confined to facilitating public access to the content of the granted patent. The definitive text of the patent is established by the grant decision. The board held that while the EPC does not explicitly deal with the situation where the patent specification does not correctly reproduce the content of the European patent, it is established practice at the EPO that if the patent specification diverges from the text on which the grant decision is based, then the patent specification is corrected by the EPO (T. 150/89, T. 1644/10, Guidelines C-V, 10. – November 2018 version).

In T. 84/16 the specification contained printing errors, but the patentee instead of requesting a reprint of the patent specification, filed an appeal, which was held to be inadmissible, the appropriate remedy in such cases being that the text of the patent specification be brought into conformity with the content of the grant decision. The Office can arrange for correction at any time by means of a note in the European Patent Bulletin and publication of a corrigendum (see R. 143(2) EPC and the Decision of the President of the EPO dated 14 October 2009, OJ 2009, 598).

6. Procedural status of third parties

In T. 1259/09, in the course of the opposition proceedings, opponents had requested a correction of the decision to grant pursuant to R. 140 EPC. The opposition division forwarded this request to the examining division. In a communication the examining division informed the opposition division that no correction of the grant decision would take place. The opponents filed an appeal against this communication of the examining division. The dispute at issue was whether the appellants (opponents), by filing their request for correction, had initiated proceedings before the examining division which were separate from the ex parte examination proceedings with the consequence that they had become a party to the proceedings before the examining division. The board held that by filing a request for correction of the grant decision under R. 140 EPC a third party does not become a party to the examination proceedings.

In T. 1349/08 the board held that correction of the decision to grant belongs to the examination proceedings. Analogous to Art. 115 EPC a person – here the appellant (opponent), who is neither applicant nor patentee – contesting the allowability of a correction of a decision to grant under R. 140 EPC and requesting reinstatement of the original decision to grant, cannot thereby become a party to the proceedings, irrespective of whether or not the Appellant is adversely affected by said "decision", it cannot acquire the quality of party status to the examination proceedings.

M. Inspection of files, European Patent Register and stay of proceedings

1.	Inspection of files	851
1.1.	General	851
1.2.	Exclusion from inspection under Rule 144 EPC	852
2.	European Patent Register	854
2.1.	General	854
2.2.	Registration of licences	855
2.3.	Transfer	855
3.	Stay of proceedings under Rule 14(1) EPC	856
3.1.	Rule 14(1) EPC	856
3.1.1.	General	856
3.1.2.	Opening of proceedings before a national court	857
3.2.	Rule 14(3) EPC	858

1. Inspection of files

1.1. General

Art. 128 EPC governs the inspection of European patent applications. Paragraphs 1, 2 and 5 regulate file inspection prior to publication of the application under Art. 93 EPC and are therefore exceptions, as an application must normally be kept secret until it is published. Thus file inspection may be granted under Art. 128(1) EPC if the applicant consents or under Art. 128(2) EPC if the applicant himself has invoked his rights under the application. Paragraphs 3 and 4 on the other hand regulate file inspection after the application has been published (see in this chapter III.M.1.2.).

According to **J 5/81** (OJ 1982, 155), under Art. 128 EPC, the confidential treatment of patent applications ceases on publication of the application, not on expiry of the 18-month period mentioned in Art. 93(1) EPC. Any person who can prove that the applicant has invoked the rights under the European patent application against him may obtain inspection of the files **before the publication of the application** and without the consent of the applicant under Art. 128(2) EPC.

According to **J 14/91** (OJ 1993, 479), rights under a European patent application could be considered invoked under Art. 128(2) EPC where their invocation was formulated in relation to the first filing in a contracting state but the subsequent European application was mentioned at the same time. Any dispute between the applicant and a third party concerning the latter's right to inspect the files pursuant to Art. 128(2) EPC was best decided in oral proceedings convened at short notice.

In **J 27/87** the board confirmed the Receiving Section's decision to refuse a request pursuant to Art. 128(2) EPC, because there was no proof that the applicants had invoked their rights under the application against the appellants. The extracts from correspondence

in which the applicants' representative asserted that his clients had developed a new technology and mentioned the patent application were not deemed sufficient evidence.

In the case before the board in T 1101/99, a **formalities officer** acting for the opposition division rejected the request for inspection of the file. The board noted that the term 'granting of inspection' set out in the Notice of the Vice-President of DG 2 of the EPO concerning the entrustment to formalities officers of certain duties normally the responsibility of the opposition divisions of the EPO (dated 28.4.1999, OJ 1999, 504, point 13) apparently referred only to a positive decision, whereas in the decision under appeal the request for inspection was rejected. The board found that there was no justification for interpreting the delegation of duties beyond its actual wording such that it would also cover the rejection of requests for file inspection.

1.2. Exclusion from inspection under Rule 144 EPC

Under Art. 128(4) EPC, after publication of the European patent application, the files relating to it may be inspected on request, subject to the restrictions laid down in the Implementing Regulations. R. 144 EPC (previously R. 93 EPC 1973) indicates those parts of the file which are to be excluded from inspection pursuant to Art. 128(4) EPC. These include documents excluded from inspection by the President of the EPO (R. 144(d) EPC).

The President exercised this power to exclude documents in Art. 1(2) of her decision of 12 July 2007 (OJ SE 3/2007, 125), which provides that: "Documents or parts thereof ... (a) shall be excluded from file inspection at the reasoned request of a party or his representative if their inspection would be prejudicial to the legitimate personal or economic interests of natural or legal persons".

In T 2522/10 of 28 January 2014 the board summarised that the test for exclusion or non-exclusion is clear and straightforward – would the document in question serve the purpose of informing the public about the patent or patent application in issue? While the answer to that question will depend on the facts of each case, if the answer once ascertained is "yes", then there may be no exclusion and the matter need not be considered further. If the answer is "no", then consideration must be given to a further question, namely whether inspection would be prejudicial to the legitimate personal or economic interest of natural or legal persons.

Examples where file inspection would not have served the purpose of informing the public about the patent are to be found in the decisions T 379/01, T 1401/05 of 20 September 2006, J 23/10 and T 1201/10. In each of these cases the material which was the subject of a request for exclusion from file inspection had no relevance to the subject matter of the patent (Decision of the President dated 12 July 2007, OJ SE 3/2007, 125).

In T 379/01 the board stressed that the provisions concerning the exclusion of documents from file inspection stipulated exceptions from the principle of public inspection of files pursuant to Art. 128(4) EPC 1973, thus requiring a **narrow construction** of those provisions. The board concluded that a merely **abstract** prejudice to hypothetical personal or economic interests was not a sufficient bar. The party requesting such exclusion should

rather show that public access to certain documents would be prejudicial to specific and concrete personal or economic interests.

In J. 23/10 it could be gathered from the document in question that the applicant paid the renewal fees for certain applications for which they were not the registered applicant. These applications had been transferred to them but this had not been made public. It was still the assignor who was mentioned in the register. In the Board's view, this is information about internal relationships between the parties concerned, the publication of which could be prejudicial to their economic interests, while being irrelevant for the assessment of the patent application as such and therefore to be excluded from file inspection.

In T. 264/00 two internal documents, belonging respectively to the appellant and to the respondent and concerning the outcome of a confidential meeting between two of their employees, contained confidential information on the conception, manufacture and marketing of some of the respondent's products. The board held that the dissemination of this information might effectively be prejudicial to legitimate economic interests. Pursuant to R. 93(d) EPC 1973, therefore, the documents had not been made available to the public.

In T. 2254/08 the board decided that the inspection of documents that were marked confidential on filing but were publicly accessible on the internet was not prejudicial to the economic interests of the appellant (proprietor).

In T. 99/09 the document for which inspection had been requested contained precise technical details, particularly as to the source of the constituents of a medicinal product available on the market and certain specifications for the product's manufacture. Given the technical nature of the document, the board concluded that its disclosure might indeed be prejudicial to the appellant's economic interests. Since the respondents had not objected to or commented on the request to exclude the document from inspection, it was excluded under Art. 1(2)(a) of the EPO President's decision of 12 July 2007 (OJ SE 3/2007, 125) in the light of Art. 128(4) and R. 144(d) EPC.

In T. 1839/11 the board came to the conclusion that where a filed document contains information, some of which serves the purpose of informing the public about the patent but some of which does not, the filing of a version of the document in a form from which the latter information has been redacted may form the proper basis for an order excluding the unredacted document from file inspection under R. 144 EPC, the redacted version being open to file inspection.

In T. 1201/10, the request for re-establishment of rights contained information about the appellant's financial affairs. The board held that the appellant had a legitimate personal interest that this information was not made public. This request for re-establishment was itself not relevant to the decision in the case in hand.

Filed documents which, following a substantial procedural violation, were to be withdrawn from the part of the file available for public inspection and which did not fall under the exclusions listed in R. 93 EPC 1973 had to be returned to the filing party if it so requested

(T 811/90). Similarly, documents marked "confidential" which did not belong to classes of documents to be excluded from file inspection were returned to the party concerned without note being taken of their contents (T 516/89, OJ 1992, 436; see also the later decision of the President of the EPO, OJ 2001, 458). See also T 760/89 (OJ 1994, 797).

In T 1534/16, during written proceedings before the board, a number of documents were filed by the appellant before it withdrew its opposition, which were provisionally excluded from file inspection at the request of the appellant (patentee). The board, considering that the opponent and intervener had explicitly agreed in writing to the appellant's request and being satisfied that the documents in question did not serve the purpose of informing the public about the patent in suit, concluded that the above-mentioned documents should remain excluded from file inspection pursuant to R 144(d) EPC.

2. European Patent Register

2.1. General

Art. 127 and R 143 EPC (previously R 92 EPC 1973) govern entries in the European Patent Register. R 143 EPC gives a list of items that are to be entered in the Register, additional entries required being specified in the EPO President's decision dated 15 July 2014 concerning the information given in the European Patent Register, which was adopted under R 143(2) EPC. The Register shows the state of the proceedings and the legal status of patents rights. Entries are made in it until the end of the opposition period or of opposition proceedings, as appropriate. In J 12/16 the board held that, in view of the suspensive effect any appeal yet to be filed would have, entries potentially interfering with the outcome of the then resulting appeal proceedings should not be made in the register while the period for appeal (here, against a decision refusing requests for registration of a transfer and for a stay of grant proceedings) was still pending.

According to J 5/79 (OJ 1980, 71), no entries can be made in the Register prior to publication of the European patent application (Art. 127 EPC 1973 – unchanged in that respect).

An entry in the European Patent Register recording the withdrawal of a patent application fulfils the same function as a publication in the European Patent Bulletin in that it amounts to a notification to the public (J 25/03, OJ 2006, 395; see also J 14/04 and J 12/03). The withdrawal of an application cannot be retracted once it has been published in the European Patent Register (J 2/15).

In T 194/15 the board held that the entry of a change of an opponent's name in the European Patent Register does not establish a right, it merely records it (see also T 799/97).

Under Art. 20 EPC in conjunction with the EPO President's decision dated 21 November 2013 concerning the responsibilities of the Legal Division (OJ 2013, 600), the Legal Division is usually responsible for decisions on entries and deletions in the European Patent Register (for exceptions – in cases where a request can be granted directly – see

EPO President's decision dated 21 November 2013 concerning the entrustment to non-legally qualified staff of certain duties incumbent on the Legal Division, OJ 2013, 601). Appeals against such decisions are a matter for the Legal Board of Appeal, not the technical boards (Art. 106(1) and Art. 21(2) EPC). The entitlement of the proprietor entered in the Register cannot be questioned in either opposition or appeal proceedings (see T. 553/90, OJ 1993, 666).

2.2. Registration of licences

As to the recording in the Register of European Patents of an exclusive licence under a patent **already granted**, the Legal Board of Appeal ruled in its decisions J. 17/91 (OJ 1994, 225) and J. 19/91 that registration was no longer possible once the patent had been granted because the EPO had renounced jurisdiction in favour of the national offices of the contracting states designated in the request for grant.

2.3. Transfer

Art. 72 EPC provides that an assignment of a European patent application must be made in writing and requires the signatures of the parties to the contract. Under R. 22 EPC, a transfer of a European patent application is recorded in the Register of European Patents at the request of an interested party and on production of documents satisfying the EPO that the transfer has taken place. This is in line with the PCT system (R. 92bis.1 PCT).

In J. 12/00 the board summarised the preconditions for registering a transfer of a European patent application (now enshrined in R. 22 EPC) as follows: (i) a request of an interested party; (ii) the production of documents satisfying the EPO that the transfer has taken place; and (iii) the payment of an administrative fee. Documents relating merely to the obligation to transfer the right, but not to the transfer itself, were not sufficient to satisfy the EPO. Nor, according to the board, was it enough to cite registrations in different countries on the basis of documents other than assignment documents (similarly J. 4/10).

In T. 128/10 the board held that the three requirements under R. 22 EPC in conjunction with R. 85 EPC, as formulated in J. 12/00, did not need to be fulfilled at the same time. If they were met on different dates, the transfer would only have effect vis-à-vis the EPO at the date on which all the requirements mentioned above were fulfilled.

In J. 38/92 and J. 39/92 the Legal Board of Appeal ruled that a transfer could only be recorded in the European Patent Register on the basis of an official document in accordance with R. 20(1) EPC 1973 if that document **directly** verified the transfer (similarly J. 4/10). It did not suffice if a judgment was submitted which mentioned another document from which it was possible to verify the transfer.

In appeal proceedings, assessing whether there are documents satisfying the EPO that a transfer has taken place in accordance with R. 20(1) and (3) EPC 1973 and recording the transfer in the Register is a matter for the department of first instance responsible for making the entry in the Register. Accordingly, in appeal proceedings, substitution of another party for the original applicant is possible only once the relevant department of

first instance has made the entry or where there is clear-cut evidence of a transfer (**J 26/95**, OJ 1999, 668; see also **T 976/97**, **T 1751/07**). In **T 393/15** the board held that evidence of a transfer could not be regarded as clear-cut if the person carrying out the transfer had not been clearly authorised to do so.

A transfer can be recorded in the European Patent Register even after deemed withdrawal of a patent application, if it is still possible that restitutio is available and the successor in title has taken, together with his request for registering the transfer, procedural steps suitable for restoring the application (**J 10/93**, OJ 1997, 91).

In **J 17/12** the board held that the transfer of a European patent application may not be recorded in the European Patent Register at a time when proceedings for the grant of the application are stayed under **R 14(1) EPC**. There is nothing to stop the filing, during the suspension of grant proceedings, of a request to transfer the application, but no action will be taken on the request during the suspension. While the fact of the transfer may not be apparent from the register, it will be apparent from an inspection of the public file, as will the decision to stay the grant proceedings itself.

In **J 17/14** the board decided that the reversal of a completed transfer in the Register was not necessarily justified simply because doubts subsequently arose as to whether the claimed succession had been satisfactorily proven. There were cases where it might be more appropriate to stay the grant or opposition proceedings in favour of the party originally registered.

3. Stay of proceedings under Rule 14(1) EPC

3.1. Rule 14(1) EPC

3.1.1 General

Under **R 14(1) EPC** (**R 13(1) EPC 1973**) the EPO must stay the proceedings for grant ex officio if a third party provides it with evidence (under the EPC 1973, 'proof') that he has instituted proceedings against the applicant seeking a decision within the meaning of **Art 61(1) EPC** (see **J 28/94**, OJ 1997, 400; **T 146/82**, OJ 1985, 267; **J 10/02**, **J 6/10**, **J 7/10**), unless the third party communicates to the EPO in writing his consent to the continuation of such proceedings. The patentee will not be heard but may file a request with the Legal Division not to suspend proceedings. An appeal may be filed against the Legal Division's decision adversely affecting the applicant, proprietor or third party respectively (**J 28/94**, OJ 1997, 400).

Decision **J 15/06** followed **J 28/94** (OJ 1997, 400). The communication ordering suspension was considered to be a preliminary procedural measure "sui generis" which was justified as a preventive measure to preserve the third party's possible rights to the patent in dispute and took immediate effect. The respondent's withdrawal of its request for suspension of the proceedings significantly changed the procedural situation in the appeal proceedings. However, the existence of a legitimate interest of a third party was an unwritten prerequisite for a further stay of the proceedings under **R 13 EPC 1973**. The

withdrawal was therefore equivalent to and to be interpreted as consent to the continuation of the proceedings pursuant to R. 13(1) EPC 1973. See also J.18/06.

The grant proceedings ended on the date on which the European Patent Bulletin mentioned the grant (Art. 97(4) EPC 1973). In the interim period, **proceedings for grant** were still **pending** before the EPO and a request for suspension of proceedings under R. 13 EPC 1973 was admissible (J.7/96, OJ 1999, 443). See also J.33/95 of 18 December 1995, J.36/97, J.15/06, according to which the EPO can also order suspension pursuant to R. 13(1) EPC 1973 after the publication of the mention of the grant of a patent was acknowledged provided that an allowable request had been filed before the publication. Suspension of the proceedings for grant meant that the legal status quo existing at the time they were suspended was maintained, i.e. neither the EPO nor the parties might validly perform any legal acts while the proceedings were suspended (J.38/92 and J.39/92).

In J.20/05, G.1/09 and J.9/12 the boards established that R. 14 EPC prevents the filing of a divisional application if the proceedings for grant concerning the earlier application are stayed. In J.9/12 the board held that an application filed after the effective date of the stay of proceedings concerning the parent application, but before communication of stay, is to be treated as a divisional application.

In J.10/02 the appellant argued that in the case where an appeal was lodged against a decision to suspend grant proceedings, the provision of R. 13 EPC 1973 appeared to be in conflict with the provisions of Art. 106(1) EPC 1973. The board, however, pointed out that the suspensive effect of an appeal served to provide an appellant with provisional legal protection in the sense that no action should be taken to implement the decision of the department of first instance in order not to deprive the appeal of its purpose. However, if the grant proceedings were continued and the appellant were to arrive at a definitive end to the grant proceedings in its favour, this would be more than the appellant could achieve if it succeeded with the appeal under consideration.

3.1.2 Opening of proceedings before a national court

According to T.146/82 (OJ 1985, 267), suspension had to be ordered if satisfactory proof of the opening of relevant proceedings before a national court was given to the EPO by a third party, provided that the European patent application had not been withdrawn or was not deemed to have been withdrawn.

In J.6/03 the legal board held that R. 13(1) EPC 1973 referred to proceedings which resulted directly, i.e. generally and automatically, in decisions mentioned in Art. 61(1) EPC 1973. The provision was therefore not applicable in respect of decisions of courts of third states (here, Canada).

According to J.36/97 neither the jurisdiction of the national court whose decision was to be recognised nor the validity of such decision might be reviewed by the boards of appeal (see also J.8/96 and J.10/02). When and how legally relevant civil proceedings were opened in a contracting state was likewise determined by national law (J.7/00).

In **J 9/06** the Legal Board pointed out that, according to **G 3/92** (OJ 1994, 607), only the courts of the contracting states have jurisdiction to decide claims to entitlement to the right to the grant of a European patent. It was not possible for the EPO, nor was it its function in the context of the examination of a request to suspend proceedings under **R 13 EPC 1973**, to examine whether the subject-matter disclosed in a European patent application in respect of which suspension was requested corresponded to the disclosure of another application, ownership of which was disputed before a national court.

In **J 15/13** the board held that while it is established case law that the board is not allowed to examine the substance and merits of a national entitlement case, the board's power of examination cannot be limited to the mere check whether the claim submitted with the entitlement suit is directed to the transfer of the application but – to a certain extent – also allows and may even require a consideration of the grounds given in the complaint of the entitlement suit. The board has to verify that the national proceedings are in accordance with **R 14(1) EPC**, since to request a stay of the grant proceedings is a strong weapon which can be misused.

3.2. Rule 14(3) EPC

Under **R 14(3) EPC** (**R 13(3) EPC 1973**), upon staying the proceedings for grant, the EPO may set a date on which it intends to resume the proceedings for grant, regardless of the stage reached in the national proceedings under **R 14(1) EPC**. It is clear from the wording of **R 14(3) EPC** that this is a discretionary decision (**J 33/03**).

When exercising its discretion under **R 13(3) EPC 1973**, the board in **J 10/02** took into account the fact that the entitlement proceedings only concerned part of the invention and the duration of the suspension.

In parallel decisions **J 6/10** and **J 7/10** the legal board held that some aspects of the exercise of discretion under **R 14(3) EPC** are (i) how long the proceedings before the national courts/authorities have been pending (with a period of more than four years held to be considerable both for grant proceedings to be stayed and for entitlement proceedings to be pending in first instance) (ii) the duration of the suspension of grant proceedings, and (iii) requests for suspension of grant proceedings filed at a late stage.

In **J 15/13** the board held that the filing of the request under **R 14(1) EPC** at the last possible moment may only be taken as an argument for the resumption of the grant proceedings if such behaviour appears to be a misuse of the respondent's right to a stay of the grant proceedings.

In **J 4/17** the board held that the legislator left it to practice and jurisprudence to define the circumstances that justify setting a date for resumption on a discretionary basis. Resumption of the proceedings is not limited to cases involving misuse or delaying tactics. The possibility that the EPO sets a date for resumption upon staying the proceedings for grant hints towards a broader construction. However an applicant cannot justify its request for resumption based on the length of the entitlement proceedings where this duration has been significantly caused by the applicant's procedural conduct.

In J.13/12 the board decided in the light of J.33/03 that, unlike the position under R.14(1) EPC, R.14(3) EPC gave the EPO discretion to decide whether proceedings were to be resumed. In exercising its discretion under R.14(3) EPC, it had to weigh the interests of the applicant up against those of the third party which had brought a national action to determine rights against the applicant. The Guidelines for Examination, as internal administrative guidelines, could also be consulted; but they gave no indication that the national proceedings had to be finally closed, where applicable after exhaustion of all legal remedies, before a date for resuming the grant proceedings could be set, or at any rate before they could actually be resumed.

In J.1/16, the Legal Board held that where, when deciding not to resume proceedings, the Legal Division had properly identified and exhausted its scope for discretion and weighed up the situation in the light of all the relevant factors, without being influenced by anything irrelevant and without making any logical mistakes in its assessment of the facts, it was not open to the Legal Board to exercise its own discretion in the Legal Division's place. Where a decision is basically to be upheld, a subsequent change in circumstances (in the case in hand: an appeal court ruling in national entitlement proceedings) can nevertheless present a ground for adapting it.

The board held in T.146/82 (OJ 1985, 267) that if, in accordance with R.13(3) EPC 1973, the EPO set a date on which it intended to continue the proceedings for the grant of the European patent, the date might be varied or the order staying the proceedings might be discharged at the subsequent request of the applicant or of the third party who applied for the order.

1. Introduction

Under Art. 115 EPC, any third party may present, in proceedings before the EPO, following publication of the European patent application, observations concerning the patentability of the invention to which the application or patent relates. There are no fees or deadlines for presenting such observations. The third party is not a party to the proceedings. R. 114(1) EPC requires that any such observations be filed in an official language of the EPO, while R. 114(2) EPC states that they will be communicated to the applicant or patent proprietor. Third-party observations are an integral part of the files and, as such, open to inspection under Art. 128 EPC. More information can be found in the Guidelines (see e.g. A-VII, 3.5, A-XI, 2.1, D-X, 4.5 and E-VI, 3 – November 2018 version) and the Notice from the EPO dated 5 July 2017 concerning the filing and processing of third-party observations (OJ 2017, A86).

Observations must be restricted to the substantive requirements of the EPC (Art. 52 to 57 EPC). Most observations concern lack of novelty and/or lack of inventive step. In the proceedings for petition for review R.18/11 third-party observations were filed. The Enlarged Board considered the observations to be inadmissible, because according to Art. 115 EPC such submissions had to concern patentability, and patentability issues could not be the subject of review proceedings.

EPO departments have discretion under Art. 114(1) EPC to admit third-party observations of their own motion, in particular where they consider them to have some bearing on the

outcome of the proceedings (T. 1216/12). Observations that contain legal or technical information relevant for the decision in hand will generally be considered (T. 866/91).

Art. 115 EPC helps to ensure that no legally invalid patents are granted or maintained. The public must be able to rely as far as possible on the legal validity of a patent granted by the EPO and the provision is designed to protect this public interest (T. 156/84, OJ 1988, 372; T. 60/91, OJ 1993, 551; T. 1495/09).

2. Formal requirements

2.1. Language of the documents

Under R. 114(1) EPC, any observations by a third party must be filed **in writing** in an official language of the EPO, i.e. English, French or German; otherwise, they are deemed not to have been received. Observations not filed in an official language and so deemed not to have been received are nevertheless added to the file and so accessible to the public under Art. 128(4) EPC. Third-party observations will be communicated to the applicant or patent proprietor even if they have not been filed in one of the prescribed official languages (Art. 14(4), R. 114(1) EPC).

R. 114(1) EPC also explicitly provides for applicability of R. 3(3) EPC, which states that **documentary evidence** and, in particular, publications substantiating an argument may be filed in any language. The EPO may, however, require that a translation in one of its official languages be filed, within a period to be specified. If a translation is not filed in due time, the EPO may disregard the document in question.

2.2. When can third-party observations be filed?

Art. 115 EPC specifies that observations cannot be filed until after publication of the European patent application but sets no upper time limit for their presentation by persons wishing to make adverse observations concerning the patentability of inventions claimed in patent applications/patents. This means that observations can also be filed during opposition proceedings, even after expiry of the opposition period, and during appeal proceedings (T. 390/90, G. 9/91, OJ 1993, 408, T. 1756/11). Art. 115 EPC explicitly covers all proceedings before the EPO and so applies, in principle, to revocation and limitation proceedings too.

2.3. Pending proceedings

The provision of Art. 115(1), second sentence, EPC that a third party shall not be "a party to proceedings before the European Patent Office" assumed that proceedings were pending before the EPO.

In T. 580/89 (OJ 1993, 218), observations submitted by a third party were not added to the file until after the decision had been taken and therefore not considered.

In T. 690/98 the question arose of whether observations filed by a third party could give rise to a reassessment by the Office of its own motion, under Art. 114(1) EPC 1973, of the patentability of the subject-matter of the contested patent, even if the appeal proved to be inadmissible. In the board's view, the answer was no, since the admissibility of an appeal, according to Art. 110(1) EPC 1973, was a prerequisite for examination of the appeal. The substance of the contested decision could only be examined when admissibility was established. Therefore, objections by third parties lodged at the appeal stage were not to be examined by the Office of its own motion as there no appeal proceedings were pending.

2.4. Anonymously filed observations

As stated in the EPO notice dated 5 July 2017 concerning the filing and processing of third-party observations (OJ 2017, A86), third-party observations may be filed anonymously.

In the inter partes proceedings T. 735/04, document D6, a patent application by one of the patent proprietors, was cited in anonymous third party observations. Since D6 was highly relevant for the patentability of the claimed subject-matter and could cause the patent to be revoked, it was introduced into the proceedings.

In T. 146/07 anonymous third-party observations were received by the board at a very late stage. According to R. 114(1) EPC, any observations by a third party must be filed in writing. The board stated that this requirement implied that the observations have to be signed (see R. 50(3) and 86 EPC) in order to allow an identification of the third party. Identification is particularly important in the context of opposition proceedings in order to allow the competent organ of the EPO to verify whether the observations have indeed been filed by a third-party rather than by a party to the proceedings. Otherwise, a party might be tempted to submit late observations and/or documents by means of anonymous third party observations in order to avoid negative procedural consequences such as apportionment of costs. The board was aware that anonymously filed third-party observations might nevertheless be adopted by a party to the proceedings as its own or may even trigger objections by the competent organ of the EPO of its own motion (see above T. 735/04). In the absence of such a further procedural act, anonymous third-party observations are to be disregarded altogether. This view is in line with the decisions G. 1/03 and G. 2/03 (OJ 2004, 413 and 448) in which the Enlarged Board of Appeal refused to take into account an anonymously filed third-party statement. In T. 1439/09 the board agreed with this line of reasoning. Therefore, the anonymous observations filed under Art. 115 EPC were deemed not to have been filed and were disregarded by the board.

In view of these decisions, the board in T. 1756/11 held that anonymous third-party observations made at a very late stage in the opposition appeal proceedings should be disregarded on formal grounds, in order to preclude covert abuse of procedure by parties to the proceedings. Likewise in T. 1181/12 and T. 379/13 the board did not take into consideration third-party observations which were submitted anonymously during the appeal proceedings.

In T.1336/09, however, the board came to the conclusion that in this **ex parte case** the anonymous character of the third-party observations did not bar them from being admitted into the procedure. The board referred to earlier decisions of the boards, which did admit such observations, without apparent misgivings in relation to their anonymous character (T.735/04, T.258/05). Unlike T.146/07, which had concerned an inter partes appeal, the case at hand here (T.1336/09) concerned ex parte proceedings, in which the appellant was the sole party and could raise new issues or submit new prior art at any time – as could the board of its own motion by virtue of Art.114(1)EPC. Accordingly, the risk of anonymous third-party observations providing a cover for procedural abuse could largely be excluded.

2.5. Reasons for observations

R.114(1)EPC requires, among other things, that third-party observations state the grounds on which they are based.

In T.189/92 the board held that it was the responsibility of the third party to ensure that the facts and evidence filed were not only unequivocally clear but also as complete as possible, so that they could be handled directly by the investigating instance without doubt and without further inquiry.

In T.908/95, the evidence adduced to show fulfilment of the criteria for establishing public prior use, in particular public availability, did not substantiate or prove such fulfilment to the extent that the allegation could be accepted. The board found that the additional inquiries needed to prove it, which might even include the hearing of witnesses, could only be conducted with the co-operation of the "third party", but that this was impossible where the person in question was not a party to the proceedings. The third party's observations therefore had to be disregarded (see also T.73/86).

In T.301/95 (OJ 1997, 519), the opposition division had disregarded third-party observations as to a claim of public prior use, as the alleged facts had not been proven with near certainty.

3. Third party's legal status

3.1. General issues

Art.115, first sentence, EPC states that **any** third party may present observations. There is no requirement to state whether the third party is acting in its own name or on behalf of someone else (T.1224/09).

In T.811/90, the patentee had filed an appeal against a decision of the opposition division concerning the removal of certain documents from the public part of the file. The opponent was not a party to the impugned decision and was consequently not entitled to be a party to the proceedings before the board. His request was therefore inadmissible but was admitted as an observation by a "third party".

Similarly the board in T 446/95 held that the intervention of a company was inadmissible, so its auxiliary requests were also inadmissible. However, there was nothing to prevent the company's observations and the documents it had filed from being dealt with under Art. 115 EPC 1973 (T 223/11).

In T 7/07, the board agreed with the findings in T 1196/08 that an intervention based on proceedings for infringement of a patent that has effect in a particular state solely on the basis of national law is inadmissible. The intervener's submissions were consequently regarded as third-party observations under Art. 115 EPC.

In T 887/04 of 14 November 2006, the board found that, although the intervention had to be held inadmissible, account had to be taken of document D5 cited by the intervener under Art. 115 EPC 1973 for the purposes of examining novelty and inventive step, because, despite its belated submission, it was highly relevant.

3.2. Third party's procedural rights

According to Art. 115, second sentence, EPC a third party does not become a party to the proceedings. In principle, therefore, third parties have none of the procedural rights associated with such status, in particular the right to appeal and the right to be heard (T 1756/11). Their observations are to be examined as submitted and assessed with regard to credibility (T 951/93, T 1196/08).

In T 951/91 the board found that by interpreting Art. 115 EPC 1973 in the light of their object and purpose, it was clear that they were intended exclusively to cut down, and not to extend, the rights of third parties, still less to extend their rights beyond the rights of parties to the EPO (see also T 1756/11, T 1528/13).

According to T 390/07 the admissibility of third-party observations is entirely a matter for the board as a third party within the meaning of Art. 115 EPC is not a party to the proceedings and has no more than an opportunity to "present observations". While it is well-established by case-law that third-party observations can be considered, both at first instance and on appeal, there is no obligation on the board beyond such consideration and no right of a third party to be heard on the admissibility of its observations or any evidence in support of them. The actual parties to proceedings naturally have the right to be heard in relation to such observations, but their admissibility is entirely a matter for the board. Parties to the proceedings can comment at any stage on new facts and evidence emerging from third-party observations filed after expiry of the opposition period, if they think that these could influence the decision. The opposition division or the board of appeal, exercising its discretion, is then obliged to rule on whether or not to admit the late-filed comments into the proceedings (T 1756/11).

In T 283/02, the opposition division had duly forwarded the observations by third parties to the patentee, who had made no comment. The failure of the opposition division to mention these observations in its decision did not constitute a procedural violation, even though a mention would have been desirable.

4. Third-party observations in opposition-appeal proceedings

4.1. Third-party observations and the scope of opposition

Examination of an opposition is limited to the extent to which the patent is opposed in the notice of opposition. If the opponent limits the notice of opposition to certain matters, the remaining matters are not opposed within the meaning of Art. 101 and 102 EPC 1973 or the subject of any proceedings within the meaning of Art. 114 and 115 EPC 1973 (G 9/91 and G 10/91, OJ 1993, 408 and 420). The opponent thereby deliberately refrains from exercising his right under the EPC to oppose the other matters covered by the patent and, consequently, the EPO has no competence to deal with them at all. (T 737/92, T 653/02, T 31/08).

Following G 9/91 and G 10/91, the board in T 580/89 of 28 April 1993 concluded that it had no power to examine the patentability of the subject-matter of claims which had not been opposed in the notice of opposition but were the subject of observations by the third party under Art. 115 EPC 1973 which had not reached the EPO until after the decision of the opposition division had been taken.

4.2. Introducing a fresh ground for opposition in opposition proceedings

An opposition division may, in application of Art. 114(1) EPC, of its own motion raise a ground for opposition not covered by the statement pursuant to R. 76(2)(c) EPC but referred to by a third party under Art. 115 EPC after the expiry of the time limit laid down in Art. 99(1) EPC. The Enlarged Board emphasised that the consideration of grounds not properly covered by the statement should only take place before the opposition division in cases where, prima facie, there were clear reasons to believe that such grounds were relevant and would in whole or in part prejudice the maintenance of the patent. The possibility under Art. 114(2) EPC of disregarding facts and evidence in support of fresh grounds not submitted in due time should, of course, also be kept in mind (G 9/91, OJ 1993, 408; T 356/94; T 1053/05).

4.3. Introducing a fresh ground for opposition in appeal proceedings

In an appeal procedure the provisions of Art. 114(1) EPC 1973 have to be interpreted in a more restrictive manner than in an opposition procedure and, accordingly, fresh grounds for opposition raised by an opponent or referred to by a third party under Art. 115 EPC 1973 after expiry of the time limit laid down in Art. 99(1) EPC 1973 may in principle not be introduced at the appeal stage, unless the patentee agreed. (G 9/91 and G 10/91, OJ 1993, 408, 420).

In T 667/92 of 27 November 1996, the board disregarded third-party observations because the patentee had not consented to their admission.

In T 1667/07 some documents which were copies of submissions made by third parties during the examination of the application were submitted as evidence in support of fresh grounds for opposition raised for the first time on appeal. The board pointed out that since

it cannot consider the fresh grounds of opposition put forward by the appellant for the first time in appeal proceedings – as the patent proprietor opposed to their introduction into the proceedings – it cannot consider **evidence** submitted in their support either.

4.4. Third-party observations presented after expiry of the opposition period

4.4.1 General

Because Art. 115 EPC sets no upper time limit for presenting third-party observations, in principle they can also be filed after expiry of the opposition period, and so even during inter partes appeal proceedings. Although the Art. 114(2) EPC provision on late-filed submissions mentions only the parties to the proceedings, established case law holds that submissions (i.e. facts and evidence) emerging from third-party observations not filed until after expiry of the opposition period are likewise to be treated, by way of a legal fiction, as "late". This means that Art. 115 EPC cannot serve to extend third parties' rights, let alone extend them beyond the rights of parties to the proceedings. In other words, where third-party observations are filed after the time limit under Art. 99(1) EPC, the principle enshrined in Art. 114(1) EPC of examination by the EPO of its own motion is to be applied on the fictional basis that those observations are late, i.e. they are subject to the criteria developed in the case law for the board's exercise of discretion in deciding whether to admit late-filed submissions within the meaning of Art. 114(2) EPC. (T 1756/11, see also T 402/12, T 1216/12, T 1528/13).

Irrespective of a third party's legal status, the principle that the EPO must examine the facts of its own motion in first-instance administrative proceedings does not have the same legal importance in judicial appeal proceedings, in particular in inter partes proceedings (G 9/91 and G 10/91, OJ 1993, 408, 420).

In T 1756/11 the board observed that the opposition divisions should at least comment on the relevance of third-party observations, for example in the summons to oral proceedings.

In T 301/95 of 28 March 2000, a third party had alleged public prior use after expiry of the period for opposition, i.e. belatedly. Under Art. 114(2) EPC 1973, it was at the discretion of the opposition division and the board of appeal whether or not to consider the belated submissions, but in deciding whether to do so, the most important criterion was the relevance of the belatedly cited prior art. The observations were not considered.

According to T 923/10 the boards have discretion to take such observations into consideration or to disregard them. When exercising their discretion the boards normally take criteria into account which they consider when they decide about the admissibility of submissions by parties to the proceedings that are considered "late-filed" in view of Art. 114(2) EPC and Art. 12(1), (2), (4) and 13(1), (3) RPBA 2007. These criteria include the relevance of the submissions filed (see for example T 1137/98, T 390/07, T 544/12). More specifically, it is the boards' established case law that a crucial factor is whether submissions filed late in appeal proceedings are prima facie highly relevant, i.e. likely to change the outcome of the proceedings (T 1216/12). In T 1348/11 the board added that

submissions provided by a third party should not be given a more favourable status than submissions of a party to the proceedings to whom Art. 114(2) EPC applies.

In T. 1756/11 the board observed that the boards usually have to disregard late-filed third-party observations in opposition appeal proceedings of their own motion, unless they relate to amendments to the claims or other parts of the patent made during the opposition or appeal proceedings.

4.4.2 Third-party observations admitted

In T. 1216/12, third-party observations had been filed together with an employee statement asserting that the test results cited in the notice of opposition were erroneous and so irrelevant. The board observed that, since these test results had been used in the contested decision as a basis for assessing whether the claimed subject-matter involved an inventive step, the statement raised serious doubts about that assessment. It therefore admitted the observations as prima facie highly relevant.

In T. 1224/09 a third party had submitted documents D53 to D55 (Japanese patent applications) at the start of the appeal proceedings. The board considered documents D53 to D55 to be prima facie relevant, as they had led to the refusal of the corresponding application before the Japanese Patent Office. The board stated that third party observations could be submitted at any time as long as proceedings were pending. Admitting and considering such observations, however, was an issue to be decided by the competent department of the EPO. In the case of the boards of appeal, the principles set out in Art. 13 RPBA 2007 seemed to be a reasonable basis on which the discretion to admit the third party observations was to be exercised.

The observations under Art. 115 EPC were filed more than 1 1/2 years before the oral proceedings so that the parties and the board had sufficient time to consider the document. The board had also notified the parties that it considers document D 27 to be relevant. None of the parties had requested that the submission of the third party be disregarded. Thus, the board decided to admit the submission of the third party into the proceedings (T. 458/07).

4.4.3 Third-party observations not admitted

A document submitted under Art. 115 EPC 1973 during opposition proceedings, but after the time limit for filing the notice of opposition had expired, was discussed in the appeal proceedings, but not taken into account as it was found not proven to be publicly available at the relevant time and thus did not form part of the state of the art (T. 314/99).

In T. 637/09 the board took into account, when exercising its discretion, that it should not accord the third party within the meaning of Art. 115 EPC more favourable treatment than would be given to an actual party seeking to introduce such submissions at that stage of the proceedings. The third-party observations filed shortly before the oral proceedings were not admitted into the proceedings since their admission would have accorded the

third party more favourable treatment than would have been given to an actual party (see also T.346/15).

In T.953/02 the respondent had challenged the submission under Art. 115 EPC 1973 because of a signature which was deficient, i.e. not that of a natural person. The submission by the third party was filed substantially less than one month before the oral proceedings. The board did not admit it into the proceedings. This also removed any need to consider the arguments set out in the respondent's letter or the literature enclosed.

In T.771/13 the observations were received by the EPO some days before oral proceedings. The novelty objection was not based on state of the art under the EPC. Moreover, the remaining documents and objections were not prima facie more relevant than those raised previously. Consequently there was no need to decide whether or not to admit these late-filed observations.

In T.1528/13, not only had the third-party observations been presented well after the notice of appeal had been filed but neither they nor the evidence produced in support of them appeared prima facie any more relevant than the submissions already on file.

5. Remittal following filing of observations

A board may choose to remit a case to the department of first instance as a result of observations filed under Art. 115 EPC. See, for example, T.249/84 and T.176/91 of 10 December 1992.

In T.929/94, a preliminary examination by the board of the third-party observations and the supporting material showed that an entirely new case based on new facts and evidence had been presented against the patentability of the claimed invention in these observations. In order to preserve the applicant's right to review through appeal of any adverse decision of the department of first instance, the board remitted the case for examination of and decision upon such new material, as requested by the applicant.

In T.41/00, a document submitted during the appeal proceedings by a third party under Art. 115 EPC 1973 appeared to come closer to the claimed subject-matter than any of the prior-art citations considered during the examination proceedings. However, since it remained open to question whether the document had been available to the public at the patent's priority date, the case was remitted to the department of first instance.

In T.848/06 the board intended to remit the case to the department of first instance. The board concluded that it would not be appropriate for the board to take into account the third party observations so as not to prejudice their consideration by the said department.

In T.30/01 the case was remitted to the department of first instance for further prosecution. The board stated that the opposition division would also have to consider whether to admit or disregard the observations presented during the appeal proceedings by the third party and partially incorporated by reference in the respondent's own case.

O. Transfer of party status

1.	Party status as patent proprietor	869
2.	Party status as opponent	870
2.1.	General principles	870
2.2.	Universal succession	871
2.3.	Transfer together with the business assets to which the opposition relates	872
2.4.	No transfer: sale of opponent's subsidiary company	873
2.5.	Legal uncertainty as to who is the correct party	874
2.6.	Evidence for and effect of a transfer	874
2.6.1	Date of effective transfer	875
2.6.2	What kind of evidence suffices	876
2.6.3	Natural heir	877
2.7.	Effect of finding that no transfer took place during opposition proceedings	878
2.8.	No administrative fee for a transfer of opponent status	878

1. Party status as patent proprietor

Where the European patent is transferred during opposition proceedings the new patent proprietor entered in the Register of Patents takes the place of the previous patent proprietor both in the opposition and in the appeal proceedings. His entitlement may not be questioned in these proceedings (**T. 553/90**, OJ 1993, 666).

For a transferee of a patent to be entitled to appeal, the necessary documents establishing the transfer, the transfer request and the transfer fee pursuant to **R. 22 EPC** must be filed **before** expiry of the period for appeal under **Art. 108 EPC**. Later recordal of the transfer does not retroactively validate the appeal (**T. 656/98**, OJ 2003, 385). In appeal proceedings, substitution of another party for the patent proprietor is possible only once the relevant department of first instance has made the entry in the Register or where there is clear cut evidence of a transfer (**J. 26/95**, OJ 1999, 668, **T. 593/04**). The procedural requirements to be fulfilled for recording the transfer of a European Patent in the Register (filing of a request, providing evidence, payment of a fee) need not be fulfilled at the same time. If they are met at different times, the transfer takes effect vis-à-vis the EPO from the date on which all of these requirements are fulfilled (**T. 128/10**). The original party remains, as long as the transfer has not been proven, a party to the proceedings, with all its rights and obligations (see **T. 870/92 of 8 August 1997**). A name change does not result in a change of legal identity (see **T. 19/97**).

In **T. 1068/15** and **T. 1001/15** the applicant requested transfer of the patent application during pending appeal proceedings. The Legal Division did not register the alleged transfer. The board considered that it had to examine the question of party status ex officio before dealing with the substance of the case (with reference to **G. 2/04**). In doing so it was not bound by the assessment of other departments of the EPO or by the state of the Register (with reference to **T. 854/12**).

In T.15/01 (OJ 2006, 153) the board distinguished between the situation where a party acquired a patent through a transfer, as in T.656/98 and through a merger, as in the case before the board. It held that R. 20(3) EPC 1973 (now R. 22(3) EPC) did not apply in the latter case, where the change of proprietor status was caused by universal succession of law. The universal successor of a patent applicant or patentee automatically acquired party status in proceedings pending before the EPO.

The transfer of party status as patent proprietor must be distinguished from a "transfer" of the legal entity from one jurisdiction to another. In T.786/11 the patent proprietor had requested that the address of the "applicant (patentee)" be changed from one in the British Virgin Islands to one in Mauritius and submitted evidence that it had merely changed its address. The board held that both these jurisdictions – unlike many others – allow a legal entity to be transferred from one jurisdiction to the other without any effect on its identity. The board therefore concluded that the respondent had been "transferred" from the British Virgin Islands to Mauritius and had continued as a legal entity under Mauritian law (see also T.2330/10 and T.1458/12).

2. Party status as opponent

2.1. General principles

The status as an opponent cannot be freely transferred (G 2/04, OJ 2005, 549). The opponent does not have a right of disposition over his status as a party. If he has met the requirements for an admissible opposition, he is an opponent and remains such until the end of the proceedings or his involvement in them. He cannot offload his status onto a third party (G 3/97, OJ 1999, 245, T.298/97, OJ 2002, 83).

However, in the following two circumstances the status as an opponent may be transferred:

- in the case of universal succession of the opponent (G 4/88, OJ 1989, 480, T.475/88, T.1091/02, OJ 2005,14); or

- when a relevant part of the opponent's business has been transferred (G 2/04, T.670/95). The transfer or assignment of the opposition to a third party has to be made as part of the transfer or assignment of the opponent's business assets together with the assets in the interests of which the opposition was filed (G 4/88, OJ 1989, 480).

Opponent status may also be transferred in opposition appeal proceedings (T.659/92, OJ 1995, 519, T.670/95, T.19/97). In T.563/89 the board held that the right to lodge an appeal may also be transferred to a third party, based on the same reasons as developed in case G.4/88.

A transfer of an opposition has to be requested at the EPO together with supporting evidence before it can take effect (T.1137/97, T.19/97, T.1911/09). This does not apply to cases of universal succession where the opponent status is automatically acquired from the date of the effective succession (T.6/05, T.425/05, T.2382/10); in the case of universal

succession the change may – upon request and production of evidence by either party – be recorded with retroactive effect as from the effective date of the legal succession (T 2357/12).

The EPO has a duty to examine, ex officio, the status of the opponent at all stages of the proceedings. This duty not only extends to the admissibility of the original opposition, but also to the validity of any purported transfer of the status of opponent as a new party (T 1178/04, OJ 2008, 80). Even if the objection of the admissibility of the appeal and the appellant's status as party is raised very late, namely at the beginning of the oral proceedings before the board, this issue has to be examined ex officio at every stage of the appeal proceedings; an appellant's objection against the late introduction of this issue can therefore not succeed (T 1415/16).

2.2. Universal succession

In T 349/86 (OJ 1988, 345) the board referred to R. 60(2) EPC 1973, which stated that in the event of the death of the opponent the opposition proceedings could be continued by the EPO of its own motion, even without the participation of the heirs. According to the board this may be read as definitely stating that an opposition may be transferred to a deceased opponent's heirs and, by analogy, to a company absorbing the opposing company by merger or takeover (see also T 1091/02, OJ 2005, 14). In G 4/88 the Enlarged Board confirmed that the opposition may be transferred to the opponent's universal successor in law (point 4 of the Reasons). In T 475/88, the board held that the appeal filed in the name of Hoechst AG was admissible, as opponent status had been transferred to that company on its merger with Ruhrchemie AG.

In T 2357/12 the board was concerned with a situation in which the transfer of all assets of an enterprise had been made whose legal entity had subsequently been dissolved. In its assessment of this situation, the board noted that "universal succession" as an exception to R. 22(3) EPC was a concept of procedural law under the EPC and was to be construed autonomously by the EPO, independent from national law. Under the case law of the boards of appeal, the main considerations for acknowledging that a universal succession has taken place were legal certainty as to the person of the successor and the need to avoid a legal vacuum. Under that case law, the transfer of all assets of an enterprise, immediately followed by its dissolution as a legal entity, could constitute universal succession. The board applied these principles to the facts of the case and concluded that although there was no genuine concept of "universal succession" under the national law in question (State of Delaware), the case at hand was to be considered one of universal succession under EPC case law. See also T 1755/14 for a case in which universal succession occurred through "accrual" ("Anwachsung" under German law).

In T 659/92 (OJ 1995, 519) there had been no universal succession. There was nothing to indicate that the opponent's business assets had been contractually transferred. The board concluded that a unilateral declaration by the owner of rights that he had transferred industrial property rights and opponent status in proceedings relating to a particular right could not of itself effect universal succession by transfer of business assets.

In T 531/11 the board held that an excerpt from a purchase contract stating that a company has been acquired "through sale of individual business assets" showed that under the terms of the contract there has been no universal succession.

2.3. Transfer together with the business assets to which the opposition relates

In G 4/88 the question referred to the Enlarged Board (T 349/89 of 29 April 1988) was whether an opposition instituted before the EPO is transferable only to the opponent's heirs or whether it may be transferred freely either with the opponent's enterprise or with a part of that enterprise operating in a technical field in which the invention to which the patent in suit relates can be exploited. The Enlarge Board examined the situation in which the opposition has been instituted in the interest of the opponent's business or part of that business. The term "business" was understood in a broad sense as describing the an economic activity which is or could be carried on by the opponent and which constituted a specific part of his business assets. In such a situation, the opposition constituted an inseparable part of those business assets. Insofar as those assets were assignable under applicable national laws, the opposition which was part of them had also to be regarded as transferable. The Enlarged Board answered the referred question by stating that an opposition pending before the EPO may be transferred or assigned to a third party as part of the opponent's business assets together with the assets in the interests of which the opposition was filed. Applying G 4/88 to the facts of the case the board in T 349/89 thus held in its decision of 30 November 1989 that the universal successor in title of the original opponent had transferred its opponent status to the singular successor of part of its industrial and commercial activity (operations in the commercial vehicle field) to which the opposition related.

In T 9/00 (OJ 2002, 275) the board found as follows: If, as in the present case, the subject of an opposition is assigned to two different parts of the opponent's company, the status of opponent can pass to a third party only if both parts or the entire company are transferred to it.

In T 298/97 (OJ 2002, 83) the board held that the transfer may be to one, and one only, successor or transferee.

In T 799/97 the opponent had gone bankrupt during the first-instance opposition proceedings. The board held that the opponent's entire business, and so the activities to which the opposition related, had been transferred to the company with which the administrator had concluded a contract of sale. Not all receivables and liabilities had been acquired, but that had not been established as an essential prerequisite for the transfer of opponent status in G 4/88 and T 659/92. In T 384/08 the board confirmed that the mere fact that certain assets were explicitly excluded in an assignment contract was as such not sufficient for concluding that the contract did not result in the transfer of a business or a specific part of it.

In T 423/11 of 11 March 2015 the board held that the assets transferred were those in the interest of which the opposition had been filed. The objection that not all the corresponding assets had been transferred, because exceptions had been made for some patents, had

no bearing. It was true that some patents had not been transferred and only a licence had been given. However, a licence conferred on the licensee the necessary rights to undertake any action to defend the patent under licence. Therefore those exceptions did not deprive the transferee of the general rights conferred on it by the transfer of the other assets.

In T.1421/05 the board held that where the business assets in relation to which an opposition was filed have been transferred and at the same time the transferor has contractually agreed to transfer the opposition to the transferee, the status of opponent remains with the transferor in the absence of there being filed with the Office (a) evidence sufficiently evidencing the transfer and (b) a request to recognise the transfer of opponent status. Where in such a case the transferor subsequently ceases to exist but has a universal successor, the status of opponent is capable of passing to that successor.

In T.2357/12 the board held that in cases of succession by law where parts of an enterprise form new legal entities or are immediately merged with other entities (de-merger, spin-off, secession merger), they would be considered to be cases of universal succession under national (e.g. German) law. The continued existence of the former opponent, and the fact that it would not be possible to decide at first sight to which of the resulting legal entities the part of the enterprise to which the opposed patent was assigned, might result in applying the rules of singular succession under the procedural law of the EPC (see T.136/01, T.1514/06, T.1032/10).

In T.445/16 the board held that, although a spin-off merger ("Umwandlung durch Ausgliederung") was seen as a form of universal succession in German national law, it was, in the context of transfer of opposition status under EPC law, considered to be a transfer of assets within the meaning of G.4/88. See also T.848/13.

2.4. No transfer: sale of opponent's subsidiary company

In T.711/99 (OJ 2004, 550) the board emphasised that the exception stated in G.4/88 to the general principle that an opposition was not freely transferable should be construed narrowly. In G.4/88 the Enlarged Board had considered a situation where the commercial vehicles department, which was subsequently sold, was without legal personality. The company which filed the opposition was the only one entitled to do so. In T.711/99, by contrast, the issue was whether the opponent parent company should be recognised, in the event of the sale of a subsidiary that has always been entitled itself to file oppositions, as having the right to transfer its opponent status. The board denied this and held that the opponent status could only be transferred together with the assignment of part of the commercial activity of an opponent with sole legal authority where the transferred company division or department did not have that status and therefore lacked legal personality. It added that the notion of legitimate interest in the proceedings, which was irrelevant for the admissibility of an opposition at the time of its filing, likewise had no bearing on the opponent's status at any subsequent stage.

In T.1091/02 (OJ 2005, 14) the board challenged the case law subsequent to G.4/88 which required, for a transfer of opponent status outside universal succession, a transfer of the

relevant business or part of it (T. 659/92, T. 670/95, T. 298/97, T. 711/99). It referred to the Enlarged Board questions which included the following: Can a legal person who was a wholly owned subsidiary of the opponent when the opposition was filed and who carries on the business to which the opposed patent relates acquire opponent status if all its shares are assigned by the opponent to another company and if the persons involved in the transaction agree to the transfer of the opposition?

In G. 2/04 (OJ 2005, 549) the Enlarged Board decided that there was no convincing reason, in particular not any overriding interest of the parties or the public, to extend the application of the rationale of G. 4/88 to the case where a subsidiary company was sold in whose interest the opposition had been filed by the parent company. Thus, a legal person who was a subsidiary of the opponent at the time when the opposition was filed and who carries on the business to which the opposed patent relates cannot acquire the status as opponent if all its shares are assigned to another company. In its reasoning, the Enlarged Board emphasised that in G. 4/88 the Enlarged Board was faced with a situation in which, for legal reasons, it was not possible from the outset to attribute the procedural status of opponent to the business in whose interest the opposition was filed, whereas the Enlarged Board in G. 2/04 was concerned with the situation in which the holding company did not want to attribute the procedural status of opponent to the entity in whose interest the opposition was filed. The opponent could easily have made provision for a future eventuality that its subsidiary should take over the responsibility for the opposition. If the holding company and subsidiary had filed the opposition as common opponents, the holding company could have withdrawn from the opposition at any time, leaving the subsidiary as the sole opponent. The Enlarged Board noted that a liberal admission of transfers could often result in the need to examine contested questions of fact or difficult questions of company law. This would broaden the possible procedural battle-fields for the parties and give rise to complications and delays in opposition proceedings.

2.5. Legal uncertainty as to who is the correct party

In G. 2/04 the Enlarged Board also considered the issue of what could be done if there was a justifiable legal uncertainty as to how the law was to be interpreted in respect of the question of who the correct party to the proceedings is. It decided that in such a situation it was legitimate that the appeal was filed in the name of the person whom the person acting considers, according to his interpretation, to be the correct party, and at the same time, as an auxiliary request, in the name of a different person who might, according to another possible interpretation, also be considered the correct party to the proceedings.

For an example of a case where a justifiable legal uncertainty as to the person entitled to appeal existed, see T. 1091/02 of 28 June 2006.

2.6. Evidence for and effect of a transfer

The EPC does not contain any explicit provisions regarding the formal requirements for the transfer of opponent status. Nevertheless, the boards of appeal have consistently held that formal requirements have to be fulfilled for the opponent status to be considered as transferred (see T. 960/08 with reference to case law, see also T. 261/03 of 24 November

2005). A new opponent acquires party status as opponent and as party to the opposition appeal proceedings only upon filing documentary evidence of the legal succession with the EPO of (T 244/12).

A transfer of an opposition is something that has to be requested at the EPO together with supporting evidence before it can take effect. The effective date of the transfer of an opposition must be taken as the date when the transfer has been requested at the EPO and adequate evidence provided (T 1137/97, T 19/97, T 1421/05, T 1032/10). Pursuant to T 261/03 (of 24 November 2005) such a request may also be an implicit one.

Until evidence of the transfer has been provided, the original party to the proceedings continues to have the relevant rights and obligations (T 870/92 of 8 August 1997, T 1137/97, T 413/02). Acts performed before the relevant point in time by the former opponent are valid – provided the former opponent is still in existence and able to act; acts performed by the new opponent are invalid, and may have to be repeated once the change of parties has come to effect (T 2357/12, with reference to T 1514/06).

In case of a universal succession, however, there is necessarily and automatically a continuation of the existing legal status as opponent from the date of merger (T 6/05, see further below); in the case of universal succession, the change may – upon request and production of evidence by either party – be recorded with retro-active effect as from the effective date of the legal succession (T 2357/12).

2.6.1 Date of effective transfer

In T 19/97 the board emphasised that there was a clear distinction between the substantive transfer of opponent status as a business asset and its procedural validity in the case at issue. As a formal requirement, the procedural validity of a transfer of opponent status was dependent on the submission of a duly substantiated request within the proceedings. On grounds of procedural certainty, a change of party based on an assignment could not take place outside the proceedings without the formal cognisance of the board and also could not have retroactive effect, as otherwise procedural acts or decisions could be respectively performed or taken without the involvement of the new opponent as the only legitimate party.

In T 956/03 the board considered the question of the time limit for filing evidence of a transfer. According to the board, the case law showed a definite balance in favour of the view that a transfer could only be acknowledged from, at the earliest, the date when adequate evidence to prove the transfer had been filed. This was desirable in the interest of legal certainty and, within that principle, to ensure that the identity of an opposing party was known. If the transfer took place before the appeal period expired, then the entitlement of the transferee to replace the opponent had to be established by filing the necessary evidence before the appeal period expired.

In T 428/08 the appellant had argued that it ought to be admissible to submit evidence of legal succession after the appeal period had expired, as evidence of prior use could also be submitted after the opposition period had expired without being rejected as grounds for

opposition. The board did not follow this argument and relied on case law which made the date when the transfer became valid explicitly dependent on the date when evidence of it was supplied, in keeping with the procedural certainty requirement for the identities of the parties to the proceedings to be clear at all times.

In T.184/11 the board could not share the appellant's view that, following T.956/03, any transfer occurring before the appeal period expired also had to be substantiated by the end of that period. In T.956/03 the board had had to rule on the admissibility of an appeal filed by a party which maintained that it was successor in title to one of the opponents in the first-instance proceedings but failed to provide evidence of that within the appeal period. It was in that light that the principle set out in T.956/03 – that if a transfer occurred before expiry of the appeal period, then the evidence showing that the transferee was entitled to take the opponent's place also had to be submitted by the end of that period – was to be understood. In the case at issue, however, a party that had been opponent in the first-instance proceedings had initially been respondent in the appeal proceedings, and only during the latter was transfer of party status requested. This request was granted during the oral proceedings before the board, once the requisite evidence of the transfer of opposition had been provided. See also T.1563/13.

In T.6/05 the board drew a distinction between those cases where the opponent status is transferred together with the assignment of business assets and the cases of universal succession via merger – like the case at issue. Whereas in the former cases, the party status might either remain with the original opponent or be transferred to the new one, the universal successor of a patent proprietor automatically acquired party status in proceedings pending before the EPO, since R.20(3) EPC 1973 did not apply in the context of universal succession in law. The successor acquired party status from the date on which the merger became effective and not only once sufficient evidence to this effect had been produced. The principles for transferring a European patent were to be applied *mutatis mutandis* to the transfer of opponent status. In the case of the universal succession of the opponent, there could only be one (legal) person who had rights and obligations, with the consequence that there was necessarily and automatically a continuation of the existing legal status as opponent from the date of merger. It could thus be established unambiguously and without any legal uncertainty, at any point in time in the proceedings who in fact was the opponent having party status, regardless of the date when sufficient evidence to this effect was filed (see also T.425/05 and T.2382/10).

2.6.2 What kind of evidence suffices

If no evidence of legal succession is produced, the mere declaration by a company designated as legal successor to the original opponent that it is the original opponent's legal successor is not sufficient to substantiate the transfer of the status of opponent and of party to the appeal proceedings (T.670/95).

In T.261/03 of 24 November 2005 the board of appeal considered what kind of evidence was required to establish a valid transfer. The board made a parallel to the requirements of R.20 EPC 1973 and noted that it was not aware of any appeal decision that had held that the documents to be submitted according to this provision have to prove the alleged

transfer "up to the hilt". Such a yardstick of full and absolute proof would indeed be overly strict since in many situations documentary evidence alone could then hardly suffice. As the wording of R. 20(1) EPC 1973 suggested, something less was required. The board took the view that the requirements of R. 20 EPC 1973 were complied with if the documents submitted were such as to render it credible to the competent organ of the EPO, evaluating the documents in a reasonable way and in the light of all the circumstances, that the alleged facts are true. The mere fact that another document might have been a more direct piece of evidence than the one submitted by the appellant does not invalidate the proof actually offered (see T. 273/02, applied in T. 1178/04).

In T. 1513/12 the board refused a request for a transfer of opponent status because, although the filed extracts from a commercial register showed there had been a spin-off, they did not contain any evidence of a transfer. In particular, no extracts from the spin-off agreement or from the agreements negotiated in this connection, which could have proved the transfer more conclusively, had been filed.

In T. 219/15 the board refused the request for transfer of the opponent status. The appellant had provided the purchase agreement, but that agreement did not demonstrate that the relevant business assets, i.e. the opposition proceedings relating to the patent in suit, were sold to the other company.

In T. 2016/12 the board rejected the transfer of a specific part of the original appellant's (ATech Ltd) business assets to the purported transferee (AES AG). The board had requested the submission of the contracts concluded between the legal entities involved in the merger; the opponent replied, however, that such contracts could not be provided for reasons of confidentiality. Other evidence presented was not conclusive. Furthermore, the board considered that if a transfer was not unequivocally proven, the original party to the proceedings would normally continue to be considered as the appellant. However, in the case in issue, ATech Ltd (the original party) allegedly continued to exist under its new name of GETech GmbH. However, from the two extracts of the commercial register concerning the business GETech GmbH, it was apparent that some assets had been transferred according to a separation plan to yet another company. The party provided no details as to this split or the business assets involved. The evidence indicated that GETech GmbH did not become the universal successor to that party through a complete acquisition of the entire business of the original party and a successive simple change of name. Therefore, it also could not be concluded that GETech GmbH was a party to the proceedings. Under these circumstances, the board could not reliably establish ownership of the business assets to which the opposition and appeal belonged. Consequently the board could not continue the proceedings, which therefore had to be terminated.

2.6.3 Natural heir

In the case of a transfer of an opposition from a deceased natural opponent to his or her heir, the heir can only be ascertained by reference to the particular national laws of succession applicable to the estate of the deceased opponent. It follows that the person seeking to establish that they have the right to succeed to an opposition must produce

satisfactory evidence that he, she or they have done so under the relevant national law (T. 74/00).

2.7. Effect of finding that no transfer took place during opposition proceedings

In T. 1178/04 (OJ 2008, 80) the opposition division had decided that the transfer of opponent status in the course of the opposition proceedings was valid. The board held that even if the transfer of the opponent status during the opposition proceedings was invalid, the appeal by the opponent was nevertheless admissible. The board explained that "party" simply meant someone who takes part in the proceedings before the EPO. If it was decided by the department of first instance that he was entitled to take part in the proceedings he remained a party even though this decision was later reversed on appeal; such a decision on appeal had the effect that he was no longer entitled to take part in the proceedings, but not that he had never been a party to the proceedings. His position could not change retrospectively from that of having been a party to that of never having been a party. After reviewing the evidence the board held that no valid transfer of the status of opponent had taken place. The only means of correcting this error was to set aside the decision of the opposition division as a whole. The opposition division was thus not bound by its previous decision. It was only bound by the ratio decidendi of the board's decision as regards the transfer of opposition status (see also T. 1081/06).

In T. 194/15 the board decided that the evidence submitted showed that the transfer of the business assets from Abbott to AbbVie took place before the opposition had been filed. Accordingly, the opposition filed by Abbott could no longer be transferred to AbbVie. As a consequence, the opposition proceedings were continued with the wrong party as opponent. Referring also to T. 1178/04 and T. 1982/09, the board decided to remit the case to the opposition division so that the proceedings could be conducted with the right party.

2.8. No administrative fee for a transfer of opponent status

There is no administrative fee to pay for a transfer of opponent status (T. 261/03 of 24 November 2005; T. 413/02).

P. Intervention

1.	Admissibility	879
1.1.	Any third party	879
1.2.	Relevant patent	880
1.3.	National infringement proceedings	880
1.4.	Proceedings pending before the EPO	882
1.4.1	Intervention in opposition proceedings	882
1.4.2	Intervention in appeal proceedings	883
1.5.	Time limit for intervention	883
1.6.	Fees	883
1.7.	Substantiation requirement	884
2.	Legal status of intervener	884
2.1.	In opposition proceedings	884
2.2.	In appeal proceedings	885
2.3.	Intervention in proceedings where time limits are pending	885

Under Art. 105 EPC, to intervene admissibly in opposition proceedings a party must show either that proceedings for infringement of the same patent have been instituted against him, or that following a request of the proprietor of the patent to cease alleged infringement, the third party has instituted proceedings for a ruling that he is not infringing the patent. Under Art. 105(2) EPC, an admissible intervention shall be treated as an opposition.

1. Admissibility

1.1. Any third party

In T 305/08 the appellant (opponent I) had filed an appeal against the decision of the opposition division to reject the opposition. Two separate interventions were subsequently filed (by opponents II and III), which also raised fresh grounds of opposition under Art. 100(c) EPC 1973. The board stated that the term "any third party" in Art. 105(1) EPC could not be given an interpretation other than that each party had to be a separate legal entity and that it was irrelevant whether they belonged to the same group of companies. Nor was allowing the interventions tantamount to allowing the appellant to late-file oppositions via opponents II and III under its control and thus introduce new evidence. The interventions were therefore admissible.

In T 384/15 two interventions were filed in the appeal procedure by different legal entities, both belonging to the same company. The respondent (patent proprietor) argued that there was credible evidence that the opponent was acting as a straw man on behalf of the company to which also the two interveners were inextricably linked. The board considered that there was no question that the interveners were third parties within the meaning of Art. 105(1) EPC, i.e. different legal entities, with respect to the opponent (appellant) regardless as to whether or not one of the interveners was the principal instructing the opponent (G 3/97, OJ 1999, 245). The board also rejected the argument that there had

been an attempt by the opponent and the interveners to circumvent the law by abuse of process, since there was no proof that the opponent had acted directly on behalf of one of the interveners (T 305/08).

1.2. Relevant patent

In T 446/95, in which an infringement action had been based on a French national patent, the board held that the intention and purpose of an intervention in accordance with Art. 105 EPC 1973 was to enable the assumed infringer to defend himself against the action by the patentee based on the opposed European patent, in order to prevent the EPO and the national courts handing down contradictory decisions on the validity of European patents. In the case in question, the fact that the European patent had claimed priority from the French patent and that France had been designated was irrelevant, as there was no legal basis for intervening in the European patent on the basis of an infringement action relating to the French patent. The admissibility of an intervention before the EPO could not depend on a provision of national law. The intervention was therefore inadmissible.

In T 7/07 the board held that the patent in suit was not granted for Lithuania under the EPC, as Lithuania was an extension state and therefore could not be designated for a European patent. The national law of the extension state governs the extension proceedings and the legal effects of the extension. The infringement proceedings were based on a patent which had been granted for a number of EPC contracting states and which, under Lithuanian law, also took effect in Lithuania, but exclusively on the basis of Lithuanian national law, which conferred the same effect on this patent as on a national patent. As a result, the infringement proceedings were not based on the European patent in suit in the opposition proceedings. The board agreed with the findings in T 1196/08 that an intervention based on proceedings for infringement of a patent that has effect in a particular state solely on the basis of national law is inadmissible because it fails to meet one of the requirements under Art. 105(1)(a) EPC. It therefore regarded the interveners' submissions as third-party observations under Art. 115 EPC.

1.3. National infringement proceedings

Under Art. 105 EPC, third parties may intervene only if they prove either that proceedings for infringement of the opposed European patent have been instituted against them or that, following a request by that patent's proprietor that they cease the alleged infringement, they have instituted proceedings for a ruling that they are not infringing the patent (G 4/91, OJ 1993, 707 in conjunction with Art. 105 EPC). The principle that the assessment of the nature of a procedural act taken by a party before the EPO is to be made with consideration of its actual substance rather than with consideration of its form or name applies equally when deciding whether national infringement proceedings have been commenced (T 188/97).

In T 195/93 the board held that if a patentee simply sent a legal warning letter asking the interveners to stop production and sale of a product covered by the patent, this could not be regarded as institution of proceedings for a court ruling even if under national law the

addressee became liable for damages 30 days after receiving the letter. The intervention was therefore rejected as inadmissible.

Similarly, according to T 392/97, Art. 105 EPC 1973 required that an intervener should prove both that the patentee had requested that he cease alleged infringement of the patent and that he had instituted proceedings for a court ruling that he was not infringing the patent. Thus where the letter was sent not to the allegedly infringing company, but to an unrelated one which it was assumed was about to acquire it, the first requirement was not fulfilled and their interventions were inadmissible. The first requirement was also not fulfilled in T 446/95, where the letter merely set out a position adopted in response to a letter from the purported intervener, and did not give notice to cease infringement. According to T 887/04 of 14 November 2006, it was for the assumed infringer to prove, first, that he had received a "request" to cease the infringement, i.e. that he had been expressly asked to do so, and, second, that he had been required to "cease", i.e. put an end to, the infringement. Proof of mere warnings or threats of legal action had therefore to be considered insufficient.

In T 898/07 the board found the intervention admissible. It was apparent from the documents submitted by the opponent that the respondent had repeatedly informed it that it considered its actions to infringe the patent and, with reference to infringement proceedings already pending against third parties, invited it to enter licensing negotiations. The board considered this a request to cease patent infringement by concluding a licensing agreement which would render the allegedly unlawful conduct (patent infringement) lawful (licensed use). This met the first requirement under Art. 105(1)(b) EPC, the wording of which related not only to a request to refrain from using the invention altogether, but also generally to a request to cease the alleged patent infringement. In addition, the opponent had instituted proceedings against the respondent for a declaration of non-infringement of the patent.

In T 223/11 the board held that it is internationally a widely accepted principle that the submission of a request on the national level for a marketing authorisation for a pharmaceutical product by a generic company does not constitute patent infringement (the so-called Bolar exemption). Such proceedings, no matter how obstructive these may have been to a future market entry of the intervener's product, cannot be considered as equivalent to infringement proceedings, irrespective of whether the Bolar exemption has been codified in the relevant national law or not.

In T 1713/11 the board stated that the EPC gives no specific definition of what constitutes proceedings for infringement. Furthermore, intervention was conceived as a procedurally exceptional situation, which is justified only by a substantial legitimate interest of the assumed infringer to enter the opposition proceedings. Therefore, it did not appear likely that there was a legislative intent to create an elaborate and intricate system of procedural provisions for the admissibility of interventions, and the boards too should refrain from creating such a system through their case law, and focus instead on whether the substantive conditions for admitting an intervention were fulfilled. Nullity proceedings concerning the patent at issue would not qualify and neither would *saisie-contrefaçon* proceedings (see also T 305/08). However, the definition of "proceedings for infringement"

was not limited to civil proceedings, to proceedings that allow for certain remedies to be claimed, or two party proceedings. The board therefore concluded that as long as a patent proprietor or any other party entitled to do so initiated proceedings which aimed to establish whether a third party was commercially active in an area that fell within the patent proprietor's right to exclude, such proceedings were "proceedings for infringement" within the meaning of Art. 105 EPC.

In T 1746/15 the board followed T 1713/11, according to which "proceedings for infringement" pursuant to Art. 105(1)(a) EPC were "proceedings meant to establish whether a third party is commercially active in an area that falls within the patentee's right to exclude". The board held that the independent evidentiary proceedings under German law ("selbständiges Beweisverfahren") initiated against the respondent by decision of the Landgericht Düsseldorf do not constitute the "establishment" of an infringement within the above meaning. The independent evidentiary proceedings under German law is comparable to "saisie" proceedings, e.g. "saisie-contrefaçon" in France, which are not regarded as "infringement proceedings" in terms of Art. 105(1)(a) EPC (T 1713/11 and T 305/08).

1.4. Proceedings pending before the EPO

1.4.1 Intervention in opposition proceedings

In G 4/91 (OJ 1993, 707) the Enlarged Board held that the intervention under Art. 105 EPC 1973 of an assumed infringer in the opposition proceedings presupposed that opposition proceedings were pending at the time he gave notice of intervention. Moreover, a decision of the opposition division on the relief sought had to be regarded as conclusive in the sense that the opposition division no longer had the power thereafter to amend its decision. The Enlarged Board further held that proceedings before an opposition division were terminated when such a conclusive decision was issued, irrespective of when this decision became final. Thus, if, after an opposition division had issued a decision terminating the proceedings, and none of the parties to the opposition proceedings filed an appeal, any notice of intervention filed during the two-month period for appeal under Art. 108 EPC 1973 was invalidated.

In T 791/06, where an intervention was filed after the oral proceedings before the opposition division when the decision was pronounced but before notification of the written decision, the board held that it had not been filed during pending opposition proceedings but considered the intervention to have been filed during the appeal proceedings.

In T 631/94 (OJ 1996, 67) the board noted that when a decision to terminate opposition proceedings, taken in written proceedings, was handed over to the EPO postal service, it became public and effective and had therefore been issued. If the parties to the proceedings leading to that decision did not appeal, the opposition proceedings were completed at that point in time and thereafter intervention based on Art. 105 EPC 1973 was no longer possible.

1.4.2 Intervention in appeal proceedings

In G 1/94 (OJ 1994, 787) the Enlarged Board concluded that Art. 105 EPC 1973 should apply to appeal proceedings. The term "opposition proceedings" was not restricted to the department of first instance, but could also refer to such proceedings at second instance. Intervention during appeal proceedings was therefore admissible (see also T 694/01). A notice of intervention filed during the two-month period for appeal has no legal effect if no appeal is filed (G 4/91, OJ 1993, 707).

In T 694/01 the board found that intervention depended on how far the opposition or appeal was still pending. An intervener could not challenge issues on which a final decision had already been taken (in earlier appeal proceedings).

In T 1961/09 the board held in the catchword that while an intervention under Art. 105 EPC shortly before oral proceedings in an appeal, raising new issues, will normally require the oral proceedings to be adjourned if not the remittal of the case altogether (G 1/94, OJ 1994, 787), the oral proceedings may be continued if and so far as this can be done without unfairness to the other parties, in particular the proprietor.

1.5. Time limit for intervention

Under R 89 EPC, intervention is not possible until the opposition period has expired (this was previously laid down in Art. 105 EPC 1973), but notice of it must be filed within three months of the date on which proceedings referred to in Art. 105 EPC were instituted.

In T 452/05 the board considered three dates which could possibly have triggered the three month period: the date on which the request for an interim injunction was made, the date on which the request was granted, or the date when the injunction order was served upon the opponent. In the board's view, only the last date should be regarded as the decisive point in time, as only from that date onwards could the opponent provide evidence of the proceedings that entitled it to intervene.

If multiple proceedings are under way, the three-month time limit for intervening is always triggered by the date on which the **first** proceedings were instituted (T 296/93, T 1143/00).

The two alternative starting points under Art. 105(1) EPC 1973 for calculating the three-month period for intervention were mutually exclusive (T 296/93, OJ 1995, 627). See also T 144/95. Art. 105 EPC 1973 could not be used to give an opponent who failed to file an appeal in time a second chance, as the opponent does not fulfil the requirement of being a third party (T 1038/00).

1.6. Fees

Under Art. 105(2) EPC in conjunction with Art. 2(1) No. 10 RFees, interveners must pay the opposition fee (see R 89(2), second sentence, EPC; T 27/92 of 25 July 1994).

Where a party intervenes only at the appeal stage, several decisions have stated that no appeal fee need be paid if the party is not seeking appellant status in his own right (see T 27/92, T 684/92, T 467/93, T 471/93, T 590/94, T 144/95, T 886/96 and T 989/96). In T 1011/92 and T 517/97 (OJ 2000, 515) the board ruled that an intervener must pay the fee if he wants to have his own right to appeal proceedings, in the sense that he can continue them if the original appellant withdraws his appeal. However, in T 144/95, where an intervention was filed during appeal proceedings and an appeal fee paid, the board ordered the appeal fee to be refunded (at the request of the intervener) – under Art. 107 EPC 1973, an admissible appeal could only be filed by a party who was already a party to the proceedings leading to the decision and who was adversely affected by it. Where the intervention was filed during appeal proceedings, the intervener could not satisfy these conditions, and, referring to G 1/94, OJ 1994, 787, could not be considered as an appellant. Whilst Art. 105 EPC 1973 provided an exception to the time limit for payment of the opposition fee under Art. 99 EPC 1973, no such exception was made concerning the appeal fee.

In G 3/04 (OJ 2006, 118) the Enlarged Board held that there was no legal basis for demanding the payment of the appeal fee by an intervener in appeal proceedings. Fees paid by way of precaution but without a legal basis were reimbursed.

1.7. Substantiation requirement

Under R. 89 in conjunction with R. 76 EPC, the notice of intervention must give the grounds for the intervention, and the facts and evidence submitted to substantiate them.

In T 1659/07 the board found that the substantiation requirement under R. 89(2) EPC in conjunction with R. 76(2)(c) EPC was met by a reference to an existing statement of grounds for appeal or notice of opposition. The purpose of the requirement was to ensure that the intervener's arguments could be objectively understood, i.e. that the intervener's position was set out clearly enough that both the patentee and the opposition division or board of appeal could identify the reasons for the intervention. Reference to the arguments of another opponent already on file was sufficient to that end. Accordingly, an intervener need not repeat those arguments in detail or contest the patent on the basis of new, independent reasoning or facts.

2. Legal status of intervener

2.1. In opposition proceedings

In G 3/04 (OJ 2006, 118) the Enlarged Board held that the valid intervener acquired the status of an opponent, irrespective of whether the intervention occurred during the proceedings before the opposition division or at the appeal stage. In either case his rights and obligations were the same as those of other opponents. An intervener in proceedings before the opposition division has a right of appeal under Art. 107 EPC. For the appeal to be validly filed, he must pay the appeal fee under Art. 108, second sentence, EPC. Furthermore, the board held that an intervener in proceedings before the opposition division, where all the opponents have withdrawn their oppositions, can continue the

proceedings alone and, if need be, file an appeal, since he has the same status as an opponent under Art. 99 EPC 1973.

In T 614/13 of 2 July 2015 the board had to rule on the admissibility of an intervener's appeal against the opposition division's decision to reject its opposition because it had not shown that it had intervened in the opposition proceedings in time. The board held that, even if it upheld the opposition division's decision, that would not mean the intervener had never been a party to the proceedings, but only that as from the date on which decision on appeal took effect it would no longer be entitled to take part in the (further) proceedings. Until that point in time its procedural status would be confined to obtaining clarification as to whether it was entitled to take part.

2.2. In appeal proceedings

In G 3/04 (OJ 2006, 118; see also in this chapter III.P.2.1.), the Enlarged Board ruled that an intervener, if the appeal is filed by someone other than him, is a party as of right according to Art. 107, second sentence, EPC. If the intervention is filed during the appeal proceedings, the intervener, again because he can only acquire the status of an opponent, has the same rights and obligations – apart from the right to raise new grounds of opposition – as any opponent who has not filed an appeal. If in this case the sole, or each, appeal has been withdrawn, the appeal proceedings are terminated in respect of all the substantive issues, including the new grounds for opposition raised by the intervener, for all the parties (see also T 694/01, OJ 2003, 250).

In G 1/94 (see in this chapter III.P.1.4.2), the Enlarged Board also examined the question of whether an intervener during appeal proceedings could raise any of the grounds for opposition under Art. 100 EPC 1973 even if they had not yet been examined by the opposition division, and found in the affirmative. If a fresh ground for opposition was raised, the case should be remitted to the department of first instance unless the patent proprietor wished the board to rule on it there and then. In T 694/01 (OJ 2003, 250), it was made clear that where a board has decided to maintain a patent on the basis of a given set of claims and a description to be added to them, in subsequent appeal proceedings confined to the issue of the adaptation of the description the previous decision is *res judicata* and the intervener cannot therefore challenge this decision by introducing a new ground of opposition.

2.3. Intervention in proceedings where time limits are pending

In T 392/97 the would-be interveners requested that the date for the appointed oral proceedings be postponed and submitted that they had not been duly summoned to the oral proceedings in accordance with R. 71(1), second sentence, EPC 1973 which stipulated at least two months' notice. In the board's view, R. 71(1), EPC 1973 did not stipulate that the requirement of a two-month period also applied if, subsequent to a duly effected summons, there was an intervention by a third party. As a general principle, an intervener entered the proceedings at the stage they were at on the date of intervention, including pending time limits. Issuing a further summons or adjourning the date in this case was therefore rejected.

Q. Continuation of the opposition proceedings by the EPO

1.	Surrender and lapse of the patent	886
1.1.	Surrender of patent	886
1.2.	Continuation of the opposition proceedings after lapse or surrender (Rule 84(1) EPC)	887
1.2.1	Request for continuation of the proceedings made by the opponent	887
1.2.2	Request for continuation of the proceedings made by the patent proprietor	888
2.	Death or legal incapacity of an opponent	889
3.	Withdrawal of opposition	889
3.1.	Form and effect of withdrawal on party status	889
3.2.	Effect of withdrawal on opposition proceedings before the departments of first instance	890
3.3.	Effect of withdrawal on opposition appeal proceedings	891

R. 84 EPC provides for the continuation of opposition proceedings by the EPO of its own motion. This may happen in the following circumstances: where the patent has lapsed or been surrendered and the opponent requests continuation of the opposition proceedings (R. 84(1) EPC); in the event of the death or legal incapacity of an opponent and where the opposition has been withdrawn (R. 84(2) EPC). In the case of a withdrawal of the opposition during the opposition appeal proceedings, there are a number of procedural consequences which depend on the party status of the opponent and which do not permit the exercise of discretion as to whether or not opposition appeal proceedings are continued (see in this chapter III.Q.3.3.).

1. Surrender and lapse of the patent**1.1. Surrender of patent**

Under the provisions of the EPC 1973, the patent proprietor was unable to terminate the proceedings by informing the EPO of his surrender of the European patent, since this was not provided for in the EPC 1973; at this stage in the proceedings, notices of surrender had to be addressed, as far as national law permitted, to the national authorities of the designated contracting states (T 73/84, OJ 1985, 241; G 1/90, OJ 1991, 275; see T 123/85, OJ 1989, 336 and T 196/91). Under the provisions of the EPC 2000 the patent proprietor may request that the European patent be revoked pursuant to Art. 105a EPC. The existence of this procedure does however not preclude patent proprietors from giving notices of surrender to national authorities.

Neither the surrender of a patent nor its lapse has retroactive effect. Both therefore have to be distinguished from revocation, which takes effect from the outset (Art. 68 EPC).

1.2. Continuation of the opposition proceedings after lapse or surrender (R. 84(1) EPC)

If a European patent has lapsed or been surrendered in all the designated states, the opposition proceedings may, under R. 84(1) EPC (R. 60(1) EPC 1973), be continued at the request of the opponent, provided the request is filed within two months of a communication from the EPO informing the opponent of the surrender or lapse. R. 84(1) EPC is limited to the situation where the opposed patent has been surrendered or has lapsed during ongoing opposition proceedings. Where the patent had already lapsed prior to the filing of the opposition R. 75 EPC applies, which states that an opposition may be filed even if the opposed patent has been surrendered or has lapsed in all the designated contracting states (T. 606/10).

R. 84(1) EPC also applies, pursuant to R. 100(1) EPC, to opposition appeal proceedings.

Where the European patent expires during ongoing appeal proceedings in all the contracting states and the appellant (opponent) does **not** request continuation of the proceedings, the proceedings are terminated without any decision on the issues (T. 329/88, followed by numerous decisions, including T. 762/89, T. 749/01, T. 289/06, T. 949/09, T. 480/13 and T. 977/14).

R. 84(1) EPC establishes no legal obligation on the EPO to ascertain of its own motion the legal status of a European patent and does not apply in the event of an alleged surrender or lapse of a European patent, unless confirmation thereof has been received by the EPO from the appropriate authorities of all the designated contracting states (T. 194/88, T. 809/96, T. 201/04). However, in some exceptional circumstances, the proceedings have been terminated where such evidence was missing. In T. 762/89 the respondent (patent proprietor) had submitted that the patent had lapsed following non-payment of the national renewal fees in the designated contracting states (AT, BE, DE, FR, GB, IT, LU, NL und SE). EPO records showed that the European patent had lapsed in 1990 in all the designated contracting states except Italy and Luxembourg, and the respondent provided confirmation that the patent had lapsed in Italy with a letter of 7 January 1992. Since the respondent had expressly declared on a number of occasions that the patent had lapsed in all the designated states, the board held that, with a view to procedural economy, there was no valid reason why the respondent should be required to show that it had lapsed in Luxembourg as well. In T. 607/00 the board accepted the respondent's statement, which was not challenged by the appellant, that the patent had lapsed in Italy.

If the appellant (opponent) expressed doubts concerning a respondent's (patent proprietor's) claim that a patent had lapsed or been surrendered, then the lapse had to be registered with the EPO or properly proved. Otherwise, R. 60(1) EPC 1973 was not applicable and the appeal procedure continued (T. 194/88, T. 682/91, T. 833/94, T. 201/04).

1.2.1 Request for continuation of the proceedings made by the opponent

In T. 1213/97 the patent had expired for all designated contracting states during the opposition appeal proceedings. The appellant (opponent) requested a decision on the

state of the file which implied a request for the continuation of the appeal proceedings for the purpose of issuing a decision. The board exercised its power under R. 60(1) EPC 1973 to continue the appeal proceedings.

In T. 598/98 too the patent had lapsed for all designated contracting states since a time subsequent to the opponent's filing of the appeal, and the appellant (opponent) had requested continuation of the proceedings. The request was allowed. The board maintained that the opponent's legitimate interest in retroactive revocation was one of the elements that could be a factor in the board's decision to terminate or continue the proceedings under R. 60 EPC 1973. It also stated that the general interest in a central ruling on the patentability of an invention claimed in a patent did at any rate justify continuing the proceedings until a final decision was taken if the case was essentially ready for decision at the time when the patent lapsed and if it also made a significant difference to the patent's fate whether a decision was taken on the merits or the proceedings were simply terminated.

In T. 500/12 the board granted the request filed by the appellant (opponent) for continuation of the appeal proceedings. The appellant had provided evidence from several national patent registers showing that the opposed patent had not lapsed in all contracting states and was still in force. The appellant further submitted that the annuity fees could be paid not only by the patentees but also by a third party. Furthermore, annuity fees could still be validly paid with a surcharge in many of the contracting states and, even if they were not paid with a surcharge in due time, reinstatement periods also had to be considered.

In T. 740/15 the board interpreted R. 84(1) EPC to mean that if the opponent files a request for continuation of the opposition proceedings within the given time limit, the scope of discretion of the opposition division provided in R. 84(1) EPC is thereby limited to only one possible lawful decision and this is the continuation of the opposition proceedings. The board noted that this understanding found support in the travaux préparatoires of the EPC 1973.

1.2.2 Request for continuation of the proceedings made by the patent proprietor

In contrast to the case law cited above, T. 708/01 concerns the situation where the patent proprietor had appealed against the decision of the opposition division to revoke the patent. The patent had expired in all the designated contracting states. The board decided that R. 60(1) EPC 1973 only applied, if at all, to the extent that the appellants were required to state whether they wished to maintain the appeal. The proprietors could also apply to have the patent maintained in amended form with effect only for the past. In the case in point the appellants stated that they wished to maintain the appeal. The board decided to continue the proceedings.

In T. 520/10 the board noted that if a European patent has lapsed in all designated contracting states, opposition proceedings may be continued at the request of the opponent. However, if – as in the present case – the patent proprietor was the appellant, it would be inappropriate to allow one or more of the opponents (respondents) to decide whether the appeal proceedings should be continued. For this reason, R. 84(1) EPC had

to be applied mutatis mutandis in such opposition appeal proceedings so that it was the patent proprietor who could request that the appeal proceedings be continued. As no such request had been made, the appeal proceedings were terminated. See also T 1733/09, T 1313/10, T 1272/10, T 1825/11.

In T 2536/10 the board interpreted a mere statement confirming that the patent had been allowed to lapse in all designated states in response to the board's communication asking the appellant (patent proprietor) whether it requested continuation of the appeal proceedings to mean that the appellant did not wish to request continuation. The appeal proceedings were terminated.

2. Death or legal incapacity of an opponent

R. 84(2), first sentence, EPC provides that in the event of the death or legal incapacity of an opponent the opposition proceedings may be continued by the EPO of its own motion. This means that, with a view to ensuring expeditious handling of the case, they can be continued even without the participation of the opponent's heirs or legal representatives. There is therefore no need to wait for the heirs to be identified and the inheritance to be accepted or for a legal representative to be appointed (T 1533/07).

The appointment by the courts of an insolvency administrator under German law does not mean that the opponent is legally incapacitated within the meaning of R. 84(2), first sentence, EPC. Rather, under German insolvency law the administrator is an ex officio party. By way of a change of party by operation of law, he thus becomes a party to the proceedings, and takes the place of the opponent (T 1533/07, T 917/01).

3. Withdrawal of opposition

R. 84(2), second sentence, EPC provides that the opposition proceedings may be continued by the EPO of its own motion if the opposition is withdrawn.

3.1. Form and effect of withdrawal on party status

A withdrawal requires an unambiguous statement. An opponent's statement explaining his lack of interest in the fate of the European patent to which his opposition relates cannot be construed as a withdrawal of the opposition (T 798/93, OJ 1997, 363). A declaration by the opponent that he has decided to "discontinue the opposition" clearly indicates that he wants to cease his opposition and is to be interpreted in the sense that the opposition has been withdrawn (T 789/89, OJ 1994, 482).

An opponent who withdraws his opposition ceases to be a party to the proceedings (T 283/02). Where the proceedings continue and there are questions concerning the apportionment of costs, the opponent ceases to be a party with respect to the substantive issues, but remains a party as regards apportionment of costs (T 789/89, see also recent decisions T 1397/10, T 2350/10 and T 2061/11).

It is not possible to request that a withdrawal of an opposition be cancelled. The withdrawal is a procedural declaration by a party which takes effect on receipt by the EPO. An opponent who withdraws his opposition and as a result ceases to be an active party to the proceedings can no longer take procedural steps himself (T. 283/02).

In T. 558/95 the board noted that the main request had been refused by the opposition division before the opposition was withdrawn. The decision concerning this request was thus final; even after the withdrawal of the opposition, it could no longer be reviewed by the department of first instance. The continuation of the proceedings by the EPO of its own motion under R. 60(2), second sentence EPC 1973 (R. 84(2) EPC) therefore applied only to the auxiliary request, which had not been the subject of a final decision.

3.2. Effect of withdrawal on opposition proceedings before the departments of first instance

After withdrawal of an opposition, the opposition proceedings should be continued if they have reached such a stage that they are likely to result in a limitation or revocation of the European patent without further assistance from the opponent and without the opposition division itself having to undertake extensive investigations (T. 197/88, OJ 1989, 412; see also the more recent decision T. 36/11 and Guidelines D-VII, 5.3 – November 2015 version). The continuation of the opposition proceedings under these circumstances follows from the EPO's general duty towards the public not to maintain patents which it is convinced are not legally valid at all or would be legally valid only with the necessary limitations (T. 156/84, OJ 1988, 372; T. 197/88).

In T. 1668/08 the respondent (opponent) withdrew its opposition during the appeal proceedings and was hence no longer a party to those proceedings. The board decided to remit the case to the department of first instance for further prosecution. The board emphasised that during that further prosecution the opposition division would first need to decide, in accordance with R. 84(2) EPC, whether or not to continue the opposition proceedings of its own motion in view of the withdrawal of the opposition. It warned that its decision to remit should not be taken as indicative of the conclusion to be reached in this respect.

In T. 36/11 the board held that an appeal by the patent proprietor against the decision of the opposition division to discontinue opposition proceedings after the withdrawal of the opposition was inadmissible because the patent proprietor had not been adversely affected by that decision.

In T. 228/14 the opposition was withdrawn after the opposition division had delivered its decision in oral proceedings to revoke the patent. The board held that if the opposition proceedings had been terminated after the decision had been set aside, the patent would have stood as granted. But the proprietor had requested maintenance of the patent in amended form and thus no longer approved of the text of the patent as granted. The board stated that a decision to terminate the opposition proceedings would be contrary to the principle of party disposition as codified in Art. 113(2) EPC 1973.

3.3. Effect of withdrawal on opposition appeal proceedings

The discretionary nature of an opposition division's decision whether or not to continue the proceedings pursuant to R. 84(2) EPC has to be distinguished from the much more narrow framework within which the boards of appeal decide on the effect of a withdrawal of an opposition. The effect of a withdrawal on the opposition appeal proceedings depends on whether or not the opponent is the sole appellant.

In G 8/93 (OJ 1994, 887) the Enlarged Board held that if the **opponent** as **sole appellant** filed a statement withdrawing his opposition, this could only be regarded as a withdrawal of the appeal which immediately and automatically terminated the appeal proceedings as far as all substantive issues were concerned (G 7/91, G 8/91, OJ 1993, 356 and 346). This was irrespective of the patentee's consent. The proceedings were terminated even if in the board's view the requirements under the EPC for maintaining the patent were not met. The Enlarged Board emphasised the distinction between the power to initiate and continue proceedings and the power to clarify the facts in pending proceedings. According to its case law, in appeal proceedings the former was **exclusively** the province of the appellant, whereas the latter might be exercised by the board subject to Art. 114 EPC 1973 provided proceedings were pending.

In contrast, according to established case law the withdrawal of an opposition has no direct procedural consequences for the appeal proceedings if the opponent was the **respondent** and the contested patent was revoked by the contested decision (T 629/90, OJ 1992, 654; followed by numerous other decisions, including T 789/89, OJ 1994, 482, T 194/90 and T 627/92, as well as, more recently, T 46/10, T 727/10, T 2061/11, T 1216/12). In such cases, the board must carry out a substantive examination of the opposition division's decision, and can only set aside this decision and reject the opposition if the grounds for opposition do not prejudice the maintenance of the granted patent. The board's examination can include the examination of evidence submitted by the respondent prior to the withdrawal of the opposition (T 629/90, OJ 1992, 654; see also T 900/03, T 340/05, T 46/10, T 727/10, T 817/12). According to T 46/10, the board can also consider any arguments the respondent (opponent) submitted before the withdrawal.

The opposition appeal proceedings are also continued if both the patent proprietor and the opponent have appealed but the opponent withdraws his opposition in the course of the appeal proceedings. The effect of the withdrawal of the opposition is that the appeal is regarded as withdrawn and the opponent ceases to be a party to the appeal proceedings as regards the substantive issues (T 922/01, T 1346/10).

R. Apportionment of costs

1.	Principle that each party must bear its own costs	892
2.	Equity of a different apportionment of costs – case groups	893
2.1.	Late submission of documents and/or requests	893
2.1.1.	Late submission was unjustified	894
	a) Different apportionment of costs ordered	894
	b) No different apportionment of costs ordered – no disadvantage	897
2.1.2.	Late submission was justified	898
	a) No different apportionment of costs ordered	899
	b) Different apportionment of costs ordered for reasons of equity	900
2.2.	Acts or omissions prejudicing the timely and efficient conduct of oral proceedings	901
2.2.1.	Failure of a party to appear at oral proceedings	901
	a) Different apportionment of costs ordered	902
	b) Refusal of a request for apportionment of costs	902
2.2.2.	Request for scheduling or postponement of oral proceedings; withdrawal of request for oral proceedings	905
2.2.3.	Other cases concerning oral proceedings	908
2.3.	Filing of opposition or appeal	910
2.4.	Withdrawal of opposition or appeal at short notice	911
2.5.	Other cases	911
3.	Expenses that may be apportioned	913
3.1.	Future costs	914
3.2.	Procedure for fixing costs	914
3.3.	Appeal against decision fixing amount of costs	915
4.	Procedural aspects	915
4.1.	Filing a request for apportionment of costs	915
4.2.	Competence issues	916
4.3.	Appeal solely against the decision on apportionment of costs inadmissible	916

1. Principle that each party must bear its own costs

Under Art. 104(1) EPC, each party to opposition proceedings must, as a rule, meet the costs it has incurred. However, the opposition division or board of appeal may, for reasons of equity, order a different apportionment of the costs incurred during taking of evidence or in oral proceedings. At the appeal stage Art. 16(1) RPBA (2007) also applies, allowing the board, subject to Art. 104(1) EPC, to order a different apportionment. It lists typical cases where costs arise as a result of: (a) amendments pursuant to Art. 13 RPBA (2007) to a party's case as filed pursuant to Art. 12(1) RPBA (2007); (b) extension of a time limit; (c) acts or omissions prejudicing the timely and efficient conduct of oral proceedings; (d) failure to comply with a direction of the board; or (e) abuse of procedure.

In T 133/06 the board added that Art. 104 EPC belonged to the procedural provisions and so was subject to the general principle of law that a new procedural law was immediately

applicable but had no retrospective effect unless otherwise provided. Hence when deciding whether the new Art. 104 EPC is applicable in appeal proceedings initiated under EPC 1973, the board must take into consideration not only the fact that, according to the transitional provisions (see Decision of the Administrative Council 28 June 2001, OJ SE 1/2007, 197), the new Art. 104 EPC is applicable to granted patents, but also the date of the event which gives rise to the application of this article. This is the only way to give the new procedural provision an immediate application without giving it a retrospective effect.

According to the boards, the phrase "taking of evidence" used in Art. 104(1) EPC 1973 – but no longer used in Art. 104 EPC – refers generally to the receiving of evidence by an opposition division or a board of appeal (T. 117/86, OJ 1989, 401; T. 101/87, T. 416/87, T. 323/89, OJ 1992, 169; T. 596/89 and T. 719/93, referring to Art. 117 EPC 1973).

2. Equity of a different apportionment of costs – case groups

There is no definition of equity in the EPC. The boards of appeal therefore had to develop the criteria determining whether costs were to be apportioned on a case-by-case basis. In a number of decisions it has generally been stated that apportionment of costs is justified if the conduct of one party is not in keeping with the care required, that is if costs arise from culpable actions of an irresponsible or even malicious nature (see, for example, T. 765/89, T. 26/92 and T. 432/92).

Requests for a different apportionment of costs are often filed in various scenarios in which costs are incurred for:

- late submission of documents and/or requests (see in this chapter III.R.2.1.);
- acts or omissions prejudicing the timely and efficient conduct of oral proceedings (see in this chapter III.R.2.2.);
- filing of opposition or appeal (see in this chapter III.R.2.3.);
- withdrawal of opposition or appeal at short notice (see in this chapter III.R.2.4.);
- other cases (see in this chapter III.R.2.5.).

2.1. Late submission of documents and/or requests

Where facts and evidence supporting the opposition are submitted at a late stage in the proceedings and another party incurs considerably higher costs as a result, a different apportionment of the costs may be ordered for reasons of equity (see T. 10/82, OJ 1983, 407; T. 117/86, OJ 1989, 401; T. 101/87, T. 326/87, OJ 1992, 522; T. 416/87, OJ 1990, 415; T. 323/89, OJ 1992, 169; T. 596/89, T. 622/89, T. 503/90, T. 611/90, OJ 1993, 50; T. 755/90, T. 110/91, T. 867/92, OJ 1995, 126; T. 719/93 and T. 970/93). The relevant factor in deciding on the costs is whether or not there are cogent reasons justifying the late submission; it is regarded as irrelevant whether the material in question has any

bearing on the merits of the decision. However, it should be pointed out that, in several cases, requests for apportionment of costs have been refused, despite an unjustified delay, because there was no proof that higher costs had been incurred (see, for example, T. 212/88, OJ 1992, 28; T. 582/90, T. 267/92, T. 9/95 and T. 207/03).

According to board of appeal case law, if a party introduces important facts or evidence at a late stage of the proceedings, without cogent reasons for the delay, this may be taken into account in the apportionment of costs (see T. 117/86, OJ 1989, 401; T. 326/87, OJ 1992, 522; T. 97/90, T. 611/90, OJ 1993, 50; T. 847/93, T. 1016/93, T. 574/02, T. 931/06, T. 493/11). If the reasons for the late citing of a document do not point towards negligence or other circumstances that would amount to an abuse of procedure, there is no reason of equity which would justify an apportionment of costs in the other party's favour (T. 1016/93).

Preparations for discussing the admission of late-filed documents into the proceedings during the opposition-appeal proceedings and, if they are admitted, preparations for discussing their relevance in respect of the patentability of the claimed subject-matter are part of the normal work that can be expected of any party and/or its representative (T. 1848/12).

In T. 1781/13 the board found that, since the EPC did not treat late-filed submissions as automatically inadmissible and the RPBA (2007) similarly did not treat amendments to a case this way, both instead leaving it to the boards to decide on admission at their discretion (Art. 114(2) EPC; Art. 12(4) and 13(1) RPBA), it was clear that a party's amending its case could not be regarded as unfair per se and so held against it. Generally speaking, additional circumstances were therefore needed for equity to dictate ordering a party to pay the other's costs because it had amended its case at a late stage. In the case in hand, no such circumstances were apparent to the board and the party requesting that it be awarded costs, although bearing the burden of substantiating that request, had not made a case for them.

2.1.1 Late submission was unjustified

a) Different apportionment of costs ordered

In T. 117/86 (OJ 1989, 401) the appellants had produced, together with their statement of grounds, two new documents and an affidavit in support of the contention that the opposed patent lacked an inventive step. The board concluded that the fact that new documents were presented **after the nine-month period** for filing opposition could itself give rise to additional expenditure for the other party, and that the costs should be apportioned differently for reasons of equity.

The board in T. 416/87, expressly referring to T. 117/86, regarded it as an abuse of the opposition procedure that the appellant had in its statement of grounds of appeal relied exclusively on three new documents and had even raised for the first time the **issue of novelty** on the basis of a document already discussed in the patent in suit. By introducing arguments and documents which bore little relation to the content of those filed in the original opposition, the appellant had produced virtually a new opposition at the appeal

stage. This could not, by definition, be the purpose of an appeal. Although the respondent clearly envisaged requesting a decision on costs in the event of oral proceedings only, the abuse of procedure justified the apportionment of costs incurred during the taking of evidence.

The board in T. 83/93 held that it was also an abuse of the appeal procedure to submit **five new documents** as evidence 40 months after the end of the opposition period (without giving reasons) and to revive an objection under Art. 100(c) EPC 1973 on the basis of new facts and evidence 51 months after the end of the opposition period.

In T. 493/11 the respondent introduced important evidence at a late stage of the proceedings, namely only two months before the date of the scheduled oral proceedings, without cogent reasons for the delay and, in particular, without submitting all the necessary information. The board stressed that the **responsibility for stating its complete case** lay exclusively within the respondent's own sphere. As a consequence, any delay causing the incurring of additional costs by the other party remained within the respondent's sphere and liability and, in the case in hand, justified an apportionment of costs.

In T. 867/92 (OJ 1995, 126) the claims had been amended during the opposition proceedings. Eighteen months after the claims had been amended the appellant (opponent) cited in the statement of grounds of appeal a **new prior art** document. The board held that the EPC does not impose a time limit for citing new prior art in response to an amendment of the claims. However, an opponent who cites new prior art with a considerable delay with no special reason justifying the delay runs the risk of having to bear the proprietor's costs incurred in attending oral proceedings which cannot bring the case to an end because of the new citation. However, as there was no suggestion that the appellant (opponent) wilfully abused the procedure in the case at issue, the board considered that it would be equitable to order the appellant to pay only half those costs.

In T. 514/01 the board found that the late allegation of **public prior use** during the first oral proceedings before the opposition division had given rise to additional costs because second oral proceedings before the opposition division had been needed to investigate the alleged prior public use.

In T. 416/00 the appellant (opponent) submitted a **document** which had been cited in the patent in suit and mentioned in the opposition proceedings but **had never been discussed between the parties** until the appeal proceedings, and had even been expressly excluded before the opposition division. The board found that the opponent's attempt to make surprising use of a document that it had disregarded in the oral opposition proceedings ran counter to the speedy conclusion of the proceedings before the two departments. Even if this was not a deliberate tactic on the opponent's part, the result was the same in terms of the principle of fairness governing proceedings. The respondent's request for a different apportionment of costs was granted.

In T. 671/03 document D18 was first filed in the appeal proceedings and deemed to constitute an **amendment to the appellant's submissions** pursuant to Art. 10b RPBA 2003 (Art. 13 RPBA (2007)). If it had been filed within the opposition period, there would

have been no need to discuss its admission during the oral proceedings in the appeal. The costs for preparing and attending the oral proceedings before the board, which mainly discussed the admission of D18, could have been avoided. For reasons of equity the board ordered a suitably modified apportionment of costs.

In **T.1033/09** the oral proceedings had been adjourned following the **admission of an auxiliary request** submitted by the respondent during those proceedings. For the board, there was no doubt that this auxiliary request constituted an amendment to the respondent's case after it had filed its reply to the statement of the grounds of appeal, and so one within the meaning of Art. 13(1) RPBA (2007). The board therefore found it equitable to apportion the costs in the appellant's favour.

Similarly, in **T.2165/08** of 6 March 2013 the appellant (patent proprietor) filed its auxiliary requests 1 to 3 **one month before the oral proceedings** and further supporting documents even closer to the oral proceedings. The board stated that it would always be unacceptable for a party to produce evidence without any explanation – unless conceivably its relevance was self-evident. But to produce evidence at the virtual end of the proceedings accompanied only by a statement that the explanation would be provided even later was not only discourteous but a clear, and apparently deliberate, attempt to frustrate the respondent's preparation for the oral proceedings. That was both an act prejudicing the efficient conduct of oral proceedings and an abuse of procedure, which merited an apportionment of costs.

The board in **T.874/03** ruled that when late filing of facts and evidence necessitated remitting the case to the department of first instance, the costs of any oral proceedings in the appeal proceedings were normally to be borne by the party responsible for the late filing.

In **T.2233/09** the board concluded that it would have been possible for the appellant to submit the evidence necessary to prove transfer of appellant status well ahead of the oral proceedings and that it was its conduct that had caused the adjourning of the oral proceedings. Therefore, for reasons of equity, the respondent's costs for the new oral proceedings had to be borne by the appellant.

In **T.1763/12** the board admitted document O6A into the proceedings even though it was filed **only three days before the scheduled date for the oral proceedings**. The appellant (opponent) did not give any reason why document O6A had only been submitted at such a late stage of the proceedings and why it could not have filed this document earlier. The consequence was that the discussion at the oral proceedings before the board was limited to the issue of admittance of O6A without considering any substantive matter. This would have been avoided if the document had been filed earlier. The board held it to be equitable that the expenses incurred by the appellant (patent proprietor) in connection with the oral proceedings be borne by the appellant (opponent).

In **T.2549/12** documents which the appellant had filed with its statement of grounds of appeal amounted to new submissions that opened up a new discussion and a fresh case that had not been dealt with in the first-instance decision. The board refused to admit the

documents. On the apportionment of costs, the board held that, where an **entirely new case** was first made on appeal (here, through filing the new submissions) and there were no mitigating circumstances that might excuse its being made so late, opportunities to make it at first instance having been missed and no explanation or justification for that being provided, it was appropriate to order a different apportionment of costs within the meaning of Art. 104(1) EPC.

b) No different apportionment of costs ordered – no disadvantage

In T. 28/91 three documents which had already been submitted to the opposition division were re-submitted at a later stage in the appeal proceedings. The board ruled that the late submission was not disadvantageous as no new arguments had been introduced, and therefore no additional work had been necessary (see also T. 133/06).

In T. 525/88 the late filing was unjustified, but the request for apportionment of costs was rejected because the documents were of **no relevance** and did not affect the decision. The same applied in T. 534/89 (OJ 1994, 464) and T. 876/90. In T. 882/91, the board did not look into whether the unjustified late submission had led to higher costs because it was of the opinion that the other party had not had to spend very **much additional time and energy** on the documents which had been submitted late and that there was therefore no reason to apportion costs (see the decisions on similar cases in T. 737/89, T. 685/91, T. 556/90, T. 231/90 and T. 875/91).

In T. 330/88 the respondents filed a new document two days prior to the oral proceedings. The board took the view that the late filing was unjustified but that an apportionment of costs would not be equitable as the appellants had had **sufficient time** to deal with the document, especially since the decision was not taken until four months after the oral proceedings and following the opportunity to present comments.

In T. 336/86 the appellants submitted a prior patent belonging to the respondents for the first time in the appeal proceedings, which destroyed the novelty of the patent in suit. The respondents requested an apportionment of costs as the oral proceedings would not have been necessary had the patent been presented earlier. The board agreed that the late submission was not justified and that higher costs had been incurred as a result. However, as the respondents either had – or should have – been aware of the **existence of their own patent**, it took the view that an apportionment of costs was not justified.

In T. 931/97 the opponent had submitted new evidence in appeal proceedings, which was already **known** to the patentee from earlier proceedings before the German Patent Office. The board held that where the patentee knew the documents and could assess their prospects a different apportionment of costs was not justified.

In T. 1182/01 the board admitted into the appeal proceedings several documents filed late by the appellant and held that its decision to **remit** the case immediately to the department of first instance meant that the respondent had not incurred any undue cost burden in relation to the appeal in hand.

In T. 633/05 the appellant referred for the first time in the statement of grounds of appeal to a document which had been cited in the European search report but not considered in the opposition proceedings. In the board's view, the appellant sought to provide new evidence in support of a line of argument already put forward in the opposition proceedings, namely the fact that certain features of the present invention were known in the art. As the said document was cited in the statement of grounds of appeal and was anyway part of the examination file, the respondent had had ample time to study the content of this fairly short document and prepare a rebuttal against the appellant's allegation that it disclosed some key features of the contested patent. Thus, the board had no reason to suspect that the appellant's late filing might have been aimed at delaying the appeal proceedings, or that it resulted in the respondent being burdened with unreasonable additional costs.

In T. 273/10 the board found that the opponent had abusively withheld the document in question, which ought to have been submitted for adversarial scrutiny in good time. However, it also observed that this had not been the only reason why further oral proceedings had been necessary. At the stage when the initial proceedings had been adjourned, it would anyway have been impossible to close them the same day. The board noted that a full day had been needed for the second set of proceedings and, moreover, that continuation of the proceedings had given the proprietor an opportunity to put forward new auxiliary requests. It followed that, since both parties had benefited from the holding of further oral proceedings, it would not be equitable to order the opponent to bear the costs alone.

In T. 213/14 the board exercised its discretion under Art. 13(1) RPBA (2007) not to admit auxiliary requests into the proceedings; it also refused a different apportionment of the costs. It held that a proprietor filing new requests in order to defend its position subsequent to oral proceedings being appointed or to receiving a negative preliminary opinion from the board was, with regard at least to the case in hand, not seen as an extraordinary circumstance justifying an apportionment of costs. Whilst the requests could arguably have been filed as part of the appellant's complete case, the later filing of these could not be understood to have resulted in significantly greater work for the respondent. The respondent should have considered what objections were to be made, including, where appropriate, possible objections as regards admittance of such requests into the proceedings.

2.1.2 Late submission was justified

In principle, costs are not apportioned differently if the late submission of facts and evidence appears justified. The boards have assumed in particular that belated submission is justified or that no abuse of procedure has taken place if new documents are filed for the first time at a later stage in the proceedings as a reaction to communications from the board, comments from the other party or amendments of the patent or decisions of the department of first instance which make such documents necessary in the first place (see T. 582/88, T. 638/89, T. 765/89, T. 472/90, T. 556/90, T. 334/91, T. 875/91, T. 81/92 and T. 585/95).

a) No different apportionment of costs ordered

In **T.712/94** the board allowed the appellant (opponent) to introduce facts and evidence on alleged prior use at the appeal stage, whilst refusing the respondent's (patentee's) request for apportionment of costs. The patentee had been made aware of the prior-use documents during negotiations conducted well before the first-instance decision was taken; so they had not taken him by surprise when submitted after the failure of those negotiations.

In **T.1167/06** the board did not consider it an abuse of procedure that two weeks before the oral proceedings the appellant filed three further auxiliary requests, additional arguments and four short documents, the latter illustrating common general knowledge on issues that had already been discussed. The need to **translate the requests and documents** and the resultant costs were in the nature of the European procedure with three official languages and affected all parties in equal measure. As the language of the proceedings for the patent was German, the respondent had to expect many submissions to be made in that language. The respondent stated that an additional representative had had to deal with the late filing and travel to the oral proceedings because the **representative assigned the case had been on leave** at the time in question. In the board's view, however, the representative's absence on leave was not the fault of the other party. Moreover, the respondent (opponent) had been represented by the same two representatives before the opposition division, so the additional representative had not needed much time to familiarise himself with the latest dossier updates.

In **T.29/96** a new document which was fairly simple and straightforward in content had been filed together with the statement of grounds of appeal. The board ruled that this was the earliest possible moment that the document could have been submitted. In addition, the introduction of the new document could not be regarded as having given rise to a new opposition; the appellant had not introduced a new item of closest prior art but merely a new secondary information source, in an attempt to **fill the gap referred to in the impugned decision** so as to improve its position with respect to the assessment of inventive step.

In **T.554/01** the applicant submitted a number of documents following the negative decision taken by the opposition division. The board held that the mere fact that certain documents had been submitted at a late stage did not justify a finding that there had been an abuse on the part of the applicant, especially where they had been submitted as a result of a legitimate desire **to supplement the line of argument** which had been unsuccessful before the department of first instance. Moreover, the respondents had not shown that they had incurred additional costs as a result of the documents' introduction into the proceedings.

In **T.1171/97** the board rejected a request for apportionment of costs because it was satisfied that the new documents which had become known to the appellants (opponents) in the course of another search had not been filed in order to obstruct the proceedings, but because they contained aspects which, **according to the statement of the opposition division**, had not been found in the previously available references.

In T 507/03, as a reaction to the reasons given in the impugned decision, the opponent (appellant) filed a new set of documents in the appeal proceedings. Refusing the request for a different apportionment of costs due to the late filing, the board argued that, according to Art. 108 EPC 1973 and R. 65 EPC 1973 (now R. 101 EPC), a statement of grounds of appeal had to identify the extent to which amendment or cancellation of the decision was requested. This, however, did not forbid a losing opponent from filing new pieces of prior art if it was felt that they could counter the reasons given in the appealed decision. Further, the new documents were all **easily understandable** and had not caused **an unreasonable amount of extra work** such as to justify departing from the normal rule that each party meets its own costs pursuant to Art. 104 EPC 1973.

In T 242/04 the board considered that the respondent's late filing was made **in response to a communication of the opposition division** for making written submissions and took place roughly one month before expiry of the final date accorded in the communication as well as roughly two months before the date for oral proceedings. The circumstances were therefore not such that there was no justification for the late filing or that it could be held that the respondent acted in bad faith. In addition, the appellant who requested an apportionment of costs and, in particular, reimbursement of the travel costs of a technical expert, neither gave any reasons let alone any evidence for the necessity of the technical expert's presence at the hearing before the opposition division, nor provided any evidence that the respective trip was caused only by the said late filing. Therefore, a different apportionment of costs was not regarded as justified.

In T 333/06 the board found that the appellant's maintenance of his request for admission of the fresh ground for opposition – lack of inventive step – and of the new supporting documents, after being notified of **the board's preliminary negative opinion**, did not constitute abuse, as that opinion was not a final decision. Furthermore, even if the appellant had acknowledged that the new documents were not relevant to novelty, objectively he could not be blamed for having maintained them in the hope that his oral presentation would result in the admission of lack of inventive step as a fresh ground for opposition and hence of the new documents relevant to inventive step. Thus, while this had admittedly made the respondent's preparations for oral proceedings more difficult than they would have been if the appellant had withdrawn the new documents, the procedural conduct on the part of the appellant which had necessitated those preparations was not abusive but one of the appellant's legitimate prerogatives.

b) Different apportionment of costs ordered for reasons of equity

In T 847/93 a new prior art document was cited in the statement of grounds. Mitigating circumstances for the late filing of new facts and evidence were put forward by the appellants and were held to be credible by the board. However, the board was also of the opinion that it was credible that the costs incurred by the respondents were higher as a result of the introduction of an entirely fresh case than if the facts and evidence had not been filed at a late stage. It therefore decided to order an apportionment of costs under Art. 104(1) EPC 1973 according to which the appellant had to pay the respondents 50% of the costs incurred by the respondents – after remittal to the department of first instance

– in respect of the subsequent oral proceedings and the taking of evidence as well as in any subsequent appeal (on the issue of future costs, see chapter III.R.3.1.).

In T 1137/97 a belatedly submitted document was admitted into the proceedings and a different apportionment of costs was ordered. In determining the costs, the board itself, exercising its discretion under Art. 111(1) EPC 1973, awarded a fixed sum of EUR 2 500 to avoid the need for an exact investigation of the amount, which would have been more burdensome for the parties.

In T 937/00 the board found that all the requests presented by the appellant in writing in advance of the oral proceedings were clearly inadmissible and their filing could hardly be considered appropriate in the circumstances of the case, in which the appellant had chosen to file an exceptionally high number of independent claims in response to the notice of opposition. At the very end of the oral proceedings, he had even filed a third auxiliary request according to which all the claims which had been contested in the appeal procedure were simply abandoned. In these circumstances, the board felt compelled to admit the belated auxiliary request (had the board rejected the appellant's third auxiliary request, the appeal would have been dismissed and the revocation of the patent would have become final) and to remit the case to the department of first instance, none of the remaining claims having ever been considered by the opposition division. However, the board ordered for reasons of equity an apportionment of the costs of the oral proceedings.

2.2. Acts or omissions prejudicing the timely and efficient conduct of oral proceedings

2.2.1 Failure of a party to appear at oral proceedings

The boards consider it highly undesirable for summoned parties to announce too late, unclearly or not at all that they will not be attending. Such conduct is inconsistent both with the responsible exercise of rights and with the basic rules of courtesy (see for example T 434/95, T 65/05).

There is an equitable obligation on every party summoned to oral proceedings to inform the EPO as soon as he knows that he will not be attending as summoned (T 212/07), regardless of whether he himself or another party requested the oral proceedings and of whether or not a communication accompanied the summons to oral proceedings. If a party who has been summoned to oral proceedings fails to attend as summoned without notifying the EPO in advance, an apportionment of costs in favour of another party, who has attended as summoned, may be justified for reasons of equity in accordance with Art. 104(1) EPC 1973 (established case law, see for example T 930/92, OJ 1996, 191; T 123/05, T 972/13). As one party's non-attendance does not automatically put the other party at a disadvantage (T 273/07, T 544/94 and T 507/89), one essential question here is whether the appellant's failure to attend rendered the oral proceedings unnecessary (T 10/82, OJ 1983, 407; T 275/89, OJ 1992, 126).

a) Different apportionment of costs ordered

In T 909/90 oral proceedings had been appointed at the appellants' request. Without giving the board or opponents any advance notice, the appellants did not attend the oral proceedings. Nor did they comment on the board's communication. For this reason in particular the oral proceedings contributed nothing new to the case. The board ordered the apportionment of costs without examining whether higher costs had been incurred as a result of the appellants' failure to appear. The appellants' failure to advise the board **in time or at all** that they would not be appearing at the oral proceedings was likewise the reason for ordering them to bear the costs in T 434/95, T 641/94 and T 123/05.

In T 937/04 the appellant (patent proprietor), by fax sent only to the EPO after its business hours on Friday, 17 February 2006, informed the board, without giving reasons, that it would not be attending the oral proceedings on 21 February 2006. The board stated that the appellant, in informing only the EPO and not the other parties, had failed to exercise all due care required and concluded that, for reasons of equity, an apportionment of costs should be accorded in favour of the respondent.

In T 91/99 the board stated that, where an appellant failed to give notice that he would not be attending the oral proceedings until two working days before the date set for the proceedings, this could constitute negligent or wilful conduct; however, in the case at issue, there was no culpable conduct on the part of the appellant which could justify an apportionment of costs under Art. 104(1) EPC 1973. In T 693/95 and T 338/90 costs were awarded because notice of the appellant's absence had been given, in the former case, only an hour before the oral proceedings and, in the latter, at the time when the oral proceedings were due to start.

In T 53/06 the appellant requested oral proceedings "in case the board considers not to set the decision aside". As soon as it received the board's summons to oral proceedings and communication, the appellant knew not only that oral proceedings would take place but also that the condition it had itself placed on its own request for oral proceedings had been fulfilled, since the communication clearly indicated that the board's provisional opinion was that the decision under appeal would not be set aside. However, the appellant neither replied to the communication nor indicated at all, let alone as soon as it knew, that it would not attend oral proceedings. Since the respondent had, in the absence of any submissions from the appellant additional to those in the grounds of appeal, nothing to add to its own case in its reply to the grounds of appeal, the **oral proceedings proved to be unnecessary**. In those circumstances, an apportionment of costs in favour of the respondent was held to be appropriate under Art. 16(1)(c) RPBA (2007) as well as under Art. 16(1)(e) RPBA (2007). See also T 212/07, T 2179/09, T 258/13.

b) Refusal of a request for apportionment of costs

The non-appearance of a party generally does not adversely affect the party which did attend. As a rule, a different apportionment of costs will not be ordered if the parties which are affected have neither shown nor claimed that they incurred additional costs because the other party was not present (T 544/94, T 632/88 and T 507/89).

In T. 591/88 both parties had requested that oral proceedings be held – both in fact filing an "unconditional" request. Without giving any advance notice, the respondents failed to appear. The appellants requested apportionment of costs on the grounds that the oral proceedings would not have been necessary had they known that the respondents would not be attending. The board rejected a different apportionment of costs because the appellants had made an "unconditional" request for oral proceedings, i.e. also covering the eventuality that the other party would not appear.

In T. 383/13 the respondent (opponent) asked the board to order a different apportionment of costs under Art. 104(1) EPC, having attended oral proceedings for which the appellant had announced its absence by letter dated just two days beforehand. The board held that if a party was late in deciding not to attend oral proceedings or in informing the board or other party of that decision, awarding costs against it may well be justified – if those costs were directly caused by not letting them know in time. In exercising that discretionary power, the board should apply the standard laid down in T. 1079/07. In the case in point, the oral proceedings were not superfluous: the board would not have cancelled them even if informed of the appellant's absence well in advance, because it wanted to be able to decide the case at the oral proceedings and close it on that date. That the board's provisional opinion had been in the respondent's favour was immaterial. Any diligent professional representative had a duty to attend oral proceedings even if the provisional opinion was in his favour and the other party did not come. The board concluded that it was not appropriate in the present case to order a different apportionment of costs under Art. 104(1) EPC.

In T. 2377/13 the board decided that it was the standard laid down in T. 383/13 and T. 1079/07, not that used in T. 937/04, which it had to apply in exercising its discretion as to whether to order a different apportionment of costs. In the case in hand, the board would certainly not have cancelled the oral proceedings, even if informed well in advance of the appellant's absence, because it had wanted to be able to decide on and close the case on the date scheduled for them, and so they had definitely not been superfluous.

In T. 1699/15 the appellant (patent proprietor) gave notice that it would not attend the oral proceedings only at a late stage: the day before them, at 2 p.m. The board decided not to apportion costs differently, in particular because there was no objective evidence to suggest deliberately ambiguous or abusive conduct. The parties had been summoned to the oral proceedings not only because of the auxiliary request of the respondent (opponent) but also in view of the need to discuss, among other matters, the question of a technical prejudice, as indicated in the board's preliminary opinion. In the absence of any further information from the board to say that the oral proceedings might be cancelled following the appellant's notice of absence, the respondent had had no guarantee that the decision would be in its favour and so had had to prepare to defend its case.

According to the board in T. 1079/07, to inform the EPO and any other party to the proceedings about the intention not to attend oral proceedings in due time is a matter of courtesy and respect rather than a procedural obligation to be met (see also T. 69/07). In order to judge a late announcement of an intended absence from oral proceedings as

constituting a "culpable action of an irresponsible or even malicious nature" (see T.937/04), strong supporting evidence for such an allegation would be required.

In T.1441/06 the respondents had not requested oral proceedings. They had not reacted to the board's communication, nor had they apparently had the intention to come or to notify the EPO of their intended absence at all. It was the appellant who had requested oral proceedings, albeit conditionally. In addition, the oral proceedings were not only arranged at the request of the appellants, but also because the board itself wished to be in a position to give a decision on the case. The oral proceedings would therefore not have been cancelled by the board even if the respondents had at an early time indicated that they would not attend. In these circumstances the board saw no sufficient reason to depart from the ordinary rule that each party bears its own costs.

In T.65/05 the respondent maintained that, like the appellant, it would not have attended the oral proceedings if it had been informed in time that the opposing party would not be appearing. In the case in point the board considered it doubtful that the oral proceedings could therefore have been waived or that the respondent would then at any rate not have attended them or would have withdrawn its request for oral proceedings. Both parties had submitted auxiliary requests for oral proceedings. The board had issued the summons without an opinion on the merits, in particular without any announcement or intimation that it was likely to decide in the respondent's favour. Therefore the respondent could not rely on a favourable decision purely on the basis of its written submissions if it stayed away from the oral proceedings. In these specific circumstances the board deemed it likely that that respondent (patent proprietor) would have appeared at the oral proceedings to defend its interests even if it had known that the opposing party would not be there. The request for a different apportionment of costs was therefore rejected (see also T.190/06 and T.1361/09).

In T.435/02 both the appellant and the respondent had filed an **auxiliary request** for oral proceedings. When filing its request, the respondent had wanted to attend the oral proceedings to ensure that the board would not overturn the decision under appeal without its having the opportunity to present its case orally. In response to the appellant's decision not to attend the proceedings, the respondent gave notice that it too would not be attending and commented that it had wished to attend "merely to rebut statements/arguments made by the patentee during these proceedings". Although the board expressly informed the parties that the oral proceedings would be held as planned, the respondent failed to attend. The respondent requested a different apportionment of costs because the appellant had withdrawn its request for oral proceedings so late that the respondent had incurred costs which no longer could be recovered. The board refused the request on the grounds that, contrary to the respondent's claim, its failure to appear was not a response to the appellant's decision not to attend but the result of a choice not to take the opportunity which it had requested to present its case orally.

In T.1071/06 the appellant had announced that it would not be attending the oral proceedings about a month after receiving the board's opinion with the summons. For the board, the time taken was entirely reasonable because appellants had to be afforded an

opportunity to review their **appeal's prospects of success** in the light of the opinion accompanying the summons (among other things) before deciding how then to proceed.

In T.275/89 (OJ 1992, 126) the appellant's representative filed a request that the oral proceedings scheduled for 3 May be adjourned, on the grounds that the appellant was unable to attend the oral proceedings owing to **illness**. The request was submitted so late, i.e. in the afternoon of 30 April, that it was **impossible** in view of the public holiday the following day **to notify the respondents in time**: they had already set out during the afternoon of 1 May. The request for adjournment was refused however and the oral proceedings took place without the appellant. The respondents requested a different apportionment of costs on the grounds that they would not have attended either had they known that the appellant would not be appearing. The board, however, took the view that the appellant could not be made responsible for the fact that the respondents had chosen to make an early start to the journey. Furthermore, the only matter of importance was whether the appellant's absence rendered the oral proceedings unnecessary. This question had to be answered in the negative. The request for costs was therefore rejected. The same decision was reached in T.1856/10, where a **medically certified, sudden and unexpected illness** of the appellant's representative had made him unable to attend. Here it was deemed acceptable that the board and the other party had not been informed of the first signs of his illness on the morning of the day before the oral proceedings, but only on the afternoon of that day, after he had seen a doctor.

In T.849/95 the respondent submitted a request for apportionment of costs, as the appellant had not informed the EPO in good time that he would not be taking part in the oral proceedings which he too had requested. The board rejected the request, as the oral proceedings were arranged not only at the request of both parties, but also because the board itself required further airing of facts on the part of the respondent. The oral proceedings would not have been cancelled even if the appellant had informed the EPO in good time.

In T.838/92 the appellants stayed away from the oral proceedings. The respondents requested a different apportionment of costs as they had appeared with **seven witnesses**. The board rejected the request because the witnesses had been summoned at the respondents' instigation in order to prove the prior uses alleged by the latter. There was therefore no reason to impose the costs on the appellant (cf. also T.273/07).

2.2.2 Request for scheduling or postponement of oral proceedings; withdrawal of request for oral proceedings

Nothing in the EPC prevents a party from **withdrawing a request for oral proceedings** at any stage of the procedure. The withdrawal of such a request is not culpable conduct as such and cannot be a factor in assessing whether reasons of equity exist in accordance with Art. 104(1) EPC 1973 (T.91/99).

On the basis of Art. 116(1) EPC 1973 any party has the exclusive right to request oral proceedings if it considers them to be necessary. The fact that one of the parties has to travel a longer distance than the other does not make the request for oral proceedings

abusive. Furthermore, an objection of abuse based on the fact that the problems to be discussed in oral proceedings are simple ones and could easily be presented in writing cannot be sustained (**T. 79/88**).

In **T. 297/91** it had, for a number of reasons, not been possible to decide all the issues during the first oral proceedings, with the result that the respondent (patent proprietor) had requested that oral proceedings be held for the second time and that the costs incurred be borne by the appellant. The board rejected the request for apportionment of costs because the **further oral proceedings had become necessary** for reasons beyond the patent proprietor's control.

In **T. 432/92 postponement** of the oral proceedings was requested two days prior to the agreed date as the father of the respondents' representative had died on the previous day. The appellants requested a different apportionment of costs because their representative had already travelled from America to the EPO, thereby incurring unnecessary costs. They argued that the respondents could have been represented by someone else from their patent attorney's firm. The board refused the request because there had been no recognisably wrongful or irresponsible conduct on the part of the other party. The board was of the opinion in particular that the respondents could not be expected to be represented by a different patent attorney, who would have had to prepare two oral proceedings in one day (one for an ongoing parallel case) and to travel as well.

In **T. 154/90** (OJ 1993, 505) the opponents had initially insisted on oral proceedings, although the opposition division did not consider that they were necessary. However, **eight days** before the arranged date the opponents informed the opposition division that they wished to cancel the oral proceedings. For reasons of internal organisation at the EPO, the opposition division did not receive this letter until after the date of the oral proceedings. The board of appeal ruled that eight days was a sufficient period of time for the oral proceedings to be cancelled, since no evaluation of new facts or arguments was needed (the case was different in **T. 10/82**, OJ 1983, 407). Since the letter was received too late for purely internal reasons, the opponents were not at fault. They were not obliged to bear a part of the costs of the other party. A change of opinion regarding the necessity of oral proceedings could not be regarded as culpable conduct either (see also **T. 383/05**).

In **T. 29/96** the respondent informed the board and appellant, **four working days** before the date set for oral proceedings, that it was abandoning the patent and no longer requesting oral proceedings. However, the declaration abandoning the patent was not completely unambiguous. The board refused the appellant's request that costs be awarded against the respondent; it had been clear that the oral proceedings would probably be superfluous and the appellant could have contacted the DG 3 Registry to find out about the course the proceedings would be taking.

In **T. 490/05, on the day before oral proceedings**, the proprietor had withdrawn both his request for oral proceedings and his request to have the impugned decision set aside. Thus, even before oral proceedings it was clear that the impugned decision revoking the patent was sure to be made final. This gave him the advantage of being able to focus his

preparations for the oral proceedings on the proprietor's request for apportionment of costs. Thus there were no reasons of equity for sharing the costs incurred by the opponent.

In T. 42/99 appellant I announced, as early as **one month prior to oral proceedings**, that experts would attend those proceedings. Only shortly before the appointed date for the proceedings, appellant II submitted a request that statements by an expert be admitted at the oral proceedings. Appellant II also requested the postponement of the oral proceedings so that its expert would have enough time to prepare. The board decided to postpone the appointed date, however, in doing so, the board also regarded it as equitable to order a different apportionment of costs. In its reasons the board took the view that, although a reply from appellant II to the announcement by appellant I that experts would attend the oral proceedings would not have been possible within the time limit set by the board, a "response" to the aforementioned announcement should have followed immediately and not shortly before the appointed date for oral proceedings. At this late stage, it was plausible that the representative of appellant I had made arrangements for the trip to Munich and a hotel reservation, which could not be cancelled without a financial loss.

In T. 99/05 the appellant submitted, **13 days before the oral proceedings**, a new experimental report in view of which the respondent asked for postponement of the oral proceedings. The appellant strongly objected to such a postponement. Since, in the board's view, the question of postponing the oral proceedings was linked to the question of whether the late-filed experimental report should be introduced into the proceedings, the board deemed it appropriate to maintain the oral proceedings in order to hear the arguments of the parties concerning the relevance of the late-filed experimental report of the appellant, and hence to decide on the introduction or not of this report into the proceedings. However, the oral proceedings did not result in a final decision with regard to patentability and second oral proceedings were scheduled in order for the respondent to be allowed sufficient time to file counter-experiments. Whilst the late filing did not represent an abuse of proceedings, it was evident that the final outcome of the proceedings had been delayed. Therefore, the board found it appropriate for reasons of equity to order a different apportionment of costs.

In T. 556/96 the appellant withdrew his request for oral proceedings **early in the afternoon preceding** the oral proceeding. By that time, the opposing party's representative had already set off. The board ruled that the appellant had withdrawn his request too late. The fact that the other party had also unconditionally requested oral proceedings was irrelevant; it too could have withdrawn the request, had it known in time that the appellant would not be attending. The board therefore ordered the appellant to pay the costs incurred by the respondent in preparing and attending the oral proceedings.

In T. 1771/08 the board held that an apportionment of costs under Art. 104(1) EPC could be ruled out from the outset for lack of equity if the representative of the party requesting a different apportionment owing to postponement of the oral proceedings had **unreservedly agreed** to their postponement.

In T. 258/13 the appellant withdrew its request for oral proceedings **two days before the oral proceedings**, which de facto amounted to only one day in view of the lateness in the

day (5 p.m.). This was not notification in good time. Citing T. 556/96, the board held that the appellant's request had to be treated as having been received so late that the respondent would already have had to be fully prepared, taking further into account the necessary travelling time during the day before the oral proceedings. An apportionment of costs in favour of the respondent was appropriate. However, for the oral proceedings only the presence of an authorised representative was necessary. The attendance or not of an accompanying person had no bearing on the conduct of the oral proceedings and was a matter of a deliberate choice by a party in which the other party did not need to be involved. Also to charge the appellant costs incurred by the accompanying person would contravene the principle of equity.

In T. 169/14 the board held that there was an equitable obligation on every party summoned to oral proceedings to inform the EPO and the other party as soon as possible, once it had decided that it would not be attending or was withdrawing its request for them. Consequently, in cases where a party unduly delays its decision not to attend the oral proceedings, or the withdrawal of its request for them, or its communication of this to the board, an apportionment of costs in favour of the other party could be justified if the costs were directly caused by the fact that the notice was not filed in due time. In the case at issue, the appellant withdrew its request for oral proceedings only one week before the scheduled date. However, the appellant at the same time submitted observations in reply to the board's preliminary opinion and requested that they be taken into consideration by the board in reaching its decision. Had the board found the appellant's new submissions admissible and convincing, oral proceedings would have had to take place in view of the respondent's conditional request for them. Additionally, there were no facts on file indicating that the appellant unduly delayed his notice or conducted himself in a clearly improper or irresponsible manner.

2.2.3 Other cases concerning oral proceedings

An apportionment of costs is justified if excessive costs are incurred for the oral proceedings and caused mainly by one party (see T. 49/86). The right to oral proceedings is absolute and therefore not subject to any conditions (T. 614/89, T. 26/92, T. 81/92 and T. 408/02). If the party that requested oral proceedings fails to produce new arguments during them, that does not constitute abuse of procedure and is not a reason for awarding of costs, as consistently ruled in T. 303/86, T. 305/86, T. 383/87, T. 125/89 and T. 918/92 (but not in T. 167/84, OJ 1987, 369).

In T. 1022/93 the oral proceedings, which only the appellant had requested, were **superfluous**. Even in the written appeal procedure the appellant had refrained from communicating why, in its opinion, the amended process claims should be considered inventive and from specifying that the additional example described a process according to the amended set of claims. This made it impossible either to remit the case without oral proceedings or to deal with the substance of the case at the oral proceedings. For reasons of equity, therefore, the appellant was required pursuant to Art. 104(1) EPC 1973 to reimburse to the respondent the costs incurred as a result of the participation at the oral proceedings before the board.

In T.905/91 the respondents had requested a different apportionment of costs on the grounds that **the appellants had not brought prepared auxiliary requests to the oral proceedings**, which had therefore continued into the afternoon. The board rejected the request for the following reasons. Firstly, the appellants had endeavoured to take account of the reservations expressed by the board and had filed new documents. Secondly, oral proceedings served specifically to clarify the situation completely through the direct exchange of arguments and, if necessary, to rephrase the patent application in the light of the outcome of the discussion. The duration of oral proceedings depended on the particular case; at any rate it was not unusual for such proceedings to continue into the afternoon, and the parties should be prepared for this.

In T.210/98 the respondent requested an apportionment of costs on the ground that the appellant **had withdrawn three auxiliary requests at the beginning of the oral proceedings** for which the preparation had been time-consuming. The board refused the request, stating that it was normal for parties to prepare themselves thoroughly for oral proceedings. A change of view was one of the situations with which a professional representative could be confronted during oral proceedings. As it was not exceptional for requests to be changed or withdrawn during oral proceedings as a result of the discussion held, no abuse of procedure could be seen in the withdrawal of requests at the beginning of the oral proceedings, which had apparently been a reaction to convincing written arguments.

In T.461/88 (OJ 1993, 295) the board decided that the appellants' insistence on **hearing witnesses** was clearly compatible with the principle of the responsible exercise of rights, as this may well have been the only means of proving the alleged public nature of the prior use. The board refused the request for apportionment of costs.

In T.668/03 the appellant requested an apportionment of costs in view of the fact that **oral proceedings had to be held for a second time**. As a matter of fact, the former oral proceedings had to be adjourned because the identity of one of the opponents had been drawn into doubt by the appellant during the first oral proceedings. The board pointed out that it was the duty of the respondent to make it clear throughout the procedure who belonged to the group of common opponents. However, had the appellant raised this issue before the first oral proceedings, it could have been dealt with in writing and thus the costs for further oral proceedings could have been avoided. Therefore, the board could not detect any reasons of equity which could be used to order a different apportionment of costs (likewise T.1404/10).

In T.490/13 the board considered that the appellant (proprietor) had manifestly failed to act with due care during the opposition proceedings in that, even if the appellant considered the objections, which had been raised by the respondent and had been endorsed by the opposition division in its summons to oral proceedings, to be unfounded, it still **ought to have come up in time with a fall-back position** to counter them. Its failure to do so had led to its appeal, the need for oral proceedings before the board and the remittal to the opposition division for an examination of claims that the opposition division could already have assessed the first time round. Responsibility for the remittal in this case lay with the appellant, so the board decided to apportion costs differently (Art. 104(1) EPC)

and ordered the appellant to pay those which the respondent had incurred in relation to the oral proceedings at the appeal stage.

2.3. Filing of opposition or appeal

Exceptions to the principle that each party must bear its own costs may also be made in cases of abusive conduct in which it is equitable to make an award of costs against one of the parties. An apportionment of costs is often requested on the grounds that the notice of opposition or appeal has been incorrectly filed. The fact that an appeal proves **clearly inadmissible** does not justify an award of costs if the appellant evidently has the subjective impression that he is adversely affected. A party which is of the opinion that the first-instance department has not acceded to its request may consider that it is adversely affected by the decision and may consequently decide to file an appeal. This is no more than its **legitimate right to make use of the appeal procedure** provided for in the EPC and to have the decision reviewed. Occasionally having to seek defence against unfounded or even inadmissible appeals is just one of the general risks of life and thus, in the absence of any further circumstances, does not justify a different apportionment of costs. The EPC makes no distinction between successful and unsuccessful appeals for the purposes of cost apportionment; so it cannot be argued that apportionment is justified if an appeal appears to be clearly inadmissible (T 964/14, T 2177/12, T 614/89, T 772/95).

In T 170/83 the opponents had used an incorrect form for payment of the opposition fee, thereby giving rise to a decision by formalities to reject the opposition; the opponents thereupon filed an appeal against this decision. The patent proprietors (respondents) requested that the appeal costs be awarded against the appellants, since it was their error which had rendered the proceedings necessary. The board rejected the request, taking the view that the appeal proceedings were not improper. An abuse justifying the apportionment of costs could only be rooted in the party's conduct **during the proceedings**.

In a number of cases the boards took the admissibility or allowability of an opposition or an appeal to be an indication that no abuse had taken place (e.g. T 7/88 and T 525/88). Similarly, in T 506/89, the board found that the opponent's filing of an appeal did not constitute an abuse of procedure and therefore rejected the request for a different apportionment of costs, since it had decided, in the oral proceedings, to maintain the patent as amended. Nor was there an abuse of procedure where the appeal was filed without new arguments (T 605/92) or where the appellant's chances of success were considered to be low (T 318/91). According to T 717/95 no abuse has taken place if a party to the proceedings misinterpreted the content of a citation when comparing it with the subject-matter claimed in the disputed patent.

In J 22/12 it was disputed whether an appeal against a communication issued on behalf of the examining division could be admissible. The board found that this was not the case. It considered that the filing of an opposition and of a subsequent appeal in the matter could not be considered as an abuse of procedure as they were actions which used the provisions of the EPC for the ends envisaged by those provisions. Thus the board found it appropriate that each party should bear its own costs.

2.4. Withdrawal of opposition or appeal at short notice

An appellant is entitled to withdraw his appeal at any time. Based on the principle of free party disposition, this right may not be restricted, even implicitly by the threat of cost apportionment, on the grounds that oral proceedings have been scheduled and the opposing party cannot be notified in time. As a rule, the benefits that respondents derive from the withdrawal of the appeal will offset the costs that they incur, even if they are avoidable. That is the case even if the appeal is only formally pending on account of the request for cost apportionment (T.490/05).

In T.85/84 the appellants withdrew the appeal in a telex to the EPO and the respondents' representative **48 hours** before the date of the oral proceedings. By the time the respondents' representative found out, he had already departed in order to prepare for the oral proceedings in Munich. The board conceded that the appeal had been withdrawn at extremely short notice but did not order apportionment of the costs, as the respondents' representative had still been informed in due time that the oral proceedings would not be taking place. Internal delays in forwarding the communication were not the fault of the appellants. The representative's departure for Munich a day before the oral proceedings was not warranted by the distance and therefore not necessary from the point of view of the oral proceedings.

In T.614/89 and T.772/95, in which the appeals were withdrawn respectively **four and three days** before the date set for oral proceedings, the boards ruled that the short notice alone did not constitute an abuse of procedure.

The same conclusion was reached in T.674/03, where the opponent withdrew its appeal **nine days** before the date set for the oral proceedings. The board held that the exercise of an absolute procedural right did not, in principle, constitute abuse and that there was no evidence of improper or negligent conduct.

In T.1663/13 the opponent waited until the **last working day** before the oral proceedings scheduled to withdraw both its request for oral proceedings and its appeal. The board cancelled the oral proceedings. The board agreed with the principles set out in T.490/05. However, it held that the case was not simply about withdrawing an appeal on the last working day before scheduled oral proceedings. Rather, the board noted the **special circumstances of the case**, inter alia, that the opponent did not follow the board's direction to declare whether it maintained its request for oral proceedings in view of the board's negative opinion on the admissibility of the appeal, but instead twice requested an extension of time limit without filing any substantive reply. The board decided to apportion costs and fix the amount both for preparing the oral proceedings and for travel.

2.5. Other cases

In T.952/00 the board found that the wrongful act, whether intentional or simply the result of culpable negligence, had to be judged in the light of the normal behaviour of an ordinarily diligent party. It also had to be the direct cause of the costs in suit. In the case in point, it transpired that the proprietor had culpably made inaccurate statements in the course of

the proceedings. The board concluded that without those false statements the opponent (appellant) would not have been required to go to the expense of gathering further evidence. Its request for an apportionment of the costs it had incurred during taking of evidence after notification of the decision at first instance was therefore granted.

In T.269/02, according to the respondent, the appellant had been given sufficient opportunity before the opposition division to amend its claims to overcome the problem under Art. 123(2) EPC 1973. However, the appellant had chosen not to do this, with the result that the patent was revoked on this ground, rendering necessary the appeal proceedings, which dealt solely with the issue of amendment. Contrary to the respondent's assertions, the board stated that in cases such as the present, where the patent had been revoked in opposition proceedings, the appellant must be given the opportunity to study the decision of the opposition division duly substantiated in writing in order to enable it to decide on the **formulation of appropriate requests** for the appeal proceedings. In these circumstances, the board did not find that the appellant had abused or exceeded its legitimate rights, in a way which arbitrarily caused the respondents to incur costs which, in all fairness, ought to be reimbursed. The request for an apportionment of costs was therefore refused.

In T.916/05 the circumstances did not justify a different apportionment of costs. The fact that some of the arguments had not been presented before and could have been filed in oral proceedings before the opposition division, had such proceedings taken place, was in the board's opinion irrelevant and could not be regarded as an abuse of procedure. In fact, an appellant could not be prevented from choosing a **different line of argument** when making its case before a board of appeal.

In T.162/04 the respondent requested a different apportionment of costs because it had had to invest a considerable amount of time and effort in considering the numerous requests submitted by the appellant during the appeal proceedings. However, the appellant's **requests were later withdrawn** rendering the time and effort of the respondent, in its view, useless. In the board's judgment, such conduct did not amount to an abuse of procedure. Indeed, the conduct of the appellant, who by withdrawing the contested requests and by **replacing them with other requests** was apparently trying to overcome the objections which had been raised, was not as such objectionable but had to be considered as a legitimate defence of its case. The request for an apportionment of costs was therefore refused (likewise T.967/12).

In T.248/05 the board held that the alleged **lack of clarity** of the category of the claimed subject-matter and the possible associated additional costs which could be incurred by a clarification of this subject-matter would not justify apportioning the respondent's costs to the appellant. Firstly, the criticised elements of claim 1 and the alleged vagueness of the statement setting out the grounds of appeal were entirely irrelevant for the subject-matter of the appeal in point, i.e. the findings of the opposition division on added subject-matter. Secondly, lack of clarity of a claim or of a submission could hardly be regarded as an abuse of procedure unless this were intentional.

In T 854/12 the board decided that a different apportionment of costs was justified where procedural stages had needlessly had to be repeated because a **lack of clarity as to the owner** of the company purportedly acting as a party had been deliberately exploited or at least knowingly allowed to persist during the proceedings.

3. Expenses that may be apportioned

Under R. 88(1), EPC (R. 63(1), EPC 1973) the decision on apportionment of costs in opposition proceedings may consider only the expenses necessary to ensure proper protection of the rights involved (T 167/84, OJ 1987, 369; T 117/86, OJ 1989, 401; T 416/87, OJ 1990, 415; T 323/89, OJ 1992, 169). The order for apportionment of costs should be such as to compensate the other party for the unnecessary costs which it has incurred as the direct result of the appellant's failure in its duty (T 212/07, T 952/00). On the costs of interpreting at oral proceedings, see chapter III.C.8.2.

According to Art. 16 RPBA (2007), **the costs ordered to be paid in appeal proceedings** may be all or part of those incurred by the receiving party and may inter alia be expressed as a percentage or as a specific sum. In the latter event, the board's decision is a final decision for the purposes of Art. 104(3), EPC. The costs ordered may include costs charged to a party by its professional representative, costs incurred by a party itself whether or not acting through a professional representative, and the costs of witnesses or experts paid by a party but shall be limited to costs necessarily and reasonably incurred.

Under R. 88(1), third sentence, EPC, the costs include the remuneration of the parties' representatives. In T 854/09 the board stated that the costs concerned were those reasonably incurred by the opponent. In this case, where an adjournment of oral proceedings was necessary, this included the expense of a single representative preparing for and attending the second proceedings, including travel and accommodation. Under R. 88(2), last sentence, EPC, costs may be fixed once they have been established as credible. The request must be accompanied by a bill of costs and supporting evidence. The board in T 475/07 exceptionally took the view that a detailed cost calculation was superfluous. It worked on the assumption that the representative could calculate on the basis of one day for preparing the additional oral proceedings and one day for attending them. The cost estimate of EUR 2 300 thus seemed credible.

In T 930/92 (OJ 1996, 191) the board held that, when fixing the amount of costs to be paid to a party, in addition to the remuneration of the professional representative of that party, the expenses incurred by an employee of that party in order to instruct the professional representative before and during oral proceedings could be taken into consideration under R. 63(1), EPC 1973, if such instruction was necessary to assure proper protection of the rights involved. In T 326/87 (OJ 1992, 522), all the costs incurred as a result of the remittal to the department of first instance were deemed to be apportionable.

Since the filing of new material after expiry of the opposition period may cause the other party to incur additional costs, the board, in T 117/86 (OJ 1989, 401), ordered that the appellant should pay the respondent 50% of his representative's costs in preparing and filing the response to the appeal (see also T 83/93).

In T.715/95 new documents were submitted only in the appeal proceedings, and the delay was not justified. However, the board admitted the documents, remitted the case to the department of first instance and ordered the late-filing party to bear 50% of the cost of the oral proceedings. Similarly, in T.45/98, the appellant submitted new documents only in the appeal proceedings, and they were admitted. The case was not remitted to the department of first instance, but the appellant was ordered to pay 45% of the costs incurred in the appeal proceedings by the respondent's representative.

3.1. Future costs

The prevailing view in the boards' case law is that they should not take a decision on the apportionment of future costs because they have no basis for assessing them and lack jurisdiction (T.1178/04, OJ 2008, 80). Thus the board in T.758/99 held that a decision on the apportionment of **future** costs in appeal proceedings caused by the late filing of documents depended on the course of the subsequent procedure and, in the absence of the necessary facts, could not be decided at that stage (see also T.133/06). For these reasons the board deviated from the judgment given in T.611/90, in which the legitimately incurred future costs had been apportioned. The board remitted the case to the department of first instance and ordered that a decision on the request for apportionment of costs would be taken at a later stage (see also T.223/95, T.758/99, T.890/00, T.1182/01, T.48/00 and T.758/99).

In T.369/08 the board also stated that it was apparent that the costs arising would depend on the course of the future proceedings. According to the board, the consequence of this is that the board necessarily is not in possession of the necessary facts to decide upon an apportionment of costs. Consequently the Board considered it appropriate not to make an open-ended order of apportionment of costs as had been done in the aforementioned T.611/90.

In T.1282/08 the board noted that in some cases some boards of appeal ordered the apportionment of future costs (see T.847/93, T.715/95) and the scenarios facing these other boards might have been different in the above-cited cases. Nevertheless, the board had difficulty seeing how it could make a decision, at the remittal stage, on the apportionment of costs yet to be incurred in subsequent proceedings, the course and outcome of which were still open to speculation. Hence the possible apportionment of opposition costs was to be decided by the opposition division at the end of the opposition proceedings.

3.2. Procedure for fixing costs

Under R.88(2)EPC, costs will be fixed only at the request of the entitled party. The request must be filed with the registry of the opposition division and is not subject to a time limit. Under R.88(3)EPC, a request for a decision by the opposition division on the amount fixed by the registry must be filed within one month of the communication on the fixing of costs. It must be filed in writing and state the grounds on which it is based. It is not deemed to be filed until the fee prescribed in Art.2(1) item 16 RFees has been paid.

In T. 668/99 the question was raised as to whether the prohibition of reformatio in peius also applied if the proceedings were not referred to a higher level of jurisdiction but were continued within the same level of jurisdiction, as was the case with a **legal remedy against the fixing of the costs** by the opposition division registry. The board recalled that an appeal and a request for an opposition division decision have far more similarities (suspensive and devolutive effect) than differences, and so the position of the sole requester is comparable to that of the sole appellant. The board was therefore satisfied that the prohibition of reformatio in peius also had to apply to a request under Art. 104(2), second sentence, EPC 1973.

Where the **boards of appeal** have to rule on the apportionment of costs, they have the power under Art. 104 EPC (Art. 111(1) EPC 1973) and having due regard to Art. 113(1) EPC 1973, not only to apportion but also to fix the costs (see e.g. T. 934/91, OJ 1994, 184; T. 323/89, OJ 1992, 169; T. 930/92, OJ 1996, 191; for a more recent decision in which the board fixed the amount of the costs, see T. 1663/13). The scope of the apportionment depends on the specific circumstances of the individual case. The party to the proceedings who caused the additional costs may be ordered to pay all or a part of those costs (T. 323/89, OJ 1992, 169).

3.3. Appeal against decision fixing amount of costs

According to R. 97(2) EPC, the decision fixing the amount of costs of opposition proceedings cannot be appealed unless the amount exceeds that of the fee for appeal.

In T. 161/17 the appellant had contested only the opposition division's decision fixing costs and not its earlier interlocutory decision (on maintenance of the patent in amended form), in which it had also ordered a different apportionment of those costs. The board considered that this decision apportioning costs had become final. Since, in its appeal against the fixing of costs, the appellant had in fact objected only to their apportionment, the appeal had to be dismissed. It did not follow from R. 97(1) EPC that a decision apportioning costs was necessarily open to challenge together with the decision fixing them.

4. Procedural aspects

4.1. Filing a request for apportionment of costs

The practice before the boards of appeal is that all requests by parties, including any requests as to costs, should be made before any decision is announced in oral proceedings, as the decision on apportionment is part of the final decision (see R. 88(1) EPC re opposition proceedings). In T. 212/88 (OJ 1992, 28), though, **by way of exception** the request for apportionment was also considered later, because at that time this practice had not been published and the parties were therefore unaware of it.

The decision on costs may also be taken in isolation if the opposition and the appeal have been withdrawn (T. 85/84, T. 765/89).

There is no basis for deciding on a different apportionment of costs if the party which would benefit from the decision did not request apportionment and even made it known that it would not enforce any such decision (T 408/91, T 125/93).

A request for apportionment of costs submitted by the respondent merely as a party to the appeal proceedings as of right (Art. 107, second sentence, EPC 1973) must be rejected as inadmissible as it would otherwise contravene the principle of equal treatment (T 753/92, T 514/01, T 1237/05).

In several decisions, the boards of appeal have stressed the importance of submitting evidence to support a request for a different apportionment of costs (e.g. T 49/86, T 193/87, T 212/88, OJ 1992, 28; T 404/89, T 523/89, T 705/90, T 776/90, T 306/93). Thus in T 896/92 the request for a different apportionment of costs was rejected for lack of substantiation and because of the absence of obvious reasons. In T 193/87 (OJ 1993, 207) the board likewise refused to apportion costs because the respondents had provided no evidence and it was unable to see any reasons of equity that might have justified such an apportionment.

4.2. Competence issues

In T 765/89 it was stressed that the board was still responsible for deciding on the request that costs be awarded against the appellants even if the latter had withdrawn their appeal. Where an opponent (respondent) withdraws his opposition during appeal proceedings, he ceases to be a party to the appeal proceedings as far as the substantive issues are concerned but retains his party status in so far as the question of apportionment of costs is still at issue (T 789/89, OJ 1994, 482).

According to the board in T 1059/98, apportionment of the costs of proceedings before the opposition division could not be requested for the first time on appeal, because the boards of appeal could only review decisions taken by a department of first instance and so had no competence to decide on such requests (see also T 1273/11). As a matter of principle costs are not apportioned in transfer proceedings (J 38/92, OJ 1995, 8).

4.3. Appeal solely against the decision on apportionment of costs inadmissible

R. 97(1) EPC (Art. 106(4) EPC 1973) states that the apportionment of costs of opposition proceedings cannot be the sole subject of an appeal. As a rule, therefore, an appeal relating to apportionment of costs must be regarded as inadmissible if the appeal relating to the revocation of a patent is rejected as inadmissible for lack of merit and there is no other admissible request. However, if the impugned decision did not take into account the withdrawal of the request for oral proceedings and is thus based on a substantial procedural violation, the part of the impugned decision relating to apportionment of costs must be set aside (see e.g. T 154/90, OJ 1993, 505).

In T 1237/05 the board found that the opponent, not being adversely affected by the patent's revocation, was not entitled to appeal solely against the apportionment of costs. The opponent's appeal, in view of Art. 106(4) EPC 1973, was inadmissible on that count

alone. The mere fact that an appeal, in this case the proprietor's, was admissible did not in itself make the opponent's appeal admissible (the opponent in any case not being adversely affected by the first-instance decision on the merits) because it related only to cost apportionment. A distinction had to be drawn between appeal proceedings (initiated by at least one admissible appeal) and an appeal lodged by a party; the wording of [Art. 106\(4\) EPC 1973](#) clearly referred to an appeal lodged by one of the parties to the proceedings, regardless of the existence of other appeals lodged by the other parties.

In [T. 753/92](#) respondent I was adversely affected by the decision under appeal only in so far as their request for apportionment of costs was rejected. If respondent I had lodged an appeal against this decision, the appeal, with the apportionment of costs as its sole subject, would have been inadmissible under [Art. 106\(4\) EPC 1973](#). The fact that respondent I submitted the request for apportionment of costs merely as a party to the appeal proceedings as of right ([Art. 107 EPC](#)) could not render such a request admissible without contravening the principle of equal treatment.

In [T. 668/99](#) the board took the view that, since no appeal had been lodged against the opposition division's decision on costs, that decision had become final upon expiry of the time limit for filing a notice of appeal (see also [T. 161/17](#)). It found that the decision on costs mentioned in the request had not been submitted with the appeal, nor was there any indication of an implicit challenge to that decision. The board held that, unlike general procedural requirements, which – as had been consistently held – had to be reviewed at all times, including in the appeal procedure, the issuance of a decision on costs by the EPO did not necessarily mean that a decision had also to be reviewed by the EPO. The review of a decision at a higher level of jurisdiction required an appeal by one of the parties.

In [T. 420/03](#) the question arose whether the "additional decision" concerning the apportionment of costs fell within the scope of appeal. While the notice of appeal remained completely silent as regards the decision on the apportionment of costs, the request for cancellation of this decision was contained in the statement setting out the grounds of appeal. In the case before it, the board found that the notice of appeal did not contain any explicit statement concerning the apportionment of costs, and there was no other statement in the notice of appeal which could be interpreted – at least indirectly – that this was also the subject of the appeal.

S. Notifications

1.	Forms of notification	918
1.1.	Notification by postal services	918
1.2.	Notification by means of electronic communication	919
1.3.	Notification by delivery by hand and delivery by public notice	920
2.	Notification to representatives	920
3.	Notification to third parties	921
4.	Spheres of risk and apportioning the burden of proof	922

Notifications are governed in detail by Art. 119 EPC and R. 125 to 130 EPC. Notification may be made by post, delivery by hand, public notice or, as provided for in R. 127 EPC, by means of electronic communication. With regard to notifications by electronic communication, a pilot project was launched by the Decision of the President dated 4 July 2012 (OJ 2012, 486), with the aim of progressively introducing new technical means for the electronic communication of patent applications, other documents, notifications and further information. The pilot project was continued by the Decision of the President dated 11 March 2015 (OJ 2015, A28) together with Administrative Council decision CA/D 6/14 of 15 October 2014 (OJ 2015, A17).

Under the above-mentioned Administrative Council decision CA/D 6/14 (OJ 2015, A17), a set of amendments to the Implementing Regulations concerning notification and the use of electronic tools in proceedings before the EPO were introduced, thereafter entering into force on 1 April 2015. In particular amendments to 125, 126, 127 and 129 EPC were adopted, and these are explained in the sections on the individual forms of notification below. Amended R. 125(1) EPC clarifies what documents must be notified and serves merely as an explicit legal basis for the EPO's existing practice of not formally notifying notices and communications from which no time limits are reckoned (see notice of the EPO dated 30 March 2015, OJ 2015, A36). R. 126(1) EPC was further amended by Administrative Council decision CA/D 2/19 (OJ 2019, A31) to remove the requirement to notify with advice of delivery (proposed to enter into force on 1 November 2019).

1. Forms of notification

1.1. Notification by postal services

In R. 126 EPC, and also in R. 125(2) and 133(1) EPC, references to "post" have been replaced by "postal services" and "postal service providers" in 2015. This gives the Office the freedom to choose any postal service provider it regards as suited to serving notification.

In view of the low return rate of advices of delivery and the notable administrative burden associated with their processing, R. 126(1) EPC was amended by Administrative Council decision CA/D 2/19 (OJ 2019, A31) to remove the requirement to notify by registered mail with advice of delivery. Decisions incurring a period for appeal or a petition for review,

summons and any notice or other communication triggering a time limit must instead be notified by registered letter, if not notified electronically. Amended R. 126(1) EPC is proposed to come into force on 1 November 2019.

In T 1693/13, the EPO had notified the contested decision using courier service UPS before R. 126 EPC as amended had entered into force. The board held that the appellant had been entitled in the circumstances to assume that the UPS courier service was treated as "post" within the meaning of R. 126 EPC as then still in force and that it made no difference to how the appeal period was determined under that provision whether a decision had been sent by post or by UPS. In contrast, in G 1/14 the Enlarged Board took the view that old R. 126(1) EPC related solely to notification by post using a "registered letter with advice of delivery" and not to any other kind (by UPS in the case in hand). See also chapter V.B.2.3.3.

In J 9/96 the Legal Board of Appeal held that notification of a communication posted as an ordinary letter in accordance with R. 78(2) EPC 1973 (no longer applicable since 1.1.1999) was deemed to have been made when despatch had taken place. However, if the communication did not reach the addressee and was not returned to the EPO, the legal fiction of deemed notification could not be applied, unless the EPO could establish that it had duly despatched the communication (see also J 27/97 and J 32/97). On the question of apportioning the burden of proof and spheres of risk in connection with notification irregularities, see in this chapter III.S.4.

1.2. Notification by means of electronic communication

Under R. 127 EPC, notification may also be effected by means of electronic communication as determined by the President of the EPO and under the conditions laid down by him. However, for this to happen, users must have agreed to receive communications by such means.

R. 127(2) EPC extends to electronic notification the safeguards that already applied for paper. It defines the date on which an electronic document is deemed to be delivered as the tenth day after its transmission. In case of dispute, the Office must prove that the electronic document reached the addressee, or the date on which it reached him. This provision is not limited to any specific technical solution or tool, such as the Mailbox service (see notice of the EPO dated 30 March 2015, OJ 2015, A36).

The President's decision of 11 March 2015 (effective as of 1 April 2015) is currently the legal basis for the EPO's Mailbox service (see notice of the EPO dated 30 March 2015, OJ 2015, A36). It defines the date of transmission, which triggers the ten-day period under R. 127(2) EPC, as the date indicated in the document ("the date of the document"), provided the addressee can access it in the Mailbox by that date. In other words, the ten-day period cannot be considered to have started before the date of the document. If the addressee disputes the date of transmission, it is up to the EPO to establish it. The ten-day period then starts on the date thus established (Art. 9 of the decision, OJ 2015, A28).

Facsimile ("fax") transmission of notifications is generally not admissible (J.27/97) and therefore does not constitute valid notification even if receipt is proven. The situation was different in T.580/06 where notification of a shortfall under point 6.4 ADA was sent only by fax. However, this form of notification was in keeping with point 6.4 ADA in conjunction with R.77(2)(d) EPC 1973. The President had not laid down conditions for notifications by fax within the meaning of that rule; in particular, postal confirmation of the fax had not been made compulsory. Thus the notification had been made in an appropriate form. In the board's view, the "OK" on the fax transmission report was to be regarded as evidence of complete and error-free transmission, on which the fax became the recipient's responsibility.

1.3. Notification by delivery by hand and delivery by public notice

Under R.128 EPC notification may be effected on the premises of the EPO by delivery by hand of the document to the addressee, who must on delivery acknowledge its receipt. Notification is deemed to have been effected even if the addressee refuses to accept the document or to acknowledge receipt thereof.

If the address of the addressee cannot be established, or if notification in accordance with R.126(1) EPC has proved to be impossible even after a second attempt, notification shall be effected by public notice (R.129(1) EPC). In this case, the EPO informs the parties and the public of the date on which the document is deemed to have been delivered by publishing a notice in the European Patent Bulletin. The document is deemed to have been delivered one month after publication of the notice.

2. Notification to representatives

If a representative has been appointed, notifications must be addressed to him in accordance with R.130(1) EPC (previously R.81(1) EPC 1973) from the time of his appointment. This only applies if a representative is actually appointed before a notification is posted since a notification has to be made on the basis of the facts on file at the time of posting (J.22/94). If several representatives have been appointed for a single party, notification to any one of them is sufficient (T.1281/01).

In J.17/98 the board stated that the filing of a general authorisation does not, without any additional information linking the authorisation to a specific case and/or to the appointment of a representative, imply the appointment of a professional representative (see also decision J.20/96).

In its decision J.5/04, the board made it clear that the initial designation of a representative at the time when the international application had been filed with a receiving Office other than the EPO (here: INPI) did not meet the requirements for the valid designation of the representative for the regional phase before the EPO.

In T.812/04, the board pointed out that R.101(6) EPC 1973, in conjunction with R.81(1) EPC 1973, clearly indicated that, until the termination of an authorisation had been communicated to the EPO, the latter was obliged to notify communications, decisions

or other documents to the duly appointed representative and that these notifications alone would have valid effects. The fact that the appellant had filed the notice of appeal himself imposed no obligation on the Registry of the boards of appeal to inquire about the legal status of relations between the applicant (client) and the duly appointed representative or to send the documents and communications subsequently directly to the client direct.

In J 19/92 the Legal Board of Appeal held that notifications to an applicant's representative were duly made if they were despatched before the representative relinquished his brief. The notification to the applicant did not therefore have to be repeated after the brief had been relinquished. On the contrary, it was the representative who was obliged to inform his client of the notification. In T 247/98 the board confirmed that what determined whether a R 81(1) EPC 1973 notification was to be sent to the representative was the legal situation at the time when the document was despatched (see also T 1281/01).

However, in T 703/92 the written decision and minutes of the oral proceedings were sent not to the authorised representative but to the opponents. The board found that, as the provision relating to notification had not been observed, the question whether a notification had effectively taken place depended (in accordance with R 82 EPC 1973) on whether and when the representative had received the full decision.

In T 172/04 the notification concerned had been received by an employee authorised to receive post on behalf of the representative. That the representative himself only had knowledge of the notification several days or weeks later was therefore irrelevant, as the only legal condition to consider, i.e. delivery to the addressee, was established. This finding was confirmed in T 743/05, in which the board observed that an addressee is a person to whom something is addressed and that the authorised employee of the representative's office's signature on the advice of delivery met this definition. A different interpretation (i.e. that it had to be brought to the attention of the professional representative himself), would lead to uncertainty for all the users of the European Patent system, as the answer to the question whether notification had effectively taken place could in that case depend entirely on the honesty, goodwill or organisational skills of the professional representative (similarly T 261/07).

In J 28/10 the representative's office was located in a large building in a business-park and incoming mail for the law firm was left at the doorman's desk. The doorman was the employee of a security company, this company having a contractual relation with the company that administrated the business-park where the representative rented office space. This led the board to the conclusion that a letter which was delivered to a recipient, who was also identified as recipient for previous deliveries, should be deemed delivered by the postman to an authorised recipient, acting within the mail reception process implemented at the representative's office and accepted by him.

3. Notification to third parties

In T 261/07 the decision to revoke the patent was delivered (by registered letter with advice of delivery) to a person who was not an employee of the patentee (to whom the notification was addressed), but of a company that received letters on behalf of the patentee. No

acknowledgement of receipt was on file for the patentee, who claimed never to have received the decision. Following T. 172/04 and T. 743/05, the board held that for reasons of legal certainty, delivery to the addressee is effected once a person authorised by the addressee has received the letter. In T. 1535/10 too, the board held that, where the recipient did not operate his own mail office and instead made use of an external mail office, he had to accept that the external office would be treated as if it were his own in matters relating to the delivery of communications subject to deadlines. Any delay in forwarding such communications on the part of the external office would thus be attributed to the recipient's sphere of risk.

In J. 35/97, a communication was handed to a third party not authorised by the appellant to accept it. The said party was in the addressee's business premises, but not an employee. In the board's view, that meant that notification under Section 12(1) and (2) RPCPS had not occurred. Nor did the party qualify under any of the categories of "substitute addressee". There was also no evidence that the appellant had ever seen the communication. The board therefore found the EPO had not shown notification to have been properly effected.

4. Spheres of risk and apportioning the burden of proof

Under R. 126(2) EPC, in the event of any dispute, it is incumbent on the European Patent Office to establish that a letter has reached its destination or to establish the date on which it was delivered to the addressee, as the case may be. In cases where the EPO is not able to prove the actual date of notification, a letter, for instance, sent by the addressee himself which indicates the date of receipt is accepted as proof. If it is evident from an addressee's reply that he has received the document, although he does not mention the date of its notification, the date on which that reply was written is to be regarded as the date of notification (Guidelines E-II, 2.6 – November 2018 version, regarding R. 125(4) EPC). The risk associated with electronic notification under R. 127 EPC is apportioned in the same way.

In T. 1535/10 the board held that responsibility for obstacles to and delays in the receipt of decisions to be notified under R. 126(1) EPC had to be assigned according to spheres of risk. The Office was liable for both the risks arising in its own sphere and "transport risks". However, it distinguished such risks from those within the recipient's sphere of organisation and influence, e.g. the risk that employees or other authorised recipients failed to forward a letter delivered to the business address, or delayed in doing so. For a presumption that a letter had entered the recipient's sphere of organisation and influence, it sufficed that it had been delivered to his address and that he was in a position to take note of it, irrespective of whether he had actually taken (final) possession of it and noted its content (see also T. 580/06).

In J. 14/14, in keeping with the bulk of the boards' case law, the Legal Board held that it was clear from the wording of R. 126(2) EPC that, in the event of any dispute as to whether a notification has been received by the addressee, the onus was on the EPO to establish the fact and date of delivery. In the case in hand, the only proof of delivery that the EPO had in respect of the communication in question was a letter from Deutsche Post, referring

to a registered letter sent to the appellant's representative and stating that it had been delivered to a person authorised to receive it. This was deemed insufficient to fulfil the requirements of R. 126(2) EPC since there was no proof that the appellant's representative or any other named individual had signed a document acknowledging receipt of the letter and no communication from the foreign postal service was disclosed (see also J. 9/05 and J. 18/05, where a similar confirmation letter by Deutsche Post was held not to be sufficient to prove the receipt of an EPO notification since the appellant had filed a considerable amount of counter-evidence and pointed out specific reasons why the letter might not have been received by the representative's office).

In T. 529/09, however, the board held, distinguishing the case in hand from J. 9/05 and J. 18/05, that unlike in these cases, the appellant had not submitted any further arguments or evidence in order to demonstrate that the Deutsche Post's confirmation had failed to establish that the registered letter had reached its destination. The evidence on file therefore had to be regarded as sufficiently reliable and complete for proving the proper delivery of the letter (see also T. 1304/07, T. 1934/16).

In T. 247/98 the board stated that when establishing the meaning of the term "im Zweifel" in the German version of R. 126(2) EPC, account should be taken of the French and English versions, which assume that there is a dispute ('en cas de contestation', 'in the event of any dispute'). A dispute ('Zweifel', literally 'doubt' in the German version) within the meaning of this rule could only arise if it was maintained that a letter had in fact been received more than ten days following its posting. The mere absence of the advice of delivery or the receipt from the file was not in itself sufficient to give rise to a dispute ('Zweifel') within the meaning of this rule. In T. 2054/15 the board stated that the burden of proof on the EPO cannot be taken to mean that the party is under no obligation to help clarify the circumstances within its own sphere of responsibility.

T. Applications by non-entitled persons

Art. 61 EPC deals with the remedies available where a person other than the patent applicant is held by a national court to be the person entitled to the grant of a European patent. The Article remains unchanged in substance. For further details, see R. 16 EPC and R. 17 EPC.

In G 3/92 (OJ 1994, 607), the Enlarged Board of Appeal was called upon to consider the application of Art. 61(1)(b) EPC 1973 in the following circumstances:

The appellant had lodged a European patent application in 1988. The search report revealed the existence of a prior application filed in 1985 for substantially the same invention by a third party, to whom the appellant had revealed the invention in confidence in 1982. This prior application had been published, and in 1986 deemed to be withdrawn for non-payment of the examination fee. Thereupon the appellant claimed from the UK Patent Office Comptroller, and was granted, entitlement to a patent for the invention disclosed in the prior European application under Section 12(1) UK Patents Act 1977. The appellant was thus allowed under Section 12(6) UK Patents Act 1977 to file a new application in the UK to be treated as having the same filing dates as the prior European application. The appellant then filed a new European patent application in respect of the invention disclosed in the prior application under Art. 61(1)(b) EPC 1973 in 1990.

The referring Legal Board of Appeal took the view in its interlocutory decision J 1/91 (OJ 1993, 281) that the Comptroller's decision was a final decision within the meaning of Art. 61 EPC 1973. However, whilst entitlement to a patent was a matter for national courts to decide, those courts had no power directly to provide a remedy under the Convention, that being a matter to be dealt with by the EPO under Art. 61 EPC 1973.

The Enlarged Board of Appeal held that when it has been adjudged by a final decision of a national court that a person other than the applicant is entitled to the grant of a European patent, and that person, in compliance with the specific requirements of Art. 61(1) EPC 1973, files a new European patent application in respect of the same invention under Art. 61(1)(b) EPC 1973, it is not a pre-condition for the application to be accepted that the earlier original usurping application is still pending before the EPO at the time the new application is filed.

The Legal Board of Appeal therefore ruled in J 1/91 of 25 August 1994 that the conditions of Art. 61(1)(b) EPC 1973 had been met and accordingly remitted the patent application to the Receiving Section for further prosecution.

For stay of proceedings before the EPO in case of entitlement suit, see also chapter III.M.3. "Stay of proceedings under Rule 14(1) EPC".

U. Rules relating to Fees

1.	General	925
2.	Payment of fees	926
2.1.	Methods of payment	926
2.2.	Debit orders	926
2.3.	Indication of purpose of payment	927
3.	Date of payment	928
3.1.	Fiction of fee payment in due time – ten-day fail-safe arrangement	928
4.	Insufficient payments – small amounts lacking	929
5.	Reduction of the examination fee	930
6.	Partial refund of the examination fee	930

1. General

The Rules relating to Fees (RFees) determine the amounts of the fees levied by the EPO and the ways in which they are to be paid (Art. 51(4) EPC). They also contain provisions regulating the due date for fees, the particulars to be indicated concerning payments, the date of payment, insufficient payments and certain refunds and reductions.

According to the Legal Board of Appeal in **J 7/07**, no provision of the EPC states explicitly that the EPC takes precedence over the Rules relating to Fees in cases of conflict between them. However, the EPC is clearly the higher legal norm, and in case of conflict, by analogy with Art. 164(2) EPC 1973, the provisions of the EPC should take precedence over the provisions of the Rules relating to Fees. Also on general legal principles, the Implementing Regulations should take precedence over the Rules relating to Fees. See also chapter III.D.1.2.2 "Applicability of Rule 132 EPC to the Rules relating to Fees".

The EPC 2000 required a revised version of the Rules relating to Fees, which also entered into force on 13.12.2007 (see Administrative Council decision of 7.12.2006, OJ 2007, 10; also Administrative Council decision of 25.10.2007, OJ 2007, 533). Since then, further amendments have come into effect – information can be obtained from the EPO website using the regularly updated HTML version of the Rules relating to Fees, and its "Version history" function (see also OJ 2018, A98). The relevant chapter of the Guidelines for Examination (November 2018 version) is Part A-X. Up-to-date fee information on fees is available in the Official Journal of the EPO under the rubric "Guidance for the payment of fees, expenses and prices" and at www.epo.org/applying/forms-fees.html.

Besides the cases set out below, decisions concerning individual procedural fees are to be found in the relevant chapters of this book.

2. Payment of fees

2.1. Methods of payment

Fees due to the Office may be paid by the methods foreseen in Art. 5 RFees (see also R 2/09). Art. 5(1) RFees provides for payment or transfer to a bank account held by the Office. Under Art. 5(2) RFees further fee payment methods may be allowed by the President of the EPO. These are payment by debit order from a deposit account held with the EPO (see in this chapter III.U.2.2.) and payment by credit card (since 1 December 2017 – see decision of the President, OJ 2017, A72, and Notice, OJ 2017, A73).

2.2. Debit orders

Under Art. 5(2) and Art. 7(2) RFees the EPO makes deposit accounts available for the settlement of fees and costs of other services provided by the EPO (not, however, for the fees according to Art. 17 REE – see D 9/17). These are governed by the Arrangements for deposit accounts (ADA) and their annexes. The current version (Supplementary Publication 5, OJ 2017, 11; for amendments, see OJ 2019, A20) has introduced many changes in the use and management of deposit accounts; an overview is given in the accompanying Notice (Supplementary Publication 5, OJ 2017, 2; see also later Notice, OJ 2019, A21). In particular, debit orders may be filed only in an electronically processable format by an accepted means, and with that EPO Form 1010 has become obsolete (points 5.1.2, 5.1.3 and 5.2.4 ADA and Notice; see also T 590/18 in chapter III.A.1.2.1). It follows that some of the decisions in this section are now of limited application.

Already in T 152/82 (OJ 1984, 301) it was held that the EPO must execute a debit order in accordance with the substance of that order where the intention was clear, even though the amount specified was clearly incorrect (see also T 2035/14). This also applied where a national form was used in error, as in T 170/83 (OJ 1984, 605). A timely filed statement that a debit order for payment of a fee had been issued was itself considered such a debit order in the absence of any record of the original (T 17/83, OJ 1984, 306).

In T 1265/10 the board considered in the particular circumstances of the case that the crossing of Section X of the notice of opposition (EPO Form 2300) to indicate enclosure of a fee payment voucher (which enclosure, however, was not found at the EPO) was a declaration of the intention to pay the opposition fee. A debit order had to be unambiguously recognisable and show a clear and unambiguous intention to make a particular payment (T 170/83, OJ 1984, 605; T 152/82, OJ 1984, 301; T 152/85, OJ 1987, 191). As stated in T 170/83, an authorisation to be derived from the circumstances required that the authorising person (account holder) was known and clearly identifiable, and that certain fees due to the EPO for a known procedure were meant to be paid by the withdrawal from such account (and not in any other way). Following T 806/99, which was based on almost identical facts, the board found these conditions to be fulfilled. This was sufficient for payment of the fee.

However, in T.198/16 the board held that the statement in the electronically filed notice of appeal "The appeal fee is paid via the enclosed form 1010" (which form was not enclosed) was not a "clear, unambiguous and unconditional" debit order under point 6.3 ADA 2015, but a mere statement that such a debit order was supposed to be given.

In J.14/12 the question was whether for the renewal fees paid on a divisional application additional fees were also due. The board found that, for some of the renewal fees, a letter filed within the four-month period of R.51(3), second sentence, EPC requesting (in general terms) debiting of the fees falling due with the filing of that divisional application was, when read in conjunction with the internal fee calculation sheet filed with the application, sufficient to fulfil the requirements for the content of a valid debit order (see point 6.3 ADA, version valid from 1.4.2009, Supplement to OJ 3/2009). Hence, those renewal fees were timely paid and additional fees were not due.

In case T.773/07, which concerned the Arrangements for deposit accounts in force until 12.12.2007 (Supplement to OJ 1/2005), the appellant's deposit account held insufficient funds to cover the appeal fee. The board rejected the argument that this fee could or should have been booked before six other fees on the relevant date. It was not for the EPO cashier to choose priorities between fees to be paid, all the more so since it was the responsibility of the account holder to ensure that the account contained sufficient funds at all times (point 5.2 ADA; see current points 5.2.1 and 5.2.2 ADA).

In T.871/08 of 23 February 2009 the opponent had indicated that the appeal fee would be paid by online debit order, but also requested that, if this was not done by one day before expiry of the Art.108 EPC 1973 time limit, the Office should debit the fee. The board held that the payment of the appeal fee was exclusively the responsibility of the appellant or its representative, who could not discharge themselves by shifting the responsibility to the Office, let alone with a conditional order. However, in T.2364/12 a different conclusion was reached in the circumstances of that case.

It is to be noted that debit orders may now specify a deferred execution date (point 5.4.1 ADA).

As confirmed in T.270/00, if an automatic debit order is revoked after the decisive payment date for the appeal fee, this is too late to affect the payment. Valid payment of the appeal fee is a matter of fact, which cannot be undone and is not at the disposal of the appellant.

2.3. Indication of purpose of payment

According to J.16/84 (OJ 1985, 357, headnote), which concerned the application of the former Art.7(2) RFees (now Art.6(2) RFees), if when a fee is paid the purpose of the payment has evidently been given incorrectly, this deficiency is not prejudicial if the intended purpose can be established without difficulty from the remaining information. The inadvertent use of a fee by the EPO for a different purpose from that evidently intended by the person making the payment has no effect on the purpose intended by that person.

In J.19/96 the board noted that J.23/82 (OJ 1983, 127) held that the indication of the purpose of a payment within the time limit for payment was not a mandatory requirement for payment to have been made in due time and, according to Art. 7(2) RFees (now Art. 6(2) RFees), could thus still be given later. However, the current board doubted whether this meant that it was generally possible to change the purpose of a payment after expiry of the relevant time limit with retroactive effect to the date on which the payment was made.

J.23/82 and J.19/96, which concerned designation fees for individual contracting states under the earlier law, are reported in the "Case Law of the Boards of Appeal", 6th ed. 2010, VI.F.2.4.

3. Date of payment

Where an amount is paid into or transferred to a bank account held by the Office, the date on which the amount of the payment or transfer is **actually entered** in its account is considered to be the date on which the payment has been made to the Office (Art. 7(1) RFees, formerly Art. 8(1) RFees). Thus, where an appeal fee was mistakenly transferred to a bank account held by the German Patent Office (GPO), neither the date on which the transfer was entered in the GPO's account nor the date on which the order to transfer the amount to the GPO was issued could be taken into account to establish whether a fee due to the EPO had been paid in due time (see T.45/94 and T.1130/98).

Payment via the EPO's credit card fee payment service is deemed to have been made on the date on which the transaction is approved (see OJ.2017, A72 and A73).

3.1. Fiction of fee payment in due time – ten-day fail-safe arrangement

Under Art. 7(3), (4) RFees, provided that certain requirements are met, the period for payment of a fee is considered to have been observed even if payment is not **received** until after expiry of the period in which it should have been made. If the payment was **undertaken** no later than ten days before expiry of said period, no surcharge becomes payable under Art. 7(3) RFees. However, as confirmed in J.25/12, payment of a surcharge does not create a possibility to **pay** a missing fee amount **after expiry** of the period for payment. For the application of the rule see T.842/90 and J.20/00. In the latter case, which concerned the payment of a renewal fee, the board held that it applied, because in effect the due date for payment of a renewal fee marks the last day of a period (R.37(1) EPC 1973; cf. R.51(1) EPC) during which this fee can be validly paid.

Art. 7(3) RFees does not apply to key dates after which payments reaching the EPO are affected by a fee increase (J.18/85, OJ 1987, 356).

According to J.7/08, a period for payment may be deemed to have been observed within the meaning of Art. 8(3) RFees 1973 (cf. Art. 7(3) RFees) even if the receipt of the funds after the expiry of the period is no longer attributable to the original transfer order, but to another payment transaction initiated in the meantime (see also J.22/85, OJ 1987, 455).

4. Insufficient payments – small amounts lacking

Under Art. 8 RFees, a time limit for payment is in principle deemed to have been observed only if the full amount of the fee has been paid in due time. However, the EPO has the discretion, where this is considered justified, to overlook any small amounts lacking without prejudice to the rights of the person making the payment.

In T 130/82 (OJ 1984, 172) the board decided that it was justified to overlook an underpayment of just over 10%. In J 11/85 (OJ 1986, 1) the board stated that an underpayment of about 10% may as a rule be considered as a small amount (see also T 109/86 of 20 July 1987). See also T 343/02 of 20 January 2003, where the underpayment of less than 2% due to the unexpected deduction of bank charges was overlooked. The board in J 25/12 did not doubt that the underpayment could be regarded as a small amount, but stressed that the EPO could exercise its discretion to overlook small amounts only if justified. This was not so here since the representative had been informed about the changed fee rates and invited to pay the amount lacking within a time limit – which, however, he had failed to do.

In the cases set out below the amount lacking corresponded to the 20% language-based fee reduction according to former R. 6(3) EPC and Art. 14(1) RFees. Under the revised provisions (in force from 1.4.2014 – see Decision of the Administrative Council of 13 December 2013, OJ 2014, A4), this reduction applies only to the filing and examination fees and certain categories of applicant, and the amount is set at 30%.

According to T 290/90 (OJ 1992, 368), whether it is justified to overlook a small amount lacking must be decided on an objective basis, having regard to all the relevant circumstances of the case, and not on a subjective basis. The board held that in the circumstances 20% of the opposition fee could properly be regarded as a small amount, because it was inappropriate to punish the appellant for contending that he was entitled to a reduction in the opposition fee (under R. 6(3) EPC 1973), and the missing 20% was paid soon after expiry of the period.

However, in T 905/90 (OJ 1994, 306, Corr. 556) the board found that the meaning of 'smallness' could best be determined by comparing the amount of shortfall with the amount of the full fee. A difference of 20% clearly could thus not, on purely arithmetical grounds, be regarded as small. It was with very small or trifling amounts that the former Art. 9 RFees (see now Art. 8 RFees) was designed to deal so as to prevent a loss of rights where an inadvertent error of some kind had led to a slight underpayment of an amount due in respect of the relevant proceedings.

In J 27/92 (OJ 1995, 288) the examination fee was underpaid by about 20%. Distinguishing T 905/90, the board defined the concept of a "small amount lacking" as a fixed proportion of at most 20% of the amount of the fees to be paid. Moreover, the choice of 20% would achieve the desirable end of making it possible to apply the provision to cases where a party paying fees mistakenly sought to take advantage of the (now former) 20% reduction in fees available under R. 6(3) EPC 1973 and former Art. 12(1) RFees (see now Art. 14(1) RFees). In the circumstances of the case the board decided that it was

justified to overlook the deficit as the applicant not only paid it without delay, but also appeared to have been misled into paying only 80% of the fees as a result of information provided by the EPO. For a different approach, see T 642/12, in which the board, following T 905/90, considered that "small amounts lacking" are to be read as "insignificant or negligible amounts".

Reference is also made to decision T 152/82 (OJ 1984, 301), relevant to incorrect amounts in debit orders (see in this chapter III.U.2.2. above).

5. Reduction of the examination fee

In J 1/09, the Legal Board held that R. 107(2) EPC 1973 governed the reduction of the examination fee after the entry of an international application into the European phase. It did not apply to divisional applications. Art. 12(2) RFees 2003 only laid down the level of the reduction. For the conditions for the reduction it referred to R. 107(2) EPC 1973 (see also J 14/07).

J 4/18 concerned the application of the examination fee reduction (R. 6(3) – (7) EPC, Art. 14(1) RFees) to multiple applicants.

6. Partial refund of the examination fee

The Legal Board ruled in J 25/10 (OJ 2011, 624, see headnote) that following the withdrawal of a European patent application, a refusal by the examining division of a request for a 75% refund of the examination fee, on the basis that substantive examination has already begun (Art. 11(b) RFees), must be based on facts which objectively demonstrate that this is so. See also J 9/10. Following these two decisions the EPO made adjustments to the system for refunding search and examination fees – see Notice dated 29 January 2013 (OJ 2013, 153). For Art. 11 RFees, as in force from 1 July 2016, see OJ 2016. A48 and OJ 2016. A49.

1. Overview

Art. 133 and 134 EPC together with R. 152 EPC and the Decision of the President of the EPO dated 12 July 2007 on the filing of authorisations (OJ SE 3/2007, 128) provide a complete, self-contained code of rules of law on the subject of representation in proceedings established by the EPC. Art. 133 EPC lays down the general principles of representation. Art. 133(1) EPC stipulates that, subject to Art. 133(2) EPC, no person is compelled to be represented by a professional representative in proceedings established

by the EPC. However, according to [Art. 133\(2\) EPC](#), natural persons not having their residence in an EPC contracting state must be represented by a professional representative ([Art. 134\(1\) EPC](#)) or a legal practitioner ([Art. 134\(8\) EPC](#)) and act through him in all proceedings established by the EPC, other than in filing the European patent application ([T 578/14](#)).

The Guidelines for Examination in the EPO (November 2018 version) contain detailed information on the practice relating to representation, most notably in: A-III, 2; A-VIII, 1 and D-I, 7. They also refer to the decisions of the EPO President dated 12 July 2007 (OJ SE 3/2007, [A 3](#) and [L 1](#)). Readers can find analyses of those decisions in, for example, [T 267/08](#), [J 8/10](#) and [T 1744/09](#).

2. Professional representatives

2.1. List of professional representatives ([Article 134\(1\) EPC](#))

[Art. 134\(1\) EPC](#) stipulates that professional representation of natural or legal persons in proceedings established by the EPC may only be undertaken by professional representatives whose names appear on a list maintained for this purpose by the EPO. The requirements for entry in this list are laid down in [Art. 134\(2\) EPC](#). In the context of [Art. 134\(1\) EPC](#), it is also useful to consult [R. 154 EPC](#) "Amendment of the list of professional representatives", as well as the Decision of the President, OJ 2013, 600, and the Notice from the EPO, [OJ 2015, A55](#).

The objective of the list of professional representatives is to provide a survey of particularly qualified representatives in patent matters ([D 14/93](#), OJ 1997, 561).

In [J 1/78](#) (OJ 1979, 285) the appellant was entered on the list of professional representatives before the EPO under the letter "V" as "von F., A.". The object of his appeal was to obtain a ruling which would enable him to be entered under the letter "F" as, for example, in the telephone directory. The decision found that the entry was made in accordance with the principles laid down by the President of the EPO whereby the full surname must be entered in alphabetical order. Under German law, former titles of nobility ("von") form part of the surname. The board noted that the purpose of entry on the list was to confer upon the person whose name was entered the right to appear in the European patent grant procedure. A distinction had to be made between entry for the purposes of conferring a right and publication of the list, which latter was not prescribed in the EPC 1973. The EPO issues a directory from time to time for the purposes of meeting public demand for information. In this directory, the person entered on the list could be allowed an additional entry under another letter should he so desire.

2.2. Duty of persons without residence nor place of business within a contracting state to be represented by a professional representative

According to [Art. 133\(1\) EPC](#), no person shall be compelled to be represented by a professional representative in proceedings established by the EPC. However, [Art. 133\(2\) EPC](#) stipulates that natural or legal persons not having either a contracting

state residence or their principal place of business within the territory of one of the contracting states must be represented by a professional representative and act through him in all proceedings established by the Convention, other than in filing a European patent application. The Implementing Regulations may permit other exceptions. T.1157/01 reviews the applicable law.

As recalled in J.1/04 for instance, there is no obligation for an applicant having a principal place of business within an EPC contracting state to be represented in proceedings established by the Convention. If, however, the applicant wishes to be represented, he must authorise either an employee or a professional representative or legal practitioner.

Regarding an employee of a **group of companies**, T.2308/10 says that an employee of a company in such a group is not entitled to represent another company belonging to the same group. T.298/97 had already established that, there being no provision in the Implementing Regulations pursuant to Article.133(3), last sentence, EPC, the EPC did not currently allow the representation of one legal person by an employee of another economically related legal person.

In T.213/89 the Japanese inventor replied directly to the EPO with a set of revised application documents, and accompanied by a letter to his representative indicating that the revised documents had also been sent to the representative. The board noted that no confirmation by the representative was received that any of the submissions directly received from the inventor should be regarded as an official reply to an EPO action. Since persons not having a residence or their principal place of business within the territory of one of the contracting states must act through their representative in the proceedings, the said submissions received direct could not be taken into account.

In T.717/04, a letter from the appealing applicant, a natural person with an address not within the territory of one of the contracting states, was faxed to the EPO with arguments and a new set of claims to be taken into account. According to Art. 133(2) EPC.1973, since the appealing applicant's address was not within the territory of one of the contracting states, the board concluded that filing claims and arguments such as those in the appealing applicant's letter would have required professional representation. As these submissions were neither made nor endorsed by the representative, the board could not take them into account.

In T.578/14 Mr S., as a resident of New Zealand, had to act through a representative in the appeal proceedings. Therefore, the board could not take into account requests and submissions, which were made neither by the representative nor endorsed by him (T.213/89, T.717/04, and J.4/10). This did not apply to submissions which exclusively concerned the appointment or change of a representative or the filing of an authorisation or of any information that the representative's authorisation has terminated.

In J.9/13 the Receiving Section refused the European patent application pursuant to Art.90(5) EPC, because the applicant, resident in Moscow, had not appointed a professional representative as required by Art.133(2) EPC. The appellant (applicant) contended that Art.133(2) EPC did not apply to residents of the Russian Federation. The

Russian Federation was a party to the "Partnership and Cooperation Agreement (PCA). The board stressed that neither the European Patent Organisation nor the European Patent Office is part or member of the European Union. Therefore, neither the European Patent Organisation nor the European Patent Office are bound by the provisions of the PCA, neither of them is a "party" or "other party" pursuant to Art. 98 of the PCA. The appeal was deemed not to have been filed (R. 152(6) EPC by analogy).

2.3. Professional representatives during the transitional period

One of the conditions for including a professional representative on the EPO list is that he has passed the European qualifying examination (EQE). During a transitional period after the EPC 1973 first entered into force, this requirement could be waived under the conditions laid down in Art. 163 EPC 1973 (see J 19/89, OJ 1991, 425; J 10/81). For all states acceding to the EPC 1973 at its inception, this period ended on 7.10.1981 (Decision of the Administrative Council dated 6.7.1978, OJ 1978, 327). Art. 163 EPC 1973 was one of the transitional provisions, now superseded, and has therefore been deleted in the new EPC 2000.

Art. 163(6) EPC 1973 retains all its significance as a grandfather clause and is therefore preserved in the EPC 2000 to deal with the situation of national representatives of states acceding to the EPC in the future. The substance of the grandfather clause of Art. 163 EPC 1973 has therefore been integrated in Art. 134(3) EPC 2000 in simplified form, as a permanent provision of the EPC.

The reunification of Germany posed its own problems, in J 18/92, J 30/92, J 31/92, J 32/92 and J 33/92, regarding the admission of professional representatives. The appellants argued that the provisions of Art. 163(6) EPC 1973 should be applied to patent attorneys, even where they had qualified in West Germany and not the former GDR. In the board's view, Art. 163(6) EPC 1973 could only be applied by analogy to those finding themselves in a similar situation to the patent agents of a country acceding to the EPC. This requirement was fulfilled only by patent agents from the former GDR and not by their colleagues who had already been admitted in the West.

2.4. Procedural steps performed by a person other than the professional representative

In J 28/86 (OJ 1988, 85) the Legal Board of Appeal held that a request for examination filed by a person who was not entitled to act as a representative in accordance with Art. 134 EPC 1973 was invalid. The board noted that the situation did not change because the representative had later been entered on the list of professional representatives. In this capacity he had neither approved nor resubmitted the invalid request he had made earlier.

In T 665/89 the board addressed the question of the admissibility of an opposition by an opponent whose residence was not in a contracting state, where the notice of opposition was signed by a person who was neither a professional representative nor an employee of the opponent. The board of appeal concluded that the actions of the unauthorised

person ought to be judged as if the signature were missing, and thus assumed that the **deficiency** was remediable. The opponent supplied the missing correct signature at the EPO's invitation within the time limit laid down. The document thus retained the original date of receipt in accordance with R. 36(3), third sentence, EPC 1973 (G 3/99 cites T 665/89).

R 18/09 the Enlarged Board of Appeal, referring in detail to G 3/99 (OJ 2002, 347), stated that concerning the principle that a plurality of persons acting in common be treated as a single party (a "group party") and the requirement that such a group party acts through a common representative which both apply to petition proceedings. It was also held in G 3/99 (point 20 of the Reasons) that there is no practical need to acknowledge the validity of procedural acts of one member of a group party who is not its common representative. Such a procedural act is treated by the EPO in the same way as a missing signature. Where an appeal is filed by a non-entitled person, it shall be considered as not duly signed and the common representative be invited to sign it within a given time limit. (See also G 3/99 under III.R.3. "Appointment of a common representative (R. 151 EPC)").

In J 32/86 the board held that the mere appointment of a professional representative to meet the requirement of Art. 133(2) EPC 1973 (the appellant had his residence in the USA) did not automatically have the legal effect of validating acts previously performed by an applicant himself. The EPO was however obliged to give the representative a fair chance to remedy any deficiency of this kind that might have occurred before his appointment and which could still lawfully be remedied by him.

2.5. Submissions by a professional representative after transfer of opponent status

In T 1204/13, Mr S., the representative acting for the original opponent, submitted that it had since merged with its parent company. The board held that, if so, its opponent status would have been automatically transferred to its universal successor in title but, if not, it remained the opponent. In any event, Mr S. was entitled to act as professional representative in either case and so to make submissions on behalf of whichever opponent he now represented.

3. Legal practitioners entitled to act as professional representative

3.1. General issues

According to Art. 134(1) EPC, professional representation of natural or legal persons in proceedings established by the EPC may only be undertaken by professional representatives whose names appear on the above list. However, Art. 134(8) EPC (former Art. 134(7) EPC 1973) provides that professional representation in such proceedings may also be undertaken, in the same way as by a professional representative, by any legal practitioner qualified in one of the contracting states and having his place of business within such state, to the extent that he is entitled, within the said state, to act as a professional representative in patent matters. The arrangements for legal practitioners set out in Art. 134(8) EPC therefore constituted an exception.

In J 8/10 (OJ 2012, 472), the board observed that, if a legal practitioner wishes to act under Art. 134(8) EPC, the EPO considers whether he meets the conditions of that provision (i.e. is qualified in a contracting state and has his place of business and the right to act as a professional representative in patent matters in that state). For professional representatives it does not need to consider whether they are entitled to act before it, because it has its own list of those who are (Art. 134(1) EPC). If the legal practitioner fulfils the conditions, the EPO enters his name on a list which – like the list of associations of representatives – it keeps as an internal working tool and does not publish.

In J 19/89 (OJ 1991, 425) it was observed that despite all the differences in the designations and career backgrounds of the persons included in the ranks of legal practitioners, the profession had developed on an essentially equal footing in the contracting states as a result of Europe's common legal history and shared legal culture. The board noted that the last clause of Art. 134(7), first sentence, EPC 1973 was necessary because under national law even an actual legal practitioner might be precluded to some degree from acting as a professional representative in patent matters. That clause prevented a "Rechtsanwalt", "legal practitioner" or "avocat" from having more extensive powers of representation before the EPO than he was entitled to before his national patent office. Art. 134(7) EPC 1973 was therefore a special rule limited in scope to the corpus of legal practitioners, which existed under various designations in all the contracting states.

In J 18/99 the main issue was whether or not the appellant, a legal practitioner (abogado) qualified in Spain and having his place of business in Spain, was entitled under Art. 134(7) EPC 1973 to undertake professional representation of third parties in proceedings before the EPO. Following the examination of national provisions, the board concluded that under the current Spanish law, any legal practitioner qualified in Spain and having his place of business in Spain was entitled to represent clients in patent matters before the Spanish Patent and Trademark Office if he presented an authorisation from the party.

3.2. Register of legal practitioners

The register of legal practitioners must be clearly distinguished from the list of professional representatives established in accordance with Art. 134(1) to (4) EPC.

Whereas, according to Art. 134(4) EPC 1973, the entry of a person's name in the list of professional representatives entitles them to act in **all proceedings** established by the EPC 1973, the EPC 1973 does not contain any corresponding provision for legal practitioners. Their competence to undertake representation before the EPO is not general, but depends directly on their complying with the provisions of Art. 134(7) EPC 1973 (J 27/95).

The objective of the list of professional representatives is to provide a survey of particularly qualified representatives in patent matters; it would be jeopardised if legal practitioners without such qualifications were included on the list. Accordingly, the conditions for entry on the list of professional representatives under Art. 134(2) EPC 1973 also apply to legal practitioners (D 14/93, OJ 1997, 561).

According to the practice of the EPO, legal practitioners who indicate their intention to undertake representation in proceedings before the EPO and present an authorisation are entered in a register of legal practitioners, provided that they comply with the requirements of [Art. 134\(8\) EPC](#). The Legal Division is responsible for checking these requirements and for the registration of names in, or deletion from, the register of legal practitioners (see also [J 27/95](#)).

3.3. Qualifying conditions according to [Article 134\(8\) EPC](#)

In [J 19/89](#) (OJ 1991, 425) the Legal Board of Appeal considered whether a patent attorney under national law should, in view of his legal qualifications and entitlement to act as a professional representative in national patent matters, be regarded as a "legal practitioner" within the meaning of [Art. 134\(7\) EPC 1973](#) and hence be authorised to act before the EPO. The board decided that irrespective of his specialist qualifications and powers of representation in national patent matters, a **patent attorney** under national law could not be regarded as a "legal practitioner" within the meaning of [Art. 134\(7\) EPC 1973](#), and therefore was not entitled to act as a professional representative before the EPO (see also [D 14/93](#), OJ 1997, 561).

In [T 643/01](#) the appellant (patent proprietor) contended in particular that the opponent's reply of 28 January 2002 was inadmissible on the ground that it had been signed by Mr R., who was a legal practitioner and member of the Paris Bar but who was allegedly unable to show that he possessed an authorisation conforming to the requirements of [R. 101\(1\) EPC 1973](#). The appellant requested that, if the signatory concerned was relying on his official status as a professional representative before the EPO, the board should find that French law prohibited such a plurality of offices, since the exercise of the profession of barrister could not properly be combined simultaneously with that of industrial property attorney. The board held, in the case at issue, that the signatory of the impugned pleadings of 28 January 2002 was entitled to act before the EPO and held the appropriate authorisation for that purpose. Mr R. and Mr D., legal practitioners and members of a partnership, were indeed members of the Paris Bar, and the names of both appeared on the list of professional representatives before the EPO. They were therefore both entitled to act in one capacity or the other before the EPO under [Art. 134\(1\) and \(7\) EPC 1973](#). The board held that a decision on the legality, in France, of simultaneously exercising the profession of barrister and acting as a professional representative before the EPO fell solely within the jurisdiction of French professional and judicial bodies.

In [J 27/95](#), the Legal Board of Appeal first made it clear that the competence of legal practitioners to undertake representation before the EPO depended directly on their complying with the provisions of [Art. 134\(7\) EPC 1973](#). Thus, each time a legal practitioner made a request to act as a professional representative in proceedings before the EPO, the Legal Division had the right to examine whether he or she satisfied the conditions under [Art. 134\(7\) EPC 1973](#). In its decision the board pointed out that a legal practitioner qualified in a contracting state had to have "his place of business in such State". The place of business within the meaning of [Art. 134\(7\) EPC 1973](#) was the place (if any) at which a person practised his or her profession as legal practitioner.

In T. 1846/11 the board considered the legal consequences that would ensue if there was no authorisation filed for a legal practitioner, or any subsequent approval by the appellant submitted for steps taken by a legal practitioner without such authorisation. Mr K. was a legal practitioner entitled to act as a representative under Art. 134(8) EPC. A legal practitioner must file the original version of a signed authorisation or a reference to a general authorisation already on file under R. 152(1) EPC and Art. 2, first sentence, of the Decision of the President (OJ SE 3/2007, 128). Mr K. filed a duly signed general authorisation from the appellant dated 8 April 2016. The board was satisfied that this general authorisation authorised Mr K. to represent the appellant in proceedings before the EPO and thus in the present appeal proceedings as from 8 April 2016. However, since the general authorisation was dated 8 April 2016, any procedural steps taken by Mr K. as representative up to that date were not covered by that authorisation itself. The board would exceptionally have accepted that the appellant subsequently approve the procedural steps taken by Mr K. as representative in the period from 1 October 2010 to 8 April 2016. However, Mr K. failed to file any such approval. The legal consequence was that the procedural steps taken by Mr K. were deemed not to have been taken (R. 152(6) EPC applied mutatis mutandis). Consequently the notice of appeal was deemed not to have been filed and an appeal did not exist.

In J. 35/92 the first-named of two individual joint applicants had transferred his rights in the application to a company, which had appointed another representative who had then purportedly withdrawn the application. The second applicant did not agree with the withdrawal. The department of first instance held that the company was entitled unilaterally to withdraw the application by virtue of R. 100(1) EPC 1973, according to which the first-named applicant could be regarded as the representative of both, but the board of appeal disagreed. R. 100 EPC 1973 applied only where no joint professional representative had been appointed, whereas in the case in question the original applicants had appointed a representative, who continued to act for the second applicant. The board therefore concluded that the purported withdrawal of the application by the first-named applicant was invalid. The parties were given two months to appoint a joint professional representative, failing which one would be appointed by the EPO.

In J. 10/96 the Legal Board of Appeal ruled that where several applicants were represented jointly by a professional representative, who during the course of proceedings ceased to represent his clients, the correct procedure to be followed was that contained in R. 100(2), second sentence, EPC 1973, according to which the applicants were to be requested by the EPO to appoint a common representative within two months. If this request was not complied with, the EPO was empowered to appoint the common representative.

In G. 3/99 (OJ 2002, 347) the Enlarged Board of Appeal dealt with the question of the admissibility of joint oppositions and joint appeals. The decision makes it clear that an opposition filed in common, apart from the fact that it is filed by more than one person, is as much a single opposition as an opposition filed by only one person. In an opposition filed in common, there must in all cases be a **common representative** (Art. 133(4) and R. 100 EPC 1973), and only that common representative is entitled to act in the opposition proceedings on behalf of all the common opponents taken as a whole.

The decision further notes that an individual common opponent not being the common representative, or a subgroup of the group who filed the opposition in common, but without their common representative, is not allowed to act or intervene on his own or on behalf of one or more or all of the other individuals. Thus, only the common representative is entitled to sign the filed documents (R. 100 and R. 36(3) EPC 1973), the signature of other individuals not being required. At any stage of the procedure, be it the opposition or the appeal procedure, it may also occur that the joint member who is the common representative intends to withdraw from being a joint member, i.e. to withdraw from the proceedings. In such circumstances, he must notify his decision to the EPO with the procedural consequence that, for the determination of a new common representative, the provisions of R. 100(1) EPC 1973 have to be applied for the opposition procedure by virtue of the last sentence of that rule and, for the subsequent appeal procedure, by virtue of R. 66(1) EPC 1973.

It may also occur that the common representative ceases to act in the procedure without the EPO being informed thereof. In both cases, the other joint members must take the appropriate action to continue the procedure in due time and to inform the EPO of the new common representative, if appointed. However, there is no practical need to acknowledge the validity of procedural acts of a joint member who is not the common representative. Since a procedural act performed by a non-entitled person is treated by the EPO in the same way as a missing signature (see T 665/89), each joint member or any other person acting on his behalf can perform such an act to avoid missing a time limit, provided the deficiency is remedied within a further time limit set by the board in the communication under R. 36(3) EPC 1973 notified to the common representative and sent for information to the non-entitled person who performed the act. The deficiency can be remedied if the procedural act is signed by the common representative.

G 3/99 was applied in T 1154/06 in connection with the necessity of appointing a professional representative if the first-named of multiple patent proprietors was not resident in a contracting state. (See R 18/09, in which the Enlarged Board referred to these two decisions and held that both the principle that a plurality of persons acting in common must be treated as a single party (a "group party") and the requirement that such a group party acts through a common representative apply to petition proceedings.)

In T 1654/13 it was submitted that the appeal filed by the common representative of the joint patent proprietors had to be understood as having been filed on behalf of both patent proprietors as joint appellants. The wording used in the notice of appeal, referring only to the first of the two patent proprietors, i.e. Unilever N.V., thus had to be understood only in relation to the request for the reduction of the appeal fee. The board, citing Art. 118 EPC and calling to mind R 18/09 and T 1154/06, decided that there was no doubt that Unilever N.V. and Unilever PLC were joint appellants. The appeal was admissible.

In decision T 1366/04 the appeal had been filed by the first of two joint patent proprietors only. The board held that the requirements of Art. 118 EPC were met and that there was no doubt about the identity and appellant status of the two patent proprietors.

Decision **T.418/07** concerns a different case, where shortly before the oral proceedings the respondent (patent proprietor) appointed a second firm of representatives as joint representatives in addition to the firm already acting and asked the board to send copies of all correspondence to both firms. In this case of **multiple representatives**, the board held that while it is open to a party to appoint as many representatives as it may wish, the board is not aware of any requirement on it or on other parties to send correspondence to more than one representative of one party. If a party wants to retain multiple representatives, it must make its own arrangements for copying correspondence to them all. Parties cannot expect the board to provide copying services for their convenience.

4. Authorisations for appointment of a representative

At various points in the following sections there are references to the issue of whether an authorisation actually exists, a problem in a number of cases.

4.1. Filing of the authorisation

R. 101 EPC 1973 has been redrafted as R. 152 EPC 2000. R. 152(6) EPC, in particular, now reads: "If a required authorisation is not filed in due time, any procedural steps taken by the representative, other than the filing of a European patent application, shall be deemed not to have been taken, without prejudice to any other legal consequences provided for by this Convention." See also the decision of the EPO President dated 12 July 2007 on the filing of authorisations (OJ SE 3/2007, 128, L.1.), and **J.8/10** (OJ 2012, 470).

Under R. 152(1) EPC and Art. 1(1) of the EPO President's decision (OJ SE 3/2007, 128), professional representatives whose name appears on the EPO's list and who identify themselves as such need file a signed authorisation only in certain specified circumstances (change of representative without notification that the previous representative's authorisation has terminated or where the EPO has doubts about the representative's entitlement to act), **T.1204/13** (see also **T.548/13**).

In **J.12/88** it turned out that the former representative of the appellant had acted before the EPO on behalf of the appellant without being instructed to do so and using a forged authorisation. The board considered all these proceedings to be null and void. All fees paid to the EPO on behalf of the appellant never had been due and had to be reimbursed.

In **T.850/96** the appellant had alleged that the opposition was not admissible because the signatories of the notice of opposition did not file an authorisation. According to him an employee must declare with the notice of opposition that he acts as a professional representative. Otherwise he must file an authorisation. In the case under consideration both signatories of the notice of opposition were professional representatives. The board held that Art. 1(1) of the decision of the President of the EPO of 19 July 1991 (OJ 1991, 489) stipulates that a professional representative whose name appears on the list maintained by the EPO **and who identifies himself as such** shall be required to file a signed authorisation only in the circumstances set out in Art. 1(2) and (3) of this decision of the President (now decision of 2007, OJ SE 3/2007, 128). In the case at issue, the deficiency had not been the lack of a signed authorisation, but the failure of the signatories

of the notice of opposition to identify themselves as professional representatives (see also [T.1744/09](#) citing [T.850/96](#) saying that a professional representative identifying himself retroactively is not precluded).

In [T.425/05](#), the respondent (patent proprietor) requested the board at the start of the procedure to declare the appeal inadmissible, on the one hand because it had been filed at a date when the original opponent (company I) had been dissolved and had therefore ceased to have legal existence, and on the other because the mistake in the notice of appeal could not be a mere clerical error on the part of the professional representative which could easily be corrected, since the representative manifestly could not act on behalf of company F, which had not yet authorised him to do so. The board began by establishing that the representative's authorisation to act on behalf of company I had never been contested or rescinded. It was equally evident that the original opponent, company I, no longer had legal existence, as it had been dissolved and its assets had passed into the hands of company F, its associate and sole shareholder. The board concluded that company F had succeeded company I as opponent, and therefore also as the client of the representative. Thus the appeal filed by the representative, whose authorisation, confirmed in the meantime, had never been rescinded, had been implicitly, but necessarily, filed on behalf of his actual client, company F; the identification of company I as the opponent in the notice of appeal was due to a clerical error which had since been corrected.

In [T.267/08](#) a change of representation had been notified by the new representative together with the notice of appeal. The previous representative had not contacted the EPO to indicate that his authorisation had terminated. The decision of the President of the EPO (OJ SE 3/2007, 128) stated that in cases of a change of representation, and where the EPO had not been notified of the termination of the previous representative's authorisation, "the new representative must file, together with the notification of his appointment, an individual authorisation (original and one copy) or a reference to a general authorisation already on file. If he does not, he shall be requested to do so within a period to be specified by the EPO." In the case at issue, the board invited the new representative under [R.152\(2\) EPC](#) to file an authorisation, as the board had realised that the authorisation failed to name the correct opponent. The new representative sent the authorisation by fax but failed to file the original version. The board stated that the filing of a valid authorisation for the opponent must, of necessity, entail the **filing of the original**, and a professional representative should know this. The legal consequence of this was that the procedural steps taken by the new representative were deemed not to have been taken ([R.152\(6\) EPC](#)). Consequently the notice of appeal was deemed not to have been filed and an appeal did not exist.

In [T.637/09](#) the appellant informed the board and the respondent that Mr M, who was already acting as its professional representative, would be joined by Mr S, another professional representative. Mr S's authorisation to represent the appellant was challenged by the respondent at the start of the oral proceedings. The board observed that under [R.152\(10\) EPC](#) a party may be represented by **several representatives** acting jointly. Mr S was not required to file a signed authorisation in order to be able to represent the appellant. There was no need to file a (further) authorisation under Art. 1(3) of the

Decision of the President of the EPO (OJ SE 3/2007, 128). The board concluded that Mr S was duly authorised to represent the appellant along with Mr M.

In T.1542/10, a letter was filed on 10 January 2011 by professional representative P. The letter indicated "Nokia Siemens Networks OY" as opponent and used the same internal reference number as that indicated by representative B in the notice of opposition. In addition it referred to an enclosed power of attorney. According to this authorisation representative B authorised P to represent "Nokia Siemens Networks GmbH & Co. KG". In reply, the appellant (patent proprietor) took the view that the letter was submitted on behalf of a **legal person different** from the respondent since the enclosed authorisation did not indicate the respondent's name but that of Nokia Siemens Networks GmbH & Co. KG. Under the given circumstances it was quite obvious to the board from an objective perspective that the indication of the name Nokia Siemens Networks GmbH & Co. KG in the authorisation was made erroneously. The fact that the board's registry did not receive an answer after it had sent out a communication pointing out that no valid authorisation had been submitted by the respondent's new representative did not entail any negative consequences for the respondent. In particular it was noted that the communication **did not specify any time limit** so that the sanction provided for by R.152(6) EPC could not apply. In view of the authorisations submitted by the respondent in its letter dated 13 June 2013 and at the oral proceedings, the board had no doubt that representative P had been authorised to represent the respondent.

The board in T.1700/11 ruled that if a European representative files an opposition on behalf of a party but fails to file a signed authorisation in due time in response to a request to do so from the board, the opposition is deemed not to have been filed (R.152(1) and (6) EPC). The board held that this legal fiction resulted in a loss of rights (R.112(1) EPC) and that an examination of the admissibility of the opposition, which had not been filed according to the legal fiction, was out of the question.

In T.534/07 it was decided that the validity of procedural acts undertaken by the representative for his client was not affected by the existence of a conflict of interest.

In case J.19/13 the representative who electronically signed the request for grant (EPO Form 1001E) was not a valid signatory for the applicant. A procedural act performed by a non-entitled person is to be treated in the same way as a missing signature. For the electronic filing of a document accompanied by the electronic signature of an unauthorised person, the same principle applies, as confirmed, for instance, in T.1427/09 of 17 November 2009. Therefore, the request for grant form was to be considered not signed. The signature of the applicant or his representative forms one of the requirements for the content of the request for grant (cf. R.41(2)(h) EPC). The signature on the request for grant is, however, not one of the requirements for the accordancy of a date of filing pursuant to Art.80 EPC and R.40 EPC.

See also chapter V.A.2.4. "Entitlement to appeal", and in particular T.1324/06 where the very existence of the authorisation was challenged.

4.2. General authorisations

This subsection deals *inter alia* with the extent of the powers conferred.

In J. 9/99 (OJ 2004, 309) the board decided that the Legal Division had authority to check the authorisation of a representative named in a general authorisation and to issue a formal decision to reject the registration of a general authorisation. A decision not to register a general authorisation can only be issued in respect of a request from a party to the proceedings within the meaning of R. 101(2) EPC 1973, i.e. either an authorising or an authorised party.

In J. 11/93 the applicant submitted in his statement of grounds of appeal that the official communication should have been sent to the authorised European representative since he had been duly empowered to act on behalf of the applicant by a general authorisation filed with the EPO in respect of another European patent application. Instead of this the communication was sent directly to the applicant, a US company. The board confirmed that the authorisation in suit had never been registered by the EPO as being a general one, and that even if it had been so registered it would then have been incumbent on the applicant to communicate the number allotted to the general authorisation so that the Receiving Section could take it into consideration before sending the communication to the applicant at its last known address, rather than to the representative. Under these circumstances the board considered that when the letter sent directly to the applicant was issued no European professional representative had yet been appointed by the applicant.

In J. 17/98 the Legal Board of Appeal had to rule on whether communications concerning the deemed withdrawal of applications had been correctly notified to the applicants, who were residents of a non-EPC contracting state, even though general authorisations were held by the EPO on their behalf. The applicants argued that the communications relating to deemed withdrawal should in fact have been notified to the representatives appearing in the general authorisations on file with the EPO. The board held that the filing of a general authorisation to act on behalf of a specific applicant and the notification of the appointment of a representative in an individual application were two **separate** procedural acts. By definition, general authorisations did not refer to specific cases and did not allow the EPO to assume, without further information from the applicant, that a specific representative had been appointed in a particular case. From the Convention it was clear that the filing of a general authorisation did not imply the appointment of a professional representative in a specific case (see also chapter III.S.2. "Notification to representatives").

In J. 1/04, the relevant question in this case was whether the notifications of the communications were correctly addressed to the appellant. The appellant criticised the EPO's practice of sending communications directly to the applicant, even if the latter had appointed a national representative in the international phase. The board first noted that Art. 133 EPC 1973 makes it clear that there is no obligation for an applicant having a principal place of business within an EPC contracting state to be represented in proceedings established by the Convention. If, however, the applicant wishes to be represented, he must authorise either an employee or a professional representative or legal practitioner. Whatever possibility the applicant prefers, if he does not wish to handle

matters himself and therefore wishes to be represented, he must appoint a representative who is entitled, in accordance with the provisions of Art. 134 EPC 1973, to undertake representation before the EPO. In the case at issue the applicant did not do this, although the EPO had expressly pointed out to the applicant that an authorisation for the international phase did not comprise an authorisation for the European phase and that disregard thereof could lead to a loss of rights. Furthermore, as long as the applicant did not appoint a representative who was entitled to represent him before the EPO, the general principle applied that procedural acts had to be performed by the EPO in relation to the registered applicant as being the party to the proceedings. Thus, notifications had to be addressed to the registered applicant and they had been correctly made if they were addressed to the applicant (appellant) in the case at issue. The appeal was dismissed.

In T. 1378/05 the appeal had been validly filed by legal representative G. on the basis of a "mere" authorisation to act "in matters concerning European patent application 'Method for authorisation in file transfer systems'" in proceedings before the German Patent Office, the Federal Patent Court and the – German – Federal Supreme Court. Thus there was no authorisation for proceedings before the European Patent Office. The appellant filed such an authorisation within the two-month time limit set by the board and therefore "in due time" within the meaning of R. 101(4) EPC 1973.

In T. 1865/07, the board noted that, in the circumstances of the case, giving an incorrect general authorisation number was of no consequence.

4.3. Sub-authorisations

In T. 227/92 it was held that a sub-authorisation from a professional representative to a person who was not a professional representative within the meaning of Art. 134 EPC 1973 was invalid. The latter person's role was therefore limited to that of technical adviser to the professional representative.

In T. 382/03 the previous representative, Mr E. of UDL, filed a fax to announce that Mr U., who was not a member of that association, would appear for respondent 1 at the oral proceedings before the board. Mr E. did not notify the board that his association's authorisation was terminating. Hence, that was a situation where the President's decision required the new representative, Mr U., to prove that he was authorised to act on behalf of respondent 1. As Mr U. did not refer to a general authorisation from respondent 1, proof of an individual authorisation had to be provided to the board. In principle, that could be done by filing a direct individual authorisation from opponent 1, or by filing a sub-authorisation from an authorised representative who was entitled to sub-authorise a third representative. In view of the sub-authorisation from UDL submitted by Mr U. at the oral proceedings, the only issue remaining was whether or not UDL was entitled to give such a sub-authorisation.

For an example of a professional representative entitled by a chain of sub-authorisations to make submissions on behalf a party, see T. 1081/06.

In T 1676/08, the board had no reason in the circumstances of the specific case to doubt that Mr S, a legal practitioner entitled to act as a representative, was duly sub-authorised. Moreover, on the same day of the oral proceedings, the professional representative, Mr M, stated as a precautionary measure that he endorsed any submission made by Mr S during these oral proceedings.

In T 1693/10, the contested sub-authorisation given to a second professional representative had eventually been withdrawn. This second representative was regarded from then on as assisting the first representative as an "accompanying person" within the meaning of G 4/95 (OJ 1996, 412) but was not permitted to speak at the oral proceedings because at least one of the criteria laid down in that decision for such permission had not been met.

In T 2453/12 opponent 2's notice of opposition had been filed under the name of an already defunct company and rejected as inadmissible by the opposition division at the oral proceedings. Its representative had then been issued with authorisation to act for opponent 1 during the remaining proceedings. The patent proprietor (respondent) took the view that one opponent's representative could not now act for the other opponent too. The opponents argued that opponent 1's original representatives – who were anyway its employees – remained authorised to represent it and that the appeal lodged by those representatives was therefore admissible. Opponent 1 had merely issued opponent 2's representative with a sub-authorisation during the opposition proceedings. The board observed that, under Art. 133(1) and (3) EPC, legal persons having their principal place of business in an EPC contracting state were not compelled to be represented by a professional representative in EPO proceedings and were instead free to have a duly authorised employee act for them. That applied irrespective of whether they chose also to authorise a professional representative in parallel; parties could never deprive themselves of the right to represent themselves by issuing authorisations. For that reason alone, there could be no doubt that opponent 1's in-house representatives had been entitled to lodge its appeal.

4.4. Authorisation of an association of representatives

The Administrative Council's decision CA/D 9/13 of 16 October 2013 on the interpretation of the term "association of representatives" (OJ 2013, 500) endorsed the interpretation in J 16/96. For more information on this subject, see also the Notice dated 28 August 2013 on matters concerning representation before the EPO (OJ 2013, 535).

As explained in J 8/10 (OJ 2012, 470), the EPO keeps a list of associations of representatives as an internal working tool which it does not publish.

In J 16/96 (OJ 1998, 347) the EPO Legal Division had informed a company X that its patents department could not be registered as an association of representatives. Such an association meant one consisting solely of professional representatives in private practice. The Legal Board concluded that there was no basis in the Convention for the EPO's practice of restricting R. 101(9) EPC 1973 (now R. 152(11) EPC) to professional representatives "in private practice". An **association** within the meaning of that provision

could therefore **also** be formed by **professional representatives not in private practice**. There was no reason to interpret the term "association of representatives" in a way which limited its meaning. (J 16/96 cited on this point in T 656/98). As mentioned in the introduction to this point, Decision CA/D 9/13 endorsed the Legal Board's interpretation in J 16/96.

Case J 8/10 (OJ 2012, 470) was about whether legal practitioners too could belong to associations of representatives under R 152(11) EPC (R 101(9) EPC 1973). The Legal Board interpreted R 152(11) EPC as referring to an association of professional representatives. Therefore, legal practitioners were not covered by the legal fiction of R 152(11) EPC (see also T 1846/11).

4.5. Termination of authorisation

According to R 152(8) EPC, a representative is deemed to be authorised until the termination of his authorisation has been communicated to the EPO. In T 578/14 the board stated that if, or for as long as, the termination of an authorisation was not communicated to the EPO, the authorisation remained effective vis-à-vis the EPO even though, the contract between the party and its representative had been dissolved, or the party had – vis-à-vis the representative – revoked the authorisation that it had given him. In the case of a change of representative involving professional representatives, the provisions of Art. 1(2) of the Decision of the President of the EPO (OJ SE 3/2007, 128) also apply, i.e. usually either the termination of the authorisation of the previous representative is communicated to the EPO or the new representative files an individual authorisation (original and one copy) or a reference to a general authorisation already on file. In view of R 152(8) EPC and the Decision of the President, the responsibility for informing the EPO about the termination of the contract between a party and its representative before the EPO lies with the represented party, irrespective of whether or not it has its residence in an EPC contracting state, or with its representative. It is only when the EPO receives such information that it might have to determine on the basis of the documents filed whether a contract between a party to the proceedings before the EPO and its representative has indeed been terminated. The board added that informing the EPO about an intention to change the representative could not be equated with a clear withdrawal of an authorisation under R 152(7) EPC or with the communication of the termination of the authorisation as mentioned in R 152(8) EPC. Both cases concern a procedural declaration which in the interest of legal certainty has to be unambiguous.

5. Oral submissions by an accompanying person

5.1. Enlarged Board's landmark decision G 4/95

In G 2/94 (OJ 1996, 401) and G 4/95 (OJ 1996, 412), the Enlarged Board answered questions referred to it in J 11/94 (OJ 1995, 596) and T 803/93 (OJ 1996, 204) as to whether, and if so in what circumstances, a person not qualified to act as a representative before the EPO (an "accompanying person") might make oral submissions on either legal or technical issues on a party's behalf during oral proceedings under Art. 116 EPC 1973 in ex parte or inter partes proceedings.

According to the decision G 4/95 oral submissions by an accompanying person in opposition or opposition appeal proceedings cannot be made as a matter of right, but only with the permission and at the discretion of the board. When exercising its discretion decision G 4/95 specified the main criteria to be considered. According to the decision G 2/94 a board of appeal has a discretion to allow an accompanying person to make submissions during oral proceedings in ex parte proceedings, in addition to the complete presentation of a party's case by the professional representative.

In G 4/95 the Enlarged Board noted that the appointment of a professional representative by a party involved the authorisation and identification of the professionally qualified person who was responsible for the presentation to the EPO of all submissions made by the party. Such presentation of a party's case was the essential core of the function of a professional representative under Art. 133 EPC 1973. During oral proceedings, a professional representative was expected to present the entire case of the party that he or she represented.

The Enlarged Board considered separately the presentation of facts and evidence, on the one hand, and the presentation of arguments, on the other hand.

As to the presentation of facts or evidence by an accompanying person, the Enlarged Board held that such oral submissions during oral proceedings – in addition to the complete presentation of the party's case by the professional representative – are not excluded under the EPC. They may be allowed under the overall discretionary control which the EPC gives to the EPO with respect to the filing of facts and evidence.

As to the question whether an accompanying person may make oral submissions during oral proceedings by way of argument, the Enlarged Board pointed out that Art. 133 EPC 1973 made no distinction between written and oral proceedings in connection with the requirements for representation. Thus a professional representative was responsible for all written and oral submissions made on behalf of the party who had appointed him. However, in the context of the **written procedure** provided under the Convention **for oppositions and opposition appeals** an appointed professional representative could submit additional documents signed by a third person (for example a professor of law or science). Provided that they were submitted under the responsibility and control of the professional representative, they did not have to be excluded from consideration in the proceedings in which they were filed. Similarly, during **oral proceedings** in the context of opposition or opposition appeal proceedings, a person accompanying the professional representative of a party was not excluded from making oral submissions in relation to either legal or technical issues on behalf of that party to the proceedings under the control of the professional representative, and in addition to the complete presentation of the party's case by the professional representative.

The Enlarged Board further held that such oral submissions could not be made as a matter of right, but only with the permission of and at the discretion of the EPO. The following **criteria** should be considered by the EPO when exercising its discretion:

(i) The professional representative should request permission for such oral submissions to be made. The request should state the name and qualifications of the accompanying person and should specify the subject-matter of the proposed oral submissions.

(ii) The request should be made sufficiently in advance of the oral proceedings so that all opposing parties are able properly to prepare themselves in relation to the proposed oral submissions.

(iii) A request made shortly before or at the oral proceedings should, in the absence of exceptional circumstances, be refused unless each opposing party has agreed to the making of the oral submissions requested.

(iv) The EPO should be satisfied that oral submissions by an accompanying person were made under the continuing responsibility and control of the professional representative.

5.2. Application of the case law established by the Enlarged Board

5.2.1 Introduction

The decisions reported below show how the criteria established by the Enlarged Board have been applied, both in oral proceedings before the boards and when scrutinising decisions taken by the department of first instance.

In the following cases, the accompanying person was **not authorised** to make oral submissions: **T 334/94** (request not made early enough); **T 1208/06** (inventor not the proprietor); **T 89/04** (classed as accompanying person – request made just three days before the oral proceedings); **T 2135/08** (no information on experts' qualifications and subject-matter of oral submissions); **T 1706/06** (request not made early enough – consent not given by the other party); **T 302/02** (submissions of the expert of a party on subject-matter not specified in some detail beforehand); **T 1676/08** (examination of the criteria – numerous procedural points raised); **T 2552/11** (insufficient information to enable other party to prepare); **T 520/07** (request made during oral proceedings – same submissions by same person at first instance – appeal proceedings separate); **T 8/13** (person closely followed the whole case from beginning); **T 378/08** (standard application of the criteria in specific case of an EQE candidate); **T 1693/10** (sub-authorisation withdrawn – "accompanying representative" an accompanying person within the meaning of **G 4/95** – no request that an oral presentation be made by the "accompanying representative" – alleged conflict of interests).

In the following cases, the accompanying person was **authorised** to make oral submissions: **T 899/97** (request made early enough in circumstances); **T 475/01** (persons accompanying both parties – one party representing itself); **T 1212/02** (professional representative's colleague – pragmatic approach); **T 754/08** (former patent attorney); **T 1207/06** (presentation of the entire case – not established); **T 919/07** (accompanying persons authorised if contribution relevant to discussion); **T 1458/11** (trainee in professional representative's law firm – objection on appeal to scope of submissions not

upheld), T 661/14 (right to speak on legal issues – no distinction between legal or technical issues)

In the following decisions, the boards held that G 4/95 did not apply: T 621/98 (patent proprietor); T 1687/08 (lawyer).

5.2.2 Trainee patent attorneys

In T 1431/12, the reason given for Mr W.'s making submissions was that he was a trainee patent attorney familiar with the case. It was therefore unlikely that his submissions (unlike, for example, an expert's) would go beyond those of a patent attorney specialising in the subject-matter and so would not mean that the appellant would have to commission an expert to counter them. Given those circumstances, the board exercised its discretion to permit Mr W. to provide any technical information necessary to supplement the submissions made by the professional representative supervising him. As his submissions were indeed confined to providing such additional technical information, the board saw no reason to restrict or even revoke this permission during the oral proceedings.

For a classic application of the requirements set out in G 4/95 to a party's contention that, since the accompanying person was preparing for the European qualifying examination, he ought to be given a training opportunity, see T 378/08.

5.2.3 Distinction between party to proceedings and accompanying person

In T 2036/12, the opposition division had refused to permit Mr S. to make submissions on the basis that they had to be considered those of a "technical expert". The board rejected its line of argument, observing that G 4/95 concerned "accompanying persons", i.e. people who were not parties to the proceedings and generally not entitled to make their own submissions as a matter of right, whereas Mr S., as the **proprietor's managing director** with the power to sign for it, was a direct party to the proceedings. It made no difference that a professional representative had likewise been present; as a party to the proceedings, he was entitled in his own right to make submissions in support of his case. The opposition division's refusal to permit his submissions was thus a breach of the right to be heard under Art. 113(1) EPC.

In T 621/98, during oral proceedings, the board was faced with the question of whether the patent proprietor, who was professionally represented, needed to announce in advance his intention to make submissions during the proceedings, pursuant to G 4/95. The board ruled that the patent proprietor was a party to the proceedings and as such was not to be treated as an accompanying person. As a party to the proceedings he had a right to take part in them.

In T 89/04 Mr D. was a vice president of the company OpenTV. Since the company ACTV, Inc. was recorded in the Register of European Patents as the patentee, OpenTV, which was a different legal person, was not a party to the proceedings in accordance with Art. 99(4) and 107, second sentence, EPC 1973. Mr D. was considered to be a person accompanying the representative.

In T. 475/01 the board took the view that neither the EPC nor the above Enlarged Board decision could be held to imply that **a party that represented itself** in proceedings was to be treated differently to a professional representative in respect of oral submissions by accompanying persons.

In T. 754/08, it had been announced that Mr R., a former patent attorney of the appellant (opponent) in this case, would make technical statements during the oral proceedings. It was not disputed that Mr R. had the knowledge of a technical expert in the field of the patent in suit. However, in the respondent's/patent proprietor's view, since Mr R. was the former patent attorney of the appellant in this case, his submissions would be those of a professional representative. Since he was not authorised to act in the latter function, he should not be allowed to speak during the oral proceedings. The board decided that the conditions set out in the decision G. 4/95 were applicable to **any accompanying person**. Therefore, there was no reason to exclude a former European patent attorney as such. Since the conditions were met the board saw no reason not to allow Mr R. to make oral submissions during the oral proceedings.

In T. 1693/10, the appellant's representative had eventually withdrawn a sub-authorisation – challenged by the other party – given to a second professional representative with the result that this second representative had to be regarded as assisting the appellant's representative as an "accompanying person" within the meaning of G. 4/95. Nevertheless, since at least one of the criteria laid down in that decision had not been met (no request from the appellant that the accompanying person be permitted to make oral submissions), he was not authorised to address the board during the oral proceedings. The board, however, dismissed the objection raised by the respondent under Rule 106 EPC to the fact that the accompanying representative was beside the appellant's professional representative during the oral proceedings and not in the audience. One of the grounds for dismissal was that the respondent had failed to indicate how the mere presence of the accompanying person beside the appellant's professional representative infringed the rights invoked, which included the right to a fair hearing, a right not on the exhaustive list in Art. 112a(2) EPC. The board was in addition not competent to decide on possible conflicts of interest.

In T. 1687/08, at oral proceedings held before the opposition division on 25 February 2008, the division had refused Mr J permission to speak on behalf of the patent proprietor/appellant. The board found in the case at issue that the requirements for representation by a legal practitioner were fulfilled, i.e. that the letter dated 16 January 2008 represented an authorisation which established that Mr J was entitled to represent the patent proprietor. The board stated that from the minutes of the oral proceedings and the decision under appeal it was apparent that the opposition division had not considered Mr J to be a legal practitioner under Art. 134(8) EPC. Instead, it had treated him as an accompanying person, and therefore applied the requirements set out in decision G. 4/95. Since the patent proprietor had requested Mr J's participation in the oral proceedings as a legal practitioner under Art. 134(8) EPC, not as an accompanying person within the meaning of decision G. 4/95, the division's decision not to allow him to speak had been taken under the wrong legal provision. The board concluded that such a denial by the opposition division of the

right of representation had to be considered as a substantial procedural violation. The decision under appeal was set aside, the case remitted and the appeal fee reimbursed.

In a communication the board in T 8/13 stated that the request to allow another person who was not a professional representative to make submissions on behalf of the appellant (opponent) during the oral proceedings would not be allowable in view of the conditions set by Art. 134 EPC and having regard to decision G 4/95. The appellant argued that Ms. L, attending the oral proceedings together with the appellant, had closely followed the whole case from the beginning and should therefore have been allowed to present the case. Moreover, the appellant suffered from asthma and could therefore only plead the case with difficulty. The board was not persuaded by these arguments. Ms. L was neither a representative according to Art. 134 EPC nor was she presented as a technical expert to be heard on a technical question. The personal involvement with the case or her relationship to the appellant also did not qualify Ms. L to have made submissions as an accompanying person in accordance with the conditions set out in G 4/95. In regard to the appellant's medical condition, the appellant was informed by the board that it was prepared to interrupt the proceedings from time to time should this be required.

In T 1212/02 the board held that an employee of the opponent's holding could make submissions only as a person accompanying its professional representative and so subject to the conditions set out in G 4/95, even though he worked alongside the professional representative on the opponent's affairs in the holding's patent department.

5.2.4 Inventor as accompanying person

In T 1208/06 the inventor was not identical to the patent proprietor, so T 621/98 did not apply. In the circumstances, and applying the criteria of G 4/95, the board held the opposition division to have acted correctly by categorising the inventor as an "accompanying person" and not as a party to the proceedings within the meaning of Art. 99(3) EPC and by rejecting the proprietor's request.

The board in T 1150/12 agreed to hear the inventor as an accompanying person, if necessary to supplement the professional representative's submissions. It was anyway bound to treat an inventor's submissions or comments just as impartially as it would the naturally one-sided submissions made by the parties' representatives.

5.2.5 Name, qualifications and subject-matter to be specified

Professional representatives must request permission for oral submissions to be made by an accompanying person, stating that person's name and qualifications and specifying the subject-matter of the proposed oral submissions.

In T 1668/14 the board considered that G 4/95 did not deal explicitly with the question of whether an accompanying person may ever be allowed to speak on matters other than those previously notified. However, the fact that the EPO has a discretion to decide that a proposed accompanying person may not be heard at all suggests that such discretion extends also to the nature of the submissions to be permitted. The board therefore judged,

in the case in hand, that it fell within the discretion of the EPO to decide whether an accompanying person might be allowed to speak on matters other than those previously notified, and that this discretion was to be exercised taking into account the facts of the particular case and the principles set out in G 4/95. Permission should only be granted where it is clear that it would not unexpectedly disadvantage the opposing party.

Concerning the admissibility of oral presentations by three technical experts, the board in T 2135/08 concluded that none of the three criteria i), ii) and iii) of G 4/95 were met, among other reasons since the requesting party had failed to state -even at the oral proceedings- the qualifications of these three persons and to specify the subject-matter of their proposed oral submissions.

The board in T 302/02, applying G 4/95, did not allow the expert to make submissions. If an expert were allowed to make submissions on subject-matter not specified in some detail beforehand, the other party or parties would be placed at a disadvantage since they could not prepare themselves properly, and this would be against the spirit and purpose of decision G 4/95 and should only be permitted if none of the parties to the proceedings objects.

In T 2552/11, the board did not permit oral submissions from Mr J. The statement by the appellant (opponent) that Mr. J would "refer to the prior art documents cited by the opponent" was very general, and not sufficient to enable the respondent (patent proprietor) to prepare itself properly.

In T 919/07, where the requests in writing concerning oral submissions by accompanying persons did not indicate what such submissions could contribute to the evidence on the file, the board exercised its discretion by deciding that the accompanying persons should be heard in the event that the board wished to ask them questions.

5.2.6 Oral submissions to be requested sufficiently in advance

Any request should be made sufficiently in advance of the oral proceedings to enable all opposing parties to prepare themselves properly for the proposed submissions.

In T 334/94 the board emphasised that a party wanting such submissions to be made had to ask permission sufficiently in advance of the oral proceedings to give the other parties time to prepare. The board noted that the Enlarged Board had not defined what "sufficiently in advance" meant, or laid down a deadline for making such requests. In its view, the **deadline of one month** before the proceedings for filing submissions or new sets of claims was a minimum. On that basis, nominating an accompanying expert one week before the proceedings was not acceptable.

In T 899/97 the appellant (opponent) requested that a technical expert be allowed to speak during the oral proceedings in order to explain the physical phenomena that occurred when a prior art separator was used. Pointing out that the relevant letter from the appellant had reached him only two weeks before the oral proceedings, and referring to G 4/95 and T 334/94, the respondent requested that this technical expert be refused permission to

speak. The board considered the particular circumstances of the case, i. a. that this technical expert was one of the authors of the test report (R2) filed by the appellant with the statement of grounds, that the board had raised some questions on this specific technical issue in the annex to the summons to oral proceedings, and that these technical issues had already been discussed before the department of first instance. With these circumstances in mind, the board held that the appellant's request that the technical expert be heard had been submitted sufficiently in advance of the oral proceedings.

The board in **T. 89/04** refused a request that an accompanying person be permitted to make oral submissions as it had been filed only three days before the opposition proceedings.

5.2.7 Exceptional circumstances

Save in exceptional circumstances, a request made shortly before or at the oral proceedings should be refused unless each opposing party has agreed to the making of the oral submissions requested.

In **T. 520/07** the board did not share the respondent (patentee's view) that the appellant could not be surprised by its request, the same accompanying person having already made submissions in oral proceedings before the opposition division. In all procedural matters, appeal proceedings were completely separate from first-instance ones, so requests made in the latter had no effect for the former.

5.2.8 Professional representative's responsibility

The EPO must be satisfied that an accompanying person's oral submissions were made under the continuing responsibility and control of the professional representative.

In **T. 1027/13**, on the day of the first instance oral proceedings, the chairman had categorically forbidden Mr H (accompanying person) to address the opposition division and to communicate with Mr W (representative), apparently under the impression that Mr H had not only been present to make submissions regarding some specific legal or technical points, but had actually been **intending to present the complete case** in place of the **newly appointed representative** Mr W. The patent proprietor and the opposition division had concluded that Mr H was trying to act as the representative of the opponent, thereby circumventing the provisions of Art. 133 and 134 EPC. The patentee also contested that there was proper control and supervision by Mr W since he had declared that he was not prepared to defend the case in oral proceedings. The question to be decided by the board was whether or not the categorical refusal to let Mr H make oral submissions or even communicate with the authorised representative merely amounted to a very strict but, nevertheless, correct exercise of discretionary power, still in line with the principles stated in **G. 4/95** or, instead, to an inappropriate exercise of this discretion, going beyond the discretionary remit. The board stated that as a consequence of this conduct of the oral proceedings, the representative of the opponent appeared to have been totally deprived of any support he was expecting to get from the announced accompanying person Mr H, i.e. a person very familiar with all aspects of the case from its very beginning.

The categorical refusal in effect had been keeping the opponent from taking position in an "efficient and effective manner" on the contentious issues of the case, which would also have included the obviously very important supporting oral contributions by Mr H.

In case T 1458/11 appellant 2 (patent proprietor) was represented by a professional representative, Mr Ch, accompanied by Mr H, a **trainee in the law firm** of Mr Ch. Mr H had not been announced prior to the oral proceedings before the opposition division. Appellant 2 requested that Mr H be allowed to speak "on selected issues during the oral proceedings under his (Mr Ch's) supervision and responsibility". Appellant 1 (opponent) agreed to this with the proviso that Mr H would "not make the complete case". The opposition division allowed Mr H to speak "on selected issues under Mr Ch's responsibility". After the impugned decision was pronounced, appellant 1 submitted that, according to its observations, Mr H had spoken "for more than 50% of the time" and that this was not what had been agreed at the beginning of the oral proceedings. According to G 4/95, the opposition division had the duty to ensure that the oral submissions made by an accompanying person satisfy the conditions that they are made **in addition to** the complete presentation of the party's case by its professional representative and under the continuing responsibility and control of the professional representative. It was incumbent on appellant 1 to inform the opposition division of any alleged negligence of the opposition division's duty as soon as it became aware of it. This immediate reaction was required since a party to the proceedings must take an active part and must on its own initiative submit in due time whatever will support its position (cf. R 2/08). Furthermore, nothing indicated that appellant 1 was taken by surprise or that it was not prepared, or at least could not have been prepared, for the oral submissions made by the accompanying person. The board failed to see that a procedural violation occurred during the proceedings before the opposition division.

5.2.9 Procedural objection under R 106 EPC

In R 3/08 the question arose whether an accompanying person can validly raise a procedural objection pursuant to R 106 EPC. However, in the circumstances this question did not need to be answered since, based on the affidavit of Mr S.L., it was credible that the professional representative himself explicitly supported his procedural objections. Even if, in the absence of further evidence, the exact circumstances of the representative's intervention was not established, the board was prepared to assume in favour of the petitioner that the objections raised in that phase of the oral proceedings met the requirements of R 106 EPC.

5.3. Oral submissions by former members of the boards of appeal

In J 11/94 (OJ 1995, 596) the authorised representative was accompanied during oral proceedings by a former chairman of the Legal Board of Appeal who had retired about a year and a half previously. The professional representative requested permission for the former board member to make submissions in addition to his own arguments. The case referred to the Enlarged Board therefore encompassed the question whether special criteria applied to the exercise of a board's discretion in relation to a request for the making of additional oral submissions by a former board of appeal member.

The Enlarged Board noted in G 2/94 (OJ 1996, 401) that there was a potential conflict between what might be seen as a right of former board of appeal members to seek subsequent employment on the basis of their special knowledge by making oral submissions during proceedings before the EPO, and the need for proceedings before the EPO to be conducted free from any suspicion of partiality. The existence of such a potential conflict was well recognised in the context of national judicial systems where it was clear that persons accepting appointments as judges were subject to restrictions if they wished to work in private legal practice after having served as judges. The Enlarged Board concluded that the above potential conflict had to be resolved with a view to avoiding any suspicion of partiality during the conduct of proceedings before the EPO. The public interest in the proper conduct of proceedings before the EPO had to prevail over the personal interests of former board of appeal members who wished to make oral submissions on behalf of parties to the proceedings.

It was therefore necessary to place **restrictions** on the admissibility of such oral submissions, at least for a reasonable period of time following termination of a person's appointment as a member of a board of appeal. In the absence of specific legislation, the point in time following termination of his or her appointment after which a former member of the boards of appeal might make oral submissions in proceedings before the board of appeal was **a matter within the judicial discretion** of the boards of appeal. The Enlarged Board found that during either ex parte or inter partes proceedings, a board of appeal should refuse permission for a former member of the boards of appeal to make oral submissions during oral proceedings before it, unless it was completely satisfied that **a sufficient period of time** had elapsed following termination of such former member's appointment to the boards of appeal, so that the board of appeal could not reasonably be suspected of partiality in deciding the case if it allowed such oral submissions to be made.

After **three years** have elapsed, permission should be granted except in very special circumstances.

T 585/06 dealt with the presence of a former member of the boards of appeal at the oral proceedings before the opposition division and acting as consultant of the patent proprietor. The former member had not acted as an authorised representative but only as the patent proprietor's consultant. He had not addressed the opposition division. This amounted to an important difference from the facts of case G 2/94.

5.4. Oral submissions by qualified patent lawyers of non-EPC contracting states

Another question of law decided in G 4/95 was whether, having regard in particular to the provisions of Art. 133 and Art. 134 EPC 1973, a person who was not qualified in accordance with Art. 134 EPC 1973 but was a qualified patent lawyer in a country which was not an EPC contracting state might present some or all of a party's case as if he were qualified under Art. 134 EPC 1973. The Enlarged Board decided that no special criteria applied to the making of oral submissions by qualified patent lawyers of countries which were not contracting states to the EPC. The criteria set out above were equally applicable to such patent lawyers (see T 774/05 with respect to "US patent attorney").

In case **T.756/09**, the request for oral submissions by Dr M, an Australian patent attorney, was made only ten days before the oral proceedings and the appellant (opponent) had denied its agreement both in writing and at the beginning of the oral proceedings. In support of its request, the respondent (patent proprietor) essentially submitted that Dr. M would not make submissions in the capacity of a technical expert, but as a patent attorney who was very familiar with the case, had advised the professional representative before the oral proceedings and would continue to do so during the oral proceedings. Taking into account the circumstances of the case, in particular that Dr. M was not a technical expert and thus was **not** expected to elaborate on technical aspects of the case in a manner which might take the appellant **by surprise**, the board concluded that submissions made directly by Dr. M under the supervision of the professional representative would not put the appellant (opponent) at a disadvantage and might contribute to an efficient debate. Hence, despite its late filing, the board decided to accede to the respondent's request for oral submissions by an accompanying person with the proviso that such submissions would be stopped if new technical facts or arguments were introduced into the debate.

W. Guidelines for Examination in the European Patent Office

1. Guidelines not binding on boards	957
2. Guidelines binding (in principle) on departments of first instance	959
3. The boards' application of the Guidelines in specific cases	961

In accordance with Art. 10(2)(a) of the European Patent Convention (EPC), the President of the European Patent Office (EPO) adopted, effective as at 1 June 1978, the Guidelines for Examination in the European Patent Office. Since the decision of the President dated 28 July 2015 the Guidelines have been amended pursuant to Art. 10(2) EPC in accordance with the policy of revising them annually. The **version in force** at the time of this case law report's publication is the **November 2018** edition (available online at www.epo.org). Notices giving general information about the changes made in each revision round are published in the OJ: for the November 2015 version in OJ 2015, A74; for the November 2016 version (the last version to be published as a hard copy) in OJ 2016, A76; for the November 2017 version, in OJ 2017, A75; and for the November 2018 version, in OJ 2018, A73. Please note that the Guidelines do not constitute legal provisions. For the ultimate authority on practice at the EPO it is necessary to refer firstly to the EPC itself, including the Implementing Regulations, and secondly to the interpretation put upon the EPC by the boards of appeal and the Enlarged Board of Appeal (Guidelines, General Part, 3 "General remarks" – November 2018 version). With the exception of important aspects relating to interlocutory revision, the appeals procedure is not dealt with in the Guidelines (Guidelines, General Part, 5 "Survey of the processing of applications and patents" – November 2018 version).

Art. 20(2) RPBA 2007 states: "If, in its decision, a Board gives a different interpretation of the Convention to that provided for in the Guidelines, it shall state the grounds for its action if it considers that this decision will be more readily understood in the light of such grounds."

It should be borne in mind that the edition of the Guidelines referred to in the following abstracts of board decisions is that applied by the board in question and may have been worded differently from the November 2018 version. The various different editions of the Guidelines are archived at www.epo.org/law-practice/legal-texts/guidelines/archive.html.

1. Guidelines not binding on boards

The Guidelines for Examination are not binding on the boards of appeal.

In T 1561/05 the board confirmed that the Guidelines for Examination in the EPO were not binding on the boards of appeal (applying T 162/82, OJ 1987, 533). T 1561/05 of 17 October 2006 is also referred to in J 7/10.

In T 740/98 the board noted, among other things, that the legal system established under the Convention did not treat the Guidelines as binding.

In T. 1356/05 the board stated that no provision of the Guidelines could override an article or rule of the EPC (see also T. 1360/05, and T. 861/02, in which the board, while noting the advice in the Guidelines on decisions consisting of references to communications, stated that R. 68(2) EPC 1973 must always be complied with).

In T. 500/00 the appellant argued that the disclaimer had been made in good faith according to the Guidelines and in accordance with the practice of the boards of appeal at the time of making the disclaimer. The board pointed out that the Guidelines were not rules of law and noted that what counted was not whether the opposition division had acted in accordance with the Guidelines, but whether it had acted in accordance with the Convention. In any event, the principle of good faith could not have been successfully invoked in this case.

As to the alleged lack of consistency between what was in fact the established case law and the Guidelines for Examination, the board in T. 1741/08 noted that it was not bound by the Guidelines, an important factor in the judicial independence of the boards of appeal (Art. 23(3) EPC). An alleged divergence between the Guidelines for Examination and case law therefore could not be a sufficient basis for challenging the case law by means of a **referral** to the Enlarged Board of Appeal.

In T. 1363/12 the board stated that it is to be noted that the principles established by the Enlarged Board of Appeal for the assessment of the requirement of Art. 123(2) EPC could not be changed **by issuing amended Guidelines**.

In ex parte case T. 1090/12, the appellant drew the attention to the Guidelines G-VII, 3.1 ("an assertion that something is common general knowledge need only be backed by documentary evidence (for example, a textbook) if this is contested") and submitted that this passage was binding on the boards of appeal when exercising the power of the examining division. The appellant requested the referral of the following question to the Enlarged Board of Appeal: "To what extent is a Board of Appeal, when exercising power within the competence of the first instance department which was responsible for the decision appealed under Article 111(1) EPC, subject to the same constraints on that power as the first instance department, such as the duty to follow the Guidelines?" The board refused this request and stated that the Guidelines for Examination at the European Patent Office (here version of November 2016) are not part of the European Patent Convention (see Art. 164(1) EPC 1973) and therefore cannot be binding upon the members of the boards of appeal (see Art. 23(3) EPC 1973).

In T. 8/13, as regards the passages of the Guidelines (F-IV, 2.2, 4.5.3, 6.2 and 4.13 – 2012 version) referred to by the appellant, the board limited itself to pointing out that they could not be applied in the way the appellant has argued and that, anyway, they have no binding effect on the boards of appeal. The scope of protection conferred by the claim(s) of a patent according to Art. 69 EPC and the protocol on its interpretation, is to be distinguished from the disclosure in a patent.

Observing that the Guidelines were not legally binding on the boards, the board in T.1222/14 took the view that the appellant had anyway misinterpreted the section it had cited (Guidelines F-IV, 4.6).

The fact that the Guidelines are not binding on the boards of appeal does not mean that the boards do not apply them or quote them as a source of inspiration (see in this chapter III.S.3.).

2. Guidelines binding (in principle) on departments of first instance

The Guidelines state (General Part, point 3 General remarks – November 2018 version): "The Guidelines cannot cover all possible occurrences and exceptions in every detail, but must be regarded as general instructions that may need to be adapted to the individual case. The application of the Guidelines to individual European patent applications or patents is the responsibility of the formalities officers and examiners. As a general rule, parties may expect the EPO to act in accordance with the Guidelines. ... It should be noted also that the Guidelines do not constitute legal provisions. For the ultimate authority on practice in the EPO, it is necessary to refer firstly to the European Patent Convention".

In T.647/93 (OJ 1995, 132) the board stated that it was normally desirable for examining divisions to act in accordance with the Guidelines, but pointed out that these were not rules of law, so failure to follow a procedure set out in them was not in itself a substantial procedural violation (T.51/94, T.937/97).

In T.162/82 (OJ 1987, 533) and T.42/84 (OJ 1988, 251), two boards of appeal ruled on the discretionary power of examining divisions to depart from the EPO Guidelines. According to these two decisions, the Guidelines were only general instructions intended to cover normal occurrences. Thus, an examining division could depart from them provided it acted in accordance with the EPC. In reviewing the decision of an examining division, a board of appeal would wish to ensure uniform application of the law and judge whether the division had acted in accordance with the Convention, not whether it had acted in accordance with the Guidelines.

In T.500/00 the board noted that what counted was not whether the opposition division had acted in accordance with the Guidelines, but whether it had acted in accordance with the Convention.

In T.1388/10, the board observed that the Guidelines merely offered general guidance covering normal occurrences. Their application in specific individual cases was the responsibility of the examining division, which could depart from them in exceptional cases. Also, the Guidelines were not the law – unlike the EPC and its Implementing Regulations. When reviewing examining division decisions, the boards did not assess whether the division had complied with the Guidelines. Rather, they considered whether it had exercised its discretion within the limits set by the EPC and its Implementing Regulations.

In J.27/94 (OJ 1995, 831) the board stated that there might be cases in which the public had a legitimate expectation that the department of first instance would not deviate from the established case law. This might apply if the relevant case law had become enshrined in the consistent practice of the department of first instance, and in particular if this had been made known to the public in published Guidelines, Legal Advice or Notices from the EPO. In such a situation, an applicant might legitimately expect that a practice allowing or even recommending a particular way of proceeding would not be changed without appropriate advance information. In the case at issue, the Guidelines had remained unchanged, which in fact led to the reasonable expectation that the practice based on them would likewise not be changed.

The board in T.1607/08 recalled that the Guidelines published by the EPO were one of the sources of legitimate expectations. Therefore, where the Guidelines gave the clear indication that the continuation of the opposition proceedings had to be communicated to the patent proprietor, the latter was entitled to expect that such information would be given before a decision on the substantive issues was issued. Otherwise, as in the case at issue, the decision to revoke the contested patent would come as a surprise to the patent proprietor.

In T.182/90 (OJ 1994, 641), T.119/91, T.523/91, T.366/92 and T.397/94 the boards of appeal stated that it was **not** a substantial procedural violation within the meaning of R.67 EPC 1973 if a request to be called back by or have an interview with the primary examiner was ignored. It was a matter for the examiner's discretion to decide whether to conduct such informal discussions in accordance with the Guidelines, bearing in mind the particular circumstances of the case (see also T.300/89, OJ 1991, 480).

The examining division's failure to follow a procedure set out in the Guidelines is not in itself a substantial procedural violation unless it also constitutes a violation of a rule or principle of procedure governed by an article of the Convention or one of the Implementing Regulations. This is because the Guidelines are not legally binding (T.42/84, OJ 1988, 251; T.51/94; J.24/96, OJ 2001, 434).

In T.246/08 the board saw, in the particular circumstances of the case, the examining division's deviation from the Guidelines as a matter for approval rather than reproach.

In T.313/10 the examining division had argued, using their own criteria, that a method performed by a computer was excluded. This was contrary to the established jurisprudence as set out in the Guidelines.

In T.1020/15 the board cited, in addition to applicable EPC provisions, numerous passages from the Guidelines (E-IX, 1.2; C-VIII, 1, 3 and 4; G-IV, 7.5.3; E-X, 7.1(i), 7.3 and 7.4) in support of its finding that the examining division's decision was vitiated by four substantial procedural violations.

According to the board in T.755/14, contrary to the appellant's view, although the search and examining divisions had failed to follow the procedure established in the Guidelines for considering unity, their substantively incorrect assessment of the unity issue could not

be regarded as or equated to a substantial procedural violation within the meaning of R. 103(1) EPC, especially as the Guidelines were not legally binding. The board was also unable to identify any substantial procedural violation in the action then taken by the examining division.

In T 679/14, the board found, in line with the Guidelines (regarding postponements at the instigation of the Division, Guidelines, E-II, 7.1), that it is unacceptable to repeatedly postpone oral proceedings without serious reasons, especially if it is done several times in the same examination proceedings after long delays have already occurred. In the case in hand, although the individual delays caused by the (eight) postponements were short, the examining division had acted against the interests of procedural efficiency, at the same time as ignoring clear rules given in the Guidelines to avoid such delays.

3. The boards' application of the Guidelines in specific cases

Although the boards are not bound by the Guidelines, this does not mean that they do not take them into account or turn to them for inspiration when reaching their decisions. It should be borne in mind that the edition of the Guidelines referred to in the decisions summarised below to illustrate the related case law is that applied by the board in the specific case concerned and not necessarily that currently in force (November 2018 version).

In T 651/91 the board cited with approval the Guidelines, confirming that a generic disclosure did not normally deprive any specific example falling within that disclosure of novelty.

In T 523/89 the board saw no reason to disagree with the general principle of interpretation laid down in the Guidelines.

In T 631/97 (OJ 2001, 13) the board found that the interpretation of R. 46(1) EPC 1973 was in agreement with that of the Enlarged Board of Appeal in Opinion G 2/92. It also found that the Guidelines were fully consistent with G 2/92 and R. 46 EPC 1973.

In T 587/98 (OJ 2000, 497) the board found that the claims were not "conflicting" claims within the meaning of the Guidelines.

The Enlarged Board in G 3/14 (OJ 2015, A102) observed that neither the EPC itself nor the Implementing Regulations made any distinction between independent and dependent claims when it came to their compliance with the requirements of the EPC at the examination stage. Although not part of the express legal framework of the EPC, the Guidelines likewise made no distinction between independent and dependent claims when it came to objections of lack of clarity (see e.g. Guidelines F-IV, 4.1 – November 2014 version; this part is unchanged in the November 2018 version, F-IV, 4.1).

In T 32/95 (ex parte) the board found that, once the applicant had indicated sound reasons for doubting whether a cited document belonged to the state of the art, the examiner should

have acted as recommended in the Guidelines, i.e. not pursued the matter further if additional investigation failed to produce sufficient evidence to remove that doubt.

In the *ex parte* case **T. 655/13** (examining division's reasoning based on a pertinent prior-art document in a non-official EPO language), the board based its reasoning partly on the Guidelines (E-X, 2.6 – November 2017 version; E-IX, 5 – June 2012 version, in force at the time of the appealed decision; and G-IV, 4 – November 2017 version).

In **T. 300/89** (OJ 1991, 480) the board held, in relation to the appellant's complaint as to the failure of the examiner to telephone as requested, that the practice in relation to such informal communications was clearly set out in the Guidelines.

In **T. 839/95** the board noted that an interlocutory decision in the case of an allowable auxiliary request was foreseen in the instructions to examiners only for auxiliary requests in opposition proceedings.

The applicant's request "to render a decision on the record" was not to be construed as a waiver of the right to a fully reasoned first-instance decision, even in the light of the suggested procedure in the Guidelines (see **T. 1309/05**, **T. 583/04**).

In **T. 1709/06** the board noted that although the Guidelines for Examination E-X, 4.4, suggested a procedure for issuing a decision "on the state of the file" taking a standard form, a number of decisions of the boards of appeal (see **T. 1309/05**, **T. 1356/05**) had pointed out that such a standard decision form did not meet the "reasoned" requirement of R. 68(2) EPC 1973 (now R. 111(2) EPC).

In **T. 1123/04** the board noted that R. 68(2) EPC 1973 (now R. 111(2) EPC) stipulated that decisions of the European Patent Office which were open to appeal had to be reasoned. The criteria for the "reasoning" were, for instance, elaborated in the Guidelines.

In **T. 2068/14** the board had to consider whether the decision of the examining division was adequately reasoned. The board endorsed the following statement in the Guidelines, as it reflected the jurisprudence of the boards of appeal: "It is particularly important that special attention should be paid to important facts and arguments which may speak against the decision made. If not, the impression might be given that such points have been overlooked" (Guidelines of September 2013, then applicable; *idem* Guidelines E-X, 2.6 – November 2018 version, Reasoning of decisions). The board in **T. 1998/10** (use of standard form) backed up its reading of the R. 111(2) EPC provision on the need to give reasons for decisions by referring to the same section of the Guidelines (E-IX, 5 "Reasoning of decisions"), according to which the reasons given in a decision should be "complete and independently comprehensible, i.e. generally without references".

In **T. 833/99**, which concerned a number of alleged prior uses, the board observed that, contrary to what the appellant (opponent) had argued, it was not the conditions set out in the first paragraph of Guidelines D-V, 3.1.3.1 (G-IV, 7.2.1 – November 2018 version) that applied but those in the last sentence of the final paragraph (also G-IV, 7.2.1 – November 2018 version: "... however, all concealed features which could be ascertained

only by dismantling or destroying the object will not be deemed to have been made available to the public.").

The opponents' argument that the product-by-process feature was meaningless (i.e. non-limiting) was based on section F-IV, 4.12 of the Guidelines for Examination (November 2015 version), in which it was stated that a claim defining a product in terms of a process is to be construed as a claim to the product as such. However, the board in T 658/13 could not agree that said section of the Guidelines implied that a product-by-process formulation as such could only be meaningless.

In T 261/15, in respect of the argument that a selected sub-range has inter alia to be sufficiently far removed from the end-points of the known range, the board pointed out that it was not aware of any jurisprudence stating this condition in such a general way. It was true that the Guidelines for Examination, G-VI, 8, recited under point (ii)(b) this criterion as a condition for acknowledging novelty of a numerical selection. However, neither decision T 198/84 nor T 279/89, which are cited in this passage of the Guidelines, stipulates this condition.

In interpreting R 116(1) EPC and deciding whether or not the department of first instance had applied it correctly, the board in ex parte case T 1750/14 applied a literal reading of its provisions in conjunction with those of R 132(2) EPC, as found in the Guidelines (D-VI, 3.2, last sentence – September 2013 version).

The board in T 1741/08 remarked that it would seem that while the statement in Guidelines G-II, 3.7, was not actually inconsistent with the case law of the boards of appeal, the optimistic tone might sometimes mislead (potential) applicants.

The reasons given in the EPO notice of 8 November 2013 on handwritten amendments for changing a practice that had been applied for years at first instance and was also recognised in the Guidelines do not warrant changing the established practice of the boards of appeal and the related case law (T 37/12, citing T 1635/10, point 5 of the Reasons).

With regard to the requirements of Art. 84 EPC, the appellant in T 1882/12 argued that Guidelines C-III, 4.9 (F-IV, 4.9 – November 2015 version) on optional features did not impose a ban on the terms "preferably", "preferred" and "more particularly" to which the examining division had objected, but rather required that they be looked at carefully in their specific context to ensure that they did not introduce ambiguity. In the appellant's view the examining division's procedural violation was essentially that it had incorrectly assessed the clarity requirement because the claim wording in the case in point had not been carefully examined, which was **inconsistent with the Guidelines and hence contrary to the principle of equal treatment**. Yet the mere fact that other examining divisions had not raised such objections in similar cases did not imply a breach of the principle of equal treatment. As the appellant itself had submitted, the Guidelines prescribed a careful examination.

Although only one reason is required to refuse an application, in case **T.1710/11**, numerous clarity objections were set out in the contested decision and the examining division held that "a final decision on [novelty and inventive step] can properly be taken only after the scope of the claims has been clarified". In the knowledge that the subject-matter of the "unclear" claim was not inventive, it appeared to be somewhat inefficient to issue a decision which gave lack of clarity – but not a lack of inventive step – as a reason for refusal, thus forcing the appellant to address each of the clarity objections before being able to challenge the inevitable inventive step objection. The board noted that this approach did not appear to be in line with the "constructive and helpful" attitude that the Guidelines require the examiner to adopt (C-I, 2).

In **T.1060/13** the board, in explaining the conditions under which interlocutory revision must be granted by the examining division, drew attention to an inconsistency both in the Guidelines of June 2012, applicable to the case, and with the version of September 2013. However, the text quoted has been amended in the meantime and is no longer to be found as such in the Guidelines E-X, 7.4. – November 2015 version. In particular, the reference to the obiter dictum has been deleted.

The board in **T.736/14**, whilst observing that the EPC contains no explicit provisions about how to proceed if an applicant whose application is non-unitary responds unclearly or in a misleading way to an invitation from the examining division to specify which searched invention it wishes to prosecute further, nevertheless found that Guideline H-II, 7.1 (version 2013; entitled "Restriction to a single, searched invention") should not have been applied at all when refusing to admit the auxiliary request, since the applicant had not clearly indicated the invention to be further examined at that stage of the examination proceedings.

When dealing with internet disclosures, the boards have referred to the Guidelines (see G-IV, 7.5.2 – November 2018 version) and established the balance of probabilities as the applicable standard of proof (**T.2227/11**, upheld more recently in **T.1711/11**, **T.353/14**, **T.545/08**). Earlier decision **T.1134/06** that the stricter standard of proof "beyond reasonable doubt" had to be applied to internet disclosures has been refuted by the later case law cited above.

10.	Publication of the application	989

1. Introduction

The EPO first examines whether a patent application satisfies the requirements for the **accordance of a date of filing** in accordance with the Implementing Regulations (Art. 80 EPC, Art. 90(1) EPC and R. 40 EPC). Only if an application is accorded a date of filing is the **examination as to formal requirements** commenced (Art. 90(3) EPC).

2. Responsibility for formalities examination

Under Art. 16 EPC, the Receiving Section is responsible for the examination on filing and the examination as to formal requirements of European patent applications. It retains responsibility up to the time when the Examining Division becomes responsible for the examination of the European patent application under Art. 94 EPC (R. 10 EPC).

The limitation in time of the Receiving Section's responsibility was previously in Art. 16 EPC 1973. The move to the Implementing Regulations ensures greater flexibility in determining when competence passes within the EPO from one department to another.

The Receiving Section is also no longer limited to the EPO's branch in The Hague as it was under Art. 16 EPC 1973. According to **T 1012/03**, the amendments to Art. 16 and 17 EPC deleting the allocation of the Search Divisions and Receiving Section to the branch at The Hague clearly indicate that the EPC no longer restricts the competence of the President of the EPO to decide which transactions shall be carried out at Munich and which at The Hague.

In **G 1/02** (OJ 2003, 165) the Enlarged Board of Appeal pointed out that Art. 90 EPC 1973 and Art. 91 EPC 1973 entrusted to the Receiving Section certain duties relating to formalities examination of applications on filing, and the section's decisions may give rise to a loss of rights (see Art. 91(3) EPC 1973) which are appealable (see Art. 106 EPC 1973). The Receiving Section is composed entirely of formalities officers who – just like their counterparts working with opposition divisions – receive specialist training but are not required to have studied a technical subject or law at university.

In **J 18/84** (OJ 1987, 215) the Legal Board of Appeal distinguished the respective areas of responsibility of the Receiving Section and the Legal Division regarding the designation of the inventor. The examination of an initial designation of inventor complying with Art. 81 EPC 1973 fell exclusively to the Receiving Section as one of its formalities examination responsibilities under Art. 16 and 91 EPC 1973. (These responsibilities are

now in Art. 16 and 90(3) EPC). However, once entries began in the Register of European Patents – which under Art. 127, 2nd sentence, EPC 1973 coincided with the publication of the European patent application – the Legal Division might be competent for disputed corrections.

In J 13/02, the board took the view that the fact that the EPC 2000 versions of Art. 16 to 18 EPC were already applicable in accordance with Art. 6 of the Revision Act did not alter the fact that the Receiving Section's competence came to an end once a valid request for examination has been made with the result that the examining division had to examine whether the application met the requirements of the EPC 1973 (Art. 94(1) EPC 1973 in conjunction with Art. 96(2), 97(1) and 97(2) EPC 1973).

See in this chapter IV.A.5.5.3 for the extent of competence of the Receiving Section in respect of requests for correction under R. 139 EPC.

3. Where and how applications may be filed

Under Art. 75 EPC a European patent application may be filed with the EPO or, if the law of a Contracting State so permits, (and subject to Art. 76(1) EPC) with the central industrial property office or other competent authority of that State.

According to J 3/80 (OJ 1980, 92), the obligation to forward European patent applications filed nationally to the EPO rests upon the relevant central industrial property office and not upon the applicant (see also J 1/12 in this chapter IV.A.5.1.; see also chapter III.E.2.2. "Re-establishment only in cases of failure to observe a time limit for which it was for the applicant to observe").

The form of filing is regulated by R. 2 EPC and may be by hand, by post or by technical means of communication. Details and conditions are laid down by the President of the EPO. Documents purporting to be documents filed subsequently for the purposes of R. 2(1) EPC must be deemed not to have been received if they are filed with technical means not approved by the President of the EPO (T 765/08).

4. Persons entitled to file application

A European patent application may be filed by any natural or legal person, or any body equivalent to a legal person by virtue of the law governing it (Art. 58 EPC). An application may also be filed either by joint applicants or by two or more applicants designating different Contracting States (Art. 59 EPC).

In proceedings before the EPO, the applicant is deemed to be entitled to exercise the right to a European patent (Art. 60(3) EPC). This fiction only relieves the EPO of any need to investigate the existence of the entitlement. However, when a person referred to in Art. 60(1) EPC, other than the applicant, disputes the entitlement to the grant of a European patent, the entitlement may be modified under the conditions provided for in Art. 61 EPC.

The Enlarged Board held in **G 3/92** (OJ 1994, 607) that when it has been adjudged by a final decision of a national court that a person other than the applicant is entitled to the grant of a European patent, and that person, in compliance with the specific requirements of Art. 61(1) EPC, files a new European patent application in respect of the same invention under Art. 61(1)(b) EPC, it is not a pre-condition for the application to be accepted that the earlier original usurping application is still pending before the EPO at the time the new application is filed.

5. Accordance of a date of filing

5.1. Requirements for according a date of filing

The date of filing of the European patent application shall be the date on which the requirements laid down in the Implementing Regulations are fulfilled (Art. 80 EPC, which is applicable to European patent applications filed on or after 13.12.2007). Detailed provisions concerning the requirements have been moved to the Implementing Regulations (R. 40 EPC). The requirements include:

- an indication that a European patent is sought;
- information identifying the applicant or allowing the applicant to be contacted (see in this chapter IV.A.5.2.);
- a description or reference to a previously filed application.

The patent application must be filed with the EPO or other competent authority in accordance with Art. 75(1) EPC.

If a date of filing cannot be accorded following the examination under Art. 90(1) EPC, the application is not dealt with as a European patent application (Art. 90(2) EPC).

According to **G 2/95** (OJ 1996, 555), Art. 80 EPC 1973 stipulated the minimum requirements which had to be met in order for a filing date to be accorded. According to Art. 80(d) EPC 1973 (see now R. 40 EPC), the documents filed by the applicant had to contain a description and one or more claims (in accordance with Art. 14 EPC 1973, which was substantially amended in the EPC 2000). However, the description and claims did not have to comply with the other requirements of the EPC 1973. It was sufficient for the application documents to clearly contain a description and one or more claims. However, if they did not contain a description or claims, the requirements for according a filing date under Art. 80(d) EPC 1973 were not met and could not be created subsequently by way of a correction under R. 88 EPC 1973 (see now R. 139 EPC and this chapter IV.A.5.5.). If the application documents met the requirements of Art. 80 EPC 1973, the European patent application was accorded a filing date.

In **J 18/86** (OJ 1988, 165) the board stated that under R. 24 EPC 1973 in conjunction with Art. 75(1)(b) EPC 1973 the date of filing of a European application was always the date on which the application documents were actually received, either by the EPO directly or by

a competent national authority. Nothing in the EPC 1973 admitted of the possibility of applying a provision of any national law to the determination of the date of filing of a European patent application.

In J. 4/87 (OJ 1988, 172), the board held that in the event of an unforeseeable postal delay causing non-compliance with a time limit, if R. 85(2) EPC 1973 (relating to general interruption or subsequent dislocation in the delivery of mail in a Contracting State) was not applicable so as to extend the time limit, the EPO had no discretion to extend it. Applying the principles set out in J. 18/86 above, the date of filing was the actual date of receipt by the EPO or a competent national authority. See also J. 13/05.

In J. 12/05, the Legal Board, citing J. 4/87 and J. 18/86, held that the EPC did not permit backdating of the filing date. It went on to state that, even where the conditions for extending the priority period under either R. 84a EPC 1973 or R. 85 EPC 1973 were met, this did not result in a change of the actual filing date. Instead, there arose a legal fiction that the priority period had been observed, even though the filing date was actually later than that period's expiry date.

In T. 382/94 (OJ 1998, 24), the claims and description had been filed in German, but the drawings contained text matter in English. The board held that the EPC 1973 did not make the accordance of a filing date dependent on any text matter in the drawings being in a language in accordance with Art. 14(1) or (2) EPC 1973. If the drawings were filed in full on the date of filing, they formed part of the application as filed, even if they contained text matter in an official language other than the language of proceedings. The language requirements for a European patent application were amended under the EPC 2000, see chapter III.F.1. "Language of filing and date of filing of a European patent application".

In J. 1/12 the appellant had filed a European patent application with the UK Patent Office with the same documents as those underlying the later application before the EPO. The application in the UK never reached the EPO. The Legal Board therefore had to consider whether, contrary to Art. 80 EPC 1973, it was justified to assign the application the earlier filing date (Art. 75(1)(b) EPC 1973). Art. 77(2) EPC 1973 provides that European patent applications filed within the member states are to be forwarded to the EPO within six weeks after filing. Art. 77(5) EPC 1973 supplements this provision by providing that European patent applications which do not reach the EPO before the specified time limit are deemed to be withdrawn. It followed that the application filed with the UK Patent Office was deemed to have been withdrawn. No re-establishment of rights is provided for. In such a situation the legislator expressly provides in the last sentence of Art. 77(5) EPC 1973 for the refund of the filing, search and designation fees. In addition, Art. 135(1)(a) and 136(2) EPC 1973 provide facilities for a conversion of the lost European patent application into national patent applications. It followed that the legislator of the EPC clearly recognised the harsh consequences of Art. 77(5) EPC 1973 for an applicant. But, having recognised the problem, the legislator did not provide the applicant with any means to regain the lost application.

5.2. Identity of applicant

5.2.1 Requirement for information identifying the applicant (Rule 40(1)(b) EPC)

R. 40(1)(b) EPC provides that the date of filing of a European patent shall be the date on which the documents filed by the applicant contain, inter alia, 'information identifying the applicant or allowing the applicant to be contacted'. (The latter option was added in the EPC 2000). The requirement for information identifying the applicant was previously contained in Art. 80(c) EPC 1973.

In J. 25/86 (OJ 1987, 475) it was pointed out that the requirement under Art. 80(c) EPC 1973 for "information identifying the applicant" was to be considered as having been met whenever it was possible to establish beyond reasonable doubt the identity of the applicant on the basis of all data contained in the documents filed by the applicant or his representative.

As noted in this chapter IV.A.4., under Art. 60(3) EPC the EPO assumes the applicant to be entitled to the European patent.

In T. 948/10 the EPO was wrongly informed that the applicant company's name had changed, and amended it accordingly. As neither the appellant's representative nor the examining division/Client Data Registration department had had any reason to believe that the party to the proceedings was anyone other than the original applicant, the board found that this error did not invalidate the procedural steps taken taken by the applicant before the first-instance departments ("falsa demonstratio non nocet"), and that the EPO should correct the mistake itself.

5.2.2 Correction of designation of applicant (Rule 139 EPC)

Under R. 139 EPC linguistic errors, errors of transcription and mistakes in any document filed with the EPO may be corrected on request. The decisions below consider the application of the EPC 1973 (R. 88 EPC 1973, which was not amended in substance). The provisions concerning identification of the applicant have been amended (see in this chapter IV.A.5.2.1).

In J. 7/80 (OJ 1981, 137), the board held that if the wrong applicant was named in an application and the wrong applicant and the correct applicant were both companies forming part of the same group of companies then the mistake could be corrected under R. 88 EPC 1973, if there was sufficient evidence to support the request for correction.

Following J. 7/80 (OJ 1981, 137) it was held in J. 18/93 (OJ 1997, 326), J. 17/96 and J. 31/96 that a correction substituting the name of the applicant was allowable under R. 88 EPC 1973 if there was sufficient evidence to support the request for correction. This rule was not in conflict with the provisions of Art. 61 EPC 1973, which concerned ownership disputes. R. 88, second sentence, EPC 1973 was not applicable. It was only necessary to verify whether there was sufficient evidence to support the request under R. 88 EPC 1973 for correction of the applicant's name; where the correction of a mistake

was requested and R. 88, second sentence, EPC 1973 was not applicable, the EPO had to be satisfied that a mistake had been made, what the mistake was and what the correction should be. In J 8/80 (OJ 1980, 293), the board added that, in order to avoid any abuse, the burden of proving the facts had to be a heavy one.

A correction under R. 88, first sentence, EPC 1973 was retroactive to the original date of filing (J 3/91, OJ 1994, 365; J 2/92, OJ 1994, 375) and the application was restored to the form which it should have taken on the filing date if the error had not been made (J 4/85, OJ 1986, 205).

In J 17/97 and J 18/97 the representative had filed the parent application in the name of Int. Inc., but the divisional application in the name of S.medica. Due to the different identities of the applicants, the Receiving Section had refused to treat the application as a divisional application. In its decisions, the Legal Board did not allow the request for correction to replace the name of the applicant of the divisional application with the name of the applicant of the parent application pursuant to R. 88 EPC 1973 because the appellant had not proved that the divisional application had been filed in error by S.medica and should have been filed by Int. Inc.

5.3. Legal effect of accordance of a date of filing

According to T 1409/05 (OJ 2007, 113) a legally effective – in the terminology of the EPC, an accorded – filing date had several different legal effects. Amongst others:

(a) it marked the beginning of the pendency of a European patent application; Art. 80 EPC 1973 in conjunction with Art. 90(1)(a), 90(2) EPC 1973;

(b) it marked the notional date on which the applicant formally claimed to have deposited his invention with the EPO; and

(c) the filing date defined the state of the art and hence the extent of search and examination, for the purposes of Art. 54(2) and (3) EPC 1973.

The legal effects (a) to (c) ensued immediately when the filing date was accorded. Further legal effects of the filing date unfolded upon publication of the patent application:

(d) It marked the date which counted as the filing date so as to affect other applications for the purposes of Art. 54(3) EPC 1973.

The filing date unfolded still further legal effects on grant:

(e) it marked the starting date for the granted protection envisaged by Art. 64(1) EPC 1973, cf Art. 63(1) EPC 1973; and

(f) the filing date marked the legally confirmed date by which the applicant had deposited the invention for which protection was granted, and as such, recognised the claim of (b).

The board went on to point out that the difference between the legally relevant dates (a) to (f) was clearly shown by the fact that logically they did not need to coincide, although this was the core assumption in the patent granting system established by the EPC.

A filing date for a "normal" application was accorded as soon as the requirements of Art. 80 EPC 1973 were met – apart from other formal issues, such as language etc. If an application was deemed to have been accorded a filing date, an application came into existence. In other words, there was a pending application, and the legal effects (a) to (c) above were obtained.

Conversely, a pending application had always to be deemed to have been accorded a filing date. It was true that the EPC used the notion of an application that was not deemed to have been accorded a filing date; cf Art. 90(2) EPC 1973. However, such a purported application would legally never be pending, as there would be no application; cf Art. 90(2) EPC 1973. Such a purported application was neither searched nor examined, and neither filing, search, examination nor annual fees needed to be paid thereafter. A purported application which did not have a filing date simply did not exist as an application sensu stricto for the purposes of the EPC. This showed that a pending application without a filing date would be in a legal limbo. In other words, the notion of according a filing date was synonymous with the legal recognition of the existence of a pending European patent application.

The board in T 382/94 (OJ 1998, 24) found that the accordance of a date of filing could by its very nature relate only to the whole of the application documents filed in accordance with Art. 80 EPC 1973. The EPC 1973 did not contain any provision which prescribed that the filing date could be accorded to only a part of these documents. As a result, according to Art. 123(2) EPC 1973 the limits for changing or correcting the parts of an application affecting the disclosure (ie the description, claims and drawings) were defined by "what a skilled person would derive ... from the whole of these documents as filed" (G 3/89 (OJ 1993, 117)). The content of the European patent application as filed was established with the description, claims and, where appropriate, the drawings (following G 2/95, OJ 1996, 555).

5.4. Subsequent filing of missing parts of the description or missing drawings (Rule 56 EPC)

5.4.1 Legal provisions

If the examination under Art. 90 EPC to determine whether the application satisfies the requirements for the accordance of a date of filing reveals that parts of the description, or drawings, appear to be missing, the EPO invites the applicant to file the missing parts within two months (R. 56(1) EPC). The rule's counterpart under the EPC 1973, R. 43 EPC 1973 referred only to missing drawings. The reference to missing parts of the description was added in the EPC 2000. Thus, in J 7/97, under the EPC 1973, where a European patent application had been filed with the EPO by fax, but one page of the description was missing, this was not considered an 'obvious error' and a filing date was granted for the application but omitting the page which was not faxed.

Where the applicant files missing parts of the description or missing drawings within two months of the date of filing or of a communication by the EPO inviting him to file the missing parts, the application is re-dated to the date on which the missing parts were filed. However, if the application claims priority, the missing parts of the description or the missing drawings are completely contained in the earlier application and all the requirements of R. 56(3) EPC are fulfilled, the application is not re-dated but retains the date on which the requirements laid down in R. 40(1) EPC were fulfilled (R. 56(3) EPC).

R. 56 EPC applies only to applications filed after the entry into force of EPC 2000 (J. 3/06, OJ 2009, 170). According to the Legal Board, applications filed before 13 December 2007 can be seen to be subject to EPC 2000 as regards the applicability of the Implementing Regulations when the article corresponding to the rule in question also applies to patent applications filed prior to 13 December 2007 under Article 1 of the Administrative Council's decision of 28 June 2001. However, a rule in the Implementing Regulations can be assumed to apply to a particular EPC 2000 article when it puts a more detailed construction on that article, in keeping with the purpose of "implementing" the EPC. This is not true of the relationship between Art. 90 and R. 56 EPC because R. 56 EPC does not elucidate Art. 90 EPC. In the context of the system as a whole, R. 56 EPC relates to Art. 80 EPC (filing date), which is not in the catalogue of provisions stated to be also applicable to pending procedures as soon as EPC 2000 was to enter into force. Consequently, the rules relating to it do not apply either.

In T. 2166/10 the patent proprietor filed an appeal against the decision of the opposition division revoking his patent, which had been granted on the basis of a Euro-PCT application. Some of the pages of the description had been missing from the original application and the opposition division held that only the originally filed pages were entitled to the international filing date. The subject-matter as granted consequently extended beyond the content of the application as filed.

In the board's judgment, there was no doubt that the preliminary examination and the patent in suit were partly based on new description pages which had been submitted in the course of the international preliminary examination procedure by way of amendment and which were missing from the application as originally filed. The applicant had never raised the issue of the missing pages or requested a correction of the filing date (cf. J. 3/00). Nor did the applicant subsequently file a request for correction of an error in the decision to grant. The board therefore concluded that the opposition division was correct when it held that the application as filed therefore did not include the missing pages of the description.

5.4.2 Interpretation of Rule 56 EPC

According to J. 27/10, the same interpretation is to be given to the term "parts of the description ... appear to be missing" in R. 56(1), first sentence, EPC as to the term "missing parts of the description" in the subsequent paragraphs of R. 56 EPC for deciding if a part is missing from the description. The term "description" in "missing parts of the description" in R. 56 EPC refers to the description which was originally filed in order to obtain a filing date and not to any other description. The incomplete originally filed description is to be

completed by the missing parts which must be added to the already filed text of the description. Thus an interpretation of R. 56 EPC that some, or all, of the description that was originally filed in order to obtain a filing date could be amended, replaced or deleted is incorrect.

In J 15/12 the board made it clear, with reference to J 27/10, that R. 56 EPC could also not be used to replace drawings. R. 56(1), first sentence, EPC was confined to drawings referred to in the description or claims but which appeared to be missing. In J 12/14 the board stated that the filing of drawings where the re-production of the figures is of low visual quality cannot be remedied by R. 56 EPC.

In J 2/12 the Legal Board found that where (a) the description as filed with an application includes references to numbered drawings and (b) drawings with corresponding numbering are also filed with the application, different drawings may nevertheless be filed later under R. 56 EPC as "missing drawings" if it can be established without having to apply technical knowledge that the drawings originally filed with the application are not the drawings referred to in the description and that the later-filed drawings are the drawings referred to in the description. In the case at issue, it was immediately apparent that the figures referred to in the description were not the figures as originally filed. In other cases it might be that such a conclusion could not be reached so readily, but as it was so clear in this case, the Legal Board did not have to consider where in general the dividing line should be drawn.

5.4.3 Whether to apply R. 56 EPC or R. 139 EPC

The decisions below consider the application of the equivalent rules under the EPC 1973:

- R. 43 EPC 1973 (now R. 56 EPC), which, however, referred only to missing drawings. The reference to missing parts of the description was added in the EPC 2000; and
- R. 88 EPC 1973 (now R. 139 EPC), which provides, inter alia, that mistakes in any document filed with the EPO may be corrected on request. However, if the request concerns, inter alia, the description or drawings, the correction must be obvious in the sense that it is immediately evident that nothing else would have been intended than what is offered as the correction.

In J 19/80 (OJ 1981, 65) it was held that if a **part** of a drawing was missing, the missing part was not to be considered as a missing drawing for the purposes of R. 43 EPC 1973; the whole figure was to be considered as an incorrect drawing. The correction of drawings was dealt with in R. 88 EPC 1973. Moreover, the evidence required to support a request for correction of a drawing by adding a missing part had to be unambiguous. However, according to G 3/89 and G 11/91 (OJ 1993, 117 and 125), the parts of a European patent application or of a European patent relating to the disclosure (the description, claims and drawings) might be corrected under R. 88, second sentence, EPC 1973 only within the limits of what a skilled person would have derived directly and unambiguously, using common general knowledge, and seen objectively and relative to the date of filing, from the whole of these documents as filed. Such a correction was of a strictly declaratory

nature and thus did not infringe the prohibition of extension under Art. 123(2) EPC 1973. Documents not meeting this condition might not be used for a correction under R. 88, second sentence, EPC 1973 even if they were filed together with the European patent application. These included, inter alia, priority documents, the abstract and the like.

In the explanatory remarks to EPC 2000 in CA/PL/06, it was explained that R. 56(1) EPC is not intended to apply to missing **parts** of the drawings. If the Receiving Section notes that a part of a drawing is missing, it will treat the application, for the purpose of R. 56 EPC, as if the complete drawing were missing and will invite the applicant to re-submit the complete drawing.

According to J 1/82 (OJ 1982, 293), if a sheet including two complete figures was late-filed, these could not be considered incorrect drawings for the purposes of R. 88 EPC 1973 – the late filing of one or more complete figures was dealt with in R. 43 EPC 1973.

5.5. Corrections under Rule 139 EPC

5.5.1 Legal provisions

Under R. 139 EPC (formerly R. 88 EPC 1973), mistakes in any document filed with the EPO may be corrected on request. However, if the request for such correction concerns the description, claims or drawings, the correction must be obvious in the sense that it is immediately evident that nothing else would have been intended than what is offered as the correction. Re corrections under R. 139, second sentence, EPC see also chapter II.E.4: "Correction of errors in the description, claims and drawings – Rule 139 EPC".

5.5.2 No replacement of invention

The decisions below are mainly about applying R. 88 EPC 1973, which however has not substantively changed; in R. 139 EPC, only minor editorial amendments to all three language versions have been made.

In G 2/95 (OJ 1996, 555) the Enlarged Board held that the complete documents forming a European patent application, that is the description, claims and drawings, cannot be replaced by way of a correction under R. 88 EPC 1973 by other documents which the applicants had intended to file with their request for grant (overruling T 726/93, OJ 1995, 478). The interpretation of R. 88 EPC 1973 had to be in accord with Art. 123(2) EPC 1973. This meant that a correction under R. 88 EPC 1973 was thus bound by Art. 123(2) EPC 1973, in so far as it related to the content of the European patent application as filed (see G 3/89 (OJ 1993, 117)). Such a correction could therefore be made only within the limits of what a skilled person would derive directly and unambiguously, using common general knowledge and seen objectively and relative to the date of filing, from the whole of the documents forming the content of the European patent application (referring to G 3/89).

The content of the European patent application was formed by the parts of the application which determined the disclosure of the invention, namely the description, claims and drawings (referring to [G 3/89](#)). As a result of the prohibition of extension under [Art. 123\(2\) EPC 1973](#), documents other than the description, claims and drawings could only be used in so far as they were sufficient for proving the common general knowledge on the date of filing (referring to [G 3/89](#)). On the other hand, documents not meeting this condition could not be used for a correction even if they were filed together with the European patent application. These included, inter alia, priority documents, the abstract and the like (referring to [G 3/89](#)). See also [J 5/06](#).

In decision [J 21/94](#) of 20 January 1997 and terminating the appeal proceedings following the referral to the Enlarged Board of Appeal dealt with in [G 2/95](#) (OJ 1996, 555), the Legal Board concluded that the originally disclosed invention B could be accorded a filing date even if there were contradictions between the request for grant (which related to invention A) and the application documents (which disclosed invention B). If a further invention (here invention A) was disclosed during grant proceedings, it could not be given a filing date unless it was clear that protection for this invention was now sought.

In [J 5/06](#), the board referred to [J 21/94](#) and stated, if an application is accorded a date of filing pursuant to [Art. 80 EPC 1973](#), the technical content of the application is definitively established ([G 2/95](#)). Exchanging this technical content with another one is a technical modification. The application of the strict requirements of either [Art. 123\(2\)](#) or [R. 88 EPC 1973](#), second sentence, is not limited to those circumstances when a minor part of a complete description needs to be interpreted relative to the rest, but these requirements are applicable to any suggested amendment or correction. This means that the technical content of the application as filed cannot simply be discarded, even if it does not correspond to the intention of the applicant, but must be considered when deciding whether an amendment or correction is allowable or not. The intention of the applicant at the time of filing (or even later) is immaterial in establishing the technical content of a patent application.

In [J 16/13](#) the appellant requested correction of the wrongly filed description and claims under [R. 139 EPC](#). The board stated that the skilled person would have immediately recognised the mismatch between the drawings and the other parts of the description. However, it was not "immediately evident that nothing else would have been intended than what is offered as the correction". [R. 139 EPC](#) required certainty as to the only correction possible; here, that was lacking. The board noted that the case before it was similar to [J 5/06](#), in which it had been confirmed that the earlier case law (up to [T 726/93](#)) holding that [R. 88 EPC 1973](#) had to be applied in the light of the applicant's intentions had clearly now been overturned (see [G 2/95](#), [J 21/94](#), [G 3/89](#)), and the request that the patent specification be corrected under [R. 139 EPC](#) was refused.

5.5.3 Extent of competence of the Receiving Section for corrections under [Rule 139 EPC](#)

[R. 139 EPC](#), second sentence, (previously [R. 88 EPC 1973](#)) lays down as a condition for acceptance of a request for correction concerning a description, claims or drawings that a correction must be obvious in the sense that it is immediately evident that nothing else

would have been intended than what is offered as the correction. This often requires a technical examination of the file, so that the question has arisen under R. 88 EPC 1973 whether the Receiving Section was competent to deal with the correction in such a case.

In decision J 4/85 (OJ 1986, 205) the board made it clear that the duties of the Receiving Section did not include a technical examination of the file; it should not, therefore, take a decision on a request for correction necessitating such an examination, but should leave the request in abeyance until the file had been transferred to the examining division (likewise J 5/12).

However, in J 33/89 (OJ 1991, 288) the board pointed out that the Receiving Section remained competent for decisions on requests for correction of drawings under R. 88, second sentence, EPC 1973 unless the request necessitated a technical examination. In J 12/14 the board agreed, and decided that the question of what technical features the figures in the drawings showed with respect to the claimed invention was not part of the formal examination procedure before the Receiving Section.

In J 5/01 the board decided that the wording of Art. 16 EPC 1973 and Art. 18 EPC 1973 as they stood left no room for an interpretation according to which the responsibility for a European patent application could be split between the Receiving Section and the examining division. The clear and mutually exclusive allocation of this responsibility in the EPC prevailed over considerations of procedural or cost economy (likewise T 2411/10; contrary to J 8/82, OJ 1984, 155). Thus, relying on the point in time at which a request for correction was made rather than on the two acts mentioned in Art. 16 EPC 1973 (request for examination or indication under Art. 96(1) EPC 1973) would be *contra legem*.

The board pointed out that corrections under R. 88 EPC 1973 were not a matter which formed part of the examination on filing or of the examination as to formal requirements (Art. 90 and 91 EPC 1973). Rather, the wish or the need for a correction might arise during the whole grant procedure and even afterwards, e.g. during opposition proceedings. For corrections necessitating a technical examination see J 4/85, OJ 1986, 205.

5.6. Change of date of filing

The Legal Board of Appeal held in J 14/90 (OJ 1992, 505) that re-dating an application could not be justified on the grounds that the later date would permit the granting of a European patent for a new Contracting State. The designation of a state formed part of the request for grant of a patent, and hence belonged to the documents making up a patent application, which meant that in principle there was no reason why the filing date of an application should not be changed to the date on which a further state was designated. What was lacking were the necessary legislative provisions which would make this possible. In the case before the board there were no special circumstances, as had been the case with decision J 5/89. On the contrary the public interest and the need for consistency ruled out a re-dating.

In J 5/89 the Legal Board of Appeal had stated that it was clear that Art. 80 EPC set a date **before** which a date of filing could not be accorded to an application, but it did not follow

that an application could not be given a **later** filing date with the consent of the applicant, provided that there was no detriment to the public interest, in circumstances in which the applicant had been **misled** by the EPO into not filing a new application entitled to that later filing date. See also chapter III.A. "The principle of the protection of legitimate expectations".

J 18/90 (OJ 1992, 511) followed J 14/90 (OJ 1992, 505) in holding that the express designation of a new Contracting State in a European patent application shortly before entry into force of the EPC for that state was no justification for deferring the filing date until the date of entry into force. However, the Legal Board added in J 18/90 that such express designation might, after checking with the applicant, be interpreted as meaning that the applicant did not want a filing date earlier than the date on which the EPC entered into force for the state concerned.

In T 683/06 the appeal had been lodged against a decision of the examining division to refuse a divisional application. The parent application had been sent by fax during the night. Some of the documents had arrived before midnight, some of them after midnight. According to the examining division's contested decision, the divisional application extended beyond the content of the parent application (Art. 76(1) EPC) because the claims in the divisional application were supported only by those parts of the documents for the parent application which had arrived by fax after midnight and in the light of the applicant's decision in favour of the earlier filing date did not belong to the parent application.

In its main request, the appellant sought to have the date after midnight recognised as the parent application's date of filing. However, the EPC makes no provision for a filing date once fixed to be changed subsequently. Only R. 56 EPC enables the filing date to be moved back if missing drawings or parts of the description are filed later. The correction of errors in filed documents in accordance with R. 139 EPC may also result in a change of filing date. But the case in point involved no such correction. Nor was a correction possible under R. 140 EPC.

6. Examination of formal requirements

Under Art. 90(3) EPC, if the patent application is accorded a date of filing, the EPO examines, in accordance with the Implementing Regulations, whether the following requirements have been satisfied:

- Art. 14 EPC, concerning the language of the patent application (see chapter III.F.1.);
- Art. 78 EPC, concerning the requirements of a European patent application (see in this chapter IV.A.6.1.);
- Art. 81 EPC, concerning the designation of the inventor (see in this chapter IV.A.6.2.);

as well as any requirements laid down in the Implementing Regulations, and, where applicable;

- Art. 88 EPC, concerning claiming priority (see in this chapter IV.A.8.);
- Art. 133 EPC, concerning general principles of representation (see chapter III.V.);
- any other requirement laid down in the Implementing Regulations (see in this chapter IV.A.6.3.).

Under Art. 90(4) EPC, where the EPO notes that there are deficiencies which may be corrected, it shall give the applicant an opportunity to correct them. If any deficiency noted under Art. 90(3) EPC is not corrected, the patent application shall be refused unless the EPC provides a different legal consequence (Art. 90(5) EPC).

In J. 18/08 the board stated that Art. 90(5) EPC provides that if any deficiency noted in the examination under paragraph 3 is not corrected, the European patent application shall be refused unless a different legal consequence is provided by the Convention. From this it follows that if an appeal is filed against such a refusal, the board has to examine whether the deficiency noted has been corrected or not. The present case was different from the situation where the non-observance of a time limit automatically leads to the application being deemed to be withdrawn. In such a case the legal consequence automatically ensues when an act required within a specific time limit is not performed, without any decision to be taken concerning the refusal of the application (R. 112 EPC). By contrast, if the application is refused under Art. 90(5) EPC the deficiency on which the decision is based can be corrected at the appeal stage.

6.1. Requirements of a European patent application (Article 78 EPC)

Under Art. 78(1) EPC a European patent application shall contain:

- a request for the grant of a European patent;
- a description of the invention;
- one or more claims;
- any drawings referred to in the description or the claims;
- an abstract

In addition it shall satisfy the requirements laid down in the Implementing Regulations.

Under Art. 78(2) EPC a European patent application is subject to the payment of the filing fee and the search fee. If the filing fee or the search fee is not paid in due time, the application shall be deemed to be withdrawn.

In J. 13/04, the patent application had been validly filed with the French Patent Office INPI. The board observed that, under Art. 78(2) EPC 1973, the time limit for payment of the filing and search fees in the case at hand could not be determined on the basis of either the

date on which the application was forwarded to the EPO or the date on which the receipt had been issued under R. 24(2) EPC 1973 but rather only on the basis of the date on which the application had been received by the competent national authority, provided that the date of that filing was also the date of filing within the meaning of Art. 80 EPC 1973.

6.2. Designation of the inventor

The European patent application shall designate the inventor. If the applicant is not the inventor or is not the sole inventor, the designation shall contain a statement indicating the origin of the right to the European patent (Art. 81 EPC).

A European patent application must also contain a request for the grant of a European patent (Art. 78(1) EPC). Under R. 19 EPC, the request for grant of a European patent shall contain the designation of the inventor. If the designation of the inventor is not made in accordance with this Rule, the EPO shall inform the applicant under R. 60(1) EPC that the application will be refused unless the designation is made within sixteen months of the date of filing of the application, or, if priority is claimed, of the date of priority. This period is deemed to have been observed if the information is communicated before completion of the technical preparations for the publication of the patent application.

R. 19(1) EPC requires consent to the rectification of a designation of inventor to be given by a "wrongly designated" person. In J. 8/82 (OJ 1984, 155), the Legal Board of Appeal held that a person already named whose name is not to be cancelled from the designation is not a "wrongly designated" person within the meaning of the Rule and his consent to the addition of the name of another person is not required. (The Legal Board of Appeal's finding in this decision on the allocation of responsibility between the Receiving Section and Examining Division for making a decision concerning such requests was overruled in J. 5/01, see in this chapter IV.A.5.5.3).

The issue which arose in J. 1/10 was whether the legal position regarding designation of the inventor is changed by early publication of the European patent application at the applicant's request under Art. 93(1)(b) EPC, which can mean that the European patent application as published does not tell the public who the inventor is. In the board's judgment, early publication under Art. 93(1)(b) EPC did not affect the time period under R. 60(1) EPC for filing the designation of the inventor. If it did, it would shorten the 16-month period for filing that designation. However, there was no legal basis for assuming any connection between early publication and a reduction in the 16-month period. Nor could this be inferred from R. 60(1) EPC or the provisions governing the procedure for rectifying deficiencies (Art. 90(3) and (4) EPC).

6.3. Any other requirement laid down in the Implementing Regulations

6.3.1 General provisions governing the presentation of application documents (Rule 49 EPC)

General provisions governing the presentation of the application documents are to be found in R. 49 EPC. These include the requirement in R. 49(2) EPC that the documents

making up the application shall be presented so as to allow electronic and direct reproduction in an unlimited number of copies. The application which was the subject of J.4/09 was rejected by the Receiving Section on the ground that it was in breach of this provision. The Legal Board of Appeal disagreed, observing, first of all, that the fact that the drawings had become part of the EPO's electronic file and did not differ noticeably from the filed versions went against the receiving section's view.

It went on to say that it was not part of the examination as to formal requirements to consider what precisely could be gathered from the drawings. Rather, it was the applicant who determined the scope of disclosure by selecting the application documents and their form, so that their informative value was his responsibility. An analysis going beyond the points to be examined on filing under R.46 and 49(1) to (9) and (12) EPC was impermissible. In particular, it was not permissible for improved drawings to result in a disclosure which could not be found in the original version of the application; nor could the applicant be compelled to change the drawings and so sacrifice a disclosure which, in his view, could only take this form.

7. Designation of states

7.1. Legal provisions

Under Art. 79(1) EPC **all** the contracting states which are party to the EPC at the time of filing of the patent application are deemed to be designated in the request for grant of a European patent. This is different from the situation under the EPC 1973, where contracting states had to be positively designated in the request for grant. This practice caused problems since, in principle, a later designation made after the filing date of the European patent application was inadmissible. Applicants continue to have the option of withdrawing designations pursuant to Art. 79(3) EPC.

Under Art. 79(2) EPC the designation of a contracting state **may** be subject to the payment of a designation fee (under the EPC 1973 it was stated, 'The designation of a Contracting State **shall** be subject to the payment of the designation fee.' – emphasis added). Since 1.4.2009, a flat designation fee has been payable for one or more contracting states designated (Art. 2(3) RFees).

The time limit for the payment of designation fees is within six months of the date on which the European Patent Bulletin mentions the publication of the European search report (R. 39 EPC, formerly Art. 79(2) EPC 1973).

The revised Art. 79 EPC is applicable to all European patent applications filed on or after 13.12.2007.

For case law on Art. 79(2) EPC 1973 (as in force until 30.6.1997), please refer to the "Case Law of the Boards of Appeal of the European Patent Edition", 5th Edition 2006, VII.A.4.1 "Article 79(2) EPC (old version)".

7.2. Effect of non-payment of the designation fee

7.2.1 Deemed withdrawal

Since 1.4.2009 a single designation fee has been payable in respect of **all** the Contracting States of the EPC. R. 39 EPC in force from that date provides that the designation fee shall be paid within six months of the date on which the European Patent Bulletin mentions the publication of the European search report. Where the designation fee is not paid in due time or the designations of all the Contracting States are withdrawn, the European patent application shall be deemed to be withdrawn. Under the EPC 1973 the same time limit was to be found in Art. 79(2) EPC.

Under Art. 121 EPC, where a designation is deemed withdrawn for any contracting state in respect of which the designation fee has not been paid (R. 39(2) EPC), the applicant may now apply for further processing, unless he has waived his rights to receive a R. 112(1) EPC communication and to request further processing by crossing the appropriate box in the Request for grant form.

R. 39 EPC as amended from 1.4.2009 applies to European patent applications filed on or after that date, as well as international applications entering the regional phase on or after that date.

7.2.2 Designation of states in divisional applications

Art. 76(2) EPC 1973 stipulated that a European divisional application could not designate contracting states which were not designated in the earlier application.

In G 4/98 (OJ 2001, 131), the Enlarged Board of Appeal held, overruling J 22/95 (OJ 1998, 569), that, without prejudice to Art. 67(4) EPC 1973, the designation of a contracting state party to the EPC 1973 in a European patent application did not retroactively lose its legal effect and was not deemed never to have taken place if the relevant designation fee had not been paid within the applicable time limit.

The Enlarged Board of Appeal further held that since in its opinion no general retroactive effect was attached to the fact that a designation was deemed to be withdrawn, the deemed withdrawal necessarily took effect upon expiry of the time limits mentioned in Art. 79(2) EPC 1973 and R. 15(2), 25(2) and 107(1) EPC 1973, as applicable, and not upon expiry of the period of grace provided by R. 85a EPC 1973.

Art. 76(2) EPC has therefore been amended to ensure that only those contracting states which remain designated in the earlier application at the time of filing of a divisional application are deemed to be designated in the divisional application. (Similarly, the EPO can only act as the "designated Office" for states designated in an international application in respect of which the EPC was in force on the date on which the international application was filed; J 30/90, OJ 1992, 516).

7.2.3 No correction of non-payment of fee under R. 88 EPC 1973

In J 21/84 (OJ 1986, 75) it was held that if the designation fee for a state was paid, neither within the time limit under Art. 79(2) EPC 1973 nor within the period of grace under R. 85a EPC 1973 together with the surcharge, such failure could not be corrected on the basis of and in conjunction with the correction of an error according to R. 88 EPC 1973.

Concerning the indication of the purpose of fee amounts paid in respect of designation fees under the earlier law, see "Case Law of the Boards of Appeal of the EPO", 6th edition 2010, VI.F.2.4 "Designation fees".

7.3. Correction of designation of states (Rule 139 EPC)

7.3.1 Decisions considering the application of the EPC 1973

Under Art. 79 EPC 1973 the request for the grant of a European patent had to contain the designation of the Contracting State or States. This was substantially changed with the EPC 2000. The decisions below consider the application of the EPC 1973. (Unlike Art. 79 EPC 1973, R. 88 EPC 1973 (now R. 139 EPC) was not amended in substance).

According to J 10/87 (OJ 1989, 323) a request for retraction of a withdrawal of the designation of a Contracting State filed after publication of the patent application may have been allowable under R. 88 EPC 1973 in appropriate circumstances, in particular if;

- (a) the public had not been officially notified of the withdrawal by the EPO at the time the retraction of the withdrawal was applied for;
- (b) the erroneous withdrawal was due to an excusable oversight;
- (c) the requested correction did not result in a substantial delay of the proceedings; and
- (d) the EPO was satisfied that the interests of third parties who may possibly have taken notice of the withdrawal by inspection of the file are adequately protected.

J 17/99 explained that with respect to corrections of designations in Euro-PCT applications, the same principles applied as for Euro-direct applications (see also chapter VI. "The EPO acting as a PCT authority").

J 27/96 concerned a Euro-PCT application which originally designated all the contracting states for a European patent, but on entry into the regional phase only designated and paid fees for ten. The board acknowledged that correction of a mistake pursuant to R. 88 EPC 1973 by adding the designation of a state had in principle been allowed by the Legal Board of Appeal (see J 3/81, OJ 1982, 100). However, it could remain undecided whether R. 88 EPC 1973 could have been applied to the designations purported to be missing, as the lack of fee payment in due time was not a mistake that could be corrected under R. 88 EPC 1973 and was therefore a failure which could not be remedied (referring to J 21/84, OJ 1986, 75). Nor could the appellant's auxiliary request to replace expressly

designated states with other non-designated states succeed – the designated states were not designated erroneously – rather the error lay in the omission of the non-designated states. Moreover, were there a retroactive effect of the correction, this did not mean that the applicant would be reinstated into the procedural phase when designations had to be made and fees paid or that, in consequence, the whole procedure in that phase would be available to him again. Correction of a mistake was an isolated procedural measure and not a case of re-establishment into a procedural phase as a whole.

In J.3/01 the Legal Board of Appeal was concerned with the same problem, in that the appellant's request was aimed at a reinstatement into an earlier procedural phase by means of a correction under R. 88 EPC 1973. The board held that correction under R. 88 EPC 1973 did not reverse the effect of decisions already taken on the basis of the uncorrected document and did not re-open a procedural phase already terminated or a time limit already expired. In other words, a procedural loss of right only indirectly caused by the incorrect document would not be remedied by a later correction of the document pursuant to R. 88 EPC 1973. This principle also characterised the functional and essential difference between a correction under R. 88 EPC 1973 on the one hand and restitutio in integrum pursuant to Art. 122 EPC 1973 on the other hand (see also J.25/01). The board concluded that correction under R. 88 EPC 1973, to include designation of the UK following failure to pay the designation fee, was not allowable, as it would be in breach of Art. 122(5) EPC 1973, according to which re-establishment into periods for payment of designation fees was not allowable.

In J.16/08 the request for correction of the designation of states was allowed in the unusual circumstances of the case. Following the case law summarised in J.7/90 (OJ 1993, 133) and endorsed in J.6/02, the board applied the three conditions to be met by such a request for correction in order for it to be allowable – firstly, that the error was an excusable oversight; secondly, that the request for correction was filed without undue delay upon discovery of the error, and thirdly, that the request for correction was, in the public interest, made early enough to enable publication of a warning with the European patent application. No such warning was required in the circumstances of this case, as the application had erroneously been published showing all contracting states as designated. Third parties were therefore not prejudiced by the correction, since no publication had ever indicated that the territorial scope of the invention was limited to two contracting states.

7.3.2 Decisions considering the application of the EPC 2000

Under Art. 79(1) EPC all the contracting states which are party to the EPC at the time of filing of the patent application are now deemed to be designated in the request for grant of a European patent. Applicants continue to have the option of withdrawing designations pursuant to Art. 79(3) EPC (see in this chapter IV.A.7.1.).

J.9/14 confirmed the established jurisprudence of the Legal Board on the correction of errors according to which the withdrawal of the designation of a contracting state could not be retracted once it had been published in the European Patent Bulletin. The board referred to J.1/11, where it had been held that with regard to the progress of technology

and the implementation of internet technology by the EPO a distinction between public file inspection and publication in the European Patent Bulletin was no longer relevant.

The Legal Board in J 9/14 re-emphasised that the public had a legitimate interest in relying on the information published by the EPO. The official notification to the public of the withdrawal is a key step and legal certainty would suffer unacceptably if thereafter, even for only a short period, a correction of the withdrawal were allowable (see also J 25/03, J 37/03, J 7/06).

8. Priority

8.1. Filing of priority documents

An applicant desiring to take advantage of the priority of a previous application must file a declaration of priority and any other document required, in accordance with the Implementing Regulations (Art. 88 EPC). Under R. 52(2) EPC, a declaration of priority shall preferably be made on filing the European patent application, but it may still be made with sixteen months of the earliest priority date claimed. This is a significant relaxation of the requirements as compared to R. 38(2) EPC 1973, under which at least the date and the state of the previous application had to be indicated on filing.

Similarly, R. 53 EPC (R. 38(3) EPC 1973) provides that an applicant claiming priority shall file a copy of the previous application within sixteen months of the earliest priority date claimed.

In J 1/80 (OJ 1980, 289) it was stated that as R. 38(3) EPC 1973 permitted an applicant to file certified copies of the priority documents at any time before the end of the sixteenth month after the date of priority, there was only a deficiency which he must be given an invitation to correct if the priority documents had not been filed at the end of the period.

8.2. Correction of priority declarations

8.2.1 Introduction

Under the EPC 1973, the correction of priority declarations was allowed under R. 88 EPC 1973. The possibility to correct the declaration of priority was expressly introduced into the EPC 200 in R. 52(3) EPC.

8.2.2 Correction of priority declarations under R. 88 EPC 1973

a) Requirement for mistake to have been made

Under the EPC 1973, the Legal Board allowed correction of state designations under R. 88, first sentence, EPC 1973 (now R. 139 EPC), early on (J 8/80, OJ 1980, 293; J 12/80, OJ 1981, 143; J 3/81, OJ 1982, 100; J 21/84, OJ 1986, 75). Shortly afterwards the rather strict principles developed in these decisions were also applied in cases where correction of priority declarations was at stake. Although a mistake correctable under

R. 88, first sentence, EPC 1973 could be an incorrect statement or the result of an omission, all the previous cases related to omitted priority declarations (J 3/82, OJ 1983, 171; J 4/82, OJ 1982, 385; J 14/82, OJ 1983, 121; J 11/89 and J 7/90, OJ 1993, 133).

In the four decisions J 3/91 (OJ 1994, 365), J 6/91 (OJ 1994, 349), J 9/91 and J 2/92 (OJ 1994, 375), the Legal Board refined the principles to be applied to corrections of priority declarations. In J 6/91 it analysed and summarised the previous case law, pointing out that the applicant had to prove a **mistake**, i.e. that the document filed with the EPO did not express the true intention of the person on whose behalf it was filed. In the earlier decisions the **burden of proof** on the applicant was defined as a heavy one. In J 9/91, however, the board took the view that the omission of a priority declaration would, in nearly every case, be an error. Thus, as a general rule, there was no need in cases of this kind to require special evidence to discharge the burden on the applicant of proving that a mistake had been made.

b) Time limit for request for correction

Despite the fact that R. 88, first sentence, EPC 1973 allowed correction without any time bar, the Legal Board followed the established case law requiring a request for correction of a priority claim to be made sufficiently early for a warning to be included in the publication of the application (J 3/82, OJ 1983, 171; J 4/82, OJ 1982, 385; J 14/82, OJ 1983, 121). This principle was upheld because the EPO, when exercising its discretionary power under R. 88, first sentence, EPC 1973 had to balance the applicant's interest in gaining optimum protection and a third party's interest in maintaining legal security and, in particular, in ensuring that the published application data were correct.

The board in J 6/91 noticed, however, that the previous case law in special circumstances already allowed the correction even without such a warning:

(i) if the EPO was partly responsible for the fact that no warning was published (J 12/80, OJ 1981, 143) and/or

(ii) if the interest of the public was not seriously affected because

- the mistake was obvious (in this sense, implicitly, J 8/80, OJ 1989, 293);

- under certain circumstances, where only a second or further priority was added (J 4/82, OJ 1982, 385; J 14/82, OJ 1983, 121; J 11/89);

- the public was otherwise informed about the full scope of protection sought by the applicant (J 14/82, OJ 1983, 121).

In J 3/91, J 6/91 and J 2/92 it was held that even after publication of a European patent application without a warning, the priority declaration could be corrected under R. 88, first sentence, EPC 1973 provided that there was an **obvious discrepancy** in the published

application indicating that something was wrong. In such a case the interests of third parties were not adversely affected by the correction.

In J. 3/91 the board held that an experienced practitioner could have noticed the obvious discrepancy because the claimed Japanese priority date (31.12.1983) and the European application date (3.1.1984) were close together and the Japanese file number was mentioned.

In J. 6/91 the international application in suit claiming priority from a US continuation-in-part application was itself presented as a continuation-in-part application and referred back to an earlier US application. In view of this and other special circumstances, the board allowed the addition of a (first) priority claim referring to the earlier US application.

In J. 2/92 the US priority date claimed for a PCT application was, owing to a clerical error, a Saturday when the USPTO was closed, instead of the previous Friday. The correct date was indicated on the priority document. Owing to a further clerical error in the request for transmittal of priority documents under R. 17.1(b) PCT (a typing error in the document number), the Receiving Office – in this case the USPTO – transmitted the wrong document to WIPO. The board allowed its replacement even after publication of the international application, adding, however, that this might not always be possible (see also T. 33/06).

In the parallel cases T. 972/93 and T. 973/93 the examining division had refused a request for the priority date to be corrected. European patent application E1 claimed the priority of a French application F1, from which two French divisional applications F2 and F3 were filed within the priority year claiming the priority of the parent application. At issue in T. 972/93 and T. 973/93 were European applications E2 and E3, which claimed the priority of F2 and F3 respectively. In error however, the filing date of F2 and F3 was given as the priority date. This mistake was detected during examination proceedings, after E2 and E3 had been published with the wrong priority date, because E1 was discovered as a prior right within the meaning of Art. 54(3) EPC 1973 (Art. 54 EPC has been substantially amended – see chapter I.C. "Novelty").

The board of appeal allowed the correction (following J. 6/91, OJ 1994, 349), ruling that the mistake was apparent, because only eight months separated the filing date of E2 and E3 from the incorrect priority date, whereas the priority year was usually exploited to the full. The interests of third parties had not been adversely affected because the precautionary filing of two European divisional applications with respect to E1, which had the same content as F2 and F3, made it possible to gain protection for the subject-matters of E2 and E3 with the priority of F1.

On the other hand, in J. 7/94 (OJ 1995, 817) the board did not allow the correction. It held that the mere fact that an existing priority was not claimed could not justify adding this priority by correction. The correction of priority data, not requested sufficiently early for a warning to be included in the publication of the application, was only allowable if it was justified by special circumstances (confirming J. 6/91, OJ 1994, 349). See also T. 796/94.

In J 11/92 (OJ 1995, 25) it was held that an incomplete priority declaration could be corrected, by the addition of an omitted priority in special circumstances, even after publication of the European patent application without a warning to the public that a request for correction had been made, provided that the public had been informed about the full scope of European patent protection sought, by way of a second European or Euro-PCT patent application, filed as a precautionary measure by the applicant in due time (referring to J 6/91, OJ 1994, 349).

In T 713/02 (OJ 2006, 267), the board held that the examination of a request for correction of priority data after the publication of the application was not to be restricted to that portion of the facts and circumstances which in a decision of a board of appeal in another case were considered not to preclude the correction. Therefore, in the case before the board, it could not be ignored that the requested correction by addition of an earlier priority date would eliminate from the state of the art pursuant to Art. 54(2) EPC 1973 a highly relevant document, which the applicant had previously de facto accepted as comprised in that state of the art (see, however, the Notice from the European Patent Office regarding decision T 713/02 (OJ 2006, 293), according to which the EPO's departments of first instance do not, for the time being, follow the findings that no decisions, except where a total loss of rights should be remedied, may be taken in the applicant's favour prior to the decisions terminating the granting procedure).

8.2.3 Rule 52(3) EPC

New R. 52(3) EPC introduced the possibility to correct the declaration of priority. New R. 52(2) EPC and (3) EPC apply the time periods laid down in the PCT for the addition or correction of priority claims to Euro-direct applications, with the necessary terminological adjustments, in order to avoid treating Euro-PCT and Euro-direct applications differently. Pursuant to R. 52(3) EPC, an applicant may correct a declaration of priority within 'sixteen months from the earliest priority date claimed, or, where the correction would cause a change in the earliest priority date claimed, within sixteen months from the correct earliest priority date, whichever sixteen-month period expires first, provided that such correction may be submitted until the expiry of four months from the date of filing accorded to the European patent application'. However, for easy publication, a declaration of priority may not be made or corrected after a request under Art. 93(1)(b) EPC has been filed (R. 52(4) EPC).

9. Deemed withdrawal of the application (Rule 100(3) EPC)

R. 100 EPC concerns the examination of appeals. If the applicant fails to reply in due time to an invitation under R. 100(2) EPC, the European patent application is deemed to be withdrawn under R. 100(3) EPC. These provisions were previously contained in Art. 110(2) and (3) EPC 1973 respectively.

The Legal Board held in J 29/94 (OJ 1998, 147) that if the appellants failed to reply in due time to an invitation under Art. 110(3) EPC 1973, the European patent application was deemed withdrawn, even if the appeal related to formal points, as the effect of the appeal,

namely that the board of appeal was now competent for the case, applied to the entire application (see chapter V.A.1. "Legal character of appeal procedure").

10. Publication of the application

Art. 93 EPC concerns the publication of the European patent application, which should take place as soon as possible after the expiry of a period of eighteen months from the date of filing, or, if priority has been claimed, from the date of priority, unless the applicant requests earlier publication. Under R. 67(1) EPC (R. 48 EPC 1973), the President of the EPO shall determine when the technical preparations for publication of the patent application are deemed to have been completed. The application shall not be published if it has been finally refused or withdrawn or is deemed to be withdrawn before the termination of the technical preparations for publication (R. 67(2) EPC).

In J 5/81 (OJ 1982, 155) it was stated that the key date for completion of the technical preparations for publication under Art. 93 EPC 1973 specifiable pursuant to R. 48(1) EPC 1973 could be said to give the applicant a certain minimum period of time within which his withdrawal of the application also prevented its publication. If the application was not withdrawn until after the key date, the applicant could no longer rely on its not being published. Nevertheless, the EPO was allowed by law to prevent publication, at its own discretion.

B. Examination procedure

1.	Stage before substantive examination	992
1.1.	Amendments made by the applicant of his own volition under Rule 137(2) EPC	992
1.2.	Request for examination (Rule 70 EPC)	992
1.2.1	General issues	992
1.2.2	The invitation to confirm early request for examination (R. 70(2) EPC)	994
2.	The first stage of substantive examination	994
2.1.	Beginning of "substantive examination"	994
2.2.	One invention to be the subject of examination	995
2.3.	Consolidation of proceedings	996
2.4.	Communications under Rule 71(1) and (2) EPC	996
2.4.1	Invitation to correct deficiencies and to propose amendments (Rule 71(1) EPC)	996
2.4.2	Content of Rule 71(2) EPC communication	997
2.5.	Refusal after a single communication	998
2.5.1	General issues	998
2.5.2	Failing to make a "bona fide" response	999
2.6.	Amendments under Rule 137(3) EPC	1001
2.6.1	Discretion of the examining division under Rule 137(3) EPC	1001
2.6.2	Consent under Rule 137(3) EPC in oral proceedings	1004
2.6.3	The burden of proposing amendments	1005
2.6.4	Reasons for the exercise of discretion	1005
2.6.5	Second communication under Rule 71(3) EPC: the consent of the examining division	1006
2.7.	Failure to reply to the communication from the examining division (Article 94(4) EPC)	1006
2.7.1	Reply within the meaning of Article 94(4) EPC	1007
2.7.2	Waiver of the applicant's right to present comments	1007
2.8.	Issue of a further communication under Article 113(1) EPC	1008
2.8.1	Introduction	1008
2.8.2	Arguments taken into account in the decision of the examining division	1009
2.8.3	Information on non-compliance: the essential reasoning	1010
2.8.4	Essential reasoning based on an International Preliminary Examination Report (IPER)	1011
2.8.5	Fresh argument based on grounds and evidence communicated beforehand	1011
2.8.6	Bona fide attempt by the applicant to overcome the objections	1012
2.8.7	Form of the communication under Article 113(1) EPC	1013
2.9.	Informal communications	1013
2.9.1	Telephone conversations	1013
2.9.2	Interviews	1014
3.	The grant stage in examination	1015
3.1.	Rule 71(3) EPC communication: the text for approval	1015
3.2.	Approval of the text by the applicant	1016
3.2.1	General issues	1016

3.2.2	Clear and unambiguous approval of the text	1016
3.2.3	Decisions with no text submitted or agreed by the applicant (Article 113(2) EPC)	1017
	a) General issues	1017
	b) Auxiliary request issues	1019
3.2.4	Examination procedure under the previous system (Rule 71 EPC and Rule 51(4) EPC 1973)	1020
3.3	Amendments or corrections filed in response to the communication under Rule 71(3) EPC	1021
3.3.1	Amendments where Rule 71(3) EPC communication is the first communication	1021
3.3.2	Amendments and corrections requested according to Rule 71(6) EPC	1022
3.3.3	Criteria for admitting amendments filed in reply to the Rule 71(3) EPC communication	1022
3.3.4	Claims fees due in response to Rule 71(3) EPC communication	1025
3.4	Amendment after approval of the text for grant	1026
3.5	Examination after remittal for further prosecution	1028
3.6	Amendments after the decision to grant	1028
3.7	Withdrawal of amendments and abandonment of subject matter	1029
3.7.1	General issues	1029
3.7.2	Effects of non-payment of claims fees	1030
3.8	Withdrawal of the patent application	1030
3.8.1	General issues	1030
3.8.2	Correction of the withdrawal of the application under Rule 139 EPC	1033
3.9	Refusal of a European patent application under Article 97(2) EPC (former Article 97(1) EPC 1973)	1035
3.10	Entry into force of a decision to grant a European patent	1037
3.11	Errors in the Patent Bulletin	1038

1. Stage before substantive examination

1.1. Amendments made by the applicant of his own volition under Rule 137(2) EPC

R. 137(2) EPC states: "Together with any comments, corrections or amendments made in response to communications by the European Patent Office under R. 70a (1) or (2) EPC, or R. 161(1) EPC, the applicant may amend the description, claims and drawings of his own volition".

Thus, following receipt of the search report and search opinion, and prior to the first communication from the examining division, the applicant must (subject to certain exceptions) respond to the search opinion, by filing amendments to the description, claims or drawings and/or filing his observations on the objections raised in the search opinion. Any amendments filed at this stage are made by the applicant of his own volition in accordance with R. 137(2) EPC (Guidelines C-II, 3.1 – November 2018 version).

A reply to the search opinion and any amendments made by the applicant of his own volition should be on file when the substantive examination phase starts (see R. 70a, 137 and 161 EPC) (CA/81/10, Rev. 1). The applicant's response required by R. 70a EPC (or filed voluntarily in response to search opinions not requiring a response) will be taken into account by the examining division when drafting the first communication.

In T. 1178/08 the board stated that in accordance with Art. 123(1) EPC in conjunction with R. 137(2) and (3) EPC, an applicant is to be given at least one opportunity to amend the application of his own volition. No further amendments may be made without the consent of the examining division. It noted that the EPC and the Implementing Regulations do not contain explicit provisions concerning the admissibility of amendments in appeal proceedings. R. 66(1) EPC 1973 sets out that the provisions relating to proceedings before the department which has made the decision from which the appeal is brought are applicable mutatis mutandis in such a case. Thus the board held that an appellant is not entitled, as a matter of right, to present amendments of his own volition at the appeal stage, but as a matter of discretion to be exercised by the board. See also T. 979/02.

1.2. Request for examination (Rule 70 EPC)

1.2.1 General issues

According to Art. 94(1) EPC, the EPO shall, in accordance with the Implementing Regulations, examine on request whether the European patent application and the invention to which it relates meet the requirements of the EPC. The request shall not be

deemed to be filed until the examination fee has been paid (Art. 94(1), second sentence, EPC; former Art. 94(2) EPC 1973). If no request for examination has been made in due time, the application shall be deemed to be withdrawn (Art. 94(2) EPC).

R. 70 EPC sets out the practical arrangements for filing the request for examination, including the form and the time limit. R. 70(1) EPC stipulates that the applicant may request examination of the European patent application up to six months after the date on which the European Patent Bulletin mentions the publication of the European search report. The request may not be withdrawn.

In J 21/98 (OJ 2000, 406) the Legal Board stated that the request for examination constituted an autonomous step, which had to be kept quite separate from the (previous) step of filing the European patent application. In particular, the provision of Art. 94(1) EPC 1973, pursuant to which, for the examination of the application to be started, the applicant had to file a written request, showed that, according to the EPC, the patent application was not considered as the only necessary step to be taken by the applicant to obtain the grant of a patent, since a further step was necessary, consisting in a written request for examination – that meant a new declaration of intention to continue the grant procedure. Thus the applicant was given the right to know the outcome of the search report before deciding whether to ask for the prosecution of the grant procedure by means of the request for examination, which implied the payment of the related fee, or to drop said procedure. The provisions of the EPC were indeed clearly aimed at giving the applicant the possibility to properly consider the convenience of a further prosecution of the grant procedure in the light of the outcome of the search report.

In J 12/82 (OJ 1983, 221) the Legal Board found that the unequivocal terms of Art. 94 EPC 1973 did not permit any wide interpretation – in fact the Article required that the request be written, filed within a certain period and accompanied by payment of the fee within the same period. In addition it should be noted that the authors of the EPC 1973, i.e. the contracting states, gave the request filed within the time limit extensive effects: it could not be withdrawn (Art. 94(2), last sentence, EPC 1973), yet on the other hand, if it was filed late the patent application was automatically deemed to be withdrawn (Art. 94(3) EPC 1973). The Legal Board held that the mere payment of the examination fee within the time limits provided for in Art. 94(2) EPC 1973 could not be a substitute for filing the request itself in good time.

In J 4/00 the Legal Board held that a request for examination under Art. 94 EPC 1973 required, over and above payment of the examination fee, that the underlying intention of an applicant that his application should proceed to examination was manifested in a written statement made by the applicant or his representative addressed to the EPO and received there in time. While this requirement was quite distinct from that of payment of the examination fee, there was no prescribed form of words for a request for examination which could be contained in the same document as a debit order or other payment instruction. To qualify as a request for examination, in the circumstances of the case the only reasonable interpretation of the text filed with the EPO had to be that the applicant thereby wanted to inform the EPO that he wished to have the application examined pursuant to Art. 94 EPC 1973.

1.2.2 The invitation to confirm early request for examination (R. 70(2) EPC)

Under R. 70(2) EPC (former Art. 96(1) EPC 1973) if the request for examination has been filed before the European search report has been transmitted to the applicant, the Office shall invite the applicant to indicate, within a period to be specified, whether he wishes to proceed further with the application, and shall give him the opportunity to comment on the search report and to amend, where appropriate, the description, claims and drawings.

Following J 8/83 (OJ 1985, 102), it is the practice of the Office to send the invitation provided for in R. 70(2) EPC also in cases where a supplementary European search report is to be drawn up on a Euro-PCT-application (see Guidelines E-IX, 2.5.3 – November 2018 version).

In J 8/83 (OJ 1985, 102) and J 9/83 the Legal Board found that if a supplementary European Search report has to be drawn up in respect of an international application which was deemed to be a European patent application, the applicant was entitled to receive the invitations provided for in Art. 96(1) EPC 1973 and R. 51(1) EPC 1973. Since in the case of such an international application, responsibility for examination of the application did not pass to the examining division until the applicant had indicated under Art. 96(1) EPC 1973 that he desired to proceed further with his application, the applicant might obtain a refund of the examination fee if in response to the invitation under Art. 96(1) EPC 1973 he withdrew his application, or allowed it to be deemed to be withdrawn.

The Legal Board noted that the provisions of Art. 96(1) EPC 1973 and R. 51(1) EPC 1973 clearly operated in the respective interests of applicants, third parties and the EPO by encouraging applicants to review their applications critically and realistically in the light of the European search report, before substantive examination began. The opportunity given by the EPO to obtain a refund of the substantial fee for examination by withdrawing the application at that stage, or allowing it to be deemed to be withdrawn, provided an additional incentive to withdraw cases unlikely to succeed.

2. The first stage of substantive examination

2.1. Beginning of "substantive examination"

Responsibility for examining the application passes from the Receiving Section to the examining division at the time when a request for examination is filed. This is subject to two exceptions: (i) if the applicant has filed a request for examination before the European search report has been sent to him, then the examining division is responsible only from the time when the confirmation of the request is received by the EPO following an invitation under R. 70(2) EPC; (ii) if the applicant has filed a request for examination before the European search report has been sent to him and has also waived the right to receive an invitation to confirm under R. 70(2) EPC, then the examining division is responsible only from the time when the search report is sent to the applicant (Guidelines C-II, 1 – November 2018 version).

In order for examination of a European application to begin, the applicant is required to file a request for examination, which, however, is not deemed to be filed until after the examination fee has been paid.

In J 9/10 the Legal Board held that a communication pursuant to Art. 94(3) EPC on EPO Form 2001A which was automatically generated by a computer and posted by a formalities officer without the involvement of an examiner appointed to the examining division did not constitute a legally effective act of the examining division and therefore could not be regarded as the beginning of "substantive examination" pursuant to Art. 10b(b) RFees (as last amended by decision of the Administrative Council of 15 December 2005). The fulfilment of the second condition for the refund of the examination fee according to Art. 10b(b) RFees, gave rise to the questions of what "substantive examination" was and what kind of act or acts amounted to the beginning of "substantive examination". The Legal Board noted that to ensure predictability and verifiability of the application of Art. 10b(b) RFees, the beginning of "substantive examination" had to be interpreted as requiring a concrete and verifiable act of the examining division as regards "substantive examination" after having assumed responsibility for the examination of the application (see also J 25/10). The Legal Board held that if a communication of a particular examining division was to be legally valid, it had to have been written on behalf of and represent the views of the members who had been appointed to that division to examine the issues forming the subject of the communication. There was, however, no indication in the file that the appointed primary examiner had actually authenticated the communication under Art. 94(3) EPC before it was despatched by the formalities officer. Therefore, the communication could not be attributed to the examining division, but only to the formalities officer whose name was indicated on EPO Form 2001A. Further, the Legal Board found that the formalities officer, although acting in good faith, had had no power to issue the communication pursuant to Art. 94(3) EPC.

2.2. One invention to be the subject of examination

In T 158/12 the appellant's view was that there was no article or rule in the EPC which would prevent the applicant from changing from one invention to another – if they were searched – during examination. The board considered, however, that the articles and rules present in the EPC form a statutory system which clearly lead to the conclusion that there was no provision allowing the payment of multiple examination fees for a patent application. The board stated that for one application, only one examination is to be carried out as the result of the single examination fee which has been paid. Having once chosen one invention (or one group of inventions) to be made the subject of examination, this choice could not be altered once examination of that invention has commenced. The board was of the opinion that this approach based on the statutory provisions of the EPC was confirmed in opinion G 2/92. Hence, the appellant's view that the examination of an application could be based on more than one invention was not supported by this opinion of the Enlarged Board of Appeal.

In T 736/14 the board noted that the EPC contains no explicit provisions about how to proceed, if an applicant whose application is non-unitary responds unclearly or in a misleading way to an invitation from the examining division to specify which searched

invention it wishes to prosecute further. The board held that in such a situation it cannot be automatically assumed that the applicant selected the invention covered by the main request for examination. Rather, the examining division has to clarify, e.g. via a further communication, which of the searched inventions the applicant actually wants it to examine.

2.3. Consolidation of proceedings

In J 17/92 the possibility of consolidating proceedings and the preconditions it laid down for such consolidation were subject to review by the boards of appeal. The Legal Board held that allowing consolidation was something both permissible and desirable under the EPC, in accordance with the desire expressed in the preamble to the EPC that such protection be obtainable in the contracting states by means of a single procedure for the grant of patents. Consolidation was not only in the interest of applicants, but also in that of the public not to have to take account of two separate European patents with the same text. The Legal Board noted that the conditions to be imposed on consolidation should not be more restrictive than necessary. It therefore took the view that the condition that the two applications at issue as filed had to be identical was too stringent. In the case in hand, the Legal Board found that if the form of claims with which the applicant wished to proceed in the consolidated applications was acceptable either as an amended set of claims or as being identical to the set of claims as filed, consolidation should be possible. In the Legal Board's view, such an amended set of claims should prima facie not prevent consolidation.

2.4. Communications under Rule 71(1) and (2) EPC

2.4.1 Invitation to correct deficiencies and to propose amendments (Rule 71(1) EPC)

The applicant's response to the search opinion required by R. 70a EPC (or filed voluntarily in response to search opinions not requiring a response) will be taken into account by the examining division when drafting the first communication (Guidelines C-II, 3.1 – November 2018 version).

According to Art. 94(3) EPC if the examination reveals that the application or the invention to which it relates does not meet the requirements of the EPC, the examining division shall invite the applicant, as often as necessary, to file his observations and, subject to Art. 123(1) EPC to amend the application.

Further, according to R. 71(1) EPC (former R. 51(2) EPC 1973) in any communication under Art. 94(3) EPC the examining division shall, where appropriate, invite the applicant to correct any deficiencies noted and to amend the description, claims and drawings within a period to be specified.

In T 301/10 the board stated that according to the established case law developed in relation to Art. 96(2) EPC 1973 and also applicable to Art. 94(3) EPC, the expression "as often as necessary" in this article indicates that the examining division has discretion which has to be exercised objectively in the light of the circumstances of the case (see T 162/82; OJ 1987, 533; T 300/89, OJ 1991, 480; T 726/04). See also T 1734/10.

Under Art. 113(1) EPC, however, it is not necessary to give the applicant repeated opportunities to comment on the examining division's submissions if the main objections to the grant of a European patent remain the same. A further invitation to present comments following a substantiated communication in which deficiencies were recorded is only appropriate if it would appear likely that, in the light of the applicant's reply, the examination proceedings would terminate in the granting of a patent (see T 84/82, OJ 1983, 451; T 161/82, OJ 1984, 551; T 162/82, OJ 1987, 533; T 243/89; T 300/89, OJ 1991, 480; T 793/92; T 516/93).

2.4.2 Content of Rule 71(2) EPC communication

According to R. 71(2) EPC (R. 51(3) EPC 1973) any communication under Art. 94(3) EPC (Art. 96(2) EPC 1973), shall contain a reasoned statement covering, where appropriate, all the grounds against the grant of the European patent.

If no search opinion has been issued, the examiner's first communication under Art. 94(3) EPC will, as a general rule and by analogy with the search opinion, cover all objections to the application (Guidelines C-III, 4 – November 2018 version).

In T 937/09 the board observed that, according to R. 71(2) EPC, any communication under Art. 94(3) EPC had to contain a reasoned statement covering, where appropriate, all the grounds against the grant of the European patent. This rule thus contained two requirements: applicants had to be informed, first, of each EPC requirement deemed not to be met and, second, for each such requirement, of the legal and factual reasons why it was deemed not to be met.

In J 32/95 (OJ 1999, 733) the Legal Board held that the objection raised by the appellant that the examining division had unduly dealt with the application in a piecemeal manner was also unfounded. According to the Guidelines, the examiner's first letter should, as a general rule, cover all objections to the application. Pursuant to R. 51(3) EPC 1973 any communication shall, where appropriate, cover all the grounds against the grant of the European patent. Thus, whether and to what extent this is to be done is a matter of procedural expediency. This means that the examining division has to weigh the aspects of the case involved. In particular, the likelihood that the objection raised can be overcome, the kind of amendments which can be expected, and any objections which could yet remain thereafter have to be weighed against the amount of additional work involved for the examining division. In the case in hand, an objection concerning lack of novelty was raised in the first communication against all claims of the application. Such a far-reaching objection can normally only be overcome by substantial amendment of the claims. Therefore, claims amended in this way, if filed, have to be largely re-examined with respect to the prior art. In the view of the Legal Board, R. 51(3) EPC 1973 therefore does not require that an examining division should immediately raise the objection that the claims on file lack inventive step in relation to other documents, if it is of the opinion that all the claims in the application are anticipated by one document. By contrast, in its second communication concerning the amended claims filed by the appellant, the examining division, although maintaining the non-novelty objection against new claim 1, also raised an objection of lack of inventive step. Thus the Legal Board came to the conclusion that

the appellant's submission that the examining division had breached R. 51(3) EPC 1973 by issuing several communications was unfounded. See also T. 937/09.

In T. 2311/10 the board held that whether and to what extent the examining division covered all the grounds against the grant of the European patent in a communication of was a question of procedural economy (see J. 32/95) and a matter for the division's discretion.

In T. 161/82 (OJ 1984, 551) the board noted that a distinction had to be made between the grounds on which a decision was based (ie the requirements of the EPC which were not satisfied by the application or the invention to which it related) and the reasoned statement explaining in greater detail why the examining division was of the opinion that such grounds existed (see R. 51(3) EPC 1973). Art. 113(1) EPC 1973 did not require an applicant to be given repeated opportunity to comment on arguments of the examining division so long as the decisive objections to the grant of the European patent remained the same except for some supplementary observations concerning the applicant's arguments which did not convince the examining division.

In T. 20/83 (OJ 1983, 419) the board noted that Art. 96(2) EPC 1973 prescribed that the examining division had to draw all obstacles to patentability to the applicant's attention. This conclusion related to the requirements for patentability as laid down in the EPC itself. The validity of a patent in various contracting states was however not an immediate condition under the EPC (see T. 830/91, OJ 1994, 728).

In T. 98/88 the board pointed out that R. 51(3) EPC 1973 did not make it compulsory for communications in accordance with Art. 96(2) EPC 1973 to set out all the grounds against the grant of the patent. The board's view in this case was that deferral of the examination in respect of the requirements under Art. 52 EPC 1973 until a clear version of the claims had been received did not conflict with R. 51(3) EPC 1973. See also T. 677/97.

2.5. Refusal after a single communication

2.5.1 General issues

An examining division may refuse an application after a single communication if it does not consider that there is a prospect of a positive result (see T. 201/98, T. 79/91, T. 1969/07), without warning (T. 1002/03, T. 1969/07). The refusal of an application after the first communication is justified if decisive objections against patentability remain (see T. 84/82, T. 161/82, T. 300/89, T. 95/04), particularly where the claimed subject-matter has not been substantially modified (see also T. 66/83, T. 304/91, T. 63/93).

In T. 640/91 (OJ 1994, 918) the board stated that the requirement in Art. 96(2) EPC 1973 that the examining division must invite the applicant to file his observations "as often as necessary" implicitly recognised that in certain circumstances the examining division would be legally obliged to invite further observations from the applicant before issuing a decision. Having regard to Art. 113(1) EPC 1973, there was a "necessary" legal obligation for an examining division to invite further observations from an applicant before issuing a

decision adversely affecting him, where the division might be inclined to issue an immediate decision on the ground that he had shown lack of good faith in his previous observations. The board pointed out, moreover, that it was in principle not the function of an examining division to assess either the degree of collaboration from applicants or their good faith when deciding whether or not to invite further observations in the exercise of its discretion under Art. 96(2) EPC 1973. The exercise of this discretion depended primarily upon whether or not there was a reasonable prospect that such an invitation could lead to the grant of a patent. See also T. 855/90.

In T. 821/96 the board stated that, according to the established case law, it was left to the examining division's discretion to decide whether to issue a further invitation to present comments under Art. 96(2) EPC 1973. A further invitation would only be appropriate if it appeared likely that, in the light of the applicant's reply, the examination proceedings would terminate in the granting of a patent. See also T. 201/98.

In T. 449/03 the board stated that the appellant's allegation that the applicant was generally entitled to receive at least two communications in the examination proceedings before a negative decision on patentability was unfounded (see T. 84/82, OJ 1983, 451). However, where features are added to a claim in response to an official communication, it is only in exceptional cases that a further communication may be dispensed with (cf. T. 161/82, OJ 1984, 551): for example where it can be held that the features added to the claim are implicit to the specific part of the prior art document already held against the subject-matter of the claim, so that the objection against patentability communicated to the applicant remains the same.

In T. 5/81 (OJ 1982, 249) the appellant submitted that, in the only communication sent, the examiner had failed to comment on claim 5, an omission which was contrary to Art. 96(2) EPC 1973 and R. 51(3) EPC 1973. The board noted that an appeal might relate only to a decision subject to appeal within the meaning of Art. 106(1) EPC 1973 and not to preparatory measures. Art. 96(2) EPC 1973 and R. 51(3) EPC 1973 applied exclusively to that preparatory procedure. A failure to comply with these requirements could not be taken into consideration unless it had some influence on the decision to refuse, as in the case of a breach of Art. 113(1) EPC 1973 (see also T. 808/90). The appellant's objection was unfounded, not only for this reason, but also because the examiner commented on the content of the claim in question by drawing attention to the possibility of formulating an independent claim based thereon. Since the appellant did not make use of that possibility, the examining division was not obliged to discuss it when refusing the application. The allusion thereto in the reasons for the decision did not form part of the ratio decidendi and was intended solely to demonstrate that the examining division was aware of the fact that the application might contain patentable subject-matter. A refusal under these circumstances was not open to challenge. See also T. 228/89, T. 347/04, R. 14/10.

2.5.2 Failing to make a "bona fide" response

In T. 802/97 the board noted that when applying Art. 96(2) EPC 1973 to determine in a specific case whether an applicant should be given a further opportunity to present comments or amendments before refusing an application after a single official

communication, the established practice of the examining divisions as set out in particular in the Guidelines is to warn the applicant who had made a bona fide attempt to deal with the examining division's objections, e.g. by a telephone conversation or by a short further written action, that the application will be refused unless he can produce further more convincing arguments or makes appropriate amendments within a specified time limit. Only when the applicant has not made any real effort to deal with the objections raised in the first communication, should the examining division consider immediate refusal of the application, this however being an exceptional case. See also T.587/02.

In T.1388/10 the appellant argued that the refusal of its application had been flawed because refusal directly after a first examining communication was allowed only if the applicant failed to make a "bona fide" response to that communication, whereas in the case in hand it had indeed made a "bona fide" attempt to overcome the examining division's objections. Its application should therefore not have been refused without a further "warning". The board noted that examining divisions have discretion over how often to invite an applicant to comment. It also had to be borne in mind that the Guidelines merely offered general guidance covering normal occurrences. Their application in specific individual cases was the responsibility of the examining division, which could depart from them in exceptional cases. Also, the Guidelines were not the law – unlike the EPC and its Implementing Regulations. The board pointed out that when reviewing examining divisions' decisions it did not assess whether the division had complied with the Guidelines. Rather, it considered whether the division had exercised its discretion within the limits set by the EPC and its Implementing Regulations. In the case in hand, the board held that the examining division's decision not to issue a second communication under Art. 94(3) EPC fell within the discretion available to it, and its exercise of that discretion had not been flawed.

In T.201/98 the board accepted that in the case in hand the appellant's response to the single communication was a bona fide attempt to deal with the examining division's objections. However it was the established jurisprudence of the boards of appeal that an examining division did not exceed its discretionary power by immediately refusing an application, provided that the decision complied with Art. 113(1) EPC 1973, i.e. was based on grounds on which the appellant had had an opportunity to present comments, see T.84/82 (OJ 1983, 451) and T.300/89 (OJ 1991, 480). In the case in hand, the board considered that the decision of the examining division was based on grounds on which the appellant had had an opportunity to present comments in accordance with Art. 113(1) EPC 1973.

In T.677/97, the board took the view that the pre-decision examination procedure did not meet the minimum legal standard set by the EPC in Art. 96(2) EPC 1973 and R. 51(2) and (3) EPC 1973. R. 51(3) EPC 1973, by virtue of the phrase "where appropriate", allowed the examining division discretion to issue a first communication which is less than comprehensive. This interpretation of the EPC had also been approved in T.98/88. It was incumbent on the examining division under Art. 96(2) EPC 1973 to send a second communication containing a reasoned statement as to why the objection under Art. 56 EPC was maintained. In making this finding the board was not departing from the established jurisprudence of the EPO boards of appeal which recognised that it was within

the discretion of an examining division to issue a refusal decision after a single communication. In the circumstances of the case in hand, however, an immediate refusal was not a reasonable exercise of this discretion. The limits on the examining division's discretion in this respect were explained in T. 951/92 (OJ 1996, 53). The board stated that if a communication under R. 51(3) EPC 1973 and pursuant to Art. 96(2) EPC 1973 did not set out the essential legal and factual reasoning which would lead to a finding that a requirement of the EPC had not been met, then a decision based upon such a finding could not be issued without contravening Art. 113(1) EPC 1973, unless and until a communication had been issued which contained such essential reasoning. If a decision was issued in the absence of a communication containing such essential reasoning, Art. 96(2) EPC 1973 was also contravened, since in order to avoid contravening Art. 113(1) EPC 1973 it was "necessary" to issue a further communication (following T. 640/91, OJ 1994, 918).

In T. 89/93 the board again held that the examining division could not refuse an application after a first communication if the applicant had made a serious attempt to overcome the objections raised or if it appeared likely that continuing the procedure would lead to a positive result. Following T. 908/91, the board decided, however, that reimbursement of the appeal fee would not be equitable. See also T. 181/95, T. 958/99, T. 1578/05.

In T. 1002/03 the board stated that it was established jurisprudence of the boards of appeal that an examining division did not exceed its discretionary power pursuant to Art. 96(2) EPC 1973 ("as often as necessary") by proceeding to an immediate refusal after a first communication, provided that the decision complied with Art. 113(1) EPC 1973, i.e. was based on grounds on which the appellant had had an opportunity to present comments. In the case in point, the examining division's first and only official communication under Art. 96(2) EPC 1973 stated that the deficiencies mentioned in the IPER gave rise to objections under the corresponding provisions of the EPC. In reply to the official communication the appellant filed a new set of claims in which only claim 1 had been amended to overcome the objection of lack of clarity in the IPER. In the board's view no special warning in the official communication was necessary in these circumstances. Accordingly the appellant's right to be heard (Art. 113(1) EPC 1973) was not violated. See also T. 1969/07.

2.6. Amendments under Rule 137(3) EPC

2.6.1 Discretion of the examining division under Rule 137(3) EPC

Under Art. 123(1) EPC, a European patent application or a European patent may be amended in proceedings before the EPO, in accordance with the Implementing Regulations. R. 137(3) EPC is of particular relevance.

R. 137(3) EPC stipulates that no further amendment may be made without the consent of the examining division. Thus the applicant may amend only if the examiner consents to the amendments proposed. Giving the examining division this discretion is intended to ensure that the examination procedure is brought to a conclusion in as few actions as possible (Guidelines C-IV, 3; H-II, 2.3 – November 2018 version). In exercising its

discretion the examining division must consider all relevant factors; in particular, it must balance the applicant's interest in obtaining a patent which is legally valid and the EPO's interest in bringing the examination procedure to a close in an effective way (in accordance with the principles set out in G 7/93). Furthermore, the exercise of discretion under R. 137(3) EPC needs to be reasoned.

In giving or withholding such consent, the examining division has to exercise its discretion responsibly and in accordance with the principles as set out in G 7/93 (OJ 1994, 775) which, although made in relation to amendments made in the pre-grant stage, are of general validity. The Enlarged Board pointed out that in the exercise of its discretion under R. 86(3) EPC 1973 (now R. 137(3) EPC), an examining division is required to consider all relevant factors which arise in a case. In particular, it must consider both the applicant's interest in obtaining a patent which is legally valid in all of the designated states, and the EPO's interest in bringing the examination procedure to a close by the issue of a decision to grant the patent, and must balance these interests against one another (T 1982/07). Once an examining division has exercised such discretion, a board of appeal should only overrule it if it comes to the conclusion either that the examining division did not exercise its discretion in accordance with the right principles or that it exercised its discretion in an unreasonable way and had thus exceeded the proper limit of its discretion (see T 237/96 with particular reference to G 7/93, OJ 1994, 775; T 182/88, OJ 1990, 287; see also T 937/09, T 1214/09, T 918/14).

In T 1074/10 the board noted that the convergence criterion (i.e. whether the respective versions of the sets of claims converge or diverge) had been accepted by the boards of appeal and has also been applied by the boards themselves (see e.g. T 240/04, T 1685/07, T 1969/08). R. 86(3) EPC 1973 – and, equivalently, R. 137(3) EPC – leaves open entirely how the examining division should exercise its discretion and in particular, neither defines a convergence criterion nor a criterion based on prima facie compliance with the requirements of the EPC. The board was of the opinion that the "divergence" of a request from earlier requests in the sense that it changes substantially the issues at stake could be contrary to the EPO's interest in bringing the procedure to a close. Therefore, the board agreed with the cited jurisprudence and considered that divergence of a request is one factor amongst others which a deciding instance may consider when exercising its discretion under R. 86(3) EPC 1973. The decision of the examining division not to admit a request was therefore not wrong merely because this criterion was used.

In T 996/12 the board stated that, in general terms, the way in which the examining division should exercise its discretion to allow amendment of an application depends upon the circumstances of each individual case and on the stage of the pre-grant procedure which the application has reached. The board noted that the applicable Guidelines did not support the concept of converging claim sets being a requirement for allowing amendments or, conversely, a diverging claim set not being acceptable. The examining division referred to two board of appeal decisions, T 1685/07 and T 745/03, for this criterion. Apart from the fact that these decisions apply particularly to the situation where a patent proprietor submits a plurality of auxiliary requests in addition to a main request in opposition appeal proceedings, it needed to be stressed that its underlining justification was to be found in the efficiency of these appeal proceedings, the latter being of a judicial

nature in contrast to the purely administrative character of the proceedings before, for instance the examining division or the opposition division. The board found that this fundamental distinction *eo ipso* made the unqualified application of this criterion by the department of first instance of the EPO questionable.

In T.573/12 the board noted that, as set out in G.7/93 (OJ 1994, 775), an examining division, when considering whether to admit an amendment or not, is required to consider all relevant factors which arise in the case. In particular it must consider and balance the applicant's interest in obtaining a patent and the EPO's interest in bringing the examination procedure to a close. In the case in hand, the examining division's first communication was rather vague and assessed the invention in rather general terms, without analysing the individual features. The appellant's subsequent amendment added some features to the independent claims. In the board's judgment, this was a *bona fide* reaction. Additionally, it was the first amendment which was dependent on the examining division's consent and the minutes showed that the examining division could and did discuss the added features. Admitting the request would not have involved excessive or unjustified additional work. Furthermore, the Guidelines (Part C-VI, 4.7 – April 2010 version) stated: "Regarding less extensive amendments, the examiner should adopt a reasonable approach, trying to balance fairness to the applicant against the need to avoid unnecessary delay and excessive and unjustified additional work for the EPO." Given the above circumstances, the board held that the examining division did not properly balance all relevant factors and thus could not endorse the examining division's conduct.

In T.937/09 the board held that, under R.137(3)EPC, it was for the examining division to decide in a proper exercise of discretion whether to admit amendments to a European patent application after the first communication. In the board's view, this meant that the examining division had to admit amendments filed by the applicant together with the reply to a communication giving reasoned notice of a particular deficiency for the first time, if it could already have raised an objection to that deficiency in its first communication, and if the amendments could be regarded as an objectively suitable attempt to correct the deficiency.

In T.166/86 (OJ 1987, 372) the board held that under R.86(3)EPC.1973, further amendments – which included the submission of a separate set of claims for a given contracting state – could only be made with the consent of the examining division (see Legal Advice No. 4/80, OJ 1980, 48). The examining division had to take the decision on whether to consent to the requested amendment after due assessment of the particular circumstances. In particular, this involved balancing the EPO's interest in the speedy completion of the proceedings against the applicant's interest in obtaining a patent which was legally valid in all the contracting states. The examining division would not be able to refuse its consent to an amendment if, for good reasons, the applicant was only at that late stage in a position to request the amendment, or if the requested amendment was obviously essential for him and to take it into account would not appreciably delay the grant procedure.

In T.229/93 the board found that in the circumstances of the case the examining division should have considered refusing to consent to the amendments pursuant to

R. 86(3) EPC 1973, since the filing of such amendments after the expiry of the time limit for answering the first communication of the examining division in the form of a completely retyped description was contrary to the requirement of procedural economy (see T. 113/92).

In T. 951/97 (OJ 1998, 440) the board held that it is easier to secure an amendment at an earlier rather than at a later stage of the procedure. See also T. 76/89, T. 529/94, T. 937/07. For instance, the board in T. 674/17 exercised its discretion not to admit the new main request into the proceedings, in accordance with R. 137(3) and 100(1) EPC, since the new main request (submitted only after the board had sent a communication under Art. 15(1) RPBA 2007) amounted to the presentation of a fresh case.

In case T. 2324/14 the examining division had found that the auxiliary request "prima facie [did] not overcome the objections under Art. 84 EPC and Art. 83 EPC", and thus it did not give its consent under R. 137(3) EPC to it. The board noted that the EPC does not define what it means for an examining division to give or deny its consent to an amendment under R. 137(3) EPC. The boards of appeal had, however, accepted that the examining division could base its decision to deny consent to an amendment on prima facie considerations and that it could deny its consent to an amendment with prima facie deficiencies. However, the examining division had not limited its examination of the auxiliary request to prima facie considerations. In fact, the examining division had considered the auxiliary request fully, since it was able to give sufficient reasons for its conclusion that a patent could not be granted on the basis of that request. The examining division thus having considered the auxiliary request fully, the board took the view that there was no discretion left for the examining division "not to admit" it. In T. 2026/15 the board confirmed these findings of T. 2324/14, adding that this meant that the examining division had implicitly admitted the auxiliary request and, equivalently, had given its consent under R. 137(3) EPC.

In T. 1105/96 (OJ 1998, 249) the board noted that where an examining division had indicated that a further request in the form of an amended text for the main claim of an application would be allowable, it was difficult to imagine any circumstances in which it would be lawful for the examining division to deny the admissibility of such request, in the exercise of its discretion. Certainly, in the circumstances of the case in hand, the rejection in advance of such a further auxiliary request unless all preceding requests were abandoned was an abuse of procedure, an unlawful exercise of discretion under R. 86(3) EPC 1973 and thus a substantial procedural violation.

2.6.2 Consent under Rule 137(3) EPC in oral proceedings

R. 116(2) EPC supplements R. 137(3) EPC with a special provision on amendments to the application where oral proceedings are to be held, under which the examining division has discretion to disregard such amendments if they are not filed before the date fixed in the summons to such proceedings. However, whilst meeting the time limit for filing further requests for amendments to the application fixed in the summons under R. 116 EPC does not render R. 137(3) EPC inapplicable, requests filed by that time limit can only be refused under R. 137(3) EPC in a proper exercise of discretion (T. 937/09, T. 2294/12).

2.6.3 The burden of proposing amendments

In T 300/89 (OJ 1991, 480) the board pointed out that, even if it were possible for the examiner to envisage amendments which might lead to the grant of a patent, the burden lay with the applicant to propose amendments if he so wished (including various alternatives in the form of auxiliary requests). These amendments could be proposed in the applicant's observations in reply to the first communication (Art. 96(2) EPC 1973) from the examining division, where any objections were raised (T 599/92). It also held that an applicant had a right to request oral proceedings at any time, but if he wished to avoid the risk of an adverse decision being issued without oral proceedings being appointed, he should request oral proceedings at the latest in his observations in reply to such (here, first) communication under Art. 96(2) EPC 1973.

In T 301/10 the board stated that it is incumbent upon the appellant to maintain unamended or to amend – optionally on an auxiliary basis – the application documents upon which examination is to be carried out and a decision eventually to be reached (Art. 94 and 97 EPC together with Art. 113(2) EPC 1973) (see T 300/89), and not upon the examining division to prolong the examination procedure beyond the procedural framework set out in the EPC (see in this respect Art. 123(1) EPC together with R. 86(3) EPC 1973) until the applicant opts for amending the application and eventually "exhausts" all possibilities for amendment, as this would seriously undermine the principle of procedural economy.

2.6.4 Reasons for the exercise of discretion

In T 182/88 (OJ 1990, 287) and T 166/86 (OJ 1987, 372) the boards decided that a separate set of claims submitted at a late stage in the proceedings was admissible under the particular circumstances. They added that the EPO's user-friendly reputation should clearly be excluded from consideration during the exercise of any discretion by the EPO. The showing of consideration towards parties before the EPO should not be confused with the proper exercise of discretion according to the law. It was also held that when a decision hinged on the exercise of discretion, the reasons should be given.

In T 309/09 the board doubted that the number of auxiliary requests could generally be considered a factor on the basis of which their admission under R. 137(3) EPC could properly be denied outright. Whilst it did not wish to rule out that a large number of auxiliary requests might be a sufficient reason in specific cases, it decided that the question could be left unanswered in the case in hand, as in any event six auxiliary requests could not automatically be considered excessive. Nor did it have to consider whether a lack of convergence among the requests was relevant in this connection, because the contested decision did not contain any explicit analysis of specific cases which might support such a conclusion, even though any convergence criterion applied would at any rate have had to be assessed separately for each individual request. The board concluded that the examining division had been entitled to exercise discretion and had done so in accordance criteria which were essentially correct in the light of G 7/93, but that, contrary to R. 111(2) EPC, it had failed to give adequate reasons in support of its exercise of

discretion in the contested decision. Discretionary decisions could not be taken arbitrarily and – like all decisions open to appeal – had to be substantiated.

In T 246/08 the board stated that it is the established jurisprudence of the boards of appeal that the power of the examining division to consent to amendments under R. 137(3) EPC is a discretionary power that has to be exercised after considering all the relevant factors of the specific case and balance in particular the applicant's interest in obtaining an adequate protection for his invention and the EPO's interest in bringing the examination to a close in an effective and speedy way. Moreover, the exercise of a discretionary power has to be reasoned, otherwise it would be arbitrary. It followed that a refusal of consent to amend made in advance of any amendment being submitted could not be a reasonable exercise of discretion pursuant to R. 137(3) EPC. Indeed it was ipso facto a substantial procedural violation since it risked deterring an applicant from making an amendment which could not reasonably have been forbidden. See also T 872/90.

In T 233/12 the board pointed out that the criterion that an amended set of claims is prima facie not allowable is, in general, an accepted principle (amongst others) to be taken into account in the assessment of whether consent under R. 137(3) EPC should be given to the amendment. While a prima facie finding that a claim is not allowable may, by its very nature, be justified in briefer terms than a fully reasoned conclusion, the reasons for a prima facie finding may not be so short as to reduce the finding to a mere allegation. Moreover, the amount of reasoning required to justify a prima facie finding was amongst the parameters which the examining division had to balance in view of the circumstances of each individual case when exercising its discretion. In particular, if an applicant files an amendment together with arguments as to why the amendment, in its view, satisfies a particular requirement of the EPC, the examining division cannot merely assert the contrary without giving an indication as to why the applicant's argument failed. That is, a prima facie finding must not simply ignore the arguments on file which appear to directly contradict it.

2.6.5 Second communication under Rule 71(3) EPC: the consent of the examining division

If the examining division gives its consent under R. 137(3) EPC to these amendments and/or the correction and considers them allowable without issuing a further communication under Art. 94(3) EPC, it issues a second communication under R. 71(3) EPC based on the amended/corrected text, after which it then proceeds to the grant of the patent pursuant to Art. 97(1) EPC (see below in this chapter IV.B.3.1. "Rule 71(3) EPC communication: the text for approval").

2.7. Failure to reply to the communication from the examining division (Article 94(4) EPC)

According to Art. 94(4) EPC, if the applicant fails to reply in due time to any communication from the examining division, the application shall be deemed to be withdrawn. Art. 94(4) EPC corresponds in essence to Art. 96(3) EPC 1973.

2.7.1 Reply within the meaning of Article 94(4) EPC

In J 37/89 (OJ 1993, 201), the Legal Board construed Art. 96(3) EPC 1973 to mean that an applicant who merely requests an extension of the term for reply which request is then refused, 'fails to reply' within the meaning of that sub-paragraph, with the consequence that the application must be deemed withdrawn.

In T 160/92 (OJ 1995, 35) the board held that Art. 96(3) EPC 1973 did not require "a complete reply", but only "a reply" in order to avoid the consequence of having the application deemed to be withdrawn. A letter of reply to a communication of the examining division filed in due time by the applicant and dealing with substantial points of this communication constituted a reply within the meaning of Art. 96(3) EPC 1973 and thus, from the point of view of procedural law, ruled out the possibility of deemed withdrawal.

Both J 37/89 and T 160/92 also expressed the view that a letter of reply did not have to be (substantively) complete or cogent in order to qualify as a reply within the meaning of Art. 96(3) EPC 1973 (T 685/98, OJ 1999, 346).

In J 29/94 (OJ 1998, 147) the Legal Board observed – in relation to Art. 110(3) EPC 1973 – that there was another form of reply which could result in a refusal, and not in the deemed withdrawal of the application; if the applicant did not want to reply in substance to the communication, it was permissible for him to ask for a decision on the file as it stood.

In J 5/07, the Legal Board held that the filing of a divisional application did not constitute a response to an invitation by the examining division in the parent application within the meaning of Art. 96(3) EPC 1973. The Legal Board noted that a divisional application was legally and administratively separate and independent from the grant proceedings concerning the parent application (see G 1/05, OJ 2008, 271; T 441/92). The filing of a divisional application leaves the text of the patent application objected to unamended.

In T 861/03 the board found that filing a request for an interview with the processing examiner without also submitting substantive observations on deficiencies identified in the communication under Art. 96(2) EPC 1973 did not amount to an adequate reply for the purposes of Art. 96(3) EPC 1973, under which the legal consequence of failing to submit such a reply was that the application was deemed to be withdrawn.

2.7.2 Waiver of the applicant's right to present comments

In T 685/98 (OJ 1999, 346) the board held that in unclear cases there can be no presumption that an applicant has waived his right to be heard under Art. 113(1) EPC. The board noted that prior to a valid refusal under Art. 97(1) EPC 1973 the applicant must either have exercised his right to comment or have waived this right. It held that a simple procedural request made by the applicant after receipt of the R 51(2) EPC 1973 communication could not be treated as a waiver of the right to present comments during the remainder of the four-month term set for reply. When the applicant neither replied in substance to the objections raised nor waived his right to present comments, then the refusal of the application was ultra vires and voidable ab initio because under

Art. 97(1) EPC 1973 the application was to be refused, if no different sanction was provided for by the EPC. However, Art. 96(3) EPC 1973 provides a different sanction for failure to reply, namely the deemed withdrawal of the application.

2.8. Issue of a further communication under Article 113(1) EPC

2.8.1 Introduction

If it appears that the previous communications were insufficiently reasoned or incomplete, or if the applicant has filed amendments and/or arguments since the previous communication, the examiner should carefully consider Art. 113(1) EPC before issuing a refusal. A further communication may have to be issued with sufficient reasoning, unless oral proceedings are to be held (see Guidelines C-V, 15.4 – November 2018 version).

Under Art. 113(1) EPC, the decisions of the EPO may only be based on grounds or evidence on which the parties concerned have had an opportunity to present their comments.

In T. 645/11 the board stated that Art. 113(1) EPC 1973 guarantees that proceedings before the EPO will be conducted openly and fairly (see J. 20/85, OJ 1987, 102; J. 3/90, OJ 1991, 550). The right to be heard ensures that the parties to proceedings are not taken by surprise by grounds mentioned in an adverse decision (see e.g. T. 669/90, OJ 1992, 739; T. 892/92, OJ 1994, 664). That requires, firstly, that a party be given an opportunity to comment on the grounds and evidence alleged against it. In particular, it means that if a decision to refuse is taken on the basis of grounds which have not previously been presented to the applicant, then the decision does not comply with the provisions of Art. 113(1) EPC 1973. It is not sufficient that the applicant be presented with an assertion that the application fails to comply with some provision of the EPC. There must also be an explanation of why it fails to comply. The right to be heard also requires the deciding instance demonstrably to hear and consider any relevant comments (see T. 763/04, T. 246/08).

In T. 690/09 the board stated that if a request for amendment is refused, the examining division must inform the applicant of the reasons for not admitting the amendments in order to satisfy the right to be heard according to Art. 113(1) EPC. The applicant will typically be invited to request grant on the basis of a preceding acceptable version of the claim set if such a version exists. Otherwise, if the applicant maintains his request for amendment, the application has to be refused under Art. 97(2) EPC, since there is no text which has been approved by the applicant and allowed by the examining division (see Art. 113(2) EPC 1973, see also T. 647/93, OJ 1995, 132; T. 946/96; T. 237/96).

In T. 246/08 the board stated that established jurisprudence has interpreted Art. 113(1) EPC 1973 to mean that the comments presented must be considered in the ensuing decision (J. 7/82, OJ 1982, 391). Thus a decision which fails to take explicitly into account potentially refutative arguments submitted by a party, i.e. arguments which may militate against or cast doubt on the decision in question, contravenes Art. 113(1) EPC 1973, thereby constituting a substantial procedural violation. In brief, a

decision must show that all potentially refutative arguments adduced by a party are actually refutable. See also T.1170/07.

In T.1854/08 the applicant was informed by e-mail that the three newly filed requests were not admitted into the proceedings because they introduced substantial obscurities. The board stated that the applicant had not been given any opportunity to present his comments to overcome the negative position expressed in the e-mail. Contrary to that, he had had to gather from the e-mail that it was no longer possible to convince the examining division. This followed from the fact that the refusal to admit the newly filed request was not presented as a provisional opinion of the division but as a decision which could not be overturned. This contravened Art. 113(1) EPC.

2.8.2 Arguments taken into account in the decision of the examining division

According to the jurisprudence of the boards of appeal, the examining division does not have to address each of the party's arguments (see e.g. T.1969/07, T.1557/07, R.19/10).

In T.1557/07 the board stated that with regard to the allegation that the examining division did not fully and accurately deal with all the relevant arguments submitted by the applicants, the examining division was under no obligation to address each and every argument presented by the party concerned. In the case in hand, the examining division had commented on the crucial points of dispute thus giving the applicants a fair idea of why their submissions were not considered convincing. This allegation was therefore also not conclusive. In conclusion, the examining division had not committed a substantial procedural violation.

In R.19/10 the petitioner submitted that Art. 113(1) EPC not only enshrined a party's right to be heard before a decision was issued against it, but also guaranteed its right to have the relevant grounds fully taken into account in the written decision. The Enlarged Board stated that it agreed in principle. However, this principle was not without any limitation, as explained in T.1557/07, referred to by the petitioner itself: provided that the reasons given enable the parties concerned to understand whether the decision was justified or not, the deciding organ is under no obligation to address each and every argument presented by the party concerned.

In T.802/97 the board held that if a decision included several grounds, it should meet the requirements of Art. 113(1) EPC 1973 with respect of each of the grounds. In the board's judgment, if a decision of the EPO included several grounds supported by respective arguments and evidence, it was of fundamental importance that the decision as a whole met the mandatory requirements of Art. 113(1) EPC 1973. Leaving it up to the deciding body to suggest which of the grounds were to be considered as the basis of the decision and which were not – and did not therefore need to comply with the requirements of Art. 113(1) EPC 1973 – could only lead to legal uncertainty and confusion of the parties. An exception from the above principle could be obiter dicta which were not part of the grounds on which a decision is based.

2.8.3 Information on non-compliance: the essential reasoning

In T 951/92 (OJ 1996, 53) the board held that if a communication under R. 51(3) EPC 1973 and pursuant to Art. 96(2) EPC 1973 did not set out the essential legal and factual reasoning to support a finding that a requirement of the EPC had not been met, then a decision based on such a finding could not be issued without contravening Art. 113(1) EPC 1973, unless and until a communication had been issued which did contain the essential reasoning. If a decision was issued in the absence of a communication containing essential reasoning, Art. 96(2) EPC 1973 was also contravened, since in order to avoid contravening Art. 113(1) EPC 1973 it was "necessary" to issue a further communication (see also T 520/94, T 750/94, OJ 1998, 32; T 487/93, T 121/95, T 677/97). Moreover, the board summed up the case law by stating that Art. 113(1) EPC 1973 was intended to ensure that, before a decision refusing an application for non-compliance with a requirement of the EPC was issued, the applicant had been clearly informed by the EPO of the essential legal and factual reasons on which the finding of non-compliance was based. This was so that in advance of the decision he knew both that the application might be refused and why, and also so that he might have a proper opportunity to comment upon the reasons and/or to propose amendments so as to avoid refusal of the application. Thus the term "grounds or evidence" in Art. 113(1) EPC 1973 should not be narrowly interpreted. In particular, in the context of the examination procedure the word "grounds" did not refer merely to a ground of objection to the application in the narrow sense of a requirement of the EPC which was considered not to be met. The word "grounds" should rather be interpreted as referring to the essential reasoning, both legal and factual, which led to refusal of the application (T 187/95). In other words, before a decision was issued an applicant had to be informed of the requirement which he had to meet and had to have an opportunity of meeting it (see also T 520/94; T 750/94, OJ 1998, 32; T 487/93; T 121/95).

In T 907/91 the examining division refused the application without informing the applicant of its grounds for not accepting the amended documents submitted after receipt of the first communication and after oral proceedings. The board held this action to be in breach of Art. 113(1) EPC 1973 because, prior to issuing the contested decision in written or oral proceedings, the examining division should have given its reasons for refusing to accept the amended documents. Such grounds could be of a formal nature or relate to substantive patent law, depending on the relevant provisions. However, other grounds could also be brought to bear, based on generally recognised principles of procedural law (see Art. 125 EPC 1973), such as the applicant's attempt to delay proceedings by submitting an excessively large number of requests for amendments in clear abuse of the patent grant procedure.

In T 763/04 the board stated that Art. 113(1) EPC enshrines a party's right to be heard before a decision is issued against it. In accordance with the established jurisprudence of the boards of appeal (see J 7/82, OJ 1982, 391 and T 94/84, OJ 1986, 337) this right also guarantees the right to have the relevant grounds fully taken into account in the written decision. The board held that Art. 113(1) EPC 1973 will be contravened where, as in the case in hand, facts and arguments, which from the appellant's submissions are clearly central to his case and which may speak against the decision taken, are completely

disregarded in the decision in question. The board stated that Art. 113(1) EPC 1973 requires not merely that a party be given the opportunity to voice comments, but more importantly that the deciding instance demonstrably hears and considers these comments. In summary, the right to be heard in accordance with Art. 113(1) EPC 1973 is contravened if the decision of the first instance fails to mention and to take into consideration important facts and arguments which may speak against the decision in question. See also T 206/10, T 246/08.

2.8.4 Essential reasoning based on an International Preliminary Examination Report (IPER)

In T 275/99 the board held that the requirements of Art. 113(1) EPC 1973 were met if the appealed decision was entirely based on the grounds, facts and evidence which were already known to the appellant from the extensive IPER which had been drawn up for the description and the claims of the international application corresponding exactly to the European application refused and which had been incorporated by way of reference in an official communication of the examining division.

In T 587/02 the board held that if the only communication preceding the decision to refuse an application merely draws attention to an IPER, the requirements of Art. 113(1) EPC are met provided the IPER constitutes a reasoned statement as required by R. 51(3) EPC 1973, using language corresponding to that of the EPC.

In T 1870/07 the single communication from the examining division pursuant to Art. 96(2) EPC 1973 merely signalled agreement with the IPER. The board did not see any objection to citing an IPER from an International Preliminary Examining Authority other than the EPO, provided that it constituted a reasoned statement (see, for example, T 951/92). However, in its view, the IPER failed to meet the requirements of a reasoned statement. In the communication of the examining division, there was no logical chain of reasoning which would have permitted the appellant to understand and deal with the novelty objection, either by amendment or counterargument. Art. 113(1) EPC 1973 was, therefore, not satisfied.

2.8.5 Fresh argument based on grounds and evidence communicated beforehand

According to the case law of the boards of appeal, the use of a fresh argument in a decision still based on grounds and evidence communicated beforehand is not precluded.

The board pointed out in T 268/00 that the right to be heard pursuant to Art. 113(1) EPC 1973 only precluded a decision's being taken on the basis of fresh evidence and grounds, while the use of a fresh argument, here based on a particular technical opinion, in a decision still based on grounds communicated beforehand was not precluded. Hence the technical argument in the decision under appeal addressed by the appellant, whether fresh or not, did not violate any of the appellant's rights. As to the technical substance of that argument, whilst the appellant might neither agree with the finding of the examining division nor with the technical argument given, a divergence of

views between the examining division and the appellant on the substantive issue of inventive step did not amount to a procedural violation. See also T.1557/07, T.815/08.

2.8.6 Bona fide attempt by the applicant to overcome the objections

In a case where an applicant has made a bona fide attempt to overcome the objections raised by the examining division, Art. 113(1) EPC may require such an attempt to be confirmed in the light of amended claims and substantial comments of the applicant (T.734/91, T.582/93).

In T.734/91 the appellant had filed a fresh set of claims in reply to a communication of the examining division, the subject-matter of claim 1 being considerably changed in the light of the objection of lack of novelty raised by the examining division. These were substantial amendments in the light of the objections raised by the examining division. The effort by the appellant was therefore considered to represent a bona fide attempt to overcome these objections. Claim 1 as amended had not been dealt with in the communication by the examining division but only in the contested decision. Thus the appellant did not have an opportunity to present his comments with regard to the grounds for refusal of this amended claim 1. The board stated that the examining division has to communicate the grounds against the grant of a patent to the applicant before refusing an application. In doing so it has to exercise its discretion to decide when it is deemed necessary and appropriate to invite the applicant's comments. This has to be done objectively in the light of the circumstances of each case (T.162/82, OJ 1987, 533). This does not mean that the applicant should be given repeated opportunity to comment on the same objections (T.161/82, OJ 1984, 551; T.42/84, OJ 1988, 251; T.243/89). In a case where an applicant has made a bona fide attempt to overcome the objections raised by the examining division, Art. 113(1) EPC 1973 may require such an attempt to be confirmed in the light of amended claims and substantial comments of the applicant. See also T.998/05.

In T.763/04 the board held that the appellant, who had made a bona fide attempt to address the sole objection raised, could have legitimately expected the examining division out of fairness to use the discretion afforded by Art. 96(2) EPC 1973 to offer at least one further opportunity to address the objection. The board considered the refusal after the third communication, which was the first R.51(3) EPC 1973 compliant communication as regards the ground of lack of novelty, without the issuance of a further communication, to represent a violation of the general principle of good faith and fair proceedings underlying the proceedings before the EPO.

In T.92/96 the board found that, after notification of a correctly reasoned communication from the examining division, the applicants had had an opportunity to comment on the objections set out therein, but had confined themselves to suggesting a minor correction to the claim. The examining division decided to refuse the application, since the applicants had made no real effort to reply to the objections. In the board's view, the applicants had therefore suffered no prejudice. Consequently, the examining division had not committed a procedural violation, particularly with regard to Art. 113(1) EPC 1973.

2.8.7 Form of the communication under Article 113(1) EPC

In T 1237/07 the board pointed out that the right to present comments enshrined in Art. 113(1) EPC 1973 did not necessarily need to be exercised in writing but could be satisfied by way of oral proceedings.

In T 497/02 the board found that Art. 113(1) EPC 1973 merely requires applicants to be afforded the opportunity to present their comments on the grounds on which the EPO bases its decision: it does not require a written communication nor does it specify how much time applicants should be afforded to consider and present their comments.

2.9. Informal communications

2.9.1 Telephone conversations

In T 300/89 (OJ 1991, 480) the board held, in relation to the appellant's complaint as to the failure of the examiner to telephone as requested, that the practice in relation to such informal communications was clearly set out in the Guidelines. Such informal communications and the practice relating to them should be clearly distinguished from the formal examination procedure governed by Art. 96(2) EPC 1973 and R. 51 EPC 1973. The examiner's discretion as to whether to make such an informal communication had to be exercised in accordance with the Guidelines, having regard to the particular circumstances of each individual case. An exercise of such discretion adversely to an applicant, such as in the case in question, could not by its nature be a procedural violation, however, because the procedure for such conversations was informal in the sense that it was not governed by the EPC 1973, but was additional to the procedure provided by the EPC 1973. In any event, in the board's view, in the case in question no criticism could properly be made of the examiner in relation to his failing to telephone the appellant.

In T 160/92 (OJ 1995, 35) the appellant claimed that in two telephone conversations with the primary examiner he was misled into believing that a refusal was not imminent, as a further communication would be issued as the next step of the procedure. The board noted that telephone calls between examiners of the EPO and applicants, in some situations, could be a tool for speeding up an otherwise slower procedure. However, one should be warned against expecting too much from them in critical situations, as misunderstandings could happen more easily than in writing, sometimes promoted by the fact that one of the two participants in the conversation might not be fully prepared for dealing with the case. It was with good reason that the procedure before the EPO was in principle, with the exception of oral proceedings under Art. 116 EPC 1973, a written procedure. Moreover, in the examination (as well as in the opposition) procedure the primary examiner was only one of a division of three examiners, it being well-known that his individual statements could not be binding for the division. Furthermore, telephone conversations were not provided for in the EPC and did not, as such, form part of the formal procedure before the EPO. The board held that the answer to the controversial question whether the applicant was misled about the possibility of imminent refusal of the application must be sought by focusing on the procedurally relevant content of the file.

In T.1905/07 the board pointed out that presenting new grounds in a telephone conversation should not be equated with presenting the same grounds in formal oral proceedings or in a formal written communication. First, mere verbal communication by telephone was more prone to misunderstandings. Secondly, a party also had a right to be heard by the organ which took the decision, i.e. the examining division in the case in hand. A telephone conversation with only one of the examiners of that division did not safeguard this right in the same way as oral proceedings. Whether or not a party's fundamental right to be heard had been infringed depended on the particular circumstances of the case.

2.9.2 Interviews

In principle, the refusal of a request for an interview with the examiner concerned does not contravene any of the rules of procedure contained in the EPC. If the applicant requests a personal consultation, the request should be granted unless the nature of the issue to be discussed requires formal proceedings or the examiner believes that no useful purpose would be served by such a discussion (Guidelines C-VII, 2, November 2018 version).

In T.98/88 it was held that Art. 116 EPC 1973 gave every party the absolute right to oral proceedings, but not the right to an interview with a particular member of an examining division. It is for the examiner concerned to decide whether such an interview should take place (see also T.589/93). In T.193/93, the board held that examiners were under no obligation to grant an "interview" (T.235/85, T.909/95).

In T.409/87 the board noted that Art. 116 EPC 1973 makes it clear that whether or not the EPO considers it to be expedient, a party is entitled to oral proceedings upon request (see T.299/86, OJ 1988, 88; see also chapter III.C.2.1. "Right to oral proceedings in examination, opposition and appeal proceedings"). However, a request for an interview is clearly not, by itself, a request for oral proceedings and there is no obligation upon the examining division to grant such request for an interview when, as set out in the Guidelines, the examiner believes that no useful purpose would be served by such a discussion (see T.19/87, OJ 1988, 268, T.909/95). As an interview, in contrast to oral proceedings, is not a procedural step provided by the EPC, the refusal to grant a request for an interview is not a decision open to appeal and, therefore, does not fall under the provision of R. 68(2), first half-sentence, EPC 1973. See also T.283/88.

In T.299/86 (OJ 1988, 88) the board held that the right of a party to request oral proceedings under Art. 116 EPC 1973 was in no way affected by the fact that such party could have also requested and/or attended an interview with the examiner.

In T.808/94 the board stated that informal interviews (also called "personal consultation") and/or informal consultations by telephone which were carried out by the primary examiner alone could not replace duly requested oral proceedings under Art. 116 EPC 1973, which were to take place before all members of the examining division (Art. 18(2) EPC 1973).

3. The grant stage in examination

By decision of the Administrative Council CA/D 2/10 of 26 October 2010 (OJ 2010, 637), R. 71 EPC's paragraphs 3 to 7 of were amended, its paragraphs 8 to 11 were deleted and new R. 71a EPC was inserted. The provisions as amended entered into force on 1 April 2012.

R. 71 EPC governing the last phase of the grant proceedings has been split into two separate rules: new R. 71 EPC focuses on the work of the examining division and R. 71a EPC on issues which arise when the grant procedure is concluded and which are mainly dealt with by the formalities officer acting on behalf of the division.

3.1. Rule 71(3) EPC communication: the text for approval

New R. 71 EPC reinstates the pre-2002 practice concerning changes to the text intended for grant suggested by the examining divisions. The new text of R. 71(3) EPC (R. 51(4) EPC 1973), which entered into force on 1 April 2012, reads as follows: "Before the examining division decides to grant the European patent, it shall inform the applicant of the text in which it intends to grant it and of the related bibliographic data. In this communication the examining division shall invite the applicant to pay the fee for grant and publishing and to file a translation of the claims in the two official languages of the European Patent Office other than the language of the proceedings within four months."

Thus once the examining division has decided that a patent can be granted it must inform the applicant of the text on the basis of which it intends to do so. This text may include amendments and corrections made by the examining division on its own initiative which it can reasonably expect the applicant to accept. (Guidelines C-V, 1.1 – November 2018 version).

In T.1849/12 the appellant asked for the withdrawal of the examining division's communication, and requested that the examining division be instructed to issue the communication under R. 71(3) EPC without delay – specifically before the expiry of 18 months from the priority date – and therefore to grant the European patent as quickly as possible. The board noted that Art. 93(2) EPC provided for the possibility of granting a patent before the expiry of the 18-month period. An earlier grant was thus not ruled out, provided the examining division had already concluded that the application met all the requirements of the EPC. As this was not yet so in the case in hand, the possibility provided for in Art. 93(2) EPC of granting a patent before the 18 months expired did not apply. The board did not see any conflict in this regard between the provisions of Art. 93(2) and 97(1) EPC. Under the EPC, the granting of a patent was conditional upon the mandatory examination of all EPC requirements. A patent could only be granted if the examining division considered all examination requirements met. Contrary to the appellant's claim, the examining division had no discretion in this regard. It had to be taken into account that the EPO was responsible for safeguarding the interests of the public, in addition to those of the appellant, and the public had to be able to rely on it doing so.

3.2. Approval of the text by the applicant

3.2.1 General issues

If the applicant pays the fees and files the translations within the due period (and files or requests no corrections or amendments to the text proposed for grant in the R. 71(3) EPC communication), he will be deemed to have approved the text intended for grant (R. 71(5) EPC) (see Guidelines C-V, 1.1 – November 2018 version).

The above also applies where the R. 71(3) EPC communication was based on an auxiliary request, provided that the applicant does not reply to the R. 71(3) EPC communication by requesting that a grant be based on a higher ranking request. This means that, in the absence of any indication to the contrary, the above acts imply approval of the text of the auxiliary request upon which the R. 71(3) EPC communication was based as well as the abandonment of all higher ranking requests. The above also applies where the R. 71(3) EPC communication included proposals by the examining division for amendments or corrections of the text intended for grant. Consequently, provided the applicant does not reject these proposed amendments or corrections in his reply, the completion of the above acts constitutes approval of the text containing the amendments or corrections as proposed by the examining division (Guidelines C-V, 2 – November 2018 version).

3.2.2 Clear and unambiguous approval of the text

A number of decisions commented on below relate to earlier versions of former R. 51(4) EPC 1973 (now R. 71(3) EPC, version 2012). Nevertheless, they may also be applicable to the new R. 71(3) EPC.

In J 12/83 (OJ 1985, 6) the Legal Board held that an applicant for a European patent could be "adversely affected", within the meaning of Art. 107 EPC 1973, by a decision to grant the patent if the patent were granted with a text not approved by the applicant, contrary to Art. 97(2)(a) EPC 1973. Approval, for the purposes of that Article, had to be established "in accordance with the provisions of the Implementing Regulations" (here R. 51(4) EPC 1973).

In J 13/94 the Legal Board observed that any approval of the text, in accordance with R. 51(4) EPC 1973, might thus have serious procedural consequences for applicants. Hence, according to the case law of the Legal Board, declarations by applicants should only be treated as valid approval under R. 51(4) EPC 1973 if they were clear and unambiguous which, in particular, implied that: the approval was not subject to any condition (J 27/94, OJ 1995, 831); it was clear to which text the applicant had given his approval (J 29/95, OJ 1996, 489).

In J 27/94 (OJ 1995, 831) the Legal Board held that in the interests of legal certainty a procedural declaration had to be unambiguous (confirming J 11/94, OJ 1995, 596). This implied that it must not be subject to any condition, leaving it open whether the EPO could proceed further on the basis thereof. It found that the examining division should not have

treated the letter in question as valid approval under R. 51(4) EPC 1973, because it contained a condition which made the approval invalid. The approval of the text intended for grant was a necessary requirement for the next step in the proceedings, i.e. the communication under R. 51(6) EPC 1973. It had to be clear for the EPO when receiving the declaration whether or not it was an appropriate basis for the despatch of this communication. In the interests of legal certainty the Legal Board stated that procedural declarations had to be unambiguous. The examining division should have objected to the invalid approval, with the eventual consequence foreseen in R. 51(5), first sentence, EPC 1973.

In T 971/06 the board noted that the approval by an applicant or patent proprietor under Art. 97(2)(a) EPC 1973 was a principle underlying all decisions of the EPO (see Art. 113(2) EPC 1973). Accordingly, it was perfectly clear that it was an absolute pre-condition of any decision of the examining division to grant a patent that an applicant had to have consented to the proposed text. If that pre-condition were not fulfilled, the only courses of action open to the examining division were to refuse the application under Art. 97(1) EPC 1973 or, if possible amendments or corrections remain to be considered, to continue the examination. So strict was the approval condition that, as the case law showed, the only valid approval was that which was unconditional, unambiguous and clear (see J 13/94; J 27/94, OJ 1995, 831; J 29/95, OJ 1996, 489). The board held that in the absence of a valid approval, the examining division had no power to make a decision to grant and any decision to grant purportedly made without the applicant's valid approval could have no legal effect.

In T 872/90 the board held that, in view of the requirement of Art. 113(2) EPC 1973 according to which the EPO would consider and decide on the European application only in the text submitted to it, or agreed, by the appellant, former claims which had been replaced by newly filed claims could no longer be considered to constitute a text agreed to by the applicant.

In T 1/92 (OJ 1993, 685) the board held that the applicant's approval of the text is only binding if it is still unambiguously present at the expiry of the R. 51(4) EPC 1973 period.

3.2.3 Decisions with no text submitted or agreed by the applicant (Article 113(2) EPC)

a) General issues

Art. 113(2) EPC states that the EPO shall examine, and decide upon, the European patent application or the European patent only in the text submitted to it, or agreed, by the applicant or the proprietor of the patent. See also Guidelines C-V, 4.9 – November 2018 version.

In T 690/09 the board stated that the application would be refused under Art. 97(2) EPC, if there is no text which has been approved by the applicant and allowed by the examining division (see Art. 113(2) EPC 1973, T 647/93, OJ 1995, 132; T 946/96; T 237/96).

In T 1093/05 the board noted that to grant a patent in a text not approved by the applicant was in breach of Art. 97(2)(a) and 113(2) EPC 1973 and thus a substantial procedural violation. The board stated that in those circumstances it was established case law that an examining division was bound by its final decision on an application, which could be set aside only following an admissible, reasoned appeal (see G 12/91, OJ 1994, 285; G 4/91, OJ 1993, 707; T 371/92, OJ 1995, 324; T 1081/02; T 830/03). In view of this established case law, the board could not subscribe to the view expressed in T 971/06 that an erroneous decision was a nullity and therefore no appeal needed to be filed against it.

In T 237/96 the board noted that in circumstances in which, as in the case in question, amendments proposed by the applicant were not allowed by the examining division by virtue of R 86(3) EPC 1973 and the applicant did not give its agreement to any other version of the application documents, the established practice of the EPO, sanctioned by consistent case law, was to refuse the application on the ground that there was no version approved by the applicant within the meaning of Art. 113(2) EPC 1973 on which a patent could be granted.

Some decisions showed a different approach concerning the legal basis for refusing an application where no agreed claim text existed. In T 246/08 the board held that the substantive legal requirement for the continued presence of claims in an application was expressed in Art. 78(1)(c) EPC 1973, not in Art. 113(2) EPC 1973. It noted that Art. 78(1)(c) EPC 1973 was a requirement of the application not only for according a filing date, but also for substantive examination and grant, whereas Art. 113(2) EPC 1973 was silent as to the legal consequence of the absence of an agreed text (T 2112/09).

In T 32/82 (OJ 1984, 354) the board held that in accordance with Art. 113(2) EPC 1973, it could only decide on the European patent application in the text submitted to it or agreed by the applicant. It followed that when deciding the appeal the board had no authority under the EPC to order the grant of a European patent containing claims which were different from those submitted by the applicant in their content or interdependency. Even if the board had indicated to an applicant that a dependent claim might be allowable if rewritten as an independent claim but the applicant had not expressly requested the board to consider it as such, the board was not obliged to do so.

In T 647/93 (OJ 1995, 132) the board stated that the provision of Art. 113(2) EPC 1973, that the EPO shall consider and decide upon the European patent application or the European patent only in the text submitted to it, or agreed, by the applicant for or proprietor of the patent, is a fundamental procedural principle, being part of the right to be heard, and is of such prime importance that any infringement of it, even as the result of a mistaken interpretation of a request, must, in principle, be considered to be a substantial procedural violation. In any case, such violation occurs when, as in the case in hand, the examining division does not make use of the possibility of granting interlocutory revision under Art. 109 EPC 1973, after the mistake has been pointed out in the grounds of appeal. See also T 121/95.

b) Auxiliary request issues

Where it is not clear which higher request the applicant wishes to pursue, the examining division must request the applicant to clarify this in resumed examination proceedings. (Guidelines C-V, 4.9 – November 2018 version).

In T 1255/04 (OJ 2005, 424) the board held that in a case where there is a request considered allowable on which a R. 51(4) EPC 1973 communication is to be sent, but there are also not allowed higher-ranking requests, the communication under R. 51(4) EPC 1973 is deficient if it is not accompanied by reasons why the higher-ranking requests are not allowed. This communication should also expressly mention the option of maintaining the disallowed requests, thus reminding the applicant and the examining division of the possibility for the applicant of asking for a written appealable decision on these higher-ranking requests (T 1181/04 followed). It pointed out that if the applicant maintains a still pending higher-ranking request discussed at the oral proceedings before the examining division, that request cannot be refused under R. 86(3) EPC 1973. The decision under appeal, by merely stating that the application was refused because there was no version approved of by the applicant within the meaning of Art. 113(2) EPC 1973 on which a patent could be granted, was inadequately reasoned because it did not give the substantive reasons why what the applicant did not approve of was not in conformity with the patentability requirements of the EPC.

In T 169/96 the board held that according to Art. 113(2) EPC 1973, the EPO was bound to the requests of the applicant or proprietor. In case of main and auxiliary requests, this meant that the EPO was also bound to the order of the requests. Before a decision could be taken on the basis of an auxiliary request, the main request had to be examined and decided upon (T 484/88). This principle was violated by the examining division. The applicants were only invited to indicate their approval of the text according to auxiliary request III. Therefore, their express disapproval related necessarily only to this version of the application. There was nothing in the file which could be interpreted as a withdrawal of the main request and the auxiliary requests I and II. Hence, these requests were pending when the decision under appeal was taken and the failure to give a decision on these requests was a violation of Art. 113(2) EPC 1973. The failure to deal with the requests preceding auxiliary request III violated also R. 68(2) EPC 1973. If a decision related to several requests, it had to give reasons for the rejection of each one (T 234/86). The fact that the first examiner had expressed a preliminary view in a previous communication which might be applicable to these requests could not replace reasons in the decision itself. Whereas the reasons of a decision might, in the interest of procedural economy, refer in appropriate cases to previous communications, it had to be clear from the decision which considerations led the division to its conclusions (T 234/86, see also T 1439/05).

In T 255/05 the board observed that the appellant's "auxiliary request" was not one single request but encompassed numerous requests. It was totally undefined in which order these four requests and any such combination requests should be considered by the board. The board noted that according to Art. 113(2) EPC 1973, the EPO should consider or decide upon the European patent application only in the text submitted to it, or agreed, by the applicant. It was therefore the applicant's responsibility to define the text on the

basis of which it requested a patent to be granted. In the case of auxiliary requests this included the requirement that the applicant had also to indicate the order in which the requests were to be examined. This was so because filing an auxiliary request meant that such a request was only filed in the event that the preceding request was not allowed by the board. As a consequence, when the appellant, even after having been invited to do so by the board, did not clearly indicate the order in which its several requests were submitted and what the exact content of each of these requests was, there was no text submitted or agreed by the applicant within the meaning of Art. 113(2) EPC 1973 and no request which could be considered by the board. Therefore, the appellant's "auxiliary request" had to be disregarded.

In T 888/07 the board held that, if the examining division refused to consent to the latest submitted set of amended claims, put forward to substitute for the claims previously on file under R. 86(3) EPC 1973, the previous set of claims that the examining division had consented to consider but which the applicant had not maintained as an auxiliary request was not automatically revived. It noted that in accordance with Art. 113(2) EPC and established case law (see e.g. T 237/96) a decision could not be based on the previous set of claims. Art. 113(2) EPC 1973 stated that the EPO had to consider and decide upon the European application or patent only in the text submitted to it, or agreed to, by the applicant or proprietor. Deciding to refuse an application on the grounds that the claims previously on file were not allowable would have contravened Art. 113(2) EPC 1973, since these claims were no longer pending.

3.2.4 Examination procedure under the previous system (Rule 71 EPC and Rule 51(4) EPC 1973)

Under the system existing before 1 April 2012, R. 51 EPC 1973 implemented the examination procedure established in Art. 96 and 97 EPC 1973. In particular, R. 51(4) EPC stipulated that the examining division had to communicate to the applicant the text in which it intended to grant the patent and invite him to pay the fees and file the translation. According to the last sentence of this provision, the payment of the fees and the filing of the translation was considered to be implicit approval of the text proposed by the examining division.

In T 1181/04 (OJ 2005, 312) the board noted that the function of a communication under R. 51(4) EPC 1973 was to establish whether the applicant approved the proposed text of the patent as foreseen in Art. 97(2)(a) and Art. 113(2) EPC 1973. If, after receiving the communication under R. 51(4) EPC 1973, the applicant approved the version of the patent proposed by the examining division and fulfilled the formal requirements for grant, the examining division would issue a decision to grant according to Art. 97(2) EPC 1973. If he did not approve, the application was refused according to Art. 97(1) EPC 1973, since the EPC did not provide any other sanction in this case. The board pointed out that the way in which R. 51(4) EPC 1973 and Art. 97(1) and (2) EPC 1973 operated indicated that a communication under R. 51(4) EPC 1973 was not intended to terminate the examination procedure but was rather a preparatory action and was therefore not appealable. An appeal against a communication under R. 51(4) EPC 1973 would therefore normally be considered inadmissible. The board noted that the communication under

R. 51(4) EPC 1973 from the examining division gave the appellant the impression that no possibility was available to him other than to pay and accept the proposed text or not to pay and lose the application. This impression was even stronger because reasons for turning down the higher-ranking requests were also contained in the document and no indication was given as to how to proceed if the appellant wished to maintain these higher-ranking requests. The board observed that where approval was not given, this also had a legal consequence, namely the refusal of the application in accordance with Art. 97(1) EPC 1973. The legal consequence of the non-existence of the applicant's approval was not the same as that foreseen for the failure to pay the fees or to file the translation. In the former case the application was refused, whereas in the latter it was deemed to be withdrawn. The board noted that the fact that an applicant's disapproval of the text proposed for grant had special legal consequences also made it necessary to ensure that disapproval was clearly established by the examining division. The board noted that the communication sent to the applicant reflected an EPO practice that did not provide for a procedure to be followed in the event that the applicant did not agree with the version proposed by the examining division. The board found that this practice was not justified by the EPC. The applicant's approval of the text proposed for grant by the examining division was an essential and crucial element in the grant procedure and its existence or non-existence needed to be formally ascertained. Further, the applicant should have been given the opportunity to express his disapproval of the text proposed for grant by the examining division with a communication under R. 51(4) EPC 1973 and to obtain an appealable decision refusing his requests. See also T. 1255/04, OJ 2005, 424; T. 1226/07.

The board in T. 1377/15 observed that the communication the appellant had received under R. 71(3) EPC – unlike the one under R. 51(4) EPC 1973 at issue in T. 1181/04 – had expressly referred to the possibility of expressing disapproval and subsequently obtaining an appealable decision giving the reasons for refusing the higher-ranking requests. It therefore held that the conditions set out in T. 1181/04 for exceptionally treating such a communication as an appealable decision were not met.

3.3. Amendments or corrections filed in response to the communication under Rule 71(3) EPC

3.3.1 Amendments where Rule 71(3) EPC communication is the first communication

The applicant's right to amend the application of his own volition after receipt of the examiner's first communication was shifted to the procedural stage of response to the opinion accompanying the European search report (see Decision of the Administrative Council, which entered into force on 1 April 2010, OJ 2009, 299).

Thus, by way of exception, in cases where the R. 71(3) EPC communication is also the first communication in examination proceedings, amendments filed in response thereto must be admitted into the proceedings under R. 137 EPC. However, where a further R. 71(3) EPC communication is sent in respect of such cases, any amendments filed in response thereto must be consented to by the examining division according to R. 137(3) EPC (see Guidelines C-V, 4.4 – November 2018 version).

3.3.2 Amendments and corrections requested according to Rule 71(6) EPC

R. 71(6) EPC reads as follows: "If the applicant, within the period under paragraph 3, requests reasoned amendments or corrections to the communicated text or keeps to the latest text submitted by him, the examining division shall issue a new communication under paragraph 3 if it gives its consent; otherwise it shall resume the examination proceedings". See also Notice from the EPO dated 8 June 2015 concerning the possibility to waive the right to a further communication under Rule 71(3) EPC, OJ 2015, A52; Guidelines C-V, 4.11 – November 2018 version.

All of the amendments or corrections requested by the applicant have to be reasoned, in particular those which have not been on file yet (CA/81/10, Rev 1).

Where amendments or corrections are not admitted, or where they are admitted but not considered allowable, examination will be resumed (Guidelines H-II, 2.5.2 – November 2018 version).

The boards of appeal have confirmed in their case law (e.g. T 1064/04) that the principles set out in G 7/93 (OJ 1994, 775) also apply after the structural amendment of R. 51 EPC 1973 in 2002 (CA/81/10, Rev 1).

In T 1567/17 the board held that the applicant's remark in a response under R. 71(6) EPC that an amended feature "can also be omitted if regarded as violating Art. 123(2) EPC" could not be construed as waiving its right to be heard and its right to a reasoned decision in case the application were to be refused. Rather, this remark merely intimated that the applicant would accept the issue of a new communication under R. 71(3) EPC on the basis of the amended set of claims without said feature. The appellant had been given no opportunity to respond to the division's opinion on this issue and the board held that the direct refusal of the application by the examining division was in violation of Art. 113(1) EPC. Surrender of a right cannot be simply presumed (referring to G 1/88, OJ 1989, 189; T 685/98, OJ 1999, 346).

3.3.3 Criteria for admitting amendments filed in reply to the Rule 71(3) EPC communication

The criteria for accepting or refusing requests for amendment under R. 137(3) EPC (former R. 86(3) EPC 1973), or correction under R. 139 EPC (former R. 88 EPC 1973), have not been changed by new R. 71 EPC (former R. 51 EPC 1973), which entered into force on 1 April 2012 (OJ 2010, 637).

Decision G 7/93 (OJ 1994, 775) dealt with the criteria for assessing the admissibility of late-filed amendments in examination. In particular, applying the principles of G 7/93 to amendments filed in response to the communication under R. 71(3) EPC means that this communication does not constitute an opportunity for the applicant to call into question the outcome of the earlier procedure (T 375/90). The Enlarged Board noted that the question whether an approval submitted under R. 51(4) EPC 1973 becomes binding once a communication in accordance with R. 51(6) EPC 1973 has been issued depended rather

upon the proper interpretation of Art. 123(1) EPC in conjunction with R. 86(3) EPC 1973. The Enlarged Board came to the conclusion that the approval of a notified text submitted by an applicant pursuant to R. 71(3) EPC (former R. 51(4) EPC 1973) does not become binding. It stated that, in general terms, the way in which the examining division should exercise its discretion to allow an amendment of an application must depend upon the circumstances of each individual case, and must also depend upon the stage of the pre-grant procedure which the application has reached. It is clear from the wording of the provisions in R. 51(4) to (6) EPC 1973 that the underlying object of the R. 51(6) EPC 1973 communication is to conclude the granting procedure on the basis of the previously notified and approved text of the application. Thus although the examining division still has a discretion to allow amendments at this stage of the pre-grant procedure, such discretion must be exercised with the above underlying object in mind. In particular it held that admission of amendments at a late stage of the proceedings is to be the exception and not the rule.

In T. 1064/04 the board stated that the principles in G. 7/93 could be considered generally applicable to new requests put forward at a late stage of the proceedings, where the applicant had already had at least one opportunity to amend the application and the examining division has already completed substantive examination of the application. The board found that the examining division had exercised its discretion in a reasonable way in accordance with the applicable principles. A late stage of the examination proceedings had been reached at the end of the oral proceedings, and any amendments thereafter fell to be considered under the principles derivable from decision G. 7/93. T. 1064/04 summarised the principles derived from decision G. 7/93 (OJ 1994, 775) on admission of amendments at a late stage of proceedings (see also T. 1540/11, T. 1326/11). The principles that can be derived from decision of the Enlarged Board are:

(a) Until the issue of a decision to grant the patent, the examining division does have discretion under R. 86(3), second sentence, EPC 1973 (now R. 137(3) EPC) whether or not to allow the amendment of the application at a late stage, irrespective of whether the applicant has already agreed to a text (G. 7/93, point 2.1 of the Reasons).

(b) The examining division is required to exercise its discretion considering all relevant factors, in particular the applicant's interest in obtaining a patent which is valid in all designated states, and the EPO's interest in bringing examination to a close, and must balance these against one another (G. 7/93, points 2.2 and 2.3 of the Reasons).

(c) Allowing a request for amendment at a late stage of the examination proceedings, that is, against the background that the applicant has already had at least one opportunity to amend the application and that the examining division has already completed the substantive examination of the application, will be an exception and not the rule (G. 7/93, point 2.3 of the Reasons).

(d) It is not the function of a board of appeal to review all the facts of the case as if it were in the place of the department of first instance, in order to decide whether or not it would have exercised the discretion in the same way as the department of first instance. Rather a board of appeal should only overrule the way in which the department of first instance

exercised its discretion if it comes to the conclusion either that the department of first instance has not exercised its discretion in the right way as set out in (b) above or has exercised its discretion in an unreasonable way, and thus exceeded the proper limits of its discretion (G 7/93, point 2.6 of the Reasons).

In T 1399/10 the board held that if an examining division comes to the conclusion that a request is not prima facie allowable but introduces new deficiencies, it is justified for the division to refuse the request under R. 137(3) EPC.

In T 1326/11 the decision under appeal dealt solely with the refusal under R. 137(3) EPC (2010) by the examining division to admit into the proceedings the request received after issuance of the communication under R. 71(3) EPC. Thus, the question to be decided on this appeal was whether this refusal was an appropriate exercise of the discretion given to the examining division under R. 137(3) EPC. Guided by the principles to be found on G 7/93 as summarised in T 1064/04, the board was of the view that the complexity of the case only supported the decision of the examining division not to admit a request at a very late stage of proceedings, which had already involved two communications of the examining division and oral proceedings before it. Admitting the request at that late stage would have led to re-examination and consequently unduly lengthened the proceedings.

In T 246/08 the board held that a refusal of consent to amend made in advance of any amendment being submitted cannot be a reasonable exercise of discretion pursuant to R. 137(3) EPC (former R. 86(3) EPC 1973) and is ipso facto a substantial procedural violation.

A number of decisions set out below relate to earlier versions of former R. 51(4) EPC 1973 (now R. 71(3) EPC). Nevertheless, they may also be applicable to the new R. 71(3) EPC.

In T 375/90 the board noted the conditions defined by the boards of appeal limiting the extent of the discretion which may be exercised when applying R. 86(3) EPC 1973, where amendments were proposed by the applicant after issue of the R. 51(4) EPC 1973 communication:

(i) There is no discretion in the obligation to admit amendments which remove deficiencies constituting violations of the EPC 1973 (see T 171/85, OJ 1987, 160; T 609/88).

(ii) In all other cases the EPO's interest in a speedy completion of the proceedings must be balanced against the applicant's interest in the grant of a patent with amended claims (see T 166/86, OJ 1987, 372; T 182/88, OJ 1990, 287; T 76/89).

The board noted that the Guidelines stated that the communication under R. 51(4) EPC 1973 did not constitute an opportunity for the applicant to call into question the outcome of the earlier procedure and only minor amendments would be considered within the period under R. 51(4) EPC 1973. It followed from the foregoing considerations that the examining division (or the board acting within its competence), when applying the provisions of R. 86(3) EPC 1973, is not completely free to deny any examination of the respective amended documents. See also T 989/99.

In T. 999/93 the decision to refuse the application under R. 51(5), first sentence, EPC 1973 for lack of any approved text of the application (Art. 113(2) EPC 1973), was incorrect since the fact that the appellant never withdrew the main and first and second auxiliary requests as well as the appellant's letter (disapproval of the text proposed for grant, but request for a decision on the main request) clearly showed that he indeed approved and proposed the text according to his higher-ranking requests (see also R. 51(5), second sentence, EPC 1973). The decision would instead have required reasoning as to the substance of the main, first auxiliary and second auxiliary requests.

In T. 237/96 the board held that the broadening of the scope of claim 1 requested by the applicant after receipt of the examining division's communication under R. 51(4) EPC 1973 so as to encompass one originally disclosed embodiment was not consistent with his previous submission that said embodiment was not part of the invention, raised new issues as to clarity and inventive step and was not supported by any argumentation in favour of the allowability of the amended claim. The board found that the examining division, in refusing to consent to the amendment under R. 86(3) EPC 1973, did not exercise its discretion in a wrong or unreasonable manner. Had it given its consent to the amended version of the claim, it would have been necessary to restart examination from the beginning, which, given the prima facie lack of clarity of the claim, would have led to a considerable delay.

In T. 1066/96 it was clear that further amendments could not be excluded wholesale in advance, but the discretion under R. 86(3) EPC 1973 had to be exercised on a case by case basis balancing the interests of the EPO and the applicant against one another (see G. 7/93, OJ 1994, 775). Therefore, in exercising its discretion under R. 86(3) EPC 1973 in a negative way, an examining division could only refuse an application if, before issuing a decision, it had informed the applicant of the fact that the further amendments requested would not be admitted and of the reasons for not admitting said amendments, thereby taking due account of the applicant's reasons for such late filing of further amendments (see also T. 2536/17). If the applicant maintained its request and its counterarguments were not considered convincing by the examining division, the application had to be refused under Art. 97(1) EPC 1973, since it contained no claims to which the applicant had agreed.

In T. 121/06 the board held that issuing a communication under R. 51(4) EPC 1973 in which amendments were proposed, which the applicant could not reasonably be expected to accept without further discussion, constituted a substantial procedural violation.

3.3.4 Claims fees due in response to Rule 71(3) EPC communication

According to R. 71(4) EPC (in force since 1 April 2012) if the European patent application in the text intended for grant comprises more than fifteen claims, the examining division shall invite the applicant to pay claims fees in respect of the sixteenth and each subsequent claim within the period under paragraph 3 unless the said fees have already been paid under R. 45 or 162 EPC.

The appeal in J 6/12 was lodged against the decision by the formalities officer acting for the examining division to refuse a request for a refund under R. 71(5) EPC of ten claims fees following amendments which had resulted in a smaller number of claims. R. 71(6) EPC (now R. 71(4) EPC), which entered into force in December 2007, was the legal basis for the invitation to pay claims fees. According to this provision, the "text [of the application] intended for grant" was the basis for charging additional claims fees. However, the Legal Board held that this text had only become final after the examining division had approved the filed amendments, and not already on the date of issue of the communication under R. 71(3) EPC. Fees which the appellant had been invited to pay at that earlier stage had not yet become payable and decreased in the measure that the appellant had reduced the number of claims in response to the communication under R. 71(3) EPC. The Legal Board stressed that the EPO could not retain fees of more than insignificant amounts which had been paid for no legal reason.

3.4. Amendment after approval of the text for grant

R. 71a(2) EPC (Conclusion of the grant procedure) makes it clear that, until the decision to grant the European patent is issued, the examining division may resume the examination proceedings at any time.

An examining division has discretion to allow amendments until issue of a decision to grant (T 690/09, referring to G 7/93, order 1, OJ 1994, 775; G 12/91, OJ 1994, 285).

Once the applicant has approved the text communicated to him pursuant to R. 71(3) EPC, by paying the fees and filing the translation of the claims, further requests for amendment will only exceptionally be admitted under the discretionary power of the examining division given by R. 137(3) EPC. A clear example of an admissible request is where the applicant files separate sets of claims for designated states for which prior national rights exist. Similarly, it is appropriate to admit minor amendments which do not require re-opening of the substantive examination and which do not appreciably delay the issue of the decision to grant (see G 7/93, OJ 1994, 775).

A refusal of amendments must be reasoned, and both Art. 113(1) and Art. 116(1) EPC must be observed. It must be shown that the conditions defined in G 7/93 (OJ 1994, 775) are not met. This means that arguments must be given as to why the amendments are not minor in nature but in fact necessitate resuming substantive examination while considerably delaying the issue of a decision to grant the patent (Guidelines H-II, 2.6 – November 2018 version).

In decision G 7/93 (OJ 1994, 775) the Enlarged Board stated that the wording in R. 86(3) EPC 1973 (now R. 137(3) EPC) "No further amendment may be made without the consent of the examining division" simply meant that the examining division might or might not give its consent to a request for amendment by the applicant. The approval of a notified text submitted by an applicant pursuant to R. 51(4) EPC 1973 was not rendered binding by virtue of a communication being issued in accordance with R. 51(6) EPC 1973. Even following the issue of such a communication and until the issue of a decision to grant the patent, it was left to the discretion of the examining division under R. 86(3), second

sentence, EPC 1973 whether or not to allow amendment of the application. However, since the underlying object of a R. 51(6) EPC 1973 (earlier version) communication was to conclude the granting procedure on the basis of the approved text, a request for amendment which was received by an examining division after such a communication has been issued should be considered in a different way from a similar request for amendment received at a much earlier stage in the overall examination procedure, and in particular before approval by the applicant of a notified text. Such a request should be considered in the context of the very late stage in the pre-grant procedure at which it had been made, and against the background that the examining division had already completed its substantive examination of the application, and that the applicant had already had at least one opportunity to amend the application. Against such a background, allowing a requested amendment after the issue of a R. 51(6) EPC 1973 communication would be the exception rather than the rule. The question remained in what kind of circumstances it would be appropriate to make an exception to the normal rule. In the Enlarged Board's view, the discretion to allow amendment should be exercised according to the same principles. Of course, an objection should only be raised by an examining division at that stage of the proceedings if it was prepared to allow amendments to meet the objection. When exercising its discretion following the issue of a R. 51(6) EPC 1973 communication, an examining division had to consider all relevant factors. In particular it had to consider and balance the applicant's interest in obtaining a patent which would be legally valid in all of the designated states, and the EPO's interest in bringing the examination procedure to a close by the issue of a decision to grant the patent.

In G 10/92 (OJ 1994, 633) the Enlarged Board stated that if examination proceedings were re-opened by the examining division after approval in accordance with R. 51(4) EPC 1973, because – for whatever reason – the proposed text for grant was to be amended, R. 51(4) EPC 1973 required that the applicant once again be informed of the text in which the examining division intended to grant the European patent. The same was true in appeal proceedings. The approval in accordance with R. 51(4) EPC 1973 given before the department of first instance was equally binding on an appeal. If the board of appeal then concluded that the patent had to be amended prior to grant, the applicant again had to approve the amended text, approval being stated before the board if the board was ruling on the issue, or to the examining division if the matter had been remitted.

In G 10/93 (OJ 1995, 172) the Enlarged Board held that the examining division was not bound by the view – whether positive or negative – expressed in the examination pursuant to Art. 96(2) EPC 1973; examination proceedings could be re-opened "for whatever reason" after the approval in accordance with R. 51(4) EPC 1973.

In T 171/85 (OJ 1987, 160) the board decided that if discrepancies or inconsistencies are found in the text communicated under R. 51(4) EPC 1973 to the applicant for a European patent, they may be removed in agreement between examining division and applicant even if the latter has already given his approval under R. 51(4) EPC 1973 to the (faulty) text.

3.5. Examination after remittal for further prosecution

If a case is remitted from the boards of appeal for further prosecution, the examining division must check whether requests from examination proceedings prior to the appeal are still outstanding and must give the party an opportunity to comment (see T 1494/05; see also Guidelines E-X, 2.1 – November 2018 version).

If a department has to give a decision in a case which has already been remitted by the board of appeal for further prosecution to that department, it is bound by the ratio decidendi of the board of appeal, insofar as the facts, e.g. the subject-matter of the patent and the relevant state of the art, are the same (Guidelines E-X, 4 – November 2018 version).

In T 79/89 (OJ 1992, 283) the board rejected the appellant's main request, and remitted the case to the department of first instance for further prosecution on the basis of the auxiliary request. In this case, Art. 111(2) EPC 1973 was applicable, according to which the department of first instance shall be bound by the ratio decidendi of the board of appeal, insofar as the facts are the same. The ratio decidendi of the board of appeal's previous decision was that the subject-matter of the main request was not allowable, but that the grant of a patent in accordance with the auxiliary request was subject to a consideration of its patentability by the examining division. In this case, in the board's judgment, following the issue of the board's previous decision, the examining division clearly had no power to re-open examination on the basis of the claims which the appellant requested (with subject-matter corresponding to the previously rejected main request). Having examined the subject-matter of the auxiliary request for patentability and found no objection to it, the examining division was bound to issue a communication under R. 51(4) EPC 1973 with a text based on the auxiliary request. Furthermore, in the absence of approval of such text, in the board's judgment the examining division was bound to refuse the application, for the reasons set out in its decision. Since the examining division had no power to re-open examination in respect of the claims as requested by the appellant, in the context of the appeal in question the board necessarily had no power to re-open examination in respect of such claims, because it could only exercise power which was within the competence of the examining division (Art. 111(1) EPC 1973). Thus, the main request of the appellant had to be refused.

3.6. Amendments after the decision to grant

In T 798/95 the decision to grant the European patent was handed over by the formalities section of the examining division to the EPO postal service for notification. The request for amendment of the application under R. 86(3) EPC 1973 was filed on the same day at 6.47 pm, thus after completion of the proceedings. Referring to G 12/91 (OJ 1994, 285), the board held that a request for amendment under R. 86(3) EPC 1973 filed after completion of the proceedings up to grant before an examining division was to be disregarded, even if the filing of the request and the completion of the proceedings occurred on the same date. See also Guidelines H-II, 2.6 – November 2018 version.

3.7. Withdrawal of amendments and abandonment of subject matter

3.7.1 General issues

A request to withdraw an amendment is itself a request for further amendment; thus, if this request occurs after reply to the first communication from the examiner, the corresponding amendment will be admitted only if the examiner consents.

In deleting subject-matter from an application, the applicant should avoid any statement which could be interpreted as abandonment of that subject-matter. Otherwise the subject-matter cannot be reinstated (see J 15/85; G 1/05, OJ 2008, 271; G 1/06, OJ 2008, 307; see also Guidelines H-III, 2.5 – November 2018 version).

In J 15/85 (OJ 1986, 395) it was held that if an applicant cancels claims in a patent application but fails to state at the time that their deletion is without prejudice to the filing of a divisional application, the examining division is obliged to withhold its consent to the subsequent filing of a divisional application. However, a declaration of abandonment can be interpreted to the effect that there was no intention to abandon definitively the subject-matter of the application or patent. In T 910/92 the applicants had expressly abandoned several claims in their application, but later retracted their declaration and requested that the claims deleted from the application be reinstated in a divisional application. The board considered under what circumstances it was possible to retract a declaration of abandonment. It referred to the case law, which required that the real intention of the party making the declaration be established, taking into account all the circumstances of the case, and concluded that in this case the appellants' real intention was not to abandon part of the original disclosure altogether, but to avoid the lack of unity that had arisen as a result of the change in the protection sought. In contrast to the case in J 15/85 the board did not see any need in this case to protect the public interest by generally prohibiting the retraction of a declaration of abandonment. It could be expected that any third parties interested in the proceedings relating to the application in question would have asked to inspect the files at suitable intervals up until the conclusion of the proceedings (G 1/06, OJ 2008, 307; G 1/05, OJ 2008, 271; J 2/01, OJ 2005, 88; J 29/97).

In J 13/84 (OJ 1985, 34) the Legal Board applied the same criteria to the interpretation of a declaration of abandonment as the case law had developed for declarations of withdrawal of an application. In particular, all the circumstances had to be taken into consideration and not just the preceding declarations. In the case in question the applicants had deleted their claim 21 in response to a communication from the examining division, adding that "in accordance with the examiner's suggestion, we are filing a divisional application for the intermediate products ... and for their method of preparation". The Receiving Section took the view that the divisional application, with the former claim 21 as its subject-matter, was not filed within the period of two months prescribed in R 25(1)(b) EPC 1973 (in the version which entered into force on 7 October 1977; the provision was deleted with effect from 1 October 1988). It argued that claim 21, which had already been divided out from the application on 6 June 1983 and therefore no longer formed part of the parent application on 31 August 1983 (the date of filing of the divisional application), could no longer be converted into a divisional application. The Legal Board

did not share this view and called for the declaration of abandonment to be interpreted in the same way as a declaration of withdrawal of an application, i.e. taking into account all the circumstances. It added that, generally speaking, and as stated in the headnote of J 11/80 (OJ 1981, 141), a request for withdrawal should only be accepted without question if it is completely unqualified and unambiguous. The Legal Board also referred to decisions J 24/82, J 25/82 and J 26/82 (OJ 1984, 467), in which it was found that, where claims were withdrawn specifically under R. 25(1) EPC 1973 (in the version which entered into force on 7 October 1977), the applicant's restrictive intention was not to be interpreted in isolation on the strength of particular statements but in the context of the entire procedure. The Legal Board took the view that in this case no express intention to drop the claim ensued from the circumstances. The divisional application was therefore admissible.

In T 118/91 the board ruled that the inclusion of a particular claim in a divisional application did not mean that claim had been dropped from the parent application.

3.7.2 Effects of non-payment of claims fees

If an applicant fails to pay claims fees, he is considered under R. 45(3) EPC (former R. 31 EPC 1973) to have abandoned the claims. Apart from resolving the specific question whether certain parts of the application were part of the description or were claims, decision J 15/88 (OJ 1990, 445) made clear that such abandonment of certain claims could only cause a substantive loss of subject-matter if the subject-matter involved was contained only in the claims and not also in the description or drawings. The Legal Board held that an applicant who declined to pay claims fees when they were demanded ran the risk that features of a claim deemed to have been abandoned pursuant to R. 31(2) EPC 1973, which were not otherwise to be found in the description or drawings, could not subsequently be reintroduced into the application and, in particular, into the claims. The idea that there could be forced abandonment of subject-matter, in reliance on R. 31(2) EPC 1973, appeared rather to be in conflict with the principles of higher law to be deduced from Art. 52(1) EPC 1973 in conjunction with Art. 123(2) EPC 1973. An applicant normally had the right to derive subject-matter from any part of the description, claims or drawings as originally filed. See also T 490/90.

3.8. Withdrawal of the patent application

3.8.1 General issues

A valid notice of withdrawal which has been received at the EPO is binding on the applicant, although, in the case of withdrawal by mistake, R. 139 EPC (R. 88 EPC 1973) may be applicable (see e.g. J 10/87, OJ 1989, 323; J 4/97; see also T 1673/07, J 6/13; J 11/16). However, a withdrawal cannot be retracted once the public has been officially informed of it (J 1/11, J 2/15). A publication in the European Patent Register has the same legal effect as a publication in the European Patent Bulletin, unless otherwise specified (J 1/11, J 2/15).

A request for withdrawal of a European application should only be accepted without question if it is completely unambiguous and unconditional (cf. J 11/87, OJ 1988, 367;

J.27/94, OJ 1995, 831; J.19/03; see also J.11/80, OJ 1981, 141; T.60/00; J.38/03; T.1673/07). In J.11/87 (OJ 1988, 367) the Legal Board added that where there was even the slightest doubt as to the applicant's actual intent such a declaration should be construed as a declaration of withdrawal only if the subsequent facts confirmed that such had been his true intent.

In J.15/86 (OJ 1988, 417) the Legal Board stated that there was a recognised difference between passive abandonment and active withdrawal of a European patent application. Each case in which there was a dispute as to the applicant's intention had to be considered on its own facts. A written statement by the applicant or his representative had to be interpreted in the context of the document as a whole and the surrounding circumstances. Similarly, J.7/87 (OJ 1988, 422) ruled that the language used had to be interpreted in the light of the surrounding circumstances, from which it had to be clear that the applicant really wanted immediate and unconditional withdrawal rather than passive abandonment leading in the course of time to deemed withdrawal. Actual withdrawal did not depend on whether the applicant had used the term "withdrawal".

In J.6/86 (OJ 1988, 124) the Legal Board considered the statement "the applicant wishes to abandon this application" as an unambiguous withdrawal of a European patent application, since nothing in the circumstances under which the statement had been made could be taken as qualifying such an interpretation. It is too late to ask for retraction of a notice of withdrawal once the withdrawal has been notified to the public in the European Patent Bulletin (see J.15/86, OJ 1988, 417).

In J.4/97 the applicants informed the EPO three days after withdrawal that their request had been made erroneously and should be cancelled. The EPO informed the applicants that the withdrawal had come into force and was binding, and notification of the withdrawal was later published in the European Patent Bulletin. However, the Legal Board held that the withdrawal of the application could be corrected under R.88 EPC 1973. The legal considerations contained in J.10/87 concerning the retraction of a withdrawal of a designation of a contracting state applied equally to the withdrawal of a patent application as a whole. In particular, it had to be ascertained that the withdrawal had been due to an excusable error, that there was no undue delay in seeking retraction, and that the retraction of the withdrawal had not adversely affected the public interest or the interests of third parties. In the circumstances of the case, the Legal Board held that the mere fact that the withdrawal was retracted after only three days was a strong indication that it had indeed been made in error. The error resulted from confusion between two similar reference numbers assigned by the appellants to their patent applications. In the Legal Board's opinion this mistake could be considered as an excusable oversight. The public interest was not affected because the withdrawal was retracted before the corresponding entry was made in the Register of European Patents and more than six weeks before the withdrawal was officially notified to the public in the European Patent Bulletin. Thus, at the time the general public was informed of the withdrawal, the public part of the file clearly showed that a request for cancellation of the withdrawal had been filed thereby warning third parties relying on the information published by the EPO. The interests of third parties could be protected if a national court applied Art.122(6) EPC 1973 mutatis mutandis.

In J.4/03 the Legal Board noted that the request for retraction of the withdrawal of the application had been made after notification of the withdrawal in the European Patent Bulletin, the means of official publication of the EPO. That meant that the public had already received the information that the application no longer existed so that the principal precondition for allowing a correction was not met. See also J.7/06.

In J.14/04 the Legal Board rejected the request for correction of the withdrawal of the application. It agreed with J.10/87 that the public interest lay in being able to rely on information officially published by the EPO. However, the Legal Board took the view that the Register of European Patents constituted an official publication (see also J.37/03, J.38/03), and as, at the time of the request for withdrawal, access to the Register was freely offered to the public on the Internet, the request for withdrawal was available to the public on the date the Register indicated the request for withdrawal was recorded. It was of no relevance whether the file was actually consulted on this date. Nor did the Legal Board consider that Art.122(6)EPC.1973 could apply mutatis mutandis to cases of correction under R.88.EPC.1973.

The Legal Board held in J.25/03 (OJ 2006, 395) that entries in the Register of European Patents also amounted to notification to the public from the day of their publication as well as publication in the European Patent Bulletin. The Legal Board rejected the request for correction of the withdrawal of the patent application and added that it was of no relevance that only four days had elapsed between mention of the withdrawal in the Register and mention of the request for retraction of the withdrawal. Legal certainty would suffer unacceptably if further delay were permitted for retraction of the withdrawal in such circumstances where even after inspection of the complete file there would not have been any reason for a third party to suspect, at the time of the official notification to the public of the withdrawal, that the withdrawal could be erroneous and later retracted.

In J.6/13 the Legal Board pointed out that an applicant is bound by its procedural acts notified to the EPO provided that the procedural statement was unambiguous and unconditional (J.19/03). The Legal Board held that there could be no retraction of a withdrawal if there was no reason for third parties to assume that the withdrawal was erroneous. Referring to J.12/03 (citing with approval J.25/03, OJ 2006, 395), the Legal Board pointed out that in the interest of legal certainty for third parties, and taking into account the public function of the Register, a third party upon file inspection must have had good reason to suspect that the withdrawal was made in error in order to allow its retraction. The Legal Board had to determine whether, in the case in hand, such good reason was present. The Legal Board took the view that, based on decisions J.12/03 and J.18/10, the prospects of the application, however promising, were insufficient to infer an obvious or even potential contradiction with a subsequent withdrawal. Patent applications may be withdrawn due to considerations of business strategy, investor preference, shift in portfolios, agreements with competitors, etc. Due to financial considerations, most granted European patents are validated only in a limited number of countries. These considerations may come into play at any time, even after the recent payment of annuities, or after the communication of a positive search report. The favourable prospects of the application in this case would thus not lead a third party to the conclusion that the

withdrawal was possibly made in error. Nor did they lead the representative who handled the case to this conclusion, either.

3.8.2 Correction of the withdrawal of the application under Rule 139 EPC

In J 1/11 the Legal Board noted that both the European Patent Register according to Art. 127 EPC and the European Patent Bulletin according to Art. 129(a) EPC were official sources of information to the public. There was nothing that would allow a distinction as to which of the two was more official, reliable or decisive. This was not to say that the Bulletin had no functions other than those of information. Contrary to what the appellant alleged, entries into the Bulletin were no more "cast in stone" than those of the Register, and could be corrected either under R. 140 EPC, or by way of a decision. As far as the function of providing information to the public was concerned, the Legal Board was unable to deduce a fundamental difference between the Register and the Bulletin. The factual elements surrounding the official character of the information available support the general availability to the public of the entries in the Register of European Patents, from the day they appear in it (see also J 2/15). In conclusion, the Legal Board decided that the appellant's requests for retraction of the withdrawal of its application as a correction of an error under R. 139 EPC had to be refused. The Legal Board pointed out that explicitly withdrawing a pending patent application is a declaration of the highest importance for the applicant, since all the legal effects of the application, such as establishing a preliminary right, are finally abandoned. In the light of these consequences, utmost caution is therefore required when declaring the withdrawal of an application. A correction of errors in documents filed with the EPO under R. 139 EPC is only possible under strictly defined conditions. In the case in hand, the request for retraction of the withdrawal reached the EPO more than a month after the withdrawal was made and after it was recorded in the European Patent Register. Yet it is not primarily the EPO that is concerned with a withdrawal, but the public, for which a withdrawal is of potential interest. It is thus the public that can be regarded as the ultimate addressee of such a withdrawal. Therefore, a withdrawal cannot be retracted once the public has been officially informed of it. In a broader sense, this is also reflected in the principle that a declaration of intent can only be retracted if the retraction reaches the addressee either before said declaration or at the same time, a rule that can be found in the civil law systems of many contracting states of the EPC. See also J 2/15.

In J 2/15 the applicant had pointed to a "fundamental inconsistency" between the decisions in cases J 10/87 and J 4/97 on the one hand, and J 25/03 and J 1/11 on the other. The Legal Board acknowledged that the reasoning of the more recent decisions had led a change in the case law due to the evolution of technical means. However, this could not be seen as an inconsistency in the case law where cases on the same subject-matter arrive at different results and have a different reasoning whilst being decided at the same time. The Legal Board was of the opinion that this inconsistency had been comprehensively addressed in J 1/11, and saw no need to elaborate on this further.

In J 19/03 the Legal Board noted that it is obvious that corrections of procedural acts having an ab initio effect have a potentially serious impact on an application, in particular if they relate to its territorial extent or to whether the application is pending at all, and raise

serious concerns as to legal certainty not only for the applicants vis-à-vis the EPO but also for the public. Therefore, the jurisprudence of the boards of appeal took as a starting point that, as a general rule, an applicant is bound by its procedural acts notified to the EPO provided that the procedural statement was unambiguous and unconditional (cf. J.11/87, OJ 1988, 367; J.27/94, OJ 1995, 831) and is not allowed to reverse these acts so that they can be considered as never filed (J.10/87, OJ 1989, 323; J.4/97; see also J.2/15). On the other hand, the boards of appeal considered that R.88 EPC 1973 acknowledged as a further legal value the desirability of having regard to true, as opposed to ostensible, party intentions in legal proceedings (T.824/00, OJ 2004, 5) in appropriate circumstances. As a result of the conflict between these two legal principles, the case law read R.88, first sentence, EPC 1973 as conferring a discretion on the competent instance to allow or not to allow a correction of an error since it is only stated in this rule that a respective error "may be corrected". The Legal Board decided that the notice of withdrawal did not contain a relevant error or mistake which could be corrected under R.88, first sentence, EPC 1973. The Legal Board found that under R.88, first sentence, EPC 1973, it was not sufficient to prove that a divergence had occurred between the true intention of the applicant and the declaration filed by its representative; rather it was additionally required that this divergence was caused by an error of the person who was competent to make the decision on the procedural act before the EPO. Therefore, as a rule, in cases where the party was represented by a professional representative the error pursuant to R.88 EPC 1973 must be an error of the representative in expressing his own intentions.

In J.10/08 the matter to be dealt with was the request of the appellant to retract this withdrawal under R.139 EPC because it was, according to the appellant, made erroneously. This rule allowed correction of errors in documents filed with the EPO, these errors being defined as linguistic errors, errors of transcription and mistakes. In the case under consideration the document filed with the EPO did not show any kind of such an error. The error was not of a factual kind but of a mental one. Therefore it had to be examined whether the correction of such an error could also be subsumed under R.139 EPC. The Legal Board noted that the boards of appeal have dealt with this question in a great number of decisions. One of those decisions on the question of a possible retraction of a procedural declaration was J.10/87 (OJ 1989, 323) with reference to earlier decisions. In this decision the Legal Board developed the preconditions under which a correction of a procedural declaration might be allowed, namely that the public had not been officially notified of the withdrawal by the EPO, that the erroneous withdrawal was due to an excusable oversight, that the requested correction would not delay the proceedings substantially and that the interests of third parties who might have taken note of the withdrawal by inspection of the file were adequately protected. The Legal Board accepted that it was not the intention of the appellant in the case in hand to withdraw the application but that this was due to a misunderstanding between the various representatives of the appellant dealing with the case. In the case in hand, the Legal Board concluded that the public would not have been misinformed or misled by the information published in the European Patent Register and the withdrawal of the application could be retracted in the case in hand by correction under R.139 EPC.

In T.1673/07 the appellant argued that it should be allowed under R.88 EPC 1973 (which corresponds to R.139 EPC) to resile from the withdrawal of the designation of Germany

and France, since it had been made under an erroneous assumption. The board, however, stated that, according to the established case law of the boards of appeal, one precondition for such a retraction was that the relevant request be made before the withdrawal has been officially notified to the public (see e.g. J 15/86, OJ 1988, 417; J 25/03, OJ 2006, 395). This was in the interests of legal certainty and balancing the interests of the applicant and of third parties, in particular in being able to rely on information officially published, and was an objective criterion which applied irrespective of the true intentions or mindset of the person who had made the relevant statement. In the case in hand the withdrawal had been published in the European Patent Bulletin about half a year before the validity of the withdrawal of the designations was contested for the first time. In conclusion, the withdrawal of the designation was valid and could not be retracted.

3.9. Refusal of a European patent application under Article 97(2) EPC (former Article 97(1) EPC 1973)

Under Art. 97(2) EPC (former Art. 97(1) EPC 1973) if the examining division is of the opinion that the European patent application or the invention to which it relates does not meet the requirements of the EPC, it shall refuse the application unless the EPC provides for a different legal consequence.

In R 14/10 the Enlarged Board held that there is no obligation under the EPC to carry out the examination of a European patent application or patent in its entirety, i.e. in respect of all pending claims if a claim considered unallowable has been maintained and no auxiliary request relating to a set of claims not comprising this unallowable claim has been submitted. In such a case the application or patent fails to meet a requirement of the EPC and is open to refusal or revocation (see T 228/89, referring to T 5/81, OJ 1982, 249; see also T 293/86, T 398/86, T 98/88).

In T 162/88 it was stated that if the European patent application in the version submitted or approved by the applicant contained a claim which the examining division considered unallowable, the examining division had to refuse the European patent application in its entirety under Art. 97(2) EPC and not just the claim concerned (see also T 117/88, T 253/89, T 228/89).

In T 11/82 (OJ 1983, 479) the board held that a European patent application had to satisfy the conditions laid down in the Implementing Regulations (see Art. 78(3) EPC 1973). If, in the opinion of the examining division, the application did not do so, the examining division was obliged by Art. 97(1) EPC 1973 to refuse it.

In several decisions the boards pointed out that it was highly desirable that the examining division should give an appealable decision with sufficient reasoning on all the issues that had been properly raised by the EPO during the examination proceedings and dealt with substantively in the applicant's reply. Such "complete" decisions streamlined the procedure rendering remittal to the department of first instance unnecessary; the board could decide all issues already raised in the department of first instance without depriving the appellant of the opportunity to have them considered at two instances (see T 153/89, T 33/93, T 311/94).

In T. 839/95 the examining division did not take a final decision as provided for in Art. 97 EPC 1973. Instead, it issued a decision indicated as an interlocutory decision under Art. 106(3) EPC 1973 rejecting the main and two auxiliary requests and stating that the invention claimed according to the third auxiliary request was found to meet the requirements of the EPC. The board noted that an interlocutory decision in the case of an allowable auxiliary request is foreseen in the instructions to examiners only for auxiliary requests in opposition proceedings. It did not consider it appropriate for the department of the first instance to proceed in the same way in grant proceedings. In the board's judgment, the purpose of the interlocutory decision in opposition proceedings was intended to save the proprietor the further cost of fulfilling the formal requirements under R. 58(5) EPC 1973 before there was a final decision on the version in which the patent could be maintained (T. 89/90, OJ 1992, 456). A corresponding situation did not exist in grant proceedings because there was no adverse party who might object to the version to which the applicant had agreed. The appeal was admissible, since the appellant was adversely affected by the rejection of his preceding requests.

In T. 856/05 the appellant had argued that since the decision of the examining division did not give any reasons for refusing claim 6, it was not reasoned, thereby contravening R. 68(2) EPC 1973. The board held that it was sufficient for the examining division, when deciding to refuse a European patent application under Art. 97(1) EPC 1973, to state one ground only which in their opinion would prejudice the grant of a European patent, since the EPC did not contain any provision which would allow a European patent to be partially granted. In the case in hand, the examining division was unable to grant a patent because it was of the opinion that the subject matter of claim 1 did not involve an inventive step. Consequently, the examining division was under no obligation to comment on the other claims.

In T. 1423/07 the examining division had refused the application on the basis of the Guidelines. The board stated that the EPC did indeed not contain any explicit provision which would prohibit double patenting. By invoking an "accepted principle in most patent systems that two patents cannot be granted to the same applicant for one invention", the passage of the Guidelines made reference to Art. 125 EPC as a basis for not allowing double patenting. Therefore, what had to be evaluated was whether a European application could be refused on the grounds of double patenting on the basis of Art. 125 EPC. The board found that there was a general principle of law generally recognised in the contracting states which did not allow double patenting arising from a granted national patent and a granted European patent, but this did not provide a basis for refusing a European application under Art. 97(2) EPC or Art. 97(1) EPC 1973. In view of the fact that the national patent laws of only two of the contracting states and the case law of a third contracting state provided a basis for refusing a patent application on the grounds of double patenting, there was no principle of law generally recognised in the contracting states which justified refusing a European patent application on the ground of double patenting.

3.10. Entry into force of a decision to grant a European patent

Under Art. 97(3) EPC (former Art. 97(4) EPC 1973) the decision to grant a European patent shall take effect on the date on which the mention of the grant is published in the European Patent Bulletin. Art. 97(3) EPC is essentially identical to Art. 97(4), first sentence, EPC 1973. The provisions concerning the minimum period that must lapse before the grant can take effect have been deleted from the Article. With the other grant formalities being transferred to the Implementing Regulations (see R. 71 EPC), this matter too was more appropriately regulated at a lower legislative level. Consequently, Art. 97(6) EPC 1973 was deleted as unnecessary.

Under the EPC 2000, Art. 98 EPC stipulates that the European Patent Office shall publish the specification of the European patent as soon as possible after the mention of the grant of the European patent has been published in the European Patent Bulletin. The contents of the specification are transferred to the Implementing Regulations (see R. 73(1) EPC). Art. 98 EPC now contains the words "as soon as possible" in order to indicate that it is not always technically possible to publish the specification on the same day as the mention of the grant.

In T 84/16 the board referred to T 1644/10 and held that no legal effects are provided by the EPC with respect to the patent specification. The board endorsed the finding in Legal Advice No. 17/90 (OJ 1990, 260) that "the text of the patent specification (...) has no binding character. Its function is confined to facilitating public access to the content of the granted patent, particularly the nature and scope of the industrial property right".

In J 7/96 (OJ 1999, 443) the Legal Board did not share the view of the department of first instance and the applicant that the proceedings for grant were concluded on the date the examining division reaches its decision to grant a European patent under Art. 97(2) EPC 1973. The Legal Board noted that it was true that this date represented the date on which the process of reaching a decision on the application within the examining division was concluded; both the EPO and the applicant were bound by the decision as far as the text of the patent to be granted, the claims, description and drawings were concerned, and the subject-matter of the text of the patent became *res judicata* at that date. Thereafter, the EPO could no longer amend its decision and had to disregard any fresh matter the parties might submit (see G 12/91, OJ 1994, 285). Only linguistic errors, errors of transcription and obvious mistakes could be corrected later under R. 89 EPC 1973. The date on which the decision to grant the European patent was reached was thus clearly decisive as regards the EPO and the applicant. The Legal Board noted that under Art. 97(4) EPC 1973, the decision to grant a European patent referred to in Art. 97(2) EPC 1973 does not take effect until the date on which the European Patent Bulletin mentions the grant. It is from this date of mention that, in accordance with Art. 64(1) EPC 1973, a European patent confers on its proprietor the same rights in respect of each contracting state in respect of which it is granted as would be conferred by a national patent granted in that State. The mention also marks the time when the responsibility of the EPO comes to an end and the national patent systems take over, the granted patent becoming a bundle of national patents. It also marks the start of the period during which a notice of opposition may be filed (Art. 99(1) EPC 1973). Thus, the date of

publication of the mention of the grant of the patent is the date on which the grant of the patent takes legal effect with respect to third parties, and on which the extent of protection conferred on the applicant is determined once and for all by means of the accompanying publication of the specification of the patent pursuant to Art. 98 EPC 1973. During the period between the decision to grant the patent (Art. 97(2) EPC 1973) and the publication of the mention of the grant (Art. 97(4) EPC 1973), the application is deemed to be still pending before the EPO. As the department of first instance itself admits in its decision, and as is also not disputed by the applicant, according to established EPO practice it is still possible during this interim period to take some limited action in respect of the application, which may, for example, be withdrawn or transferred. Applicants may even withdraw individual designations if they so wish. For its part, the EPO continues to have certain rights or obligations concerning the patent during this period; for example, the annual fees fall due and transfers of rights in the patent must be registered by the EPO.

In J 23/03 the appellant requested that the designation country GR incorrectly marked with a cross be corrected to GB. After a considerable exchange of correspondence, the examining division refused the request for correction on the ground that, from the date of publication of the patent, public interest in the reliability of the published information overrode the patent proprietor's interest in a correction, especially as he had had several opportunities to check the designation information in the course of the proceedings, namely after the notification of forms 2004 and 2005. The Legal Board stated that R. 88 EPC 1973 did not contain an explicit reference to a time limit and that a request for correction could therefore be submitted at any stage of the patent grant procedure (see also J 6/02). This also applied to the correction of incorrect designation information in the application documents as requested by the appellant. The Legal Board nevertheless found that the appellant's request for correction of the designation information in the application documents had been submitted to the EPO only on 29 April 2002. Mention of the grant of his patent had appeared in the Patent Bulletin over a month before that date. Under Art. 97(4) EPC 1973, mention of the patent grant led to the grant of the patent taking effect and to the patent grant proceedings being concluded. At the time that the appellant submitted his request for correction, therefore, the proceedings were no longer pending (see J 7/96, OJ 1999, 433; J 42/92). The Legal Board held that the pendency of patent grant proceedings was, however, a requirement for the submission of an admissible request for correction because after that date the bundle of European patents granted under a single system divides into national patents which are then no longer administered by the EPO but by the appropriate national offices.

3.11. Errors in the Patent Bulletin

Art. 97(3) EPC (former Art. 97(4) EPC 1973) stipulates that the decision to grant a European patent shall take effect on the date on which the mention of the grant is published in the European Patent Bulletin.

In decision J 14/87 (OJ 1988, 295) the question arose to what extent a deficiency in the publication of the mention of grant of a European patent, i.e. the omission of important particulars relating to the grant, might render the patent ineffective. The Legal Board held that in principle deficiencies in the publication of the mention of grant in the European

Patent Bulletin did not necessarily render the decision to grant within the meaning of Art. 97(4) EPC 1973 ineffective. Nevertheless, this matter could be decided only in the light of the case in question and the fact that the purpose of the publication was to draw the attention of interested parties to the grant of the patent, and also that any decision to file an opposition had, under normal circumstances, to be based on a careful examination of the extent of the protection conferred by the patent and not solely on the particulars given in the European Patent Bulletin. Such an examination could be carried out satisfactorily only if the patent specification was published at the same time as the mention of grant of the patent.

4. Additional searches during examination

An additional search will sometimes be required either at the first stage of amendment or subsequently. This may arise for a number of reasons (for more details, see Guidelines C-IV, 7.2 – November 2018 version).

4.1. Rule 63 EPC governing incomplete search

4.1.1 Introduction

R. 63(1) and (2) EPC (incomplete search) (former R. 63 EPC; R. 45 EPC 1973) have been amended by decision of the Administrative Council CA/D 3/09 of 25 March 2009 (OJ 2009, 299), which entered into force on 1 April 2010.

Under R. 63(1) EPC if the EPO considers that the European patent application fails to such an extent to comply with the EPC that it is impossible to carry out a meaningful search regarding the state of the art on the basis of all or some of the subject-matter claimed, it shall invite the applicant to file, within a period of two months, a statement indicating the subject-matter to be searched. See T. 1653/12.

According to R. 63(2) EPC if the statement under paragraph 1 is not filed in due time, or if it is not sufficient to overcome the deficiency noted under paragraph 1, the EPO shall either issue a reasoned declaration stating that the European patent application fails to such an extent to comply with the EPC that it is impossible to carry out a meaningful search regarding the state of the art on the basis of all or some of the subject-matter claimed or, as far as is practicable, draw up a partial search report. The reasoned declaration or the partial search report shall be considered, for the purposes of subsequent proceedings, as the European search report. See T. 1653/12.

In the ideal case, the applicant's statement removes completely the deficiencies under Art. 84 EPC and a complete search report can be drawn up. Alternatively, the partial search report will be drawn up in the light of the applicant's submissions, so that it will be up to the applicant to delimit the subject-matter to be searched.

R. 63 EPC enables the applicant to submit statements more clearly defining the subject-matter to be searched in cases where a normal search cannot be carried out. However, because the search report should, as a rule, be drawn up in time for publication together

with the application further processing in respect of the period referred to in proposed R. 63(1) EPC will be excluded. This implies that re-establishment of rights will be possible.

In T 1242/04 (OJ 2007, 421) the board held that R. 45 EPC 1973 applies to cases which do not comply with the provisions of the EPC to such an extent that it is not "possible" to carry out a "meaningful search" into the state of the art on the basis of all or some of the claims. Thus a R. 45 EPC 1973 declaration is allowed only where a search is not possible. In other cases the search division draws up a partial search report, "so far as is practicable". R. 45 EPC 1973 relates only to the practicability of a search and not to the potential relevance of its results in subsequent substantive examination.

In T 1653/12 the board noted that T 1242/04 dealt with former R. 45 EPC 1973, which has a different wording from current R. 63 EPC. Since T 1242/04 dealt with a case, in which no invitation of the search division under R. 63(1) EPC and no response thereto was present, the reasons of that decision were not directly applicable to the case in hand. However, both decisions stated that fundamental clarity problems might make it impossible to carry out a meaningful search. The discrepancy between the claims and description was such a fundamental clarity problem.

4.1.2 Additional search necessary: limited discretion of the examining division

In T 1515/07 the board stated that in normal circumstances an additional search had to be carried out if a search under R. 63 EPC is missing. It was true that the case law allowed discretion in this respect, but this discretion was limited to the special cases of notoriously known features or those explicitly accepted by the applicant as known. In all other cases, an additional search had to be performed. In particular, as long as no search had been performed an examining division should normally not refuse an application for lack of inventive step if the invention as claimed contained at least one technical feature which was not notorious. The examining division considered that it was not "necessary" to carry out a search because a decision could be reached anyway. The examining division was held to have committed a substantial procedural violation within the meaning of R. 103(1)(a) EPC by not performing an additional search that was manifestly necessary. It was therefore equitable to reimburse the appeal fee.

In T 1242/04 (OJ 2007, 421) it was held that only when a search is not at all possible can it be denied under R. 45 EPC 1973. Whether or not the search division believes that the result of a search will be of use for the substantive examination is irrelevant. If nevertheless the situation occurs that no search has been performed although it could (and should) have been, an examining division is not obliged to perform an additional search for purely formal reasons if it considers a refusal of the application to be justified on the basis of prior art which is either so well known that it clearly does not require written proof or is accepted by the applicant as known. In all other cases an additional search should be performed.

In T 690/06 regarding the procedure before the examining division the board was of the opinion that the examining division should have performed an additional search since the database partitioning and access control features were neither non-technical nor notorious. Following the principles set out in T 1242/04, the board considered that, as long

as no search has been performed, an examining division should normally not refuse an application for lack of inventive step if the invention as claimed contained at least one technical feature which was not notorious. The term "notorious" had to be interpreted narrowly. See also T.918/14.

In T.1411/08 the board understood "notorious" as implying that technical detail was not significant. The board stated that where a search division has decided that no search was to be performed, it is not always necessary for the examining division to carry out an "additional search" before raising an inventive-step objection. According to the established case law of the boards of appeal it is possible to raise an objection of lack of inventive step without documented prior art. That should be allowable where the objection is based on "notorious knowledge" or indisputably forms part of the common general knowledge (T.1242/04, OJ 2007, 421). Such cases, however, are exceptional, and a search is otherwise essential. In the case in hand, the examining division could and should have ensured that a search was performed before refusing the application for lack of inventive step. The board considered that the failure to carry out an "additional search" constituted a substantial procedural violation.

In T.1924/07 the board held that the applicant's acknowledgement in the original application that certain prior art is known is, in general, not a sufficient reason for not carrying out an additional search. The only condition under which an additional search can be dispensed with is where all the technical features of a claim correspond to "notorious" prior art.

In T.2299/10 the decision under appeal was, inter alia, based on the objection that the subject-matter of claim 1 lacked an inventive step. The EPO acting as International Searching Authority issued a declaration of non-establishment of the international search report under Art.17(2)(a) PCT. No supplementary European search report was established either. The examining division examined the application despite the fact that no search had been carried out. However, this is only possible in exceptional cases and, according to the jurisprudence of the boards of appeal, an additional search for pertinent prior art may be dispensed with only if the technical features of the claims are considered to be "notorious", i.e. generic and so well known that they cannot reasonably be refuted (see T.1411/08). In the board's judgment, the technical features went beyond the mere common general knowledge and could not be considered "notorious". An applicant's acknowledgement in the original application that certain prior art was known is in general not a sufficient reason for not carrying out an additional search since such statements may be – and indeed frequently are – withdrawn or qualified. Moreover, this could only apply in cases where all the technical features in the claim would be acknowledged as known (see T.1924/07). In the case in hand, however, the appellant did not acknowledge the relevant features of claim 1 mentioned as being known. Thus, claim 1 could not be definitively assessed with respect to novelty and inventive step without knowledge of the relevant documented prior art. Thus the request required a search for relevant prior art. Hence the matter had to be remitted for an additional search and further examination.

In T.2249/13 the appellant doubted the legitimacy of the Notice from the European Patent Office dated 1 October 2007 concerning business methods (OJ 2007, 592), which

announced a no-search policy for claims pertaining to business methods. Such discrimination was not justified. It considered that the EPO had enriched itself unfairly by receiving the search fee without performing a search. Furthermore, the no-search declaration of the search division could not be deemed to be a European search report under R. 63(2) EPC as the search division had ignored R. 63(1) EPC by failing to invite the appellant to file a statement indicating the subject-matter to be searched. The board pointed out that the board was applying the EPC and associated provisions as they stand. The Rules Relating to Fees did not provide for a refund of the search fee in case of a no-search declaration under R. 63 EPC. R. 63(2) EPC states that such a no-search declaration shall be considered as the European search report. Further, the fact that the search division did not comply with R. 63(1) EPC (failure to communicate with the appellant) did not alter the legal situation. The search division's actions were not open for review by the board (Art. 106(1) EPC) and, for the same reason, neither was the search division's reliance on the Notice from the EPO dated 1 October 2007 concerning business methods. Therefore, the board considered that the request for a (partial) refund of the search fee was inadmissible.

4.1.3 Declaration under Rule 63(2) EPC

a) Notoriously well-known technical features

According to the case law of the boards of appeal an examining division need not carry out an additional search if the technical features of the claims are notoriously well known. In particular, it is possible to raise an objection of lack of inventive step without documented prior art (see e.g. T 939/92, OJ 1996, 309; T 1242/04, OJ 2007, 421; T 1411/08). That should be allowable where the objection was based on "notorious knowledge" or indisputably forms part of the common general knowledge. In such cases it would be inappropriate to carry out an additional search for documented prior art on purely formal grounds (T 1242/04, OJ 2007, 421; see also T 690/06, T 698/11, T 779/11).

In T 359/11 the board held that where the relevant search authority has stated, either in a search report or in a declaration that no search report will be established, that it is not necessary to cite any documentary evidence of the prior art on the grounds that all of the technical features of the claimed invention are notorious, it is always incumbent upon the examining division to consider whether an additional search is necessary. The criterion to be applied is that if the invention as claimed contains at least one technical feature which is not notorious, the application should normally not be refused for lack of inventive step without performing an additional search (see T 690/06). In the case in hand, the choice of the examining division to decide on the issue of inventive step without performing an additional search could only be considered justifiable if the claimed subject-matter comprises no technical features which are non-notorious.

In T 2467/09 the examining division refused the application for lack of inventive step without making reference to documentary evidence. In fact, no prior art search was carried out in either the international phase or the European phase. The board noted that according to the established case law of the boards of appeal, an application should normally not be refused for lack of inventive step as long as no search has been performed.

An exception may however be made in cases where the objection is based on knowledge that is "notorious" or indisputably forms part of the common general knowledge. The board pointed out that while it could not be reasonably disputed that server systems providing web pages were known at the priority date of the application, in the board's view this was less evident for "technologies for the dynamic building of web pages". While such technologies were probably well-known in 2008, which was when the examining division for the first time explicitly relied on their existence, it had to be kept in mind that the field of web technology had evolved considerably in the eight years following the filing of the priority application in April 2000. The board noted that the argument that certain knowledge is notorious is only a sufficiently cogent reason if it satisfies any reasonable addressee, i.e. if, at the time the argument is to be assessed by the applicant and, in case of an appeal, by a board of appeal, it cannot be reasonably disputed that that knowledge formed part of the common general knowledge of the skilled person at the effective filing date. In the case in hand, the board held that without documentary evidence, the examining division's reasoning failed to convince in this respect. The board remitted the case to the department of first instance for further prosecution. The examining division was to carry out an additional search on the basis of the claims, including the dependent claims. See also T 283/12.

b) Subject-matter not having technical character

In T 1242/04 (OJ 2007, 421) the board noted that R. 45 EPC 1973 applied to cases which did not comply with the provisions of the EPC to such an extent that it was not "possible" to carry out a "meaningful search" into the state of the art on the basis of all or some of the claims. Thus a R. 45 EPC 1973 declaration was allowed only where a search was not possible. In other cases the search division would draw up a partial search report, "so far as is practicable". In the board's view, R. 45 EPC 1973 related only to the practicability of a search and not to the potential relevance of its results in subsequent substantive examination. The board noted that it was not evident that claims directed only to technical features that the search division deemed "trivial" could prevent a meaningful search into the state of the art, which in fact ought to be particularly simple in such a case. The board held that where the application's subject-matter had non-technical aspects, a declaration under R. 45 EPC 1973 might be issued only in exceptional cases in which the claimed subject matter clearly had no technical character. In the board's view, however, it was not always necessary in such circumstances to carry out an additional search in the documented prior art.

The board in T 779/11, referring to T 1242/04, pointed out that although R. 45 EPC 1973 was not identical to Art. 17(2)(a) PCT (in conjunction with R. 39.1 PCT), there appeared to be no good reason why the same findings should not apply to the issuing of a declaration under Art. 17(2)(a) PCT. Cf. T 918/14.

c) Statement indicating the subject-matter to be searched not sufficient to overcome the deficiency noted under Rule 63(1) EPC

In T 1653/12 the board pointed out that the applicant's statement did not provide a basis for the search examiner to perform a meaningful search. The particular wording used

therein ("and/or") left it entirely open which of the two alternatives claimed should be searched. Hence, it was plausible that a meaningful search could not be made.

4.2. Non-payment of further search fees under Rule 64 EPC

R. 64(1) EPC (former R. 46 EPC 1973) was amended by decision of the Administrative Council (OJ 2009, 299), and entered into force on 1 April 2010.

Under R. 64(1) EPC if the EPO considers that the European patent application does not comply with the requirement of unity of invention, it shall draw up a partial search report on those parts of the application which relate to the invention, or the group of inventions within the meaning of Art. 82 EPC, first mentioned in the claims. It shall inform the applicant that, for the European search report to cover the other inventions, a further search fee must be paid, in respect of each invention involved, within a period of two months. The European search report shall be drawn up for the parts of the application relating to inventions in respect of which search fees have been paid.

In G. 2/92 (OJ 1993, 591) the Enlarged Board stated that an applicant who fails to pay the further search fees for a non-unitary application when requested to do so by the search division cannot pursue that application for the subject-matter in respect of which no search fees have been paid. Such an applicant must file a divisional application in respect of such subject-matter if he wishes to seek protection for it. It also stated that if the applicant has not availed himself of the opportunity to have the search results on the other inventions included in the search report because he has paid no additional search fees in response to the invitation under R. 46(1) EPC 1973, he will be taken to have elected that the application should proceed on the basis of the invention which has been searched. However, non-payment is not to be equated with the abandonment of parts of the application.

In T. 998/14, however, the board noted that decision G. 2/92 does not necessarily apply for features which are disclosed in the original application documents in connection with an invention or group of inventions in respect of which a search has been made.

5. Amendments relating to unsearched subject-matter – Rule 137(5) EPC

5.1. General issues

R. 137(5) EPC as in force from 1 April 2010 (OJ 2009, 299) (former R. 137(4) EPC and R. 86 (4) EPC 1973) relates to amendments made during the grant procedure which are under the control of the examining division. It stipulates that amended claims may not relate to unsearched subject-matter which does not combine with the originally claimed invention or group of inventions to form a single general inventive concept. Nor may they relate to subject-matter not searched in accordance with R. 62a or R. 63 EPC.

In T. 2459/12 what was at issue was whether the invention is "unsearched" within the meaning of R. 137(5) EPC, which limits the choice of subject-matter which may be put forward by way of amendment for examination in the European procedure. The board

stated that it was clear that the only interpretation of R. 137(5) EPC was that, within the meaning of R. 137(5) EPC, "unsearched" means "unsearched by the EPO". It was consequently the view of the board that where, following the drawing up of a supplementary European search report by the EPO, an applicant files amended claims seeking protection for subject-matter not covered by the supplementary European search as a result of the application of R. 164(1) EPC as then in force, an objection under R. 137(5) EPC should be raised.

5.2. The purpose of Rule 137(5) EPC

The wording of R. 137(5), first sentence, EPC is the same as that of R. 86(4) EPC 1973. R. 86(4) EPC 1973 (with effect from 1 June 1995), was intended to prevent amendments of the application which circumvent this principle that a search fee must always be paid for an invention presented for examination (T 274/03). This rule was introduced to give the EPO the means to react appropriately when the applicant dropped existing claims and replaced them with originally non-unitary subject-matter extracted from the description (see T 1285/11). See also T 1485/13.

In T 274/03 the board stated, with regard to R. 86(4) EPC 1973 (now R. 137(5) EPC), which was introduced with effect from 1 June 1995, that it was intended to prevent amendments of the application which circumvent the principle that a search fee must always be paid for an invention presented for examination. R. 86(4) EPC 1973 stops applicants switching to unsearched subject-matter in the reply to a communication from the examining division and makes means available for the EPO to react when different subject-matter is claimed not simultaneously but in sequence as is the case when the applicant drops the existing claims and replaces them with originally non-unitary subject-matter extracted from the description. See also T 2334/11.

In T 443/97 the board stated that R. 86(4) EPC 1973 (now R. 137(5) EPC) concerned examination proceedings, and particularly those cases in which no further search fees requested by the search division for non-unitary subject-matter had been paid by the applicant. The purpose of R. 86(4) EPC 1973 was to exclude any amendment which circumvented the principle according to which a search fee must always be paid for an invention presented for examination. The board noted that unity of invention was a requirement of an administrative nature and that the administrative purposes of this requirement were fulfilled when the examination procedure had been concluded, i.e. when the patent had been granted (see G 1/91, OJ 1992, 253). Therefore, R. 86(4) EPC 1973 was not relevant for the opposition case in hand.

In T 442/11 the board observed that R. 137(4) EPC, as in force before 1 April 2010, (having the same wording as R. 86(4) EPC 1973) had entered into force on 1 June 1995 and been incorporated in the Implementing Regulations to prevent applicants from switching, during the examination proceedings, the protection sought to unsearched parts of the application which had not yet been claimed when the search was performed (see "travaux préparatoires" on R. 86(4) EPC 1973, OJ 1995, 409). See also T 509/11, T 2334/11, T 1485/13, T 145/13.

5.3. Applicability of Rule 137(5) EPC

5.3.1 General issues

R. 137(5) EPC states: "Amended claims may not relate to unsearched subject-matter which does not combine with the originally claimed invention or group of inventions to form a single general inventive concept. Nor may they relate to subject-matter not searched in accordance with Rule 62a or Rule 63".

According to well-established case law, R. 137(5) EPC does not apply when the applicant has not paid the search fee in respect of a non-unitary invention relating to the originally filed claims (see T. 708/00, OJ 2004, 160; T. 1285/11).

In T. 613/99 the board stated that R. 86(4) EPC 1973 referred to a particular situation, i.e. where subject-matter was described but not claimed in the original application and was therefore not searched; where that subject-matter failed to meet the requirement for unity of invention with the matter claimed in the application; and where, following the search report, the applicants had filed fresh claims relating only to this unsearched matter. In this situation, the patentability of these fresh claims could not be examined in the context of the original application, since this would have amounted to a derogation from the principle endorsed in G 2/92 (OJ 1993, 591), according to which the invention to be examined had to be an invention for which a search fee had been paid. In the case in hand, the situation was entirely different. The claimed subject-matter in the application at issue had been claimed in the original application and had therefore been searched, even if it had not been possible to carry out a meaningful search. Moreover, the invention forming the subject of claims 1 and 2 of the application at issue was substantially the same as that which formed the subject of claims 1 and 2 of the original application. In such a situation, if the examining division rejected a finding of the search division regarding matter excluded from the search, a so-called additional European search could be carried out at the request of the examining division.

5.3.2 Extent of the European search report

The extent of the search for prior art to be conducted for the purposes of the European search report is defined in Art. 92 EPC, which states that the EPO shall be drawn "on the basis of the claims, with due regard to the description and any drawings". In principle, and in so far as possible and reasonable, the search should cover the entire subject-matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended (Guidelines B-III, 3.5 – November 2018 version).

In T. 708/00 (OJ 2004, 160) the application was refused by the examining division, principally on the grounds that the new claims were not allowable under R. 86(4) EPC 1973. The board stated that the provisions of Art. 92(1) EPC 1973 must not have the effect of limiting the search solely to the subject-matter of the claims, even if this would simplify matters for the search division. Nor does this imply that the sole purpose of the description and drawings is to help interpret the claims. It does, however, mean that the search division has to be discerning in the use of its discretionary power so as to

ensure that the search is in complete accordance with the subject-matter of the patent application (see R. 44(1) EPC 1973), i.e. the invention, even if the essential features are not all defined in the claims at the time of search but are disclosed for example in the description or drawings. In the case in hand, the applicants were never informed of exactly what subject-matter is searched, which means that the examining division and board of appeal were also without any information in this regard. It was therefore impossible – since negative proof is out of the question – to establish what subject-matter went "unsearched" under R. 86(4) EPC 1973. This rule therefore had to be interpreted using alternative means such as the preparatory documents or the documents published regarding the adoption of the rule. The board came to the conclusion that amended claims may only be refused on the basis of R. 86(4) EPC 1973 if the subject-matter of the claims filed originally and that of the amended claims is such that, had all claims originally been filed together, a further search fee would have been payable – on top of the search fee payable in respect of the claims actually filed at the outset – in respect of the amended claims, relating to a different invention within the meaning of R. 46(1) EPC 1973. The board noted that R. 86(4) EPC 1973 must be interpreted so as to fairly balance the objective of this rule, namely the EPO's interest in collecting, in return for services rendered, search and examination fees, and the fundamental right conferred by the EPC on the applicant to make amendments at least once to the description, claims and drawings that prove necessary during the grant procedure. The board pointed out that the intention and purpose of R. 86(4) EPC 1973 and the interference with the applicant's fundamental right to amend the application at least once called for a strict interpretation of R. 86(4) EPC 1973 (see also T. 141/04). It held that R. 86(4) EPC 1973 did not apply when the applicant had not paid the search fee in respect of a non-unitary invention relating to the originally filed claims in spite of being invited to do so under R. 46(1) EPC 1973. In that case, the application could not be examined further, and a divisional application would have to be filed if protection were sought (see G. 2/92, OJ 1993, 591). The boards in T. 319/96 and T. 631/97 (OJ 2001, 13) made a clear distinction between applying the provisions of R. 86(4) EPC 1973 and a situation where search fees were not paid in spite of an invitation to do so under R. 46(1) EPC 1973.

In T. 789/07 the board held that in order to search a claimed feature completely – as required by Art. 92 EPC and in line with the Guidelines – the search division must as a rule ascertain how the feature is to be interpreted in the light of the description and drawings. Only then can it arrive at a reasoned assessment about the amendments likely to be made to the claims during examination proceedings and within the framework of the original disclosure. This interpretation also forms the basis for comparison, with a view to R. 86(4) EPC 1973, with the originally claimed invention or group of inventions. The board also took the view that a claimed feature falling within the scope of the search must be regarded for R. 86(4) EPC 1973 purposes as searched, even if it was not in fact searched in a specific case (see also T. 2334/11, T. 1679/10, T. 345/13, T. 1503/13). In T. 1679/10 the board added that it would go too far to construe the Guidelines as meaning that it would be sufficient to have one broad independent claim in the application as filed, with no dependent claims, in order to be entitled to a search extending to all the features of a large number of embodiments covered by the wording of that claim.

In T.264/09 the board stated that if a feature which has not been searched and which further defines an element which was already part of a claim which had been searched, is taken from the description and added to this claim in order to overcome an objection under the EPC, e.g. lack of inventive step, this does not result in a claim which has been amended such that it relates to unsearched subject-matter which does not combine with the originally claimed invention to form a single general inventive concept (see also T.2334/11, T.1503/13). The board thereby followed the well-established case law on the interpretation of R.86(4)EPC.1973 (see e.g. T.708/00, OJ 2004, 160; T.274/03; T.141/04), it being noted that R.86(4)EPC.1973 has the same wording as R.137(4)EPC (as in force at the date the examining division took its decision), which, as from 1 April 2010, is included in R.137(5)EPC. The board noted that the Guidelines were drafted accordingly; these explicitly mention the possibility of carrying out an additional search in connection with the examination of amended claims.

5.3.3 Subject-matter of amendment not combining with the originally claimed invention

In T.442/95 the appellants submitted new claims, based on subject-matter which did not appear in the claims as filed. They submitted that the description of this newly claimed subject-matter was to be found in the description. In the board's judgment, the subject-matter claimed had not been searched and did not combine with the originally claimed and searched groups of inventions to form a single general inventive concept. There was no need at this stage to investigate whether the application as filed provided support for such a claim, because under R.86(4)EPC.1973 the claim was not admissible. The only path open to the appellants was to pursue the subject-matter of said claim in the form of a divisional application.

In T.353/03 the examining division had stated in its decision of refusal that the new feature in claim 1 had not been searched and that, for that reason, the application was refused according to Art.97(1) in conjunction with R.86(4)EPC.1973. The board found that in its decision the examining division did not take into account the fact that R.86(4)EPC.1973 mentioned another condition which also had to be fulfilled for amended claims to be rejected, namely that the unsearched subject-matter did not combine with the originally claimed invention to form a single general inventive concept (lack of unity). There was no discussion in the appealed decision as to why the subject-matter of new claim 1 was not in unity with original claim 1. The board came to the conclusion that the appealed decision was not reasoned within the meaning of R.68(2)EPC.1973.

In T.333/10 the board found that the subject-matter of amended claim 1 could not be considered to have been searched and it did not combine with any of the originally claimed inventions to form a single general inventive concept. The appellant referred to T.2334/11 and argued that, in a case like the one before it, no "a posteriori" unity judgment was to be made; rather, it was to be generally examined if the added feature taken from the description combined with the originally claimed invention to form a single general inventive concept focused on in the claims and description as originally filed. The board noted that the claims as originally filed had been found to lack unity by the search division. It also stated that the case in hand concerned the replacement of some of the features from the combination of features on which the search was based by features which might

not be considered as corresponding special technical features within the meaning of R. 44(1) EPC and which could not be expected to constitute a pure limitation of one of the searched inventions. In contrast, T 2334/11 concerned a factual situation in which added features restricted the scope of the searched subject-matter. This difference had also been addressed in T 2334/11, which essentially stated that the jurisprudence concerning R. 137(5) EPC distinguished between cases in which the claimed subject-matter was substantially changed, in particular by replacement or omission of a feature in a claim, and which could give rise to an objection under R. 137(5) EPC, and cases which concerned the pure limitation or concretisation of a claim by adding a feature disclosed in the application as originally filed, and which did not normally cause lack of unity with the originally claimed invention within the meaning of R. 137(5) EPC. In the case in hand, the board did not see a limitation or concretisation of any of the four inventions which had initially been searched and which could have been pursued by the appellant. The board noted that T 2334/11 could not be understood to the effect that the amendment of an independent claim by a feature extracted from the description is generally admissible under R. 137(4) EPC if the subject-matter of the independent claim has been searched and lacks novelty with respect to a prior-art document. Instead, the board in T 2334/11 emphasised that – in such cases – it always has to be examined whether the added feature is linked to the general inventive idea that can be deduced from the claims and description as originally filed. Hence, the amended set of claims was not admissible.

5.4. Criteria for consent to amendments under R. 137(5) EPC

The question concerning the criteria to be used for the proper application of R. 137(5) EPC has been dealt with in various decisions of the boards of appeal.

5.4.1 Amendment not affecting the notion of unity of invention

A claim may be limited by inclusion of additional features, provided the resulting combination was directly and unambiguously disclosed in the application as originally filed in an explicit or implicit manner and does not relate to an invention which was not searched (Guidelines H-V, 3.2 – November 2018 version).

In T 708/00 (OJ 2004, 160) the board held that under R. 86(4) EPC 1973, amended claims could only be refused if the subject-matter of the claims filed originally and that of the amended claims was such that, had all the claims originally been filed together, a further search fee would have been payable – on top of the search fees payable in respect of the claims actually filed at the outset – in respect of the amended claims, relating to a different invention within the meaning of R. 46(1) EPC 1973 (see also T 319/96; T 631/97, OJ 2001, 13). It noted that a subsequent amendment to limit the subject-matter of the main claim by additional features disclosed in the application as filed did not generally affect the notion of unity of invention under either R. 86(4) or 46(1) EPC 1973 and that it is normal for an applicant to make such an amendment in respect of an objection to the patentability of the subject-matter in unlimited form. See also T 2334/11.

In T 274/03 it was however made clear that certain conditions have to be satisfied for an amendment not to generally affect the notion of unity of invention. Thus, this notion is not

affected, and therefore no post-search switching of subject-matter is involved by the amendment, if for instance features are added from the description to further define an element that was already a feature of the original main claim. See also [T 1394/04](#).

In [T 2334/11](#) the board held that what generally had to be ascertained for the purposes of applying [R. 137\(5\) EPC](#) where an original claim was amended by adding a feature was whether the added feature could be regarded as falling under the original general inventive concept as established in the light of the claims and description as filed (see [T 1640/07](#)), and not whether the originally claimed subject-matter and the subject-matter defined in the amended claim withstood an assessment of unity a posteriori. It found that one of the ideas underlying the case law on application of [R. 137\(5\) EPC](#) was that, while amendments to claimed subject-matter which considerably altered the essence or nature of the invention – especially through replacement or omission of features in a claim (see [T 442/95](#), [T 274/07](#)) – might occasion an objection under [R. 137\(5\) EPC](#), the mere limitation or the more specific drafting or supplementing of a claim by inclusion of a feature disclosed in the application as filed, in order, for example, to overcome an objection of lack of clarity, novelty or inventive step, generally did not result in a lack of unity for the purposes of [R. 137\(5\) EPC](#). See also [T 1503/13](#).

In [T 1394/04](#) the board noted that careful consideration of the very nature of the added feature is necessary in order to determine whether the amendment leads to a situation where lack of unity of inventive concept between the original main claim and the later claimed subject-matter arises. Such a situation in the context at issue would necessarily entail an implicit finding of lack of unity "a posteriori" (with reference to [T 274/03](#)) and according to the Guidelines this form of objection to lack of unity should be the exception. The board also noted that it could not be excluded that such a situation could arise as a consequence of later amendments supported solely by the description. In fact, it may occur that the description of the application contains a further general inventive concept, distinct from that underlying the main claim and its dependent claims, if any, but not clearly identified or declared as such in the description. In such a case, if the subject-matter of the main claim based on the first inventive concept had to be amended, on account of a lack of novelty resulting from too broad terms used in the wording, any amendment of the claim pertaining exclusively to said further inventive concept could justify an objection of lack of unity "a posteriori". This example elucidates that situations may actually occur where the amendment of the main claim, whose subject-matter lacks novelty, based on features supported exclusively by the description, may affect the notion of unity of the invention. Although such situations occur very rarely in practice, as already noted above, in such cases [R. 86\(4\) EPC 1973](#) would have to be applied in order to avoid a possible circumvention of [Art. 82 EPC 1973](#). In the case in hand however it was clear that, much the same way as in [T 274/03](#), the introduced amendment feature merely constituted a further specification of original features of the claim which are essential to the invention. This constituted an essential aspect of the invention. Therefore, no lack of unity pursuant to [R. 86\(4\) EPC 1973](#) in conjunction with [Art. 82 EPC 1973](#) could be found.

5.4.2 Amendments filed to meet an objection

In T 141/04 the board held that R. 86(4) EPC 1973 does not apply if a feature originally disclosed in the description is added to an originally-filed claim in order to meet an objection raised. It noted that the Guidelines were in line with the jurisprudence of the boards of appeal. The board noted that, notwithstanding the applicant's right to introduce subject-matter from the description into the claims, the exercise of such a right is not without restrictions, as indicated by Art. 123(1) EPC 1973 and R. 86(3) EPC 1973. Therefore, the examining division could possibly have exercised its discretion under R. 86(3), last sentence, EPC 1973 to refuse to admit this request, as it was filed for the first time during the oral proceedings before the examining division and apparently comprised unsearched subject matter. As such, the request could not reasonably be considered as clearly allowable, this latter being a usually applied requirement for admissibility of a request at such a late stage of the proceedings. On the contrary, the potential requirement for an additional search would have represented an unreasonable protraction of the examination procedure.

In T 274/03 the board noted that it was clear that post-search "switching" of subject-matter clearly implied a significant change in the nature of the subject-matter being claimed which was not normally comparable to the addition of features taken from the description to further define an element that was already a feature of the original main claim. The board was of the opinion that an amendment amounting to the restriction of an original main claim by including complementary features from the original description into the claim represented an admissible reaction of an applicant vis-à-vis an objection against the patentability of the unamended claim and did not constitute an abuse of the system of the nature which R. 86(4) EPC 1973 was introduced to prevent (T 377/01, T 708/00). This type of amendment should not therefore in general be judged as contravening the requirements of the rule, even though an additional search could be required. In this context it was to be observed that the implicit finding of lack of unity between the originally claimed and later claimed subject-matter, which was a prerequisite for an objection under R. 86(4) EPC 1973, had to, with amendments of the type under consideration here, be a posteriori. The Guidelines made it clear however that this form of objection to lack of unity should be the exception, with benefit of the doubt being given to the applicant. See also T 2334/11.

5.5. Non-compliance with Rule 137(5) EPC: a ground for refusing an application

In T 2459/12 the board noted that in T 1981/12 doubt was also expressed whether R. 137(5) EPC could be an appropriate basis for refusing an application. The board in T 1981/12 concluded that, by reference to T 708/00 and T 442/95, an amendment not complying with this rule was inadmissible. According to Art. 97(2) EPC, a European patent application which does not meet the requirements of the EPC is refused unless "this Convention provides for a different legal consequence". R. 137(5) EPC sets out a requirement to be met by amended claims of a European patent application, and neither in the Rule itself nor elsewhere in the EPC is any "different legal consequence" provided for the case where this requirement is not met. The board therefore judged that a failure to meet the requirements of R. 137(5) EPC is a ground for refusal of the application under

Art. 97(2) EPC. This was also entirely consistent with the view taken in **T.708/00**. R. 86(4) EPC 1973 was regarded as having "the status of an administrative provision in the context of the search and grant procedures", as is "the case for the unity of invention requirement in general".

C. Opposition procedure

1.	Legal character of opposition proceedings and applicable principles	1055

8.2. Interlocutory decisions	1118
8.2.1. General	1118
8.2.2. Maintenance of European patent as amended	1118

1. Legal character of opposition proceedings and applicable principles

According to Art. 99(1) EPC, within nine months of the publication of the mention of grant of the European patent any person may give notice to the EPO of opposition to that patent. Opposition proceedings (see Art. 99 to 105 and R. 75 to 89 EPC) constitute an exception to the general rule under the EPC that after grant a European patent is no longer within the competence of the EPO but becomes a bundle of patents within the jurisdiction of the designated contracting states (T 9/87, OJ 1989, 438). They allow, during a limited period of time, a centralised action for revocation of a European patent to be brought before and decided by the EPO.

Opposition is an independent procedure following the grant procedure (T 198/88, OJ 1991, 254). It is not designed to be an extension of the examination procedure (G 1/84, OJ 1985, 299). As explained in G 9/91 and G 10/91 (OJ 1993, 408 and 420), it takes place at a point in time when the proprietor is enjoying in each designated contracting state the same rights as would be conferred by a national patent granted in that state (Art. 64 EPC). The relief sought by the opponent is not, as in traditional pre-grant opposition, refusal of the patent application but revocation of the patent as granted (in its entirety or in part) with effect *ex tunc* in all designated contracting states (Art. 68 EPC). Furthermore, the grounds for opposition (Art. 100 EPC) being limited to and essentially the same as the grounds for revocation under national law (Art. 138 EPC), the concept of post-grant opposition under the EPC differs considerably from that of pre-grant opposition. The opposition procedure before the EPO thus has several important features more in common with the concept of the traditional revocation procedure and its effect is more similar to that of such a procedure. This characteristic is further emphasised by the addition at a late stage in the preparation of the EPC of the possibility to oppose a European patent even if it has been surrendered or has lapsed for all contracting states (Art. 99(3) EPC 1973; see now R. 75 EPC and also T 606/10).

Post-grant opposition proceedings under the EPC are in principle to be considered as contentious proceedings between parties who normally represent opposing interests and who should be treated equally fairly (G 9/91 and G 10/91, OJ 1993, 408 and 420). As soon as the notice of opposition has been filed, the procedure automatically becomes bilateral, no matter whether the opposition is valid, admissible or allowable. The Convention does not provide for a decision by an opposition division "to end the *ex parte* proceedings" (T 263/00). R. 79(1) EPC (R. 57(1) EPC 1973) requires the opposition division to communicate the opposition to the proprietor of the patent, and the Guidelines D-IV, 1.5 (November 2018 version) provide that communications and decisions about whether the opposition is deemed to have been filed and is admissible are also to be notified to the patent proprietor. Concerning the contentious nature of opposition proceedings, see also parallel cases T 1553/06 and T 2/09 in this chapter IV.C.2.1.4.

The opposition procedure is a purely administrative procedure. It differs fundamentally from the appeal procedure, which must be regarded as a judicial procedure and is, by its very nature, less investigative (see G 7/91 and G 8/91, OJ 1993, 356 and 346; G 9/91, OJ 1993, 408). Unlike an appeal, opposition has neither suspensive effect nor the effect of transferring the case to a superior instance (see T 695/89, OJ 1993, 152).

According to the principle of party disposition (cf. G 9/92 and G 4/93, OJ 1994, 875), the request of the opponent determines the extent to which the patented subject-matter may be examined in opposition.

In opposition proceedings, the EPO must investigate the facts of its own motion (Art. 114(1) EPC). However, certain restrictions have been placed on this principle of ex officio examination in order to make such proceedings clearer, to shorten and accelerate cases, and to limit the risks to the parties (G 9/92 and G 4/93, OJ 1994, 875).

Under the EPC, there is no legal obligation for the patent proprietor to take an active part in opposition proceedings. However, the patent proprietor is not free to present or complete his case at any time that he wishes during the opposition or opposition appeal proceedings (T 936/09 – see also summary in chapter V.A.4.11.3.d) and decision T 167/11).

As opposition is an independent procedure which takes place after the grant procedure, a document considered in examination proceedings is not automatically scrutinised in opposition or opposition appeal proceedings, even if quoted and acknowledged in the contested European patent (T 198/88, OJ 1991, 254).

Certain topics relating to opposition proceedings are dealt with in Part III: See chapters III.Q. "Transfer of party status", III.P. "Intervention", III.Q. "Continuation of the opposition proceedings by the EPO" and III.R. "Apportionment of costs".

2. Filing and admissibility requirements

2.1. Entitlement to file an opposition

2.1.1 General

In G 3/97 and G 4/97 (OJ 1999, 245 and 270) it was held that the legislator explicitly designed the opposition procedure as a legal remedy in the public interest which, according to Art. 99(1) EPC, is open to "any person".

According to the Enlarged Board, an opponent's status is a procedural status, and the basis on which it is obtained is a matter of procedural law. This is addressed in Art. 99(1) EPC in conjunction with Art. 100, R. 76 and R. 77(1) EPC (R. 55 and R. 56(1) EPC 1973). The opponent is the person who fulfils the requirements set out therein for filing an opposition; in particular the person must be identifiable (R. 76(2)(a), R. 41(2)(c) EPC; R. 55(a) EPC 1973; see also in this chapter IV.C.2.2.4). The EPC does not specify any further formal conditions to be met by the opponent. A person who fulfils

the said requirements becomes a party to the opposition proceedings (Art. 99(3) EPC; Art. 99(4) EPC 1973).

Thus, the EPC does not require that the opponent have his own interest in the outcome of the opposition proceedings. As early as in G 1/84 (OJ 1985, 299) the Enlarged Board held that the motives of the opponent were in principle irrelevant (otherwise, no doubt, the phrase "any person" would have been rendered as "any person interested"), whilst his identity was primarily of procedural importance (similarly in T 635/88, OJ 1993, 608; T 590/93, OJ 1995, 337). Following that case law, the board in T 798/93 (OJ 1997, 363) found that the EPC and its attendant provisions contained no requirements as to the opponent's personal circumstances or motives for acting. Requests for the opposition to be declared inadmissible therefore had to be refused if, as in the case under consideration, they were based on either an objection regarding a particular aspect of the opponent's status, such as his profession (professional representative before the EPO) or his field of technical expertise (different from that of the opposed patent), or on his lack of motives for acting (statement by the opponent saying that his only reason for acting was to complete his training).

According to T 353/95, only an existing natural or legal person can be a party to opposition proceedings and this applies also at the appeal stage since Art. 107, first sentence, EPC makes no different provision (R. 66(1) EPC 1973; R. 100(1) EPC).

2.1.2 Examination at any stage in the proceedings of entitlement to oppose

An objection that an opposition is inadmissible because the opponent was not entitled to file it may be raised at any stage of the proceedings, i.e. even at a late stage before the board of appeal, because the admissibility of the opposition is an indispensable procedural requirement for any substantive examination of the opposition submissions and is therefore to be examined ex officio (see T 289/91, OJ 1994, 649; T 590/94, T 522/94, OJ 1998, 421; T 1178/04, T 384/08). Following the principle established by board of appeal case law that the admissibility of an opposition is examined by the EPO of its own motion, if the board has good reasons for examining the admissibility of an opposition (T 199/92), it may and is obliged to do so, even if the patent proprietor has not challenged admissibility during either opposition or appeal proceedings (T 541/92). In G 3/97 and G 4/97 (OJ 1999, 245 and 270), the Enlarged Board of Appeal reaffirmed that the admissibility of an opposition could be challenged during the appeal proceedings on grounds relating to the identity of an opponent, even if no such objection had been raised before the opposition division.

During the appeal underlying G 1/13 (OJ 2015, A42), the proprietor had challenged the admissibility of the opposition because the opponent company had ceased to exist during the proceedings before the opposition division. By court order, the company was then restored with retrospective effect. The Enlarged Board held that where an opposition is filed by a company which subsequently, under the relevant national law, ceases to exist, but is subsequently restored to existence under a provision of that national law, by virtue of which the company is deemed to have continued in existence as if it had not ceased to exist, all these events taking place before a decision of the opposition division maintaining

the opposed patent in amended form becomes final, the EPO must recognise the retroactive effect of that provision of national law and allow the opposition proceedings to be continued by the restored company (see also chapter V.A.2.4.3.d) "Existence of a company").

For decisions concerning **transfer of opponent status**, see chapter III.O.2.

The status of opponent can also be acquired by an **assumed infringer** who has **intervened** in pending opposition proceedings (see chapter III.P. "Intervention").

2.1.3 Filing of opposition by patent proprietor or inventor

Given the purpose and special nature of the opposition procedure, patent proprietors may not oppose their own patent. In G 9/93 (OJ 1994, 891), the Enlarged Board of Appeal departed from the view taken in G 1/84 (OJ 1985, 299) and held that patent proprietors were not covered by the expression "any person" used in Art. 99(1) EPC 1973. The provisions of Part V of the EPC and the corresponding Implementing Regulations were clearly based on the assumption that the opponent was a person other than the patent proprietor and that the opposition proceedings were always inter partes. The case law established in G 1/84 on this point is thus obsolete.

In T 3/06 the patentee argued, with reference to G 9/93 (OJ 1994, 891), that opponent 2 as the **inventor** of the patent in suit, being a **shareholder** of the patent proprietor, could not validly file an opposition even if the plain language definition of "any person" in Art. 99(1) EPC did not prevent inventors from filing an opposition. The board held the patent proprietor and the opposing inventor to be different persons. The inventor, although a shareholder in the patent proprietor, was not an executive of the company, nor did he have any substantial influence on commercial and judicial decisions concerning the business of the patent proprietor.

A procedure for limitation or revocation of a European patent at the request of the patent proprietor is now provided for under Art. 105a to 105c EPC (see also chapter IV.D.1.).

2.1.4 Filing of opposition on behalf of a third party – straw man

With regard to the question whether an opposition is inadmissible if the opponent is a "straw man" acting for some other person, the Enlarged Board of Appeal clarified in G 3/97 and G 4/97 (OJ 1999, 245 and 270) that the opponent is the person who fulfils the requirements of Art. 99(1) in conjunction with Art. 100 EPC, R. 55 and 56(1) EPC 1973 (R. 76 and 77(1) EPC). Filing the opposition renders this person formally the legitimate opponent. The fact that the opponent is acting on behalf of a third party does not render the opposition inadmissible. It is however inadmissible if the opponent's involvement is to be regarded as **circumventing the law by abuse of due process**. Such circumvention of the law arises, in particular, if:

- the opponent is acting on behalf of the patent proprietor. According to G 9/93 (OJ 1994, 891), a proprietor cannot oppose his own patent; opposition is an inter partes procedure, so the patentee and opponent must be different persons.

- if the opponent is acting on behalf of a client in the context of activities which, taken as a whole, are typically associated with professional representatives, without possessing the necessary qualifications (Art. 134 EPC 1973). This would be the case if a person not entitled to act as a professional representative were acting on a client's behalf and carrying out all the activities typically carried out by professional representatives, while himself assuming the role of a party in order to circumvent the prohibition on his acting as a professional representative.

However, circumvention of the law by abuse of process **does not arise merely** because a professional representative files an opposition in his own name on behalf of a client. In any case, the principle of the free evaluation of evidence applies. The burden of proof lies with the person alleging that the opposition is inadmissible. The deciding body has to be satisfied, on the basis of clear and convincing evidence, that such abuse is occurring.

Previously relevant case law (see T 10/82, OJ 1983, 407; T 635/88, OJ 1993, 608; T 25/85, OJ 1996, 81; T 582/90, T 289/91, OJ 1994, 649; T 548/91, T 339/93, T 590/93, OJ 1995, 337; T 798/93, OJ 1997, 363) has been superseded by G 3/97 and G 4/97.

In T 2365/11 the notice of opposition was filed by a natural person; however, in a submission (to indicate the language which would be used during the oral proceedings) the opponent's attorney had referred to a certain company as the opponent. The patentee took the view that the law had been circumvented by abuse of due process. The board held that the opponent was clearly identified in the notice of opposition. Whether or not the correctly identified opponent was acting on behalf of a third person did not affect the admissibility of the opposition. The situations described in G 3/97 (order 1(b) and (c)) as circumvention of the law by abuse of process could be excluded in the present case.

Parallel cases T 1553/06 and T 2/09, involving the same parties but different patents, were heard by the same board. Considering the admissibility of the respective oppositions, the board examined in particular whether the parties and their representatives had worked together on a **test case** in order to obtain answers from the EPO to specific legal questions regarding prior art. Following the principles set out in G 9/93 and G 3/97, the board emphasised the contentious nature of opposition proceedings as a necessary condition for the admissibility of the opposition and examined whether an abuse of procedure, i.e. because the opponent acted on behalf of the patent proprietor ("straw man"), rendered the opposition inadmissible. The board could not find a circumvention of the law by abuse of process as it saw no reason to doubt the parties' submissions that the opponent was not bound by any instructions from the patentee or the study committee. An opposition filed within the framework of a test case was not inadmissible for that sole reason, provided that the prosecution of the proceedings thereby instituted was contentious because the parties defended mainly opposing positions. The respective oppositions were therefore deemed admissible.

2.1.5 Repeated filing of an opposition by the same person

According to T 9/00 (OJ 2002, 275), the repeated filing of an opposition by the same person could be objected to for lack of legitimate interest. A (legal) person who filed two different notices of opposition against the same patent acquired party status as an opponent only once, even if both notices complied with the requirements of Art. 99(1) EPC and R. 55 EPC 1973 (R. 76 EPC). Both oppositions in question gave lack of novelty and lack of inventive step as grounds. Since the later opposition did not entail any change in the legal situation in the opposition proceedings compared to the earlier one, the board dismissed it as inadmissible for lack of a general legitimate interest. Nor could such an interest be inferred from the fact that the later opposition was assigned to a different part of the company and only that part of the company had been transferred to a third party. The status of opponent could pass to a third party only if both parts or the entire company were transferred to it.

In T 774/05, a notice of opposition was filed on one day, enclosing a cheque for the opposition fee but no reasoned statement. On the following day further documents were filed which included patent documents and a reasoned statement referring to a notice of opposition. According to the board, the opponent's intention was to maintain a single opposition, as evidenced by the statement in the faxes that the cheque for the opposition fee presented the day before should be used for the opposition. The only indication of separate oppositions was the fact that both the document filed initially and the faxes of the following day each stated that they were an opposition. This was not an indication, however, of an intention on the part of the opponent to file two oppositions but rather an indication of their content. Taking all these documents together, the board considered that the opponent had filed only one opposition, for which the requirements for a valid filing were completed within the opposition period. The opposition was therefore admissible.

In T 966/02, the same opponent had filed two oppositions, the second of which cited document D1, on which the opposition division based its decision. The main issue was whether the opposition division had been competent to use the document cited in the second opposition. The board stated that the first opposition had been filed in due form and time and was therefore admissible. Hence there was no need to decide whether the second opposition was admissible, since the department of first instance was, in any event, competent to take account of both document D1 and any other relevant material of its own motion (Art. 114 (1) EPC).

2.1.6 Filing of multiple oppositions by different persons

According to Art. 99(3) EPC, opponents are parties to the opposition proceedings as well as the patent proprietor. It is clear from this provision that multiple admissible oppositions do not initiate a corresponding number of parallel opposition proceedings but only a single one. Each opponent can rely on an opposition ground duly submitted by other opponents and communicated to all parties in accordance with R. 79(2) EPC, both in the opposition proceedings and in any subsequent appeal proceedings (T 270/94, T 620/99, T 774/05).

2.1.7 Filing a joint opposition – multiple opponents

a) Payment of a single opposition fee

In G 3/99 (OJ 2002, 347), the Enlarged Board of Appeal held that an opposition filed in common by two or more persons, which otherwise met the requirements of Art. 99 EPC and R. 1 EPC 1973 (R. 3 EPC) and R. 55 EPC 1973 (R. 76 EPC), was admissible on payment of a single opposition fee. The payment of the opposition fee was linked to the filing of an opposition and not to the number of persons who filed the opposition. There was no procedural difference with respect to an opposition filed by a single natural person, by a single legal person or by a single body equivalent to a legal person by virtue of the law governing it. With respect to the wording "any person" in Art. 99(1) EPC and its interpretation in line with Art. 58 EPC, the Enlarged Board held that, as regards an opposition filed in common by a plurality of persons, each of the common opponents had to be either a natural person, a legal person, a body equivalent to a legal person by virtue of the law governing it or a combination thereof.

b) Representation, legal status and composition of a multiple opponent

In G 3/99 (OJ 2002, 347), the Enlarged Board also held that, in an opposition filed in common, there had to be in all cases a **common representative** (Art. 133(4) EPC 1973 and R. 100 EPC 1973). Only that common representative is entitled to act in the opposition proceedings on behalf of all the common opponents taken as a whole and to sign the filed documents. Since the EPO treats a procedural act performed by a non-entitled person in the same way as a missing signature (see T 665/89), each common opponent or any other person acting on his behalf could perform such an act to avoid missing a deadline, provided the deficiency is remedied within an additional period set by the board in the communication under R. 36(3) EPC 1973 (R. 50(3) EPC), notified to the common representative and sent for information to the non-entitled person who performed the act. The deficiency is remedied once the procedural act is signed by the common representative.

According to the Enlarged Board, in order to safeguard the rights of the patent proprietor and in the interests of procedural efficiency, it had to be **clear throughout the proceedings** who belonged to the group of common opponents or common appellants. If either a common opponent or appellant (including the common representative) intended to withdraw from the proceedings, the EPO had to be notified accordingly by the common representative or by a new common representative determined under R. 100(1) EPC 1973 in order for the withdrawal to take effect.

Referring to this case law in its interlocutory decision in T 482/02 of 9 February 2005, the board stated that, where it was doubtful whether an opposition had been filed on behalf of a body which enjoyed legal personality in its own right or on behalf of several natural persons acting in common, the opponents (here a UK partnership) should be invited to establish that the body was a legal person or an equivalent thereto. If this was not established, the opposition was to be considered as having been filed on behalf of the several natural persons as common opponents (see also T 866/01). In that case the

opponents still had to furnish the names and addresses of the partners in order to comply with R. 55(a) EPC 1973 (R. 76(2)(a) EPC). If this information was not received within a period specified by the board, the opposition had to be rejected as inadmissible under R. 56(2) EPC 1973 (R. 77(2) EPC), irrespective of whether or not such information would have been sufficient to prevent rejection under R. 56(1) EPC 1973 (R. 77(1) EPC).

Similarly, in T 315/03 (OJ 2005, 246), the board followed G 3/99, adding that, while the admissibility of an opposition by multiple opponents had to be kept under review throughout the proceedings, parties could not expect the opposition division or board to do this alone. It was clear that the board had neither the resources nor the knowledge of the relevant laws of all the contracting states necessary to police the composition of, and the legal status of all members of, multiple opponents. Once prima facie admissibility was acknowledged, it had to be up to the party or parties seeking to challenge admissibility to make a case of inadmissibility.

With regard to changes over time in the **composition** of a multiple opponent, the board agreed with the respondent that the absence over eleven and a half years of any notification concerning the 1200 members of opponent 6 ("opposition club") could in itself be considered an indication that the "clear throughout" condition had not been complied with. On the other hand, the fact that certain opponents only came into being for the purpose of filing opposition to one patent could not in itself be an objection to admissibility; an opponent's motive or lack of motive was irrelevant (see G 3/97, OJ 1999, 245). Similarly, it appeared to the board to be wholly irrelevant that an opponent, whether individual or multiple, might be supported by others (e.g. employees or shareholders of a company which was a party). Such supporters clearly could not take any part in the proceedings and could not affect its outcome. Moreover, the support for a party could not per se be a reason to challenge admissibility.

2.2. Formal requirements for opposition and filing in due time

2.2.1 Introduction

According to Art. 99(1) EPC notice of opposition must be filed within nine months of the publication of the mention of the grant of the European patent in the European Patent Bulletin. Notice of opposition is not deemed to have been filed until the opposition fee has been paid. In the interests of legal certainty, the Convention lays down certain further requirements that must be met before the opposition period expires, in particular that the notice of opposition is filed in a written reasoned statement (R. 76(1) EPC) and that it sufficiently identifies the opponent (R. 76(2)(a) EPC) and the patent opposed (R. 76(2)(b) EPC), that it states the extent to which the patent is opposed and the specific grounds, and that it indicates the facts and evidence presented in support of these grounds (R. 76(2)(c) EPC). Fulfilment of the requirements of R. 76(2)(c) EPC (R. 55(c) EPC 1973) is not only essential for the admissibility of the opposition. They also establish the legal and factual framework of the opposition (see G 9/91 and G 10/91, OJ 1993, 408 and 420).

2.2.2 Opposition period

In T 438/87 the question addressed was whether a delay in **publication** of the European patent specification could affect the calculation of the nine-month period for filing an opposition. The board concluded that, since the mention of the grant of the patent in suit had been brought to the public's attention in the normal way, it was from this date that the opposition period had begun, irrespective of what problems may have affected publication of the patent specification and what consequences such untoward event might have for certain third parties owing to their geographical location.

According to T 1644/10, the opposition period is triggered solely by the grant of a European patent and publication of the mention of its grant in the European Patent Bulletin. The mention in the European Patent Bulletin that a correction of the patent specification has been issued does not trigger either a first or any "further" opposition period, even if the corrected specification confers a broader scope of protection than that conferred by the one originally published.

In T 2061/12, the board noted that the EPO distinguished between fax parts received before and after midnight, according them different filing dates (T 683/06, T 2133/10; decision of the President dated 12 July 2007, OJ SE 3/2007, 7). In this case, only the last page and possibly part of the penultimate one had arrived after midnight, while Form 2300 signed by the patent agent, the payment form and at least the first two pages of the notice of opposition – which at a minimum substantiated a novelty objection – had all certainly reached the EPO before midnight. The opposition had therefore been filed in due time under Art. 99(1) EPC; it also complied with R. 76(1) and (2) EPC. It was therefore admissible (R. 77(1) and (2) EPC).

2.2.3 Payment of opposition fee

Art. 99(1), last sentence, EPC states that a notice of opposition is not deemed to have been filed until the opposition fee has been paid. According to the board in T 152/85 (OJ 1987, 191), payment of an opposition fee is a factual requirement, which must be fulfilled within the nine-month opposition period if an opposition is to be admitted. Failure to pay an opposition fee within the required period where the filing of an opposition is intended is a factual mistake which cannot be rectified once the time limit for filing an opposition has passed. In the board's view, it could not be corrected under R. 88 EPC 1973 (R. 139 EPC). It was apparent from the wording of that rule that the clear policy of the EPO was to distinguish between a mistake in a document and other kinds of mistakes, such as failure to pay a fee in time, and only to allow correction of mistakes in a document. Art. 99(1) EPC 1973 provided a nine-month period during which notice of opposition could be filed and the opposition fee paid, payment of the fee being essential for the opposition. Until the requirements of Art. 99(1) EPC 1973 were met, a potential opponent was not party to any proceedings before the EPO.

2.2.4 Identity of opponent and correction of opponent's name

Under R. 76(2)(a) EPC and R. 41(2)(c) EPC, the notice of opposition must contain the name, address and nationality of the opponent and the state where his residence or principal place of business is located. R. 41(2)(c) EPC also gives precise particulars by which such identity needs to be established. If the **identity** of an opponent is not sufficiently established before expiry of the opposition period, the opposition is inadmissible (T 25/85, OJ 1986, 81). T 590/94 held that this defect cannot be remedied. With reference to the rationale of G 1/12 (relating to correction of the appellant's name) the board in T 615/14 concluded however that a request to correct the designation of the opponent in the notice of opposition was allowable under R. 139, first sentence, EPC provided that it complies with the principles endorsed in G 1/12. Hence, the original intention at the time of filing the opposition could also be established on the basis of evidence submitted after expiry of the opposition period. See also the summaries of T 615/14 and T 579/16 below.

In T 870/92 of 8 August 1997 the board emphasised that, when indicating a legal entity, failure to use its exact official designation (R. 26(2)(c) EPC 1973 and R. 61a EPC 1973; R. 41(2)(c) and R. 86 EPC) did not necessarily mean that the opposition was inadmissible. An **incorrect designation** which nevertheless sufficed to indicate the party's identity had to be distinguished from the absence of such information. Errors in a designation could be corrected at any time (R. 88, first sentence, EPC 1973; R. 139, first sentence, EPC; see also T 828/98 and T 719/09).

In principle, the use of an **abbreviation** instead of the full name of a legal entity does not render an opposition inadmissible as long as the party's identity can be established. In T 1034/08, the board had no reasonable doubt that the abbreviation GSK stood for GlaxoSmithKline with regard to the identity of the Belgium-based opponent GSK Biologicals. Given that Belgian company law allows the co-existence of more than one company name and that GlaxoSmithKline Biologicals was the company's sole primary name, the board concluded that abbreviation GSK Biologicals did not constitute an incorrect designation of the opponent.

Further deficiencies such as a wrong postal code or lack of signature may be subsumed under R. 76(2)(a) and R. 50(3) EPC, respectively, and can thus be remedied within a time limit set by the opposition division in accordance with R. 77(2) EPC. The opposition division can extend this time limit or set a new time limit if deemed appropriate (T 1632/06, T 244/12).

In T 1165/03 the board regarded an identity card or passport as the best **evidence** of identity but with the same proviso as applies to all evidence, i.e. that its value could be offset or even negated by other evidence. In this case, two partly illegible photocopies of different identity cards and inconsistent explanations had been filed. The board therefore held that the identity card evidence was inherently unreliable and inconclusive.

Questioning the identity of an opponent is not enough to render the opposition inadmissible; cogent evidence must be put forward. In T 4/05 no such case was made. The appellant had not filed the extract from the commercial register which, it submitted

during oral proceedings before the board, showed a different company name. This could therefore not be cited as evidence that the opponent's identity was unclear. The appellant's objection that two other companies were trading at the same address as the opponent also failed; this was merely an observation which could not affect the party status of an opponent who had been unambiguously identified.

In T 1426/13 the opposition had been filed on behalf of "Isarpatent GbR". The board noted that the lack of public registration of a **GbR** ("Gesellschaft bürgerlichen Rechts") could contribute to uncertainty or even confusion about the name and/or identity of a GbR at specific points in time. However, the EPO had to accept that such **unregistered legal entities** may be a party in proceedings before the EPO. Any relevant evidence had to be evaluated according to the principle of free and unfettered consideration of evidence (e.g. T 482/89, OJ 1992, 646). From the documents submitted the board was satisfied that a name change had occurred before the opposition was filed and that no other entity than Isarpatent GbR could have been the opponent. Nor was the admissibility of the opposition affected by any changes in the composition of the GbR after the opposition had been filed. A GbR may be held liable for its obligations, including costs which may be awarded to another party in EPO opposition proceedings. Therefore it was not necessary to determine the individual members (T 482/02 of 9 February 2005 distinguished).

According to T 1551/10, for an opposition to be admissible, the opponent has to be **identifiable** by expiry of the opposition period (T 25/85, OJ 1986, 81), and provided this is the case, wrong information can be corrected (T 219/86, OJ 1988, 254; T 870/92). Extracts from the commercial register showed that Swisscom (Schweiz) AG was the (sole) universal successor in title to Swisscom Mobile AG, which was originally named as the opponent, although it had already been removed from the register before the opposition was filed. It was not apparent that any of Swisscom Mobile AG's business assets had been taken over by any other legal entity. Therefore, Swisscom (Schweiz) AG was clearly and unambiguously identifiable as the opponent by the time the opposition period ended. Procedural statements mistakenly made in the name of a deceased party or of a legal person that no longer existed following a merger could be regarded as having been made in the name of their universal successor in title (T 15/01, OJ 2006, 153). The mistake in the opponent's name could therefore be corrected under R. 139 EPC. See however T 1226/13 in which the board requested additional evidence concerning the true intention of the person on whose behalf the opposition was filed.

In T 1269/11 the board held that **both** R. 77 and R. 139 EPC were **available** in principle to rectify errors in the name of the respondent (opponent) as given in the notice of opposition (by analogy with G 1/12, OJ 2014, A114, concerning correction of the wrong identification of the appellant and summarised in chapter V.A.2.5.2.a). However, there was not sufficient evidence to allow a correction in this case.

The **availability of R. 139 EPC** to correct the name of the opponent (irrespective of the question of identifiability of the opponent, which was not discussed) was confirmed by T 615/14 as follows. A request to correct the designation of the opponent in the notice of opposition is allowable under R. 139, first sentence, EPC provided that it complies with the principles endorsed in G 1/12 (OJ 2014, A114), in particular that the correction must

introduce what was originally intended when filing the notice of opposition, that it does not give effect to a change of mind or development of plans and that it represents the opponent's actual rather than ostensible intention. The original intention at the time of filing the opposition can also be established on the basis of evidence submitted after the expiry of the opposition period. See also T 603/15 and also T 1226/13, which emphasises the heavy burden of proof required (with reference to G 1/12, OJ 2014, A114 and J 8/80, OJ 1980, 293).

In T 2254/14, the board first of all investigated whether the opponent had been duly identifiable on expiry of the opposition period and found that the particulars provided had indeed been inconsistent in that the trading name given in the notice of opposition (EPO Form 2300) could be associated to a different legal person from the one named in the attached statement of grounds. Citing G 1/12 (OJ 2014, A114), however, it held that this could be corrected under R 139 EPC. The board considered that the criteria set out that decision, in particular in point 37 of the Reasons, were met.

In T 579/16 too, the board, having first of all found that the opponent had not been clearly identifiable from the documents submitted prior to expiry of the opposition period, confirmed that an opponent's name could be corrected under R 139, first sentence, EPC where the conditions set out in G 1/12 (OJ 2014, A114) were met. Drawing on the wording of Section 121(1) of the German Civil Code, it interpreted the condition that the correction request be filed "without delay" to mean that it had to be filed "without culpable delay" ("ohne schuldhaftes Zögern"), i.e. how promptly a requester could reasonably be expected to act had to be assessed subjectively rather than objectively. The answer therefore depended not only on any special circumstances of the specific case having to be taken into account in line with J 16/08 but also on the knowledge and personal perspective of the person making the request. The board held that the request at issue had been made without delay. For a case where the request for correction was rejected for the reason that condition d) of point 37 of the Reasons in G 1/12 was not considered to be fulfilled, see T 603/15.

This line was also taken in T 1755/14, where the entity in the name of which the opposition was filed ceased to exist before this filing so that no opposition status was acquired which could be transferred as requested. However, the board considered that the request for correction of the error was allowable. Referring to G 1/12 (point 37 of the Reasons), the board noted that the principles for correction under R 139, first sentence, EPC are, in particular, that (i) the correction must introduce what was originally intended, (ii) the requestor carries a heavy burden of proof and (iii) a request for correction must be filed without delay. The board accepted that the true intention was to file the opposition in the name of the universal successor of the entity named as opponent. The board was satisfied that the other criteria were met.

2.2.5 Title of invention

Under R 76(2)(b) EPC, the notice of opposition must contain, inter alia, the number of the patent, the name of the proprietor and the title of the invention. If the patent is not sufficiently **identified**, the opposition must be rejected as inadmissible under

R. 77(1) EPC, unless the deficiency has been remedied before expiry of the opposition period.

In T 317/86 (OJ 1989, 378) the opponent had not indicated the title of the invention within the period specified under R. 56(2) EPC 1973 (R. 77(2) EPC) for remedying deficiencies other than those falling under R. 56(1) EPC 1973 (R. 77(1) EPC). The board decided that omission from the notice of opposition of the title of the invention – merely an item of bibliographical data identifying the contested patent – did not constitute a deficiency within the meaning of R. 56(2) EPC 1973, if the other particulars available to the EPO were together sufficient to identify easily and beyond doubt the patent being contested by means of an opposition.

In T 335/00 and T 336/00, the R. 55(b) EPC 1973 (R. 76(2)(b) EPC) requirements were not strictly fulfilled. Among other things, the title of the invention was missing, and the opposition was directed to the application. The board nonetheless deemed the opposition admissible because the contested patent was identifiable uniquely and fairly easily on the basis of the specified publication number. Even the mistake of opposing an application and the omission of the title did not seem serious enough to the board to render the opposition inadmissible.

2.2.6 Statement of extent of opposition

The Enlarged Board of Appeal remarked in G 9/91 (OJ 1993, 408) that in practice it is rather unusual that the opposition is limited to only a certain part (subject-matter) of the patent. Normally, the whole of the patent is opposed. Addressing the situation where it was clear from the statement under R. 55(c) EPC 1973 (R. 76(2)(c) EPC) that the patent was opposed only to a certain extent, the Enlarged Board held that by limiting the extent to which the patent is opposed to only certain subject-matters, the opponent deliberately refrains from making use of his right under the EPC to oppose remaining subject-matters covered by the patent. Such subject-matters are therefore, strictly speaking, not subject to any "opposition" in the sense of Art. 101 and 102 EPC, nor are there any "proceedings" in the sense of Art. 114 and 115 EPC concerning such non-opposed subject-matters.

The statements in the notice of opposition relevant to the extent to which the European patent is opposed should be interpreted in such a way that an addressee would understand them, taking into account the surrounding circumstances (T 376/90, OJ 1994, 906; see also T 1/88, in which the board based its interpretation of equivocal procedural acts on the "objective value of the declaration", German: "objektiver Erklärungswert"). However, the general practice of interpreting the **absence of such statements** as an indication of the opponent's intention to oppose the patent concerned in its entirety, has been subject to scrutiny in the light of G 9/91. In T 376/90 the board doubted that this "liberal" practice could be continued. In the extreme, where the extent to which a patent is opposed is in serious doubt, this reviewed approach may lead to a rejection of the opposition as inadmissible (T 376/90). However, in T 764/06 the board concluded from the absence of a statement under R. 55(c) EPC 1973 that the patent was opposed only to a certain extent that the patent in suit was opposed in its entirety.

2.2.7 Statement of grounds for opposition

The notice of opposition must also state the grounds on which the opposition is based (R. 76(2)(c) EPC; R. 55(c) EPC 1973). The grounds for opposition which can form the legal basis of an opposition are contained in an exhaustive list in Art. 100 EPC. Accordingly, an opposition may only be filed on the grounds that (a) the subject-matter of the European patent is not patentable, (b) the European patent does not sufficiently disclose the invention or (c) the subject-matter of the European patent goes beyond what was originally disclosed. Each ground for opposition listed in Art. 100 EPC corresponds to a requirement for grant laid down elsewhere in the EPC.

The Enlarged Board of Appeal set out a number of fundamental principles in **G 1/95** (OJ 1996, 615):

Whereas the grounds for opposition in Art. 100(b) and (c) EPC 1973 each relate to a single, separate and clearly delimited legal basis on which an opposition can be based, i.e. insufficient disclosure or unallowable amendment before grant, the same does not apply to Art. 100(a) EPC 1973. Art. 100(a) EPC 1973 not only refers to the general definition of patentable inventions under Art. 52(1) EPC 1973 and the exceptions to patentability under Art. 53 EPC 1973; it also refers to a number of definitions given in Art. 52(2) to (4) and 54 to 57 EPC 1973 for the terms "invention", "novelty", "inventive step" and "industrial application", which, when used in conjunction with Art. 52(1) EPC 1973, set specific requirements and therefore constitute separate grounds for opposition. Taken together, Art. 52 to 57 EPC 1973 therefore do not, for the purposes of Art. 100(a) EPC 1973, constitute a single objection to the maintenance of the patent, but a collection of different objections. Some of these are completely independent of each other (e.g. Art. 53 and 52(1) EPC 1973, Art. 54 EPC 1973) whereas others might be more closely related (e.g. Art. 52(1) and 54 EPC 1973; Art. 52(1) and 56 EPC 1973). For an opposition to be admissible under Art. 100(a) EPC 1973, it has to be based on **at least one of the grounds for opposition** set out in Art. 52 to 57 EPC 1973.

According to the reasoning of **G 1/95**, one function of R. 55 and 56 EPC 1973 (R. 76 and 77 EPC) is to establish what the notice of opposition has to contain in order to be admissible. R. 76(2)(c) EPC specifies that the notice of opposition has to contain a statement of the extent to which the European patent was opposed and of the grounds (i.e. the legal reasons mentioned above) on which the opposition is based and an indication of the facts, evidence and arguments presented in support of these grounds, i.e. the substantiation. The wording of (c) shows clearly the distinction made between the grounds, meaning the legal reasons or legal bases such as those under Art. 100(a) EPC and the substantiation. Accordingly, in the context of Art. 99 and 100 EPC and of R. 76(2)(c) EPC, a "ground for opposition" has to be interpreted as meaning an individual legal basis for an objection to the maintenance of a patent. It follows in particular that Art. 100(a) EPC contained a collection of different legal objections (i.e. legal bases), or different grounds for opposition, and is not directed to a single ground for opposition.

Non-compliance with Art. 84 EPC is not a ground for opposition, but is a matter to be considered in the context of Art. 101(3) EPC (see also G 3/14, OJ 2015, A102 and in this chapter IV.C.5.2.).

In T 600/08 the board observed that the EPC did not provide for reviewing, as part of opposition proceedings, the legality of a decision by the Receiving Section to correct an applicant's name in a divisional application. The grounds for opposition were set out exhaustively in Art. 100 EPC. Objections to the text of a patent as granted could not be raised on other grounds. It made no difference that the text of the patent in suit had been amended.

2.2.8 Indication of facts, evidence and arguments – substantiation of grounds for opposition

a) Principles

The third requirement of R. 76(2)(c) EPC for the admissibility of the opposition is the substantiation of the specified ground, i.e. an indication of the facts, evidence and arguments presented in support of it. The fulfilment of this latter requirement in respect of **one of the grounds for opposition** is enough to render admissible the opposition **as a whole**. Nowhere in the EPC is there any basis for the concept of partial admissibility of oppositions. The concept of "inadmissibility" is only applicable to the notice of opposition as a whole (T 653/99; see also T 212/97 and T 65/00).

According to T 114/95, if an opponent requests revocation of the patent in its entirety, it is sufficient to substantiate the ground(s) of opposition in respect of **at least one claim** of the patent for the requirements of R. 76(2)(c) EPC (R. 55(c) EPC 1973) to be met (T 926/93, OJ 1997, 447; T 1180/97, T 1900/07; see also in this chapter IV.C.3.2.).

The question whether the requirements in R. 76(2)(c) EPC are met must be determined on expiry of the nine-month opposition period (R. 77(1) EPC). A notice objectively complying with the requirements **on the relevant date** is not rendered inadmissible where the opponent later cites prior art not mentioned in it to support his line of argument (T 1019/92; see also T 104/06).

In T 222/85 (OJ 1988, 128) the board held that the third requirement was only satisfied if the contents of the notice of opposition were sufficient for the opponent's case to be **properly understood on an objective basis**, from the point of view of a reasonably skilled person in the art to which the opposed patent relates. The board reasoned that the purpose of the third requirement of R. 55(c) EPC 1973 (R. 76(2)(c) EPC), in combination with the first two requirements, was to ensure that the notice of opposition set out the opponent's case sufficiently so that both the patentee and the opposition division knew what that case was. Whereas the requirements of R. 55(a) and (b) EPC 1973 (R. 76(2)(a) and (b) EPC) and the requirements (1) and (2) of R. 55(c) EPC 1973 could be considered as **formal** in nature, requirement (3) of R. 55(c) EPC 1973, in combination with Art. 99(1) EPC, was **substantive** in nature, and called for reasoning which went to the merits of the opponent's case. A well-drafted opposition ought to contain reasoning that

was full but concise. And in general, the less reasoning that a notice of opposition contained, the greater the risk that it would be rejected as inadmissible (similarly [T. 925/91](#), OJ 1995, 469; see also [T. 2/89](#), OJ 1991, 51; [T. 448/89](#), OJ 1992, 361; [T. 545/91](#), [T. 204/91](#)). According to the board, the question whether a particular notice of opposition meets the minimum substantive requirements of Art. 99(1) EPC 1973 and R. 55(c) EPC 1973 could only be decided in the context of the particular case (since various relevant factors, such as the complexity of the issues raised, vary from case to case) – see also e.g. [T. 534/98](#), [T. 1097/98](#), [T. 934/99](#), [T. 426/08](#). In [T. 623/18](#) (see also the summary in this chapter [IV.C.2.2.8 b\)](#)) the board qualified the principles established in [T. 222/85](#) by emphasising inter alia that there was no basis for making the admissibility of the opposition dependent on substantive questions, such as whether an objection relates merely to a lack of clarity.

In [T. 204/91](#) the board stated in particular that the term "indication" in R. 55(c) EPC 1973 (R. 76(2)(c) EPC) had to be construed as requiring **more than a mere hint** at a number of possible attacks upon the patent and at the likely support for each such possible attack, which indication or hint might then be augmented by the subsequent late filing, possibly even at the appeal stage, of further evidence, arguments or other matter – even of fresh grounds of objection. Rather, the scope and depth of "indication" needed to be such as to enable the patentee and the opposition division to see clearly just what attack was being mounted against the patent, and what evidential support was being adduced for that attack. In other words, the patentee and the opposition division had to be put in a position of understanding clearly the nature of the objection submitted as well as the evidence and arguments in its support. This required the elaboration of the relevant circumstances of the case to such an extent that the patentee and the opposition division were able to form a definitive opinion on at least one ground for opposition raised, without the need to make further investigations (see [T. 453/87](#) and [T. 279/88](#); see further e.g. [T. 1069/96](#) and [T. 426/08](#)).

The fact that a patentee must be able to understand, without undue burden, the case made against his patent in the notice of opposition does not, however, exclude the possibility that he may have to undertake a **certain amount of interpretation** ([T. 199/92](#); see also [T. 1553/07](#), [T. 265/16](#); see however [T. 1082/00](#), which highlights the limits of this principle and refers to [T. 204/91](#)).

In [T. 934/99](#) the board stated that R. 55(c) EPC 1973 (R. 76(2)(c) EPC) did not imply the requirement of a logical line of reasoning in the sense that the arguments brought forward in the notice of opposition had to be cogent or convincing. Rather, the criterion was whether the arguments presented were relevant and, where necessary as the result of a reasonable interpretative effort, specific enough to allow a person skilled in the art to form a reasoned opinion of whether the line of reasoning on which the opponent apparently relies was (logically) correct ("convincing") or not (i.e. wrong).

The sufficiency of the notice of opposition has **to be distinguished** from the **strength** of the opponent's case. On the one hand, an unconvincing ground for opposition might have been clearly presented and argued. Conversely, a deficient submission may be rejected as inadmissible even though, if properly drafted, it would have succeeded ([T. 222/85](#),

OJ 1988, 128; T. 621/91, T. 3/95, T. 1069/96, T. 1856/11). Assessing the evidence is part of the process of ascertaining whether the opposition is well founded in substance (T. 234/86, OJ 1989, 79). Thus, in T. 353/06 the board identified the appellants' arguments for the inadmissibility of the opposition as concerning the corroborative value of the facts and evidence, rather than a failure to indicate such facts and evidence in support of the grounds of opposition.

In the same vein, in T. 65/00 the board held that it was of no importance for admissibility whether the relevance of the arguments brought forward, or their correctness, was sufficient to revoke the patent. In the case at issue it was therefore irrelevant whether the arguments brought forward by the opponent referred to Art. 84 or Art. 83 EPC 1973. For admissibility it was sufficient that the arguments were such that an **arguable case** was **established**. See also T. 623/18.

Similarly, the board in T. 1194/07 referred to the established case law, according to which the indication of facts, evidence and arguments need not be conclusive or correct. That is an issue of merit. However, the board also emphasised that the merits of a case can only be assessed in a meaningful manner if the case has been stated fully, by an adequate indication of the relevant facts, evidence and arguments. Key elements linking the cited prior art to the claim or relating to their validity as evidence, as well as crucial arguments informing the reader why the skilled person might have considered combining the features of such prior art with those of the accompanying evidence, should not be missing in the notice's chain of logic leading from the prior art to the invention. The omission of key facts and elements in the notice's reasoning may amount to little more than speculation or an outline of a possible case against the patent (see also T. 1856/11).

In T. 344/88 the opponent had given the wrong number for a patent specification which it had cited against the patent in suit. The board considered whether R. 55(c) EPC 1973 (R. 76(2)(c) EPC) was contravened if the mistake was not corrected until after expiry of the opposition period. While the patent cited bore no relation to the invention under consideration, the notice of opposition contained enough information to identify the actual patent intended and so the board allowed the number to be corrected. Given such a detailed submission of facts, it would have been taking formal requirements too far to reject the opposition simply because the wrong number had been given for a cited patent specification.

In T. 426/08, the board considered that the **content of evidence** merely referred to within the opposition period but not produced until after it could not, for the purpose of examining admissibility, be taken into account either as an indication of facts or evidence or as proof of facts.

In T. 1022/09 the opposition division had confused the criteria for admissibility of late-filed documents with those for documents filed with and referred to in an admissible notice of opposition. According to the board, the content and publication date of the documents filed with the notice of opposition did not come into play for the question of admissibility. Since their filing was substantiated, they were automatically admitted to the opposition proceedings.

b) Sufficient substantiation of grounds for opposition

In T 134/88 the opposition did not deal with all the features of the contested claim, but still satisfied the requirements of R. 55(c) EPC 1973 (R. 76(2)(c) EPC). The board summed up by saying that an opposition directed against alleged lack of inventive step in the case of a combination invention was generally inadmissible if it related only to the assessment of one individual feature. To be admissible, it would have to deal with the invention as a whole, or at least with its **essential** content, so that when the facts on which the opposition was based were indicated, circumstances became recognisable which enabled the patent proprietor and the assessing body to pass conclusive judgment on the asserted grounds for opposition without having to make enquiries of their own. Allegations which could not be subsumed under one of the opposition grounds have to be left out of consideration (see also e.g. T 1279/05, T 114/07, T 521/00, T 1074/05). A detailed and exhaustive discussion of matters which were implicit to such skilled persons was not needed to understand the opponent's case and, therefore, not an admissibility requirement. See also T 534/98, in which it was held that evidence of the **common general knowledge** was not required to substantiate an opposition. In accordance with the prevailing view in the case law, proof that something belonged to the common general knowledge was only necessary if this was called into question by another party or by the EPO.

In T 1014/09 the opposition was based on the inadmissibility of an amendment (replacement of "carrier housing" by "intermediate housing") "because it was not covered by the original disclosure". The board had to establish to what extent this **general reference** to the original disclosure could be regarded as a due indication of the facts, evidence and arguments within the meaning of R. 55(c) EPC 1973 (R. 76(2)(c) EPC), and to what extent the assessment of the amendment to the claims as "misleading" could be construed as an indication that the amendment had unlawfully changed or extended the technical information. The board concluded that the facts of the case at issue and the accompanying legal analysis set out in the notice of opposition had to be regarded as duly substantiating the ground for opposition under Art. 100(c) EPC.

In T 185/88 (OJ 1990, 451) the board ruled that grounds for opposition are deemed to be in due form if the only document cited in support of the sole assertion of lack of inventive step (here: German patent specification), while itself published **after** the date of filing or priority, nevertheless contained a reference to a document published **before** the date of filing or priority (here: German unexamined application or "Offenlegungsschrift").

In T 864/04 the board had to examine whether the express mention of document D1a in the notice of opposition in relation to D1 by the statement: "(divided out inter alia of US-PS No. 5,290,583)" was sufficiently precise to enable the patentee to find out the date of the publication of this document. In the Board's view, this was indeed the case because no undue burden was involved to discover D1a's publication date. The opposition was considered admissible.

In T 623/18 the board guarded against a too strict approach. The board emphasised the purpose of the statement under R. 76(1) and (2)(c) EPC, as explained in G 9/91 and G 10/91 (OJ 1993, 408 and 420), namely to define the extent and scope of the opposition

and the legal and factual framework, within which the substantive examination of the opposition is in principle conducted, as well as to give the patentee a fair chance to consider his position at an early stage of proceedings. The board saw no basis for making admissibility of the opposition dependent on the assessment of substantive questions, in particular on whether an objection merely related to a lack of clarity or could support the ground for opposition under Art. 100(b) EPC. It was also a matter of substantive examination to characterise the person skilled in the art, for whom, according to Art. 100(b) EPC, the description should be sufficiently clear and complete, and for whom obviousness over the prior art was to be assessed according to Art. 100(a) EPC in combination with Art. 56 EPC.

c) Insufficient substantiation of grounds for opposition

In T 182/89 (OJ 1991, 391) the board observed that in order to establish insufficiency, a **mere statement** by an opponent that one example in a patent had been repeated once "exactly as described" without obtaining exactly the described results as set out and claimed in the patent was clearly inadequate. On the question of substantiation, the board took the view that, if a notice of opposition alleging insufficiency under Art. 100(b) EPC 1973 as the sole ground for opposition contained such a statement as the only indication of "facts, evidence and arguments" in support of this ground, then the notice of opposition should be regarded as inadmissible even if the alleged facts were subsequently proved.

In T 550/88 (OJ 1992, 117) the board of appeal considered whether **national prior rights** could as a matter of law constitute "facts or evidence" relevant to the ground of lack of novelty under Art. 54(1) and (3) EPC 1973. In the board's judgment, on the proper interpretation of Art. 54(3) EPC 1973, national prior rights were not comprised in the state of the art, and only prior European patent applications filed under the Convention could be considered as such under Art. 54(3) EPC 1973. The board decided that the opposition was inadmissible because the only facts and evidence indicated in the notice of opposition were references to national prior rights.

According to T 613/10, the admissibility of the opposition has to be decided in the light of the circumstances of the case, especially if the requirements of R. 76(2)(c) EPC are not clearly and unambiguously met. Those circumstances include not just the technical complexity of the subject-matter in the opposed patent and the citations but also the number of claims and the number of citations – even if in principle an opposition can contain any number of attacks or citations. The patent proprietor should not have to try and work out the opponent's case for himself, from inadequate information given in the notice of opposition. In the case before the board, notice of opposition had been filed within the opposition period on the official form and two additional sheets. These listed 26 items of evidence, which however were filed, together with a detailed statement, only after the period expired. The notice had indicated the grounds of lack of novelty and lack of inventive step but did not say which citations related to which. None of the cited passages or drawings had been compared with the features of any of the 26 claims; nor had any technical connection been established between the citations and the claims. The board concluded that the notice of opposition did not properly indicate the facts presented in

support of either of the two grounds, so that the requirements of R. 76(2)(c) EPC were not fulfilled.

d) Alleged public prior use

In accordance with G 1/95 (OJ 1996, 615), alleged public prior use does not constitute a ground for opposition under Art. 100(a) EPC but is a fact cited to substantiate such a ground (T 190/05).

An allegation of public prior use will only meet the third requirement of R. 76(2)(c) EPC if it is sufficiently substantiated. It is established case law (e.g. T 328/87, OJ 1992, 701; T 538/89; T 988/91; T 541/92; T 28/93; T 927/98; T 900/99, T 1022/99; T 190/05; T 25/08; T 1856/11) that, when an opposition ground is based on an allegation of public prior use, the requirements of R. 76(2)(c) EPC are fulfilled if the notice of opposition indicates, within the opposition period, the facts which make it possible to determine

- the date of prior use ("when"), in order to ascertain its "prior" character;
- the object of the use ("what"), in order to examine its relevance, and
- the circumstances relating to the alleged use ("how") in order to confirm its availability to the public.

The notice of opposition must also indicate the arguments and evidence in support of the alleged prior use. In T 1856/11 the board took the information contained in the supporting documents filed during the opposition period into account for establishing the required details.

An **abstract indication** of the subject-matter of the prior use is generally insufficient. Instead, the opponent must compare its features with those of the contested claim and demonstrate the technical parallels between them (see e.g. T 28/93, T 25/08, T 426/08). This can, however, be dispensed with in straightforward cases in which the facts are immediately self-evident to the average skilled person (T 1069/96, T 25/08, T 426/08).

In T 538/89 the board stressed that the evidence offered in support of public prior use could be submitted after expiry of the period for opposition since R. 55(c) EPC 1973 (R. 76(2)(c) EPC) only required that it be indicated (see also e.g. T 234/86, OJ 1989, 79; T 752/95; T 249/98; T 1022/99 and T 25/08). According to the board, **nomination of a witness** for subsequent examination is deemed to constitute indication of evidence (see also T 28/93, T 988/93 and T 241/99). In T 1553/07 the board held that the naming of a witness to be heard later is to be regarded as a sufficient indication of evidence as long as it is clear for what assertions of facts the witness is being named. There is no need also to indicate what the witness is able to say about the alleged facts.

A distinction must be made between examining the admissibility of the opposition and its substantive merit. The information relating to the "when", the "what" and the "how" of the circumstances surrounding prior use is all that the patent proprietor and the opposition

division need in order to understand the case of the opponent and for the opposition to be admissible. The rest, i.e. whether the alleged facts were or would be sufficiently proven through additional filings in the course of the opposition proceedings, is a question of allowability in terms of substantive law. Thus, establishing that the alleged prior use was indeed public has little bearing on the **admissibility** of the opposition, but could be significant for assessing its **allowability** in terms of substantive law (see T 406/92, T 786/95, T 1022/99; cf. also T 533/94, T 534/94, T 1553/07, T 25/08, T 1856/11).

Whether sufficient details of the "when, what and how" have been submitted is also examined by the boards in order to establish whether (and, if so, at what point) a late-filed prior use has been sufficiently substantiated to be considered in the proceedings (see e.g. T 441/91, T 97/92, T 611/97, T 460/13, T 1955/13; on the admission of late-filed submissions, see in this chapter IV.C.4.). Similarly, evidence offered can be taken only if the facts it is intended to prove have already been sufficiently substantiated (see e.g. T 1271/06, citing T 297/00).

Several decisions note that specification of the circumstances of the act of use also requires that the opponent indicates "**to whom**" the subject-matter was made available (see e.g. T 522/94, OJ 1998, 421; T 339/01; T 1553/07; T 2010/08; T 1927/08). In T 241/99, for instance, the board considered it insufficient for the purposes of R. 55(c) EPC 1973 (R. 76(2)(c) EPC) that, in the event of a purported **sale to a small, closed group of customers**, these were identified only by a coded indication (list of numbers). This was different from the **sale of mass-produced goods to anonymous buyers** and resembled rather the case of a single sale, for which the requirements of R. 76(2)(c) EPC were met only if the name and address of the sole buyer were indicated within the opposition period.

Citing this decision, the board in T 55/01 noted in the context of the applicable standard of proof that case law had taken into account that cases of **mass-produced consumer goods** which are widely advertised and offered for sale to customers who often remained anonymous may require a different treatment. In the case at issue no allegations concerning the identity of the purchasers had been made and no proof concerning this matter produced. The sale of the mass-produced product on the market and the distribution of the corresponding service manual was nevertheless considered as proven.

The evaluation of evidence in cases of alleged public prior use is dealt with in detail in chapter III.G.4.3.2.

e) Non-patent literature or oral disclosure

In T 511/02, concerning the opponent's duty of substantiation, it had not been indicated when and how fitting and installation instructions cited against the patent had been made available to the public. Since this factor was crucial to the establishment of whether they formed part of the prior art and thus whether they could actually be cited against the patent, no adequate indication had been given of the relevant facts and evidence (see also T 1271/06 and T 109/11 for cases where the requirements of R. 55(c) EPC 1973

(R. 76(2)(c) EPC) were found not to be met; see T.1688/12 for a case where these requirements were considered to be fulfilled).

In T.782/04 the board noted however that the respondent had to apply a reasonable amount of understanding by reading the notice of opposition as required by the jurisprudence. In the case in hand the brochure produced by a company to illustrate a product to potential customers bore the notice "printed in Japan 73", whereas the priority date of the patent in suit was ca. 18 years later. The board considered that the allegations were sufficiently substantiated. The examination of whether the allegations were true was a question of evidence that was part of the examination of the allowability of the opposition. See also T.1236/13 (concerning documentation available on the internet) where the allegations as to which information carrier was used, the publication date and who was the public could be derived from document D6.

Where an oral disclosure is cited as prior art, the opposition division and the patent proprietor must be provided with sufficient details of the facts asserted and the supporting evidence to determine the date and content of the disclosure and the circumstances in which it was made public (T.406/92).

2.2.9 Other requirements for notice of opposition

In T.193/87 (OJ 1993, 207) the board found that if a notice of opposition was filed in a language of a contracting state other than an official language of the EPO and the prescribed **translation** was not filed in due time (Art. 14(4) and (5) EPC 1973; Art. 14(4) EPC), the notice should be deemed not to have been received, and the opposition fee was to be refunded (following T.323/87, OJ 1989, 343). Since the opposition had not come into effect, there was no question of examining its admissibility under R. 56(1) EPC 1973 (R. 77(1) EPC).

In T.960/95 the notice of opposition was filed **without having been signed**. The board stated that a notice of opposition should be duly signed (R. 36(3), first sentence, EPC 1973, R. 61a EPC 1973; R. 50(3), first sentence, EPC, R. 86 EPC). The omission of the signature was remedied within the time limit set by the opposition division, and the notice of opposition therefore retained its original date of receipt (R. 36(3), third sentence, EPC 1973; R. 50(3), third sentence, EPC; see also T.1165/03).

2.3. Procedural aspects of examination of admissibility

2.3.1 Formalities officers' powers in opposition proceedings

In opinion G.1/02 (OJ 2003, 165), the Enlarged Board of Appeal examined the powers and duties of formalities officers in opposition proceedings, the underlying question being their competence to decide on the consequences of late payment of the opposition fee. Taking the view that T.295/01 (OJ 2002, 251) and T.1062/99 were divergent, the President asked the Enlarged Board of Appeal to consider whether points 4 and 6 of the Notice of 28.04.1999 conflicted with provisions of a higher level (OJ 2002, 466). The Enlarged Board stated that the provisions of the Notices of the Vice-President DG 2 were valid on the basis

of R. 9(3) EPC 1973 (R. 11(3) EPC), under which formalities officers could be entrusted with duties falling to the examining and opposition divisions and involving no technical or legal difficulties. It therefore concluded that points 4 and 6 of the Notice of 28.04.1999 did not conflict with provisions of a higher level.

2.3.2 Admissibility of opposition to be checked at every stage

The admissibility of the opposition must be checked *ex officio* in every phase of the opposition and ensuing appeal proceedings. It can and, where appropriate, must be raised by the board in appeal proceedings even if this is the first time this matter is addressed (T 289/91, OJ 1994, 649, T 522/94, OJ 1998, 421). On the other hand, as highlighted in T 522/94, the requirement of admissibility must not be circumvented by overemphasising the *ex officio* principle and shifting the burden of establishing the case from the opponent to the opposition division.

2.3.3 Rejection of opposition as inadmissible

In T 222/85 (OJ 1988, 128) the board stated that a communication under R. 57(1) EPC 1973 (R. 79(1) EPC) indicating the admissibility of an opposition was not a decision of the opposition division, and the sending of such a communication did not prevent the subsequent rejection of the notice of opposition as inadmissible under R. 56(1) EPC 1973 (R. 77(1) EPC), for example if the admissibility was challenged by the patent proprietor (see also T 621/91).

As soon as an opposition had been rejected as inadmissible, the opposition procedure was regarded as legally terminated and substantive examination could no longer be initiated. The inadmissibility of an opposition, when finally decided, or an appeal, had the effect of transferring the European patent to the national jurisdiction of the designated states, which then assumed sole responsibility for assessing the patent's validity with reference to their own legislation. The board therefore came to the conclusion that it was inconsistent with the procedural principle referred to above for the decision rejecting the opposition as inadmissible to consider that opposition's merits. Remarks on substantive matters in a decision rejecting the opposition as inadmissible had no legal effect. Such remarks should, in principle, be avoided, as a procedural deficiency of this kind could result in legal uncertainty during the national phase and could disadvantage either the proprietor or the opponent (T 925/91, OJ 1995, 469; see also T 328/87, OJ 1992, 701).

3. Substantive examination of opposition

3.1. Introduction

In G 9/91 and G 10/91 (OJ 1993, 408 and 420) the Enlarged Board held that R. 76(2)(c) EPC (R. 55(c) EPC 1973) made sense only when interpreted as having the **double function** of governing (together with other provisions) the admissibility of the opposition and of simultaneously establishing the legal and factual framework within which the substantive examination of the opposition was in principle to be conducted.

The **legal framework** of an opposition case is defined solely by (i) the extent to which the patent is actually opposed and (ii) the grounds upon which it is opposed, whilst its **factual framework** is determined by the facts, evidence and arguments adduced and set out in the notice of opposition pursuant to R. 76(2)(c) EPC (T. 737/92); see also T. 1900/07 with regard to the legal framework). A distinction has to be made between the two main requirements of R. 76(2)(c) EPC, i.e. the indication of the **extent** to which the European patent is opposed and the **grounds** for opposition.

3.2. Extent of opposition

R. 76(1) EPC (Art. 99(1) EPC 1973) provides, inter alia, that "notice of opposition shall be filed in a written reasoned statement". R. 76(2)(c) EPC (R. 55(c) EPC 1973) requires the notice of opposition to contain, inter alia, "a statement of the extent to which the European patent is opposed" (see also in this chapter IV.C.2.2.6).

In G. 9/91 (OJ 1993, 408) the Enlarged Board clarified that the **power** of an opposition division or a board of appeal **to examine and decide** on the maintenance of a European patent under Art. 101 and 102 EPC 1973 (now merged in Art. 101 EPC) depends on the extent to which the patent is opposed in the notice of opposition (R. 55(c) EPC 1973; R. 76(2)(c) EPC). However, this principle is subject to a restriction: even if the opposition is expressly directed only against the subject-matter of an independent claim in a European patent, claims which depend on any such independent claim can nonetheless also be examined as to their patentability if the independent claim is eliminated in opposition or appeal proceedings, provided that the validity of these **dependent claims** is put in doubt prima facie by the information which is already available (cf. also T. 443/93, T. 31/08; the principles set out in G. 9/91 have been followed by subsequent case law, e.g. T. 1019/92, T. 1066/92, T. 1350/09; see also T. 525/96 and T. 907/03 in respect of claims of an auxiliary request).

The statements in the notice of opposition relevant to the extent to which the European patent is opposed should be interpreted in such a way that an addressee would understand them, taking into account the surrounding circumstances (T. 376/90, OJ 1994, 906; see also T. 1/88, in which the board based its interpretation of equivocal procedural acts on the "objective value of the declaration"). In the light of G. 9/91, the board in T. 376/90 doubted that the general practice of interpreting the **absence of such statements** as an indication of the opponent's intention to oppose the patent concerned in its entirety could be continued. See however also T. 764/06, in which the board concluded from the absence of a statement under R. 55(c) EPC 1973 that the patent was opposed only to a certain extent that the patent in suit was opposed in its entirety.

In T. 114/95 the board held that if an opponent requested revocation of the patent in its entirety, it was sufficient to substantiate the ground(s) for opposition in respect of **at least one claim** of the patent for the requirements of R. 55(c) EPC 1973 (R. 76(2)(c) EPC) to be met. R. 55(c) EPC 1973 did not refer to claims but rather required that the notice of opposition should contain a statement of the extent to which the patent was opposed (see also e.g. T. 938/03 and T. 1900/07; see however the different opinion in T. 737/92, requiring

that claims are actually opposed, as distinct from being merely formally mentioned in the notice of opposition).

In T 938/03 the board highlighted that the extent to which a patent was opposed did not depend on the second requirement under R 55(c) EPC 1973 (R 76(2)(c) EPC), namely the indication of the grounds of opposition and the facts, evidence and arguments in support of these grounds. Rather, the extent to which a European patent is opposed was exclusively determined by what has been implicitly (see T 376/90, OJ EPO 1994, 906) or explicitly indicated (in the case at issue by ticking the relevant box in EPO form 2300).

3.3. Scope of examination of grounds for opposition

According to the Enlarged Board in its opinion G 10/91 (OJ 1993, 420; see also G 9/91, OJ 1993, 408), an opposition division or a board of appeal is **not obliged to consider all the grounds for opposition** referred to in Art. 100 EPC, going beyond the grounds covered by the statement under R 55(c) EPC 1973 (R 76(2)(c) EPC), but may exceptionally do so. In opposition proceedings, the opposition division may, in application of Art. 114(1) EPC, raise a ground for opposition not covered by the opposition statement or consider such a ground raised by the opponent (or referred to by a third party under Art. 115 EPC) after the expiry of the time limit of Art. 99(1) EPC in cases where, **prima facie**, there are clear reasons to believe that it is relevant and would in whole or in part **prejudice the maintenance of the European patent**.

However, in opposition appeal proceedings a more restrictive application of Art. 114(1) EPC is generally justified. A fresh ground for opposition should only be raised by the board of appeal or admitted into the proceedings if the board considers it already *prima facie* highly relevant and the patentee agrees to its introduction (G 10/91). For details see chapter V.A.3.2.1 h) "Fresh ground for opposition on appeal".

The wording of Art. 101(1) EPC ("at least one ground for opposition") now makes it clear that the opposition division is not obliged to examine all the grounds for opposition. Reference is also made to this chapter IV.C.3.4. "Fresh grounds for opposition".

Following G 10/91, the board in T 274/95 (OJ 1997, 99) held that, if a ground for opposition was substantiated in the notice of opposition but was **subsequently not maintained** during the opposition division proceedings (in the case in question, a statement to that effect had been made by the opponent during oral proceedings), the opposition division was under no obligation to consider this ground further or to deal with it in its decision, unless the ground was sufficiently relevant to be likely to prejudice maintenance of the patent.

In T 223/95 the appellant had argued that the opposition division should take steps of its own motion to establish by investigation the level of knowledge of the person skilled in the art. The board observed that such an investigative approach would not be consistent with the character of the post-grant opposition proceedings under the EPC, which were in principle to be considered as **contentious proceedings** between parties normally

representing opposite interests, who should be given equally fair treatment. In the board's opinion, it was unrealistic to suppose that the opposition division could seek, gather and select evidence in an entirely impartial fashion; herein lay an essential distinction between the functions of the examining divisions and the opposition divisions. It was the responsibility of the opponent himself to present to the opposition division the facts, evidence and arguments in support of the grounds on which the opposition was based.

3.4. Fresh grounds for opposition

3.4.1 General

In G 10/91 (OJ 1993, 420) the Enlarged Board held that in principle, the opposition division shall examine only such grounds for opposition, which have been properly submitted and substantiated in accordance with Art. 99(1) EPC 1973 in conjunction with R. 55(c) EPC 1973. Exceptionally, the Opposition Division may in application of Art. 114(1) EPC consider other grounds for opposition, which, prima facie, in whole or in part would seem to **prejudice the maintenance of the European patent** (see also the summary of G 10/91 in this chapter IV.C.3.3. above). This **exercise of discretion** by the opposition division is reviewed by the boards in accordance with G 7/93 (see e.g. T 1005/14).

In G 1/95 and G 7/95 ("Fresh grounds for opposition", OJ 1996, 615 and 626; consolidated proceedings), the Enlarged Board first defined the **meaning of "grounds for opposition"** within the framework of Art. 100 EPC, and paragraph (a) in particular, as well as in the light of G 10/91 (OJ 1993, 408 and 420 – see also summary of G 10/91 in this chapter IV.C.3.3.). It noted that the function of Art. 100 EPC is to provide a limited number of legal bases i.e. a limited number of objections, on which an opposition can be based, all "grounds for opposition" in Art. 100 EPC having their counterparts in other articles of the EPC which have to be met during the procedure up to grant. Whereas the grounds in Art. 100(b) EPC and 100(c) EPC each relate to a separate and clearly delimited legal basis for an opposition, the totality of the articles (Art. 52 to 57 EPC) within the meaning of Art. 100(a) EPC constitute a collection of different objections to the maintenance of the patent.

The Enlarged Board had, in G 10/91, explained that, in application of Art. 114(1) EPC, an opposition division may introduce a ground for opposition not covered by the notice for opposition, either of its own motion or upon application by an opponent, if such a ground is considered sufficiently relevant. If an opposition division does introduce such a ground into the proceedings before it, it will of course decide whether such ground prejudices the maintenance of the patent, in the decision that it issues. The Enlarged Board in G 10/91 had first used the term "a fresh ground for opposition" in the context of considering the proper application of Art. 114(1) EPC during opposition appeal proceedings, and the term as used there must be interpreted as intended to refer to a **new legal basis for objecting to the maintenance of the patent**, which was neither raised and substantiated in the notice of opposition nor introduced by the opposition division.

In G 1/95 (OJ 1996, 615), the Enlarged Board went on to hold that, in a case where a patent had been opposed on the grounds set out in Art. 100(a) EPC, but the opposition

had only been substantiated on the grounds of lack of novelty and lack of inventive step, the ground of unpatentable subject-matter based on Art. 52(1) and (2) EPC was a fresh ground for opposition and accordingly could not be introduced into the appeal proceedings without the agreement of the patentee.

In G 7/95 (OJ 1996, 626), it was held that in a case where a patent had been opposed under Art. 100(a) EPC on the ground that the claims lacked an inventive step in view of documents cited in the notice of opposition, the ground of lack of novelty vis-à-vis the said documents based on Art. 52(1) and 54 EPC was a fresh ground for opposition and accordingly could not be introduced into the appeal proceedings without the agreement of the patentee. However, the allegation that the claims lacked novelty in view of the closest prior art document could be considered in the context of deciding on the ground of lack of inventive step.

In T 13/15 the board noted that, when deciding whether to admit a new ground for opposition, the criterion of prima facie relevance had to be applied by the opposition division (see G 9/91). However, there was no obligation for an opposition division to apply the principle of prima facie relevance in case of a new line of attack which was within the framework of a ground for opposition and which was based on a document which was already in the proceedings.

In T 1340/15 the appellant argued that "prima facie" was to be understood as "at first glance" and that the legal question of whether or not the granted claims were covered by the original disclosure of the application (Art. 100(c) EPC) could not be solved prima facie. The board considered that following G 10/91 the opposition division only had to determine if there were, prima facie, clear reasons for considering the issue of added matter. The "prima facie" test was not to be interpreted so narrowly as to mean that it must be possible to definitely conclude "at first glance" that Art. 123(2) EPC was actually infringed. In the case at hand, in view of the evident ambiguity of the language of the relevant passage, the opposition division had a valid reason for admitting the new ground.

According to the board in T 514/04, the lack of novelty objection originally raised against claim 5, relating to a process for the preparation of a product, **did not extend to the products obtained from this process**, including the products of claims 1 to 4, and that consequently the lack of novelty objection raised against claims 1 to 4 for the first time before the board was a fresh ground for opposition.

In T 1959/09 the patentee (respondent) had requested the board to refer to the Enlarged Board of Appeal the question whether an existing ground for opposition **raised in respect of a different independent claim** amounts to a fresh ground of opposition as set out in G 10/91. In this respect, reference was made to T 514/04 (see above), where the board had stated that the extent and ground for opposition mentioned in R 55(c) EPC 1973 (R 76(2)(c) EPC) were connected in the sense that a specific claim(s) is/are objected to under a specific ground or grounds. The patentee argued that it was inadmissible without the approval of the patentee to extend the opposition over and above this basic concept which defined both the extent to which the patent was originally opposed (cf. G 9/91) and the grounds originally submitted with respect to subject-matter opposed under Art. 99

(1) EPC and R. 55(c) EPC 1973 (cf. G 10/91). The board did not recognise the necessity for such a referral since the ground for opposition pursuant to Art. 100(c) EPC as well as the question whether the requirements of Art. 123(2) EPC were met were clearly considered in the impugned decision. In addition, the board distinguished the present case, where claims 1 and 17 of the main request both belonged to the same category and virtually included the same subject-matter, from the case in T 514/04, where the question posed was whether a ground for opposition raised against a claim to a process applied equally to a claim to a product produced by said process. Hence, T 514/04 had no bearing on the case at issue.

The board noted in passing that there was no basis in G 10/91 for the general assumption that a ground for opposition raised against an independent claim may not subsequently be raised by the opponent against another independent claim, falling within the scope of the opposition. According to the board, T 514/04 neither mentioned nor elucidated the relevant passages in G 10/91 which supported that assumption. Actually, G 10/91 appeared to regard a new ground for opposition as being a "ground for opposition not covered by the statement" pursuant to R. 55(c) EPC 1973, no indication being given in that decision which would justify the inference that this should be construed far more broadly as meaning any ground for opposition in respect of a specific given claim which was not covered by the statement pursuant to R. 55(c) EPC 1973 (R. 76(2)(c) EPC).

3.4.2 Objections of lack of novelty and lack of inventive step

In T 135/01, the board took the view that the mere observation in the course of an opposition procedure, whether by a party or the opposition division, that the subject-matter of a claim was new having regard to the prior art did not mean that **lack of novelty** was thereby introduced **as a ground for opposition**. Thus an assessment of inventive step generally began with a determination of the point of novelty, which implied a finding that the subject-matter of the claim was new. Treating such a routine affirmation of novelty as introducing the opposition ground of lack of novelty would be tantamount to including the latter ground as an invariant concomitant of the opposition ground of lack of inventive step, which would be contrary to decision G 7/95 (OJ 1996, 626 – see in this chapter IV.C.3.4.1).

If a patent has been opposed on the grounds of lack of novelty and lack of inventive step and if only the ground of novelty has been substantiated, a specific substantiation of the ground of lack of inventive step is not necessary. Under such circumstances a specific substantiation of the ground of lack of inventive step is not even generally possible since – given that novelty, i.e. the presence of a difference between the claimed subject-matter and a prior art, is a prerequisite for determining whether an invention involves an inventive step in view of that prior art – this would contradict the reasons in support of lack of novelty. Therefore, the objection of lack of inventive step does not constitute a fresh ground for opposition and can therefore be examined in the appeal proceedings without the agreement of the patentee (T 597/07; see also T 131/01, OJ 2003, 115).

In T 635/06 the notice of opposition specified that the patent in suit was opposed for lack of novelty and lack of inventive step as the respective boxes of the standard EPO form had been crossed and as the notice explicitly indicated both grounds. In the circumstances

of the case it was not possible for the opponent to substantiate the ground of lack of inventive step by any analysis going beyond its arguments against novelty. The opponent was thus limited to the position that a comparison of the disclosed composition and the claimed subject-matter revealed no distinguishing feature, the presence of which would, however, be necessary for a detailed objection to inventive step. Hence, the ground of lack of inventive step was considered by the board to be sufficiently addressed and, thus, properly raised in the notice of opposition.

In T. 620/08 the opposition was originally based on the ground of lack of inventive step alone but, later in the opposition proceedings, the opponent submitted documents and arguments that the subject-matter of the patent lacked novelty. In its decision, the opposition division set out in detail the reasons why it considered that the subject-matter of the patent was novel over these documents, which then led to its decision not to admit the late-filed ground for opposition. The patentee argued before the board of appeal that, since it had not been admitted into the proceedings by the opposition division, the objection of lack of novelty was a fresh ground for opposition which could not be introduced without the agreement of the patentee. Citing T. 986/93 (OJ 1993, 215), the board took the view that the term "fresh ground of opposition" in G. 10/91 meant a ground which is relied upon for the first time in appeal proceedings. This, however, was not the case here. Furthermore, a board of appeal was not barred from considering a late-filed ground for opposition which had been disregarded by the opposition division, if it was of the opinion that the opposition division exercised its discretion wrongly in this respect.

3.4.3 Grounds raised against amended claims

Amendments must be examined fully for compatibility with the EPC (Art. 101(3) EPC; see also in this chapter IV.C.5.2.). Thus, where the respondents (opponents) first raise an objection under Art. 100(b) EPC during the appeal proceedings to an amended claim, the appellants cannot refuse permission to discuss the new ground (T. 27/95).

Where amended claims were introduced in the opposition proceedings there could be no objection to the opponent's submitting new citations and new arguments against the new claims that challenged inventive step for the first time (T. 623/93). The examination by the opposition division of a new submission justified in this way was in keeping with G. 9/91 (OJ 1993, 408, point 19 of the Reasons).

In T. 922/94, the board recalled that Art. 102(3) EPC 1973, R. 66(1) EPC 1973 (Art. 101(3)(a), R. 82, and R. 100(1) EPC) conferred wide powers upon the boards to consider all possible objections under the EPC, pleaded or not pleaded, that might arise from an amendment of the claims originally filed. In case objections concerning the requirements of Art. 123(2) EPC were not expressly pleaded under R. 55(c) EPC 1973 (R. 76(2)(c) EPC), but formed part of the opposition division's decision, the objection under Art. 123(2) EPC formed part of the legal framework of the decision under appeal and the patentee (appellant) could not rely on G. 10/91 for its request not to admit this ground into the appeal proceedings (see T. 227/88, OJ 1990, 292 and T. 1848/12).

In T 693/98 the board dealt with the question as to whether, on the proper interpretation of Art. 102(3) EPC, the fact that an amendment to the claims has been made in opposition proceedings opens the possibility for an opponent to raise an objection under Art. 123(2) EPC to all the amendments to the claims including those made before the patent was granted, even if such objection was not originally raised and substantiated as a ground for opposition. Citing G 10/91 (OJ 1993, 420, point 19 of the reasons) the board concluded that only the amendments made during opposition or appeal proceedings, not those made before grant, must be examined for compliance with the requirements of the EPC (see also T 301/87, OJ 1990, 335).

The introduction of a feature into an independent claim, which feature was present in the claims and in the description as granted, could not be considered as an amendment which legitimated the admittance of Art. 100(b) EPC as a fresh ground of opposition, which required that a European patent as a whole had to disclose the invention in a manner sufficiently clear and complete for it to be carried out by a person skilled in the art (T 1053/05; cf. T 739/08 and T 565/13).

3.4.4 Scope of examination of new grounds for opposition by opposition division

In T 736/95 (OJ 2001, 191) the ground referred to by the appellant under Art. 100(c) EPC had not been raised in the notice of opposition. The opposition division had decided not to admit the newly submitted ground, without giving the parties any indication that it considered it to be less pertinent. Having regard to G 10/91 (OJ 1993, 420) and G 1/95 (OJ 1996, 615), the board held that the department of first instance at least had to examine whether a fresh ground was **relevant** and could therefore prejudice maintenance of the patent. Since it did not do so, but based its refusal to admit the ground only on the fact that it had been raised late, the opposition division deprived the appellant of the opportunity to have the relevance of this ground, and thus its admissibility, examined on appeal.

According to the board in T 520/01, where a ground was substantiated within the opposition period and the party which had raised the ground neither appeared at the opposition oral proceedings nor withdrew the ground, the ground had to be dealt with by the opposition division and could be taken up by other appellants in subsequent appeal proceedings.

In T 433/93 the board held that, in all normal cases, if an opposition division decided to introduce a new ground for opposition into the proceedings in addition to the ground(s) for opposition raised and substantiated in the notice of opposition, this should be done in writing **as early as possible** in the proceedings. The written notification to the patent proprietor from the opposition division informing the proprietor that a new ground for opposition would be introduced into the proceedings should at the same time ensure that the proprietor was informed not only of the new ground for opposition (i.e. the new legal basis for the opposition), but also of the legal and factual reasons (i.e. its substantiation) that would in effect substantiate the new ground which would lead to a finding of invalidity and revocation, so that the proprietor was fully informed of the case which he had to meet, and had a proper opportunity to present comments in reply. If, in a very exceptional case, an opposition division decided for the first time during oral proceedings that a new ground

for opposition should be introduced, it would in principle be appropriate, even during oral proceedings, for the opposition division to notify the proprietor in writing both of the introduction of the new ground and of the legal and factual reasons which substantiated such a new ground. In this way, possible misunderstandings would be avoided, and the notification would be part of the written file record of the case.

3.4.5 Examination of fresh facts and evidence related to a fresh ground

In **T 1002/92** (OJ 1995, 605) the board stated that, when considering the admissibility of a further ground for opposition not covered by the notice of opposition after expiry of the opposition period, both before an opposition division and before a board of appeal, the Enlarged Board (**G 10/91**, OJ 1993, 420) was necessarily implicitly considering the admissibility of such a fresh ground in combination with at least an indication of the **fresh facts and evidence** intended to support it. The mere stating of a fresh ground without any indication of the fresh facts, evidence and argument supporting it would obviously be inadmissible, either within or after expiry of the opposition period. The board then went on to conclude that it would be illogical to have one criterion for the admissibility of late-filed new facts, evidence and arguments in combination with a fresh ground, and a different criterion for judging the admissibility of late-filed new facts, evidence and arguments in support of a ground for opposition already covered by the opposition statement. Hence, in the board's view, it followed that the principles set out by the Enlarged Board in the opinion **G 10/91** as underlying the admissibility of fresh grounds for opposition, were also generally applicable to the admissibility of late-filed new facts, evidence and arguments intended to support grounds for opposition already covered by the opposition statement. For further details on examination of fresh facts and evidence, see in this chapter **IV.C.4**. "Late submissions" below.

3.4.6 Opportunity to comment on new grounds for opposition

Art. 113(1) EPC, in which the requirement that the parties be heard is enshrined, provides that decisions of the EPO may only be based on grounds or evidence on which the parties have had an opportunity to present their comments. The word "grounds" is interpreted as referring to the **essential reasoning, both legal and factual** (see e.g. **T 951/92**, OJ 1996, 53; **T 433/93**, OJ 1997, 509). See also in this chapter **IV.C.6.5**. "Opportunity to present comments" below.

Thus if an opposition division wishes to introduce a new ground of opposition into the proceedings in addition to the ground(s) substantiated in the notice of opposition, either of its own motion or upon request by an opponent, the patent proprietor must be informed (normally in writing) not only of the new ground of opposition (i.e. the new legal basis for the opposition), but also of the essential legal and factual reasons which could lead to a finding of invalidity and revocation. Thereafter the patent proprietor must have a proper opportunity to present comments in reply to the new ground and its substantiation (**T 433/93**, OJ 1997, 509, see also **T 1283/11**).

In **T 656/96**, the opponent had based his opposition solely on the invention's purported lack of inventive step. However, lack of novelty was advanced as a ground for opposition

for the first time in the oral proceedings and in the absence of the patent proprietor, who had previously informed the division that he would not be attending oral proceedings. The opposition division revoked the contested patent, even though it had not originally raised a novelty objection in its communication under Art. 101(2) EPC 1973 (Art. 101(1) EPC). In such circumstances, the board referred to the case law of the Enlarged Board of Appeal distinguishing between the opposition ground of lack of novelty and that of lack of inventive step (G 7/95, OJ 1996, 626) and recognising the opposition division's competence to consider, exceptionally under Art. 114(1) EPC, fresh grounds for opposition which, *prima facie*, appear, either in whole or in part, to prejudice maintenance of the European patent (G 10/91, OJ 1993, 420). In the case in hand, the board held that, particularly in the light of the opinion on novelty expressed in the communication from the opposition division, no *prima facie* case against maintenance of the patent could be gathered from the file, so that the appellant had been entitled to consider that the question of novelty would play no part before the opposition division. The appellant must therefore have been **taken by surprise** by the decision taken in his absence by the opposition division at the oral proceedings to revoke the patent on the grounds of lack of novelty, grounds on which he had not been asked, nor had any reason, to express an opinion.

In T 270/94, the board found that the opposition division had infringed Art. 113(1) EPC by preventing opponent 1, who had based its opposition solely on lack of novelty, from commenting on an opposition ground of lack of inventive step duly submitted by opponent 2 and communicated to all the parties in accordance with R. 57(2) EPC 1973 (R. 79(2) EPC). Furthermore, the board observed that Art. 114(2) EPC, relied on by the opposition division, was not applicable to the case, because it indicated only that the EPO could disregard late-filed facts or evidence, whereas the case in hand involved arguments put forward by one of the parties to the proceedings in relation to a ground for opposition submitted in due time by another party.

In T 1164/00 the board held that the opposition division was in principle entitled to introduce a new ground for opposition even at the late stage of oral proceedings, since, in its view, it was apparent that the patent in suit did not comply with the requirements of Art. 83 EPC. However, in this case, the annex to the summons to oral proceedings did not contain any indication of the opposition division's intention to introduce a new ground for opposition, which meant that the appellant was made aware of the factual and legal reasons supporting the introduction of this new ground for the first time during the oral proceedings. The board therefore concluded that the appellant had not been notified in writing as early as possible and, not having been informed beforehand of the factual and legal reasons, had been taken by surprise and had not had a fair opportunity during the oral proceedings to prepare a proper defence against this new objection. In those circumstances, the opposition division **ought to have adjourned the oral proceedings** in order to give the appellant sufficient time, in accordance with Art. 113 EPC, to prepare a suitable defence against the new objections (see also T 433/93, OJ 1997, 509; T 817/93; T 1083/01; T 64/03 and T 27/14).

In T 2362/08, the board had to determine whether the patent proprietors' right to be heard according to Art. 113(1) EPC had been safeguarded with regard to the decision of the opposition division on insufficiency of disclosure. While the ground of insufficiency

appeared in the notice of opposition, the objections of the opponents were merely based on two lines of argument. No further submission on insufficiency was filed by the opponents in writing and, before the oral proceedings took place, no further issue was raised by the opposition division. Specifically, in its communication accompanying the invitation to oral proceedings, the opposition division did not agree with the objections of the opponents, placed the burden of proof on them to establish that the skilled person would be unable to carry out the invention and noted that the opponents had not submitted any experimental evidence. In its decision on insufficiency, however, the opposition division developed a completely different line of argument on a substantive issue of insufficiency which was raised for the first time at the oral proceedings. Furthermore, the patent proprietors had to face an **unexpected reversal of opinion** from the opposition division, which discharged the opponents of the burden of proof, thereby shifting it to the patent proprietors. The board could not consider the simple formal hearing of the patent proprietors on the issue at the oral proceedings to have been a proper opportunity for them to present their comments. By presenting the new legal and factual framework only at the oral proceedings and by coming to a final decision on the issue without first having given the patent proprietors a proper opportunity to respond, the opposition division did not respect their right to be heard.

4. Late submissions

4.1. Discretionary decision

Under Art. 114(1) EPC, the EPO is obliged to examine the facts of its own motion, and in doing so, it is not restricted to the facts, evidence and arguments provided by the parties and the relief sought. In T 223/95 the board emphasised the **character of the post-grant opposition proceedings** under the EPC, which were in principle to be considered as contentious proceedings between parties normally representing opposite interests, who should be given equally fair treatment. It was the **responsibility of the opponent** himself to present to the opposition division the facts, evidence and arguments in support of the grounds on which the opposition was based.

According to Art. 114(2) EPC, however, the EPO may disregard facts or evidence which are not submitted in due time by the parties concerned. Interpretation of Art. 114 EPC therefore requires an analysis of the inter-relationship between its paragraphs 1 and 2. In T 122/84 (OJ 1987, 177) the board summarised the historical development of the principle of ex officio examination with regard to late submission on the basis of the "travaux préparatoires" to the EPC 1973. A solution it found compatible with this principle was to leave it to the **discretion** of the department concerned whether or not to examine facts or evidence not submitted in due time, rather than ruling out such examination altogether.

For appeal proceedings the boards have highlighted that a rigid rule excluding all new evidence might lead to injustice and unfairness in some cases and would not be compatible with the principles of procedural law generally recognised in the Contracting States (J 5/11, J 6/14, T 598/13). That applies a fortiori to opposition proceedings.

The discretionary power under Art. 114(2) EPC is clearly conferred on the EPO departments only to ensure that proceedings run smoothly and to forestall tactical abuse (T 273/84, OJ 1986, 346).

For proceedings at first instance, R. 116(1) EPC provides that, when the summons to oral proceedings is issued, a final date for making written submissions in preparation for the oral proceedings must be fixed. New facts and evidence submitted after this date need not be considered, unless admitted on the grounds that the subject of the proceedings has changed. This provision does not act as an absolute bar to admitting late submissions; instead, its very wording shows that it leaves **room for discretion** (T 798/05; see also T 2102/08, T 1253/09).

4.2. Sufficient reasoning

According to the consistent case law of the boards of appeal, although Art. 114(2) EPC gives an opposition division discretion not to consider facts and evidence not submitted in due time, the division is obliged to give reasons for its decision; it is not enough merely to cite their late submission (T 705/90, T 214/01, T 1855/13). Even if submissions are late-filed, their admission remains a procedural aspect over which the opposition division can exercise discretion. As a consequence, the decision needs to show the reasoning why the discretion was exercised one way or the other (T 1855/13).

In T 2097/10, the board found that the brief statement of reasons given by the opposition division – to the effect that documents D18 and D19 were relevant and not especially voluminous – was sufficient. Moreover, it was not apparent from the minutes that the patentee's representative had been denied an opportunity to comment on those documents, or that he had asked for more time to prepare such comments but his request had been refused.

In T 544/12 the board pointed out that a **bare assertion** of a lack of prima facie relevance was not by itself sufficient reasoning.

4.3. Concept of "in due time"

The discretionary power pursuant to Art. 114(2) EPC applies to facts and evidence filed late (see e.g. T 502/98, T 986/08, T 66/14). What is meant by "in due time" for the purposes of Art. 114(2) EPC requires interpretation.

The parties in inter partes cases are subject to a particular **duty to facilitate due and swift conduct of the proceedings**, in particular by submitting all relevant facts, evidence, arguments and requests as early and completely as possible. This duty is reflected in the EPC provisions governing the handling of late submissions: Art. 114(2) EPC as a general provision; R. 137 EPC for the grant procedure; and R. 76(2)(c) and R. 80 EPC for the opposition procedure; R. 116(1) EPC concerning the final date for making written submissions in preparation for oral proceedings (for appeal proceedings, see the Rules of Procedure of the Boards of Appeal; see chapter V.A.1.2. below).

The boards have stressed that opponents are required to submit all their objections during the opposition period, setting each out in full (T.117/86, OJ 1989, 401). Under R. 76(2)(c) EPC, the notice of opposition must contain a statement of the extent to which the European patent is opposed and of the grounds on which the opposition is based, as well as an indication of the facts and evidence presented in support of these grounds.

Notwithstanding the above, according to the case law of the boards of appeal, not only the facts and the evidence submitted by the opponent within the nine-month period to file an opposition and those possibly submitted by the patent proprietor within the four months given for replying to the grounds of oppositions are "filed in due time". The filing of facts and evidence within subsequent periods of time may also be in "due time" when it occurs in accordance with the principle of procedural economy and, therefore, when the filing party has observed a **fair degree of procedural vigilance** (T.502/98 referring to T.201/92, T.238/92, T.532/95 and T.389/95; see also e.g. T.574/02).

Accordingly, new facts, documents and/or evidence are regarded as having been filed on time if their filing was occasioned by an argument or a point raised by another party so that, under the circumstances of the case, they could not have been filed earlier. According to T.502/98 this may occur, for instance, when certain facts or evidence became relevant only after a party has submitted an unforeseeable amendment of the claims or a new experimental test report or has challenged for the first time the existence of common general knowledge. In such cases, a diligent party normally has no obligation to retrieve and file such facts and evidence before such action of the other party (cited e.g. in T.986/08). See also T.623/93, where the board held that, where amended claims were introduced in the opposition proceedings there could be no objection to the opponent's submitting new citations and new arguments against the new claims (with reference to G.9/91, OJ 1993, 408, point 19 of the Reasons).

Therefore, the filing of new facts and evidence in direct response to new submissions by the other party (T.389/95, T.320/08, T.1698/08, T.1949/09), or at the earliest time possible in the proceedings (T.468/99, T.2551/16), or promptly after their relevance has become apparent (T.201/92, T.502/98, T.568/02, T.574/02, T.986/08), has been considered to be "in due time" (see also T.156/84, OJ 1988, 372, but also e.g. T.1734/08 and T.733/11, which considered submissions filed outside the period specified by Art. 99(1) EPC to be late-filed, without considering the observance of procedural vigilance).

In T.117/02 the board stated that in the case of a request to introduce late-filed submissions (here: a new ground of opposition and new arguments and evidence) the **right to be heard** should be granted before those late-filed submissions were rejected. In summary, an opponent must be given an opportunity to respond in an appropriate way when the subject of the proceedings has changed, for example due to amendment. Depending on the nature of the amendment this may involve the filing of further documents (T.366/11).

In T.2165/10, the board shared the respondent's view that the appellant (opponent) should have included an indication of the alleged public prior use submitted later in its notice of opposition and indicated/filed all evidence in its possession at that time. It did not accept

the appellant's argument that the documents in its possession at the time of filing the opposition were considered by the appellant not to be enough to constitute a complete chain of evidence.

In T 628/14 the board recalled that, according to the established case law, R 116(1) EPC should not be construed as an invitation to file new evidence or other material departing from the legal and factual framework of issues and grounds pleaded as established with the notice of opposition. Also, the fact that the opposition division expressed a preliminary opinion in its communication did not necessarily justify the filing of new evidence, unless this was in reaction to new aspects raised in the communication.

The board in T 66/14 observed that, according to case law, evidence first submitted by an opponent after expiry of the nine-month period under Art. 99(1) EPC was generally to be regarded as late for the purposes of Art. 114(2) EPC, and that R 116(1), fourth sentence, EPC was not to be understood to mean that a fresh period during which new evidence could be filed without being treated as late was triggered on issue of the summons to oral proceedings (T 841/08). However, there may be cases in which special circumstances justify an opponent's not filing evidence until after the nine-month period under Art. 99(1) EPC and in which, therefore, that evidence is **not** to be treated as late for the purposes of Art. 114(2) EPC (T 532/95). In particular, new evidence submitted after the date referred to in R 116(1) EPC is to be admitted if the **subject of the proceedings has changed**.

4.4. Documents cited in the patent specification or search report

A document considered during the examination procedure is **not automatically** scrutinised in opposition or opposition appeal proceedings, even if it is quoted and acknowledged in the contested European patent (T 155/87, T 198/88, OJ 1991, 254; T 484/89, T 652/99). Generally, it has to be relied upon by a party to be considered by the opposition division.

According to T 291/89 this also applied to a document cited in the search report. In T 111/04 the board agreed with the case law and considered that this applied also to evidence filed during the grant proceedings.

In T 536/88 (OJ 1992, 638) the board pointed out, however, that the document cited and acknowledged in the description of the contested patent itself as the closest prior art and on the basis of which the technical problem in the description was formulated remains an exception. Such a document also forms part of the opposition or opposition appeal proceedings even if it is not expressly cited within the opposition period (T 541/98, T 652/99, T 454/02, T 86/03).

In T 140/00 although document (7) had been cited in the specification of the patent in suit, it had merely been acknowledged as conventional background art; it was not considered therein as essential or as the closest prior art and starting point of the claimed invention. Therefore, that document did not automatically form part of the appeal proceedings and, thus, was late-filed evidence subject to a discretionary decision of the board.

In T.234/90, T.300/90 and T.501/94 (OJ 1997, 193) the board held that a document indicated in a citation as the closest prior art for the purpose of elucidating the technical problem set out in the citation did not automatically form part of the opposition or opposition appeal proceedings.

In the board's view in T.387/89 (OJ 1992, 583), neither an opposition division nor a board of appeal had any duty to reconsider the relevance of documents cited in the European search report if such documents had not been relied upon by the opponents to support their grounds of opposition. Under Art. 114(1) EPC 1973, however, an opposition division or appeal board could introduce new documents into the opposition proceedings if it had good reason to suppose that the documents could affect the outcome of the decision (T.420/93, T.530/00).

4.5. Criteria for exercise of discretion

4.5.1 Different approaches

It is at the opposition division's discretion whether to admit late-filed documents (Art. 114(2) EPC; see chapter IV.C.4.1. above). According to settled case law, it must first examine them as to their relevance. Late-filed facts and evidence and supporting arguments should only exceptionally be admitted into the proceedings if, *prima facie*, there are reasons to suspect that such late-filed documents prejudice the maintenance of the European patent in suit (see, in particular, T.1002/92, OJ 1995, 605; see also T.1643/11, T.2443/12; and in this chapter IV.C.4.5.3 "Prima facie relevance").

As to whether and, if so, to what extent opposition divisions can or must consider other criteria too, with the result that even *prima facie* relevant documents may not be admitted in certain cases, the boards have taken various different approaches.

According to one of those approaches, the principle of examination by the EPO of its own motion (Art. 114(1) EPC) takes precedence over the possibility of disregarding facts or evidence not submitted in due time. This follows from the EPO's duty towards the public **not to grant or maintain patents which it is convinced are legally invalid** (T.156/84, OJ 1988, 372; T.2542/10; T.1272/12). Accordingly, the main criterion for deciding on the admissibility of late-filed documents and evidence is their **relevance**, i.e. whether they are decisive (relevant) for the outcome of the case (see T.258/84, OJ 1987, 119; T.892/98; T.605/99). Some decisions assess the relevance in relation to other documents already in the case (e.g. T.932/99, T.482/01, T.927/04; see however T.1652/08 and T.66/14 rejecting this definition). If the document is relevant it must be admitted into the case and taken into account (T.164/89, T.1016/93).

In addition, in landmark decision T.1002/92 (OJ 1995, 605) the board held that the principles set out by the Enlarged Board in G.9/91 and G.10/91 (OJ 1993, 408 and 420) with regard to the admissibility of fresh grounds of opposition (see chapter IV.C.3. above) are also generally applicable to late-filed new facts and evidence in support of grounds of opposition already presented in the notice of opposition. Accordingly, in proceedings before the opposition divisions, late-filed facts, evidence and related arguments which go

beyond the "indication of the facts, evidence and arguments" presented in the notice of opposition pursuant to R. 55(c) EPC 1973 should only exceptionally be admitted into the proceedings if, prima facie, there are clear reasons to suspect that such late-filed material would prejudice the maintenance of the European patent in suit. The board saw the consideration of relevance as the principal factor governing the exceptional admissibility of late filed new facts, evidence and related arguments in proceedings before the opposition division. For the more restrictive and stringent criteria in proceedings before the boards of appeal, see chapter V.A.4.13 below.

Many decisions have affirmed T 1002/92 (for late submissions in opposition proceedings see e.g. T 481/99, T 481/00, T 1643/11, T 2438/13, T 710/15).

However, in many earlier decisions, too, the relevance of late-filed documents was no longer viewed as being the only decisive criterion for admitting them. Other criteria, such as how late the documents were, why they had been submitted late and whether their submission constituted a procedural abuse or whether admitting the late-filed documents could lead to an excessive delay in the proceedings, were also held to be decisive (see T 534/89, OJ 1994, 464; T 17/91, T 951/91, OJ 1995, 202; T 1019/92, T 481/99, T 1182/01, T 927/04, T 1029/05, T 1485/08, T 2542/10, T 1272/12, T 1883/12, T 1271/13).

For decisions on the exercise of discretion by opposition divisions, see in this chapter IV.C.4.5.3 to 4.5.5; for "Criteria for considering late-filed facts and evidence" in appeal proceedings, see chapter V.A.4.13 below.

4.5.2 Review of discretionary decisions by the boards

The discretionary power conferred by Art. 114 EPC necessarily implies that the EPO department of first instance must have a certain degree of freedom in exercising its power. A board of appeal should only overrule the way in which a department of first instance has exercised its discretion when deciding on a particular case if it concludes that it has done so according to the wrong principles, or without taking into account the right principles, or in an unreasonable way, and has thus exceeded the proper limits of its discretion (T 640/91, OJ 1994, 918; G 7/93, OJ 1994, 775; see also chapter V.A.3.5). This rule also applies with respect to opposition division decisions on the admission of late-filed submissions (T 1209/05, T 1485/08, T 1652/08, T 1253/09, T 1852/11, T 2513/11, T 1568/12, T 1883/12, T 1271/13, T 572/14; see also chapter V.A.3.5.5). It is not the function of a board of appeal to review all the facts and circumstances of the case as if it were in the place of the department of first instance in order to decide whether or not it would have exercised such discretion in the same way (T 75/11; see however T 544/12, where the opposition division did not give sufficient reasons for its decision).

This discretionary power has to be exercised reasonably after hearing the parties, including in oral proceedings if requested (T 281/00).

4.5.3 Prima facie relevance

According to established case law of the boards of appeal, a decisive criterion for admitting late-filed documents is their prima facie relevance, see e.g. T. 1002/92, OJ 1995, 605; T. 212/91, T. 931/06 and T. 1883/12; for appeal proceedings, see chapter V.A.4.13.2.

Regarding examination as to relevance, the board explained in T. 560/89 (OJ 1992, 725) that Art. 114(2) EPC 1973 allowed the EPO to disregard documents which contained no more information than the documents filed on time and did not disclose matter which could change the outcome of the decision. According to the decision in T. 611/90 (OJ 1993, 50), the boards could reject late-filed evidence, documents and other submissions on the ground that they were irrelevant, i.e. no more "weighty" or "cogent" than those already on file. In T. 1557/05, the appellant (opponent) filed further patent documents as prior art. The board held that late-filed evidence was admissible only if it is more relevant than the evidence already on file.

In T. 1652/08, however, the board held that, in establishing whether a document was prima facie relevant, the decisive factor was **not** whether it was even more relevant than a previously filed document, but rather whether it was prima facie relevant for the outcome of the case.

In T. 2165/10, documents E1-E10, which related to an alleged public prior use, had not been admitted into the proceedings by the opposition division. The board held that the prima facie relevance test had been exercised correctly. The opposition division had considered, with regard to novelty, that E1-E10 did not disclose a number of the claimed features and, with regard to inventive step, that they did not deal with the problem underlying the contested patent. Since there was a document (D4) that related to this problem, the board could not find fault in the division's reasoning that the prior use was less relevant as the starting point.

Prima facie relevance is ascertained on the face of the facts, i.e. with **little investigative effort**, which reflects the need for procedural expediency in considering and admitting late-filed facts and evidence (T. 1883/12). The interest in procedural expediency was also expressed in the approach of T. 1557/05 not to admit late documents which, prima facie, are no more relevant than what is already on file. In this regard the board added in T. 1883/12 that relevance is decided in relation to facts to be proven, and if late documents (here: patent documents), on the face of it, are not more relevant to those facts than admitted evidence and thus appear to add nothing, it is perfectly reasonable in the interest of procedural economy not to admit them.

Citing T. 1652/08, the board in T. 66/14 confirmed that, when it came to examining a late-filed document's relevance, the decisive factor was not whether it was even more relevant than one previously filed but whether it was prima facie relevant for the outcome of the case. That could not be assessed in isolation from the submissions put forward by the party submitting it; in exercising its discretion, the opposition division had to consider what objection the late-filed document was supposed to substantiate.

In T 1485/08, the opposition division had decided not to admit the late filing (on the day of the oral proceedings) of an English translation of a Korean patent which had been filed with the grounds of opposition. The board noted that the document (Korean patent) had been filed with the notice of opposition against novelty of the patent in suit. Although not in one of the official languages of the EPO, from the use of various English terms in the description of the document it was already discernible that its subject-matter was related to the claimed subject-matter. The board was of the opinion that the opposition division in not admitting the English translation for the sole reason that it was late-filed, without having examined its relevance or considered any other criteria, did not properly exercise its discretion.

For examples of cases where the boards were satisfied that the opposition division had considered the correct criterion, prima facie relevance, and had done so in detail and in a reasoned manner, see e.g. T 1643/11, T 782/13, T 2513/11 and T 572/14.

4.5.4 Submission contrary to fair and expedient procedure

In T 1271/13 the opponent had submitted report D11, underlying a new insufficiency objection, one month before the oral proceedings and a corrected version D11a one day before the oral proceedings. The opposition division had come to the conclusion that the experiment results had not been submitted sufficiently well in advance for the proprietor to have had the opportunity to perform counter-experiments. The very late submission of D11/D11a was contrary to a fair and expedient procedure. The board found that the opposition division had based its discretionary decision not to admit D11/D11a on well-established principles and had not acted in an unreasonable way.

4.5.5 Abuse of proceedings

An abuse occurs where a party deliberately withholds documents for tactical reasons (see e.g. T 1019/92, T 724/03).

In T 17/91 the board took the view that an assertion of public prior use based on the **opponent's own activities** which is submitted after the expiry of the opposition period and in the absence of good reasons for the delay represented an abuse of the proceedings and a breach of the principle of "good faith" which all parties are expected to observe. As soon as evidence was in the possession of the opponent and it was recognisable that it could be highly relevant to the validity of the patent it should be submitted in the proceedings.

However in T 1019/92 the board held that the fact that an opponent submitted prior art material originating from itself after the end of the opposition period did not constitute an abuse of the proceedings in the absence of evidence that this was done **deliberately for tactical reasons**. Likewise, in T 481/00 the board considered that the maintenance of a prima facie clearly invalid patent as the legal consequence of the late submission of a clearly novelty-destroying prior use allegation in opposition proceedings, albeit still submitted in time to guarantee the patentee's right to be heard, would in the specific circumstances of its case amount to an inappropriate sanction without a sufficient legal

basis in the EPC or in the general principles of procedural law applicable under Art. 125 EPC.

According to the board in T.1955/13, there were good reasons not to treat an opponent's late-filed allegation of its own public prior use differently for the purposes of admissibility depending on whether it admitted to having withheld the alleged prior art deliberately or claimed simply not to have looked for it earlier. If the lateness of its prior-art search could not be explained by procedural developments that would prompt a reasonable person to search in a particular direction for the first time, the opposition division would not be committing any error in law in applying the case law on abusive withholding of prior art when it came to deciding whether to admit its allegation.

In T.154/95 the board ruled that in opposition or appeal proceedings it was basically irrelevant how an opponent came across documents or other evidence made available to the public. Thus there was nothing to stop an opponent from citing a prior use invoked in the same case by another opponent whose opposition was inadmissible because it had been filed after expiry of the opposition period.

4.6. Party entitled to rely on earlier decision

In T.1194/08 the opposition division indicated that E15, a late filed document, was accepted as a belated submission. In the oral proceedings, however, the opposition division decided to reject the document as having been filed late. In the opinion of the board, the opposition division was not entitled to reverse its admittance of the document during the oral proceedings.

In T.68/02 document D16 was discussed extensively by the respondent without objecting to its admission into the proceedings. At the start of the oral proceedings before the opposition division the respondent requested that the document not be admitted into the proceedings. The opposition division as a consequence did not admit the document. The board could not agree with the action of the opposition division in this respect. The discussion of the document by the respondent and the opposition division before the oral proceedings took place led to the normal expectation that the document was already in the proceedings.

4.7. Late submissions of new arguments

4.7.1 New arguments – definition

The Enlarged Board of Appeal defined "new arguments" in opinion G.4/92 (OJ 1994, 149) as being not new grounds or evidence, but reasons based on the facts and evidence which have already been put forward (T.131/01, OJ 2003, 115). In T.604/01, facts in the legal sense are to be understood as the circumstances and incidents of a case, looked at apart from their legal bearing. In T.926/07 the board stated (with reference to T.92/92) that facts are alleged circumstances/matters which must, where applicable, be substantiated by evidence. Arguments, by contrast, are the expositions generated when the law is applied to facts and evidence filed on time. Arguments based on facts filed on time were therefore

to be admitted at every stage of the opposition and opposition appeal proceedings. See also chapter V.A.4.10. on the late submission of new arguments in appeal proceedings.

Taking a similar line in T. 861/93, the board ruled that **decisions** referred to by a party in support of its arguments were never citations which, under Art. 114(2) EPC 1973, could be rejected as being late. Decisions to which a party referred in support of its arguments should be regarded as part of these arguments and should not be rejected as being filed late (doubted in T. 1914/12).

In T. 131/01 (OJ 2003, 115) the board considered that the reasons why, in the opponent's view, the skilled person would obviously have arrived at the claimed subject-matter with the aid of a particular DE citation constituted a new argument. This document had been **cited and analysed in the notice of opposition** and its content therefore did not constitute new facts. The board in T. 2238/15 similarly took the view that a newly submitted objection of a lack of inventive step over two citations already on file was at best a new argument. Since the contents of those citations, in so far as they were relevant for claim 1 as granted and the additional features according to the first auxiliary request, had already been analysed in the notice of opposition, they were not new facts.

The board in T. 1448/09 observed that, while reference to **common general knowledge** could be an argument, whether that knowledge actually existed was a question of fact.

According to T. 1553/07 arguments also included statements intended to rebut facts which had already been put forward (including evidence). In oral proceedings before the opposition division, the patent proprietor explained why, in its opinion, the public prior use claimed by the opponent had not been established beyond all doubt by the evidence which had been submitted late. The board did not regard the disputing of the prior use claimed by the opponent as constituting the presentation of new facts.

In T. 710/15, the opponent raised during oral proceedings before the opposition division a new objection under Art. 100(c) EPC. This ground for opposition had been previously validly invoked. The board held that in the case at issue the new objection did not introduce new facts or evidence, but merely a new argument.

According to the board in T. 1914/12, a "fact" was to be understood as a piece of (allegedly) factual information or a circumstance on which a party based its case, whereas an "argument" was a contention that it based on one or more such facts and that supported the ground it was invoking. To illustrate its point, the board gave the example of an opponent objecting that a claim lacked novelty over the disclosure in a particular paragraph of a prior-art document: the ground invoked would then be lack of novelty (i.e. an assertion that the claimed subject-matter was part of the prior art), and that ground would be based on the argument that the claimed subject-matter was disclosed in the cited paragraph of the document; the fact on which that argument, meanwhile, was based would be the document's wording, a translation or copy of the document being filed as (a piece of) evidence. The board also remarked that, while a distinction was sometimes made in the case law between an "argument" and a "line of argument", it could see no legal basis in the EPC for treating an isolated argument differently from a set of arguments.

4.7.2 Late submissions of new arguments in opposition proceedings

According to the case law of the boards of appeal, Art. 114(2) EPC provides no legal basis for disregarding late-filed arguments. Art. 114(2) EPC refers to late-filed facts and evidence ("Tatsachen und Beweismittel" in German; "faits et preuves" in French), but not legal submissions and arguments (T. 861/93, T. 386/01). Late-filed arguments cannot therefore be disregarded on the grounds that they were submitted for the first time at the oral proceedings (T. 92/92, T. 704/06). In T. 710/15 the board confirmed that Art. 114(2) EPC was not a basis for disregarding arguments not submitted in due time. For the admission of new arguments before the boards of appeal, see also T. 1914/12 citing and disagreeing with T. 1069/08 and T. 1621/09, and chapter V.A.4.10.1.

In T. 92/92 the board held that the EPC in the English version made a clear distinction between "facts and evidence" on the one hand and "arguments" on the other in Art. 114(1) EPC 1973 and that Art. 114(2) EPC 1973 did not refer to arguments. Art. 114(2) EPC 1973 was to be interpreted such that the parties' right to argue their case was not unduly restricted.

Under R. 71a EPC 1973 (R. 116 EPC) new facts and evidence do not need to be considered after the time stated in the summons, unless they are admitted on the grounds that the subject of the proceedings has changed. R. 71a EPC 1973, and Art. 114(2) EPC 1973 on which it is based, refer to late-filed facts and evidence but not to new arguments, which can be made at any stage in the proceedings. In accordance with the jurisprudence, therefore, new arguments in support of facts already adduced have to be considered in accordance with R. 71a(1) EPC 1973, even if presented after the date specified in the summons, and equally cannot be rejected by citing Art. 114(2) EPC 1973 (T. 131/01, OJ 2003, 115; T. 926/07, T. 1553/07).

In T. 2238/15 too, the board (citing T. 92/92) endorsed the view that the EPC distinguished clearly between "facts and evidence" and "arguments" and provided no basis for refusing to admit late-filed arguments. The discretion under Art. 114(2) EPC to disregard late-filed facts and evidence therefore did not extend to arguments, and that applied equally to new arguments not submitted until after the date fixed in the summons to oral proceedings (see R. 116 EPC).

5. Amendments in opposition proceedings

5.1. Admissibility of amendments

5.1.1 Principles

The extent to which amendments may be admissible in opposition proceedings was discussed in T. 1149/97 (OJ 2000, 259). Once a decision to grant has been issued, the European examination procedure is closed and its results become binding on the applicant and the EPO in that no further amendments may be made. However, if an opposition is filed, the patent in suit may be amended. Such amendments are not left to the general discretion of the patent proprietor, since opposition proceedings are not a continuation of

the examination proceedings (G. 1/84, OJ 1985, 299). However, the patent proprietor may, pursuant to R. 80 EPC (R. 57a EPC 1973) – without prejudice to R. 138 EPC (cf. R. 87 EPC 1973) – react to the opponent's objections by amending the description, claims and drawings, provided that the amendments are **occasioned by the grounds for opposition** specified in Art. 100 EPC, even if the respective ground has not been invoked by the opponent. In addition, amendments occasioned by national rights of earlier date are admissible pursuant to R. 138 EPC (see also in this chapter IV.C.5.1.2).

According to the board, those regulations could be seen to reflect the formal aspects of a procedural cut-off effect associated with the grant of a patent in the opposition phase. Compliance with the restrictions imposed by R. 57a and 87 EPC 1973 (R. 80 and 138 EPC) was thus a prerequisite for any further considerations as to possible substantive cut-off effects for amendments after grant during opposition proceedings which, in the board's view, could only be based on Art. 123(3) EPC (see also chapter II.E.2.3.2).

In T. 750/11 the board observed that amendments under R. 80 EPC were formally admissible so long as they could be regarded as a **serious attempt** to overcome a ground for opposition. So an amendment further limiting the subject-matter of an independent claim complied with R. 80 EPC in formal terms. Whether it actually overcame any ground for opposition was a separate matter to be settled as part of the ensuing substantive examination.

According to T. 323/05, which concerned a request to adapt the description, R. 57a EPC 1973 (R. 80 EPC) establishes a limit to the amendments which can be made to the patent in suit. Art. 84 and R. 57a EPC 1973 are the two provisions which have to guide the patent proprietor when he is invited by the opposition division to adapt the description. In other words, the amendments have to be appropriate and necessary, and nothing more.

In T. 993/07 the board recalled that R. 80 EPC is *lex specialis* for amendments during opposition proceedings, analogous to R. 137 EPC for amendments during examination proceedings. The board interpreted the rule to mean that in opposition proceedings the proprietor's right to amend the patent, e.g. the claims as granted, is limited to making amendments in order to overcome an objection based on a ground for opposition as specified in Art. 100 EPC, thereby possibly avoiding revocation of the patent. In line with this interpretation, the board stated that opposition proceedings were not to be understood as an opportunity for the proprietor to fix any, from his perspective, shortcomings in the patent, such as an insufficient number of independent and/or dependent claims in order to define all commercially valuable embodiments. The fact that the addition of one or more independent and/or dependent claims may improve the fall-back positions in any future revocation proceedings before a national court was clearly not the scope and purpose of either R. 80 EPC or the opposition procedure. The board also observed that a limitation procedure pursuant to Art. 105a EPC is not subject to the same requirement as set out in R. 80 EPC.

In T. 359/13 the board stated that R. 80 EPC did not place any restriction on the form of amendments a patent proprietor may (seek to) make to address objections raised (here: reformulating the product claim as a use claim). On the contrary, a patent applicant or

proprietor was free to draft proposed amendments to the specification in any manner considered appropriate. Even in the situation considered in G. 1/99 where the requirements of the principle of no reformatio in peius imposed restrictions on the manner in which the claims may be amended, an opponent as appellant had no right to prescribe the form of the amendments which the patent proprietor as respondent may make (see T. 23/04).

In T. 2290/12, the appellant had used parts of a claim found by the opposition division to lack inventive step in a series of new independent claims which also included features taken from the description. The board considered such an approach legitimate, provided it did not amount to an abuse of procedure and the number of independent claims was not unreasonably high. Since lack of inventive of step was a ground for opposition, R. 80 EPC had in any event not been infringed.

The opposition division's decision to admit into the proceedings an auxiliary request (main request in the appeal proceedings) filed during the oral proceedings was challenged before the board in T. 491/09. In its decision the board concluded that the opposition division had properly exercised its **discretion according to R. 116(1) and (2) EPC** by taking into account the following criteria:

a) prima facie allowability: contrary to the opponent's/appellant's argument that the opposition division should have examined the prima facie clarity of the claims, it was evident from the minutes of the oral proceedings that no such objections had been raised. Also, the board could not share the appellant's view that the opposition division should ex officio have examined the entire claim for clarity, following T. 1459/05 and T. 656/07 (on this issue, see now G. 3/14, OJ 2015, A102, in this chapter IV.C.5.2.2). Apart from the fact that T. 656/07 was issued after the oral proceedings at the opposition stage and that, in general, the opposition division could hardly be expected to receive knowledge of any single decision immediately after its deliverance, the board could not find any fault with the opposition division not following a decision which expressly stated that it concerned a very particular case and warranted a departure from otherwise consistent case law.

b) procedural expediency/abuse of procedure: the board recognised that the respondent (patent owner) needed quite some prompting to finally come up with its late-filed request which addressed the point under discussion during the oral proceedings before the opposition division, but could not see an abuse of procedure therein, nor an unwarranted advantage for the respondent.

c) reasonable expectation that the opponents familiarise themselves with the proposed amendments in the time available: the minutes revealed that the oral proceedings had been conducted properly and towards the resolving of the outstanding issues, giving the opponent ample opportunity to familiarise itself with the amended subject-matter.

For another decision approving these criteria, see e.g. T. 500/15, which also elaborates on the criterion of complexity of amendments as well as the need to give individualised reasons, taking into account the concrete request.

In T.754/16 the board emphasised that for the opposition division to have discretion not to admit new requests, these had to be late filed in the first place (see in this chapter IV.C.5.1.3 below).

Since the EPC does not provide for surrender of the patent in opposition proceedings, so that – even if they issue an express statement to that effect – patent proprietors cannot surrender their patent either wholly or in part during such proceedings, they can merely request that the patent be amended. In requesting that the patent be maintained in a limited form, a patent proprietor is merely attempting to delimit it to meet objections raised by the EPO or the opponents and **does not**, by virtue of such limitation, **irrevocably surrender subject-matter** not covered by the request as limited. In principle, the patent proprietor is free to withdraw such a request at any time during opposition proceedings or to amend it subsequently and, in particular, to resume a defence of the patent as granted, unless this would constitute an abuse of procedural law or the proprietor is prevented from doing so by the prohibition of reformatio in peius (see T.123/85, OJ 1989, 336; T.296/87, OJ 1990, 195; T.155/88; T.225/88; T.217/90; T.715/92; T.752/93 of 16 July 1996; T.1037/96; T.445/97; T.473/99; T.880/01; T.794/02; T.934/02; T.1213/05; T.1394/05; T.1150/11).

According to the case law in T.123/85 (OJ 1989, 336), there is nothing to stop patent proprietors who have defended only a limited version of their patent in opposition proceedings from seeking to reinstate the patent as granted in any subsequent appeal proceedings. However, this is subject to the conditions laid down in G.9/92 and G.4/93 (OJ 1994, 875; accordingly, the position taken in T.369/91, OJ 1993, 561, is obsolete). The board in T.1150/11 reiterated the settled case law that previous limitations of the claims cannot be treated as an express abandonment of parts of the patent but are to be regarded merely as attempts to come up with a wording delimiting the patent such as to overcome objections. It could see no reason to depart from that case law. See also T.385/15.

In G.1/10 (OJ 2013, 194), the Enlarged Board of Appeal held that R.140 EPC is not available for correcting patents, including during opposition or limitation proceedings. However, it is always open to a patent proprietor to seek to amend his patent during opposition or limitation proceedings and such an amendment could remove a perceived error. Such an amendment would have to satisfy all the legal requirements for amendments including those of Art. 123 EPC (see also full summary of G.1/10 in chapter III.L.2.1).

5.1.2 Amendments occasioned by national prior rights

Amendments occasioned by national prior rights – which are not included in the grounds for opposition specified in Art. 100 EPC – are also admissible during opposition proceedings. The reference in R.80 EPC to R.138 EPC (former R.87 EPC 1973), which as a general provision of the EPC 1973 also applies to opposition proceedings, makes this absolutely clear (see prior practice in T.550/88, OJ 1992, 117).

This was also confirmed by the board in T.15/01 (OJ 2006, 153). In that case, the appellant had justified the filing of separate claims for Spain and Greece on the grounds that a

number of claims as granted might be ineffective in Spain and Greece, since the reservations made by both contracting states under former Art. 167(2)(a) EPC 1973 (now deleted) were still in force on the date of filing of the application. The board held that, although the EPC 1973 did not contain an explicit provision for the corresponding situation where an applicant or proprietor wished to take into account the reservation made by an EPC contracting state under Art. 167(2)(a) EPC 1973, it had been the established practice of the EPO from the very beginning to accept the filing of separate sets of claims for such contracting states. This practice had also been confirmed in G 7/93 (OJ 1994, 775), in which the Enlarged Board of Appeal regarded such situations as an exceptional case in which amendments might be appropriate at a very late stage of the examination procedure. The technical board further made it clear that the general purpose of R. 57a EPC 1973 (R. 80 EPC) was to allow amendments only where they were made to overcome an objection against the validity of the European patent. It followed from the reference to R. 87 EPC 1973 (R. 138 EPC) that, within the framework of the centralised opposition procedure before the EPO, amendments were also to be allowed where the patentee intended to overcome a possible ground of invalidity which only existed in respect of a particular contracting state. Thus, R. 57a EPC 1973 was not infringed by the formulation of a separate set of claims for a contracting state in which, due to a reservation made under Art. 167(2)(a) EPC 1973, certain product claims as granted would be considered invalid or ineffective.

5.1.3 Time frame for filing amendments

R. 80 EPC (R. 57a EPC 1973) does not specify the point in time up to which amendment is allowed; here the practice in existence prior to the introduction of R. 57a EPC 1973 remains unchanged. This restriction of the right to amend is in line with the object and purpose of opposition proceedings, and does away with the need for a discretionary provision like R. 137(3) EPC (R. 86(3) EPC 1973) (see notes on introduction of R. 57a EPC 1973 in Notice dated 01.06.1995, OJ 1995, 409).

The boards of appeal have derived, in particular from R. 79(1) EPC (R. 57(1) EPC 1973), the principle that the proprietor has no right to have amendments admitted at any stage of opposition proceedings. At the discretion of the opposition division or the board of appeal, amendments can be refused if they are neither appropriate nor necessary. In particular, late-filed amendments can be refused if they are not a fair attempt to overcome an objection made. In general, the question whether an amendment is appropriate **can only be answered on the basis of its content**, i.e. after it has actually been submitted. To refuse any further amendment is only appropriate if it is evident after various unsuccessful amendments that the proprietor is not seriously trying to overcome the objections but is only delaying the proceedings (T 132/92; see also T 1758/15). In T 802/17, the opposition division had given the patent proprietor an opportunity to draft an additional request (German: "einen zusätzlichen Antrag zu formulieren") during the oral proceedings. However, as it had then filed only an amended main request, its later request for permission to file amended auxiliary requests too was refused. In the board's view, the presumably underlying considerations of procedural economy (which the opposition division had anyway merely hinted at) had been insufficient to justify this refusal in the circumstances, as the proprietor had been reacting to a new objection under Art. 123(2).

EPC, which had been a surprising turn taken in the proceedings and which its amendment had overcome.

In T.463/95 the board highlighted that according to T.153/85 the opposition division exercises a discretionary power in relation to requests for amendment. Consideration of a new or amended independent claim could reasonably be expected when such a new or amended claim results from a combination of features taken from granted claims which has been specifically opposed, since the opponents should already be familiar with the subject-matter.

In T.648/96 the amendments requested during the oral proceedings before the opposition division were simply a response to arguments put forward. The board said EPO deciding instances have a discretion to consider documents (including claims) filed in particular during oral proceedings, if they respond to the instance's or the opponent's objections, or are clearly grantable. Undesirable delays in the proceedings should, however, be avoided.

In T.382/97 the appellant (patentee) had submitted three auxiliary requests only at the beginning of oral proceedings. It tried to justify disregarding the time limit set by the opposition division under R.71a EPC 1973 (R.116 EPC) by citing R.57a EPC 1973 (R.80 EPC) which, it asserted, "was created as a *lex specialis* for amendments during opposition proceedings". The board could not accept the argument that the absence of a time limit in R.57a EPC 1973 entitled a patent proprietor to submit amendments to its patent at any time, i.e. also during oral proceedings, without good reason. In the board's judgment, R.57a EPC 1973 and R.71a EPC 1973 together governed the procedural preconditions for amendments to a patent by its proprietor before the opposition division, which amendments of course had to comply with Art.123(2) and (3) EPC 1973: R.57a EPC 1973 created the legal basis for amendment, and R.71a EPC 1973 governed the deadline for doing so. The board emphasised that amendments not complying with a time limit set under R.71a EPC 1973 might nevertheless be admissible if there were good reasons for their late submission. Finally, the board noted that the patent owner's right to amend its patent under R.57a EPC 1973 did not equate to an automatic right to file additional auxiliary requests. Any amendment had to be carried out in the most expedient manner, which had to be established by the opposition division, taking into due account the interests of all parties.

In T.2415/13 the opposition division had admitted an auxiliary request filed only at the oral proceedings since, as stated in its decision, the amendment made in it was "neither unforeseeable nor difficult to grasp". In the board's view, this implied that, according to the opposition division, the opponent could be expected to deal with the amendment during the oral proceedings. This was an appropriate criterion to apply when deciding on the admissibility of late-filed requests and the board has no reason to assume that the opposition division applied it in an unreasonable way.

In T.754/16 the opposition division had not admitted auxiliary requests 8 and 9, filed during oral proceedings, on a **prima facie basis** (referring to Art.114(2) and R.116 EPC). The board noted that this presupposed, in the first place, that the requests were **late** (confirming T.273/04). This was however not the case since filing the auxiliary requests

was a direct response to the opposition division's change of opinion in the oral proceedings. Under R. 116(2) EPC, requests filed after the final date set for making written submissions can only then not be admitted if the patent proprietor had been notified of the grounds prejudicing the maintenance of the patent, which was not the case here. Neither did Art. 114(2) EPC provide a basis for disregarding these requests since it applied only to late filed facts and arguments.

Concerning the time frame for filing amendments, see also in this chapter IV.C.6. "Right to be heard in opposition proceedings".

5.1.4 Amending a non-opposed sub-claim

In T. 711/04, the board took the view that the decision in G. 9/91 (OJ 1993, 408) did not answer the question to what extent a patent proprietor may amend a non-opposed claim in opposition or appeal proceedings. Rather, it merely set out the legal and factual framework for substantive examination of the patent in suit. In accordance with those principles, not even the patent proprietor could propose amendments because the subject-matter of a non-opposed claim was not the subject of an "opposition" within the meaning of Art. 101 and Art. 102 EPC 1973 (Art. 101 EPC combines Art. 101(1) and (2) with Art. 102(1) to (3) EPC 1973; R. 82 EPC) or "proceedings" within the meaning Art. 114 and Art. 115 EPC. The Enlarged Board of Appeal had also found, however, that this basic principle was not directly applicable where the only subject-matter outside the specified scope of the opposition were dependent claims which had to be regarded as implicitly covered. This exception for sub-claims was, the board found, entirely justified by the fact that a sub-claim that was combined with a main claim and then requested as a new main claim had to be examined as to its form and substance in order to ascertain whether or not the combination of the claims had extended the protection sought. This also showed that the theoretical legal construct underlying the decision in G. 9/91, i.e. that there were no proceedings within the meaning of Art. 114 or Art. 115 EPC, was untenable in the case in hand. A patent proprietor wishing to limit the patent to the subject-matter of a non-opposed sub-claim had to combine that sub-claim with the corresponding main claim. The non-opposed sub-claim was inevitably amended as a result, even if the amendment might appear to be a mere technicality.

5.1.5 Filing of new dependent or independent claims

The principles for dealing with amendments to opposed patents developed by the boards of appeal (see chapter IV.C.5.1.1 above) also apply to the filing of additional dependent or independent claims in opposition or subsequent appeal proceedings.

a) Filing new dependent claims (sub-claims)

The addition of new dependent claims which do not correspond to any claims as granted is not appropriate or necessary to overcome a ground for opposition and therefore impermissible (see e.g. T. 794/94, T. 674/96, T. 24/96). As explained in T. 829/93 and T. 317/90, the addition of a dependent claim is not a response to an objection that the claimed subject-matter is not patentable because it neither limits nor amends the subject-

matter claimed in the relevant independent claim. The fact that dependent claims can serve as an important safety net should the corresponding independent claim ultimately be refused does not render it legitimate to add them to a remaining, broader independent claim in opposition proceedings.

b) Filing new independent claims

In T. 610/95 the appellant failed to provide a reasoned argument to show that the filing of new independent claim 5 was indeed necessitated by a ground for opposition. The board referred to G. 1/84 (OJ 1985, 299), which made it clear that the opposition procedure was not designed to be, and was not to be misused as, an extension of the examination procedure. It would, in the board's opinion, contravene the principles set out in G. 1/84 if it was considered admissible to amend the text of a granted patent during opposition proceedings, while maintaining the sole independent claim under opposition, by incorporating an additional new independent claim which as such had no counterpart in the granted patent.

In T. 223/97 the board confirmed that the addition during opposition proceedings of one or more independent claims while maintaining the main claim in question could not be considered to be a restriction to the main claim in order to meet the ground for opposition raised against it. However, the replacement of one independent claim as granted by several, for example two, independent claims each directed to a respective specific embodiment covered by the independent claim as granted was admissible if the replacement was occasioned by grounds for opposition (see also T. 428/12).

Referring to the above decisions, the board held in T. 181/02 that only **in exceptional cases** could the replacement of a granted single independent claim by two or more independent claims be occasioned by a ground for opposition, for example where a granted independent claim covered two specific embodiments. Such a situation might also arise if two granted dependent claims (e.g. claims 2 and 3) were linked in parallel to a single independent claim (claim 1). Then the filing of two independent claims (e.g. including the features of claims 1 and 2, and 1 and 3) might be possible (moreover thereby decreasing the number of claims). However, it was normally sufficient for the patentee to remain with a single independent claim solely by modifying the granted claim once, i.e. by adding one or more features to the granted single independent claim. Adding a second independent claim was in normal cases not needed to avoid revocation of the patent on the basis of the unmodified or modified granted single independent claim (see also T. 1689/12; see further T. 1810/14, where the board defined a further situation in which the replacement of a granted sole independent claim by two independent claims may be admissible).

Citing the above case law, the board in T. 263/05 (OJ 2008, 329) added that, when examining the amendments, it did not have to decide whether the ground for opposition would occasion the replacement of a granted single independent claim by two or more independent claims only in "exceptional cases". Rather, it had to be asked in each individual case whether the proposed amendments were an **appropriate and necessary**

response designed to avoid revocation of the patent and could thus be regarded as occasioned by the grounds for opposition. See also T. 428/12.

In T. 937/00 the board saw no objection in principle to a patentee amending its claims in response to an opposition so that they comprise several independent claims directed to different subject-matters originally covered by a single generic claim of a given category, when such claim cannot be maintained. However, the board noted that the filing of multiple independent claims directed to different inventions might unduly complicate and delay the opposition procedure, in particular when this filing was followed by a series of further amendments. An efficient and possibly complete examination of the opposition might for instance become virtually impossible if subsequent amendments were proposed in a piecemeal way rather than addressing all the objections raised by the other party as soon as these objections arose. See also T. 2290/12, in which the board considered it legitimate to seek to cover parts of an initially granted claim later found by the opposition division to lack inventive step by including them in a series of independent claims so long as this did not amount to an abuse of procedure and the number of independent claims was not unreasonably high.

In T. 1/05 the board did not regard the introduction of product-by-process claims as an amendment occasioned by a ground for opposition. The submission of such claims demonstrated that these amendments were not directed to addressing a ground for opposition but were intended to compensate for the effects of an amendment that had been made to address such a ground, namely deletion of the product claims.

5.1.6 Applicability of Rule 43(2) EPC in opposition proceedings

R. 43(2) EPC (R. 29(2) EPC 1973) provides that a European patent application may not contain more than one independent claim in the same category unless they involve (i) a plurality of interrelated products, (ii) different uses of a product or apparatus or (iii) alternative solutions to a particular problem, where it is inappropriate to cover these alternatives by a single claim.

The scope and potential applicability of R. 43(2) EPC in opposition proceedings was addressed in T. 263/05 (OJ 2008, 329). Having considered the purpose and legislative history of the rule, the board concluded that it could not apply across the board to all amendments made during opposition proceedings. If it did, it would be impermissible to make any amendment introducing non-unitary claims, something which was not only permissible in opposition proceedings but also clearly appropriate given that the patent proprietor was no longer able to file a divisional application. To conclude that R. 43(2) EPC applied across the board in opposition proceedings would have watered down the decision in G. 1/91 (OJ 1992, 253). R. 43(2) EPC could not be applied in opposition proceedings to prohibit the amendment of a patent as granted where it would be unreasonable to demand that the amended claims comply with it. This was the case where, otherwise, R. 43(2) EPC would force the patent proprietor to abandon potentially valid subject-matter already contained in the claims as granted. The board could not envisage any circumstances in opposition proceedings in which R. 43(2) EPC would be of any application because, once it had been established that an amendment to the claims was necessary and appropriate

having regard to grounds for opposition, it would inevitably be unreasonable to impose the additional requirement that the amendment complied with the purely administrative provisions of R. 43(2) EPC.

In T 830/11 the board confirmed that the condition of conciseness of Art. 84 EPC 1973 and the provisions of R. 29(2) EPC 1973 (R. 43(2) EPC) had to be construed in opposition proceedings in the light of the finding in G 1/91, point 4.2 of the Reasons. R. 29(2) EPC 1973 (R. 43(2) EPC) should not constitute an obstacle to defending the patent in all its branches (cf. T 263/05 and T 1416/04). The board emphasised that it was not questioning the general applicability of Art. 84 EPC 1973 as to conciseness or of R. 29(2) EPC 1973 (R. 43(2) EPC) in opposition proceedings. It merely considered that these norms did not apply to sets of claims whose subject-matter was already claimed in the granted version of the patent.

According to the board in T 1416/04, a request containing a plurality of independent product claims might be allowable under R. 57a EPC 1973 (R. 80 EPC) in order to provide an amendment of a granted set of claims containing only one independent product claim, if the amended independent claims arose from the deletion of previous claims. With regard to the form of the claims, the board did not consider it relevant for the case before it to decide whether R. 43(2) EPC applied to opposition cases or not: even if R. 43(2) EPC should be considered applicable, the subject-matter in the granted claims could not appropriately be covered by one independent claim so that the requirements of this rule would have been met anyway.

5.1.7 Applicability of Rule 137(5) EPC in opposition proceedings

The board in T 735/12 held that an opponent's objection under R. 137(5) EPC that a claim included features taken only from the description and therefore unsearched was inoperative if only because R. 137 EPC governed solely amendments to a European patent application and was therefore not applicable in opposition (appeal) proceedings.

5.1.8 Amendments intended to remedy a lack of clarity

Objections to the clarity of claims (here equivocality of the term "average particle size") or any consequent requests for amendment are only relevant to opposition proceedings in so far as they can influence the decisions on issues under Art. 100 EPC or arise in relation to the subject-matter to be amended as a consequence of such issues. This was the view taken by the board in T 127/85 (OJ 1989, 271), to which it added that it would be an abuse of opposition proceedings if the patent proprietor were allowed merely to tidy up and improve the disclosure by amendments not specifically necessitated by the grounds advanced for the opposition, even if those amendments were to comply with Art. 123 EPC. See also T 89/89 and T 324/89.

According to the established case law of the boards of appeal, Art. 84 EPC is an EPC requirement that has to be taken into account in opposition proceedings whenever the patent proprietor files any amendments (within the limits set in G 3/14, OJ 2015, A102; see in this chapter IV.C.5.2.2). However, Art. 84 EPC is not itself a ground for opposition

under Art. 100 EPC. Irrespective of how the granted claims are formulated, and be they dependent or independent, an opposition cannot be lodged on the basis that they lack clarity (T 23/86, OJ 1987, 316; T 565/89; T 89/89; T 16/87, OJ 1992, 212; T 1835/08; T 1855/07). The board in T 89/89 followed the findings in decision T 295/87 (OJ 1990, 470) according to which amendments during opposition proceedings should only be considered as appropriate and necessary in the sense of R. 57(1) and 58(2) EPC 1973 (R. 79(1) and R. 81(3) EPC) and therefore admissible if they can fairly be said to arise out of the grounds of opposition. It therefore regarded the proposed amendments (consisting in correcting the two-part form of claim 1 and clarifying the meaning of its last feature but not relevant for the decision on the grounds for opposition) as inadmissible. In T 792/95, the board confirmed the principle that, in opposition proceedings and subsequent appeal proceedings, only such amendments could be made as were necessary in the light of the grounds for opposition under Art. 100 EPC (citing T 23/86, OJ 1987, 316; T 127/85, OJ 1989, 271 and T 168/85).

In T 113/86 the board of appeal followed this principle, ruling against the admissibility of amendments proposed by the patent proprietor which were not necessary to take account of the grounds for opposition, if there were the slightest possibility of a different interpretation being given to the patent specification before and after the amendments. The protection conferred by the patent would actually be extended if, as a result of amendments to clarify the granted claims, the claims could be more widely construed than a court would have construed them by the application of Art. 69 EPC. However, the board was of the opinion that the removal of an inconsistency between a claim and the description should be allowed if the inconsistency arose from an error, provided that the error was so obvious to a skilled person in the light of the patent specification as a whole that an interested third party could have anticipated the extent of protection conferred by the amended claim. In these circumstances the request for the correction of an error did not represent an abuse of opposition proceedings. Moreover, the removal of the discrepancy was in the interests of legal certainty.

Where a deficiency results from a discrepancy between the description and the claim, lack of clarity in the invention's disclosure can be objected to because that requirement comes under Art. 83 EPC, not Art. 84 EPC, and may therefore be taken into consideration in opposition proceedings (see e.g. T 175/86).

5.1.9 Removal of error (in claim) in opposition proceedings – Rule 139 EPC

According to T 657/11, in opposition proceedings mistakes or errors concerning the claims, the description or the drawings of the patent as granted may be removed either by an amendment occasioned by a ground for opposition under Art. 100 EPC or, as far as the mistakes or errors concern texts or drawings which remain unamended, under certain conditions by way of a correction pursuant to R. 139 EPC.

The claims according to the main request before the opposition division and the appellant's initial request in the appeal proceedings differed from the granted claims only in that the wording "NF permeate" in the last process step of claim 6 was replaced by "NF concentrate". The board had communicated that R. 140 EPC was not available to correct

the text of a granted patent (G. 1/10, OJ 2013, 194). However, the claims according to the appellant's final (sole) request were, as compared to the claims as granted, **amended beyond the mere removal of an error**, namely by limiting them to those granted as (process) claims 6 to 11. Hence the basis for the decision on the appeal (and, thereby, on the opposition) was no longer that for the decision to grant, which would definitely lose its effect and be replaced by a new decision. In such a situation any (further) amendment of the claims, even if aimed at removing an obvious mistake in the claims as granted, did not constitute a correction of an error in a decision of the EPO within the meaning of R. 140 EPC. As pointed out in G. 1/10, it was always open to a patent proprietor to seek to amend his patent during opposition or limitation proceedings and such amendment could remove a perceived error. However, an amendment with the (sole) aim of removing a mistake or error in the claims, but also in the description and drawings of the patent as granted, could not be said to be "occasioned by a ground for opposition under Art. 100" (R. 80 EPC). It followed that such mistakes or errors – here the expression "[nanofiltration] permeate"- in the unamended part of the text could only be removed by a correction pursuant to R. 139 EPC, which provision and the specific requirements defined therein applied independently of R. 80 EPC. The proposed correction was in accordance with those requirements.

In T. 488/13 the board considered that a printing error, which could not be imputed to the patentee, should normally be correctable at any time. In the case in hand the proposed amendment effectively corrected such a printing error, so that the amendment was appropriate and necessary.

5.2. Scope of examination of amendments

5.2.1 General

According to T. 472/88, in all cases in which amendments are requested by a patentee which were compatible with Art. 123 EPC, Art. 102(3) EPC 1973 (now Art. 101(3)(a) and R. 82 EPC) conferred on the opposition division and the board of appeal jurisdiction, and thus the power, to decide on the amended patent in the light of the requirements of the EPC as a whole. This jurisdiction was thus wider than that conferred by Art. 102(1) and (2) EPC 1973 (both now Art. 101(2) EPC) which expressly limited jurisdiction to the grounds of opposition mentioned in Art. 100 EPC. When amendments were made to a patent, both instances have the power to deal with grounds and issues arising from those amendments even if they were not (and could not be) specifically raised by an opponent pursuant to R. 55(c) EPC 1973 (now R. 76(2)(c) EPC) (T. 227/88, OJ 1990, 292; G. 9/91, OJ 1993, 408; T. 472/88; T. 922/94; see also T. 459/09; for examination of compliance with Art. 84 EPC, see in this chapter IV.C.5.2.2 below).

In T. 503/96 the board considered the criteria for the need for an **additional search** in relation to restrictive amendments. It referred to the Guidelines B-III, 3.5, then applicable, which state, "In principle, and in so far as possible and reasonable, the search should cover the entire subject-matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended...". The board stated that whether or not to commission an additional search in a particular case was a matter

for the administrative discretion of the opposition division, but if an inappropriate criterion was invoked when exercising this **discretion**, doubt would inevitably be raised as to whether the discretion was reasonably exercised. Since, in the case of amendment of the claims in the course of opposition or appeal proceedings, such amendments are to be fully examined as to their compatibility with the requirements of the EPC (G 9/91, OJ 1993, 408), it was not inappropriate for an opponent to make observations on a possible need for an additional search to enable this full examination to be carried out (Guidelines D-VI, 5, then applicable). The judgment on whether an additional search was necessary and the obligation to perform this search if it was judged to be necessary were administrative matters for the EPO.

In T 648/96 the board found that the opposition division's failure, in the contested decision, to address the substance of the opponent's "lack of clarity" objections to the amended documents was a substantial procedural violation; under Art. 102(3) EPC 1973 (now Art. 101(3)(a) and R. 82 EPC), it should have examined of its own motion whether the amendments complied with Art. 84 EPC and Art. 123(2) and (3) EPC 1973 (see also T 740/94).

5.2.2 Extent of power to examine amended claims for compliance with Article 84 EPC

The extent to which the opposition division or a board of appeal may examine clarity for the purpose of Art. 101(3) EPC was the subject of questions put to the Enlarged Board of Appeal in referral G 3/14 (OJ 2015, A102). In the case underlying the referral (T 373/12, OJ 2014, A115) claim 1 of auxiliary request 1, submitted during opposition proceedings, consisted of a combination of the features of claim 1 as granted and of dependent claim 3 as granted.

As a preliminary point, the Enlarged Board identified the following main types of case: amendments which encompass a literal insertion of elements of dependent claims as granted into an independent claim (type A); these include amendments in which a dependent claim contains within it alternative embodiments, one of which is then combined with its independent claim (Type A(i)), and amendments in which a feature is introduced into an independent claim from a dependent claim, being a feature which was previously connected with other features of that dependent claim from which it is now disconnected (Type A(ii)); furthermore, amendments which encompass a literal insertion of complete dependent claims as granted into an independent claim (Type B, this being the case with which the referring board was confronted).

The Enlarged Board first considered its previous jurisprudence, i.e. G 1/91 (OJ 1992, 253), G 9/91 (OJ 1993, 408) and G 10/91 (OJ 1993, 420). Citing the statement in point 19 of the Reasons in G 9/91 and G 10/91 that "[...] in case of amendments of the claims or other parts of a patent in the course of opposition or appeal proceedings, such amendments are to be fully examined as to their compatibility with the requirements of the EPC", it noted that if the Enlarged Board had at the time considered that the opposition division and the boards of appeal were given wide powers to examine amended claims, it would have said so. Therefore, the term "amendments" had to be understood in the sense that the subject-matter to be examined must have some direct nexus with the amendment.

The Enlarged Board identified three main lines in the jurisprudence of the technical boards: the "conventional" approach, based on the test whether the amendment introduces any contravention of Art. 84 EPC, and the principle that Art. 101(3) EPC does not allow objections to be based upon Art. 84 EPC if they do not arise out of the amendments made (see T 301/87 and T 227/88, applied in many further cases, see e.g. T 381/02, T 1855/07, T 367/96 of 3 December 1997 and T 326/02). Secondly, there was a wider interpretation, according to which a lack of clarity could be examined if the amendment "highlights and focuses attention" on a previously existing ambiguity (T 472/88; see also T 681/00 and T 1484/07). The third line of jurisprudence was considered "diverging". According to T 1459/05 (see also T 1440/08 and T 656/07), clarity may be examined on a case-by-case basis as a matter of discretion when the added feature is the only feature that distinguishes the subject-matter of the claim from the prior art. T 459/09 was the most far-reaching of these diverging cases, stating that amended claims may generally be examined for clarity on a case-by-case basis irrespective of the kind of amendment.

On the interpretation of Art. 101(3) EPC, the Enlarged Board pointed out that the requirements of Art. 84 EPC are part of the "requirements of the Convention" for the purposes of Art. 101(3) EPC. There was, however, no indication that the object and purpose of Art. 101(3) EPC was to open up the patent to a complete re-examination, whether for clarity or the other requirements of the EPC. It was rather the amendment itself which was relevant, and its effect for the ground for opposition in question. Self-evidently, the amendment must not itself give rise to new objections.

As apparent from the travaux préparatoires to the EPC 1973, the legislator had deliberately chosen not to make Art. 84 EPC a ground for opposition. It would be unsatisfactory if an opponent could cause delays whenever an amendment was made, by raising all kinds of Art. 84 EPC objections. Moreover, a lack of clarity could still be relevant in opposition proceedings in that it could influence the decision on issues under Art. 100 EPC (sufficiency, novelty, inventive step), or impact on the grounds of invalidity alleged in national proceedings relating to a European patent. Furthermore, when the EPC 2000 was drafted, no suggestion was made for a change to reverse the effect of the then established case law, i.e. the conventional approach based on T 301/87. If the deletion of an independent claim with its dependent claims permitted examination of the remaining claims for lack of clarity, Art. 84 EPC would effectively become a ground for opposition in a large number of cases, which would be contrary to the legislator's intention. To conclude otherwise for a combination of claims which actually consists of striking out the original independent claim and then writing out the previously dependent claim in full, would be arbitrary and unjustified.

In conclusion, the Enlarged Board approved the conventional line of jurisprudence as exemplified by T 301/87, and answered the referred questions as follows:

"In considering whether, for the purposes of Art. 101(3) EPC, a patent as amended meets the requirements of the EPC, the claims of the patent may be examined for compliance with the requirements of Art. 84 EPC only when, and then only to the extent that, the amendment introduces non-compliance with Art. 84 EPC."

In T.616/12 (issued before decision G.3/14 above) the board held the appellant's objections to lack of clarity in amended claim 1 to be inadmissible. An objection to the clarity of granted claims was not foreseen in the opposition procedure, as lack of clarity was not a ground for opposition. Since claim 1 was a combination of granted claims 1 and 15, a clarity objection to it was tantamount to raising an objection of lack of clarity to the claims as granted. Furthermore, it was not apparent how a lack of clarity resulted from an amendment caused by combining the granted claims. See also e.g. T.1577/10.

Considering the different types of amendment distinguished in G.3/14, the board in T.1112/12 observed that a common theme underlying the Enlarged Board's ruling appeared to be that modifying a claim by **merely deleting or excluding embodiments** from the claimed subject-matter does not result in an amendment which is open to an objection under Art. 84 EPC (see also T.1977/13 and T.260/13). For further cases where the lack of clarity was already present in the claims as granted and the clarity objection therefore rejected, see T.266/15 and T.488/13.

In T.248/13 certain ambiguous terms were already contained in claim 15 as granted. However these terms defined the flavour of the final product, whereas the terms of claim 1 of auxiliary request 1 referred to an ingredient to be added. The board considered that by taking these terms out of the context in claim 15 as granted and placing them in the context of claim 1 of auxiliary request 1, a new ambiguity was introduced that was not present before. Therefore this amendment was objectionable under Art. 84 EPC.

5.3. Proprietor's approval of amended text of the patent

In T.861/16, the board held that since the principle of tacit acceptance ("qui tacet consentire videtur") was not established in the EPC, it was not enough for an opposition division merely to ask the patent proprietor whether it wished to comment on amendments to the description which had been prepared by the division. It had to ensure that the patent proprietor approved them (on the need for a text submitted or agreed by the proprietor, see also chapter III.B.3.).

6. Right to be heard in opposition proceedings

6.1. Principle of equal treatment

In inter partes proceedings such as opposition proceedings the right to be heard is inextricably linked to the **principle of equal treatment**: no party should be given preferential treatment in the number of times it is allowed to present its case orally or in writing. The opposition division is therefore required to ensure that the parties can exchange their submissions in full and have equal opportunity to comment on them. If the opposition division considers a multiple exchange of submissions expedient, it must give each party equal opportunity to comment. Thus, the opposition division may invite a party to submit a **rejoinder to the reply** to the notice of opposition, but in that case it is obliged to invite the other party to **respond to that rejoinder**, after which it must decide again whether a third exchange of submissions is expedient. The fact that R.79(3)EPC (R.57(3)EPC 1973) leaves it to the opposition division ("if it considers it expedient") to

invite the opponents to reply cannot be interpreted as an authorisation to derogate from the fundamental principle of equal treatment (see [T.190/90](#), [T.682/89](#) and [T.439/91](#)). According to [T.669/90](#), (OJ 1992, 739), if the opposition division misleads a party into believing that it is not necessary to defend its interests by filing observations in reply to new facts and evidence filed by an adverse party, and if such new facts and evidence then form the basis for a decision adversely affecting the misled party, the latter has not had "an opportunity to present its comments" within the meaning of [Art. 113\(1\)EPC](#). Such a procedure is also not a fair procedure and is contrary to the principle of good faith governing relations between the EPO and parties to proceedings before it (cf. [T.532/91](#), [T.678/06](#)). Such inequality of treatment constitutes a substantial procedural violation.

In addition to the cases that follow, see in this chapter [IV.C.3.4.6](#) "Opportunity to comment on new grounds for opposition".

6.2. Invitation to file observations under [Article 101\(1\)EPC](#)

[Art. 101\(1\)EPC](#) ([Art. 101\(2\)EPC 1973](#)) reinforces the right to be heard laid down in [Art. 113EPC](#) by requiring the opposition division, when examining an opposition, to invite the parties "**as often as necessary**" to comment, within specified periods, on its own communications or those filed by other parties. Where necessary, any communication to the proprietor of the European patent must contain a reasoned statement covering all the grounds against the maintenance of the European patent ([R.81\(3\)EPC](#); [R.58\(3\)EPC 1973](#)).

[Art. 101\(1\)EPC](#) does not require as a rule that the grounds for not maintaining the patent invariably be set out in a communication, but only if this is "necessary". Such "necessity" can arise only in efforts to establish the facts or in view of [Art. 113\(1\)EPC](#). So the opposition division **must issue a communication only** if it considers this necessary, e.g. to take up **new** substantive or legal arguments or draw attention to points still requiring clarification. [R.81\(3\)EPC](#), which merely contains instructions concerning the content of any communications that may have to be issued, adds nothing to the above consideration of principle. Accordingly, the provisions of [Art. 101\(1\)EPC](#) and [R.81\(3\)EPC](#) cannot be interpreted as meaning that the opposition division is obliged in every case to issue at least one communication before giving its decision, unless it is necessary to do so on the basis of [Art. 113\(1\)EPC](#) (see e.g. [T.275/89](#), OJ 1992, 126; [T.538/89](#), [T.682/89](#) and [T.532/91](#)).

Not issuing at least one communication under [Art. 101\(1\)EPC](#) cannot in itself substantiate an allegation of infringement of the right to be heard under [Art. 113EPC](#) (see e.g. [T.774/97](#) and [T.781/08](#)). In [T.165/93](#), for example, the board saw no need under [Art. 113\(1\)EPC](#) for the opposition division, before revoking the patent, to announce its opinion in a communication or to give a further opportunity to the patentee to declare whether he was interested in a limited patent if, despite having been informed of an additional objection of the opponent, he did not react but maintained his sole request for maintenance of the patent with the amended claims. Nor is it necessary under [Art. 113\(1\)EPC](#) to give a party a **repeated opportunity** to comment on the argumentation of the EPO body, so long as the decisive objection against the contested procedural action remains the same (see e.g. [T.161/82](#), OJ 1984, 551; [T.621/91](#)).

According to T 295/87 (OJ 1990, 470), in opposition proceedings, under Art. 101(2) and R. 57(1) EPC 1973 (Art. 101(1) and R. 79(1) EPC) the proprietor has a right to file observations upon a notice of opposition. Thereafter, observations from the parties are only admissible in the exercise of the discretion of the opposition division or a board of appeal, if such observations are necessary and expedient in the sense of Art. 101(2) and R. 57(3) EPC 1973 (Art. 101(1), R. 79(3) EPC). The board specified that following communication of the patentee's observations (and any amendments), other parties are only to be invited by the opposition division to reply to such observations "if it considers it expedient". It was clearly desirable in the interest of the smooth and efficient conduct of opposition proceedings, and in the public interest, that observations by parties should be properly limited to what is necessary and expedient. This in turn required the exercise of a proper control by the opposition division (and by a board of appeal). Of course, the extent to which further observations are necessary or expedient depended upon various factors, including the complexity of the issues, and could only be decided in the context of each case. Nevertheless, in appropriate cases, the opposition division and the boards of appeal had the power, and indeed the duty, to refuse to admit observations and/or supporting documents for consideration, in the exercise of discretion under Art. 101(2) and 114(2) and R. 57(3) EPC 1973 (Art. 101(1) and 114(2) and R. 79(3) EPC).

For cases where a communication was, however, considered necessary, see in this chapter IV.C.6.5. below (T 293/88, T 120/96 and T 1056/98).

6.3. Invitation to file observations under Rule 82(1) EPC

R. 82(1) EPC (R. 58(4) EPC 1973) provides that the opposition division is to inform the parties of the text in which it intends to maintain the patent and invite them to state their observations **within two months** if they disapprove of that text. The boards of appeal have frequently addressed the issue of when it is necessary to send the parties such a communication.

In T 219/83 (OJ 1986, 211) and T 185/84 (OJ 1986, 373) the board stated that, after oral proceedings in an appeal from opposition proceedings, the parties had to be sent a communication pursuant to R. 58(4) EPC 1973 only if they could not reasonably be expected to state their observations concerning the maintenance of the European patent in the amended form definitively during the oral proceedings. This case law was confirmed in several decisions (e.g. T 75/90, T 895/90 and T 570/91).

In T 446/92 it was stated that, in a case where a duly summoned opponent was not represented at oral proceedings, the decision of the board to maintain the contested patent in amended form in accordance with a request of the patentee submitted during those proceedings could nevertheless be given orally (R. 68(1) EPC 1973; R. 111(1) EPC) at the end of the proceedings, if no new facts or evidence were dealt with during the proceedings. Under these circumstances, the application of R. 58(4) EPC 1973 could be dispensed with because the patent in suit was maintained with an amended text emanating from and approved by the patentee (see, in this respect, G 1/88, OJ 1989, 189) and, furthermore, because the opponent's **deliberate decision to refrain from being represented at oral proceedings** before the board was to be regarded as being

tantamount to a tacit abandoning of his right to present comments pursuant to Art. 113(1) and R. 58(4) EPC 1973. In the previous decisions T. 424/88, T. 561/89 and T. 210/90 the board did not send the parties/participants a communication pursuant to R. 58(4) EPC 1973, even though the appellants (opponents) had not attended the oral proceedings.

In T. 29/16 the board held that a substantial procedural violation had occurred when the opposition division did not comply with R. 82(1) EPC, which, it stated, defined the right to be heard more particularly in the case in hand. The opponent had not been invited to comment on the text, on the basis of which the opposition division intended to maintain the patent in amended form. Therein lay a violation of the right to be heard.

6.4. EPO communication concerning submissions by the other party – adequate opportunity to reply

Communications signed by the formalities officer and inviting the appellants to "take note" of the opponents' submissions are not communications of the opposition division within the meaning of Art. 101(1) EPC (Art. 101(2) EPC 1973), which require a period to be fixed for reply (normally four months; see Guidelines E-VIII, 1.2 – November 2018 version). It is at the discretion of the recipient to reply to this communication if he finds it necessary, having reviewed the significance of the material sent to him. If he intends to reply but for any reason is prevented from doing so within a reasonable period of time, then the appropriate action is to inform the opposition division of his difficulties (see T. 582/95).

The boards of appeal have dealt in a series of decisions with the issue of determining what is a reasonable period which provides the recipient of an EPO communication with an adequate opportunity to reply:

The right to be heard enshrined in Art. 113(1) EPC requires that the party concerned be given **sufficient time** to submit an adequate response if the EPO decides to communicate to a party to proceedings before it an objection raised by another party without an express invitation to reply within a specified time limit. The question regarding what period of time is sufficient for this purpose is a **question of fact** which has to be answered on the basis of the merits of each individual case. It is to be noted in this context that, as a rule, a time limit set by the EPO should not be shorter than **two months** (see R. 132 EPC, former R. 84 EPC 1973).

Exceptional circumstances in which a shorter period of time was held to be acceptable were mentioned in T. 275/89 (OJ 1992, 126). In this case, the objection was made that the interval between the notification to the patentee of a submission from the opponents and the date the decision was issued was too short to allow the appellant (patentee) to file observations. The board noted that the opposition division had waited for somewhat longer than a month before taking its decision. In the board's view, in the case of a communication which was issued for information purposes only and which did not set a time limit for response, a period of **one month** (which in the present case was exceeded) sufficed as a rule to comply with the requirements of Art. 113 EPC. Moreover, the documents on which the decision under appeal was based had already been mentioned in the notice of

opposition together with an assessment of their substantive and legal significance, so that the decision under appeal was not based on fresh matter.

In T 494/95, the board took the view that the interval of more than one month between the notification of the patent proprietor's reply to the opposition and the date of issuing the decision was sufficient to allow the appellant (opponent) a reasonable opportunity to present his comments, or **at least to indicate an intention** of so doing, or to request oral proceedings. In the board's view, it was clear from R. 57(3) EPC 1973 (R. 79(3) EPC), from the EPO information "Opposition Procedure in the EPO" (OJ 1989, 417) and from previous decisions that, if oral proceedings did not take place and the decision was based solely on grounds on which the parties concerned had had an opportunity to present their comments, a decision could be taken without further notice upon expiry of the period allowed to the patent proprietor for submitting observations. Here, the board could not see that any procedural violation had occurred, as the decision was neither based on grounds unknown to the appellant (Art. 113(1) EPC), nor was the opposition division invariably obliged under the EPC to set a time limit for the appellant's response to the patent proprietor's observations or to suggest that any such response should be made.

By contrast, another board held in a case involving **difficult technical questions** that a period of about one month did not provide the appellant with a realistic opportunity to inform the opposition division of his intention to file a substantive reply and to ask for an appropriate time limit for this purpose, let alone to present substantive comments (T 263/93; see also T 494/95).

In T 914/98 the board stated that the **seventeen-day** period which elapsed between the appellants receiving the reply of the respondents and the handing over of the decision to the EPO internal postal service was manifestly **too short** to give the appellants an adequate opportunity for comment. According to the board, in view of the case law the appellants could not reasonably have expected a decision to be issued so quickly.

6.5. Opportunity to present comments

Art. 113(1) EPC, in which the right to be heard is enshrined, provides that decisions of the EPO may only be based on grounds or evidence on which the parties have had an opportunity to present their comments. The term "grounds or evidence" in Art. 113(1) EPC should not be narrowly interpreted. The word "grounds" does not refer merely to a ground of objection to the application or patent in the narrow sense of a requirement of the Convention which is considered not to be met. The word "grounds" should rather be interpreted as referring to the **essential reasoning, both legal and factual**, which leads to the findings of the decision (see e.g. T 951/92, OJ 1996, 53, with regard to a refusal of the application, T 433/93, with regard to the finding of invalidity and revocation, and T 1056/98 with regard to inadmissibility; on the right to be heard, see also chapter III.B.).

In T 293/88 (OJ 1992, 220) the board found that the decision of the opposition division to revoke the patent without issuing any communication in advance disregarded the fact that the validity of the **uncontested claims** 7, 9 and 10 had not been challenged at all, and a further opportunity to fall back at least to such position was reasonably to be expected in

such circumstances. The onus of raising such related additional matter with the parties was on the opposition division under Art. 113(1) EPC – which it had not done in this case.

In T 558/95 the opposition division had issued two written communications before the oral proceedings stating that, "in the provisional opinion of the opposition division", the subject-matter described in the public prior use did not prejudice the contested patent within the terms of Art. 100(a) EPC. The patent proprietor therefore found it "surprising" that detailed consideration was given to the public prior use during the oral proceedings. However, the board held that **provisional opinions** of this kind were not binding on the further proceedings. Especially in view of the fact that the opponent continued to elaborate his arguments against these comments by the opposition division, the possibility of a different assessment by the opposition division could not be ruled out from the start.

The opposition division that rejects an opposition as **inadmissible** without providing a reasoning prior to its decision prevents the opponent from responding with comments, thus violating the right to be heard (T 1056/98).

Normally, where a document has been sent to one of the parties, that party is given sufficient time to respond thereto before a department of the EPO takes a decision (T 263/93). If the case is to be **remitted to the department of first instance** for further prosecution, the recipient of a document still has, in view of the remittal, the opportunity to contest the arguments put forward by the other party (see T 832/92).

Under Art. 113(1) EPC, the opposition division must expressly give the parties an opportunity to present observations after remittal to it of a case by a board of appeal for further prosecution on the basis of new evidence, even if submissions with respect to this new evidence have already been made during the preceding appeal proceedings (see T 892/92, OJ 1994, 664; see also T 769/91). In T 120/96 another board shared this view and added that the term "opportunity" in Art. 113(1) EPC could only be given effective meaning by applying the principles of good faith and the right to a fair hearing. For such an opportunity to exist, it is necessary that the parties be expressly asked whether or not they wish to present, within a fixed period of time, their comments, or if, as in the case at issue, the parties have already made detailed submissions during the previous appeal proceedings, whether or not these submissions should be regarded as complete. On these grounds alone, the board found that the immediate termination of the opposition proceedings following the remittal, without any intervening communication announcing the resumption of proceedings, was inconsistent with Art. 113(1) EPC.

In T 1027/13, a case in which an accompanying person had not been allowed to speak in oral proceedings before the opposition division, the board held that an effective and efficient conduct of oral proceedings, although subject to the discretionary power exercised by the chairman in oral proceedings with regard to specific issues, must nevertheless guarantee that the fundamental procedural rights of each party in adversarial proceedings, i.e. the right to fair and equal treatment, including the right to present comments in oral proceedings (Art. 113(1) and 116 EPC), are respected. The board concluded that the categorical refusal of the opposition division that the accompanying person may make oral submissions or even communicate with the opponent's representative in effect had been

keeping the opponent from taking position in an "efficient and effective manner" on the contentious issues of the case (see also chapter [III.V.5.2.](#)).

6.6. Change in composition of opposition division during opposition proceedings

For the implications of a change in the composition of the opposition division for the party's right to be heard, see chapter [III.K.1.3.2.](#)

7. Acceleration of opposition proceedings in the case of pending infringement proceedings

In cases where an infringement action in respect of a European patent is pending before a national court of a contracting state, a party to the opposition proceedings may request accelerated processing. The request may be filed at any time. It must be filed in written reasoned form. In addition, the EPO will also accelerate the processing of the opposition if it is informed by the national court or competent authority of a contracting state that infringement actions are pending (Notice of the EPO dated 17 March 2008, OJ EPO 2008, 221; Guidelines E-VIII, 5 – November 2018 version).

The case underlying [T.290/90](#) (OJ 1992, 368) involved seven oppositions. One of these was deemed not filed, and the opponent appealed against the decision issued in respect of it under [R.69\(2\)EPC.1973](#) ([R.112\(2\)EPC](#)). The patent proprietor requested accelerated processing of the appeal because an infringement action was pending and, in view of the probable number of infringing products on the market, the longer the opposition proceedings took, the more difficult it would be to enforce the patent if maintained. According to the board, a "raison d'être" for obtaining and maintaining a patent was to enforce it where appropriate. The timing of enforcement proceedings could be of real importance and delays could be prejudicial to the proprietor's interests and those of his competitors. In the case of infringement proceedings the speedy processing of opposition proceedings in respect of the relevant European patent became especially important. It was therefore important to decide quickly not only on the appeal but also on the complete substantive opposition. In the case of multiple oppositions, as here, the board considered, in view of the suspensive effect of the appeal, that the opponent (appellant) should be treated as having duly filed an opposition unless and until the board decided otherwise. With an appeal concerning the existence or admissibility of one of the oppositions, the examination stage of the opposition proceedings should be prepared and processed in parallel, with the participation of all the opponents, up to the point when it was ready to be decided: as soon as the appeal was decided, the opposition could also be decided (see Headnote II.).

See also chapter [V.A.1.5.](#) "Accelerated processing before the boards of appeal".

8. Decisions of opposition division

8.1. Revocation of a European patent for failure to fulfil formal requirements – by way of decision

It had been held in T 26/88 (OJ 1991, 30) that the revocation of the patent for failure to fulfil the formal requirements of paying the printing fee and filing the translations of the amended claims (Art. 102(4) and (5) EPC 1973; R. 82(3), second sentence, EPC) had occurred by operation of law ("automatically").

However, according to G 1/90 (OJ 1991, 275), the revocation of a patent under Art. 102(4) and (5) EPC 1973 **required a decision**. The Enlarged Board compared the ways of terminating proceedings provided for at various stages under the EPC and concluded that the wording of the regulations clearly indicated in each case whether a decision or a communication had to be issued concerning the loss of rights under R. 69(1) EPC 1973 (R. 112(1) EPC). It also considered the issue of legal certainty and, in the light of the "travaux préparatoires", discussed the question of when a loss of rights noted in accordance with that provision became non-appealable. It found that the procedure of pronouncing revocation by way of a decision led neither to legal uncertainty nor to misunderstandings. See also T 1403/16 for a recent decision emphasising (in the context of the applicability of Art. 122 EPC), for all three possibilities pursuant to Art. 101 EPC to terminate opposition proceedings (revocation of the patent, rejection of the opposition and maintenance of the patent as amended), that the opposition division had to deliver a decision within the meaning of Art. 106(1) EPC. This also applied to R. 84(1) EPC.

8.2. Interlocutory decisions

8.2.1 General

In case T 376/90 (OJ 1994, 906) the opposition division had held that the opposition was admissible in an interlocutory decision within the meaning of Art. 106(3) EPC 1973 (Art. 106(2) EPC), i.e. a decision which did not terminate the proceedings as regards one of the parties, without, however, **allowing separate appeal**. In the board's view, according to the clear language of the provision, such an interlocutory decision could only be appealed together with the final decision, unless the decision allowed separate appeal. Whether to allow a separate appeal was within the **discretion** of the opposition division. This discretion had been properly exercised by the opposition division with a view to enabling a decision on the substantive issues to be reached as soon as possible.

8.2.2 Maintenance of European patent as amended

The long-established practice of the EPO of delivering interlocutory decisions subject to appeal when the opposition division intends to maintain a patent as amended was acknowledged by the Enlarged Board of Appeal in G 1/88 (OJ 1989, 189).

According to Art. 101(2) and (3)(a) EPC (Art. 102(1) to (3) EPC 1973) a decision on an opposition to a European patent can involve revocation of the patent, rejection of the

opposition or maintenance of the patent as amended, the latter requiring the publication of a new European patent specification. Under R. 82(2) EPC (R. 58(5) EPC 1973) a prerequisite for maintenance of the patent as amended is that the fee for publishing (former printing fee) be paid. With these regulations in mind, the EPO very early on adopted the device of an interlocutory decision, for which there is no express provision, in order to establish in the first place the text of the amended specification. Only after this interlocutory decision has become final (or the case has been decided on appeal) are the fee for publishing (formerly printing) and a translation of the claims in the other official languages requested pursuant to R. 82(2) EPC (R. 58(5) EPC 1973). Additionally, as of 1 May 2016 a typed version of the amended text passages is requested where during oral proceedings only handwritten amendments have been filed (R. 82(2) EPC as in force since 1 May 2016, OJ 2016, A22). Once these requirements have been fulfilled what is then a non-appealable final decision on maintenance of the patent as amended is given and the new patent specification is published.

An interlocutory decision which determines the text of the patent to be maintained as amended can of course only be given if there is a text "submitted or agreed" by the patent proprietor pursuant to Art. 113(2) EPC. It has been standard practice for the EPO's opposition divisions always to proceed in accordance with the relevant R. 82(1) EPC (R. 58(4) EPC 1973) even where the text has already been "submitted or agreed" by the patent proprietor during the proceedings and rejected by the opponent.

In T 390/86 (OJ 1989, 30) the board held that neither Art. 102(3) EPC 1973 (which partly became Art. 101(3)(a) EPC and partly was incorporated in R. 82 EPC) nor R. 58(4) EPC 1973 (R. 82(1) EPC) precluded an opposition division from giving decisions on substantive issues in the opposition before sending a communication under R. 58(4) EPC 1973, and before "deciding to maintain the patent in amended form". For example, an opposition division could during the course of an opposition make a (final) interlocutory decision (either orally or in writing) that a particular proposed amendment contravened Art. 123 EPC. Similarly, an opposition division could make a (final) interlocutory decision during an opposition that the main claim, for example, of the opposed patent could not be maintained. Such a **substantive interlocutory decision** was not a decision actually to maintain the patent in amended form, but was preliminary to such a decision. The taking of such substantive interlocutory decisions during the course of opposition proceedings was desirable both in order to move the proceedings forward towards a conclusion, and, in appropriate cases as envisaged in Art. 106(3) EPC 1973 (Art. 106(2) EPC), to allow a party to appeal such an interlocutory decision before the opposition proceedings were terminated. It was further held that where a final substantive decision had been given, an opposition division had no power thereafter to continue examination of the opposition in relation to the issues which were the subject of that decision. Further submissions from the parties relating to such issues were inadmissible.

In T 89/90 (OJ 1992, 456) the opponents had lodged objections to an interlocutory decision finding that the patent as amended and the invention to which it related met the requirements of the EPC. The legal basis for interlocutory decisions was provided by Art. 106(3) EPC 1973. The board observed that the EPC contained no general rules as to when an interlocutory decision could or should be delivered. The relevant department

therefore had to use its discretion in judging whether an interlocutory decision was appropriate in an individual case. This involved weighing up various considerations such as whether an interlocutory decision would accelerate or simplify the proceedings as a whole (clarifying a disputed question of priority, for example, could be of key importance for the form and length of the subsequent proceedings) and clearly also included the issue of costs. In the board's view, it was clear that the established practice of delivering appealable interlocutory decisions under Art. 106(3) EPC 1973 (Art. 106(2) EPC) where a patent was maintained as amended was based on the weighing up of such cost aspects. The board concluded that this practice was both formally and substantively acceptable.

In G 9/92 (OJ 1994, 875), the Enlarged Board of Appeal set out the implications of an admissible appeal against an interlocutory decision of the opposition division concerning maintenance of the patent in amended form, first, where the sole appellant is the patent proprietor and, secondly, where the sole appellant is the opponent. In the first case, neither the board nor the non-appealing opponent as a party as of right may challenge the maintenance of the patent as amended in accordance with the interlocutory decision. In the second case, the patent proprietor is primarily restricted to defending the patent in the form in which it was maintained by the opposition division. The board may reject as inadmissible any amendments proposed by the patent proprietor as a party as of right if they are neither appropriate nor necessary. For further details of the prohibition on *reformatio in peius* and its application in board decisions, see chapter V.A.3.1.

D. Limitation/revocation

1. <u>Limitation/revocation – Article 105a-105c EPC</u>	1121
2. <u>Requests for revocation during opposition and opposition appeal proceedings</u>	1121

1. Limitation/revocation – Article 105a-105c EPC

With the entry into force of the EPC 2000, Art. 105a EPC has been introduced, pursuant to which a European patent may be revoked or limited at the request of the proprietor. Limitation can be achieved by an amendment of the claims. The effect of a successful limitation or revocation is that the patent is limited or revoked ab initio (Art. 68 EPC) and in respect of all the Contracting States in which it has been granted. It takes effect on the date on which the mention of the decision to limit or revoke is published in the European Patent Bulletin (Art. 105b(3) EPC, **T 646/08**, **T 2177/12**). The nature of this procedure, which is ex parte, lies somewhere between the examination and opposition proceedings (**G 3/14**, OJ 2015, A102).

There is no time limit as to when the request for limitation/revocation can be made. However, it is a precondition that no opposition proceedings (including opposition appeal proceedings) in respect of the patent are pending (Art. 105a(2) EPC). If they are, then the request is deemed not to have been filed (R. 93(1) EPC). If limitation proceedings are pending at the time of the filing of an opposition, the limitation proceedings are terminated (R. 93(2) EPC). If a patentee wishes to revoke his patent whilst opposition proceedings are ongoing, he may do so but not by using the procedure set out in Art. 105a-105c EPC (see in this chapter IV.C.5.2.). If he wishes to limit his patent, he may be able to do so by amending it in the course of the opposition and opposition appeal procedure.

The decision as to whether a request for limitation or revocation under Art. 105a EPC is granted is taken by the examining division (R. 91 EPC). If the request is admissible, the examining division examines whether the amended claims constitute a limitation of the claims of the European patent as granted or amended, and whether they comply with Art. 84, 123(2) and 123(3) EPC (R. 95(2) EPC). No examination of the claims with regard to Art. 52-57 EPC is foreseen. The decision of the examining division is appealable before the technical boards of appeal. As at 31 March 2019 no decision of the boards of appeal concerns an appeal against such a decision of the examining division.

2. Requests for revocation during opposition and opposition appeal proceedings

The procedure for limitation/revocation pursuant to Art. 105a-105c EPC is not available during opposition and opposition appeal proceedings. However, a patent may still be revoked during such proceedings at the request of the patent proprietor (see e.g. **T 2177/12**).

If the patent proprietor states in opposition or appeal proceedings that he no longer approves the text in which the patent was granted and will not be submitting an amended text, the patent is to be revoked. This is supported by Art. 113(2) EPC, which provides that a patent may be maintained only in a version approved by the patent proprietor. If there is no such version, one of the requirements for maintaining the patent is lacking (T. 73/84, OJ 1985, 241, followed by numerous decisions, see e.g. recent decisions T. 307/13 and T. 1536/14).

If the patent proprietor himself requests that the patent be revoked, the decision to revoke the patent is given without substantive examination as to patentability. The examination as to whether the grounds for opposition laid down in Art. 100 EPC prejudice the maintenance of the patent becomes impossible since the absence of a valid text of the patent precludes any substantive examination of the alleged impediments to patentability (T. 186/84, OJ 1986, 79; see also T. 157/85, T. 1659/07, T. 124/08, T. 1287/08, T. 1111/10).

In T. 237/86 (OJ 1988, 261) the board stated that a direct request for revocation sufficed, whatever the form of the words, when it was made clear to the boards that appellant and respondent agreed that the patent should be revoked. In T. 459/88 (OJ 1990, 425) the board stated that if, in proceedings before the EPO, the patent proprietor himself requested that his patent be revoked, there could scarcely be any more cogent reason for revoking it since it could not be in the public interest to maintain a patent against its proprietor's will. The patent was thus revoked by the board exercising its powers under Art. 111(1) EPC 1973 (see also the more recent decisions T. 655/01, T. 1187/05, T. 1526/06, T. 1610/07, T. 1541/09).

There must be no doubt that the proprietor applying to have the patent revoked is requesting revocation with the consequences specified in Art. 68 EPC 1973 (Art. 68 EPC), namely the cancelling of the effects of the European patent application and the resulting patent as from the outset (T. 186/84, T. 347/90, T. 386/01). Where the respondent (patent proprietor) states that the patent has been abandoned 'since' a particular date, this cannot be considered to be a request for revocation, as it does not indicate that the patent has been abandoned ab initio. The case law on requests for revocation therefore does not apply and the appeal must be examined as to its merits (T. 973/92).

In T. 237/86 (OJ 1988, 261) the statement "We herewith abandon the above patent" was held to be equivalent to a request for revocation to which the board could accede under Art. 111(1) EPC 1973 (see also T. 347/90). In T. 92/88 the words "the patent has been allowed to lapse in all designated states" were held to amount to a request for revocation.

In a number of cases the boards have decided that a request by a patent proprietor to withdraw "the application" amounted to a request to revoke the patent (T. 264/84, T. 415/87, T. 68/90 and T. 322/91). The board in T. 393/15 pointed out that the basic rule nevertheless applied that any statement intended as such a request had to be clear and leave no room for doubt. In the specific case before it, a letter stating "the patent application is withdrawn" could not be considered clear, because (among other things) the numbers of the patent and the appeal case were missing.

In T 646/08 the appellant, in a letter, withdrew its appeal and at the same time withdrew its approval of the text of the patent as maintained by the opposition division in its interlocutory decision. The board held that the letter did not contain an unequivocal statement of the proprietor that he accepted the revocation of the patent with all the consequences specified in Art. 68 EPC. The appeal proceedings were terminated.

In T 2573/12 the proprietor had stated during proceedings before the opposition division that it wished to abandon the patent. The board held that the **wish** to abandon the patent did not constitute a clear and unambiguous request for abandonment, which would be construed as equivalent to a request for revocation (see T 237/86, OJ 1988, 261).

A number of cases concern the situation in which the opposition division revoked the patent, and the patent proprietor appealed, and then, in the course of the appeal proceedings, requested revocation of the patent. In T 347/90 the board dismissed the appeal without going into the substantive issues, so that the revocation of the patent by the department of first instance was confirmed. In T 18/92, by contrast, the request by the patent proprietor (appellant) for revocation of the patent was interpreted by the board as a withdrawal of the appeal. Withdrawal of the appeal meant that the first-instance decision revoking the patent took effect. In T 481/96 the board examined the two solutions and endorsed T 18/92. In T 1244/08 the board confirmed that according to established case law (see also T 1003/01 and T 53/03), if an appellant (patent proprietor) whose patent has been revoked by an opposition division states clearly and unambiguously that it is no longer interested in pursuing the appeal proceedings, that is tantamount to a statement withdrawing the appeal. The withdrawal had the effect of immediately terminating the appeal proceedings, such that the opposition division's revocation decision became final. Any later request to retract the withdrawal and continue appeal proceedings was inadmissible.

V. PROCEEDINGS BEFORE THE BOARDS OF APPEAL

A. Appeal procedure

1.	Legal character of appeal procedure	1133
1.1.	General	1133
1.2.	Rules of Procedure of the Boards of Appeal (RPBA)	1134

9.8.2 Withdrawal of appeal under Rule 103(2) EPC	1328

1. Legal character of appeal procedure

1.1. General

The provisions governing the appeal procedure are set out in Art. 106 EPC to Art. 111 EPC and R. 99 EPC to R. 103 EPC and in the Rules of Procedure of the Boards of Appeal. R. 100(1) EPC plays an important role since it stipulates that, unless otherwise provided, the provisions relating to proceedings before the department which had taken the decision impugned shall apply to appeal proceedings. This application by analogy is, however, not automatically permissible in every case and for every provision (G 1/94, OJ 1994, 787). Criteria therefore had to be established for when such an analogy was permissible and when not. To this end it was necessary to analyse the legal nature of the appeal procedure.

Appeal proceedings are wholly separate and independent from the proceedings at first instance. Their function is to give a judicial decision upon the correctness of a separate earlier decision taken by a department (T 34/90, OJ 1992, 454; G 9/91, OJ 1993, 408; G 10/91, OJ 1993, 420; T 534/89, OJ 1994, 464; T 506/91). In T 501/92 (OJ 1996, 261) the board deduced from this principle that any procedural request or statement made by a party during proceedings in the first instance was not applicable in any subsequent appeal proceedings, and had to be repeated during the latter if it was to remain procedurally effective.

The fact that the boards of appeal are courts was established in G 1/86 (OJ 1987, 447, point 14 of the Reasons). In decision G 1/99 (OJ 2001, 381) the Enlarged Board held that the appeal procedure is to be considered as a judicial procedure (see G 9/91, OJ 1993, 408, point 18 of the Reasons) proper to an administrative court (see G 8/91, OJ 1993, 346, point 7 of the Reasons; likewise G 7/91, OJ 1993, 356). In G 9/92 and G 4/93 (both OJ 1994, 875) it was decided that the extent of appeal proceedings is determined by the appeal.

These characteristics of the appeals procedure not only serve as criteria when assessing whether a provision may be applied analogously in individual cases; they also have general legal consequences in many respects. It follows from the characteristics set out by the Enlarged Board that the general principles of court procedure, such as the entitlement of parties to direct the course of the proceedings themselves ("principle of party disposition"), also apply to appeals (see G 2/91, OJ 1992, 206; G 8/91, G 8/93, OJ 1994, 887; G 9/92 and G 4/93), that a review of the decision taken by the department of first instance can, in principle, only be based on the reasons already submitted before that department (G 9/91, G 10/91), and that the proceedings are determined by the petition initiating them (*ne ultra petita*) (see G 9/92 and G 4/93). The Enlarged Board has also made it clear that the decision-making powers of opposition divisions, and of the boards in opposition appeal proceedings, are circumscribed by the statement under R. 55(c) EPC 1973 (R. 76(2)(c) EPC) of the extent to which the European patent is opposed. They have no powers to decide and thus investigate anything extending beyond that statement (see G 9/91). This defined the sphere of application of Art. 114(1) EPC 1973, and clarified the distinction between the power to initiate and

determine the object of proceedings, on the one hand, and the power to examine the facts then relevant, on the other. The individual procedural consequences and the Enlarged Board's decisions are discussed in greater detail below.

It is established jurisprudence that the boards of appeal and the Enlarged Board of Appeal respectively act as judicial bodies, which were established by law, and apply general principles of procedural law (see G 3/08, OJ 2011, 10 and G 2/08, OJ 2010, 456).

In T 1676/08 the board went on to say that one of these principles is laid down in Art. 6(1) ECHR, relying on principles of law common to the member states of the European Patent Organisation and applying to all EPO departments of the said organisation, which requires inter alia in "... the determination of his civil rights and obligations ... everyone is entitled to a **fair and public hearing** within a reasonable time by an independent and impartial tribunal established by law". It is also established jurisprudence that, for **inter partes** proceedings before a board of appeal to be fair, the board must be neutral (see e. g. R 12/09 of 15 January 2010 and T 253/95).

1.2. Rules of Procedure of the Boards of Appeal (RPBA)

The RPBA too contain key provisions governing the appeal procedure. They were thoroughly revised in 2003, the revisions relating to the "core" of the appeal procedure, i.e. written and oral proceedings and various related aspects, such as late filing and costs (for details, see CA/133/02). In 2007 they were revised again, to reflect the EPC 2000 (OJ 2007, 536); the provisions on written and oral proceedings were largely left unchanged, but renumbered. Another substantial revision is planned for 2019.

It follows from the RPBA that appeal proceedings are to be conducted primarily in writing. Art. 12(2) RPBA 2007 requires the parties to proceedings to submit their complete cases at the outset, and Art. 13 RPBA 2007 leaves it to the board's discretion to admit any changes to their cases after that. The purpose of these provisions is to ensure fair proceedings, free of tactical behaviour, for all the parties and to enable the board to start work on a case on the basis of both parties' complete submissions (T 217/10, T 713/11, T 1098/11).

Under Art. 23 RPBA 2007, the RPBA are binding on the boards unless they lead to a situation which would be incompatible with the spirit and purpose of the EPC (on this, see T 2227/12).

See also in this chapter V.A.4.1.2 "Rules of Procedure of the Boards of Appeal (RPBA)".

1.3. Suspensive effect of the appeal

Under Art. 106(1), second sentence EPC, an appeal has suspensive effect. The Legal Board of Appeal defined this effect in J 28/94 (OJ 1995, 742), in which a third party claimed entitlement to the grant of the patent and requested suspension of the proceedings for grant under R. 13(1) EPC 1973. The board took the view that the appeal's suspensive effect meant the contested decision had no legal effect until the appeal was

resolved. Otherwise the appeal would be nugatory. Thus, if a decision refusing to suspend the publication of the mention of grant of a patent were appealed, publication should be deferred until the appeal was decided. If (as here) this was not possible for technical reasons, the EPO should take all necessary steps to advise the public that the mention of grant was no longer valid (see also T.1/92, OJ 1993, 685).

In J.12/16 the examining division had had the mention of the grant of the patent published while the period for appealing against the Legal Division's rejection of a request for the application's transfer was still running. The board held that doing so could cause serious problems because publishing the mention of the grant triggered the start of the period for opposing the patent; that, in turn, could make the appeal redundant while the appeal proceedings were still pending, even though the appeal itself had suspensive effect. Since, as long as the appeal period had not expired, in theory the filing of an appeal, and so the suspensive effect under Art. 106(1) EPC, had to be expected at any moment (see also J.28/94), publishing the mention of the grant should be avoided in such circumstances so as not to deprive the appeal of its suspensive effect in practice.

According to J.28/03 (OJ 2005, 597), suspensive effect means that the consequences following from an appealed decision do not immediately occur after the decision has been taken. Actions normally taking place after a decision are "frozen". Suspensive effect does not have the meaning of cancellation of the appealed decision. Even after an appeal the decision as such remains and can only be set aside or confirmed by the board of appeal. Moreover, the status of a divisional application filed while an appeal against the decision to grant a patent on the parent application is pending depends on the outcome of that appeal.

In T.591/05, the suspensive effect of an appeal was said to be a direct consequence of, and was subordinate to the appeal itself and, consequently, no circumstance directly arising from the suspensive effect of the appeal could be invoked in support of the admissibility of the appeal itself.

In J.18/08 the applicant failed to appoint a professional representative (Art. 133(2) EPC) and the application was refused by the Receiving Section under Art. 90(5) EPC. A notice of appeal was filed by a professional representative, who notified the EPO at the same time that he had been appointed as the representative in this application. The board held that when the appeal was filed, the deficiency (on which the refusal was based) was corrected. Thus the underlying ground for the refusal had been overcome and the reasoning in the decision under appeal no longer applied. It was noted that this case was different from the situation where the non-observance of a time limit automatically leads to the application being deemed to be withdrawn. In such a case the legal consequence automatically ensues when an act required within a specific time limit is not performed, without any decision to be taken concerning the refusal of the application. By contrast, if the application is refused under Art. 90(5) EPC the deficiency on which the decision is based can be corrected at the appeal stage. Accordingly, the appeal was allowed.

In T.1674/12 the board noted that under Art. 106(2) EPC a decision which does not terminate proceedings as regards one of the parties can only be appealed together with

the final decision, unless the decision allows a separate appeal. This second sentence made clear that the department taking the decision remained in charge of the proceedings until a decision terminating them was taken or until it allowed a separate appeal. Under Art. 106 EPC, in procedural situations like that at issue, it was up to the opposition division to decide whether to allow a separate appeal. The parties had no rights in that respect. If, as in the case in question, the opposition division had not expressly allowed a separate appeal in its decision, it was entitled to find that an appeal nevertheless filed did not meet any of the conditions of Art. 106(2) EPC, and in particular those of its second sentence.

1.4. Devolutive effect of the appeal

When appeal proceedings start, responsibility for the case passes from the department of first instance to the boards of appeal (known as the devolutive effect; see T 473/91, OJ 1993, 630; T 830/03, T 555/08).

On appeal, the department of first instance loses its competence for the further prosecution of the application for all contracting states – the appeal does not leave a part of the application pending in the first instance. Thus, deemed withdrawal of the application pursuant to Art. 110(3) EPC 1973 applied in the case of a failure to reply to a communication pursuant to Art. 110(2) EPC 1973 in ex parte appeal proceedings, even where the decision under appeal did not refuse the application, but only a particular request. The board reasoned that even if the appealed decision concerned only the designation of a state and not the application as a whole, according to the principle of unity of the application and of the patent in the proceedings the suspensive effect of the appeal affected the application as a whole (J 29/94, OJ 1998, 147).

The devolutive effect of the appeal does not affect the competence of the department of first instance to decide on a request concerning the contents of the minutes of the oral proceedings held before it. What is devolved is the subject-matter decided by the appealed decision (T 1198/97).

According to T 1382/08, the devolutive effect of an appeal before a board extends only to that part of the impugned decision which is indicated in the statement of grounds for appeal and actually challenged by the appeal. For the board, therefore, the extent to which the impugned decision is to be amended, as defined under R. 99(2) EPC, is simultaneously the limit of the devolutive effect. This in turn implies that the impugned decision's part not covered by the statement of grounds of appeal also cannot be part of the appeal proceedings and consequently becomes final on expiry of the time limit for appeal. This approach was also adopted by the same board in T 448/09. Only those issues that were considered and decided upon in the decision can later be challenged in appeal proceedings (T 2117/11). However, the board in T 689/09 noted that, whilst it was aware of case law, according to which the distinction between different legal effects of a decision also fell under the "extent to which the impugned decision is to be amended" pursuant to R. 99(2) EPC, (T 1382/08), this approach left the notion of the "subject of the appeal" even more diffuse and elusive.

See also in this chapter V.A.3.2. "Subject-matter under examination".

1.5. Accelerated processing before the boards of appeal

Parties with a legitimate interest may ask the boards of appeal to deal with their appeals rapidly (see Notice from the Vice-President Directorate-General 3 dated 17 March 2008 concerning accelerated processing before the boards of appeal (OJ 2008, 220)).

The appellant (patentee) in T.734/12 requested acceleration of the appeal proceedings on the basis of three arguments: the possibility of remittal; the suggestion that the decision under appeal related to an important point of law the resolution of which might take additional time; and the commercial and medical importance of the patented and approved treatment. In the board's opinion these reasons did not in themselves justify acceleration. Whilst acceleration had been acknowledged as appropriate when infringement proceedings were threatened or pending, which was not the case here. However, it was clear there was a substantial measure of agreement between the parties and the public had an interest in the early resolution of disputes. The interests of the parties and of the public would therefore best be served by an expedited procedure.

In T.895/13 of 28 March 2014 the board confirmed that acceleration is always a matter for the exercise of the board's discretion. While trivial reasons would clearly not warrant acceleration, there was no fixed standard of proof. Acceleration is not limited to the examples given in the Notice, but is a matter to be decided in the discretion of the board on the particular facts of the case before it. It was clear in the case at issue that the board could have accelerated the procedure ex officio under the notice, in view of the disadvantage which could ensue before the Belgian courts from the suspensive effect of the appeal in question. If the board could allow acceleration on that basis of its own motion, it could clearly do so on the request of a party (in this case the respondent (opponent)). The board ordered the appeal proceedings to be accelerated. It added that its views related only to the particular facts of this case and the co-pending appeal in T.1125/13 of 28 March 2014 between the same parties and were not intended to set any precedent for application beyond those facts.

In T.239/16 the board allowed acceleration. The board stated that according to the notice trivial reasons would clearly not justify acceleration. It followed from the scenarios in the notice that the term "legitimate interest" was not to be construed as requiring compelling reasons. Rather, objective reasons had to be put forth that warranted giving the appeal priority. Of course, the reasons invoked must be weighed against any disadvantage which might possibly ensue from granting accelerated proceedings. In the case in hand, in support of their requests for accelerated processing, the appellants (opponents) argued that infringement proceedings had been brought against their affiliates in France. The board was satisfied that the appeal proceedings at issue had a bearing on the infringement proceedings in France even if the appellants were not party to the infringement proceedings in France. See also T.1868/16 where the board allowed acceleration on the grounds that arbitration proceedings had been brought against an affiliate company in Portugal.

See also chapter IV.C.7. "Acceleration of opposition proceedings in the case of pending infringement proceedings".

2. Filing and admissibility of the appeal

According to Art. 108 EPC a notice of appeal shall be filed in accordance with the Implementing Regulations, at the EPO within two months after the date of notification of the decision. Notice of appeal shall not be deemed to have been filed until the fee for appeal has been paid. The content of the notice of appeal is set out in R. 99 EPC. In view of the future use of electronic means of communication, it was found useful to avoid references to 'in writing' or 'in written form' and leave such regulation to the Implementing Regulations.

The admissibility of an appeal can only be assessed as a whole (T 382/96, T 1763/06, T 509/07, T 23/10, T 2001/14). There is no support in the EPC for a notion of 'partial admissibility' of an appeal (T 774/97, T 509/07).

See also chapter V.A.9.3. "Appeal deemed not to have been filed or inadmissible appeal".

2.1. Transitional provisions

If notice of appeal was filed before the revised EPC entered into force, the appeal's admissibility must be assessed under the provisions of the EPC 1973, in line with the principle (*tempus regit actum*) that entitlement to perform a procedural act is governed by the law in force when the act took place (T 1366/04).

In J 10/07 (OJ 2008, 567) the board had to decide whether the EPC 1973 or the EPC 2000 applied. The decision whether an appeal is admissible according to the relevant provisions, geared to the fulfilment of the requirements for admissibility within a certain legally defined period, depends entirely on the substantive and legal position at the time of expiry of the time limits. Since the belated fulfilment of admissibility requirements after the expiry of the time limit cannot be taken into account in the examination of admissibility, so too a change in the legal position occurring after the expiry of the time limit for fulfilling the admissibility requirements can have no impact, either to the appellant's advantage or to his detriment, on the assessment of admissibility. In T 2052/08, the board, citing the finding in J 10/07 that R. 103 EPC should not be applied to appeal cases concerning patent applications filed before the entry into force of the EPC 2000, found that, as J 10/07 concerned the reimbursement of the appeal fee in situations where a substantial procedural violation had occurred at first instance, its conclusions should not be taken as implying a statement on the applicability of R. 103 EPC.

In T 616/08, the board found that, to the extent that it was relevant whether an aligned or the original version of a rule applied, there was a gap in the law which needed to be closed by case law as long as the legislator was not active. Art. 107, 109 and 111 EPC were not mentioned in the decision of the Administrative Council of 28 June 2001 on the transitional provisions under Art. 7 of the Act revising the European Patent Convention of 29 November 2000 ("transitional provisions"), although Art. 106, 108 and 110 EPC were. The board took into account the purpose of the transitional provisions (namely, to avoid the use of different versions of the EPC over a prolonged period), and the fact that there was nothing to indicate any intention to use new and old versions of Articles covering appeal

proceedings in parallel. It therefore decided to apply Art. 107, 109 and 111 EPC and the rules appertaining to them where Art. 106, 108 and 110 EPC were applicable. The board referred to J 10/07 (OJ 2008, 567), where the Legal Board had concluded that Art. 107 and 111 EPC 1973 should be applied to applications filed before the cut-off date, but considered that the continued application of all EPC 1973 articles which had not been addressed in the transitional provisions did not appear to be in line with the legislators' objectives that the revised provisions should quickly take effect in practice and that the use of different variations of the EPC over a prolonged period should be avoided.

2.2. Appealable decisions

Under Art. 106(1), first sentence, EPC appeals lie from decisions of the Receiving Section, examining divisions, opposition divisions and the Legal Division. It is such decisions themselves rather than their grounds that are open to appeal (see T 611/90, OJ 1993, 50).

2.2.1 Departments

The boards can hear appeals only against the decisions taken by other EPO departments (J 12/85, OJ 1986, 155). There is thus no right of recourse to the boards of appeal in respect of extensions of patent applications and patents to the extension states. Instead, it is the respective national jurisdiction which is responsible (J 14/00, OJ 2002, 432; J 19/00, J 9/04, J 2/05, J 4/05, J 22/10 and J 9/11). The board in T 506/08 considered that it was not competent to hear a request for a (partial) refund of the international search fee where no search had been performed.

2.2.2 Decisions

Whether a document constitutes a 'decision' or not depends on the substance of its content and not on its form (J 8/81, OJ 1982, 10; see also J 26/87, OJ 1989, 329; J 13/92, T 263/00 and T 713/02, OJ 2006, 267). It is, therefore, not relevant that the text in question is in the form of a mere letter, nor does it matter if it states "... it is decided" to allow the request. Nor is the fact decisive that the Notice of the Vice-President DG2 dated 28.4.99 uses the wording "Decisions concerning the correction of errors ..." (T 713/02, OJ 2006, 267). A "decision" needs to involve a reasoned choice between legally viable alternatives (T 934/91, OJ 1994, 184).

Notification of the case number and the responsible board of appeal by the registry did not constitute a decision under R. 69(2) EPC 1973 recognising that an appeal was pending (T 371/92, OJ 1995, 324; see also T 1100/97 and T 266/97). See now R. 112 EPC.

a) Examples of appealable decisions

(i) A formalities officer's letter rejecting the opposition as inadmissible was held to be an appealable decision in T 1062/99. (See G 1/02, OJ 2003, 165, a referral occasioned by diverging decisions T 1062/99 and T 295/01, OJ 2002, 251) on a formalities officer's competence to decide on the admissibility of an opposition).

(ii) A document (EPO Form 2901) concerned with the applicant's request for re-establishment in respect of the period for payment of the third renewal fee plus additional fee was deemed to be a decision in J 7/08.

b) Examples where the communication was not an appealable decision

The case law of the boards of appeal has established that the following are **not** regarded as appealable decisions taken by other EPO departments:

(i) A request under R. 89 EPC 1973 for correction of a contested decision. Not until the request has been decided at first instance can the matter be referred to the board (J 12/85, OJ 1986, 155).

(ii) The preparatory steps referred to in Art. 96(2) EPC 1973 and R. 51(3) EPC 1973 (T 5/81, OJ 1982, 249).

(iii) A communication under R. 57(1) EPC 1973 (T 222/85, OJ 1988, 128), or R. 69(1) EPC 1973 (J 13/83). See also chapter III.K. "Formal aspects of decisions of EPO departments".

(iv) A communication from the opposition division finding that an opposition has been validly filed, and stating that the decision will be taken on that point at the oral proceedings (T 263/00).

(v) An order by a director of a department of first instance (such as an opposition division) rejecting an objection to a member of the division on the ground of suspected partiality. The composition of the division could, however, be challenged on such a ground in an appeal against its final decision or against a separately appealable interlocutory decision under Art. 106(3) EPC 1973 (G 5/91, OJ 1992, 617).

(vi) A "decision" by a director on a request for inspection of file. Only the examining division charged with the technical opinion (Art. 25 EPC 1973) or the formalities officer pursuant to the Notice of the DG2 Vice-President (OJ 1984, 317, revised and supplemented in OJ 1989, 178 and OJ 1999, 504) has the competence to decide on a request for inspection of file. Such a 'decision' under appeal is therefore void ab initio and the appeal inadmissible (J 38/97; see also T 382/92).

(vii) A letter bearing the letterhead of an EPO Directorate-General and signed by an EPO Vice-President, if it is evident from its content that it does not constitute a decision and from its form that it does not emanate from any of the departments listed in Art. 21(1) EPC 1973 (J 2/93, OJ 1995, 675).

(viii) The minutes of oral proceedings (T 838/92). A correction to minutes of oral proceedings made on the initiative of the opposition division was held not directly appealable in T 231/99.

(ix) A communication from a formalities officer primarily dealing with the patentee's request to stay the opposition proceedings and to remit the case to the examination division for a decision on the request for correction under R. 89 EPC 1973 (T 165/07).

(x) A communication under R. 71(3) EPC. This is not intended to terminate the examination procedure but is rather a preparatory action and is therefore as such not appealable (T 1182/04 and T 1226/07).

(xi) When not acceding to a request to hold oral proceedings in Munich instead of The Hague, the examining division does not take a decision but only expresses the way the EPO is managed. Consequently, that issue is not subject to appeal, nor can the board refer a question on the venue of oral proceedings to the Enlarged Board of Appeal (T 1142/12).

(xii) A communication of information by which the appellant was informed that, as the decision to grant had been rectified under Art. 109 EPC, the examination procedure was resumed, and it was not possible to file an opposition during this part of the procedure. The appeal was rejected as inadmissible under Art. 107 EPC (J 22/12).

(xiii) An order to take evidence is neither an appealable decision under Art. 106(1) EPC nor an interlocutory decision allowing a separate appeal within the meaning of Art. 106(2) EPC. Instead, it is a case-management measure that precedes a substantive decision and cannot be reviewed as long as the proceedings are still pending (T 1954/14).

(xiv) A communication to change in a board's composition with regard either to the number of its members under Art. 21(4)(b) EPC 1973 or to the replacement of a member under Art. 4 of the Business Distribution Scheme of the Technical Boards of Appeal is not a decision (T 1676/08).

T 26/88 (OJ 1991, 30), which held that a document stating that the patent was revoked under Art. 102(4) and (5) EPC 1973 did not constitute a decision, was overruled by G 1/90 (OJ 1991, 275).

2.2.3 Interlocutory decisions

Under Art. 106(2) EPC (formerly Art. 106(3) EPC 1973) a decision which does not terminate proceedings as regards one of the parties (interlocutory decision) can only be appealed together with the final decision, unless the decision allows a **separate appeal**. The EPC does not explicitly set out the cases in which interlocutory decisions have to allow a separate appeal. Instead, the legislator has expressly left it to the department making the decision to decide whether to allow an appeal; see the "travaux préparatoires" for the EPC 1973 (T 1954/14). Separate appeal is possible against interlocutory decisions regarding admissibility of the opposition (see e.g. T 10/82, OJ 1983, 407) or maintenance of a patent in amended form (see e.g. T 247/85 and T 89/90, OJ 1992, 456).

In T.857/06 the board stated that a first interlocutory decision which does not allow a separate appeal can be appealed together with a second interlocutory decision which does not leave any substantive issues outstanding and which allows a separate appeal.

The board in T.756/14 observed that allowing a separate appeal against an interlocutory decision under Art. 106(2) EPC is a constitutive decision by the examining division without which the former decision cannot be challenged by way of an appeal and so this aspect must be included in the order too.

2.2.4 Appeals against decisions of the boards of appeal

Art. 106(1) EPC does not provide for appeals against decisions of the boards of appeal. Appeals under Art. 106(1) EPC against final board decisions are therefore not possible and have to be rejected as inadmissible. A limited judicial review of decisions of the boards of appeal was introduced into the EPC 2000, in Art. 112a EPC. See chapter V.B.3. "Petition for review under Article 112a EPC".

It was established by the Enlarged Board in G.1/97 (OJ 2000, 322) that:

1. In the context of the EPC 1973, the jurisdictional measure to be taken in response to requests based on the alleged violation of a fundamental procedural principle and aimed at the revision of a final decision of a board of appeal having the force of res judicata should be the refusal of the requests as inadmissible.
2. The decision on inadmissibility is to be issued by the board of appeal which took the decision forming the subject of the request for revision. The decision may be issued immediately and without further procedural formalities.
3. This jurisdictional measure applies only to requests directed against a decision of a board of appeal bearing a date after that of the present decision.
4. If the Legal Division of the EPO is asked to decide on the entry in the Register of European Patents of a request directed against a decision of a board of appeal, it must refrain from ordering that the entry be made if the request, in whatever form, is based on the alleged violation of a fundamental procedural principle and aimed at the revision of a final decision of a board of appeal.

These principles have since been followed in several decisions, for example J.16/98, J.3/98 and T.431/04.

This situation has not been changed by the introduction of a petition for review in Art. 112a EPC (T.365/09). According to the board, a first difference between appeal and petition evidently lay in the fact that, unlike Art. 106(1) EPC, Art. 112a(3) EPC clearly excludes a suspensive effect of the petition. Moreover, a petition for review can, according to Art. 112a EPC, only be based on fundamental procedural violations or defects during the appeal proceedings, which do not include questions relating to patentability. This can be derived from the exhaustive list of fundamental procedural violations and defects in

Art. 112a(2) EPC and R. 104 and 105 EPC. This view has, in the meantime, been confirmed in G 3/08 (OJ 2011, 10).

In T 846/01 it was clear that the appellants were not contesting the substance of the opposition division's interlocutory decision, which dealt with the renumbering of the claims and the adaptation of the description, but were actually trying to reopen the issue of validity which had already been decided in an earlier decision of a board of appeal. Under Art. 106 EPC 1973 and in view of the principle of *res judicata*, this finding in the decision was not open to challenge, even though the opposition division decision was accompanied by a form stating the decision was appealable. See also T 2047/14 on this topic.

2.3. Board competent to hear a case

2.3.1 Technical or Legal Board of Appeal

a) General

The responsibilities and composition of boards are laid down in Art. 21 EPC. In G 2/90 (OJ 1992, 10) the Enlarged Board made it clear that under Art. 21(3)(c) EPC 1973, the Legal Board of Appeal was competent only for appeals against decisions taken by an examining division consisting of fewer than four members and which did not concern refusal of the application or grant. In all other cases, i.e. those covered by Art. 21(3)(a), 21(3)(b) and 21(4) EPC 1973, the technical boards were competent. The provisions of Art. 21(3) and (4) EPC 1973 governing responsibilities and composition were not affected by R. 9(3) EPC 1973.

In G 3/03 (OJ 2005, 343), the Enlarged Board of Appeal held that in the event of interlocutory revision under Art. 109(1) EPC 1973, the department of first instance whose decision had been appealed was not competent to refuse a request of the appellant for reimbursement of the appeal fee. It was the board of appeal which would have been competent under Art. 21 EPC 1973 to deal with the substantive issues of the appeal if no interlocutory revision had been granted which was competent to decide on the request.

In G 1/11 (OJ 2014, A122) the Enlarged Board of Appeal held that a technical board of appeal was competent to hear an appeal against an EPO examining division's decision – taken separately from its decision granting a patent or refusing the application – not to refund search fees under R. 64(2) EPC.

b) Technical board of appeal competent

Art. 21(3)(a) EPC expressly states that appeals against decisions concerning the limitation or revocation of European patents should be heard by the technical boards of appeal.

An appeal against a decision of an examining division refusing a request under R. 89 EPC 1973 for correction of the decision to grant was to be decided by a technical board of appeal (G 8/95, OJ 1996, 481, overruling J 30/94). (A board, however, has no appellate competence, in *inter partes* opposition appeal proceedings, to review the

decision on correction of the grant decision taken in ex parte examination proceedings under R. 89 EPC 1973, since that decision does not form the subject of the appeal proceedings before it; see T. 79/07, deviating from T. 268/02).

According to T. 1382/08, for the purpose of determining competence under Art. 21(3) EPC 1973, a contradictory or unclear impugned decision is to be considered in the light of its legal consequences vis-à-vis the applicant or the impression given to the public as to its legal nature. In the case at issue, it was unclear whether the contested decision of the examining division was actually a refusal of the application or, instead, merely a refusal of a request for a refund of the search fee or confirmation of the loss of rights established in the R. 69(1) EPC 1973 communication. In the latter two cases, the Legal Board of Appeal would have been competent to hear the appeal under Art. 21(3)(c) EPC 1973. The board found that the decision had the effect of a refusal, which meant that the technical board of appeal was competent.

However, in J. 16/13, the board held that, where the formal order of an appealed decision is obviously erroneous to such an extent that it is essentially incomprehensible when compared with the reasons in the body of the decision, in particular when it plainly does not correspond to any of the foreseen possible legal effects flowing from the substantive issue underlying the appealed decision, and if the competence pursuant to Art. 21(3) EPC is supposed to change from one board to another only because of such an "impossible" order, the formal order can be disregarded for the purposes of Art. 21(3)(a) and (c) EPC, and rather the substantive request underlying the decision must be guiding in determining the board competent to decide the case (T. 1382/08 not followed).

c) Legal Board of Appeal competent

An appeal against the decision of the examining division refusing a request for corrections under R. 88 EPC 1973 filed after grant of the patent, on the other hand, is to be decided by the Legal Board of Appeal. The appeal concerned the preliminary question of whether a request under R. 88 EPC 1973 could be made after grant. This was purely a question of law, and did not concern the refusal of a European patent application or the grant of a European patent. It was also consistent with G. 8/95, as answering the preliminary question did not involve any consideration of the text with which the patent should be granted (J. 42/92).

2.3.2 Specific cases

a) Interruption of proceedings

The question for the board in T. 854/12 was whether it was competent to decide itself whether proceedings had been interrupted under R. 142 EPC, or had to arrange for the Legal Division to take a decision in this regard. It found that a decision-making board had to ascertain for itself whether, based on the facts submitted and any additional facts it had had to investigate of its own motion, the conditions for an interruption had been met, if its decision depended on this point.

b) Request for a search-fee refund

Where a request under R. 64(2) EPC for a refund of a further search fee paid under R. 64(1) EPC is first filed on appeal against an examining division decision, the board has no competence to decide on it and it must therefore be refused as inadmissible (T. 2076/15).

2.4. Entitlement to appeal

2.4.1 Formal aspects under Article 107 EPC

Under Art. 107, first sentence, EPC, an EPO decision can be appealed only by a party to the proceedings which gave rise to it. Concerning the entitlement to appeal of a transferee of a patent, see chapter III.O.1. "Party status as patent proprietor".

a) Appeal filed by wrong company

In T. 340/92 the appellant was a company which had obviously been named in the notice of appeal by mistake, instead of a subsidiary, which was the real opponent. The actual appellant was the only party adversely affected by refusal of the opposition, and was readily identifiable through its representative, who was named in the appeal dossier. The board held that this deficiency could be remedied under R. 65(2) EPC 1973. See also T. 875/06.

However, if the notice of appeal was filed by an adversely affected party, but the grounds of appeal were filed by a different company which was not a party to the opposition proceedings, let alone a party adversely affected by the outcome of those proceedings, the appeal could not be held admissible. No provision having been made in the Implementing Regulations pursuant to Art. 133(3), last sentence, EPC 1973 the EPC 1973 did not allow the representation of one legal person by the employee of another economically related legal person, who could not therefore file the grounds of appeal on the other's behalf (T. 298/97, OJ 2002, 83).

b) Appeal filed in name of representative

An appeal filed in the name of the representative instead of the party adversely affected by the decision impugned was rejected as inadmissible in J. 1/92.

In the absence of any clear indication to the contrary, a professional representative who was authorised to act for a party adversely affected by a decision and then filed an appeal against this decision had to be presumed to be acting on behalf of the very same party that he acted for in the first instance proceedings, and not on behalf of someone else not entitled to appeal (T. 920/97). Although the notice of appeal did not indicate the name and address of the appellant as required by R. 64(a) EPC 1973, the appellant corrected the notice of appeal in time and the appeal was thus admissible. See also T. 1911/09 and T. 2244/14.

c) Party consisting of plurality of persons

If a party consists of a plurality of persons, an appeal against a decision which adversely affects this party has to be filed on behalf of all these persons through their duly determined common representative (see G 3/99, OJ 2002, 347, where multiple opponents file a joint opposition; T 1154/06, with respect to joint proprietors of a European patent; see also R 18/09, with respect to joint proprietors and a petition for review) (T 755/09).

In G 3/99 (OJ 2002, 347), the Enlarged Board of Appeal held that where the opposing party consisted of a plurality of persons, an appeal had to be filed by the common representative under R 100 EPC 1973. Where the appeal was filed by a non-entitled person, the board of appeal was to consider it not to be duly signed and consequently invite the common representative to sign it within a given time limit. The non-entitled person who filed the appeal should be informed of this invitation. If the previous common representative was no longer participating in the proceedings, a new common representative should be determined pursuant to R 100 EPC 1973 (see also R 18/09).

In order to safeguard the rights of the patent proprietor and in the interests of procedural efficiency, it had to be clear throughout the procedure who belonged to the group of common opponents or common appellants. If either a common opponent or appellant (including the common representative) intended to withdraw from the proceedings, the EPO had to be notified accordingly by the common representative or by a new common representative determined under R 100(1) EPC 1973 in order for the withdrawal to take effect (see e. g. T 562/13).

Where an appeal is filed by **only one of several joint members** of a party and where this member is not the common representative, the board of appeal should send the common representative a communication giving him the opportunity to fulfil the necessary requirements of the EPC (see G 3/99, T 1154/06). If the common representative does not do so, the notice of appeal is deemed not to have been filed. Such an appeal is thus treated in the same way as an appeal filed but not signed by an authorised person (R 18/09; see also T 755/09).

In T 755/09 the appeal was filed only on behalf of one of several persons who, at the time of filing the appeal, were the joint applicants of the application in suit (see Art. 59 EPC). In principle the appeal had therefore to be held inadmissible in accordance with R 101(1) EPC. The board pointed out that the case did not come under the category calling for a communication under R 101(2) EPC inviting the appellant to remedy deficiencies under R 99(1)(a) EPC within a specified period (see G 1/12, OJ 2014, A114). The notice of appeal was unambiguous nor did the appellant ever claim that the notice of appeal contained a deficiency under R 101(2) EPC. The legal remedy foreseen in R 101(2) EPC therefore could not apply (see also T 656/98, OJ 2003, 385).

d) Company in receivership

A company that has gone into receivership can no longer validly file an appeal; only the insolvency administrator can do so on its behalf. In T 693/05, the insolvency administrator

had authorised the representative to file an appeal, which was held admissible. In T.1324/06, the authorised representative of a company which had previously been declared bankrupt filed an appeal on behalf of the company. Relying on R.101(6) EPC 1973 and R.152(8) EPC, under which the authorised representative shall be deemed to be authorised until the termination of his authorisation has been communicated to the EPO, the board held the appeal admissible, no such notification having been received from the insolvency administrator or representative.

e) Death of the appellant (opponent)

In T.1213/13, the board noted that the appellant, the only party to the proceedings adversely affected by the appealed decision, had died. The deadline set in the board's communication aiming to establish if there were any heirs had passed and the communication gone unanswered. It had therefore not been possible to identify any heirs (or legal representatives). Since the status of opponent could pass to any heirs, where an opponent was an appellant too, the heirs could pursue the appeal. However, they had to make themselves known and prove their status as such. The board declared the proceedings closed for want of an appellant to pursue them (see also T.74/00).

2.4.2 Party adversely affected (Article 107 EPC)

a) General

Under Art.107 EPC, any party to proceedings adversely affected by a decision may appeal. A party is adversely affected within the meaning of Art.107 EPC if the decision fails to meet that party's wishes. This had to be assessed by comparing the request at first instance with the substance of the decision (see T.244/85, OJ 1988, 216; T.1682/13). According to T.234/86 (OJ 1989, 79) a party is adversely affected if the decision does not accede to his main requests or to auxiliary requests preceding the allowed auxiliary request (see also T.392/91). This is not the case if the patent proprietor withdraws his main request or preceding auxiliary requests and agrees with the allowed auxiliary request (T.506/91, T.528/93, T.613/97, T.54/00, T.434/00). In these cases the patent had been maintained in amended form by the opposition division.

The question of whether or not a party is adversely affected by a decision taken by an authority as defined in Art.106 EPC arises in connection with Art.107 EPC in order to establish who may appeal.

An appeal is inadmissible where the appellant is seeking only to amend not the decision itself but the reasons for it (T.84/02) or the sole aim is to settle a point of law not relevant to the case (J.7/00), although here the board did decide to rule on the issue (see also T.1790/08). Abandoning claims to have a prompt decision in order to be in a position to appeal also results in the appeal being inadmissible where the patentee's requests were actually granted (T.848/00).

In T.735/13, the board held that appellants who had agreed with a decision at the time but later changed their minds could not be regarded as adversely affected; an adverse effect

required a discrepancy between the decision and what they had been requesting when it was issued.

In T. 298/97 (OJ 2002, 83), the board held that where the notice of appeal is filed by an adversely affected party but the grounds of appeal are filed by a natural or legal person who, although having economic connections with that adversely affected party, is not itself that party, the appeal cannot be held admissible.

b) Patent applicant

(i) Patent applicant adversely affected

In J. 12/83 (OJ 1985, 6) the board found that an applicant for a European patent might be "adversely affected" within the meaning of Art. 107 EPC 1973 by a decision to grant the patent, if the patent was granted with a text not approved by him under Art. 97(2)(a) EPC 1973 and R. 51(4) EPC 1973. In J. 12/85 (OJ 1986, 155) the board held that he could be "adversely affected" within the meaning of Art. 107 EPC 1973 only if the grant decision was inconsistent with what he had specifically requested (see also T. 114/82 and T. 115/82, both OJ 1983, 323 and T. 1/92, OJ 1993, 685).

An applicant was 'adversely affected' and thus able to file an appeal where the examining division had rectified its decision but refused to grant reimbursement of the appeal fee (J. 32/95, OJ 1999, 733).

The grounds forming the basis of a decision on rectification should not be interpreted to mean only the legal basis of the decision, but also the factual reasons supporting the legal basis. An applicant adversely affected by the **factual basis** was thus considered adversely affected in T. 142/96.

In J. 17/04 the board found that although the notice of appeal only referred to a correction of the decision under appeal under R. 88 and 89 EPC 1973, it made therewith (implicitly) the allegation that the decision under appeal incorrectly limited the regional scope of the patent and that this decision should be set aside. The board was therefore satisfied that the appellant had sufficiently claimed to be adversely affected and the appeal was admissible.

According to T. 1351/06, a subsidiary request is only valid if the main request or higher-ranking subsidiary requests are not granted. Under Art. 113(2) EPC 1973, the EPO was bound by the applicant's requests. In the case in point, the main request had not been withdrawn and therefore remained pending. Consequently, the decision to grant a patent on the basis of the subsidiary request was contrary to Art. 113(2) EPC 1973. The appellant had therefore been adversely affected under Art. 107 EPC 1973.

(ii) Patent applicant not adversely affected

In J 5/79 (OJ 1980, 71) the board ruled that an applicant whose priority right was found to have lapsed because he failed to file the priority documents was no longer adversely affected if re-established in his rights before the application was published.

c) Patent proprietor

(i) Patent proprietor adversely affected

In T 457/89, by analogy with G 1/88 (OJ 1989, 189), the board took the view that the appellant (patentee) was adversely affected by the decision revoking his patent, despite failing to comment on a communication within the time specified in an opposition division's invitation under Art. 101(2) EPC 1973. For, according to G 1/88, wherever non-compliance could lead to loss of rights, the EPC 1973 always expressly indicated this and Art. 101(2) EPC 1973 made no provision for any loss of rights.

In T 537/05 the appellant was held adversely affected by the decision under appeal granting the patent in an amended form on the basis of the appellant's main request, because this request was not submitted until after the opposition division had 'decided' that the subject-matter did not meet the requirements of Art. 56 EPC 1973. Giving the wording its true meaning, the opposition division had thus revoked the patent, its actions after the decision were ultra vires, and the patent proprietor thus adversely affected and entitled to appeal.

(ii) Patent proprietor not adversely affected

In T 73/88 (OJ 1992, 557) the board ruled that if a patentee's request that his patent be maintained was upheld by a decision of the opposition division, he could not appeal against adverse reasoning in the decision (here, regarding his claim to priority) because he was not adversely affected by it within the meaning of Art. 107 EPC 1973.

One of the principles representing the fundamental value of legal procedural certainty was that a party was not to be regarded as adversely affected within the meaning of Art. 107 EPC 1973 by a decision which granted his final request. A request under R. 88 EPC 1973 for correction of a document as the sole reason for the appeal was inadmissible (T 824/00, OJ 2004, 5). In this case the proprietor had requested correction under R. 88 EPC 1973 of his letter withdrawing all requests (see also T 961/00 and J 17/04).

In T 528/93 a request was withdrawn during opposition proceedings and was thus not the subject of the contested decision. The board decided that a virtually identical request filed during appeal proceedings was not the subject of the appeal, because the appellant was not adversely affected by the decision of the opposition division as far as this request was concerned.

In T. 327/13 the board found that, to establish whether a party has been adversely affected by a decision, it is not enough to consider the end result in isolation, but to consider the party's complete case, as is defined in Art. 12(2) RPBA 2007, in conjunction with the substance of the decision. Although the board noted that it was clear that the appellants were adversely affected by the opposition division's decision not to accede to the then main request, the decision had not been contested with the appeal. The board therefore concluded that they could not be regarded as "adversely affected" under Art. 107 EPC.

The argument that the discovery of a prior art disclosure in national proceedings meant that the patent proprietor had subsequently become adversely affected was rejected in T. 591/05 – by granting the patent the department of first instance had acceded to the then valid request of the appellant.

In T. 332/06 the patent proprietor's appeal was admissible at the time it was filed but became inadmissible when the statement of grounds was received, as the patent proprietor only contested that portion of the decision relating to the claims for the contracting state DE. These claims, had been allowed by the opposition division for DE but rejected with respect to the remaining contracting states. The patent proprietor was therefore not adversely affected with respect to DE.

In T. 1783/12 the opposition division had refused the main request that the opposition be rejected as inadmissible. The appellant had therefore been adversely affected by this procedural aspect of the decision under appeal. However its statement of grounds of appeal had not set out why this aspect should be set aside, instead explicitly addressing only why the patent should be maintained as granted. Moreover, at first instance it had requested the maintenance of the patent in amended form as per the first auxiliary request filed at the oral proceedings, and this request had been granted. Summing up, the board held that at the relevant point in time under Art. 108 EPC – the filing of the statement of grounds of appeal – (a) no reasons had been given why the decision not to reject the opposition as inadmissible should be set aside; and (b) the substantive request for the maintenance of the patent as granted did not result from an adverse effect within the meaning of Art. 107 EPC. The appeal was therefore inadmissible.

In T. 611/15 the opposition division maintained the patent in amended form based on auxiliary request VIII. The proprietor had argued that it had withdrawn only the auxiliary requests filed in writing before the oral proceedings, not the main request. However, the minutes stated that the representative of the proprietor announced that he would withdraw all other requests so that auxiliary request VIII as filed during the oral proceedings represented the main and sole request of the proprietor. In the absence of any request for correction of the minutes, the board assumed that these statements accurately reflected the state of the proprietor's requests. Given that the decision on this request was in favour of the proprietor it followed that the proprietor was not adversely affected by the decision.

d) Opponent

(i) Rule 82(1) EPC

Under R. 82(1) EPC (previously R. 58(4) EPC 1973), before the opposition division decides to maintain the patent as amended, it shall inform the parties of the text in which it intends to maintain the patent and shall invite them to file their observations within two months if they disapprove of that text.

The Enlarged Board found in G 1/88 (OJ 1989, 189) that the fact that an opponent had failed, within the time allowed, to make any observations on the text despite an invitation to do so under R. 58(4) EPC 1973 did not render his appeal inadmissible. To regard silence as betokening consent would be tantamount to withdrawal of the opposition with consequent surrender of the right to appeal. Surrender of a right could not be simply presumed. Deeming silence to be equivalent to surrender would also be inconsistent with the logic of how the EPC operated, since it would be at odds with the way in which it dealt with the loss of rights. Where the legal consequence of an omission was to be a loss of rights, this was expressly stated. Furthermore, under Art. 164(2) EPC 1973 the Implementing Regulations had always to be interpreted in the light of the EPC. The interpretation of the Implementing Regulations which corresponded most closely to the principles of the EPC thus prevailed. It was a principle of the EPC, however, that parties' rights were safeguarded by the possibility of appeal to at least one higher-ranking tribunal. The Implementing Regulations should therefore be construed in such a way that R. 58(4) EPC 1973 was not allowed to interfere with the right of appeal under Art. 106 and 107 EPC 1973. This interpretation in the light of the sense and purpose of the procedure under R. 58(4) EPC 1973, leads to the same goal.

In T. 156/90 the opponent had stated that he would have no objection to maintenance of the patent if the claims were amended in a specified way, which they were. His subsequent appeal was dismissed as inadmissible; his argument that the circumstances had changed and he was no longer bound by his consent failed.

In T. 266/92 of 17 October 1994 the opponent had declared in opposition proceedings that he would withdraw his request for **oral proceedings** if the patentee agreed to an amended wording of the patent, as he did. The board held that the appellant was adversely affected within the meaning of Art. 107 EPC 1973, and was entitled to appeal; withdrawal of a request for oral proceedings did not in itself imply withdrawal of any other existing request (see also T. 25/15).

In T. 833/90 the board held that an appeal should be considered admissible if it was not clear or ascertainable whether the opponent (appellant) had agreed to maintenance of the patent. This was followed in T. 616/08.

(ii) Opponent adversely affected

In T. 273/90 the board concluded that legal uncertainty arising from **inadequate adjustment of the description** to amended claims constituted sufficient grievance, as the

commercial interests of the appellant (opponent) could be adversely affected (likewise [T.996/92](#)).

In [T.1178/04](#) (OJ 2008, 80) the board found the appeal filed by the opponent admissible even where the **validity of the opponent's status** was challenged following a disputed transfer, as a person was a party to proceedings for the purposes of [Art. 107 EPC 1973](#) even if his entitlement to take part in such proceedings was brought into question. A decision that he was not entitled to take part in the proceedings would have the effect that he was no longer entitled to take part in the proceedings, but not that he had never been a party. See also [T.1982/09](#).

It is not necessary for an opponent to have a **continuing interest**, financial or otherwise, in the prosecution of the opposition or appeal; it suffices that the decision does not accede to one of its substantive requests ([T.1421/05](#) following [T.234/86](#), OJ 1989, 79).

(iii) Opponent not adversely affected

In [T.299/89](#) the board considered the extent of entitlement to appeal of an opponent who in his opposition had requested only partial revocation but in his appeal wanted the whole patent revoked. It decided that this was determined by the scope of the original request made in the opposition. The opponent was only adversely affected within the meaning of [Art. 107 EPC 1973](#) **to the extent that this request was not granted**, and he could not on appeal file a wider request.

An opponent is not adversely affected by **obiter dicta reasons** given in a revocation decision and favourable to the patent proprietor, and which it is appropriate for the opposition division to include to obviate remittal in the event of revocation being reversed on appeal ([T.473/98](#), OJ 2001, 231).

A respondent (opponent) which is not adversely affected by a decision revoking the patent is not entitled to file an appeal for the sake of **acquiring an independent appellant status** instead of the status of a respondent (party as of right) ([T.193/07](#)). The board considered that its conclusion was in accordance with the established jurisprudence of the boards of appeal (see e.g. [T.981/01](#), [T.1147/01](#), [T.854/02](#), [T.1341/04](#)). The board also pointed out that purely hypothetical considerations put forward by the opponent in support of the admissibility of its appeal concerning potentially disadvantageous situations that might occur (in the future) in related national litigation proceedings had no legal relevance under [Art. 107 EPC](#).

In [T.1569/11](#) the opponents did not seek to challenge the decision of the opposition division (i.e. revocation of the patent) but the reasons for the decision. In particular, the opponents wanted the patent to be found invalid under [Art. 100\(c\) EPC](#). The board noted that, in doing so, they misunderstood the nature and purpose of opposition appeal proceedings, which are not to re-examine a patent but to decide whether or not a first instance decision is correct (cf. [T.854/02](#); [T.437/98](#), OJ 2001, 231; [T.193/07](#)).

In T 735/13 the opponent had not raised during the oral proceedings before the opposition division any of the objections under Art. 100(a), (b) and (c) EPC to the second auxiliary request that it then had in its grounds of appeal. Since patents as granted and maintained could be opposed only for one of the reasons allowed under the EPC, the opponent had not been adversely affected by the maintenance of the patent as per the second auxiliary request, at least not for any of the reasons it had given on appeal.

2.4.3 Procedural status of the parties

a) Parties to appeal proceedings

Under Art. 107, second sentence, EPC the parties to proceedings before the department of first instance are also parties to the ensuing appeal proceedings, even if they have not personally filed an appeal. Pursuant to Art. 99(3) EPC, opponents as well as the patentee are parties to opposition proceedings. In addition, Art. 105 EPC makes provision for intervention by the assumed infringer. For further details, see chapter III.P. "Intervention".

In T 811/90 (OJ 1993, 728) opposition proceedings had been concluded and the time limit for lodging an appeal had expired. Only the patent proprietor lodged an appeal, but against a separate decision on a point incidental to the opposition. It was held that the other party had no right to be a party to the appeal as he had not been a party to the relevant decision.

However, in a decision concerning an appeal against a Legal Division decision refusing to suspend grant proceedings under R. 13 EPC 1973, the applicant was to be treated as a party to the proceedings. The request for suspension could not be separated from the grant proceedings. The applicant's legal position was directly affected by suspension, because for its duration he was denied the rights under Art. 64(1) EPC 1973 (J 33/95 of 18 December 1995).

An applicant who was not heard when grant proceedings were suspended at a third party's request pursuant to R. 13 EPC 1973 could still challenge the justification for that suspension. He was a party as of right to any appeal proceedings initiated by the third party against rejection of the latter's request by the EPO (J 28/94, OJ 1997, 400).

In T 643/91 the **appeal** of opponent 1 was rejected as inadmissible. Opponent 2 filed an admissible appeal. Opponent 1 was considered by the board to be "any other party to the proceedings" under Art. 107 EPC 1973 and, as a consequence, to be a party as of right in the appeal proceedings of opponent 2. However, in T 898/91 it was held that an opponent whose **opposition** has been rejected as inadmissible by the opposition division and who has not filed an appeal against this decision is not entitled to be a party to any appeal by the patent proprietor, because he ceases to be a party to the opposition proceedings once the decision on the admissibility of its opposition takes full legal effect.

T 540/13 followed T 1178/04 (OJ 2008, 80) rather than T 898/91, which took another view. The board stated that when an opposition division decides that an opposition is inadmissible in a case where at least one other admissible opposition has been filed, it is

not necessary for the opponent of the opposition held inadmissible to appeal this decision in order to preserve its party status in appeal proceedings initiated by another party.

Where two opponents lodge appeals contesting different sets of claims and one subsequently withdraws its appeal, it becomes a party as of right under Art. 107 EPC and the other opponent becomes the sole appellant (see e.g. T 233/93).

Where a company is dissolved and thus ceases to be a legal person, it loses its capacity to be a party to any proceedings. If it was the original appellant, the appeal consequently lapses (T 353/95 and T 2334/08). However, a party's opponent or appellant status does not lapse merely as a result of bankruptcy proceedings being issued (T 696/02).

Third parties commenting under Art. 115 EPC 1973 on the patentability of the invention claimed are not parties to the proceedings before the EPO. See also chapter III.N. "Observations by third parties".

b) Rights of parties under Article 107 EPC

In appeal proceedings, the case law recognises the right of all parties to be heard (see J 20/85, OJ 1987, 102; J 3/90, OJ 1991, 550; T 18/81, OJ 1985, 166; T 94/84, OJ 1986, 337; T 716/89, OJ 1992, 132), albeit within the limits of expediency (see T 295/87, OJ 1990, 470). The parties also have a right to oral proceedings.

Furthermore, G 1/86 (OJ 1987, 447) recognised the validity of the principle that all parties must be treated equally in similar legal situations in proceedings before the boards of appeal.

Decision T 73/88 (OJ 1992, 557) deduced from this that all parties to proceedings had the right to continue appeal proceedings. If there was already one valid appeal, no further appeals were needed and the fees paid for appeals filed later had to be refunded. However, in decision G 2/91 (OJ 1992, 206) the Enlarged Board disagreed. It took the view that from the legal point of view the status of parties who had filed an appeal was not comparable with that of those who had not. It was clear from generally recognised principles of procedural law that the appellant alone could decide whether the appeal filed by him was to stand. Art. 107, second sentence, EPC 1973 only guaranteed non-appellants who were party to proceedings of the first instance that they were parties to **existing** appeal proceedings. A person who was entitled to appeal but did not do so, settling instead for being "automatically" a party to the appeal proceedings, had no independent right of his own to continue those proceedings if the appellant withdrew his appeal. He acquired that right only by filing an appeal himself and paying the associated appeal fee. By the same token, there was also no reason to refund the fee for any appeals filed after the first, unless the requirements of R. 67 EPC 1973 were met. The related issue of whether non-appealing parties can file substantive requests is dealt with in G 9/92 and G 4/93 (both OJ 1994, 875; see also chapter V.A.3.1. "Binding effect of requests – no reformatio in peius").

In T. 864/02, the board found that, according to some case law, a non-appealing party as of right did not have the same procedural status in all respects as did an appellant e.g., it did not have an independent right to continue appeal proceedings if the appellant withdrew its appeal (see G. 2/91, OJ 1992, 206 and G. 9/92, OJ 1994, 875). However, the case law also confirmed the right to be heard of all parties to pending proceedings (principle that all parties must be treated fairly and equally). The party as of right was thus entitled to raise a novelty objection where the notice of opposition had raised this ground and the submission therefore lay within the framework of the opposition procedure. In T. 591/01 and T. 475/97 the respective parties as of right were allowed to submit requests.

c) The boards' duty of impartiality in inter partes proceedings

In T. 1072/93 the board held that the freedom of the board to offer specific advice to one of the parties as to how an objection might be overcome, even when such an objection stemmed from the board itself, was severely limited, especially in inter partes proceedings where the preservation of judicial impartiality was a paramount requirement. In T. 253/95, the same board confirmed that boards of appeal in inter partes proceedings must be strictly impartial and found that alerting a party to a possible argument against him and on a ground on which the burden of proof rested on him, in advance of the oral proceedings, would amount to a clear violation of the principle of impartiality, irrespective of the fact that the communication setting out such an argument would also be sent to the other party. In T. 394/03 the board held that, even though the opposition division's decision to reject the opposition had been annulled, it was not necessary, in the absence of a request, to give the patentee and respondent another opportunity to comment, nor, given the impartiality of the board, was there any requirement on principle to do so. Following T. 394/03, the board in T. 902/04 having regard to procedural economy, the principle of party disposition and the requirement for judicial impartiality in inter partes proceedings, found it appropriate to decide the case. Since the opponent's request was allowed, there was no need to hold the oral proceedings which only the opponent had requested on a purely auxiliary basis.

d) Existence of a company

In the case underlying G. 1/13 (OJ 2015, A42) an opposition had been filed by a company which subsequently, under the relevant national law governing the company, for all purposes had ceased to exist. However, the company was subsequently restored to existence under a provision of that governing national law, by virtue of which the company was deemed to have continued in existence as if it had not ceased to exist. The Enlarged Board held that the EPO had to recognise the retroactive effect of that provision of national law. Thus, where a valid appeal was filed in due time in the name of the non-existent opponent and the restoration of the company to existence with retroactive effect took place after the expiry of the time limit for filing the notice of appeal under Art. 108 EPC, the board of appeal had to treat the appeal as admissible. The Enlarged Board referred to the clearly established principle under the EPC that national law should be referred to in order to determine whether a legal entity existed or had ceased to exist, and had capacity to act. The Enlarged Board also considered that the EPO should follow national law as regards the deemed retrospective existence of such a legal entity. This was merely to apply the general principle that such issues are the exclusive concern of national law.

In T.796/12 the patent proprietor raised the objection that company Z, which was registered as the appellant (opponent), had been dissolved as a result of a bankruptcy procedure before the appeal had been filed. Hence, the opponent had ceased to exist as a legal person before the filing of the appeal and could not file the appeal or be the appealing party in the opposition-appeal proceedings. The board stated that whether an opponent to an ongoing opposition appeal case can validly be regarded as a legal entity and act in these proceedings is a matter of national law of the state where the company is incorporated, see G 1/13 (OJ 2015, A42); in the case at issue that state was Germany. Under German law, even a company removed from the company register could validly perform procedural acts, such as filing a lawsuit in cases where a dispute is related to any form of economic interest. The board thus held that the opponent could file a valid appeal even after its removal from the company register. The appeal was filed by the representative who had acted on behalf of the opponent during the opposition. The appeal was thus admissible.

2.5. Form and time limit of appeal

2.5.1 Electronic filing of appeal

Pursuant to the Decision of the President dated 10 November 2015 (OJ 11/2015, A91), appeals too may now be filed in electronic form. The case law below relates to cases decided prior to the date this decision entered into force (on 16 November 2015).

Under Art. 108 EPC 1973, notice of appeal was filed in **writing**. Art. 108 EPC was amended when the EPC was revised. It now requires appeals to be filed **in accordance with the Implementing Regulations** (see R. 99 EPC). Thus an appeal filed via electronic means (*epoline*[®]), not being "in writing" was rejected as inadmissible in T.781/04 of 30 November 2005 and T.991/04 of 22 November 2005, referring to the EPO Notice dated 9.12.2003 concerning the My *epoline*[®] portal. Referring to T.781/04, T.991/04 and T.514/05 (OJ 2006, 526), the board in T.765/08 stated that documents purporting to be documents filed subsequently for the purposes of R. 2(1) EPC (here the notice of appeal) must be deemed not to have been received if they are filed by technical means not approved by the President of the EPO. This applies even if the means of transmission is subsequently allowed (T.331/08, following T.514/05); the board was not entitled to exercise discretionary power to consider whether the appeal, filed via *epoline*[®], might nonetheless be deemed to have been filed, since i) to do so would be tantamount to exercising legislative power; 2) such legislative power was however clearly delegated in R. 36(5) EPC 1973 to another authority within the EPO, namely the President; 3) thus pursuant to Art. 23(3) EPC 1973 the board was precluded from examining whether this purported notice of appeal could be deemed to have been received, since such a procedure would be ultra vires; 4) it was immaterial that this means of communication was now permitted for the filing of appeals. It was the law and instructions in place at the time of filing which had to be applied. The board in T.1090/08 also found the appeal inadmissible, but on the facts of the case granted re-establishment of rights.

In T.1427/09 of 17 November 2009 the notice of appeal and statement of grounds were filed in due time but the electronic signatures were not issued to a person authorised to

act in the proceedings, in contravention of Art. 8(2) of the 2009 Decision, which was silent on the legal consequences of non-compliance. The board held that the principle that the signature of an unauthorised person should be treated like a missing signature, as set out in T. 665/89, should apply not only to handwritten signatures, but also to electronic signatures. The electronic filing of a document in appeal proceedings accompanied by the electronic signature of an unauthorised person should therefore be treated under R. 50(3) EPC like the filing of an unsigned document per mail or telefax in the same proceedings.

2.5.2 Form and content of notice of appeal (Rule 99(1) EPC)

R. 99(1) EPC defines the content of the notice of appeal to be filed within the period specified in Art. 108 EPC, taking up the requirements mentioned in R. 64(a) and (b) EPC 1973. Under R. 99(1) EPC the notice of appeal shall contain, under R. 99(1)(a) EPC, the **name and address of the appellant**, under R. 99(1)(b) EPC an **indication of the decision impugned** and under R. 99(1)(c) EPC, a **request** defining the **subject** of the appeal.

However, under R. 64(b) EPC 1973, the appellant already had to include in the notice of appeal a statement identifying the **extent** to which amendment of the impugned decision was requested. This rarely presented a problem in appeals filed by an opponent; as a rule, an opponent would request that the decision impugned be set aside and the patent revoked (partially or in its entirety). However, where the appellant is the patent proprietor, the amended claims are nearly always filed with the statement of grounds of appeal, and it is only then that the precise nature of the requested amendment of the decision impugned becomes apparent. Consequently, this requirement has been moved to R. 99(2) EPC, which defines the content of the statement of grounds of appeal; before, this had been left to board of appeal case law under Art. 108, third sentence, EPC 1973.

The requirement of R. 99(1)(c) EPC takes into account the fact that the appellant's initial request, according to G 9/92 and G 4/93 (OJ 1994, 875) and G 1/99 (OJ 2001, 381) defines the subject of the appeal and thereby the framework of the appeal proceedings.

a) Rule 99(1)(a) EPC

Under R. 99(1)(a) EPC the notice of appeal shall contain the name and address of the appellant (see also R. 64(a) EPC 1973 according to which the notice of appeal is required to contain the name and address of the appellant in accordance with the provisions of R. 26(2)(c) EPC 1973. The relevant provisions are now R. 99 EPC and R. 41 EPC respectively).

In T. 2330/10 the board stated that there was a difference between establishing the identity of an appellant and knowing the address where the appellant could be found. The deficiencies concerning the indication of the appellant's name and address as prescribed by R. 99(1)(a) EPC did not necessarily have to be remedied within the two-month time limit pursuant to Art. 108 EPC, but could be remedied later following an invitation under R. 101(2) EPC if there was a reason to issue such invitation. Whether or not the opponent

knew the appellant's new address by the end of the two-month period was not relevant, nor was the degree of difficulty the opponent could have had in finding it out. The notice of appeal was therefore filed on behalf of a clearly identified legal person that was party to the first instance proceedings.

According to T.624/09 it has become standard case law that the provisions of R. 99(1)(a) EPC are satisfied if the notice of appeal contains sufficient information for identification of a party (see e.g. T.483/90, T.613/91 and T.867/91). In T.483/90 the appellant's name was incorrectly given and its address was missing but the number of the contested patent and the name and address of the professional representative were the same as those cited in previous proceedings. In T.613/91 the appellant's precise address was missing from the notice of appeal, but was known to the parties and the board from the opposition proceedings. In T.867/91 the notice of appeal did not contain the address of the appellant and did not expressly state that the patentee was the appellant. In T.624/09 the notice of appeal did not contain the appellant's address. In T.350/13 there was sufficient information available to identify the appealing party (opponent); the notice of appeal indicated the number of the European patent, the decision of the opposition division and the name of the patent proprietor. In both T.1636/13 and T.1712/10 it was possible to identify the appellant when the appeal was filed. It was alleged in T.899/95 that the opponent was a legal entity but was not identified by its official designation; its identity was, however, clear. In T.786/11, the board held that "IS Limited" did not change its legal identity by being transferred to Mauritius wurde (see also T.1458/12 and T.1201/14).

An appeal filed by an appellant whose name was changed before the appeal was filed without indicating the change of name met the requirements of R. 64(a) EPC 1973, provided that the appellant was identifiable (T.157/07). See also T.1/97, T.786/00 and T.866/01. According to T.866/01, the requirement regarding sufficient identification of the appellant was to be considered to be met whenever it is possible to establish beyond reasonable doubt the identity of the appellant on the basis of all information provided by the appellant or his legal representative within the time limit under Art. 108 EPC or in the previous proceedings, including any such information contained in the decision under appeal.

However, in T.938/94, where the appellant's name and address were not stated in the notice of appeal and it failed to give this information within the time limit set by the invitation pursuant to R. 65(2) EPC 1973, the appeal was rejected as inadmissible (see also T.774/05, in which the appeal was rejected as inadmissible, as the appellant's address was not given in the notice of appeal).

Several decisions have allowed correction of the name of the appellant to substitute a natural or legal person other than the one indicated in the appeal under R. 65(2) EPC 1973 in conjunction with R. 64(a) EPC 1973, if it was the true intention to file the appeal in the name of the said person and if it could be derived from the information in the appeal, if necessary with the help of other information on file, with a sufficient degree of probability that the appeal should have been filed in the name of that person (T.97/98, OJ 2002, 183; see also T.15/01, OJ 2006, 153, T.715/01, T.707/04 and T.875/06). Where there is objectively a deficiency in the notice of appeal indicating a genuine error as regards the

identity of the appellant and there is objective evidence in the file indicating with a sufficient degree of probability who the appellant should be, then the notice of appeal may be corrected under R. 101(2) EPC (T 1961/09, following T 97/98, OJ 2002, 183) (see also T 540/09, T 662/09).

In T 445/08 (OJ 2012, 588) it was undisputed that the notice of appeal as filed was not admissible because the appellant company had not been a party to the opposition proceedings and accordingly was not adversely affected by the appealed decision. It was no longer the patent proprietor. The questions the board referred to the Enlarged Board included whether the request for correction, which would result in the appeal being admissible, was possible pursuant to R. 101(2) or 139 EPC. The request was filed only after expiry of the relevant two-month period provided for by R. 101(1) EPC.

In G 1/12 (OJ 2014, A114) the Enlarged Board of Appeal reformulated the question originally posed in T 445/08 (OJ 2012, 588) to ask whether, when a notice of appeal, in compliance with R. 99(1)(a) EPC, contains the name and the address of the appellant as provided in R. 41(2)(c) EPC and it is alleged that the identification is wrong due to an error, the **true intention** having been to file on behalf of the legal person which should have filed the appeal, it is possible to correct this error under R. 101(2) EPC by a request for substitution by the name of the true appellant.

The Enlarged Board answered that it was possible, provided the requirements of R. 101(1) EPC had been met. Given the explicit reference in R. 101(1) EPC to Art. 107 EPC and the possibility of remedying deficiencies only within the two-month appeal period under Art. 108, first sentence, EPC, the identity of the appellant, i.e. the person entitled to appeal, had to be established by expiry of the two-month period prescribed in Art. 108, first sentence, EPC at the latest. R. 101(2) EPC concerns deficiencies concerning the indication of the appellant's name and address as prescribed by R. 99(1)(a) EPC. They may be remedied irrespective of the time limits pursuant to Art. 108 EPC, upon invitation by the board of appeal (see also T 755/09).

The Enlarged Board fully endorsed the case law, in which it was considered that an incorrect indication of the appellant's identity is a deficiency which can be remedied, provided "its correction does not reflect a later change of mind as to whom the appellant should be, but on the contrary only expresses what was intended when filing the appeal" (see T 97/98).

The Enlarged Board also found that in cases of an error in the appellant's name, the general procedure for correcting errors under R. 139, first sentence, EPC was available under the conditions established by the case law of the boards of appeal. The following principles have been established:

(1) The correction must introduce what was originally intended. It is the party's actual rather than ostensible intention which must be considered.

(2) Where the original intention is not immediately apparent, the requester bears the burden of proof, which must be a heavy one (J 8/80).

(3) The error to be remedied may be an incorrect statement or an omission.

(4) The request for correction must be filed without delay.

In T 603/15 the board found that this last condition had not been met because four years had passed before the request for correction of an EPO Form 2300 under R. 139 EPC had been filed, and so it had to be refused in light of G 1/12.

An allowable correction under R. 139 EPC has retrospective effect (J 4/85 as endorsed in several subsequent decisions, for example J 2/92, OJ 1994, 375; J 27/96; J 6/02; J 23/03 and J 19/03).

Thus, an appeal filed by mistake in the name of an opponent who no longer exists but who has a universal successor, and which was obviously intended to be filed on behalf of the person who is the actual opponent and who was prejudiced by the decision, namely the universal successor, is admissible (T 1421/05).

In T 2561/11 the notice of appeal was only signed by the opponent's representative without mentioning the opponent. The board was satisfied that a reader willing to understand would have understood, before the end of the time limit for filing an appeal, that the notice of appeal had been filed on behalf of the opponent. In T 2564/12, too, the true appellants was identifiable from the file, even if not correctly identified in the notice of appeal.

However, where the effective date of transfer of the patent to the appellant named in the notice of appeal had not actually occurred until after the period for filing a notice of appeal and it was the appellant's **true intention** to file an appeal on behalf of the name given in the notice of appeal, there is no deficiency in the notice concerning the name of the appellant which may be remedied in accordance with R. 99(1)(a) EPC in conjunction with R. 101(2) EPC nor an error which may be corrected pursuant to R. 139, first sentence, EPC and the appeal is thus inadmissible (T 128/10 following T 97/98; see also T 2045/09).

In T 979/12 the board noted that according to G 1/12, the board must establish the true intention of the appellant "on the basis of the information in the appeal or otherwise on file, i.e. ascertain who must be deemed in all likelihood to have filed the appeal...".

In T 445/08 of 26 March 2015 the board noted that it was not immediately clear that the appeal filed on behalf of the appellant, a company fully identified with its address and nationality and different from the patent proprietor, was actually intended to be filed on behalf of the appellant and stated that, regarding the requirements listed in G 1/12, it could not accept that the mere fact that the appellant was the party adversely affected during the opposition proceedings was sufficient to establish the true intention. The board stated that if it was indisputable that the notice of appeal was to be considered in the context of the file history, the true intention needed to be confirmed by external facts, at least to prevent requirements such as those of Art. 107 EPC being circumvented. It found that in applying R. 139 EPC to a party's request to correct a mistake in the notice of appeal in respect of the identity of the appellant, the principle of legal certainty, according to which

parties are bound by their procedural acts, needed to be taken into consideration. The board concluded that the requirements for the correction requested had been met, and thus that the correction was to be allowed.

b) Rule 99(1)(b) EPC

Under R. 99(1)(b) EPC, the notice of appeal shall contain an indication of the decision impugned.

According to J 16/94, (OJ 1997, 331), for a notice of appeal to comply with Art. 108, first sentence, EPC 1973 and R. 64(b) EPC 1973, it had to express the definite intention to contest an appealable decision. An appeal filed as a subsidiary request, i.e. **conditional** on the main request not being allowed by the department of first instance, was therefore inadmissible. This was because there should be legal certainty as to whether or not a decision was contested. This was confirmed by T 460/95 (OJ 1998, 588).

c) Rule 99(1)(c) EPC

The notice of appeal shall contain **a request defining the subject** of the appeal (R. 99(1)(c) EPC).

Under R. 64(b) EPC 1973, the notice of appeal had also to contain a statement identifying the decision which was impugned and the **extent** to which amendment or cancellation of the decision was requested. If the extent to which cancellation of the decision was requested was not expressly stated in the notice of appeal, the board would examine whether the relevant information could be determined from the totality of the appellant's submissions (see T 7/81, OJ 1983, 98 and T 32/81, OJ 1982, 225; see also T 925/91, T 932/93 and T 372/94). However, this requirement now applies to the statement of grounds and no longer to the notice of appeal and can be found, reworded, in R. 99(2) EPC.

In decision G 1/99 (OJ 2001, 381), the Enlarged Board of Appeal pointed out that issues outside the subject-matter of the decision under appeal are not part of the appeal. It also noted that within the limits of what in the subject-matter of the decision under appeal adversely affects it, it is the appellant who in the notice of appeal determines the extent to which amendment or cancellation of the decision under appeal is requested.

According to the board in T 358/08, R. 99 EPC has not altered the previous law as to the requirements of either the notice of appeal or the statement of the grounds of appeal as regards the appellant's requests. R. 99(1)(c) EPC is satisfied if the notice of appeal contains a request, which may be implicit, to set aside the decision in whole or, (where appropriate) only as to part. Such a request has the effect of 'defining the subject of the appeal'. Nor is it necessary in the case of an appeal by an applicant or proprietor for the notice of appeal to contain a request for maintenance of the patent in any particular form. This is something which relates to 'the extent to which [the decision] is to be amended', and which is therefore a matter for the statement of grounds of appeal under R. 99(2) EPC.

This has been confirmed in many decisions, e.g. T 844/05, T 509/07, T 9/08, T 226/09, T 689/09 and T 648/10.

The requirement in R 99(1)(c) EPC is duly met where the notice of appeal states that "an appeal is filed". This statement defines the subject of the appeal as a request for the legal effects of the decision being contested to be reversed. The specific wording in which the patent proprietor would like its patent to be maintained can then be requested in the grounds of appeal within the meaning of R 99(2) EPC, which must set out the reasons why the decision should be set aside or the extent to which it should be amended (T 1777/14).

In T 2561/11 the board summarised the established jurisprudence with regard to the meaning of the expression "a request defining the subject of the appeal" in R 99(1)(c) EPC and stated that the boards had repeatedly construed the appeal of patent proprietors against a decision to revoke the patent as a request that the decision be set aside in its entirety, even though there had been auxiliary requests before the opposition division (see T 358/08). Similarly, in appeals against the rejection of the opposition the appeal of the opponent was construed as a request to set aside the decision under appeal and revoke the patent (see T 9/08, T 183/12 and T 256/13).

In T 620/13 the board pointed out that the notice of appeal must contain an unambiguous, clear and most of all, explicit statement, which is recognisable as a legal statement, concerning both the identification of the impugned decision and the subject of the appeal (see also J 19/90). It was immaterial that the registrar was able to establish which decision was appealed. Furthermore, according to the correct reading of T 358/08, what might be "implicit" was that part of the request which indicates whether the decision is to be set aside in whole or only in part. Decision T 358/08 lent no authority to the argument that there need not be any request at all. The appeal was rejected as inadmissible.

Many of the decisions below concern the application of R 64(b) EPC 1973, in particular the requirement concerning the extent to which amendment or cancellation of the decision was requested in the notice of appeal. (This request, reworded, now forms part of the statement of grounds; R 99(2) EPC).

It was sufficient to fulfil the requirements of R 64(b) EPC 1973 if the extent of the request made on appeal could be inferred interpreting the notice of appeal in an objective way (T 85/88, see also e.g. T 32/81, OJ 1982, 225; T 7/81, OJ 1983, 98; T 1/88, T 533/93, T 141/95 and T 308/97).

T 631/91, T 727/91 and T 273/92 confirmed the principle that the appeal's scope could be ascertained from the appellant's overall submissions if the request filed in the appeal proceedings did not make this clear. Since no indication was made to the contrary in the appellant's submissions, the board of appeal assumed that he wished to file a request in the appeal proceedings along the same lines as that filed in the opposition proceedings (see also T 925/91, OJ 1995, 469; T 194/90 and T 281/95).

The wording "... we hereby file notice of appeal to the decision ..." was construed in T 632/91 as a request to set aside entirely the decision under appeal and to grant a patent on the basis of the documents of the European patent application to which the decision under appeal referred. This was followed in T 49/99 and T 1785/06. See also T 9/08 for a corresponding application under R 99(2) EPC.

If the only ruling in an opposition division decision was that the patent was revoked, a statement by the patent proprietor that he was appealing against the decision was invariably tantamount to his stating that he wished and hence requested that the decision be set aside in its entirety, because setting aside had to be unitary. Hence the content of the notice of appeal was what R 64(b) EPC 1973 demanded as one of its requirements for an admissible appeal, i.e. a statement identifying the extent to which cancellation of the decision was requested (T 407/02). This has also been applied under R 99 EPC; see T 912/08, T 624/09, T 689/09 and T 1188/09.

However, where the decision under appeal related to more than one different legal issue, the statement identifying the extent of the appeal as prescribed by R 64(b) EPC 1973 had to make it clear which issue(s) of the decision were also subjects of the appeal (T 420/03). As the notice of appeal was completely silent on the apportionment of costs and there was nothing which indicated that the decision should be set aside in its entirety, this issue was not within the extent of the appeal.

d) Rule 99(3) EPC

Under R 99(3) EPC Part III of the Implementing Regulations applies mutatis mutandis to the notice of appeal, the statement of grounds and the documents filed in appeal proceedings.

R 99(3) and 41(2)(h) EPC together make it clear that a notice of appeal must be signed by the appellant or his representative, but not that every single document in the notice has to be signed or that the signature has to be appended at a particular place or page. In T 783/08, the debit order had been part of the notice of appeal, so the board held that the signature on it fulfilled the EPC requirements in question. The appeal had therefore been validly filed.

2.5.3 Appeal filed within the time limit

Art. 108, first sentence, EPC requires notice of appeal to be filed at the EPO within two months of notification of the decision being contested.

In T 389/86 (OJ 1988, 87) the board stated that an appeal which was filed after pronouncement of a decision in oral proceedings but **before notification** of the decision duly substantiated in writing complied with the time limit pursuant to Art. 108, first sentence, EPC 1973. See also T 427/99, T 1125/07 and T 1431/12.

Where the translation of the notice of appeal in an **official language** of the EPO was not filed in due time, the notice was deemed not to have been received according to

Art. 14(5) EPC 1973 and the appeal not to have been filed (T 323/87, OJ 1989, 343; see also T 126/04). Where the notice of appeal was filed in a non-official language by a company not entitled to benefit from the provisions of Art. 14(4) EPC 1973 and a translation into an official language was filed on the same day, the notice of appeal was nonetheless deemed not to have been filed. In view of G 6/91 (OJ 1992, 491), where the translation was filed at the same time as the original, the EPO could not take it as the "official" notice of appeal and ignore the original as superfluous. As further stated in G 6/91, "a translation cannot become the original; whatever the date on which it is filed it remains a translation, with all ensuing legal consequences, including the possibility of correction to bring it into conformity with the original" (T 1152/05 and T 41/09). The residence or principal place of business of the professional representative used was irrelevant (T 149/85, OJ 1986, 103 and T 41/09).

In T 2133/10 the board referred to G 6/91 that a party who wanted to benefit from a fee reduction under R. 6(3) EPC must file the translation "no earlier than simultaneously" with the original. From a contextual reading of these separate parts the board inferred that the terms "at the same time" and "simultaneously" were used synonymously and were meant at least to cover the case at hand, i.e. where the original and translation were filed together in a single filing on the same date. Thus, if the original and translation are filed together a fee reduction under R. 6(3) EPC should apply.

Concerning the interpretation of Art. 108 EPC, the President of the EPO has referred the following point of law to the Enlarged Board of Appeal (Art. 112(1)(b) EPC): If notice of appeal is filed and/or the appeal fee is paid after expiry of the two month time limit under Art. 108 EPC, is the appeal inadmissible or is it deemed not to have been filed, and must the appeal fee be reimbursed? The case is pending under ref. No. G 1/18. The question was already referred to the Enlarged Board of Appeal by technical boards in two cases, G 1/14 and G 2/14. However, the Enlarged Board did not answer it as in G 2/14 the patent application was deemed to be withdrawn, and in G 1/14 the referral was found inadmissible. On this, see also, in the section on "Reimbursement of appeal fees", chapter V.A.9.3., which deals with the distinction between inadmissible appeals and those deemed not filed).

According to T 1281/01 the legal fiction that the decision (under appeal) had been delivered on the tenth day following its posting (R. 78(2) EPC 1973) did not apply when it had actually been delivered to a previously authorised representative **after** she had notified the EPO that the file had been transferred to another representative. Pursuant to R. 82 EPC 1973, the decision under appeal was deemed to have been notified on the date it was received by the authorised representative and the appeal had thus been filed in due time.

Similarly, where an appellant was **mised** by the EPO into thinking that the decision issued was only a draft, being replaced by a second one, it was sufficient if he filed the appeal within four months of notification of the second written decision (T 830/03).

Where the opposition division misleadingly issued two decisions, it sufficed if the statement of grounds of appeal was filed within the time limit applicable to the second decision, even if it was outside the time limit for the first decision (T 993/06).

In T 124/93 the parties were misled by the re-dating of the decision by the opposition division. Following the principle of good faith governing the relationship between the EPO and the parties acting before it, their submissions received after expiration of the normal terms were considered to have been made in due time (see e.g. T 124/93, T 1176/00 and T 1694/12 in comparable cases).

2.5.4 Payment of appeal fee

If no written notice of appeal has been filed within the time limit the question has arisen whether merely paying the fee for appeal constitutes a valid means of lodging an appeal. In T 275/86 the board had held that payment with EPO Form 4212 05.80 should be accepted as such a notice since it contained essentially the same information as was required in a notice of appeal within the meaning of R 64 EPC 1973. However, the board in J 19/90 stated that merely paying the fee for appeal did not constitute a valid means of lodging an appeal. This applied even if the object of the payment was indicated as being a "fee for appeal" relating to an identified patent application and the form for payment of fees and costs was used. This was confirmed in T 371/92 (OJ 1995, 324), T 445/98, T 514/05 (OJ 2006, 526) and T 778/00 (OJ 2001, 554), where the board also added that the failure to indicate the provisions of R 65 EPC 1973 in the annex to the communication dealing with the possibility of appeal did not make this incomplete or misleading. This applies equally to inter partes proceedings (T 1926/09); it is in the public interest in both ex parte and inter partes proceedings to be informed with certainty about the applicant's intention of challenging a first-instance decision. See also T 1946/15.

In T 595/11 the board held that fee payment is not an issue of admissibility of the appeal, but rather a precondition for the very existence of the appeal, i.e. its deemed filing. If the appeal fee is not paid, the appeal need not be examined at all for admissibility and even less on its merits.

In T 1943/09, the board held that the only possible conclusion in the light of the provisions of the EPC was that payment of the appeal fee did not suffice to lodge a valid appeal. The legislative amendment under the EPC 2000 whereby R 99(1) EPC lists the items making up the obligatory content of the notice of appeal removed any doubt there might have been as to the fact that the mere payment of the appeal fee cannot replace the notice of appeal, even if it is effected within two months of notification of the decision against which an appeal is to be filed.

The Legal Board in J 1/16 wrote in its catchword: "If the Legal Division has issued a single decision with rulings on the fate of more than one set of patent grant proceedings, it is legitimate to file a single appeal against that decision and to pay only one appeal fee for it."

2.6. Statement of grounds of appeal

2.6.1 Legal provisions

Under Art. 108 EPC a statement setting out the grounds of appeal shall be filed within four months after the date of notification of the decision in accordance with the Implementing Regulations (see R. 99 EPC).

Under R. 64(b) EPC 1973 a statement identifying the extent to which amendment of the impugned decision was requested had to be included in the **notice of appeal**. Under the EPC 2000 the appellant must indicate 'the reasons for setting aside the decision impugned, or the extent to which it is to be amended' in the **statement of grounds** (R. 99(2) EPC; see also T. 358/08); up to now this had been left to board of appeal case law under Art. 108, third sentence, EPC 1973.

Art. 12(2) RPBA 2007 requires the statement of grounds and the reply to contain the parties' complete cases. They have to set out clearly and concisely the reasons why it is requested that the decision under appeal be reversed, amended or upheld, and should specify expressly all the facts, arguments and evidence relied on.

If the notice of appeal does not contain anything that can be regarded as a statement of grounds, the appeal is inadmissible unless a written statement of grounds is received by the EPO within the time limit set in Art. 108 EPC (R. 99(2) EPC and R. 101(1) EPC). If an appeal is to be rejected as inadmissible solely because the statement of grounds was not filed in due time the fee for appeal is not refundable (T. 13/82, OJ 1983, 411).

2.6.2 Form of statement of grounds of appeal

Whether a document complies with Art. 108 EPC, third sentence, is considered to depend on its substance and not upon its heading or form (T. 145/88, OJ 1991, 251, where the document headed "Statement of Grounds" was found not to contain even the minimum of reasoning and thus was not a statement of grounds at all). The mere existence of some argumentation and carrying the heading "Statement of the Grounds of Appeal" or "Grounds" does not automatically pass the threshold of Art. 108 EPC, even if clearly relating to the substance of the impugned decision (T. 1581/08, referring to T. 145/88). The board went on to point out that sufficiency is also not a question of volume. There is no minimum requirement as to the length or the fullness of detail of the argumentation which is necessary for an admissible appeal. In this context a distinction is to be drawn between insufficiency for the purposes of admissibility and insufficiency as far as the persuasiveness of the grounds is concerned which – if the arguments are not convincing – results in the dismissal of the appeal (see T. 922/05 and below). See also e.g. T. 23/03 and T. 613/07.

The board in T. 74/12 pointed out that R. 99(2) EPC did not require a case number to be indicated in the statement of grounds of appeal. That logically implied that an appeal could not be found inadmissible simply because the case number was missing, as only the law, viz. the EPC and its implementing regulations, could define the conditions for taking certain

procedural steps and the consequences to be expected if those steps were not taken. A procedural principle stated that rights or a means of redress could be lost only if such a consequence was clearly and precisely prescribed.

2.6.3 Content of the statement of grounds of appeal

a) General

The examination of whether the requirements of Art. 108, third sentence, EPC and R. 99(2), EPC are met has to be made on the basis of the contents of both the statement of grounds of appeal and of the decision under appeal. Whether a statement of grounds meets the requirements of Art. 108 EPC can only be decided on a case-by-case basis (T. 162/97, T. 165/00, T. 1435/11).

The board in T. 1435/11 added that it was the boards' settled case law that the grounds for appeal had to set out an appellant's case – meaning not just its arguments but its requests too – in a way that was coherent, clear and sufficiently substantiated (see T. 760/08, T. 446/00). Indeed, the purpose of the statement of grounds, together with the notice of appeal, was to define the scope of the appeal. This definition was at the sole discretion of the appellant (see T. 2532/11).

In T. 23/10 the board stated that, whether or not sufficient grounds relating to the requests submitted, was immaterial for the purposes of the admissibility of the appeal, because an appeal can only be assessed as a whole. In other words, if the admissibility requirements of Art. 108, third sentence, EPC are fulfilled in respect of at least one request, let alone of several requests, the appeal as a whole will be admissible (T. 509/07, T. 1763/06). The fact that the appellant, in the course of appeal proceedings, withdrew the main and auxiliary request and thereby abandoned its refutation of the reasoning of the impugned decision under Art. 100(c) EPC, had no bearing on the assessment of the admissibility of the appeal as filed. The admissibility requirements of Art. 108, third sentence, EPC concerning the appeal filed by the patentee were met within the time limit for filing the statement of grounds of appeal at least as far as the main request and auxiliary requests were concerned. As a consequence, the appeal of the patentee was admissible. See also T. 1668/14.

In J. 10/11 the board reviewed the case law of the boards of appeal on the requirements to be fulfilled in the statement of grounds. If the appellant submits that the decision under appeal is incorrect, then the statement setting out the grounds of appeal must enable the board to understand immediately why the decision is alleged to be incorrect and on what facts the appellant bases its arguments, without first having to make investigations of its own (see T. 220/83, OJ 1986, 249, and T. 177/97; affirmed by numerous decisions, see for example T. 573/09 and T. 918/17).

Exceptionally, it has been acknowledged that the requirement for admissibility may be regarded as satisfied if it is immediately apparent upon reading the decision under appeal and the written statement of grounds that the decision should be set aside (see J. 22/86, OJ 1987, 280).

b) Causal relationship

There must be a causal relationship between the arguments in the statement of grounds of appeal and the reasons given in the decision under appeal (T.2012/16). The absence of any correlation of the ground of appeal to the decision under appeal is detrimental to the admissibility of the appeal (T.340/09).

In J.22/86 the appellant had made no submissions regarding the causal relationship between the reasons given in the statement of grounds of appeal and the asserted invalidity of the findings of the decision impugned. If no causal relationship were required, any submission, even one not connected with the reasons on which the decision impugned is based, would be acceptable. This would render the provisions of Art.108 EPC moot. Whilst the grounds do not have to be conclusive in themselves, i.e. justify the setting aside of the decision impugned, they must enable the board to assess whether or not the decision is incorrect. The appeal was rejected as inadmissible.

c) Refusal of the application

In T.395/12 the appeal was also held inadmissible; the applicant's only statement that directly addressed the decision under appeal was that the examining division was "wrong", with no explanation why. Decisions T.213/85 (OJ 1987, 482) and T.95/10 clarify that the appeal procedure is not a mere continuation of the examination procedure (in accordance with decisions G.10/91, OJ 1993, 420; G.9/92, OJ 1994, 875 and G.4/93, OJ 1994, 875), but separate therefrom. Where the applicant in the grounds of appeal repeats its arguments set out during the examination phase without taking into account the decision under appeal, it mistakes the function of the boards of appeal; they are not a second go at the examination procedure, but are meant to review decisions made by the examining divisions, based on the objections raised against the decision in the grounds of appeal, which must therefore relate to the reasons on which the decision under appeal is based. The appeal had also to be considered inadmissible because the grounds failed to deal with all the reasons the examination division advanced for refusing the application. According to T.1045/02, the grounds of appeal must deal with all those reasons on which the decision under appeal is based. This is consistent with the requirement of Art.12(2) RPBA 2007, according to which, "The statement of grounds of appeal and the reply shall contain a party's complete case". See also T.473/09, where the appeal was also held inadmissible as the grounds failed to deal with all the reasons for refusing the application and T.918/17.

However, according to the board in T.1045/02, a statement of grounds failed to meet the minimum requirements if it dealt with only one of several grounds for refusal. In T.1407/17 the board found that the grounds of appeal gave no indication of why the ground for refusal under Art.56 EPC was unfounded. One of the three independent grounds for refusal that had led to the appealed decision had therefore not been addressed.

d) Statement of the legal or factual reasons

In T 220/83 (OJ 1986, 249) the board ruled that the grounds for appeal should specify the legal or factual reasons on which the case for setting aside the decision was based. The arguments had to be clearly and concisely presented to enable the board and the other party or parties to understand immediately why the decision was alleged to be incorrect, and on what facts the appellant based his arguments, without first having to make investigations of their own. Whilst passages from the literature setting out the state of the art might – provided sufficiently precise reference was made to them in the grounds of appeal – be considered an integral part of the grounds, they could not by themselves form a sufficient statement of grounds. This principle was expressly confirmed in many decisions, for example T 250/89 (OJ 1992, 355), T 1/88, T 145/88 (OJ 1991, 251), T 102/91, T 706/91, T 493/95, T 283/97, T 500/97, T 1045/02, T 809/06, T 2346/10, T 294/11 and T 2001/14 (see also T 12/00, where the case was contrasted with T 220/83 and found to differ on the facts).

In T 22/88 (OJ 1993, 143), the board held that a written statement announcing only that the appellant would complete an omitted act (here the filing of the translations of the revised claims) did not comprise sufficient reasons, and therefore did not constitute a valid statement of the grounds of appeal.

Where, as a result of contradictions and inexactitudes in an anyway very brief statement of grounds, it is left to the board to make sense of it, the appeal is usually inadmissible (T 760/08).

In T 2377/13 the appellant's grounds of appeal had not addressed any of the main reasons for the opposition division's decision, and in particular the finding that experiments D9 and D13 were not suitable to show that a technical effect resulted from the difference between the closest prior art and the claimed subject-matter, and so had not set out why the appealed decision should be set aside.

e) Grounds to be analysed vis-à-vis reasons in decision

In T 213/85 (OJ 1987, 482) the board stated that grounds sufficient for the admissibility of an appeal had to be analysed in detail vis-à-vis the main reasons given for the contested decision. If an opposition had been dismissed on the grounds of insufficient substantiation and the grounds for appeal merely disputed patentability without elaborating on the admissibility of the opposition, the appeal was inadmissible for lack of adequate substantiation (see also T 169/89, T 2001/14). According to the board in T 95/10, there were three reasons for this:

- First, the appeal procedure is not a continuation of the opposition procedure, but a distinct procedure in which any facts, evidence or arguments considered relevant must, if need be, be resubmitted (see G 10/91, OJ 1993, 420; G 9/92 and G 4/93, both in OJ 1994, 875).

- Second, the appellant's analysis of the contested decision is needed in its statement of grounds of appeal because the legal dialogue between the board of appeal, the appellant

and the respondent which is being sought on appeal can take place only if the appellant has at least addressed those reasons for the contested decision which it considers incorrect.

- The third reason is that, in the absence of such an analysis, neither the board of appeal nor the respondent can establish why the appellant regards the contested decision as incorrect. It is, however, only based on this knowledge that the respondent can counter the appellant's arguments and that the board is in a position to reach an objective decision. This does not apply if the opposition division's decision itself failed to analyse the facts and arguments submitted by the appellant during the opposition proceedings (see also T 1188/08, T 720/12)

In T 501/09 the board was aware that other boards of appeal had found that an appeal based entirely on new evidence may be admissible when the grounds for opposition have remained the same (see T 1557/05). However, if this new evidence is subsequently not admitted in the appeal proceedings this has the consequence that the appellant's case on appeal is not substantiated.

Similarly, in T 727/09 there was an entirely new set of facts, albeit based on the same ground for opposition. The board noted that if the statement of grounds of appeal is exclusively based on these new documents, there must be a direct and clear link between the contested decision and the grounds for appeal. In the case at issue, the factual basis was, however, entirely new. The appeal was rejected as inadmissible.

In T 2361/15 the appeal of the appellant was solely based on an alleged public prior use filed for the first time with its statement of grounds. In the case at hand the statement of grounds admittedly did not address the reasons given in the contested decision for rejecting the opposition, since the appellant had introduced a fresh case concerning the same ground for opposition. The board stated that bringing a fresh case in appeal does not automatically imply that the statement of grounds does not "indicate the reasons for setting aside the decision impugned". It is a sufficient condition that the statement of grounds of appeal enables the board to understand immediately why the decision is alleged to be incorrect and on what facts the appellant bases its arguments. The statement of grounds met this condition.

Where there had been several independent reasons for the decision to refuse the application and at least one of those reasons was not addressed in the statement of grounds at all or only in insufficient detail, the board could not normally reverse the contested decision, even if it concurred with the appellant in relation to all the reasons for refusal addressed in the statement of grounds. The request of Art. 108, R. 99(2) EPC were not met (T 899/13).

However, the case underlying T 395/13 was different. Although the statement of grounds of appeal contained no substantive arguments addressing the reasoning of the decision under appeal, it nonetheless met the requirements of Art. 108 EPC in combination with R. 99(2) EPC. This was because the main objection of the appellant in the grounds of appeal was that the decision under appeal did not contain sufficient reasoning to enable

the appellant to file such arguments. The grounds of appeal contained reasoning as to why the appellant considered the decision under appeal to be deficient in this manner, and hence why that decision should be set aside. R. 99(2) EPC required no more than this and in particular did not specifically require that the statement of grounds of appeal addresses the arguments in the decision under appeal. The board therefore concluded that the appeal was admissible.

In T. 1/88 the board considered that the criteria of T. 220/83 and T. 213/85 were satisfied by a statement of grounds in which it was merely argued by the appellant that a document, which allegedly showed that the process of the patent in suit was obvious, had not been properly evaluated. The question of inventive step, on the lack of which the contested decision had been partly based, was not dealt with in detail.

In T. 767/14 the board invoked the settled case law that appeals by opponents were sufficiently reasoned where they made a substantiated case for the decision under appeal being wrong on one of the objections or grounds for opposition. That was because, if the decision were indeed wrong on that point, the appeal had to be allowed for this reason alone (see also T. 846/01, T. 950/99).

In T. 950/99, the statement setting out the grounds of appeal included the legal and factual reasons why the decision under appeal should be set aside with respect to at least one ground, namely lack of inventive step. Therefore, even if it did not contain a full reasoning with respect to each and every ground, it nevertheless met the minimum requirement of Art. 108 EPC (referring to J. 22/86, OJ 1987, 280). In T. 808/01, the board held that, where the statement of grounds contained several lines of argument and reasons sufficient to render the appeal admissible had been given in support of at least one of them, the appeal was admissible and it did not matter that no such reasoning had been given in support of one of others.

In T. 846/01, the board held that, for an appeal to be admissible, at least one of the grounds in the written statement of grounds of appeal must relate to a point which could at least arguably have been decided in the appellant's favour by the instance appealed from but which point had not been so decided, and such favourable decision on this point would have produced a different outcome. Following T. 846/01, the board in T. 1178/04 confirmed that an appeal does not lie against part of a decision of a first instance tribunal if the result would have been the same even if the point had been decided in the appellant's favour.

In T. 1187/04, where the appellant had dealt only with the novelty objections and not addressed inventive step, the appeal was held inadmissible.

In T. 760/08, the appellant had left it to the board to clarify inconsistencies, define the state of the art and consider which of the two features in the characterising portion, either by itself or in combination, the appellant regarded as apt to establish novelty and patentability. The board had already stated in T. 922/05 that, in its view, the principles set out in Art. 12(2) RPBA 2007, as a generalisation of the relevant case law, which was not entirely consistent and had mostly resulted from the specific circumstances of the individual cases concerned,

served as a suitable standard for assessing the admissibility of an appeal. The statement of grounds in question did not meet the standard set by those principles.

In T. 733/98, where an application was refused under Art. 97 EPC 1973 and R. 51(5) EPC 1973, on the grounds that the applicant neither communicated his approval of the text proposed for grant within the period according to R. 51(4) EPC 1973 nor proposed amendments within the meaning of R. 51(5) EPC 1973 within this period, the statement of the grounds of appeal was inadmissible, as it dealt only with the issues of the admissibility and allowability of new claims filed with the statement of grounds.

In T. 257/03, since all the board could gather from the statement of grounds was that the appellant sought the reopening of the entire opposition proceedings, but not why it considered that the opposition division's decision should be amended, it dismissed the appeal as inadmissible.

In T. 198/15 the statement setting out the grounds of appeal consisted essentially of word-for-word repetitions of the notice of opposition, supplemented by word for word repetitions of the appellant's written submissions and new novelty attacks based on documents which did not form part of the proceedings before the opposition division. The arguments which were mere repetitions of the ones presented before the opposition division, did not, and could not, provide reasons why the decision under appeal was to be set aside because they were drafted before the decision of the opposition division was issued.

f) Objection not raised at first instance

In T. 393/15 the appellant had based its statement of grounds of appeal solely on an objection under Art. 83 EPC it had not raised at first instance. During the proceedings before the opposition division, however, features from the description had been added to independent claim 1 of the request ultimately held allowable. The board observed that a request amending a patent by adding features not in the claims as granted was as a rule open in opposition proceedings to objection under Art. 83 EPC (in conjunction with Art. 101(3) EPC), even if the ground for opposition under Art. 100(b) EPC had not been cited (see also T. 66/14). Accordingly, the Art. 83 EPC objection raised on appeal did not go beyond the legal scope of the case before the opposition division.

g) Duty of board to be impartial

The case law of the boards of appeal was reviewed in T. 922/05 and much of it found to take a relatively lenient position in the sense that the appeals were deemed to be admissible if the competent board was able to infer from the particulars of the case the presumed intentions of the applicant and the probable reasons underlying its actions (see T. 563/91, T. 574/91, T. 162/97, T. 729/90). However, excessive leniency towards one party would rightly be perceived as an injustice towards the other. The board was of the opinion that submissions of a party which only made it possible for a board to **infer** a line of argumentation did not fulfil the requirements of either the "**clear reasons**" or the "**express specification of facts and arguments**" as prescribed by the RPBA. The statement of the grounds of appeal filed by the appellant remained silent on at least two issues, which would

have been clearly relevant for deciding on the appeal, and therefore should have been addressed by the grounds of appeal in order to be complete. The silence of the appellant on these issues was seen by the board as a serious defect of the appeal. This was not changed by the fact that both issues could have been easily dispensed with in just a few sentences, without lengthy argumentation. The appeal was rejected as inadmissible (see also e.g. T.760/08, T.727/09, T.450/13, T.460/13).

In T.450/13 the board pointed out that the statement of grounds of appeal was not sufficiently substantiated with regard to the alleged public prior use attacks. A reference back to first instance proceedings was not a sufficient reasoning to render a submission in the statement of grounds of appeal admissible (see T.473/09). The submissions in the statement of grounds of appeal had to be such as to enable the board (and any other party) to understand immediately why the decision was alleged to be incorrect, without first having to make investigations on its own. To ask the board to do this would mean that the board had to make up the appellant's case in breach of the principle of impartiality (see also T.1676/08).

2.6.4 References

a) References to earlier submissions

The boards have frequently held that a statement of grounds referring generally to submissions made at first instance, as a rule, cannot be considered sufficient for the purposes of Art. 108, third sentence, EPC (see e.g. T.254/88, T.432/88, T.534/89, T.90/90, T.154/90, OJ 1993, 505; T.287/90, T.188/92, T.646/92, T.473/09, T.47/12, T.450/13).

In T.1311/13 the board stated that a mere reference to a party's earlier submissions and/or the verbatim repetition of the arguments presented in those submissions ("grounds by cut-and-paste"), including the submissions or arguments put forward at the oral proceedings before the opposition division, without actually dealing with, or entering into a discussion of the reasons given in the decision under appeal by the opposition division for arriving at its decision, was not enough to substantiate a ground of appeal.

In T.432/88 the appeal filed only made a general reference to the appellant's submissions in the preceding opposition proceedings and thus amounted to no more than a mere assertion that the contested decision was incorrect, without stating the legal or factual reasons why that decision should be set aside. Consequently, the appellant had left it entirely to the board and the respondent to conjecture in what respect the appellant might consider the decision under appeal to be defective. This was just what the requirement that grounds for appeal be filed is designed to prevent. This was followed in T.534/89, where the board pointed out that otherwise the respondent is at a loss to know how to prepare his case and the board cannot direct the appeal proceedings in an efficient way.

Merely referring to one's own first-instance submissions could not normally replace an explicit account of the legal and factual reasons for the appeal. Only exceptionally did the case law allow substantiation to take that form. References to earlier submissions, even

when taken together with the contested decision, did not as a rule clearly indicate which grounds of the decision were regarded as mistaken, and why. The board and the opposing party could not then consider the merits of the appeal without making investigations of their own (T 349/00). See also T 165/00, where the case law was reviewed. Here the board could not share the appellant's view that reference on appeal to pleadings filed at the preceding instance had to be interpreted as a fresh filing of those pleadings and that the statement of grounds therefore had to be regarded as adequately reasoned. This ran counter to the rule highlighted in the boards' case law that grounds of appeal should state the legal and factual reasons why the appeal should be allowed and the contested decision set aside and that it was not enough merely to seek fresh examination of the patentability requirement found not to be met at the previous instance by indicating disagreement with that finding (see T 220/83, OJ 1986, 249; T 213/85, OJ 1987, 482; T 145/88, OJ 1991, 251; T 1462/08; T 2077/11).

Furthermore, a statement of grounds of appeal that is identical or nearly identical to the notice of opposition can as a rule not be considered to contain arguments as to why the decision under appeal is incorrect (T 2077/11, T 39/12, T 123/15 of 21 December 2016).

In a small number of isolated decisions, however, the boards have accepted a general reference to submissions at first instance as potentially constituting grounds for an admissible appeal (T 355/86, T 140/88, T 216/10), but these decisions were given in special cases in which those submissions already adequately addressed the grounds underlying the contested decision.

In T 725/89, submissions filed with the opposition division before despatch of the contested decision and commenting on the outcome of the oral proceedings directly preceding the decision were deemed to constitute admissible grounds for appeal, even though the actual statement of grounds referred to them only generally.

b) References to other documents

In T 869/91, the statement of grounds referred only generally to certain documents, but as the board could gather from further arguments in the statement what the appellant sought to assert on the basis of those documents, it was considered admissible.

Precisely cited passages from the relevant literature become an integral part of the grounds but cannot by themselves form a sufficient statement of grounds (T 1402/10, citing T 922/05).

2.6.5 New case raised

a) Appeal based on the same ground for opposition

In some decisions the appeal was found admissible where the opponent (appellant) introduced a fresh case on appeal concerning the same ground for opposition (T 3/92, T 219/92, T 229/92, T 847/93, T 708/95, T 191/96 and T 509/13).

It was stated as early as in T.611/90 (OJ 1993, 50) that, apart from other deficiencies, an appeal raising a case entirely different from that on which the decision under appeal was based is still admissible if it was based on the **same** opposition ground. In the case in hand the opponent, on appealing the finding of the opposition division that the patent was novel and inventive, went on to develop what was an entirely fresh case on lack of novelty. Similarly, the appeal was found admissible in T.938/91, where the opponent (appellant) introduced a new alleged public prior use and citation; although a "fresh case" was presented by the appellant to the board, the fresh reasons still fell within the same ground for opposition.

Following T.611/90, the board in T.252/95 held that grounds could be deemed to be sufficient if new facts were submitted which removed the legal basis from the decision. That also applied where the grounds for opposition were based on new facts and there was no discussion whatsoever of the grounds for the opposition division's decision. In T.801/00 the board also found that an admissible appeal can be entirely based on new facts. The arguments presented by the appellant in respect of the new citations were sufficiently clear to enable the board and the other party to understand immediately why the attacked decision was alleged to be incorrect and to which extent it should be cancelled.

b) New facts and evidence

According to the case law of the boards of appeal (see e.g. T.389/95, T.1063/98, T.1029/05, T.1915/09, T.1314/12), an appeal invoking a ground for opposition already invoked in opposition proceedings, i.e. remaining within the same legal framework, albeit being based on a completely fresh factual framework does not ipso facto lead to an inadmissible appeal. However, this finding does not necessarily mean that the new items of **evidence** only filed during the appeal procedure may not be disregarded by the board (see e.g. T.389/95).

In T.389/95 an appeal was filed on existing grounds for opposition but based solely on new evidence introduced in the grounds of appeal. The board found the appeal to be admissible because the issue of new factual framework was one of fact to be determined objectively as part of the substantive examination of the appeal. G.10/91 allowed even a fresh legal ground for opposition to be considered in appeal proceedings if the patentee approved and it followed from this, that an appeal based solely on such a ground was not ipso facto inadmissible; by the same token an appeal based on the same legal ground, albeit on a completely fresh factual framework, might be admissible. See also T.932/99. According to T.1029/05, it was the consistent jurisdiction of the boards of appeal that an appeal was not to be considered inadmissible merely because it was based on evidence submitted for the first time with the grounds for appeal. See also T.1082/05.

c) Amended claims filed

It is settled case law that the grounds for appeal can also be considered sufficient where they refer to new facts which deprive the decision of its legal basis (T.252/95, T.760/08), particularly where new sets of claims are filed (T.934/02, T.2226/13). In principle,

appellants had two options when it came to submitting their statement of grounds: they could attack the opposition division's decision as flawed, so that, provided they made a convincing case with respect to all reasons underlying the decision and the board accepted that case, it would be able and obliged to set the decision aside on all counts. Alternatively, they could file amended claims which they considered apt to remedy the deficiencies identified by the opposition division in the decision.

It is not an absolute requirement for admissibility that the appellant should attack the opposition division's decision as flawed. Where amended claims have been filed, an appeal may also be admissible if sufficient reasons are given in the statement of grounds why the amendments are considered apt to remedy the deficiencies identified by the opposition division (T.1668/14).

An appeal by the patent proprietor is to be considered as sufficiently substantiated to satisfy the requirements of Art. 108 EPC, third sentence, even if it does not state any specific reason why the decision is contested, provided that two criteria are met:

- there is a change in the subject of the proceedings due to the filing of amended claims together with the statement setting out the grounds of appeal,
- the reasons for the decision are no longer relevant in view of the amended claims (see e.g. T.105/87, T.563/91, T.717/01, T.934/02, T.655/03 and T.1708/08).

The board in T.934/02 added that it was therefore not necessary and would also be pointless for the purposes of adequately substantiating an appeal, to file grounds in support of a version of a claim that the appellant (patent proprietor) was no longer defending in the appeal proceedings. See also T.1197/03 and T.642/05. However, where the application was not refused on the basis that the previous set of claims on file could not be allowed, i.e. for lack of clarity, novelty or inventive step, rather on the ground that there was no agreed set of claims, filing new claims was not an adequate response (T.573/09); the statement of grounds should have set out why the appellant should be given the opportunity to have the proceedings continued before the board.

However, it was not enough merely to file a new set of claims without comment. Rather, appellants had to set out why and to what extent the amended set of claims was a response to the factual and legal assessment on which the opposition division had based its decision (T.220/83, OJ 1986, 249; and T.145/88). In T.933/09 the board held that appellants had to state explicitly in their grounds for appeal the extent to which the amendments overcame the objections on which the decision under appeal was based, and rejected the appeal as inadmissible (see also T.1533/13). The amendments should address the reasons for the decision being contested (T.2453/09).

The mere fact of filing amended claims with the statement of grounds of appeal is not sufficient if it does not overcome the reasons for the refusal in the case at issue. The appellant in T.1707/07 did not address the reasons given in the decision under appeal and it was thus not clear to the board why the decision under appeal was alleged to be incorrect. The appeal was rejected as inadmissible. See also T.502/02 and T.132/03.

In T.23/03 the factual basis of the contested decision remained unchanged and the amendments made to the claims filed with the statement of grounds of appeal did not add anything which implicitly could clarify as to why the appellant might be of the opinion that the contested decision no longer applied to the new dependent claims. The appeal was therefore inadmissible.

In T.295/04, the statement of grounds contained only a general reference to pleadings submitted during the proceedings at first instance and a set of new claims. Since such a general reference could not be regarded as setting out why the department of first instance's decision should be amended, the appeal was dismissed as inadmissible.

In T.1276/05 the patent proprietor/appellant reverted back to a form of claim which had been effectively withdrawn during the opposition proceedings, i.e. the patent as granted, without explaining why the contested decision was wrong. The board noted that the lack of a need for explanation was based on the specific situation of the case before it, wherein – unusually – the offered amendments self-evidently overcame the grounds for the decision and the appeal was thus admissible.

In T.2532/11 the question also arose whether newly filed requests could be seen as implicit grounds of appeal. A statement of grounds of appeal supported by amended claims may define, at least implicitly, the extent to which the appellant wishes the decision under appeal to be set aside. Many decisions have adopted a lenient position and deemed appeals admissible if the competent board was able to infer from the particulars of the case the presumed intentions of the appellant and the probable reasons underlying its actions (T.729/90, T.563/91, T.574/91, T.162/97). Appeals have also been held admissible where there was a change in the subject of the proceedings due to the filing of new claims together with the statement of grounds and the latter set out in detail why the raised grounds for opposition did not prejudice the maintenance of the patent as amended on the basis of these new claims (T.717/01, T.934/02 referring to J xx/87 (= J.902/87), OJ 1988, 323 and T.105/87). The board of appeal has the duty to assess whether the appeal is well-founded within the frame of the case as presented by the appellants but it cannot guess what the arguments are, let alone, provide arguments in lieu of the appellants. A direct link must be maintained between the decision under appeal and the statement of grounds of appeal.

In T.223/14 the amended claims had obviously been filed with the intention of clarifying existing features and so overcoming the objection underlying the finding of a lack of novelty. They therefore did not constitute a completely new set of facts and thus there was a sufficiently direct link (see T.2532/11) between the decision under appeal and the statement of grounds of appeal.

2.6.6 Arguments need not be new or relevant

Whether the appellant's arguments are convincing or likely to be successful is irrelevant for the purposes of determining the admissibility of the appeal (T.1668/14).

In T. 3/95 the board found that the fact that the points made in the statement of grounds of appeal did not go beyond those made before the opposition division did not detract from the admissibility of an appeal. A requirement that new arguments be submitted to render an appeal admissible would have implied that the appealed decision must have been correct. Nor did the appeal need to have a strong prospect of success.

The fact that some arguments were already presented during the opposition proceedings was not detrimental to the admissibility of the appeal (T. 1074/12).

Irrelevancy and lack of cogency might lead to an unsuccessful outcome of the appeal, but did not of themselves render it inadmissible (T. 65/96, see also T. 922/05).

2.6.7 Exceptional circumstances warranting admissibility of appeal

a) Immediately apparent the contested decision cannot be supported

In J. 22/86 (OJ 1987, 280) the board made it clear that where the written statement did not contain such full reasons, the requirement for admissibility might be regarded as satisfied if it was immediately apparent upon reading the decision under appeal and the written statement that the decision should be set aside. According to the board, a well-drafted statement of grounds should contain reasoning that is full but concise. And, in general, it is obvious that the less reasoning that a statement contains, the greater will be the risk that the appeal will be rejected as inadmissible for non-compliance with Art. 108 EPC. The question whether a particular statement alleged to be a statement of grounds of appeal in a particular case meets the minimum requirement of Art. 108 EPC could only be decided in the context of that particular case; and the context of a particular case will normally include the contents of the decision under appeal. In a wholly exceptional case such as the one before the board, it might be immediately apparent to the board upon reading the decision under appeal and the statement of grounds that such decision cannot properly be supported, even though the grounds contained in such statement can fairly be described as minimal. See also J. 2/87 (OJ 1988, 330), J. 6/88, T. 195/90, T. 729/90 and J. 1/14.

b) Patent proprietor requests revocation

An opponent's appeal is admissible when the written statement of grounds is based solely on the fact that the patent proprietor himself filed the request for revocation of the patent after the appeal was filed (T. 459/88, OJ 1990, 425 and T. 961/93).

c) Substantial procedural violation

In T. 1020/13 the board held that, if a substantial procedural violation is alleged and adequately substantiated in the statement of grounds of appeal, it is irrelevant for the decision on admissibility of the appeal whether the challenge to the substantive reasons for the decision can likewise be regarded as adequately substantiated.

2.6.8 No partial admissibility of appeal

The admissibility of an appeal can only be assessed as a whole (T 382/96, T 1763/06, T 509/07, T 2001/14). There is no support in the EPC for a notion of 'partial admissibility' of an appeal (T 774/97, T 509/07, T 1311/13). The board in T 509/07 thus found it immaterial for the purposes of the admissibility of the appeal whether or not sufficient grounds relating to the main request had been submitted, where the first auxiliary request clearly complied with the admissibility requirements of Art. 108, third sentence, EPC – where these requirements are fulfilled at least in respect of one request, the appeal as a whole will be admissible. However, it is a different question whether a request in relation to which the admissibility requirements of Art. 108, third sentence, EPC are not met is admitted into the appeal proceedings. In T 382/96 and T 509/07, such unsubstantiated requests were not admitted. See also T 1763/06 and T 2001/14.

2.7. Admissibility of appeal to be checked in every phase of appeal proceedings

It is established jurisprudence of the boards of appeal that the admissibility of the appeal is to be examined ex officio at every stage of the appeal proceedings (see T 15/01, OJ 2006, 153), and thus also at the oral proceedings (T 501/09, T 2223/10, T 198/15). It can and, where appropriate, must be raised by the board in appeal proceedings even if this is the first time this matter is addressed (T 289/91, OJ 1994, 649; T 28/93; T 522/94, OJ 1998, 421; T 1668/07).

In T 670/09, the respondent did not challenge the appeal's admissibility until two days before the oral proceedings. The board observed that, under Art. 12(2) RPBA 2007, the reply to an appeal had to contain the respondent's entire case. As a rule, respondents had to object to the appeal's admissibility or the board's competence in limine litis, i.e. before submitting their substantive defence. The respondent's objection to admissibility was therefore disregarded.

2.8. Cases where admissibility of appeal need not be considered

In appeal proceedings in which the question of allowability of an appeal can be readily decided (i.e. the appeal is clearly unallowable) but no decision on its admissibility can be taken yet, the issue of admissibility of the appeal can be left open (T 1467/11). Similarly, in a number of decision on petitions for review under Art. 112a EPC, the Enlarged Board of Appeal did not arrive at a final conclusion as to whether the petition in question was clearly inadmissible, because it found the petition to be clearly unallowable (T 2023/09).

2.9. Interlocutory revision

2.9.1 General

Under Art. 109(1) EPC, in **ex-parte** proceedings the department whose decision is contested must rectify its decision if it considers the appeal to be admissible and well-founded. Inter-partes proceedings are excluded from rectification. However, this does not prevent the department of first instance rectifying its decision where it erroneously revokes,

on grounds of non-compliance, a patent it had decided to maintain in amended form (see [T.168/03](#)). On expiry of the three-month period under [Art. 109\(2\) EPC 1973](#), the department of first instance whose decision is contested ceases to be responsible for the matter. Rectification of the decision is then no longer possible ([T.778/06](#)).

[Art. 109\(1\) EPC](#) provides an exception to the principle of general devolutive effect of the appeal, in order to allow an interlocutory revision. This exception has to be construed narrowly in connection with the interlocutory revision, and not as a broader entitlement for the department of first instance to decide whether an appeal is admissible ([T.1973/09](#)) (see also [T.473/91](#), OJ 1993, 630, [T.808/03](#) of 12 February 2004).

In [T.638/01](#) a form was wrongly filled in and the appeal was sent by the formalities officer acting for the opposition division directly to the boards of appeal, bypassing the procedural step prescribed by [Art. 109\(1\) EPC](#), viz. consideration for interlocutory revision. The board pointed out that since the granting of interlocutory revision in an appropriate case is **mandatory**, it followed a fortiori that considering a case for interlocutory revision in circumstances where the latter is possible is itself a **mandatory procedural step**. Since, however, the legislative purpose of [Art. 109 EPC](#) is overall procedural economy, it made no sense for the board to remit the case to the department of first instance for performance of this omitted step.

2.9.2 The department of first instance's obligation to rectify the decision

In case [T.139/87](#) (OJ 1990, 68) the board of appeal made it clear that an appeal by an applicant for a European patent was to be considered well-founded within the meaning of [Art. 109\(1\) EPC 1973](#) if the main request of the appeal included amendments which clearly met the objections on which the refusal of the application had been based as indicated by the examining division. In such a case, the department that issued the contested decision **must** rectify the decision. Irregularities other than those that gave rise to the contested decision do not preclude rectification of the decision (see also [T.47/90](#), OJ 1991, 486; [T.690/90](#); [T.1042/92](#); [T.1097/92](#); [T.219/93](#); [T.647/93](#); OJ 1995, 132; [T.648/94](#); [T.180/95](#); [T.794/95](#); [T.1120/11](#); [T.410/14](#) and [T.2303/16](#)).

However, in [T.615/95](#), where the examining division considered that interlocutory revision would only be possible on condition several objections were overcome and these objections were unrelated to the refusal and clearly had no link at all to the decision under appeal, the board held that such an approach had no legal basis.

According to [T.1060/13](#) it is established case law of the boards of appeal that, in the event that the appeal is objectively to be considered as admissible and well-founded, the department of first instance is obliged to grant interlocutory revision ([T.139/87](#), OJ 1990, 68; [T.180/95](#); [T.2528/12](#); [T.1362/13](#)); there is no room for discretion in the interests of procedural efficiency ([G.3/03](#), OJ 2005, 344; [J.32/95](#), OJ 1999, 713; [T.919/95](#)). In [T.2445/11](#) the board was aware that its interpretation of [Art. 109\(1\) EPC](#) was not fully in line with the views expressed in [T.1060/13](#), even though the outcome was the same. According to that decision, interlocutory revision must be allowed if the main request filed with the statement of grounds of appeal clearly overcomes the grounds for refusal, it being

irrelevant whether amended claims give rise to new objections or suffer from deficiencies that are themselves the subject of observations included by way of obiter dicta. In the board's view, this approach may sometimes be too rigid, as it leaves no room for a pragmatic assessment of the situation with a view to procedural efficiency and may result in a needless repetition of the first-instance proceedings, forcing the applicant to pay a second appeal fee.

An appeal is to be considered "well-founded" if at least the main request submitted with the appeal includes amendments which clearly meet the objections on which the decision relies, such that the department of the first instance could reasonably be expected to recognise this and thus rectify its decision. That there are other objections which have not been removed but which were not the subject of the contested decision cannot preclude the application of Art. 109(1) EPC 1973 (T 139/87; T 47/90, OJ 1991, 486; T 219/93; T 919/95). Thus, even if the amendments raise new objections not yet discussed, interlocutory revision must be allowed since an applicant should have the right to two instances. Objections or remarks made in an obiter dictum of a decision under appeal cannot be taken into account (see e.g. T 1640/06 and T 726/10; the board disagreed with T 1034/11). Refusing interlocutory revision in the case of an admissible and well-founded appeal constitutes a breach of the duty to grant interlocutory revision in such a case and thus a breach of the principle of procedural efficiency (contrary to the finding in T 704/05) and cannot be regarded as a substantial procedural violation within the meaning of R. 103 EPC (see e.g. T 794/95).

In T 508/13 the board stated that the expression "considers the appeal to be ... well founded" in Art. 109(1) EPC leaves an examining division room for exercising judgment while bearing in mind that the purpose of interlocutory revision is to speed up the procedure (see T 2445/11). At the same time, once an examining division has decided not to rectify a refusal decision, the possible incorrectness or inappropriateness of not rectifying it is in itself insufficient reason for an immediate remittal of the case: the opportunity to cut short the appeal procedure by means of interlocutory revision has in any event passed. Rather, it has to be assessed whether an immediate remittal is appropriate in view of the overall state of the case.

In T 2445/11 the board accepted in principle that there are cases where amended application documents presented on appeal as the main request overcome the grounds for refusal yet do not warrant rectification of the decision because of other obvious deficiencies: deficiencies which are newly introduced and immediately apparent, or deficiencies which are well explained by remarks or objections included as obiter dicta in the decision to refuse and on which the applicant has had an opportunity to comment. But where, as here, an application has been refused by the examining division on grounds that were subsequently overcome, and more fundamental objections have not been well developed in the proceedings up to the refusal, there was little point in remitting the case to the boards of appeal.

In T 473/91 (OJ 1993, 630) the board made it clear that the admissibility question under Art. 109 EPC 1973 fell under the jurisdiction of the department of first instance only when this question could be decided immediately on the basis of the appeal submissions

themselves. Consequently, the appellate instance had exclusive jurisdiction over a request for restitutio in integrum into a time limit relating to the appeal itself.

In T. 919/95 the appellant was of the opinion that an interlocutory revision had to result in the appeal being allowed. A "cassatory" revision that merely set aside the contested decision and resumed the suspended proceedings was not compatible with the EPC. The interlocutory revision had to be a 'reformatory' revision, i.e. one that conferred on the appellant something that the contested decision deprived him of. The board stated that the requirements of Art. 109 EPC 1973 were met if the reason for the contested decision were removed as a result of an admissible appeal; once the contested decision had been set aside the requested decision could be taken, or the proceedings could be resumed, since further examination was required of new grounds or facts. The latter did not rule out a subsequent refusal. The purpose of interlocutory revision was to speed up the procedure. If an examining division rectified a decision under Art. 109 EPC 1973 merely in order to grant a patent according to an auxiliary request, even though the applicant insisted on his main request, the procedure was not thereby accelerated but slowed down and this would constitute a substantial procedural violation (see also T. 142/96).

3. Substantive examination of the appeal

3.1. Binding effect of requests – no reformatio in peius

The question of law referred to the Enlarged Board of Appeal in G. 9/92 and G. 4/93 (both OJ 1994, 875) asked whether and to what extent a board of appeal could depart from the request formulated in the notice of appeal when deciding opposition appeal proceedings, to the disadvantage of the appellant.

The Enlarged Board took several factors into account. The aim of the appeal was to eliminate an 'adverse effect'. As the filing of an appeal was subject to a time limit, it would not be consistent to allow non-appealing parties the unrestricted right to alter the extent of the proceedings by submitting their own requests without limitation of time. A non-appealing party as a respondent had the opportunity to make what it considered to be appropriate and necessary submissions in the appeal proceedings to defend the result obtained before the department of first instance.

The Enlarged Board thus concluded that:

1. If the **patentee** was **sole appellant** against an interlocutory decision maintaining his patent in amended form, neither the board of appeal nor the non-appealing opponent (as party to the proceedings as of right under Art. 107, second sentence, EPC 1973) could challenge maintenance of the patent as thus amended.
2. If the **opponent** was **sole appellant** against an interlocutory decision by an opposition division maintaining the patent in amended form, the patentee was primarily restricted in the appeal proceedings to defending the patent as thus maintained. Amendments proposed by the patentee (as party to the proceedings as of right under

Art. 107 EPC 1973, second sentence) could be rejected by the board as inadmissible if they were neither appropriate nor necessary (see e.g. T 321/93).

As legal uncertainty had been created by the fact that the case law of the boards of appeal had not been uniform as regards the principle of prohibition of reformatio in peius when applying or interpreting decision G 9/92 (OJ 1994, 875), a further question was referred to the Enlarged Board, which was answered in G 1/99 (OJ 2001, 381). See in this chapter V.A.3.1.8.

3.1.1 Reformatio in peius does not apply separately to each point

According to the established case law of the boards of appeal, the doctrine of prohibition of reformatio in peius cannot be construed to apply separately to each point or issue decided, or the reasoning leading to the impugned decision (see T 149/02). If an appeal is lodged against an adverse decision of the department of first instance about the main request, then the whole request is before the board of appeal and within its jurisdiction, and the board is empowered to reopen and to decide upon matters which have been an issue before the opposition division (see T 327/92, T 401/95, T 583/95, T 576/12).

3.1.2 Reformatio in peius and devolutive effect of appeal

In T 149/02 the board stated that the two general principles of procedure – prohibition of reformatio in peius and the devolutive effect of the appeal, which conferred on the board the power to consider its subject-matter – were complementary and had to be implemented in such a way that they did not exclude each other.

3.1.3 Cases where reformatio in peius does not apply

In T 1178/04 (OJ 2008, 80) the board held that where the issue was a person's right to be a party, the principle of no reformatio in peius was of no application, bearing in mind the fact that the principle of no reformatio in peius was taken mainly from the well-established principle in German law ("Verschlechterungsverbot"). This principle has no application in those cases where (a) there exist procedural preconditions for making relevant requests to the court ("Verfahrensvoraussetzungen") and (b) these preconditions are of a kind that cannot be waived or dispensed with ("unverzichtbare Verfahrensvoraussetzungen"), such that the court must itself be satisfied that they have been fulfilled. According to the board, in the context of patent proceedings such as these, preconditions of this kind included the admissibility of the opposition itself and the capacity of a person to be a party to the proceedings in the first place.

Referring to T 1178/04, the board in T 384/08 found that the admissibility of the opposition is an indispensable procedural requirement for the substantive examination of the opposition submissions at every stage of the proceedings. The board therefore had to examine the question of the transfer of status of the opponent ex officio before dealing with the substance of the case.

3.1.4 Exceptions to reformatio in peius to be construed narrowly

The respondent (patent proprietor) in T 1194/06 conceded that a limitation according to the first route mentioned in the decision G 1/99 (OJ 2001,381) was possible (i.e. an amendment introducing one or more originally disclosed limiting features without putting the opponent (appellant) in a worse situation than if it had not appealed) but argued that this would result in a substantial restriction of the scope of the claims. The board was aware of the fact that the respondent would lose part of the protection afforded by the patent as maintained by the opposition division. It was, however, clear from G 1/99 that the principle of reformatio in peius had to be respected by the boards of appeal and that an exception to this principle should be construed narrowly. There was no reason to assume that the Enlarged Board of Appeal in G 1/99 considered even a substantial limitation of the scope of protection unacceptable.

3.1.5 Patentee as sole appellant

In T 598/99 the board observed that the principle of reformatio in peius applied so as to prevent a sole appellant being put in a worse situation than he was in before he appealed. Where the patentee was the sole appellant, the principle could not serve to protect the opponent (respondent) from being put in a worse situation than he was in before the appeal (G 9/92, OJ 1994, 875 and G 4/93, OJ 1994, 875). Indeed, whenever a sole patentee was successful in his appeal against the revocation of his patent, the opponent would be in a worse position than before. The fact that the opponent was not entitled to appeal against the decision to revoke the patent was immaterial in that respect.

An early decision applying the principles expounded in G 9/92 and G 4/93 (OJ 1994, 875) was T 856/92, in which the board concluded that in a case where the patentee and sole appellant appealed only in respect of some of the claims held allowable in the opposition division's interlocutory decision, neither the board nor the opponent might challenge those claims not questioned by the appellant.

When the patent proprietor is the sole appellant, the patent as maintained by the opposition division in its interlocutory decision cannot be objected to by the board, either at the request of the respondent (opponent) or ex officio (see G 1/99, OJ 2001, 381, T 1689/12).

In T 1626/11, the first ten claims of the main request were identical in wording to those of the second auxiliary request, which the opposition division had already found to comply with the EPC. Faced with the question whether it could examine those claims without contravening the principle of no reformatio in peius, the board cited T 856/92 and T 149/02, in which the boards had concluded that, where the proprietor was the sole appellant, they could no longer review any part of a set of claims included in a new set of claims also containing additional (parallel) claims if the opposition division had already held that the first set to be EPC-compliant and the additional claims did not alter how it was to be interpreted. This conclusion, based on G 9/92, was similarly reached in T 168/04, T 1713/08, T 722/10 and T 428/12.

The board in T 659/07 found that where the patentee is the sole appellant, the patent as maintained by the opposition division in its interlocutory decisions, cannot be objected to by the board, either at the request of the respondent (opponent) or ex officio, even if the patent as maintained would otherwise have to be revoked on the ground that a feature present in both claim 1 as granted and as maintained introduces added subject-matter contrary to Art. 123(2) EPC 1973.

3.1.6 Opponent as sole appellant

In T 752/93 of 16 July 1996, T 637/96, and T 1002/95 the opposition division had maintained the patent in amended form and only the opponent had appealed. The non-appealing patentee proposed amendments during the appeal proceedings. In T 752/93 and T 1002/95 the board found that amendments proposed by a non-appealing patentee could, according to G 9/92 (OJ 1994, 875), be rejected as inadmissible by the board of appeal if they were neither appropriate nor necessary, i.e. had not been occasioned by the appeal. According to T 752/93 the patentee should therefore have the opportunity to correct erroneous amendments if these were detected later in the proceedings. Similarly, in T 637/96, the respondent (patentee) was able to request restoration of the claim as granted, as the amendment made to it in opposition proceedings did not change its subject-matter (i.e. the claim as granted and amended meant the same thing) and was therefore unnecessary. In T 752/93 and T 637/96 the amendments were found not to worsen the sole appellant's position and the board thus considered them appropriate and necessary. In T 1002/95 the board pointed out that under R. 57a EPC 1973, which came into force after decisions G 9/92 and G 4/93, a patentee was entitled to make "appropriate and necessary" amendments occasioned by grounds for opposition specified in Art. 100 EPC 1973, even if the respective ground was not invoked by the opponent.

In T 23/04 the board made it clear that the requirements of reformatio in peius do not imply any right of the appealing party (opponent) to dictate the form any proposed amendments may take, and certainly to prescribe a form of amendment which would be maximally disadvantageous to the patent proprietor.

In T 1380/04 the board, referring to G 1/99 (OJ 2001, 381), held that the deletion of a term by the patentee/respondent could not be allowed, as this would have worsened the legal position of the appellant, contrary to the prohibition of reformatio in peius. It was immaterial that the term had only been introduced at the suggestion of the opposition division, as this did not alter the fact that approval of this amendment was the responsibility of the proprietor.

However, if the opponent and sole appellant deliberately refrains from invoking the prohibition of reformatio in peius against a claim request submitted by the respondent (patentee) which extended the scope beyond that of the claims as maintained by the department of first instance, the board need not apply the principle of the prohibition of reformatio in peius of its own motion. Following the principle of party disposition, any right protecting an appellant against an outcome that puts it in a worse position than if it had not appealed, may be waived (T 1544/07).

The board observed in T.111/10 that the exceptional possibilities for amendment foreseen by G.1/99 in application of the principle of the prohibition of reformatio in peius only applied if the patent would otherwise have to be revoked, i.e. the patent proprietor (respondent) did not have any other possibility of amendment which would allow rescue of even part of the opposed patent. In the case at issue, however, such a possibility existed. Although this would have resulted in a restriction of scope, it could not be considered unduly inequitable for a patent proprietor who, not having appealed, could not from the outset expect to get more than what was already maintained by the opposition division.

3.1.7 Revocation of patent

The principles of G.9/92 (OJ 1994, 875) were applied in T.169/93 to the situation where the patent had been revoked, not amended. The patentee appealed against the decision to revoke (for lack of inventive step). The opposition division had found the patent sufficiently disclosed and novel. The appellant submitted that these issues could not be reopened, as none of the opponents had appealed this finding, relying on decisions G.9/91 (OJ 1993, 408), G.10/91 (OJ 1993, 420) and G.9/92. The board disagreed, pointing out that the respondents were unable to file an appeal, not being adversely affected under Art.107 EPC 1973, their request for revocation having been granted. Moreover, as the patent had been revoked, it was not possible for the appellant to have an even worse outcome. It was thus open to the respondents to re-argue matters which had already been at issue before the opposition division. See also T.1341/04, where the board further noted that the situation arising from a decision to revoke a patent was legally different from the one in which the patent had been maintained by the opposition division in amended form, where the decision could be appealed by both patentee and opponent. It was this situation which led to the conclusion in G.9/92 and G.4/93 that the patent proprietor is primarily restricted during the appeal proceedings to defending the patent in the form in which it was maintained by the opposition division, in a case where the opponent is the sole appellant.

3.1.8 Exceptions to the rule

Limited exceptions to the rule against reformatio in peius exist. In G.1/99 (OJ 2001, 381) the Enlarged Board of Appeal answered the question referred to it in T.315/97 (OJ 1999, 554), namely, "Must an amended claim which would put the opponent and sole appellant in a worse situation than if he had not appealed – e.g. by deleting a limiting feature of the claim – be rejected?".

The Enlarged Board held that **in principle** such a claim must be rejected. However, an exception to this principle might be made where the opposition division had allowed an inadmissible amendment. In the case at issue the opposition division had done just that with the agreement of the proprietor, who was thus not adversely affected by the decision and unable to appeal. The patent proprietor (respondent) had filed during the appeal proceedings a main request including the added (and unallowable) limiting feature, and an auxiliary request deleting it (and thus widening the claim). The Enlarged Board found that the main request had to be rejected because it did not meet the requirements of the EPC. Moreover, if the principle of reformatio in peius were to be applied without considering the specific circumstances of the case, the auxiliary request would also have to be rejected

because it would put the opponent (appellant) in a worse situation than if it had not appealed. The only possible course the board could then take would be to revoke the patent, there being no further remedy for the proprietor. The proprietor would thus definitively lose any protection as a direct consequence of an inadmissible amendment being held allowable by the opposition division. The Enlarged Board considered it inequitable for the patent proprietor not to be given a fair opportunity to mitigate the consequences of errors of judgment made by the opposition division. The patent proprietor should thus be allowed to file requests in order to overcome this deficiency, as follows:

- in the first place, for an amendment introducing one or more originally disclosed features which limited the scope of the patent as amended;
- if such a limitation was not possible, for an amendment introducing one or more originally disclosed features which extended the scope of the patent as maintained, but within the limits of Art. 123(3) EPC 1973;
- finally, if such amendments were not possible, for deletion of the inadmissible amendment, but within the limits of Art. 123(3) EPC 1973, even if, as a result, the situation of the opponent was made worse.

See T 594/97, T 994/97, T 590/98, T 76/99 and T 724/99 for application of the principles enunciated in G 1/99.

The three options given in G 1/99 were set out with regard to the requirement of Art. 123(2) EPC. According to T 648/15 these options could be applied in a similar way when dealing with the requirement of Art. 84 EPC (see also T 1380/04). The board further noted, that the three options given in G 1/99 do not apply independently of one another and cannot be chosen ad libitum. Indeed, they are set out in such a way so as to indicate a particular sequence of options for overcoming the deficiency presented by a claim.

According to T 809/99 a non-appealing patent proprietor is primarily restricted on appeal to defending the claims as maintained by the opposition division. If these claims are not allowable, the principle of prohibition of reformatio in peius applies, i.e. an amended claim which would put the opponent and sole appellant in a worse situation than if it had not appealed must be rejected. The board went on to say that the only exception to this principle as set out in G 1/99 requires consideration of a particular sequence of possibilities for overcoming the deficiency presented by the claim(s). The first solution for overcoming the deficiency to be considered (an amendment introducing one or more originally disclosed limiting features which would not put the opponent (appellant) in a worse situation than it was in before it appealed) in fact concerns a limitation of the scope of the claim. Such limitation can also be achieved by deleting the alternative embodiment in the claim, which led to the deficiency. The proprietor's argument that the limitation to only one of the two alternatives would render the scope of protection too narrow for it to be commercially interesting is not a valid reason for dismissing this solution and proceeding to the next possible solution indicated in G 1/99.

The board in T.1033/08 made it clear that G.1/99 (OJ 2001, 381) did not supersede G.9/92 and G.4/93 (both in OJ 1994, 875), but was complementary thereto in that it gave directions for allowing an exception to the principle of prohibition of reformatio in peius as defined in these decisions. Certain conditions had to be fulfilled. A limiting feature introduced during the opposition procedure had to be deleted. The necessity for its deletion had to be caused by the appeal. This meant that the deletion was necessary and appropriate because it was related to a ground of opposition and caused by new facts, evidence or arguments put forward by the appellant, or because of a different evaluation of the situation by the board of appeal. Without the deletion, the patent would have to be revoked. It was not possible to overcome the objection by introducing new features which limit the scope of the patent as maintained. Only if these preconditions were fulfilled, might an objection be overcome by introducing new features which extended the scope of the patent as maintained, but within the limits of Art.123(3)EPC according to the second option of G.1/99.

In T.974/10 the board emphasised that the Enlarged Board of Appeal had stated in G.1/99 that, "... if the patent cannot be maintained **for reasons which were not raised at the first instance**, the non-appealing proprietor deserves protection for reasons of equity". As, in the case at issue, the clarity objection was raised by the board for the first time in the appeal, the respondent had to be allowed to file amendments as foreseen in decision G.1/99, which decision gave due regard to the principle of equity.

According to T.1843/09 (OJ 2013, 502) the prohibition of reformatio in peius as far as it entails a procedural limitation of the proprietor's liberty to change by way of amendments the scope of protection sought prevails "in principle" (G.4/93, OJ 1994, 875) until the final settlement of the opposition case and, therefore, also in any proceedings, including further appeal proceedings, subsequent to a remittal under Art.111EPC. The board went on to say that it is clear from G.1/99 that exceptions to the principle of the prohibition of reformatio in peius are a matter of equity in order to protect the non-appealing proprietor against procedural discrimination in circumstances where that prohibition would impair the legitimate defence of its patent. Therefore, exceptions are not limited to the situation specifically dealt with in G.1/99. Rather, the equity approach as taken by the Enlarged Board of Appeal covers, beyond an error of judgment by the opposition division, any change of the factual and/or legal basis on which limitations have been made by the proprietor prior to the appeal by the opponent as the sole appellant, provided the proprietor would be prevented by the prohibition on reformatio in peius from adequately defending its patent against new facts and objections introduced into the proceedings at the appeal stage.

In T.24/13, the appellant had asserted that a remittal under Art.111EPC would also put it at a disadvantage as the proprietor might possibly be granted a broader patent. The board disagreed because the prohibition on reformatio in peius applied equally in opposition proceedings resumed after such remittal (see T.1843/09, OJ 2013, 508; T.1033/08).

In T.61/10 the board pointed out that the existence of a causal link between the limiting feature to be deleted and the new situation arising on appeal was a necessary precondition for justifying an exception to the principle of prohibition of reformatio in peius for reasons

of equity. In G 1/99, T 1843/09 and T 1979/11 this condition was fulfilled. However, in the case before the board, the precondition was not fulfilled, so a departure from the principle of prohibition of reformatio in peius based on analogies with the cases cited was not justified.

In T 2129/14 the inadmissible amendment concerned four elements of the claimed system and some relationships between them. Compared with claim 1 of the request found allowable by the opposition division, in claim 1 of the second auxiliary request three features were deleted. As a result, the protection was extended compared to the request on the basis of which the patent would have been maintained if the opponent and sole appellant had not appealed. Under such circumstances the opponent and sole appellant was in a worse situation than if it had not appealed. The Enlarged Board laid down the conditions under which the exception may be made. The board noted that the three conditions laid down by G 1/99 are sequential. Further, the board noted that in claim 1 of the second auxiliary request features had been added which also involved some relationships between the four elements of the system. In the board's opinion, each of the requirements lost by deleting the inadmissible amendment had to be considered together with the added features, in the light of the conditions established in G 1/99. The board came to the conclusion that the amendments fell within the conditions for an allowable exception under G 1/99, allowing the deletion of the former inadmissible amendments, and were therefore allowable.

3.1.9 Reformatio in peius and lack of cross-appeal in the EPC

According to an obiter dictum in T 239/96, the board took the view that, in the absence of a provision on cross-appeal (in German "Anschlussbeschwerde"), reformatio in peius could not be ruled out altogether under the EPC, as it might serve as a means of avoiding unnecessary litigation, while still satisfying the legitimate expectations of the parties for a fair hearing. The board found that this deficiency in the EPC (i.e. the lack of a cross-appeal) was of prime importance when considering the respondent's procedural position and the issue of reformatio in peius.

3.2. Subject-matter under examination

3.2.1 Opposition appeal proceedings

a) Admissibility of opposition

The admissibility of the opposition, being an indispensable procedural requirement for any substantive examination of the opposition submissions, must be checked ex officio in every phase, including any ensuing appeal proceedings (T 240/99).

b) The notice of appeal

In T 226/09 the board decided that the request in the notice of appeal for the patent to be maintained on the basis of the first auxiliary request did not limit the subject of the appeal

within the meaning of R. 99(1)(c) EPC for the appellant-proprietor and therefore did not rule out a broader request in the statement of grounds.

c) Unopposed subject-matter not reviewed

No part of a patent's subject-matter (e.g. individual claims) not opposed within the nine-month time limit can be reviewed in either opposition or appeal proceedings. The opponent's statement under R. 76(2)(c) EPC (R. 55(c) EPC 1973) establishes the extent to which the patent is contested and thus the formal competence of the opposition division or board of appeal. The only exception to this principle concerns an opposition explicitly directed **only** to the subject-matter of an independent claim. In such a case, subject-matter covered by claims which depend on the independent claim can also be examined as to patentability (see e.g. G 9/91, OJ 1993, 408; see also T 323/94).

According to T 896/90, detailed grounds for opposition for a single granted independent claim do not mean that only that part of the patent is being contested, if the opponent has indicated that he wants the whole patent revoked. However, in T 737/92 (in which only arguments against process claims and not against composition claims were submitted) the board found that an opposition was filed only to the extent that it was substantiated (see also T 318/01).

Where two opponents lodge appeals contesting different sets of claims and one subsequently withdraws its appeal, it becomes a party as of right under Art. 107 EPC 1973 and the other opponent becomes the sole appellant. The scope of the appeal is defined by the latter's request, which the non-appealing party may not exceed and which binds the board (T 233/93).

In T 653/02 it was held that a board has no competence to examine a newly formulated claim derived by combination of granted claim 1 with a sub-claim not being within the extent to which the patent had been opposed; this did not fall within the exception allowed by G 9/91 (OJ 1993, 408). In T 646/02 the board found that the case at issue differed from the facts before the board in T 653/02, in that the subject-matter not opposed was described in the patent and was part of the independent claim as granted but was not itself the subject-matter of a dependent claim of the patent as granted. Whether or not the board had competence to examine depended, however, only on whether the patent was clearly restricted to a subject-matter not covered by the notice of opposition. This was done in T 646/02 by restriction to the subject-matter of the **deliberately excluded dependent claim** and, in the case at issue, by restriction to **deliberately excluded variants** of the invention. The board held that the exception in G 9/91 was not therefore applicable in the case before it either, since it was applicable only to subject-matter implicitly covered by the notice of opposition and not to those explicitly excluded.

In line with G 9/91, a patent proprietor could, in appeal proceedings, amend an uncontested **dependent** claim in accordance with R. 57a EPC 1973 (T 711/04).

Although the appeal procedure is to be considered as a judicial procedure in accordance with G 9/91 (OJ 1993, 408), this does not mean that a board in examining an appeal within

the framework of the legal grounds and facts submitted by the parties is limited to only considering passages in documents indicated and facts submitted by the parties. Examination of the appeal may raise further relevant questions within this framework and parties thus be invited to file observations. Moreover, where amendments of the claims were made during opposition proceedings, these are to be fully examined as to their compatibility with the requirements of the EPC (T.1355/04).

d) Dependent claims

In T.2094/12 granted claim 5, which was dependent on granted claim 1, was not opposed. Claim 1 as upheld by the opposition division combined granted claim 1 with the (non-optional) subject matter of granted claim 5. The subject matter of claim 1 of the main request was therefore based on "dependent subject matters" as referred to in G.9/91. According to this point: "...even if the opposition is explicitly directed only to the subject-matter of an independent claim of a European patent, subject-matters covered by claims which are depending on such an independent claim may also be examined as to patentability, if the independent claim falls in opposition or appeal proceedings, provided their validity is prima facie in doubt on the basis of already available information (cf. T.293/88, OJ 1992, 220). Such dependent subject-matters have to be considered as being implicitly covered by the statement under R.55(c) EPC 1973 (now R.76(2)(c) EPC)....". Thus in the case in hand because the opposition notice was explicitly directed to granted claim 1, it was implicitly also directed to the subject matter of granted claim 5, now claim 1 of the main request. The opposition division was thus also competent to in considering prima facie validity of the patent. The opposition division held that validity of the claims as upheld was not prima facie called into doubt by the evidence (documents) then on file. Therefore, in order to challenge this decision on its merits the appellant (opponent) must demonstrate why the division was wrong in this finding of prima facie validity and should have carried out a full examination. The review of the decision must take place under the same constraint, i.e. it must consider prima facie validity first, and only if that is not confirmed can a full examination take place.

e) Appeal by patentee against revocation

Where the patentee appeals the revocation of the patent, the board is not bound by the findings of the opposition division; the whole case, including those claims considered novel by the opposition division, and objected to by the non-appealing opponent, must be considered (T.396/89). Furthermore, if the patent proprietor as the sole appellant in the opposition appeal proceedings makes amendments to the version of the patent adopted in accordance with an interlocutory decision of the opposition division, the board is both competent and obliged ex officio to examine those amendments from both a formal and a substantive point of view, even if the respondents expressly agree to them (T.1098/01). Similarly, where the patent proprietor was respondent on appeal against the decision of the opposition division as a whole, it was the board's power and duty to decide for itself on each issue addressed and it was not bound by any finding of that decision (in the respondent's favour) (T.36/02).

f) Removal of references in dependent claims

Claims which remain unchanged after the removal of the references in dependent claims need not be examined in opposition appeal proceedings to see if they contain grounds for opposition raised for the first time in those proceedings, unless the patentee consents (T. 968/92).

g) Abandonment of subject-matter

See also chapter V.A.4.12.13 "Reinstating broader claims in appeal proceedings".

According to T. 123/85 (OJ 1989, 336), the EPC makes no provision for patentees to surrender their patents during opposition proceedings (referring to T. 73/84, OJ 1985, 241; T. 186/84, OJ 1986, 79) nor surrender part of the patent so as to limit it. Thus a request withdrawn during opposition proceedings may nonetheless be considered in any ensuing opposition appeal proceedings. This view was followed in many decisions, including T. 296/87 (OJ 1990, 195), T. 934/02, T. 699/00, T. 794/02, T. 1276/05 and T. 1188/09.

In T. 1018/02, it was stated that amendments of a European patent had to comply with R. 57a EPC 1973. According to this rule, amendments were possible provided that they were occasioned by grounds for opposition. However, this did not mean that, if a patent proprietor in the first instance chose to defend a main request which was limited in scope compared with the claims as granted, then he could not during the appeal proceedings go beyond the limits of that request. In accordance with T. 407/02, a patent proprietor who had only defended his patent in limited form before an opposition division, was in principle allowed on appeal to return to a broader version or even to the patent as granted. Following T. 407/02, the board in T. 1188/09 pointed out that opponents must therefore always be prepared for the possibility that a patent proprietor whose patent has been revoked by the opposition division will seek its restoration as granted on appeal. According to the board in T. 1188/09, T. 1018/02 expressly followed this approach, which was again upheld in T. 386/04, where it was explained that supposedly contrary decisions had always been concerned with circumstances in which the amendment to the claim amounted to an abuse of the procedure.

According to T. 386/04, an appellant (proprietor), whose patent has been revoked, is entitled to seek maintenance of the patent as granted even though its main request before the opposition division had only been the maintenance of the patent in more limited form. The exception to this is where to allow the proprietor to revert to the amended claims would amount to an abuse of procedure. According to the board, this long-standing principle is not contradicted by decisions T. 528/93 or T. 840/93 (OJ 1996, 335), which are concerned with new claims raising new issues, and is not contrary to the statement by the Enlarged Board of Appeal in decision G. 9/91 (OJ 1993, 408), concerning the purpose of an appeal. In this context, there is no procedural logic in distinguishing between cases in which the patent has been revoked and cases in which the patent has been maintained.

The board in T. 28/10 extensively discussed T. 123/85 (OJ 1989, 336) and the case law based on it (including T. 386/04). The board in that case had observed that the EPC 1973

made no provision for patent proprietors to surrender their patents during opposition proceedings. Given that patents could not be surrendered with effect for the EPO in opposition proceedings, it had rejected the opponent's argument that limited sets of claims filed in the course of the opposition proceedings were to be understood as a surrender. In the circumstances of T 123/85, this finding had to be considered to mean only that a European patent, as a subjective right, could not be altered with legal effect – i.e. irrevocably limited – during opposition proceedings by way of a unilateral waiver by the proprietor (see, in this connection, G 1/90, OJ 1991, 275; T 386/01) and that, therefore, claims amended for the purpose of opposition proceedings could not be deemed a surrender. Nevertheless, it could not be inferred from these conclusions that a patent proprietor must be able to revert to a broader version of the claims which it had not initially defended in the opposition proceedings, and thereby amend its case, without being subject to any procedural restrictions.

In T 28/10 the patentee had sought to introduce into the appeal proceedings claims which had not been the basis of discussion before the opposition division. The board found that the legal situation had changed since T 123/85 and Art. 12(4) RPBA 2007 was now the relevant legal provision rather than case law based on that decision. It observed that the decision in T 123/85 had been based on T 64/85, in which the board had considered that abusive exercise of the right to make subsequent amendments to submissions could be sanctioned on the basis of Art. 114(2) or R. 86(3) EPC 1973 and so taken the view that the principle of concentration, which underlay those provisions, had restrictive effect. The board in T 28/10 endorsed this finding that, in addition to the prohibitions on procedural abuse and *reformatio in peius* (see e.g. T 934/02), the principle of concentration likewise limited the principle of free party disposition. As far as amendments to claims in opposition or opposition appeal proceedings were concerned, the principle of concentration rule was enshrined in R. 116(2) EPC and in Art. 12(4) and Art. 13 RPBA 2007. Whilst those provisions did not preclude such subsequent amendments entirely by imposing strict time limits on certain submissions, they left it to the decision making department's discretion whether or not to allow them.

h) Fresh ground for opposition on appeal

Grounds for opposition submitted for the first time on appeal may be considered only with the patent proprietor's consent. If the patentee has not consented to a fresh ground's introduction into the proceedings, the board's decision must not deal with it in substance at all and may mention only that it has been raised (see G 10/91 and G 9/91, OJ 1993, 420; G 1/95, OJ 1996, 615).

On the introduction of fresh grounds for opposition into opposition proceedings, see chapter IV.C.3.4.

In T 1571/12 the patent proprietor consented at the oral proceedings before the board to the introduction of a fresh ground for opposition, namely that the invention could not be carried out (Art. 100(b) EPC). The board remitted the case to the department of first instance for an answer to the highly relevant question of whether the claimed subject-matter was sufficiently disclosed for it to be carried out.

In **T. 350/13** the opponent's argument, that the proprietor had implicitly given its approval with respect to **Art. 100(c) EPC**, by arguing in response to the opponent's objections, was not persuasive in admitting this ground for opposition. Irrespective of the patent proprietor at some time responding substantively to the new ground, this could not be interpreted as an implicit or binding indication that it approved the introduction of this ground into the appeal proceedings.

An appeal unconnected with the reasons given in the appealed decision (lack of inventive step) and directed only to a new ground for opposition (lack of novelty) based on a new document is contrary to the principles laid down in decisions **G. 9/91** and **G. 10/91** (OJ 1993, 408 and 420), according to which an appeal should be within the same legal and factual framework as the opposition proceedings. It is tantamount to a new opposition and is thus inadmissible (**T. 1007/95**, OJ 1999, 733; **T. 27/13**).

In **T. 27/13** the board held that the objection under **Art. 83 EPC** in the statement of grounds constituted a fresh ground for opposition under **Art. 100(b) EPC** that was outside the legal framework of the opposition proceedings. In the light of **G. 10/91**'s observations on the legal character of opposition and opposition appeal proceedings and the particular importance it attached to grounds for opposition in that they established the legal framework within which substantive examination of the opposition was in principle to be conducted, the board did point out that it could find the present appeal admissible only if the same ground for opposition was raised when the appeal was filed. Only then could there be any discussion of the possibility of introducing a fresh, additional ground for opposition. Hence the appeal was inadmissible.

In **T. 1029/14** the first time that the appellant argued that the subject-matter of claim 1 lacked an inventive step was during appeal proceedings, two working days before the oral proceedings. This objection was not admitted into the proceedings pursuant to **Art. 13(3) RPBA 2007**. The board further questioned whether the line of attack starting from D1 as the closest prior art could be discussed at all in the appeal proceedings without the agreement of the patent proprietor. The appellant argued that the objection concerning inventive step starting from D1 did not constitute a fresh ground of opposition and could be examined in appeal proceedings without the agreement of the patentee, since D1 had been used to attack novelty. To support this argument it referred to **T. 131/01** and **T. 597/07**. However, in **T. 131/01** the board pointed out that the opponent had already indicated in the notice of opposition that the claimed subject-matter lacked an inventive step in the event that it was found to be novel. Therefore **T. 131/01** differed from the case in hand, where the appellant had made no suggestion in opposition proceedings that the claimed subject-matter would be obvious when starting from D1, should it be found to be novel. The situation underlying **T. 597/07** was similar to case **T. 131/01**, where inventive step had also been discussed during opposition proceedings. The board therefore concluded that the case in hand was to be distinguished from those underlying **T. 131/01** and **T. 597/07**. The board referred to the similar case **T. 448/03** in which inventive step was not discussed at all in the opposition proceedings, but for the first time in the appeal proceedings. In **T. 448/03** it was concluded, in line with the principles set out in decision **T. 131/01**, that an objection concerning inventive step was to be considered a fresh ground if it was raised for the very first time in the appeal proceedings, irrespective of the fact that the document

used as the starting point for the inventive step objection was the same document as used before to attack novelty.

i) Ground not properly substantiated by the patentee

In T. 1649/10, the opposition division held that the subject-matter of claim 1 of the patent as granted did not involve an inventive step and decided to maintain the patent as amended. On appeal, appellant I (opponent) raised the issue of the admissibility of appellant II's (patentee) appeal, invoking, among other things, a lack of substantiation. In this regard, the board held that the mere indication by appellant II that the subject-matter of granted claim 1 was inventive, starting from document D4 as the closest prior art, whereas the impugned decision based its analysis on a combination of D10 as the closest prior art and document D4, did not fulfil the requirements of R. 99(2) EPC as to the necessity for the appellant to indicate the reasons for setting aside the decision. The board was thus not in a position to recognise in the reasoning put forward by appellant II, which relied on D4 as the closest prior art, why the reasoning of the opposition division, which relied on document D10 as closest prior art, had to be rejected. The appeal filed by appellant II was, hence, rejected as inadmissible. Its role in the appeal proceedings was then that of a party as of right under Art. 107 EPC.

j) Ground not properly substantiated by the opponent

In T. 1799/08 the board stated that it is not the function of the boards of appeal to carry out a general review of decisions at first instance, regardless of whether such a review has been sought by the parties. In view of the character of the inter partes appeal proceedings, it could not be expected that the board, independently of its preliminary opinion on some of the critical issues for deciding on a ground not properly substantiated by the opponent which had initially raised it, would fully investigate that ground, in breach of the principle of equal treatment of the parties, and provide its own reasoning, substituting itself for an opponent which remained passive. The board thus accepted, in the absence of any evidence to the contrary, the patent proprietors' arguments.

k) Ambiguities in the claims

Reviewing and eliminating any ambiguities in the claims and description which are not necessary to refute substantiated grounds of opposition is not part of the review of the contested decision carried out during opposition appeal proceedings. In the event of ambiguities in the claims which are not connected to changes in the granted documents, Art. 69 EPC 1973 stipulates that the description and drawings must be used to interpret the claims, not that the claims must be changed (T. 481/95).

3.3. Patentability requirements under examination in ex parte proceedings

In G. 10/93 (OJ 1995, 172) the Enlarged Board ruled that, where the examining division had refused an application, the board had the power to examine whether the application or the invention to which it related met the requirements of the EPC 1973. This also held good for requirements the division had not considered in the examination proceedings or

had regarded as fulfilled. The board should then, where appropriate, decide either to rule on the case itself or send it back to the examining division.

This followed from the fact that ex parte review was not of a contentious nature. It involved examination of the patentability requirements in proceedings in which only one party (patent applicant) was involved. The departments involved at every instance had to ensure that these requirements were fulfilled. In ex parte proceedings, therefore, the boards of appeal were not restricted either to examination of the grounds for the contested decision or to the facts and evidence on which that decision was based, and could include new grounds even though in ex parte cases too the main aim of appeal proceedings was to review the contested decision.

This decision was based on case T 933/92, in which an examining division had refused an application for non-compliance with Art. 123(2) EPC 1973. Whilst sharing the examining division's view with respect to Art. 123(2) EPC 1973, the board felt the application should be refused for lack of inventive step. In the board's view, the question whether grounds could be added or replaced was not resolved by G 9/91 and G 10/91.

If an application for which no search had been carried out in accordance with R. 45 EPC 1973, inter alia for lack of clarity of the claims, had been refused for the same reason, a board of appeal need only examine whether the claims failed to comply with the clarity requirement of Art. 84 EPC 1973 to such an extent that it was not possible to carry out a meaningful search. Having found that the claims fulfilled the requirements of the EPC to such an extent that it should have been possible to carry out a search, the board in T 1873/06 remitted the application to the examining division for an additional search to be performed and the substantive examination to be continued. R. 45 EPC 1973 has been streamlined and is now R. 63 EPC.

In T 1367/09, when preparing the communication pursuant to Art. 15(1) RPBA 2007 the board did not raise the issue of Art. 84 EPC 1973. Nevertheless, when reconsidering the case in preparation for the oral proceedings the board noted that Art. 84 EPC 1973 should indeed be addressed in the oral proceedings. The board noted that in the light of G 10/93 (OJ 1995, 172) the board had the power, in ex parte appeal proceedings, to enforce any grounds for refusal of an application, in particular grounds which the examining division did not consider at all or held to be satisfied.

The extent of the obligation to review a case where the appeal is partially withdrawn is discussed in chapter V.A.6.3.4 "Partial withdrawal of appeal by sole appellant and opponent".

3.4. Facts under examination – applying Article 114 EPC in appeal proceedings

3.4.1 Boards to examine facts of own motion

Art. 114(1) EPC, which also applies in appeal proceedings, requires the board to establish the facts of its own motion. See J 4/85, OJ 1986, 205; T 1800/07; T 1574/11.

As the Enlarged Board made clear in G 8/93 (OJ 1994, 887), the board's obligation under Art. 114(1) EPC 1973 existed only once proceedings were pending (see also T 690/98). Earlier, T 328/87 (OJ 1992, 701) had already ruled that the facts could be investigated only if the appeal was admissible. There were, however, limits to this obligation, for example under Art. 114(2) EPC 1973, where facts and evidence are submitted late. The same applied if an opponent (respondent) withdraws his opposition: in T 34/94 the board found that, "if in the event of withdrawal of the opposition the opponent is the respondent, the board may take into account evidence which was submitted by the opponent prior to withdrawal of the opposition. However, for reasons of procedural economy, the duty of the EPO to examine the facts of its own motion does not extend to its having to examine the submission of the opponent that a previous oral disclosure took place if the crucial facts were difficult to ascertain without his co-operation" (this confirmed the case law in T 129/88, OJ 1993, 598; T 830/90, OJ 1994, 713; T 887/90, T 420/91 and T 634/91; see also T 252/93 and T 1047/03).

In T 1574/11 the board observed that it was not restricted to the facts, evidence or arguments provided by the parties. As the primary purpose of the appeal procedure was to check that the contested decision was correct, the board was in principle entitled to consider the evidence provided therein if it deemed it to be relevant to its own decision.

T 182/89 (OJ 1991, 391) sets out what the obligation to investigate involves; Art. 114(1) EPC 1973 should not be interpreted as requiring the opposition division or board of appeal to ascertain whether there was support for grounds for opposition not properly substantiated by an opponent, but as enabling the EPO to investigate fully the grounds for opposition which were both alleged and properly substantiated pursuant to R. 55(c) EPC 1973 (see also T 441/91 and T 327/92). In T 263/05 (OJ 2008, 329) the board accepted that it had an ex officio duty under Art. 114(1) EPC 1973 to examine amended claims, but only for prima facie non-compliance with the EPC, e.g. lack of clarity or conciseness.

If departments of first instance and/or parties fail to take account of highly relevant matter which is clearly available in the EPO file and which relates to a ground of opposition, the board's competence extends to rectifying the position by consideration of that matter provided, of course, the parties' procedural rights to fair and equal treatment are respected. This is not only consistent with decisions G 9/91 (OJ 1993, 408) and G 10/91 (OJ 1993, 420), but incumbent on the board as the last instance in proceedings concerning the grant or maintenance under opposition of European patents (T 385/97). It enhances acceptance of the boards' decisions and their standing as the only judicial body ruling on patentability with effect for all the designated contracting states, if those decisions based on all material are submitted during the appeal proceedings. A document presented in such proceedings should therefore be taken into account if it is not completely irrelevant or at odds with considerations of procedural economy (T 855/96).

3.4.2 Circumstances where the board need not examine facts of its own motion

T 60/89 (OJ 1992, 268) held that when alleged facts put forward without proof as causing lack of novelty had occurred a long time previously and the question was no longer

pursued by the parties it was not obliged to investigate the matter ex officio under Art. 114(1) EPC 1973. Nor did the board in T. 505/93 consider itself obliged to carry out any further investigation when the opponents refused to take part in oral proceedings where the content of a prior use was to be clarified.

In the context of an appeal by an appellant (opponent) from an opposition division decision maintaining the patent in amended form, the board of appeal only has to consider the appeal as regards claims upon which the appellant (opponent) has advanced arguments and those claims that are dependent, either wholly or partially, on these claims, and has to apply the provisions of Art. 114(1) EPC 1973 in a restricted manner (T. 223/05).

The board in T. 2501/11 stated in its catchword: where prior publication of a citation has been admissibly disputed and the party bearing the burden of making the case for and proving it fails to provide a substantiated response, the board cannot treat that citation as prior art because opposition appeal proceedings are adversarial and so conducted in accordance with the adversary system of procedure, in which it is for the parties to make their cases and the boards' power to examine the facts of their own motion (Art. 114(1) EPC) is limited.

3.5. Review of first-instance discretionary decisions

3.5.1 Principles applying to the review of first-instance discretionary decisions

a) General

In several decisions, the boards have addressed the issue of their scope for reviewing decisions taken by departments of first instance in exercise of their discretion. Among the factors to be considered is whether or not the department of first instance exercised its discretion properly.

The issues associated with exercising discretion are addressed in a number of other chapters in the context of the various individual provisions conferring discretion: see chapters IV.B.2.6.1 on the examining divisions' discretion under R. 137(3) EPC; IV.C.4.5 on the opposition divisions' discretion to admit late-filed submissions; V.A.7.2 on discretion to remit; and V.A.4.3 on the boards' discretion to admit late-filed submissions.

b) Proper exercise of discretion

It is established case law that, on appeal against a decision taken by a department of first instance in exercise of its discretion, it is not for the board to review all the facts and circumstances of the case as if it were in that department's place and decide whether or not it would have exercised discretion in the same way. If the EPC requires that a department of first instance exercise discretion in certain circumstances, that department should have a certain degree of freedom to do so without interference from the boards. They should overrule the way in which it exercised its discretion in reaching a decision in a particular case only if they conclude that it did so in accordance with the wrong principles, without taking the right principles into account or in an arbitrary or unreasonable way,

thereby exceeding the proper limits of its discretion (on this point, see, in particular, G 7/93, OJ 1994, 775, and T 640/91, OJ 1994, 918, where the board found that the department of first instance had exercised its discretion unreasonably and that this amounted to a substantial procedural violation).

Although G 7/93 was concerned with a specific situation, namely an examining division's refusal to admit amendments after issuing a communication under R. 51(6) EPC 1973, the boards have applied the criteria established there to their review of other discretionary decisions of the departments of first instance (T 820/14). For instance, the same approach has been taken to reviewing opposition division decisions on the admission of late-filed submissions (T 1209/05, T 1652/08, T 902/09, T 1253/09, T 544/12, T 1882/13).

In several decisions, e.g. T 1614/07, T 849/08, T 1788/12, T 1643/11, T 89/15, the boards have cited one or both of G 7/93 and T 640/91 when reviewing whether the department of first instance exercised its discretion properly.

In T 820/14 the board pointed out that so long as departments of first instance had exercised their discretion properly, the boards **as a rule** should not overrule their decisions and substitute their own discretion for that exercised at first instance. That applied regardless of whether not they ultimately decided to admit the previously refused submissions, uphold the refusal to admit them on different grounds or remit the case to the department of first instance and give it an opportunity to exercise its discretion anew. By the same token, however, the case law established in G 7/93 **could not be interpreted as imposing on the boards any duty** to uphold a proper exercise of discretion at first instance.

c) Review of first-instance discretionary decisions taken on substantive grounds

In T 1816/11, the sole reason for the examining division's refusal to admit the main request had been that it did not meet the requirements of Art. 84 and 56 EPC. The board held that, in such cases, where the discretionary decision had been taken on substantive rather than procedural grounds, the criteria established in G 7/93 could not apply (likewise T 820/14, T 556/13 and T 971/11). Rather, the substantive assessment (of clarity, inventive step, etc.) underlying the decision was fully open to review, as this went to the very essence of the boards' power of review.

In T 2342/13, as to the examining division's reason for not admitting the auxiliary request, namely a prima facie lack of inventive step, the board considered that a question relating directly to the compliance of a request with a provision of substantive patent law was to be assessed by the board itself and that on such a point there was no latitude for deferring to the view of the department of first instance (cf. T 1816/11, similar T 2343/13).

The board in T 1820/13 added that, although an opposition division's exercise of discretion could, as a rule, be reviewed only to a limited extent, i.e. only for abuse or errors, that could not mean that any substantive issues underlying its resulting decision were not open to review by the boards. Such issues went to the very essence of the boards' power of review and so they were called on to use their own discretion under Art. 12(4) RPBA 2007

(see [T.1816/11](#)). Thus, their review of an exercise of discretion had to include checking any underlying prima facie examination, for example as to whether it was vitiated by manifest errors.

In [T.47/14](#), the appellant did not dispute that the opposition division had exercised its discretion in accordance with the right criteria but rather challenged its substantive assessment of a citation. It set out why it considered the assessment to be wrong and so to have led to an erroneous evaluation of the citation's relevance and an unjustified refusal to admit it. At issue therefore was whether the opposition division had exercised its discretion improperly as a result of being mistaken as to the citation's technical relevance. The board found that it was certainly open to it to review the substantive basis for an opposition division's exercise of discretionary decision if the resulting decision was manifestly erroneous (see [T.109/08](#)).

3.5.2 Development of the case law on reviewing first-instance discretionary decisions

a) Early case law on exercising discretion

In some early decisions, the boards took the view that facts, evidence and requests that a department of first instance had already decided not to admit in a proper exercise of its discretion should normally not be admitted on appeal either.

In [T.267/03](#), for example, the board held that, where the opposition division had properly exercised its discretion in deciding under [Art. 114\(2\) EPC 1973](#) not to admit a late submission, the boards were generally bound to refuse its admission on appeal too (see also [T.927/04](#)).

The board in [T.28/10](#) held that the findings in [G.7/93](#) (OJ 1994, 775) on reviewing discretionary decisions were of general relevance and so to be borne in mind when applying [Art. 12\(4\) RPBA 2007](#). Accordingly, the board had to confine itself to reviewing the opposition division's exercise of discretion in deciding not to admit late-filed submissions and set aside its decision only in the event that it had done so improperly. It would otherwise undermine the discretion conferred on the opposition division under [R. 116 EPC](#) (see also [T.2102/08](#), [T.484/11](#)).

b) Recent case law on exercise of discretion under [Art. 12\(4\) RPBA 2007](#)

In a number of recent decisions, the boards have observed that, under [Art. 12\(4\) RPBA 2007](#), they generally have their own margin of discretion to admit on appeal facts, evidence and requests refused by a department of first instance in proper exercise of its discretion.

In [T.556/13](#), the board took the view that the jurisprudence is not to be understood as meaning that the discretion conferred on the boards of appeal under [Art. 12\(4\) RPBA 2007](#) is limited to such an extent that the board must generally hold inadmissible a request which had not been admitted into the proceedings by the opposition division by a correct discretionary decision. Thus, it is not ruled out that, in view of the particular facts and

circumstances of a particular case, the board will not hold a request inadmissible, although it was rightly not admitted into first-instance proceedings by the opposition division. This may occur, for example, if the board is confronted with additional facts and different circumstances or with additional submissions made by a party in the appeal proceedings. Another example could be that the reasons for the contested decision themselves contain considerations which go beyond those which were relevant for the opposition division's discretionary decision not to admit a request.

In T 945/12 the board referred to some decisions where it was stated that in the case of a review of first-instance discretionary decisions a board of appeal nevertheless had to exercise its discretion under Art. 12(4) RPBA 2007 independently, giving due consideration to the appellant's additional submissions. In doing so, the board of appeal was not re-exercising the discretion of the department of first instance based on the case as it was presented then, but rather taking into account additional facts and different circumstances while exercising its own discretion under Art. 12(4) RPBA 2007 (see also T 2219/10, T 971/11).

3.5.3 The boards' own discretion

a) Submissions refused at first instance admitted on appeal

In the cases reported here, the boards admitted on appeal facts, evidence and requests refused at first instance, some of them pointing out that they have their own discretion to do so and are generally not bound in this by how the department of first instance exercised its discretion (see, in particular, T 820/14 and, similarly, T 2219/10, T 1811/13, T 795/14, T 1817/14, T 291/15, T 575/15).

In T 971/11 the opponent (appellant) filed document B1 two days before the oral proceedings before the opposition division, which did not admit it into the proceedings. The board stated that the opposition division had based its discretionary decision on the principles established by the jurisprudence and had not acted in an unreasonable way. Together with its statement of grounds of appeal, the appellant re-submitted document B1. The board considered whether it had discretion to admit a document which was not admitted in the first-instance proceedings. According to Art. 12(4) RPBA 2007 the non-admission of a document which was not admitted in the first-instance proceedings into the appeal proceedings is at the discretion of the board. The board referred to the established case law, according to which a filing made with the statement of grounds of appeal should not be considered inadmissible if it is an appropriate and immediate reaction to developments in the previous proceedings. The board has to exercise its discretion under Art. 12(4) RPBA 2007 independently, giving due consideration to the appellant's additional submissions. In the judgement of the board, a document which would have been admitted into appeal proceedings if it had been filed for the first time at the outset of those proceedings should not, however, be held inadmissible for the sole reason that it was already filed before the department of first instance (and not admitted). To impose such a limitation on the discretion conferred by Art. 12(4) RPBA 2007 could even have the undesirable effect of encouraging a party to hold back a document during the opposition

proceedings, only to present it at the appeal stage. The board admitted the document (see also T.876/05 and T.1403/13).

In T.2219/10 the board stated that although T.971/11 concerned the admission of documents in opposition, similar considerations applied with respect to the question of whether sets of claims filed with the grounds of appeal which had not been admitted in the first-instance proceedings should be admitted into the appeal proceedings. This is especially the case in ex-parte proceedings, in which issues of equal treatment of adverse parties do not arise. In the case in hand, there was no need to examine whether the examining division had correctly exercised its discretion in not admitting the auxiliary request filed at a late stage of the first instance proceedings, since in the exercise of its own discretion under Art. 12(4) RPBA 2007 the board admitted all the appellant's requests, including the main request, into the proceedings.

In T.1811/13 the board stated that the fact that the opposition division had not admitted documents HL13 and its translations did not preclude the board from admitting them if it considered them to be relevant (see T.971/11). This was not to be understood to mean that the opposition division had necessarily exercised its discretion incorrectly; the procedural situation simply was not the same any more. In the case in hand, the board found document HL13 to be relevant because it disclosed a feature that was critical for the assessment of inventive step.

In T.291/15 the board stated that the fact that the opposition division did not admit a late-filed document and did not exceed the proper limits of its discretion by not admitting it did not, in principle, prevent the board from admitting the document pursuant to Art. 12(4) RPBA 2007, in particular if it considered it to be prima facie relevant and taking into account additional facts and different circumstances (T.971/11, T.1811/13).

In line with T.971/11 and T.2219/10 the board exercised its discretion in T.945/12 with regard to auxiliary request I in light of the new circumstances and submissions, while taking into account the reasoning given by the opposition division for not admitting the very similar request in the first instance proceedings. The board noted that most of the reasons invoked by the opposition division no longer applied. Since auxiliary request I was submitted with the grounds of appeal, both the board and the opponent had time to examine the request. The board therefore decided to admit the request into the appeal proceedings.

In T.575/15 the board was of the opinion that it had the discretion to admit auxiliary requests 3 and 4, which had not been admitted by the examining division. Since at least some of the fundamental objections against the higher-ranking requests applied to these dependent claims as well, the board saw no reason not to admit them and hence took them into account.

The boards in T.490/13, T.1397/14 and T.556/13 likewise admitted, on appeal, requests not admitted in the opposition proceedings.

b) Submissions not admitted by the boards

In the cases reported here, the boards decided **not to admit** facts, evidence and requests already not admitted at first instance.

In T 584/09 of 10 June 2013, the board found that the opposition division had given sufficient reasons for its exercise of discretion and applied the correct criteria. Citing T 640/91, it held that it was not for it to review whether, as the appellant had argued, the opposition division might have been mistaken as to the relevance of the documents in question. In T 1643/11 the board was not convinced that the opposition division had exercised its discretion in an unreasonable way or according to the wrong principles, nor did it consider that that exercise was based on a manifestly wrong technical assumption. For these reasons the board confirmed the division's decision not to admit D9 and D13 into the proceedings.

In T 182/12, the appellant had requested in its statement of grounds of appeal that its patent be maintained on the basis of a request identical to an auxiliary request that the opposition division had refused to admit. Its failure to file it earlier had been at least partly a procedural tactic and in any event not justified by an unexpected turn of events. The board therefore saw no reason to overrule the opposition division's exercise of discretion and concluded that, since it too could not admit the appellant's sole request, the appeal had to be dismissed.

In T 1882/13, the opposition division had refused to admit a document on the ground that it was irrelevant. Finding that to be the right criterion for deciding whether to admit late-filed documents in opposition proceedings and that the division had not applied it unreasonably or arbitrarily, the board upheld its decision.

In T 2576/12, the board could see no good reason to exercise its own discretion under Art. 12(4) RPBA 2007 differently from the opposition division and similarly refused to admit the two documents at issue.

The board in T 1467/11 observed that Art. 12(4) RPBA 2007 left the boards room for finding in specific cases that the facts were such that requests the opposition division had rightly refused to admit could nonetheless be admitted on appeal. However, it understood the review criteria laid down by the Enlarged Board in G 7/93 to mean that, where the opposition division had properly exercised its discretion in deciding not to admit amendments to a case, this was liable to result in their non-admission on appeal too unless facts justifying treating them differently could be established.

In T 241/13 the board was of the view that the opposition division had correctly exercised its discretion and therefore decided not to admit the first auxiliary request into the proceedings under Art. 12(4) RPBA 2007. See also T 902/09.

In T 447/13 the board stated that, even if the discretion to grant or refuse a request for postponement of oral proceedings was not directly derivable from the EPC (unlike the discretion referred to in G 7/93), it believed that the same principles applied. It was

therefore not the task of the board to decide whether the examining division had reached the correct decision in refusing postponement, but simply to judge whether it had used its discretion in accordance with the right principles and in a reasonable manner (see e.g. T 2526/11).

c) Discretion misused by the department of first instance

In T 1872/08 the opposition division did not use its discretion in a reasonable way by not admitting the additional comparative tests. Therefore, the board decided to overrule the decision of the opposition division in this respect and to admit into the proceedings these comparative tests, which the patentee resubmitted in its statement of grounds.

In T 1485/08 the board stated that the opposition division had not properly exercised its discretion in not admitting document (16T) for the sole reason that it was late-filed, without having examined its relevance or having considered any other criteria. Document (16T), which was resubmitted with the statement of grounds of appeal, was highly relevant as there were clear reasons to believe that it would prejudice the maintenance of the patent. The board decided, in the exercise of its discretion pursuant to Art. 12(4) RPBA 2007, not to hold document (16T) inadmissible.

3.5.4 Submissions admitted at first instance are part of the appeal proceedings

In T 467/08, the board refused the request to disregard on appeal comparative test results submitted in the opposition proceedings, on the basis that neither the EPC itself nor the RPBA provided for such a decision. The boards merely had competence to review a decision taken by the opposition division on whether or not to admit late-filed submissions, documents and requests filed in those earlier proceedings, or to decide themselves whether or not to admit submissions, documents and requests filed on appeal.

In T 572/14 the board held that the opposition division had considered the question of prima facie relevance of the document (21) and had come to the conclusion that this criterion was fulfilled. The board noted that it can hold inadmissible and hence disregard a party's submission in the appeal proceedings only on the basis of Art. 114(2) EPC and Art. 12(4) and 13 RPBA 2007. However, since document (21) was admitted by the opposition division and therefore became part of the opposition proceedings, it could not be excluded from the appeal proceedings pursuant to Art. 12(4) RPBA 2007 (see also T 467/08).

In T 1227/14, the board observed that the boards did not have the power to disregard on appeal submissions admitted by the opposition division in exercise of its discretion. The EPC did not provide a legal basis for excluding, in appeal proceedings, documents which were correctly admitted into the first-instance proceedings, in particular when the impugned decision was based on them (T 1852/11, T 1201/14).

In T 1652/08, the appellant argued that the late-filed documents, which the opposition division had – wrongly in its view – admitted, were no more relevant than those previously filed. The board, however, held that, in establishing whether a document was prima facie

relevant, the decisive factor was not whether it was even more relevant than a previously filed document, but rather whether it was prima facie relevant for the outcome of the case. Where documents had been properly admitted in the first-instance proceedings and the contested decision was based on them, they had to be admitted on appeal too (see also T 1568/12).

3.5.5 Review of an opposition division's discretionary decision (not) to admit a new ground for opposition

In accordance with established case law, an opposition division has the discretionary power to introduce of its own motion a fresh ground for opposition (Art. 114(1) EPC). With regard to the opposition proceedings the Enlarged Board of Appeal stated in G 10/91 (OJ 1993, 420) that exceptionally, the opposition division may in application of Art. 114(1) EPC consider other grounds for opposition which, prima facie, in whole or in part would seem to prejudice the maintenance of the European patent. With regard to the appeal proceedings the Enlarged Board of Appeal held that fresh grounds for opposition may be considered in appeal proceedings only with the approval of the patentee. On the extent to which an opposition division should examine new grounds for opposition, see chapter IV.C.3.4.4.

The board's review of the discretionary decision of the opposition division is essentially limited to ensuring that the opposition division did not use this power unreasonably (T 1340/15).

In T 1119/05 the objection under Art. 100(b) EPC was already raised, although belatedly, before the opposition division which decided not to admit this late-filed ground. The board introduced the documents referred to in support of the objection in order to assess whether the opposition division had exercised its discretion properly. Having found no indication that the opposition division had exercised its discretion in an unreasonable way, the board saw no reason to reverse the decision of the first instance (see also T 839/14).

The board in T 109/08 held that, when reviewing an opposition division's exercise of discretion in deciding under Art. 114(2) EPC not to admit a late-filed ground for opposition, the boards had the power to overrule its decision if they concluded that it was based on manifestly incorrect technical assumptions or on an erroneous approach to applying the ground in question, since that would amount to a misuse of the discretionary power under Art. 114(2) EPC. The case was remitted to the department of first instance for a new decision.

In T 1286/14 the board addressed the limited scope for reviewing exercises of discretion to refuse a "fresh ground for opposition" where the proprietor objects to its admission on appeal. In the case at issue, the opposition division had considered a late-filed ground irrelevant and refused to admit it. In such circumstances, it was sufficient for the board to establish that there was evidence that the opposition division had actually examined whether the ground was prima facie relevant and given reasons for its finding on this. So, instead of reviewing whether the opposition division had examined such prima facie relevance "correctly" in substance, it merely had to check that such an examination had

demonstrably been conducted. In other words, its duty to review the exercise of discretion was limited. Citing G. 10/91 (OJ 1993, 420), it thus refrained from examining the substance of the fresh ground, thereby following the approach taken in T. 736/95, OJ 2001, 191; T. 1519/08 and T. 1592/09 and rejecting that entailing a thorough review of the earlier exercise of discretion on its merits, as taken in e.g. T. 1053/05, T. 1142/09 and T. 620/08.

3.5.6 Review of discretion – stay of proceedings

In J. 1/16, the applicant had appealed against the Legal Division's decision not to resume stayed grant proceedings until further notice. The Legal Board stated in its catchword: where, when deciding not to resume proceedings, the Legal Division has properly identified and exhausted its scope for discretion and weighed up the situation in the light of all the relevant factors, without being influenced by anything irrelevant and without making any logical mistakes in its assessment of the facts, it is not open to the Legal Board to exercise its own discretion in the Legal Division's place.

4. New submissions on appeal

4.1. Introduction

4.1.1 Legal basis

Under Art. 114(1) EPC, the EPO is obliged to examine the facts of its own motion, and in doing so, it is not restricted to the facts, evidence and arguments provided by the parties and the relief sought. According to Art. 114(2) EPC, however, the EPO may disregard facts or evidence which are not submitted in due time by the parties concerned (on this point, see chapter opposition procedure, IV.C.4. "Late submissions").

In earlier case law it has been pointed out that the wording of Art. 114(1) EPC 1973 does not mean that the boards of appeal have to conduct rehearings of the first-instance proceedings, with unfettered right, and indeed obligation, to look at all fresh matter regardless of how late it was submitted. Art. 114(2) and Art. 111(1) EPC 1973 set a clear limit to the scope of any new matter that can be introduced into an appeal by the parties so that cases on appeal have to be, and remain, identical or closely similar to those on which decisions at first instance have been rendered (T. 97/90, OJ 1993, 719; see also T. 26/88, OJ 1991, 30, where it was stated that the essential function of the appeal procedure was to determine whether the decision issued by a department of first instance was correct on its merits; T. 326/87, OJ 1992, 522; T. 229/90; T. 611/90, OJ 1993, 50; T. 339/06 and T. 931/06).

Facts and evidence submitted for the first time in appeal proceedings may be disregarded by the boards of appeal as a matter of discretion under Article 114(2) EPC 1973, which limits the boards' inquisitorial duties under Article 114(1) EPC 1973 (T. 326/87, OJ 1992, 522).

On the review of discretionary decisions taken by departments of first instance on new submissions in proceedings before them, see chapter V.A.3.5.

It is settled case law of the boards of appeal that **new requests** containing amended claims may exceptionally be admitted in appeal proceedings. According to R. 100(1) EPC, the provisions in R. 137(3) EPC, relating to examination, and in R. 80 EPC, relating to opposition, apply by analogy in appeal proceedings. Under R. 137(3) EPC, further amendments of a European patent application may not be made without the consent of the examining division, while R. 80 EPC provides, in essence, that the description, claims and drawings may be amended if this is occasioned by a ground for opposition under Art. 100 EPC.

The RPBA too contain provisions on amendments to parties' cases, as described in the next section.

4.1.2 Rules of Procedure of the Boards of Appeal (RPBA)

The RPBA contain precise provisions on amendments to parties' cases. They explicitly leave their admission – be they facts, evidence or requests – to the board's discretion. A substantial revision of the RPBA is planned for 2019.

The RPBA give general directions on how the boards of appeal should exercise their power to admit or disregard material filed at different stages of the appeal proceedings. Account must be taken of Art. 12 and 13 RPBA 2007 in particular.

Art. 12 and Art. 13 RPBA 2007 (formerly Art. 10a and Art. 10b RPBA 2003) are essentially aimed at concentrating the parties' submissions at an early stage of the proceedings, to ensure that the case is as complete as possible when it is processed. In particular, amendments which would lead to an adjournment of the oral proceedings should not be admitted. Their purpose is therefore to expedite the proceedings and implement the principle of fairness towards the other party or parties. It follows from this that parties to appeal proceedings are subject to certain restrictions as far as their procedural conduct is concerned. For example, it is a matter for each party himself to submit all facts, evidence, arguments and requests relevant for the enforcement or defence of his rights as early and completely as possible (T. 162/09). The RPBA provisions on amendments to a party's case essentially codify the boards' comprehensive case law (on this point, see T. 87/05, R. 5/11).

Under Art. 12(2) RPBA 2007, the statement of grounds of appeal and the reply must contain a party's complete case and should, inter alia, specify expressly all the facts, arguments and evidence relied on.

Under Art. 13(1) RPBA 2007, the boards have discretion to admit and consider any amendment to a party's case after it has filed its grounds of appeal or reply. This discretion must be exercised in view of, inter alia, the complexity of the new subject-matter, the current state of the proceedings and the need for procedural economy. Art. 13(3) RPBA 2007 adds that amendments sought to be made after oral proceedings have been arranged may not be admitted "if they raise issues which the Board or the other party or parties cannot reasonably be expected to deal with without adjournment of the oral proceedings".

Art. 13(1) RPBA 2007 merely lists examples of factors to be considered by the board in exercising its discretion and not an exhaustive set of criteria which must be cumulatively met, such that other considerations and well-established criteria relevant to the admissibility issue can also be taken into account (R 16/09, R 1/13, T 253/10, T 484/11). As a rule, the boards' decisions should be based on the issues in dispute at first instance, which does not rule out the admission of new submissions, but does subject it to the fulfilment of certain criteria, given that no entirely "fresh case" should be created on appeal (on this point, see also T 356/08, T 1685/07, T 162/09).

Art. 12(4) RPBA 2007 expressly refers to the boards' power to exclude requests which could have been filed or were not admitted in the first-instance proceedings. Art. 12(4) RPBA 2007 instructs us that consideration is unlikely to be given to new submissions that should have been presented in the first-instance proceedings.

4.2. Principles applying to late submissions

4.2.1 Inter partes proceedings

In the context of amendments to parties' cases, several decisions refer to the principles developed by the Enlarged Board of Appeal in relation to the inter partes appeal procedure provided for in the EPC, according to which such an appeal primarily serves the parties' right to a review of the first-instance decision in proceedings of a judicial nature. In G 9/91 and G 10/91 (OJ 1993, 408, 420) in particular, it was held that the main purpose of the inter partes appeal procedure is to conduct a final review of the decision given at the previous instance and thereby provide the losing party with an opportunity to challenge the decision against it and obtain a judicial ruling on whether it is correct. The appeal proceedings are thus largely determined by the factual and legal scope of the preceding opposition proceedings.

The parties are subject to certain restrictions on their procedural conduct, given, in particular, the need in inter partes proceedings to act fairly towards the other party and, more generally, the requirements of due process. The parties to inter partes proceedings are subject to a particular duty to facilitate due and swift conduct of the proceedings, which includes submitting all relevant facts, evidence, arguments and requests as early and completely as possible (T 1685/07, T 2102/08, T 253/10, T 1364/12). Admitting subsequent amendments to a party's case must not adversely affect the counterparty's right to submit observations on them (Art. 13(2) RPBA 2007), for example because it cannot duly exercise that right in the time then left (T 253/10, T 1466/12).

4.2.2 Ex parte proceedings

In **ex parte** cases it is established case law that proceedings before the boards of appeal are primarily concerned with examining the contested decision (G 10/93, OJ 1995, 172). Since the judicial examination in ex parte proceedings concerns the stage prior to grant and lacks a contentious nature, the boards are restricted, in their review of the decision under appeal, neither to an examination of the grounds for the contested decision nor to the facts and evidence on which the decision is based. In T 980/08 the board stated that

this absence of restriction does not amount to a positive obligation for the boards to consider any request filed in appeal especially when the requests bring about a new case. The appeal proceedings are intended to review the correctness of the decision of the first instance rather than to continue examination by other means (see also [T.65/11](#)).

4.3. The boards' discretion

Under [Art. 13\(1\) RPBA 2007](#) any amendment to a party's submissions after it has filed its statement of grounds of appeal or reply may be admitted and considered at the board's discretion.

According to established case law, discretion has to be exercised equitably, i.e. all relevant factors which arise in the particular circumstances of the case have to be considered (see [G 7/93](#), OJ 1994, 775; [R 11/11](#), [T 931/06](#), [T 936/09](#), [T 23/10](#)). In exercising its discretion the board takes account of the circumstances of the specific case, in particular the interests of the parties and the procedural economy of the appeal proceedings, having in mind the purpose of these proceedings ([T.123/08](#)).

In [T.336/13](#) the board noted that the issue of discretionary power pertains to the merits of the decision and is part of substantive law (see [R.1/13](#)). Only an arbitrary or manifestly unlawful exercise of discretion amounts to a fundamental violation of the right to be heard pursuant to [Art. 113 EPC](#) (see [R.9/11](#), [R.10/11](#)).

4.4. State of proceedings

4.4.1 General

It is the established case law of the boards of appeal that the appeal procedure is designed to ensure that the proceedings are as brief and concentrated as possible and ready for decision at the conclusion of oral proceedings, if scheduled. An important aim of [Art. 12 and 13 RPBA 2007](#) is that the parties' submissions are concentrated at as early a stage as possible so that the case is as complete as possible when it comes to processing it ([T.1315/08](#), see also [T.727/14](#)). Therefore, amendments to the claims are to be filed at the earliest possible moment ([T.214/05](#), [T.382/05](#)).

Under [Art. 12\(2\) RPBA 2007](#), the statement of grounds of appeal and the reply must contain the party's complete case. In addition to all facts, arguments and evidence, they should include all requests ([T.764/03](#)). They must set out clearly and concisely the reasons why it is requested that the decision under appeal be reversed. This provision provides a cut-off point after which any further submission is ipso facto late and subjected to the discretionary power of the board. The intended overall effect of this article is to require the parties to present a complete case at the outset of the proceedings in order to provide the board with an appeal file containing comprehensive submissions from each party and to prevent procedural tactical abuses ([T.1488/08](#)).

[Art. 13 RPBA 2007](#) leaves it to the board's discretion to consider amendments made to a party's case after filing of the statement of grounds of appeal. In particular, new

submissions will not be considered if this would require an adjournment of already scheduled oral proceedings (Art. 13(3) RPBA 2007). The subject-matter to be examined on appeal is thus determined by the statement of grounds for appeal and the reply.

4.4.2 Procedural economy

Under Art. 13(1) RPBA 2007, the board must exercise its discretion in view of the need for procedural economy, that is, the need to conclude proceedings swiftly and to create legal certainty. It also follows from the inter-relationship between Art. 12 and 13 RPBA 2007 that amendments made to a party's case after filing of the grounds of appeal do not form part of the subject of the appeal and so must be admitted in order to be considered (T 253/10).

a) Late-filed requests

The state of the proceedings and the need for procedural economy taken together imply a requirement for a party to present appropriate requests as soon as possible if such requests are to be admitted and considered (T 1033/10, T 375/11, T 1245/11, T 2219/12). Requests filed very late (i.e. shortly before or during the oral proceedings) will therefore be admitted only if they are prima facie allowable. The admission of new requests at a very late procedural stage (shortly before the oral proceedings) is only in keeping with the principle of procedural economy if the requests are not unsuitable from the outset to overcome the doubts as to the allowability of the claims (T 978/05, T 1731/06, T 33/07, T 321/07, T 1650/08, T 486/14, T 1322/15). As far as procedural economy is concerned, an amendment at a late stage in the proceedings is justifiable if it is an appropriate and immediate reaction to unforeseeable developments in the previous proceedings which do not lie in the responsibility of the party submitting the amendment (T 1990/07, T 1354/11).

The amended claims must not give rise to circumstances relevant for the assessment of patentability which are so new that the other party cannot reasonably be expected to address them without the proceedings being unduly prolonged (T 651/03).

Both the timing of the filing of amended claims or auxiliary requests and the difficulty entailed in examining them are important criteria for deciding whether they can be admitted to the proceedings (T 397/01): the later the requests are filed, the less likely they are to be held admissible (T 942/05); and the more complex the issues raised by amendments and the later those amendments are filed, the greater the risk that the remaining time is insufficient to consider them properly (T 81/03).

In T 412/12 the appellant filed a new auxiliary request at the last possible moment in the oral proceedings, namely after the fourth auxiliary request had already been discussed and found allowable. The board held its tactic of moving little by little towards filing a new auxiliary request "at the last minute" to be neither justified nor fair towards the other parties – all the more so given that a request had already been found allowable – because admitting that request would have prolonged the proceedings substantially. Such a delay would have also run counter to the need for procedural economy at the stage that the proceedings had reached.

If an objection (made by a party and/or by the board) is not fully understood in a particular case, it is then, at the very least, incumbent on the party having difficulties in understanding an objection to indicate this at the earliest possible stage and make the appropriate effort to have the objection clarified. A lack of understanding alone cannot justify postponing amendments to a party's case until a later stage in the proceedings (T 1033/10).

b) Late-filed facts and evidence

As early as T 117/86 (OJ 1989, 401), it was pointed out that facts and evidence in support of an opposition which were presented after the nine-month period had expired were out of time and late, and might or might not be admitted into the proceedings as a matter of discretion under Art. 114(2) EPC 1973. Boards had to ensure that proceedings were conducted expeditiously, and other parties fairly treated. The parties should submit all the facts, evidence and arguments relevant to their case as early and completely as possible, particularly when such an evidence was already known to the party concerned (see T 101/87; T 237/89; T 951/91, OJ 1995, 202; T 34/01; T 1182/01; T 927/04; T 1029/05).

In T 188/05 the board did not share the appellant (opponent's) view that it was obliged to admit relevant evidence irrespective of how late it had been filed, provided that it cast doubt on the patent's validity. The case law of the boards of appeal establishes quite clearly that the first instance and the boards of appeal have a discretion to admit late-filed submissions and that the exercise of this discretion depends on the facts of each case but pertinent matters may include the relevance of the new material, whether it could have been produced before and if so why it was not, whether other parties and/or the board itself are taken by surprise, and how easily they can and whether they have adequate time to deal with it (see also T 1774/07, T 424/11).

In T 1449/05 the board stated that the discretion to permit amendment of a party's case may be exercised against a proprietor who seeks to resile at a late stage in the opposition appeal procedure from a previous long-standing acknowledgement or persistent tacit admission of prior art. Admitting this resilement would require in all fairness the adjournment of the oral proceedings to allow the appellant opponent to search for adequate evidence. This could have been done at an earlier stage of the proceedings (likewise T 1682/09).

In T 874/03 the board, considering a prior-art document, which was first filed at the oral proceedings before the board, acknowledged that it was immediately apparent that this fresh material might represent the closest prior art. Such facts and evidence might not in principle be admitted into the proceedings because their admission would lead to an adjournment of the proceedings. However, an exception to the above principle was justified if the patent proprietor agreed to the admission of the fresh material. The board stipulated that, as emphasised by the Enlarged Board in G 9/91 (OJ 1993, 409), it might in some cases be in the patent proprietor's own interest that such facts and evidence were not excluded from consideration in the centralised procedure before the EPO (T 369/08).

In T 1488/08 the patent had been opposed under Art. 100(a) and (c) EPC 1973. In their written statement setting out the grounds of appeal, however, the appellants had only

invoked lack of inventive step. The board found that the new objections of added subject-matter and lack of novelty had only been raised after the respondents had submitted their reply and were therefore late filed. Their attempt to re-introduce them could therefore only be regarded as a change of position determined by procedural tactics ("salami" tactics). On that basis alone, the board considered, in view of procedural economy, that it should exercise its discretion not to admit the late filed objections.

4.5. Amendments after arrangement of the oral proceedings

Strict criteria are applied to amendments sought to be made after oral proceedings have been arranged. According to Art. 13(3) RPBA 2007, these amendments "shall not be admitted if they raise issues which the board or the other party or parties cannot reasonably be expected to deal with without adjournment of the oral proceedings." Thus, the parties' right to be heard and/or procedural economy take precedence over other considerations (T 232/08). This provision therefore leaves the decision-making board no room for discretion (T 253/10).

4.5.1 Late-filed requests

a) Filing of requests after arrangement of the oral proceedings

According to an approach frequently adopted by the boards a request after arrangement of the oral proceedings may be admitted and considered at the board's discretion (i) if sound reasons exist for filing this request so far into the proceedings (this may be the case when amendments are occasioned by developments during the proceedings), (ii) if the auxiliary request does not extend the scope of discussion as determined by the grounds of appeal and the respondent's reply (iii) if the auxiliary request is clearly or obviously allowable (this means that it must be immediately apparent to the board, with little investigative effort on its part, that the amendments made successfully address the issue raised without giving rise to new ones) (see in particular T 1634/09, T 484/07, T 447/09, T 2344/09, T 1925/10, T 416/12, T 1605/14 and T 385/15). Such amendments should in principle allow the granting of a patent based thereon (T 1748/08, T 2250/08).

In T 81/03, the board found that requests filed shortly before the minimum deadline set by it in the summons to the oral proceedings had to be regarded as belated where they contained points which could only be dealt with properly in an additional written phase (T 518/08).

In T 253/06, the board held that it was permissible under Art. 13(3) RPBA 2007 to regard as belated auxiliary requests filed after oral proceedings had been arranged but within the prescribed period, if those requests were not substantiated, i.e. not accompanied by reasons explaining why the amendments had been made and how they were intended to overcome the objections raised in the course of the proceedings (T 2422/09, T 351/10, T 2497/10). This conclusion holds all the more true, if such an unsubstantiated request is filed only shortly before the oral proceedings. In this respect an ex-parte is not different from an inter-partes case (T 1278/10).

Amended claims filed at such a late stage should be clearly allowable in the sense that it can be quickly ascertained that they overcome all outstanding issues without raising new ones (T 1126/97, T 1993/07, T 183/09).

Similarly, in T 1443/05, the board refused to admit the auxiliary request under Art. 13(3) RPBA 2007 because, as a result of its late filing, the question whether it met the requirements of Art. 123(3) EPC 1973 could not be answered without adjourning the oral proceedings (see also T 1026/03, T 1305/05, T 455/06).

b) Filing of requests during the oral proceedings

Under Art. 15(6) RPBA 2007, the case should be ready for decision at the conclusion of the oral proceedings before the board, unless there are special reasons to prevent this. The board of appeals have developed several criteria in exercising its discretionary power to admit amended claims submitted for the first time during oral proceedings without any legally relevant excuse for the lateness. An amendment at a late stage is justifiable if it is an appropriate reaction to unforeseeable developments in the proceedings, – for example if it addresses comments or objections first raised in those proceedings (T 391/11, T 2385/11).

New requests can be considered only in exceptional cases, for example if a party is confronted with unexpected developments during the proceedings (T 1869/10, T 2219/12) or if it would be immediately apparent to the board, with little or no investigative effort on its part, that the new requests are clearly and obviously allowable (T 5/10, T 1912/09, T 2219/12). It is established case law that claims which are clearly not allowable will not normally be admitted. Thus, the general principle is that in order to be admissible, an amended claim belatedly filed in oral proceedings must be clearly allowable by virtue of a clearly permissible amendment (T 1273/04, T 1311/05, T 2238/09). It must be immediately apparent to the board, with little or no investigative effort on its part, that amendments successfully address the issues raised without giving rise to new ones (T 5/10). According to T 1315/08 (ex parte) an especially strict standard should be applied to such requests. As a rule, new requests not filed until the oral proceedings could only be admitted if they eliminated minor objections to an otherwise allowable claim or if they were a reaction to debate in the oral proceedings, especially where this reaction was to limit the claim even further.

In T 183/09 auxiliary requests 2 to 4 were filed at the oral proceedings. The board summarised by stating that unless an amendment is justified by developments in the appeal proceedings – for example if it addresses objections or comments first raised in the proceedings – it will be admitted only if it does not extend the scope or framework of discussion as determined by the decision under appeal and the statement of the grounds of appeal, and is moreover clearly allowable. From the above the board inferred that procedural economy, that is the need to conclude proceedings swiftly and so create legal certainty, plays an increasingly dominant role as appeal proceedings progress towards their end. In the final stages of an appeal procedure it may in fact come to outweigh all other factors in the balance of interests that the board must strike when deciding on the

admissibility of new requests or of new facts and evidence (T 1993/07, T 532/08, T 562/09, T 1227/10, T 1354/11).

R. 116 EPC (R. 71a(2) EPC 1973) and Art. 13(3) RPBA 2007 have considerably restricted the scope for admitting in opposition appeal proceedings new requests first filed by the patentee in oral proceedings despite specification of a deadline for filing such requests in the summons notice. Such auxiliary requests could be refused as belated under R. 116 EPC, unless they had to be admitted on the grounds that the subject of the proceedings has changed (T 1105/98, T 913/03, T 494/04).

In T 1617/08 the board stated that the purpose of an oral hearing in appeal proceedings is to give the parties an opportunity to argue their case but not to give an appellant (patentee) the opportunity to repeatedly modify its requests until an acceptable set of claims is found.

In T 1790/06, in exercising its discretion the board also took account of the conduct of the respondent (patentee) during the oral proceedings. A party's obligations included taking care not to act in a manner detrimental to the efficient conduct of oral proceedings. At such proceedings, it should not for example submit requests willy-nilly, withdraw them and then resubmit them later. That was unacceptable, for both the board and other parties. Similarly, in T 2540/12 the respondent's behaviour impaired the efficient conduct of the oral proceedings and the board stated that this in itself was sufficient reason not to admit the new auxiliary request.

(i) Amended claims not admitted

In T 1105/98 the auxiliary request was not submitted until the start of oral proceedings before the board. The board had to make sure that the amended claims fulfilled the formal requirements and appeared likely to succeed, bearing in mind the time needed to ascertain this but also the right to be heard. These conditions were not fulfilled if a further search was needed, so that either the oral proceedings had to be postponed or the matter remitted to the department of first instance for further prosecution. The board in T 681/02 adopted the view taken in T 1105/98, where the board had held that, if the said request was intended as a response to the board's preliminary opinion in preparation for the oral proceedings, it could have been submitted prior to the time limit specified in that opinion, that is to say, up to one month before the oral proceedings.

In T 162/12 the discussion during the oral proceedings had been essentially limited to the objection raised in the board's annex to the summons, without any new issues coming up which could have left the appellant facing a new situation. Claim 1 of the auxiliary request 1 corresponded to the combination of claims 1 and 2 of the main request. However, the board had already expressed in its annex to the summons its preliminary opinion that the subject-matter of claim 2 of the main request did not involve an inventive step. The appellant therefore could have filed said auxiliary request, properly supported by arguments, sufficiently in advance for the board to prepare itself for the oral proceedings. In acting as it did, the appellant kept all its cards to itself whereas the board with its annex

to the summons had laid its cards on the table. That could not be considered conducive to efficient proceedings.

In T. 831/92, the board held that it was contrary to the principle of procedural fairness to file an auxiliary request during oral proceedings before a board of appeal because it was difficult for an opponent to deal with a request not submitted in good time before the oral proceedings (T. 1333/05). In T. 667/04 the board stated that no exceptional circumstances were put forward excusing the late filing of the request. To have admitted it would have run counter to the principle of procedural fairness (see also T. 233/05).

In T. 156/15 the appellant filed auxiliary request 19 after the chairman had announced the results of the board's deliberation on the main request and auxiliary requests 1 to 18, and filed auxiliary request 20 after the chairman had announced the result of the board's deliberation on auxiliary request 19. By its behaviour, the appellant (patent proprietor) was, as a matter of fact, adjusting its strategy to the results of the board's deliberation, which put the appellant (opponent) in a position where it was difficult to react. In deciding on the admission of such late-filed requests, respect for the principle of fairness of the procedure might make it immediately apparent that these requests should not be admitted, even without also considering specific criteria for the exercise of the board's discretion such as prima facie allowability.

During the oral proceedings in T. 14/02, the respondent (patentee) requested the board's leave to file additional requests in order to limit the claimed subject-matter. The board refused the request on two grounds: firstly, the need for a new request had already been apparent before the oral proceedings since the board had already issued a communication containing a negative provisional opinion setting out why the main request did not appear to be inventive; secondly, the proposed subject-matter of the new requests would have required the other party to perform another search and might have resulted in a remittal.

In T. 236/11 the amended claim consisted of a combination of features that had not been claimed in the proceedings before that. In view of the many different sets of claims filed during the proceedings before the opposition division, the board found the claiming of this combination at this late stage surprising, with the result that neither it nor the appellant was in a position to deal with the claim without postponing the oral proceedings or remitting the case to the department of first instance.

In T. 732/11 (ex parte) the appellant's sole request was filed during the oral proceedings before the board, after the board had given its opinion that the previous request contravened Art. 123(2) EPC. The reasons for that opinion had already been presented to the appellant in the board's communication. The board stated that it would have been possible (and indeed incumbent on the appellant) to have prepared the request in advance of the oral proceedings, rather than obliging the board to interrupt the oral proceedings so that this could be done.

In T. 2046/14 the board stated that, independently of its success in overcoming the objections, a piecemeal filing of auxiliary request(s) in a case where the relevant objections were known from the beginning of the appeal proceedings neither satisfies the

requirements of Art. 12(2) RPBA 2007, nor satisfied the requirements of due process (efficient conduct of the proceedings) and the need for economy of the proceedings.

(ii) Amended claims admitted

In T.1067/03 (inter partes), the board regarded the clarifications in the auxiliary request as a response to the preceding discussion in the oral proceedings. Moreover, the amendment was not so complex that it would have made it impossible to reach a definitive decision in the oral proceedings.

In T.1045/08 the board considered that the auxiliary requests filed in the oral proceedings responded to objections to the earlier filed requests in particular in view of the newly introduced documents. In filing a relevant document shortly before oral proceedings a party must accept that the other party may file appropriate new requests also during the oral proceedings, which may raise issues not previously addressed in the proceedings.

In T.2097/10, the amendment entailed deletion of claim 1 and so eliminated the objections raised. Moreover, the then remaining independent claim, which was already in auxiliary request 1, was prima facie allowable. Since the amendment was restricted to deletion of a claim, it would not unnecessarily delay the proceedings.

In T.1589/11 the board raised no objection to the introduction by the opponent of new arguments not contained in the statement of grounds of appeal. That the board found these new arguments convincing only became apparent to the proprietor during the oral proceedings. Under these circumstances the board considered it equitable to allow the proprietor to formulate a response to this finding, especially as the new request could not be seen as adding greatly to the complexity of the case.

In T.2284/12 (ex parte) the board accepted that the auxiliary requests were filed in reaction to detailed comments and objections of the board that were debated in the course of the oral proceedings. The amendments made could be considered as an attempt by the appellant to overcome all pending objections. They did not raise new issues of particular complexity and contributed to the convergence of the debate. See also similar cases T.2485/10, T.391/11, T.1306/11 and T.1995/12.

4.5.2 Late-filed documents and evidence

In T.188/05 the board held that the admission of the appellant's new submission would alter his case in a way that would raise issues which the board and the respondent could not reasonably be expected to deal with without adjournment of the oral proceedings. The material was therefore not admitted to the proceedings.

In T.1774/07 the introduction of the new documents into the proceedings without adjourning oral proceedings would have been contrary to the principle of equal treatment of the parties. The board thus concluded that the documents, independently on their relevance, were not to be introduced into the proceedings.

In T 232/08 the objection of lack of novelty based on document D11 was raised for the first time during appeal proceedings at the oral proceedings. The board considered that the respondent's right to be heard with regard to the novelty-objection based on document D11 would have been respected only if the oral proceedings had been adjourned or the case had been remitted to the department of first instance in order to allow the respondent adequate consideration of the appellant's objection. Consequently the board had decided not to allow the appellant to present its novelty objection based on document D11.

In T 139/12, after the oral proceedings had been arranged, the appellant filed new evidence as a basis for attacking novelty for the first time and launching a new attack on inventive step. The board held that that amounted to an entirely new line of argument on the basis of new evidence that lay outside the scope of the appeal proceedings as defined by the statement of grounds of appeal and the reply. Admitting such a fresh case would normally make remittal necessary and, at the very least, would mean adjourning the oral proceedings in order to give the respondent the opportunity to respond appropriately.

In T 1058/15, the appellant raised a novelty objection based on a new document (D8) filed only a few weeks before the oral proceedings on appeal. The board observed that this objection did not amount to an entirely fresh ground for opposition, which could have been admitted on appeal only with the patent proprietor's consent (G 9/91, OJ 1993, 408), because novelty had already been challenged on the basis of a different document during the opposition proceedings. The circumstances and the interests at stake were nevertheless similar because, here too, the patent proprietor (respondent) had been equally entitled to expect that no additional ground for opposition resulting in greater procedural complexity would be newly raised during the appeal proceedings. Since the respondent had not agreed to the new document's admission, the board decided not to admit it, irrespective of its relevance.

4.5.3 Absence from the oral proceedings

The EPO can consider and decide only on the text of the European patent submitted to it, or agreed, by the proprietor (Art. 113(2) EPC). Moreover, any party duly summoned to oral proceedings cannot rely on the proceedings being continued in writing or the case being remitted to the department of first instance solely because he failed to appear at the oral proceedings, see Art. 15(3) and (6) RPBA 2007. Under those provisions, the board is not obliged to delay any step in the proceedings, including its decision, by reason only of the absence at the oral proceedings of any party duly summoned; that party may then be treated as relying only on its written case. The board must also ensure that each case is ready for decision at the conclusion of the oral proceedings. The explanatory notes to Art. 15(3) RPBA 2007 state that this provision does not contradict the principle of the right to be heard pursuant to Art. 113(1) EPC since that Article only affords the opportunity to be heard and, by absenting itself from the oral proceedings, a party gives up that opportunity (see the explanatory note to Art. 15(3) RPBA 2007 in CA/133/02 dated 12.11.2002, quoted in T 1704/06, T 1278/10, T 2281/12, T 133/12, T 1245/14).

a) Absence of applicant (patent proprietor) from oral proceedings

The purpose of oral proceedings is to give parties the opportunity to present their case and to be heard. However, they give up that opportunity if they do not attend the oral proceedings. It is established case law of the boards of appeal that appellants who submit amended claims shortly before the oral proceedings and subsequently do not attend these proceedings must expect a decision based on objections which might arise against such claims in their absence. It is to be expected, for example, that the board will hold the new claims to be unallowable for lack of inventive step (T 602/03, T 991/07, T 1403/07, T 1587/07, T 1867/07, T 546/08, T 680/10, T 795/11).

In T 1634/11 the board stated that an appellant filing amended claims in response to a board's communication had to expect that the admissibility of the newly filed claims would be considered during forthcoming oral proceedings. Since the new sole main request was not admitted into the proceedings and all previous requests had been withdrawn, there were no further requests on file, so that the appeal had to be dismissed.

A patent proprietor who prior to oral proceedings files amended claims but no description adapted thereto, and who is not represented at the oral proceedings, cannot "rely on" the proceedings being continued in writing or the case being remitted to the department of first instance for adaptation of the description (T 181/02, T 109/02, T 651/08, T 776/05, T 2294/08). Hence, a patent proprietor should make sure, that all the required documents, including a description adapted to the claims, on the basis of which the maintenance of the patent could be ordered are on file, so that a decision can be taken by the board at the end of the oral proceedings if a given request is found allowable (T 986/00, OJ 2003, 554; T 181/02; T 109/02; T 776/05; T 651/08). Amended claims filed without an amended description may lead to revocation (T 1194/08).

In T 979/02, the appellants filed an amended set of claims as a "single main request". The board found that, for reasons of procedural economy, it had no choice but to decide on the admissibility of the request on the basis of whether the request documents were clearly admissible prima facie. It concluded that, prima facie, both the description and the claims taken alone revealed a number of formal deficiencies.

In the situation where an appellant submits new claims after oral proceedings have been arranged but does not attend these proceedings, the board can refuse the new claims for substantive reasons, specifically lack of inventive step, even if the claims have not been discussed before and were filed in good time before the oral proceedings. This will in particular be the case if an examination of these substantive requirements is to be expected in the light of the prevailing legal and factual situation (T 1704/06). See also T 1828/10.

In T 1867/07 the board concurred with this view and added that a duly summoned party who by its own volition is absent at oral proceedings cannot be in a more advantageous position than this party would have been, had it been present. The voluntary absence of the appellant cannot be a reason for the board not to raise issues it could have and would have raised had the appellant been present, and to decide accordingly (T 680/10).

In T.1587/07, it was held that the appellant had had to expect that, in its absence, the board would refuse to admit its new request. The board explained that, given the appellant's absence from the oral proceedings in this ex parte case, it had been unable to discuss with it issues relevant for the purposes of Art. 13 RPBA 2007, such as why features deleted during the proceedings at first instance had been reintroduced at a late stage of the appeal proceedings. Its voluntary absence was not a reason for the board not to raise issues it would have addressed if it had been present (see the similar case in T.1403/07).

In T.1621/09 the board dealt with the following question: where a new argument is put forward for the first time at oral proceedings, how is the exercise of the board's discretion to admit the amendment affected if the party prejudiced is not present at the oral proceedings? The board stated that Art. 13(2) RPBA 2007 must be read subject to Art. 15(3) RPBA 2007, with the result that the absence of a duly summoned party does not prevent a board from allowing an amendment to another party's case and reaching a decision on the basis of the amended case. The absence of the party is nevertheless a factor to be taken into account in the exercise of the discretion. In the case at issue the board decided however not to allow the appellant to amend its case. See also T.607/10.

b) Absence of opponent from oral proceedings

In T.1949/09 the board refused to admit test results filed by the proprietor (appellant) before the oral proceedings. Apart from the unjustified, late filing, the tests raised in the board's view a number of questions about their significance, which could not be answered without an adjournment of the proceedings. Art. 15(3) RPBA 2007, which provides that the board is not obliged to delay any step in the proceedings, including its decision, by reason only of the absence at the oral proceedings of any party, does not go so far as to nullify Art. 113(1) EPC. On that basis, the respondent, who chose not to attend the oral proceedings, could rely on the procedural provisions, namely that the decision would be made on the basis of the written case within the meaning of Art. 12 RPBA 2007 and that no significant amendment of the case would be admitted which would go beyond what is provided by Art. 13 RPBA 2007.

In T.470/04, the appellant patentee filed an amended set of 15 claims during the oral proceedings, which were not attended by the respondent (opponent). Since the amended set of claims was based on a combination of claims already on file, had been filed as a response to objections raised by the board during the oral proceedings, did not modify the main point of discussion defined by the decision under appeal and by the statement of the grounds of appeal, i.e. lack of inventive step, and could be easily dealt with by the board at the oral proceedings, the board concluded that the requests were admissible under the circumstances.

In T.2471/10 the respondents could have reasonably expected amendments like those made in the claims of the appellant's new request and thus they could not have been taken by surprise. Accordingly, the respondents' absence was no obstacle to admitting the appellant's new request into the proceedings and taking a decision on it.

4.5.4 New submissions after the end of oral proceedings

In T 360/13 the appellant waited until after the board's deliberations, but before it announced its decision, i.e. the point in the oral proceedings when the debate had already been closed and the case was ready for decision, to file a new auxiliary request amending its previous one by deleting a feature whose clarity had already been discussed. The board noted that, once the debate had been closed, the criteria for admitting new submissions were especially strict (Art. 15(5) RPBA 2007). In the case in hand, there was no justification at all for filing the new auxiliary request so late.

Continuation of the appeal proceedings after the end of oral proceedings is not, as such, a reason for admitting new submissions or additional evidence relating to issues which were not admitted at the first oral proceedings or in respect of which the debate had indeed been closed. In the board's view, presenting a party's case little by little, depending on the further evolution of the case, is not in line with the principle of procedural economy (T 577/11).

4.6. Parties' right to submit observations on amendments – Article 13(2) RPBA 2007

In R 9/11 the Enlarged Board held that Art. 13(2) RPBA 2007, which gives parties a right to comment on new submissions filed by others, did not inevitably extend to having all auxiliary requests – without any further examination of their prima facie allowability – automatically admitted into the proceedings. In R 1/13 the Enlarged Board stated that the petitioner's suggestion that the right to be heard carries with it, in the case of requests filed in response to late objections, a right to a full discussion which transcends the requirement of admissibility was simply incorrect. A late objection may lead to more latitude in the filing of requests in response but there is no certainty of admissibility, let alone of a more thorough discussion if admissibility is achieved. If the petitioner was correct, any request filed in response to a late objection would be admissible even if it clearly had no prospect of overcoming the objection. There can be no such right of automatic admissibility for those making the new submissions.

4.7. Communication of a board of appeal

The purpose of a communication of a board of appeal pursuant to Art. 15(1) RPBA 2007 is to prepare the oral proceedings; it is not an invitation to the parties to make further submissions or to file further requests (T 1459/11 and T 1862/12).

In T 1168/08, the board stated that the appellants' justification for the late filing of the new requests, namely that they had been filed in reaction to the board's communication, was not acceptable here, because the argumentation in support of the board's preliminary opinion that the claimed subject-matter had no basis in the application as originally filed and lacked novelty corresponded in substance to the reasoning of the respondent in reply to the grounds of appeal. A board communication under Art. 15(1) RPBA 2007 is intended as guidance for the oral proceedings. It helps the parties to focus their argumentation on issues that the board considers crucial for reaching its decision. Where the board's

communication contains a preliminary opinion based solely on the issues raised by the parties and their arguments, that communication cannot be taken as a justification for submitting new requests that the parties could have filed earlier (see also T.253/10, T.582/12).

In T.30/15 the appellant argued that the board's preliminary opinion had raised a new objection to the sufficiency of the description. That was why it had filed a new document, doing so as soon as possible. The board disagreed: the cited passage of its preliminary opinion did not contain any new objection but merely summarised those already set out in the decision under appeal. Filing the new document in response was therefore not justified.

4.8. Circumstances extraneous to proceedings

4.8.1 Introduction

In some cases, the parties justify late filing with circumstances extraneous to the proceedings. The boards have refused to accept the following justifications: T.160/89 (heavy workload); T.148/92 (doubts as to the definitive embodiment of the invention; appellant's frequent need to travel); T.626/90 (lack of timely instructions), T.583/93 (OJ 1996, 496; lack of communication between the patentee and the licensee); T.575/94 (new instructions); T.1697/13 (necessary consultation of the applicant) and T.2575/11 (transfer of the patent and change of representative).

4.8.2 Change of representative

In several cases, a change of representative has been put forward as an explanation for the late filing of facts, evidence and requests. As a rule, the boards do not accept that as a valid reason, as was the case, for example, in T.830/90 (late-filed requests) and T.430/89 (late-filed documents and arguments); see also T.736/99, T.497/11, T.139/12, T.792/12, T.1154/12 and T.846/13. In T.382/97 the board pointed out that the mere change of a representative was not a valid ground justifying the late filing of requests since it was an arbitrary move by the relevant party by which it could influence which procedural actions had to be considered as belated and which as timely. It was evident that such a situation would be contrary to any reasonable procedural conduct. Only if the change of representative was necessitated by proven exceptional and extraordinary circumstances might the board come to different conclusions. The board in T.1748/08 reiterated that a change in representative was usually brought about by the party itself and so generally speaking could not justify late filing.

In T.785/96, under cover of a letter sent just one month before the oral proceedings before the board, the appellant filed additional experiments. The appellant stated that the reason for this late filing was a change of representative, after which the necessity of the experiments had appeared. The board confirmed the decision T.97/94 (OJ 1998, 467) and stated that a change of representative did not form an acceptable ground for late filing unless it was due to force majeure. The new representative was obliged to continue the proceedings from the point they had reached when he took over from his predecessor (see also T.552/98).

In T.1585/05 the board noted that the fact that the late-filed requests were filed by a new representative bore no weight on the admissibility of the claims, since the ultimate responsibility for filing requests always remains that of the proprietors, so that the Board has to consider that, unless otherwise proven, all actions undertaken by the former representative were undertaken in agreement with the proprietors and thus expressed their desires (see T.1420/06). The new representative was therefore bound to continue the proceedings from the point they had reached when he took over from his predecessor. See also T.1351/10, in which the board held that a change of representative at the time when the grounds for appeal were filed did not justify filing the main request only one month before the oral proceedings before the board.

In T.1282/05, the board held, inter alia, that a withdrawal of the representative did not justify the late return to broader subject-matter which had not yet been discussed in the appeal proceedings because the board had to assume that all actions of the former representative had been performed in consultation with and with the approval of the appellant, to whom they therefore had to be imputed.

A change in the person handling the case is not an extraordinary circumstance justifying the filing of a request at a late stage in appeal proceedings, especially where the objections to be overcome were raised at the outset (T.1457/08).

4.8.3 Illness of representative

In T.1032/96, the board held that the late transfer of the case to the representative owing to the illness of a colleague was not sufficient justification for the failure to submit the set of claims until just three days before the date of the oral proceedings. The claims were deemed to be late.

In T.336/11 the opponent filed its reply to the statement of grounds of appeal by the patent proprietor on 10 November 2011. The reply was signed by the representative then in charge, who passed away shortly thereafter. In an ensuing letter dated 23 March 2012, the opponent's new representative filed further submissions which were said to complete the opponent's previous reply. In view of these exceptional circumstances the board admitted the new objections into the proceedings which were filed late due to the representative's severe illness and death.

4.8.4 Change of ownership

In T.1170/12 the board stated that a change of ownership or representation did not normally justify late amendments or a divergence from subject-matter previously claimed. The new owner takes over the application in the state that it is in at the time of transfer of ownership. The EPO and the public must be able to rely on the steps taken by an applicant, even if the application is subsequently transferred, or the applicant changes representative.

4.8.5 Business reasons

In T.764/03, the only reason given by the appellant for the failure to introduce the auxiliary requests at an earlier stage of the proceedings was that the patentee had taken so long to reach a decision on the patent content which it considered useful to prosecute from a competition point of view. The board observed that only the rules and the circumstances of the appeal proceedings in question could be considered when determining at what stage of appeal proceedings requests had to be filed, when they had to be regarded as belated and what the legal consequences of such belatedness were. Circumstances extraneous to the proceedings, such as e.g. licensing negotiations with competitors or infringement proceedings were not factors which could be taken into account in assessing when in the appeal proceedings requests affecting the patent's content had to be filed, unless they were put forward as grounds for a request for accelerated handling of a case (see also T.356/08, T.28/10).

In T.1544/08 the board stated in its catchword that the wish to avoid giving commercially valuable information to competitors was not necessarily a valid reason for not complying with the requirement of Art. 12(2) RPBA 2007 that the grounds of appeal should contain the appellant's complete case.

4.9. New submissions in proceedings resumed before the boards

In review case R.16/13 the Enlarged Board set the contested decision aside and ordered that the proceedings (in T.379/10 of 5 March 2013) be resumed. On doing so, the board held that such resummptions of appeal proceedings were confined to rectifying the defect identified on review. The appellant took the view that filing comparative tests was an essential part of the comments that R.16/13 had allowed it to make. But the newly filed tests raised an admissibility issue: whether they merely helped the appellant to overcome the board's objection – which R.16/13 had said it could comment on – or whether they went further and would thus extend the subject-matter of the resumed proceedings beyond that specified in the petition for review decided on in R.16/13. The board held that the new tests and line of argument would indeed extend the subject matter, and therefore declined to admit them into the resumed proceedings.

4.10. Late submission of new arguments and lines of attack

4.10.1 New arguments on appeal

Further information on "new arguments" is contained in chapter IV.C.4.7.

Art. 12(2) RPBA 2007 provides that the statement of grounds of appeal should specify expressly all the facts, **arguments** and evidence relied on by the party. Art. 13(1) RPBA 2007 leaves it to the board's discretion to admit any amendments to a party's case after that.

The board in T.1621/09 held that, to the extent the Enlarged Board of Appeal's opinion in G 4/92 (OJ 1994, 149) dealt with the general admissibility of new arguments in appeal

proceedings, it had to be regarded as having been modified by the amendments to the RPBA introduced with effect from 1 May 2003. In addition, the board examined whether or not new arguments first brought forward during oral proceedings but based on citations already in the proceedings could constitute an amendment to a party's complete case within the meaning of Art. 13(1) RPBA 2007. The board said they could, and concluded that the admissibility of such arguments was therefore prima facie a matter for the board's discretion. The boards in T 232/08, T 1069/08, T 1732/10, T 1761/10, T 433/11 and T 1847/12, came to similar conclusions.

The board in T 1914/12 held (contrary to T 1621/09) that the boards did not have any discretion when it came to the admissibility of late-filed arguments based on facts already in the proceedings. Invoking Art. 114 EPC, which in English referred to arguments (as well as to facts and evidence) in paragraph 1, but not in paragraph 2, it concluded that the discretion conferred by paragraph 2 did not extend to late-filed arguments and observed that this was in line with the pre-2011 case law (e.g. T 92/92, T 861/93, T 131/01, T 704/06, T 926/07 and T 1553/07). It noted that two decisions had been taken in September 2011 – T 1069/08 and T 1621/09 – in which that case law had been questioned on the basis of Art. 13(1) in conjunction with Art. 12(2) RPBA 2007 and it had been concluded that the boards did have some discretion when it came to late-filed arguments. However, it was unconvinced by the reasoning underlying these decisions. Their interpretation ignored the fact that Art. 114(2) EPC provided no justification for such discretion, as the older case law had held many times. In English at least, the EPC, and in particular Art. 114, treated facts and arguments differently. More specifically, Art. 114(2) EPC explicitly conferred discretion for late-filed facts but not for late-filed arguments based on facts already in the proceedings. The RPBA, although they could provide more detail on and help in interpreting the EPC, could not give the boards powers that the EPC did not.

The right to be heard is not to be understood as a right to have every argument taken into consideration, regardless of when in the proceedings it was submitted (T 647/15).

In T 1348/11 the board considered that the new line of argument advanced by the appellant amounted to an amendment of the appellant's case within the meaning of Art. 12(2) and 13(1) RPBA 2007, because it represented a departure from its initial line of argument and not just a further development of it.

4.10.2 New arguments and lines of attack admitted

In T 607/10 the board considered that, in deciding whether a new argument has the effect of amending a party's case within the meaning of Art. 13(1) RPBA 2007, it must be established on a case-by-case basis whether the new argument is a departure from, or just a development of, the original arguments filed with the grounds of appeal or the reply thereto. In the case at hand, the new argument could not be seen as merely a further development or elaboration of the opponent's previous position. The new analysis was based on a different choice of the closest prior art. This new argument had therefore to be seen as constituting an amendment to the opponent's case within the meaning of Art. 13(1) RPBA 2007, which might be admitted and considered only at the discretion of the board.

In the case at hand, the board, in the exercise of its discretion, decided to admit the new arguments put forward by the opponent. See also T.704/06 (ex parte), T.1941/10, T.216/10 and T.174/12, where the late-filed arguments were also admitted into the proceedings.

During the oral proceedings in the similar case T.55/11, when discussing inventive step of granted claims 1 and 20 starting from document D1 and taking into account document D13, the appellant (opponent) argued for the first time that the subject-matter of said claims also lacked an inventive step starting from document D13 and taking into account document D1. The board followed the case law reported above and admitted the new arguments. In its communication the board had indicated that inventive step based upon D1 in combination with D13 might be discussed at the oral proceedings, and hence the patent proprietor could have foreseen that the argument which the opponent was now relying on might well become a subject for discussion. Documents D1 and D13 had both been before the opposition division and had been extensively discussed throughout the proceedings.

In T.161/09 the board decided to use its discretionary power to admit the appellants' first line of argument to the proceedings, in support of their objection of lack of inventive step, despite these submissions having been made only during the oral proceedings and having been contested as being inadmissible by the respondent. In the view of the board these submissions did not alter the legal and factual framework of the proceedings. In T.112/13, too, the board admitted a more detailed and expanded line of argument at the oral proceedings under Art. 13(1) RPBA 2007 because it did not substantially amend the case as set out in its statement setting out the grounds of appeal.

Likewise in T.671/08 the late filed argument was exceptionally admitted despite causing adjournment of the oral proceedings. The board considered the appellant's (opponent's) objection of insufficient disclosure to be a fundamental one that could not be ignored. The board stated that the fundamental nature of the new objection would render any discussions on novelty and inventive step meaningless, had it been left unresolved. This case was an exception to the principles set out in Art. 13(3) RPBA 2007 where amendments to a party's case should not be admitted into the proceedings when their admission would lead to an adjournment of the oral proceedings.

In T.524/12 the case made by the appellant (opponent) was an extension of the case it had made before the opposition division. Since, in essence, similar features were discussed, and the lines of argument put forward were largely those that had already been discussed, the appellant was not making a substantially new case, but was simply basing the case it had made in support of its objection before the opposition division partly on new arguments. Art. 12(4) RPBA 2007 did not provide for not admitting mere arguments.

4.10.3 New arguments and lines of attack not admitted

In some decisions it has been observed that new arguments first put forward at the oral proceedings without any reasonable explanation or justification are to be regarded as late filed and not admitted into the proceedings (T.1069/08, T.775/09, T.1621/09, T.810/12).

In T.1621/09 the board held that a new argument brought forward in appeal proceedings by a party which would have the effect of amending its case, even if the argument is based on evidence and facts already in the proceedings, can only be introduced into the proceedings at the discretion of the board of appeal by way of an amendment under Art. 13 RPBA 2007. The board, in the exercise of this discretion, decided however not to allow the appellant to amend its case, inter alia because the new argument amounted to a new way of putting the appellant's case on novelty and was raised at the last stage of the appeal, namely during oral proceedings.

In T.1069/08 it was only at the oral proceedings that the appellant (opponent) asked the board to be allowed to present its arguments on the lack of obviousness of the claimed subject-matter. This request was refused by the board. The appellant's statement of grounds of appeal did not include any argument regarding the obviousness of the claimed subject-matter. Hence, the introduction of this new argument at oral proceedings represented an amendment to the appellant's case (Art. 13(1) RPBA 2007).

In T.1761/10 the board also decided not to admit the new inventive step attack submitted at oral proceedings. The appellant's attack raised complex new issues and oral proceedings would have had to have been adjourned in order to give the board and the respondent sufficient time to address these issues (see also T.1226/12 and T.2602/12).

In T.775/09, the party as of right's second line of argument was based on a number of citations first referred to at the oral proceedings on appeal. The board observed that such an amendment to the party's case at this stage gave rise to combinations and facts of a complex nature which had not previously been addressed during the written proceedings. Therefore the board exercised its discretion under Art. 13(1) RPBA 2007 and refused to admit the new argument at such a late stage of the appeal proceedings.

In T.1019/13 a new inventive-step attack was made for the first time during the oral proceedings before the board. In the written proceedings, the opponents made more than ten different inventive-step attacks based on various different combinations of documents. It was already a heavy burden for the proprietor to prepare a defence addressing all these different attacks. In such a situation, the proprietor could not be expected to extend its preparation to cover yet more inventive-step attacks, based on new combinations of documents, which opponents might make during the oral proceedings.

In T.181/17 the board did not admit the new inventive step attack using D17 as closest prior art submitted at the oral proceedings. D17 was only referred to in the context of novelty. The board stated that novelty and inventive step were different grounds of opposition, and documents useful in attacking novelty were not necessarily the same as those that qualified as the closest prior art.

Also in T.2091/12, T.988/14, T.1098/11, T.221/13, T.73/15 and T.392/16 the board did not admit the new lines of attack on inventive step.

In T.647/15, by choosing to keep silent until the oral proceedings and make its arguments based on documents D10 and D11 only then, the opponent had surprised the board and

the other parties, thereby undermining those parties' right to comment as appropriate in an adversarial procedure.

In T 1890/13 document D28 was initially filed with the notice of opposition. Thus, it was filed in due time within the meaning of Art. 114(2) EPC. However, it was discussed neither during the oral proceedings before the opposition division nor in the impugned decision. It was only at the oral proceedings before the board that the appellant argued for the very first time that D28 was extremely relevant for the assessment of inventive step. The board held that this new line of argument based on D28 was submitted at a very late stage in the overall proceedings. Therefore, the question of admitting the substantiated document D28 into the appeal proceedings was subject to Art. 13(1) and (3) RPBA 2007. The board refused the appellant's request that D28 be introduced into the appeal proceedings under Art. 13(1) RPBA 2007, for the following reasons: the late substantiation of D28 was not an appropriate and immediate reaction to unforeseeable developments in the proceedings, the teaching of D28 was not prima facie more relevant than the other prior art documents on file; admitting into the appeal proceedings such a new line of argument based on D28 would run counter to the principle of procedural economy and fairness.

4.10.4 Reinforcement of arguments

Filing with the statement setting out the grounds of appeal new documents reinforcing the line of attack already taken before the department of first instance had to be considered as the normal behaviour of a losing party and did not constitute an abuse of procedure (T 113/96, T 1034/01, T 1177/04, T 1267/05).

In T 875/06 the board found that the additional evidence D14 and D15 did not change the appellant's case but simply backed up the arguments made previously because these documents were more relevant with regard to the cited aspects of the invention than the documents already entered into the proceedings. Since the consideration of D14 and D15 did not significantly alter the legal framework and facts of the case in respect of the first-instance proceedings, the board admitted these documents into the proceedings under Art. 13(1) RPBA 2007. In T 113/96 and T 426/97, involving similar cases, the boards admitted new prior-art documents.

4.11. Article 12(4) RPBA 2007

4.11.1 General principles

According to Art. 12(2) RPBA 2007, the statement of grounds of appeal shall contain a party's complete case. Art. 12(4) RPBA 2007 requires the board to take into account everything presented by the parties under Art. 12(1) RPBA 2007 if and to the extent that it relates to the case under appeal and meets the requirements in Art. 12(2) RPBA 2007. However, according to Art. 12(4) RPBA 2007, the board has the discretionary power to hold inadmissible facts, evidence and requests which could have been presented or were not admitted in the first instance proceedings.

In several decisions, the boards have cited the principles developed by the Enlarged Board of Appeal in G 9/91 and G 10/91 (OJ 1993, 408, 420) for the inter partes appeal procedure provided for in the EPC. Art. 12(4) RPBA 2007 is consistent with the principles developed by the Enlarged Board in relation to the application of Art. 113 and 114 EPC in opposition-appeal procedures (T 2102/08). The boards of appeal thus retain, as a review instance, discretion to refuse new material, including requests (claim sets) not submitted during opposition proceedings (T 240/04, T 1705/07, T 23/10, T 1525/10). This ensures the fair and reliable conduct of the judicial appeal proceedings (T 23/10, T 1165/10, T 301/11). This has also been confirmed by the Enlarged Board of Appeal (R 10/09, R 11/11).

Given that the aim of opposition-appeal proceedings is to obtain judicial review of the administrative opposition decision, it follows that the board must as a rule take their decision on the basis of the issues in dispute before the opposition division. It can be directly inferred from the above that the parties have only limited scope to amend the subject of the dispute in second-instance proceedings, and this principle is reflected in Art. 12(4) RPBA 2007. The appeal proceedings are not about bringing an entirely fresh case (T 1705/07, T 356/08, T 1067/08, T 2102/08, T 144/09, T 881/09, T 936/09, T 23/10, T 935/12). In T 2135/13 the board understood the expression "fresh case" as referring to a substantial change in the subject of the proceedings.

Art. 12(4) RPBA 2007 enables the boards to penalise an infringement of the duty to facilitate the first-instance proceedings, i.e. a failure to display due co-operation through the submission of facts, evidence and requests in the manner required up to a certain point in the proceedings, and so serves to ensure compliance with the requirement of a fair procedure and to expedite processing of the case. Moreover, it does not entail any arbitrary different treatment of similar cases of belated submissions which is incompatible with the procedural scheme. The duty to facilitate proceedings applies equally to opponents (with respect to the submission of their objections) and patentees (with respect to their means of defence) (T 2102/08, T 28/10).

Art. 12(4) RPBA 2007 instructs us that consideration is unlikely to be given to new submissions that should have been presented in the first-instance proceedings (T 339/06, T 416/07).

In T 301/11 the board observed that requiring all parties to complete their relevant submissions during opposition proceedings meant that the moment in time when their case had to be complete was not determined by the procedural strategy chosen by them. According to Art. 12(4) RPBA 2007, admission of auxiliary requests into proceedings hinged on the question whether a party to appeal proceedings was in a position to make its submission earlier, and whether it could have been expected to do so under the circumstances (see also T 23/10, T 969/14).

In T 1067/08 the appellant filed a main request which was identical to the sole request not admitted in opposition proceedings. The board stated that appeal proceedings were not just an alternative way of dealing with and deciding upon an opposition and that parties to first-instance proceedings were not at liberty to bring about the shifting of their case to the second instance as they pleased, and so compel the board of appeal either to give a first

ruling on the critical issues or to remit the case to the department of first instance. Conceding such freedom to a party (and/or to the department of first instance) would run counter to orderly and efficient proceedings. In effect, it would allow a kind of "forum shopping" which would jeopardise the proper distribution of functions between the departments of first instance and the boards of appeal and would be absolutely unacceptable for procedural economy generally. The board decided not to admit the main request into the appeal proceedings and stated that the exercise of the powers under Art. 12(4) RPBA 2007 might also be justified where a party's conduct – e.g. maintaining a single request which the opposition division had declined to admit into the proceedings as an abuse of procedure, and refusing to file amended and/or auxiliary requests – had in effect prevented the department of first instance from giving a reasoned decision on the critical issues, thereby compelling the board of appeal either to give a first ruling on those issues or to remit the case to the department of first instance (see also T 936/09, T 495/10, T 2017/14).

In T 1873/11 the board rejected the appellant's contention that the use of "power" in Art. 12(4) RPBA 2007 (as opposed to "discretion" in Art. 13(1) RPBA 2007) prevented it from taking a decision at its discretion. Rather, "power" implied the very ability to decide not to admit requests, etc. in certain circumstances specified in the RPBA 2007, even if any such refusal to admit them naturally had to be supported by reasons.

Since, in fact, almost every claim request could have been presented before the department of first instance, the question within that context is whether the situation was such that the filing of this request should already have taken place at that stage (T 273/11, see also T 1162/11). Also in T 1848/12 the board applied the more lenient "should have been presented" with regard to the admission of documents.

In T 419/12 the board observed that refusing under Art. 12(4) RPBA 2007 to admit a request first submitted in appeal proceedings entailed indicating a specific reason why that particular request not only could but should have been submitted at first instance (see also T 569/14).

In both R 11/11 and R 13/11 the respective petitioners complained that the board of appeal decided in its discretion under Art. 12(4) RPBA 2007 not to admit the petitioner's auxiliary requests. The Enlarged Board held that its case-law clearly showed that petition proceedings may not be used to review the exercise by a board of appeal of a discretionary power if that would involve an impermissible consideration of substantive issues. This has also been confirmed in the specific context of the discretion in Art. 12(4) RPBA 2007.

In R 4/13 the Enlarged Board stated that in cases where the discretion not to admit requests is exercised by a board in reliance on Art. 12(4) RPBA 2007 it is inevitably a matter of speculation whether and in what circumstances the party would have filed such requests. Such speculation is however irrelevant as regards the existence and exercise of the discretion and the board quite correctly did not enter into such speculation. In reality it was not therefore in dispute that the board had jurisdiction not to admit the requests.

4.11.2 Relationship between Article 12(4) and Article 13 RPBA 2007

The board in T 1162/12 pointed out that, when exercising their discretion under Art. 13(1) RPBA 2007, the boards took particular account of the complexity of the new subject-matter submitted, the current state of the proceedings and the need for procedural economy. The case law had recognised the fact that requests could have been presented at first instance as another potential criterion when exercising that discretion; although this criterion was mentioned in Art. 12(4) RPBA 2007, and so in connection with the admissibility of requests filed at the start of appeal proceedings, it was obvious that, if it could lead to the non-admission of such requests, it applied all the more so to late-filed ones. Otherwise a party intentionally not filing its requests with its grounds of appeal would be at an advantage (see also T 361/08 and T 144/09).

In T 144/09 the board noted that the applicability of Art. 12(4) RPBA 2007 is not restricted by the time limit for filing the grounds of appeal or any reply thereto. Indeed, a restriction in that sense would not seem to serve any useful purpose and might even result in a possibility of artificially circumventing Art. 12(4) RPBA 2007, irrespective of whether Art. 13(1) RPBA 2007 might be a further provision of the rules of procedure which could provide a different barrier to filing such requests (see also T 2598/12).

In the ex parte case T 133/12 the board considered it appropriate, when exercising its discretion under Art. 13(1) RPBA 2007, to take into account the provisions of Art. 12(4) RPBA 2007, according to which the board has the discretionary power to hold inadmissible requests which were presented by the appellant with the notice of appeal or the statement of grounds of appeal, but which could have been presented in the first instance proceedings (see also T 1587/07). The fact that the appellant had filed the requests after it filed the statement of grounds of appeal should not put the appellant in a better position than if it had filed them with the statement of grounds of appeal. Otherwise it would be easily possible for the appellant to circumvent the provisions of Art. 12(4) RPBA 2007 (see also T 143/14).

4.11.3 Inter partes appeal procedure

a) Not filing documents and evidence at first instance

In T 432/12 the decisive issue was whether there was a sound and plausible reason in this specific case for filing the documents only in the appeal proceedings. In principle, documents could be admitted in the case of e.g. a normal reaction to a late turn of events in the opposition (oral) proceedings, an exceptional interpretation by the opposition division at a late stage or in the decision, or evident non-allowability in view of the newly cited documents and/or objections, (see also T 169/12). However, none of these exceptions applied to the case at hand.

In T 724/08 the appellant had already raised a novelty objection in its opposition and therefore could have submitted the late-filed documents during the first-instance proceedings. It was immaterial whether the appellant had indeed only come across these Japanese patent specifications or the corresponding Patent Abstracts of Japan by chance

later or whether said documents had genuinely been difficult to find, because it was not permissible to use these issues to slow down proceedings or gain an unfair advantage over the other party. In exercising this power, the board could make admitting a citation into appeal proceedings dependent on whether it is prima facie relevant but the board was not obliged to do so, because otherwise an opponent could easily submit a (highly) relevant citation for the first time in the statement setting out the grounds of appeal and expect the citation to be admitted into the appeal proceedings on grounds of relevance.

In T.1314/12 the board added that this would mean that a proprietor could be obliged to repeatedly defend its patent against new attacks throughout the entire opposition and opposition appeal procedure. However, this was clearly incompatible with the requirement under the EPC and the RPBA that all relevant information be presented within certain time limits.

In T.2471/13 the prior art document filed with the statement of grounds and objections based thereon could and should have been filed in first-instance proceedings. The board decided not to admit the document into the proceedings, irrespective of its potential relevance.

In T.910/11 the appellant (opponent) raised a new line of attack under Art. 123(2) EPC against claim 4, which had been held to be allowable by the department of first instance. An objection could therefore clearly have been raised at first instance. Nor was any explanation offered as to why this objection had not been raised earlier. In view of the absence of justification for the late filing of this new attack the board decided not to admit it into the proceedings (see also T.169/12).

In T.2193/14 the board considered the admissibility of documents filed with the statement of grounds of appeal for the purpose of questioning the validity of the subject-matter of granted dependent claims against which no substantiated attack had been made in the notice of opposition. The board decided not to admit the documents into the appeal proceedings. These documents should and could already have been submitted before the opposition division.

In T.2187/14 a second machine translation that was filed to replace an initial incomprehensible machine translation was not admitted.

In T.876/05 the board rejected the opponent's argument that filing new documents a few days before the oral proceedings before the department of first instance was destined for failure and that it was therefore preferable for him not to file those documents until the appeal stage. The board held that Art. 10a(4) RPBA 2003 (Art. 12(4) RPBA 2007) put documents that could have been submitted before the department of first instance and documents which had been submitted but had not been admitted on an equal footing. Had these documents been filed in the opposition proceedings, the worst that could have happened was that they would have been regarded as inadmissible by the opposition division, so the consequences would have been no different than if they had not been filed. The board decided, when examining the patentability of the filed requests, to consider only the documents that appeared immediately relevant (T.624/04).

In **T.1715/08** the board held all the evidence submitted on appeal to be late-filed and did not admit it. All of it could have been filed during the opposition proceedings. The arguments based on it (new objection of lack of inventive step) were disregarded.

In **J.5/11** the Legal Board stated that the Office's duty to examine evidence of its own motion is more stringent in relation to evidence that is in the public domain, and the case for admitting such evidence when it is filed out of time by the parties is correspondingly stronger. The Office's duty to examine of its own motion evidence that is in the private sphere of the party concerned is obviously limited. Such evidence can only be taken into consideration by the Office if it is brought to the Office's notice by the party concerned. If evidence of that type is not put forward in the proceedings before the first-instance department of the Office, it is difficult to see any compelling reason why the Board of Appeal should exercise its discretionary power under Art.114(2) EPC and Art.12(4) RPBA 2007 in such a way as to admit the evidence when it is filed with the grounds of appeal or a fortiori at a later stage of the appeal proceedings. That is particularly true when, as in the present case, the first-instance department has expressly drawn the appellant's attention to the need for supporting evidence, indicated precisely what type of evidence is needed and given the appellant an adequate time limit within which to file the evidence.

b) Documents and evidence not admitted by the opposition division

In **T.229/08** the opposition division had disregarded evidence designated as M12 because it was late-filed and because prima facie availability to the public could not be established. The board considered that it was primarily charged with reviewing the opposition division's exercise of its discretion. The provision of Art.12(4) RPBA 2007 related to evidence which not only was not admitted but which also "could have been presented" in first instance proceedings. It was therefore evident that in both cases the board would have equal power to hold late-filed evidence inadmissible, whereby the party filing the evidence during appeal would have to overcome the additional hurdle of satisfying the board that its action in first presenting it in the statement setting out the grounds of appeal did not amount to tactical abuse.

In **T.305/07** the appellant filed the experimental evidence which had not been admitted by the opposition division with its statement of the grounds of appeal. The board stated that the claims at issue differed from those dealt with by the opposition division and in relation to which it considered the experimental evidence as irrelevant. The board came to the conclusion that none of the experimental evidence submitted with the statement of the grounds of appeal was relevant to the present case. Hence, the board decided not to admit the experimental evidence filed with the statement of the grounds of appeal.

In **T.795/14**, the appellant had filed with its statement of grounds of appeal tests which the opposition division had regarded as inadmissible for prima facie lack of relevance. However, they related to the evaluation of inventive step, which had been the focus of the opposition division's decision; moreover, the appellant had filed five additional auxiliary requests and it could not be ruled out that they would become relevant to the evaluation of inventive step in one of those. The board saw no reason not to admit the tests.

In T. 971/11 the board held that a document which would have been admitted into appeal proceedings if it had been filed for the first time at the outset of those proceedings should not, however, be held inadmissible for the sole reason that it was already filed before the department of first instance (and not admitted), see on this point chapter V.A.3.5. "Review of first-instance discretionary decisions".

c) Documents and evidence admitted under Art. 12(4) RPBA 2007

In T. 1830/11 the board admitted evidence produced with the statement of grounds of appeal. It found that there were no provisions in the EPC which obliged the opponent to provide evidence against every possible fallback position defined in the dependent claims. Thus when amendments were made to the claims during oral proceedings before the opposition division (as in the case at issue, claim 1 having been amended to include the features of a dependent claim in the patent as granted), the requirement under Art. 114(2) EPC that evidence be submitted "in due time" might, depending on the circumstances, arise only when the statement of grounds of appeal was filed.

In T. 79/11, various sets of experimental data were submitted with the statement of grounds of appeal, clearly in response to the decision under appeal and with a view to supporting the appellant's (patentee's) arguments on inventive step. Although the data could already have been submitted at first instance, their later submission was not an unreasonable response to the reasons given for the decision under appeal.

In T. 1003/15 it appeared obvious that the new submitted documents D4 and D5 were prima facie relevant, not only for the claims which were found to meet the requirements of the EPC during the opposition proceedings, but also for the claims of the main request submitted in the appeal proceedings.

d) Requests not submitted by proprietor in opposition proceedings

According to established case law it is clear from the wording of Art. 12(4) RPBA 2007 that the board in inter partes proceedings has discretion over whether or not to admit requests which could have been presented by the patent proprietor in first-instance proceedings, but were not. The precondition of whether the request at issue could have been presented in the first-instance proceedings relates to the question of whether the presenting party could have been expected to present its request in the first-instance proceedings in the circumstances of the specific case (T. 1538/10).

In T. 240/04, the board refused to consider the third auxiliary request because the appellant could have submitted it before the opposition division. Indeed, it even ought to have done so because the amended independent claim concerned a technical problem which was only remotely related to the original one and presented facts not previously examined. The appellant therefore had to expect that the board would be unable to decide the matter. To admit a new request in those circumstances would practically give patentees the opportunity to compel a remittal to the department of first instance as they pleased, which would not only put the opponent at a disadvantage but would also run counter to the principle of procedural economy.

In T.339/06, the patent granted comprised several independent claims in the same category. The board found that the new request might force it to give in the appeal proceedings a first ruling concerning only subject-matter relating to a fundamentally different embodiment from those which had been the subject of the opposition division's decision. Thus, in particular, the admissibility of a request first submitted in appeal proceedings and relating solely to an independent claim which, although within the scope of the opposition, had not been considered in the first-instance decision had to be decided on in the light of whether it could also have been submitted earlier (see also similar case T.38/13).

In T.1705/07 the appellant for the first time in the appeal proceedings submitted requests which no longer contained the process claims on which the contested decision was based, but which now only comprised claims of another category, namely product and use claims. The board found that the auxiliary requests submitted for the first time in the appeal proceedings related to fundamentally different subject-matter. Consequently, admitting them into the proceedings would mean that the matters in dispute were fundamentally different from both a substantive and a patent-law point of view, so that the upshot would normally be a remittal to the department of first instance. As a result, the proceedings would last longer and the public would be deprived of legal certainty regarding the validity of the contested patent, which would not be compatible with the principle of procedural economy. If these claims were to be discussed and decided upon in the appeal proceedings, that would enable the appellant to make good this omission – for which it itself bore responsibility – solely for its own benefit. In accordance with the legal principle "nemo auditur propriam turpitudinem allegans", however, it was not permissible for any party, in this case the appellant, to benefit from an omission of its own, since this would be unjust to the opposing parties.

In T.1125/10 the appellant had not reacted to the obviously relevant documents filed shortly before the oral proceedings before the opposition division and had not attended those proceedings. The board held that it was the appellant's total inaction in the face of obviously relevant new documents which had prevented the opposition division from taking a reasoned decision on the subject-matter of the amended claims based on those documents, meaning that, even though the appellant had again chosen not to attend the proceedings, it now had to decide on the matter at first and final instance or remit the case to the department of first instance. The board therefore decided not to admit the appellant's new requests into the proceedings (see T.1067/08).

In T.379/09 the patent proprietor filed, only one month before the oral proceedings before the board of the appeal, a new request aimed at overcoming an objection raised by the opposition division, although the nature of the objection had been set out in the summons to oral proceedings issued by the opposition division. Furthermore, admitting the request would have caused a considerable delay of the procedure.

In T.936/09 the board stated that under the EPC, there is no legal obligation for the patent proprietor to take an active part in opposition proceedings. However, the patent proprietor is not free to present or complete his case at any time that he wishes during the opposition or opposition appeal proceedings, depending, for example, on his procedural strategy or

his financial situation. If a patent proprietor chooses not to respond in substance at all to the opposition, for example by filing arguments or amended claims, or chooses not to complete his submissions at the stage of the first-instance proceedings, but rather presents or completes his case only in the notice of appeal or the statement setting out the grounds of appeal, then he will need to face the prospect of being held to account for such conduct by the board when, for example, exercising its discretion under Art. 12(4) RPBA 2007. This applies in particular if, as in the present case, all the reasons for revocation of the opposed patent were known to the patent proprietor before it received the impugned decision.

In T 1335/14, the board noted that the case before it was comparable to that in T 936/09 in that, although the patent proprietor had not said that it was not going to respond to the notice of opposition, its failure to take any action over a long period, even though the EPO had sent communications, could objectively only be regarded in the same way.

Likewise in T 1400/11 the appellant (patent proprietor) had not reacted to the opposition filed against its patent, despite having been made aware of all the reasons ultimately leading to its revocation, and had only mounted a defence on appeal. Its approach amounted to circumventing the opposition proceedings in an attempt to shift the whole case to the appeal stage and compel the board to give a first ruling or remit the case to the opposition division. This would also have put the respondent at an unfair disadvantage: if the appellant's main request were admitted and decided upon by the board, the respondent would in effect be deprived of the opportunity to have the matter reviewed at two instances. Since the appellant had not submitted an admissible request on which to base the appeal proceedings, the appeal was dismissed.

In T 23/10 the board stated that a patentee withholding claim requests in opposition proceedings is precluded from having those requests admitted on appeal, since the patentee would otherwise be permitted to disadvantage the adverse parties by conducting appeal proceedings contrary to its actions before the opposition division (endorsed in R 13/11).

Following the decision in T 23/10, the board in T 1165/10 found that, since the patent proprietors could, in the knowledge of the objections of the opponents and the opinion of the opposition division, have submitted further requests in the first-instance proceedings but had deliberately refrained from doing so, the introduction of new requests during appeal proceedings could only be seen as an attempt to start the opposition anew, which amounted to a clear abuse of procedure.

In T 872/09 none of the patentee's auxiliary requests was admitted into the proceedings because it had deliberately chosen not to defend any of them during the first-instance opposition proceedings, even though it was aware that the opposition division had found its main request unallowable.

In T 301/11 the board stated that the fact that no auxiliary request was filed in opposition proceedings after time had been requested by and allotted to the appellant could only be seen as a deliberate choice not to have any further request decided upon by the opposition

division on any other issue (see also [T 144/09](#)). The appellant had thereby deliberately prevented a decision of the opposition division on the other grounds of opposition.

In [T 2154/13](#) the board considered that non-attendance at oral proceedings before the opposition division did not in itself justify the submission of new requests in appeal proceedings as a (presumed) reaction to the course of the oral proceedings in which the submitting party deliberately did not participate.

e) Broadening of claims considered by the opposition division

The appeal proceedings do not have the purpose of starting a new examination of different subject-matter, in particular where such subject-matter involves the broadening of claims considered by an opposition division ([T 144/09](#), [T 1616/10](#)).

In [T 144/09](#), about one month before oral proceedings in opposition proceedings the patent proprietor added a new feature "space requirement..." into the requests. During the oral proceedings the opposition division raised an objection under [Art. 123\(2\) EPC](#) concerning the inclusion of this feature. It asked the patent proprietor explicitly whether it would file any request that would overcome the objection. However, it did not file any amended or auxiliary requests. Thus, the patent was revoked. With the statement of grounds of appeal the patent proprietor filed new requests without the space requirement feature. The board stated that no reason could be seen for not having simply deleted the objected feature by way of an auxiliary request during the oral proceedings before the opposition division. A request can be held inadmissible under [Art. 12\(4\) RPBA 2007](#) when added subject-matter held unallowable during proceedings before the opposition division is not removed at least by way of an auxiliary request filed in those proceedings, but only by way of a request filed during the appeal proceedings (see also [R 11/11](#) regarding the appellant's petition for review on this matter; see also [T 154/12](#)).

Also in [T 1616/10](#) the main request and auxiliary request 1 were not admitted into the proceedings, because claim 1 was broader than all requests underlying the appealed decision and the requests could have been filed in first-instance proceedings.

In [T 1964/12](#) in view of the objections of lack of novelty and/or lack of an inventive step raised by the opponents, the patent proprietor had decided not to argue novelty and inventiveness of the process claims as granted and had, instead, intentionally limited their subject-matter. The board found that, by doing so, it had deliberately chosen not to obtain a decision from the opposition division on the process claims as granted. Allowing it to revert on appeal to the process claims as granted would go against the need for procedural economy. Accordingly, the board decided not to admit the main request into the proceedings.

In [T 526/13](#) the board referred to [T 1964/12](#), that when a patent proprietor deliberately chooses not to obtain a decision from the opposition division on a certain request, allowing them to revert on appeal to that request may go against the need for procedural economy. However, in the case at hand the board considered that the actions of the patent proprietor in first-instance did not have the effect of preventing the opposition division from deciding

on the substance of the request that was filed on appeal. The first-instance decision on the auxiliary request covered all of the features of claim 1 of the new main request. Hence, allowing the appellant to introduce the new main request on appeal did not go against the need for procedural economy.

In T 1719/13 the auxiliary request corresponded to auxiliary request 1 found allowable by the opposition division, except for the addition of dependent claim 5. The board found that there was no convincing reason to admit this request into the proceedings. The board referred to the consistent case law that the opposition proceedings may not be used to tidy up the patent by adding one or more dependent claims; such an addition was normally inadmissible under R 80 EPC (see for instance T 993/07). By the same token, the board considered the addition of one or more dependent claims in appeal proceedings to a claim request held allowable by the opposition division to be an attempt to tidy up the allowable claim request and thus not admissible under Art. 12(4) RPBA 2007.

In T 1467/13, in the opposition proceedings the patent proprietor had sought maintenance on the basis of new requests that were now, on appeal, its main and first to eighth auxiliary requests. Those requests had therefore defined the scope of the proceedings at first instance. In its ninth to thirteenth auxiliary requests, filed with its statement of grounds of appeal, a feature had been deleted. Their subject-matter was thus, with no apparent justification, outside the scope of the proceedings as defined at first instance. Based on Art. 12(4) RPBA 2007, it therefore should have been filed in the first-instance proceedings.

f) Resubmission of requests withdrawn at opposition stage

Under Art. 12(4) RPBA 2007, a board of appeal has discretion to refuse to admit requests which could have been presented or were not admitted in the first- instance proceedings. In the boards' view, this applies all the more to requests that were filed and subsequently withdrawn during the first-instance proceedings, since such a course of events clearly shows that these requests could have been presented in those proceedings. The purpose of an appeal is to review what was decided at first instance and, as a logical consequence, not what was not decided (T 528/93, T 1186/06, T 390/07, T 1587/07, T 361/08, T 340/10, T 1525/10, T 140/12, T 1689/12).

A request which has been withdrawn can, in principle, if admitted by the department or board hearing the case, be reintroduced to the proceedings, whereas a request which has been **abandoned** cannot be resubmitted at a later stage (T 926/12).

In T 998/12 the board pointed out, among other things, that the withdrawal of a request by way of procedural declaration was binding and as a rule irrevocable, and meant that the request in question immediately ceased to be pending. Although this legal effect applied primarily to the proceedings pending at the time, it would be incompatible with the meaning and purpose of this procedural rule if the effect could in the end be undermined by re-filing the request in any subsequent appeal proceedings. In practice, that would indirectly enable a "withdrawal of the withdrawal" (see also T 793/13).

(i) Request not admitted

One criterion to be considered by a board of appeal in exercising its discretion is whether the withdrawal of a request has prevented the department of first instance from giving a reasoned decision on the critical issues, thereby compelling the board either to give a first ruling on those issues or to remit the case to the department of first instance. In T. 679/09 the withdrawal of auxiliary requests I to IV in the opposition proceedings had exactly this effect. While the appellant may not have intended to avoid a decision of the opposition division on the admissibility of inter alia auxiliary request III, this was the inevitable result of its withdrawal (T. 495/10, see also T. 933/04, T. 1067/08, T. 935/12, T. 1697/12).

In T. 1525/10 the board stated that if the appellants had wanted to preserve their right to have any of auxiliary requests I to III considered by a board of appeal, they should have maintained them in opposition proceedings. It is incumbent on both the EPO and users of the European patent system who are parties to proceedings before it to act in good faith. A proprietor who files auxiliary requests by which it delimits the framework of the opposition proceedings and then deliberately withdraws them in order to avoid any adverse decision being reached infringes this general principle by seeking to introduce these requests into appeal proceedings.

The claim request which had been replaced by another request in the proceedings before the opposition division because it was manifest that it would fail, thereby avoiding a formal decision, but which had then been filed again on appeal, was considered inadmissible by the board (T. 390/07).

In T. 691/09, the board deemed the belated introduction of a request which had been withdrawn during the oral proceedings before the opposition division to be an abuse of procedure.

(ii) Request admitted

In T. 2599/11 the board admitted the sole request into the appeal proceedings that was withdrawn in opposition proceedings. The board was of the opinion that the purpose of the appeal proceedings as defined in G. 9/91 and G. 10/91 (OJ 1993, 408, 420) did not prevent the appellant from submissions and requests which, after revocation of its patent by the opposition division, reverted to a more broadly worded version in appeal proceedings than the claims defended in opposition proceedings, if these broader claims did not amount to a completely fresh case. With respect to Art. 12(4) RPBA 2007 the board had to consider whether the non-filing of the sole request or the withdrawal of the similar request A in the opposition proceedings prevented the opposition division from giving a reasoned decision on the critical issues. The board referred to T. 361/08 according to which it is not the patentee's right to revert to granted claims if these claims did not form a basis for the decision under appeal because the request comprising these claims was withdrawn in the first-instance proceedings. In the case at issue, the board concluded that the critical issues in the opposition and the appeal proceedings were identical in so far as the question had to be answered whether the claimed subject-matter involved an inventive step. Hence, the

sole request of the appellant did not bring an entirely fresh case and was admitted into the proceedings (see also T.467/13).

In T.937/11 the main request was identical to auxiliary request 1 which was withdrawn before the opposition division. The board stated that the circumstances of the present case had to be distinguished from the situation underlying T.1525/10 and T.390/07 (see above). Because the opposition division's reasons for rejecting the main request evidently applied likewise to the claims of auxiliary request 1, the appellant did not avoid a decision on the ground for opposition when it withdrew auxiliary request 1. Moreover, the appellant neither surprised nor disadvantaged the opposing parties on appeal when it turned the withdrawn auxiliary request 1 into its main request before the board.

In T.883/12 the request was very similar to the request which was withdrawn. The proprietor argued convincingly why it had not been unreasonable to withdraw a number of the auxiliary requests before the opposition division without a decision having been taken on them, namely because the opposition division had deemed, with respect to a higher ranking request, that a particular feature was required in order to allow an inventive step to be recognised; the claims of the withdrawn auxiliary requests did not include this feature. The board stated that the current request was not one which could reasonably have been filed in the first instance proceedings (i.e. in the sense of being both submitted and maintained, such that a decision on it would be taken by the department of first instance).

g) Request admitted as a normal procedural development

According to established case law, amendments, including amended requests, are usually admitted into appeal proceedings if they are justified by the normal development of the proceedings or can under the circumstances be considered a normal reaction of a losing party (T.1072/98, T.540/01, T.848/09, T.2485/11, T.618/14).

In T.848/09 the board considered the filing of the present main request to be a legitimate and normal reaction to the decision to revoke the patent, because the amendment concerned the addition of a feature of a dependent claim which further limited the subject-matter. Moreover, the request was filed at the earliest possible stage of the appeal proceedings, namely with the statement of grounds (see also T.881/09). Even if, theoretically, the patent proprietor might have been able to file this request at the end of the oral proceedings before the opposition division, the board considered the situation to be different from T.144/09, since it did not appear that the patent proprietor made a "considered and deliberate choice" not to file the request. Rather, the reasons for the revocation of the patent were not so explicitly known as in case T.144/09 and plausibly the formulation of a suitable new request overcoming the objection was not immediately evident.

In T.134/11 the board observed that the mere fact that a request could have been filed in the first-instance proceedings as such does not lead automatically to the inadmissibility of this request (as in this case there would be no discretionary power of the board). On the contrary, normally such a request is inadmissible only in exceptional circumstances. For example, such circumstances may arise where, by the filing of a request only at the appeal

stage, a decision by the opposition division on certain issues is avoided and the decision is shifted to the second instance (this is referred to as "forum shopping" in decision T 1067/08). In the case at issue it was credible that it was not the appellant's intention to avoid any decision of the opposition division on the current main request. Furthermore the current main request did not raise any new issues but represented merely a continuation of the approach chosen by the appellant all through the first-instance opposition proceedings. The main request thus was admissible. Contrary to the respondent's view, this finding was not at variance with decisions T 144/09 and T 936/09. The reason for not admitting certain requests in these decisions was essentially that the proprietor had not filed any request in the first-instance opposition proceedings which could have overcome the opposition division's objection and in fact had done so only in the appeal.

In T 2485/11, the appellant had filed an amended main request and an auxiliary request during first-instance proceedings in an attempt to overcome objections of lack of novelty and inventive step raised in the notice of opposition. At the oral proceedings, the opposition division concluded that the amended requests did not comply with Art. 123(2) EPC. The appellant, unlike in T 144/09 and T 936/09, took the opportunity offered to it and filed further requests modifying the amendments in the main request, in order to overcome the opposition division's objection under Art. 123(2) EPC. The fact that, after these requests had also been considered to contravene Art. 123(2) EPC, the appellant did not file a further request could not be regarded as an abuse simply because, theoretically, it could have filed amendments. Hence, given the circumstances of the case, the appellant's submission of auxiliary requests 1 to 5 was considered to be a normal and legitimate reaction of a losing party (see also similar case T 2244/11).

In T 1226/12, when exercising its discretion, the board took into account the fact that the opposition division had made the decision under appeal without a prior communication and any oral proceedings. Even though the appellant, in its reply to the opposition, had defended its patent only as granted and had not requested any oral proceedings, it was nonetheless the case that the opposition division had not communicated its preliminary opinion to the parties. Such an opinion might have led the appellant to define other, fallback positions by way of auxiliary requests. Instead, it had been confronted for the first time in the revocation decision with the opposition division's (at that stage) final opinion on the grounds for opposition filed.

4.11.4 Ex parte appeal procedure

a) Admission of requests already refused by the examining division

Art. 123(1) EPC provides that the applicant shall be given at least one opportunity to amend the application of his own volition. R. 137(3) EPC subjects any other amendments to the examining division's consent. As made clear by R. 100(1) EPC, this provision applies analogously on appeal against examining division decisions (T 1969/08). According to Art. 12(4) RPBA 2007, the board has the power to hold inadmissible requests which were not admitted in the first instance proceedings.

It is the established jurisprudence of the boards of appeal that the power of the examining division to consent to amendments under R. 137(3) EPC is a discretionary power. According to G 7/93 (OJ 1994, 775) the way in which the examining division should exercise its discretion to allow an amendment of an application must depend upon the circumstances of each individual case, and must also depend upon the stage of the pre-grant procedure which the application has reached. A board of appeal should only overrule the way in which a department of first instance has exercised its discretion if it comes to the conclusion either that the department of first instance, in its decision, has not exercised its discretion in accordance with the right principles or that it has exercised its discretion in an unreasonable way. The exercise of a discretionary power has to strike a balance between, in particular, the applicant's interest in obtaining adequate protection for his invention and the EPO's interest in bringing the examination to a close in an effective and speedy way. Moreover, the exercise of a discretionary power has to be reasoned, otherwise it would be arbitrary (T 246/08). The board in T 1929/13 referred to further criteria (on this point see Guidelines, H-II, 2.3 – November 2018 version).

In T 820/14 the board pointed out that it had its own discretion to admit a request not admitted at first instance and was generally not bound by how the first-instance department had exercised its (on this see also T 971/11).

b) Requests not submitted in examination proceedings
