In T 1178/08 the board pointed out that a board in an ex parte case has discretion over whether or not to admit requests which could have been presented to the first instance, but were not (Art. 12(4) RPBA 2007). It must exercise that discretion having regard to the particular circumstances of the individual case. The board considered that this view is consistent with the view taken in previous decisions in the different context of inter partes cases (see R 10/09, T 144/09 and R 11/11, which rejected the petition for review of T 144/09 as clearly unallowable, and T 1007/05). The board was aware that amended claims filed together with the statement of grounds of appeal have in many cases been admitted into appeal proceedings if they constituted a legitimate reaction to the reasoning underlying the appealed decision. Indeed, such amended claims filed with the statement of grounds of appeal may achieve the goal of "a more defined and controlled initial phase of proceedings" (see T 1007/05), in particular if they serve to avoid later amendments. But this does not mean that the board is obliged to admit amended claims solely because they were filed with the statement of grounds of appeal. In the case in hand, the applicant had been given several opportunities to file amended claims in the first-instance proceedings. No auxiliary requests were filed. By presenting its sole and amended request only in appeal proceedings the applicant was making it impossible for the board to examine the contested decision.

In T 1802/12 the applicant had been given several opportunities to file amended claims in the first-instance proceedings. The board concluded that the auxiliary request could and should have been submitted during the first-instance proceedings. Although the examining division issued only one communication pursuant to Art. 94(3) EPC, the clarity objections raised therein had been reiterated in great detail in the annex to the summons to oral proceedings. In reply to the summons to oral proceedings which had been postponed twice

as requested by the appellant, the appellant reacted by not attending them. No new arguments were put forward and the application was ultimately refused by the examining division (see also similar case T 892/11).

In T 1472/08, the board concluded that the purpose of examination-appeal proceedings could not be to completely reopen the examination proceedings by admitting claims defining features more broadly if those claims could already have been presented in those proceedings and the broader definitions were not apt to overcome the objections raised in the contested decision or by the board (see also T 2000/09 and T 1428/11).

In T 1212/08, the examining division had raised objections as to the clarity, novelty and inventive step of the claimed subject-matter in its summons to oral proceedings, prompting the applicant to request a decision on the basis of the documents on file. Auxiliary request 2 having first been filed with the grounds of appeal, the board considered whether this new subject-matter should be examined and decided on for the first time on appeal, or whether it should remit the case to the department of first instance for further prosecution. It found, however, that neither of these procedural options was appropriate and acceptable, taking the view that the feature derived from the description was a new aspect which had no equivalent in the original claims, while remittal of the case would make the proceedings considerably longer. It observed that these two inappropriate options would never have arisen if auxiliary request 2 had been presented on time before the examining division. The applicant ought to have had the examining division exhaustively assess and then decide on all subject-matter for which it intended to seek protection, even if only on a subsidiary basis, especially if, as it conceded, it wished the board to rule on it (see also T 892/11).

The board in T 1108/10 endorsed T 1212/08, finding that the two inappropriate procedural options would not have arisen if the sets of claims in the auxiliary requests had been presented on time at first instance. Appeal proceedings were not a continuation of examination at first instance or a second, parallel procedure for the substantive examination otherwise to be carried out by the examining division which applicants could freely opt to launch depending on the circumstances.

In T 1768/11 the appellant should have realised that the newly raised objections by the examining division necessitated the filing of amended requests. Yet it refrained from doing so. It appeared to the board that the appellant preferred to discontinue the still-ongoing proceedings before the examining division and to prosecute its case instead directly before the board. But Art. 12(4) RPBA 2007 is intended to prevent just that. Thus, the board found that this case was one where the appellant could – and should – have presented its new requests in the first-instance proceedings, and consequently the board stated it could exercise its power under Art. 12(4) RPBA 2007 to hold them inadmissible. Nevertheless, since the requests on file presented the board with no difficulties, it decided to exercise this discretionary power in the appellant's favour and to admit them into the proceedings.

In T 1841/08 the board stated that as the auxiliary requests had not been filed before the examining division, although the examining division repeatedly pointed out deficiencies, admitting these requests into the appeal proceedings would mean that the board would

have to examine them for the first time in appeal proceedings, or refer the matter back to the examining division.

In T 1569/13, T 1906/13 and T 1648/17 too, the auxiliary requests not filed until the appeal stage were not admitted.

c) Resubmission of requests withdrawn during examination

In T 902/10 the board held that it is established case law that the Boards of Appeal do not admit requests that were withdrawn during first instance proceedings (T 922/08); if the board were to admit such a request, it would be contrary to the main purpose of ex parte appeal proceedings, which are primarily concerned with examining the contested decision (cf. G 10/93, OJ 1995, 172), i.e. with providing the adversely affected party (the applicant) with the opportunity to challenge the decision on its merits and to obtain a judicial ruling as to whether the first-instance decision was correct (see also T 2278/08, T 1306/10, T 1311/11, T 2489/11).

In T 922/08 claim 1 of the main request filed with the statement of grounds of appeal was identical to claim 1 filed as a first auxiliary request before the examining division. During the oral proceedings before the examining division, the applicant withdrew this request of its own volition. The board stated that even if the withdrawal of the present main request during the examination procedure was not considered an abandonment of this request for subsequent appeal proceedings as argued by the appellant, the fact that the request was withdrawn in the first-instance proceedings precluded the issue of a reasoned decision on its merits by the examining division. Reinstating this request upon appeal would compel the board either to give a first ruling on the critical issues, which runs contrary to the purpose of a second-instance ruling, or to remit the case to the department of first instance, which is clearly contrary to procedural economy (see also T 1156/09, T 1231/09, T 902/10, T 184/13, T 2508/13).

In T 122/10 the auxiliary requests 2 – 4 were filed during the oral proceedings. The claimed subject-matter of the auxiliary requests was identical to the subject-matter of the requests filed with the grounds of appeal which were withdrawn by the applicant in the course of the proceedings. The board stated that although reference was made to Art. 12(4) RPBA 2007 which sets out that the board shall take into account everything presented with the grounds of appeal, and thus in this case the auxiliary requests 2 to 4 as presented during oral proceedings, such provision can only be understood to apply if such requests have not previously been **withdrawn** as was the case here. Once the appellant chose to withdraw its earlier filed requests, the provisions of Art. 13(1) RPBA 2007 apply since an amendment to the party's case has been made.

In T 675/13 the embodiment which claim 1 covered had already been pursued in the first-instance proceedings and was then abandoned, thus preventing that aspect of the invention from being decided on its merits by the examining division. Its reinstatement would allow a kind of inadmissible "forum shopping" (see e.g. T 2017/14). The board concluded from the foregoing that claims directed to the embodiment not only could but

also should have been prosecuted in the examination proceedings, so that they would have been subject to an appealable decision.

Also in T.996/13 the reintroduction of a claim request into the appeal procedure, which had been withdrawn at an earlier stage of the procedure was not admitted.

In T.435/11 claim 1 of the request essentially corresponded to a claim on which the examining division had expressed a negative opinion with respect to novelty and which had subsequently been withdrawn in favour of more restricted claims. The board took into account the special circumstances of the case. In the first-instance proceedings, the appellant had introduced limitations against which the examining division had raised objections under Art. 123(2) EPC, and the appellant had not been able to overcome those objections by further amendment. The appellant had thereby manoeuvred itself into a difficult position. If the appellant in these appeal proceedings was to be afforded a way out at all, it had to be allowed to revert to a claim with the offending features removed. The board therefore admitted the main request into the proceedings.

d) Feature re-introduced on appeal

In T.1969/08 the board stated that if a feature objected to as "obscure" by the examining division and omitted from all requests subsequently filed by the applicant is then reintroduced in the claims filed one month before oral proceedings in the appeal proceedings without commenting on the objection raised earlier against this feature, the board may refuse to admit these claims into the proceedings at its discretion under Art. 12(4) RPBA 2007.

e) Interlocutory revision

In T.1832/10 the board stated that notwithstanding the amendments contained in the claims and carried out by the appellant in an attempt to overcome the objections raised, the examination division did not make use of the possibility of granting interlocutory revision pursuant to Art. 109(1) EPC. However, according to the established case law (T.139/87, OJ 1990, 68), an appeal by an applicant was to be considered well-founded within the meaning of Art. 109(1) EPC if the main request included amendments which clearly met the objections on which the refusal of the application has been based. In view of the fact that it is not normally the function of the appeal board to consider and decide upon claims which were filed during the prosecution of the examination but were neither commented nor decided upon by the examining division and in order to give the appellant an opportunity to have the issue decided upon by two instances, the board remitted the case to the first instance.

4.12. Criteria for consideration of amended claims

4.12.1 Principles applicable to amended claims

It already became apparent in early decisions that the boards do admit amended requests or auxiliary requests in appeal proceedings because they are serious attempts at

overcoming objections, or if their late filing can be justified and admitting them does not involve the board or the other party, as the case may be, in an examination which would significantly delay the proceedings. However, requests filed shortly before or during oral proceedings, in particular, may be refused if they are not clearly allowable (T. 95/83, OJ 1985, 75; T. 153/85, OJ 1988, 1; T. 406/86, OJ 1989, 302; T. 295/87, OJ 1990, 470; T. 381/87, OJ 1990, 213; T. 831/92).

In other decisions too, the boards have observed that, when exercising their discretion, they must weigh up all the circumstances of the case. The later the claims are submitted, the stricter the criteria to be applied. The subject-matter of the new claims should not diverge considerably from the claims already filed, in particular they should not contain subject matter which has not previously been claimed. The new claims should be clearly allowable in the sense that they do not introduce new objections under the EPC and overcome all outstanding objections under the EPC (T. 1126/97, T. 52/99, T. 468/99, T. 397/01, T. 411/02, T. 81/03, T. 989/03, T. 515/06).

New requests may exceptionally be admitted for reasons of procedural economy, even where not filed until a very late stage (e.g. during the oral proceedings), if the amendments are justified, e.g. where filed in response to objections or comments which were not part contained in the decision under appeal but were raised in writing during the appeal proceedings and moreover do not extend the scope of discussion as determined by the decision under appeal and the statement of grounds of appeal (T. 1126/97, T. 52/99, T. 468/99, T. 397/01, T. 846/04, T. 1109/05).

With regard to the proper exercise of discretion in deciding whether to admit requests filed by the appellant patentee which were not submitted before the opposition division, the crucial questions to be considered are whether or not the amended claims of those requests are clearly allowable, whether they give rise to new objections, whether or not there is proper justification for their late filing (so as to forestall tactical abuse) and whether the board can deal with them without undue procedural delay (T. 153/85, OJ 1988, 1; T. 206/93; T. 396/97; T. 196/00; T. 50/02; T. 455/03; T. 1333/05).

It is settled case law that an appellant patentee who has lost before the opposition division thus has the right to have the rejected requests reconsidered by the appeal board or to file new requests at a timely stage of the appeal proceedings, in particular together with the statement of grounds of appeal or the reply. However, if the patentee wants other (further) requests to be considered, the admission of these requests is a matter for the board's discretion, and not a matter of right (T. 840/93, OJ 1996, 335; T. 427/99; T. 50/02; T. 455/03; T. 651/03; T. 240/04; T. 339/06).

Thus, in addition to the factors referred to in Art. 13(1) RPBA 2007, the following criteria may, according to settled case law, likewise be decisive: there must be sound reasons for filing a request at a late stage in the proceedings, as may be the case where amendments are occasioned by developments during the proceedings or where the request addresses still outstanding objections. The amendments must be prima facie clearly allowable, and their introduction must not constitute an abuse of procedure. They must not extend the scope of discussion determined by the grounds of appeal and the respondent's reply or

introduce new facts on which the other party has had no opportunity to comment. Nor may they lead to an excessive delay in the proceedings. The time at which requests comprising amended claims were filed and the number of amended claim sets are also factors to be considered. Besides the timing of the request, an important factor is whether the various claim versions "converge" or "diverge", in other words whether they develop and increasingly limit the subject-matter of the independent claim of a main request in the same direction and/or in the direction of a single inventive idea, or whether they entail different lines of development because, for instance, they each incorporate different features. The scope of the amendment and the degree of difficulty or complexity involved in examining it are relevant, while the request's chances of success may also be important (see, on the last point, T 951/91, OJ 1995, 202; T 81/03; T 942/05; T 1474/06; T 162/09; T 1634/09; T 376/10; T 683/10; T 484/11; T 409/12).

4.12.2 Clear allowability of amended claims

a) General

In accordance with the case law, the boards refuse to consider late-filed auxiliary requests on the ground that they are inadmissible where they are directed to subject-matter which prima facie is not allowable. The subject-matter must be so clear and straightforward that it can be easily understood and regarded as allowable. Claims are clearly allowable if the board can quickly ascertain that they do not give rise to new objections and overcome all outstanding objections under the EPC and their patentability could be assessed without giving rise to any difficulty or delay (on this point, see T 153/85, OJ 1988, 1; T 270/90, OJ 1993, 725; T 955/91; T 92/93; T 401/95; T 862/00; T 1004/01; T 1202/02; T 922/03; T 87/05; T 1785/07; T 824/07; T 615/08; T 421/09; T 360/11). It must be immediately apparent to the board, with little investigative effort on its part, that the amendments made successfully address the issue raised, without giving rise to new ones (T 1634/09, T 1743/09). There must be no doubt that the late-filed requests meet the formal requirement and that they constitute a promising attempt to counter all outstanding objections (T 33/07, T 321/07, T 1650/08, T 1168/08, T 1634/09).

b) Examples

In T 1004/01, the amendments to the claims related solely to a narrower definition of features and values which were so clear and straightforward that a person skilled in the art could easily understand them. It was not unusual, the board found, for several auxiliary requests to be submitted in appeal proceedings, since they were the patentee's last opportunity to have the patent maintained.

In T 1128/10, it was immediately apparent that the amendments made successfully addressed the issue raised without giving rise to new ones. Therefore, they were admitted into the proceedings.

In T 70/04, the board refused to admit an auxiliary request for maintenance of the patent in a further amended form. Although the amendment indicated was a combination of two claims, it was quite extensive and raised new issues which had not yet been considered

in the opposition or appeal proceedings, mainly because of a greatly increased number of variables compared to claim 1 as maintained.

In T.708/05 the board stated that the fact that a board of appeal reverses a conclusion reached in a decision at first instance is a matter which a party must always be prepared for. In the present circumstances the introduction of a disclaimer to establish novelty at this late stage, a proposal which had previously been on the table but which had been abandoned in the meantime by the appellant, is not conduct which warrants the exercise of the board's discretion in the appellant's favour. Furthermore, the subject matter of this new request would still give rise to several objections and would therefore not amount to clearly allowable subject-matter.

In T.1650/08 the board did not consider it as a necessary prerequisite that the proposed amendments overcome all outstanding objections with certainty but that they result at least in an arguable case. The board saw no reason in admitting amendments which would result in clearly non-allowable request as this would only lead to unnecessary delays.

4.12.3 Response to objections

In general, the boards admit amendments filed in response to comments and objections made by the rapporteur or the other party. However, undesirable procedural delays should be avoided (see T.38/89, T.459/91, T.1059/92, T.648/96). Amended claims may be admitted into the proceedings if the introduced amendments are properly justified, e.g. have been filed as a response to objections, evidence or comments which were not part of the decision under appeal but have been raised in writing during the appeal proceedings (T.397/01, T.253/10). They must also constitute a promising attempt to counter the objection raised (T.1859/06).

The board in T.2227/12 stated in its catchword: where only objections under Art.123(2) and 84 EPC have been addressed in the contested decision and in the appeal proceedings, the board, in deciding whether to admit a request filed at the oral proceedings, need examine only whether it is prima facie allowable in view of those objections and need not examine its prima facie allowability under Art.52(1), 54 and 56 EPC.

In the cases below, the amended requests were admitted:

In T.93/11 the amendments were the direct result of the board's communication. Furthermore, they also overcame the formal objections of the board, which was procedurally expedient. Finally, they simply narrowed down the subject-matter claimed to the core of the invention. The board further considered that there was no general prohibition on reacting to a board's communication by submitting new requests, let alone when these took account of all the objections raised or repeated therein. Furthermore, the number of issues to be discussed at the oral proceedings was substantially reduced.

In T.794/94, the board recognised that patents in the field of genetic engineering sometimes gave rise to exceptional problems which made it difficult to formulate a suitable

request and therefore amounted to exceptional circumstances justifying late submission of requests designed to meet objections which had already been considered at length. However, there was no right to file an endless succession of new requests in substitution for requests found inadmissible or unallowable by the board (see also T. 607/05, T. 516/06).

In T. 1148/97, the board took the view that late-filed claims could still be admitted if the amendments to the wording of the claims limited the scope of the subject-matter claimed to such an extent that revocation of the patent could be avoided and maintenance of the patent as amended ordered after swiftly conducted proceedings (T. 710/99, T. 30/03).

In T. 385/06 the patent proprietor filed amendments before the final date set in the board's communication. In the judgment of the board, these amendments might be seen as a response to the board's observations relating to two grounds for opposition. Hence these amendments were allowable under R. 80 EPC, since they were occasioned by grounds for opposition invoked by the opponents.

In T. 610/94 too, the board admitted sets of claims filed during the oral proceedings because they had been limited and took account of the deficiencies it had identified. In T. 626/90, there was no question of the appellants having been unfairly taken by surprise, because the amendments in both requests were nothing more than a limitation of the claimed subject-matter to preferred embodiments of the invention as described in the patent in suit (T. 1097/99). Likewise, in the ex parte proceedings T. 1400/04, the amended claims were admitted because the oral proceedings did not need to be adjourned.

In T. 407/14, the additional feature in claim 1 of the main request amounted to a clear limitation of the claimed subject-matter. The board held it to be a legitimate response on the part of the appellant to the preliminary opinion of a lack of inventive step.

In T. 442/12 the late-filed request was admitted because it was prima facie a promising attempt to overcome all the objections set out in the board's communication and detailed supporting reasons had been given.

4.12.4 Converging or diverging versions of claims

It is settled case law that the admissibility of amendments depends, among other things, on whether the amended claims converge with or diverge from the subject-matter previously claimed, i.e. whether they develop and increasingly limit the subject-matter of the independent claim of a main request in the same direction and/or in the direction of a single inventive idea, or whether they entail different lines of development because, for instance, they each incorporate different features (T. 240/04, T. 1474/06, T. 1685/07, T. 980/08, T. 1589/08, T. 1690/08, T. 1969/08, T. 162/09, T. 2513/11, T. 310/17). Whether the claims of auxiliary requests converge is to be understood in the sense that the subject-matter of the lower ranking requests is further defined i.e. with the intention to counter objections with regard to the preceding requests (T. 1134/11).

In T. 565/07 the board ruled that although patentees too should be able in principle, under R. 80 EPC, to limit a patent's subject-matter by including the features of a dependent claim

in response to objections that the granted independent claim was not patentable, if they exercised that right repeatedly in a variety of directions – e.g. by filing requests in parallel or in sequence – the board would end up having to decide in which of several versions the patent was to be maintained. That would be at odds with Art. 113(2) EPC, which required the board to decide upon "the text submitted to it ... by the applicant". In other words, it was up to the patentee to decide the text for further prosecution and also one or more sets of claims which in any event had to be in line with that decision and thus its chosen direction of limitation (on this point, see T 382/96, T 446/00, T 1685/07).

In T 1685/07, the auxiliary requests, which had not been filed until after the summons to oral proceedings, said completely different things. The board ruled that, when deciding whether to admit new requests first introduced during the appeal proceedings, it was particularly important to ascertain whether the applicant or patent proprietor submitting more than one request was following a consistent line of defence in its various requests and not, particularly towards the end of the proceedings, using a "screen" of different versions of claims to create, for both the other party and the board of appeal, an obscure and unacceptable procedural situation in which they were obliged to select from a multiplicity of varying versions the one which could in the final analysis be valid.

In T 649/14 the board stated that the convergency request was not bound to the date of filing of a request. It should be met at the current state of the proceedings.

In T 100/13 a proprietor had filed divergent auxiliary requests addressing a variety of points at a very late stage in the proceedings, namely after the oral proceedings had been arranged, without stating why they should be allowed over the cited prior art. The board found that, in these circumstances, neither it nor the other party could reasonably be expected to discuss their patentability for the first time at the oral proceedings. It was up to the proprietor as respondent to show in its reply to the statement of grounds for appeal why those grounds were wrong or how amending the main or auxiliary requests could overcome the objections raised and thereby enable the thus amended claims to be taken as a basis for maintaining the patent in limited form.

In T 1750/08 the board admitted the auxiliary request because the amendment as a further limitation of a feature that underlay the opposition division's decision to maintain the patent in amended form and that was already central to the discussions in the appeal (converging request).

In T 1903/13 the board stated in its catchword that it was within the board's discretion not to admit auxiliary requests which defined subject-matter "diverging" from subject-matter of higher-ranking requests, including those requests which, in essence, were filed during the first-instance proceedings and re-filed with the respondent's reply, but were not examined by the first-instance department.

In T 1280/14, the respondent (patent proprietor) had re-filed with its reply 15 auxiliary requests that the opposition division had not examined because it had granted its main request. Although the board had already found fault in its preliminary opinion with the various alternative lines of defence formed by these requests, the respondent did not

reveal until the oral proceedings that it from then on intended to pursue only two of them. Holding that it should have communicated this change to its requests in due time, i.e. no later than one month before the oral proceedings, and that its conduct had therefore been at odds with the need for procedural economy, the board refused to admit its two remaining auxiliary requests and revoked the patent.

4.12.5 Unsubstantiated requests

In a number of decisions, it has been observed that unsubstantiated auxiliary requests cannot be considered in appeal proceedings.

Under Art. 12(2) RPBA 2007, the statement of grounds of appeal and the reply must set out the parties' complete case. In particular, it must be set out why it is requested that the decision under appeal be amended or upheld. Taken as a whole, the RPBA make it clear that appeal proceedings are primarily written in nature, with Art. 12(2) RPBA 2007 requiring that the parties' complete case be submitted at the outset. The purpose of this provision is to ensure fair proceedings for all concerned and to enable the board to start working on the case on the basis of both parties' complete submissions. In inter partes proceedings, both rights and obligations should be divided equally among the parties so that the board can perform its independent judicial function (T 217/10, T 1732/10, T 1890/09).

In T 2598/12 it was stated that there was no time bar to the requirement following from Art. 12(2) and (4) RPBA 2007 that a request filed during appeal proceedings must be properly substantiated. Consequently, this requirement applies, mutatis mutandis, to new requests filed in response to a communication of the board.

In T 217/10 the board observed that it was not only for the appellant to substantiate its appeal but equally for the respondent to show at an early stage why it considered that the objections raised in the grounds of appeal did not withstand scrutiny. If auxiliary requests were submitted, reasons usually had to be given to explain how they overcame those objections (at least if this was not obvious from the amendments made). In the case in question, the auxiliary requests had not been accompanied by any reasons, so it was not immediately apparent to the board how they could overcome the objections raised. The board therefore refused to consider them (see also T 420/14).

In T 1732/10 the board held that not reacting in substance to the appeal of the opponent, but waiting for the board's preliminary opinion before any substantive reaction is filed, is regarded as an abuse of procedure. This is all the more so if the substantiation for all the requests, which were filed after summons to oral proceedings have been sent, is filed only shortly before the oral proceedings before the board. Such requests – which are not self-explanatory – are considered by the board as submitted only on the date of their substantiation. Such very late requests are contrary to procedural economy, do not take account of the state of the proceedings and cannot be reasonably dealt with by the board without adjournment of the proceedings or remittal to the department of first instance, contrary to Art. 13(1) and 13(3) RPBA 2007.

Auxiliary requests filed by proprietors with their statement of grounds of appeal or reply could not be admitted if they neglected also to specify why the contested decision should be amended or the patent maintained (T.2355/14).

In T.1836/12 the board held that filing new requests without addressing all the points raised in the annex to the summons to oral proceedings made the procedure inefficient, contrary to the principle of procedural economy. Simply filing unsubstantiated requests did not overcome any objections that had already been raised by the board in the annex to the summons or that were to be expected in the light of the contested decision. Given the lack of substantiation, the board had informed the appellant well in advance that the admissibility of these new requests would have to be discussed at the oral proceedings and that they would be considered filed only on the date of their substantiation (T.1732/10).

In T.1784/14 the board summarised in its catchword that if no substantiation is provided, at any stage during the appeal proceedings, for claim amendments which are not self-explanatory, the requests containing those amendments may be considered not validly filed (following T.1732/10). In T.2288/12 the board confirmed that requests that are not self-explanatory become effective only at the date on which they are substantiated. See also T.2101/14.

In T.568/14 the board acknowledged that auxiliary requests, if filed without any explanation, may be deemed inadmissible or not validly filed (see e.g. T.253/06). This does not however apply if no explanation as to why amendments are filed is needed because they are self-explanatory. This condition was met in the present case.

In T.687/15 appellant merely stated that the new requests represented "fall back" positions. This statement did not serve to place the board and the other parties in a position to understand the rationale behind these requests. On the contrary the onus was placed in the board and the respondents to assemble, or derive the case being made themselves and develop appropriate responses. This is contrary to the requirements of Art.12(2) RPBA 2007.

In T.1533/13 the board had to deal with the admissibility of late-filed claim requests which were filed roughly one month prior to the oral proceedings. These requests were based on claim requests already filed without explanation with the statement of grounds of appeal. The board stated that the appellant had filed ten auxiliary requests with the statement of grounds of appeal, containing various parameters, and had provided no explanation at all in the statement of grounds of appeal as to why all these parameters had been introduced and which of the opposition division's objections was therefore overcome. The mere filing of amended claims did not exonerate the appellant from the task of expressly specifying in the statement of grounds of appeal the relevance of the amendments for overcoming the objections on which the decision under appeal was based (T.933/09).

In T.2077/13 the auxiliary request filed in response to the summons to oral proceedings corresponded to an auxiliary request already filed in opposition proceedings and dealt with in the contested decision. The appellant argued that the auxiliary request was no surprise. However, filing this request that was previously known to the parties at a late stage of the

appeal proceedings does not exempt the appellant from its obligation to provide at least some substantiation with regard to the allowability of this request, in particular since this request was found not allowable by the opposition division.

On this topic see also [T 1890/09](#), [T 1836/12](#), [T 1134/11](#), [T 162/12](#), [T 122/13](#) and [T 964/13](#).

4.12.6 Discretion to admit amended claims at any stage of the appeal proceedings

The board in [T 577/97](#) found that decisions not to admit auxiliary requests ought, in principle, to be limited to exceptional cases in which the filing of the auxiliary requests could be said to amount to an abuse of procedural rights (see also [T 148/05](#)). In [T 681/02](#), the board observed that, in the specific case underlying the decision in [T 577/97](#), the auxiliary request had contained a single amendment in the form of a new claim which corresponded to a granted claim with a further restriction. It could therefore be assumed that the subject-matter of the auxiliary request had been searched, so that, in contrast to the case now in hand, it could be examined definitively in the oral proceedings. In some decisions, the boards cite [T 577/97](#) in relation to their discretion to accept amended claims at any stage of the appeal proceedings. In [T 1124/04](#) the board was confronted at a very late stage in the oral proceedings with the filing of further auxiliary requests. According to the appellant, the necessity of further restricting the claimed subject-matter had become apparent during the oral proceedings, in particular because the board considered D2 as the closest prior art. In line with [T 577/97](#), the board held that it has at least the discretion to accept amended claims even at a late stage of the appeal proceedings, thus also during the oral proceedings. Of course, it has to be ascertained that the procedural fairness is not jeopardised by the admission of such late filed claims ([T 952/99](#), [T 360/01](#), [T 500/01](#), [T 872/01](#), [T 45/03](#), [T 696/04](#), [T 148/05](#)).

In [T 1613/13](#) the board had to consider whether the fact that the newly filed request resulted in reverting to a request previously withdrawn during the appeal proceedings was per se a reason not to admit the request. The board stated that there was no legal basis that would justify the non-admissibility of a request merely because it has been replaced by another. It has discretion to assess whether or not the withdrawal should be considered definitive, and whether the attempt to reintroduce the withdrawn request was justified or a misuse of proceedings.

4.12.7 Last chance

Some decisions considered whether a patentee should always be given a "last chance" to save its patent. It has been thoroughly discussed and clearly established by the boards of appeal that there is no absolute right for a patentee to such a "last chance" request. On the contrary, the admissibility of a late-filed request is always a matter for the board's discretion ([T 837/07](#)). Moreover, as stated inter alia in decision [T 446/00](#), the concept of a "last chance" suggests one last chance at the end of the proceedings and not multiple "last chances" on numerous occasions during the course of the appeal. However, a patentee is normally given an opportunity to limit his claims even at the oral proceedings, so that he is given a last chance to obtain a patent ([T 577/97](#), [T 707/08](#), [T 1165/13](#)).

In T. 1067/10 the board stated that the argument of its being the patentee's last chance in view of the non-admission of requests cannot be accepted since the appellant had had ample opportunity to file amended sets of claims at an earlier stage in the proceedings and did not need to wait until the oral proceedings to do so.

4.12.8 Change of subject-matter

In T. 1273/04, the board held that an amended claim belatedly filed in oral proceedings could only be admitted if it was clearly allowable by virtue of a clearly permissible amendment. However, this principle had to be tempered in examination appeal proceedings by having regard to the extent to which the application had been examined. Applying this to the case in hand, the board found that claim 1 of the main request had been amended in a clearly permissible manner. However, the amendment had shifted the subject-matter claimed in a divergent manner which would require a new study of the prior art and potentially even review of the search in order to assess novelty. The main request was therefore refused.

In T. 651/03, the board found that claim 1 of the first auxiliary request had been amended in such a way that its category had been changed from a product claim to a use claim. The board concluded that this change extended the patent protection and therefore ran counter to Art. 123(3) EPC 1973. The late-filed request was therefore clearly non-allowable.

In T. 267/09 the board pointed out while the whole discussion in the opposition proceedings and in the appeal proceedings up to and including the oral proceedings before the board was focused only on the independent product claims. The late filed auxiliary requests were directed to method claims. With this change in the category the appellant shifted its case in an unexpected manner in an entirely different direction and in fact created another case. Admitting these requests into the proceedings, taking the respondent and the board by surprise, would run counter to the need for procedural economy and to the principle of procedural fairness.

In ex parte case T. 979/07, the board said that admitting a set of claims filed only in oral proceedings and necessitating an additional search because it shifted the claimed invention to other technical matter would de facto give applicants in appeal proceedings carte blanche to get oral proceedings postponed or the whole examination procedure reopened. That would be at odds with the requisite procedural economy (see also T. 407/05, T. 1123/05 and T. 764/07).

4.12.9 Need for additional search

a) General

It was already apparent from the boards' early decisions that late-filed claims that might have required an additional search would not be admitted into the proceedings. In T. 14/02, intended requests as suggested by the respondent in the oral proceedings would not just have involved a minor change in the wording of claim 1 but rather major limitations of the claim which in all likelihood would have required a new search by the appellant and could

have caused a remittal to the first instance (see also T. 51/90, T. 270/90, OJ 1993, 725; T. 25/91). In T. 48/91, the board refused the amended claims as inadmissible because they contained additional features the impact of which was either unclear or impossible to assess without further investigations such as carrying out proper comparison tests (see also T. 234/92, in which a feature from the description was introduced to claim 1, so that an additional search might have been required, and T. 1105/98, in which an additional search was needed).

In T. 870/07, the board admitted the main request filed during the oral proceedings as it was in no doubt that the additionally claimed subject-matter had also been searched. The situation was not new in the sense that the board was faced with an incomplete search preventing it from examining the claimed subject-matter.

b) Features taken from the description – Art. 13(3) RPBA 2007

In some cases, requests filed after the scheduling of oral proceedings refer to features derived solely from the description. This raises the question of whether such features were included in the original search, or whether an additional search is necessary. It cannot be automatically assumed that they were considered in the original search or that the opponent is responsible for carrying out such a search (T. 1732/10, see also T. 447/09, T. 1273/11). In T. 1650/12 and T. 2482/10 the question was raised of whether it was the opponent's duty to carry out a search with regard to late-filed amendments taken from the description or whether it was a matter for the opposition division to do so in accordance with the Guidelines. According to the consistent case law of the boards of appeal, if an additional search is needed to assess the patentability of claims amended with features from the description at such a late stage that either the oral proceedings must be adjourned or the case must be remitted to the department of first instance for further prosecution, Art. 13(3) RPBA 2007 is against the admissibility of such claim requests. Remittal of the matter to the opposition division to conduct such a search would amount to the same thing as adjourning oral proceedings, and this would also be necessary if the opponent were obliged to carry out such a search (T. 1273/11, T. 2575/11).

In T. 1741/12 the board stated that the auxiliary request could, and indeed should, have been presented before the opposition division and not for the first time in appeal proceedings, since it incorporated entirely new matter taken from the description. Thus, it was unclear whether they had been the subject of the search. As a consequence, even in the hypothetical case that the subject-matter of claim 1 was not obvious having regard to the prior art on file, the board would not be in a position to maintain the patent in amended form on the basis of this request, but would have to remit the case to the opposition division. This situation is analogous to that dealt with in decision T. 881/09 where it was decided not to admit an auxiliary request which incorporated a probably unsearched feature taken from the description, using the board's discretionary power under Art. 12(4) RPBA 2007.

c) Carrying out an additional search

In T. 2127/09, the search division considered that the claimed subject-matter was merely an obvious implementation of game rules on known hardware and did not carry out a search. At the oral proceedings before the board the appellant (applicant) submitted an amended set of claims as sole request in response to the board's objections. The board stated that it was necessary to carry out an additional search in accordance with R. 63 EPC. The board emphasised that remittal should be seen as an exceptional procedural possibility, and that it had also to be examined whether the applicant could have been expected to have made earlier the amendments which were made during the appeal before the board, and thereby could have requested the examining division to perform the necessary search. The board decided to admit the amendments to the claims.

4.12.10 Dependent claims

In T. 1060/04, the amended claim 1 resulted from a combination of claim 1 as granted and features of a number of dependent claims as granted. The appellant patentee had submitted the relevant claims to the board during the oral proceedings. On the question whether the patentability of the dependent claims had to be examined, the board held, *inter alia*, that the fact that an opposition directed to the subject-matter of an independent claim also implicitly covered subject-matter defined in claims dependent on the independent claim (see G. 9/91, OJ 1993, 408, point 11 of the Reasons) did not necessarily mean that the parties and the board had to be prepared to assess the allowability and patentability of amended independent claims as granted, including the subject-matter of claims dependent on them, at any time during the proceedings (see also T. 794/94).

In T. 67/09, the board rejected the appellant's view that auxiliary requests 1 and 2 were admissible because the amendments were essentially limited to a combination of granted claims the subject-matter of which had already been challenged in the proceedings at first instance. Given that only the patent as granted had been discussed in both the opposition and the appeal proceedings, neither the board nor the respondent had had any reason to look at the subject-matter of dependent claims when preparing for the oral proceedings, especially since no request directed to them had previously been filed (see also T. 1752/09).

In the *ex parte* case T. 569/08, the belatedly filed auxiliary request resulted from a combination of features derived from a number of original claims. The board observed that original dependent claims which had been searched were normally predestined to serve as fallbacks in the event that an independent claim was not allowable. However, that was not so throughout the entire proceedings since, depending on the procedural stage, amendments to the application might be subject to the discretion of the examining division or board. In the case at issue, the board considered it incompatible with due procedural economy to shift the subject-matter to be decided on in the appeal proceedings to subject-matter which could have been presented to the examining division and which would have to be examined as to inventive step for the first time by the board. Thus, even a combination of originally filed claims could be disregarded on appeal.

4.12.11 Number of auxiliary requests

In T 516/06 the board stated that there is no right to file an endless succession of new requests in substitution for requests found inadmissible or unallowable by the board. Proceedings must come to an end some time. If the contrary was true, oral proceedings could easily be misused, in particular in ex parte proceedings, to test the board's opinion as to what subject matter might be patentable and to tailor claims accordingly. In such cases, while not "holding the pen", the board would nonetheless be the ghost-writer of what was ultimately claimed.

In T 309/09, the board had doubts as to whether the number of auxiliary requests could generally be considered a factor on the basis of which their admission under R. 137(3) EPC could properly be denied outright. Whilst it did not wish to rule out that a large number of auxiliary requests might be a sufficient reason in specific cases, it decided that the question could be left unanswered in the case before it, as in any event six auxiliary requests could not automatically be considered excessive.

In T 280/11 the board found that the patent proprietor, which in written proceedings had filed a very high number of requests and had submitted a further four auxiliary requests during the oral proceedings, had to expect a significant portion of the time available on the day of the proceedings to be taken up solely with the administrative handling of all the 686 requests. After the board had discussed and rejected these requests at the oral proceedings, or (in the case of new auxiliary requests 682 to 685) after lengthy debate had refused to admit them into the proceedings, the proprietor could not reasonably expect to be granted a further break late in the afternoon of the same day to allow further requests to be drafted and submitted.

4.12.12 Amended claims not admitted with divisional applications pending

In T 840/93 (OJ 1996, 335) the board held that in the light of G 9/91 and G 10/91 (OJ 1993, 408 and 420), special attention must be given to late-filed requests at the appeal stage when divisional applications are still pending. If the distinction between the subject-matter of the divisional applications was unclear and some of them were still pending before the department of first instance, it was inappropriate to admit, during oral proceedings at the appeal stage after opposition, new requests which are neither immediately allowable nor bona fide attempts to overcome objections raised.

In T 28/92 the claims were not obviously allowable and the alternative of admitting the requests, but referring the matter back to the department of first instance for further examination, was not acceptable, particularly as there were still pending divisional applications of the application on which the patent in suit was based. The board would not wish to increase the number of proceedings in which much the same subject-matter was already being considered by various instances of the EPO.

4.12.13 Reinstating broader claims in appeal proceedings

The limitation of claims may represent attempts to respond to objections by the EPO or an opponent without necessarily involving any immediate intentions of substantive abandonment. In this case the question arises of whether the applicant or patent proprietor can reinstate broader claims which had been proposed at an earlier stage of the proceedings.

Previously, the boards consistently ruled that a proprietor who has defended his patent to only a limited extent in opposition proceedings is not prohibited a priori (i.e. except in specific cases where the *reformatio in peius* prohibition applies or there has been abuse of procedure) from returning to a broader version of his patent, including the granted version, in subsequent appeal proceedings. Intervening limitations of the patent do not imply any express abandonment of parts of it but are to be regarded merely as attempts to word the patent so as to delimit it against objections (see inter alia T.123/85, OJ 1989, 336; T.296/87, OJ 1990, 195; T.331/89; T.900/94; T.699/00; T.880/01; T.794/02; T.934/02; T.1018/02; T.386/04; T.1276/05). In T.331/89, the board found the reactivation of earlier claims to be an abuse of procedure because the request had not been filed until the oral proceedings and, in view of its content, was not immediately allowable.

This case law must, however, be interpreted in the light of Art. 12(4) RPBA 2007.

Since adoption of R.116(2)EPC and Art.12(4) and 13 RPBA 2007, the relevant legislation differs from that applicable at the time of the decision in T.123/85. Whether sets of claims presented on appeal are to be considered is therefore not to be determined in accordance with the case law established in that decision, but rather in accordance with the procedural rules now applicable to appeal procedures and the specific circumstances of the case. Accordingly, the admission of auxiliary requests is subject to Art. 12(4) RPBA 2007, which provides that the boards may at their discretion disregard sets of claims which were found to be late filed and not admitted at first instance or which ought already to have been presented at first instance. This discretion also applies to sets of claims presented for the first time on appeal as a means of defending a broader version of the patent than that at issue in the opposition proceedings (T.28/10, T.36/12, T.467/13).

Referring to T.28/10, the board stated in T.671/08 that there was no absolute right of the patent proprietor to revert in appeal to the patent as granted nor that he is in principle hindered from doing so. There will be cases, as the present case shows, in which the admission of such a request poses no additional work and other cases in which such a request may even constitute an abuse of the proceedings. It follows thus that if such a request is submitted in appeal the board has to exercise its discretion under Art. 12(4) RPBA 2007 and decide whether to admit or not such a request.

In T.1282/05, on being summoned to oral proceedings the appellants had filed new requests, the independent claims in these requests being worded far more broadly than the matter previously claimed in the appeal proceedings and essentially constituting a return to the original claim 1. The board found that the amendments could not be regarded as a response to objections in the summons, nor had the appellants given any reasons for

them. Moreover, the statement of grounds gave no indication that such a return towards the originally claimed matter was intended. Hence the appellants' actions constituted an infringement of Art. 12(2) RPBA 2007. Furthermore, comparable requests could have been submitted before the department of first instance (T 1420/06).

In T 2075/11 the patent as granted could clearly have been defended in the opposition proceedings but the appellant (patent proprietor) had instead chosen to limit it, which meant that no first-instance decision had been taken on the granted version (see also similar case T 933/04). The board did not regard the appellant as having abandoned the patent as granted but it was of the firm view that admitting the request for maintenance as granted at the appeal stage went against the principle of procedural economy. In T 781/13, too, the board did not allow the appellant to revert to the original version of claim 1 as granted as it was against the principle of procedural economy.

In T 796/02, the board held that it amounted to an abuse of procedure to withdraw a request with broader claims in appeal proceedings in order to prevent the board from taking a negative decision on it, but then re-introduce those broader claims before the opposition division, after a remittal of the case for further prosecution on the basis of much more limited claims was obtained.

In T 1578/13, the appellant requested that its patent revoked by the opposition division be maintained on the basis of three auxiliary requests already dealt with in the contested decision. In a fourth auxiliary request, it requested that it be maintained as originally granted. In its first three auxiliary requests, the wording of the granted patent had been amended to read "gas outlet casing" instead of "gas inlet casing". During the opposition proceedings, the appellant, instead of requesting that the opposition be rejected or defending the patent as granted, had merely requested that the patent be maintained in versions correcting the allegedly obvious mistake. The board considered that, at the latest on learning at the oral proceedings at first instance, that the opposition division was not minded to allow the requested correction, the appellant ought to have begun defending the patent as granted. By that point, it had to have been clear to it that reverting to the patent as granted would immediately overcome the objection under Art. 123(3) EPC.

4.12.14 Patent revocation

According to G 9/92 and G 4/93 (OJ 1994, 875), in opposition appeal proceedings the extent to which the patent proprietor is entitled to make amendments depends on the result of the first instance proceedings and on whether the patent proprietor himself filed an admissible appeal or is merely the respondent (on this point, see chapter V.A.3.1. "Binding effect of requests – no reformatio in peius").

Where the patent proprietor is appealing against the **revocation** of his patent, he is entitled to revert to a more broadly worded version of the patent, and in particular the one as granted, even if he had filed a restricted version at the commencement of appeal proceedings (T 89/85; T 296/87, OJ 1990, 195; T 373/96; T 65/97; T 564/98; T 2285/08 and T 476/09). According to T 386/04 an appellant-proprietor, whose patent has been revoked, is entitled to seek maintenance of the patent as granted even though its main

request before the opposition division had only been the maintenance of the patent in a more limited form. Only in exceptional circumstances, where it would amount to an abuse of procedure, it should not be allowed to revert to the granted claims. This long standing principle is not contradicted by decisions T 528/93 or T 840/93 (OJ 1996, 335), which are concerned with new claims raising new issues, and is not contrary to the statement by the Enlarged Board of Appeal in decision G 9/91 (OJ 1993, 408) concerning the purpose of an appeal (see also T 1276/05).

In T 933/04, the appellant's main request was derived from the patent as granted. This granted version had not, however, been the subject of the opposition division's decision. It had indicated that the patent as granted (now the main request) was not novel, with the result that it had not been pursued. The board refused to admit the main request because the appellant ought not to have withdrawn it from the proceedings if it had intended to pursue it (see also T 1067/08, T 2075/11).

In T 476/09 the conduct of the appellant did not amount to an abuse of procedure. It was true that the claims of the request before the opposition division were more restricted than the claims of the present requests submitted by the appellant with the statement of grounds of appeal in that the claims before the opposition division defined the external additive to include hydrophobic titanium oxide and hydrophobic silica. However, this definition of the external additive had no bearing on the opposition division's decision. Therefore, the fact that this definition was not contained in the claims of the present requests did not raise any new issues which have not yet been dealt with by the opposition division. Hence, the appellant did not leave the factual and legal scope of the first instance opposition proceedings with its new requests in appeal proceedings.

4.13. Criteria for considering late-filed facts and evidence

The criteria governing the admission of late-filed facts, evidence and arguments are more restrictive and stringent in proceedings before the boards of appeal than in opposition proceedings at first instance. When exercising their discretion, the boards consider the criteria listed as examples in Art. 13(1) RPBA 2007 (complexity of new subject-matter submitted, current state of proceedings and need for procedural economy). However, this list is not exhaustive and thus other criteria are used too: for example the relevance of the late-filed submission, the reasons for the late filing, whether the late filing has to be regarded as an abuse of procedure and whether it is a legitimate reaction to the decision at first instance.

4.13.1 Legitimate reaction to the first-instance decision

a) General

According to the established case law of the boards of appeal, filing new facts, documents and evidence would be considered to be in due time, if the filing was occasioned by an argument or a point raised by another party or in the appealed decision and could not have been filed before under the circumstances of the case. However, in order not to deprive the other parties of their right to verify the new evidence or to prevent the board from

ensuring that the proceedings are conducted expeditiously, such facts and evidence have to be submitted once they are available and once it has become clear that they were relevant (T 201/92; T 951/91, OJ 1995, 202; T 502/98; T 730/07; T 320/08; T 976/10). Late filing is justifiable if it is an appropriate and immediate reaction to developments in the previous proceedings (T 855/96). Late filing is also admissible in order to support the reasoning to date (T 561/89) and to prove claimed common general knowledge, if challenged (T 106/97, T 1076/00).

The delay is of less importance if the party was reacting to a finding in the contested decision (T 101/87, T 1511/06). An appellant who has lost the opposition proceedings should be given the opportunity to fill the gaps in its arguments by presenting further evidence in the second instance (T 406/09).

In T 49/85 the board stated that a reference filed by an opponent for the first time with its statement of grounds was not submitted in due time unless representing the effective counter evidence to a newly emphasised reason given in the decision (see also T 172/85 and T 561/89). It is however within the discretion of a board of appeal pursuant to Art. 114(1) EPC to admit such a document into the proceedings in view of its relevance (T 339/08). The same applied if the party reacted to its opponent's submission, e.g. in T 705/90, where documents I to N were cited by the appellant in its observations in support of an argument presented in response to the respondent's statement of grounds.

In T 1045/08 the board stated that where a party files new requests in appeal proceedings the other party must have the possibility of responding to these including the filing of new prior art documents, particularly when some of the amendments to the claims of the requests are based on features taken from the description of the patent. In this situation the concept of "late filed" must be considered relatively since the documents could not have been filed earlier because the party could not know the content of the future requests of the other party.

In T 1817/15 the board considered that where evidence is belatedly filed on appeal as an objectively appropriate reaction to the impugned decision, such evidence should be sufficiently relevant to the outcome of the assessment of the patentability of the subject-matter claimed. However, a final decision on the relevance of these documents should not be given in the event that the case is then remitted to the first-instance department for further prosecution upon admission. Otherwise, the latitude of examination by the first-instance department would be unduly restricted (see e.g. T 736/99). In other words, it would suffice in such cases to demonstrate that it is prima facie not unlikely that the admission of such fresh evidence could change the outcome of the assessment of the first-instance department.

b) Late-filed submissions admitted

In T 238/92 the board of appeal did not consider a document presented for the first time with the statement of grounds of appeal as "late-filed", since it served as the first evidence of a feature considered in the contested decision as essential for the assessment of inventive step (see also T 117/92). In T 1380/04 the submission of D16 along with the

statement of grounds was a justified reaction to the opposition division's decision. The document also appeared prima facie more relevant to inventive step than any other document already in the proceedings (see also T 1146/06).

In T 666/09, the board agreed with the appellants that the comparative study filed with the statement of grounds of appeal was a direct response to the opposition division's decision.

In T 101/87 the board drew a distinction between (a) the case of an opponent attempting to find further prior art when the opposition division had decided that the original citations did not warrant revoking or restricting the patent, and (b) the case of an opponent making a further search in response to substantial amendments of a claim or to comments from the opposition division regarding a missing link in a chain of argument. In the latter case, new documents could be admitted into the proceedings, instead of being regarded as late-filed.

In T 927/04 the board stated that it was legitimate for a party who had lost in opposition proceedings to try to improve its position in appeal by filling a presumed missing link, as in the case in point, with respect to the issue of prior use.

In T 259/94 the appellants submitted new evidence two years after filing the appeal. The respondent did not object to their introduction into the appeal proceedings. The board held that in such circumstances the principle of "volenti non fit iniuria" empowered it to admit the late-filed evidence.

In T 828/14 the board examined whether the change in the line of attack was justified as a direct and objectively appropriate response to developments in the first-instance proceedings, and in particular to findings in the contested decision. The document was admitted into the proceedings.

In T 241/10 the board stated that the board has no power under Art. 12(4) RPBA 2007 to hold a document filed with the statement of grounds of appeal inadmissible if the filing of that document was a legitimate reaction to the submission of amended claims by the patent proprietor shortly before the first-instance oral proceedings and the opponent could not have been reasonably expected to present that document in the proceedings before the opposition division (similar to T 980/09).

In T 1817/15 the filing of E6 to E8 was regarded as a legitimate and appropriate reaction to the assessment of inventive step conducted in the decision under appeal for amended claim 1 in the sense of cases T 238/92, T 1146/06, T 295/08, T 406/09, T 828/14 and, above all, T 241/10 (based on an almost identical factual situation), with the aim of filling the gaps in the appellant's chain of argument by providing the missing evidence suggested by the decision under appeal.

In T 113/12 the document was cited in response to a claim amendment that was made at the oral proceedings before the opposition division. The amendment was based on subject matter from the description. The board found it inequitable not to allow the appellant to respond to such an unforeseeable new situation with a new document. Such a course of

action would effectively tie the hands of the appellant in appeal to only base their arguments on previously cited documents, having first given the respondent a free hand to amend the claim based on the description at the last moment in opposition proceedings.

c) Evidence of common general knowledge

Belated submissions may be taken into account as evidence of alleged common general knowledge, where such knowledge has been disputed (T.106/97, T.1076/00).

In T.85/93 (OJ 1998, 183) the board pointed out that evidence of common general knowledge, like any other evidence in support of an opponent's submissions, should be filed at an early stage in the proceedings before the opposition division, and might be rejected as inadmissible at the board's discretion if filed for the first time during appeal proceedings. In T.274/99 the board considered the late-filed textbook under Art. 114(1) EPC 1973 – although late-filed documents, including those that prove common general knowledge, could be disregarded under the boards' case law – because it provided a better understanding of the state of the art, it was obviously relevant, its submission could be seen as reasonable as far as the respondent was concerned, and its consideration did not delay the proceedings in any way.

4.13.2 Relevance

According to the case law of the boards of appeal a criterion to be taken into account is whether a late-filed document is prima facie highly relevant and whether there is proper justification for its late filing to forestall tactical abuse. Such material should be prima facie highly relevant in the sense that it can reasonably be expected to change the eventual result and is thus highly likely to prejudice the maintenance of the European patent (see T.1002/92, OJ 1995, 605; T.212/91; T.931/06; T.501/09; T.1306/09 and T.2542/10). See also under chapter IV.C.4.5.3 "Prima facie relevance".

In T.1002/92, the board stated that the criteria governing the admission of late-filed facts, evidence and arguments are more restrictive and stringent in **proceedings before the boards of appeal** than in opposition proceedings at first instance. In contrast to the first-instance proceedings, the appeal procedure is a judicial procedure and therefore "less investigative". Therefore, as regards **proceedings before the boards of appeal**, new facts, evidence and related arguments which go beyond the "indication of the facts, evidence and arguments" presented in the notice of opposition pursuant to R.55(c) EPC 1973 in support of the grounds of opposition on which the opposition is based should only very exceptionally be admitted into the proceedings in the appropriate exercise of the board's discretion and if such new material was prima facie **highly relevant**.

In R.6/17 the Enlarged Board noted that the prima facie relevance of a document is not listed explicitly in Art. 13(3) RPBA 2007 dealing with amendments of a party's case after the summons to oral proceedings. However, the list of criteria in Art. 13(1) RPBA 2007 is non-exclusive, and the criterion of prima facie relevance has been applied by some boards of appeal as one criterion amongst others. The prima facie relevance is certainly neither the most relevant nor does it stand alone, i.e. without interdependence on other criteria.

The interest in procedural expediency and procedural economy is also expressed in the common approach not to admit late documents which, prima facie, are no more relevant than what is already on file.

In T.2054/11 the board observed that, once oral proceedings on appeal had been arranged, and especially just before or during those proceedings, whether or not late-filed amendments to a party's case could be considered no longer depended in practice on whether they were relevant (see Art. 13(3) RPBA 2007).

In T.2576/12 the board pointed out that, when exercising its discretion under Art. 12(4) RPBA 2007, it could make admitting prior art filed for the first time with the grounds for appeal dependent on whether it was prima facie (highly) relevant but that it did not have to, because otherwise there would be nothing to stop an opponent from always withholding (highly) relevant prior art until filing its grounds for appeal in the expectation that it would be admitted because of its relevance (see also T.724/08).

In T.887/11 the board admitted the (new) evidence as well as the offered witness testimony submitted with the appeal grounds into the proceedings because of its high relevance. In T.182/09 likewise the board admitted a highly relevant document into the proceedings (see also T.1404/10, T.605/11).

In T.340/12 the board admitted the late-filed document into the proceedings and stated that in this case the prima facie high relevance of the document should take precedence over the procedural aspect of its late filing.

In T.158/14 the board was satisfied that the opponent provided a reasonable justification why D9 and D10 were not filed during the nine-month opposition period: these documents were Japanese utility models having no English abstract and were found by the opponent only by chance after discussing the appealed decision with one of its Japanese clients. The board saw no indication that the opponent deliberately withheld D9 and D10 for tactical reasons and D9 and D10 were highly relevant with regard to the patentability of the claimed subject-matter.

In T.931/06 the board stated that when assessing inventive step, a late filed document may be considered if it belongs to the same or a closely related technical field and discloses subject-matter conceived for the same or a similar purpose as the contested patent. In the light of T.1002/92 such a document would then be prima facie relevant in the sense that it might prejudice the maintenance of the patent, at least in unamended form.

In T.1105/04 the board referred to T.736/99 and admitted a late-filed document into the proceedings, because it was considered by both parties as the closest prior art document.

In T.609/99 the board stated that despite the proprietor's objection to the admission of evidence which had been disregarded in the opposition procedure pursuant to Art. 114(2) EPC 1973, the board might, in certain circumstances, take account of this evidence without any implication that it was prima facie highly relevant. This exercise of

discretion was not inconsistent with the criteria set out in T. 1002/92 (OJ 1995, 605). In the circumstances of the case at issue the board's admission of evidence had not extended the legal and factual framework.

In T. 2335/12 the board concluded that the experimental evidence disclosed in document D32 had been filed late by the appellant for unjustified reasons and lacked prima facie relevance.

4.13.3 Complexity of new subject-matter

Some boards have held that new submissions should normally be disregarded if the **complexity of the technical or legal issues** raised is such that clearly neither the board nor the other party can be expected to deal with them without adjournment of the oral proceedings. Complex fresh subject-matter filed at short notice before or during oral proceedings runs the risk of being not admitted to the proceedings without any consideration of its relevance or allowability (see T. 633/97, T. 1050/00, T. 1213/05).

In T. 1044/04 the board stated that the late-filed document was a relatively short document which did not raise further complex substantive questions with regard to technical or legal issues complicating the appeal proceedings. Thus the board decided to admit the late-filed document D6 into the appeal proceedings (see T. 633/97, T. 787/00).

4.13.4 Cases of abuse of procedure

a) No abuse of procedure

In some decisions, the boards of appeal have held that there has been no tactical abuse and taken late-filed documents into account under the principle of examination by the EPO of its own motion, since these might have put maintenance of the patent at risk (see T. 110/89, T. 315/92). An abuse of procedure presumes a deliberate withholding of information (see T. 534/89). In T. 1029/05 the board stated that the issue of admissibility of the late-filed document boiled down to the following questions: (i) whether the late filing is to be seen as an abuse of proceedings, and, if question (i) is answered in the negative, (ii) whether the relevance of the document is prima facie such as to justify its introduction into the proceedings (see also T. 2020/09).

In T. 1019/92 the board reached the conclusion that the fact that an opponent, after the end of the opposition period, subsequently submitted prior art material originating from itself, did not constitute an abuse of the proceedings in the absence of evidence that this was done deliberately for tactical reasons. The board admitted the late-filed document into the proceedings.

In T. 330/88 the board held that the right to be heard (Art. 113(1) EPC 1973) had not been contravened by virtue of a relevant document being submitted late during oral proceedings. The representative was given sufficient time during the oral proceedings held on two consecutive days to consider this document, consisting of only seven pages including the claim page and two figure sheets.

In T 671/03 the opposition division did not admit documents D6 to D16 into the proceedings, stating that they had been filed more than two years after the expiry of the opposition period and were prima facie not so complete as to substantiate the alleged prior use. Three more documents were filed during the appeal proceedings. However, it was not apparent to the board that the submission of documents D6 to D19 had been deliberately delayed for tactical reasons. It therefore held that the late filing was not an abuse of procedure. Documents D6 to D19 could therefore not be disregarded without considering their relevance. Following a detailed examination of the relevance of the various documents, the board concluded that only D18 could be admitted into the proceedings because it was prima facie highly relevant (T 1182/01, T 1029/05).

In T 151/05 the fact that the appellant relied first on prior use 2 and then, after having realised that this argument was not sufficiently substantiated, on other evidence for demonstrating the common general knowledge was seen by the board as a misjudgement but not as an abuse of the proceedings. Consequently, the board considered the relevance of the documents.

In T 1757/06 the opponent (Dow chemical) submitted a patent publication filed by Dow Italia two months before the oral proceedings before the board of appeal. The board held that the opponent and the applicant were separate corporate entities, but nevertheless it would be expected that companies of the same commercial group would have knowledge of their own patent documents. Normally the attempt of a party to file at a late stage one of its own publications will fail, as this is considered to be an abuse of procedure. Although in this case the board did not find that there had been an abuse, it pointed out that the filing at a very late stage of a document that the opponent should have been aware of from the outset of the proceedings could not be condoned.

b) Abuse of procedure (yes)

In some cases the boards of appeal have disregarded late-filed material on the grounds of abuse of procedure.

In T 951/91 (OJ 1995, 202) the board refused to take account of late-filed evidence **even before it was actually submitted** and pointed out that the discretionary power given to the departments of the EPO pursuant to Art. 114(2) EPC 1973 served to ensure that proceedings could be concluded swiftly in the interests of the parties, the general public and the EPO, and to forestall tactical abuse. Parties had to take into account the possibility that late-filed material would be disregarded and do their best to submit the facts, evidence and arguments relevant to their case as early and completely as possible. The board held that the submission of further fresh experimental data proposed to be filed by the appellant (opponent) some 20 months after the statement of grounds of appeal had been filed as an abuse of procedure.

In T 496/89 the board pointed out that the late introduction of documents and of other matter into the appeal proceedings is inimical and contrary to the public interest, quite apart from being unfair to the other party. Attempts by either party to spring a surprise on the other by deliberate late-filing, as well as inadvertent omissions to present arguments

and the evidence needed to support them, ran counter to the spirit and intent of the Convention (see also T. 430/89, T. 270/90, T. 741/91, T. 135/98).

The board in T. 718/98 decided that a party's introduction, at a very late stage of the proceedings, of evidence which could have been filed much earlier, as a strategic measure to improve its own case against the opposing party, amounted to an abuse of procedural rights and was therefore rejected independently of the possible relevance of the evidence (see also T. 169/04).

In T. 446/00, the board identified various forms of behaviour as abuses of procedure, including non-compliance with a procedural direction of the board requiring a party to take a certain step or steps. It was also an abuse of procedure for a party to adopt an unequivocal position on an issue and subsequently to depart from that position without explanation. That applied particularly, but not solely, in contested inter partes proceedings, in which another party was entitled to rely on that position as part of the case it had to meet (see also T. 762/07).

In T. 215/03 the appellant (opponent) sought to rely on a document (D24) filed approximately one year after commencing the appeal proceedings together with 25 other documents (in total about 450 pages of technical literature). The board stated that under the particular circumstances of the case, that the belated submission of evidence was not justified. To submerge, at such a late stage of proceedings, the other party and the board under a deluge of paper amounted to an abuse of procedure. The board thus decided not to admit this evidence into the proceedings regardless of its possible technical relevance.

4.13.5 Late submission of experimental data

a) Test reports admitted into the proceedings

In T. 192/09 the late filing of the additional experimental report could not be seen as an abuse of procedure. The new results had been submitted one month before the oral proceedings, in accordance with the instructions of the board. This had provided the respondent with adequate time to examine the data, decide if counterexperiments were necessary and assess whether it was feasible to provide these within the available time.

In T. 317/10 the board admitted into the proceedings a late-filed test report which had been filed shortly before the scheduled oral proceedings, finding that its late submission did not raise issues which the board or the respondent could not reasonably be expected to deal with without adjournment of the oral proceedings. Similarly, in T. 596/11, in view of the prima facie highly relevant nature of the results in a test report, and the fact that no objections to their lateness, correctness or admittance had been raised by the respondent, the board admitted them into the proceedings.

b) Test reports not admitted into the proceedings

In some cases, experimental data submitted shortly before the oral proceedings before the boards of appeal was found to be late filed and so inadmissible under Art. 114(2) EPC.

The reason invoked was that the handling of such data was more cumbersome and time-consuming than that of scientific publications, since it usually called for counter-experiments (T 342/98, T 120/00, T 157/03, T 311/10). In T 760/05 the board confirmed that filing an experimental report shortly before the date indicated by the board as the ultimate date for filing submissions ran counter to the principle that sufficient time should remain for the adversary to study it and perform counter-experiments. Similarly, in T 569/02, the board held that comparative experiments normally required careful consideration by the other party, including discussions with technical experts, who could not be expected to be immediately available. It might also be necessary for the other party to repeat the tests or perform other tests themselves. The board did not consider that the **relevance of the tests** played a role, since even relevant evidence of this type should not be filed at such a late stage in the proceedings.

Moreover, if oral proceedings have been arranged in inter partes proceedings, experiment results must be submitted sufficiently well in advance for the other party to have the opportunity to perform counter-experiments (e.g. T 270/90, OJ 1993, 725; T 939/90; T 375/91; T 685/91; T 305/94; T 245/10). Very late submission of experiment results (seven weeks before the oral proceedings) is contrary to a fair and expedient procedure (T 375/91, T 1008/05). In T 832/08, the board found that, where comparative experiments were submitted, the other parties had to be afforded sufficient time, so as not to breach their right to equal treatment.

In T 356/94 the board pointed out that taking into consideration comparative tests presented on the same day as oral proceedings were held could constitute an infringement of the other party's right to be heard, since the latter had had no material opportunity to check them (see also T 481/00, T 567/02).

4.13.6 Public prior use

a) No consideration of late-filed evidence of public prior use

The boards began early on in their case law to set strict standards for the admissibility of late-filed evidence of public prior use by the opponent. On the basis of Art. 114(2) EPC 1973, they refused to include late-filed evidence in the proceedings where, in the specific circumstances, there had been an abuse of procedure and a breach of the principle of good faith. In such cases they chose to refrain from examining the **potential relevance** of the submission (see T 17/91; T 534/89, OJ 1994, 464 and T 211/90). In T 985/91 the board took the view, with reference to T 17/91, that late-filed documents should only be admitted into the proceedings under certain circumstances if they related to alleged prior use.

In T 17/91, an allegation of prior use based on the opponents' own activities had been filed two years after the expiry of the opposition period, with no good reason for the delay. This, in the board's view, constituted an abuse of the proceedings and a breach of the principle of good faith. Irrespective of its potential relevance, the allegation was therefore to be disregarded under Art. 114(2) EPC 1973.

Taking a similar line, the board ruled in **T. 534/89** (OJ 1994, 464) that an objection based on prior use by the opponents themselves which was raised only after the expiry of the opposition period, although the factual circumstances were known to the opponents and there was nothing to prevent the objection being raised during that period, constituted an abuse of procedure.

Four weeks before the oral proceedings in **T. 211/90** the appellant alleged public prior use for the first time. However, the evidence was already familiar to the appellant before expiry of the opposition period. The board held that the fact that the appellant was unaware of the relevance of this evidence, even though familiar with it at the time of filing the opposition, did not justify its introducing the evidence into the proceedings for the first time at such a late stage – irrespective of the reasons why it did not become aware of the potential relevance of this material until then. The board therefore decided not to consider this material in the further proceedings, without examining its potential relevance.

In **T. 691/12** the board observed that a prior-use allegation first submitted in the appeal proceedings could not be admitted and considered as prior art unless it met at least the following three conditions: (a) it did not involve an evident abuse of procedure; (b) the prior use as alleged had prima facie to be so relevant that it cast doubt on the validity of the patent; and (c) the prior use had to be fully proven, requiring no further investigation to establish its nature or context. In the case in point these conditions were not met (see also **T. 1847/12**, **T. 63/13**).

In **T. 2393/13** the board decided to disregard an unsubstantiated allegation of prior use. Under **Art. 12(4) RPBA 2007**, facts and evidence not only had to be submitted at the appropriate time; they also had to meet the requirements in **Art. 12(2) RPBA 2007**, i.e. they had to be complete. In other words, all the facts useful to establish when the prior use happened, what was used and the circumstances of that use should have been submitted to the board because only if it had had a complete case that adequately set out the relevant facts, evidence and arguments could it have usefully examined the allegation of prior use and come to a decision.

In **T. 481/99** the board said that the principle that late-filed facts, evidence and related arguments should only exceptionally be admitted into the proceedings by the opposition division (see e.g. **G. 9/91**, OJ 1993, 408 and **T. 1002/92**, OJ 1995, 605) did not imply that a late-filed allegation of prior use, which would be relevant if proven, was to be automatically disregarded on the ground that the new facts first needed to be established by taking evidence. However, if the submissions and/or documents relating to the late allegation of prior use showed inconsistencies or even contradictions, the deciding body was entitled to disregard the alleged prior use pursuant to **Art. 114(2) EPC 1973** without further enquiries.

In **T. 380/00** the appellant (opponent) relied for the first time in the statement of the grounds of appeal on the non-confidential disclosure of technical features of the invention by an engineer during a job interview. The board considered that the alleged public prior use by the engineer was too poorly substantiated to justify further investigation of the matter.

On the issue of documents relating to prior use submitted during appeal proceedings, the board in T. 508/00 ruled that poor communications within a company or a group of subsidiary companies did not constitute adequate and acceptable grounds for allowing the late submission of evidence concerning alleged prior use (see also T. 443/09).

In T. 1914/08, justifying why these documents had not been submitted until more than two years later and only shortly before the date set for oral proceedings, the respondent stated that it had been experiencing financial difficulties in the interim period. The board exercised its discretion in this regard and considered that, given the documents had been referred to and therefore available to the respondent from early on, their late filing without a justification which was causally linked to the proceedings was not in keeping with a proper conduct of the procedure. The late-filed documents were thus not admitted into the proceedings.

In T. 884/14 the board held that the opponent's allegation of public prior use in the form of a product from its own company that it had not manufactured for a long time could certainly not be admitted if it had failed to look for that product from the outset, even though it had known of its existence and should have looked for it in its files in good time. That it had mistakenly believed there was no evidence could not excuse its failure to do so.

In T. 1835/11, in its statement of grounds the appellant submitted new prior art – an alleged public prior use – without explaining why it had not filed it earlier. As the claims had not been amended in substance and the alleged prior use concerned sales of the appellant's own products, the board took the view that the appellant should have been able to file this prior art during the opposition proceedings.

In T. 450/13 the board stated that not substantiating a public prior use in opposition proceedings but attempting to substantiate it in the statement of grounds of appeal could lead to the inadmissibility of such a line of attack under Art. 12(4) RPBA 2007.

Likewise in T. 444/09, T. 12/11, T. 1295/12 and T. 2361/15 no account was taken of a public prior use alleged for the first time in appeal proceedings.

b) Consideration of late-filed evidence of public prior use

In T. 628/90 an allegation of public prior use, which was filed for the first time in appeal proceedings and was adequately substantiated, was taken into account because of its possible relevance to enable thorough consideration to be given to the patentability of the subject-matter of the contested patent (see also T. 150/93, T. 947/99).

In T. 947/99 the appellant submitted with regard to the circumstances of the late claim concerning public prior use that he had only become aware of the possibility that there might have been public prior use in the course of proceedings conducted in parallel before the Patents Court in London at a meeting. In the board's opinion, the appellant had given a very clear explanation and sound reasons as to why the claim of public prior use had been made and why it could not have been made any earlier.

In T. 571/08, the board held that documents submitted by the appellant to support a new prior use, as part of a challenge to one of a set of new auxiliary requests filed shortly before the oral proceedings before the opposition division, had not been filed belatedly. The appellant had, in response to the opposition division's decision to allow the auxiliary request with the additional feature in question, filed the documents at the earliest possible opportunity, namely with its notice of appeal.

4.13.7 Admission of submissions relating to Article 55(1)(a) EPC

In T. 1682/15, with the statement of grounds of appeal, the appellant, for the first time, requested that D(28) be disregarded, since its disclosure was due to an evident abuse within the meaning of Art. 55(1)(a) EPC. The submissions in relation to Art. 55(1)(a) EPC were not presented before the opposition division, although D(28) had been filed by the opponent (respondent) with its notice of opposition and, throughout the opposition proceedings, D(28) was considered to be highly pertinent. Moreover, all the evidence filed by the appellant in support of the alleged evident abuse lay within its own knowledge and sphere and had already been available to it when D(28) was first cited in the opposition proceedings. Accordingly, the board could not see any reason which could have prevented the appellant from already presenting its submissions concerning an evident abuse during the opposition proceedings (Art. 12(4) RPBA 2007).

5. Parallel proceedings

The board in T. 18/09 stressed that, in the case of parallel proceedings before a national court and the boards of appeal, parties should inform both tribunals of the position as early as possible and ask the appropriate tribunal for acceleration in order to avoid duplication of proceedings. Whether acceleration is requested by one party, or both or all parties in agreement, or by a national court, all parties must accept a strict procedural framework including short time limits. It must also be understood that acceleration can have no effect on the equal treatment of all parties and cannot confer any advantage on any one party.

6. Termination of appeal proceedings

Under the EPC it is possible to withdraw a patent application, opposition or appeal. Decision J. 19/82 (OJ 1984, 6) ruled that partial withdrawal is also possible. The consequences of such a withdrawal for pending appeal proceedings are considered below.

6.1. Closure of the substantive debate

Art. 15(5) RPBA 2007 reads: "When a case is ready for decision during oral proceedings, the Chairman shall state the final requests of the parties and declare the debate closed. No submissions may be made by the parties after the closure of the debate unless the Board decides to re-open the debate."

According to the established practice, the closing of the debate marks the last moment in the oral proceedings at which parties can still make submissions.

As long ago as T 595/90 (OJ 1994, 695) it was noted that submissions filed after closure of the debate could not be taken into account unless the board decided to reopen the debate.

In T 577/11 the board stated that as to the significance of the closing of the debate, the Enlarged Board of Appeal confirmed in G 12/91 (OJ 1994, 285) that, once the debate has been closed, further submissions by the parties must be disregarded unless the department allows the parties to present comments within a fixed time limit or decides to re-open oral proceedings for further substantive debate of the issues. These considerations of principle equally apply to proceedings before the boards of appeal (cf. R 10/08, R 14/10). In the aftermath of decision G 12/91 the principle that no submissions may be made by the parties after closure of the debate unless the board decides to re-open it is explicitly included in current Art. 15(5) RPBA 2007. Hence, the closing and also, as a rule, the re-opening of the debate are at the board's discretion.

In T 1629/06, the day before the oral proceedings, the appellant announced its intention not to attend the oral proceedings and requested, without reasons, that the procedure be continued in writing. The board dismissed the request.

6.1.1 Decision taken as the file stands

In T 784/91 the board took the view that if in ex parte proceedings the appellant indicated that he did not wish to comment on the case, this could be construed as signifying agreement to a decision being taken on the case as the file stood.

6.1.2 Proceedings after delivery of the decision

In T 843/91 (OJ 1994, 818) it was stated that once a decision had been taken the board was no longer empowered or competent to take any further action apart from drafting the written decision (see also T 296/93, OJ 1995, 627, where the board disregarded statements filed after the announcement of the decision, and T 515/94). In T 304/92 the respondent's request to file new claims after the chairman had announced the board's decision was rejected, but recorded (with the response) in the summary of facts.

However, in T 212/88 (OJ 1992, 28) a request for apportionment of costs submitted after the substantive decision had been announced at the end of the oral proceedings had been, exceptionally, admitted. Although the practice of the boards was that all requests by parties, including any request as to costs, should be made before any decision was announced in oral proceedings, this practice had not been published and so there was no reason why parties or their representatives should have been aware of it. In T 598/92 an error in a claim was corrected at the request of the appellant one day after the decision was delivered at the end of oral proceedings.

After the board in T 1518/11 had announced its decision to dismiss the appeal against the refusal of the application in suit and closed the oral proceedings, the appellant stated by letter that the appeal was withdrawn. However, since the decision had already been announced at the oral proceedings and thereby became effective on that day, the appeal

proceedings had already terminated (following T.843/91, OJ 1994, 818) and the appellant's submission made after the announcement of the board's decision was without any legal effect. Furthermore, a statement of withdrawal of appeal made by the (sole) appellant after the final decision of the board had been announced at oral proceedings did not relieve the board of its duty to issue the decision in writing, setting out the reasons for the decision, and notify the appellant of it (following T.1033/04).

6.2. Interlocutory decisions of a board

The finding that an appeal is admissible may be given in an interlocutory decision. Art. 110 EPC and R. 101 EPC show that the boards have to examine whether an appeal is admissible before considering its merits. An interlocutory decision might be appropriate where the points of law concerning admissibility are of general significance and require a speedy decision (see T.152/82, OJ 1984, 301; and also T.109/86 of 20 July 1987). (There is an exception where the appeal is clearly unallowable but admissibility cannot be checked, see chapter V.A.2.8. "Cases where admissibility of appeal need not be considered").

The boards have also issued interlocutory decisions on re-establishment in respect of the time limits for appeal (T.315/87 of 14 February 1989 and T.369/91, OJ 1993, 561), on the admissibility of an opposition (T.152/95 of 3 July 1996), and to inform the public rapidly (pending the final decision) that a mention of grant in the European Patent Bulletin was incorrect because of the appeal's suspensive effect (J.28/94, OJ 1995, 742). Referral of a point of law to the Enlarged Board is also an interlocutory decision.

6.3. Withdrawal of the appeal

6.3.1 Article 114(1) EPC and withdrawal of the appeal

Under Art. 114(1) EPC the EPO shall examine the facts of its own motion in proceedings before it. The question has arisen whether this is relevant in the event of the withdrawal of the appeal.

In G.7/91 and G.8/91 (OJ 1993, 346 and 356) the Enlarged Board of Appeal ruled that as far as the substantive issues settled by the contested decision at first instance were concerned, appeal proceedings – whether ex parte or inter partes – were terminated when the sole appellant withdrew his appeal. The Enlarged Board found that the provision of Art. 114(1) EPC 1973 did not allow for continuation of the proceedings once the appeal had been withdrawn. This was evident from the legislative rationale of the EPC. If Art. 114(1) EPC 1973 applied to all withdrawal situations, then the R.60(2) EPC 1973 exception for oppositions would be superfluous. Nor was withdrawal of the appeal covered by "relief sought" within the meaning of Art. 114(1), second part of sentence, EPC 1973 to which the EPO would not be restricted in examining the facts; it constituted a procedural act not requiring the consent of the relevant board (point 8 of the Reasons). The appeal procedure was that proper to an administrative court, so any exception from general procedural principles such as the "principle of party disposition" had to be supported by much weightier grounds than in administrative proceedings. Neither Art. 114(1) EPC 1973

nor the interests of the general public or the respondent constituted arguments against this interpretation. Art. 114(1) EPC 1973 was restricted to the examination of the facts. The interests of the general public were primarily safeguarded by the opposition system. It could be assumed that the patent did not disturb those who had not filed an opposition, so there was no need to continue the appeal proceedings in order to safeguard their interests. Nor were the respondents' interests any more in need of protection if they had not themselves filed an appeal, as was explained in detail in G 2/91 (OJ 1992, 206). Finally, the Enlarged Board pointed out that when the sole appellant withdrew his appeal, the suspensive effect of the appeal lapsed and the opposition division's decision thus became final as regards the substantive issue.

6.3.2 Board's duty to issue decision when appeal is withdrawn after the decision is announced

A statement of withdrawal of appeal made by the (sole) appellant after the final decision of the board has been announced at oral proceedings does not relieve the board of its duty to issue and notify to the appellant the decision in writing setting out the reasons for the decision in order to conclude the decision-taking procedure triggered by the announcement of the final decision at the oral proceedings, which had already become effective under G 12/91 (OJ 1994, 285) (T 1033/04).

6.3.3 Board's powers to decide on issues after withdrawal of the appeal

If the sole appellant says he has withdrawn his appeal, but the parties are in dispute as to whether he did so admissibly, then the board is empowered to rule on that issue (T 659/92, OJ 1995, 519).

After withdrawal of an appeal it is still permissible to decide on ancillary questions (T 85/84). Thus in T 21/82 (OJ 1982, 256), J 12/86 (OJ 1988, 83), T 41/82 (OJ 1982, 256) and T 773/91, the board of appeal dealt with requests for reimbursement of the appeal fee filed after withdrawal of the appeal, and in T 117/86 (OJ 1989, 401), T 323/89 (OJ 1992, 169), T 614/89 and T 765/89 with requests for apportionment of costs.

6.3.4 Partial withdrawal of appeal by sole appellant and opponent

Partial withdrawal of an appeal by the sole appellant (opponent) following an allowable limitation of the patent's subject-matter under Art. 123 EPC 1973 during appeal proceedings deprived the board of its discretionary power to examine the substantive merits of the remaining, limited subject-matter. The patent had to therefore be granted in its amended form (T 6/92 and T 304/99). In T 127/05 the board recalled that an opponent who was the sole appellant had the possibility of withdrawing his appeal if he found that the outcome would be disadvantageous to himself. In G 7/91 and G 8/91 (OJ 1993, 346 and 356) the Enlarged Board of Appeal ruled that as far as the substantive issues settled by the decision at first instance were concerned, appeal proceedings were terminated when the sole appellant withdrew his appeal. It followed that an opponent who was the sole appellant could, if he so wished, force the non-appealing patent proprietor to "live with" a deficiency which he had introduced. A patent proprietor who filed an appeal could

prevent himself from being placed in such a situation. The board also did not agree that decision G.1/99 (OJ 2001, 381) restricted amendment to a response to an objection first raised in appeal proceedings.

6.3.5 No withdrawal of appeal with retrospective effect

The mere fact that a representative had filed a notice of appeal before taking note of the appellant's adverse instruction did not justify a correction to the effect that no appeal had been filed. The request amounted to a withdrawal of the appeal with retrospective effect, which was not provided for in the EPC (T.309/03, OJ 2004, 91).

6.3.6 Request for withdrawal of appeal to be unambiguous

A notice of abandonment of the patent was held to be tantamount to withdrawing the appeal in T.1003/01. In T.60/00, however, the appellant's statement that it had decided not to pursue the appeal was not regarded as unambiguous withdrawal of the appeal, derived from the principles laid down in earlier case law: effective withdrawal does not depend on the term "withdrawal" being used (J.7/87, OJ 1988, 422); a request for withdrawal should only be accepted without question if it is completely unqualified and unambiguous (J.11/80, OJ 1981, 141); and where any doubt as to a party's intent exists, the declaration made can be construed as a withdrawal only if the related subsequent facts confirm that such is the party's true intent (J.11/87, OJ 1988, 367). In T.2347/11 of 16 October 2012 the letter of "withdrawal" of an application in this case did not relate unambiguously and without doubt to the case at issue and thus could not be understood as withdrawal of the appeal. See also T.2514/11.

According to the board in T.1244/08, where an appellant holding a patent revoked by an opposition division stated that it did not agree with the text of the patent as granted and was not proposing an amended one, this was tantamount to a withdrawal of the appeal and immediately brought the proceedings to an end.

6.3.7 Conditional withdrawal of appeal

Procedural declarations may be made with the proviso that certain conditions are met, as long as a case is already pending (J.16/94, referring to Art.108, first sentence, and R.64(b)EPC 1973; T.854/02) and these conditions do not concern facts outside the proceedings (T.502/02). Thus, whereas a conditional appeal is not possible, the conditional withdrawal of an appeal may be valid (T.6/92, T.304/99). However, the withdrawal of an appeal can take effect only if the appeal is still pending (T.1402/13 of 25 February 2016).

When an appellant has clearly withdrawn his appeal, the appeal proceedings can be closed without a reasoned written decision, even if the appellant has appended to his declaration of withdrawal an obviously non-allowable request for a refund of the appeal fee (T.1142/04).

6.3.8 Correction of withdrawal of appeal under Rule 139 EPC

In T 610/11 the board came to the conclusion that the declaration submitted by the appellant's representative to withdraw the appeal could not be considered to contain an error to be corrected under R 139 EPC. The board stated that the representative did not make any error when declaring the withdrawal of the appeal. Rather, the appellant gave instructions to the representative, which, as it turned out later, did not represent its true intention. In other words, an error occurred during the process of deciding how the appellant should deal with the application. The board referred to the jurisprudence of the boards of appeal according to which, as a general rule, an applicant is bound by its procedural acts notified to the EPO, provided that the procedural statement was unambiguous and unconditional (cf. J 11/87, OJ 1988, 367; J 27/94, OJ 1995, 831), and is not allowed to reverse these acts so that they can be considered as never filed (J 10/87, OJ 1989, 323; J 4/97). The board concluded that in cases where a professional representative acts on behalf of an appellant, an error or mistake in a procedural declaration before the boards of appeal can be corrected under R 139 EPC only if this error or mistake has been made by the representative himself (see also J 19/03).

6.4. Deemed withdrawal of patent application

If a European patent application is finally deemed to be withdrawn after an admissible appeal against a decision refusing it has been filed, the appeal can usually be considered disposed of, because there is no possibility of a European patent being granted for the application. However, where, as in the case before the board, the sole aim of the appeal is to obtain a finding by the board that a substantial procedural violation occurred in the first instance proceedings, such that the appealed decision is to be set aside and the appeal fee reimbursed, the appeal cannot be dealt with in this way. In these circumstances the appellant has a legitimate interest in receiving a decision on the merits of the appeal (T 2434/09).

7. Remittal to the department of first instance

7.1. General

Under Art. 111(1) EPC, the boards, having examined the allowability of an appeal, decide on it either by exercising any power within the competence of the department which was responsible for the decision appealed or by remitting the case to that department for further prosecution.

Which of these two options the board chooses will depend on the specific facts of the case before it and is a matter for its discretion.

Under Art. 11 RPBA 2007, a board is to remit the case to the department of first instance if a fundamental deficiency is apparent in the first-instance proceedings, unless special reasons present themselves for doing otherwise; on this see chapter V.A.7.7.

7.2. Exercise of discretion to remit

7.2.1 No absolute right to have issue decided on at two instances

It is the boards' settled case law that parties do not have a fundamental right to have their case examined at two levels of jurisdiction. Accordingly, they have no absolute right to have each and every matter examined at two instances; Art. 111(1), second sentence, EPC leaves it instead to the board's discretion to decide on an appeal either by exercising any power conferred on the department of first instance or by remitting the case to that department (R 9/10, T 83/97, T 133/87, T 557/94, T 402/01 of 21 February 2005, T 399/04, T 1252/05, T 1363/10). In choosing what to do, the board must consider the circumstances of the individual case, also bearing in mind other factors such as the need for procedural economy (T 392/89 of 3 July 1990, T 1376/07, T 1253/09, T 2266/13). It is well-recognised that any party should, where possible, be given the opportunity to have two readings of the important elements of a case (T 1084/03, T 1907/06, T 286/09).

The primary function of an appeal is to consider whether the decision issued by the first-instance department was correct. Hence, a case is normally remitted if essential questions regarding the patentability of the claimed subject-matter have not yet been examined and decided on by the department of first instance (see e. g. T 1026/02, T 2023/07, T 1444/13). However, the board may, in the interests of procedural economy, decide the case even if a decisive issue has not been dealt with by the department of first instance (T 942/07, T 1376/07). This is the case even if as a consequence the patent is revoked for the first time by the board of appeal (see e.g. T 557/94; G 1/97, OJ 2000, 322; T 839/05).

7.2.2 TRIPS

Nor does Art. 32 TRIPS limit the board's discretion concerning remittal. In T 557/94 the board held that Art. 32 TRIPS (which provides for the judicial review of any decision to revoke a patent) did not oblige the reviewing instance to remit the case to the department of first instance, where the department of first instance did not revoke the patent and the reviewing instance intended to deviate from the decision of the first instance. Art. 111 EPC 1973 empowered the board to decide on the merits of the case without restriction and it would be alien to at least the majority of legal systems in the EPC contracting states to limit the power of the reviewing instance in such a way that – dependent upon the "result" of the decision under attack – it would be bound to remit the case to the department of first instance (see also G 1/97, OJ 2000, 322).

7.2.3 Criteria applied when exercising discretion

When deciding whether or not to remit a case, the boards consider a number of other factors, such as the need for procedural economy (see chapter V.A.7.3. below), whether new facts and evidence have been submitted (see chapter V.A.7.5. below), whether the first-instance proceedings were vitiated by a substantial procedural violation (see chapter V.A.7.7. below), the parties' requests, the need to avoid economic uncertainty, the parties' interest in examination at two instances, the right to a fair hearing and whether or not there

has been comprehensive assessment of the case during the proceedings at first instance (see chapter V.A.7.4. below).

7.3. Procedural economy

7.3.1 Delay in procedure

The boards have frequently cited a general interest in bringing proceedings to a close within a reasonable period; see e.g. T.594/00 and T.343/01. In T.1913/06, for instance, a request for remittal was refused on the basis that procedural efficiency was imperative in view of the public interest in a streamlined and efficient procedure.

Some boards have emphasised that remittal of a case results in a substantial delay in the procedure, which keeps the public in uncertainty about the fate of the patent for several more years. It also involves additional costs for all the parties and the EPO (see e. g. T.966/95, T.577/97, T.111/98, T.98/00, T.186/01). It is also generally accepted by the boards that a delay in the first-instance proceedings can be considered a "special reason" for not remitting a case within the meaning of Art. 11 RPBA 2007 (T.1548/11, T.1423/15).

7.3.2 Final decision after patent expiry

Another possible reason for not remitting a case is that a final decision could not be expected until after the patent has expired (T.249/93, T.1200/08). In T.340/12 the board took into consideration the considerable age of the patent, which would lapse in less than two years. The board saw no public interest in remitting the case, which would leave open the question of validity for several more years.

7.3.3 Obiter dicta

Obiter dicta are sometimes included in first-instance decisions in order to avoid remittal. In the interests of overall procedural economy and effectiveness, the board in T.473/98 (OJ 2001, 231) also found it entirely appropriate and desirable that an opposition division should include in the reasons for a revocation decision pursuant to Art. 102(1) EPC 1973 employing the standard decision formula, by way of obiter dicta, findings which could obviate a remittal in the event of the revocation being reversed on appeal.

7.3.4 Requests for remittal

There is no need for a party to request that a case be remitted; remittal is at the boards' discretion and can be ordered without any request. Not even Art. 11 RPBA 2007 requires a request for the special case of remittal on account of a fundamental procedural deficiency (T.1805/14).

According to T.265/05, the board should take account of its particular circumstances and the parties' wishes (here the parties requested the board to decide the case).

In T. 27/14 the board stated that, irrespective of several substantial procedural violations, which in the board's opinion constituted fundamental deficiencies within the meaning of Art. 11 RPBA 2007, the appellant had explicitly requested that, instead of remitting the case to the opposition division, the board should itself deal with the issue of sufficiency of disclosure. Against the background of the respondents having no objections in this regard and the issue of sufficiency of disclosure having been discussed in detail in the written submissions in the appeal proceedings, the board did not remit the case.

The board in T. 1864/09 refused a request for remittal because it had not been filed until the end of the oral proceedings, by which time the board had already completed its substantive examination, including a thorough check of the amended claim for compliance with Art. 56 and 84 EPC.

7.3.5 Commercial uncertainty

In T. 229/90 the board stated that continuing commercial uncertainty cannot be in the general public interest. For this reason, the board must always balance this general public interest against the fundamental legal requirement that it should act only within its appellate role, as provided for by the EPC, and not step into the shoes of the department of first instance.

The interest of the public and the parties in having the proceedings brought to a swift close and the need to prevent continued economic uncertainty can generally be considered good reasons for not remitting a case (T. 1376/07).

In T. 987/13 the appellant argued that remitting the case to the examining division would prolong the proceedings, which would go against its economic interests. The board stated that the examining division might deem it necessary to reconsider the choice of the closest prior art in view of the claim amendments or even to carry out an additional search. Therefore, the appellant's economic interests were held to be of secondary importance. The board also noted that the examination proceedings could be accelerated at the applicant's request.

7.3.6 Presentation of new points of view

If no new documents are introduced, but merely arguments presented from a different point of view, or if the claims are maintained on the basis of an auxiliary request which the department of first instance has already indicated that it would be prepared to accept, then the desideratum of keeping the procedure as short as possible requires that there should be no remittal (T. 5/89, OJ 1992, 348; T. 392/89 of 3 July 1990 and T. 137/90). See also T. 1210/05.

7.4. Non-examined patentability issues

Since the main purpose of the appeal proceedings is to review the decision of the department of first instance, the boards normally refer the case back if essential questions regarding the patentability of the claimed subject-matter have not yet been examined and

decided on by the department of first instance. This applies to both ex parte and inter partes proceedings.

In particular, remittal is considered by the boards in cases where a first-instance department issues a decision against a party solely upon a particular issue which is decisive for the case, and leaves other essential issues outstanding. If, following appeal proceedings, the appeal on the particular issue is allowed, the case is normally remitted to the first-instance department for consideration of the undecided issues (see e. g. T. 1088/01, T. 870/03, T. 1019/03, T. 79/04, T. 1907/06, T. 282/12, T. 389/12).

In some ex parte cases, the boards have refrained from deciding the whole case because the examining division had not taken an appealable decision on all patentability requirements (see e.g. T. 556/03, T. 561/04, T. 2062/08, T. 2009/13). Although Art. 111(1) EPC empowers the boards to go beyond the grounds of the contested decision, that does not mean they should carry out a full examination of the application for compliance with the requirements, that being a task for the examining division. In ex parte cases too, the main purpose of proceedings before the boards is to review the contested decision (see G. 10/93, OJ 1995, 172).

In the ex parte case T. 153/89 the board stated that first-instance decisions should deal with all legal obstacles to patentability. Such "complete" decisions helped to streamline proceedings by obviating the need for a remittal to the department of first instance, as the board could decide on all matters already raised at first-instance without depriving the appellant of the opportunity to have them considered at two instances (see also T. 33/93, T. 311/94).

In T. 1444/13 the board made it clear that a first-instance department should conduct as complete an examination as possible, in order to reduce the likelihood of remittal in any subsequent appeal. Thus, having regard to the clear indications provided in the first appeal and also considering that a decision revoking a patent based solely on Art. 100(c) EPC may in many cases be set aside in appeal proceedings because a new set of claims is filed, the opposition division should have examined the requirement of sufficiency of disclosure. The board decided to remit the case to the opposition division for examination of all the outstanding issues.

In T. 248/85 (OJ 1986, 261), the board observed that the department of first instance had not yet fully examined the application on the basis of the problem-solution approach and held that this alone meant the contested decision had to be set aside and the case remitted to that department without any decision on its merits.

In T. 274/88 the board agreed that where an irregularity has been remedied during appeal proceedings, the matter should still normally be remitted to the department of first instance. However, in this particular case, which was ex parte, the board did not remit because, after correction, the subject-matter of the application was patentable, the appellants had expressly waived their right to have the issues considered at two instances, and the examining division had already indicated that it was favourably disposed on the question of patentability.

7.5. Remittal where new submissions filed on appeal

7.5.1 Admission of new submissions alters legal and factual framework

The boards have held in several decisions that, if fresh evidence, arguments or other material filed late on in the appeal proceedings result in a case substantially different from that decided at first instance, the case should be remitted to the department of first instance wherever fairness to the parties so dictates. See e.g. T 97/90, OJ 1993, 719; T 847/93. The boards will normally exercise their discretion under Art. 111(1) EPC to remit if the submission of new facts and evidence or a substantial amendment of the claims significantly alters the legal and factual framework and so results in a "fresh case" (T 908/07, T 340/12).

7.5.2 Opposition appeal proceedings

If a new citation (such as an anticipatory document) is filed during opposition appeal proceedings, the question arises whether the case is to be remitted to the department of first instance. In board of appeal case law (see T 258/84, OJ 1987, 119; T 273/84, OJ 1986, 346; T 215/88, T 611/90, OJ 1993, 50; T 621/90, T 166/91, T 223/95), the prevailing view is that, if a document filed for the first time in opposition appeal proceedings is relevant enough to be taken into consideration, the case should as a rule be remitted to the department of first instance so that the document can be examined at two levels of jurisdiction and the patent proprietor is not deprived of the possibility of subsequent review. However, it is established board of appeal practice that where the board comes to the conclusion that the document is not such as to prejudice the maintenance of the patent, the board may itself examine and decide the matter under Art. 111(1) EPC 1973 (T 253/85; T 326/87, OJ 1992, 522; T 416/87, OJ 1990, 415; T 626/88; T 457/92; T 527/93; T 97/90, OJ 1993, 719).

In T 966/95 the board stated that the attribution of a discretionary power would be meaningless if the boards were ipso facto obliged to remit the case whenever new matter was raised in appeal proceedings, irrespective of the nature of such matter. Thus, Art. 111 EPC also conferred the power upon a board of appeal to act inter alia as the first and only instance in deciding upon a case, taking into account a document which was only filed in appeal proceedings, without the possibility of further appellate review. Remittal due to the admission of a new document could, however, be considered if, without remittal, a party would not have had sufficient opportunity to defend itself against an attack based on the new document, or if the factual framework had changed to such an extent that the case was no longer comparable with the one decided at first instance (T 577/97, see also T 111/98, T 98/00, T 402/01 of 21 February 2005, T 148/05).

7.5.3 Ex parte appeal proceedings

In ex parte appeal proceedings too, if a document is relied upon for the first time during the appeal proceedings and it is admitted because it is relevant, the case has normally been remitted to the department of first instance (see e.g. T 28/81, T 837/91, T 389/94).

In T.648/12 the board, in a communication, introduced a new citation (D6) into the proceedings which contained archived screen shots from a manufacturer's website. It appeared from D6 that the portable training device was sold before the earliest priority date claimed for the application in suit (training device using electronic workout scripts). D6 seemed to be highly relevant for the assessment of novelty and inventive step. The board remitted the case to the department of first instance.

In T.991/01 the examining division sent the appellant a computer-generated translation of a Japanese patent application after the oral proceedings before it, and no copy was kept in the file, so that the board of appeal was unaware of its existence until the appellant referred to it in the oral proceedings before the board. The case was remitted.

In T.1343/12 since it appeared that the assessment of inventive step hinged to a great extent on the true disclosure of D1, the case was remitted to the examining division for re-consideration of the issue of inventive step in the light of a certified translation thereof.

In T.104/15 the appellant requested that the case be remitted to the examining division for further prosecution in the light of newly introduced document D8. Document D8, originating from the appellant, was introduced by the board in reaction to fresh arguments submitted with the statement setting out the grounds of appeal. The board decided not to remit the case and referred to G.10/93 (OJ 1995, 172) stating that, in ex parte proceedings (rather than in inter partes proceedings), the boards of appeal are restricted neither to examination of the grounds for the contested decision nor to the facts and evidence on which the decision was based. The board also was in a position to properly judge the technical content of the claims and the newly introduced prior-art document, and to deal with the merits of the case without remittal.

7.5.4 Patent at risk

It is settled case law that a remittal to the department of first instance is especially desirable where a new citation puts maintenance of the patent at risk or admission of a new objection would result in its revocation. Any re-assessment of the case then necessary should normally be carried out at first instance (T.326/87, OJ 1992, 522; see also T.97/90, OJ 1993, 719; T.724/03; T.133/06).

The board in T.638/89 followed this line of argument and remitted the case to the opposition division after admitting late-filed but highly relevant documents.

But where an entirely new objection does not prejudice maintenance of the patent, the board can refuse to admit it or else admit it and decide against the opponent (T.97/90). In cases where an opponent has first cited a prior-art document at the appeal stage of opposition and the board considers it to be the closest prior art and so admissible but not such as to prejudice maintenance of the patent, it may itself examine and decide the matter (T.416/87, OJ 1990, 415).

That remittal is not automatic where the patent is at risk is shown by T.1060/96. Here the respondent had had one year to challenge consideration of a document submitted by the

appellant (opponent) during the appeal procedure and one year prior to oral proceedings. Moreover, the document was technically very simple and merely reinforced the teaching of known documents. The board refused the respondent's request for remittal and revoked the patent.

In T. 258/84 (OJ 1987, 119), the board found it necessary to consider late-filed citations on account of their considerable relevance. As a rule, this would have meant remitting the case to the department of first instance (here, the opposition division) so as not to deprive the respondent (proprietor) of a hearing at a first level of jurisdiction but it had not disputed the new citations' relevance or objected to their late submission, so the board could see no reason to do so and ultimately revoked the patent itself.

7.5.5 Remittal to department of first instance ordered

In T. 611/90 (OJ 1993, 50), the appellant had first alleged public prior use, on the basis of new evidence, in its statement of grounds of appeal. For the board, this amounted to a fresh case which had to be remitted. It pointed out that, in such circumstances, the interest of the public and the parties in having the proceedings speedily concluded could be overridden by the requirement that appeal proceedings should not become a mere continuation of first-instance proceedings. In T. 147/95, the submission of a new document in support of a ground of opposition had introduced a completely new line of argument that potentially prejudiced maintenance of the patent as it then stood and so the case had to be remitted to the opposition division.

Citing T. 402/01 of 21 February 2005, the board in T. 1600/06 found that even if the patent proprietor has no automatic right of remittal after the citation of a new document, the patent proprietor's right to be heard in accordance with Art. 113(1) EPC may require remittal when, as in the case before it, the new document alters the legal and factual framework of the case significantly and a "fresh case" results.

In T. 736/01 the board stated that since it was not the function of an appeal to examine and decide upon a fresh case resulting from the newly submitted and admitted prior art, it would remit the case to the opposition division.

In T. 361/03 a document submitted by the appellant (opponent) one month before the oral proceedings fundamentally altered the factual framework of the case under appeal. The board admitted the document but held remittal justified. This had the twofold purpose of allowing this fresh case to be examined at two levels of jurisdiction and of giving the respondent a reasonable opportunity to consider possible fallback amendments and possible evidence that could be produced in defence of such amended requests.

The board in T. 125/93 admitted a highly relevant document that had been filed shortly before the oral proceedings, which had the concomitant effect of altering the factual framework of the case under appeal compared with that upon which the decision under appeal had been based. The board referred the case back to the opposition division for further prosecution.

In T.1469/07 the appellant and interveners observed that it was in the interest of the public and of legal certainty to have a final decision as quickly as possible. However, the board noted that the fresh case was caused not by the respondent but by the new evidence filed by the appellant and the interveners. Accordingly, in the exercise of its discretion, the board considered that the case against the patent had altered to such an extent that the respondent had a legitimate reason to have its full case considered at two instances (see also T.78/11).

7.5.6 No remittal to department of first instance

In T.253/85 the board admitted the late-filed document into the proceedings. The document did not introduce any new aspect but was mainly to be regarded as a complement to other documents already considered by the opposition division. The board held that there was, thus, no need to remit the case to the opposition division in order to avoid bypassing one level of jurisdiction (see also T.133/87). In T.852/90 the board rejected the request for remittal because the late-filed evidence amounted to no more than an amplification – albeit a significant one – of the case already canvassed before the opposition division.

In T.1070/96 the board stated that even though, as a rule, a case should be remitted to the department of first instance if a new document is so relevant that it has considerable influence on the decision to be taken, however, a remittal is not appropriate if the board is able to deduce from the reasoning of the decision under appeal how the opposition division would have decided had it known of the late-filed document (see also T.908/07).

In T.887/98 the board held that remittal was not justified: the appellant (patent applicant) had indeed been able to put forward his arguments in proceedings at both first and second instance, and had been given plenty of time to study a document D2 before the oral proceedings. Furthermore, the examining division had found another document to be prejudicial to inventive step, so introducing D2 into the proceedings before it would not affect its decision. Also in T.1122/03 the request for remittal was refused because the introduction of document D8 would not have altered the opposition division's decision.

In T.1349/13 the patentee requested that the case be remitted because D6 was only admitted into the proceedings on the day of the oral proceedings before the board of appeal. The board decided not to remit the case because D6, which had been filed together with the opponent's statement of grounds of appeal, could not be considered late-filed but had to be seen as an allowable reaction to the opposition division's admission of the patentee's second auxiliary request into the proceedings.

The board in T.402/01 of 21 February 2005 pointed out that a patent proprietor had no automatic right of remittal after the citation of a new document with the grounds of appeal, even if there was a change in factual framework, at least in cases where the document was filed in reaction to amendment of the claim, providing that both parties' right to a fair hearing was not jeopardised. See also T.1252/05. In T.111/98, implicitly referring to the right to be heard pursuant to Art. 113(1) EPC 1973, it was considered that remittal due to the admission of a new document should be an exception, for example if, without remittal,

a party would not have had sufficient opportunity to defend itself against an attack based on the new document or if the document's admission amounted to a substantial change in the factual framework.

Referring to T 402/01 and also T 111/98, the board in T 1493/06 agreed. In T 1493/06, the board had introduced document D7 at an early stage in the appeal procedure in a first communication, and subsequently issued another fully reasoned objection based on document D7 in the communication accompanying the summons to oral proceedings. The board, applying the criterion of T 111/98, therefore considered that the appellant had had sufficient opportunity to react to the introduction of document D7, so that remittal was not necessary in order to comply with Art. 113(1) EPC 1973.

In T 893/07 the board interpreted T 111/98 to mean that what actually appears to be essential when a board exercises its discretion to remit a case is whether the factual framework has substantially changed during the appeal proceedings. As it had not, remittal was refused.

In T 1007/05 new documents had been introduced into the proceedings and discussed. Under these circumstances the board held that it would only be reasonable to remit a case which had been extensively discussed if exceptional circumstances justified this action, for instance if the introduction of documents into the proceedings had created an entirely new situation.

See also T 577/97, T 111/98, T 98/00 and T 1092/11 for decisions where remittal was refused.

7.6. Remittal following substantial amendments to claims

According to T 63/86 (OJ 1988, 224), where substantial amendments to the claims are proposed on appeal, which require substantial further examination, the case should be remitted to the examining division. In this way, the applicant's right to appeal to a department of second instance is maintained, both in relation to the exercise of discretion under R. 86(3) EPC 1973 (now R. 137(3) EPC), and in relation to the formal and substantive allowability of the amended claims. Several boards of appeal have applied this case law in their decisions; e.g. T 501/88, T 47/90 (OJ 1991, 486), T 332/05, T 637/06, T 1818/08 (all ex parte). This case law is also applicable to inter partes cases; see e.g. T 491/03, T 2287/08.

In T 746/91 the board applied the principles laid down in T 63/86 and remitted the case to the opposition division for it to examine and decide whether the claims should be admitted and, if so, whether they complied with the provisions of the EPC. The board took this view in the particular circumstances because the opposition proceedings had themselves been comparatively brief and had not involved the holding of oral proceedings. It had thus adhered to the principle whereby it should be established swiftly whether or not a patent can be maintained.

In T.125/94 the board remitted the case to the department of first instance because the amended claims had not only substantially changed the factual framework of the contested decision, but could also require a search in an additional classification unit to determine the closest prior art. In T.230/98, too, the subject-matter of the amended claims was most probably not covered by the search and had not yet been the subject of first-instance proceedings.

According to the board in T.1201/00, if a case is likely to have to be remitted to the opposition division for it to assess the unexamined issue of inventive step, a new auxiliary request first submitted during oral proceedings before the board designed to overcome an objection of lack of novelty compared with a cited document may exceptionally be admitted and also remitted to the opposition division for final novelty examination against that document if none of the requests that took precedence can be granted for lack of novelty. The need for the department of first instance to assess inventive step against all the cited prior art means that novelty examination against one cited document would not entail a significant delay in the opposition proceedings.

In T.908/07, the board held that a late-filed claim admitted in the exercise of the board's discretion mainly because the issues raised could be dealt with without adjournment of the oral proceedings, should not normally be remitted to the department of first-instance for examination in respect of the grounds for opposition on which the first instance decision was based. In T.111/98 the board held that the amendment of the claims in response to the citation of a new document during appeal proceedings was not as such a sufficient reason to remit the case to the department of first instance. Remittal remained at the discretion of the board (see also T.193/07).

In T.839/05, since the amendments were of a different nature for each auxiliary request, a possible consequence of remittal could have been further remittals on subsequent appeal proceedings, which would unduly lengthen the proceedings. Thus, with due consideration made for procedural economy and to avoid further delay, the board decided not to remit the case.

7.7. Remittal following fundamental deficiencies

7.7.1 Legal basis

According to Art.11.RPBA.2007 a board is to remit a case to the department of first instance if fundamental deficiencies are apparent in the first-instance proceedings, unless special reasons present themselves for doing otherwise. In other words, the rule is that a case is to be remitted if a fundamental procedural deficiency is established, but a board may exceptionally refrain from doing so if there are special reasons not to. It is for the board to assess whether there are actually any reasons that can be classed and accepted as "special" and so whether it should therefore exercise its discretion to deal with the case itself instead of remitting it (T.1805/14).

Accordingly, the board has discretion whether to remit the case even in the presence of such fundamental deficiencies if there are special reasons for doing so. The boards may

take into account the state of the proceedings, the special circumstances that led to the procedural violations and the interests of the parties and the public to reach a final decision on the one hand and the interest of the opponents to have the case thoroughly discussed in two instances on the other hand (T.1647/15). The violation of fundamental principles such as the right to be heard, the right to have a reasoned decision or the right to oral proceedings is considered as a fundamental deficiency of the first-instance proceedings which justifies the reimbursement of the appeal fee and normally a remittal to the first instance (T.996/09).

7.7.2 Fundamental deficiencies

a) Violation of right to be heard

According to the established case law of the boards of appeal, the violation of the principle of the right to be heard is considered as a fundamental deficiency of first instance proceedings and remittal is often ordered accordingly, as e.g. in T.125/91 (no opportunity to comment), T.808/94 and T.892/92, OJ 1994, 664 (no oral proceedings arranged), T.1399/04 (no opportunity to comment), T.1077/06 (no opportunity to comment), T.1536/08 (evidence not considered), T.477/13 (refusal of request for postponement of oral proceedings). For further details, see chapter III.B. "Right to be heard".

In T.1505/06 the board was unable to review the decision of the opposition division not to postpone the oral proceedings and was unable to ascertain whether the right of the patent proprietor (appellant) to be heard had been respected. It therefore had no choice but to remit the case to the opposition division for further prosecution.

b) Reasons for decision deficient

R.111(2) EPC gives parties to EPO proceedings a fundamental procedural right to be provided with the reasons for a decision (J.18/16). Lack of compliance with R.111(2) EPC is a fundamental deficiency, which, according to Art.11 RPBA 2007, should lead to an immediate remittal of the case to the department of first instance, unless special reasons present themselves for doing otherwise (T.2275/15; see also T.1553/07, T.546/10 (decision based on the state of the file), T.2393/11, T.2245/12, T.395/13, T.2424/13, T.591/17, T.1922/17). For more details, see chapter III.K.3. "Form of decisions".

c) Violations of Article 19(2) EPC (composition of the opposition division)

According to the boards' settled case law, a failure to comply with the Art.19(2) EPC provisions on the composition of opposition divisions is a substantial procedural violation which should normally lead to remittal of the case for fresh examination by a properly composed opposition division and reimbursement of the appeal fee (see e.g. T.251/88, T.939/91, T.382/92, T.476/95, T.838/02, T.1349/10, T.135/12, T.2536/16).

In some cases, e.g. T.251/88 and T.838/02, the parties have been invited to cite any reasons that might go against a remittal to the department of first instance. In both cases, the patent had been revoked by the opposition division. The board in T.825/08 followed

this approach and observed that it might not always be strictly necessary under Art. 11 RPBA 2007 to remit a case if there were good reasons not to do so and both parties agreed. According to T 1700/10, violations of Art. 19(2) EPC should lead to a remittal regardless of the parties' position at least in situations where third parties are affected by the outcome of defective first-instance proceedings, as, in the case in hand, where the patent had been maintained in the opposition proceedings (see also T 1349/10). In such cases, the public too has an interest in the decision (T 234/11).

In T 2175/16 the board considered that a change in the composition of the opposition division between the holding of the oral proceedings and issuing the written decision to be a substantial procedural violation, which justified that the decision under appeal be set aside, the case remitted to the opposition division and the appeal fee reimbursed.

d) Appellant adversely affected

Where the decision of the opposition division contained obvious mistakes, causing the decision under appeal to be contradictory and legally obscure such that it was unclear whether the appellant was adversely affected, this constituted a substantial procedural violation and the board remitted the case to the department of first instance for further prosecution (T 616/08).

e) Content of requests unclear

In T 405/12, the board found that it was not clearly apparent from the contested decision of the opposition division which claims had belonged to the main request it dealt with and so unclear which request had been ruled on. That made it impossible for the board to review the decision, and this alone meant the first-instance proceedings had been vitiated by a fundamental deficiency within the meaning of Art. 11 RPBA 2007.

f) Failure to hold oral proceedings

In T 1972/13 the board stated that it is consistent practice to remit the case where the examining division failed to hold oral proceedings requested by the applicant, since it cannot be known if the examining division would have come to a different decision if oral proceedings had been held. The same situation applies where it is not clear whether a request for oral proceedings was made (see also T 1423/13, refusal without summoning to oral proceedings as announced).

g) Witnesses not heard

In T 1363/14, the board classed an opposition division's failure to hear witnesses put forward as a fundamental deficiency.

7.7.3 Special reasons not to remit under Article 11 RPBA 2007

Under Art. 11 RPBA 2007, if there are 'special reasons', a board need not remit a case to the department of first instance even where there were fundamental deficiencies in the first instance proceedings.

a) Special reason identified – no remittal to department of first instance

- Length of proceedings

It is generally accepted by the boards that the additional time that would be needed to bring the first-instance proceedings to a close can usually be considered a "special reason" not to remit a case (T.1423/15).

In T.1548/11 in the judgment of the board, special reasons spoke against a further remittal of the present case to the opposition division, in particular the length of the opposition (appeal) proceedings to date (including two appeal procedures) and the considerable further delay which would ensue from a remittal. Moreover, it was observed that the appellant whose right to be heard had been violated requested the board not to remit the case to the opposition division but to decide itself on the remaining issue of inventive step. In these circumstances, remittal of the case to the department of first instance would be inequitable (see also T.1824/15).

In T.679/14 the board stated that the long duration of the proceedings and the fact that this was the second appeal constituted special reasons for not remitting the case in reaction to fundamental deficiencies in the first-instance proceedings.

The board in T.2171/14 refused the appellant-proprietor's request for remittal to the department of first instance despite fundamental deficiencies in the contested decision. It pointed out that a remittal would primarily have resulted in further proceedings before the opposition division which could not be expected to change the substance of the issue and would also have considerably prolonged the total duration of the procedure (unhelpful given pending national infringement proceedings and the appellant-opponent's request for acceleration of the appeal proceedings).

- Age of application or patent

In T.1709/06 the board took the view that remittal to the examining division would be inappropriate given the already advanced age of the application and the considerable further delay which would ensue from remittal. Moreover, the appellant made clear in the oral proceedings its desire for the board to decide on the case.

Likewise in T.1758/15, the board decided not to remit the case to the opposition division because the patent was relatively old and the facts and major lines of arguments were on the table. A remittal would most likely only create a delay of several years, with the board thereafter being confronted with essentially the same case. That would be contrary to procedural efficiency.

- Procedural economy

In T 2068/14 the board argued that although in this case a fundamental deficiency in the sense of Art. 11 RPBA 2007 had taken place, the clarity objection raised by the board with respect to the appellant's claims (Art. 84 EPC) was immediately apparent upon examination of the disclosure of the claimed subject-matter. This constituted a "special reason" justifying not remitting the case to the department of first instance. The board pointed out that it would be contrary to the principles of legal certainty and efficiency to remit a case when the appellant had not adequately dealt with objections raised by the board that would prejudice the grant of a European patent.

- Arguments taken into consideration at first instance

In T 515/05 the board considered that remittal was not appropriate, essentially because (i) the arguments of the appellant had been taken into account in the decision under appeal, (ii) the appellant in the meantime had had the opportunity, and indeed availed itself of it, to expand its argumentation before the board, and (iii) no concrete reason was given by the appellant for the necessity for remittal (e.g. no intention was declared to produce further evidence which would need more time for preparation). In the circumstances a remittal to the opposition division would only unnecessarily delay the proceedings.

In T 1951/16 the appellant explicitly requested the board not to remit the case. Additionally, the department of first instance had evidently taken note of the appellant's case on the question of non-unity, even though the appellant had been deprived of the opportunity to present it orally.

In T 1817/14 the examining division did not admit the second auxiliary request into the proceedings. However, the decision under appeal did not mention the existence of the second auxiliary request, which constituted a fundamental deficiency within the meaning of Art. 11 RPBA 2007. The board stated that it was clear that the appellant was heard on the admission of the second auxiliary request, and the missing reasons were contained in the minutes. Therefore, the appellant had been in a position to understand the examining division's reasons for not admitting the second auxiliary request. The board considered these circumstances to constitute special reasons for not immediately remitting the case to the examining division under Art. 11 RPBA 2007.

In T 1929/12, even though the decision under appeal suffered from a fundamental deficiency within the meaning of Art. 11 RPBA 2007, the board found that no purpose would be served by remitting the case to the examining division, which would most likely eventually have issued another, better reasoned decision to the same effect.

In T 427/11, the lengthy duration of the proceedings was not the only special reason for not remitting the case. Additionally, the opposition division had evidently taken note of all the inventive step objections raised, even though the corresponding reasoning in the decision under appeal was incomplete.

- Partiality of a member of the opposition division

In T 1647/15 the board observed that whereas under normal circumstances a potential suspicion of bias concerning a member of an opposition division might be a strong indication for a remittal, this was not the case here where this suspicion did not affect the whole process of decision-making but only arose out of an uncontrolled outburst at the end of exceptionally long and intense oral proceedings. Thus, the board doubted that a remittal to the department of first instance, even in a different composition, would serve the interests of justice, in the sense that the remittal would likely result in the affair growing further in complexity and would cause an excessive delay in having the case finally decided, also taking into account that these were the second appeal proceedings in the case.

- Formal deficiencies

In T 1254/11, the board assumed, arguendo, that both the fact that no decision to enlarge or reduce the opposition division had been added to the publicly available file and the fact that the appointment of the new chairman could only be traced from the internal register of the EPO constituted fundamental deficiencies in the proceedings before the opposition division. However, unlike the situation in T 990/06, it was possible to determine from the file that the division had been lawfully enlarged and, at a later stage, lawfully reduced again. The board considered that these circumstances constituted special reasons for not remitting the case within the meaning of Art. 11 RPBA 2007. The aforementioned fundamental deficiencies, assumed merely for the sake of argument, were of a formal nature. They would not, in the board's view, justify substantially delaying the proceedings.

b) No special reasons – remittal to department of first instance

- Procedural delay

In T 21/09 the board shared the view of the board in decision T 48/00 that a delay of the final decision caused by the remittal was an insufficient reason not to order remittal. The fundamental right of an appellant to a fair hearing before the opposition division must outweigh any advantage that might accrue to the respondent by having the board of appeal deal fully with the case rather than remit it (T 914/98).

In T 48/00 the only reason advanced as to why remittal would not be appropriate was the respondent's argument that this would delay the final decision in the case and it would therefore be prejudiced by the continued existence of a patent it considered invalid. The board pointed out that the respondent did, however, have the opportunity to challenge the validity of the patent in national courts whereas, for the appellant, revocation as a result of opposition proceedings would represent a final loss of its rights in all the designated states.

- Infringement proceedings before national courts

Infringement proceedings before the German courts did not constitute a special reason in T 914/98, where the board held that the fundamental right of the appellants to a fair hearing

before the opposition division had to outweigh any advantage that might accrue to the respondents by having the board deal fully with the case rather than remit it.

- Length of proceedings

In T.1077/06 the appellant whose right to be heard had been violated requested the remittal of the case to the department of first instance. In the specific situation of the case at issue, this request took precedence over apprehensions regarding an undue delay of the procedure (see also T.594/00).

In T.591/17 the board considered whether the age of the present application constituted a special reason because it took the examining division almost ten years to react to the appellant's letter, only a small part of which was due to the staying of examination proceedings. However, taking into account that the appellant did not once, between 2005 and 2015, even enquire about the progress of examination proceedings, and did not address the overall length of the proceedings in its grounds of appeal, the board decided that the age of the case did not constitute a special reason for not remitting the case.

In T.2092/13 the board stated that the overall length of the proceedings may constitute a special reason. However, the application was a divisional application, and this explained, at least in part, the length of the proceedings. In addition, this sole circumstance did not constitute, in the case in hand, a sufficient special reason for not considering the remittal of the case.

In T.1088/11 the board accepted that a remittal to the department of first instance would introduce considerable procedural delay, but this could not be regarded as one of the special reasons referred to in Art. 11 RPBA 2007. Where there are good grounds for supposing that the impugned decision was taken in an incorrect composition, calling into question the legal validity of that decision, the case should be remitted to the department of first instance. The board concurred with the finding in T.990/06 that under these circumstances considerations of procedural economy can play no role.

7.8. Remittal for adaptation of the description

The boards have remitted several cases to the department of first instance for adaptation of the description to amended claims.

For reasons of procedural economy, such a remittal to bring the description into line with amended claims – albeit permissible under Art. 111(1) EPC 1973 – should be avoided wherever possible (T.977/94) but may be necessary in certain circumstances. In T.1149/97, for instance, although the appellant had also submitted an amended description at the oral proceedings, the board thought it expedient to use its discretion under Article 111(1) EPC 1973 to remit the case to the department of first instance so it could investigate how to adapt the description and the drawings to ensure they were fully consistent with the now much narrower subject-matter in the amended claim with the requisite care.

In T 985/11 the description as adapted before the opposition division related to subject-matter which was no longer claimed and therefore needed to be further adapted. The board decided against continuing the appeal proceedings in writing, for reasons of procedural economy. The additional delay caused by a remittal seemed likely to be fairly short, since the wording of the claims was finalised by the decision, and the proceedings after remittal will thus be confined to adapting the description. As the board was taking a decision on the allowable version of the claims, procedural economy and legal certainty were also served.

8. Binding effect of decision remitting case to department of first instance

8.1. Notion of res judicata

Art. 111(2) EPC provides that, where a board of appeal remits a case to the EPO department of first instance whose decision was appealed, that department is bound by the board's ratio decidendi, in so far as the facts are the same. If the decision under appeal was taken by the Receiving Section, the examining division is also bound by the board's ratio decidendi.

The boards' decisions generally acquire the authority of "res judicata" on being issued. "Res judicata" is a generally recognised principle in the contracting states that is acknowledged by the boards of appeal (see e.g. T 167/93, OJ 1997, 229; J 3/95, OJ 1997, 493; T 365/09, T 449/15). It means a matter finally settled by a court of competent jurisdiction, rendering that matter conclusive as to the rights of the parties and their privies, such a final judgment constituting an absolute bar to a subsequent legal action involving the same claim, demand or cause of action, and the same parties or their privies (T 934/91, OJ 1994, 184; see also T 1666/14).

A decision's binding effect under Art. 111(2) EPC applies only to the case decided on (J 27/94, OJ 1995, 831). Art. 111 EPC does not provide for such binding effect for cases not decided by the boards, although there will generally be good reasons for departments of first instance to follow their decisions in order to maintain a consistent practice and avoid unnecessary appeals.

The authority of res judicata binds the administrative department dealing with the same application in the subsequently resumed examination proceedings (see Art. 111(2) EPC) and indeed the board in any fresh appeal against the then ensuing examination decision. By contrast, a decision taken on appeal in examination proceedings has no such binding effect in any subsequent opposition proceedings or on appeal against the opposition division's decision because opposition proceedings are separate and distinct from examination proceedings (especially in that different parties are involved) and differ from them in terms of the nature of the public interest involved (T 1666/14).

The ratio decidendi of a decision under Art. 111(2) EPC 1973 is the ground or the reason for making it – in other words, the point in a case which determines the outcome of the judgment (T 934/91, OJ 1994, 184). It is not contained in the order but in the section "Reasons for the Decision" and it is thus of no importance for its binding effect that a

particular matter is not mentioned in the order (T.436/95). The order of a board's decision provides a first point of reference for establishing the extent to which *res judicata* applies. However, where a case is remitted for further prosecution on the basis of claims of auxiliary requests following rejection of higher-ranking claim requests, the order is usually confined to the setting aside of the decision under appeal and the remittal for further prosecution. Thus, the order has to be seen in context with the reasons for the decision as a whole in order to determine the extent to which the decision is final (T.449/15).

8.2. Department of first instance bound by decision of board of appeal

Under Art. 111(2) EPC the EPO department of first instance whose decision was appealed is bound by the *ratio decidendi* of the board of appeal if the case is remitted to it.

The board in T.366/92 pointed out that according to Art. 111(2) EPC 1973 the examining division was bound by the board's decision only to the extent that it had been decided that the subject-matter of Claim 1 was novel when compared with the prior art known from D2 and that the claim met the requirements of Art. 84 and 123(2) EPC 1973. See also T.255/92.

When after remittal the proprietor files new requests which require examination to be reopened on issues that have already been judged upon by the board of appeal, without the justification that might be provided, for example, by the proprietor's being faced with a new situation, then such requests should be deemed inadmissible (T.383/11).

In T.308/14 the board held that if a case is remitted to the opposition division in appeal proceedings, after the board has taken a decision under Art. 84 EPC on the clarity of a certain feature in a claim, this decision is *res judicata* and thus binding on the opposition division in the subsequently resumed opposition proceedings. The binding effect did not only cover the decision on Art. 84 EPC as such; it also extended to any finding of fact that led to this decision. Therefore, if in the resumed opposition proceedings an insufficiency objection is made under Art. 83 EPC on the basis that this very feature was ambiguous (insufficiency arising out of ambiguity), the opposition division should not reopen the discussion on whether this feature is clear, and should accept any finding of fact that the board made in arriving at its decision on Art. 84 EPC.

According to T.934/91 (OJ 1994, 184), a board's decision apportioning costs constituted an absolute bar to the opposition division's considering afresh, let alone deciding upon, either the fact or the quantum of the apportionment, or their reviewing the reasons (*ratio decidendi*) for which the apportionment had been made. The board found that the purported decision of the opposition division on this point was in law a mere communication of the clear and immutable legal position brought about by the earlier decision of a final court of competent jurisdiction, namely, the technical board of appeal.

However, a board of appeal decision has the binding effect referred to in Art. 111(2) EPC only if the case is remitted to the department of first instance. A board of appeal decision in another case is not binding on the department of first instance (see T.288/92; and also J.27/94, OJ 1995, 831).

8.3. Binding effect in opposition proceedings after remittal to an opposition division

A decision by a board of appeal on an appeal from an examining division decision is not binding in subsequent opposition proceedings or on appeals therefrom, having regard both to the EPC and to the principle of *res judicata* (T 26/93; T 167/93, OJ 1997, 229; T 694/01, OJ 1997,229; T 2291/08). The binding effect is also not restricted to cases where the composition of the board remained unchanged (T 436/95). Following T 167/93, the board in T 1099/06 pointed out that opposition proceedings are separate and distinct from examination proceedings and are characterised by the nature of the public interest. The legislative and procedural framework has quite clearly been designed to allow the public interest in challenging granted patents by opposition to take priority over any considerations of certainty or apparent consistency. The board pointed out that to the extent this principle is recognised in the law of the EPC, it is of extremely narrow scope and must meet the six criteria set out in T 167/93 (OJ 1997, 229) – the issue must have been (a) judicially determined; (b) in a final manner, (c) by a tribunal of competent jurisdiction; (d) where the issues of fact are the same; (e) the parties (or successors in title) are the same; and (f) the legal capacities of the parties are the same. Thus a decision in earlier examination appeal proceedings could not be *res judicata* in subsequent opposition appeal proceedings, the criteria (c), (e) and (f) not being satisfied.

8.4. Board of appeal bound in subsequent appeal proceedings following remittal

The problem of being bound by an earlier board of appeal decision where a case is remitted also arises in connection with a subsequent appeal against the ensuing decision.

In a number of decisions, the boards have observed that they are bound by their own initial decision if a second appeal relating to the same subject-matter is brought before them (a "self-binding" effect, known by the German term *Selbstbindung*). However, they are not so bound where the facts underlying the initial decision have changed (Art. 111(2) EPC) (T 21/89; see also T 153/93 and T 1545/08). This is often based on the argument that that board of appeal decisions are final and without appeal, so that no EPO body – not even boards of appeal – can take a new decision on facts which have already been decided. In T 690/91 the argument was that the same binding effect applied to any subsequent appeal proceedings since, according to Art. 111(1) EPC 1973, the board might exercise the same power as was within the competence of the department which was responsible for the decision appealed.

See also T 720/93 for the extent to which a board considered itself bound by an earlier board of appeal decision in the same case. Although the claim pending before the board represented different facts from in the first proceedings since it was a different type of claim and contained a number of different features, the board found some findings of the first decision binding for the second proceedings.

The board in T 736/16 had to rule on a second appeal brought by the appellant on the basis that it had no longer been open to the opposition division to examine compliance with Art. 123(3) EPC because the board had already settled that matter in relation to the

same request when ruling on its first appeal in T.1909/12. The board agreed that both the opposition division and it itself were bound under Art. 111(2) EPC by the ratio decidendi in its decision on the first appeal (and, indeed, by those in R.3/14, another earlier decision issued in the same case). However, since it had not explicitly referred to Art. 123(3) EPC in either in the order or the reasons for that decision, it first had to ascertain whether it could be clearly inferred from any parts of the reasons that it had indeed already decided that the appellant's request met the requirements in that article. It concluded that it had not done so.

In T.449/15 the board had to compare the subject-matter of respective claim 1 of the main request decided upon in T.449/13 and of auxiliary requests 4 and 5 pending before the board for consideration in the second appeal proceedings. The amendments only amounted to an inclusion of redundant linguistic additions and merely represented cosmetic changes without any effect on the scope of the claims. Therefore, the board concluded that the amendments undertaken did not alter the subject-matter claimed in substance compared to the subject-matter finally decided upon in T.449/13, or the facts on which said decision was based. Consequently, the finding that the claimed subject-matter lacked an inventive step was res judicata. In this context, the board noted that there have also been other decisions in the jurisprudence of the boards of appeal in which the competent boards considered themselves as being prevented from deciding on an issue due to the principle of res judicata, even though the claims under consideration were not literally identical to the claims decided upon in the earlier decision (see e.g. T.1872/08, T.572/07, T.436/95).

8.5. Remittal for the continuation of proceedings

Where a board of appeal issued a decision rejecting certain claimed subject-matter as not allowable and remitted the case for further prosecution in accordance with an auxiliary request, under Art. 111(2) EPC 1973, the examination for allowability of the rejected claimed subject-matter could not be re-opened, either by the examining division during its further prosecution of the case, or by the board of appeal in any subsequent appeal proceedings (T.79/89, OJ 1992, 283).

In the opposition proceedings following the remittal for continuation of the proceedings, an amendment of the patent claims could change the actual basis of an appeal decision. In such a case the binding effect of Art. 111(2) EPC 1973 no longer applied (T.27/94).

Art. 111(2) EPC 1973 stated unambiguously that the department of first instance and the board of appeal which was again concerned with the case were bound by the ratio decidendi of the remitting decision only "in so far as the facts are the same". The opposition division was thus not bound by the first decision if new claims were submitted which were not in conflict with the ratio decidendi of the decision (T.609/94).

8.6. Remittal only for adaptation of the description

A decision remitting a case to the opposition division with the order to maintain a patent on the basis of amended claims is binding in the sense that neither the wording nor the

patentability of those claims can be challenged again in subsequent EPO proceedings (T. 843/91, OJ 1994, 832). The decision on the claims' patentability remains final even where the facts have changed (T. 27/94). When the first board of appeal delivers its decision, the content and the text of the patent claims become res judicata and can no longer be amended in proceedings before the EPO (T. 113/92). Only objections to the amendments made to the description by the opposition division can be examined on appeal (T. 1063/92).

Remittal for the description to be amended does not render it possible for an opponent to challenge substantive patentability again by appealing the opposition division's decision after remittal, where a final decision has been taken on this and the scope of the patent (T. 1063/92). Following T. 843/91 (OJ 1994, 832), the board in T. 153/93 found that all findings of fact that were a *conditio sine qua non* of the finally binding parts of the decision were res judicata with the result that new facts, evidence or arguments seeking to cast doubt upon these facts could not be considered either by the opposition division or the board of appeal.

Where the board, in the decision remitting the case to the department of first instance, is silent on the question of the adaptation of the description, this does not necessarily imply that no adaptation is required, but merely that the matter was not considered or decided. The point is therefore not res judicata and so can be raised in a subsequent appeal (T. 636/97).

8.7. Remittal to a differently composed department of first instance

Whether a case can be remitted to a differently composed department of first instance when the original first-instance decision proves to have been vitiated by a substantial procedural violation is dealt with in detail, in the context of suspected partiality of members of the departments of first instance, in chapter III.J.4.2. "Remittal and rehearing of a case".

9. Reimbursement of appeal fees

9.1. Introduction

According to R. 103(1)(a) EPC (R. 67 EPC 1973) the reimbursement of appeal fees shall be ordered in the event of interlocutory revision or where the board of appeal deems an appeal allowable, if such reimbursement is equitable by reason of a substantial procedural violation.

R. 103(1)(b) EPC, introduced with the EPC 2000, goes some way towards compensating for the lack of a cross-appeal facility. Appeals filed as a precaution – in case the other party appeals – can be withdrawn if the other party does not file an appeal, at an early stage of the proceedings, during the period between the expiry of the respective periods for filing the notice of appeal and filing the statement of grounds of appeal, i.e. before any great expense or effort on the part of the parties or the EPO (see notes to R. 67 EPC 1973, OJ SE 1/2003, 184).

R. 103(2) EPC, introduced by decision of the Administrative Council of 13 December 2013 (CA/D 16/13; OJ 2014, A3), provides for a reimbursement of the appeal fee at 50% if the appeal is withdrawn after expiry of the period under R. 103(1)(b) EPC, provided withdrawal occurs (a) if a date for oral proceedings has been set, at least four weeks before that date or (b) if no date for oral proceedings has been set, and the board has issued a communication inviting the appellant to file observations, before expiry of the period set by the board for filing observations.

R. 103(3) EPC (formerly R. 103(2) EPC) governs the competence of the department of first instance and of the board of appeal in the matter of the reimbursement of the appeal fee and codifies the case law of the Legal Board of Appeal (J 32/95, OJ 1999, 733; G 3/03, OJ 2005, 344; see in this chapter V.A.9.6.2. "Competence to decide on reimbursement").

For the rules formally applicable to patent applications pending on the date of entry into force of the EPC 2000, see J 10/07 (OJ 2008, 567); for the applicability of R. 103(1)(b) EPC see T 2052/08.

9.2. Examination ex officio

The boards may, even in the absence of a request to this effect, examine ex officio whether the reimbursement of the appeal fee is equitable by reason of a substantial procedural violation (J 7/82, OJ 1982, 391; T 271/85 of 22 March 1989; T 346/88; T 598/88; T 484/90, OJ 1993, 448 and T 736/14).

9.3. Appeal deemed not to have been filed or inadmissible appeal

For the issue of reimbursement of the appeal fee the distinction between an appeal not deemed to have been filed and an inadmissible appeal is relevant. When the appeal is deemed not to have been filed the appeal fee must be reimbursed since the purpose of this fee cannot be achieved. On the contrary, when an appeal is inadmissible it is in principle not possible to repay the appeal fee (T 445/98).

9.3.1 Appeal deemed not to have been filed due to late payment of the appeal fee

In J 16/82 (OJ 1983, 262) the Legal Board held that if an appeal was deemed not to have been filed, pursuant to Art. 108, second sentence, EPC 1973, because the appeal fee was not paid until after the expiry of the time limit for appeal, the purpose of the fee payment could no longer be achieved. The appeal fee must therefore be reimbursed, without the board of appeal having to give any specific order to that effect (see also T 324/90, OJ 1993, 33; T 239/92; T 1954/13). However, in T 79/01, T 1289/10, T 1535/10 and T 2210/10, where the appeal fee had also been paid late, reimbursement of the appeal fee was not ordered (see T 1553/13, OJ 2014, A84). See also in this chapter V.A.9.3.7.

In J 18/12 the Legal Board held that the final non-existence of the patent application in a substantive sense did not mean that the appeal proceedings had not come into existence (as opposed to the legal fiction of non-existence when an appeal was deemed not to have

been filed). This situation regularly arose in proceedings before the EPO, e.g. where a decision of the Receiving Section not to accord a filing date was appealed.

In T 1325/15 the board addressed the question of whether an appeal had to be found inadmissible or deemed not to have been filed if the notice of appeal was filed, and the appeal fee paid, only after expiry of the time limit for filing the notice of appeal (see also T 2017/12, OJ 2014, A76, and T 1553/13, OJ 2014, A84). The board saw no compelling reason to deviate from the established approach of regarding an appeal filed out of time as deemed not to have been filed. Although the position that R 101(1) EPC means that a late-filed notice of appeal brings into existence an inadmissible appeal might be not unreasonable, the board considered, in view of the general rule that no distinction was to be made between the late filing and the non-filing of a document, that no appeal exists where a notice of appeal was not (deemed to be) filed in due time. The board noted that its approach, although not always consistently applied in the jurisprudence of the boards of appeal, was also in line with the reasoning in earlier decisions that an appeal was deemed not to have been filed where the appeal fee had been paid in time but the notice of appeal had been filed only after expiry of the two-month period of Art. 108 EPC (see in particular J 19/90, T 445/98, T 778/00, OJ 2001, 554).

9.3.2 Notice of appeal not filed in due time but appeal fee paid within 2 month period

In J 19/90 the Legal Board considered that the payment of an appeal fee did not in itself constitute the valid filing of an appeal. The board in T 371/92 (OJ 1995, 324) held that payment of the appeal fee at most implied an intention to file an appeal but did not in itself constitute the notice of appeal required to institute appeal proceedings. When applicants paid the appeal fee, and even thereafter, they remained free to decide whether or not they wished to lodge an appeal. If they changed their mind and dropped the matter, the appeal, being non-existent, was not deemed to be withdrawn, but the fee was reimbursed because no appeal had been filed (see also T 41/82, T 696/95, T 445/98, T 778/00, T 1479/09, T 377/11).

9.3.3 Appeal inadmissible

When an appeal is filed but inadmissible it has come into existence and it is in principle not possible to reimburse the appeal fee (T 445/98, see also J 16/94, T 372/99, T 752/05). For the distinction between the existence of an appeal and the admissibility of an appeal, see also T 460/95 of 20 October 1997 and T 778/00, OJ 2001, 554.

In T 13/82 (OJ 1983, 411) the board held that the appeal fee cannot be refunded on the basis that no statement of grounds was filed, or that it was filed too late (see also T 324/90, OJ 1993, 33, T 576/93). In T 89/84 it was held that this applied independent of whether the statement of grounds were not filed as a result of a genuine omission (as was the case T 13/82, OJ 1984, 562), or because the appeal was filed as a precautionary measure (see also T 543/99).

In J 15/01 the Legal Board ruled that the fact that an appeal was against a communication, as opposed to a decision under Art. 106(1) EPC 1973, did not justify refunding the appeal

fee. If – as in the case before it – the board concluded that there had not been an appealable decision under Art. 106(1) EPC 1973, this made the appeal inadmissible but did not mean it had never existed, the requirements under Art. 108 EPC 1973 having been met. The appeal fee could not therefore be refunded.

In J 38/97 the Legal Board held that the appeal was inadmissible, but nevertheless held that it was equitable in the circumstances of the case (violation of the principle of the protection of legitimate expectation) to order the reimbursement of the appeal fee (see also in this chapter V.A.9.7.3).

In T 1897/17 the board held that an appeal lodged after the expiry of the two-month period (Art. 108 EPC) was inadmissible. The board stated that it did not concur with the majority interpretation in decisions of the boards of appeal that an appeal was 'deemed not to have been filed' if the notice of appeal or the payment of the appeal fee were received outside this period. The board further held that as the appeal fee was paid in accordance with Art. 108 EPC and Art. 2 (1) No. 11 RFees in order to validly form an appeal, it was not paid without any legal basis, and that since none of the conditions of R. 103 EPC applied, the appeal fee could not be reimbursed (see in this chapter V.A.9.3.7 "Reimbursement of the appeal fee in case of a request for re-establishment"). This decision has triggered a referral to the Enlarged Board to consider the diverging case law (see in this chapter V.A.9.3.4 below).

9.3.4 Inadmissible or deemed not to be filed – diverging case law and G 1/18

In accordance with Art. 112(1)(b) EPC, and as a result of diverging case law, the President of the European Patent Office has referred the following point of law to the Enlarged Board of Appeal: "If notice of appeal is filed and/or the appeal fee is paid after expiry of the two-month time limit under Article 108 EPC, is the appeal inadmissible or is it deemed not to have been filed, and must the appeal fee be reimbursed?" (see Communication from the Enlarged Board of Appeal concerning case G 1/18, OJ 2018, A71). This question has previously been submitted to the Enlarged Board in G 1/14 and G 2/14 – however the question was not addressed because in G 1/14 the referral was found to be inadmissible and in G 2/14 the patent application was abandoned.

9.3.5 Translation of notice of appeal

In T 323/87 (OJ 1989, 343) the translation of the notice of appeal had not been filed in due time. The board held that, pursuant to Art. 14(5) EPC 1973, the notice of appeal was deemed not to have been filed, and ordered reimbursement of the appeal fee. In T 1152/05 it was also decided that, since the appeal of the patent proprietor was deemed not to have been filed, it followed that the appeal fee was paid without reason and had to be reimbursed. In T 126/04, on the other hand, the board decided that failure to file a translation of the notice of appeal in due time meant that the appeal was inadmissible.

9.3.6 No legal ground for payment

The grounds for reimbursement listed in R. 103(1) EPC aside, fees may also be refunded if there was no legal ground for their payment, e.g. in the event of payment by mistake or overpayment, see Art. 12 RFees e contrario (T 1284/09).

9.3.7 Reimbursement of the appeal fee in case of a request for re-establishment

In T 1192/07 the request for re-establishment in respect of the time limit for paying the appeal fee was refused. As a result, the appeal was deemed not filed because the appeal fee had not been paid in time and the appeal fee was refunded.

In T 1465/08 the board refunded the appeal fee in a case where the request for re-establishment in respect of the time limit for paying the appeal fee was itself deemed not to have been filed with the consequence that the appeal was deemed not to have been filed.

In T 257/07 the request for re-establishment in respect of the time limit for filing the notice of appeal was refused, and therefore the appeal was deemed not to have been filed and the appeal fee reimbursed (see also T 1962/08).

In T 1289/10 the board rejected the request for re-establishment in respect of the time limit to file a notice of appeal and pay the appeal fee. The appeal was dismissed as inadmissible; the appeal fee was not reimbursed.

9.3.8 No legal basis for retaining appeal fee in case of intervention in opposition appeal proceedings

In T 791/06 the intervention of appellant III was considered by the board to be an admissible intervention in opposition appeal proceedings, and so only the required opposition fee needed to be paid, as established by G 3/04. Hence there was no legal basis for retaining the appeal fee, which in any case had been paid as a precaution. The board concluded that the appeal fee paid by the intervener should be reimbursed.

9.3.9 Several appellants

In T 552/97 the board interpreted R. 67 EPC 1973, looking in particular at the English text, as meaning that, where several appeals have been filed, each appellant's appeal fee may be reimbursed if such reimbursement was equitable.

9.4. Allowability of the appeal

R. 103(1)(a) EPC stipulates as a precondition for reimbursement that the appeal must be allowable. In J 37/89 (OJ 1993, 201) the board stated it was clear from the wording and purpose of the provision that "allowable" was to be understood to mean that the board of appeal, in substance at least, "follows" the relief sought by the appellants, in other words that the board allows their requests (see also T 1111/09). In J 18/84 (OJ 1987, 215) the

board held that the fact that the appeal was allowed only in part was no impediment to a refund (see also T.129/01, T.604/01, T.863/08, J.1/13).

9.5. Substantial procedural violation

One of the preconditions for reimbursement of the appeal fee under R.103 EPC is that a substantial procedural violation has taken place. A "substantial procedural violation" is an objective deficiency affecting the entire proceedings (J.7/83, OJ 1984, 211). Whether or not there has been a substantial procedural violation is to be determined on an objective basis (J.32/95, OJ 1999, 733; T.160/09).

9.5.1 Violation must be of a procedural nature

In T.12/03 the board stated that a substantial procedural violation is an objective deficiency in the procedure in the sense that the rules of procedure have not been applied in the manner prescribed by the Convention. According to J.6/79 (OJ 1980, 225), the giving of incorrect information by the EPO about the rules of procedure, which, if followed by the applicant, could lead to the same consequences as the incorrect application of those rules, could also be considered as lying within the scope of a "procedural violation". In T.690/06 the board held that an error of judgment on substantive issues by the examining division did not constitute a "procedural" violation (see also T.698/11, T.658/12). See also in this chapter V.A.9.5.8.

In T.990/91 the board held that the lack of opportunity to reply to a new argument from the examining division in its decision to refuse the application that was supererogatory and incidental could not be considered to be a procedural violation (see also T.1085/06).

In T.68/16 the board noted that the opposition division had not used the problem-solution approach. The board stated that this fact in itself did not constitute a substantial procedural violation. The problem-solution approach is not enshrined in the EPC and its use is not mandatory. The board agreed that, as a rule, a division that does not use the problem-solution approach should indicate its reasons for doing so, if only to dispel the impression that it acts arbitrarily. However, the Guidelines for Examination only state that any "deviation from this approach should be exceptional" and do not require a justification (see Guidelines G-VII, 5). Consequently, the board found that a division that, in an exceptional situation, chooses not to use the problem-solution approach and not to explain its choice does not commit a substantial procedural violation.

9.5.2 Violation must be substantial and affect the entire proceedings

In T.682/91 the board of appeal emphasised that a procedural violation which did not adversely affect the rights of the parties could not be considered substantial. The seriousness of a procedural violation derived from its adverse effects.

In J.14/99, as in J.15/99, J.21/98 (OJ 2000, 406), J.22/98 and J.6/99, it was decided that a procedural violation which had not played any part in the decision could not be considered substantial (see also T.2385/10). In T.2249/08 the board found it a requirement

that the criticised discretionary **decision of the department of first instance must be decisive** for the outcome of the decision under appeal. In T.49/13 the board held that an error which would not have led to a different outcome of the proceedings was not a substantial procedural violation (see also T.1340/10, T.1740/06).

In T.5/81 (OJ 1982, 249) it was stated that an alleged violation affecting a part of the decision other than its ratio decidendi could not be a substantial violation within the meaning of R. 67 EPC 1973 (see also T.959/00).

In T.473/98 (OJ 2001, 231) the board held that the mere fact that the **obiter dictum** in the case in hand was somewhat misleadingly referred to in the pronouncement as "further decisions" in the decision proper did not constitute a substantial procedural violation. It was abundantly clear that no "additional decisions" were in fact made. The board further held that the inclusion of obiter dicta was entirely appropriate. See also T.725/05.

In T.712/97 the board held that the opposition division had considered the respondent's experimental report, but had not relied on it in a way adverse to the appellant. Therefore, the refusal to admit the appellant's experimental report into the proceedings, while a violation of the appellant's right to present comments on the respondent's experimental report, had no substantive effect on the outcome of the proceedings and did not amount to a substantial procedural violation.

In T.219/93 the board remitted the case to the department of first instance since it clearly called for revision under Art.109 EPC 1973. The contested decision had also been inadequately reasoned on one point within the meaning of R.68(2) EPC 1973. Nevertheless, the **refusal** had been **made principally on other grounds**, and the board did not consider the procedural violation to be so substantial within the meaning of R.67 EPC 1973 that reimbursement of the appeal fee would be equitable.

In T.107/05 the board held that the opposition division's lack of consideration of the opponent's arguments on E5 had not been conclusive for the outcome of the appealed decision. The opposition division had considered E5 "acting of its own motion" and had assessed within its power of discretion that it was not relevant – an analysis confirmed in the appeal proceedings. The mistake made by the opposition division could be regarded as a **procedural violation** but in this particular case **not as a substantial one**.

In T.1607/08 (see also T.2246/13) a procedural violation of the principle of the protection of **legitimate expectation** occurred. Since this violation led to the revocation of the patent and came as a surprise to the patent proprietor, it constituted a substantial procedural violation (see also T.1423/13). In T.2321/08, the examining division violated the procedure foreseen in Art.94(3) EPC. This procedural violation was considered substantial because its immediate consequence was the refusal of the application.

9.5.3 Procedural violation must be committed by the department whose decision is under appeal

In T. 469/92 the alleged procedural violation was not an act of the opposition division, whose decision was the subject of the appeal, but instead that of the examining division. Even if such an act were in breach of the procedural requirements of the Convention, a board of appeal would not have the power to order reimbursement.

In T. 1875/07 the board stated that a substantial procedural violation could only be committed by one of the departments charged with the procedure mentioned in Art. 15 EPC 1973, not by the President acting under Art. 10 EPC 1973. Therefore, the non-disclosure to the public of the details of a system for performance evaluation for examiners cannot amount to a substantial procedural violation.

9.5.4 Search

In T. 1411/08 and T. 1515/07 the boards considered that the examining division had to be held to have committed a substantial procedural violation because it had not performed an additional search that was manifestly necessary (see also T. 1924/07). In T. 1924/07 the board held that a distinction had to be drawn between, on the one hand, whether the examining division had acted despite realising that the features were technical and not notorious, thereby indicating a situation where a search was "manifestly necessary" (cf. T. 1515/07 and T. 1411/08), and on the other hand, whether the features had been erroneously overlooked or misjudged, i.e. an "error of judgment" had occurred (cf. T. 690/06 and T. 698/11); the latter case could not be considered a procedural violation (see in this chapter V.A.9.5.10).

In T. 736/14 the board held that, if an applicant whose application is non-unitary responds unclearly and/or in a misleading way to an invitation from the examining division to designate which searched invention it wishes to prosecute further, it could not be automatically assumed that the applicant selected the invention covered by the main request for examination. Rather, the examining division had to clarify, e.g. via a further communication, which of the searched inventions the applicant actually wanted it to examine. Confronting the applicant with an irrevocable decision not to admit an auxiliary request covering one of the inventions searched, without giving an opportunity to comment on its admissibility beforehand, constituted a substantial procedural violation of the applicant's right to be heard. In T. 291/93 it was held that a simple reference by the appellant to an inadequate search of the prior art could not be taken as sufficiently supporting an allegation that a substantial procedural violation had occurred.

9.5.5 Guidelines

In T. 42/84 (OJ 1988, 251) the board held that the Guidelines were not legally binding and a failure by the examining division to follow them was not in itself a procedural violation within the meaning of R. 67 EPC 1973 unless it also constituted a violation of a rule or principle of procedure governed by an Article of the Convention or one of the Implementing Regulations (see also T. 647/93, OJ 1995, 132; T. 51/94; J. 24/96 OJ 2001, 434; T. 937/97).

9.5.6 Request for interview

In T 182/90 (OJ 1994, 641), T 119/91, T 523/91, T 366/92, T 397/94 and T 245/15 the boards of appeal stated that it was **not** a substantial procedural violation within the meaning of R. 67 EPC 1973 if a request to be called back by or have an interview with the primary examiner was ignored. It was for the examiner's discretion whether to conduct such informal discussions in accordance with the Guidelines, bearing in mind the particular circumstances of the case (see also T 300/89, OJ 1991, 480).

9.5.7 Oral proceedings

a) Failure to summon for oral proceedings

The refusal of a request for oral proceedings usually amounts to a breach of the right to be heard, and as such, a violation justifying the reimbursement of the appeal fee (see inter alia T 209/88, T 283/88, T 598/88, T 668/89, T 663/90, T 766/90, T 795/91, T 35/92, T 686/92, T 556/95, T 647/99, T 1972/13).

In T 405/96 the board held that receipt of the request for oral proceedings by the EPO was proven by the appellants. The fact that the department of first instance could not be held responsible for the loss within the Office was irrelevant (see also T 671/95).

Failure to summon the parties to oral proceedings was considered to be a substantial procedural violation in T 209/88 and T 93/88 (see also J 16/02). In T 560/88 the board of appeal held that there was a substantial procedural violation where a clear auxiliary request by the appellant for oral proceedings had not been granted (see also T 543/92).

In T 19/87 (OJ 1988, 268), however, the board held that the finding – albeit wrong – that there had been no request for oral proceedings was not a procedural violation within the meaning of R. 67 EPC 1973. Furthermore, failure to seek clarification from the appellant did not constitute a breach of any procedure.

In T 731/93 the board held that the refusal of a request for "further" oral proceedings constituted a substantial procedural violation where fresh evidence had been admitted. Whilst Art. 116(1), second sentence, EPC 1973 does give the EPO the discretionary power to reject a request for further oral proceedings before the same department, it does so only "where the parties and the subject of the proceedings are the same".

b) Submissions of parties as response to summons

In T 1183/02 (OJ 2003, 404) the board held that a response to a summons to oral proceedings before the examining division which contained good faith responsive amendments and arguments did not stay the summons. Hence omitting to confirm that the summons remained valid did not constitute a substantial procedural violation within the meaning of R. 67 EPC 1973.

In **T. 343/08** the board stated that there was no general duty for an examining division to provide feedback on an applicant's reply to a summons to oral proceedings, in advance of such oral proceedings.

c) No reasons for refusal of request for postponement

In **T. 1505/06** the board held that the failure of the opposition division to include in its decision its reasons for refusing the request for postponement was a substantial procedural violation.

In ex parte case **T. 1750/14**, the appellant's representatives requested a postponement of the final date for making submissions (under R. 116(1) EPC) repeatedly and separately from their request to postpone the date for oral proceedings. The request for postponement of the final date was never withdrawn and the appellant's desire to file amended claims was made clear even during oral proceedings before the examining division. Because of the lack of substantiation within the meaning of R. 111(2) EPC as to the refusal of the request for postponement of the final date for making submissions, the board held that the examining division had committed a substantial procedural violation. Nevertheless, the board considered that a party could not gain a procedural advantage from an omission of its own. Its procedural behaviour spoke against regarding the reimbursement of the appeal fee as equitable within the meaning of R. 103(1)(a) EPC.

d) No reasons for refusal of request to change location for oral proceedings

In **T. 689/05** and **T. 933/10** the boards held that the examining division's rejection of the applicant's request that the oral proceedings be held in Munich instead of The Hague had to be reasoned, R. 111(2) EPC, R. 68(2) EPC 1973. In **T. 933/10** it was held that this violation justified the reimbursement of the appeal fee. However, in **T. 689/05** the board held that the established procedural violation did not affect the entire proceedings before the examining division. It would have been disproportionate to set aside the entire impugned decision because of the partial lack of reasoning of the decision under appeal. In **T. 1142/12** the board rejected the appellant's argument that under Art. 116 EPC the parties have not only a right to oral proceedings but also the right to have their case heard at the proper place (here, Munich instead of The Hague). Therefore, no substantial procedural violation occurred.

e) Repeated postponements of oral proceedings

In **T. 679/14** the board held that it was contrary to the principles of procedural efficiency and legal certainty to repeatedly adjourn oral proceedings. Referring to the Guidelines E-II, 7.1 – June 2012 version, the board concluded that the postponement of oral proceedings on five occasions at the instigation of the examining division without serious reasons, as far as apparent from the file, constituted a procedural deficiency in the circumstances of the case in hand. The board nevertheless refrained from deciding on whether it amounted to a substantial procedural violation. The appeal fee was however reimbursed due to violation of R. 111(2) EPC (insufficient reasons).

f) Minutes

In T 642/97 the board held that if a party was of the opinion that the minutes were incomplete or wrong since essential submissions were not reflected in the file it could request the opposition division to correct the minutes to preserve its rights. In the absence of such a request, the allegation of a substantial procedural violation could not be justified (see also T 231/99, T 99/08). In T 1277/15 the opposition division had not commented on the appellant's request for correction of minutes either in the contested decision on the merits or in any other, separate decision. The board, however, found that this procedural error had not had any impact on the outcome of the opposition proceedings.

In T 835/10 (referring to T 437/98) the appellant alleged that new arguments had been given in the decision of the examining division. The board did not agree and stated that the minutes gave a summary of what was discussed and did not have to expand the different steps of the reasoning given in writing later.

In T 685/14 the board took the view that the failure to transmit the minutes to the appellant was a procedural deficiency but, per se, not a fundamental one. A party should be in a position to file an appeal based on its own notes. Moreover, even after having received the minutes, the appellant had neither challenged their consistency with the decision, nor extended its case by any additional considerations. The board dismissed the appeal and refused the request for reimbursement of the appeal fee.

In T 853/10 the board held that, when judging whether a substantial procedural violation had occurred during the oral proceedings, the board could rely only on the minutes of the oral proceedings, which were not disputed by the patent proprietor (see also T 642/97), and on the facts agreed upon by all parties.

9.5.8 Right to be heard

The right to be heard (see chapter III.B.) is an important procedural right intended to ensure that no party is caught unawares by reasons given in a decision turning down his request on which he has not had the opportunity to comment (R 2/14 of 22 April 2016). A decision which fails to take into account the arguments submitted by a party and which is based on a ground on which the party had had no opportunity to present its comments, contravenes Art. 113(1) EPC and constitutes a substantial procedural violation, see among many other cases J 7/82, OJ 1982, 391; T 197/88, OJ 1989, 412; T 880/91; T 892/92, OJ 1994, 664; T 951/92, OJ 1996, 53; T 1101/92; T 220/93; T 479/94; T 778/98; T 594/00; T 1039/00; T 2294/12 (comparative tests) and T 203/15.

Other violations of Art. 113(1) EPC may also constitute a substantial procedural violation, see the various cases listed in chapter III.B.2. For a case in which the board found a violation of the right to be heard but held that a reimbursement was not equitable, see T 433/08 (see in this chapter V.A.9.7.1).

The infringement of Art. 113(2) EPC has, in principle, also to be considered to be a substantial procedural violation justifying the reimbursement of the appeal fee (see

T. 647/93, OJ 1995, 132; see also T. 32/82 and J. 19/84, for example when the final requests were not clarified (T. 666/90, T. 552/97, T. 1439/05, T. 382/10) or when the opposition division overlooked amended claims presented in a submission T. 543/92 and T. 89/94). See chapter III.B.3. "Text submitted or agreed by applicant (patent proprietor) – Article 113(2) EPC".

9.5.9 Inadequate reasons given in the decision at first instance

The obligation to provide adequate reasoning in a decision in accordance with R. 111(2) EPC (R. 68(2) EPC 1973) is closely linked to the principle of the right to be heard under Art. 113 EPC (T. 1340/10). A failure to do so is to be considered a substantial procedural violation justifying the reimbursement of the fee for appeal (see among many other cases T. 493/88, OJ 1991, 380; T. 522/90; T. 392/91; T. 142/95; T. 278/00; T. 571/03; T. 897/03; T. 1366/05; T. 1612/07; T. 87/08; T. 353/11; T. 2366/11; T. 129/14 and T. 679/14).

In T. 75/91 the board stated that the impugned decision enabled the reader to follow a line of argument for refusing the application. Whether these reasons were convincing and had to be accepted by the board had nothing to do with a procedural violation. See also T. 698/10, where the board added that the examining division was under no obligation to explicitly address every argument presented by the applicant as long as the reasoning given enabled the appellant and the board to examine whether the decision was justified or not. See also chapter III.B.2.4. "Consideration of the parties' arguments, submissions and evidence".

In T. 2340/13 there was a discrepancy between what was stated in the "Summary of facts and submissions" of the written decision of the opposition division, where it was stated that, inter alia, Art. 123(3) EPC was discussed in detail, and the minutes, which although very detailed, did not mention any discussion concerned with Art. 123(3) EPC. Neither was there any discussion of this matter in the "Grounds for the decision", except that the title above point 3 read "Added subject-matter (Art. 100(c), 123(2), 123(3) EPC)". The board found that if the matter had been discussed, the opposition division should properly have given an indication thereof in the minutes and indicated in the decision whether and why Art. 123(3) EPC was regarded as being complied with. The board held that the omission of any reasons in respect of Art. 123(3) EPC was not only a violation of R. 111(2) EPC but also of Art. 113(1) EPC.

In T. 2282/17 the board held that where a decision only refers to one or more previous communications, leaving it to the board and the appellant to speculate as to which of the reasons given by the examining division might be essential to the decision to refuse the application, it does not meet the requirements of R. 111(2) EPC. Since the examining division's decision clearly contravened R. 111(2) and Art. 113(1) EPC, and since the appellant had to appeal in order to obtain a fully reasoned decision, the board found it was equitable to reimburse the appeal fee pursuant to R. 103(1)(a) EPC.

For cases concerning the obligation under R. 111(2) EPC, R. 68(2) EPC 1973, see chapter III.K.3.4. "Reasons for the decision", and in particular chapter III.K.3.4.4.

9.5.10 Error of judgment by a department of first instance

A number of decisions have discussed whether an error of judgment by a department of first instance could be regarded as a substantial procedural violation justifying reimbursement of the appeal fee.

a) Communications

In T.19/87 (OJ 1988, 268, see also above in this chapter at V.A.9.5.7.b)) the board found the examining division had made an error of judgement and not a procedural violation when it erroneously held the appellant had made no request for oral proceedings. The board found there was no basis for ordering reimbursement of the appeal fee in accordance with R.67.EPC.1973.

In T.621/91 the board held that misinterpretation of a letter to an EPO department constituted an error of judgment and not a substantial procedural violation.

In J.9/05 and J.18/05 the board had to decide on the examining division's decisions that R.69(1).EPC.1973 communications were deemed to have been duly delivered to the addressees on the tenth day following its posting. The board held in each case that whilst the examining division had evaluated the evidence as to the postal delivery incorrectly, this amounted to an error of judgment and could not be characterised as a procedural non-compliance, a prerequisite for the application of R.67.EPC.1973.

b) Wrong assessment of prior art or technical content

According to the established jurisprudence of the boards of appeal, a misinterpretation of a document normally constitutes an error of judgment rather than an error of law and is therefore no "procedural" violation, let alone a substantial one (T.1031/12). In T.162/82, OJ 1987, 533, the board held that an error in interpreting a document could not possibly be regarded as a procedural violation (see also T.1049/92, T.976/11).

In T.367/91 the board stated that to base a decision only on a wrong assessment of prior art and/or the claimed invention had to be regarded as a substantive error, not a procedural violation (see also T.144/94, T.12/03, T.1340/10, T.997/15). In T.68/08 the board held a wrong assessment of the claimed invention (or of the prior art) would always be a substantive issue.

In T.17/97 the appellant's request for reimbursement of the appeal fee was based on the fact that the opposition division had disregarded a document. In the board's judgment an erroneous assessment of the relevance of a document did not, by its very nature, constitute a procedural violation within the meaning of R.67.EPC.1973.

The misinterpretation of a document does not constitute a procedural violation (T.1049/92; T.162/82, OJ 1987, 533; T.1031/12). In T.588/92 the board pointed out that a different opinion on the specialist knowledge to be applied when interpreting the technical content did not amount to a procedural violation.

In T. 860/93 (OJ 1995, 47) the board found that that even though there had been a gross error of judgement on the part of the examining division there was no procedural non-compliance of the kind which was a condition precedent to R. 67 EPC 1973 taking effect.

In T. 863/93 the board held that it was the established jurisprudence of the Boards of Appeal that in order to fall within R. 67 EPC 1973 a procedural violation as opposed to an error of judgment must have occurred. It concluded that the issue raised by the appellant, i.e. the examining division's misunderstanding of D1, was a matter of judgment which did not justify the reimbursement of the appeal fee.

In T. 970/10 the board held that an incorrect assessment of a document with regard to its date of availability to the public related to a factual error in respect of the substantive requirements under Art. 54(2) EPC, and not to an error in respect of procedural law.

In T. 976/11 the board disagreed that the change of the closest prior art alone could constitute a substantial procedural violation. It held that an examining division had the procedural discretion to revise its objection of inventive step, including the choice of the closest prior art, at any stage of the examination proceedings, including the oral proceedings.

In T. 658/12 the board held that an insufficiently reasoned decision had to be distinguished from a decision that had faulty or unpersuasive reasoning. The board concluded that while the COMVIK-approach may have been incorrectly applied in the case in hand, this was a substantive issue, only involving judgement. Thus, the board found that the decision was reasoned in the sense of R. 111(2) EPC. The board also found that the examining division had not acted unreasonably, as claimed by the appellant (applicant), by not admitting the second auxiliary request. The board held, therefore, that there was no basis for reimbursement of the appeal fee (see also T. 690/06).

In T. 680/89 the board found that it did not amount to a procedural violation if the examining division wrongly finds that a claim is not sufficiently clear to comply with the requirements of Art. 84 EPC 1973, even where there has been a possible error of judgment and failure to seek clarification from the appellant. It concluded there was no basis for ordering reimbursement of the appeal fee in accordance with R. 67 EPC 1973.

c) Error in the application of the law

In T. 687/05 the board held that the fact that the decision under appeal was based on an incorrect interpretation of Art. 100(c) EPC 1973 did not constitute a "procedural" violation, but was simply an error in the application of the law (see also J 8/13 and T. 378/14).

d) Board reaches a different conclusion than the department of first instance

The fact that a board comes to a different conclusion from the department of first instance does not by itself mean that the latter has committed a substantial procedural violation within the meaning of R. 103(1)(a) EPC (R. 67 EPC 1973), which would necessitate

reimbursement of the appeal fee (T. 87/88, OJ 1993, 430; see also T. 538/89; T. 182/92; J. 14/12; T. 203/15; T. 997/15).

In T. 182/92 the board stated that the fact that the first instance reached a conclusion regarding the document of priority which could not be confirmed by the board was a matter of interpretation of a document, i.e. a matter of judgement, which could not amount to a procedural violation.

e) Exercising of discretion

In T. 208/00 the board considered that the department of first instance had to be granted a certain degree of latitude in exercising its power of discretion, which, in the case in hand, it had not overstepped in a clearly inappropriate manner. It stated that it was not equitable to reimburse the appeal fee, especially as under the established case law of the boards of appeal (see T. 860/93) not even "a gross error of judgment" by the department of first instance was regarded as justifying such reimbursement.

In T. 248/00 the board decided that, where a late submission was not admitted, an irregularity had taken place if the department had exercised its discretion incorrectly, that is to say on the basis of irrelevant or arbitrary considerations (see also T. 1651/10). The board held that, even if the non-admission might ultimately prove to be incorrect, such application of the law did not amount to a substantial procedural violation. The issue was, rather, whether the opposition division's discretion had been incorrectly exercised in not admitting a late-filed request.

In T. 2249/08 the board held that it was apparent that the opposition division had exercised its discretion to disregard "facts and evidence" presented belatedly, i.e. after a final date in preparation for oral proceedings. It stated that such discretionary decisions were not normally subject to review, unless the decision was based on the wrong principles or was otherwise manifestly unreasonable. Thus any finding of a substantial procedural violation through a discretionary decision also presupposed such grave errors, as opposed to mere errors of judgement.

f) Wrong procedure adopted

Normally there is no procedural violation justifying reimbursement of the appeal fee if the wrong procedure is adopted in a situation where the EPC does not lay down clearly what procedure is to be followed and the case law has not yet established any settled practice (T. 234/86, OJ 1989, 79).

g) Following earlier decisions

In T. 208/88 (OJ 1992, 22) the board held that taking a different line from an isolated appeal decision – as opposed to established board of appeal case law – could not be regarded as a substantial procedural violation.

In T.494/07 the board held that if two apparently similar case constellations were decided differently, this could at most be regarded as an error of judgment. In the case at issue, the board held that not following an earlier board decision did not constitute a substantial procedural violation.

In T.875/98 the board noted that the Convention did not contain any rule of procedure which imposed on an opposition division an obligation to abide by a decision in a different case. It held that a single decision did not establish a "case law" which had to be adhered to in another opposition case, even if the subject-matter of the two respective cases was closely related.

9.5.11 Cases concerning the decision-making process and the decision

a) Issuing of decision

(i) Issuing of decision before expiry of time-limit to comment

In T.804/94 the board ruled that there had been a substantial procedural violation as the opposition division had issued a decision rejecting the opposition before **expiry of the four-month period** it had set for responding to its communication (see also T.663/99; see also chapter III.B.2.5.2).

(ii) Excessive length of proceedings

In T.900/02 the board found that the extreme length of the delay – three years and seven months – between oral proceedings and the issue of a written decision amounted to a substantial procedural violation.

In T.358/10 the board found that sending the minutes 19 months after the oral proceedings had taken place and notifying the decision 22 months after its pronouncement at the end of those proceedings were inherently unacceptable procedural violations which, by themselves, sufficed to justify refunding the appeal fee (see also T.243/87, T.563/11). In T.2340/13 the length of time between the oral proceedings and issuing of the minutes and written decision of the opposition division was 13 months and 14.5 months respectively. The board noted, with reference to T.358/10, that even if this delay by itself were not considered to be a substantial procedural violation, it plausibly contributed to the other procedural violations (see in this chapter V.A.9.5.9).

In T.823/11 the board considered the duration of the proceedings before the department of first instance of more than twelve years after entry into the European phase as excessive. According to the board, in T.315/03 even a shorter delay of ten years in a much more complex opposition case had amounted to a substantial procedural violation. The board also referred to the judgment of the European Court of Human Rights in *Kristiansen and Tyvik AS v. Norway* (application No. 25498/08), in which the examination and (administrative) appeal proceedings of a patent application had taken a total of eighteen years. Taking into account the duration of patent protection of twenty years, the Court had found "the length of the administrative proceedings before the patent authorities" to be

excessive because it "in effect rendered meaningless any exercise by them [the applicants] of their right of access to a court".

In T.1824/15 the board noted that the reasons for decision T.823/11 did not explain why the delays in the examination procedure could not be justified by the particular circumstances of the case. Moreover, T.823/11 did not explain how its reasoning was in line with that of the cited ECtHR decision, in particular why circumstances leading to a finding of a violation under Art. 6(1) ECHR would necessarily lead to a finding of a substantial procedural violation under R.103(1)(a) EPC. In the case in hand the examining division had been entitled to raise the new objection so late in the first-instance proceedings. Members of an examining division were free to change their minds at any point in the procedure, including during oral proceedings, as long as the requirements of Art.113(1) EPC were fulfilled. The board held that the over eleven year delay in raising of the objection based on D3 had led to neither a fundamental deficiency under Art.11 RPBA 2007 nor a substantial procedural violation. With regard to the time taken by the examining division to issue the written decision and the minutes, the board found that the delay of seven months was not a procedural violation of any sort, let alone a substantial one, and also not a fundamental deficiency under Art.11 RPBA 2007. The request for reimbursement of the appeal fee was therefore rejected.

In T.1131/12 the board stated that, although a delay of five years between a last communication and the written decision would be wholly unacceptable, there was no causal link between this excessive delay and the outcome of the examining division's decision. Moreover, the appellant had only filed and substantiated the request for reimbursement shortly before the oral proceedings. For these reasons, the board refused the reimbursement request under Art.12(1)(a) and (2) RPBA 2007.

In T.2707/16 the contested refusal decision was taken more than fourteen years after the filing date. The board found that the excessive delays, in particular the lapse of more than seven years before the second substantive communication was sent out, constituted a procedural violation. The board argued that the violation was also substantial because the severe delays had the consequence that the first-instance decision was taken much later than it would have been without the procedural deficiencies. Thus, they had an impact on an essential element of the decision, namely its date ("justice delayed is justice denied"). However, the board was of the opinion that a reimbursement of the appeal fee in the circumstances should be regarded as equitable only where the applicant has made clear by some action that he did not tacitly agree with the stagnation of the proceedings. The board found the appellant failed to provide any such signal for a very long period of time and therefore refused the request for reimbursement.

(iii) Lack of competence

A decision taken by a department that is not competent amounts to a substantial procedural violation justifying the reimbursement of the appeal fee (see T.2411/10 where the Receiving Section, and not the examining division, was competent to decide). A substantial procedural violation is deemed to have occurred if the decision has been taken

by a formalities officer who was not competent to decide (J.10/82, OJ 1983, 94; T.114/82, OJ 1983, 323; T.790/93; T.749/02).

(iv) Decision not approved by all members

In T.225/96 the board ruled that to issue the parties with a draft decision not approved by all opposition division members present at the oral proceedings was a substantial procedural violation.

b) Content of decision

(i) Written decision deviates from oral decision

In T.425/97 the board decided that any substantive deviation of the decision notified in writing from that given orally at the oral proceedings amounted to a procedural violation. T.1365/09 held that a contradiction between the decision rendered at the oral proceedings and the written decision as sent to the parties contravened R.111(1) EPC and amounted to a substantial procedural violation.

(ii) Decision deviates from previous communication

In T.2006/08 the board found that although the opposition division had expressed an opinion on the issue of sufficiency of disclosure in favour of the patentee in two communications, this opinion was clearly labelled as being preliminary and non-binding. The board also held that a preliminary, provisional opinion did not prevent a party from making its complete case. It was the responsibility of a party to ensure that the facts and evidence filed were not only unequivocally clear but also as complete as possible. If a party decided to retain or not to file further evidence to support its case, it would run the risk that an adverse decision might be issued based on the available (incomplete) evidence on file. The board rejected the request for reimbursement of the appeal fee.

In T.980/06, the contested decision had regarded a claim as patentable, whereas in the sole previous communication the examining division had taken a negative view. In such circumstances, a second communication would have been useful. However, its absence was not a "substantial" procedural violation.

(iii) Failure to deal with objection

In T.740/94 the board held that the failure of the opposition division to deal with an objection under Art. 100(b) EPC 1973 against an amended claim in its decision to maintain the patent in amended form clearly constituted a substantial procedural violation (see G.10/91, OJ 1993, 420, point 19 of the Reasons).

(iv) Third party observations not mentioned in decision

In T.283/02 the opposition division had duly forwarded the observations by third parties to the patentee, who had made no comment. The failure of the opposition division to mention

these observations in its decision did not constitute a substantial procedural violation, even though a mention would have been desirable.

(v) Board decision containing similar facts not followed

In T 494/07 the board held that the strict legal obligation to follow the ratio decidendi of a decision of a board (Art. 111(2) EPC 1973) was limited to the same application and the same instance whose decision has been contested in the appeal, but did not extend to other applications (or even to other instances in the same application). This was so even if the subject-matter of the two applications was highly similar (see J 27/94, OJ 1995, 831).

(vi) Remarks on substantive matters in decision on admissibility

Remarks on substantive matters in a decision rejecting the opposition as inadmissible have no legal effect. Even if misleading, they do not represent a substantial procedural violation justifying the reimbursement of the appeal fee (T 925/91, OJ 1995, 469; see also T 1051/92).

(vii) Applying legal provision not yet in force

In T 991/02 an opposition division decision was set aside for lack of a legal basis. The opposition division's application of a new rule, not yet in force in this case, constituted a substantial procedural violation.

c) Requests

(i) Obligation to reason refusal of request

According to T 961/00, it is a party's procedural right to file and maintain such requests as are regarded by the competent organ as unallowable or even inadmissible. If a party does so, then the competent organ has to give a decision on it (see T 1105/96, OJ 1998, 249), but cannot simply disregard it and deal with the case as if the request did not exist. This would constitute a substantial procedural violation (see also T 234/86, T 484/88, T 155/88).

In T 1157/01 the decision under appeal had omitted to give reasons for the refusal of the higher ranking requests still pending before the examining division; this amounted to a substantial procedural violation (see also T 488/94; for opposition procedure see T 234/86, OJ 1989, 79).

(ii) Auxiliary requests and order of requests

In J 23/96 the board held that an auxiliary request was filed in case the main request was refused; the auxiliary request then took its place and had to be dealt with in the same decision. The examining division's failure to deal with the auxiliary request for re-establishment in the decision under R. 69(2) EPC 1973 (R. 112(2) EPC) amounted to a substantial procedural violation.

In T. 320/99 (referring to T. 1105/96) the examining division considered the auxiliary request allowable, but nonetheless issued a decision refusing the main request and thus the application. The correct course of action would have been to issue a communication under R. 51(4) EPC 1973 based on the auxiliary request. The issue of the decision was a substantial procedural violation which justified the reimbursement of the appeal fee.

In T. 883/07 the board held that the examining division's failure to examine the auxiliary requests independently of the main request amounted to a substantial procedural violation within the meaning of R. 67 EPC 1973. Claim requests do not coexist in parallel, but form a stack which has to be considered – each one independently of all the others – in the sequence indicated by the applicant or patent proprietor (see Guidelines C-VI, 4.1 and E-X, 3 – June 2005 version).

In T. 1758/15 the opposition division had concluded that four attempts to overcome a single issue were enough. The decision to not admit a further request was taken without having identified any signs of procedural abuse and without knowing the content of the further request. The board concluded that the opposition division had not exercised its discretion under R. 116(2) and Art. 114(2) EPC in a reasonable way, which constituted a substantial procedural violation. However, because the appeal was not deemed allowable, the appeal fee was not reimbursed. In any case, during second oral proceedings the appellant withdrew its request for reimbursement.

(iii) Requests not taken into account because of delay within EPO

In T. 231/85 (OJ 1989, 74) the board held that failure to take the applicant's requests into account as a result of a delay within the EPO (in this case six weeks) constituted a substantial procedural violation (see also T. 598/88). In T. 205/89, owing to a mistake by a formalities officer, a request for an extension of the time for submitting comments in opposition proceedings never reached the opposition division, which therefore took its decision without considering the argument presented in the subsequently filed submission. The board considered that the failure by the formalities section amounted to a substantial procedural violation on its part and regarded the reimbursement of the appeal fee to thus be equitable.

(iv) Requests not filed by correct party

In T. 1178/04 a procedural violation within the meaning of R. 67 EPC 1973 had occurred, in that the requests relating to the patentability of the claimed invention were made in the oral proceedings before the opposition division by a party to whom the opposition had been purportedly but invalidly transferred. These requests were inadmissible.

d) Amendments

In T. 246/08 the board stated that a refusal to allow amendments made in advance of any amendment being submitted could not be a reasonable exercise of discretion pursuant to R. 137(3) EPC and was ipso facto a substantial procedural violation (see also T. 872/90).

In T.121/06 the board held that issuing a communication under R.51(4)EPC 1973 in which amendments were proposed which the applicant could not reasonably be expected to accept without further discussion constituted a substantial procedural violation.

In T.901/10 the appellant implied that the way in which the examining division had applied R.137(3) and (4)EPC amounted to a substantial procedural violation. After the application had entered the European phase, no examination report was issued for six years. Nevertheless, the board held that such delays, undesirable as they may be, do not oblige the examining division to be more lenient under R.137(3)EPC. The appeal fee was not reimbursed.

In T.1354/13 the board held that an applicant who presents extensively revised claims at a late stage of the proceedings has to be prepared for the possibility that the admissibility of these claims will be considered under Art.123 and R.137EPC. The request for reimbursement of the appeal fee was refused.

e) Signature on decision and minutes

In T.390/86 the board held that the written reasons for a decision delivered during oral proceedings could only be signed by members of the deciding body who had taken part in the oral proceedings (see also T.563/11). In T.2076/11 the appeal fee was reimbursed as the written decision and the minutes of the oral proceedings were signed by the director of the organisational unit. See also chapter III.B.2.8. "Changes in the composition of the opposition division after oral proceedings".

In T.211/05, the board took the view that for a person to take part in a decision when not entitled to do so (here the director signing the decision instead of the second examiner), resulting in failure to comply with the principle that the power to examine a patent application must not only be exercised personally but also be seen – by both the applicant and the public – to be exercised personally, constituted a substantial procedural violation, in particular because it deprived the applicant of his right to be heard by the full examining division (see also T.1033/16).

f) Composition of opposition division

(i) Under Article 19(2)EPC

The board of appeal ordered reimbursement of the appeal fee in T.382/92 because the composition of the opposition division had not complied with the requirements of Art. 19(2)EPC 1973. The chairman and one member of the opposition division had already been members of the examining division which had decided on the application leading to the patent concerned (see also T.939/91, T.960/94, T.825/08, T.1349/10, T.1700/10, T.79/12, T.1788/14). See also chapter III.K.1.3.3.

(ii) During opposition proceedings

In T 2175/16 the person who signed the decision of the opposition division as first examiner had not been the first examiner at the oral proceedings. Thus, a change in the composition of the opposition division had taken place between holding the oral proceedings, at the end of which a decision was given orally, and issuing the written decision. The board considered the change of composition to be a substantial procedural violation, which justified that the appeal fee be reimbursed (see also chapter III.K.1.3.2).

9.5.12 Partiality

In T 900/02 the board stated that a suspicion of partiality must inevitably arise if a member of an opposition division, or any other first instance body, first solicits and then accepts employment with a firm in which a partner or other employee is conducting a case pending before that member, even if it occurred after oral proceedings had been held. This amounted to a substantial procedural violation.

In T 585/06 the appellant (opponent) considered that the presence of a former member of the boards of appeal, as a consultant of the patent proprietor, at the oral proceedings before the opposition division had led to partiality of the opposition division. The former member did not address the opposition division, not even under the control of the representative of the respondent. This amounted to an important difference to the facts underlying case G 2/94. The authorised representative was absolutely free whether to accept the hints whispered by the former member, who did not make any intervention of his own motion. The appellant's representative accepted at the beginning of the oral proceedings that the former member would sit beside the representative of the respondent and assist him. Even during the oral proceedings no objection was made to his presence. Moreover, no substantiated reasons of partiality of the opposition division were submitted by the appellant. The request for the reimbursement of the appeal fee was refused.

In T 1647/15 the minutes indicated that the representative of opponent III was interrupted by the chairman during the oral proceedings before the opposition division with: "Shut your mouth" and "Don't talk any more". The board held that the ability of the chairman to hear opponent III with an objective judicial mind could be perceived as having been affected and held that the objection of suspected partiality was justified. The board found it equitable to reimburse the appeal fee paid by each of the opponents I to III.

9.5.13 Suspensive effect of appeal

In J 5/81 (OJ 1982, 155) it was held that there was a substantial procedural violation where the Receiving Section had ignored the suspensive effect of an appeal in contravention of Art. 106(1) EPC 1973.

9.5.14 Non-compliance with order of the board

In T 227/95 a decision was taken by a board to remit the case to the department of first instance (opposition division) for further prosecution and not, as assumed by the division,

with instructions to maintain the patent. The fact that the opposition division had not carried out the board's order amounted to a substantial procedural violation with regard to Art. 111 EPC 1973. The case was remitted again to the department of first instance, and the appeal fee was reimbursed.

9.5.15 Referral pending before Enlarged Board

Where a decision of the examining division depended entirely on the outcome of proceedings before the Enlarged Board of Appeal on a legal question or point of law raised under Art. 112 EPC 1973 – and this was known to the examining division – the further examination of the application had to be suspended until the matter had been decided by the Enlarged Board of Appeal. Failure to do so amounted to a substantial procedural violation under R. 67 EPC 1973 (T 166/84, OJ 1984, 489). See also chapter V.B.2.5.3 "Stay of first instance proceedings following a referral".

9.5.16 Refusal of application on one ground only

In T 859/97 the board took the view that it was sufficient for the examining division, when deciding to refuse a European patent application under Art. 97(1) EPC 1973, to state one ground only which in their opinion would prejudice the grant of a European patent. In the case in hand, the examining division was unable to grant a patent because it had concluded that the subject-matter of claim 7 was not new. Consequently, it was under no obligation to comment on the patentability of claims 1 to 6. The requirements of R. 67 EPC 1973 were thus not met.

9.5.17 Cases concerning documentation and communications passing between the EPO and the parties

a) Ambiguous communication or wrong form

In J 3/87 (OJ 1989, 3) it was stated that if an EPO communication was not as clear and unambiguous as it ought to be, and led a reasonable recipient into error, that amounted to a substantial procedural violation, even if the ambiguity of the communication was partly due to an unfortunate provision of the law.

In J 17/92 the appellants complained that the examining division had used the wrong form for its communication, namely a form threatening that the application would be refused if a response was not filed. The board considered that the failure of the examining division to withdraw the wrong form and the threatened sanction of a possible refusal of the application amounted to a substantial procedural violation.

b) No reply to communication under Article 101 EPC.

In T 362/02 the opposition division had revoked the patent for the sole reason that the appellant had not replied to a communication under Art. 101(2) EPC 1973 inviting him to file observations. The board found that this decision was a substantial procedural violation because the EPC did not provide any sanction for a party's failure to reply to a

communication under Art. 101(2) EPC 1973. Further, revocation of a patent for mere failure to reply to a communication was contrary to the clear intention of the law, which required a proprietor to agree to the form in which a patent was granted or amended and to use clear and unambiguous words if he wished to abandon a patent.

c) Wrong type of communication

In J 10/07 (OJ 2008, 567), the board found that, although the Receiving Section was not to be blamed for issuing a communication under R. 43(2) EPC 1973, as the drawings could not have been in the file on that date, it should not have issued the notification under R. 43(3) EPC 1973 but a communication pursuant to R. 43(1) EPC 1973. This amounted to a substantial procedural violation. If the Receiving Section had followed the legally correct procedure, an appeal would not have been necessary.

d) Period set for opponent to reply to patentee's response

In T 138/08 the appellant (opponent) complained that two months and 21 days was not sufficient time to reply to the patentee's observations filed in response to the opposition. The board observed that the communication of the observations of the patentee had been made merely for information and the opposition division and had not raised any matter of substance in the communication. For that simple act a period of two months was considered sufficient. Therefore, the reimbursement of the appeal fee under R. 103(1)(a) EPC was not justified.

e) Observations not forwarded to other party

In T 789/95 the file contained no indication that a copy of the opponent's observations had been forwarded to the patent proprietor. It was therefore to be assumed that the communication of the observations to the patent proprietor had been omitted, in contravention of the Guidelines. In the board's view, this constituted a substantial procedural violation, as it infringed the principle that all parties to proceedings must be accorded the same procedural rights.

f) Appointment of professional representative

In J 20/96 the EPO had waited one year and three months before requesting the appointment of a professional representative and nearly another year before asking for the appellant's new address. Although conceding that the Receiving Section had been slow to request the appointment of a professional representative, the Legal Board ruled that this was not a substantial procedural violation because such appointments were a matter for the appellant; similarly, it was also up to him or his representative to provide his address.

g) Warning in relation to a grace period

As to the EPO's obligation to issue a warning in relation to the grace period of R. 85a EPC 1973 (this provision was deleted in the EPC 2000), and the question of whether or not this warning constituted a "courtesy service", see J 17/04 and J 32/97.

9.6. Reimbursement of appeal fee in case of interlocutory revision

9.6.1 Requirements

Pursuant to Art. 109 EPC a department whose decision is contested must rectify its decision if it considers the appeal admissible and well founded; this applies in ex parte cases only. R. 103 EPC (R. 67 EPC 1973) allows for reimbursement of the appeal fee in the case of interlocutory revision. In G 3/03 (OJ 2005, 344) it was held that the grant of interlocutory revision constituted a necessary, but not sufficient, prerequisite for the department of first instance to allow a request for the reimbursement of appeal fees (see also T 1222/04). In T 939/95 the words "if such reimbursement" in R. 103 EPC were held to refer both to interlocutory revisions and appeals, meaning that it was also a prerequisite for interlocutory hearings that a substantial procedural violation had occurred and that reimbursement was found equitable in the discretion of the deciding body (see also T 79/91, T 536/92).

9.6.2 Competence to decide on reimbursement

As to the question of which department is competent to decide on the request for reimbursement, in cases of interlocutory revision, the legal situation defined by G 3/03 (OJ 2005, 344) and J 32/95 (OJ 1999, 733) is now enshrined in R. 103(3) EPC (see T 625/09, T 206/10). In J 32/95 the Legal Board held that if the department of first instance considered the request for reimbursement of the appeal fee not to be well-founded in the event of interlocutory revision, it had to remit the request to the board of appeal for a decision. In G 3/03 the Enlarged Board of Appeal held that in the event of interlocutory revision under Art. 109(1) EPC 1973, the department of first instance whose decision had been appealed was not competent to refuse a request from the appellant for reimbursement of the appeal fee. The board of appeal which would have been competent under Art. 21 EPC 1973 to deal with the substantive issues of the appeal if no interlocutory revision had been granted was competent to decide on the request. G 3/03 was, for example, applied in T 1379/05, T 1315/04, T 245/05, T 1863/07 and T 2352/13.

In T 21/02 the board, distinguishing the facts from G 3/03 and J 32/95, held that it was not empowered to decide on the request for reimbursement of the appeal fee as the request had been submitted in the absence of a pending appeal and hence could not constitute an ancillary issue to be dealt with in appeal proceedings. An appeal had been fully dealt with by interlocutory revision by the department of first instance and was thus no longer pending when a request for reimbursement of the appeal fee was submitted (see also T 1703/12, T 2134/12, T 2008/14).

In T.242/05 the board held that once interlocutory revision had been granted, the appeal was res judicata. In the absence of a pending appeal, any request for reimbursement of the appeal fee filed after the decision to grant interlocutory revision will be considered inadmissible, regardless of whether the decision was taken by the examining division or the board of appeal as the body competent to consider the appeal (see also T.70/08).

In T.893/13 the board disagreed with T.21/02 and T.242/05, and found that since the examining division was not competent to decide that the appeal fee was not to be reimbursed, an interlocutory revision without an order for reimbursement could not be construed as a decision not to reimburse. The board further stated that a request for reimbursement of the appeal fee could be validly filed even after interlocutory revision, since R.103(3) EPC entrusted the boards with the decision on all other matters of reimbursement based on only two conditions: that the decision was rectified and that the appeal fee was not reimbursed by the examining division.

9.6.3 Examining division should have rectified decision

In T.647/93 (OJ 1995, 132) it was pointed out that when the examining division did not make use of the possibility of granting interlocutory revision after the **mistake** had been pointed out in the grounds of appeal, this was normally deemed to constitute a procedural violation justifying the reimbursement of the appeal fee (see also T.808/94, T.898/96, T.861/03, T.1113/06, T.971/06, J.7/07; see also T.685/98, OJ 1999, 346).

In T.183/95 the board held that appellant's request for reimbursement of the appeal fee in the event of interlocutory revision could not be granted under R.67, first half sentence, EPC 1973, since the examining division did not rectify its decision. However, it held that a refund of the appeal fee may be ordered under R.67, second half sentence, EPC 1973, if the appeal is allowed and the board finds this equitable by reason of a substantial procedural violation. In T.2528/12 the board also declined to order reimbursement, because although interlocutory revision had not been granted, as it should have been, that was not a substantial procedural error. That the grant proceedings had taken longer as a result had not adversely affected the appellant in a legal sense.

In T.794/95 the board did not consider it equitable to order the reimbursement of the appeal fee, since the examination procedure up to the decision under appeal was not tainted with any failure and the necessity for the appellant to file an appeal emerged exclusively from the substance of the decision, not because of any procedural shortcomings up to this stage and equally not from the later incorrect handling of the appeal by the examining division (i.e. the failure to rectify its decision).

In T.685/98 (OJ 1999, 346) the board held that where a fundamental procedural right had manifestly been violated in a refusal pursuant to Art. 97(1) EPC 1973, or in the foregoing examination procedure, a further substantial procedural violation occurred if the examining division failed to grant interlocutory revision on appeal (following T.647/93, OJ 1995, 132; see also T.1765/13), since such a right had to be safeguarded irrespective of the substantive merits of the case.

In T 898/96 the board took the view that the decision of the examining division to refuse the application having regard to Art. 113(2) EPC 1973 should have been rectified by way of interlocutory revision. The failure to rectify such a decision in this way was a substantial procedural violation. However, the board did not consider the refund of the appeal fee to be equitable because the applicant did not approve this text of the application until he filed an appeal.

In T 704/05 the board found that the examining division could have set its decision aside by way of interlocutory decision pursuant to Art. 109(1) EPC 1973. However, given that the examining division was expressly precluded from giving its reasons for not granting interlocutory revision, it was not open to the board to criticise this omission. The mandatory but necessarily silent judgment made pursuant to Art. 109(1) EPC 1973 as to whether an appeal refuted the reasons for a refusal was not an exercise of discretion and ipso facto left no room for an inquiry as to whether discretion had been properly exercised. The board was aware that a number of decisions of the boards of appeal had taken a different view on this point – to the extent of sometimes castigating such omission as a substantial procedural violation – but respectfully suggested that these decisions had not given sufficient weight to the implications of the silence imposed on the examining division by Art. 109(2) EPC 1973.

In case T 1982/07 the board said that it was fundamental to the principle of fair trial that in the examination an applicant, when confronted with new prior art documents, was not only given the right to be heard, but also the right to react thereto by amending the claims in order to overcome the prior art references. In the case at issue, the way the examining division exercised its discretion under R. 86(3) EPC 1973 (now R. 137(3) EPC) was erroneous, as it did not allow the applicant to react appropriately, but rather tied its hands to an extent neither mandated by procedural efficiency nor justified in the light of the prior art documents. The examining division thus exercised its discretion in an unduly restrictive manner, thereby committing a substantial procedural violation. It would have been incumbent on the examining division to rectify the decision pursuant to Art. 109(1) EPC, but this was not done. The board ordered the remittal to an examining division that had not previously dealt with this case.

9.6.4 A rectification decision maintaining earlier decision

In T 691/91 the board held that Art. 109 EPC 1973 provided for two legally viable alternatives: to maintain or to annul the decision which was appealed. In the case at issue, the examining division had chosen a third way: to maintain the earlier decision by issuing a decision on rectification, which resulted in the appellant having to file a second appeal against the decision on rectification. This alternative was not covered by the provisions of Art. 109 EPC 1973. This decision was thus held to be ultra vires and the board ordered reimbursement of the second appeal fee. Reimbursement of the first appeal fee was also ordered because a violation of the right to be heard had occurred during the examination proceedings (see also T 252/91).

9.6.5 Re-opening examination after rectification

In T 142/96 the practice of re-opening examination after rectification was held to be contrary to the principle of procedural economy underlying Art. 109 EPC 1973 and so constituted a substantial procedural violation.

In T 2247/09 the examining division had granted interlocutory revision, then proceeded with the examination of the new subject-matter put forward with the appeal, before refusing the application again in its second decision. The appellant claimed that he had had to pay two appeal fees in order to have the claims considered by a board of appeal. The board noted that the reasons given in the examination division's second decision differed from those given in its first decision. Moreover, the decision to grant interlocutory revision had been correct because the applicant's new request had removed the reasons for the decision under appeal. The mere fact that the further examination again resulted in the refusal of the application did not constitute a substantial procedural violation.

9.7. Reimbursement must be equitable

9.7.1 Causal link between substantial procedural violation and filing of appeal

In order to render the reimbursement of the appeal fee equitable, a causal link must exist between the alleged procedural violation and the decision of the department of first instance that necessitated the filing of an appeal (T 388/09; see also J 9/10, T 1101/92, T 1198/97, T 2373/11).

In T 677/08 the board held there was no causal link between the procedural violation and the necessity to file an appeal. The application was refused for lack of inventive step, and so the appellant would have had to file the appeal even if the examining division had sufficiently reasoned its refusal of the request for a video conference.

In T 2111/13 the board held that, according to established case law, for the reimbursement of the appeal fee to be equitable a causal link between the substantial procedural violation and the filing of the appeal was required. According to an alternative approach, a procedural violation is not to be deemed substantial if the outcome of the proceedings would not have been different had the violation not occurred (see in this chapter V.A.9.5.2). In the case at hand, the board saw no need to choose between these two approaches and rejected the appellant's request for reimbursement.

In the cases that follow the boards held that reimbursement was not equitable because no causal link could be established:

In T 2106/10 the board reiterated that any reimbursement of the appeal fee had to be equitable and depended on the question of whether the procedural deficiencies were 1) substantial and 2) forced the appellant to file the present appeal. In the case in hand the board did not address the question as to whether a substantial procedural violation had taken place, since the board was of the opinion that the appellant had to file the appeal irrespective of whether or not substantial procedural violations had taken place.

In T 41/97 a refund was not equitable because the procedural error (refusal of interlocutory revision prior to receipt of the statement of grounds of appeal and before the expiry of the period for filing it) was not the reason the appeal had been filed (see also T 1891/07, T 1994/11, T 2227/09).

In T 711/11 the appellant alleged that the examining division found a lack of unity without providing adequate reasoning. The board stated that lack of unity was not the sole ground given in the contested decision for refusing the application. The appellant would in any case have had to file an appeal in view of the ground of lack of inventive step. Therefore, the board considered the reimbursement of the appeal fee not equitable.

In T 893/90 the contested decision to refuse the application on the grounds of lack of novelty was based primarily on document 1, on which, in contrast to document 2, the appellant had had adequate opportunity to put forward comments. The board stated that the decision under appeal had been fully reasoned, and that the procedural violation as regards the reliance on document 2 was thus not sufficiently closely linked to the need to pay an appeal fee for it to be equitable to reimburse the fee.

In T 601/92 the opposition division had not commented, either in a communication or in its decision, on auxiliary request (5) submitted by the patent proprietor in good time before the decision was issued. Because auxiliary request (2), which had been submitted in the appeal proceedings and which preceded auxiliary request (5), was allowed, the board did not see any reason, despite the procedural violation, to reimburse the appeal fee, as this would not have been equitable.

In T 2377/09 the board took the view that reimbursement of the appeal fee solely on the grounds of the established procedural violation would not be in accordance with the equitability requirement of R. 67 EPC 1973 (R. 103 EPC). This was because the rejection decision was based on additional, alternative grounds which had given the appellant no cause to claim a substantial procedural violation and against which it would in any case have had to appeal to get the decision set aside (with reference to T 893/90, T 219/93, T 4/98 (OJ 2002, 139) and T 978/04).

In T 840/07 the appellant's request which had succeeded in the appeal was the same as the main request which it had filed before the examining division but had later replaced. The appellant had not pursued that request to the point where it became the subject of a decision. The board concluded that the appellant had had no choice but to appeal if it wanted the result it had eventually obtained before the board. To reimburse the appeal fee would have given the appellant a fee-free appeal which would be inequitable (see also T 784/11, referring to T 4/98).

In T 1891/07 the board held that despite the presence of a substantial procedural violation it would not be equitable to reimburse the appeal fee because the violation could not have been causative in filing the appeal since it occurred after the notice of appeal had been filed.

In T.1990/08 the appellant submitted that the examining division had committed a procedural violation as it had not provided a translation of D1 but had used it to deny inventive step. The board held that even if the inventive step objection including the appraisal of document D1 in the decision were disregarded, the contested decision would still be negative as it had also relied on Art. 84 and 123(2) EPC to refuse the application. Regardless of whether a substantial procedural violation had occurred or not, the appellant would have had to appeal in order to obtain a reversal of the first-instance decision. The alleged procedural violation could not have been the immediate and only cause of the need to appeal and to pay an appeal fee.

In T.433/08 the board and the parties agreed that a violation of Art. 113(1) EPC had occurred because the opposition division had relied in its decision on a document which had not been referred to in the course of the opposition proceedings. The board held, however, that the opposition division would not have reached a decision more favourable to the opponent if it had not taken into account said document. Thus, the opposition division had not acted to the detriment of the opponent. The board concluded that the rights of the opponent (appellant) were not curtailed to an extent that would make the reimbursement of its appeal fee equitable by reason of a substantial procedural violation.

In T.1680/11 the board held that an alleged procedural violation with respect to a decision to rectify under Art. 109 EPC could not justify refunding the appeal fee. A decision to grant an appeal could not be the reason for filing the appeal, as it was – by its very definition – taken after the appeal had been filed.

9.7.2 Conduct of appellant

The conduct of the appellant may render the reimbursement of the appeal fee not equitable even if a substantial procedural violation occurred (J.4/09; see also T.1500/10).

a) Reimbursement held not to be equitable

In J.22/85 (OJ 1987, 455) the board did not consider a reimbursement of the appeal fee to be justified because the appellant had failed to provide the Receiving Section with the evidence subsequently submitted in the appeal proceedings.

In T.167/96 the impugned decision did not meet the minimum requirements for a reasoned decision. Although there was no doubt that this lack of reasoning amounted to a substantial procedural violation, the board did not consider that a refund of the appeal fee was equitable. The appellant had availed himself of the appeal procedure to file necessary amendments which the opposition division had sought in vain over a period of years to elicit from him (see also T.908/91).

In J.18/96 (OJ 1998, 403) the Receiving Section had failed to observe the provisions concerning examination on filing. Although the appeal was allowed on the ground, inter alia, of a procedural violation, the reimbursement of the appeal fee was not equitable because the appellants themselves had contributed to the failure of the proceedings before the Receiving Section.

In J.4/09 the board said that, as a rule, an applicant could be regarded as behaving inequitably if it made no use of opportunities to participate in the initial proceedings. In this case, it had not reacted to the Receiving Section's communication; only in its statement of grounds for appeal had it drawn attention to an obvious inconsistency.

In T.1216/02 the board held that, albeit for reasons outside the knowledge and control of the examining division, the refusal decision had been based on evidence on which the applicant had not had an opportunity – viewed objectively – to present his comments. This constituted an objective substantial procedural violation under R.67 EPC 1973. However, the board did not deem reimbursement of the appeal fee equitable, because the appellant should have facilitated further substantive examination in the event of remittal or interlocutory revision by including in his statement of grounds of appeal a substantive response to the examining division's communication, based on the document which, at the time when the appeal was filed, he had known to be correct.

In T.427/03 the decision (to revoke the patent) under appeal was set aside by reason of a substantial procedural violation – no reference to any Article or Rule of the EPC as the legal basis for the revocation, no reasoning is provided to justify the revocation. However, the board did not find it equitable to reimburse the appeal fee as the **appellant had contributed to the situation** by filing a new set of claims 16 months after the announcement of the opposition division at the end of the oral proceedings that the patent could be maintained in amended form on the basis of the last set of claims put forward at the end of the oral proceedings instead of providing an adapted description as requested.

In T.1500/10 the board held that if oral proceedings took place at the instance of the EPO because it considered this to be expedient under Art.116(1) EPC and the duly summoned party does not attend them without serious reasons, this conduct might have the consequence that it would not be equitable to reimburse the appeal fee.

In T.674/12 the board held that the appellant, by filing different unclear requests, did not help to expedite the proceedings and contributed to the fact that the decision of the examining division was based on a request which was no longer in the proceedings. The board considered the reimbursement of the appeal fee not to be equitable.

In T.1750/14, the appellant's representatives requested a postponement of the final date (under R.116(1) EPC) repeatedly and separately from their request to postpone the date for oral proceedings. The specific reasons for not allowing any postponement of the final date – regardless of the refusal of the request for postponement of the date for oral proceedings – were not addressed in the decision of the examining division. The board held that the examining division had committed a substantial procedural violation. Nevertheless the board held that the applicant – and in particular its professional representative – must or should have known, in view of the last sentence of R.116(1) EPC that it is generally not guaranteed that any written submission is automatically admitted into the proceedings before the EPO for the sole reason that it is filed prior to the final date, nor is it entirely unlikely that a submission may be admitted at the department's discretion when filed after that date. The applicant could have followed the invitation from the examining division and attempted to file, for example, amended sets of claims with the

aim of overcoming the objections raised in the summons. This, however, was not done by the applicant of its own volition. In the board's view, such procedural behaviour spoke against regarding the reimbursement of the appeal fee as equitable within the meaning of R. 103(1)(a) EPC. A party cannot gain a procedural advantage from an omission of its own.

b) Reimbursement held to be equitable

In T. 281/03 of 17 May 2006 the board held that reimbursement of the appeal fee was equitable despite the fact that the appellant had continuously delayed his case on inventive step until the last moment. The board noted that delaying detailed substantiation of the ground of inventive step raised in the notice of opposition until the last moment of opposition proceedings should be avoided if possible, since it created an unexpected situation for the other parties and the opposition division. However, the board noted that the case in hand was special, not just in that the inventive step argument was based on the same document as the novelty argument, but that the novelty of the features depended on how D1 was interpreted as a whole. The board held that it was not efficient to expect an opponent to provide a multitude of speculative arguments covering each possibility, nor did it seem sensible to the board to place a formal requirement to provide at least one argument, which may turn out to be completely wrong.

9.7.3 Violation of the principle of the protection of legitimate expectations

In T. 308/05 the board ruled that the appeal fee was to be reimbursed even though the appeal had been withdrawn. Referring to J. 30/94 and J. 38/97 (see below) the board held that the fact that in the case in hand the EPO had been found to have breached the principle of the protection of legitimate expectations, and that the consequence had been the filing of an appeal which was objectively superfluous, made it necessary for reasons of equity to refund the appeal fee paid by the appellant. See also T. 1785/15.

In J. 30/94 the board held that Art. 109(2) EPC created a legitimate expectation of the parties that an appeal would be remitted to the board of appeal within a reasonable time after the decision of the department of first instance not to allow the appeal. The board held EPO had clearly offended against this legitimate expectation because the appeal was only referred to the Boards of Appeal seven years after its filing. The board found it equitable under these exceptional circumstances to order the reimbursement of the appeal fee even though the appeal had been withdrawn.

In J. 38/97 the appeal was found inadmissible but the appeal fee was nevertheless refunded. The board took the view that the appellant, having requested an appealable decision, could legitimately expect the impugned decision to be issued by the competent department and not by a person lacking legal authority. In accordance with the principle of good faith, it was equitable in these circumstances to order the reimbursement of the appeal fee.

In T. 1423/13 the examining division had issued a communication to the appellant in which it stated that "in case no allowable set of claims is presented, the next office action will be

the summons to oral proceedings". The board held that this statement was a source of legitimate expectation for the appellant; the examining division then violated this principle by issuing the decision to refuse the application without summoning the applicant to oral proceedings. It thus took the applicant by surprise, thereby depriving it of a further opportunity to present arguments or its final fall back positions. The appeal fee was reimbursed.

9.8. Withdrawal of appeal

9.8.1 Withdrawal of appeal under Rule 103(1)(b) EPC

Under the EPC 1973, when appeal proceedings were terminated by the withdrawal of the appeal, R. 67 EPC 1973 was in general not applicable (see J 12/86, OJ 1988, 83; T 41/82, OJ 1982, 256; T 773/91; J 30/94; T 372/99; T 543/99; T 1216/04; T 552/07; for exceptions to this rule in case of a violation of the principle of the protection of legitimate expectations see J 30/94 and T 308/05).

Under the EPC 2000, however, the appeal fee is reimbursed if the appeal is withdrawn before the filing of the statement of grounds of appeal and before the period for filing that statement has expired (R. 103(1)(b) EPC). For cases where this provision was first applied, see T 1495/08, T 2052/08, T 1822/09.

For a case in which the **patent application** was withdrawn after the expiration of the period for filing the statement of grounds and the appeal fee was thus not reimbursed, see T 683/08. The board in T 1613/08 held that R. 103(1)(b) EPC did not confer any discretion on the boards to excuse missing the end of the period even by as short a time as one day.

9.8.2 Withdrawal of appeal under Rule 103(2) EPC

According to R. 103(2) EPC, as amended on 13 December 2013 (CA/D 16/13; OJ 2014, A3), the appeal fee is reimbursed at 50% if the appeal is withdrawn after expiry of the period under R. 103(1)(b) EPC and certain conditions are met (see in this chapter V.A.9.1.). These rules apply to appeals pending at their entry into force, i.e. on 1 April 2014, and to appeals filed thereafter. In T 1086/09 the board held that a letter received on 28 March 2014 stating that the appeal should be withdrawn "hereby" would mean that the appeal was withdrawn on 28 March 2014, and thus no longer pending on 1 April 2014. In T 370/11 the board held that the 50% was to be calculated on the basis of the appeal fee actually paid, and not on the basis of the rate of the appeal fee applicable on the date of withdrawal or reimbursement.

In T 1402/13 of 31 May 2016, the board stated that under R. 103(1)(b) and (2) EPC the termination of appeal proceedings caused by a loss of rights due to the non-payment of renewal fees could not be equated to a declaration of withdrawal of the appeal. This result was also supported by the travaux préparatoires (CA/90/13 Rev. 1), which explicitly required the appellant to make a procedural declaration. In order to claim entitlement to reimbursement under R. 103(2) EPC, the appellant was required, at a time when its application was still pending, to make a procedural declaration that left no doubt that

withdrawal of the appeal was intended. As this was not the case, the request for reimbursement of the appeal fee was rejected.

In T. 265/14 the appeal had been withdrawn after expiry of the period set by the board in a first communication inviting the party to file observations under R. 100(2) EPC but before expiry of the period set in a second communication. The board held that R. 103(2)(b) EPC was not to be interpreted as definitively ruling out reimbursement of 50% of the appeal fee where no observations were filed within the period set under R. 100(2) EPC. If a board then set a new period for filing observations, it thereby gave the appellant a fresh opportunity to withdraw the appeal, with the effect of reducing the fee, within that period. So the board concluded that issuing a second invitation under R. 100(2) EPC was to be treated as equivalent to setting a date for oral proceedings after expiry of the period set in the first invitation, which likewise reopened the possibility of the reimbursement of the appeal fee under R. 103(2)(a) EPC. That reimbursement was possible in those circumstances supported the view that R. 103(2) EPC as a whole was to be interpreted broadly in the light of its object and purpose and that both its scenarios could be treated in the same way.

B. Proceedings before the Enlarged Board of Appeal

5.6.	Publication of the decision	1369
5.7.	Reimbursement of costs	1369

1. Introduction

The Enlarged Board of Appeal is responsible for proceedings under Art. 112 EPC (referral of points of law by boards of appeal or the President of the EPO), proceedings under Art. 112a EPC (petitions for review against decisions of the boards of appeal) and proceedings under Art. 23(1), first sentence, EPC (removal from office of a member of the boards of appeal).

The provisions governing the procedure before the Enlarged Board are set out in the EPC, the Implementing Regulations and the RPEBA. The latter are binding upon the Enlarged Board, provided that they do not lead to a situation which would be incompatible with the spirit and purpose of the Convention (Art. 19 RPEBA).

The members of the Enlarged Board are mainly appointed from among the members of the boards of appeal, who continue to exercise their functions in the Legal Board or their respective technical boards ("internal members"). This double function is in itself not a reason for exclusion or objection under Art. 24 EPC (see R 12/09 of 3 December 2009, R 19/12 of 25 April 2014 and R 2/14 of 17 February 2015 for petition for review proceedings). Legally qualified members of national courts or quasi-judicial authorities may also be appointed as members of the Enlarged Board ("external members"), and may continue their judicial activities at national level (Art. 11(5) EPC).

2. Referral under Article 112 EPC

2.1. General

Art. 112 EPC defines the conditions in which legal uniformity within the European patent system may be established by means of a referral to the Enlarged Board of Appeal. It requires the boards (Art. 112(1)(a) EPC) or the President (Art. 112(1)(b) EPC) to deem the referral necessary, either in order to ensure uniform application of the law or if points of law of fundamental importance arise. For a referral by the President, a further admissibility

criterion is that two boards of appeal must have given different decisions on the question referred (G 3/08, OJ 2011, 10).

This chapter concerns Art. 112 EPC. The Enlarged Board's answers to referred questions of law are covered in the chapters corresponding to these questions.

2.2. Composition

In proceedings under Art. 112 EPC, the Enlarged Board consists of five legally and two technically qualified members; the chairman must be a legally qualified member (Art. 22(2) EPC). If a board of appeal refers a question to the Enlarged Board, at least four members of the Enlarged Board must not have taken part in the proceedings before the referring board (Art. 2(4) RPEBA).

2.3. Referral by a board of appeal

2.3.1 General

Under Art. 112(1)(a) EPC a board of appeal *shall* refer a question to the Enlarged Board of Appeal if it considers that a decision is required, in order to ensure uniform application of the law or because a "point of law of fundamental importance" arises. With the EPC 2000, the English wording was changed from "important" to "fundamental importance" in order to bring it into line with the French and German versions (see G 1/12, OJ 2014, A114).

Only questions on a specific point, not entire cases, may be referred to the Enlarged Board (e.g. T 184/91 of 25 October 1991, T 198/12). The Enlarged Board of Appeal is not a third instance within the EPO, but part of the second instance constituted by the boards of appeal (T 79/89, OJ 1992, 283). However, the Enlarged Board's answers to the referred points of law are binding on the referring board in respect of the appeal in question (Art. 112(3) EPC; see also J 8/07 of 1 July 2010).

The Enlarged Board of Appeal is not bound by the way the referring board formulated the question, and may redraft the referred question (see, for example, G 2/08, OJ 2010, 456, G 2/10, OJ 2012, 376, and G 1/13, OJ 2015, A42). The Enlarged Board does not consider referred questions narrowly, but in a way as to clarify the points of law which lie behind them (G 3/14, referring to G 2/88 and G 6/88, OJ 1990, 93 and 114).

The Enlarged Board of Appeal in petition for review proceedings under Art. 112a EPC is not a "Board of Appeal" within the meaning of Art. 112(1)(a) EPC that could initiate referral proceedings under that provision (R 7/08, R 1/11, R 7/12). The Disciplinary Board of Appeal has no power to refer questions to the Enlarged Board of Appeal either (D 5/82, D 7/82, D 9/91, D 30/05).

If a board is not empowered to decide a question, it is not empowered to refer that question to the Enlarged Board (T 1142/12).

Questions can be referred by a board either of its own motion or following a request from a party. If a board rejects a party's request for referral, it must give reasons in its final decision (Art. 112(1)(a) EPC). This was considered necessary to provide the parties with a certain guarantee, on the one hand, and to enable a certain degree of standardisation of the jurisprudence on the other (travaux préparatoires, BR/177/72, p. 31). Providing parties with a right of reference was, however, rejected (BR/168/72, p. 51).

The parties to the appeal proceedings are parties to the proceedings before the Enlarged Board (Art. 112(2) EPC). The Enlarged Board may invite the President of the EPO to comment on questions of general interest; the parties are entitled to submit their observations on the President's comments (Art. 9 RPBEA). Third parties may send written statements (*amicus curiae briefs*) to the Enlarged Board (Art. 10 RPBEA).

2.3.2 Discretion of the board

Several decisions state that referring a question under Art. 112(1)(a) EPC lies within the discretion of the boards (see e.g. T.1016/10; T.365/05; T.1242/04, OJ 2007, 421). In T.390/90 (OJ 1994, 808) the board stated that the boards have discretionary power to refer any question to the Enlarged Board, either if a request for such reference has been made by a party, or if an important point of law arises and, in both cases, if the board considers that a decision by the Enlarged Board is required to ensure uniform application of the law or to decide upon the point of law that had arisen.

In G.3/98, (OJ 2001, 62) the Enlarged Board stated that while the view of the referring board is decisive for assessing whether a referral is required, such assessment should be made on objective criteria and should be plausible (see also G.2/99, OJ 2001, 83). One of the criteria identified in T.1242/04 was whether the question can be answered beyond all doubt by the board itself, in which case it does not need to be referred to the Enlarged Board (see also in this chapter V.B.2.3.7).

In T.560/13 the board noted that under Art. 21 RPBA 2007, a referral of questions to the Enlarged Board of Appeal must be made in cases where the board considers it necessary to deviate from an interpretation of the EPC contained in an earlier opinion or decision of the Enlarged Board of Appeal. It further noted that according to Art. 20(1) RPBA 2007, if a board wishes to deviate from an earlier decision taken by a board of appeal, a referral is not compulsory, but the board must give the grounds for deviation unless such grounds are in accordance with an earlier opinion or decision of the Enlarged Board (see also T.1676/08 and T.1020/03, OJ 2007, 204). Moreover, in G.1/98 the Enlarged Board stated that it was clearly desirable that whenever a board of appeal was aware that its decision involved a different interpretation of the law, on a point of substance and importance, from that applied in a decision of a previous board, that attention be drawn to this fact in its decision in a manner appropriate to the circumstances of the case, and that reasons be given for the different interpretation, in order that the President of the EPO can take appropriate action (see also Art. 20(1) RPBA 2007).

2.3.3 Relevance of the referred question for the underlying case

The referred question must not have a merely theoretical significance for the original proceedings which would be the case if the referring board were to reach the same decision regardless of the answer to the referred question (G 3/98, OJ 2001, 62; G 2/99, OJ 2001, 83; see also T 547/08). It must be relevant for deciding the case in question (G 2/04, OJ 2005, 549; T 2136/16), or the Enlarged Board must be satisfied that "answers to the questions referred are necessary for each Board of Appeal to be able to dispose of their respective appeals on the correct legal basis" (G 1/05, OJ 2008, 271; G 1/06, OJ 2008, 307; see also G 2/06, OJ 2009, 306). In T 154/04 (OJ 2008, 46; see also J 16/90, OJ 1992, 260; and T 1044/07) the board held that the answer to the referred question must be "essential to reach a decision on the appeal in question".

In T 520/01 (see also T 787/06) the board referred to G 3/98, did not maintain the patent on grounds other than those to which the question related, and thus refused the party's referral request. In T 469/92, the board granted the appellant's main request, and therefore did not consider its auxiliary referral request.

In G 1/98 (OJ 2000, 111) one of the questions referred by the board concerned objections of which the appellant had not been made aware before, and the appellant expressed its intention to the Enlarged Board to make the required amendments. As a result, the Enlarged Board doubted the relevance of the referred question and deemed it inappropriate to offer guidance. In G 7/95 (OJ 1996, 626, see also G 9/92 of 22 June 1993) the Enlarged Board, having regard to the particular facts of the case before the referring board, deemed it not necessary to answer the referred question either.

In G 1/09 (OJ 2011, 336) a board referred a question on whether a *rejected* patent application was still pending under R 25 EPC 1973 (R 36 EPC; divisional applications) when no appeal had been filed but the time limit for filing an appeal had not yet expired. In his comments under Art. 9 RPEBA, the President of the EPO raised two additional questions, namely whether a *granted* application was still pending in such a situation, and whether the filing of an inadmissible appeal could maintain the pendency of the application beyond the expiry of the time limit for filing an appeal. The first additional question was – although not relevant for the decision in the underlying case – answered by the Enlarged Board in an obiter dictum, whereas the second was considered not to be covered by the referral decision.

In G 2/03 (OJ 2004, 448) the Enlarged Board stated that not all substantive requirements had been examined by the referring Board and that the referred question could, in the end, turn out to be irrelevant. Taking into account the usual order of examination according to which the referred question (on the allowability of disclaimers) was examined before substantive requirements such as inventive step, the Enlarged Board considered the referral nevertheless admissible. In G 2/99 (OJ 2001, 83), the Enlarged Board had doubts whether the answer to the referred question would have an impact on the decision in the underlying proceedings, but deemed the referral nevertheless admissible, for reasons of procedural efficiency. In G 2/07 (OJ 2012, 130) the referrals were considered admissible

"irrespective of whether an answer is actually required on all aspects which the referred questions might in theory be seen as embracing".

In G 1/14 the question referred to the Enlarged Board was whether an appeal is inadmissible or deemed not to have been filed if the notice of appeal is filed and the fee for appeal paid after expiry of the time limit (see chapter V.A.9.3. "Appeal deemed not to have been filed or inadmissible appeal"). Until 1 April 2015 the wording of R. 126(1) EPC was limited to "Notification by post ... by registered letter with advice of delivery" (since amended to: "Notification by postal services ... by registered letter with advice of delivery or equivalent"). In the Enlarged Board's view notification of first-instance decisions by the postal service UPS was not covered by R. 126(1) EPC as formerly in force, so the referring board's finding that the appeal had not been lodged in time was inoperative. As this meant there was no need to refer the question, the Enlarged Board dismissed the referral as inadmissible.

2.3.4 Question of law

Only questions of law, not technical issues (e.g. T 287/11: the interpretation of technical features of a specific claim; T 181/82: whether the person skilled in the art can understand the technical content of a prior art document; see also T 1798/08) may be referred to the Enlarged Board. Similarly, in T 118/89 the board stressed that only questions of law, not questions of fact may be referred.

2.3.5 Pending proceedings

A board may only refer a point of law to the Enlarged Board of Appeal "during proceedings on a case" (Art. 112(1)(a) EPC). If the underlying appeal is withdrawn (see T 1040/04 and G 3/06, OJ 2007, 312), or the underlying application deemed to be withdrawn (G 2/14, OJ 2015, A13), the proceedings before the Enlarged Board are terminated.

The referral to the Enlarged Board must precede the decision of the board of appeal (T 2271/08). After a board has issued a decision in respect of certain issues, it has no power to refer a question to the Enlarged Board in connection with the issues already decided, even though other issues are still pending in proceedings on the same case (T 79/89, OJ 1992, 283).

For a referral to be admissible, the appeal has to be admissible (see T 1954/14). This principle does, however, not apply if the referral itself concerns the admissibility of the appeal. Without this exception, the boards would be denied the opportunity to refer questions on important points of law concerning the admissibility of an appeal. This would contradict Art. 112(1)(a) EPC where no restrictions of that kind appear (G 1/12, OJ 2014, A114; see also G 8/92, not published in the OJ; G 3/99, OJ 2002, 347; G 2/90, OJ 1992, 10 and G 2/04, OJ 2005, 549).

2.3.6 Ensuring uniform application of the law

In order to be admissible, the referred question must either concern a non-uniform application of the law by the boards or, alternatively, a point of law of fundamental importance (see in this chapter V.B.2.3.7). According to Art. 112 EPC, this requirement concerns not only referrals by a board but also referrals by the President, which, however, must in any case concern "different decisions" of the boards (see in this chapter V.B.2.4.1).

In T.154/04 (OJ 2008, 46) the board found that deviating from an opinion given in another decision of a board of appeal or a deviation from national jurisprudence are not per se valid reasons for referral under Art. 112(1)(a) EPC. According to the board, the legal system of the EPC allows for the evolution of the case law, which is not case law in the Anglo-Saxon meaning of the term. In T.15/01 (OJ 2006, 153) the board did not consider a referral to the Enlarged Board necessary, because only one previous decision of the boards deviated from its own conclusion as to the exhaustion of priority rights. In T.248/88 the board also held that a single and isolated non-uniform decision did not qualify under Art. 112(1)(a) EPC.

In T.712/10 the board stated that the Enlarged Board does not have the power to ensure uniform application of the law between the boards of appeal and national courts. However, a lack of uniformity between the law as applied by the boards of appeal and national courts could, in theory, bring to the fore a point of law of fundamental importance.

In T.2477/12 the board held that the application of the same legal principles and criteria may lead to different results in different cases. This is a consequence of the specific facts of each individual case and not, however, an indication of a contradictory interpretation or an inconsistent application of the law.

In G.1/12 (OJ 2014, A114), the Enlarged Board considered the requirement of non-uniform application of the law to be fulfilled because some decisions allowed deficiencies in the appellant's name to be remedied under R.101(2) EPC, whereas in other decisions on analogous situations the boards applied R.139 EPC. A minority of the members of the Enlarged Board were of the opinion that this merely demonstrated that, as long as the removal of the deficiency did not lead to a change of the appellant's true identity, both procedures were available according to consistent case law.

2.3.7 Point of law of fundamental importance

The requirement that the referred question must either concern a lack of uniform application of the law by the boards or a point of law of fundamental importance concerns both referrals by a board and referrals by the President (see in this chapter V.B.2.4.1).

G.1/12 (OJ 2014, A114) concerned the correction of errors regarding the identity of the appellant and, in this context, the admissibility of an appeal. The Enlarged Board held that the referred question related to a "point of law of fundamental importance" because it was relevant to a large number of similar cases (see also T.271/85, OJ 1988, 341, T.1242/04, OJ 2007, 421 and T.1676/08: "a substantial number of similar cases") and was therefore

of great interest not only to the parties to the specific appeal proceedings in question (see also T.590/18). Settling this point of law was important not only to the users of the European patent system but also to the boards of appeal and the department of first instance in examination and opposition proceedings. A minority of the members of the Enlarged Board disagreed and considered the referral inadmissible. According to the minority, the majority's view implied that "importance" within the meaning of Art. 112 EPC was nothing more than mere relevance. The number of cases affected, however, was neither a suitable nor an appropriate criterion for establishing the admissibility of a referral. In G.1/13 (OJ 2015, A42), the Enlarged Board confirmed the view of the majority in G.1/12.

In T.26/88 (OJ 1991, 30) the board held that a question was not sufficiently important when the legal framework upon which the question was based (here: R. 58(5) EPC 1973) had changed in the interim and the question was therefore unlikely to arise again very often. Similarly, in T.2459/12, the board stated that a question regarding a point of law the answer to which would affect only a relatively small number of applicants for a limited period of time, after which it would become obsolete (here: due to an amendment to R. 164 EPC), was not a question relating to a point of law of fundamental importance.

The lack of case law on a particular issue is in itself not a sufficient reason to refer a question to the Enlarged Board (T.998/99).

In J.5/81 (OJ 1982, 155) the appellant requested the referral of a question which the board considered an important point of law. The board refused the appellant's request nevertheless, as the question could be answered by reference to the EPC without doubt (see also, for example, J.14/91, OJ 1993, 479; T.1196/08; T.1676/08; T.2477/12). In T.39/05, the board already denied the existence of an important point of law if a question could be answered by reference to the EPC without doubt.

In J.10/15 the Legal Board was of the opinion that the legal situation in the case in hand was clearly to be derived from the EPC and the PCT, so that there was no question of law of fundamental importance which could justify a referral to the Enlarged Board of Appeal.

2.4. Referral by the President of the EPO

2.4.1 General

Under Art. Art. 112(1)(b) EPC, in order to ensure uniform application of the law (see in this chapter V.B.2.3.6) or if a point of law of fundamental importance (see in this chapter V.B.2.3.7) arises, the President of the EPO may refer a point of law to the Enlarged Board "where two boards of appeal have given different decisions on that question".

2.4.2 Discretion of the President

Under Art. 112(1)(b) EPC, the President of the EPO *may* refer a point of law and is entitled to make full use of the discretion granted by Art. 112(1)(b) EPC. His appreciation of the need for a referral may change even after a relatively short time, for example because his

assessment of the case law of the Boards of Appeal has changed, or a change in the presidency has taken place (G 3/08, OJ 2011, 10).

2.4.3 Differing decisions

In G 3/08 (OJ 2011, 10) the Enlarged Board found that the terms "different/abweichende/divergentes" decisions in Art. 112(1)(b) EPC had to be interpreted in the light of the provision's object and purpose according to Art. 31 of the Vienna Convention on the Law of Treaties. The purpose of the presidential referral right under Art. 112(1)(b) EPC is to establish uniformity of law within the European patent system. Having regard to this purpose, the notion "different decisions" has to be understood restrictively in the sense of "conflicting decisions". Legal development is an additional factor which must be carefully considered. Development of the law is an essential aspect of its application and inherent in all judicial activity. Consequently, legal development as such cannot on its own form the basis for a referral, because case law does not always develop in linear fashion, and earlier approaches may be abandoned or modified.

Legal rulings are characterised not by their verdicts, but by their grounds. The Enlarged Board of Appeal may thus take obiter dicta into account in examining whether two decisions satisfy the requirements of Art. 112(1)(b) EPC (see also G 3/93, OJ 1995, 18).

In G 4/98 (OJ 2001, 131) the Enlarged Board held that a discrepancy between Office practice of the EPO and the case law of the boards of appeal was not in itself sufficient to justify a referral by the President, if the practice of the EPO was not warranted by the case law.

In G 3/95 (OJ 1996, 169) the Enlarged Board considered the President's referral inadmissible due to the absence of different, i.e. conflicting decisions. In G 3/08 (concerning Art. 52(2) EPC, computer programs), the Enlarged Board said that T 424/03 indeed deviated from T 1173/97, but that this was a legitimate development of the case law and that there was no divergence which would make the referral admissible.

In T 646/13 the board, with reference to G 3/08, rejected the request for a referral to the Enlarged Board, finding that alleged contradictions between decisions T 464/05 and T 1811/13 did not exist. Rather, in the board's view, these decisions illustrated a development of the case law on a particular question.

2.4.4 Two boards of appeal

Different decisions by a single technical board in differing compositions may be the basis of an admissible referral by the President (G 3/08, OJ 2011, 10). In G 1/04 (OJ 2006, 334), the Enlarged Board found the President's referral, based on two different decisions of the same technical board of appeal, admissible and stressed that the decisions were rendered by the board in completely different compositions and that other technical boards had adopted the findings of one of the conflicting decisions.

In G 4/98 (OJ 2001, 131) the Enlarged Board stated that if the President's power of referral were to be defined by a restrictive reading of "two Boards of Appeal", no referrals would be possible with respect to the Legal Board of Appeal. This would unduly restrict the effect of Art. 112 EPC, since conflicting decisions could also occur within that board.

2.5. Procedural issues

2.5.1 Question already decided by the Enlarged Board

Should a board consider it necessary to deviate from an earlier opinion or decision of the Enlarged Board, the question must be referred to the Enlarged Board (Art. 21 RPBA 2007).

In T 297/88 the board examined under which circumstances it was possible to re-refer a question which had already been decided by the Enlarged Board. It took the view that a board may only refer the same point of law another time to the Enlarged Board if the Enlarged Board's arguments were so weak that doubts as to the correctness of the decision were unavoidable. This was also the case where the arguments were based on a false premise so that there were doubts about the conclusion drawn. Finally, a decision of the Enlarged Board could also be questioned where the premise was correct, the arguments were conclusive and the conclusion therefore also correct, but where legal or technical developments occurring in the interim made it desirable in the public interest to have the question reviewed again by the Enlarged Board.

In T 82/93 (OJ 1996, 274; see also T 80/05, T 1213/05) the board rejected the requested referral because the question had already been decided by the Enlarged Board.

In T 1063/18 the board decided that R. 28(2) EPC was in conflict with Art. 53(b) EPC as interpreted by the Enlarged Board in G 2/12 and G 2/13 and saw no reason to deviate from the Enlarged Board's interpretation of Art. 53(b) EPC. Furthermore, the board stated that no point of law arises in relation to the course of action in case of a conflict between a Rule of the Implementing Regulations and an Article of the Convention because this situation is governed by Art. 164(2) EPC. For these reasons the board decided a referral under Art. 112(1)(a) EPC was not justified.

In G 9/93 (OJ 1994, 891), the Enlarged Board confirmed the referring board's view that the concept of opposition proceedings set out in G 1/84 differed fundamentally from that in G 9/91 and G 10/91, which it endorsed.

2.5.2 Question already pending before the Enlarged Board

In T 208/88 of 20 July 1988 the board referred a question already pending once again to the Enlarged Board, because new aspects had emerged which it deemed useful for the Enlarged Board's decision. The same questions, supplemented by an additional question, were also referred again in J 15/90 of 4 September 1992 (see also T 83/05 of 8 July 2013), because the board wished to give the Enlarged Board the opportunity to consider another type of case. In T 803/93 (OJ 1996, 204) the board complemented the questions already pending and said that important questions of law should, if possible, be considered in the

context of proceedings involving parties having opposing interests in relation to these questions. In T 184/91 of 25 October 1991 the President of the EPO had referred questions to the Enlarged Board. The board referred the already pending questions again, stating that nothing prevented a board from reiterating questions that are pending, in order that the parties to an appeal may enjoy being parties to the proceedings before the Enlarged Board. In T 1553/13 of 20 February 2014 and T 2017/12 of 24 February 2014 two different technical boards referred an almost identical question to the Enlarged Board.

2.5.3 Stay of first instance proceedings following a referral

In T 166/84 (OJ 1984, 489) the board stated that, in its opinion, where a decision of the examining division depended entirely on the outcome of proceedings before the Enlarged Board of Appeal on a legal question raised under Art. 112 EPC 1973 – and this was known to the examining division – the further examination of the application must be suspended until the matter was decided by the Enlarged Board of Appeal. Failure to do so would amount to a substantial procedural violation under R. 67 EPC 1973 (R. 103(1)(a) EPC).

When G 3/14 (concerning clarity objections in opposition proceedings) was pending before the Enlarged Board, the President of the EPO decided that all proceedings before the opposition divisions where the decision depended entirely on the outcome of the Enlarged Board's decision were to be stayed ex officio, thereby superseding the then general practice under the guidelines to stay proceedings only upon request of a party (Notice from the EPO dated 7 August 2014 concerning the staying of proceedings due to referral G 3/14, OJ 2014, A87, see also Notice from the EPO dated 2 October 2015 concerning the staying of proceedings due to referral G 1/15).

According to the Guidelines for Examination (E-VII, 3 – November 2018 version), where the outcome of examination or opposition proceedings depends entirely on the answer to questions referred to the Enlarged Board, the proceedings *may* be stayed by the examining or opposition division on its own initiative or on request of a party. Under a previous version of the guidelines (E-VI, 3 – September 2013 version), the proceedings were to be stayed "only upon request of at least one of the parties" (see also Notice from the EPO dated 1 September 2006 concerning staying of proceedings, OJ 2006, 538).

2.5.4 Stay of appeal proceedings following a referral

It follows from Art. 112(3) EPC that the proceedings before the referring board are stayed until the Enlarged Board gives its decision. Proceedings before other boards of appeal may also be stayed.

In T 426/00 of 27 June 2003, the board had to answer questions that were identical to the questions raised in a referral pending before the Enlarged Board (concerning Art. 123(2) EPC, disclaimers). The board raised the purpose of ensuring a uniform application of the law under Art. 112 EPC and the need to comply with the spirit of Art. 16 RPBA 1980 (Art. 21 RPBA 2007; see in this chapter V.B.2.3.2). In order not to anticipate the Enlarged Board's evaluation of the questions before it, the board suspended the appeal proceedings.

In T 1875/07, the board acknowledged the patentability of the invention under Art. 52(2) EPC but did not consider the claimed subject-matter to be inventive. A referral on Art. 52(2) EPC was pending before the Enlarged Board. According to the board, the legal basis on which an application is refused determines only the reasons for the decision, but not the decision itself. Since the decision in the appeal proceedings did not depend entirely on the outcome of the referral, the board refused the request to suspend the appeal proceedings (see also T 787/06, T 1044/07 and T 1961/09).

3. Petition for review under Article 112a EPC

3.1. General

Art. 112a EPC was introduced with the EPC 2000, following a suggestion of the Enlarged Board of Appeal (G 1/97; OJ 2000, 322). Its purpose is not to make the Enlarged Board of Appeal a third instance (R 5/16: second judicial instance) but to provide for a limited judicial review of decisions of the boards of appeal. The grounds on which a petition for review can be based have been exhaustively defined by the legislator. These are, firstly, fundamental procedural defects which occurred in appeal proceedings and, secondly, the existence of a criminal act which may have had an impact on a decision (Art. 112a(2) EPC).

Art. 112a EPC expands on the right to a fair trial guaranteed by Art. 6 EHRC (R 9/14). The examples in Art. 112a(2)(a) to (c) EPC and particularly the wording of Art. 112a(2)(d) EPC make it clear that only fundamental (but not minor) procedural defects can be the basis for a petition for review (explanatory remarks in OJ SE 4/2007, 126; see also R 8/14). Review proceedings are confined to procedural defects so fundamental as to be intolerable for the legal system and overriding the principle that proceedings which have led to a final decision should not be re-opened in the interest of legal certainty (R 16/12, R 8/16). Art. 112a EPC provides an "exceptional means of redress" (R 1/08, R 2/12 of 17 October 2012, R 5/14, R 18/11, R 3/14; see also R 9/14), an "extraordinary legal remedy" (travaux préparatoires, MR/21/00; see also R 1/08, R 20/10, R 1/11, R 3/11), the provisions of which have to be applied strictly (R 1/08, R 23/10). A petition for review has no suspensive effect (Art. 112a(3) EPC).

From 13 December 2007 (the entry into force of Art. 112a EPC) to 31 March 2019, 164 decisions of the Enlarged Board on petitions for review (petitions withdrawn or deemed not to have been filed excluded) have been published on the Internet. In eight cases (R 7/09, R 3/10, R 15/11, R 21/11, R 16/13, R 2/14 of 22 April 2016, R 3/15, R 4/17) the decision under review was set aside and the appeal proceedings re-opened; the remaining petitions were rejected.

3.2. Transitional provisions

The decision of the Administrative Council of 28 June 2001 on the transitional provisions under Art. 7 of the Act revising the EPC of 29 November 2000 provides that "Article 112a EPC shall apply to decisions of the Boards of Appeal taken as from the date of its entry into force" (see R 2/08). Referring to G 12/91 (OJ 1994, 285), the Enlarged Board in

R. 5/08 interpreted "taken" to be the date a decision given orally is pronounced, not the date of notification. A petition based on a decision dated prior to, yet not notified to the parties until after entry into force of the EPC 2000, is therefore inadmissible.

3.3. Article 112a(1) EPC – adversely affected party entitled to file a petition for review

Under Art. 112a(1) EPC, any party **adversely affected by the decision** of a board may file a petition for review.

In the case underlying R. 1/11, the patent had been transferred and the transferee had filed an appeal against the decision of the opposition division to revoke the patent. The transfer of the patent had, however, not been registered in line with R. 22 EPC before the expiry of the period for filing the notice of appeal. Therefore, the decision under review had rejected the transferee's appeal as inadmissible. The transferor's appeal, filed after the expiry of the period for filing a notice of appeal, had also been considered inadmissible. Both the transferee and the transferor filed a petition for review. The Enlarged Board held that the requirement of Art. 112a(1) EPC that the petitioner be adversely affected for a petition to be admissible was fulfilled with respect to the transferee, irrespectively of its party status before the board of appeal, since the adverse effect resulted from the refusal to acknowledge that it had the status of appellant (his petition was, however, considered clearly unallowable in the end). The transferor's petition, on the other hand, was considered clearly inadmissible because, not being the current proprietor, the transferor was not adversely affected by the impugned decision.

In R. 4/18 the Enlarged Board held that **minutes were not considered to be a decision**. It did not see how the use of the word "conclusion" instead of "preliminary view" in the context of the minutes of an oral proceeding could transform those minutes into a decision, noting that the appeal proceedings had been terminated by the appellant's (petitioner in the case in hand) withdrawal of the appeal in the proceedings under review. The Enlarged Board noted that it was the common practice of the boards to express views or conclusions on the substantive issues before them during the course of the oral proceedings. A decision on the case is then made at the end of the oral proceedings. See also chapter V.A.2.2. "Appealable decisions".

3.4. Scope of review by the Enlarged Board of Appeal

3.4.1 Article 112a(2) EPC – grounds for a petition for review

A petition for review may only be filed on the grounds listed in Art. 112a(2) EPC. Those defined in Art. 112a(2)(a) to (c) EPC concern a breach of Art. 24 EPC governing exclusion of and objection to members of a board of appeal; the participation of persons not appointed as a member of the boards of appeal; and the fundamental violation of Art. 113 EPC. In addition, Art. 112a(2)(d) EPC opens up the possibility of using the Implementing Regulations to define further fundamental procedural defects on which a petition for review might be based (explanatory remarks in OJ SE 4/2007, 126). Under R. 104 EPC, such a defect may arise from either a failure to arrange for the holding of oral

proceedings requested by a party (R. 104(a) EPC), or a failure to decide on a request relevant for the board's decision (R. 104(b) EPC). Finally, a petition for review may also be filed on the ground that a criminal act may have had an impact on the decision (Art. 112a(2)(e) EPC).

3.4.2 Grounds listed exhaustively

The grounds for a petition for review have been exhaustively defined by the legislator, namely in Art. 112a(2) EPC in conjunction with R. 104 EPC (R. 1/08; see also R. 10/09, R. 14/09, R. 16/09, R. 17/09, R. 18/09, R. 20/09, R. 20/10, R. 6/11, R. 13/11, R. 19/11, R. 20/11, R. 2/12 of 17 October 2012, R. 18/12, R. 4/13, R. 5/13, R. 5/14, R. 7/14, R. 9/14, R. 6/15, R. 3/16). What is not defined by the Implementing Regulations does not qualify as a procedural defect under Art. 112a(2)(d) EPC (R. 16/09).

The erroneous application of a procedural rule, which does not in itself belong to the grounds for review enumerated in the EPC, can only be considered if it results in one of the procedural defects listed in Art. 112a(2) EPC in conjunction with R. 104 EPC (R. 2/08, R. 20/10, R. 18/12). In R. 8/16 the Enlarged Board noted that Art. 125 EPC expressly states that it is only applicable in the absence of procedural provisions in the EPC and held that for this reason it could not be the basis for extending the scope of Art. 112a EPC.

In particular, the following issues cannot be considered in review proceedings:

- allegedly insufficient reasoning (R. 6/11; see also R. 1/08, R. 19/11, R. 5/13, R. 1/15, R. 8/15, R. 7/16), unless this involves a fundamental violation of Art. 113 EPC
- the alleged violation of Art. 114 EPC in conjunction with R. 116(1) and (2) EPC or, respectively, R. 101 and 99(2) EPC (R. 14/09)
- the refusal to allow the recording of oral proceedings, the use of a different (but equivalent) terminology than the one used in the EPC during the oral proceedings or the non-validation of the minutes at the end of the oral proceedings (R. 17/09)
- the alleged inadequate keeping of minutes, the alleged incompetence to decide on the exclusion from file inspection or the alleged misunderstanding of a party submission (R. 20/09)
- the alleged violation of Art. 6 ECHR (R. 1/16, R. 18/09), unless this involves a fundamental violation of Art. 113 EPC (see G. 3/08, OJ 2011, 10, as to the general applicability of fundamental procedural rights in EPO proceedings)
- the alleged violation of the principle of legitimate expectations (R. 13/11, R. 1/16)
- the allegedly incorrect reversal of the burden of proof (R. 21/10)
- alleged irrationality or "Wednesbury unreasonableness" (R. 19/11)
- allegedly insufficient time allowed for the oral proceedings (R. 2/12)
- the alleged violation of the right to be heard in respect of another party (R. 5/14)
- the alleged lack of technical understanding of a board member, so that the board did not consist of two "technically qualified members" as required by Art. 21(4)(a) EPC (R. 3/12)
- the alleged violation of Art. 4(3) EPC, or of Art. 11, 15(4) and 20 RPBA 2007 (R. 9/14)
- the alleged violation of Art. 15(5) and 15(6) RPBA 2007, unless this involves a fundamental violation of Art. 113 EPC or a fundamental procedural defect under Art. 112a(2)(d) EPC in combination with R. 104(b) EPC (R. 7/14; see also R. 10/08)

- the alleged violation of Art. 20(1) RPBA 2007 (**R 7/13**)
- the alleged violation of Art. 114 EPC, of Art. 13 RPBA 2007, or the alleged lack of impartiality (**R 10/14**)
- the alleged violation of the principle of procedural economy (**R 1/16**).
- an alleged misapplication of a provision of the RPBA 2007, unless it can be shown that it resulted in a fundamental procedural violation within the meaning of Art. 112a(2) EPC (**R 3/17**).

As R 106 EPC implies, only procedural defects actually attributable to a board of appeal can be reviewed under Art. 112a EPC. Procedural defects that occurred in first instance proceedings may not be the subject of a petition for review (**R 20/10**, **R 8/11**; see also **R 19/12** of 12 April 2016, **R 3/16**).

3.4.3 No suspensory effect – review of substantive law excluded

Art. 112a(3) EPC makes it clear that the petition for review is an extraordinary legal remedy the filing of which does not affect the force of res judicata of the decision under attack. Implicitly it follows that a successful petition for review results in a decision of the Enlarged Board of Appeal which sets aside the decision of the board of appeal, i.e. overturns its res judicata effect, and re-opens appeal proceedings (explanatory remarks in OJ SE 4/2007, 128). Decisions of the boards of appeal must remain final decisions (see also **R 1/08**).

Under no circumstances may the petition for review be a means to review the application of substantive law. This restriction is justified because the function of the petition for review is to remedy intolerable deficiencies occurring in individual appeal proceedings, not to further the development of EPO procedural practice or to ensure the uniform application of the law (explanatory remarks in OJ SE 4/2007, p. 126; **R 13/10**: established case law since **R 1/08**). The Enlarged Board has no competence under Art. 112a EPC to examine the merits of the decision and to go into the substance of a case (**R 4/09**, **R 13/10**, **R 5/15**), not even indirectly (**R 19/11**, **R 6/13**, **R 3/18**). A review of the correct application of substantive law would amount to the Enlarged Board being a third instance which has been explicitly excluded (**R 3/09**; see also **R 13/09**, **R 3/18**). It is not the purpose of petition for review proceedings to evaluate whether or not the reasons selected by the board are appropriate (**R 13/14**, **R 2/18**); the Enlarged Board cannot replace a board's substantive assessment with its own (**R 9/14**). The Enlarged Board cannot act as a third instance or second-tier appellate tribunal in petition proceedings (**R 9/10**, **R 11/11**, **R 5/13**; see also **R 1/08**, **R 3/09**, **R 13/09**, **R 3/18**).

Not being competent to decide on the merits of a case necessarily implies that the Enlarged Board has no power to control the normal exercise a board makes of its discretion (**R 10/09**, see also **R 6/17**). The exercise of discretion is only subject to review if arbitrary or manifestly illegal (**R 10/11**), thereby involving a fundamental violation of the right to be heard (**R 9/11**; see also **R 17/11**).

In **R 13/12** the Enlarged Board stated that it had to remain vigilant and thwart any attempt to blur the frontier between what might clearly be a matter for a violation of the right to be heard under Art. 113 and 112a(2)(c) EPC, and anything else presented as a violation of

the right to be heard but which actually pertained to the substantive merits of the decision under review.

In R 3/18 the Enlarged Board noted that the question at issue, i.e. the "estoppel situation" as characterised by the petitioner, might, in principle be eligible for a referral to the Enlarged Board under Art. 112 EPC. However, the Enlarged Board held that an absence of such a referral under Art. 112 EPC did not entitle the Enlarged Board in proceedings under Art. 112a EPC to deal with the petitioner's request to correct this estoppel situation and to set aside the decision under review.

The following issues cannot be considered in review proceedings:

- the assessment of inventive step (R 1/08, R 12/09 of 15 January 2010, R 6/11, R 14/13, R 6/15), including the determination of the closest prior art (R 5/13)
- the interpretation of a prior art document (R 9/08, R 8/09, R 4/11)
- the assessment of clarity (R 15/10)
- the assessment of public prior use (R 19/10)
- the assessment of evidence (R 21/09)
- whether to remit a case to the department of first instance (R 10/09, R 9/10, R 12/09, R 7/13)
- whether to admit a new request (R 10/11, R 11/11, R 13/11, R 4/13) or a new document (R 10/09, R 17/11) under Art. 12 RPBA 2007; or under Art. 13(1) RPBA 2007 (R 1/13, R 4/14, R 6/17)
- whether an appeal is admissible (R 10/14, R 10/09)
- whether or not the exception to *reformatio in peius* mentioned in G 1/99 (OJ 2001, 381) applies to a particular case (R 4/09; see also R 10/14)
- whether to refer a question to the Enlarged Board of Appeal under Art. 112 EPC (R 17/14, R 7/13)
- whether the boards are empowered to decide on a request to hold oral proceedings before the examining division in Munich instead of in The Hague (R 13/14)
- sufficiency of disclosure (R 2/14 of 22 April 2016).

3.5. Petitions for review of an interlocutory decision

In R 2/15 of 21 November 2016 the Enlarged Board held that petitions for review of interlocutory decisions were not generally inadmissible (see also R 5/08, R 5/15). The Enlarged Board saw no reason to assume that Art. 106(2) EPC, which stipulates that a decision which does not terminate proceedings as regards one of the parties can, as a rule, only be appealed together with the final decision, was to be applied to the petition for review procedure. Neither Art. 112a EPC nor R. 104 to 110 EPC contained a provision corresponding to Art. 106(2) EPC.

In R 5/15 the Enlarged Board acknowledged that interlocutory decisions dealing with objections of suspected partiality unquestionably had consequences of utmost importance for the proceedings as a whole. The petitioner had argued that it was likely that the Enlarged Board would set aside the decision of the board in its alternate and that the board had violated its right to be heard by failing to consider its request for postponement. The Enlarged Board held it was not appropriate to base a decision on speculation. The

interlocutory decision of the Board in its alternate composition was binding and had the force of *res judicata*.

3.6. Obligation to raise objections

Under R. 106 EPC, a petition under Art. 112a(2)(a) to (d) EPC is only admissible where an objection in respect of the procedural defect was raised during appeal proceedings and dismissed by the board, except where such objection could not be raised.

3.6.1 Purpose of Rule 106 EPC

The purpose of R. 106 EPC is to give the board a chance to react immediately and appropriately by either removing the cause of the objection or by dismissing it (see e.g. R 5/08, T 1544/08, T 144/09, T 1977/13), thereby ensuring legal certainty for the parties and the public as to whether the ensuing substantive decision of the board is open to review under Art. 112a EPC (R 4/08, R 1/10, R 14/11, R 16/12). By ensuring that errors can be corrected by a board before a final decision is taken, R. 106 EPC also ensures that unnecessary petitions for review are avoided (R 14/11, R 18/12).

3.6.2 Requirements of a valid objection

a) Recognisable immediately as an objection, defect clear and unambiguous

Raising an objection under R. 106 EPC is a procedural act and a precondition for access to the extraordinary legal remedy under Art. 112a EPC (R 4/08, R 7/08, R 3/11, R 7/11, R 16/12). The objection must be expressed by the party in such a form that the board is able to recognise immediately and without doubt that an objection under R. 106 EPC is intended. It also must be specific, indicating clearly and unambiguously on which procedural defect the petitioner intends to rely (see R 4/08, R 7/08, R 8/08, R 1/10, R 17/10, R 7/11, R 5/12, R 6/12, R 16/12: established jurisprudence, R 3/14, R 8/16).

An objection under R. 106 EPC is additional to and distinct from other statements, such as arguing or even protesting against the conduct of the proceedings or against an individual procedural finding (R 2/08, R 7/08, R 9/09, R 1/10, R 14/11, R 21/11, R 16/12). An objection must be expressly described as such (R 8/08, R 21/11). However, even if an objection does not contain an explicit reference to R. 106 EPC, it can qualify as an objection under R. 106 (R 21/09; see also R 17/14, R 12/14).

In R 18/12, the Enlarged Board stated that only an objection which, in substance, raised a procedural defect which could be the subject of a petition for review under Art. 112a(2)(a) to (d) EPC could be regarded as an objection within the meaning of R. 106 EPC. In the case in hand, the Enlarged Board held that objecting, in substance, to the board's conclusion on clarity did not qualify as such an objection, even if the petitioner explicitly referred to Art. 113 EPC.

b) Objection raised in good time by persons capable of validly doing so

In R 1/14 the Enlarged Board held that it was an indispensable prerequisite for the admissibility of a petition that an objection be raised "in good time", i.e. at a time when the board can still rectify the alleged violation. An objection to a refusal to postpone the date of oral proceedings must therefore be made before or, at the latest, at the beginning of these oral proceedings.

In R 21/09 the Enlarged Board held that if an objection is made during oral proceedings, the fact that it is only raised after further requests have been discussed has no bearing on the admissibility of the petition.

In R 14/11 the Enlarged Board held that an objection cannot be formulated prematurely, i.e. before a procedural defect has come into existence (see also R 8/08, R 17/10).

In R 9/09 the board held that an accompanying person cannot validly make procedural declarations, such as an objection under R 106 EPC (see also R 3/08).

c) Different defects must be objected to and considered separately

Different alleged procedural defects must be objected to separately under R 106 EPC (R 5/13; see also R 10/14), and also have to be considered separately by the Enlarged Board (R 3/08, R 17/11).

3.6.3 Examples of invalid objections

The following are examples of acts that the respective boards have found did not qualify as an objection under R 106:

- contesting insufficiency of disclosure or offering new documents (R 7/08)
- requesting that a late-filed document not be admitted into the proceedings (R 9/09, R 17/10)
- protesting against the hearing of an expert (R 2/11)
- an objection against the board raising a new line of argument or a request for remittal or postponement (R 14/11)
- requesting that a board make a statement on the scope of a claim, the request being repeatedly refused (R 3/14)

3.6.4 Minutes as evidence that the objection was raised

The test whether an objection was validly raised during oral proceedings is normally the minutes which, as prescribed by R 124(1) EPC, must contain the relevant statements of the parties (R 4/08, R 17/10, R 8/16). The absence in the minutes of an objection under R 106 EPC and of any request for correction of the minutes is a strong indication that such an objection, if any, was at least not duly qualified (R 3/11; see also R 5/14, R 6/13, R 3/14).

In R.7/11 the Enlarged Board noted that unless duly corrected, the minutes of the oral proceedings authenticate the facts they relate to, and in R.2/12 of 17 October 2012 the Enlarged Board stated that if a party is really convinced that a violation of its right to be heard has occurred during the oral proceedings the subsequent objection must be clearly raised as such, so that it will oblige the board of appeal to react, and require this to be recorded in the minutes in accordance with R.124 EPC.

In R.8/17 the board stated that the petitioner's own submissions did not allow the conclusion that it had raised an objection in the oral proceedings which could qualify as an objection under R.106 EPC and if the petitioner had considered the minutes to be incomplete in this regard, one would have expected it to submit a corresponding request for correction (see R.17/10). However, in R.3/08 the Enlarged Board also took private minutes taken by an employee of the petitioner into account.

In R.8/16 the Enlarged Board noted that while there was no strict formal obligation on parties to request a correction to the minutes, not doing so will leave them with the burden of proof against the minutes in case of dispute.

3.6.5 Objection could not have been raised

Under R.106 EPC an objection is not a requirement for the petition to be admissible where such objection could not be raised during the appeal proceedings. Therefore, if the alleged procedural defect becomes apparent to the parties only through the written reasons for the decision (in R.3/10: through the announcement of the decision), the admissibility of the petition is not conditional upon a corresponding objection having been raised during the oral proceedings (R.4/08; see, by way of example, also R.1/08, R.2/08 (written procedure), R.9/08, R.3/09, R.4/09, R.7/09, R.11/09, R.19/10, R.8/11, R.21/11, R.14/13). If a petition addresses mostly the reasoning of a decision, the benefit of the doubt is given to the petitioner as to its possibility to raise an objection before the end of appeal proceedings (R.1/11, see also R.18/14).

In R.16/09 the petitioner requested the correction of the minutes of oral proceedings in order to establish what, in its view, had been the order of the procedural steps followed by the board, to prove that it could not raise any objection in respect of the procedural defect during oral proceedings. The Enlarged Board held that the lack of possibility for the petitioner to raise an objection could not be excluded, even if the request to correct the minutes was rejected.

In the proceedings underlying R.10/08, the petitioner wanted to submit a new auxiliary request, allegedly during the announcement of the decision at the oral proceedings, but the board had declared itself formally bound by the decision as announced. The petitioner could thus no longer raise an objection "during the appeal proceedings". However, in R.12/14 the Enlarged Board held that, if the pronouncing of the decision immediately follows the closing of the debate, requiring the appellant to interrupt the chairman would overstretch the obligations arising from R.106 EPC.

3.6.6 Compliance with Rule 106 EPC left open

If a request is unallowable, it can be left open whether the petitioner complied with R. 106 EPC (R 15/09, R 18/09, R 20/09, R 16/11, R 2/12 of 17 October 2012, R 16/12, R 1/13, R 15/13, R 7/14, R 17/14, R 2/16).

3.7. Contents of the petition for review

3.7.1 Petition must be adequately substantiated

In R 5/08 the Enlarged Board stated it was clear that apart from any reasons accepted by the Enlarged Board as special enough to justify the submission of additional facts, arguments or evidence, the petition itself must be adequately substantiated. R. 107(2) EPC requires a petition to indicate the reasons for setting aside the decision of a board of appeal and the facts and evidence on which it is based. This corresponds to the similar provisions requiring substantiation of an opposition or an appeal (R. 76(2)(c) and R. 99(2) EPC). The contents of a petition must be sufficient for the petitioner's case to be properly understood on an objective basis and must enable the Enlarged Board (and any other parties) to understand immediately why the decision in question suffers from a fundamental procedural defect. The petition must thus set out the reasons why it requests that the impugned decision be set aside, specify the facts, arguments and evidence relied on and must do so within the time limit for filing the petition, namely two months after notification (see Art. 112a(4) EPC; see also R 4/13, R 17/13, R 3/18).

In R 9/10 the Enlarged Board held that an implicit request to set aside the decision was sufficient. In R 20/10 the Enlarged Board stated that the obligation to file a reasoned statement could not be construed so narrowly as to mean that any kind of reasoning was sufficient to fulfil this requirement, as long as it was extensive enough. In R 2/08 the Enlarged Board held that for the petition to be admissible, it was however sufficient if only one ground was sufficiently reasoned in the request, just as it is for an appeal or opposition (see also G 9/91, OJ 1993, 408).

3.7.2 Non-compliance with Rule 107 EPC and failure to remedy a deficiency

In R 6/10 the board held that if a petition did not comply with R. 107(2) EPC, it must be rejected as inadmissible.

Under R. 108(2) EPC, if the Enlarged Board of Appeal notes that the petition does not comply with R. 107(1)(a) EPC, it shall invite the petitioner to remedy the deficiencies noted within a period to be specified. If the deficiencies are not remedied in due time, the Enlarged Board of Appeal shall reject the petition as inadmissible. In R 6/09 the Enlarged Board noted that such rejection was subject to the petitioner's request for re-establishment of rights.

3.8. Time limit for filing a petition for review

In accordance with Art. 112a(4) EPC, a petition for review shall be filed within two months of notification of the decision of the Board of Appeal (or within two months of the date on which the criminal act has been established where applicable).

In R 3/14 the Enlarged Board held that it was essential to observe the two-month time limit expressly prescribed in Art. 112a(4), second sentence, EPC for filing the reasons for the petition and the supporting submissions; no exceptions could be made.

In R 5/14 the Enlarged Board stated that filing a petition and paying the fee before the orally announced decision has been notified to the petitioner in writing did not make it inadmissible under Art. 112a(4) EPC (see also R 20/10).

In R 2/10 the Enlarged Board held that the established jurisprudence of the boards of appeal that mere payment of the appeal fee was not an act which sufficed for the admissible filing of an appeal applied *mutatis mutandis* to petition for review proceedings.

3.9. Article 12(1) RPEBA – late-filed submissions in the review procedure

Pursuant to Art. 12(1) RPEBA the Enlarged Board may consider new submissions made by the petitioner after expiry of the time limit for filing the petition for review, if this is justified for special reasons. In R 12/10, R 4/13 and R 8/16 no such reasons were advanced by the petitioner, and the Enlarged Board rejected the late-filed submissions. In R 15/13 the Enlarged Board stated that "special reasons" could not extend to the late introduction of grounds not relied on unless or until the grounds in the petition proved insufficient. In R 4/12 and in R 16/12 the Enlarged Board said that an entirely new complaint submitted for the first time during the oral proceedings before the Enlarged Board had no bearing whatsoever on the findings as to the petition's admissibility and merits reached on the basis of the grounds, facts, arguments and evidence set out in the petition.

In R 2/08 the Enlarged Board accepted the petitioner's additional explanations in response to its communication, and in R 18/09 a late-filed external legal opinion on the admissibility of the petition.

3.10. Rule 109 EPC – composition of the Enlarged Board and review procedure

Unless otherwise provided, the provisions relating to proceedings before the boards of appeal apply (R. 109(1) EPC). The RPEBA also apply in proceedings under Art. 112a EPC (Art. 1 RPEBA).

3.10.1 Composition of the Enlarged Board of Appeal

Petition for review proceedings consist of two stages. In the first stage, a panel of the Enlarged Board composed of three members (two legally qualified, one technically qualified) examines all petitions for review and rejects those which are clearly inadmissible or clearly unallowable (unanimity is required; R. 109(2)(a) EPC). Those not rejected are

considered by a panel composed of five members (four legally qualified, one technically qualified; R. 109(2)(b) EPC). In these cases, the three-member panel under R. 109(2)(a) is supplemented by two further legally qualified members (Art. 2(3) RPEBA). The chairman of the board against whose decision the petition was filed may not take part in the proceedings (Art. 2(6) RPEBA).

3.10.2 Involvement of parties other than the petitioner in petition for review proceedings

Parties other than the petitioner are not to be involved in the first stage of petition for review proceedings (R. 109(3) EPC; R. 7/14). In R. 5/08 the Enlarged Board held that non-petitioner parties, as long as they are not involved, have no right to be heard that could be violated. Although not summoned to oral proceedings in the first stage, non-petitioner parties may, however, attend such proceedings which are public.

3.10.3 Group parties

In R. 18/09 the Enlarged Board held that the principles set out in G. 3/99 (OJ 2002, 347), also applied to petition for review proceedings, namely that a plurality of persons acting in common must be treated as a single party (a "group party") and that such a group party must act through a common representative.

3.10.4 Procedural efficiency

Petition for review proceedings should by their nature be dealt with as speedily as possible, acceleration requests are therefore unnecessary (R. 18/09, R. 15/13). In R. 11/12 the board also stated that petitions for review should, in the interest of legal certainty, be dealt with expeditiously, and did not consider a planned birthday party a reason justifying the fixing of a new date for oral proceedings before the Enlarged Board.

In R. 5/08 the Enlarged Board noted that R. 109(1) EPC provides that certain specific procedural time limits do not apply to petition for review proceedings and stated that this allowed the Enlarged Board to shorten these time periods in the interest of procedural efficiency. However, it clearly provides no justification for parties to disregard time limits set by the Enlarged Board itself.

3.11. Factual bases for the review – minutes and grounds for the decision

The factual bases for a review procedure under Art. 112a EPC are the minutes of the oral proceedings and the grounds for the decision under review (R. 15/09, R. 6/14). However, in R. 3/10 the Enlarged Board also took signed declarations of persons who had attended the oral proceedings into account.

In R. 4/16 the Enlarged Board stated that, according to its settled case law on petitions for review, the boards were not obliged to explicitly state the reasons underlying a decision until they issued the final decision in writing (see R. 8/13 of 15 September 2015). R. 124(1) EPC required only that the minutes of oral proceedings contain the essentials, so they did

not have to record every single point addressed at those proceedings. It therefore could not be inferred from a point's omission from the minutes that it had not been considered.

3.12. Burden of proof

The petitioner bears the burden of proving its allegations (**R 4/09**). However, in **R 15/11** the petition was allowed and the Enlarged Board stated that it is not for the party which alleges a breach of its right under Art. 113(1) EPC to prove that it has not been heard (negativa non sunt probanda). It would rather be the task of the boards to draft their own texts in a way that enables the reader, taking into account all documents on file, to conclude that the right to be heard was respected with regard to the grounds on which the decision is based.

3.13. Effects of a successful petition for review

3.13.1 Decision of board of appeal set aside

If the petition is allowable, the Enlarged Board sets aside the decision of the board of appeal and orders the re-opening of the proceedings before the board (R 108(3) EPC). The limitation of the petition for review to a particular part of the decision (e.g. the non-reimbursement of the appeal fee) is admissible.

In **R 19/12** of 12 April 2016, the Enlarged Board held that although Art. 112a(5) and R 108(3) EPC did not explicitly provide for setting a decision aside only partially, this possibility followed from general procedural principles (see also **R 16/14**).

In **T 379/10** of 21 September 2015 the board cited **R 21/11**, in which it was held that the re-opening of appeal proceedings did not mean that the parties had to be given another opportunity to comment on all the matters in dispute. Rather, proceedings re-opened after a successful petition for review had to be restricted to rectifying the defect found in the review decision.

3.13.2 Replacement of board members

The replacement of board members under R 108(3) EPC after a petition for review has been held allowable lies in the discretion of the Enlarged Board, to be exercised fairly and proportionately in the light of the facts (**R 21/11**).

In **R 15/11** the Enlarged Board held that unless there was a compelling reason for proceeding otherwise, the Business Distribution Scheme must be adhered to and applied to a case re-opened before the board.

In **R 16/13**, the Enlarged Board rejected the request that members be replaced because it was not substantiated. In **R 21/11**, the Enlarged Board also rejected the petitioner's request that members be replaced, stating inter alia that such a replacement would necessitate the repetition of the whole appeal proceedings, which would be disproportionate. However, after the decision in **R 21/11** had been taken, the chairman of

the technical board concerned retired, and the appeal proceedings had, in any event, to be repeated. As a consequence, both the technically and the legally qualified member recused themselves under Art. 24(2) EPC (T. 584/09 of 1 March 2013).

3.13.3 Reimbursement of the fee for petitions for review

In R 21/11 the Enlarged Board stated that the only condition for the fee for a petition for review to be reimbursed under R. 110 EPC is that the proceedings before the board of appeal are re-opened (a reimbursement request is not required).

4. Grounds for petition for review

4.1. Article 112a(2)(a) EPC – alleged breach of Article 24 EPC

For general information on Art. 24 EPC, see chapter III.J. "Suspected Partiality". The present chapter deals with decisions of the Enlarged Board under Art. 112a(2)(a) EPC.

In R 16/10 the Enlarged Board rejected the petitioner's argument that Art. 24(1) EPC, concerning the exclusion of members from a board, included not only the specific situation where one of the members had represented a party in the case in question but also the general situation where a member had previously acted as representative of that party in any matter. In R 20/09 the Enlarged Board confirmed that, in cases of suspected partiality of a board member, Art. 112a(2)(a) EPC requires that a decision has been taken on the suspected impartiality (Art. 24(4) EPC).

In R 3/16 the Enlarged Board confirmed that Art. 112a(2)(a) EPC foresees the situation where a member of the board has taken part in the decision despite being excluded pursuant to a decision under Art. 24(4) EPC or in breach of Art. 24(1) EPC. The petitioner had further contended that it was an established principle that a party had no obligation to appear before an unlawful court; that, on the contrary, it could be prejudicial to do so since the right to be heard could not be properly guaranteed before such a court, thus leading to the question as to whether appeal proceedings held by a board unlawfully composed may amount per se to a breach of the right to be heard. This question, however, remained open because the Enlarged Board did not come to the conclusion that the board had actually ignored the procedure of Art. 24(4) EPC.

In R 17/09 the Enlarged Board found that in English the term "man in the street" had no pejorative associations, but was commonly used to describe an average citizen.

4.2. Article 112a(2)(b) EPC – person not appointed as a board member

The Enlarged Board has not yet ruled on a petition for review alleging that a board of appeal included a person not appointed as a board member.

According to Art. 19(1), second sentence, RPBA 2007, only members of the board shall participate in the deliberations; the Chairman may, however, authorise other officers to

attend. In **T 857/06** the board held that, under this provision (then Art. 19(1) RPBA 2003), a board's assistant may attend and take part in the deliberations.

4.3. Article 112a(2)(c) EPC – alleged fundamental violation of Article 113 EPC

4.3.1 General

The decisions of a board of appeal may only be based on grounds or evidence on which the parties have had an opportunity to present their comments (Art. 113(1) EPC), and a patent application or a patent may only be examined in the text submitted or agreed by the applicant or proprietor of the patent (Art. 113(2) EPC). For general information on the right to be heard under Art. 113 EPC, see chapter III.B. "Right to be heard".

In most petitions for review, the alleged fundamental violation of Art. 113(1) EPC is among the grounds on which the petition is based. All petitions for review that have been successful so far concern a fundamental violation of Art. 113 EPC (see in this chapter V.B.4.3.19 and in this chapter V.B.4.4.3).

4.3.2 "Fundamental" violation of Article 113 EPC – causal link and adverse effect

A violation of Art. 113 EPC can only be considered fundamental within the meaning of Art. 112a(2)(c) EPC if there is a causal link between the alleged violation and the final decision (**R 1/08**, **R 11/08**, **R 11/09**, **R 13/09**, **R 6/13**, **R 2/14** of 22 April 2016, **R 17/14**, **R 6/16**).

In **R 22/10** the Enlarged Board held, referring to the jurisprudence of the boards of appeal, that such a necessary causal link does not exist when, even if a procedural violation can be demonstrated, the same decision would have been taken for other reasons (see also **R 19/09**).

In **R 8/16** the Enlarged Board held that an alleged violation could not be fundamental, in the sense of intolerable, if it did not cause an adverse effect. In the case in hand the Enlarged Board stated that the omission of the reasons for the admission of the main request may not be a practice which it expressly endorsed but given that the petitioner did not explain and the Enlarged Board itself could not see what adverse effect might have been caused by not hearing the petitioner on this issue, and given that the admission of the petitioner's main request was clearly a positive result for the petitioner, it was not seen as a fundamental violation of Art. 113(1) EPC.

4.3.3 No prior assessment of the merits of a submission

The right to be heard is a fundamental right of the parties which has to be safeguarded irrespective of the merits of a submission. The necessity to respect it is absolute and cannot be made dependent on a prior assessment of the likelihood that the petitioner's arguments would have convinced the board (**R 3/10**, **R 5/13**). In the context of review proceedings the Enlarged Board is not entitled to go into the merits of a party's case. It is not entitled to assess whether or not and to what degree, if any, a party's standpoint which

it alleges it would have taken had it been given the opportunity to present it, would have been well-founded (R 3/10).

In R 21/11 the Enlarged Board stated that it could not be ruled out that a different decision would have been reached if the party had been heard on the point on which it alleged its right to be heard had been infringed.

4.3.4 Objective approach – board's intention irrelevant

In R 3/10 the Enlarged Board held that when determining whether a fundamental violation of the petitioner's right to be heard had occurred, an objective approach must be applied. It is therefore not relevant that it was not the deciding board's intention in any way to deprive the petitioner of its right to be heard orally on the issue of inventive step.

4.3.5 No obligation to provide detailed reasons for a decision in advance

It is settled case law that a board of appeal is not required to provide the parties in advance with all foreseeable arguments in favour of or against a request (R 1/08 with reference to G 6/95, OJ 1996, 649; see also R 13/09, R 18/09, R 4/13, R 5/15, R 6/16). In other words, parties are not entitled to advance indications of all reasons for a decision in detail (see e.g. R 12/09 of 15 January 2010, R 15/09, R 4/11, R 18/12, R 2/13, R 9/14, R 7/15, R 8/17). This principle also applies to an interpretation of a passage in the state of the art forming only part of such reasons (R 19/11, R 15/12, R 16/13).

4.3.6 Boards' obligation to remain neutral

According to settled case law, a board must remain neutral in *inter partes* proceedings, both in its communications to the parties and in oral proceedings (R 15/09; see also R 11/08), especially when the opposing party is not present (R 9/14). By giving a party possible reasons to decide against its requests (R 18/09, R 15/10), by prompting a party to make further submissions (R 9/11, R 3/13, R 17/13), by informing a party of a possible different interpretation of a passage in a prior art document (R 19/11; see also R 18/09), or by suggesting a possible wording of a claim (R 4/09, R 22/10; see also R 7/14) a board would assist a party and compromise its neutrality.

4.3.7 Parties' obligation to participate actively in the appeal proceedings

Corresponding to a board's obligation to remain neutral (see in this chapter V.B.4.3.6), parties are obliged to participate actively in the appeal proceedings (R 2/08, R 6/12, R 12/12), in particular in *inter partes* proceedings (R 15/09, R 12/09 of 15 January 2010). Parties and their representatives are responsible for the conduct of their case and it is for them to submit the necessary arguments to support their case on their own initiative and at the appropriate time (R 17/12; see, by way of example, also R 18/09, R 13/11, R 17/12, R 1/13, R 15/13, R 1/17). It is for the parties to address any point they consider relevant and fear may be overlooked and to insist, if necessary by way of a formal request, that it be discussed in the oral proceedings. If then a board does not give a party the opportunity

to bring forward its arguments, this may give rise to the complaint that the right to be heard under Art. 113(1) EPC has been infringed (R 17/11, see also R 6/16, R 6/17).

4.3.8 Reasons for a decision allegedly surprising

a) No opportunity to comment, surprising reasons

"Grounds or evidence" under Art. 113(1) EPC is understood as the essential legal and factual reasoning on which a decision is based (see chapter III.B.2.3.2 "The meaning of 'grounds or evidence'").

While the boards are not obliged to provide the parties in advance with all reasons for a decision in detail (see in this chapter V.B.4.3.5), Art. 113(1) EPC requires that decisions may only be based on grounds or evidence on which the parties concerned have had an opportunity to present their comments. In R 3/13 the Enlarged Board held that this implied that a party may not be taken by surprise by the reasons of a decision referring to unknown grounds or evidence (see also R 15/09, R 21/10).

In R 3/10, R 15/11 and R 16/13 the petition was allowed because of surprising reasons on which the parties had not been given an opportunity to comment (see in this chapter V.B.4.3.19). On the other hand, in R 8/17 the Enlarged Board held that the board must be able to draw its own conclusion from the discussion of the grounds put forward.

b) Grounds not emanating from the board

Grounds or evidence within the meaning of Art. 113(1) EPC need not emanate from the board, it is sufficient if another party raises the objection (R 2/08; see also R 1/08, R 1/13, R 6/16). If the reason given in a decision corresponds to an argument put forward by the other party, the petitioner was aware of it and thus not taken by surprise (R 4/08, R 12/09 of 15 January 2010; see also R 8/14), unless the board clearly indicated that it regarded those arguments as not convincing (R 11/12, see also R 6/16).

c) Subjective surprise

A subjective surprise has no bearing on whether a party knew the issues which might be raised and had an adequate opportunity to comment thereon (R 13/11, R 17/12; see, by way of example, also R 12/09 of 15 January 2010, R 22/10, R 1/13, R 3/13, R 4/14, R 5/16).

In R 8/13 of 15 September 2015 the Enlarged Board held that in order to determine which subject matter (grounds, facts and evidence) could have been expected to be discussed, and whether new facts and grounds were introduced ex officio by a board of appeal in its decision, the Enlarged Board has to check the file history (see also R 1/15).

In R 8/14 the Enlarged Board held that establishing the closest prior art is part of the process of arriving at a decision and takes place only after all arguments have been heard, in the final deliberations of the board. If the closest prior art is redefined because of an

amendment to a claim, the board is not obliged to address this at oral proceedings. In R.2/16 the Enlarged Board found that there had been no need for the board hearing the case at issue to give advance notice of the objective technical problem defined in accordance with the problem-solution approach, nor to comment on whether the invention was obvious, in order to comply with the appellant's right to be heard. In its communication, the board had set out in great detail what prior art it was taking as the starting point and how it considered it to differ from the claimed invention. It had expressly stated that the issue of the problem solved would be settled at the oral proceedings and clearly specified which documents it provisionally considered relevant for assessing obviousness.

The petitioner in R.4/16 asserted that there had been at least some confusion on its part as to the scope of the discussion. The Enlarged Board held that whether or not a petitioner might have been confused was a highly subjective matter and was not enough by itself to establish that there had been a fundamental violation of its right to be heard. The most important thing was to examine the objective evidence of how the oral proceedings had unfolded, taking into account their place within the overall context of the appeal proceedings as a whole.

d) Reasoning formed part of the proceedings

In R.4/11 the Enlarged Board held that in order for the decision to comply with Art. 113 EPC it was sufficient that the party concerned had an adequate opportunity to present its point of view to the board before a decision was taken, that the board considered the arguments presented by the party and that the decision was based on a line of reasoning that could be said to have been in the proceedings (see also R.11/12, R.18/12). Several further cases in which the petitioner claimed that the decision under review took it by surprise have been rejected by the Enlarged Board:

In R.7/12 the Enlarged Board found that the argument in question was "part of the appeal proceedings". See also R.8/09 in which the Enlarged Board found that the document in question "formed part of the debate".

In R.9/14 the Enlarged Board stated that it was sufficient that the "relevance [of a factor] became clear during the proceedings".

In R.22/10 the Enlarged Board found that the decision did "not contain any reasons which could not be objectively foreseen".

In R.8/13 of 15 September 2015 the Enlarged Board held that "a representative with normal experience and training could foresee what the crucial issues were for the board".

4.3.9 Timing of a decision allegedly surprising

It is not sufficient to claim that the duration of the oral proceedings resulted in a violation of the right to be heard. The petitioner must rather establish that, for reasons of lack of time, it was deprived of the possibility to defend its case properly, resulting in a decision

based on grounds that it did not have an opportunity to comment upon (R 2/12 of 17 October 2012).

In R 14/10 the petitioner argued that he was surprised that the requests as read out would be interpreted as his final requests. The Enlarged Board held that that the chairman had also read out the opponent's request "that the decision under appeal be set aside and that the European patent [...] be revoked" indicated beyond any reasonable doubt that, after the closure of the debate, the board had intended to deliberate on the patentability of independent claims and that, depending on the outcome of said deliberation, it could pronounce the revocation of the patent as a whole (see also R 7/14).

In R 4/12 the Enlarged Board stated that when a board, after discussing novelty, interrupts oral proceedings for deliberation, a party should be aware that the board could take a negative decision on novelty. In R 3/10 the Enlarged Board held, however, that be surprising for a party if only novelty was discussed and a request is then rejected due to lack of inventive step (see in this chapter V.B.4.3.19).

4.3.10 Consideration of the parties' arguments in the written decision

a) Requirement to have comments considered

The right to be heard under Art. 113(1) EPC requires that those involved be given an opportunity not only to present comments (on the facts and considerations pertinent to the decision) but also to have those comments considered, that is reviewed, with respect to their relevance for the decision in the matter (R 23/10; see also R 13/12, R 12/14). In R 8/11 the Enlarged Board held that Art. 113(1) EPC obliged the decision-making body to allow the parties to present the necessary arguments on all essential aspects of the case, to take note of these arguments and to acknowledge them in its decision (see also R 19/12 of 12 April 2016). In R 8/15 the Enlarged Board stated that a party must be able to examine whether the board has afforded it the right to be heard in order to decide whether or not to file a petition for review.

In R 4/12 the Enlarged Board held that oral remarks made by a chairman directly before a decision is pronounced do not form part of the reasons that must reflect, within certain limits, a party's arguments.

In R 8/15 the Enlarged Board held that Art. 113(1) EPC must be interpreted more narrowly than R 102(g) EPC. The latter requires a board to give reasons for its decision, but infringement thereof is not as such a ground for review. Reasons may be incomplete, but as long as they permit the conclusion that the board, in the course of the appeal proceedings, substantively assessed a certain point that it found it to be relevant, there is no violation of Art. 113(1) EPC (see also R 2/18).

Decisions of boards of appeal are open only to review but not to appeal, and thus not covered by R 111(2) EPC which requires that decisions which are open to appeal be reasoned (R 6/11; see, however, also R 12/10; see also in this chapter V.B.3.4.2).

b) No obligation to consider each and every argument

It is not necessary to consider each and every argument of the parties in detail in a decision (R 19/10, R 17/11, R 6/12, R 15/12, R 2/13, R 19/12 of 12 April 2016, R 5/15).

In R 13/12 the Enlarged Board stated that while the boards have an obligation to discuss in their decisions issues and arguments to the extent that they are relevant for the decision, they may disregard irrelevant arguments (see also R 21/10). In R 16/14 the Enlarged Board stated that not explicitly addressing specific points which, in the deciding organs view, did not have to be addressed in order to arrive at an understandable decision did not mean that such points are ignored. In R 8/16 the Enlarged Board stated that not addressing specific arguments in the decision was not necessarily a fundamental violation of the petitioner's right to be heard.

In R 19/12 of 12 April 2016 the Enlarged Board stated that the allegedly insufficient consideration, by a board, of arguments concerning a procedural defect before the department of first instance could only constitute a fundamental violation of the right to be heard when the alleged procedural defect impacted on the decision at first instance.

In R 8/17 the Enlarged Board held that it would have been highly questionable and contradictory for the board to have dealt in substance with an argument of a party in the written reasons after it had not allowed a discussion on it in the oral proceedings.

4.3.11 Parties' obligation to know the case law, references to decisions

Even under the assumption that the information given by a technical board of appeal on a decision of the Enlarged Board of Appeal was unclear, parties are deemed to know the case law, at least when represented by an authorised representative. Thus, a party cannot plead lack of such knowledge as an excuse (R 4/09).

In R 17/09 the Enlarged Board held that reference to decisions in a decision, even decisions not cited to the party earlier in writing or at the oral proceedings, could not constitute a fundamental violation of the right to be heard.

In R 9/14 the Enlarged Board held that a qualified professional representative can be assumed to be familiar with the analytical sequence of the problem-solution approach. Special guidance from the board is not necessary. Likewise in R 5/16 the Enlarged Board found that a party to appeal proceedings and its professional representative should be aware of the methodology established in the case law of the boards of appeal for examining inventive step and should be prepared to submit its relevant arguments in this respect.

In R 4/16 the Enlarged Board held that the boards might sometimes be obliged to back up a reference they made to established case law, but the onus could not be on them always to seek out specific decisions that a party had not cited in support of a position it was arguing. Were a board to do so in opposition proceedings, that would amount to its making

the case for one of the parties itself, to the detriment of the other party and contrary to its duty of impartiality.

4.3.12 No right to be heard separately on all requests

A party has no absolute right to be heard separately on each and every one of its auxiliary requests. The right to be heard is satisfied if a party had the opportunity to comment on the grounds for a decision on the main request, and the remaining requests are not allowed on the same grounds (R 6/11; see also R 11/08, R 3/12, R 14/10, R 2/14 of 22 April 2016, point 11 of the Reasons).

4.3.13 No right to a further hearing at first instance

In R 9/10 the Enlarged Board held that there is no right to a remittal, only a discretion which may or may not be exercised in a party's favour under Art. 111(1) EPC and which is the subject of considerable case-law. If there is no right to a remittal, there is no right to a further hearing before the first instance. See also R 12/09 of 15 January 2010, R 2/16, R 7/16.

In R 7/16 the board of appeal found that the decision of the opposition division presented a fundamental deficiency, but decided not to remit the case to the opposition division, exercising its discretion under Art. 11 RPBA 2007. The petition was based upon an alleged insufficiency of reasoning in the written decision. The Enlarged Board commented that a detailed discussion of the substantive issues before a decision on the remittal would have rendered any remittal pointless since the first instance would have been bound by the considerations of the board of appeal or could have expected that its decision would be reversed if it was not in line with the considerations of the board of appeal. The refusal of a remittal cannot per se be a ground for allowing a petition.

4.3.14 No right to a referral under Article 112 EPC

The right to be heard is not infringed if a board decides, after having heard the parties, not to refer a particular question to the Enlarged Board of Appeal (R 8/11; see also R 17/14).

4.3.15 No right to a communication; communication allegedly misleading

The communication of a board, if any, is a means at the board's disposal to streamline the appeal proceedings and above all the oral proceedings. Not issuing a communication does not constitute a violation of the right to be heard (R 16/09). In R 14/12 the Enlarged Board stated that if a board decided not to issue a communication, it could be assumed that it regarded the whole file as relevant for discussion at the oral proceedings.

In R 3/09 the Enlarged Board noted that discrepancies between a board's provisional opinion as expressed in a communication preparing oral proceedings and its analysis in its final decision was in itself not a fundamental procedural defect.

In **R.3/16** the Enlarged Board held that a petitioner is itself responsible for not having attended the oral proceedings where the alleged ambiguity of a communication could have been dispelled. A petitioner is free not to attend the oral proceedings but this choice is at its own risk since a board is never obliged to postpone oral proceedings only because a party does not appear, provided that it bases its decision on the facts and arguments on file (R.115 EPC and Art. 15(3) RPBA 2007). See also chapter III.B.2.7.3 "Non-attendance at oral proceedings before the boards – Article 15(3) RPBA 2007".

4.3.16 Late-filed submissions – boards' discretion under Article 13 RPBA 2007

In **R.16/09** the Enlarged Board saw no legal basis for an obligation to hear a party on substantive issues before deciding on the admissibility of a proposed auxiliary request. In the proceedings under review the petitioner had expressed its intention to present an auxiliary request in the closing stages of the oral proceedings without having prepared a set of amended claims. The Enlarged Board stated that requiring a board to always invite a party to supply a text of amended claims before a decision on the admissibility of a proposed auxiliary request is taken, would deprive it of the discretion explicitly provided by Art. 13 RPBA 2007.

In **R.5/11** the Enlarged Board held that the mere fact that a board takes into account the lateness of an auxiliary request when exercising its discretion under Art. 13 RPBA 2007 – although it did not explicitly raise this issue in the oral proceedings – does not infringe the right to be heard.

4.3.17 Alleged violation of Article 113(2) EPC

Art. 113(2) EPC does not give any right to an applicant in the sense that the EPO is in any way bound to consider a request for amendment put forward by the applicant. The effect of this provision is merely to forbid the EPO from considering and deciding upon any text of an application other than that "submitted to it, or agreed, by the applicant or proprietor" (**G.7/93**, OJ 1994, 775). See also **R.10/08**, **R.11/11**).

In **R.10/08** the Enlarged Board stated, citing **G.12/91** (OJ 1994, 285), that the moment a decision is pronounced is not the last moment at which parties may still make submissions: "This must be done at an earlier point in the proceedings to allow the decision-making department time to deliberate and then to issue its decision based on the parties submissions". Even if the debate could be re-opened in exceptional cases, the parties have to expect that, as long as it is not re-opened, a decision can be given after deliberation.

In **R.8/16** the petitioner alleged a fundamental breach of its right to be heard partially on the basis that the decision of the board did not explain what had happened to requests withdrawn and replaced by the petitioner before the final decision of the board. The Enlarged Board held that giving reasons on withdrawn requests might well have given rise to an objection under Art. 113(2) EPC.

4.3.18 Further examples of unsuccessful petitions

In R 17/13 the Enlarged Board stated that if a party informed the board that it would not be attending the oral proceedings and the case was then **decided in the party's absence**, the party's right to be heard was not infringed.

In R 16/12 the Enlarged Board found that the **principle of efficiency** required a board of appeal to focus on what is relevant for the decision. If a case can be decided on the basis of sufficiency of disclosure, discussing any other ground such as inventive step would concern an obiter dictum.

In R 4/12 the Enlarged Board stated that the assertion that the petitioner learned during the break in the oral proceedings, from a **third party** who had presented himself as the examiner who had taken the decision, that its appeal was going to be dismissed, had no bearing on an alleged infringement of the right to be heard.

In R 21/09 the Enlarged Board found that **national judgments and documents submitted in national proceedings** may be introduced into appeal proceedings. Accepting such documents as evidence – to be freely assessed by the board – does not, as such, violate the right to be heard.

In R 10/08 the Enlarged Board stated that if the **chairman deviated from the procedure provided for in Art. 15(5) RPBA 2007** by not stating the requests before closing the debate, this omission had not affected the petitioner's right to be heard under Art. 113(1) EPC in the case in hand, in that it had had sufficient opportunity to present his comments on the grounds and evidence on which the decision of the board of appeal was based.

In R 3/08 (referring to G 4/95, OJ 1996, 412) the Enlarged Board stated that oral **submissions made by an accompanying person** were under the discretionary control of the EPO. The Enlarged Board found that the denial of a request – made shortly before the oral proceedings – for an accompanying person to present oral submissions (requiring interpretation) was not a fundamental violation of Art. 113(1) EPC.

4.3.19 Successful petitions under Article 112a(2)(c) EPC

In R 7/09 the petition was allowed, as the EPO was not able to establish delivery of the opponent's statement of grounds of appeal to the patentee and subsequent petitioner. The petitioner had therefore been **unaware of the grounds** on which the decision of the board of appeal revoking his patent was based. The fact that the statement of grounds became available to the public and, thus, also to the petitioner by way of electronic file inspection had no bearing on the right of parties to be individually and specifically informed by the Office.

Similarly, in R 4/17 the petitioner argued that it had no record of ever having received the notice of appeal or statement of grounds for appeal and that it had **no knowledge of the existence of the appeal** until it received the decision in the appeal case. The Office was not able to establish that the critical communications had reached their destination, as

required under R. 126(2) EPC. The Enlarged Board held that parties must be able to rely on the EPO complying with the relevant provisions of the EPC and, at least for the purposes of Art. 113(1) EPC, they and their representatives have no duty to monitor the proceedings themselves by regularly inspecting the electronic file. It cannot be expected that the respondent should prove a negative, i.e. the non-receipt of a letter, or provide a plausible explanation for non-receipt.

In the inter partes proceedings under review in R 3/10 the chairman had stated after the parties' submissions on novelty "that the Board will decide on patentability". The board then closed the debate and held that the main request was novel but lacked an inventive step. According to the Enlarged Board, the term "patentability" covered a variety of potential objections and the chairman could not have meant to address all of them. Thus, the **petitioner had no reason to assume that the board's decision would address more than what had been previously discussed**, i.e. novelty. As the petitioner had not been given the opportunity to comment on inventive step, the Enlarged Board allowed the petition (see also chapter III.B.2.5.1 "Decision could not be expected").

In the ex parte proceedings under review in R 15/11 the board had held that the request did not comply with the requirements of Art. 84 EPC. According to the Enlarged Board, there was **no explicit or implicit indication in the file** of the appeal procedure from which it could be derived **that a possible lack of clarity was at any time discussed** with the petitioner or that at least an objection was raised in this respect. The Enlarged Board allowed the petition and held that a minimum prerequisite for an opportunity to comment on a specific ground (here: Art. 84 EPC) was that the petitioner was aware or could have been aware that compliance with that ground was at issue. A statement in the communication concerning a potential discussion of, inter alia, Art. 84 EPC did not amount to a specific objection regarding the request at issue.

In the inter partes proceedings under review in R 16/13 the petitioner had filed a document with comparative test results. In its written decision, **the board of appeal raised an issue that had not been raised in the proceedings** and it had not been possible for the petitioner to infer the board's reasoning, on the basis of his own expertise, from the way the proceedings developed. The Enlarged Board allowed the petition, stating that the right to be heard is violated when a board gives, ex officio, reasons in its decision without having given the party adversely affected an opportunity to comment on these reasons or to submit new requests. In T 1378/11 the board stated that R 16/13 could not be understood to give the parties the right to find out from the deciding body how it assesses the facts and arguments on which its decision is likely to be based.

In the inter partes proceedings under review in R 2/14 of 22 April 2016, the Enlarged Board noted that the board's decisive line of argument had concerned the aspect of modifying the inactive SEQ ID NO: 4 by means of recloning the desaturase, starting from *E. gracilis*. The reasons given by the board were limited in so far as, after establishing the need for recloning, it had immediately stated its conclusion that, although the skilled person could in fact perform each of the necessary steps, combining those steps created an undue burden for him. The other two **alternative approaches relied upon by the petitioner had not been discussed at all by the board**; they had merely been referred to as suffering

from the same negative conclusion. The board had mentioned neither facts nor a sequence of arguments that had led it to this conclusion. Therefore, it could not be understood and reproduced by the affected party. The Enlarged Board allowed the petition.

In R 3/15 the Enlarged Board set aside the inter partes decision under review on account of a breach of the right to be heard. The **board had reformulated the problem** based on a **new interpretation** of claim 1, **presented for the first time** in the written reasons for its decision, that none of the parties had previously made a case for, either in the opposition or the appeal proceedings. It was apparent from the parties' submissions that not only the appellant but also the respondents had assumed a different interpretation of claim 1 in the discussion on feature (ii). Thus the appellant had been surprised by the board's new line of argument on inventive step in its written decision, on which it had not had an opportunity to comment. That was a breach of the right to be heard (Art. 113 EPC).

4.4. Article 112a(2)(d) EPC – any other fundamental procedural defect

Under R 104 EPC, a fundamental procedural defect may have occurred where the board of appeal, contrary to Art. 116 EPC, failed to arrange for the holding of oral proceedings requested by the petitioner, or decided on the appeal without deciding on a request relevant to that decision. What is not defined by the Implementing Regulations does not qualify as a procedural defect within the meaning of Art. 112a(2)(d) EPC (R 16/09; see in this chapter V.B.3.4.2).

4.4.1 Rule 104(a) EPC – failure to arrange requested oral proceedings

The right to oral proceedings under Art. 116(1) EPC forms a substantial part of the right to be heard under Art. 113(1) EPC. Non-compliance with a request for oral proceedings deprives the party of an important opportunity for presenting its case (T 1050/09) and may constitute a fundamental procedural defect which merits the same treatment as the cases covered by Art. 112a(2)(a) to (c) EPC (CA/PL 5/02 Rev. 1 Add. 1, p. 26).

In R 2/12 of 17 October 2012 the petitioner argued that R 104(a) EPC should be understood not only as an obligation to arrange oral proceedings but also to give the parties enough time to exercise their right to be heard. The board held that the duration of oral proceedings is, as such, not listed among the procedural defects that might justify filing a petition for review (see also R 21/10).

4.4.2 Rule 104(b) EPC – failure to decide on a party's request

According to R 104(b) EPC, a fundamental procedural defect under Art. 112a(2)(d) EPC may have occurred where the board decided on the appeal without deciding on a request relevant to that decision. Like R 104(a) EPC (see in this chapter V.B.4.4.1), R 104(b) EPC also reflects an aspect of the right to be heard (R 21/11).

In R 19/10 it was acknowledged by the board that the EPC does not contain an explicit definition of the term "request". However, according to the common practice in the

proceedings before the EPO, requests are in general directed to executable legal consequences sought by the parties. The arguments provided by the parties in support of these legal consequences do not normally belong to the legally binding requests (see also [R 17/11](#)). In [R 3/14](#) the board explained that only requests submitted in writing or requests which the party had been recorded in the minutes of the oral proceedings fell under [R 104\(b\) EPC](#) (see also travaux préparatoires, CA/PL 5/02 Rev. 1 Add. 1, p. 27). In [R 19/10](#) the board further held that it was not a procedural duty of the boards of appeal under [R 104\(b\) EPC](#) to analyse the submissions of the parties in order to identify potential requests which were not explicitly made (see also [R 17/11](#)).

A request "relevant to that decision" within the meaning of [R 104\(b\) EPC](#) is a request that could possibly have led to a different decision ([R 21/11](#)).

In the proceedings under review in [R 17/13](#) the petitioner requested remittal of the case coupled with reimbursement of the appeal fee on the grounds of a substantial procedural violation, alternatively that the patent be maintained as granted, and finally oral proceedings. The board held oral proceedings and refused the request for maintenance of the patent and for reimbursement of the appeal fee. The Enlarged Board held that the petitioner's request for remittal was only relevant in the event of there having been a substantial procedural violation, which was held not to be the case.

In [R 15/09](#) the Enlarged Board held that a decision to revoke a patent necessarily includes the rejection of all auxiliary requests.

In the appeal proceedings under review in [R 13/14](#) the appellant had requested that the examining division's refusal of its request to hold oral proceedings in Munich instead of in The Hague be set aside. The board had stated, in the reasons for the decision, that it was not empowered to decide on this request. The Enlarged Board held that this statement, even if not expressed in the usual and formal terminology, had to be considered as a decision on the appellant's request.

In [R 10/08](#) (see also [R 6/14](#)), the Enlarged Board referred to [G 12/91](#) (OJ 1994, 285) and stated that the last point in time to intervene is not the moment a decision is announced but the moment at which the chairman declares the debate closed for deliberation. The petitioner should then have requested that the debate be re-opened if it intended to file a further request. Whether the petitioner intervened during or after the announcement of the decision is not relevant.

In [R 11/08](#) the Enlarged Board dismissed the petitioner's allegation that the board had not ruled on a request which it had considered too general.

In [R 16/14](#) the Enlarged Board held that since the condition underlying conditional request (iii) in the proceedings under review (namely, that the board of appeal took the position that an examining division had the option to ignore arguments advanced by an applicant) was not met, the petitioner's allegation that conditional request (iii) had become relevant again for the written reasons of the decision under review and should have been decided

upon did not hold. As a consequence, the Enlarged Board held that the claim of infringement of R. 104(b) EPC must be dismissed.

In R. 14/10 the Enlarged Board confirmed that, if a party's request is unclear, it is the duty of the deciding body to ask for clarification before deliberation (see also R. 7/14). However, if the requests as read out by the chairman in conformity with Art. 15(5) RPBA 2007 do not correspond to a party's intention, it is that party's duty to intervene at that point. In R. 12/14 the Enlarged Board stated that if a party submits written requests which the board is entitled to regard as the party's final requests under Art. 15(5) RPBA 2007, the board can also safely assume that these requests are complete.

4.4.3 Successful petition under Rule 104(b) EPC

In R. 21/11, so far the only allowable petition based on R. 104(b) EPC, the petitioner (patentee) claimed that the board had decided on the appeal without deciding on a request for admission of a second expert testimony filed by fax. The Enlarged Board found that R. 104(b) EPC was a specific manifestation of the right to be heard which applied regardless of whether the party's submission might have persuaded the board. The argument that the undecided request was irrelevant because its admission would not have made a difference could only be accepted if it could be shown that all aspects "lost" as a result of its non-admission had been taken into account in the decision under review. According to the Enlarged Board, the procedural defect asserted by the petitioner constituted an infringement of its right to be heard, both under Art. 112a(2)(d) in conjunction with R. 104 EPC and under Art. 112a(2)(c) in conjunction with Art. 113(1) EPC. While the petitioner had argued that this infringement consisted in the board's failure to take account of the second testimony in its decision, the Enlarged Board saw the infringement in the board's failure to consider the request for its admission. Had that request been granted, it could have influenced the outcome. There was therefore a causal link between the denied opportunity to comment and the board's decision (see in this chapter V.B.4.3.2). The contested decision was set aside.

4.5. Article 112a(2)(e) EPC – criminal act having an impact on a decision

Under Art. 112a(2)(e) EPC, a petition for review may be based on the ground that a criminal act may have had an impact on a decision. A competent court or authority must have finally established that the criminal act occurred; a conviction is not necessary (R. 105 EPC). Deviating from the general rule, the time limit for filing the petition is two months after the criminal act has been established, and in any event not later than five years after notification of the decision (Art. 112a(4) EPC).

In R. 2/10 the petitioner referred to alleged criminal acts which had, however, not been established by a criminal court or authority. The Enlarged Board rejected the petition as clearly inadmissible, due to failure to observe the time-limit for filing the petition.

5. Removal from office of a board member

5.1. General

According to Art. 23(1) EPC, first sentence, members of the Enlarged Board of Appeal and the boards of appeal may not be removed from office during their term of appointment, except if there are serious grounds for such removal and if the Administrative Council, on a proposal from the Enlarged Board of Appeal, takes a decision to this effect. According to Art. 12a RPEBA, the Administrative Council or the Vice-President of the EPO in charge of the Boards of Appeal (since the structural reform in 2016, the Boards of Appeal are now organised as a separate unit directed by the President of the Boards of Appeal) may make a request to the Enlarged Board to make a proposal, to the Administrative Council, for the removal from office of a board member.

5.2. Composition

According to Art. 2(5) RPEBA (see also Art. 10 BDS/EBA), the Enlarged Board in proceedings under Art. 23(1) EPC consists of five legally and two technically qualified members. The chairman of the Enlarged Board who is, under current practice, also President of the Boards of Appeal, must be replaced by his alternate, and two of the legally qualified members must be external members of the Enlarged Board (see Art. 11(5) EPC).

In G 2301/15 the Enlarged Board held that the arrangements laid down in Art. 2(5) RPEBA and Art. 10 BDS/EBA for the composition of the Enlarged Board in proceedings under Art. 23(1) EPC were compatible with the EPC and general principles of law. It could not be inferred from Art. 23(1) EPC that a proposal to remove a member from office must be decided by the full Enlarged Board (consisting of all internal and external members under Art. 1 BDS/EBA).

5.3. Removal and judicial independence

In G 2301/15 the Enlarged Board stated that removing an irksome judge from office could be used to indirectly influence decisions. It was crucial to judicial independence that judges could not be removed without special institutional safeguards. The requirement that a board member may only exceptionally be removed from office on a proposal from the Enlarged Board intended to make sure that unsubstantiated or groundless allegations could not be used as pretext for getting rid of an irksome judge.

In G 2301/16 the Enlarged Board concluded that the Office President's procedurally irregular intervention in the form of a position statement was incompatible with the Enlarged Board's judicial independence.

5.4. Independence from disciplinary proceedings

According to Art. 12a(8) RPEBA, proceedings under Art. 23(1) EPC are to be conducted independently of any disciplinary or national proceedings. In G 2301/15, the Enlarged Board stated that Art. 23(1) EPC requires that the Administrative Council may apply to a

board member the most severe disciplinary sanction available (dismissal) only if it has first received a proposal for his or her removal from office from the Enlarged Board. The administrative disciplinary proceedings before the appointing authority are separate from the judicial proceedings before the Enlarged Board, which must satisfy itself that the allegations are true, and so serious as to require the removal from office.

5.5. Adversarial judicial proceedings

In G 2301/15 the Enlarged Board held that proceedings under Art. 23(1) EPC were to be conducted in proper judicial form. A request by the Administrative Council initiated adversarial proceedings to which the board member concerned is a party as respondent (Art. 12a(4) RPEBA). The Administrative Council's request must set out all the facts, arguments and evidence relied on; all documents referred to must be attached (Art. 12a(5) RPEBA). According to the Enlarged Board, this provision requires that the Administrative Council's request specify individual incidents and the evidence for them, and give reasons why they constitute a serious ground within the meaning of Art. 23(1) EPC. It was not be up to the Enlarged Board to define of its own motion which facts may be derived from documents and exhibits. Simply referring to facts and evidence and leaving the Enlarged Board to reconstruct the events for itself neither satisfied the requirements of Art. 12a(5) RPEBA nor the respondent's right to know the charges against him. In the case in hand, as the Administrative Council's request was not substantiated as prescribed by Art. 12a(5) RPEBA, the Enlarged Board rejected the request as inadmissible.

5.6. Publication of the decision

According to Art. 18(3) RPEBA, the final decision of the Enlarged Board in proceedings under Art. 23(1), first sentence, EPC, may be published, due regard being taken of the confidentiality of the proceedings. Case G 2302/15 was terminated following the Administrative Council's withdrawal of its request that the Enlarged Board make a proposal for the removal from office of a board member. The Enlarged Board's decision was final in that it terminated the proceedings, albeit for non-substantive reasons. The Enlarged Board decided that the decision be published.

5.7. Reimbursement of costs

According to Art. 12a(10) RPEBA the Enlarged Board may on request propose the reimbursement of some or all costs incurred in the proceedings by the respondent if the request to make a proposal for their removal from office has been rejected (see G 2301/15). In G 2302/15 the proceedings were terminated following the Administrative Council's withdrawal of its request during oral proceedings. The Enlarged Board proposed the reimbursement of all costs incurred by the respondent, as the costs for preparing his defence had turned out to be unnecessary as a result of the withdrawal.

1. Introduction

Representation of natural or legal persons in proceedings established by the EPC may only be undertaken by professional representatives whose names appear on a list maintained for this purpose by the EPO (Art. 134(1) EPC). Any natural person who is a national of a contracting state, has his place of business or employment in a contracting state and has passed the European qualifying examination may be entered on the list (Art. 134(2) EPC). Under Art. 134(8) EPC (cf. Art. 134(7) EPC 1973), legal practitioners from the contracting states are also entitled to act as representatives, subject to the conditions specified therein.

Art. 134a EPC, introduced under the EPC 2000, incorporates the substance of former Art. 134(8) EPC 1973 and anchors in the Convention the existence of the Institute of Professional Representatives before the EPO ("*epi*").

For further information on representation before the EPO, see chapter III.V. "Representation". For more details of the changes introduced by the EPC 2000, see also OJ SE 4 and 5/2007.

All persons on the list of professional representatives must be members of the *epi* (Art. 134a(2) EPC; see also Art. 5(1) of the Regulation on the Establishment of an Institute of Professional Representatives before the EPO, OJ 1997, 350; for amendments to the Regulation, see OJ 2002, 429, OJ 2004, 361 and OJ 2007, 12), and are subject to the Regulation on Discipline for Professional Representatives, adopted by the Administrative Council of the European Patent Organisation (RDR, OJ 1978, 91; as amended: OJ 2008, 14), and to the Code of Conduct of the Institute of Professional Representatives before the EPO, adopted by the *epi* (OJ 2003, 523). These provisions are also published in Supplementary publication – OJ 1 of each year.

The first instance bodies which rule on infringements of the rules of professional conduct are the *epi* Disciplinary Committee and the EPO Disciplinary Board (Art. 5 RDR; see also Additional Rules of Procedure of the Disciplinary Committee and of the Disciplinary Board, OJ 1980, 176, and 177 and 183, respectively; for amendments, see OJ 2007, 552; also published in Supplementary publication – OJ 1 of each year).

The Disciplinary Board of Appeal (DBA) hears appeals against decisions of the *epi* Disciplinary Committee and the EPO Disciplinary Board (Art. 5, 8 RDR). See also Additional Rules of Procedure of the DBA, OJ 1980, 176 and 188; for amendments, see OJ 2007, 548; for consolidated version, see Supplementary publication – OJ 1 of each year.

The European qualifying examination (EQE), referred to in Art. 134(2)(c) EPC, is governed in particular by the Regulation on the European qualifying examination for professional representatives before the EPO (REE, OJ 2009, 9, which entered into force on 1.1.2009 (see now Supplementary publication 2, OJ 2019, 2), and by its Implementing provisions (IPREE, Supplement to OJ 5/2009, 20; as amended: Supplementary publication 2, OJ 2019, 18). These provisions replace the REE 1994, (last published: Supplement to OJ 12/2008, 1), and the IPREE 1994 (last published: Supplement to OJ 12/2008, 15). The content of the former Instructions (Instructions concerning the qualifications required for enrolment for the EQE, Supplement to OJ 12/2008, 19; Instructions to candidates concerning the conduct of the examination, Supplement to OJ 12/2008, 24; Instructions to candidates for preparing their answers, Supplement to OJ 12/2008, 29; and Instructions to invigilators, Supplement to OJ 12/2008, 35) has been largely incorporated into the IPREE and the current Instructions to candidates concerning the conduct of the EQE (Supplementary publication 2, OJ 2019, 36).

A number of substantive changes were introduced by the REE which entered into force on 1.1.2009 and its IPREE. These include first the creation of a Supervisory Board (Art. 1(6),

2, 3 REE), which is responsible for adopting the IPREE (Art. 3(7) REE), and the introduction of a pre-examination from 2012 (Art. 1(7), 11(7) REE, R. 10 IPREE). Other modifications are: simplification of the enrolment requirements in respect of academic qualifications and professional experience (Art. 11 REE, R. 11 to 15 IPREE); replacement of the rules on modular sitting by the option to take one or more papers at one sitting (Art. 15 REE); extension of the compensation system to all candidates (Art. 14 REE, R. 6 IPREE); streamlining of the appeal procedure (Art. 24 REE).

Under Art. 24 REE (cf. Art. 27 REE 1994), the DBA hears appeals against decisions of the EQE Examination Board and Secretariat.

Appeals against Examination Board and Secretariat decisions which were decided by the DBA under earlier provisions are referred to below if considered still relevant. For more detailed information on the old rules and related DBA decisions, see the 5th edition of the Case Law of the Boards of Appeal.

2. European qualifying examination

In principle, only persons who have passed the EQE may be entered on the list of professional representatives (Art. 134(2)(c) EPC; see also Art. 134(3) EPC).

2.1. Formalities and conditions for enrolment

In D. 4/08 the board confirmed the Examination Secretariat's strict application of the published closing date for enrolment for the EQE, stressing its importance for the timely and orderly preparation of the examination. According to D. 7/08, it was the candidate's responsibility to file the complete application, including the enrolment form and all necessary supporting evidence, by the closing date (see also D. 12/08, D. 15/09).

2.1.1 Required qualification or equivalent knowledge

To qualify for registration and enrolment, candidates must normally possess a university-level scientific or technical qualification, i.e. a bachelor's degree or equivalent academic degree awarded at the end of a full-time course of a minimum of three years, with at least 80% of the course hours taken to obtain this degree having been devoted to scientific and/or technical subjects (Art. 11(1)(a) REE, R. 11 IPREE, also R. 12 IPREE). The qualifying subjects include biology, biochemistry, construction technology, electricity, electronics, information technology, mathematics, mechanics, medicine, pharmacology and physics (R. 13 IPREE). There is no legal requirement as to the minimum number of course hours required; to establish if a candidate's degree can be considered as having been devoted mostly (80%) to science/technology, the legislator chose the number of years (a "minimum" benchmark easier to establish than the number of hours) and the percentage of courses devoted to technical and/or scientific subjects (D. 13/14). The board in D. 9/14 emphasised that the 80% is always to be calculated from the required course hours for the particular degree under scrutiny (which in the case in hand required four years of study). It furthermore accepted that a calculation based on credits may be suitable

for the purposes of R. 11(2) IPREE but that, in the case of any discrepancy between the calculations based on course hours and those based on credits, the former is authoritative.

Otherwise, under R. 14 IPREE, equivalent knowledge may be demonstrated on the basis of at least ten years' experience in the activities defined in Art. 11(2)(a) REE – see also in this chapter [V.C.2.1.2](#) and furthermore the board's interpretation of R. 14 IPREE in [D.9/14](#).

In similar cases [D.1/12](#), [D.2/12](#), [D.3/12](#) and [D.4/12](#) (see also [D.9/14](#)), the DBA concluded that the appellant possessed neither a university-level qualification meeting the above criteria (in particular because the required 80% of course hours in scientific and/or technical subjects was not met) nor sufficient professional experience to provide a basis for equivalent knowledge. However, while the appellants in cases [D.1/12](#) to [D.4/12](#) had started their practical training (see in this chapter [V.C.2.1.2](#)) after the amended REE entered into force on 1.1.2009, the respective appellants in [D.7/14](#) and [D.8/14](#) had already started it before then. In the latter two cases, the DBA held that, on the basis of the principles of good faith and equal treatment, the REE 1994 with its IPREE and Instructions should be applied, in accordance with the practice of the Examination Secretariat before 1.1.2009 (see e.g. [D.1/12](#)). Also taking into account the relevant jurisprudence (in particular [D.5/08](#)), the board was satisfied in both cases that the appellant was suitably qualified under the 1994 provisions.

Earlier decisions relating to the REE 1994 and its Instructions concerning the qualifications required for enrolment for the EQE are [D.15/04](#), [D.17/04](#), [D.18/04](#) and [D.8/04](#), reported in the "Case Law of the Boards of Appeal", 5th ed. 2006, and also [D.5/08](#), [D.10/08](#).

2.1.2 Professional experience

A further requirement for enrolment is that at the date of the examination a candidate must normally have worked full-time for at least three years in the field of European patent applications and European patents in a contracting state, as set out in Art. 11(2) to (5) REE and R. 15 IPREE. For the pre-examination the period is reduced by one year (Art. 11(7) REE). The period may be reduced by six months for candidates who have successfully completed specialised studies of at least one academic year in the field of industrial property (R. 16(1) IPREE).

One way of acquiring this work experience is to complete a training period under the supervision of and as an assistant to one or more professional representatives before the EPO, in accordance with Art. 11(2)(a)(i) REE.

The following three cases, decided under the earlier law, remain of interest. According to [D.4/86](#) (OJ 1988, 26), for the condition stipulated in previous Art. 7(1)(b)(i) REE 1977, as amended, to be met, the trainee had to have completed his training period under conditions likely to ensure that he had actually assisted a professional representative by constantly taking part in activities pertaining to patent application procedures of which the representative was in fact in charge. [D.14/93](#) (OJ 1997, 561) ruled that the training period could not be served with a legal practitioner whose name did not appear on the list of professional representatives, even if the said practitioner was a patent attorney under

national law (see Art. 134(7) EPC 1973, see now Art. 134(8) EPC). According to the board, the activities referred to in Art. 7(1)(b) REE 1991 presupposed the scientific or technical knowledge required with a view to activities pertaining to European patent applications and patents; persons training EQE candidates needed to possess such knowledge, and legal practitioners did not normally do so. D. 25/96 (OJ 1998, 45) ruled that the period of professional activity required for the EQE enrolment could not be served with a self-employed German patent agent who was not on the list of professional representatives.

A candidate may alternatively complete the prescribed period of professional activities as an employee in accordance with the requirements of Art. 11(2)(a)(ii) REE. The relevant conditions are not met where the candidate's employer is not represented before the EPO by the candidate in accordance with Art. 133(3) EPC but by external patent attorneys, or where the candidate's main activity has been in the field of national or international applications and patents (D. 6/10, with reference to D. 12/06 and D. 13/06; see also D. 11/11, with reference to D. 32/07; furthermore D. 1/12 to D. 4/12).

Given the tenor of Art. 11(2)(a)(ii) REE, (mere) professional activity and activities pertaining to patent law cannot be treated as two distinct requirements. Professional activity can be recognised only if and for such time as candidates were able to represent their employer before the EPO and in fact did so. They must have been authorised to act as representative by their employer, but formal authorisation is not enough by itself, as it does not show whether, as required, they have actually worked in that capacity (D. 1/13).

In D. 16/04 the board confirmed the practice of the Examination Secretariat of allowing only periods of professional activity completed after the required degree was obtained as not being in conflict with Art. 10 REE 1994. Art. 10(1) REE 1994 mentioned the requirement of possessing a university-level scientific or technical or equivalent qualification first, followed by a reference to the conditions set out in paragraph 2, i.e. the three-year full-time training period to be completed by the date of the examination. The ordinary meaning to be given to this grammatical order reflected the common understanding that studies normally precede practical training. The required length of the training period was a consequence of the candidate's technical or scientific degree acquired before starting the training period rather than vice versa. See also D. 6/08.

This is now a requirement under Art. 11(3) REE, which, in conjunction with R. 15(2) IPREE, also specifies how periods of professional activity may be aggregated to make up a full-time training period.

Art. 11(2)(b) REE allows candidates who at the date of the examination have performed full-time the duties of an examiner at the EPO for at least four years to enrol for the EQE without having previously worked in accordance with Art. 11(2)(a) REE. In D. 19/04 the appellant, an examiner of many years' standing at the German Patent and Trade Mark Office, had cited the corresponding Art. 10(2)(b) REE 1994 when submitting his candidature for the examination, without providing evidence that he had worked in accordance with Art. 10(2)(a) REE 1994. The board pointed out that Art. 10(2)(b) REE 1994 related to EPO examiners, who in view of their professional experience could be

assumed to have a comprehensive knowledge of the European patent grant procedure. The professional experience of long-serving examiners in national offices could not be equated with that of EPO examiners. Given the different professional circumstances of EPO examiners and those in national offices, the means represented by the provision were in reasonable proportion to the end it served.

According to R. 16(2) IPREE, the period of professional activity under Art. 11(2)(a) REE may be reduced by up to one year if a candidate has been a patent examiner at the EPO or the national patent office of a contracting state.

2.2. Examination conditions

In D.2/95 the DBA found against an appellant alleging discrimination; the fact that certain other candidates had been allowed to use normal as opposed to copy paper for the examination was not in breach of the provisions governing its conduct. Some candidates might find copy paper more awkward, but others might well prefer it. Nor did other arguments along similar lines – e.g. that too little time was allowed for the papers, or that candidates whose mother tongue was not an EPO official language were at a disadvantage and should therefore be given more time than the others – convince the DBA that the relevant provisions had been infringed (D.11/00).

In D.1/94 (OJ 1996, 468) the board did however rule that a translation error might constitute a violation of Art. 11(3) REE 1991 (cf. Art. 12(3) REE, R. 5 IPREE), since this provision assumed that the translation from the language selected by the candidate into one of the EPO official languages was totally correct. In its decision, the Examination Board therefore had to give reasons why the translation errors had not been found to be serious.

In D.14/95 the appellant alleged infringement of the principle of equal treatment because he, as a specialist in biochemistry, had been placed at a disadvantage in Paper C (taken from mechanical engineering) compared with a specialist in that field. The board found against any breach of equal treatment; the appellant's position was no different from that of any other candidate whose specialist field did not happen to be used in the paper as set. True, the examination procedure did in effect involve a certain "inequality". The Examination Board set a limited number of papers, and therefore had to make a choice amongst the different technical fields. So there would always be candidates who happened to be more specialised than others in the particular field selected. This however was inherent in any general examination, and thus did not constitute arbitrary unequal treatment. Furthermore, Paper C was less concerned with testing specialist technical knowledge than the ability to draft a notice of opposition to a European patent.

In D.9/96 a candidate alleged unequal treatment in connection with the language rules under Art. 15 REE 1994 (cf. Art. 12 REE). The board conceded that not all candidates were treated equally since not all of them received examination papers in their mother tongue. However, this differentiation was a direct consequence of the linguistic regime of the EPC 1973 itself. According to Art.14(1)EPC.1973 the official languages of the EPO were English, French and German. Each professional representative was inevitably

confronted with documents and notifications in one of the three official languages of the EPO. Thus, any professional representative had to be expected, in the public interest and the interest of his clients, to understand at least one of the official languages and to be able to work on documents and notifications drafted in this language.

The background to several appeals (D.10/97, D.15/97, D.17/97 and D.5/97) against Examination Board decisions failing candidates in Paper D of the 1996 EQE was that some (but not all) of the copies of the paper given to candidates did not contain Question 11. The Examination Board therefore automatically gave all candidates full marks for Question 11. On this point the DBA reaffirmed D.14/95, which had stated that equal treatment did not have to be absolute, provided the nature and extent of any unequal treatment was justifiable in the circumstances. It would be wrong in law, however, if the examination conditions put certain candidates at a disadvantage for no good reason. The Examination Board had compensated the affected candidates in a way which appeared entirely appropriate given the circumstances. This necessarily involved a certain unequal treatment, which however was limited in its extent and acceptable in this special situation. In particular, it ensured that no candidate was worse off than if his answer had been marked objectively. So, in the DBA's view, the way in which the Examination Board had corrected the error was appropriate to the circumstances and did not constitute unlawfully unequal treatment.

2.3. Marking the answer papers

Art. 6(2)(c) REE requires the Examination Board to give the members of the examination committees instructions for marking candidates' answers consistently (cf. Art. 16 REE 1994). Under Art. 8(1)(d) and (e) REE, the examination committees mark the answer papers, each paper being marked by two committee members (examiners) separately (cf. Art. 8(b) REE 1994).

In D.4/99 the appellant's complaint concerned the fact that the two examiners had marked Paper D differently. The board stated that the appellant's starting point that in case of non-identical marks only one value could be the correct one was irreconcilable with the fact that marking was an individual assessment of the candidate's work. Rather, more or less strict standards were possible and different aspects might be considered essential or less important even within the general instructions to the examiner for marking the papers contained in the IPREE 1994. Examiners must have some latitude of evaluation when awarding marks and individual examiners might arrive at different marks, both results being justifiable. Therefore, differences in marking did not violate the REE 1994 and its Implementing provisions (D.5/94, D.6/98). In order to safeguard the principle of equal treatment, harmonisation of marking was provided for in the marking sheets. If the marking was different, the two examiners might revise their marks on the basis of a discussion between them. The examination committee recommended the grade, and the Examination Board adopted it or otherwise, in full knowledge of the different marks awarded by the two examiners. This system ensured uniformity of marking (Art. 16 REE 1994). See also in this chapter V.C.2.6.3.

In D. 6/99 the DBA confirmed that small differences in marking did not, as such, violate the REE 1994 and its Implementing provisions. They were an unavoidable consequence of the provision, in Art. 8(b) REE 1994, that each answer was marked separately by two examiners. The board was not aware of any provision supporting the appellant's submission that in such cases only the better mark awarded in each category of the paper should be counted.

In D. 10/02 (OJ 2003, 275) it was noted that neither the REE 1994 nor its Implementing provisions regulated the procedure to follow in the exceptional cases where a committee was unable to agree on the marking; nor did they provide for calling in a third or fourth examiner. The DBA pointed out that those were the very cases in which an express provision was needed in order for a candidate to satisfy himself that his paper had not been marked arbitrarily or the procedure influenced by irrelevant circumstances. Hence the appointment of a third examiner without any basis in the REE 1994 or its Implementing provisions had to be deemed a substantial procedural violation.

In D. 3/04 the appellant had complained about unsuitable conditions during the examination. The appealed decision, however, did not show that the appellant's complaint had been taken into consideration by the Examination Board. In the view of the DBA, where the Examination Board found the circumstances referred to in a complaint not to justify the allocation of additional marks, brief reasons should be given explaining why this was so.

In D. 7/05 (OJ 2007, 378), which concerned Paper D, the DBA deemed that details of the marking include sufficient sub-division of the maximum achievable mark and the candidate's overall mark into sub-marks, and an indication of the substantive and legal issues for which those sub-marks were awarded. In producing schedules of marks there had to be a trade-off between their purpose of ensuring uniform marking (Art. 16 REE 1994) and the need also to allow for fair marking of answers which deviated from the scheme but were at least reasonable and competently substantiated. The schedules therefore had to leave some room for manoeuvre and – merely – be sufficiently detailed to constitute details of the marking within the meaning of R. 6(1) IPREE 1994 (cf. now R. 4(1) IPREE) allowing candidates to verify, on the basis of the documents published or made accessible, whether the marking of their answers infringed marking principles the respect of which was subject to review by the DBA. See also this chapter V.C.2.5. and e.g. decisions D. 11/07, D. 23/08, D. 8/12, D. 13/17.

2.4. Grades / passing the examination

To pass the examination, a candidate must have passed each paper or obtained the minimum grades as specified in the IPREE (Art. 14(1) REE, R. 6(1), (3) and (4) IPREE). The possibility of being awarded the grade "Compensable fail" in an individual paper (R. 6(3)(c) IPREE) is no longer restricted to first sitters. If, despite this compensatory measure, a candidate fails the examination, he must resit those papers which he did not pass (Art. 16(1) REE). For decisions relating to "borderline cases" under the former REE, see "Case Law of the Boards of Appeal", 5th ed. 2006, V.2.4 and also D. 23/08.

2.5. Substantiation of EQE decisions

At issue in D. 12/97 (OJ 1999, 566) was whether EQE Examination Board decisions informing candidates that they have failed the examination have to be reasoned. The DBA pointed out that this was not required by the REE 1994. The board also found the appellant's constitutional arguments - that substantiation of such decisions was a generally recognised principle of procedural law within the meaning of Art. 125 EPC 1973 - to be unfounded. For this to be so, it had to be shown that substantiation of such decisions was required in the EPC contracting states.

In D. 3/03 the DBA confirmed its case law (D. 12/97, OJ 1999, 566), whereby the REE 1994 neither required EQE decisions to be reasoned nor made reference to R. 68(2) EPC 1973 (cf. now R. 111(2) EPC), which therefore did not apply. The Guidelines for Examination were likewise not applicable for the same reasons. The REE and its Implementing provisions were *lex specialis* for the EPC. In other words, unless they expressly referred to the EPC, then only they and not the EPC applied. The subsidiary nature of these provisions was justified by the fact that they governed a particular matter unrelated to the EPC *stricto sensu*, since their purpose was to establish whether a candidate was considered fit to practise as a professional representative before the EPO. With regard to the review by the courts of decisions concerning the European qualifying examination for professional representatives before the EPO, the German Federal Constitutional Court had also held that the obligation to give reasons for examination decisions cannot be regarded as an expression of the structural elements of any protection of basic rights intended by the Basic Law (see decision 2 BvR 2368/99 of 4 April 2001).

This case law was again confirmed by the DBA in D. 7/05 (OJ 2007, 378). In its extensive reasoning the Board also held that, apart from the fact that the marking sheets under R. 6(1) IPREE 1994 already had a decision substantiation function, the extent to which the principles of rule-of-law process also demanded individual substantiation of examination decisions could not be assessed without consideration of the extent of the Board's powers of review under Art. 27(1) REE 1994. The absence of an obligation to provide individual substantiation was to be seen in connection with the fact that Examination Board decisions in EQE proceedings were subject to only limited judicial review (as to this see also chapters V.C.2.6.1 and V.C.2.6.3).

2.6. Appeals against decisions of the Examination Board and the Examination Secretariat

2.6.1 Competence of the board of appeal

Under Art. 24(1) REE (cf. Art. 27(1) REE 1994), an appeal lies from decisions of the Examination Board and the Secretariat only on grounds of infringement of the Regulation or of any provision relating to its application.

However, the board of appeal has only very limited scope for reviewing the legal validity of implementing provisions drawn up by the Administrative Council or, in the case of delegation, by the relevant subsidiary body.

In D. 3/89 (OJ 1991, 257) the board of appeal stated in justification of the limited scope of the examination that the relevant bodies had discretionary powers in drawing up such provisions. As long as the legislative organ and subsidiary bodies had not misused their discretionary powers, the DBA could apply the provisions concerning examinations only to the case in point (see also D. 1/81, OJ 1982, 258, D. 5/89, OJ 1991, 210, D. 14/96, D. 11/99 and D. 7/05, OJ 2007, 378). Concerning the Examination Secretariat's discretion to decide on the sufficiency of a candidate's professional experience, see e.g. D. 32/07 and D. 1/13.

2.6.2 Procedural aspects

a) Time limit for appeal / rectification of decisions

The notice of appeal, to be filed within one month from notification of the contested decision, must already include the statement setting out the grounds (cf. Art. 24(2) REE). Under Art. 24(3) REE, if the Examination Board or the Secretariat considers the appeal to be admissible and well-founded it must rectify its decision and order reimbursement of the appeal fee. If the appeal is not allowed within two months from notification of the decision, it is remitted to the DBA. The procedure according to Art. 27 REE 1994, which was the subject of the following two decisions, has therefore been streamlined.

In D. 38/05 of 17 January 2007 and D. 4/06 the DBA found that the provision for rectification of decisions of the Examination Board was modelled on Art. 109(1) EPC and designed to serve the same purpose in comparable situations. The aim, in either case, was that the department of first instance be able to set aside a decision of its own if it found an appeal against that decision, filed by the (sole) party, to be (admissible and) allowable. This was a quick and simple way of cancelling flawed decisions. Art. 27(3) REE 1994 (analogous to Art. 109(1) EPC) provided that the department whose decision was contested – in this case, the Examination Board – must rectify its decision if it considered the relevant requirements to be fulfilled. This also meant that the Examination Board was obliged to assess carefully whether or not these requirements were met before deciding to grant or refuse rectification and, in the latter case, referring the matter to the board of appeal. The two-month time limit for considering the appeal and deciding whether it must be allowed therefore only started to run on receipt of the statement of grounds for appeal, even though this was not expressly provided in Art. 27(3) REE 1994 – in contrast to Art. 109(2) EPC. See, however, the current provisions of Art. 24(2) and (3) REE, referred to in the previous paragraph. See also D. 3/14 in chapter V.C.2.6.4 concerning the pre-examination.

b) Payment of the appeal fee – method of payment

In D. 9/17 the DBA confirmed that the Rules relating to Fees applied, at least mutatis mutandis, to the payment of the fee for an appeal lodged under Art. 24(2) REE. This fee was to be paid by payment or transfer to a bank account held by the Office (Art. 5(1) RFees). In the case in hand, there were no allowable alternative methods; in particular, payment of the fees according to Art. 17 REE by debit order was not provided for in the Arrangements for deposit accounts.

c) Oral proceedings

Oral proceedings take place either at the instance of the disciplinary body if it considers this to be expedient or at the request of the party (Art. 13 RDR). In D 9/17, though the appellant had requested oral proceedings in relation to her main request, no such request had been filed with respect to the question raised in the board's communication on whether an appeal was deemed to have been filed (which turned on the question of valid payment of the appeal fee – see under b) above). Considering that the question whether an admissible appeal existed was to be examined by the appeal board ex officio, and the appellant had not availed herself of the opportunity which she had been given to comment on the reasons for the decision, the DBA did not consider oral proceedings to be expedient.

2.6.3 Objective review of the marks awarded

In accordance with the DBA's consistent case law (in particular D 1/92, OJ 1993, 357 and D 6/92, OJ 1993, 361), decisions of the Examination Board may in principle only be reviewed for the purposes of establishing that they do not infringe the REE, the provisions relating to its application or higher-ranking law. In D 1/92 and D 6/92, the DBA therefore concluded that its functions did **not** include reconsidering the examination procedure **on its merits**. Accordingly, the Examination Board's value judgment concerning the number of marks that an examination paper deserved was not subject to review by the board. Only if the appellant could show that the contested decision was based on serious and obvious mistakes could the board take this into account. The alleged mistake must be so obvious that it could be established without re-opening the entire marking procedure, for instance if an examiner was alleged to have based his evaluation on a technically or legally incorrect premise on which the contested decision rested. Any further claims regarding alleged defects in the assessment of candidates' work fell outside the DBA's jurisdiction, since value judgments were not subject to judicial review. These findings were confirmed in D 7/05 (OJ 2007, 378). See also, for example, D 9/00, D 7/01, D 11/01, D 16/02, D 6/04, D 14/08, D 23/08, D 1/13 and D 5/13.

In D 6/98, the DBA added that these conditions were in line with those for correcting errors under R 89 EPC 1973 (cf. now R 140 EPC), particularly in the case of errors of transcription or calculation in the marking. Under Art. 27(1) REE 1994 (cf. Art. 24(1) REE), the DBA was not empowered to reopen the assessment procedure (D 15/97). The DBA was not intended to be a department of second instance empowered to examine whether the marks awarded for a candidate's examination were justified on their merits or correct, and thus to superimpose its own value judgment on that of the Examination Board (D 20/96 and D 6/02).

In D 13/02 the board stated that obvious mistakes as referred to above were those which could be identified without a re-evaluation of the examination paper. That would be the case, for instance, if one and the same paper had been marked **very** differently by the two examiners, since the marking discrepancy alone would indicate an infringement of the principle of uniform marking, irrespective of the level of the marks awarded. Another example of an obvious mistake would be a question whose wording was ambiguous or incomprehensible. That would be clear straight away, without any reference to marks

awarded, from the meaning that common sense would ascribe to the wording of the question concerned.

D 17/05 cited D 13/02 to point out that the existence of a mistake within the meaning of D 1/92 could not be deduced from a comparison of the candidate's answer with another answer. The board also cited the statement that the disclosure of marking instructions which may have been used by the examiner was not required for a decision on an appeal and that under the established case law no other entitlement existed to any such disclosure.

D 6/13 concerned an alleged infringement by the Examination Board of R. 23(3) IPREE (regarding the content of Paper A). The Board agreed that the Examination Board has an implied obligation to prepare the examination papers and corresponding marking scheme correctly, in that the marking scheme should award the appropriate marks for correct solutions and this "correct" marking scheme should also be "correctly" applied in every case. However, the DBA may not be competent to determine whether the marking scheme or individual marking is correct from every possible aspect which may have adversely affected the marking of a candidate, given that Art. 24(1) REE excludes certain appeal grounds. Therefore, if the Examination Board did not "perfectly" fulfil this implied obligation, in that arguably correct solutions were not awarded any or enough marks, this could not qualify immediately as an infringement of R. 23(3) IPREE in the sense of Art. 24(1) REE, but was a question to be decided on a case-by-case basis. If the DBA were to extend the examination of appeals to an in-depth technical examination, this would in effect reduce to zero the scope of the restriction on the possible appeal grounds stipulated in Art. 24(1) REE, and require value judgments to be made.

In D 3/00 (OJ 2003, 365) the appellant claimed that for each question in paper D, parts 1 and 2, he should have been awarded the highest number of marks awarded by one of the two examiners who had marked his paper. In D 12/00, too, the appellant claimed that the higher number of marks should count. Any discrepancy between the markings of each examiner showed gross disregard for the principle of uniformity within the meaning of Art. 16 REE 1994 (Art. 6(2)(c) REE, English text, now provides for consistency of marking). The board confirmed its established case law, adding that differences of opinion over the number of marks to be awarded for a given answer were a reflection of value judgments which were not, in principle, subject to judicial review. It had also already been explained in D 4/99 (see in this chapter V.C.2.3. above) that the marking of examination papers was an individual assessment and that, within the general instructions to the examiners for marking the papers (IPREE 1994), more or less strict standards were possible and different aspects might be considered essential or less important. Hence it was consistent with the ratio legis of Art. 8(b) REE 1994 (cf. Art. 8(1)(e) REE) that the examiners had some (limited) latitude of evaluation when awarding marks and might therefore arrive at different marks, both results being justifiable (D 5/94 and D 6/98). The fact that two independent examiners had arrived at different marks was not per se a violation of the applicable provisions (D 12/00). In D 3/00 the board drew attention to the fact that, with regard to the evaluation of the merits of a candidate's answer in an examination paper, a candidate was not per se entitled to claim the highest mark awarded by one of the examiners for each answer to a sub-question or sub-element whenever the

two examiners who marked the paper in accordance with Art. 8(b) REE 1994 differed in their marking.

D. 6/07 and D. 7/07 were among a number of appeal decisions concerning the marking of paper C of the 2007 examination. A large number of candidates had taken as the starting point for their attack on the claims a document which the examination committee did not consider to represent the closest prior art and had been awarded no points in this regard. The Examination Board took the view that, in keeping with long-standing practice, some credit should be given for properly drafted problem and solution approaches even where the wrong starting document for assessing inventive step had been used. Given the lateness of the proceedings and the impossibility of re-marking all the papers, it decided, as an exceptional measure, that the fairest option would be to award ten additional points (being the maximum number possible) to all candidates having sat the paper. The DBA held first that the awarding of no points by the examination committee infringed the requirements of R. 4(2) and (3) IPREE 1994: the "fit to practise" criterion required the examiners in marking the individual parts of a candidate's answers not to disregard their merit in the context of the whole answer paper (D. 3/00, OJ 2003, 365) and the need to allow for the fair marking of answers which, although deviating from the marking scheme, were nonetheless reasonable and competently substantiated (D. 7/05, OJ 2007, 378). The board further ruled that, under Art. 7(3) REE 1994, it fell to the Examination Board to award the grades "pass", "fail", or "compensable fail" and formally to decide whether the whole examination had been passed or not. Its powers did not extend to the preceding marking of candidates' individual papers on a scale of zero to 100, and therefore the alteration of the marks awarded by the examination committee (in accordance with Art. 8(b) REE 1994 and R. 4(1) IPREE 1994) by the blanket addition of ten marks per paper had been *ultra vires*. The abstract awarding of marks without regard to the "fit to practise" criterion of R. 4 IPREE 1994 in the individual candidates' examination papers infringed the principle of objectivity as well as Art. 8(b) REE 1994 and R. 4 IPREE 1994. In conclusion the DBA ordered a new marking of paper C of each appellant in accordance with R. 4 IPREE 1994, with the ten additional points already awarded to be retained by the appellant.

In D. 24/17 the DBA found that on most issues the appellant did not substantiate in detail in what respect the solution of the examiners' report was incorrect, but left it to the board to establish of its own motion to what extent the official solution and the marking of her papers was or could have been wrong. This would go beyond the scope of the board's review. Only on the clarity-related issues in paper B were the appellant's submissions (partly) well-founded. It was evident that she had addressed at least some of them in her answers, and it was therefore incomprehensible that no point at all was awarded. This amounted to a serious and obvious mistake which affected the marking. The board remitted the case for paper B to be re-marked with respect to the aspect of clarity and ordered reimbursement of the appeal fee at 25%.

In D. 13/17, the DBA stressed that Paper A had a particular structure in that it was based on a single set of facts which meant that a wrong answer to one part was very likely to result in the other parts being wrongly answered too. That had to be taken into account when devising a marking scheme, as did the applicable regulatory requirements. In particular, R. 6(1) IPREE provided that each answer paper was to be marked on a scale

from zero to 100; it said nothing about deducting marks. There was much to suggest that the marking had to start from zero, with marks then being awarded for each correct answer or partial answer and added up. Especially given Paper A's particular structure, a marking scheme that allowed more marks to be deducted overall than were achievable in total was essentially untenable if the requirement for fair marking established in the case law was to be met. A different conclusion could, if at all, be reached only if the possible deductions were not cumulative and instead applied to separate and mutually exclusive wrong or incomplete answers. With regard to the possibility that marks might be lost twice for a single mistake because, owing to Paper A's particular structure, a wrong answer to one part could have implications for the answer to another part, the board held that such a "double penalty" was not in keeping with the standards for fair marking set in the case law.

In D.14/17 and in D.20/17 the DBA allowed the appeal in respect of Paper C. In the light of the examiners' report, giving the appellant 0 out of 20 marks for the inventive step attack regarding claim 2 appeared to be founded solely on the deviation in the choice of the closest prior art. The board referred to the case law on the examiners' obligation to allow for fair marking of answers which, although deviating from what was expected according to the examiners' report, were reasonable and competently substantiated (cf. *inter alia* D.7/05, OJ 2007, 278, and D.12/82, OJ 1983, 233; cf. also the "fit to practise" criterion of Art. 1(1) REE). Based on a summary examination and (at least) a figure filed by the appellant, it was evident for the board that, contrary to what was asserted in the examiners' report, no technical obstacle existed with regard to Annex 6, which was reasonably to be regarded as an alternative starting point (see also e.g. parallel case D.25/17). Furthermore, having concluded that there were special reasons not to remit the case to the Examination Board (cf. Art. 12 Additional Rules of Procedure of the DBA – see in this chapter V.C.1.; here: *prima facie* competent and logical answer, small number of marks involved, very short time between oral proceedings and next EQE session), the board in D.14/17 allowed the appellant's requests to be awarded a "compensable fail" for Paper C and, based on that, to be declared to have passed the EQE (Art. 14(1) REE). See also in this regard D.3/14, summarised in the next section, and D.5/14, both concerning the EQE pre-examination.

In some cases, the DBA has made it clear that the case law on the questions and marking of the pre-examination (see next section) is not applicable to the EQE because the former leaves no room for discretionary marking. Thus, according to D.20/16, the decisive difference between the pre-examination (R. 10 IPREE) and the EQE, in particular Paper A (R. 23 IPREE) is as follows. In the former, candidates are expected to respond to clearly defined questions or statements in a multiple choice mode, to which they can only answer "true" or "false" by ticking a box; they have no possibility to add any reasons or explanatory notes. In the latter, candidates can offer solutions which they find meet the requirements of R. 23 IPREE, and even, if need be, give reasons for their proposals in supplementary notes (R. 23(6) IPREE). For Paper A, the members of the Examination Board have a broad discretion when awarding marks. See also e.g. D.16/17.

2.6.4 Review of the marking of the EQE pre-examination

In D.3/14 the appellant had obtained the grade "fail" (with 68 marks) in the EQE pre-examination. She argued that the answer to statement 10.4 in the question paper should have been "false", rather than "true", as given in the examiners' Report, and requested that the decision of the Examination Board be set aside and that she be awarded a "pass".

Applying the principles established in the case law on the EQE itself (e.g. D.1/92, see chapter V.C.2.6.3 above), the board examined whether the alleged mistake was so obvious that it could be established without reopening the entire marking procedure. It found that statement 10.4 should have been formulated differently in order to express the aim intended. Candidates could not be expected to make an assumption in this respect (cf. R. 22(3) IPREE, providing that candidates must limit themselves to the facts given). The appellant's understanding of statement 10.4 was justified from an objective point of view. The answer to it was "false" and not "true" as indicated in the examiner's report. The examiners had based their evaluation on an incorrect premise and therefore the contested decision was based on serious and obvious mistakes which could be established without reopening the entire marking procedure. The decision had to be set aside and the appeal fee reimbursed (Art. 24(4) REE).

Concerning the requested award of a "pass", it held that the appeal board was not empowered by Art. 24(4), second sentence, REE to correct the decision, i.e. to review the marks and grade of an examination paper, and therefore considered whether special reasons provided a legal basis for not remitting the case to the Examination Board (cf. Art. 12 Additional Rules of Procedure of the DBA – see in this chapter V.C.1.). Only in a few exceptional cases had the DBA found such special reasons (D.5/86; D.11/91, OJ 1995, 721; D.8/08 and D.9/08), but in appeals against decisions of the Examination Board it had not made use of this power to review the contested decision on its merits. However, in the pre-examination, a multiple choice paper, the marks were awarded according to a strict scheme not involving any discretion and the award of a "pass" or "fail" was merely the arithmetical outcome of the marks achieved. From a limited review, the board was able to establish the correct marks on the basis of the appellant's answer paper without interfering with any value judgment of the examination committee or Examination Board. Also taken into account were the matter's urgency, since a "pass" in the pre-examination was a precondition for the main examination, and the fact that the Examination Board, by not rectifying its decision, even though the discrepancy had been comprehensively substantiated, had burdened the appellant with appeal proceedings. With the correction, the total marks rose from 68 to 70 and a "pass" was therefore awarded.

In D.1/15, too, the DBA considered that the settled jurisprudence (e.g. D.1/92; D.6/92; D.7/05, OJ 2007, 378) also applied to appeals on the pre-examination, even if the marking was hardly ever in dispute, given the simple marking scheme of a multiple-choice test. However, the review requested in this case was directed at the content of the examination as presented to the candidates. To decide on the issues, the board would have had to review at least a substantial part of the paper and perform a detailed, partly technical analysis of the facts presented. This exercise appeared to be well beyond the powers of the board. See also e.g. D.6/16.

In several appeal decisions on the 2016 pre-examination, statement 5.4 (in the German version of the paper) was held to have been unclear and confusing. In some cases (e.g. [D 1/16](#), [D 4/16](#), [D 15/16](#)), the additional points awarded resulted in the candidate achieving the "PASS" grade. Challenges to other statements in the same paper were, however, rejected (e.g. [D 5/16](#), [D 6/16](#), [D 10/16](#)). In [D 5/16](#) the board concluded with some general remarks, as follows. It was essential to ensure that the questions to be answered and any statements to be evaluated in a multiple-choice examination such as the EQE pre-examination were formulated clearly and unambiguously. It was crucial to formulate statements in such a way that clearly only one "True" or "False" answer was possible and "correct" in the circumstances (see also [D 6/16](#)). However, concerning the ambiguity of words and the relevance of the factual context of questions, if a question was logical and made sense, so that, using common sense, it was clear what answer was expected, candidates could not rely on exceptions to the rule or explore alternative interpretations with a view to showing that a different answer might also be conceivable in specific instances.

2.6.5 Legitimate interest

According to the established case law, a candidate who appealed against failing the EQE but resat and passed it before the appeal had been decided still retained a legitimate interest in pursuing the appeal. This was confirmed in [D 3/98](#). Any other view would amount to denying him recourse to the law; legitimate interest would then depend on how long proceedings took. However, appellants could exert little influence over that, and should therefore not have to suffer the consequences. Whether there was a legitimate interest was to be determined with reference to the date the proceedings were initiated (in this case, on the day the appeal was filed).

2.6.6 Complaints about the conduct of the examination – duties of the Examination Board

In several decisions, the DBA pointed out that, under point 7 of the former Instructions to candidates (OJ 1995, 145) and point 7 of the former Instructions to invigilators (OJ 1995, 153), a timely and formally correct complaint about the conduct of the examination was to be submitted to the Examination Board, which was then supposed to issue a provisional opinion, together with an invitation to comment. Failure to do so put it in breach of generally recognised principles of procedural law (Art. 125 EPC), notably the right to be heard (Art. 113(1) EPC; see [D 17/96](#), [D 2/97](#), [D 2/99](#) and [D 3/99](#)).

The corresponding provisions of R. 19(3) and (4) IPREE were considered in case [D 3/10](#), in which the appellant had raised a complaint about disturbances during the examination only with the appeal. The DBA held that it would be inadmissible to examine the alleged disturbances in the context of an appeal without any prior decision of the Examination Board in this regard. By not submitting a complaint immediately after the examination, as foreseen by R. 19(3) IPREE, the appellant had deprived the Examination Board of the opportunity to determine the exact circumstances involved and to react accordingly, if necessary with a decision pursuant to R. 19(4) IPREE, or to deal with the allegations in its decision on the result of the examination under Art. 6(5) REE (cf. [D 3/04](#)).

3. Disciplinary matters

The Regulation on Discipline for Professional Representatives (RDR) of 21.10.1977 (OJ 1978, 91), adopted by the Administrative Council in accordance with Art. 134(8)(c) EPC 1973 and amended by AC Decision of 14.12.2007 in accordance with Art. 134a(1)(c) EPC (OJ 2008, 14; also in Supplementary publication – OJ 1 of each year), contains not only provisions on general professional obligations, professional secrecy and conduct towards clients but also provisions relating to the disciplinary bodies responsible for imposing disciplinary measures (see also Additional Rules of Procedure of the Disciplinary Committee and of the Disciplinary Board, OJ 1980, 176, and 177 and 183, respectively; for amendments see OJ 2007, 552; Additional Rules of Procedure of the DBA, OJ 1980, 176 and 188; for amendments see OJ 2007, 548; for consolidated version, see Supplementary publication to OJ 1 of each year).

3.1. Disciplinary measures

According to D.5/86 (OJ 1989, 210), an infringement of the rules of professional conduct must be established to the satisfaction of the disciplinary body before it can impose a disciplinary measure. Absolute certainty is not required, but a degree of probability which in human experience verges on certainty. A disciplinary measure cannot be imposed if there is reasonable doubt as to whether the infringement has occurred.

In D.11/91 (OJ 1995, 721) the EPO Disciplinary Board had ordered the deletion of the appellant from the list of professional representatives for an indefinite period. In his appeal, the appellant contested the disciplinary measure and held that the procedure before the DBA did not comply with the provisions of the European Convention for the Protection of Human Rights, in particular because the DBA had been established not by national law but by the Administrative Council of the EPO, the disciplinary bodies did not constitute an independent court, the DBA was not a national authority, and its decisions could not be referred to a higher court of appeal.

The DBA decided that the European Convention for the Protection of Human Rights contained provisions which expressed general principles of law common to the member states of the EPO. As such these provisions should be considered part of the legal system of this Organisation and should be observed by all its departments. This therefore applied to Art. 13 ECHR, which guaranteed the protection by the judiciary of the rights of the individual. The "national authority" mentioned in this article was clearly meant to be understood as a competent authority in accordance with the law of the state concerned. However, in ratifying the Munich Convention, the contracting states accepted a transfer of prerogatives whereby professional representatives before the EPO became subject to the same set of professional regulations, controlled by a central body whose decisions were open to effective remedy before a body of second instance whose independence was guaranteed by the rules governing its composition. The drafting of these regulations and the establishment of these bodies was thus consistent with general principles of law, in particular those enshrined in the European Convention for the Protection of Human Rights.

The board took the view that, in order to ensure that the penalty was proportionate to the seriousness of the charges and that the maxim whereby penalties should not be arbitrary but fixed or predetermined was respected, Art. 4(1)(e) RDR should be understood as meaning "for a period not defined by the text", that is for a discretionary period to be decided by the competent disciplinary body. In its decision, the latter should fix the said period and give reasons for its choice.

In D. 20/99 (OJ 2002, 19), appellant X filed an appeal against the EPO Disciplinary Board's decision to issue him with a reprimand. The DBA, reviewing the penalty imposed in respect of the first charge only, held that X's actions, for which he had been prosecuted in France, were in breach of Art. 1(1) and (2) RDR. It was clear that D had been involved in drawing up European patent applications in consultancy L, owned by the appellant, while being paid by company P. However, it was evident from the file that this contractual arrangement had never been the subject of invoicing.

That gave an advantage to consultancy L by cutting the cost of drawing up patent applications. As it inevitably entailed unfair distortion of competition in relation to other European patent attorneys, this was an undue advantage. The board concluded that the misuse of corporate assets was tantamount to unfair competition in relation to fellow European patent attorneys and thus represented a breach of the rules of professional conduct governing representatives before the EPO.

3.2. Appealability of decisions in disciplinary matters

In D. 15/95 (OJ 1998, 297) the board ruled that a Disciplinary Committee decision dismissing a complaint was a decision in the legal sense only as regards the persons referred to in Art. 8(2) RDR, and only they could appeal against it. Thus the person who made the complaint had no right of appeal. Review on appeal was limited to safeguarding the rights of the "accused", i.e. the "professional representative concerned" within the meaning of the RDR (see also D. 1/98). In D. 28/97 and D. 24/99 the DBA added that the purpose of disciplinary proceedings was not for individuals to pursue their interests vis-à-vis others (although these might be affected in individual cases) but rather to serve the public interest in orderly and proper exercise of professional representation before the EPO. Any claims by individuals arising from a representative's infringement of the rules of professional conduct were exclusively a matter for the competent (civil) courts (see also D. 25/05 and D. 3/13).

4. Code of Professional Conduct

The general principles are laid down in the current version (OJ 2003, 523; also published in Supplement to OJ 1 of each year). Point 1(a) of the Code refers in turn, as regards the general requirements for *epi* members, to the RDR (OJ 1978, 91, also OJ 2008, 14; also published in Supplementary publication – OJ 1 of each year).

4.1. General professional obligations

In **D 16/95** the board ruled that, although drafting and filing translations and paying fees in the national phase in a contracting state were not directly related to grant, opposition or appeal proceedings, such activities were still covered by Art. 1 RDR. They were, after all, activities in connection with a European patent (see Art. 65 and 141 EPC 1973) and as such part of a professional representative's job. Regarding them as covered by Art. 1 RDR was also justified by the fact that it was difficult for outsiders (e.g. persons commissioned to translate patent specifications) to distinguish between those of a representative's activities which were directly related to grant, opposition or appeal proceedings and those which were not. Since national-phase-related activities were thus covered by Art. 1 RDR, reprehensible conduct in connection with them constituted a breach of a representative's general professional obligations under that provision (see also D 25/05).

4.2. Professional secrecy

In **D 11/91** (OJ 1994, 401), the appellant had requested the removal of various documents placed on file by the complainant. The appellant argued that his request was justified because, inter alia, their inclusion contravened the rule of confidentiality to which professional representatives were subject. The documents were items of correspondence between the complainant and the disciplinary bodies and correspondence pertaining to an opposition case.

The board decided that the professional secrecy referred to in Art. 2 RDR set limits on the disciplinary bodies' powers of investigation and on the obligation under Art. 18 RDR for a professional representative before the EPO to supply all relevant information. However, the mere obligation of confidentiality deriving from the principle enshrined in Part I RDR could not be invoked to resist a request under Art. 18 RDR.

4.3. Advertising

The adoption of the Code of Conduct (current version, OJ 2003, 523; also published in Supplementary publication – OJ 1 of each year) entailed the rescindment of the ban contained in point 2(b)(1) on the comparison of the professional services of a member with those of another member, as laid down in the version published in OJ 1999, 537.

The original advertising ban had already been replaced in the previous version (OJ 1999, 537) by the new provision point 2(a), which states that advertising is generally permitted provided that it is true and objective.

5. Appeals against decisions of the Disciplinary Board of Appeal

In **D 5/82** (OJ 1983, 175) the DBA already noted that it has no power to refer questions to the Enlarged Board of Appeal. In D 7/05 of 2 January 2007 and D 2/06 of 31 August 2006 the DBA had to consider requests seeking a review of its final decisions. The board stated that decisions of the boards of appeal and the DBA became final when issued, and were no longer subject to appeal, nor could they be set aside by the board itself. It refused the

requests as inadmissible, with reference to the principles set out by the Enlarged Board of Appeal in **G 1/97** (OJ 2000, 322), according to which the decision on inadmissibility is to be issued by the board of appeal which took the decision forming the subject of the request for revision. The decision on the request could be issued immediately and without further procedural formalities.

VI. THE EPO ACTING AS A PCT AUTHORITY – EURO-PCT APPLICATIONS

1. Introduction	1391
2. Jurisdiction of the boards of appeal	1391
3. Competence of the EPO acting as designated or elected Office	1392
4. Language of the proceedings	1395

1. Introduction

The EPC provisions governing "international applications filed under the Patent Cooperation Treaty – Euro-PCT applications" are contained in Part X of the Convention (Art. 150 to 153 EPC) and Part IX of the Implementing Regulations (R. 157 to 165 EPC). Pursuant to Art. 150(2) EPC, international applications filed under the PCT may be the subject of proceedings before the EPO. In such proceedings, the provisions of the PCT and its Regulations apply, supplemented by the provisions of the EPC. In case of conflict, the provisions of the PCT or its Regulations prevail. An international application for which the EPO is a designated Office (or, optionally, an elected Office), and which has been accorded an international filing date, is equivalent to a regular European application ("Euro-PCT application", Art. 153(2) EPC).

The Guidelines for Search and Examination at the EPO as PCT authority (November 2018 edition) set out the practice and procedures to be followed for international applications before the EPO in the course of the international phase, while Chapter E-IX of the Guidelines for Examination in the EPO (November 2018 edition) focuses on aspects particular to the handling of Euro-PCT applications in the European phase. Reference is also made to the comprehensive overview in the current "Euro-PCT Guide: PCT procedure at the EPO", Part A of which lists relevant official texts and further important sources of information.

2. Jurisdiction of the boards of appeal

The PCT does not expressly provide for appeal or petition during the international phase (cf. WIPO PCT Applicant's Guide – International Phase, para. 6.054). The sole exception under the EPC 1973 was the boards' competence to decide on protests against additional search or examination fees charged by the EPO acting as ISA (Art. 17(3)(a) PCT and Art. 154(3) EPC 1973) or IPEA (Art. 34(3)(a) PCT and Art. 155(3) EPC 1973) after a finding of lack of unity of invention. Thus, in **J 24/99** the Legal Board confirmed that, apart from protest cases for which the boards' responsibility explicitly derived from Art. 154(3) and 155(3) EPC 1973, the jurisdiction of the boards was limited by the EPC, in particular Art. 21 and 106 EPC, which do not confer any jurisdiction on them to review actions taken by the EPO as IPEA (see also **J 15/91**, OJ 1994, 296; **J 14/98**; **J 10/15**).

Once the Euro-PCT application enters the regional phase before the EPO the appeal procedures provided for under the EPC supplement the provisions of the PCT (J. 20/89, OJ 1991, 375). See also in this chapter VI.3.

Board of Appeal decisions on protests according to the former procedure are to be found in chapter II.B. "Unity of Invention". The current protest procedure under R. 158(3) EPC and preceding interim procedure are referred to in chapter II.B.1.

3. Competence of the EPO acting as designated or elected Office

In J. 26/87 (OJ 1989, 329) the Legal Board held that if, on the proper interpretation of the request for grant of an international application, an applicant designated an EPC contracting state for which the PCT was in force on the filing date of the international application, the EPO was bound by the provisions of Art. 153 EPC 1973 to act as the designated Office for that contracting state, even if the international application was published by the International Bureau without mentioning that contracting state as a designated state.

J. 19/93 also concerned the designation of EPC contracting states in an international application for the purpose of obtaining a European patent. The Legal Board pointed out that the EPO as elected or designated Office is fully competent to interpret applications appointing it to act in these capacities. The Office is not bound by the interpretation of the receiving Office or of the International Bureau (see also J. 4/94, J. 26/87).

In J. 7/93 the International Bureau did not inform the EPO of its election (in the demand for international preliminary examination) within the 21-month time limit under R. 104b(1) EPC 1973 (version valid prior to 1 March 2000). The EPO issued a communication pursuant to the then applicable R. 85a EPC 1973 concerning the grace period for late payment of the fees upon entry into the European phase and then a notification of loss of rights pursuant to R. 69(1) EPC 1973. The Legal Board pointed out that both referred to the 21-month period under R. 104b(1) EPC 1973, although, in the circumstances, the 31-month period was applicable. They were considered to be legally non-existent because they could not be based on any provision contained in the EPC or in the PCT. These communications, being legally non-existent, could not have any legal effect to the party's detriment.

In the PCT request in case J. 3/94 the applicant had **designated** a European patent under "Regional Patent" and five PCT contracting states including Germany and the United Kingdom under "National Patent". However, in the demand for international preliminary examination, filed with the EPO as IPEA, only the five PCT member states were **elected**; under "Regional Patent" there was no cross indicating the European patent. The applicant argued inter alia that the election of DE and GB made the EPO an elected Office by operation of law. However, the Legal Board held that the EPO did not become an elected Office in this case. One of the principles implemented by Art. 31(4)(a) PCT was that it was the applicant's choice for which office he intended to use the results of the international preliminary examination. Furthermore, it was not only a matter for the EPC to decide whether an election made for the national route was also valid for the EPO. The validity of

an election had to be decided during the international phase in order to give effect to the election. The IPEA had to examine the demand and the international authorities had to fulfil their obligations resulting from a valid election. The validity and scope of an election had to be clear not only for the applicant and the elected Office but also for the Authorities in the international phase. Its validity had to be assessed on a uniform basis by the Authorities concerned.

In J 4/94 the Legal Board had to consider whether the EPO was competent to interpret the applicant's demand for international preliminary examination differently from the United Kingdom Patent Office acting as IPEA. The Legal Board conceded that the demand was addressed to the IPEA, the competent body to deal with it. However, J 26/87 (OJ 1989, 329) had decided that the interpretation of the request for grant form by the receiving Office and the International Bureau was not binding on the EPO in its function as designated Office. The valid designation put the matter within the competence of the EPO as designated Office (Art. 2(xiii) PCT and Art. 153(1) EPC 1973). In the present case there was a defect in the demand, which the applicant should have been invited under R. 60 PCT to correct. A clear deviation by the IPEA from the intention expressed in the demand was not binding on the EPO. It was therefore possible for the EPO to regard itself as a validly elected Office. Consequently, under R. 104b(1) EPC 1973 (as in force prior to 1 March 2000) the time limit of 31 months applied.

A decision of an **examining division** of 5 June 1984 (OJ 1984, 565) pursuant to Art. 153(2) EPC 1973 (see now R. 159(2) EPC) in conjunction with Art. 25 PCT and Art. 24(2) PCT concerned the authority of a designated Office under Art. 24(2) PCT to maintain the effect of an international application. The applicant had missed the time limit for filing the representative's authorisation set by the Japanese Patent Office acting as receiving Office. The EPO, acting as designated Office, excused the non-observance of time limits which had been set by the receiving Office for the correction of formal deficiencies in accordance with Art. 14(1)(b) PCT in conjunction with R. 26.2 PCT (Art. 24(2) and 48(2)(a) PCT). The examining division found that the time limit under R. 26.2 PCT was comparable to time limits set by the EPO under Art. 121 EPC 1973 and granted re-establishment of rights according to Art. 122 EPC 1973 in respect of the time limit under Art. 121(2) EPC 1973.

J 17/99 also concerned the application of Art. 24(2) PCT. The formerly applicable precautionary designation of EP in the international application was not confirmed within the prescribed period and was therefore regarded as withdrawn (former R. 4.9(b)(ii), (c) PCT, and Art. 24(1)(i) PCT), with the consequence that the effect of the international application under Art. 11(3) PCT – i.e. that of a European filing – ended on the same date. The Legal Board declined to exercise its discretion under Art. 24(2) PCT to maintain the effect provided for under Art. 11(3) PCT: when exercising that discretion as designated Office, the EPO had to apply the same rules and principles as for identical or comparable situations arising with direct European applications (here concerning correction of designations). This non-discriminatory approach was not only a fundamental principle of the PCT itself (see, for example, Art. 26 and 48(2)(a) PCT) but also a direct consequence of Art. 150(3) EPC 1973 (see now Art. 153(2) EPC). See also J 3/81, OJ 1982, 100; J 8/01, OJ 2003, 3.

In J 19/16 the Legal Board came to the conclusion that the loss of rights, i.e. the deemed withdrawal of the application, which occurred in the international phase could no longer be remedied in the national phase. Parallel competences of the receiving Office and the designated Office in respect of the same application were not excluded. The Legal Board held that the time limit, if any, for making a request to be excused under Art. 24(2) PCT was subject to national law only. The two-month time limit pursuant to Art. 25 PCT was therefore not applicable under Art. 24(2) PCT.

The appeal in J 3/00 concerned the question whether the Receiving Section should have rectified, under R. 82ter PCT, a purported error of the RO/EPO for the purposes of the regional phase before the EPO. The international application had been filed two days before expiry of the priority period with the description and claims in Swedish by mistake. The RO/EPO accorded as the international filing date the day of receipt of the corrected, i.e. English-language, documents (Art. 11(2)(b) PCT) and furthermore cancelled the priority claim. The applicant argued that the RO/EPO should have warned it of the deficiency. The Legal Board examined whether the filing date of the international application was incorrect due to an error made by the RO/EPO which was such that, had it been made by the EPO (as designated Office) itself, it would have to be rectified under the EPC (R. 82ter PCT). Thus, according to the constant jurisprudence of the boards of appeal concerning the protection of legitimate expectations, as confirmed in G 2/97 (OJ 1999, 123), the EPO was required to warn the applicant of any loss of rights if such a warning could be expected in all good faith. The Legal Board found the relevant conditions to be met: the deficiency was immediately identifiable on the face of the application in the course of the Art. 11(1) PCT check and the applicant was in a position to correct it at very short notice. For a further case relating to R. 82ter PCT, see J 10/04.

In case T 506/08 the EPO, acting as ISA, had issued a declaration of non-establishment of the ISR under Art. 17(2)(a) PCT. The examining division did not carry out a further search on the amended application, which it subsequently refused for lack of inventive step. At the appeal stage the applicant filed a request for a (partial) refund of the international search fee. However, the board declined jurisdiction to deal with the request. The guarantee of due process of law (cf. G 3/08, OJ 2011, 10), as invoked by the appellant, did not mean that each and every claim against the EPO was a matter for the boards (e.g. J 14/87, OJ 1988, 295; with reference to Art. 9 EPC 1973). Neither the PCT nor the Agreement between the European Patent Organisation and WIPO of 31 October 2001 provided for a refund in such a case.

The Legal Board held in J 13/16 that if, in the international phase, a receiving Office had restored a right of priority under the "unintentional" criterion of R. 26bis.3(a)(ii) PCT, the restoration was not effective in proceedings before the EPO acting as designated Office, since the EPO applies the "due care" criterion (R. 49ter.1(b) PCT). In such cases, within the period specified in R. 49ter.2(b)(i) PCT, the applicant must file a (new) request for restoration of a right of priority under R. 49ter.2 PCT with the EPO acting as designated Office. For the purposes of R. 49ter.2 PCT, the request filed with the RO under R. 26bis.3(b) PCT could not be taken into account in the proceedings before the EPO acting as designated Office. See also J 10/17.

4. Language of the proceedings

In decision G 4/08 (OJ 2010, 572), the Enlarged Board of Appeal ruled on the first referred question that if an international application has been filed and published under the PCT in one official language of the EPO, it is not possible, on entry into the European phase, to file a translation of the application into one of the other two EPO official languages, which would then become the language of the proceedings. Neither the EPC 1973 nor the EPC 2000 can be interpreted as allowing that. Nor is there any conflict between EPC and PCT provisions. On the second question, the Enlarged Board decided that EPO departments cannot use, in written proceedings on a European patent application or an international application in the regional phase, an EPO official language other than the language of proceedings used for the application under Art. 14(3) EPC.

VII. INSTITUTIONAL MATTERS

1.	Legal status of the EPO boards of appeal	1397
1.1.	The judiciary of the European Patent Organisation	1397
1.2.	Boards of appeal as judicial authorities	1398
1.2.1.	Courts of law under the EPC	1398
1.2.2.	Tribunals under Article 6 of the European Convention on Human Rights	1399
1.2.3.	Judicial or quasi-judicial authorities under the TRIPS Agreement	1399
1.2.4.	Courts according to national case law	1401
1.3.	Not a court or tribunal of an EU Member State	1401
1.4.	Power to amend the RPBA under Article 23(4) EPC	1402
1.5.	Nature of the case law of the boards of appeal – no binding precedents	1403
1.6.	Nature of national case law – not binding on the boards of appeal	1403
2.	Extension agreements and ordinances	1404
2.1.	Legal nature	1404
2.2.	No jurisdiction of the boards of appeal	1404
2.3.	Non-applicability of Article 105(1)(a) EPC	1405
3.	Administrative agreements under Article 10(2)(a) EPC	1405

1. Legal status of the EPO boards of appeal

1.1. The judiciary of the European Patent Organisation

In **G 3/08** (OJ 2011, 10) the Enlarged Board held that the European Patent Organisation is an international, intergovernmental organisation, based on the separation of powers principle, which the sovereign contracting states have entrusted with the exercise of some of their national powers in the field of patents. The EPC assigns executive power to the Office to grant patents and to its President to manage the Office in organisational respects (Art. 4(3) and 10 EPC), while to the Administrative Council it assigns limited legislative powers restricted to lower-ranking rules (Art. 33 EPC), along with financial and supervisory powers. The boards of appeal, which in their decisions are bound only by the EPC (Art. 23(3) EPC), are assigned the role of an independent judiciary in this patent system (Art. 21 to 23 EPC; see also **G 6/95**, OJ 1996, 649, points 2 ff. of the Reasons), even if – at the time **G 3/08** was rendered – they were not an independent organ of the Organisation (Art. 4(2) EPC) but structurally integrated departments of the Office (Art. 15 EPC; see also **R 19/12** of 25 April 2014 and **R 2/14** of 17 February 2015). Like the judiciary of any democratic entity based on the separation of powers principle, the boards of appeal guarantee the due process of law within the Organisation. They are also assigned interpretative supremacy with regard to the EPC in terms of its scope of application (see Art. 23(3) EPC). Under Art. 21(1) EPC they are responsible for reviewing decisions taken by the Office in grant and opposition proceedings. Their interpretation of the EPC is the basis for the practice established by the Office for the examination of patent applications and oppositions to granted patents.

Since then, at the 148th meeting of the Administrative Council of the European Patent Organisation (Munich, 29 and 30 June 2016), the Council approved a comprehensive reform package concerning the Boards of Appeal. The aims of the reform were to strengthen the Boards' organisational and managerial autonomy and increase their efficiency. The reform took effect within the existing framework of the European Patent Convention, without requiring its revision. It included, with effect from 1 July 2016, a new institutional framework. The Boards of Appeal and the Enlarged Board of Appeal, including their registries and support services, are now organised as a separate unit directed by the President of the Boards of Appeal.

Concerning the organisation of the Boards of Appeal and the Enlarged Board of Appeal, R. 12 EPC has been replaced by R. 12a to 12d EPC and R. 13 EPC has been amended.

At the 150th meeting of the Administrative Council of the European Patent Organisation (Munich, 14 and 15 December 2016), the first President of the Boards of Appeal was appointed. Delegation of functions and powers from the President of the European Patent Office to the President of the Boards of Appeal can be found in part XV. "Structural reform of the boards of appeal" of supplementary publication 1 of the Official Journal (published each year) "Information from the Boards of Appeal Presidium, business distribution and texts relating to the proceedings".

The main documents concerning the structural reform of the Boards of Appeal are: CA/16/15, 06.03.2015 (Proposal for a structural reform of the EPO Boards of Appeal); CA/43/16 Rev. 1, 30.06.2016 (Reform of the Boards of Appeal); CA/D 6/16, 30.06.2016, OJ 2016, A100 (Decision of the Administrative Council amending the Implementing Regulations to the European Patent Convention); CA/D 7/16, 30.06.2016, OJ 2016, A101 (Decision of the Administrative Council setting up a Boards of Appeal Committee – as a subsidiary body of the Administrative Council – and adopting its Regulations).

1.2. Boards of appeal as judicial authorities

1.2.1 Courts of law under the EPC

In G 1/86 the Enlarged Board held that those EPC provisions governing the independence of members of the boards of appeal (Art. 23 EPC), their competence and method of work and the nature of the decisions they take, indicate that the boards act as courts with the task of ensuring that the law is respected when the EPC is applied. Moreover, there is no appeal against decisions of the boards. In the member states of the European Patent Organisation decisions by departments of last instance, i.e. those terminating proceedings concerned with checking the legality of administrative actions and the protection of the rights of the individual, can only be taken by courts of law. Since that decision, however, the situation has changed in that Art. 112a EPC, introduced as part of the revised EPC 2000, now provides for the possibility of reviewing final decisions of the boards in exceptional cases (see chapter V.B.3.).

In T 1400/11 the board stated that according to the Enlarged Board in G 7/91 and G 8/91 (OJ 1993, 356, 346, point 7 of the Reasons), G 9/91 and G 10/91 (OJ 1993, 408, 420,

point 18 of the Reasons) and G 1/99 (OJ 2001, 381, point 6.6 of the Reasons), the appeal procedure is to be considered as a judicial procedure proper to an administrative court. See also chapter V.A.1. "Legal character of appeal procedure". In G 2301/15 the Enlarged Board stated that the board members' function as judges was generally recognised. In G 2301/16, concerning the same case, the Enlarged Board saw the Office President's letter of 10 June 2016 as a violation of Art. 23(3) EPC (judicial independence). It considered that the pressure exercised by the Office President in this case was incompatible with the judicial independence of the Enlarged Board guaranteed by the EPC. The Enlarged Board's judicial independence in deciding on this case was fundamentally denied.

1.2.2 Tribunals under Article 6 of the European Convention on Human Rights

According to the first sentence of Art. 6(1) of the European Convention on Human Rights (ECHR), "[i]n the determination of his civil rights and obligations ... everyone is entitled to a fair and public hearing within a reasonable time by an independent and impartial tribunal established by law."

In R 8/13 of 20 March 2015 the Enlarged Board of Appeal stated that it was established case law of the Enlarged Board (R 2/14 of 17 February 2015; and of the boards of appeal) that the EPC, which had been signed by contracting parties to the ECHR, must be applied in a way which supports the fundamental principles of Art. 6(1) ECHR (G 1/05, OJ 2007, 362, point 22 of the Reasons; G 2/08 of 15 June 2009, point 3.3 of the Reasons). It further stated that the Enlarged Board fell within the definition laid down by the European Court of Human Rights (hereinafter "ECtHR") in *Campbell and Fell v. the United Kingdom* (28 June 1984, No 7819/77, paragraph 76): "the word 'Tribunal' in Article 6 paragraph 1 is not necessarily to be understood as signifying a court of law of the classic kind, integrated within the standard judicial machinery of the country". A tribunal may also be set up to deal with specific subject-matter which can be appropriately administered outside the ordinary court system. What is important, to ensure compliance with Art. 6(1) ECHR, are the guarantees, both substantive and procedural, which are in place (ECtHR, *Rolf Gustafson v. Sweden*, 1 July 1997, No. 23196/94, paragraph 45).

In R 1/16, the Enlarged Board ruled that a complaint based on a breach of the right to a fair trial under Art. 6(1) ECHR, of the protection of legitimate expectations and of the judicial duty to direct the parties was inadmissible as such because those were not grounds included in the exhaustive list under Art. 112a(2) EPC in conjunction with R 104 EPC.

1.2.3 Judicial or quasi-judicial authorities under the TRIPS Agreement

As to the applicability of the TRIPS Agreement in proceedings before the EPO, see chapter III.H.2. "Interpretation of the EPC affected by TRIPS Agreement".

Art. 62(5) TRIPS provides that final administrative decisions in procedures concerning the acquisition or maintenance of intellectual property rights and, where a member's law provides for such procedures, administrative revocation and inter partes procedures such

as opposition, revocation and cancellation, must be subject to review by a **judicial or quasi-judicial** authority. Art. 32 TRIPS requires member countries to provide an opportunity for **judicial** review of any decision to revoke or forfeit a patent.

In G 1/97 (OJ 2000, 322) the Enlarged Board of Appeal noted that boards of appeal may be seen as having the status of judicial authorities, since they embody all the features of such an authority: in their decisions, the members of the boards are not bound by any instructions and are obliged to comply only with the provisions of the EPC (Art. 23(3) EPC 1973; see also R.19/12 of 25 April 2014, where the Enlarged Board stressed that the Service Regulations for EPO employees provide in Art. 1(4) that they only apply to board members in so far as they are not prejudicial to their independence); they are appointed for a fixed term, during which they may not be removed from office except if there are serious grounds for so doing (Art. 23(1) EPC 1973); the EPC contains provisions for safeguarding the impartiality of board members (Art. 24 EPC 1973); the boards always include at least one legally qualified member (Art. 21 EPC 1973); they have their own rules of procedure; and finally, they issue written decisions containing a statement of reasons (R. 66(2) EPC 1973 – R. 102 EPC). Regarding the judicial nature of the boards of appeal, reference was also made to the House of Lords' decision of 26 October 1995 in *Merrel Dow v. Norton*, [1996] R.P.C. 76, and to the decision of the United Kingdom High Court of Justice dated 20 December 1996, in the case of *Lenzing AG's European Patent (UK)*, [1997] R.P.C., 245). Even if the status of a judicial authority were to be contested, it would be clear that, in the light of the foregoing, the boards of appeal constitute at least a quasi-judicial authority as referred to in Art. 62(5) TRIPS. The Enlarged Board also examined the relationship between Art. 62(5) TRIPS and Art. 32 TRIPS. Art. 32 appears in Part II of TRIPS, which does not contain rules of procedure concerning the acquisition of patent rights but provisions concerning the exercise of rights conferred by a patent, together with certain rules on substantive patent law. By contrast, Part IV of TRIPS, containing Art. 62 as its sole provision, deals with the acquisition and maintenance of intellectual property rights, which include patent rights. Applying the principle of *lex specialis derogat legi generali*, the Enlarged Board held that this aspect was much more specific than the fact that Art. 32 TRIPS only concerns patents whereas Art. 62 TRIPS also deals with other types of intellectual property rights. The Enlarged Board concluded that Art. 62(5) TRIPS takes precedence over Art. 32 TRIPS in matters relating to the grant of European patents (see also J.3/98).

In T 557/94 the appellant (patentee) referred to Art. 32 TRIPS, which guarantees an opportunity for judicial review of any decision to revoke a patent, and requested that the case be remitted to the department of first instance if the patent were revoked on the basis of a prior art document introduced during appeal proceedings. The board investigated whether the basic principle of judicial review under Art. 32 TRIPS was satisfied by the EPC 1973. It found that, under Art. 111(1), second sentence, EPC 1973, the board of appeal was empowered either to decide on the merits of the case **or** to remit the case; it was not restricted to the latter alternative if the opposition division maintained the patent and the board was considering revoking the patent for the first time (see chapter V.A.7, "Remittal to the department of first instance"). Reading Art. 32 TRIPS in the context of the usual structure of judicial review in the EPC contracting states and the EPC 1973 itself, this provision guaranteed an instance for judicial review in revocation proceedings, but did

not oblige the reviewing instance to remit the case to the department of first instance for continuation of proceedings when revocation was being considered by the judicial instance for the first time.

1.2.4 Courts according to national case law

In R 1/10 the Enlarged Board of Appeal confirmed that the EPO boards of appeal were set up as required by the rule of law. Several high-ranking national courts of EPC contracting states (in particular, the UK's Patents Court and Germany's Federal Court of Justice (Bundesgerichtshof) and Federal Constitutional Court (Bundesverfassungsgericht)) had declared the boards of appeal to be independent courts based on the rule of law (see also R 19/12 of 25 April 2014) and recognised their decisions as those of such a court which they took into consideration when developing their case law.

In J 3/95 (OJ 1997, 493) the Legal Board of Appeal stated that the status of the boards of appeal had been addressed by the High Court of Justice in the United Kingdom (Patents Court) in *R. v The Comptroller of Patents, Designs and Trade Marks ex parte Lenzing AG*. The High Court held that "the final arbiter of revocation under the new legal system [of the EPC] is to be the Board of Appeal of the EPO", and that "the UK and the other Member States have agreed at an international level via the EPC that the BoA is the final arbiter of oppositions. It is the agreed EPO equivalent of the House of Lords, Cour de Cassation or Bundesgerichtshof... Those who apply for patents in the EPO must accept the results of its findings and its methods of procedure". This decision also acknowledged that the boards of appeal constitute a specialised court exercising judicial authority within the meaning of Art. 32 TRIPS (see in this chapter VII.1.2.3).

1.3. Not a court or tribunal of an EU Member State

In T 276/99 the board noted that under the EC Treaty referrals to the Court of Justice of the European Communities (now Court of Justice of the European Union) were governed by Art. 234 ECT (now Art. 267 TFEU). The board pointed out that, prima facie, as the EPO boards of appeal were not a court or tribunal of an EU Member State, they did not have the status to refer a question to the Court of Justice of the European Communities.

The German Constitutional Court's decision of 4 April 2001 (2 BvR 2368/99, published in GRUR 2001, 728 - 730) referred to the delegation of powers to the EPO directly by the EPC contracting states who were also members of the EU, and not to any delegation from the EU itself. Since the European Patent Organisation was not part of the European Union institutions, and since the delegation of powers by the non-EU contracting states was to the EPO but not to the European Union or its institutions, there was no obvious basis for referring a question to the Court of Justice of the European Communities from an EPO board of appeal.

In G 2/06 (OJ 2009, 306) the appellant had requested a referral of questions to the Court of Justice of the European Union (CJEU) on the argument that, since R. 28(c) EPC repeats the wording of Art. 6(2)(c) of Directive 98/44/EC, the Enlarged Board of Appeal in interpreting R. 28(c) EPC was interpreting European Union law. The request was rejected

as inadmissible. The Enlarged Board made it clear that neither the EPC nor the Implementing Regulations thereto contain any provision for a referral by any instance of the EPO of questions of law to the CJEU. The boards of appeal are a creation of the EPC, and their powers are limited to those given in the EPC. Art. 234 of the EC Treaty gives the CJEU jurisdiction to give preliminary rulings concerning the interpretation of acts of the institutions of the European Community, such as the Directive, but does not appear to provide any basis for a board of appeal of the EPO to request the CJEU to give a ruling on any questions before a board of appeal. Art. 234 ECT requires the question to be raised in a case pending before a court or tribunal of an EU member state. Whereas EPO boards of appeal have been recognised as courts or tribunals, they are not courts or tribunals of an EU member state but of an international organization whose contracting states are not all members of the EU. The seat of the boards of appeal in an EU member state, Germany, could not alter their status as part of an international organisation with jurisdiction conferred under the EPC. The boards of appeal are not and have never been treated as courts or tribunals of their host country.

In R. 1/10, the Enlarged Board held that not even a CJEU finding that the boards of appeal lacked the independence required of a judicial body adhering to the rule of law (see opinion of the Advocate-General of 2 July 2010 and CJEU opinion of 8 March 2011 in Case 1/09) would be binding on the boards. The European Patent Organisation was an autonomous subject of international law and inherently independent of the EU.

1.4. Power to amend the RPBA under Article 23(4) EPC.

The version of the Rules of Procedure of the Boards of Appeal (RPBA) most recently entering into force at the time of writing is referred to as the RPBA 2007. A new version was drafted in 2018 and will be adopted after completion of a user consultation exercise. Its adoption procedure will differ from that for the earlier versions, a new one having been introduced on amendment of the Implementing Regulations to the EPC, in particular the deletion of R. 12 EPC and the insertion of R. 12a, R. 12b and R. 12c EPC, by decision CA/D 6/16 (OJ 2016, A100), which entered into force on 1 July 2016. Under this new procedure, it is now the Boards of Appeal Committee, a subsidiary body of the Administrative Council, that adopts the RPBA and the Rules of Procedure of the Enlarged Board of Appeal (RPEBA) (new R. 12c(2) EPC), while the Presidium advises the President of the Boards of Appeal on proposals for their amendment (new R. 12b(3)(c) EPC). This section and the case law cited here are concerned with the RPBA 2007 or earlier versions.

The RPBA and the RPEBA are adopted in accordance with the Implementing Regulations and subject to the approval of the Administrative Council (Art. 23(4) EPC; see OJ 2007, 536 and OJ 2007, 303). Until RPBA 2007, according to R. 12(3) EPC the Presidium of the Boards of Appeal adopted the RPBA. And pursuant to R. 13(2) EPC the members of the Enlarged Board of Appeal adopted the RPEBA. In T. 1400/11 the board stated that proceedings before the boards of appeal are governed by the RPBA in order to guarantee their judicial function.

In 1994 the Administrative Council adopted R. 71a EPC 1973 to the effect that a communication must be issued by the EPO at the same time as a summons to oral

proceedings is issued (OJ 1995, 409). In contrast to this requirement, Art. 11(2) RPBA 1980 (Art. 15(1) RPBA 2007) leaves it to the discretion of the boards of appeal whether or not to send a communication with such a summons. In G 6/95 (OJ 1996, 649) the Enlarged Board held that R. 71a(1) EPC 1973 did not apply to the boards of appeal. The Enlarged Board pointed out that Art. 23(4) EPC 1973 states that the RPBA "shall be adopted in accordance with the provisions of the Implementing Regulations". In the view of the Enlarged Board this was clearly directed to the mechanism set out in R. 11 EPC 1973, which states that the authority referred to in R. 10(2) EPC 1973 (the "Presidium") "shall adopt" the RPBA. The Enlarged Board concluded that the power under Art. 23(4) EPC 1973 to amend the RPBA belonged to the Presidium of the boards of appeal, subject to the approval of the Administrative Council. The Enlarged Board further stated that, according to Art. 33(1)(b) EPC 1973, the Administrative Council was competent to amend the Implementing Regulations. However, the Administrative Council was not entitled to amend the Implementing Regulations in such a way that the effect of an amended rule would be in conflict with the EPC 1973 itself (Art. 164(2) EPC 1973). If R. 71a(1) EPC 1973 were to be interpreted as applying to all departments of the EPO, including the boards of appeal, its effect would be directly contradictory to and in conflict with the effect of Art. 11(2) RPBA 1980, which was adopted pursuant to Art. 23(4) EPC 1973 as the emanation of the independence of the boards of appeal. The Administrative Council must be presumed to know the limits of its own power. It was therefore reasonable to assume that the Administrative Council did not intend to amend R. 71 EPC 1973 so as to provide a conflict with a rule of procedure of the boards of appeal which it had itself previously approved.

The RPBA can help in clarifying and interpreting the EPC but they cannot confer on the boards any powers that the EPC does not give them (T. 1914/12, citing Art. 23 RPBA in this context).

1.5. Nature of the case law of the boards of appeal – no binding precedents

In R. 14/11 the Enlarged Board stated that, like any other decisions of boards of appeal, its decisions in petition for review cases do not have the legal nature of creating a precedent in the sense that it would have to show in which respect a later decision differs from an earlier one in order for that later decision to be legally justified. Referring to R. 11/08 the Enlarged Board stated that such differences are normal and that the usefulness of case law is not confined to similar or identical facts but lies in the principles or guidance (such as interpretation of legislative provisions) which, whether the facts are similar or not, can be extracted from earlier cases.

1.6. Nature of national case law – not binding on the boards of appeal

Proceedings before the boards are independent and decisions of national courts are not binding in law (see R. 21/09, which is very detailed on this point, and, as examples of decisions dealing with the relationship between national case law and board decisions, T. 1904/12, T. 885/02, T. 202/13, T. 231/13, T. 488/16).

2. Extension agreements and ordinances

2.1. Legal nature

An extension agreement is an international treaty between the European Patent Organisation and an extension state which the President of the EPO is authorised by the Administrative Council to conclude with the Council's approval (Art. 33(4) EPC). Such an agreement serves the interests not only of applicants, by providing a simple route to patent protection in the extension states, but also those of the extension state, by enabling it to offer patent protection for its territory by extending the effects of European and Euro-PCT applications and patents (J 9/04; see also J 14/00, OJ 2002, 432).

In T 7/07 the board stated that the extension system largely corresponds to the EPC system operating in the EPC contracting states, except that it is not based on direct application of the EPC but on national law modelled on the EPC. The national law of the extension state governs the proceedings and the legal effects of the extension.

In J 9/04 the board noted that, as a bilateral ordinance, the Extension Ordinances essentially deal – exhaustively and strictly separately from the Convention – with matters pertaining to the integration of extended European applications and protective rights into the respective national law and their relationship to national applications and rights. This includes, in particular, the conferral of the same effects on extended applications and patents as on national ones, the obligation to provide the national patent offices with a translation of the claims into the respective language, the national authentic text of extended applications and patents, their prior-art effect with respect to national applications and patents, and, finally, simultaneous protection. According to the board, none of these provisions give rise to any obligations on the part of the EPO. The EPO merely undertakes vis-à-vis the national patent authorities to assist with the administrative tasks associated with the extension of European patents, namely receiving requests for extension, levying extension fees and, after deducting an amount to cover its expenses, forwarding the remaining amount to the national patent offices. There is no right of recourse to the boards of appeal in respect of extensions of patent applications and patents to the extension states. Instead, the respective national jurisdiction is responsible. For example, Art. 6(2) of the Slovenian Law provides for appeals against decisions of the Slovenian Patent Office (see also J 2/05).

2.2. No jurisdiction of the boards of appeal

In J 22/10 the board stated that decisions taken by the EPO when carrying out its obligations under the co-operation agreements with certain states extending the protection conferred by European patents (extension agreements) were based not on the EPC itself but solely on the co-operation agreements between the European Patent Organisation and the extension states; it therefore rejected the respective appeals as inadmissible (see also J 14/00, OJ 2002, 432; J 19/00; J 9/04 of 1 March 2005; J 2/05; J 4/05). Any decisions based on such international treaties did not fall within the scope of the EPC and, as a result of this, were not subject to the jurisdiction of the boards of appeal. The extension agreements made it absolutely clear that references to provisions of the EPC were

exhaustive and, thus, that there could be no corresponding application of other provisions, including those of Art. 106 EPC concerning the appeals procedure. In other words, the Legal Board of Appeal was not competent to decide a case that was governed solely by a "foreign" legal system.

In J. 14/00 (OJ 2002, 432) the Legal Board of Appeal decided on the admissibility of an appeal directed against a letter issued by an EPO formalities officer applying the Extension Ordinance (OJ 1994, 75) associated with the Extension Agreement with the Republic of Slovenia. It held that, according to the exhaustive provision in Art. 106(1) EPC 1973, only those decisions of the EPO could be contested which were taken, within the framework of their duties under the EPC 1973, by the departments listed therein. This was not the case for decisions taken by the EPO when carrying out its obligations under the Extension Agreement. The Legal Board found that there was nothing in the structure or legal nature of the Extension Ordinance to support the appealability of the letter issued by an EPO formalities officer. The board held that the extension procedure generated legal effects exclusively on the basis of Slovenian national law. The Extension Ordinance thus made it absolutely clear that its references to provisions of the EPC 1973 were exhaustive and that there could be no application of other provisions, including those of Art. 106 EPC 1973 on the appeals procedure.

2.3. Non-applicability of Article 105(1)(a) EPC

In T. 1196/08 an assumed infringer intervened under Art. 105(1)(a) EPC and claimed that the Romanian patent resulting from the extension of a European patent had to be seen as a European patent granted under the EPC. The board did not agree. The term "the same patent" in Art. 105(1)(a) EPC meant a European patent within the meaning of Art. 2(1) EPC 1973. While there were certain parallels between the extension system and the European patent system, fundamental differences still existed. The extension system, including all the conditions and legal effects of extension, was based exclusively on the application of national law unless express reference was made to the EPC. By contrast, the European patent system and the effects of a European patent in the contracting states relied solely on the direct application of the EPC, even if certain provisions of the EPC referred to national law. According to the board, the extension of a European patent under the national law of the extension state meant that the European patent had the effect of a national patent, while designation under Art. 79 EPC 1973 meant that the patent was granted by the EPO on the basis of the EPC and with effect for the designated contracting state. The board concluded that a patent extended to the territory of an extension state was not a European patent within the meaning of Art. 2(1) EPC 1973. Furthermore, the Romanian extension ordinance did not refer to Art. 105 EPC. The references in the Romanian extension ordinance to the provisions of the EPC being exhaustive, there could be no question of applying Art. 105 EPC by analogy.

3. Administrative agreements under Article 10(2)(a) EPC

According to Art. 10(1) EPC the European Patent Office is managed by the President, who is responsible for its activities to the Administrative Council. To this end, Art. 10(2)(a) EPC

empowers and requires the President to "take all necessary steps to ensure the functioning of the European Patent Office".

On 29 June 1981 the Presidents of the German Patent Office (GPO) and the EPO entered into an Administrative Agreement concerning the filing of documents and payments (OJ 1981, 381). In G 5/88, G 7/88 and G 8/88 (OJ 1991, 137) the Enlarged Board of Appeal considered the validity of this Administrative Agreement. The primary object and purpose of the agreement was to provide a mechanism whereby documents which are sent to the EPO, but delivered by error to the GPO (and vice versa), should be marked with the date of receipt at the wrong office and treated accordingly by the office for which they are intended.

The Enlarged Board noted that the extent of the power given to the President under Art. 10(2)(a) EPC to "take all necessary steps to ensure the functioning of the European Patent Office" was not capable of exact definition. In each case it had to be considered how far a particular step was necessary for ensuring the functioning of the EPO. So far as the agreement was concerned with the problem of incorrect delivery of documents in Munich (at the EPO and the GPO premises there), the conclusion of the agreement was a necessary step in order to avoid unjustified loss of rights to parties, and thus to ensure the proper functioning of the EPO. However, as far as the EPO sub-office in Berlin was concerned, there had been no basis for such an agreement until 1 July 1989. Before that date the sub-office in Berlin had not been a filing office, nor had a letterbox been installed. As far as documents and payments which reached the EPO via the GPO's office in Berlin were concerned, the administrative agreement was therefore invalid. The Enlarged Board applied, however, the principle of good faith and the protection of the legitimate expectations of users of the EPO in favour of the opponent, who had filed a notice of opposition against a European patent via the GPO's Berlin office, relying on the agreement published in the Official Journal.

In T 485/89 (OJ 1993, 214) the board held that a notice of opposition filed by fax at the GPO in Munich on the last day of the opposition period and forwarded to the EPO the next day was admissible; the opposition fee had already been paid some days earlier. Oppositions filed within the prescribed time by fax at the GPO in Munich while intended for the EPO were covered by the Administrative Agreement of 29 June 1981 and should be treated by the EPO as if it had received them directly, irrespective of whether or not they had been wrongly delivered.

Following talks between the Presidents of the German Patent and Trademark Office (GPTO, formerly the GPO) and the EPO, both offices agreed, in the interests of legal certainty, that the Administrative Agreement dated 29 June 1981 concerning procedure on receipt of documents and payments would, with effect from 1 September 2005, no longer be applied (OJ 2005, 444).

TABLE OF CASES

In the table of cases, the bibliographic data of all cited decisions are listed according to the reference number, giving details of the relevant board and the date of the decision. Board of appeal decisions published in the OJ include a reference to the year and page number of publication.

ANNEXES

1. Rules of Procedure of the Enlarged Board of Appeal

Decision of the Administrative Council of 25 March 2015 approving amendments to the Rules of Procedure of the Enlarged Board of Appeal of the European Patent Office (CA/D 3/15, OJ EPO 2015, A35).

THE ADMINISTRATIVE COUNCIL OF THE EUROPEAN PATENT ORGANISATION,

Having regard to the European Patent Convention, and in particular Article 23, paragraph 4, thereof,

Having regard to the amendments to the Rules of Procedure of the Enlarged Board of Appeal, adopted on 19 March 2015 under Rule 13, paragraph 2, of the Implementing Regulations to the European Patent Convention,

HAS DECIDED AS FOLLOWS:

The amendments to the Rules of Procedure of the Enlarged Board of Appeal, as shown in the Annex to this decision, are hereby approved.

This decision shall enter into force on 25 March 2015.

Done at Munich, 25 March 2015

For the Administrative Council
The Chairman

Jesper KONGSTAD

ANNEX

DECISION

Amendments to the Rules of Procedure of the Enlarged Board of Appeal, OJ EPO 1983, 3, as amended in OJ EPO 1989, 362, OJ EPO 1994, 443, OJ EPO 2003, 58, and OJ EPO 2007, 303

In accordance with Rule 13 of the Implementing Regulations to the Convention on the Grant of European Patents, the Enlarged Board of Appeal amends its Rules of Procedure. These amended Rules of Procedure read as follows:

Article 1

Field of application

These Rules of Procedure shall apply in proceedings before the Enlarged Board of Appeal under Article 23, paragraph 1, first sentence, EPC, Article 112 EPC, and Article 112a EPC.

Article 2

Business distribution and composition

(1) Before the beginning of each working year the members of the Enlarged Board of appeal appointed under Article 11, paragraph 3, EPC shall draw up a business distribution scheme. This scheme shall designate the regular members and their alternates in proceedings under Article 23, paragraph 1, first sentence, EPC, Article 112 EPC and Article 112a EPC initiated during the year. The scheme may be amended during the working year.

(2) The Chairman of the Enlarged Board of Appeal shall determine the composition of the Board for each particular case in accordance with the business distribution scheme. In proceedings under Article 23, paragraph 1, first sentence, EPC, in accordance with paragraph 5 the composition of the Board shall be determined by the alternate of the Chairman of the Enlarged Board of Appeal.

(3) For the examination of a petition under Article 112a EPC conducted in the composition under Rule 109, paragraph 2(b), EPC, two legally qualified members shall supplement the composition specified in Rule 109, paragraph 2(a), EPC.

(4) In proceedings before the Enlarged Board of Appeal under Article 112, paragraph 1(a), EPC at least four of the members shall not have taken part in the proceedings before the Board of Appeal referring the point of law.

(5) In proceedings under Article 23, paragraph 1, first sentence, EPC the Enlarged Board of Appeal shall be composed according to the provisions of Article 22, paragraph 2, first sentence, EPC, the Chairman being replaced by his alternate, and two of the legally qualified members being external members of the Enlarged Board of Appeal.

(6) Article 24 EPC shall apply to proceedings under Article 112a EPC. The Chairman, appointed under Article 11, paragraph 3, EPC, of the Board against whose decision the petition for review has been filed may not take part in the review proceedings.

(7) The parties shall be informed of the Board's composition as soon as it has been determined or changed.

Article 3

Replacement of members

(1) Members shall be replaced by alternates if they are prevented from participating, particularly as a result of sickness, excessive workload, and commitments which cannot be avoided.

(2) Any member who wishes to be replaced by an alternate shall inform the Chairman of the Board of his unavailability without delay.

(3) The Chairman of the Enlarged Board of Appeal may, in accordance with the business distribution scheme, designate another regular legally qualified member of the Board to act as Chairman in his stead.

Article 4

Exclusion and objection

(1) If the Board has knowledge of a possible reason for exclusion or objection which does not originate from a member himself or from any party to the proceedings, then the procedure of Article 24, paragraph 4, EPC shall be applied.

(2) The member concerned shall be invited to present his comments as to whether there is a reason for exclusion.

(3) Before a decision is taken on the exclusion of the member, there shall be no further proceedings in the case.

Article 5

Rapporteurs

(1) The Chairman of the Board shall for each case designate a member of the Board, or himself, as rapporteur. The Chairman may appoint an additional rapporteur. The rapporteur of the Board as composed under Rule 109, paragraph 2(a), EPC shall generally go on to be the rapporteur for proceedings conducted in the composition under Rule 109, paragraph 2(b), EPC.

(2) If an additional rapporteur is appointed, the steps referred to in paragraphs 3 to 5 shall be taken by the rapporteur and additional rapporteur jointly unless the Chairman directs otherwise.

(3) The rapporteur shall carry out a preliminary study of the case and may prepare communications to the eligible parties subject to the direction of the Chairman of the Board. Communications shall be signed by the rapporteur on behalf of the Board.

(4) The rapporteur shall make the preparations for meetings of the Board and for oral proceedings.

(5) The rapporteur shall draft decisions or opinions.

(6) If a rapporteur or additional rapporteur considers that his knowledge of the language of the proceedings is insufficient for drafting communications or decisions or opinions, he may draft these in one of the other official languages. His drafts shall be translated by the European Patent Office into the language of the proceedings and the translations shall be checked by the rapporteur or by another member of the Board.

Article 6

Registry

(1) A Registry shall be established for the Enlarged Board of Appeal. The Senior Registrar of the Boards of Appeal or the registrars assigned to him for this purpose shall be responsible for the discharge of its functions.

(2) The members of the Enlarged Board of Appeal appointed under Article 11, paragraph 3, EPC may entrust to the Registry tasks which involve no technical or legal difficulties, in particular in relation to arranging for inspection of files, issuing summonses to oral proceedings and notifications and granting requests for further processing of applications.

(3) Minutes of oral proceedings and of the taking of evidence shall be drawn up by the Senior Registrar, a registrar assigned to him for this purpose or such other employee of the Office as the Chairman may designate.

Article 7

Change in the composition of the Board

(1) If the composition of the Board is changed after oral proceedings, the parties eligible to take part in the proceedings shall be informed that, at the request of any party, fresh oral proceedings shall be held before the Board in its new composition. Fresh oral proceedings shall also be held if so requested by the new member and if the other members of the Board have given their agreement.

(2) Paragraph 1 shall not apply to a change in composition under Article 2, paragraph 3. In this event, a request for oral proceedings shall continue to apply even where oral proceedings have already taken place.

(3) Each new member shall be bound to the same extent as the other members by an interim decision which has already been taken.

(4) If, when the Board has already reached a final decision, a member is unable to act, he shall not be replaced by an alternate. If the Chairman is unable to act, the legally qualified member of the Board having the longest service on the Board or, in the case where members have the same length of service, the eldest member shall sign the decision on behalf of the Chairman.

Article 8

Consolidation of proceedings

If two or more points of law with the same or similar subject-matter have been submitted, or two or more petitions to review the same appeal decision, the Board may consider them in consolidated proceedings.

Article 9

EPO President's right to comment

In proceedings under Article 112 EPC the Board may, on its own initiative or at the written, reasoned request of the President of the European Patent Office, invite him to comment in writing or orally on questions of general interest which arise in the course of proceedings pending before it. The parties shall be entitled to submit their observations on the President's comments.

Article 10

Statements by third parties

(1) In the course of proceedings under Article 112 EPC, any written statement concerning the points of law raised in such proceedings which is sent to the Board by a third party may be dealt with as the Board thinks fit.

(2) The Board may announce further provisions concerning such statements in the Official Journal of the European Patent Office if it seems appropriate.

Article 11

Special communications to parties in proceedings under Article 112a EPC

Notwithstanding notifications or communications required under other provisions,

(a) the other parties shall be informed of the receipt of a petition for review and shall receive a copy of the petition, reference being made to Rule 109, paragraph 3, EPC;

(b) the parties shall be informed that a clearly inadmissible or unallowable petition for review has been rejected in oral proceedings;

(c) the parties shall be informed that a petition for review has been forwarded to the Board as composed under Rule 109, paragraph 2(b), EPC.

Article 12

New submissions filed after expiry of the time limit in proceedings under Article 112a EPC

- (1) Notwithstanding Rule 109, paragraph 3, EPC the Board may consider new submissions made by the petitioner after expiry of the time limit for filing petitions for review, if this is justified for special reasons.
- (2) The same shall apply in proceedings conducted in the composition under Rule 109, paragraph 2(b), EPC to new submissions from the other parties filed subsequently to their reply.

Article 12a

Proceedings under Article 23, paragraph 1, first sentence, EPC

- (1) A request that the Enlarged Board of Appeal make a proposal for the removal from office of a member under Article 23, paragraph 1, first sentence, EPC may be made to the Enlarged Board either by the Administrative Council of the European Patent Organisation or by the Vice-President of the European Patent Office in charge of the Boards of Appeal.
- (2) In the case of such a request being made by the Administrative Council, the Administrative Council shall be represented in the proceedings. The Vice-President of the European Patent Office in charge of the Boards of Appeal shall also be entitled to be heard in such proceedings.
- (3) In the case of such a request being made by the Vice-President in charge of the Boards of Appeal, he shall be a party to the proceedings.
- (4) The member who is the subject of a request to make a proposal for their removal from office under Article 23, paragraph 1, first sentence, EPC shall be a party to the proceedings as respondent.
- (5) The request referred to in paragraph 1 shall set out all the facts, arguments and evidence relied on. All documents referred to shall be attached.
- (6) The proceedings shall be conducted in writing, where necessary or requested supplemented by oral proceedings according to Article 14, and may not be concluded without the respondent being informed of the facts, arguments and evidence underlying the request and having had the opportunity to be heard on them. The respondent may appoint a person to advise or represent him.
- (7) Article 117, paragraph 1, EPC shall be applicable.
- (8) The proceedings shall be conducted independently of any disciplinary or national proceedings.

(9) Unless and to the extent that the Enlarged Board decides otherwise, the proceedings shall not be public and shall be confidential.

(10) The Enlarged Board of Appeal may on request propose the reimbursement of some or all costs incurred in the proceedings by the respondent if the request to make a proposal for their removal from office has been rejected.

Article 13

Non-binding communications from the Board

If the Board deems it expedient to communicate with the eligible parties regarding a possible appreciation of substantive or legal matters, such communication shall be made in such a way as not to imply that the Board is in any way bound by it.

Article 14

Oral proceedings

(1) If oral proceedings are to take place, the Board shall endeavour to ensure that the eligible parties have provided all relevant information and documents before the hearing.

(2) The Board's communication under Article 13 may draw attention to matters which seem to be of special significance, or to the fact that questions appear no longer to be contentious, or may contain other observations that may help concentration on essentials during the oral proceedings.

(3) A change of date for oral proceedings may exceptionally be allowed in the Board's discretion following receipt of a written and reasoned request made as far in advance of the appointed date as possible.

(4) The Board shall not be obliged to delay any step in the proceedings, including its decision, by reason only of the absence at the oral proceedings of any party duly summoned who may then be treated as relying only on its written case.

(5) The Chairman presides over the oral proceedings and ensures their fair, orderly and efficient conduct.

(6) When a case is ready for decision during oral proceedings, the Chairman shall state the final requests of the eligible parties and declare the debate closed. No submissions may be made by the parties after the closure of the debate unless the Board decides to re-open the debate.

(7) The Board shall ensure that each case is ready for decision at the conclusion of the oral proceedings, unless there are special reasons to the contrary. Before the oral proceedings are closed, the Board's decision or opinion may be announced orally by the Chairman.

Article 15

Attendance of interpreters

If required, the Chairman of the Board shall make arrangements for interpreting during oral proceedings, the taking of evidence or the deliberations of the Board.

Article 16

Deliberation and voting

(1) Only members of the Board shall participate in deliberations; the Chairman may, however, authorise other officers to attend. Deliberations shall be secret.

(2) During the deliberations between members of the Board, the opinion of the rapporteur shall be heard first, followed by that of the additional rapporteur if one has been appointed and, if the rapporteur is not the Chairman, the Chairman's last.

(3) If voting is necessary, votes shall be taken in the same sequence; even if the Chairman is the rapporteur, he shall vote last. Abstentions shall not be permitted.

Article 17

Submission of case by the Board as composed under Rule 109, paragraph 2(a), EPC to the Board as composed under Rule 109, paragraph 2(b), EPC

If, in proceedings under Article 112a EPC, the Board as composed under Rule 109, paragraph 2(a), EPC fails after deliberation to reach the unanimous conclusion that the petition for review should be rejected as clearly inadmissible or unallowable, it shall submit the petition without delay and without comment as to its merit to the Board as composed under Rule 109, paragraph 2(b), EPC for decision.

Article 18

Reasons for the decision or opinion

(1) Subject to Rule 109, paragraph 2(a), EPC the decision or opinion of the Board shall be in accordance with the votes of the majority of its members.

(2) In proceedings under Article 23, paragraph 1, first sentence, EPC or Article 112 EPC, the reasons for such decision or opinion may also indicate the opinions held by a minority of the members if a majority of the members of the Board agrees. Neither the names of the members forming any such minority nor the size of such minority may be indicated.

(3) The final decision of the Enlarged Board of Appeal in proceedings under Article 23, paragraph 1, first sentence, EPC may be published, due regard being taken of the confidentiality of the proceedings.

Article 19

Binding nature of the Rules of Procedure

These Rules of Procedure shall be binding upon the Enlarged Board of Appeal, provided that they do not lead to a situation which would be incompatible with the spirit and purpose of the Convention.

Article 20

Entry into force

These Rules of Procedure shall enter into force on 1 April 2015.

Done at Munich, 19 March 2015

Wim VAN DER EIJK

2. Rules of Procedure of the Boards of Appeal (RPBA 2007)

Decision of the Administrative Council of 25 October 2007 approving amendments to the Rules of Procedure of the Boards of Appeal of the European Patent Office, OJ EPO 2007, 536

THE ADMINISTRATIVE COUNCIL OF THE EUROPEAN PATENT ORGANISATION,

Having regard to the European Patent Convention, and in particular Article 23, paragraph 4, thereof,

Having regard to the amendments to the Rules of Procedure of the Boards of Appeal, adopted on 12 September 2007 under Rule 10, paragraph 3, of the Implementing Regulations to the European Patent Convention,

Having regard to the opinion of the Committee on Patent Law,

HAS DECIDED AS FOLLOWS:

The amendments to the Rules of Procedure of the Boards of Appeal, as shown in the Annex to this decision, are hereby approved.

Done at Munich, 25 October 2007

For the Administrative Council
The Chairman

Roland GROSSENBACHER

ANNEX

DECISION

Amendments to the Rules of Procedure of the Boards of Appeal, OJ EPO 1983, 7 as amended in OJ EPO 1989, 361, OJ EPO 2000, 316, OJ EPO 2003, 61, OJ EPO 2003, 89 and OJ EPO 2004, 541

In accordance with Rule 10, paragraph 3, of the Implementing Regulations to the European Patent Convention, the Presidium amends the Rules of Procedure of the Boards of Appeal. These amended Rules of Procedure read as follows:

Article 1

Business distribution and composition

(1) The Presidium referred to in Rule 12, paragraph 4, EPC, shall before the beginning of each working year draw up a business distribution scheme for the distribution among the Boards of Appeal of all appeals that may be filed during the year, designating the members who may serve on each Board and their respective alternates. The scheme may be amended during the working year.

(2) The Chairman of each Board of Appeal shall determine the composition of the Board for each particular case in accordance with the business distribution scheme.

Article 2

Replacement of members

(1) Members shall be replaced by alternates if they are prevented from participating, particularly as a result of sickness, excessive workload, and commitments which cannot be avoided.

(2) Any member requesting to be replaced by an alternate shall inform the Chairman of the Board concerned of his unavailability without delay.

(3) The Chairman of the Board may designate another member of the Board to replace him or her as Chairman in a particular appeal in accordance with the business distribution scheme.

Article 3

Exclusion and objection

(1) If a Board has knowledge of a possible reason for exclusion or objection which does not originate from a member himself or from any party to the proceedings, then the procedure of Article 24, paragraph 4, EPC shall be applied.

(2) The member concerned shall be invited to present his comments as to whether there is a reason for exclusion.

(3) Before a decision is taken on the exclusion of the member, there shall be no further proceedings in the case.

Article 4

Procedural compliance

(1) The Chairman shall for each appeal designate a member of the Board or himself to consider the admissibility of the appeal.

(2) The Chairman or a member designated by him shall ensure that the parties comply with these Rules and with directions of the Board and shall propose action to be taken as appropriate.

Article 5

Rapporteurs

(1) The Chairman of each Board shall for each appeal designate a member of his Board, or himself, as rapporteur. If appropriate in the light of the subject-matter of the case, the Chairman may designate an additional rapporteur.

(2) If an additional rapporteur is appointed, the steps referred to in paragraphs 3 to 5 shall be taken by the rapporteur and additional rapporteur jointly unless the Chairman directs otherwise.

(3) The rapporteur shall carry out a preliminary study of the appeal and may prepare communications to the parties subject to the direction of the Chairman of the Board. Communications shall be signed by the rapporteur on behalf of the Board.

(4) The rapporteur shall make the preparations for meetings of the Board and for oral proceedings.

(5) The rapporteur shall draft decisions.

(6) If a rapporteur or additional rapporteur considers that his knowledge of the language of the proceedings is insufficient for drafting communications or decisions, he may draft these in one of the other official languages. His drafts shall be translated by the European Patent Office into the language of the proceedings and the translations shall be checked by the rapporteur or by another member of the Board concerned.

Article 6

Registries

(1) Registries shall be established for the Boards of Appeal. Registrars shall be responsible for the discharge of the functions of the Registries. One of the Registrars shall be designated Senior Registrar.

(2) The Presidium referred to in Rule 12, paragraph 1, EPC may entrust to the Registrars the execution of functions which involve no technical or legal difficulties, in particular in relation to arranging for inspection of files, issuing summonses to oral proceedings and notifications and granting requests for further processing of applications.

(3) The Registrar shall report to the Chairman of the Board concerned on the admissibility of each newly filed appeal.

(4) Minutes of oral proceedings and of the taking of evidence shall be drawn up by the Registrar or such other employee of the Office as the Chairman may designate.

Article 7

Attendance of interpreters

If required, the Chairman of any Board shall make arrangements for interpretation during oral proceedings, the taking of evidence or the deliberations of his Board.

Article 8

Change in the composition of the Board

(1) If the composition of a Board is changed after oral proceedings, the parties to the proceedings shall be informed that, at the request of any party, fresh oral proceedings shall be held before the Board in its new composition. Fresh oral proceedings shall also be held if so requested by the new member and if the other members of the Board concerned have given their agreement.

(2) Each new member shall be bound to the same extent as the other members by an interim decision which has already been taken.

(3) If, when a Board has already reached a final decision, a member is unable to act, he shall not be replaced by an alternate. If the Chairman is unable to act, the member of the Board concerned having the longer or longest service on the Boards of Appeal, or in the case where members have the same length of service, the elder or eldest member, shall sign the decision on behalf of the Chairman.

Article 9

Enlargement of a Board of Appeal

If a Board of Appeal consisting of two technically qualified members and one legally qualified member considers that the nature of the appeal requires that the Board should consist of three technically qualified members and two legally qualified members, the decision to enlarge the Board shall be taken at the earliest possible stage in the examination of that appeal.

Article 10

Consolidation of appeal proceedings

(1) If several appeals are filed from a decision, these appeals shall be considered in the same proceedings.

(2) If appeals are filed from separate decisions and all the appeals are designated to be examined by one Board in a common composition, that Board may deal with those appeals in consolidated proceedings with the consent of the parties.

Article 11

Remission to the department of first instance

A Board shall remit a case to the department of first instance if fundamental deficiencies are apparent in the first instance proceedings, unless special reasons present themselves for doing otherwise.

Article 12

Basis of Proceedings

(1) Appeal proceedings shall be based on

(a) the notice of appeal and statement of grounds of appeal filed pursuant to Article 108 EPC;

(b) in cases where there is more than one party, any written reply of the other party or parties to be filed within four months of notification of the grounds of appeal;

(c) any communication sent by the Board and any answer thereto filed pursuant to directions of the Board.

(2) The statement of grounds of appeal and the reply shall contain a party's complete case. They shall set out clearly and concisely the reasons why it is requested that the decision under appeal be reversed, amended or upheld, and should specify expressly all the facts, arguments and evidence relied on. All documents referred to shall be

(a) attached as annexes insofar as they have not already been filed in the course of the grant, opposition or appeal proceedings or produced by the Office in said proceedings;

(b) filed in any event to the extent that the Board so directs in a particular case.

(3) Subject to Articles 113 and 116 EPC the Board may decide the case at any time after filing of the statement of grounds of appeal or, in cases where there is more than one party, after the expiry of the time limit in (1)(b).

(4) Without prejudice to the power of the Board to hold inadmissible facts, evidence or requests which could have been presented or were not admitted in the first instance

proceedings, everything presented by the parties under (1) shall be taken into account by the Board if and to the extent it relates to the case under appeal and meets the requirements in (2).

(5) Extension of time limits may exceptionally be allowed in the Board's discretion following receipt of a written and reasoned request.

Article 13

Amendment to a party's case

(1) Any amendment to a party's case after it has filed its grounds of appeal or reply may be admitted and considered at the Board's discretion. The discretion shall be exercised in view of inter alia the complexity of the new subject matter submitted, the current state of the proceedings and the need for procedural economy.

(2) Other parties shall be entitled to submit their observations on any amendment not held inadmissible by the Board ex officio.

(3) Amendments sought to be made after oral proceedings have been arranged shall not be admitted if they raise issues which the Board or the other party or parties cannot reasonably be expected to deal with without adjournment of the oral proceedings.

Article 14

Interventions

Articles 12 and 13 shall apply mutatis mutandis to interventions commenced while an appeal is pending.

Article 15

Oral Proceedings

(1) If oral proceedings are to take place, the Board may send a communication drawing attention to matters which seem to be of special significance, or to the fact that questions appear no longer to be contentious, or containing other observations that may help concentration on essentials during the oral proceedings.

(2) A change of date for oral proceedings may exceptionally be allowed in the Board's discretion following receipt of a written and reasoned request made as far in advance of the appointed date as possible.

(3) The Board shall not be obliged to delay any step in the proceedings, including its decision, by reason only of the absence at the oral proceedings of any party duly summoned who may then be treated as relying only on its written case.

(4) The Chairman presides over the oral proceedings and ensures their fair, orderly and efficient conduct.

(5) When a case is ready for decision during oral proceedings, the Chairman shall state the final requests of the parties and declare the debate closed. No submissions may be made by the parties after the closure of the debate unless the Board decides to re-open the debate.

(6) The Board shall ensure that each case is ready for decision at the conclusion of the oral proceedings, unless there are special reasons to the contrary. Before the oral proceedings are closed, the decision may be announced orally by the Chairman.

Article 16

Costs

(1) Subject to Article 104, paragraph 1, EPC, the Board may on request order a party to pay some or all of another party's costs which shall, without limiting the Board's discretion, include those incurred by any.

(a) amendment pursuant to Article 13 to a party's case as filed pursuant to Article 12, paragraph 1;

(b) extension of a time limit;

(c) acts or omissions prejudicing the timely and efficient conduct of oral proceedings;

(d) failure to comply with a direction of the Board;

(e) abuse of procedure.

(2) The costs ordered to be paid may be all or part of those incurred by the receiving party and may inter alia be expressed as a percentage or as a specific sum. In the latter event, the Board's decision shall be a final decision for the purposes of Article 104, paragraph 3, EPC. The costs ordered may include costs charged to a party by its professional representative, costs incurred by a party itself whether or not acting through a professional representative, and the costs of witnesses or experts paid by a party but shall be limited to costs necessarily and reasonably incurred.

Article 17

Communications to the parties

(1) In the written phase of proceedings, replies to requests and directions on matters of procedure shall be given by means of communications.

(2) If a Board deems it expedient to communicate with the parties regarding a possible appreciation of substantive or legal matters, such communication shall be made in such a way as not to imply that the Board is in any way bound by it.

Article 18

EPO President's right to comment

The Board may, on its own initiative or at the written, reasoned request of the President of the European Patent Office, invite him to comment in writing or orally on questions of general interest which arise in the course of proceedings pending before it. The parties shall be entitled to submit their observations on the President's comments.

Article 19

Deliberation and voting

(1) If the members of a Board are not all of the same opinion, the Board shall meet to deliberate regarding the decision to be taken. Only members of the Board shall participate in the deliberations; the Chairman may, however, authorise other officers to attend. Deliberations shall be secret.

(2) During the deliberations between members of the Board, the opinion of the rapporteur shall be heard first, followed by that of the additional rapporteur if one has been appointed and, if the rapporteur is not the Chairman, the Chairman's last.

(3) If voting is necessary, votes shall be taken in the same sequence; even if the Chairman is the rapporteur, he shall vote last. Abstentions shall not be permitted.

Article 20

Deviations from an earlier decision of any Board or from the Guidelines

(1) Should a Board consider it necessary to deviate from an interpretation or explanation of the Convention given in an earlier decision of any Board, the grounds for this deviation shall be given, unless such grounds are in accordance with an earlier opinion or decision of the Enlarged Board of Appeal. The President of the European Patent Office shall be informed of the Board's decision.

(2) If, in its decision, a Board gives a different interpretation of the Convention to that provided for in the Guidelines, it shall state the grounds for its action if it considers that this decision will be more readily understood in the light of such grounds.

Article 21

Deviation from an earlier decision or opinion of the Enlarged Board of Appeal I

Should a Board consider it necessary to deviate from an interpretation or explanation of the Convention contained in an earlier opinion or decision of the Enlarged Board of Appeal, the question shall be referred to the Enlarged Board of Appeal.

Article 22

Referral of a question to the Enlarged Board of Appeal

- (1) If a point is to be referred to the Enlarged Board of Appeal, a decision to this effect shall be taken by the Board concerned.
- (2) The decision shall contain the items specified in Rule 102, sub-paragraphs (a), (b), (c), (d) and (f), EPC and the point which the Board refers to the Enlarged Board of Appeal. The context in which the point originated shall also be stated.
- (3) The decision shall be communicated to the parties.

Article 23

Binding nature of the Rules of Procedure

These Rules of Procedure shall be binding upon the Boards of Appeal, provided that they do not lead to a situation which would be incompatible with the spirit and purpose of the Convention.

Article 24

Entry into force

These Rules of Procedure shall enter into force upon entry into force of the revised text of the European Patent Convention in accordance with Article 8 of the Revision Act.

Done at Munich on 12 September 2007

For the Presidium

The Chairman

Peter MESSERLI

3. Rules of Procedure of the Boards of Appeal – in force as from 1 January 2020

DECISION

In accordance with Rule 12c, paragraph 2, of the Implementing Regulations to the European Patent Convention, the Boards of Appeal Committee adopts the following revised version of the Rules of Procedure of the Boards of Appeal:

All terms and pronouns referring to persons in these Rules of Procedure apply irrespective of gender.

Article 1

Business distribution and composition

(1) The Presidium referred to in Rule 12b, paragraph 4, EPC, shall before the beginning of each working year draw up a business distribution scheme for the distribution among the Boards of Appeal of all appeals that may be filed during the year, designating the members who may serve on each Board and their respective alternates. The scheme may be amended during the working year.

(2) The Chair (Chairman or Chairwoman) of each Board shall, before the beginning of each working year, draw up a list of the cases in which the Board is likely to hold oral proceedings, issue a communication under Rule 100, paragraph 2, EPC, or issue a decision in written proceedings in that year. The President of the Boards of Appeal shall, before the beginning of each working year, publish the list of each Board.

(3) The Chair of each Board of Appeal shall determine the composition of the Board for each particular case in accordance with the business distribution scheme. The Chair shall designate himself or herself or a technically or legally qualified member as Chair in the particular appeal.

Article 2

Replacement of members

(1) A member or the Chair in a particular appeal shall be replaced if prevented from participating, particularly as a result of sickness, excessive workload, or commitments which cannot be avoided.

(2) A member or the Chair in a particular appeal wishing to be replaced shall inform the Chair of the Board of their unavailability without delay.

Article 3

Exclusion and objection

- (1) If a Board has knowledge of a possible reason for exclusion or objection under Article 24 EPC which does not originate from the member concerned or from a party, then the procedure of Article 24, paragraph 4, EPC shall be applied.
- (2) The member concerned shall be invited to present comments as to whether there is a reason for exclusion or objection.
- (3) Before a decision is taken on the exclusion or objection, there shall be no further proceedings in the case.

Article 4

Procedural compliance

- (1) The Chair of the Board shall for each appeal designate a member of the Board, who may also be the Chair of the Board, to consider the admissibility of the appeal.
- (2) The Chair in the particular appeal or a member designated by the Chair of the Board shall ensure that the parties comply with these Rules of Procedure and with directions of the Board and shall propose action to be taken as appropriate.

Article 5

Rapporteurs

- (1) For each appeal, the Chair of the Board shall designate a technically or legally qualified member of the Board, who may also be the Chair of the Board, as rapporteur. If appropriate in the light of the subject-matter of the case, the Chair of the Board may designate an additional rapporteur. The composition of the Board may be completed at a later stage, in accordance with Article 1, paragraph 3. The steps referred to in paragraphs 4 and 5 may not be taken until the composition of the Board has been completed in accordance with Article 1, paragraph 3.
- (2) If an additional rapporteur is appointed, the steps referred to in paragraphs 3 to 5 shall be taken by the rapporteur and additional rapporteur jointly.
- (3) The rapporteur shall carry out a preliminary study of the appeal and shall, subject to the direction of the Chair of the Board, assess whether the appeal should be given priority over, or should be treated together with, other appeals assigned to the rapporteur.
- (4) The rapporteur shall draft communications on behalf of the Board, subject to the direction of the Chair in the particular appeal, and shall make the preparations for meetings of the Board and for oral proceedings.
- (5) The rapporteur shall draft decisions.

(6) A rapporteur or additional rapporteur who considers that their knowledge of the language of the proceedings is insufficient for drafting communications or decisions may draft these in one of the other official languages. The drafts shall be translated by the European Patent Office into the language of the proceedings and the translations shall be checked by the rapporteur or by another member of the Board in the particular appeal.

Article 6 Registries

(1) Registries shall be established for the Boards of Appeal. Registrars shall be responsible for the discharge of the functions of the Registries. One of the Registrars shall be designated as head of the Registry.

(2) The Presidium referred to in Rule 12b, paragraph 1, EPC may entrust to the Registrars the execution of functions which involve no technical or legal difficulties, in particular in relation to arranging for inspection of files, issuing summonses to oral proceedings, notifications and granting requests for further processing of applications.

(3) The Registrar shall report to the Chair of the Board on the admissibility of each newly filed appeal.

(4) The Chair in the particular appeal shall designate a member of the Board or, with the agreement of the Chair of the Board, the Registrar, to draw up the minutes of the oral proceedings and of the taking of evidence.

Article 7 Interpreters

If required, the Chair in the particular appeal shall make arrangements for interpretation during oral proceedings, the taking of evidence or the deliberations of the Board.

Article 8 Change in the composition of a Board

(1) If the composition of a Board is changed after oral proceedings, the parties shall be informed that, at the request of any party, fresh oral proceedings shall be held before the Board in its new composition. Fresh oral proceedings shall also be held if so requested by the new member and if the other members of the Board in the particular appeal have given their agreement.

(2) Each new member shall be bound to the same extent as the other members by an interlocutory decision which has already been taken.

(3) A member who is unable to act after the Board has already reached a decision on the appeal shall not be replaced. If the Chair in a particular appeal is unable to act, the member of the Board having the longer or longest service on the Boards of Appeal or, in the case

where members have the same length of service, the elder or eldest member, shall sign the decision on behalf of the Chair.

Article 9
Enlargement of a Board

If a Board consisting of two technically qualified members and one legally qualified member considers that the nature of the appeal requires that the Board should consist of three technically qualified members and two legally qualified members, the decision to enlarge the Board shall be taken at the earliest possible stage in the examination of that appeal.

Article 10
Consolidation and acceleration of appeal proceedings

(1) If several appeals are filed from a decision, these appeals shall be dealt with in the same proceedings.

(2) If appeals are filed from separate decisions but are clearly connected to each other and if they are to be examined by a Board in the same composition, that Board shall endeavour to deal with them one immediately after the other. The Board may, after having heard the parties, also deal with such appeals in consolidated proceedings.

(3) On request by a party, the Board may accelerate the appeal proceedings. The request shall contain reasons justifying the acceleration and shall, where appropriate, be supported by documentary evidence. The Board shall inform the parties whether the request has been granted.

(4) If a court or other competent authority in a Contracting State requests acceleration of the appeal proceedings, the Board shall inform the court or authority and the parties whether the request has been granted and when oral proceedings, if foreseen, are likely to take place.

(5) The Board may accelerate the appeal proceedings of its own motion.

(6) If the Board accelerates the appeal proceedings, it shall give the appeal priority over other appeals. The Board may adopt a strict framework for the proceedings.

Article 11
Remittal

The Board shall not remit a case to the department whose decision was appealed for further prosecution, unless special reasons present themselves for doing so. As a rule, fundamental deficiencies which are apparent in the proceedings before that department constitute such special reasons.

Article 12

Basis of appeal proceedings

(1) Appeal proceedings shall be based on

(a) the decision under appeal and minutes of any oral proceedings before the department having issued that decision;

(b) the notice of appeal and statement of grounds of appeal filed pursuant to Article 108 EPC;

(c) in cases where there is more than one party, any written reply of the other party or parties to be filed within four months of notification of the grounds of appeal;

(d) any communication sent by the Board and any answer thereto filed pursuant to directions of the Board;

(e) minutes of any video or telephone conference with the party or parties sent by the Board.

(2) In view of the primary object of the appeal proceedings to review the decision under appeal in a judicial manner, a party's appeal case shall be directed to the requests, facts, objections, arguments and evidence on which the decision under appeal was based.

(3) The statement of grounds of appeal and the reply shall contain a party's complete appeal case. Accordingly, they shall set out clearly and concisely the reasons why it is requested that the decision under appeal be reversed, amended or upheld, and should specify expressly all the requests, facts, objections, arguments and evidence relied on. All documents referred to shall be

(a) attached as annexes insofar as they have not already been filed in the course of the grant, opposition or appeal proceedings or produced by the Office in said proceedings;

(b) filed in any event to the extent that the Board so directs in a particular case.

(4) Any part of a party's appeal case which does not meet the requirements in paragraph 2 is to be regarded as an amendment, unless the party demonstrates that this part was admissibly raised and maintained in the proceedings leading to the decision under appeal. Any such amendment may be admitted only at the discretion of the Board.

The party shall clearly identify each amendment and provide reasons for submitting it in the appeal proceedings. In the case of an amendment to a patent application or patent, the party shall also indicate the basis for the amendment in the application as filed and provide reasons why the amendment overcomes the objections raised.

The Board shall exercise its discretion in view of, inter alia, the complexity of the amendment, the suitability of the amendment to address the issues which led to the decision under appeal, and the need for procedural economy.

(5) The Board has discretion not to admit any part of a submission by a party which does not meet the requirements in paragraph 3.

(6) The Board shall not admit requests, facts, objections or evidence which were not admitted in the proceedings leading to the decision under appeal, unless the decision not to admit them suffered from an error in the use of discretion or unless the circumstances of the appeal case justify their admittance.

The Board shall not admit requests, facts, objections or evidence which should have been submitted, or which were no longer maintained, in the proceedings leading to the decision under appeal, unless the circumstances of the appeal case justify their admittance.

(7) Periods specified by the Board may exceptionally be extended at the Board's discretion upon a written and reasoned request, presented before the expiry of such period. The same applies mutatis mutandis to the period referred to in paragraph 1(c); however, this period may only be extended up to a maximum of six months.

(8) Subject to Articles 113 and 116 EPC, the Board may decide the case at any time after filing of the statement of grounds of appeal or, in cases where there is more than one party, after the expiry of the period referred to in paragraph 1(c).

Article 13

Amendment to a party's appeal case

(1) Any amendment to a party's appeal case after it has filed its grounds of appeal or reply is subject to the party's justification for its amendment and may be admitted only at the discretion of the Board.

Article 12, paragraphs 4 to 6, shall apply mutatis mutandis.

The party shall provide reasons for submitting the amendment at this stage of the appeal proceedings.

The Board shall exercise its discretion in view of, inter alia, the current state of the proceedings, the suitability of the amendment to resolve the issues which were admissibly raised by another party in the appeal proceedings or which were raised by the Board, whether the amendment is detrimental to procedural economy, and, in the case of an amendment to a patent application or patent, whether the party has demonstrated that any such amendment, prima facie, overcomes the issues raised by another party in the appeal proceedings or by the Board and does not give rise to new objections.

(2) Any amendment to a party's appeal case made after the expiry of a period specified by the Board in a communication under Rule 100, paragraph 2, EPC or, where such a

communication is not issued, after notification of a summons to oral proceedings shall, in principle, not be taken into account unless there are exceptional circumstances, which have been justified with cogent reasons by the party concerned.

(3) Other parties shall be entitled to submit their observations on any amendment not held inadmissible by the Board ex officio.

Article 14 Interventions

Where, during a pending appeal, notice of intervention is filed, Articles 12 and 13 shall apply in so far as justified by the circumstances of the case.

Article 15 Oral proceedings and issuing decisions

(1) Without prejudice to Rule 115, paragraph 1, EPC, the Board shall, if oral proceedings are to take place, endeavour to give at least four months' notice of the summons. In cases where there is more than one party, the Board shall endeavour to issue the summons no earlier than two months after receipt of the written reply or replies referred to in Article 12, paragraph 1(c). A single date is fixed for the oral proceedings.

In order to help concentration on essentials during the oral proceedings, the Board shall issue a communication drawing attention to matters that seem to be of particular significance for the decision to be taken. The Board may also provide a preliminary opinion. The Board shall endeavour to issue the communication at least four months in advance of the date of the oral proceedings.

(2) A request of a party for a change of the date fixed for oral proceedings may be allowed if the party has put forward serious reasons which justify the fixing of a new date. If the party is represented, the serious reasons must relate to the representative.

(a) The request shall be filed in writing, reasoned and, where appropriate, supported by documentary evidence. The request shall be filed as soon as possible after the summons to oral proceedings has been notified and the serious reasons in question have arisen. The request should include a list of dates on which the requesting party is not available for oral proceedings.

(b) Reasons which may justify a change of the date for oral proceedings include:

(i) notification of a summons to oral proceedings in other proceedings before the European Patent Office or a national court received before notification of the summons to oral proceedings before the Board;

(ii) serious illness;

(iii) a death within the family;

(iv) marriage or formation of a similar recognised partnership;

(v) military service or other obligatory performance of civic duties;

(vi) holidays or business trips which have been firmly booked before notification of the summons to oral proceedings.

(c) Reasons which, as a rule, do not justify a change of the date for oral proceedings include:

(i) filing of new requests, facts, objections, arguments or evidence;

(ii) excessive work pressure;

(iii) unavailability of a duly represented party;

(iv) unavailability of an accompanying person;

(v) appointment of a new professional representative.

(3) The Board shall not be obliged to delay any step in the proceedings, including its decision, by reason only of the absence at the oral proceedings of a party duly summoned who may then be treated as relying only on its written case.

(4) The Chair presides over the oral proceedings and ensures their fair, orderly and efficient conduct.

(5) When a case is ready for decision during oral proceedings, the Chair shall state the final requests of the parties and declare the debate closed. No submissions may be made by the parties after the closure of the debate unless the Board decides to re-open the debate.

(6) The Board shall ensure that each case is ready for decision at the conclusion of the oral proceedings, unless there are special reasons to the contrary. Before the oral proceedings are closed, the decision may be announced orally by the Chair.

(7) Where the decision on the appeal has been announced orally in accordance with paragraph 6, the reasons for the decision, or parts thereof, may, with the explicit consent of the parties, be put in writing in abridged form. However, where it has been indicated to the Board that a third party or a court has, in the particular case, a legitimate interest in the reasons for the decision not being in abridged form, they shall not be abridged. Where appropriate, the reasons for the decision in abridged form may already be included in the minutes of the oral proceedings.

(8) If the Board agrees with the finding of the department which issued the decision under appeal, on one or more issues, and with the reasons given for it in the decision under

appeal, the Board may put the reasons for its decision in abridged form in respect of that issue.

(9) The Board shall issue the decision on the appeal in a timely manner.

(a) Where the Chair announces the decision on the appeal orally in accordance with paragraph 6, the Board shall put the decision in writing and despatch it within three months of the date of the oral proceedings. If the Board is unable to do so, it shall inform the parties when the decision is to be despatched. The President of the Boards of Appeal shall also be informed thereof.

(b) When a case is ready for decision at the conclusion of the oral proceedings but the Chair does not announce the decision on the appeal orally in accordance with paragraph 6, the Chair shall indicate the date on which the decision on the appeal is to be despatched, which shall not be later than three months after the closure of the oral proceedings. If the Board is unable to despatch the decision on the appeal by that date, it shall inform the parties of a new date or, in exceptional circumstances, shall issue a communication specifying the further procedural steps that will be taken.

Article 16

Costs

(1) Subject to Article 104, paragraph 1, EPC, the Board may on request order a party to pay some or all of another party's costs. Without limiting the Board's discretion, such costs include those incurred by any

(a) amendment to a party's appeal case pursuant to Article 13;

(b) extension of a period;

(c) acts or omissions prejudicing the timely and efficient conduct of oral proceedings;

(d) failure to comply with a direction of the Board;

(e) abuse of procedure.

(2) The costs ordered to be paid may be all or part of those incurred by the receiving party and may, inter alia, be expressed as a percentage or as a specific sum. In the latter event, the Board's decision shall be a final decision for the purposes of Article 104, paragraph 3, EPC. The costs ordered may include costs charged to a party by its professional representative, costs incurred by a party itself whether or not acting through a professional representative, and the costs of witnesses or experts paid by a party but shall be limited to costs necessarily and reasonably incurred.

Article 17

Communications to the parties

(1) In the written phase of proceedings, replies to requests and directions on matters of procedure shall be given by means of communications.

(2) If a Board deems it expedient to communicate with the parties regarding a possible appreciation of substantive or legal matters, such communication shall be made in such a way as not to imply that the Board is in any way bound by it.

Article 18

Right of the President of the European Patent Office to comment

The Board may, of its own motion or at the written, reasoned request of the President of the European Patent Office, invite the President to comment in writing or orally on questions of general interest which arise in the course of proceedings pending before it. The parties shall be entitled to submit their observations on the President's comments.

Article 19

Deliberation and voting

(1) If the members of a Board are not all of the same opinion, the Board shall meet to deliberate regarding the decision to be taken. Only members of the Board shall participate in the deliberations; the Chair in the particular appeal may, however, authorise other officers to attend. The deliberations shall be secret.

(2) During the deliberations of the Board, the opinion of the rapporteur shall be heard first, followed by that of the additional rapporteur if one has been appointed and, if the rapporteur is not the Chair, by that of the Chair last.

(3) If voting is necessary, votes shall be taken in the same sequence, except that the Chair, even when rapporteur, shall vote last. Abstentions shall not be permitted.

Article 20

Deviations from an earlier decision of any Board or from the Guidelines for Examination

(1) Should a Board consider it necessary to deviate from an interpretation or explanation of the Convention given in an earlier decision of any Board, the grounds for this deviation shall be given, unless such grounds are in accordance with an earlier decision or opinion of the Enlarged Board of Appeal according to Article 112, paragraph 1, EPC. The President of the European Patent Office shall be informed of the Board's decision.

(2) If, in its decision, a Board gives a different interpretation of the Convention from that provided for in the Guidelines for Examination, it shall state its grounds for doing so if it considers that the decision will be more readily understood in the light of such grounds.

Article 21

Deviation from an earlier decision or opinion of the Enlarged Board of Appeal

Should a Board consider it necessary to deviate from an interpretation or explanation of the Convention contained in an earlier decision or opinion of the Enlarged Board of Appeal according to Article 112, paragraph 1, EPC, the question shall be referred to the Enlarged Board of Appeal.

Article 22

Referral of a question to the Enlarged Board of Appeal

(1) If a question is to be referred to the Enlarged Board of Appeal in accordance with Article 112, paragraph 1, EPC, a decision to this effect shall be taken by the Board.

(2) The decision shall contain the items specified in Rule 102, sub-paragraphs (a), (b), (c), (d) and (f), EPC and the question which the Board refers to the Enlarged Board of Appeal. The context in which the question arose shall also be stated.

(3) The decision shall be communicated to the parties.

Article 23

Binding nature of the Rules of Procedure

These Rules of Procedure shall be binding upon the Boards of Appeal, provided that they do not lead to a situation which would be incompatible with the spirit and purpose of the Convention.

Article 24

Entry into force

(1) The revised version of the Rules of Procedure of the Boards of Appeal (the revised version) shall enter into force on 1 January 2020.

(2) Subject to Article 25, the version of the Rules of Procedure of the Boards of Appeal valid until that time shall cease to be in force upon entry into force of the revised version.

Article 25

Transitional provisions

(1) The revised version shall apply to any appeal pending on, or filed after, the date of the entry into force, subject to the following paragraphs.

(2) Article 12, paragraphs 4 to 6, of the revised version shall not apply to any statement of grounds of appeal filed before the date of the entry into force and any reply to it filed in due time. Instead, Article 12, paragraph 4, of the Rules of Procedure of the Boards of Appeal in the version valid until the date of the entry into force shall continue to apply.

(3) Where the summons to oral proceedings or a communication of the Board under Rule 100, paragraph 2, EPC has been notified before the date of the entry into force, Article 13, paragraph 2, of the revised version shall not apply. Instead, Article 13 of the Rules of Procedure of the Boards of Appeal in the version valid until the date of the entry into force shall continue to apply.

Roland GROSSENBACHER

4. Transitional provisions

Article 7 of the Act revising the EPC of 29 November 2000

Article 7

Transitional provisions

(1) The revised version of the Convention shall apply to all European patent applications filed after its entry into force, as well as to all patents granted in respect of such applications. It shall not apply to European patents already granted at the time of its entry into force, or to European patent applications pending at that time, unless otherwise decided by the Administrative Council of the European Patent Organisation.

(2) The Administrative Council of the European Patent Organisation shall take a decision under paragraph 1 no later than 30 June 2001, by a majority of three quarters of the Contracting States represented and voting. Such decision shall become an integral part of this Revision Act.

Decision of the Administrative Council of 28 June 2001 on the transitional provisions under Article 7 of the Act revising the European Patent Convention of 29 November 2000

The Administrative Council of the European Patent Organisation, having regard to Article 7, paragraph 2, of the Act revising the European Patent Convention of 29 November 2000 ("Revision Act"), on a proposal from the President of the European Patent Office, having regard to the opinion of the Committee on Patent Law, has decided as follows:

Article 1

In accordance with Article 7, paragraph 1, second sentence, of the Revision Act, the following transitional provisions shall apply to the amended and new provisions of the European Patent Convention specified below:

1. Articles 14(3) to (6), 51, 52, 53, 54(3) and (4), 61, 67, 68 and 69, the Protocol on the Interpretation of Article 69, and Articles 70, 86, 88, 90, 92, 93, 94, 97, 98, 106, 108, 110, 115, 117, 119, 120, 123, 124, 127, 128, 129, 133, 135, 137 and 141 shall apply to European patent applications pending at the time of their entry into force and to European patents already granted at that time. However, Article 54(4) of the version of the Convention in force before that time shall continue to apply to these applications and patents.

2. Articles 65, 99, 101, 103, 104, 105, 105a-c and 138 shall apply to European patents already granted at the time of their entry into force and to European patents granted in respect of European patent applications pending at that time.

3. Article 54(5) shall apply to European patent applications pending at the time of its entry into force, in so far as a decision on the grant of the patent has not yet been taken.

4. Article 112a shall apply to decisions of the Boards of Appeal taken as from the date of its entry into force.

5. Articles 121 and 122 shall apply to European patent applications pending at the time of their entry into force and to European patents already granted at that time, in so far as the time limits for requesting further processing or reestablishment of rights have not yet expired at that time.

6. Articles 150 to 153 shall apply to international applications pending at the time of their entry into force. However, Articles 154(3) and 155(3) of the version of the Convention in force before that time shall continue to apply to these applications.

Article 2

This decision shall enter into force upon the entry into force of the revised text of the Convention in accordance with Article 8 of the Revision Act.

5. Cross-reference list EPC 1973 - EPC 2000

The concordance list compares the thematically corresponding provisions of the current Convention and Implementing Regulations with the Articles and Rules of the EPC 2000.

Article EPC 1973:

Convention on the Grant of European Patents of 5.10.1973, text as amended by the Act revising Article 63 EPC and by decisions of the Administrative Council of 21.12.1978, 13.12.1994, 20.12.1995, 5.12.1995, 10.12.1998 and 27.10.2005

Article EPC 2000:

European Patent Convention 2000 as adopted by decision of the Administrative Council of 28.6.2001

Rule EPC 1973:

Implementing Regulations to the EPC 1973, as last amended by decision of the Administrative Council of 9.12.2004

Rule EPC 2000:

Implementing Regulations to the EPC 2000 as adopted by decision of the Administrative Council of 7.12.2006

6. General Index

A

- Abandonment of application, 694**
- Abandonment of subject-matter in examination procedure, 1029**
- Claims fees, non-payment, 1030
- Absence from oral proceedings, 1217**
- Abuse of procedure, 1094**
- Abusive conduct, 764**
- Accelerated processing before boards of appeal, 1137**
- Acceleration of opposition proceedings, infringement proceedings, 1117**
- Accidental anticipation, 472**
- Accidental disclosure, 123**
- Added subject-matter, amendments, 432**
- Ambiguous feature in claim, 492
- Broadening of claim, 446
- Description, amendments, 497
- Different sets of claims for different contracting states, 501
- Disclaimer, 467
- Disclosure in drawings, amendments, 494
- Enabling disclosure, 442
- Errors in disclosure, amendments, 492
- Essentiality or three-point test, 448
- Generalisation, 480
- Gold standard, 436, 446
- Implicit disclosure, 438
- Intermediate generalisation, 482
- Intermediate product, 492
- Languages, 434
- Non-technical subject-matter, 444
- Novelty test, amendments, 443
- Original disclosure, 441
- Parameters, setting upper and lower limits, 452
- Priority documents, 434
- Selection from two lists, 460
- Skilled person, 436
- Additional search, 1253**
- Features taken from the description, 1254
- Administrative agreements under Article 10(2)(a) EPC, 1405**
- Administrative Council, 789**
- Administrative notice with no legal consequences, legitimate expectations, 567**
- Admissibility of**
- ~ appeal, 1138
- ~ to be checked in every phase of appeal proceedings, 1179
- Appealable decisions, 1139
- Board competent to hear a case, 1143
- Entitlement to appeal, 1145
- Form of appeal, 1156
- Interlocutory revision, 1179
- Partial ~, 1179
- Statement of grounds of appeal, 1166
- Time limit for appeal, 1156
- ~ evidence, 720
- Affidavits, 725
- Documentary evidence, 728
- Expert opinions as means of evidence, 721
- Sworn statements, 725
- Witness testimony as means of evidence, 721
- ~ intervention, 808, 879
- Competence of the board in its original composition, partiality, 808
- Fees for intervention, 883
- Intervention in appeal proceedings, 883
- Intervention in opposition proceedings, 882
- National infringement proceedings, intervention, 880
- Partiality, 808
- Reasoned objection, partiality, 810
- Third party, intervention, 879
- Time limit for intervention, 883
- ~ opposition, 1056, 1076, 1189
- Entitlement to file opposition, 1056
- Formal requirements for opposition, 1062
- Formalities officer in opposition proceedings, 1076
- Opposition inadmissible, 1077
- Opposition period, 1062
- Subject-matter under examination in appeal procedure, 1189
- ~ request for re-establishment of rights, 665
- Inability to observe time limits, re-establishment of rights, 672

- Omitted act, re-establishment of rights, 673
 Request for re-establishment of rights, 674,
676
 Time limits for filing request for re-
 establishment of rights, 665
- Advertising brochures and availability to the
 public, 82**
- Advertising, Code of Professional Conduct,
1388**
- Aesthetic creations, 14**
- Affidavits, 725**
- Age of documents, 266**
- Alleged advantages, 189**
- Allowability of appeal, reimbursement of
 appeal fee, 1300**
- Alternative solution to a known problem, 195**
- Ambiguous communication, wrong form,
1318**
- Ambiguous feature in claim, 492**
- Amended claims admitted as a normal
 procedural development, 1239**
- Amended claims clearly allowable, 1246**
- Amendments, 428**
- Added subject-matter, ~, 432
- Amendment after approval of text for grant, 1026
 ~ after arrangement of the oral proceedings,
1212
 Absence from oral proceedings, 1217
 Late-filed documents and evidence, 1216
 Late-filed requests, 1212
 ~ after decision to grant, 1028
 ~ in examination procedure, 1021
 Withdrawal of ~, 1029
 ~ in opposition proceedings, 1097
 Amendments occasioned by national prior
 rights, 1100
 Approval of amended text of the patent,
 1111
 New dependent or independent claims,
 1103
 ~ or corrections in examination procedure, 1021,
1022
 ~ relating to unsearched subject-matter, 1044
 Amendments under Rule 137(5) EPC, 1049
 Search report, 1046
 ~ to divisional applications, 542
 ~ under Rule 137(2) EPC, 992
 ~ under Rule 137(3) EPC, 1001
 Discretion of examining division, 1001
 Change of claim category, ~, 516
 Correction of errors, Rule 139 EPC, 530
 Description, ~, 497
 Disclosure in drawings, ~, 494
 Errors in disclosure, ~, 492
 Extension of conferred protection, 501
 Handwritten ~, oral proceedings, 641
 Novelty test, ~, 443
 Patent application and ~, 281
 Protection, extension of, 501
 Relationship between Article 123(2) and Article
 123(3) EPC, 523
 Standard of proof for allowing ~ and corrections,
536
- Amorphous forms as compared to crystalline
 forms in chemical inventions, 252**
- Analogous use, 247**
- Analogy process, 258**
- Animal testing, 263**
- Animals and animal varieties, 45**
- Anonymously filed third-party observations,
862**
- Antibodies, sufficiency of disclosure, 378**
- Anticipation of certain compounds, 136**
- Apparatus claim, 57**
- Apparatus constituting a physical entity, 9**
- Appeal**
 ~ against decisions of boards of appeal, 1142
 ~ by patentee against revocation, 1191
 ~ deemed not to have been filed or inadmissible
 appeal, 1297
 Appeal inadmissible, reimbursement of
 appeal fee, 1298
 Notice of appeal not timely filed, 1298
 Payment, no legal ground, 1300
 Reimbursement of appeal fee in case of
 request for re-establishment, 1300
 Several appellants, reimbursement of
 appeal fees, 1300
 ~ fee, 1165
 Allowability of appeal, reimbursement of ~,
 1300
 Appeal inadmissible, reimbursement of ~,
 1298

- Competence to decide on reimbursement of ~, [1320](#)
- Error of judgment, reimbursement of ~, [1308](#)
- Inadequate reasons in decision at first-instance, reimbursement of ~, [1307](#)
