inspection of files pursuant to Art. 128(4) EPC 1973, thus requiring a **narrow construction** of those provisions (see also **T 1150/13**, and **T 1839/11** in relation to the interpretation of the President's decision dated 12 July 2007, OJ SE 3/2007, 125). The board concluded that a merely abstract prejudice to hypothetical personal or economic interests was not a sufficient bar. The party requesting such exclusion should rather show that public access to certain documents would be prejudicial to specific and concrete personal or economic interests. Citing that conclusion, in **T 1401/05** of 20 September 2006 the board further expressed the opinion that documents that did not furnish information about patent applications or patents were generally subject to being excluded from file inspection, in line with the then applicable decision of the President of the EPO concerning documents excluded from file inspection dated 7 September 2001 (OJ 2001, 458). Such documents did not serve the paramount purpose of such inspection, i.e. obtaining patent information, to which the public was entitled in return for the exclusive monopoly rights that patents confer.

In **T 851/18** of 12 April 2019, the board held that the request to exclude documents from file inspection was successful only insofar as the appellant (patent proprietor) had requested, in the alternative, that the documents in question be made available for inspection in anonymised form only. The board pointed out, however, that the appellant could not successfully invoke the EU General Data Protection Regulation (GDPR) as this was not binding on the European Patent Organisation. The applicable law was instead to be found in the Guidelines for the Protection of Personal Data in the EPO of 1 April 2014, together with Art. 1(2)(a) of the decision of the President of the EPO dated 12 July 2007 concerning documents excluded from file inspection (OJ SE 3/2007, 125) and the provisions in Art. 128(4) and R. 144(d) EPC on which that decision was based.

In **T 2893/18** the board found that the fact that the contested documents were communicated to the other opponents was not in contradiction with their provisional exclusion from public inspection. The opposition division had at least provisionally excluded the contested documents from file inspection – as requested and as foreseen in the decision of the President of the EPO dated 12 July 2007 (OJ SE 3/2007, 125) – and examined their relevance for admission into the proceedings, their public availability and their exact influence on the patentability of the opposed patent before ultimately deciding on the issue of public file inspection.

1.2.2 Examples where file inspection was found not to be prejudicial to interests of appellant

In **T 2254/08** the board decided that the inspection of documents that were marked confidential on filing but were publicly accessible on the internet was not prejudicial to the economic interests of the appellant (proprietor).

In **T 1839/11** the board came to the conclusion that where a filed document contained information, some of which served the purpose of informing the public about the patent but some of which did not, the filing of a version of the document in a form from which the latter information had been redacted might form the proper basis for an order excluding

the unredacted document from file inspection under R. 144 EPC, the redacted version being open to file inspection.

In **T 1150/13** the board agreed that details of the arrangement for providing instructions to a representative did not serve to inform the public about the application and that such information was not normally obtainable from a file. However, the board rejected the request for exclusion of a letter requesting the postponement of oral proceedings on the basis that the appellant had not argued why the publication of the letter would be prejudicial to its legitimate personal or economic interest, and the board did not consider that this would be the case.

1.2.3 Examples where documents were excluded from file inspection

In **T 811/90** (OJ 1993, 728) the board ordered that documents that would not normally be excluded from public inspection pursuant to Art. 128(4) and R. 93(a) to (d) EPC 1973, but which were issued as an immediate consequence of a substantial procedural violation, be withdrawn from that part of the file available to public inspection. It was further ordered that the documents had to be returned to the filing party if it so requested. Similarly in **T 516/89** (OJ 1992, 436), the board ordered that documents marked "confidential" which did not belong to classes of documents to be excluded from file inspection be returned to the party concerned without note being taken of their contents. See also **T 760/89** (OJ 1994, 797).

In **T 264/00** two internal documents, belonging respectively to the appellant and to the respondent and concerning the outcome of a confidential meeting between two of their employees, contained confidential information on the conception, manufacture and marketing of some of the respondent's products. The board held that the dissemination of this information might effectively be prejudicial to legitimate economic interests. In agreement with both parties, the board excluded the documents from file inspection pursuant to R. 93(d) EPC 1973.

In **T 1401/05** of 20 September 2006 the board took the view that documents containing company-internal details could deprive the applicant and its domestic agent of valuable commercial assets, could be used by competitors to obtain a competitive edge over the appellant, and that a number of additional details could adversely affect the career opportunities of certain employees of the applicant and its domestic agent. It concluded that public inspection of essential parts of the documents would be prejudicial to legitimate economic interests of legal persons, and to legitimate personal and economic interests of natural persons. As the documents in question did not furnish patent information, the board excluded the relevant documents from file inspection.

In **T 99/09** the document for which inspection had been requested contained precise technical details, particularly as to the source of the constituents of a medicinal product available on the market and certain specifications for the product's manufacture. Given the technical nature of the document, the board concluded that its disclosure might indeed be prejudicial to the appellant's economic interests. Since the respondents had not objected to or commented on the request to exclude the document from inspection, it was excluded

under Art. 1(2)(a) of the EPO President's decision of 12 July 2007 (OJ SE 3/2007, 125) in the light of Art. 128(4) and R. 144(d) EPC.

In **J 23/10** it could be gathered from the document in question that the applicant had paid the renewal fees for certain applications for which they were not the registered applicant. These applications had been transferred to them but this had not been made public. It was still the assignor who was mentioned in the Register. In the Legal Board's view, this was information about internal relationships between the parties concerned, the publication of which could be prejudicial to their economic interests, while being irrelevant for the assessment of the patent application as such and therefore was to be excluded from file inspection.

In **T 1201/10** of 20 May 2019, the request for re-establishment of rights contained information about the appellant's financial affairs. The board held that the appellant had a legitimate personal interest that this information was not made public. This request for re-establishment was itself not relevant to the decision in the case in hand.

In **T 1534/16**, during written proceedings before the board, a number of documents were filed by the appellant before it withdrew its opposition, which were provisionally excluded from file inspection at the request of the appellant (patentee). The board, considering that the opponent and intervener had explicitly agreed in writing to the appellant's request and being satisfied that the documents in question did not serve the purpose of informing the public about the patent in suit, concluded that the above-mentioned documents should remain excluded from file inspection pursuant to R. 144(d) EPC.

In **T 575/23** the intervener had submitted document D20 with its notice of intervention and requested that it be excluded from file inspection under Art. 128(4) and R. 144(d) EPC (business information). It later produced a partially adapted version of the document in which some passages had been redacted. At the oral proceedings, it said that it had no objection to publication of this adapted version. The board decided to exclude the original version of D20 from public inspection. The adapted version contained all the information needed to examine the admissibility of the intervention and so excluding the original did not conflict with any public interest.

2. European Patent Register

2.1. General

Article 127 and R. 143 EPC (previously R. 92 EPC 1973) govern entries in the European Patent Register. Rule 143 EPC gives a list of items that are to be entered in the Register, additional entries required being specified in the EPO President's decision dated 15 July 2014 concerning the information given in the European Patent Register, which was adopted under R. 143(2) EPC. No entries can be made in the Register prior to the publication of the European patent application (see also **J 5/79**). The Register shows the state of the proceedings and the legal status of patents rights. Entries are made in it until the end of the opposition period or of opposition proceedings, as appropriate. In **J 12/16** the Legal Board held that, in view of the suspensive effect any appeal yet to be filed would

have, entries potentially interfering with the outcome of the then resulting appeal proceedings should not be made in the Register while the period for appeal (here, against a decision refusing requests for registration of a transfer and for a stay of grant proceedings) was still pending.

An entry in the Register recording the withdrawal of a patent application fulfils the same function as a publication in the European Patent Bulletin in that it amounts to a notification to the public (**J 25/03**, OJ 2006, 395; see also **J 14/04** and **J 12/03**). The withdrawal of an application cannot be retracted once it has been published in the Register (**J 2/15**).

In **T 194/15** the board held that the entry of a change of an opponent's name in the Register does not establish a right, it merely records it (see also **T 799/97**).

Under Art. 20 EPC in conjunction with the EPO President's decision dated 21 November 2013 concerning the responsibilities of the Legal Division (OJ 2013, 600), the Legal Division is usually responsible for decisions on entries and deletions in the Register (for exceptions – in cases where a request can be granted directly – see EPO President's decision dated 21 November 2013 concerning the entrustment to non-legally qualified staff of certain duties incumbent on the Legal Division, OJ 2013, 601). Appeals against such decisions are a matter for the Legal Board, not the technical boards (Art. 106(1) and 21(2) EPC). The entitlement of the proprietor entered in the Register cannot be questioned in either opposition or appeal proceedings (see **T 553/90**, OJ 1993, 666).

2.2. Registration of licences

As to the recording in the Register of an exclusive licence under a patent **already granted**, the Legal Board ruled in its decisions **J 17/91** (OJ 1994, 225) and **J 19/91** that registration was no longer possible once the patent had been granted because the EPO had renounced jurisdiction in favour of the national offices of the contracting states designated in the request for grant.

2.3. Registration of transfers

Article 72 EPC provides that an assignment of a European patent application must be made in writing and requires the signatures of the parties to the contract. Under R. 22 EPC, a transfer of a European patent application is recorded in the European Patent Register at the request of an interested party and on production of documents satisfying the EPO that the transfer has taken place. This is in line with the PCT system (R. 92*bis*.1 PCT). Rule 22 EPC applies to any transfer of the European patent made during the opposition period or during opposition proceedings (R. 85 EPC).

In J 5/23 of 4 September 2023, the Legal Board held that in the absence of an explicit legal basis, Art. 72 EPC was to be construed as requiring handwritten signatures of the parties. It must be noted however that R. 22 EPC was amended shortly after by decision of the Administrative Council CA/D 26/23 of 14 December 2023 (OJ 2024, A16), which entered into force on 1 April 2024. Accordingly, R. 2(2) EPC which provides that the authenticity of a document may be confirmed by handwritten signature or other appropriate means the

use of which has been permitted by the President of the EPO, shall apply mutatis mutandis to the signature of the parties in the context of R. 22 EPC. To this end, see decision of the President of the EPO dated 9 February 2024 concerning signatures on contracts and declarations under R. 22 and 85 EPC and R. 23 EPC (OJ 2024, A17).

The decisions listed below predate the entry into force of the aforementioned amendments to R. 22 EPC.

In **J 12/00** the Legal Board summarised the preconditions for registering a transfer of a European patent application (R. 20 EPC 1973; now R. 22 EPC) as follows: (i) a request of an interested party; (ii) the production of documents satisfying the EPO that the transfer has taken place; and (iii) the payment of an administrative fee. Documents relating merely to the obligation to transfer the right, but not to the transfer itself, were not sufficient to satisfy the EPO. Nor, according to the Legal Board, was it enough to cite registrations in different countries on the basis of documents other than assignment documents (similarly **J 4/10**).

In **T 128/10** the board held that the three requirements under R. 22 EPC in conjunction with R. 85 EPC, as formulated in **J 12/00**, did not need to be fulfilled at the same time. If they were met on different dates, the transfer would only have effect vis-à-vis the EPO at the date on which all the requirements mentioned above were fulfilled.

In **J 38/92** and **J 39/92** the Legal Board ruled that a transfer could only be recorded in the European Patent Register on the basis of an official document in accordance with R. 20(1) EPC 1973 if that document **directly** verified the transfer (similarly **J 4/10**). It did not suffice if a judgment was submitted which mentioned another document from which it was possible to verify the transfer.

In appeal proceedings, assessing whether there are documents satisfying the EPO that a transfer has taken place in accordance with R. 20(1) and (3) EPC 1973 and recording the transfer in the Register is a matter for the department of first instance responsible for making the entry in the Register. Accordingly, in appeal proceedings, substitution of another party for the original applicant is possible only once the relevant department of first instance has made the entry or where there is clear-cut evidence of a transfer (**J 26/95**, OJ 1999, 668; see also **T 976/97**; **T 1751/07**). In **T 393/15** the board held that evidence of a transfer could not be regarded as clear-cut if the person carrying out the transfer had not been clearly authorised to do so (see also **T 581/14**).

A transfer can be recorded in the Register even after deemed withdrawal of a patent application, if it is still possible that restitutio is available and the successor in title has taken, together with his request for registering the transfer, procedural steps suitable for restoring the application (**J 10/93**, OJ 1997, 91). See also **J 16/05**, **J 4/11**.

In **J 17/12** the Legal Board held that the transfer of a European patent application may not be recorded in the Register at a time when proceedings for the grant of the application are stayed under R. 14(1) EPC. There is nothing to stop the filing, during the suspension of grant proceedings, of a request to transfer the application, but no action will be taken on

the request during the suspension. While the fact of the transfer may not be apparent from the Register, it will be apparent from an inspection of the public file, as will the decision to stay the grant proceedings itself.

In **J 17/14** the Legal Board decided that the reversal of a completed transfer in the Register was not necessarily justified simply because doubts subsequently arose as to whether the claimed succession had been satisfactorily proven. There were cases where it might be more appropriate to stay the grant or opposition proceedings in favour of the party originally registered.

The Legal Board in **J 7/21** reviewed existing case law and concluded that none of the requirements in R. 22 EPC regarding the registration of transfers applied to cases of universal succession. See chapter III.O.1. "Party status as patent proprietor".

3. Stay of proceedings under Rule 14 EPC

3.1. Rule 14(1) EPC

3.1.1 General

Under R. 14(1) EPC (R. 13(1) EPC 1973) the EPO must stay the proceedings for grant ex officio if a third party provides it with evidence (under the EPC 1973, 'proof') that they have instituted proceedings against the applicant seeking a decision within the meaning of Art. 61(1) EPC (see **J 28/94**, OJ 1997, 400; **J 10/02**; **J 6/10**; **J 7/10**; **T 146/82**, OJ 1985, 267), unless the third party communicates to the EPO in writing their consent to the continuation of such proceedings, and unless the European patent application has been withdrawn or is deemed withdrawn (**J 28/94**, OJ 1997, 400; **T 146/82**, OJ 1985, 267). Suspension of proceedings during the period when the third party is seeking a judgement that they are entitled to the grant of the European patent has the objective of preserving the rights of the third party during the entitlement proceedings (**J 7/96**, OJ 1999, 443; **J 20/05**; **J 15/06**; **J 2/14**; **J 17/12**). A patent applicant who is not heard when grant proceedings are suspended at a third party's request pursuant to R. 13 EPC 1973 may still challenge the justification for that suspension (**J 28/94**, OJ 1997, 400).

In **J 14/19** the Legal Board summarised the previous case law as follows. A stay of grant proceedings takes effect immediately on the day the third party demonstrates that the requirements under R. 14(1) EPC have been met (**J 9/12**); proceedings can also be stayed with retroactive effect from that day (**J 7/96**, OJ 1999, 443; **J 36/97**; **J 15/06**). If a department of first instance has wrongly stayed grant proceedings, their continuation can be ordered on appeal only with effect for the future. The immediate effect of the stay cannot be set aside with retroactive effect or reversed by a decision in appeal proceedings (**J 9/06**; see also **J 10/19**).

In **J 28/94** (OJ 1997, 400) the Legal Board found that it was right not to hear the applicant in cases of suspension of proceedings, noting that R. 13 EPC 1973 said nothing about this. It justified the automatic and immediate nature of suspension by the fact that it

constituted a preventive measure in favour of the third party requesting it, and also by the need to maintain in full the rights derived from grant of the patent in dispute.

In **J 15/06** and **J 18/06** the Legal Board followed the justification in **J 28/94** (OJ 1997, 400). In **J 18/06** the Legal Board considered the communication ordering suspension to be a preliminary procedural measure "sui generis" which was justified as a preventive measure to preserve the third party's possible rights to the patent in dispute and took immediate effect. In **J 15/06** the Legal Board noted that the respondent's withdrawal of its request for suspension of the proceedings had significantly changed the procedural situation in the appeal proceedings. There existed no provision in the EPC that the withdrawal of a request for suspension had the effect that the suspension was automatically terminated. However, the existence of a legitimate interest of a third party was an unwritten prerequisite for a further stay of the proceedings under R. 13 EPC 1973. The withdrawal was therefore equivalent to and to be interpreted as consent to the continuation of the proceedings pursuant to R. 13(1) EPC 1973.

Under Art. 97(4) EPC 1973 (Art. 97(3) EPC) the grant proceedings ended on the date on which the European Patent Bulletin mentioned the grant. In the interim period, proceedings for grant were still pending before the EPO and a request for suspension of proceedings under R. 13 EPC 1973 was admissible (**J 7/96**, OJ 1999, 443). See also **J 33/95** of 18 December 1995, **J 36/97**, **J 15/06**, according to which the EPO could also order suspension pursuant to R. 13(1) EPC 1973 after the publication of the mention of the grant of a patent was acknowledged, provided that an allowable request had been filed before the publication. Suspension of the proceedings for grant meant that the legal status quo existing at the time they were suspended was maintained, i.e. neither the EPO nor the parties might validly perform any legal acts while the proceedings were suspended (**J 38/92** and **J 39/92**). See also **J 14/19**, in which the Legal Board held that proof of the existence of the conditions for a stay of proceedings under R. 14(1) EPC must be furnished during a pending grant procedure and thus before publication of the mention of grant in the European Patent Bulletin. Evidence filed after this date may not be taken into account by the EPO for this purpose.

In **J 20/05**, **G 1/09** and **J 9/12** the boards established that R. 14 EPC prevents the filing of a divisional application if the proceedings for grant concerning the earlier application are stayed. In **J 9/12** the Legal Board held that an application filed after the effective date of the stay of proceedings concerning the parent application, but before communication of stay, was to be treated as a divisional application.

In **J 10/02** the appellant argued that where an appeal was lodged against a decision to suspend grant proceedings, the provisions of R. 13 EPC 1973 appeared to be in conflict with those of Art. 106(1) EPC 1973, and that the provisions laid down by an article had to prevail over those of a rule. If the suspension of the grant proceedings were maintained, in spite of the pending appeal, this would amount to a serious procedural violation. The Legal Board, however, pointed out that the suspensive effect of an appeal served to provide an appellant with provisional legal protection in the sense that no action should be taken to implement the decision of the department of first instance in order not to deprive the appeal of its purpose. However, if the grant proceedings were continued and the

appellant were to arrive at a definitive end to the grant proceedings in its favour, this would be more than the appellant could achieve if it succeeded with the appeal under consideration.

3.1.2 Opening of proceedings before a national court

According to **T 146/82** (OJ 1985, 267), suspension had to be ordered if satisfactory proof of the opening of relevant proceedings before a national court was given to the EPO by a third party, provided that the European patent application had not been withdrawn or was not deemed to have been withdrawn.

In **J 36/97** the Legal Board, with reference to Art. 9(2) of the Protocol on Jurisdiction and the Recognition of Decisions in respect of the Right to the Grant of a European Patent of 5 October 1973 ("Protocol on Recognition"), stated that neither the jurisdiction of the national court whose decision was to be recognised nor the validity of such decision may be reviewed by the boards of appeal (see also **J 8/96**, **J 10/02**, **J 14/19**). When and how legally relevant civil proceedings were opened in a contracting state was likewise determined by national law (**J 7/00**). In **J 6/03** the Legal Board held that R. 13(1) EPC 1973 referred to proceedings which resulted directly, i.e. generally and automatically, in decisions mentioned in Art. 61(1) EPC 1973. The provision was therefore not applicable in respect of decisions of courts of third states (here, Canada).

In **J 9/06** the Legal Board pointed out that, according to **G 3/92** (OJ 1994, 607), only the courts of the contracting states had jurisdiction to decide claims to entitlement to the right to the grant of a European patent. It was not possible for the EPO, nor was it its function in the context of the examination of a request to suspend proceedings under R. 13 EPC 1973, to examine whether the subject-matter disclosed in a European patent application in respect of which suspension was requested corresponded to the disclosure of another application, ownership of which was disputed before a national court.

In the same vein, the Legal Board in **J 14/19**, observed that R. 14(1) EPC (R. 13(1) EPC 1973) did not specify when national proceedings were deemed to have been instituted. The issue of when they became pending was therefore to be assessed under the procedural law of the country whose courts had been asked to take a decision within the meaning of Art. 61(1) EPC (see also **J 2/14**, **T 1138/11**). Article 8 of the Protocol on Recognition supported this interpretation. It provided that if proceedings based on the same claim to a grant of a European patent and between the same parties were brought before different courts, the court to which a later application was made had to decline jurisdiction in favour of the court to which an earlier application had been made. Which court had been applied to first had to be determined on the basis of when proceedings had become pending. The Legal Board in **J 14/19** further held that, where the EPO was called on to apply foreign law, it had to do so within the overall context of the foreign legal system, wherever possible. When interpreting the foreign legislation to be applied, it was not bound by the case law of national courts, but if it was aware of the case law, in particular of the highest national courts, it should consider and evaluate it in coming to its decision. As regards whether instituting national proceedings might have involved an abuse of law ("Rechtsmissbrauch"), the Legal Board held that, to avoid contradictory interpretations, the

EPO should rule on any such issues autonomously, i.e. irrespective of national legal systems, even when they arose in relation to staying proceedings. Improperly asserting a right could amount to an abuse of law in some cases, for instance if the right was asserted predominantly with a view to causing damage, ahead of other, legitimate aims. The abuse of law had to be established beyond any doubt; that meant carefully examining and weighing up the circumstances of the individual case, with the burden of proof falling on whoever alleged the abuse.

In **J 15/13** the Legal Board found that while it was established case law that the board was not allowed to examine the substance and merits of a national entitlement case, the board's power of examination could not be limited to merely checking whether the claim submitted with the entitlement suit was directed to the transfer of the application, but – to a certain extent – it also allowed and possibly even required a consideration of the grounds given in the complaint of the entitlement suit. The board had to verify that the national proceedings were in accordance with R. 14(1) EPC, since to request a stay of the grant proceedings was a strong weapon which could be misused.

In **T 1473/13** the appellant's request for a stay of proceedings mentioned constitutional complaints pending before the German Federal Constitutional Court (FCC) on the basis of claimed insufficient judicial relief at the EPO against decisions of the boards of appeal. With reference to one of the constitutional complaints, the board explained that the appellant in the case in hand had not stated why and how a ruling on certain provisions of the EPC, its Implementing Regulations, the RPBA and the RPEBA could impact on other board decisions with effect for Germany. For the board it was not obvious that any FCC decisions on the constitutional complaints would have direct legal implications beyond those cases concerned. The appellant had also stated no possible disadvantage from a decision of the board in the case in hand in case of success of the constitutional complaints. The board held that in the absence of an established disadvantage for the appellant, the respective adverse consequences of staying or not staying the proceedings (i.e. the delay of the proceedings) could not be balanced. Consequently, the board held that the request for a stay must be refused.

3.2. Rule 14(3) EPC

Under R. 14(3) EPC (R. 13(3) EPC 1973), upon staying the proceedings for grant, the EPO may set a date on which it intends to resume the proceedings for grant, regardless of the stage reached in the national proceedings under R. 14(1) EPC. It is clear from the wording of R. 14(3) EPC that this is a discretionary decision (**J 33/03**; see also **J 2/14**; **J 3/18**).

In **J 10/02** the Legal Board, exercising its discretion under R. 13(3) EPC 1973 took into account the fact that the entitlement proceedings only concerned part of the invention and the duration of the suspension.

In parallel decisions **J 6/10** and **J 7/10** the Legal Board held that some aspects of the exercise of discretion under R. 14(3) EPC were (i) how long the proceedings before the national courts/authorities had been pending (with a period of more than four years held

to be considerable both for grant proceedings to be stayed and for entitlement proceedings to be pending in first instance) (ii) the duration of the suspension of grant proceedings, and (iii) requests for suspension of grant proceedings filed at a late stage.

In **J 15/13** the Legal Board held that the filing of the request under R. 14(1) EPC at the last possible moment could only be taken as an argument for the resumption of the grant proceedings if such behaviour appeared to be a misuse of the respondent's right to a stay of the grant proceedings.

In **J 4/17** the Legal Board held that the legislator had left it to practice and jurisprudence to define the circumstances that justify setting a date for resumption on a discretionary basis. Resumption of the proceedings was not limited to cases involving misuse or delaying tactics. The possibility that the EPO sets a date for resumption upon staying the proceedings for grant hints towards a broader construction. However, an applicant cannot justify its request for resumption based on the length of the entitlement proceedings where this duration has been significantly caused by the applicant's procedural conduct.

In **J 13/12** the Legal Board decided that in exercising its discretion under R. 14(3) EPC, the EPO had to weigh the interests of the applicant up against those of the third party which had brought a national action to determine rights against the applicant. The Guidelines for Examination, as internal administrative guidelines, could also be consulted; but they gave no indication that the national proceedings had to be finally determined, where applicable after exhaustion of all legal remedies, before a date for resuming the grant proceedings could be set, or at any rate before they could actually be resumed. See also **J 14/19**.

In **J 1/16** the Legal Board held that where, when deciding not to resume proceedings, the Legal Division had properly identified and exhausted its scope for discretion and weighed up the situation in the light of all the relevant factors, without being influenced by anything irrelevant and without making any logical mistakes in its assessment of the facts, it was not open to the Legal Board to exercise its own discretion in the Legal Division's place. Where a decision is basically to be upheld, a subsequent change in circumstances (in the case in hand: an appeal court ruling in national entitlement proceedings) can nevertheless present a ground for adapting it.

In **J 3/18** the Legal Board agreed with the decision of the Legal Division not to set a date for resumption of the grant proceedings pursuant to R. 14(3) EPC. The appellant had alleged, inter alia, that further actions of the respondent (third party) could last for at least a further six years. The Legal Board found that the fact that litigation in the Belgian legal system was extremely long until the final decision is reached could not influence the outcome of the appeal proceedings, because it was unclear how long these proceedings would actually take and what consequences these would have for the parties.

The board held in **T 146/82** (OJ 1985, 267) that if, in accordance with R. 13(3) EPC 1973, the EPO set a date on which it intended to continue the proceedings for the grant of the European patent, the date might be varied or the order staying the proceedings might be

discharged at the subsequent request of the applicant or of the third party who applied for the order.

In parallel decisions **J 10/21** and **J 11/21** the Legal Board held that, when exercising discretion under R. 14(3) EPC, the Legal Division had to weigh up the interests of the applicant against those of the third party who had initiated the national entitlement proceedings, and in doing so keep in mind the legislative aim of Art. 61 EPC (**J 14/19**, **J 13/12** and **J 2/14**). However, only the national courts had the competence to settle the issue of actual entitlement. As a rule, therefore, the EPO had to weigh up the relevant interests under R. 14(3) EPC without any assessment of the merits of the national court proceedings (**J 24/13** und **J 2/14**) and thus on the basis of different criteria. The Legal Board observed first of all that the following factors in particular had to be taken into account (**J 14/19**, **J 6/10** and **J 15/13**): (i) how long the proceedings before the national courts or authorities had already been pending, (ii) how long the grant proceedings had already been stayed, (iii) whether the stay had been requested at a late stage in the grant proceedings and (iv) whether the third party's conduct had involved any abuse of rights. It was for the applicant to submit the facts forming the basis for assessing these or other criteria.

5. Remittal following filing of observations 1190

1. Introduction

Under Art. 115 EPC, any third party may present, in proceedings before the EPO, following publication of the European patent application, observations concerning the patentability of the invention to which the application or patent relates. There are no fees or deadlines for presenting such observations. The third party is not a party to the proceedings. Rule 114(1) EPC requires that any such observations be filed in an official language of the EPO, while R. 114(2) EPC states that they will be communicated to the applicant or patent proprietor. Third-party observations are an integral part of the file and, as such, open to inspection under Art. 128 EPC. More information can be found in the Guidelines (see e.g. Guidelines A-VII, 3.5, A-XI, 2.1, D-X, 4.5 and E-VI, 3 – April 2025 version), the decision of the President of the EPO dated 10 May 2011 (OJ 2011, 418) and the notice from the EPO dated 5 July 2017 concerning the filing and processing of third-party observations (OJ 2017, A86).

Observations must be restricted to the substantive requirements of the EPC (see for instance **T 172/13**, where third-party observations relating to procedural issues, i.e. admittance of claim requests, were held inadmissible). Most observations concern lack of novelty and/or lack of inventive step. In the proceedings for petition for review **R 18/11** third-party observations were filed. The Enlarged Board considered the observations to be inadmissible, because according to Art. 115 EPC such submissions had to concern patentability, and patentability issues could not be the subject of review proceedings under Art. 112a EPC.

EPO departments have discretion under Art. 114(1) EPC to admit third-party observations of their own motion, in particular where they consider them to have some bearing on the outcome of the proceedings (**T 1216/12**). Observations that contain legal or technical information relevant for the decision in hand will generally be considered (**T 866/01**).

Article 115 EPC helps to ensure that no legally invalid patents are granted or maintained. The public must be able to rely as far as possible on the legal validity of a patent granted by the EPO (**T 156/84**, OJ 1988, 372; **T 1495/09**). This provision protects the public interest in ensuring that no European patent is granted which does not meet the EPC requirements and, to that end, permits third parties to act as, so to speak, the public's "mouthpiece" by providing additional information to support the expertise within the EPO (**G 2/19**, OJ 2020, A87; **T 60/91**, OJ 1993, 551).

2. Formal requirements

2.1. Language of the documents

Under R. 114(1) EPC, any observations by a third party must be filed **in writing** in an official language of the EPO, i.e. English, French or German; otherwise, they are deemed not to have been filed (Art. 14(4) EPC). Observations not filed in an official language and so deemed not to have been filed are nevertheless added to the file and so accessible to the public under Art. 128(4) EPC. Third-party observations will be communicated to the applicant or patent proprietor even if they have not been filed in one of the prescribed official languages (Art. 14(4) EPC, R. 114(1) EPC).

Rule 114(1) EPC also explicitly provides for applicability of R. 3(3) EPC, which states that **documentary evidence** and, in particular, publications may be filed in any language. The EPO may, however, require that a translation in one of its official languages be filed, within a period to be specified. If a translation is not filed in due time, the EPO may disregard the document in question.

2.2. When can third-party observations be filed?

Article 115 EPC specifies that observations cannot be filed until after publication of the European patent application but sets no upper time limit for their presentation by persons wishing to make adverse observations concerning the patentability of inventions claimed in patent applications/patents. This means that observations can also be filed during opposition proceedings, even after expiry of the opposition period, and during appeal proceedings (**T 390/90**, **G 9/91**, OJ 1993, 408, **T 1756/11**, **T 2255/15**, **T 972/22**). Art. 115 EPC explicitly covers all proceedings before the EPO and so applies, in principle, to revocation and limitation proceedings too.

2.3. Pending proceedings

Article 115, second sentence, EPC according to which a third party shall not be "a party to proceedings before the European Patent Office", assumes that proceedings are pending before the EPO.

In **T 580/89** observations submitted by a third party were not added to the file until after the decision had been taken and were therefore not considered.

In **T 690/98** the question arose as to whether observations filed by a third party could give rise to a reassessment by the EPO of its own motion, under Art. 114(1) EPC, of the patentability of the subject-matter of the contested patent, even if the appeal proved to be inadmissible. In the board's view, the answer was no, since the admissibility of an appeal, according to Art. 110(1) EPC 1973, was a prerequisite for examination of the appeal. The substance of the contested decision could only be examined when admissibility was established. Therefore, objections by third parties lodged at the appeal stage were not to be examined by the EPO of its own motion as there no appeal proceedings were pending.

2.4. Anonymously filed observations

According to the EPO notice dated 5 July 2017 concerning the filing and processing of third-party observations (OJ 2017, A86), third-party observations may be filed anonymously.

In the inter partes proceedings **T 735/04**, document D6, a patent application by one of the patent proprietors, was cited in anonymous third-party observations. Since D6 was highly relevant for the patentability of the claimed subject-matter and could cause the patent to be revoked, it was introduced into the proceedings.

In **T 146/07** anonymous third-party observations were received by the board at a very late stage. According to R. 114(1) EPC, any observations by a third party must be filed in writing. The board stated that this requirement implied that the observations had to be signed (see R. 50(3) and 86 EPC) in order to allow an identification of the third party. Identification is particularly important in the context of opposition proceedings in order to allow the competent organ of the EPO to verify whether the observations have indeed been filed by a third party rather than by a party to the proceedings. Otherwise, a party might be tempted to submit late observations and/or documents by means of anonymous third-party observations in order to avoid negative procedural consequences such as apportionment of costs. The board was aware that anonymously filed third-party observations might nevertheless be adopted by a party to the proceedings as its own or may even trigger objections by the competent organ of the EPO of its own motion (see above **T 735/04**). In the absence of such a further procedural act, anonymous third-party observations are to be disregarded altogether. This view is in line with the decisions **G 1/03** and **G 2/03** (OJ 2004, 413 and 448) in which the Enlarged Board refused to take into account an anonymously filed third-party statement. In **T 1439/09** and **T 1635/15** the board agreed with this line of reasoning. Therefore, the anonymous observations filed under Art. 115 EPC were deemed not to have been filed and were disregarded by the board.

In view of these decisions, the board in **T 1756/11** held that anonymous third-party observations made at a very late stage in the opposition appeal proceedings should be disregarded on formal grounds, in order to preclude covert abuse of procedure by parties to the proceedings. Likewise in **T 1181/12**, **T 379/13**, **T 345/15** and **T 1876/18** the board

did not take into consideration third-party observations which were submitted anonymously during the appeal proceedings.

In **T 1336/09**, however, the board came to the conclusion that in this **ex parte case** the anonymous character of the third-party observations did not bar them from being admitted into the procedure. The board referred to earlier decisions of the boards, which did admit such observations, both in ex parte and inter partes appeal proceedings without apparent misgivings in relation to their anonymous character (**T 735/04**, **T 258/05**). Unlike **T 146/07**, which had concerned an inter partes appeal, the case at hand here (**T 1336/09**) concerned ex parte proceedings, in which the appellant was the sole party and could raise new issues or submit new prior art at any time – as could the board of its own motion by virtue of Art. 114(1) EPC. Accordingly, the risk of anonymous third-party observations providing a cover for procedural abuse could largely be excluded.

In **T 1528/13** the board noted that observations under Art. 115 EPC had been received and signed by a member of a firm of European representatives. That meant they did not come from an unidentified third party and were therefore not inadmissible on that basis (see also **T 1224/09**).

2.5. Reasons for observations

Rule 114(1) EPC requires, among other things, that third-party observations state the grounds on which they are based.

In **T 189/92** the board held that it was the responsibility of the third party to ensure that the facts and evidence filed were not only unequivocally clear but also as complete as possible, so that they could be handled directly by the investigating instance without doubt and without further inquiry.

In **T 908/95** the evidence adduced to show fulfilment of the criteria for establishing public prior use, in particular public availability, did not substantiate or prove such fulfilment to the extent that the allegation could be accepted. The board found that the additional inquiries needed to prove it, which might even include the hearing of witnesses, could only be conducted with the co-operation of the "third party", but that this was impossible where the person in question was not a party to the proceedings. The third party's observations therefore had to be disregarded (see also **T 73/86**).

In **T 301/95** (OJ 1997, 519), the opposition division had disregarded third-party observations as to a claim of public prior use, as the alleged facts had not been proven with near certainty.

3. Third party's legal status

3.1. General issues

Article 115, first sentence, EPC states that **any** third party may present observations. There is no requirement to state whether the third party is acting in its own name or on behalf of someone else (**T 1224/09**, **T 1528/13**).

In **T 811/90** the patentee had filed an appeal against a decision of the opposition division concerning the removal of certain documents from the public part of the file. The opponent was not a party to the impugned decision and was consequently not entitled to be a party to the proceedings before the board. The request of the opponent was therefore inadmissible but was admitted as an observation by a "third party".

Similarly, the board in **T 446/95** held that the intervention of a company was inadmissible, so its auxiliary requests were also inadmissible. However, there was nothing to prevent the company's observations and the documents it had filed from being dealt with under Art. 115 EPC 1973 (**T 223/11**).

In **T 7/07** the board agreed with the findings in **T 1196/08** that an intervention based on proceedings for infringement of a patent that has effect in a particular state solely on the basis of national law is inadmissible. The intervener's submissions were consequently regarded as third-party observations under Art. 115 EPC.

In **T 887/04** of 14 November 2006 the board found that, although the intervention had to be held inadmissible, account had to be taken of document D5 cited by the intervener under Art. 115 EPC 1973 for the purposes of examining novelty and inventive step, because, despite its belated submission, it was highly relevant. On the admissibility of interventions, see chapter III.P.1.

In **T 1860/13** the board stated that with the withdrawal of their oppositions, the opponents renounced to their positions as parties to the proceedings and accordingly to any active role in them. The fact that the opposition division continued ex officio with the examination of the oppositions did not affect this. The submissions filed by opponent III, following the filing of the statement of grounds by the appellant (patent proprietor), were therefore regarded as observations made by a third party.

3.2. Third party's procedural rights

According to Art. 115, second sentence, EPC a third party is not a party to the proceedings. In principle, therefore, third parties have none of the procedural rights associated with such status, in particular the right to appeal and the right to be heard (**T 1756/11**; **G 2/19**, OJ 2020, A87; see also **T 1196/08** citing **G 4/88**, point 2 of the Reasons). In **T 831/17** of 21 October 2019, the board observed that the EPC legislator had decided to confer a right of appeal only on parties to proceedings and not on authors of third-party observations (**T 660/19**). It was held in **G 2/19** that a third party does not become a party to proceedings by virtue of its comments having been considered in those

proceedings. A third party's lack of status as a party to the proceedings also goes hand in hand with a lack of any adverse effect, for legal purposes, ensuing from the decision taken in those proceedings. That is consistent with the object and purpose of Art. 115, first sentence, EPC.

In **T 951/91** (OJ 1995, 202) the board found that by interpreting the words "shall not be a party to the proceedings" in Art. 115 EPC 1973 in the light of their object and purpose, it was clear that they were intended exclusively to cut down, and not to extend, the rights of third parties, still less to extend their rights beyond the rights of parties to the EPO (see also **T 1756/11**, **T 1528/13**, **T 2255/15**, **T 1574/17** and **T 1779/17**).

According to **T 390/07,** the admissibility of third-party observations is entirely a matter for the board as a third party within the meaning of Art. 115 EPC is not a party to the proceedings and has no more than an opportunity to "present observations". While it is well-established by case law that third-party observations can be considered, both at first instance and on appeal, there is no obligation on the board beyond such consideration and no right of a third party to be heard on the admissibility of its observations or any evidence in support of them. The actual parties to proceedings have the right to be heard in relation to such observations, but their admissibility is entirely a matter for the board.

In **T 283/02** the opposition division had duly forwarded the observations by third parties to the patentee, who had made no comment. The failure of the opposition division to mention these observations in its decision did not constitute a procedural violation, even though a mention would have been desirable. See also, in **T 1756/11**, in which the board observed that the opposition divisions should at least comment on the relevance of third-party observations, for example in the summons to oral proceedings (see also **T 972/22**).

4. Third-party observations in opposition-appeal proceedings

4.1. Third-party observations and the extent of opposition

Examination of an opposition is limited to the extent to which the patent is opposed in the notice of opposition. If the opponent limits the notice of opposition to certain matters, the remaining matters are not opposed within the meaning of Art. 101 and 102 EPC 1973 (now merged in Art. 101 EPC) or the subject of any proceedings within the meaning of Art. 114 and 115 EPC 1973 (**G 9/91** and **G 10/91**, OJ 1993, 408 and 420). The opponent thereby deliberately refrains from exercising its right under the EPC to oppose the other matters covered by the patent and, consequently, the EPO has no competence to deal with them at all. For more details on the extent of opposition, see chapter IV.C.3.2.

Following **G 9/91** and **G 10/91**, the board in **T 580/89** of 28 April 1993 concluded that it had no power to examine the patentability of the subject-matter of claims which had not been opposed in the notice of opposition but were the subject of observations by the third party under Art. 115 EPC 1973 which had not reached the EPO until after the decision of the opposition division had been taken.

4.2. Introducing a fresh ground for opposition in opposition proceedings

An opposition division may, in application of Art. 114(1) EPC, of its own motion raise a ground for opposition not covered by the statement pursuant to R. 55(c) EPC 1973 (R. 76(2)(c) EPC) but referred to by a third party under Art. 115 EPC 1973 after the expiry of the time limit laid down in Art. 99(1) EPC 1973. The Enlarged Board emphasised that the consideration of grounds not properly covered by the statement should only take place before the opposition division in cases where, prima facie, there were clear reasons to believe that such grounds were relevant and would in whole or in part prejudice the maintenance of the patent. The possibility under Art. 114(2) EPC of disregarding facts and evidence in support of fresh grounds not submitted in due time should, of course, also be kept in mind (**G 9/91**, OJ 1993, 408; **T 356/94**; **T 1053/05**).

4.3. Introducing a fresh ground for opposition in appeal proceedings

In an appeal procedure, the provisions of Art. 114(1) EPC have to be interpreted in a more restrictive manner than in an opposition procedure and, accordingly, fresh grounds for opposition raised by an opponent or referred to by a third party under Art. 115 EPC 1973 after expiry of the time limit laid down in Art. 99(1) EPC 1973 may in principle not be introduced at the appeal stage, unless the patentee agreed (**G 9/91** and **G 10/91**, OJ 1993, 408, 420).

In **T 667/92** of 27 November 1996 the board disregarded third-party observations because the patentee had not consented to their admission.

In **T 1667/07** some documents which were copies of submissions made by third parties during the examination of the application were submitted as evidence in support of fresh grounds for opposition raised for the first time on appeal. The board pointed out that since, according to **G 10/91**, it could not consider the fresh grounds of opposition put forward by the appellant for the first time in appeal proceedings – as the patent proprietor opposed to their introduction into the proceedings – it could not consider **evidence** submitted in their support either.

4.4. Third-party observations presented after expiry of the opposition period

4.4.1 General

Because Art. 115 EPC sets no upper time limit for presenting third-party observations, in principle they can also be filed after expiry of the opposition period, and so even during inter partes appeal proceedings. Although the Art. 114(2) EPC provision on late-filed submissions mentions only the parties to the proceedings, established case law holds that submissions (i.e. facts and evidence) emerging from third-party observations not filed until after expiry of the opposition period are likewise to be treated, by way of a legal fiction, as "late". This means that Art. 115 EPC cannot serve to extend third parties' rights, let alone extend them beyond the rights of parties to the proceedings. In other words, where third-party observations are filed after the time limit under Art. 99(1) EPC, the principle enshrined in Art. 114(1) EPC of examination by the EPO of its own motion is to be applied

on the fictional basis that those observations are late, i.e. they are subject to the criteria developed in the case law for the board's exercise of discretion in deciding whether to admit late-filed submissions within the meaning of Art. 114(2) EPC. **T 1756/11** citing **T 580/89**, **T 951/91**, **G 9/91** and **G 10/91**; see also **T 402/12**, **T 1216/12**, **T 1528/13**, **T 1285/15**, **T 1574/17**, **T 2913/19**, **T 972/22**.

It is also established case law that, since the RPBA specify some criteria for exercising this discretion in appeal proceedings with respect to the submissions of the parties to the proceedings, these criteria also apply to third-party observations. See e.g. **T 2255/15**, **T 1779/17**, **T 2391/18**, **T 1321/19**, **T 2913/19**, **T 2342/19**.

Irrespective of a third party's legal status, the principle that the EPO must examine the facts of its own motion in first-instance administrative proceedings does not have the same legal importance in judicial appeal proceedings, in particular in inter partes proceedings (**G 9/91** and **G 10/91**, OJ 1993, 408, 420). See chapter V.A.3.3. "Facts under examination – applying Art. 114 EPC in appeal proceedings ".

In **T 301/95** of 28 March 2000 a third party had alleged public prior use after expiry of the period for opposition, i.e. belatedly. Under Art. 114(2) EPC, it was at the discretion of the opposition division and the board whether or not to consider the belated submissions, but in deciding whether to do so, the most important criterion was the relevance of the belatedly cited prior art. The observations were not considered.

According to **T 923/10,** the boards have discretion to take such observations into consideration or to disregard them. When exercising their discretion, the boards normally take criteria into account which they consider when they decide about the admissibility of submissions by parties to the proceedings that are considered "late-filed" in view of Art. 114(2) EPC and the RPBA. These criteria include the relevance of the submissions filed (see for example **T 1137/98**, **T 390/07**, **T 544/12**). More specifically, it is the boards' established case law that a crucial factor is whether submissions filed late in appeal proceedings are prima facie highly relevant, i.e. likely to change the outcome of the proceedings (**T 1216/12**, **T 2342/19**, **T 1321/19**). In **T 1348/11** the board added that submissions provided by a third party should not be given a more favourable status than submissions of a party to the proceedings to whom Art. 114(2) EPC applies (**T 1574/17**, **T 1427/21**).

4.4.2 Third-party observations admitted

In **T 1216/12** third-party observations had been filed together with an employee statement asserting that the test results cited in the notice of opposition were erroneous and so irrelevant. The board observed that, since these test results had been used in the contested decision as a basis for assessing whether the claimed subject-matter involved an inventive step, the statement raised serious doubts about that assessment. It therefore admitted the observations as prima facie highly relevant.

In **T 1224/09** a third party had submitted documents D53 to D55 (Japanese patent applications) at the start of the appeal proceedings. The board considered documents D53

to D55 to be prima facie relevant, as they had led to the refusal of the corresponding application before the Japanese Patent Office. The board stated that third-party observations could be submitted at any time as long as proceedings were pending. Admitting and considering such observations, however, was an issue to be decided by the competent department of the EPO. In the case of the boards of appeal, the principles set out in Art. 13 RPBA 2007 seemed to be a reasonable basis on which the discretion to admit the third-party observations was to be exercised.

The observations under Art. 115 EPC were filed more than 1 1/2 years before the oral proceedings so that the parties and the board had sufficient time to consider the document. The board had also notified the parties that it considered document D27 to be relevant. None of the parties had requested that the submission of the third party be disregarded. Thus, exercising its discretion pursuant to Art. 114(2) EPC, the board decided to admit the submission of the third party into the proceedings (**T 458/07**).

4.4.3 Third-party observations not admitted

In **T 637/09** the board took into account that, when exercising its discretion, it should not accord the third party within the meaning of Art. 115 EPC more favourable treatment than would be given to an actual party seeking to introduce such submissions shortly before the oral proceedings. The board explained that the third-party observations contained inter alia new submissions which would, if admitted at that late stage, have compromised the fairness of the proceedings. Hence, the third-party observations were not admitted into the proceedings (see also **T 1348/11**, **T 346/15** and **T 1876/18**).

In **T 953/02** the respondent had challenged the submission under Art. 115 EPC 1973 because of a signature which was deficient, i.e. not that of a natural person. The submission by the third party was filed substantially less than one month before the oral proceedings. The board did not admit it into the proceedings.

In **T 1528/13** not only had the third-party observations been presented well after the notice of appeal had been filed but neither they nor the evidence produced in support of them appeared prima facie any more relevant than the submissions already on file. See also **T 771/13**.

5. Remittal following filing of observations

A board may choose to remit a case to the department of first instance as a result of observations filed under Art. 115 EPC. See for example, **T 249/84** and **T 176/91** of 10 December 1992.

In **T 929/94** a preliminary examination by the board of the third-party observations and the supporting material showed that an entirely new case based on new facts and evidence had been presented against the patentability of the claimed invention in these observations. In order to preserve the applicant's right to review through appeal of any adverse decision of the department of first instance, the board remitted the case for examination of and decision upon such new material, as requested by the applicant.

In **T 41/00** a document submitted during the appeal proceedings by a third party under Art. 115 EPC 1973 appeared to come closer to the claimed subject-matter than any of the prior-art citations considered during the examination proceedings. However, since the question of whether the document had been available to the public at the patent's priority date remained open, the case was remitted to the department of first instance.

In **T 848/06** the board intended to remit the case to the department of first instance. The board concluded that it would not be appropriate for the board to take into account the third-party observations so as not to prejudice their consideration by the said department.

In **T 30/01** the case was remitted to the department of first instance for further prosecution. The board stated that the opposition division would also have to consider whether to admit or disregard the observations presented during the appeal proceedings by the third party and partially incorporated by reference in the respondent's own case. Similarly, see **T 172/13** where the case was remitted for further prosecution and the board left it for the examining division to decide whether to take the second third-party observations into account.

For more details on remittals, see chapter V.A.9. "Remittal to the department of first instance".

O. Transfer of party status

1. Party status as patent proprietor 1192
2. Party status as opponent 1193
2.1. General principles 1193
2.2. Universal succession 1194
2.3. Transfer together with the business assets to which the opposition relates 1195
2.4. No transfer: sale of opponent's subsidiary company 1197
2.5. Legal uncertainty as to who is the correct party 1198
2.6. Evidence for and effect of a transfer 1198
2.6.1 Date of effective transfer 1199
2.6.2 What kind of evidence suffices 1200
2.6.3 Natural heir 1202
2.7. Effect of finding that no transfer took place during opposition proceedings 1202
2.8. No administrative fee for a transfer of opponent status 1202

1. Party status as patent proprietor

Where the European patent is transferred during opposition proceedings, the new patent proprietor entered in the Register takes the place of the previous patent proprietor both in the opposition and in the appeal proceedings. The new patent proprietor's entitlement may not be questioned in these proceedings (**T 553/90**, OJ 1993, 666).

For a transferee of a patent to be entitled to appeal, the necessary documents establishing the transfer, the transfer request and the transfer fee pursuant to R. 22 EPC must be filed **before** expiry of the period for appeal under Art. 108 EPC. Later recordal of the transfer does not retroactively validate the appeal (**T 656/98**, OJ 2003, 385). In appeal proceedings, substitution of another party for the patent proprietor is possible only once the relevant department of first instance has made the entry in the Register or where there is clear-cut evidence of a transfer (**J 26/95**, OJ 1999, 668, **T 593/04**). The procedural requirements to be fulfilled for recording the transfer of a European Patent in the Register (filing of a request, providing evidence, payment of a fee) need not be fulfilled at the same time. If they are met at different times, the transfer takes effect vis-à-vis the EPO from the date on which all of these requirements are fulfilled (**T 128/10**). The original party remains, as long as the transfer has not been proven, a party to the proceedings, with all its rights and obligations (see **T 870/92** of 8 August 1997). A name change does not result in a change of legal identity (see **T 19/97** and, in this chapter III.O.2.1, **T 7/21**).

In **T 1068/15** and **T 1001/15** the applicant requested transfer of the patent application during pending appeal proceedings. The Legal Division did not register the alleged transfer. The board considered that it had to examine the question of party status ex officio before dealing with the substance of the case (with reference to **G 2/04**). In doing so it was not bound by the assessment of other departments of the EPO or by the state of the Register (with reference to **T 854/12**).

In **T 15/01** (OJ 2006, 153) the board distinguished between the situation where a party acquired a patent through a transfer, as in **T 656/98** and through a merger, as in the case before the board. It held that R. 20(3) EPC 1973 (now R. 22(3) EPC) did not apply in the latter case, where the change of proprietor status was caused by universal succession in law. The universal successor of a patent applicant or patentee automatically acquired party status in proceedings pending before the EPO.

The transfer of party status as patent proprietor must be distinguished from a "transfer" of the legal entity from one jurisdiction to another. In **T 786/11** the patent proprietor had requested that the address of the "applicant (patentee)" be changed from one in the British Virgin Islands to one in Mauritius and submitted evidence that it had merely changed its address. The board held that both these jurisdictions – unlike many others – allow a legal entity to be transferred from one jurisdiction to the other without any effect on its identity. The board therefore concluded that the respondent had been "transferred" from the British Virgin Islands to Mauritius and had continued as a legal entity under Mauritian law (see also **T 2330/10** and **T 1458/12**).

2. Party status as opponent

2.1. General principles

The status as an opponent cannot be freely transferred (**G 2/04**, OJ 2005, 549). The opponent does not have a right of disposition over its status as a party. If the opponent has met the requirements for an admissible opposition, it is and remains an opponent until the end of the proceedings or its involvement in them. The opponent cannot offload its status onto a third party (**G 3/97**, OJ 1999, 245, **T 298/97**, OJ 2002, 83).

However, in the following two circumstances the status as an opponent may be transferred:

- in the case of universal succession of the opponent (**G 4/88**, OJ 1989, 480, **T 475/88**, **T 1091/02**, OJ 2005, 14); or

- when a relevant part of the opponent's business has been transferred (**G 2/04**, **T 670/95**), in which case the transfer or assignment of the opposition to a third party has to be made as part of the transfer or assignment of the opponent's business assets together with the assets in the interests of which the opposition was filed (**G 4/88**, OJ 1989, 480).

Opponent status may also be transferred in opposition appeal proceedings (**T 659/92**, OJ 1995, 519, **T 670/95**, **T 19/97** and **T 1268/17**). In **T 563/89** the board held that the right to lodge an appeal may also be transferred to a third party, based on the same reasons as developed in case **G 4/88**.

A transfer of an opposition has to be requested at the EPO together with supporting evidence before it can take effect (**T 1137/97**, **T 19/97**, **T 1911/09** and **T 1268/17**). This does not apply to cases of universal succession where the opponent status is automatically acquired from the date of the effective succession (**T 6/05**, **T 425/05**,

T 2382/10); in the case of universal succession the change may – upon request and production of evidence by either party – be recorded with retroactive effect as from the effective date of the legal succession (**T 2357/12**).

The EPO has a duty to examine, ex officio, the status of the opponent at all stages of the proceedings. This duty not only extends to the admissibility of the original opposition, but also to the validity of any purported transfer of the status of opponent as a new party (**T 1178/04**, OJ 2008, 80). Even if the objection against the admissibility of the appeal and the appellant's status as party is raised very late, namely at the beginning of the oral proceedings before the board, this issue has to be examined ex officio at every stage of the appeal proceedings; an appellant's objection against the late introduction of this issue can therefore not succeed (**T 1415/16**).

In **T 7/21** company X GmbH had filed an opposition against the patent in suit as opponent 1. The company had been renamed Y GmbH, as evidenced by the extract from the commercial register submitted by the appellant. The board concluded that Y GmbH was therefore entitled to file an appeal against the decision of the opposition division. The fact that the name change had not been recorded in the EPO's systems until some time after it had taken place and/or that the request for transfer had not been directly accessible to the public via file inspection did not change the status of Y GmbH as opponent 1.

2.2. Universal succession

In **T 349/86** (OJ 1988, 345) the board referred to R. 60(2) EPC 1973, which stated that in the event of the death of the opponent the opposition proceedings could be continued by the EPO of its own motion, even without the participation of the heirs. According to the board this may be read as definitely stating that an opposition may be transferred to a deceased opponent's heirs and, by analogy, to a company absorbing the opposing company by merger or takeover (see also **T 1091/02**, OJ 2005, 14). In **G 4/88** the Enlarged Board confirmed that the opposition may be transferred to the opponent's universal successor in law (point 4 of the Reasons). In **T 475/88** the board held that the appeal was admissible because the opponent status had been transferred to the company that filed the appeal as a result of its merger with the initial opponent.

In **T 2357/12** the board was concerned with a situation in which the transfer of all assets of an enterprise had been made whose legal entity had subsequently been dissolved. The board noted that "universal succession" as an exception to R. 22(3) EPC was a concept of procedural law under the EPC and was to be construed autonomously by the EPO, independently of national law. Under the case law of the boards of appeal, the main considerations for acknowledging that a universal succession has taken place were legal certainty as to the person of the successor and the need to avoid a legal vacuum. The transfer of all assets of an enterprise, immediately followed by its dissolution as a legal entity, could therefore constitute universal succession. The board concluded that although there was no genuine concept of "universal succession" under the national law in question (State of Delaware), the case at hand was to be considered one of universal succession under the EPC. See also **T 1755/14** for a case in which universal succession occurred through "accrual" ("Anwachsung" under German law).

In **T 660/15** the board agreed with **T 2357/12** that the concept of universal succession had to be interpreted autonomously, i.e. independently of national law. An essential point for accepting universal succession was that there was only one transferee possessing all the assets and the former opponent had ceased to exist, so that no legal uncertainty could arise about who the opponent was. See also **T 1575/17**, which was a case of universal succession as per the case law of the boards of appeal (**G 4/88**, **T 475/88** and **T 2357/12**) because both the change of the company's legal form and the merger with another company had given rise, each time, to a single legal entity which remained the owner of all the opponent company's assets and liabilities.

In **T 659/92** (OJ 1995, 519) there had been no universal succession. There was nothing to indicate that the opponent's business assets had been contractually transferred. The board concluded that a unilateral declaration by the owner of rights that he had transferred industrial property rights and opponent status in proceedings relating to a particular right could not of itself effect universal succession by transfer of business assets.

In **T 531/11** the board held that an excerpt from a purchase contract stating that a company had been acquired "through sale of individual business assets" showed that under the terms of the contract there had been no universal succession.

2.3. Transfer together with the business assets to which the opposition relates

In **G 4/88** the question referred to the Enlarged Board (**T 349/86** of 29 April 1988) was whether an opposition instituted before the EPO is transferable only to the opponent's heirs or whether it may be transferred freely either with the opponent's enterprise or with a part of that enterprise operating in a technical field in which the invention to which the patent in suit relates can be exploited. The Enlarged Board examined the situation in which the opposition has been instituted in the interest of the opponent's business or part of that business. The term "business" was understood in a broad sense as describing an economic activity which is or could be carried on by the opponent and which constituted a specific part of the opponent's business assets. In such a situation, the opposition constituted an inseparable part of those business assets. Insofar as those assets were assignable under applicable national laws, the opposition which was part of them had also to be regarded as transferable. The Enlarged Board answered the referred question by stating that an opposition pending before the EPO may be transferred or assigned to a third party as part of the opponent's business assets together with the assets in the interests of which the opposition was filed. Applying **G 4/88** to the facts of the case the board in **T 349/86** thus held in its decision of 30 November 1989 that the universal successor in title of the original opponent had transferred its opponent status to the singular successor of part of its industrial and commercial activity (operations in the commercial vehicle field) to which the opposition related.

In **T 9/00** (OJ 2002, 275) the board found as follows: if, as was the case, the subject of an opposition is assigned to two different parts of the opponent's company, the status of opponent can pass to a third party only if both parts or the entire company are transferred to it.

In **T 298/97** (OJ 2002, 83) the board held that the transfer may be to one, and one only, successor or transferee.

In **T 799/97** the opponent had gone bankrupt during the opposition proceedings. The board held that the opponent's entire business, and so the activities to which the opposition related, had been transferred to the company with which the administrator had concluded a contract of sale. Not all receivables and liabilities had been acquired, but that had not been established as an essential prerequisite for the transfer of opponent status in **G 4/88** and **T 659/92**. In **T 384/08** the board confirmed that the mere fact that certain assets were explicitly excluded in an assignment contract was as such not sufficient for concluding that the contract did not result in the transfer of a business or a specific part of it.

In **T 423/11** of 11 March 2015 the board held that the transferred assets were those in the interest of which the opposition had been filed. The objection that not all the corresponding assets had been transferred, because exceptions had been made for some patents, had no bearing on the decision. It was true that some patents had not been transferred and only a licence had been given. However, a licence conferred on the licensee the necessary rights to undertake any action to defend the patent under licence. Therefore those exceptions did not deprive the transferee of the general rights conferred on it by the transfer of the other assets.

In **T 1421/05** the board held that where the business assets in relation to which an opposition was filed have been transferred and at the same time the transferor has contractually agreed to transfer the opposition to the transferee, the status of opponent remains with the transferor in the absence of there being filed with the Office (a) evidence sufficiently evidencing the transfer and (b) a request to recognise the transfer of opponent status. Where in such a case the transferor subsequently ceases to exist but has a universal successor, the status of opponent is capable of passing to that successor.

In **T 2357/12** the board held that successions by law where parts of an enterprise form new legal entities or are immediately merged with other entities (de-merger, spin-off, secession merger), would be considered to be cases of universal succession under national (e.g. German) law. The continued existence of the former opponent, and the fact that it would not be possible to decide at first sight to which of the resulting legal entities the part of the enterprise to which the opposed patent was assigned, might result in applying the rules of singular succession under the procedural law of the EPC (see **T 136/01**, **T 1514/06**, **T 1032/10**).

In **T 445/16** the board held that, although a spin-off merger ("Umwandlung durch Ausgliederung") was seen as a form of universal succession in German national law, it was, in the context of transfer of opponent status under EPC law, considered to be a transfer of assets within the meaning of **G 4/88**. See also **T 848/13**.

In **T 833/15** the board held that the crucial factor was whether the contested patent related to the transferred part of the commercial activity. It was immaterial whether, based on the wording of the agreement, the contested patent (if part of the opponent's assets) would have had to be transferred or would have been licensed to the transferee under the terms

of a licence agreement as an industrial property right used together with the "Industrial Business". The only thing that mattered was the connection between the opposition as originally filed and the commercial activity which the opponent was conducting when it filed the opposition but later transferred as a business asset. The opponent status was then transferable as part of this asset (see **G 4/88**, points 5 and 6 of the Reasons).

2.4. No transfer: sale of opponent's subsidiary company

In **T 711/99** (OJ 2004, 550) the board emphasised that the exception stated in **G 4/88** to the general principle that an opposition was not freely transferable should be construed narrowly. In **G 4/88** the Enlarged Board had considered a situation where the commercial vehicles department, which was subsequently sold, was without legal personality. The company which filed the opposition was the only one entitled to do so. In **T 711/99**, by contrast, the issue was whether the opponent parent company should be recognised, in the event of the sale of a subsidiary that has always been entitled itself to file oppositions, as having the right to transfer its opponent status. The board denied this and held that the opponent status could only be transferred together with the assignment of part of the commercial activity of an opponent with sole legal authority where the transferred company division or department did not have that status and therefore lacked legal personality. It added that the notion of legitimate interest in the proceedings, which was irrelevant for the admissibility of an opposition at the time of its filing, likewise had no bearing on the opponent's status at any subsequent stage.

In **T 1091/02** (OJ 2005, 14) the board challenged the case law subsequent to **G 4/88** which required, for a transfer of opponent status outside universal succession, a transfer of the relevant business or part of it (**T 659/92**, **T 670/95**, **T 298/97**, **T 711/99**). It referred to the Enlarged Board questions which included the following: can a legal person who was a wholly owned subsidiary of the opponent when the opposition was filed and who carries on the business to which the opposed patent relates acquire opponent status if all its shares are assigned by the opponent to another company and if the persons involved in the transaction agree to the transfer of the opposition? In **G 2/04** (OJ 2005, 549) the Enlarged Board decided that there was no convincing reason, in particular not any overriding interest of the parties or the public, to extend the application of the rationale of **G 4/88** to the case where a subsidiary company was sold in whose interest the opposition had been filed by the parent company. Thus, a legal person who was a subsidiary of the opponent at the time when the opposition was filed and who carries on the business to which the opposed patent relates cannot acquire the status as opponent if all its shares are assigned to another company. In its reasoning, the Enlarged Board emphasised that in **G 4/88** the Enlarged Board was faced with a situation in which, for legal reasons, it was not possible from the outset to attribute the procedural status of opponent to the business in whose interest the opposition was filed, whereas the Enlarged Board in **G 2/04** was concerned with the situation in which the holding company did not want to attribute the procedural status of opponent to the entity in whose interest the opposition was filed. The opponent could easily have made provision for a future eventuality that its subsidiary should take over the responsibility for the opposition. If the holding company and subsidiary had filed the opposition as common opponents, the holding company could have withdrawn from the opposition at any time, leaving the subsidiary as the sole

opponent. The Enlarged Board noted that a liberal admission of transfers could often result in the need to examine contested questions of fact or difficult questions of company law. This would broaden the possible procedural battlefields for the parties and give rise to complications and delays in opposition proceedings.

2.5. Legal uncertainty as to who is the correct party

In **G 2/04** the Enlarged Board also considered the issue of what could be done if there was a justifiable legal uncertainty as to how the law was to be interpreted in respect of the question of who the correct party to the proceedings is. It decided that in such a situation it was legitimate that the appeal was filed in the name of the person whom the person acting considers, according to their interpretation, to be the correct party, and at the same time, as an auxiliary request, in the name of a different person who might, according to another possible interpretation, also be considered the correct party to the proceedings.

For an example of a case where a justifiable legal uncertainty as to the person entitled to appeal existed, see **T 1091/02** of 28 June 2006.

2.6. Evidence for and effect of a transfer

The EPC does not contain any explicit provisions regarding the formal requirements for the transfer of opponent status. Nevertheless, the boards of appeal have consistently held that formal requirements have to be fulfilled for the opponent status to be considered as transferred (see **T 960/08** with reference to case law, see also **T 261/03** of 24 November 2005). A new opponent acquires party status as opponent and as party to the opposition appeal proceedings only upon filing documentary evidence of the legal succession with the EPO (**T 244/12**).

A transfer of an opposition is something that has to be requested at the EPO together with supporting evidence before it can take effect. The effective date of the transfer of an opposition must be taken as the date when the transfer has been requested at the EPO and adequate evidence provided (**T 1137/97**, **T 19/97**, **T 1421/05**, **T 1032/10**). Pursuant to **T 261/03** of 24 November 2005 such a request may also be an implicit one.

Until evidence of the transfer has been provided, the original party to the proceedings continues to have the relevant rights and obligations (**T 870/92** of 8 August 1997, **T 1137/97**, **T 413/02**, **T 1268/17**). Acts performed before the relevant point in time by the former opponent are valid – provided the former opponent is still in existence and able to act; acts performed by the new opponent are invalid, and may have to be repeated once the change of parties has come into effect (**T 2357/12**, with reference to **T 1514/06**).

In case of a universal succession, however, there is necessarily and automatically a continuation of the existing legal status as opponent from the date of merger (**T 6/05**, see further below); in the case of universal succession, the change may – upon request and production of evidence by either party – be recorded with retroactive effect as from the effective date of the legal succession (**T 2357/12**).

2.6.1 Date of effective transfer

In **T 19/97** the board emphasised that there was a clear distinction between the substantive transfer of opponent status as a business asset and its procedural validity in the case at issue. As a formal requirement, the procedural validity of a transfer of opponent status was dependent on the submission of a duly substantiated request within the proceedings. On grounds of procedural certainty, a change of party based on an assignment could not take place outside the proceedings without the formal cognisance of the board and also could not have retroactive effect, as otherwise procedural acts or decisions could be respectively performed or taken without the involvement of the new opponent as the only legitimate party.

In **T 956/03** the board considered the question of the time limit for filing evidence of a transfer. According to the board, the case law showed a definite balance in favour of the view that a transfer could only be acknowledged from, at the earliest, the date when adequate evidence to prove the transfer had been filed. This was desirable in the interest of legal certainty and, within that principle, to ensure that the identity of an opposing party was known. If the transfer took place before the appeal period expired, then the entitlement of the transferee to replace the opponent had to be established by filing the necessary evidence before the appeal period expired.

In **T 428/08** the appellant had argued that it ought to be admissible to submit evidence of legal succession after the appeal period had expired, as evidence of prior use could also be submitted after the opposition period had expired without being rejected as grounds for opposition. The board did not follow this argument and relied on case law which made the date when the transfer became valid explicitly dependent on the date when evidence of it was supplied, in keeping with the procedural certainty requirement for the identities of the parties to the proceedings to be clear at all times.

In **T 184/11** the board could not share the appellant's view that, following **T 956/03**, any transfer occurring before the appeal period expired also had to be substantiated by the end of that period. In **T 956/03** the board had had to rule on the admissibility of an appeal filed by a party which maintained that it was successor in title to one of the opponents in the first-instance proceedings but failed to provide evidence of that within the appeal period. It was in that light that the principle set out in **T 956/03** – that if a transfer occurred before expiry of the appeal period, then the evidence showing that the transferee was entitled to take the opponent's place also had to be submitted by the end of that period – was to be understood. In the case at issue, however, a party that had been opponent in the first-instance proceedings had initially been respondent in the appeal proceedings, and only during the latter was transfer of party status requested. This request was granted during the oral proceedings before the board, once the requisite evidence of the transfer of opposition had been provided. See also **T 1563/13**.

In **T 6/05** the board drew a distinction between those cases where the opponent status is transferred together with the assignment of business assets and the cases of universal succession via merger – like the case at issue. Whereas in the former cases, the party status might either remain with the original opponent or be transferred to the new one, the

universal successor of a patent proprietor automatically acquired party status in proceedings pending before the EPO, since R. 20(3) EPC 1973 (now R. 22(3) EPC) did not apply in the context of universal succession in law (see also in this chapter III.O.1 and III.O.2.1). The successor acquired party status from the date on which the merger became effective and not only once sufficient evidence to this effect had been produced. The principles for transferring a European patent were to be applied mutatis mutandis to the transfer of opponent status. In the case of the universal succession of the opponent, there could only be one (legal) person who had rights and obligations, with the consequence that there was necessarily and automatically a continuation of the existing legal status as opponent from the date of merger. It could thus be established unambiguously and without any legal uncertainty, at any point in time in the proceedings, who in fact was the opponent having party status, regardless of the date when sufficient evidence to this effect was filed (see also **T 425/05** and **T 2382/10**).

In **T 7/17** the board recalled that, when a pending opposition was transferred or assigned to a third party as part of the opponent's business assets together with the assets in the interests of which the opposition had been filed, the party status as opponent was transferred only with effect from when an allowable request for transfer of the opponent status was received.

2.6.2 What kind of evidence suffices

If no evidence of legal succession is produced, the mere declaration by a company designated as legal successor to the original opponent that it is the original opponent's legal successor is not sufficient to substantiate the transfer of the status of opponent and of party to the appeal proceedings (**T 670/95**).

In **T 261/03** of 24 November 2005 the board considered what kind of evidence was required to establish a valid transfer. The board drew parallels with the requirements of R. 20 EPC 1973 (now R. 22 EPC) and noted that it was not aware of any appeal decision that had held that the documents to be submitted according to this provision have to prove the alleged transfer "up to the hilt". Such a yardstick of full and absolute proof would indeed be overly strict since in many situations documentary evidence alone could then hardly suffice. As the wording of R. 20(1) EPC 1973 suggested, something less was required. The board took the view that the requirements of R. 20 EPC 1973 were complied with if the documents submitted were such as to render it credible to the competent organ of the EPO, evaluating the documents in a reasonable way and in the light of all the circumstances, that the alleged facts were true. The mere fact that another document might have been a more direct piece of evidence than the one submitted by the appellant does not invalidate the proof actually offered (see **T 273/02**, applied in **T 1178/04**).

In **T 1513/12** the board refused a request for a transfer of opponent status because, although the filed extracts from a commercial register showed there had been a spin-off, they did not contain any evidence of a transfer. In particular, no extracts from the spin-off agreement or from the agreements negotiated in connection with it, which could have proved the transfer more conclusively, had been filed.

In **T 347/15** it was not clear from the submitted documents whether the opponent status had in fact been transferred. The two trade register extracts showed that the company had been restructured as per a restructuring agreement ("*Ausgliederungsvertrag*"), but they did not contain any information about the transfer of assets. It was therefore not possible to establish whether the opposition had indeed been filed in the interests of the part of the company at issue. No part of the restructuring agreement or of any addendum to that agreement had been submitted. Consequently, the board refused the request to transfer the opponent status.

In **T 219/15** the board refused the request for transfer of the opponent status. The appellant had provided the purchase agreement, but that agreement did not demonstrate that the relevant business assets, i.e. the opposition proceedings relating to the patent in suit, were sold to the other company.

In **T 2016/12** the board rejected the transfer of a specific part of the original appellant's (ATech Ltd) business assets to the purported transferee (AES AG). The board had requested the submission of the contracts concluded between the legal entities involved in the merger; the opponent had replied, however, that such contracts could not be provided for reasons of confidentiality. Other evidence presented was not conclusive. Furthermore, the board considered that if a transfer was not unequivocally proven, the original party to the proceedings would normally continue to be considered as the appellant. In the case in issue, ATech Ltd (the original party) allegedly continued to exist under its new name of GETech GmbH. However, from the two extracts of the commercial register concerning GETech GmbH, it was apparent that some assets had been transferred according to a separation plan to yet another company. The party provided no details as to this split or the business assets involved. The evidence indicated that GETech GmbH did not become the universal successor to that party through a complete acquisition of the entire business of the original party and a successive simple change of name. Therefore, it also could not be concluded that GETech GmbH was a party to the proceedings. Under these circumstances, the board could not reliably establish ownership of the business assets to which the opposition and appeal belonged. Consequently the board could not continue the proceedings, which therefore had to be terminated.

In **T 234/18** the board recalled that being party to a pending opposition is not a property right but a procedural right and concluded that this procedural right was not covered by the term "intellectual property rights" in the purchase agreement filed as evidence. Since according to the case law of the boards of appeal an automatic transfer occurred only in the case of universal succession, but not where particular business assets were transferred from one party to another (see **T 6/05** and **T 1421/05**), the request to register the purchaser as opponent could not be granted.

In **T 7/17** the board held that the requirements for a transfer of party status as appellant-opponent were not met. It was not sufficiently proven that all relevant business assets in the interests of which the opposition had been filed had been transferred; nor was it proven that the opposition had been transferred. Where a company contractually transferred the business assets in the interests of which an opposition had initially been filed, it was a matter of what the parties had agreed whether or not the opposition – i.e. the party status

as opponent – was transferred together with these assets. The board also noted that it was for the opponent or the third party seeking the party status as opponent to prove that all assets in the interests of which the opposition had been filed had been transferred.

2.6.3 Natural heir

In the case of a transfer of an opposition from a deceased natural opponent to their heir, the heir can only be ascertained by reference to the particular national laws of succession applicable to the estate of the deceased opponent. It follows that the person seeking to establish that they have the right to succeed to an opposition must produce satisfactory evidence that they have done so under the relevant national law (**T 74/00**).

2.7. Effect of finding that no transfer took place during opposition proceedings

In **T 1178/04** (OJ 2008, 80) the opposition division had decided that the transfer of opponent status in the course of the opposition proceedings was valid. The board held that even if the transfer of the opponent status during the opposition proceedings was invalid, the appeal by the opponent was nevertheless admissible. The board explained that "party" simply meant someone who takes part in the proceedings before the EPO. If the department of first instance had decided that someone was entitled to take part in the proceedings they remained a party even though this decision was later reversed on appeal; such a decision on appeal had the effect that they were no longer entitled to take part in the proceedings, but not that they had never been a party to the proceedings. Their position could not change retrospectively from that of having been a party to that of never having been a party. After reviewing the evidence the board held that no valid transfer of the status of opponent had taken place. The only means of correcting this error was to set aside the decision of the opposition division as a whole. The opposition division was thus not bound by its previous decision. It was only bound by the ratio decidendi of the board's decision as regards the transfer of opposition status (see also **T 1081/06**).

In **T 194/15** the board decided that the evidence submitted showed that the transfer of the business assets from Abbott to AbbVie took place before the opposition had been filed. Accordingly, the opposition filed by Abbott could no longer be transferred to AbbVie. As a consequence, the opposition proceedings were continued with the wrong party as opponent. Referring also to **T 1178/04** and **T 1982/09**, the board decided to remit the case to the opposition division so that the proceedings could be conducted with the right party.

2.8. No administrative fee for a transfer of opponent status

There is no administrative fee to pay for a transfer of opponent status (**T 261/03** of 24 November 2005; **T 413/02**).

P. Intervention

1. Admissibility of intervention 1203
1.1. Any third party – independent legal entity 1203
1.2. Relevant patent 1204
1.3. National infringement proceedings 1205
1.3.1 Proceedings for infringement instituted by patent proprietor – Article 105(1)(a) EPC 1205
1.3.2 Request to cease alleged infringement and institution of proceedings for non-infringement – Article 105(1)(b) EPC 1207
1.4. Proceedings pending before the EPO 1208
1.4.1 Intervention in opposition proceedings 1208
1.4.2 Intervention in appeal proceedings 1208
1.5. Time limit for intervention 1209
1.6. Fees 1210
1.7. Substantiation requirement 1211
2. Legal status of the intervener 1211
2.1. In opposition proceedings 1211
2.2. In appeal proceedings 1212
2.3. Intervener enters proceedings at stage they are at on the date of intervention 1212
3. Legal status of documents filed with intervention during appeal proceedings 1213
3.1. No need to exercise discretion for the board to admit documents filed with intervention 1213
3.2. No change of legal status of documents after withdrawal of intervention 1213
4. Intervention shortly before oral proceedings 1213

1. Admissibility of intervention

Under Art. 105 EPC, to intervene admissibly in opposition proceedings a party must show either that proceedings for infringement of the same patent have been instituted against them, or that following a request of the proprietor of the patent to cease alleged infringement, the third party have instituted proceedings for a ruling that they are not infringing the patent. Under Art. 105(2) EPC, an admissible intervention shall be treated as an opposition.

1.1. Any third party – independent legal entity

In **T 305/08** the appellant (opponent I) had filed an appeal against the decision of the opposition division to reject the opposition. Two separate interventions were subsequently filed (by opponents II and III), which also raised fresh grounds of opposition under Art. 100(c) EPC 1973. The board stated that the term "any third party" in Art. 105(1) EPC could not be given an interpretation other than that each party had to be a separate legal entity and that it was irrelevant whether they belonged to the same group of companies. Nor was allowing the interventions tantamount to allowing the appellant to late-file

oppositions via opponents II and III under its control and thus introduce new evidence. The interventions were therefore admissible.

In **T 384/15** two interventions were filed in the appeal procedure by different legal entities, both belonging to the same company. The respondent (patent proprietor) argued that there was credible evidence that the opponent was acting as a straw man on behalf of the company to which also the two interveners were inextricably linked. The board considered that there was no question that the interveners were third parties within the meaning of Art. 105(1) EPC, i.e. different legal entities, with respect to the opponent (appellant) regardless as to whether or not one of the interveners was the principal instructing the opponent (**G 3/97**, OJ 1999, 245). The board also rejected the argument that there had been an attempt by the opponent and the interveners to circumvent the law by abuse of process, since there was no proof that the opponent had acted directly on behalf of one of the interveners (**T 305/08**).

In **T 1702/17** the board held that the only material issue when determining whether the interveners could be regarded as third parties was whether the appellant and the interveners were legally distinct companies and thus independent legal entities. Economic ties of any kind between the three companies (in the case in issue, the respondent had asserted that the relationship was as 100% subsidiaries of the appellant under its authority) were immaterial under the EPC as regards the admissibility of the interventions. Nor had there been any abuse of law. On the contrary, allowing third parties to assert new grounds for opposition and submit new documents as interveners with the aim of having the patent revoked was in keeping with the spirit and purpose of the provisions of Art. 105 EPC and thus the legislator's intent.

In **T 435/17** the board held that a "third party" within the meaning of Art. 105(1) EPC had to be a separate legal entity from the other parties, and that there was no legal basis for excluding an intervener on the grounds that it shared premises, a current account for fee payments or a professional representative with an opponent.

In **T 1891/20** an intervention was filed in the appeal procedure by a legal entity separate from appellant II. The respondent (patent proprietor) argued among other things that appellant II and the intervener had a common representative, who had made submissions in a single document which concerned both of these parties. The board referred to R. 151 EPC, according to which parties may appoint a common representative. The appointment of a common representative for two opponents was not different from the appointment of a common representative for an opponent and an intervener. In both cases, the commonly represented parties could be in a different situation as to the admittance of their submissions. This, however, did not prevent them from appointing a common representative. The board considered the intervener as a "third party".

1.2. Relevant patent

In **T 446/95**, in which an infringement action had been based on a French national patent, the board held that the intention and purpose of an intervention in accordance with Art. 105 EPC 1973 was to enable the assumed infringer to defend itself against the action by the

patentee based on the opposed European patent, in order to prevent the EPO and the national courts handing down contradictory decisions on the validity of European patents. In the case in question, the fact that the European patent had claimed priority from the French patent and that France had been designated was irrelevant, as there was no legal basis for intervening in the European patent on the basis of an infringement action relating to the French patent. The admissibility of an intervention before the EPO could not depend on a provision of national law. The intervention was therefore inadmissible.

In **T 7/07** the board held that the patent in suit was not granted for Lithuania under the EPC, as Lithuania was an extension state and therefore could not be designated for a European patent. The national law of the extension state governs the extension proceedings and the legal effects of the extension. The infringement proceedings were based on a patent which had been granted for a number of EPC contracting states and which, under Lithuanian law, also took effect in Lithuania, but exclusively on the basis of Lithuanian national law, which conferred the same effect on this patent as on a national patent. As a result, the infringement proceedings were not based on the European patent in suit in the opposition proceedings. The board agreed with the findings in **T 1196/08**, that an intervention based on proceedings for infringement of a patent that has effect in a particular state solely on the basis of national law is inadmissible because it fails to meet one of the requirements under Art. 105(1)(a) EPC. It therefore regarded the intervener's submissions as third-party observations under Art. 115 EPC. See also, chapter III.N.3.

1.3. National infringement proceedings

Under Art. 105 EPC, third parties may intervene only if they prove either (a) that proceedings for infringement of the opposed European patent have been instituted against them or (b) that, following a request by that patent's proprietor that they cease the alleged infringement, they have instituted proceedings for a ruling that they are not infringing the patent (**G 4/91**, OJ 1993, 707). The principle that the assessment of the nature of a procedural act taken by a party before the EPO is to be made with consideration of its actual substance rather than with consideration of its form or name applies equally when deciding whether national infringement proceedings have been commenced (**T 188/97**).

1.3.1 Proceedings for infringement instituted by patent proprietor – Article 105(1)(a) EPC

In **T 223/11** the board held that it was internationally a widely accepted principle that the submission of a request on the national level for a marketing authorisation for a pharmaceutical product by a generic company did not constitute patent infringement (the so-called Bolar exemption). The proceedings instituted by the patent proprietor before the national administrative court, no matter how obstructive these may have been to a future market entry of the intervener's product, could not be considered as equivalent to infringement proceedings, irrespective of whether the Bolar exemption had been codified in the relevant national law or not.

In **T 1713/11** the board stated that the EPC gives no specific definition of what constitutes proceedings for infringement. Furthermore, intervention was conceived as a procedurally exceptional situation, which is justified only by a substantial legitimate interest of the

assumed infringer to enter the opposition proceedings. Therefore, it did not appear likely that there was a legislative intent to create an elaborate and intricate system of procedural provisions for the admissibility of interventions, and the boards too should refrain from creating such a system through their case law, and focus instead on whether the substantive conditions for admitting an intervention were fulfilled. Nullity proceedings concerning the patent at issue would not qualify and neither would saisie-contrefaçon proceedings (see also **T 305/08**). However, the definition of "proceedings for infringement" was not limited to civil proceedings, to proceedings that allow for certain remedies to be claimed, or two-party proceedings. The board therefore concluded that as long as a patent proprietor or any other party entitled to do so initiated proceedings which aimed to establish whether a third party was commercially active in an area that fell within the patent proprietor's right to exclude, such proceedings were "proceedings for infringement" within the meaning of Art. 105 EPC.

In **T 1746/15** the board followed **T 1713/11**, according to which "proceedings for infringement" pursuant to Art. 105(1)(a) EPC were "proceedings meant to establish whether a third party is commercially active in an area that falls within the patentee's right to exclude". The board held that the independent evidentiary proceedings under German law ("selbständiges Beweisverfahren" or "Beweissicherungsverfahren, § 485 DE-ZPO) initiated against the respondent by decision of the Landgericht Düsseldorf did not constitute the "establishment" of an infringement within the above meaning. The independent evidentiary proceedings under German law were comparable to "saisie" proceedings, e.g. "saisie-contrefaçon" in France, which were not regarded as "infringement proceedings" in terms of Art. 105(1)(a) EPC (**T 1713/11** and **T 305/08**).

The appellant (opponent) in **T 439/17** had filed notice of intervention in the opposition proceedings, invoking evidence preservation proceedings in Germany ("Beweissicherungsverfahren", § 485 DE-ZPO) that the patent proprietor had instigated. The patent proprietor had then, based on those proceedings' outcome, duly initiated infringement proceedings against the opponent while the appeal proceedings were pending. The appellant had argued that the two sets of proceedings had to be seen as one within the meaning of Art. 105 EPC, alleging support for its view in Section 493 DE-ZPO. The board disagreed, finding that it could not be derived from the latter provision that they had to be considered consolidated or otherwise procedurally linked. Furthermore, an intervention had to be admissible at the time of the intervention and could not be made admissible retroactively. In short, the board held that evidence preservation according to Section 493 DE-ZPO and subsequent infringement proceedings had to be seen as separate when applying Art. 105(1)(a) EPC. Consequently the intervention before the opposition division had been inadmissible.

In **T 2597/22** the board found that, in the circumstances at issue, an application for an interim injunction was covered by the term "proceedings for infringement" in Art. 105 EPC as it initiated such proceedings. It also found that it was irrelevant whether the proceedings were still pending before the Mannheim Regional Court.

1.3.2 Request to cease alleged infringement and institution of proceedings for non-infringement – Article 105(1)(b) EPC

In **T 195/93** the board held that if a patentee simply sent a legal warning letter asking the intervener to stop production and sale of a product covered by the patent, this could not be regarded as institution of proceedings for a court ruling even if under national law the addressee became liable for damages 30 days after receiving the letter. The intervention was therefore rejected as inadmissible.

According to **T 392/97**, Art. 105 EPC 1973 required that an intervener should prove both that the patentee had requested that the intervener cease alleged infringement of the patent and that they had instituted proceedings for a court ruling that they were not infringing the patent. Thus where the letter was sent not to the allegedly infringing company, but to an unrelated one which it was assumed was about to acquire it, the first requirement was not fulfilled and their interventions were inadmissible. The first requirement was also not fulfilled in **T 446/95**, where the letter merely set out a position adopted in response to a letter from the purported intervener and did not give notice to cease infringement. According to **T 887/04** of 14 November 2006, it was for the assumed infringer to prove, first, that they had received a "request" to cease the infringement, i.e. that they had been expressly asked to do so, and, second, that they had been required to "cease", i.e. put an end to, the infringement. Proof of mere warnings or threats of legal action had therefore to be considered insufficient.

In **T 898/07** the board found the intervention admissible. It was apparent from the documents submitted by the opponent that the respondent had repeatedly informed it that it considered its actions to infringe the patent and, with reference to infringement proceedings already pending against third parties, invited it to enter licensing negotiations. The board considered this a request to cease patent infringement by concluding a licensing agreement which would render the allegedly unlawful conduct (patent infringement) lawful (licensed use). This met the first requirement under Art. 105(1)(b) EPC, the wording of which covered not only to a request to refrain from using the invention altogether, but also generally to a request to cease the alleged patent infringement. In addition, the opponent had instituted proceedings against the respondent for a declaration of non-infringement of the patent.

In **T 1138/11** the board held that compliance with the requirement that the intervener has been requested to cease the alleged patent infringement was not to be determined in accordance with the relevant national law. Since the laws in the contracting states varied to quite an extent from one to another, this requirement had to be applied in a harmonised manner for all contracting states. This could only be achieved by way of an autonomous interpretation of the EPC provisions and their legal terms. The board also found that, since an intervention by a third party was treated as an opposition and so – as an exception to the 9-month time limit for filing a notice of opposition – this party was granted the status of an opponent, Art. 105 EPC had to be interpreted in a restrictive manner.

In **T 304/17** the appellant argued that for the three-month time limit to be triggered, it was necessary but also sufficient for the two criteria mentioned in Art. 105(1)(b) EPC to be

fulfilled, regardless of the order in which this happened. The board disagreed with this understanding of Art. 105(1)(b) EPC. It followed from its clear wording that it required a specific sequence of events ("following a request of the proprietor of the patent ..., the third party has instituted proceedings ..."). The travaux préparatoires confirmed that the legislator had intentionally chosen this sequence of events. This conclusion was also in line with a systematic interpretation, because in both alternative scenarios – Art. 105(1)(a) and (b) EPC – it was the formal institution of proceedings (before a court or another competent national authority) which triggered the time limit. These were events which could be unambiguously established with legal certainty, since they had official dates (see **T 296/93**) and thus set "a clear demarcation line" (see also **T 18/98**).

1.4. Proceedings pending before the EPO

1.4.1 Intervention in opposition proceedings

In **G 4/91** (OJ 1993, 707) the Enlarged Board held that the intervention under Art. 105 EPC 1973 of an assumed infringer in the opposition proceedings presupposed that opposition proceedings were pending at the time they gave notice of intervention. Moreover, a decision of the opposition division on the relief sought had to be regarded as conclusive in the sense that the opposition division no longer had the power thereafter to amend its decision. The Enlarged Board further held that proceedings before an opposition division were terminated when such a conclusive decision was issued, irrespective of when this decision became final. Thus, if, after an opposition division had issued a decision terminating the proceedings, and none of the parties to the opposition proceedings filed an appeal, any notice of intervention filed during the two-month period for appeal under Art. 108 EPC 1973 was invalidated.

In **T 791/06**, where an intervention was filed after the oral proceedings before the opposition division when the decision was pronounced but before notification of the written decision, the board held that it had not been filed during pending opposition proceedings but considered the intervention to have been filed during the appeal proceedings.

In **T 631/94** (OJ 1996, 67) the board noted that when a decision to terminate opposition proceedings, taken in written proceedings, was handed over to the EPO postal service, it became public and effective and had therefore been issued. If the parties to the proceedings leading to that decision did not appeal, the opposition proceedings were completed at that point in time and thereafter intervention based on Art. 105 EPC 1973 was no longer possible.

1.4.2 Intervention in appeal proceedings

In **G 1/94** (OJ 1994, 787) the Enlarged Board concluded that intervention of the assumed infringer under Art. 105 EPC 1973 was admissible during pending appeal proceedings and could be based on any ground for opposition under Art. 100 EPC. The term "opposition proceedings" was not restricted to the department of first instance but could also refer to such proceedings at second instance. Intervention during pending appeal proceedings was therefore admissible (see also **T 694/01**). A notice of intervention filed during the two-

month period for appeal has no legal effect if no appeal is filed (**G 4/91**, OJ 1993, 707). However, see **T 1286/23**.

In **T 694/01** the board found that intervention depended on how far the opposition or appeal was still pending. An intervener could not challenge issues on which a final decision had already been taken (in earlier appeal proceedings).

1.5. Time limit for intervention

Under R. 89 EPC, intervention is not possible until the opposition period has expired (this was previously laid down in Art. 105 EPC 1973), but notice of it must be filed within three months of the date on which proceedings referred to in Art. 105 EPC were instituted.

If multiple proceedings are under way, the three-month time limit for intervening is always triggered by the date on which the **first** proceedings were instituted (**T 296/93**, **T 1143/00**).

The two alternative starting points under Art. 105(1) EPC 1973 for calculating the three-month period for intervention were mutually exclusive (**T 296/93**, OJ 1995, 627). See also **T 144/95** and **T 18/98**. Article 105 EPC 1973 could not be used to give an opponent who failed to file an appeal in time a second chance, as the opponent does not fulfil the requirement of being a third party (**T 1038/00**).

In **T 694/01** the board held that Art. 105(1), first sentence, EPC 1973 did not stipulate when infringement proceedings were deemed to have been instituted. As they could only be instituted before the national courts, the wording of Art. 105 EPC, even if not explicitly, set this date by reference to the relevant national procedural laws.

In **T 452/05** the board considered three dates which could possibly have triggered the three-month period: the date on which the request for an interim injunction was made, the date on which the request was granted, or the date when the injunction order was served upon the opponent. In the board's view, only the last date should be regarded as the decisive point in time, as only from that date onwards could the opponent provide evidence of the proceedings that entitled it to intervene.

In **T 691/16** the appellant (patent proprietor) disputed that the three-month time limit prescribed by Art. 105 EPC and R. 89 EPC had been adhered to since the date on the advice of delivery recording service of the notice of action was not clearly legible and, moreover, the signature on it was allegedly not identical to the intervener's. The board ruled that the intervention had been filed properly and in due time. Proving service was the very point of the advice of delivery, and both the stamped date and the handwritten date (in so far as it was legible) showed the relevant date. So there was at least prima facie evidence against which the patent proprietor had not asserted any substantiated doubts. Moreover, R. 126(2), last half of the sentence, EPC reflected a general principle whereby, in case of doubt, it was for the sender of a document, not the recipient, to prove that it had reached the recipient and when. Doubts owing to things such as illegibility therefore could not act to the recipient's detriment. As regards the differences in the signature, the board pointed out that a notice of action did not necessarily have to be

served on the recipient itself, but could also be served on people living in the building or with the necessary authorisation. This was generally what happened at companies. There was therefore no reasonable doubt that the intervener's claim to have received the notice of action on the relevant date was true. It must be noted, however, that R. 126(2) EPC has been amended. See notice from the EPO of 25 November 2022 concerning legal changes to support digital transformation in the patent grant procedure (OJ 2022, A114) and of 6 March 2023 concerning amended Rules 126, 127 and 131 EPC (OJ 2023, A29). See also chapter III.D.1.

In **T 308/23**, the board recalled that the provisions of Art. 105 EPC were intended to allow the alleged patent infringer to defend themselves by challenging the validity of the patent within the centralised procedure before the EPO rather than through separate national proceedings. The intervention could only be initiated based on the first infringement proceedings, even if there were separate national infringement proceedings underway in different EPC contracting states. The board noted that if the alleged infringer were able to choose at will the infringement procedure allowing them to intervene in the opposition proceedings, it would be theoretically possible for them to deliberately delay the opposition proceedings by intervening at a later stage on the basis of a subsequent infringement procedure, which would run counter to the objective pursued by Art. 105 EPC and R. 89(1) EPC. Thus, the different interests of the alleged infringer in one or other of the national proceedings or its subjective assessment of the economic importance of a territory could not play a role in this context.

1.6. Fees

Under Art. 105(2) EPC in conjunction with Art. 2(1) No. 10 RFees, interveners must pay the opposition fee (see R. 89(2), second sentence, EPC).

Where a party intervenes only at the appeal stage, several decisions have stated that no appeal fee need be paid if the party is not seeking appellant status in their own right (see **T 27/92**, **T 684/92**, **T 467/93**, **T 471/93**, **T 590/94**, **T 144/95**, **T 886/96**, **T 989/96**, **G 3/04** (OJ 2006, 118)). In **T 1011/92** and **T 517/97** (OJ 2000, 515) the board ruled that an intervener must pay the appeal fee if they want to have their own right to appeal proceedings, in the sense that they can continue such proceedings if the original appellant withdraws their appeal (see in this chapter III.P.2.). However, in **T 144/95**, where an intervention was filed during appeal proceedings and an appeal fee paid, the board ordered the appeal fee to be refunded (at the request of the intervener). See also **T 2597/22**. According to the board, under Art. 107 EPC 1973, an admissible appeal could only be filed by a party who was already a party to the proceedings leading to the decision and who was adversely affected by it. Where the intervention was filed during appeal proceedings, the intervener could not satisfy these conditions, and, referring to **G 1/94**, OJ 1994, 787, could not be considered as an appellant (but rather an opponent). The act of paying an appeal fee, which is one of the conditions for an admissible appeal, did not change this position in any way. The board then added that, whilst Art. 105 EPC 1973 provided an exception to the time limit for payment of the opposition fee under Art. 99 EPC 1973, no such exception was made concerning the appeal fee. However, see referring decision **T 1286/23** where the board explained that if it were found that an

intervener could be entitled to appellant status, it would appear logical that the payment of an appeal fee would also be necessary if the intervener wanted to make effective use of their entitlement.

In **G 3/04** (OJ 2006, 118) the Enlarged Board held that there was no legal basis for demanding the payment of the appeal fee by an intervener in appeal proceedings. Fees paid by way of precaution but without a legal basis were reimbursed.

1.7. Substantiation requirement

Under R. 89 in conjunction with R. 76 EPC, the notice of intervention must give the grounds for the intervention, and the facts and evidence submitted to substantiate them.

In **T 1659/07** the board found that the substantiation requirement under R. 89(2) EPC in conjunction with R. 76(2)(c) EPC was met by a reference to an existing statement of grounds for appeal or notice of opposition. The purpose of the requirement was to ensure that the intervener's arguments could be objectively understood, i.e. that the intervener's position was set out clearly enough that both the patentee and the opposition division or board of appeal could identify the reasons for the intervention. Reference to the arguments of another opponent already on file was sufficient to that end. Accordingly, an intervener need not repeat those arguments in detail or contest the patent on the basis of new, independent reasoning or facts.

2. Legal status of the intervener

In **G 3/04** (OJ 2006, 118) the Enlarged Board held that the valid intervener acquired the status of an opponent, irrespective of whether the intervention occurred during the proceedings before the opposition division or at the appeal stage. In either case the intervener's rights and obligations were the same as those of other opponents.

2.1. In opposition proceedings

In **G 3/04** the Enlarged Board also considered that an intervener in the proceedings before the opposition division had a right of appeal under Art. 107 EPC. For the appeal to be validly filed, they must pay the appeal fee under Art. 108, second sentence, EPC. The Enlarged Board held that an intervener in proceedings before the opposition division, where all the opponents had withdrawn their oppositions, could continue the proceedings alone and, if need be, file an appeal, since they had the same status as an opponent under Art. 99 EPC 1973 (Art. 99 EPC).

In **T 614/13** of 2 July 2015 the board had to rule on the admissibility of an intervener's appeal against the opposition division's decision to reject its opposition because it had not shown that it had intervened in the opposition proceedings in time. The board held that, even if it upheld the opposition division's decision, that would not mean the intervener had never been a party to the proceedings, but only that as from the date on which decision on appeal took effect it would no longer be entitled to take part in the (further) proceedings.

Until that point in in time its procedural status would be confined to obtaining clarification as to whether it was entitled to take part.

2.2. In appeal proceedings

In **G 3/04** the Enlarged Board ruled that an intervener, if the appeal is filed by someone other than them, is a party as of right according to Art. 107, second sentence, EPC. If the intervention is filed during the appeal proceedings, the intervener, again because they can only acquire the status of an opponent, has the same rights and obligations – apart from the right to raise new grounds of opposition – as any opponent who has not filed an appeal. If in this case the sole, or each, appeal has been withdrawn, the appeal proceedings are terminated in respect of all the substantive issues, including the new grounds for opposition raised by the intervener, for all the parties (see also **T 694/01**, OJ 2003, 250).

In **G 1/94** (see in this chapter III.P.1.4.2), the Enlarged Board also examined the question of whether an intervener during appeal proceedings could raise any of the grounds for opposition under Art. 100 EPC 1973 (now Art. 100 EPC) even if they had not yet been examined by the opposition division and found in the affirmative. If a fresh ground for opposition was raised, the case should be remitted to the department of first instance unless the patent proprietor wished the board to rule on it there and then. In **T 694/01** (OJ 2003, 250), it was made clear that where a board has decided to maintain a patent on the basis of a given set of claims and a description to be added to them, in subsequent appeal proceedings confined to the issue of the adaptation of the description the previous decision is res judicata and the intervener cannot therefore challenge this decision by introducing a new ground of opposition.

In **T 1286/23** the board referred the following question to the Enlarged Board: "After withdrawal of all appeals, may the proceedings be continued with a third party who intervened during the appeal proceedings? In particular, may the third party acquire an appellant status corresponding to the status of a person entitled to appeal within the meaning of the Art. 107, first sentence, EPC?"

2.3. Intervener enters proceedings at stage they are at on the date of intervention

In **T 392/97** the would-be interveners requested that the date for the appointed oral proceedings be postponed and submitted that they had not been duly summoned to the oral proceedings in accordance with R. 71(1), second sentence, EPC 1973 which stipulated at least two months' notice. In the board's view, R. 71(1) EPC 1973 did not stipulate that the requirement of a two-month period also applied if, subsequent to a duly effected summons, there was an intervention by a third party. As a general principle, an intervener entered the proceedings at the stage they were at on the date of intervention, including pending time limits. Issuing a further summons or adjourning the date in this case was therefore rejected.

3. Legal status of documents filed with intervention during appeal proceedings

3.1. No need to exercise discretion for the board to admit documents filed with intervention

In **T 1665/16** documents E1 to E20 were filed with an intervention during appeal proceedings. The board considered that documents E1 to E20 had been filed as early as possible, since the intervention was not subject to any time limit other than the requirements under Art. 105 EPC and R. 89(1) EPC. Documents E1 to E20 were thus part of the appeal proceedings, without the board needing to exercise discretion or decide on admitting these documents into the proceedings.

3.2. No change of legal status of documents after withdrawal of intervention

In **T 1665/16** documents E1 to E20 were filed with an intervention during appeal proceedings. The intervener subsequently withdrew its intervention. The patent proprietor (respondent) requested that the documents should not be admitted into the proceedings. The board held that the withdrawal had not changed the legal and factual status of documents E1 to E20. The withdrawal of the intervention only terminated the status of the intervener as opponent and party to the proceedings but had no direct procedural consequences for the appeal proceedings, as the original opponent, who had filed a valid appeal, remained a party to the proceedings. The withdrawal of the intervention did not affect the legal validity of procedural acts like the filing of documents or other evidence carried out before the withdrawal. In particular, it did not render the intervention retroactively inadmissible, since it had only the legal effect ex nunc. There was no legal basis for regarding documents E1 to E20 as retroactively late filed. Since there was no legal basis in the EPC for the exclusion of documents from opposition proceedings which continued when one of the oppositions was withdrawn, documents E1 to E20 submitted by the opponent/intervener remained in the proceedings and had to be taken into account in the board's decision.

4. Intervention shortly before oral proceedings

In **T 1961/09** the board summarised in the catchword that while an intervention under Art. 105 EPC shortly before oral proceedings in an appeal, raising new issues, will normally require the oral proceedings to be adjourned if not the remittal of the case altogether (**G 1/94**, OJ 1994, 787), the oral proceedings may be continued if and so far as this can be done without unfairness to the other parties, in particular the proprietor (see **T 2597/22**).

Q. Continuation of the opposition proceedings by the EPO

1. General 1214
2. Surrender and lapse of the patent 1214
2.1. Surrender of patent 1214
2.2. Continuation of the opposition proceedings after lapse or surrender (Rule 84(1) EPC) 1215
2.2.1 Request for continuation of the proceedings made by the opponent 1216
2.2.2 Request for continuation of the proceedings made by the patent proprietor 1217
3. Death or legal incapacity of an opponent 1217
4. Withdrawal of opposition 1218
4.1. Form and effect of withdrawal on party status 1218
4.2. Effect of withdrawal on opposition proceedings before the departments of first instance 1218
4.3. Effect of withdrawal on opposition appeal proceedings 1219

1. General

Rule 84(1) EPC provides that the opposition proceedings may be continued where the patent has lapsed or been surrendered and the opponent requests continuation of the opposition proceedings. In the event of the death or legal incapacity of an opponent and where the opposition has been withdrawn, the opposition proceedings may be continued by the EPO of its own motion (R. 84(2) EPC). In the case of a withdrawal of the opposition during the opposition appeal proceedings, there are a number of procedural consequences which depend on the party status of the opponent and which do not permit the exercise of discretion as to whether or not opposition appeal proceedings are continued (see in this chapter III.Q.4.3.).

2. Surrender and lapse of the patent

2.1. Surrender of patent

The patent proprietor is unable to terminate the proceedings by informing the EPO of the surrender of the European patent, since this is not provided for in the EPC; notices of surrender have to be addressed, as far as national law permits, to the national authorities of the designated contracting states (as already established in earlier decisions, such as **T 73/84**, OJ 1985, 241; **G 1/90**, OJ 1991, 275; see **T 123/85**, OJ 1989, 336 and **T 196/91**). Under the provisions of the EPC 2000 the patent proprietor may request that the European patent be revoked pursuant to Art. 105a EPC. The existence of this procedure as well as the possibility of requesting revocation during opposition and opposition appeal proceedings (see chapter IV.D. "Limitation/revocation") do however not preclude patent proprietors from giving notices of surrender to national authorities.

Neither the surrender of a patent nor its lapse has retroactive effect. Both therefore have to be distinguished from revocation, which takes effect from the outset (Art. 68 EPC).

2.2. Continuation of the opposition proceedings after lapse or surrender (Rule 84(1) EPC)

If a European patent has lapsed or been surrendered in all the designated contracting states, the opposition proceedings may, under R. 84(1) EPC (R. 60(1) EPC 1973), be continued at the request of the opponent, provided the request is filed within two months of a communication from the EPO informing the opponent of the surrender or lapse. R. 84(1) EPC is limited to the situation where the opposed patent has been surrendered or has lapsed during ongoing opposition proceedings. Where the patent had already lapsed or been surrendered in all the designated contracting states prior to the filing of the opposition R. 75 EPC applies, which states that an opposition may be filed in those circumstances (**T 606/10**).

R. 84(1) EPC also applies, pursuant to Art. 111(1) EPC and R. 100(1) EPC, to opposition appeal proceedings, **T 2165/08** of 6 March 2013, **T 702/15**.

Where the European patent expires during ongoing appeal proceedings in all the designated contracting states and the appellant (opponent) does not request continuation of the proceedings, the proceedings are terminated without any decision on the issues (**T 329/88**, followed by numerous decisions, including **T 762/89**, **T 749/01**, **T 289/06**, **T 949/09**, **T 480/13**, **T 977/14** and **T 2442/18**).

R. 84(1) EPC establishes no legal obligation on the EPO to ascertain of its own motion the legal status of a European patent and does not apply in the event of an alleged surrender or lapse of a European patent, unless confirmation thereof has been received by the EPO from the appropriate authorities of all the designated contracting states (see **T 194/88**, **T 809/96**, **T 201/04** applying R. 60(1) EPC 1973). However, in some exceptional circumstances, the proceedings have been terminated where such evidence was missing. In **T 762/89** the respondent (patent proprietor) had submitted that the patent had lapsed following non-payment of the national renewal fees in the designated contracting states (AT, BE, DE, FR, GB, IT, LU, NL und SE). EPO records showed that the European patent had lapsed in 1990 in all the designated contracting states except Italy and Luxembourg, and the respondent provided confirmation that the patent had lapsed in Italy with a letter of 7 January 1992. Since the respondent had expressly declared on a number of occasions that the patent had lapsed in all the designated states, the board held that, with a view to procedural economy, there was no valid reason why the respondent should be required to show that it had lapsed in Luxembourg as well. In **T 607/00** the board accepted the respondent's statement, which was not challenged by the appellant, that the patent had lapsed in Italy.

If the appellant (opponent) expressed doubts concerning a respondent's (patent proprietor's) claim that a patent had lapsed or been surrendered, then the lapse had to be registered with the EPO or properly proved. Otherwise, R. 60(1) EPC 1973 was not applicable and the appeal procedure continued (**T 194/88**, **T 682/91**, **T 833/94**, **T 201/04**).

2.2.1 Request for continuation of the proceedings made by the opponent

In **T 1213/97** the patent had expired for all designated contracting states during the opposition appeal proceedings. The appellant (opponent) requested a decision on the state of the file which implied a request for the continuation of the appeal proceedings for the purpose of issuing a decision. The board exercised its power under R. 60(1) EPC 1973 (R. 84(1) EPC) to continue the appeal proceedings.

In **T 598/98** too the patent had lapsed for all designated contracting states since a time subsequent to the opponent's filing of the appeal, and the appellant (opponent) had requested continuation of the proceedings. The request was allowed. The board maintained that the opponent's legitimate interest in retroactive revocation was one of the elements that could be a factor in the board's decision to terminate or continue the proceedings under R. 60 EPC 1973. It also stated that the general interest in a central ruling on the patentability of an invention claimed in a patent did at any rate justify continuing the proceedings until a final decision was taken if the case was essentially ready for decision at the time when the patent lapsed and if it also made a significant difference to the patent's fate whether a decision was taken on the merits or the proceedings were simply terminated.

In **T 500/12** the board granted the request filed by the appellant (opponent) for continuation of the appeal proceedings. The appellant had provided evidence from several national patent registers showing that the opposed patent had not lapsed in all contracting states and was still in force. The appellant further submitted that the annuity fees could be paid not only by the patentees but also by a third party. Furthermore, annuity fees could still be validly paid with a surcharge in many of the contracting states and, even if they were not paid with a surcharge in due time, reinstatement periods also had to be considered.

In **T 740/15** the board interpreted R. 84(1) EPC to mean that if the opponent files a request for continuation of the opposition proceedings within the given time limit, the scope of discretion of the opposition division provided in R. 84(1) EPC is thereby limited to only one possible lawful decision and this is the continuation of the opposition proceedings. The board noted that this understanding found support in the travaux préparatoires of the EPC 1973.

In **T 2492/18** the board set aside the opposition division's decision not to continue the opposition proceedings in accordance with R. 84(1) EPC. The reason given by the opposition division was that no timely request for continuation had been filed. The board noted that the request for continuation had been filed when an appeal was pending and that it would have been within the competence of the board in question to decide upon it. However the appeal had been withdrawn after two months and thus before the board was able to deal with it. From that moment on, the competence to deal with the request was again with the opposition division. The course of events might have led to some confusion, but that did not take away from the fact that a request for continuation had been timely filed and the opposition division had had an obligation to consider it.

In **T 1959/15** the board, exercising its discretion under R. 84(1) EPC, granted the request of the appellant to continue the appeal proceedings. In doing so, it had regard to the appellant's legitimate interest in attempting to reverse the opposition division's rejection of the opposition and to the circumstance that the board's decision on the patent had an ex tunc effect under Art. 68 EPC.

2.2.2 Request for continuation of the proceedings made by the patent proprietor

In contrast to the case law cited above, **T 708/01** concerns the situation where the patent proprietor had appealed against the decision of the opposition division to revoke the patent. The patent had expired in all the designated contracting states. The board decided that R. 60(1) EPC 1973 only applied, if at all, to the extent that the appellants were required to state whether they wished to maintain the appeal. The proprietors could also apply to have the patent maintained in amended form with effect only for the past. In the case in point the appellants stated that they wished to maintain the appeal. The board decided to continue the proceedings.

In **T 520/10** the board noted that if a European patent has lapsed in all designated contracting states, opposition proceedings may be continued at the request of the opponent. However, if – as in the present case – the patent proprietor was the appellant, it would be inappropriate to allow one or more of the opponents (respondents) to decide whether the appeal proceedings should be continued. For this reason, R. 84(1) EPC had to be applied mutatis mutandis in such opposition appeal proceedings so that it was the patent proprietor who could request that the appeal proceedings be continued. As no such request had been made, the appeal proceedings were terminated (see also **T 1733/09**, **T 1313/10**, **T 1272/10**, **T 1825/11**, **T 2020/14**, **T 998/15**). In **T 769/18**, at the request of the patent proprietor, the appeal proceedings were continued.

In **T 2536/10** the board, which had asked the appellant (patent proprietor) whether it wished to request continuation of the appeal proceedings, interpreted the statement of the appellant that the patent had been allowed to lapse in all designated states to mean that the appellant did not wish to request continuation. The appeal proceedings were terminated.

3. Death or legal incapacity of an opponent

Rule 84(2), first sentence, EPC provides that in the event of the death or legal incapacity of an opponent the opposition proceedings may be continued by the EPO of its own motion. This means that, with a view to ensuring expeditious handling of the case, they can be continued even without the participation of the opponent's heirs or legal representatives. There is therefore no need to wait for the heirs to be identified and the inheritance to be accepted or for a legal representative to be appointed (**T 1533/07**).

The appointment by the courts of an insolvency administrator under German law does not mean that the opponent is legally incapacitated within the meaning of R. 84(2), first sentence, EPC. Rather, under German insolvency law the administrator is an ex officio

party. By way of a change of party by operation of law, the administrator thus becomes a party to the proceedings, and takes the place of the opponent (**T 1533/07**, **T 917/01**).

4. Withdrawal of opposition

Rule 84(2), second sentence, EPC provides that the opposition proceedings may be continued by the EPO of its own motion if the opposition is withdrawn.

4.1. Form and effect of withdrawal on party status

A withdrawal requires an unambiguous statement. An opponent's statement explaining their lack of interest in the fate of the European patent to which their opposition relates cannot be construed as a withdrawal of the opposition (**T 798/93**, OJ 1997, 363). A declaration by the opponent that they have decided to "discontinue the opposition" clearly indicates that they want to cease their opposition and is to be interpreted in the sense that the opposition has been withdrawn (**T 789/89**, OJ 1994, 482).

An opponent who withdraws their opposition ceases to be a party to the proceedings (**T 283/02**). Where the proceedings continue and there are questions concerning the apportionment of costs, the opponent ceases to be a party with respect to the substantive issues, but remains a party as regards apportionment of costs (**T 789/89**, **T 1397/10**, **T 2350/10** and **T 2061/11**).

It is not possible to request that a withdrawal of an opposition be cancelled. The withdrawal is a procedural declaration by a party which takes effect on receipt by the EPO. An opponent who withdraws their opposition and as a result ceases to be an active party to the proceedings can no longer take procedural steps themselves (**T 283/02**).

In **T 558/95** the board noted that the main request had been refused by the opposition division before the opposition was withdrawn. The decision concerning this request was thus final; even after the withdrawal of the opposition, it could no longer be reviewed by the department of first instance. The continuation of the proceedings by the EPO of its own motion under R. 60(2), second sentence, EPC 1973 (R. 84(2) EPC) therefore applied only to the auxiliary request, which had not been the subject of a final decision.

4.2. Effect of withdrawal on opposition proceedings before the departments of first instance

After withdrawal of an opposition, the opposition proceedings should be continued if they have reached such a stage that they are likely to result in a limitation or revocation of the European patent without further assistance from the opponent and without the opposition division itself having to undertake extensive investigations (**T 197/88**, OJ 1989, 412; **T 36/11**). The continuation of the opposition proceedings under these circumstances follows from the EPO's general duty towards the public not to maintain patents which it is convinced are not legally valid at all or would be legally valid only with the necessary limitations (**T 156/84**, OJ 1988, 372; **T 197/88**).

In **T 1668/08** the respondent (opponent) withdrew its opposition during the appeal proceedings and was hence no longer a party to those proceedings. The board decided to remit the case to the department of first instance for further prosecution. The board emphasised that during that further prosecution the opposition division would first need to decide, in accordance with R. 84(2) EPC, whether or not to continue the opposition proceedings of its own motion in view of the withdrawal of the opposition. It warned that its decision to remit should not be taken as indicative of the conclusion to be reached in this respect. See also **T 1223/15**, in which the board decided to remit the case to the department of first instance, including first and foremost the question of whether the Office wished to continue the proceedings of its own motion according to R. 84(2) EPC.

In **T 36/11** the board held that an appeal by the patent proprietor against the decision of the opposition division to discontinue opposition proceedings after the withdrawal of the opposition was inadmissible because the patent proprietor had not been adversely affected by that decision.

In **T 228/14** the opposition was withdrawn after the opposition division had delivered its decision in oral proceedings to revoke the patent. The patent proprietor filed an appeal and the board concluded that the revocation decision had to be set aside. Regarding the continuation of the opposition proceedings, the board held that if the opposition proceedings had been terminated after the decision had been set aside, the patent would have stood as granted. But the proprietor had requested maintenance of the patent in amended form and thus no longer approved of the text of the patent as granted. The board stated that a decision to terminate the opposition proceedings would be contrary to the principle of party disposition as codified in Art. 113(2) EPC 1973. Moreover, the board took into account that the opposition division had been of the preliminary view that the subject-matter of the granted claims lacked inventive step. For both reasons, the board decided that the opposition proceedings had to be continued.

In **T 1860/13** the opponents withdrew their oppositions during opposition proceedings. The board held that the opponents thereby renounced their positions as parties to the proceedings and, accordingly, any active role in them. The fact that the opposition division continued ex officio with the examination of the oppositions did not affect this. Opponent III's submissions on appeal, filed after the appellant's (patent proprietor's) statement of grounds, were, therefore, regarded as third-party observations under Art. 115 EPC.

4.3. Effect of withdrawal on opposition appeal proceedings

The discretionary nature of an opposition division's decision whether or not to continue the proceedings pursuant to R. 84(2) EPC has to be distinguished from the much more narrow framework within which the boards of appeal decide on the effect of a withdrawal of an opposition. The effect of a withdrawal on the opposition appeal proceedings depends on whether or not the opponent is the sole appellant.

In **G 8/93** (OJ 1994, 887) the Enlarged Board held that if the **opponent** as **sole appellant** filed a statement withdrawing their opposition, this could only be regarded as a withdrawal of the appeal which immediately and automatically terminated the appeal proceedings as

far as all substantive issues were concerned (**G 7/91**, **G 8/91**, OJ 1993, 356, 346 and 478). This was irrespective of the patentee's consent. The proceedings were terminated even if in the board's view the requirements under the EPC for maintaining the patent were not met. The Enlarged Board emphasised the distinction between the power to initiate and continue proceedings and the power to clarify the facts in pending proceedings. According to its case law, in appeal proceedings the former was **exclusively** the province of the appellant, whereas the latter might be exercised by the board subject to Art. 114 EPC 1973 provided proceedings were pending.

In contrast, according to established case law the withdrawal of an opposition has no direct procedural consequences for the appeal proceedings if the opponent was the **respondent** and the contested patent was revoked by the contested decision (**T 629/90**, OJ 1992, 654; followed by numerous other decisions, including **T 789/89**, OJ 1994, 482, **T 194/90**, **T 627/92**, **T 46/10**, **T 727/10**, **T 2061/11**, **T 1216/12**, **T 289/16**). In such cases, the board must carry out a substantive examination of the opposition division's decision, and can only set aside this decision and reject the opposition if the grounds for opposition do not prejudice the maintenance of the granted patent. The board's examination can include the examination of evidence submitted by the respondent (opponent) prior to the withdrawal of the opposition (**T 629/90**; see also **T 900/03**, **T 340/05**, **T 46/10**, **T 727/10**, **T 817/12**). According to **T 46/10**, the board can also consider any arguments the respondent (opponent) submitted before the withdrawal (see also **T 1657/14**, **T 1635/15**, **T 2861/19**).

The opposition appeal proceedings are also continued if both the patent proprietor and the opponent have appealed but the opponent withdraws their opposition in the course of the appeal proceedings. The effect of the withdrawal of the opposition is that the appeal of the opponent is regarded as withdrawn and the opponent ceases to be a party to the appeal proceedings as regards the substantive issues (**T 789/89**, **T 922/01**, **T 1346/10**). In **T 943/22**, after the opponent withdrew their opposition and their appeal, the patent proprietor remained as the sole party in the opposition appeal proceedings. The board noted that, after allowing the proprietor's appeal, the board could not assess the remaining grounds of opposition raised by the former opponents/interveners. Hence, the board's finding that the ground for opposition under Art. 100(c) EPC did not preclude the maintenance of the patent as granted implied that the patent was to be maintained as granted.

R. Apportionment of costs

1. Principle that each party must bear its own costs 1221
2. Equity of a different apportionment of costs – case groups 1222
2.1. Late submission of documents and/or requests 1223
2.1.1 Late submission was unjustified 1224
a) Different apportionment of costs ordered 1224
b) No different apportionment of costs ordered – no disadvantage 1226
2.1.2 Late submission was justified 1229
a) No different apportionment of costs ordered 1229
b) Different apportionment of costs ordered for reasons of equity 1231
2.2. Acts or omissions prejudicing the timely and efficient conduct of oral proceedings 1232
2.2.1 Failure of a party to appear at oral proceedings 1232
a) Different apportionment of costs ordered 1233
b) Refusal of a request for apportionment of costs 1234
2.2.2 Request for scheduling or postponement of oral proceedings; withdrawal of request for oral proceedings 1238
a) Request for scheduling or postponement of oral proceedings 1238
b) Withdrawal of request for oral proceedings 1239
2.2.3 Other cases concerning oral proceedings 1241
2.3. Filing of opposition or appeal 1243
2.4. Withdrawal of opposition or appeal at short notice 1244
2.5. Other cases 1245
3. Expenses that may be apportioned 1248
3.1. Necessary expenses 1248
3.2. Future costs 1249
3.3. Procedure for fixing costs 1250
3.4. Appeal against decision fixing amount of costs 1250
4. Procedural aspects 1251
4.1. Filing a request for apportionment of costs 1251
4.2. Competence issues 1252
4.3. Appeal solely against the decision on apportionment of costs inadmissible 1252

1. Principle that each party must bear its own costs

Under Art. 104(1) EPC, each party to opposition proceedings must, as a rule, bear the costs it has incurred. However, the opposition division or board of appeal may, for reasons of equity, order a different apportionment of the costs. At the appeal stage Art. 16(1) RPBA also applies, allowing the board, subject to Art. 104(1) EPC, to order a different apportionment. It lists typical cases where costs arise as a result of: (a) amendments to a party's appeal case pursuant to Art. 13 RPBA; (b) extension of a period; (c) acts or omissions prejudicing the timely and efficient conduct of oral proceedings; (d) failure to comply with a direction of the board; or (e) abuse of procedure.

In **T 133/06** the board added that Art. 104 EPC belonged to the procedural provisions and so was subject to the general principle of law that a new procedural law was immediately applicable but had no retrospective effect unless otherwise provided. Hence when deciding whether the new Art. 104 EPC (i.e. Art. 104 EPC 2000) is applicable in appeal proceedings initiated under EPC 1973, the board must take into consideration not only the fact that, according to the transitional provisions (see decision of the Administrative Council of 28 June 2001, OJ SE 1/2007, 197), the new Art. 104 EPC is applicable to granted patents, but also the date of the event which gives rise to the application of this article. This is the only way to give the new procedural provision an immediate application without giving it a retrospective effect.

In **T 66/18** the board held that Art. 104(1) EPC applied only to adversarial proceedings such as opposition proceedings. An alleged abuse during examination, i.e. before and not during opposition proceedings, did not fall within the scope of Art. 104(1) EPC. It further observed that the possibility of apportioning costs was treated in the case law not as a means of imposing a fine but rather as a way of granting at least partial compensation for conduct during opposition proceedings that fell short of the due level of care.

2. Equity of a different apportionment of costs – case groups

There is no definition of equity in the EPC. The boards of appeal therefore had to develop the criteria determining whether costs were to be apportioned on a case-by-case basis. In a number of decisions it has generally been stated that apportionment of costs is justified if the conduct of one party is not in keeping with the care required, that is if costs arise from culpable actions of an irresponsible or even malicious nature (see, for example, **T 765/89**, **T 26/92**, **T 432/92** and **T 256/16**).

In **T 1714/14** the board held that "reasons of equity" exist when a party's costs arise from culpable actions of another party, or even abusive behaviour. If, however, there was nothing to indicate negligence, wrongdoing, or an abuse of procedure, a different apportionment of costs was not justified.

From the exceptional nature of the cost apportionment provided under Art. 104(1) EPC and the reference to abuse of procedure contained in Art. 16(1)(e) RPBA, the board concluded in **T 967/18** that more than just a mistake made by a party or a negligent delay in a procedural act, which may occur in proceedings and which may lead to additional activities and costs, was required for the order of a different apportionment. Abuse of procedure referred to such extreme situations where "the exercise of rights is predominantly intended to cause damage and other legitimate purposes take a back seat" (**J 14/19**). Therefore, while the board considered that negligent behaviour may also justify apportionment, the negligence had to be serious enough to be considered equivalent to wilful misconduct.

Requests for a different apportionment of costs are often filed in various scenarios in which costs are incurred due to:

- late submission of documents and/or requests (see in this chapter III.R.2.1.);

- acts or omissions prejudicing the timely and efficient conduct of oral proceedings (see in this chapter III.R.2.2.);

- filing of opposition or appeal (see in this chapter III.R.2.3.);

- withdrawal of opposition or appeal at short notice (see in this chapter III.R.2.4.);

- other cases (see in this chapter III.R.2.5.).

2.1. Late submission of documents and/or requests

Where facts and evidence supporting the opposition are submitted at a late stage in the proceedings and another party incurs considerably higher costs as a result, a different apportionment of the costs may be ordered for reasons of equity (see **T 10/82**, OJ 1983, 407; **T 117/86**, OJ 1989, 401; **T 101/87**, **T 326/87**, OJ 1992, 522; **T 416/87**, OJ 1990, 415; **T 323/89**, OJ 1992, 169; **T 596/89**, **T 622/89**, **T 503/90**, **T 611/90**, OJ 1993, 50; **T 755/90**, **T 110/91**, **T 867/92**, OJ 1995, 126; **T 719/93** and **T 970/93**). The relevant factor in deciding on the costs is whether or not there are cogent reasons justifying the late submission; it is regarded as irrelevant whether the material in question has any bearing on the merits of the decision. However, it should be pointed out that, in several cases, requests for apportionment of costs have been refused, despite an unjustified delay, because there was no proof that higher costs had been incurred (see, for example, **T 212/88**, OJ 1992, 28; **T 582/90**, **T 267/92**, **T 9/95** and **T 207/03**).

According to board of appeal case law, if a party introduces important facts or evidence at a late stage of the proceedings, without cogent reasons for the delay, this may be taken into account in the apportionment of costs (see **T 117/86**, OJ 1989, 401; **T 326/87**, OJ 1992, 522; **T 97/90**, **T 611/90**, OJ 1993, 50; **T 847/93**, **T 1016/93**, **T 574/02**, **T 931/06**, **T 493/11**). If the reasons for the late citing of a document do not point towards negligence or other circumstances that would amount to an abuse of procedure, there is no reason of equity which would justify an apportionment of costs in the other party's favour (**T 1016/93**). But see also **T 561/19**, in which the board held that negligence, will to harm or abuse of procedure was not a prerequisite for a different apportionment of costs. It sufficed that there was no good justification for the late filing and that the late filing was the cause of both the adjournment of the oral proceedings and extra costs for the other party.

Preparations for discussing the admission of late-filed documents into the proceedings during the opposition-appeal proceedings and, if they are admitted, preparations for discussing their relevance in respect of the patentability of the claimed subject-matter are part of the normal work that can be expected of any party and/or its representative (**T 1848/12**). See similarly **T 101/17** for late-filed requests.

In **T 1781/13** the board found that, since the EPC did not treat late-filed submissions as automatically inadmissible and the RPBA 2007 similarly did not treat amendments to a case this way, both instead leaving it to the boards to decide on admission at their discretion (Art. 114(2) EPC; Art. 12(4) and 13(1) RPBA 2007), it was clear that a party's amending its case could not be regarded as unfair per se and so held against it. Generally

speaking, additional circumstances were therefore needed for equity to dictate ordering a party to pay the other's costs because it had amended its case at a late stage (see also **T 467/15**). In the case in hand, no such circumstances were apparent to the board and the party requesting that it be awarded costs, although bearing the burden of substantiating that request, had not made a case for them.

2.1.1 Late submission was unjustified

a) Different apportionment of costs ordered

In **T 514/01** the board found that the late allegation of **public prior use** during the first oral proceedings before the opposition division had given rise to additional costs because a second oral proceedings before the opposition division were then needed to investigate the alleged public prior use.

Similarly, in **T 561/19** the opponent (appellant) filed document D15 during the first oral proceedings before the opposition division. D15 was admitted and the oral proceedings were adjourned. The opposition division ordered that the costs incurred as a result of the second oral proceedings be borne by the opponent. Since there was no good justification for the late filing and the late filing was the cause of both the adjournment of the oral proceedings and extra costs for the other party, the board confirmed the opposition division's decision.

In **T 117/86** (OJ 1989, 401) the appellant had produced, together with their statement of grounds, two new prior art documents and an affidavit in support of the contention that the opposed patent lacked an inventive step. The board concluded that the fact that new documents were presented **after the nine-month period** for filing opposition could itself give rise to additional expenditure for the other party, and that the costs should be apportioned differently for reasons of equity.

The board in **T 416/87**, expressly referring to **T 117/86**, regarded it as an abuse of the opposition procedure that the appellant had in its statement of grounds of appeal relied exclusively on three new documents and had even raised for the first time the **issue of novelty** on the basis of a document already discussed in the patent in suit. By introducing arguments and documents which bore little relation to the content of those filed in the original opposition, the appellant had produced virtually a new opposition at the appeal stage. This could not, by definition, be the purpose of an appeal. Although the respondent clearly envisaged requesting a decision on costs in the event of oral proceedings only, the abuse of procedure justified the apportionment of costs incurred during the taking of evidence.

The board in **T 83/93** held that it was also an abuse of the appeal procedure to submit **five new documents** as evidence 40 months after the end of the opposition period (without giving reasons) and to revive an objection under Art. 100(c) EPC 1973 on the basis of new facts and evidence 51 months after the end of the opposition period.

In **T 867/92** (OJ 1995, 126) the claims had been amended during the opposition proceedings. Eighteen months after the claims had been amended, the appellant (opponent) cited in the statement of grounds of appeal a **new prior art** document. The board held that the EPC does not impose a time limit for citing new prior art in response to an amendment of the claims. However, an opponent who cites new prior art with a considerable delay with no special reason justifying the delay runs the risk of having to bear the proprietor's costs incurred in attending oral proceedings which cannot bring the case to an end because of the new citation. However, as there was no suggestion that the appellant wilfully abused the procedure in the case at issue, the board considered that it would be equitable to order the appellant to pay only half those costs.

In **T 416/00** the appellant (opponent) submitted a **document** which had been cited in the patent in suit and mentioned in the opposition proceedings but **had never been discussed between the parties** until the appeal proceedings, and had even been expressly excluded before the opposition division. The board found that the opponent's attempt to make surprising use of a document that it had disregarded in the oral proceedings before the opposition division ran counter to the speedy conclusion of the proceedings before the two departments. Even if this was not a deliberate tactic on the opponent's part, the result was the same in terms of the principle of fairness governing proceedings. The respondent's request for a different apportionment of costs was granted.

In **T 2549/12** documents which the appellant had filed with its statement of grounds of appeal amounted to new submissions that opened up a new discussion and a fresh case that had not been dealt with in the first-instance decision. The board refused to admit the documents. On the apportionment of costs, the board held that, where an **entirely new case** was first made on appeal (here, through filing the new submissions) and there were no mitigating circumstances that might excuse its being made so late, opportunities to make it at first instance having been missed and no explanation or justification for that being provided, it was appropriate to order a different apportionment of costs within the meaning of Art. 104(1) EPC.

In **T 671/03** document D18 was first filed in the appeal proceedings and deemed to constitute an **amendment to the appellant's submissions** pursuant to Art. 10b RPBA 2003. If it had been filed within the opposition period, there would have been no need to discuss its admission during the oral proceedings in the appeal. The costs for preparing and attending the oral proceedings before the board, which mainly discussed the admission of D18, could have been avoided. For reasons of equity the board ordered a suitably modified apportionment of costs.

In **T 493/11** the respondent (opponent) introduced important evidence at a late stage of the proceedings, namely only two months before the date of the scheduled oral proceedings before the board, without cogent reasons for the delay and, in particular, without submitting all the necessary information. The board stressed that the **responsibility for stating its complete case** lay exclusively within the respondent's own sphere. As a consequence, any delay causing the incurring of additional costs by the other party remained within the respondent's sphere and liability and, in the case in hand, justified an apportionment of costs.

Similarly, in **T 2165/08** of 6 March 2013 the appellant (patent proprietor) filed its auxiliary requests 1 to 3 **one month before the oral proceedings** in appeal and further supporting documents even closer to the oral proceedings. The board stated that it would always be unacceptable for a party to produce evidence without any explanation – unless conceivably its relevance was self-evident. But to produce evidence at the virtual end of the proceedings accompanied only by a statement that the explanation would be provided even later was not only discourteous but a clear, and apparently deliberate, attempt to frustrate the respondent's preparation for the oral proceedings. That was both an act prejudicing the efficient conduct of oral proceedings and an abuse of procedure, which merited an apportionment of costs.

In **T 1763/12** the board admitted document O6A into the proceedings even though it was filed **only three days before the scheduled date for the oral proceedings**. The appellant (opponent) did not give any reason why document O6A had only been submitted at such a late stage of the proceedings and why it could not have filed this document earlier. The consequence was that the discussion at the oral proceedings before the board was limited to the issue of admittance of O6A without considering any substantive matter. This would have been avoided if the document had been filed earlier. The board held it to be equitable that the expenses incurred by the appellant (patent proprietor) in connection with the oral proceedings be borne by the appellant (opponent).

In **T 2233/09** the appellant (opponent) announced its change of name and filed a copy of a merger certificate the day before the oral proceedings. The board concluded that it would have been possible for the appellant to submit the evidence necessary to prove transfer of appellant status well ahead of the oral proceedings and that it was its conduct that had caused the adjourning of the oral proceedings. Therefore, for reasons of equity, the respondent's costs for the new oral proceedings had to be borne by the appellant.

In **T 874/03** a new prior art document and its translation were filed during the oral proceedings on appeal. The board admitted this document and it ruled that when late filing of facts and evidence necessitated remitting the case to the department of first instance, the costs of any oral proceedings in the appeal proceedings were normally to be borne by the party responsible for the late filing.

In **T 1033/09** the oral proceedings had been adjourned following the **admission of an auxiliary request** submitted by the respondent during those proceedings. For the board, there was no doubt that this auxiliary request constituted an amendment to the respondent's case after it had filed its reply to the statement of the grounds of appeal, and so one within the meaning of Art. 13(1) RPBA 2007. The board therefore found it equitable to apportion the costs in the appellant's favour.

b) No different apportionment of costs ordered – no disadvantage

In **T 336/86** the appellant submitted a prior patent belonging to the respondent for the first time during oral proceedings on appeal, which destroyed the novelty of the patent in suit. The respondent requested an apportionment of costs as the oral proceedings would not have been necessary had the patent been presented earlier. The board agreed that the

late submission was not justified and that higher costs had been incurred as a result. However, as the respondent either had – or should have – been aware of the **existence of their own patent**, it took the view that an apportionment of costs was not justified.

In **T 330/88** the respondent filed a new document two days prior to the oral proceedings. The board took the view that the late filing was unjustified but that an apportionment of costs would not be equitable as the appellant had had **sufficient time** to deal with the document, especially since the decision was not taken until four months after the oral proceedings and following the opportunity to present comments.

In **T 525/88** the late filing was unjustified, but the request for apportionment of costs was rejected because the documents were of **no relevance** and did not affect the decision see also **T 876/90**, **T 1714/14**. In **T 882/91** the board did not look into whether the unjustified late submission had led to higher costs because it was of the opinion that the other party had not had to spend very **much additional time and energy** on the documents which had been submitted late and that there was therefore no reason to apportion costs (see the decisions on similar cases in **T 737/89**, **T 685/91**, **T 556/90**, **T 231/90** and **T 875/91**).

In **T 28/91** three documents which had already been submitted to the opposition division were re-submitted at a later stage in the appeal proceedings. The board ruled that the late submission was not disadvantageous as no new arguments had been introduced, and therefore no additional work had been necessary (see also **T 133/06**).

In **T 931/97** the opponent had submitted new evidence in appeal proceedings, which was **already known to the patentee** from earlier proceedings before the German Patent Office. The board held that where the patentee knew the documents and could assess their prospects a different apportionment of costs was not justified.

In **T 1182/01** the board admitted into the appeal proceedings several documents filed late by the appellant and held that its decision to **remit** the case immediately to the department of first instance meant that the respondent had not incurred any undue cost burden in relation to the appeal in hand.

In **T 633/05** the appellant referred for the first time in the statement of grounds of appeal to a document which had been cited in the European search report but not considered in the opposition proceedings. In the board's view, the appellant sought to provide new evidence in support of a line of argument already put forward in the opposition proceedings, namely the fact that certain features of the present invention were known in the art. As the said **document was cited in the statement of grounds** of appeal and was anyway part of the examination file, the respondent had had ample time to study the content of this fairly short document and prepare a rebuttal against the appellant's allegation that it disclosed some key features of the contested patent. Thus, the board had no reason to suspect that the appellant's late filing might have been aimed at delaying the appeal proceedings, or that it resulted in the respondent being burdened with unreasonable additional costs.

In **T 273/10** the board found that the **opponent had abusively withheld the document** in question, which ought to have been submitted for adversarial scrutiny in good time. However, it also observed that this had not been the only reason why further oral proceedings before the opposition division had been necessary. At the stage when the initial proceedings had been adjourned, it would anyway have been impossible to close them the same day. The board noted that a full day had been needed for the second oral proceedings and, moreover, that continuation of the proceedings had given the proprietor an opportunity to put forward new auxiliary requests. It followed that, since both parties had benefited from the holding of further oral proceedings, it would not be equitable to order the opponent to bear the costs alone.

In **T 213/14** the board exercised its discretion under Art. 13(1) RPBA 2007 not to admit auxiliary requests into the proceedings; it also refused a different apportionment of the costs. It held that a **proprietor filing new requests** in order to defend its position subsequent to oral proceedings being appointed or to receiving a negative preliminary opinion from the board was, with regard at least to the case in hand, not seen as an extraordinary circumstance justifying an apportionment of costs. Whilst the requests could arguably have been filed as part of the appellant's complete case, the later filing of these could not be understood to have resulted in significantly greater work for the respondent. The respondent should have considered what objections were to be made, including, where appropriate, possible objections as regards admittance of such requests into the proceedings.

In **T 101/17** the board refused the respondent's (opponent's) request for a different apportionment of costs. The respondent argued that the **filing of auxiliary requests at the appeal stage** – rather than at the stage of opposition – amounted to an abuse of procedure; although the auxiliary requests were not admitted, it had nonetheless been necessary to prepare for the scenario that they would be admitted and to subsequently address them content-wise. The board considered that the case law of the boards of appeal did not support a different apportionment of costs. It concurred with the approach taken in **T 1848/12**, namely that preparations for discussing the admission of late-filed documents were part of the normal work that can be expected of a party, as an application of the principle that each party bears its own costs. It further observed that in order to establish any causal link between the respondent's expenses and the appellant's behaviour, the respondent would have to show that it was particularly the belated filing of requests that caused the expense rather than the filing of requests as such. As a discussion on the admissibility of requests was a not uncommon occurrence in proceedings in general, this could hardly be credited with separately identifiable expenses.

In decision **T 2175/15** of 11 June 2024 on the apportionment of costs, the board held a different apportionment of costs under Art. 104(1) EPC und Art. 16(1) RPBA not to be equitable. In the case in question, the appellants (patent proprietors) had filed an auxiliary request exclusively covering the granted process claims in the first oral proceedings before the board of appeal. The board was of the opinion that it would have been reasonable to deal with that auxiliary request in those oral proceedings. Therefore, their adjournment had not been necessitated by the late filing of the auxiliary request. Contrary to the view of the opposing appellant (opponent), the board could not see any breach of fundamental

procedural due care obligations on the part of the patent proprietors in withdrawing the appeal a few days before the second oral proceedings were scheduled (see **T 490/05**).

2.1.2 Late submission was justified

In principle, costs are not apportioned differently if the late submission of facts and evidence appears justified. The boards have assumed in particular that belated submission is justified or that no abuse of procedure has taken place if new documents are filed for the first time at a later stage in the proceedings as a reaction to communications from the board, comments from the other party or amendments of the patent or decisions of the department of first instance which make such documents necessary in the first place (see **T 582/88**, **T 638/89**, **T 765/89**, **T 472/90**, **T 556/90**, **T 334/91**, **T 875/91**, **T 81/92** and **T 585/95**).

a) No different apportionment of costs ordered

In **T 712/94** the board allowed the appellant (opponent) to introduce facts and evidence on alleged prior use at the appeal stage, whilst refusing the respondent's (patentee's) request for apportionment of costs. The patentee had been made aware of the prior-use documents during negotiations conducted well before the first-instance decision was taken; so they had not taken him by surprise when submitted after the failure of those negotiations.

In **T 29/96** a new document which was fairly simple and straightforward in content had been filed together with the statement of grounds of appeal. The board ruled that this was the earliest possible moment that the document could have been submitted. In addition, the introduction of the new document could not be regarded as having given rise to a new opposition; the appellant had not introduced a new item of closest prior art but merely a new secondary information source, in an attempt to **fill the gap referred to in the impugned decision** so as to improve its position with respect to the assessment of inventive step.

In **T 1171/97** the board rejected a request for apportionment of costs because it was satisfied that the new documents which had become known to the appellant (opponent) in the course of another search had not been filed in order to obstruct the proceedings, but because they contained aspects which, **according to the statement of the opposition division**, had not been found in the previously available references.

In **T 554/01** the appellant submitted a number of documents following the negative decision taken by the opposition division. The board held that the mere fact that certain documents had been submitted at a late stage did not justify a finding that there had been an abuse on the part of the appellant, especially where they had been submitted as a result of a legitimate desire **to supplement the line of argument** which had been unsuccessful before the department of first instance. Moreover, the respondent had not shown that they had incurred additional costs as a result of the documents' introduction into the proceedings.

In **T 507/03**, as a reaction to the reasons given in the impugned decision, the opponent (appellant) filed a new set of documents in the appeal proceedings. Refusing the request for a different apportionment of costs due to the late filing, the board argued that, according to Art. 108 EPC 1973 and R. 65 EPC 1973 (now R. 101 EPC), a statement of grounds of appeal had to identify the extent to which amendment or cancellation of the decision was requested. This, however, did not forbid a losing opponent from filing new pieces of prior art if it was felt that they could counter the reasons given in the appealed decision. Further, the new documents were all **easily understandable** and had not caused **an unreasonable amount of extra work** such as to justify departing from the normal rule that each party meets its own costs pursuant to Art. 104 EPC 1973.

In **T 242/04** the board considered that the respondent's late filing was made **in response to a communication of the opposition division** for making written submissions and took place roughly one month before expiry of the final date accorded in the communication as well as roughly two months before the date for oral proceedings. The circumstances were therefore not such that there was no justification for the late filing or that it could be held that the respondent acted in bad faith. In addition, the appellant who requested an apportionment of costs and, in particular, reimbursement of the travel costs of a technical expert, neither gave any reasons let alone any evidence for the necessity of the technical expert's presence at the hearing before the opposition division, nor provided any evidence that the respective trip was caused only by the said late filing. Therefore, a different apportionment of costs was not regarded as justified.

In **T 333/06** the board found that the appellant's maintenance of their request for admission of the fresh ground for opposition – lack of inventive step – and of the new supporting documents, after being notified of **the board's preliminary negative opinion**, did not constitute abuse, as that opinion was not a final decision. Furthermore, even if the appellant had acknowledged that the new documents were not relevant to novelty, objectively they could not be blamed for having maintained them in the hope that their oral presentation would result in the admission of lack of inventive step as a fresh ground for opposition and hence of the new documents relevant to inventive step. Thus, while this had admittedly made the respondent's preparations for oral proceedings more difficult than they would have been if the appellant had withdrawn the new documents, the procedural conduct on the part of the appellant which had necessitated those preparations was not abusive but one of the appellant's legitimate prerogatives.

In **T 1167/06** the board did not consider it an abuse of procedure that two weeks before the oral proceedings the appellant filed three further auxiliary requests, additional arguments and four short documents, the latter illustrating common general knowledge on issues that had already been discussed. The need to **translate the requests and documents** and the resultant costs were in the nature of the European procedure with three official languages and affected all parties in equal measure. As the language of the proceedings for the patent was German, the respondent (opponent) had to expect many submissions to be made in that language. The respondent stated that an additional representative had had to deal with the late filing and travel to the oral proceedings because the **representative assigned the case had been on leave** at the time in question. In the board's view, however, the representative's absence on leave was not the

fault of the other party. Moreover, the respondent had been represented by the same two representatives before the opposition division, so the additional representative had not needed much time to familiarise himself with the latest dossier updates.

In **T 467/15** the board set aside the opposition division's order apportioning costs in favour of the opponent. The opponent had contended that it had been unable to prepare for the oral proceedings before the opposition division due to the **large number of diverging auxiliary requests**, the point in time at which they were submitted and the reasons for them, which it considered inadequate. In this case, however, the board decided, contrary to the opposition division, that submitting 22 auxiliary requests before the date specified under R. 116(1) EPC could not be deemed an abuse of proceedings or unreasonable. Since amending a case even at an advanced stage of the proceedings was not necessarily inadmissible under the EPC, doing so could not in itself be considered an abuse of proceedings or unreasonable. As a general rule, there needed to be further circumstances to justify awarding costs for reasons of equity because a case had been changed at a late stage (see **T 1781/13**). In the case in hand, the board did not consider the large number of auxiliary requests and the fact that they were diverging to adequately justify an award of costs.

In **T 403/17** the board admitted the submissions filed by the appellant one month before the oral proceedings. It refused a different apportionment of costs because these submissions did not lead to any amendment to the appellant's case within the meaning of Art. 13 RPBA (different from **T 2165/08** of 6 March 2013, where the board had regarded submissions made shortly before oral proceedings as an amendment to the appellant's case and an abuse of procedure). Considering these submissions and preparing to discuss their relevance to the patentability of the claimed subject-matter were regarded as being part of the normal preparatory work for the oral proceedings that could be expected by any party to the appeal proceedings (see **T 1848/12**). The board also noted that it was the appellant's right to write its submissions in German; R. 3(1) EPC stipulated that in written proceedings, any party may use any official language of the EPO.

According to the board in **T 964/21**, the fact that the patent proprietor did not contest the earliest priority claimed for D22 in view of the embodiment "A" until the first oral proceedings before the opposition division could not justify a different apportionment of costs. In this regard it had to be taken into account that a novelty objection based on this embodiment was raised for the first time in said oral proceedings. Even if a novelty objection based on the embodiment "B" of D22 was already in the proceedings, this did not mean that the patent proprietor would have been obliged to consider the validity of the priorities of D22 in relation to that objection.

b) Different apportionment of costs ordered for reasons of equity

In **T 847/93** a new prior art document was cited in the statement of grounds. Mitigating circumstances for the late filing of new facts and evidence were put forward by the appellant and were held to be credible by the board. However, the board was also of the opinion that it was credible that the costs incurred by the respondent were higher as a result of the introduction of an entirely fresh case than if the facts and evidence had not

been filed at a late stage. It therefore decided to order an apportionment of costs under Art. 104(1) EPC 1973 according to which the appellant had to pay the respondent 50% of the costs incurred by the respondent – after remittal to the department of first instance – in respect of the subsequent oral proceedings and the taking of evidence as well as in any subsequent appeal (on the issue of future costs, see chapter III.R.3.2.).

In **T 1137/97** a belatedly submitted document was admitted into the proceedings and a different apportionment of costs was ordered. In determining the costs, the board itself, exercising its discretion under Art. 111(1) EPC 1973, awarded a fixed sum of EUR 2 500 to avoid the need for an exact investigation of the amount, which would have been more burdensome for the parties.

In **T 937/00** the board found that all the requests presented by the appellant (patent proprietor) in writing in advance of the oral proceedings before the board were clearly inadmissible and their filing could hardly be considered appropriate in the circumstances of the case, in which the appellant had chosen to file an exceptionally high number of independent claims in response to the notice of opposition. At the very end of the oral proceedings, the appellant had even filed a third auxiliary request according to which all the claims which had been contested in the appeal procedure were simply abandoned. In these circumstances, the board felt compelled to admit the belated auxiliary request (had the board rejected the appellant's third auxiliary request, the appeal would have been dismissed and the revocation of the patent would have become final) and to remit the case to the department of first instance, none of the remaining claims having ever been considered by the opposition division. However, the board ordered for reasons of equity an apportionment of the costs of the oral proceedings.

2.2. Acts or omissions prejudicing the timely and efficient conduct of oral proceedings

2.2.1 Failure of a party to appear at oral proceedings

The boards consider it highly undesirable for summoned parties to announce too late, unclearly or not at all that they will not be attending. Such conduct is inconsistent both with the responsible exercise of rights and with the basic rules of courtesy (see for example **T 434/95**, **T 65/05**).

There is an equitable obligation on every party summoned to oral proceedings to inform the EPO as soon as they know that they will not be attending as summoned (**T 212/07**), regardless of whether they or another party requested the oral proceedings and of whether or not a communication accompanied the summons to oral proceedings. If a party who has been summoned to oral proceedings fails to attend as summoned without notifying the EPO in advance, an apportionment of costs in favour of another party, who has attended as summoned, may be justified for reasons of equity (established case law, see for example **T 930/92**, OJ 1996, 191; **T 123/05**, **T 972/13**). As one party's non-attendance does not automatically put the other party at a disadvantage (**T 273/07**, **T 544/94** and **T 507/89**), one essential question here is whether the appellant's failure to attend rendered the oral proceedings unnecessary (**T 10/82**, OJ 1983, 407; **T 275/89**, OJ 1992, 126).

a) Different apportionment of costs ordered

In **T 909/90** oral proceedings had been appointed at the appellant's request. Without giving the board or opponent any advance notice, the appellant did not attend the oral proceedings. Nor did it comment on the board's communication. For this reason in particular the oral proceedings contributed nothing new to the case. The board ordered the apportionment of costs without examining whether higher costs had been incurred as a result of the appellant's failure to appear. The appellant's failure to inform the board **in time or at all** that they would not be appearing at the oral proceedings was likewise the reason for ordering them to bear the costs in **T 434/95**, **T 641/94** and **T 123/05**.

In **T 693/95** and **T 338/90** costs were awarded because notice of the appellant's absence had been given, in the former case, only an hour before the oral proceedings and, in the latter, at the time when the oral proceedings were due to start.

In **T 937/04** the appellant (patent proprietor), by fax sent only to the EPO after business hours on Friday, 17 February 2006, informed the board, without giving reasons, that it would not be attending the oral proceedings on 21 February 2006. The board stated that the appellant, in informing only the EPO and not the other parties, had failed to exercise all due care required and concluded that, for reasons of equity, an apportionment of costs should be accorded in favour of the respondent 01. See also **T 301/12**.

In **T 53/06** the appellant requested oral proceedings "in case the board considers not to set the decision aside". As soon as it received the board's summons to oral proceedings and communication, the appellant knew not only that oral proceedings would take place but also that the condition it had itself placed on its own request for oral proceedings had been fulfilled, since the communication clearly indicated that the board's provisional opinion was that the decision under appeal would not be set aside. However, the appellant neither replied to the communication nor indicated at all, let alone as soon as it knew, that it would not attend oral proceedings. Since the respondent had, in the absence of any submissions from the appellant additional to those in the grounds of appeal, nothing to add to its own case in its reply to the grounds of appeal, the **oral proceedings proved to be unnecessary**. In those circumstances, an apportionment of costs in favour of the respondent was held to be appropriate under Art. 16(1)(c) and (e) RPBA 2007. See also **T 212/07**, **T 2179/09**, **T 258/13**.

In **T 301/12**, in reply to the board's communication, the appellant had announced in writing that it would "probably not be represented at the oral proceedings", while explicitly upholding its request for oral proceedings, and without providing further arguments on the substance. The board held that this submission had been unclear and left the respondent in the dark as to the appellant's true intentions. Therefore, the respondent had to properly prepare for the case on the basis that the appellant would be attending the oral proceedings. The appellant's failure to clearly state its intentions on its attendance at the oral proceedings was a culpable failure in its duties.

In **T 280/15** the board held that since the appellant's notice of non-attendance at the oral proceedings had been received only the **evening before** them, the respondent had

incurred costs which could have been avoided had the appellant conducted itself properly and observed the basic rules of courtesy. Moreover, the appellant's conduct, and particularly the fact that it had not informed the respondent directly, had prevented the respondent from limiting, if not avoiding, further costs for attending the oral proceedings.

In **T 2350/15** the appellant (opponent) informed the board that it would not be attending the hearing, but that this did not mean that it was withdrawing its appeal or its request for oral proceedings. The board considered that since it had intended to maintain the patent according to the main request of the patent proprietor, the oral proceedings (in the absence of the opponent) served no purpose and could have been cancelled, had it not been for the opponent's request. Indeed, the patent proprietor was not adversely affected by the decision to maintain the patent on the basis of its main request, and would thus not have needed any oral proceedings to defend its case. By maintaining its request for oral proceedings, the opponent thus not only obliged the board to hold them but also obliged the patent proprietor to come to the oral proceedings and to prepare for them. The board found it equitable that the appellant bore the costs (for preparation, travel and presence) for the oral proceedings before the board. But see also **T 256/16**, in which under similar circumstances the board considered that the respondent (patent proprietor) was not "obliged to come to the oral proceedings and to prepare for them" and rejected the request for apportionment of costs.

b) Refusal of a request for apportionment of costs

The non-appearance of a party generally does not adversely affect the party which did attend. As a rule, a different apportionment of costs will not be ordered if the parties which are affected have neither shown nor claimed that they incurred additional costs because the other party was not present (**T 544/94**, **T 632/88** and **T 507/89**).

In **T 591/88** both parties had requested that oral proceedings be held – both in fact filing an **"unconditional"** request. Without giving any advance notice, the respondent failed to appear. The appellant requested apportionment of costs on the grounds that the oral proceedings would not have been necessary had they known that the respondent would not be attending. The board rejected a different apportionment of costs because the appellant had made an "unconditional" request for oral proceedings, i.e. also covering the eventuality that the other party would not appear.

In **T 275/89** (OJ 1992, 126) the appellant's representative filed a request that the oral proceedings scheduled for 3 May be adjourned, on the grounds that the appellant was unable to attend the oral proceedings owing to **illness**. The request was submitted so late, i.e. in the afternoon of 30 April, that it was impossible in view of the public holiday the following day to notify the respondent in time: they had already departed in the afternoon of 1 May. The request for adjournment was refused however and the oral proceedings took place without the appellant and his representative. The respondent requested a different apportionment of costs on the grounds that they would not have attended either had they known that the appellant would not be appearing. The board, however, took the view that the appellant could not be made responsible for the fact that the respondent had chosen to make an early start to the journey. Furthermore, the only matter of importance

was whether the appellant's absence rendered the oral proceedings unnecessary. This question had to be answered in the negative. The request for costs was therefore rejected. The same decision was reached in **T 1856/10**, where a **medically certified, sudden and unexpected illness** of the appellant's representative had made him unable to attend. Here it was deemed acceptable that the board and the other party had not been informed of the first signs of his illness on the morning of the day before the oral proceedings, but only on the afternoon of that day, after he had seen a doctor.

In **T 838/92** the appellant stayed away from the oral proceedings. The respondent requested a different apportionment of costs as it had appeared with **seven witnesses**. The board rejected the request because the witnesses had been summoned at the respondent's instigation in order to prove the prior uses alleged by the latter. There was therefore no reason to impose the costs on the appellant (see also **T 273/07**).

In **T 91/99** the board stated that, where an appellant failed to give notice that they would not be attending the oral proceedings until **two working days** before the date set for the proceedings, this could constitute negligent or wilful conduct; however, in the case at issue, there was no culpable conduct on the part of the appellant which could justify an apportionment of costs under Art. 104(1) EPC 1973. See also **T 105/14** for a case in which the party announced its non-attendance **three days** before the oral proceedings and a different apportionment was not ordered.

In **T 849/95** the respondent submitted a request for apportionment of costs, as the appellant had not informed the EPO in good time that it would not be taking part in the oral proceedings. The board rejected the request, as the oral proceedings were arranged not only at the request of both parties, but also because the board itself required further airing of facts on the part of the respondent. The oral proceedings would not have been cancelled even if the appellant had informed the EPO in good time.

In **T 435/02** both the appellant and the respondent had filed an **auxiliary request** for oral proceedings. When filing its request, the respondent had wanted to attend the oral proceedings to ensure that the board would not overturn the decision under appeal without it having had the opportunity to present its case orally. In response to the appellant's announcement not to attend the oral proceedings, the respondent gave notice that it too would not be attending and commented that it had wished to attend "merely to rebut statements/arguments made by the patentee during these proceedings". Although the board expressly informed the parties that the oral proceedings would be held as planned, the respondent failed to attend. The respondent requested a different apportionment of costs because the appellant had withdrawn its request for oral proceedings so late that the respondent had incurred costs which no longer could be recovered. The board refused the request on the grounds that, contrary to the respondent's claim, its failure to appear was not a response to the appellant's decision not to attend but the result of a choice not to take the opportunity which it had requested to present its case orally.

In **T 65/05** the respondent (patent proprietor) maintained that, like the appellant, it would not have attended the oral proceedings if it had been informed in time that the appellant would not be appearing. In the case in point the board considered it doubtful that the oral

proceedings could therefore have been waived or that the respondent would then at any rate not have attended them or would have withdrawn its request for oral proceedings. Both parties had submitted auxiliary requests for oral proceedings. The board had issued the summons without an opinion on the merits, in particular without any announcement or intimation that it was likely to decide in the respondent's favour. Therefore the respondent could not rely on a favourable decision purely on the basis of its written submissions if it stayed away from the oral proceedings. In these specific circumstances the board deemed it likely that the respondent would have appeared at the oral proceedings to defend its interests even if it had known that the appellant would not be there. The request for a different apportionment of costs was therefore rejected (see also **T 190/06** and **T 1361/09**).

In **T 1441/06** the respondent (patent proprietor) had not requested oral proceedings. It had not reacted to the board's communication, nor had it apparently had the intention to come or to notify the EPO of its intended absence at all. It was the appellant who had requested oral proceedings, albeit conditionally. In addition, the oral proceedings were not only arranged at the request of the appellant, but also because the board itself wished to be in a position to give a decision on the case. The oral proceedings would therefore not have been cancelled by the board even if the respondent had at an early time indicated that it would not attend. In these circumstances the board saw no sufficient reason to depart from the ordinary rule that each party bears its own costs.

In **T 1071/06** the appellant had announced that it would not be attending the oral proceedings about a month after receiving the board's opinion with the summons. For the board, the time taken was entirely reasonable because appellants had to be afforded an opportunity to review their **appeal's prospects of success** in the light of the opinion accompanying the summons (among other things) before deciding how then to proceed.

According to the board in **T 1079/07**, to inform the EPO and any other party to the proceedings about the intention not to attend oral proceedings in due time is a matter of courtesy and respect rather than a procedural obligation to be met (see also **T 69/07**). In order to judge a late announcement of an intended absence from oral proceedings as constituting a "culpable action of an irresponsible or even malicious nature" (see **T 937/04**), strong supporting evidence for such an allegation would be required.

In **T 383/13** the respondent (opponent) asked the board to order a different apportionment of costs under Art. 104(1) EPC, having attended oral proceedings for which the appellant had announced its absence by letter dated just two days beforehand. The board held that if a party was late in deciding not to attend oral proceedings or in informing the board or other party of that decision, awarding costs against it may well be justified – if those costs were directly caused by not letting them know in time. In exercising that discretionary power, the board should apply the standard laid down in **T 1079/07**. In the case in point, the oral proceedings were not superfluous: the board would not have cancelled them even if informed of the appellant's absence well in advance, because it wanted to be able to decide the case at the oral proceedings and close it on that date. That the board's provisional opinion had been in the respondent's favour was immaterial. Any diligent professional representative had a duty to attend oral proceedings even if the provisional opinion was in their favour and the other party did not come. The board concluded that it

was not appropriate in the present case to order a different apportionment of costs under Art. 104(1) EPC.

In **T 2377/13** the board decided that it was the standard laid down in **T 383/13** and **T 1079/07**, not that used in **T 937/04**, which it had to apply in exercising its discretion as to whether to order a different apportionment of costs. In the case in hand, the board would certainly not have cancelled the oral proceedings, even if informed well in advance of the appellant's absence, because it had wanted to be able to decide on and close the case on the date scheduled for them, and so they had definitely not been superfluous.

In **T 1389/13** both appellants had requested oral proceedings. Therefore, oral proceedings were scheduled and the board summoned the parties. The board considered that even if appellant II's (opponent's) declaration that it would not attend oral proceedings amounted to a withdrawal of its request for oral proceedings, appellant I's (patent proprietor's) request for oral proceedings remained pending, meaning that the oral proceedings had to be held. Therefore, appellant II's perceived misconduct in that it should have notified its intention not to attend the oral proceedings earlier than it did, was not the cause of appellant I attending the oral proceedings. Accordingly, the board held that appellant II's conduct was not disadvantageous for appellant I.

In **T 938/14** both parties to the appeal proceedings had requested oral proceedings in case the board was not inclined to concur with their respective positions. From the board's communication it was clear that oral proceedings had to take place, as the appellant's request to maintain the patent based on its main request could not be granted. Even if the appellant's representative could have informed the respondent's representative, as a matter of professional courtesy, that it would not attend oral proceedings, the respondent could have made an attempt to ask for clarification. Thus, the board could not see any culpable actions of an irresponsible or even malicious nature in appellant's letter that would justify an apportionment of costs incurred by the respondent in attending the oral proceedings. See also **T 256/16** and **T 876/16**.

In **T 1699/15** the appellant (patent proprietor) gave notice that it would not attend the oral proceedings only at a late stage: the day before them, at 2 p.m. The board decided not to apportion costs differently, in particular because there was no objective evidence to suggest deliberately ambiguous or abusive conduct. The parties had been summoned to the oral proceedings not only because of the auxiliary request of the respondent (opponent) but also in view of the need to discuss, among other matters, the question of a technical prejudice, as indicated in the board's preliminary opinion. In the absence of any further information from the board to say that the oral proceedings might be cancelled following the appellant's notice of absence, the respondent had had no guarantee that the decision would be in its favour and so had had to prepare to defend its case.

In **T 846/22** the appellant had only informed the board the day before the oral proceedings that it would not attend them. The respondent requested that its costs incurred for the preparation of the oral proceedings be charged to the appellant, since the costs for the preparation of at least part of the oral proceedings would not have been incurred, in view of the board's preliminary opinion, which was favourable to the respondent in respect of a

number of issues. The board noted that the oral proceedings would have had to take place anyway because of the respondent's auxiliary request for oral proceedings. Moreover, even when all parties attend oral proceedings, it is possible that not all the issues addressed in the preliminary opinion will be discussed. The respondent could not be sure that the preliminary opinion would be maintained in the oral proceedings. Deciding not to be prepared for an issue which could potentially be discussed at the oral proceedings, irrespective of the board's preliminary view on the issue, always involves some risk and it is the parties' responsibility to decide what to prepare for. In any case, it could not be asserted beforehand that the board's preliminary opinion would have rendered the oral proceedings unnecessary.

2.2.2 Request for scheduling or postponement of oral proceedings; withdrawal of request for oral proceedings

a) Request for scheduling or postponement of oral proceedings

On the basis of Art. 116(1) EPC 1973 any party has the exclusive right to request oral proceedings if it considers them to be necessary. The fact that one of the parties has to travel a longer distance than the other does not make the request for oral proceedings abusive. Furthermore, an objection of abuse based on the fact that the problems to be discussed in oral proceedings are simple ones and could easily be presented in writing cannot be sustained (**T 79/88**).

In **T 297/91** it had, for a number of reasons, not been possible to decide all the issues during the first oral proceedings, with the result that the respondents had requested that oral proceedings be held for the second time. One of the respondents further requested that the costs incurred be borne by the appellant (patent proprietor). The board rejected the request for apportionment of costs because the **further oral proceedings had become necessary** for reasons beyond the patent proprietor's control.

In **T 432/92 postponement** of the oral proceedings was requested two days prior to the agreed date as the father of the respondent's representative had died on the previous day. The appellant requested a different apportionment of costs because its representative had already travelled from America to the EPO, thereby incurring unnecessary costs. It argued that the respondent could have been represented by someone else from their patent attorney's firm. The board refused the request because there had been no recognisably wrongful or irresponsible conduct on the part of the other party. The board was of the opinion in particular that the respondent could not be expected to be represented by a different patent attorney, who would have had to prepare two oral proceedings in one day (one for an ongoing parallel case) and to travel as well.

In **T 42/99** appellant I announced, as early as **one month prior to oral proceedings**, that experts would attend those proceedings. Only shortly before the appointed date for the proceedings, appellant II submitted a request that statements by an expert be admitted at the oral proceedings. Appellant II also requested the postponement of the oral proceedings so that its expert would have enough time to prepare. The board decided to postpone the appointed date, however, in doing so, the board also regarded it as equitable

to order a different apportionment of costs. In its reasons the board took the view that, although a reply from appellant II to the announcement by appellant I that experts would attend the oral proceedings would not have been possible within the time limit set by the board, a "response" to the aforementioned announcement should have followed immediately and not shortly before the appointed date for oral proceedings. At this late stage, it was plausible that the representative of appellant I had made arrangements for the trip to Munich and a hotel reservation, which could not be cancelled without a financial loss.

In **T 99/05** the appellant submitted, **13 days before the oral proceedings**, a new experimental report in view of which the respondent asked for postponement of the oral proceedings. The appellant strongly objected to such a postponement. Since, in the board's view, the question of postponing the oral proceedings was linked to the question of whether the late-filed experimental report should be introduced into the proceedings, the board deemed it appropriate to maintain the oral proceedings in order to hear the arguments of the parties concerning the relevance of the late-filed experimental report of the appellant, and hence to decide on the introduction or not of this report into the proceedings. However, the oral proceedings did not result in a final decision with regard to patentability and second oral proceedings were scheduled in order for the respondent to be allowed sufficient time to file counter-experiments. Whilst the late filing did not represent an abuse of proceedings, it was evident that the final outcome of the proceedings had been delayed. Therefore, the board found it appropriate for reasons of equity to order a different apportionment of costs. **T 561/19** deals with a similar case.

In **T 1771/08** the board held that an apportionment of costs under Art. 104(1) EPC could be ruled out from the outset for lack of equity if the representative of the party requesting a different apportionment owing to postponement of the oral proceedings had **unreservedly agreed** to their postponement.

In **T 1292/21** the appellant's representative requested a postponement of the oral hearing due to the cancellation of his flight on the evening prior to the hearing because of a warning strike by ground staff at the destination airport. In response, the board proposed that the hearing be held by video conference. However, the appellant's representative did not agree to this proposal and the hearing was postponed to a later date. The board noted that its proposal to hold the hearing by videoconference was merely an offer. It was rejected and thus the format chosen by the board for this hearing, i.e. an oral hearing in person, was ultimately retained. The board was unable to identify any breach of his duty of care on the part of the appellant's representative and rejected the respondent's request for a different apportionment of costs.

b) Withdrawal of request for oral proceedings

Nothing in the EPC prevents a party from **withdrawing a request for oral proceedings** at any stage of the procedure. The withdrawal of such a request is not culpable conduct as such and cannot be a factor in assessing whether reasons of equity exist in accordance with Art. 104(1) EPC 1973 (**T 91/99**).

In **T 154/90** (OJ 1993, 505) the opponent had initially insisted on oral proceedings, although the opposition division did not consider that they were necessary. However, **eight days** before the arranged date the opponent informed the opposition division that they wished to cancel the oral proceedings. For reasons of internal organisation at the EPO, the opposition division did not receive this letter until after the date of the oral proceedings. The board of appeal ruled that eight days was a sufficient period of time for the oral proceedings to be cancelled, since no evaluation of new facts or arguments was needed (the case was different in **T 10/82**, OJ 1983, 407). Since the letter was received too late for purely internal reasons, the opponent was not at fault. It was not obliged to bear a part of the costs of the other party. A change of opinion regarding the necessity of oral proceedings could not be regarded as culpable conduct either (see also **T 383/05**).

In **T 721/96** of 15 September 1998 the respondent informed the board and the appellant, **four working days** before the date set for oral proceedings, that it was abandoning the patent and no longer requesting oral proceedings. However, the declaration abandoning the patent was not completely unambiguous. The board refused the appellant's request that costs be awarded against the respondent; it had been clear that the oral proceedings would probably be superfluous and the appellant could have contacted the Registry of the board to find out about the course the proceedings would be taking.

In **T 556/96** the appellant (patent proprietor) informed the EPO and the respondent **early in the afternoon preceding the oral proceedings** that it would not attend the oral proceedings. By that time, the respondent's representative had already departed for Munich. The board found that the appellant had communicated its intention not to attend the oral proceedings too late. The fact that the other party had also unconditionally requested oral proceedings was irrelevant; it too could have withdrawn the request, had it known in time that the appellant would not be attending. The board therefore ordered the appellant to pay the costs incurred by the respondent in preparing and attending the oral proceedings. See also **T 939/21**.

In **T 490/05**, **on the day before oral proceedings**, the appellant (patent proprietor) had withdrawn both its request for oral proceedings and its request to have the impugned decision set aside. Thus, even before oral proceedings it was clear that the impugned decision revoking the patent was sure to be made final. This gave the respondent the advantage of being able to focus its preparations for the oral proceedings on the proprietor's request for apportionment of costs. Thus, there were no reasons of equity for sharing the costs incurred by the opponent.

In **T 258/13** the appellant withdrew its request for oral proceedings **two days before the oral proceedings**, which de facto amounted to only one day in view of the lateness in the day (5 p.m.). This was not notification in good time. Citing **T 556/96**, the board held that the appellant's request had to be treated as having been received so late that the respondent would already have had to be fully prepared, taking further into account the necessary travelling time during the day before the oral proceedings. An apportionment of costs in favour of the respondent was appropriate. However, for the oral proceedings only the presence of an authorised representative was necessary. The attendance or not of an accompanying person had no bearing on the conduct of the oral proceedings and was a

matter of a deliberate choice by a party in which the other party did not need to be involved. Also to charge the appellant costs incurred by the accompanying person would contravene the principle of equity.

In **T 169/14** the board held that there was an equitable obligation on every party summoned to oral proceedings to inform the EPO and the other party as soon as possible, once it had decided that it would not be attending or was withdrawing its request for them. Consequently, in cases where a party unduly delays its decision not to attend the oral proceedings, or the withdrawal of its request for them, or its communication of this to the board, an apportionment of costs in favour of the other party could be justified if the costs were directly caused by the fact that the notice was not filed in due time. In the case at issue, the appellant withdrew its request for oral proceedings only one week before the scheduled date. However, the appellant at the same time submitted observations in reply to the board's preliminary opinion and requested that they be taken into consideration by the board in reaching its decision. Had the board found the appellant's new submissions admissible and convincing, oral proceedings would have had to take place in view of the respondent's conditional request for them. Additionally, there were no facts on file indicating that the appellant had unduly delayed his notice or conducted himself in a clearly improper or irresponsible manner.

2.2.3 Other cases concerning oral proceedings

An apportionment of costs is justified if excessive costs are incurred for the oral proceedings and caused mainly by one party (see **T 49/86**). The right to oral proceedings is absolute and therefore not subject to any conditions (**T 614/89**, **T 26/92**, **T 81/92** and **T 408/02**). If the party that requested oral proceedings fails to produce new arguments during them, that does not constitute abuse of procedure and is not a reason for awarding of costs, as consistently ruled in **T 303/86**, **T 305/86**, **T 383/87**, **T 125/89** and **T 918/92** (but not in **T 167/84**, OJ 1987, 369).

In **T 1022/93** the oral proceedings, which only the appellant had requested, were **superfluous**. Even in the written appeal procedure the appellant had refrained from communicating why, in its opinion, the amended process claims should be considered inventive and from specifying that the additional example described a process according to the amended set of claims. This made it impossible either to remit the case without oral proceedings or to deal with the substance of the case at the oral proceedings. For reasons of equity, therefore, the appellant was required pursuant to Art. 104(1) EPC 1973 to reimburse to the respondent the costs incurred as a result of the participation at the oral proceedings before the board.

In **T 905/91** the respondent had requested a different apportionment of costs on the grounds that **the appellant had not brought prepared auxiliary requests to the oral proceedings**, which had therefore continued into the afternoon. The board rejected the request for the following reasons. Firstly, the appellant had endeavoured to take account of the reservations expressed by the board and had filed new documents. Secondly, oral proceedings served specifically to clarify the situation completely through the direct exchange of arguments and, if necessary, to rephrase the patent application in the light of

the outcome of the discussion. The duration of oral proceedings depended on the particular case; at any rate it was not unusual for such proceedings to continue into the afternoon, and the parties should be prepared for this.

In **T 210/98** the respondent requested an apportionment of costs on the ground that the appellant **had withdrawn three auxiliary requests at the beginning of the oral proceedings** for which the preparation had been time-consuming. The board refused the request, stating that it was normal for parties to prepare themselves thoroughly for oral proceedings. A change of view was one of the situations with which a professional representative could be confronted during oral proceedings. As it was not exceptional for requests to be changed or withdrawn during oral proceedings as a result of the discussion held, no abuse of procedure could be seen in the withdrawal of requests at the beginning of the oral proceedings, which had apparently been a reaction to convincing written arguments.

In **T 461/88** (OJ 1993, 295) the board decided that the appellants' insistence on **hearing witnesses** was clearly compatible with the principle of the responsible exercise of rights, as this may well have been the only means of proving the alleged public nature of the prior use. The board refused the respondent's request for apportionment of costs.

In **T 668/03** the appellant requested an apportionment of costs in view of the fact that **oral proceedings had to be held for a second time**. As a matter of fact, the former oral proceedings had to be adjourned because the identity of one of the opponents had been drawn into doubt by the appellant during the first oral proceedings. The board pointed out that it was the duty of the respondent to make it clear throughout the procedure who belonged to the group of common opponents. However, had the appellant raised this issue before the first oral proceedings, it could have been dealt with in writing and thus the costs for further oral proceedings could have been avoided. Therefore, the board could not detect any reasons of equity which could be used to order a different apportionment of costs (likewise **T 1404/10**).

In **T 1807/15** of 2 December 2022 the board stressed that the postponement of oral proceedings due to a request for a referral of a question of law to the Enlarged Board which had not been announced in advance by the party making the request would normally not justify apportionment of costs. Since there was no guarantee that such a request would be successful, all parties would normally have to prepare for a discussion on the substance of the case irrespective of whether the request was announced in advance or not. The board further noted that it was a party's right to request a referral, and exercising this right was not a reason for a different apportionment of costs. The exercise of this right should in particular not be limited by the threat of apportionment of costs.

In **T 490/13** the board considered that the appellant (proprietor) had manifestly failed to act with due care during the opposition proceedings in that, even if the appellant considered the objections, which had been raised by the respondent and had been endorsed by the opposition division in its summons to oral proceedings, to be unfounded, it still **ought to have come up in time with a fall-back position** to counter them. Its failure to do so had led to its appeal, the need for oral proceedings before the board and the

remittal to the opposition division for an examination of claims that the opposition division could already have assessed the first time round. Responsibility for the remittal in this case lay with the appellant, so the board decided to apportion costs differently (Art. 104(1) EPC) and ordered the appellant to pay those which the respondent had incurred in relation to the oral proceedings at the appeal stage.

In **T 2313/15** the respondent (opponent) requested an award of costs in the event that the case was remitted to the department of first instance. The board decided to remit the case but not to order a different apportionment of costs pursuant to Art. 104(1) EPC. The board noted that the patent proprietor in the proceedings before the opposition division had dealt with all the objections raised by the opponent in the reply to the notice of opposition. That it did so only by argument, without submitting auxiliary requests and without requesting oral proceedings, was a legitimate defence against an opposition, though it ran the calculated risk of an immediate adverse decision. Thus, the **patent proprietor had no particular obligation to request oral proceedings before the opposition division**. Nor did the board consider it equitable to impute to the patent proprietor the fact that the opposition division had chosen to decide the case on the basis of only one of the various issues raised and without summoning to oral proceedings (and was within its rights to do so). Finally, the fact that upon appeal the appellant argued only against novelty over D2 as the sole ground for revocation was not in any way reprehensible as it was all the appellant was required to do.

In **T 2061/19** the board considered that parties were by no means procedurally obliged to respond, let alone within a time limit, to a communication pursuant to Art. 15(1) RPBA, even where the board's preliminary opinion was prejudicial to their interests. The **absence of a reaction to such a negative preliminary, non-binding opinion of the board** (Art. 17(2) RPBA) could not constitute per se malicious or irresponsible behaviour that automatically amounted to an abuse of procedure within the meaning of Art. 16(1)(e) RPBA.

2.3. Filing of opposition or appeal

An apportionment of costs is often requested on the grounds that the notice of opposition or appeal has been incorrectly filed. The fact that an appeal proves **clearly inadmissible** does not justify an award of costs if the appellant evidently has the subjective impression that it is adversely affected. A party who is of the opinion that the first-instance department has not acceded to its request may consider that it is adversely affected by the decision. In such a case it has the **legitimate right to make use of the appeal procedure** provided for in the EPC and to have the decision reviewed. Occasionally having to seek defence against unfounded or even inadmissible appeals is just one of the general risks of life and thus, in the absence of any further circumstances, does not justify a different apportionment of costs. The EPC makes no distinction between successful and unsuccessful appeals for the purposes of cost apportionment; so it cannot be argued that apportionment is justified if an appeal appears to be clearly inadmissible (**T 614/89**, **T 772/95**, **T 2177/12**, **T 964/14**).

In **T 170/83** the opponent had used an incorrect form for payment of the opposition fee, thereby giving rise to a decision by the Formalities Section to deem the opposition not to have been filed; the opponent thereupon filed an appeal against this decision. The patent proprietor (respondent) requested that the appeal costs be awarded against the appellant, since it was its error which had rendered the proceedings necessary. The board rejected the request, taking the view that the appeal proceedings were not improper. An abuse justifying the apportionment of costs could only be rooted in the party's conduct **during the proceedings**.

In a number of cases the boards took the admissibility or allowability of an opposition or an appeal to be an indication that no abuse had taken place (e.g. **T 7/88** and **T 525/88**). Similarly, in **T 506/89**, the board found that the opponent's filing of an appeal did not constitute an abuse of procedure and therefore rejected the request for a different apportionment of costs, since it had decided, in the oral proceedings, to maintain the patent as amended. Nor was there an abuse of procedure where the appeal was filed without new arguments (**T 605/92**) or where the appellant's chances of success were considered to be low (**T 318/91**). According to **T 717/95** no abuse has taken place if a party to the proceedings misinterpreted the content of a citation when comparing it with the subject-matter claimed in the disputed patent.

In **J 22/12** it was disputed whether an appeal against a communication issued on behalf of the examining division could be admissible. The board found that this was not the case. It considered that the filing of an opposition and of a subsequent appeal in the matter could not be considered as an abuse of procedure as they were actions which used the provisions of the EPC for the ends envisaged by those provisions. Thus the board found it appropriate that each party should bear its own costs.

In **T 846/22** the respondent had argued that its costs from the first and second instance proceedings should be charged to the appellant because they were incurred through an abuse of procedure by the appellant, namely acting throughout the opposition and appeal proceedings whilst being a dormant company. However, the board concluded that there had been no abuse of procedure and refused the request for apportionment of costs.

2.4. Withdrawal of opposition or appeal at short notice

An appellant is entitled to withdraw its appeal at any time. Based on the principle of free party disposition, this right may not be restricted, even implicitly by the threat of cost apportionment, on the grounds that oral proceedings have been scheduled and the opposing party cannot be notified in time. As a rule, the benefits that respondents derive from the withdrawal of the appeal will offset the costs that they incur, even if they are avoidable. That is the case even if the appeal is only formally pending on account of the request for cost apportionment (**T 490/05**). See also **T 2175/15** of 11 June 2024.

In **T 85/84** the appellant withdrew the appeal in a telex to the EPO and the respondent's representative **48 hours** before the date of the oral proceedings. By the time the respondent's representative found out, he had already departed in order to prepare for the oral proceedings in Munich. The board conceded that the appeal had been withdrawn at

extremely short notice but did not order apportionment of the costs, as the respondent's representative had still been informed in due time that the oral proceedings would not be taking place. Internal delays in forwarding the communication were not the fault of the appellant. The representative's departure for Munich the day before the oral proceedings was not warranted by the distance and therefore not necessary from the point of view of the oral proceedings.

In **T 614/89** and **T 772/95**, in which the appeals were withdrawn respectively **four and three days** before the date set for oral proceedings, the boards ruled that the short notice alone did not constitute an abuse of procedure.

The same conclusion was reached in **T 674/03**, where the opponent withdrew its appeal **nine days** before the date set for the oral proceedings. The board held that the exercise of an absolute procedural right did not, in principle, constitute abuse and that there was no evidence of improper or negligent conduct (see also **T 626/15**).

In **T 1663/13** the opponent waited until the **last working day** before the scheduled oral proceedings to withdraw both its request for oral proceedings and its appeal. The board cancelled the oral proceedings. The board agreed with the principles set out in **T 490/05**. However, it held that the case was not simply about withdrawing an appeal on the last working day before scheduled oral proceedings. Rather, the board noted the **special circumstances of the case**, inter alia, that the opponent did not follow the board's direction to declare whether it maintained its request for oral proceedings in view of the board's negative opinion on the admissibility of the appeal, but instead twice requested an extension of time limit without filing any substantive reply. The board decided to apportion costs and fix the amount both for preparing the oral proceedings and for travel. Also in **T 40/17** the appeal was withdrawn the day before the oral proceedings, which were then cancelled. The board held that in the absence of any additional circumstances, it could not be concluded that the appellant had neglected the level of care towards the respondent that could be reasonably expected of it. Thus, the respondent's request for apportionment of costs was refused.

2.5. Other cases

In **T 952/00** the board found that the wrongful act, whether intentional or simply the result of culpable negligence, had to be judged in the light of the normal behaviour of an ordinarily diligent party. It also had to be the direct cause of the costs in suit. In the case in point, it transpired that the proprietor had culpably made **inaccurate statements** in the course of the proceedings. The board concluded that without those false statements the opponent (appellant) would not have been required to go to the expense of gathering further evidence. Its request for an apportionment of the costs it had incurred during taking of evidence after notification of the decision at first instance was therefore granted.

In **T 1714/14** the respondent (patent proprietor) had **not filed a full copy** of P1 but only one page. According to the appellant (opponent), this behaviour confirmed the patentee's intention to withhold information relevant for the issues to be decided. The board held that, even if the impression resulting from the content of the sole page of P1 could be misleading

in the context of the proceedings, nothing pointed in the direction of the appellant's costs incurred by the opposition proceedings being attributable in any causal fashion to negligent or even abusive behaviour by the respondent. For this reason alone, no apportionment of these costs could take place. The case in hand also differed from **T 952/00**, where inaccurate statements had culpably been made, as well as from **T 273/10**, where documents had abusively been withheld.

In **T 269/02**, according to the respondent, the appellant had been given sufficient opportunity before the opposition division to amend its claims to overcome the problem under Art. 123(2) EPC 1973. However, the appellant had chosen not to do this, with the result that the patent was revoked on this ground, rendering necessary the appeal proceedings, which dealt solely with the issue of amendment. Contrary to the respondent's assertions, the board stated that in cases such as the present, where the patent had been revoked in opposition proceedings, the appellant must be given the opportunity to study the decision of the opposition division duly substantiated in writing in order to enable it to decide on the **formulation of appropriate requests** for the appeal proceedings. In these circumstances, the board did not find that the appellant had abused or exceeded its legitimate rights, in a way which arbitrarily caused the respondents to incur costs which, in all fairness, ought to be reimbursed. The request for an apportionment of costs was therefore refused.

In **T 162/04** the respondent requested a different apportionment of costs because it had had to invest a considerable amount of time and effort in considering the numerous requests submitted by the appellant during the appeal proceedings. However, the appellant's **requests were later withdrawn** rendering the time and effort of the respondent, in its view, useless. In the board's judgment, such conduct did not amount to an abuse of procedure. Indeed, the conduct of the appellant, who by withdrawing the contested requests and by **replacing them with other requests** was apparently trying to overcome the objections which had been raised, was not as such objectionable but had to be considered as a legitimate defence of its case. The request for an apportionment of costs was therefore refused (likewise **T 967/12**).

In **T 1087/20** and **T 1549/22** the board recalled that the withdrawal of an appeal, even shortly before the oral proceedings, did not per se constitute a reason to impose costs on another party in the absence of additional circumstances amounting to an abuse of procedure. In the board's view, the same principles also applied to an applicant's or patent proprietor's unfettered freedom to withdraw their consent to the text of a patent at any time during the appeal proceedings (see e.g. **T 1484/19** of 4 July 2023). The withdrawal of the consent some two weeks before the oral proceedings was clearly not a sufficient indication of such an abuse of procedure, particularly in light of the complexity of the case, regardless – at least in principle – of the motivation for the withdrawal.

In **T 916/05** the circumstances did not justify a different apportionment of costs. The fact that some of the arguments had not been presented before and could have been filed in oral proceedings before the opposition division, had such proceedings taken place, was in the board's opinion irrelevant and could not be regarded as an abuse of procedure. In fact,

an appellant could not be prevented from choosing a **different line of argument** when making its case before a board of appeal.

In **T 248/05** the board held that the alleged **lack of clarity** of the category of the claimed subject-matter and the possible associated additional costs which could be incurred by a clarification of this subject-matter would not justify apportioning the respondent's costs to the appellant. Firstly, the criticised elements of claim 1 and the alleged vagueness of the statement setting out the grounds of appeal were entirely irrelevant for the subject-matter of the appeal in point, i.e. the findings of the opposition division on added subject-matter. Secondly, lack of clarity of a claim or of a submission could hardly be regarded as an abuse of procedure unless this were intentional.

In **T 854/12** the board decided that a different apportionment of costs was justified where procedural stages had needlessly had to be repeated because a **lack of clarity as to the owner** of the company purportedly acting as a party had been deliberately exploited or at least knowingly allowed to persist during the proceedings.

In **T 967/18** the patent proprietor had only informed the EPO of its entry into voluntary administration three years earlier in the context of a request for registering a change of ownership. The Legal Division then ordered ex officio an interruption of the proceedings under R. 142(1)(b) EPC with effect as of 11 November 2016, to resume 4 November 2019. As a result of this interruption, the appealed decision of 5 February 2018 to revoke the patent was found to be "invalid". The board held that the patent proprietor's conduct in failing to notify the EPO of its entry into voluntary administration was the result of an error of assessment. This error was not due to such a gross lack of care that could be considered equivalent to wilful misconduct.

In **T 194/21** the respondent (patent proprietor) argued that the circumstances of the case demonstrated the appellant's intention to divert the proceedings from their purpose for tactical ends, namely to keep the opposition proceedings pending for as long as possible in order to delay the outcome of the infringement proceedings in France. The board considered that the facts put forward demonstrated a certain carelessness but were not sufficient to characterise an abuse of procedures. Furthermore, a request for apportionment could only succeed if there was a proven causal link between the allegedly improper conduct and the costs at issue. In the case in question, the respondent had not specified what additional costs would have resulted from the purported tactical extension of the opposition proceedings. As for the costs incurred in defending themself in the appeal proceedings, they were inherent in the appellant's exercise of their right to appeal. Finally, the appellant's absence from the oral proceedings had not rendered them superfluous.

In decision **T 2175/15** of 11 June 2024 on the apportionment of costs, the board did not consider it justified, for reasons of equity, to order the appellant (opponent) to pay the costs of the opposing appellants (patent proprietors) for filing a total of five partiality objections. It did not share the patent proprietors' view that the option afforded by the EPC to file a partiality objection should only be used in exceptional cases. Furthermore, the board could see no reason why the opponent's behaviour should be culpable or an abuse of procedure.

3. Expenses that may be apportioned

Under R. 88(1) EPC (R. 63(1) EPC 1973) the decision on apportionment of costs in opposition proceedings may consider only the expenses necessary to ensure proper protection of the rights involved (**T 167/84**, OJ 1987, 369; **T 117/86**, OJ 1989, 401; **T 416/87**, OJ 1990, 415; **T 323/89**, OJ 1992, 169). The order for apportionment of costs should be such as to compensate a party for the unnecessary costs it has incurred as the direct result of the other party's failure in its duty (**T 952/00**, **T 212/07**). On the costs of interpreting at oral proceedings, see chapter III.C.9.2.

According to Art. 16 RPBA (Art. 16 RPBA 2007), **the costs ordered to be paid in appeal proceedings** may be all or part of those incurred by the receiving party and may inter alia be expressed as a percentage or as a specific sum. In the latter event, the board's decision is a final decision for the purposes of Art. 104(3) EPC. The costs ordered may include costs charged to a party by its professional representative, costs incurred by a party itself whether or not acting through a professional representative, and the costs of witnesses or experts paid by a party but shall be limited to costs necessarily and reasonably incurred.

In **T 964/21** the board emphasised that an order for the apportionment of costs under Art. 104 EPC must clearly state (at least) the kind of costs to be borne by the burdened party. In the case in hand the order of the opposition division was so vague that it was not possible to clearly determine (a) whether the representatives' costs of preparing for the oral proceedings were included, and (b) whether the representatives' costs for both oral proceedings were included. A ruling without any limitations of the specific costs to be borne in relation to the oral proceedings and without providing sound reasons would not comply with the right to be heard in oral proceedings as enshrined in the EPC. The decision on the apportionment of costs was therefore to be set aside.

3.1. Necessary expenses

Under R. 88(1), third sentence, EPC, the costs include the remuneration of the parties' representatives. In **T 854/09** the board stated that the costs concerned were those reasonably incurred by the opponent. In this case, where an adjournment of oral proceedings was necessary, this included the expense of a single representative preparing for and attending the second proceedings, including travel and accommodation.

In **T 930/92** (OJ 1996, 191) the board held that, when fixing the amount of costs to be paid to a party, in addition to the remuneration of the professional representative of that party, the expenses incurred by an employee of that party in order to instruct the professional representative before and during oral proceedings could be taken into consideration under R. 63(1) EPC 1973, if such instruction was necessary to assure proper protection of the rights involved. In **T 326/87** (OJ 1992, 522), all the costs incurred as a result of the remittal to the department of first instance were deemed to be apportionable.

In **T 301/12** the board considered that, in the absence of exceptional circumstances, the attendance of accompanying persons in addition to a professional representative at the oral proceedings was as a rule a matter of choice, but not a necessity within the meaning

of R. 88(1) EPC (**T 258/13**; see also **T 930/92**, where the presence of one member of the respondent's company was considered justified under the circumstances). In the case in hand, no such exceptional circumstances had arisen that would have justified the apportionment also comprising the costs of two experts accompanying the respondent's representative. In particular, based on the submissions on file, no expert discussion would have been expected.

In **T 280/15** the appellant's notice of non-attendance at the oral proceedings had been received only the evening before them. In the board's view, the respondent had incurred costs that could have been avoided, such as travel and accommodation expenses and its professional representative's fee for 12 hours' preparation.

3.2. Future costs

The prevailing view in the boards' case law is that they should not take a decision on the apportionment of future costs because they have no basis for assessing them and lack jurisdiction (**T 1178/04**, OJ 2008, 80; **T 1801/17**). Thus the board in **T 758/99** held that a decision on the apportionment of **future** costs in appeal proceedings caused by the late filing of documents depended on the course of the subsequent procedure and, in the absence of the necessary facts, could not be decided at that stage (see also **T 133/06**). For these reasons the board deviated from the judgment given in **T 611/90**, in which the legitimately incurred future costs had been apportioned. The board remitted the case to the department of first instance and ordered that a decision on the request for apportionment of costs would be taken at a later stage (see also **T 223/95**, **T 758/99**, **T 48/00**, **T 890/00** and **T 1182/01** as examples of cases where the boards left it to the opposition division to decide on the apportionment of costs incurred in subsequent first-instance proceedings).

In **T 369/08** the board also stated that it was apparent that the costs arising would depend on the course of the future proceedings. According to the board, the consequence of this is that the board necessarily is not in possession of the necessary facts to decide upon an apportionment of costs. Consequently the board considered it appropriate not to make an open-ended order of apportionment of costs as had been done in the aforementioned **T 611/90**.

In **T 1282/08** the board noted that in some cases some boards of appeal ordered the apportionment of future costs (see **T 847/93**, **T 715/95**) and the scenarios facing these other boards might have been different in the above-cited cases. Nevertheless, the board had difficulty seeing how it could make a decision, at the remittal stage, on the apportionment of costs yet to be incurred in subsequent proceedings, the course and outcome of which were still open to speculation. Hence the possible apportionment of opposition costs was to be decided by the opposition division at the end of the opposition proceedings.

In **T 1777/15** the board held that it followed from the wording of the relevant provisions that a decision on an apportionment of costs could not be made in respect of future costs:

Art. 104(1) EPC ("costs [a party] **has** incurred", emphasis by the board); R. 88(2) EPC, which requires submitting a bill of costs; and Art. 16(1) RPBA 2007.

3.3. Procedure for fixing costs

Under R. 88(2) EPC, costs to be paid under a final decision apportioning them will be fixed only at the request of the entitled party. The request is not subject to a time limit. The request must be accompanied by a bill of costs and supporting evidence. Costs may be fixed once they have been established as credible. The board in **T 475/07** exceptionally took the view that a detailed cost calculation was superfluous. It worked on the assumption that the representative could calculate on the basis of one day for preparing the additional oral proceedings and one day for attending them. The cost estimate of EUR 2 300 thus seemed credible.

Under R. 88(3) EPC, a request for a decision by the opposition division may be filed within one month of the communication on the fixing of costs. It must be filed in writing and state the grounds on which it is based. It is not deemed to be filed until the fee prescribed in Art. 2(1) item 16 RFees has been paid.

In **T 668/99** the question was raised as to whether the prohibition of reformatio in peius also applied if the proceedings were not referred to a higher level of jurisdiction but were continued within the same level of jurisdiction, as was the case with a **legal remedy against the fixing of the costs** by the opposition division registry. The board recalled that an appeal and a request for an opposition division decision have far more similarities (suspensive and devolutive effect) than differences, and so the position of the sole requester is comparable to that of the sole appellant. The board was therefore satisfied that the prohibition of reformatio in peius also had to apply to a request under Art. 104(2), second sentence, EPC 1973.

Where the **boards of appeal** have to rule on the apportionment of costs, they have the power under Art. 104 and 111(1) EPC, and having due regard to Art. 113(1) EPC, not only to apportion but also to fix the costs (see e.g. **T 934/91**, OJ 1994, 184; **T 323/89**, OJ 1992, 169; **T 930/92**, OJ 1996, 191 applying the EPC 1973; for a more recent decision in which the board fixed the amount of the costs, see **T 1663/13**). The scope of the apportionment depends on the specific circumstances of the individual case. The party to the proceedings who caused the additional costs may be ordered to pay all or a part of those costs (**T 323/89**, OJ 1992, 169).

3.4. Appeal against decision fixing amount of costs

According to R. 97(2) EPC, the decision fixing the amount of costs of opposition proceedings cannot be appealed unless the amount exceeds that of the fee for appeal.

In **T 161/17** the appellant had contested only the opposition division's decision fixing costs and not its earlier interlocutory decision (on maintenance of the patent in amended form), which also provided a different apportionment of those costs. The board considered that this decision apportioning costs had become final. Since, in its appeal against the fixing of

costs, the appellant had in fact objected only to their apportionment, the appeal had to be dismissed. It did not follow from R. 97(1) EPC that a decision apportioning costs was necessarily open to challenge together with the decision fixing them. See e.g. **T 2024/20** for an appeal against the decision fixing the costs of opposition proceedings under R. 97(2) EPC.

4. Procedural aspects

4.1. Filing a request for apportionment of costs

The practice before the boards of appeal is that all requests by parties, including any requests as to costs, should be made before any decision is announced in oral proceedings, as the decision on apportionment is part of the final decision. See **T 1556/14** of 15 October 2020, where the board held that R. 88(1) EPC implied that the request for apportionment was submitted before the decision of the opposition division was taken. Where a request for apportionment cannot be submitted before termination of the proceedings, for example when the only appeal is withdrawn and the timing of that withdrawal or other related circumstances are the alleged grounds for requesting apportionment of costs, the request must be accepted as being admissible despite being submitted after termination of the proceedings (**T 1556/14** of 15 October 2020). However, in the case in hand the board was not convinced that the appellant had been unable to file a request for apportionment of costs prior to the termination of the proceedings.

A different approach was taken in **T 1484/19** of 4 July 2023 where the board left open whether and, if so, to what extent legal certainty imposed limitations as to the admissibility of a request for apportionment of costs filed after termination of the appeal proceedings. The board stated that by analogy to the withdrawal of an appeal, it could be argued that the decision **T 1484/19** of 29 November 2022 brought the appeal proceedings to a close for the substantive merits of the appeal (which were no longer open for consideration in view of the respondent's withdrawal of its approval of any text for maintenance of the patent) while leaving ancillary questions open to a decision. Consequently, the board would have the power to decide on the request for apportionment of costs filed after the completion of the internal decision-making process.

There is no basis for deciding on a different apportionment of costs if the party which would benefit from the decision did not request apportionment and even made it known that it would not enforce any such decision (**T 408/91**, **T 125/93**).

In **T 896/92** the request for a different apportionment of costs was rejected for lack of substantiation and because of the absence of obvious reasons. In **T 193/87** (OJ 1993, 207) the board likewise refused to apportion costs because the respondent had provided no evidence and it was unable to see any reasons of equity that might have justified such an apportionment. In several decisions, the boards of appeal have stressed the importance of submitting evidence to support a request for a different apportionment of costs (e.g. **T 49/86**, **T 193/87**, **T 212/88**, OJ 1992, 28; **T 404/89**, **T 523/89**, **T 705/90**, **T 776/90**, **T 306/93**).

In **T 967/18** the board pointed out that the request for apportionment filed under Art. 16(1) RPBA constituted an amendment of the appeal case and was subject to Art. 13(2) RPBA.

4.2. Competence issues

In **T 765/89** it was stressed that the board was still responsible for deciding on the request that costs be awarded against the appellant even if the latter had withdrawn its appeal. See also **T 85/84**. Where an opponent (respondent) withdraws its opposition during appeal proceedings, it ceases to be a party to the appeal proceedings as far as the substantive issues are concerned but retains its party status in so far as the question of apportionment of costs is still at issue (**T 789/89**, OJ 1994, 482).

According to the board in **T 1059/98**, apportionment of the costs of proceedings before the opposition division could not be requested for the first time on appeal, because the boards of appeal could only review decisions taken by a department of first instance and so had no competence to decide on such requests (see also **T 1273/11**). As a matter of principle costs are not apportioned in transfer proceedings (**J 38/92**).

4.3. Appeal solely against the decision on apportionment of costs inadmissible

Rule 97(1) EPC (Art. 106(4) EPC 1973) states that the apportionment of costs of opposition proceedings cannot be the sole subject of an appeal. As a rule, therefore, an appeal relating to apportionment of costs must be regarded as inadmissible if the appeal relating to the revocation of a patent is rejected as inadmissible for lack of merit and there is no other admissible request. However, if the impugned decision did not take into account the withdrawal of the request for oral proceedings and is thus based on a substantial procedural violation, the part of the impugned decision relating to apportionment of costs must be set aside (see e.g. **T 154/90**, OJ 1993, 505).

In **T 753/92** respondent I was adversely affected by the decision under appeal only in so far as their request for apportionment of costs was rejected. If respondent I had lodged an appeal against this decision, the appeal, with the apportionment of costs as its sole subject, would have been inadmissible under Art. 106(4) EPC 1973. The fact that respondent I submitted the request for apportionment of costs merely as a party to the appeal proceedings as of right (Art. 107 EPC) could not render such a request admissible without contravening the principle of equal treatment. See also **T 514/01**.

In **T 1237/05** the board found that the opponent, not being adversely affected by the patent's revocation, was not entitled to appeal solely against the apportionment of costs. The opponent's appeal, in view of Art. 106(4) EPC 1973, was inadmissible on that count alone. The mere fact that an appeal, in this case the proprietor's, was admissible did not in itself make the opponent's appeal admissible (the opponent in any case not being adversely affected by the first-instance decision on the merits) because it related only to apportionment of costs. A distinction had to be drawn between appeal proceedings (initiated by at least one admissible appeal) and an appeal lodged by a party; the wording of Art. 106(4) EPC 1973 clearly referred to an appeal lodged by one of the parties to the proceedings, regardless of the existence of other appeals lodged by the other parties.

In **T 2197/16** the respondent (patent proprietor) was adversely affected by the decision under appeal only in so far as it had apportioned costs to it. The board stated that the general considerations of decisions **T 753/92** and **T 762/96** were applicable mutatis mutandis, since, if the respondent had lodged an appeal against the opposition division's decision on apportionment of costs, the appeal, with the apportionment of costs as its sole subject, would have been inadmissible under Art. 106(3) and R. 97(1) EPC. The respondent was only a party to the proceedings under Art. 107, second sentence, EPC and did not have the right to file a "cross-appeal" without limit of time and, unlike the rights the respondent would have as appellant, its requests were therefore subject to restrictions. Moreover, the board stressed that the notice of appeal clearly showed that the appellant (opponent) had not appealed the opposition division's decision on the apportionment of costs. Nor did the statement of grounds of appeal refer to the issue of the apportionment of costs. Therefore, the opposition division's decision in this respect was not the subject of the appeal.

In **T 668/99** the board took the view that, since no appeal had been lodged against the opposition division's decision on costs, that decision had become final upon expiry of the time limit for filing a notice of appeal (see also **T 161/17**). It found that the decision on costs mentioned in the request had not been submitted with the appeal, nor was there any indication of an implicit challenge to that decision. The board held that, unlike general procedural requirements, which – as had been consistently held – had to be reviewed at all times, including in the appeal procedure, the issuance of a decision on costs by the EPO did not necessarily mean that a decision had also to be reviewed by the EPO. The review of a decision at a higher level of jurisdiction required an appeal by one of the parties.

In **T 420/03** the question arose whether the "additional decision" concerning the apportionment of costs fell within the scope of appeal. While the notice of appeal remained completely silent as regards the decision on the apportionment of costs, the request for cancellation of this decision was contained in the statement setting out the grounds of appeal. In the case before it, the board found that the notice of appeal did not contain any explicit statement concerning the apportionment of costs, and there was no other statement in the notice of appeal which could be interpreted – at least indirectly – that this was also the subject of the appeal.

S. Notifications

1. Documents subject to formal notification 1254
2. Forms of notification 1254
2.1. Notification by postal services 1254
2.2. Notification by means of electronic communication 1256
2.3. Notification by delivery by hand and public notification 1257
3. Notification to representatives 1257
4. Notification to third parties 1258
5. Burden of proof and safeguards 1259
5.1. Burden of proof where notification is disputed 1259
5.2. Notification under Rule 125(4) EPC 1261
5.3. Safeguards in case of late delivery 1262

Notifications are governed in detail by Art. 119 EPC and R. 125 to 130 EPC. Notification may be made by postal services (R. 126 EPC), means of electronic communication (R. 127 EPC), delivery by hand (R. 128 EPC) or by public notification (R. 129 EPC).

For the calculation, determination and extension of time limits, see chapter III.D.1.

1. Documents subject to formal notification

R. 125(1) EPC was amended on 1 April 2015 to clarify the scope of documents subject to notification. The amended provision provides an explicit legal basis for the EPO's practice of not formally notifying notices and communications from which no time limits are reckoned (CA/D 6/14, OJ 2015, A17).

Hence, as a matter of course, the EPO notifies those concerned of decisions and summonses, and of any notice or other communication from which a time limit is reckoned, or of which those concerned must be notified under the EPC, or of which notification has been ordered by the President of the EPO (R. 125 EPC and notice of the EPO dated 30 March 2015, OJ 2015, A36). Other communications are not subject to formal notification.

2. Forms of notification

2.1. Notification by postal services

R. 126 EPC lays down the provisions relating to notification by postal services. All notifications by postal services are by registered letter.

In R. 126 EPC, and also in R. 125(2) and 133(1) EPC, references to "post" were replaced by "postal services" and "postal service providers" in 2015 (CA/D 6/14, OJ 2015, A17). This gave the EPO the freedom to choose any postal service provider it regarded as suited to serving notification.

In view of the low return rate of advices of delivery and the notable administrative burden associated with their processing, R. 126(1) EPC was amended to discontinue the use of advices of delivery (CA/D 2/19, OJ 2019, A31). Decisions incurring a period for appeal or a petition for review, summons and any notice or other communication triggering a time limit must instead be notified by registered letter only, if not notified electronically (OJ 2019, A57). Notices and communications from which no time limit is reckoned, or which do not require notification under the EPC or by order of the EPO President, may continue to be sent by ordinary mail. Amended R. 126(1) EPC came into force on 1 November 2019.

Following the decision to discontinue the use of advices of delivery (OJ 2019, A31), until 1 February 2024, the EPO continued to enclose an acknowledgement of receipt form (EPO Form 2936) with both notifications by registered letter of decisions incurring a period for appeal, as well as summonses. Addressees were requested to date and sign the form and return it immediately (see **T 1529/20**, summarised below in III.S.5.1., in which the board established that the case in hand did not contain a confirmation of receipt of the decision of the opposition division from the appellant). Notifications by the boards which concerned decisions, summonses, communications drawing attention to formal deficiencies or noting a loss of rights, and such other documents as determined by a board in a particular case, were also effected by registered letter and included the relevant acknowledgment of receipt form (EPO Form 3936). The same applied to notifications by the Enlarged Board. The practice of requesting and sending postal acknowledgments of receipt was abolished with effect from 1 February 2024 (OJ 2023, A108).

With effect from 1 November 2023, R. 126(2) EPC was amended to abandon the ten-day legal fiction for notification and to introduce the notification legal fiction based on the date of the document (CA/D 10/22, OJ 2022, A101). In the case of a postal notification, under EPO practice, the date of the document is the date on which it is handed over to a postal service provider. To facilitate this, the EPO post-dates its documents to allow them to be processed internally and issued on the date they bear. See notice from the EPO of 25 November 2022 concerning legal changes to support digital transformation in the patent grant procedure (OJ 2022, A114) and notice from the EPO of 6 March 2023 concerning amended R. 126, 127 and 131 EPC (OJ 2023, A29). On the practice of post-dating written decisions see **G 12/91**.

In **T 1693/13**, the EPO had notified the contested decision using courier service UPS before R. 126 EPC as amended in April 2015 had entered into force. The board held that the appellant had been entitled in the circumstances to assume that the UPS courier service was treated as "post" within the meaning of R. 126 EPC as then still in force and that it made no difference to how the appeal period was determined under that provision whether a decision had been sent by post or by UPS. In contrast, in **G 1/14** (OJ 2016, A95) the Enlarged Board took the view that old R. 126(1) EPC related solely to notification by post using a "registered letter with advice of delivery" and not to any other kind (by UPS in the case in hand).

On the question of the burden of proof and safeguards in connection with notification irregularities, see in this chapter III.S.5.

In **T 1596/14** the board noted in obiter dictum that there was no evidence or indication that the alleged unequal treatment of the parties induced by different dates of notification of the same decision had been detrimental to any party's interests. There did not appear to be any consequences for the admissibility of the appeals or for the due course of the ensuing appeal proceedings. The board noted that there was no specific sanction or remedy foreseen in the EPC for this situation and it seemed to the board that it was difficult to assume that appellant I's suggestion to re-send the decision with a new common notification date would be a remedy, since the parties in the case in hand were already aware of each other's arguments.

2.2. Notification by means of electronic communication

Under R. 127 EPC, notification may also be effected by means of electronic communication as determined and under the conditions laid down by the President of the EPO. However, for this to happen, users must have agreed to receive communications by such means (see notice of the EPO dated 30 March 2015, OJ 2015, A36).

With effect from 1 November 2023, R. 127(2) EPC was amended to abandon the ten-day legal fiction for notification and to introduce the notification legal fiction based on the date of the document (CA/D 10/22, OJ 2022, A101). In the case of a notification by means of electronic communication, under EPO practice, the date of a document is the date of its electronic transmission. See notice from the EPO of 25 November 2022 concerning legal changes to support digital transformation in the patent grant procedure (OJ 2022, A114) and notice from the EPO of 6 March 2023 concerning amended R. 126, 127 and 131 EPC (OJ 2023, A29).

Electronic notification is effected by electronic communication to an activated Mailbox. A document reaches its destination within the meaning of R. 127(2) EPC on the date the document has been made available in the corresponding Mailbox. For further details, see the decision of the President of the EPO dated 9 February 2024 concerning the web-based online service MyEPO Portfolio and electronic notification to the Mailbox in proceedings under the EPC and the PCT (OJ 2024, A20) and the notice from the EPO dated 9 February 2024 concerning new features of the MyEPO Portfolio (OJ 2024, A21). As from 1 July 2024, the Mailbox may only be accessed via MyEPO Portfolio (see the decision of the President of the EPO dated 22 April 2024 concerning the decommissioning of certain online services (OJ 2024, A43) and the notice from the EPO dated 22 April 2024 concerning the decommissioning of certain online services (OJ 2024, A44)).

From 1 June 2021, the Boards of Appeal began to notify documents in appeal proceedings electronically via the Mailbox (notice of the President of the Boards of Appeal dated 13 April 2021 concerning the extension of electronic notification via the EPO Mailbox to appeal proceedings; OJ 2021, A37).

On 1 September 2020 the EPO launched a pilot project permitting examining divisions to use email to notify important information about oral proceedings (see decision of the Vice-President Legal and International Affairs (Directorate-General 5) of the EPO dated 23 July 2020, OJ 2020, A89). The pilot project came to an end on 31 August 2021

(OJ 2021, A67). In **T 762/20** the board explained that D5 had only been introduced into the first-instance proceedings by email. However, the electronic file, which was the sole official file relating to the application (R. 147(1) EPC) and the record of the first-instance proceedings available for file inspection and used by the board in its judicial review, did not contain this email. The board thus agreed that the appellant had not been officially informed of an inventive-step objection based on D5 prior to the notification of the contested decision.

Facsimile ("fax") transmission of notifications is generally not admissible (**J 27/97**) and therefore does not constitute valid notification even if receipt is proven. The situation was different in **T 580/06** where notification of a shortfall under point 6.4 ADA was sent only by fax. However, this form of notification was in keeping with point 6.4 ADA in conjunction with R. 77(2)(d) EPC 1973. The President of the EPO had not laid down conditions for notifications by fax within the meaning of that rule; in particular, postal confirmation of the fax had not been made compulsory. Thus the notification had been made in an appropriate form. In the board's view, the "OK" on the fax transmission report was to be regarded as evidence of complete and error-free transmission, on which the fax became the recipient's responsibility.

2.3. Notification by delivery by hand and public notification

Under R. 128 EPC notification may be effected on the premises of the EPO by delivery by hand of the document to the addressee, who must on delivery acknowledge its receipt. Notification is deemed to have been effected even if the addressee refuses to accept the document or to acknowledge receipt thereof.

If the address of the addressee cannot be established, or if notification in accordance with R. 126(1) EPC has proved to be impossible even after a second attempt, notification shall be effected by public notice (R. 129(1) EPC). In this case, the document is deemed to have been notified one month after publication of notification in the European Patent Bulletin. See the decision of the President of the EPO dated 14 July 2007 concerning public notification under R. 129 EPC (OJ 2007, Special edition No. 3, 127).

3. Notification to representatives

Notifications must be addressed to the appointed representative (R. 130(1) EPC, previously R. 81(1) EPC 1973). If several representatives have been appointed for a single party, it is sufficient to notify any one of them (R. 130(2) EPC). If several parties have a common representative, it is sufficient to notify the common representative (R. 130(3) EPC).

In **T 812/04** the board pointed out that R. 101(6) EPC 1973 (R. 152(8) EPC), in conjunction with R. 81(1) EPC 1973, clearly indicated that, until the termination of an authorisation had been communicated to the EPO, the latter was obliged to notify communications, decisions or other documents to the duly appointed representative and that these notifications alone would have valid effects. The fact that the appellant had filed the notice of appeal himself imposed no obligation on the Registry of the Boards of Appeal

to inquire about the legal status of relations between the applicant (client) and the duly appointed representative or to send the documents and communications subsequently directly to the client direct.

With regard to the question to whom notifications under R. 130(1) EPC must be addressed, the legal situation at the date of issue of the communication is relevant (**T 7/17**). A notification had to be made on the basis of the facts on file at the time of posting (**J 22/94**). In **J 19/92** the Legal Board held that notifications to an applicant's representative were duly made if they were despatched before the representative relinquished his brief. The notification to the applicant did not therefore have to be repeated after the brief had been relinquished. On the contrary, it was the representative who was obliged to inform his client of the notification. In **T 247/98** the board confirmed that what determined whether a R. 81(1) EPC 1973 (R. 130(1) EPC) notification was to be sent to the representative was the legal situation at the time when the document was despatched.

In **T 128/18** it was discussed whether the further representative was merely sub-authorised to act before the EPO only at certain stages of the proceedings. The board was unable to find literal and/or unequivocal support for this understanding in any of the documents on file. As two representatives had been appointed, notification to the further representative was sufficient (R. 130(2) EPC). If there had remained any doubt as to the correct recipient of notifications at that stage, the appropriate course of action would have been for either the original or the further representative to clarify the matter with the EPO. In the absence of any action or indication to this effect, the board concluded that notifications were correctly addressed to the further representative.

The facts underlying **T 1281/01** were different to those in **T 128/18**. In **T 1281/01** a formal change of representative had been duly and clearly communicated to the EPO, and the last appointed representative had actively pursued the case, so that he was able to react immediately and notify the EPO of the error.

However, in **T 703/92** the written decision and minutes of the oral proceedings were sent not to the authorised representative but to the opponents. The board found that, as the provision relating to notification had not been observed, the question whether a notification had effectively taken place depended, in accordance with R. 82 EPC 1973 (R. 125(4) EPC), on whether and when the representative had received the full decision.

For details on representation, see chapter III.V.

4. Notification to third parties

In **T 261/07** the decision to revoke the patent was delivered to a person who was not an employee of the patentee (to whom the notification was addressed), but of a company that received letters on behalf of the patentee. No acknowledgement of receipt was on file for the patentee, who claimed never to have received the decision. Following **T 172/04** and **T 743/05**, the board held that for reasons of legal certainty, delivery to the addressee is effected once a person authorised by the addressee has received the letter (similarly **T 261/07** and **T 2210/10**). In **T 1535/10** too, the board held that, where the recipient did

not operate his own mail office and instead made use of an external mail office, he had to accept that the external office would be treated as if it were his own in matters relating to the delivery of communications subject to deadlines. Any delay in forwarding such communications on the part of the external office would thus be attributed to the recipient's sphere of risk.

In **J 35/97** a communication was handed to a third party not authorised by the appellant to accept it. The said party was in the addressee's business premises, but not an employee. In the Legal Board's view, that meant that notification according to the relevant German provisions had not occurred. Nor did the party qualify under any of the categories of "substitute addressee". There was also no evidence that the appellant had ever seen the communication. The board therefore found the EPO had not shown notification to have been properly effected.

In **J 28/10** the representative's office was located in a large building in a business-park and incoming mail for the law firm was left at the doorman's desk. The doorman was the employee of a security company, this company having a contractual relation with the company that administrated the business-park where the representative rented office space. This led the Legal Board to the conclusion that the representative was fully aware of the details and functioning of this system of reception of postal mail, including any risk associated with it. By using an external service for receiving postal mail, the representative accepted that this external service would be treated as if it were its own in matters relating to the delivery of communications subject to deadlines.

5. Burden of proof and safeguards

5.1. Burden of proof where notification is disputed

In the event of any dispute concerning the delivery of a document, it is incumbent on the EPO to establish that the document has reached its destination and to establish the date on which it was delivered to the addressee (R. 126(2) EPC for documents notified by postal services and R. 127(2) EPC for documents notified by means of electronic communication).

In **T 2054/15**, citing **J 3/14** and **J 14/14**, the board explained that the party seeking application of R. 126(2) EPC had to set out the facts justifying it. The burden of proof on the EPO could not be taken to mean that the party was under no obligation to help clarify the circumstances within its own sphere of responsibility (e.g. **T 247/98**, see chapter III.G.5.1. on apportioning the burden of proof). The EPO was liable for risks arising both in its own sphere and during "transport", but the recipient was liable for those within its own sphere of organisation and influence (e.g. **T 1535/10**). When a registered letter had been delivered to the address of the representative, it was incumbent on him to establish that the letter was not received by a person authorised to take delivery of it, or that it did not actually reach him for some other reason.

In **T 1535/10** the board held that responsibility for obstacles to and delays in the receipt of decisions to be notified under R. 126(1) EPC had to be assigned according to spheres of

risk. The EPO was liable for both the risks arising in its own sphere and "transport risks". However, it distinguished such risks from those within the recipient's sphere of organisation and influence, e.g. the risk that employees or other authorised recipients failed to forward a letter delivered to the business address, or delayed in doing so. For a presumption that a letter had entered the recipient's sphere of organisation and influence, it sufficed that it had been delivered to his address and that he was in a position to take note of it, irrespective of whether he had actually taken (final) possession of it and noted its content (see also **T 580/06**).

In **J 14/14**, in keeping with the bulk of the boards' case law, the Legal Board held that it was clear from the wording of R. 126(2) EPC that, in the event of any dispute as to whether a notification had been received by the addressee, the onus was on the EPO to establish the fact and date of delivery (see also **J 3/14**). In the case in hand, the only proof of delivery that the EPO had in respect of the communication in question was a letter from Deutsche Post, referring to a registered letter sent to the appellant's representative and stating that it had been delivered to a person authorised to receive it. This was deemed insufficient to fulfil the requirements of R. 126(2) EPC since there was no proof that the appellant's representative or any other named individual had signed a document acknowledging receipt of the letter and no communication from the foreign postal service was disclosed (see also **J 9/05** and **J 18/05**, where a similar confirmation letter by Deutsche Post was held not to be sufficient to prove the receipt of an EPO notification since the appellant had filed a considerable amount of counter-evidence and pointed out specific reasons why the letter might not have been received by the representative's office). See also **T 691/16**.

In **T 1529/20** the board agreed with the appellant that a party submitting that something had not happened, i.e. that a communication had not been received, would have difficulty in trying to prove a negative (negativa non sunt probanda, see also **T 2037/18**, **R 15/11**, **R 4/17**). The filing of cogent evidence showing that a letter had not been received was hardly ever possible (see also **J 9/05**). Therefore, the respondent's arguments that the appellant allegedly had the duty to register mail incoming at their premises but had failed to provide an excerpt of such register was not pertinent, since there was no trace in the file that the EPO had discharged its burden of proving delivery. Under such circumstances, the appellant did not have to bear the risks normally falling in their sphere of responsibility (**T 1535/10**), so that they had to be given the benefit of the doubt (**J 9/05**).

In **T 258/19**, a letter was returned to the EPO by the post office as "Non reclamé". However, an acknowledgement of receipt that had apparently been signed by the representative of the appellants was also present on file. The board held that, in view of the return of the letter by the post office, the allegation by the appellants that signing and returning the acknowledgement of receipt had been a misunderstanding did not seem improbable. Moreover, the burden of proof for establishing whether the document was received was on the EPO. This implied that in case of doubt, like in the present case, the appellant must be given the benefit of the doubt.

In **T 529/09**, however, the board held, distinguishing the case in hand from **J 9/05** and **J 18/05**, that unlike in these cases, the appellant had not submitted any further arguments or evidence in order to demonstrate that the Deutsche Post's confirmation had failed to

establish that the registered letter had reached its destination. The evidence on file therefore had to be regarded as sufficiently reliable and complete for proving the proper delivery of the letter (see also **T 1304/07**, **T 1934/16**).

In **T 247/98** the board stated that when establishing the meaning of the term "im Zweifel" in the German version of R. 126(2) EPC, account should be taken of the French and English versions, which assume that there is a dispute ('en cas de contestation', 'in the event of any dispute'). A dispute ('Zweifel', literally 'doubt' in the German version) within the meaning of this rule could only arise if it was maintained that a letter had in fact been received more than ten days following its posting. The mere absence of the advice of delivery or the receipt from the file was not in itself sufficient to give rise to a dispute ('Zweifel') within the meaning of this rule.

In **T 2210/10** the board explained that R. 126(2) EPC could not mean that it was the duty of the EPO to start enquiries as soon as a party, against the evidence on file, considered that the mail had not been properly notified. The EPO could not be expected to undertake exhaustive investigations to establish on their own the date of notification in the absence of serious doubts.

As regards differences in the signature on the advice of delivery recording that notification is effected, the board in **T 691/16** pointed out that notification did not necessarily have to be effected by means of delivery to the actual recipient, but could also be effected by means of delivery to people living in the building or with the necessary authorisation. That was generally what happened at companies. There was therefore no reasonable doubt that the intervener had received the notice of action as claimed.

If the EPO is unable to prove that a document has been delivered, the document in question will be reissued with a new date, resulting in the application of the notification legal fiction based on that later date (see notice from the EPO of 6 March 2023 concerning amended R. 126, 127 and 131 EPC (OJ 2023, A29).

5.2. Notification under Rule 125(4) EPC

Where a document has reached the addressee, but the EPO is unable to prove that it has been duly notified, or if provisions relating to its notification have not been observed, the document is deemed to have been notified on the date established by the EPO as the date of receipt (R. 125(4) EPC). In cases where the EPO is not able to prove the actual date of notification, a letter, for instance, sent by the addressees themselves and indicating the date of receipt, is accepted as proof. If it is evident from a reply from the addressees that they have received the document, although they do not mention the date of its notification, the date on which that reply was written is to be regarded as the date of notification (Guidelines E-II, 2.6 – April 2025 version, regarding R. 125(4) EPC). See also **T 1535/10**, **T 1553/13** and **J 4/13**.

5.3. Safeguards in case of late delivery

Where a document has been delivered exceptionally late, a new safeguard introduced in the last sentence of revised R. 126(2) EPC and R. 127(2) EPC will apply. In particular, if the EPO cannot show that a document has reached the addressee within seven days of the date it bears, the relevant period will be extended by the number of days by which these seven days are exceeded. See notice from the EPO of 25 November 2022 concerning legal changes to support digital transformation in the patent grant procedure (OJ 2022, A114) and notice from the EPO of 6 March 2023 concerning amended R. 126, 127 and 131 EPC (OJ 2023, A29).

T. Applications by non-entitled persons

Article 61 EPC deals with the remedies available where a person other than the patent applicant is held by a national court to be the person entitled to the grant of a European patent. For further details, see R. 16 and 17 EPC. See also R. 14(1) EPC in chapter III.M.3 for stay of proceedings before the EPO in case of entitlement suit.

In **G 3/92** (OJ 1994, 607), the Enlarged Board was called upon to consider the application of Art. 61(1)(b) EPC 1973 (Art. 61 EPC left unchanged in substance by the EPC 2000 revision) in the following circumstances: the appellant had lodged a European patent application in 1988. The search report revealed the existence of a prior application filed in 1985 for substantially the same invention by a third party, to whom the appellant had revealed the invention in confidence in 1982. This prior application had been published, and in 1986 deemed to be withdrawn for non-payment of the examination fee. Thereupon the appellant claimed from the UK Patent Office Comptroller, and was granted, entitlement to a patent for the invention disclosed in the prior European application under Section 12(1) UK Patents Act 1977. The appellant was thus allowed under Section 12(6) UK Patents Act 1977 to file a new application in the UK to be treated as having the same filing dates as the prior European application. The appellant then filed a new European patent application in respect of the invention disclosed in the prior application under Art. 61(1)(b) EPC 1973 in 1990.

The referring Legal Board took the view in its interlocutory decision **J 1/91** (OJ 1993, 281) that the Comptroller's decision was a final decision within the meaning of Art. 61 EPC 1973. However, whilst entitlement to a patent was a matter for national courts to decide, those courts had no power directly to provide a remedy under the EPC, that being a matter to be dealt with by the EPO under Art. 61 EPC 1973.

The Enlarged Board held that when it has been adjudged by a **final decision** of a national court that a person other than the applicant is entitled to the grant of a European patent, and that person, in compliance with the specific requirements of Art. 61(1) EPC 1973, files a new European patent application in respect of the same invention under Art. 61(1)(b) EPC 1973, it is not a pre-condition for the application to be accepted that the earlier original usurping application is still pending before the EPO at the time the new application is filed.

The Legal Board therefore ruled in **J 1/91** of 25 August 1994 that the conditions of Art. 61(1)(b) EPC 1973 had been met and accordingly remitted the patent application to the Receiving Section for further prosecution.

In **J 1/23** the Legal Board disagreed with the appellant's assertion that the national court's decision did not qualify as a decision adjudging that the third party was entitled to half of the European patent application within the meaning of Art. 61 EPC. Although it was undisputed that the national court decision was a **final decision**, the appellant contended that the national court could not decide on entitlement to the application because a passage referring to the "patent applications" had been removed from the third party's request in the national (appeal) proceedings. According to the Legal Board, the key

question was whether, in the particular case, the EPO interpreted the decision as a final entitlement decision within the meaning of Art. 61 EPC. In the case in hand, even in the absence of an explicit reference to "all patent applications and patents that may be issued thereof", the entitlement to the invention as specified in the application inherently implied entitlement to the grant of a European patent based on the application (see also in chapter IV.A.4).

U. Rules relating to Fees

1. Documents subject to formal notification 1254
2. Forms of notification 1254
2.1. Notification by postal services 1254
2.2. Notification by means of electronic communication 1256
2.3. Notification by delivery by hand and public notification 1257
3. Notification to representatives 1257
4. Notification to third parties 1258
5. Burden of proof and safeguards 1259
5.1. Burden of proof where notification is disputed 1259
5.2. Notification under Rule 125(4) EPC 1261
5.3. Safeguards in case of late delivery 1262

1. General

The RFees determine the amounts of the fees levied by the EPO and the ways in which they are to be paid (Art. 51(4) EPC). They also contain provisions regulating the due date for fees, the particulars to be indicated concerning payments, the date of payment, insufficient payments and certain refunds and reductions.

According to **J 7/07**, no provision of the EPC states explicitly that the EPC takes precedence over the RFees in cases of conflict between them. However, the EPC is clearly the higher legal norm and, in case of conflict, by analogy with Art. 164(2) EPC 1973, the provisions of the EPC should take precedence. Also on general legal principles, the Implementing Regulations should take precedence over the RFees. See also summary of **J 7/07** in chapter III.D.1.2.2.

The EPC 2000 required a revised version of the RFees, which also entered into force on 13 December 2007 (see Administrative Council decision of 7 December 2006, OJ 2007, 10; also Administrative Council decision of 25 October 2007, OJ 2007, 533). For subsequent amendments see the regularly updated HTML version of the RFees, and its "Version history" function, on the EPO website. The relevant chapter of the Guidelines (April 2025 version) is Part A-X. Up-to-date fee information is available in the OJ under the rubric "Guidance for the payment of fees, expenses and prices" and at *epo.org/applying/fees/fees*.

Besides the cases set out below, decisions concerning individual procedural fees are to be found in the relevant chapters of this book.

2. Payment of fees

2.1. Methods of payment

Fees due to the EPO may be paid by the methods foreseen in Art. 5 RFees (see also **R 2/09**). Article 5(1) RFees provides for payment or transfer to a bank account held by the EPO. Under Art. 5(2) RFees further fee payment methods may be allowed by the President of the EPO. These are payment by debit order from a deposit account held with the EPO (see next section) and payment by credit card (since 1 December 2017 – see decision of the President, OJ 2017, A72, and notice, OJ 2022, A18). On the establishment of the online Central Fee Payment system (CFP), see OJ 2020, A130, OJ 2021, A61 and OJ 2022, A81.

2.2. Debit orders

2.2.1 Governing provisions

Under Art. 5(2) and 7(2) RFees the EPO makes deposit accounts available for paying fees to the EPO (not, however, for the fees according to Art. 17 REE, Supplementary publication 2, OJ 2019 – see **D 9/17**). They are governed by the ADA and their annexes. For the current version and accompanying notice, see Supplementary publication 2, OJ 2024 and decision of the President of the EPO dated 25 September 2024, OJ 2024, A81. Payments from a deposit account are made by debit order, and most fees are paid by this method.

2.2.2 Accepted means of filing a debit order

Since 2017, debit orders submitted to the EPO must be filed in an electronically processable format by an accepted means (point 7.1.2 ADA; see also decision of the President of the EPO dated 25 September 2024 concerning the revision of the ADA and their annexes, OJ 2024, A81). With that, the previous payment form EPO Form 1010 in particular became obsolete (for more on debit orders that are invalid because submitted in another way or format, see point 7.1.3 ADA, see also **T 590/18** of 4 July 2018 in chapter III.A.2.2.1, **T 703/19** and **T 1146/20**). It follows that some of the decisions in this section are now of limited application.

In **T 480/21** the board concluded that an extension of the period for paying the opposition fee was provided under point 5.5 ADA 2017 (point 11 ADA 2024). The evidence strongly suggested that the inability to file the debit order was due to a malfunction of the EPO's Online Filing software, which, in this case, was attributable to the EPO. See also **T 2053/20** in chapter III.A.3.2.

2.2.3 Authority to sign

In **T 1878/18** the board held that the absence of the signatory of the debit order from the law firm's letterhead and the list of professional representatives did not call into question their authority to make a payment. The board also indicated that, according to the ADA,

the EPO is not obliged to perform an ex officio assessment to determine authority to sign, as this is solely a matter for the account holder.

2.2.4 Types of debit orders

The debit order may be a debit order for individual fees or an automatic debit order, in each case for one or more patent applications. By filing an automatic debit order, the deposit account holder authorises the EPO to debit fees automatically as the proceedings progress (see AAD, Supplementary publication 2, OJ 2024, and e.g. **T 1474/19** and **T 342/21**). The automatic debiting procedure is open only to applicants, patent proprietors and their representatives, but not to opponents (whether in first-instance proceedings or as a party to appeal or review proceedings), third parties or persons (other than the applicant or patent proprietor) who inspect the file (see point 1.3 AAD, point II of Annex A.2 to the ADA and e.g. **T 71/21** in this chapter III.U.2.2.5; see also **T 2053/20** in chapter III.A.3.2.).

2.2.5 Interpretation and correction of debit orders

a) Interpretation of debit orders

In **T 1474/19** the board summarised the jurisprudence of the boards concerning the validity of a debit order submitted under the ADA. According to one line of jurisprudence (see (i) below), notwithstanding formal deficiencies, a debit order in line with the prescribed filing requirements has to be assessed on its substance, in view of the party's clear intention objectively expressed in the order to pay a particular fee (e.g. the appeal fee) from an identifiable account. No fee amount needs to be specified. On this basis, the EPO is authorised to and has to debit the intended fee in the applicable, i.e. correct, amount. Another line of jurisprudence (see (ii) below) takes a "more literal" approach in the interpretation of a debit order, putting more emphasis on the incorrect amount specified in the order. According to yet another line of case law (see (b) below), correction of a debit order under R. 139 EPC is possible under the requirements set by **G 1/12.**

(i) Substance of a debit order – clear intention to pay

The EPO's long-standing practice of correcting debit orders of its own motion dates back to **T 152/82** (Debit order I, OJ 1984, 301), according to which a debit order must be carried out notwithstanding incorrect information given in it (here the wrong fee amount), if the intention of the person giving the order is clear (see Headnote II.).

In **T 17/83** (Debit order II, OJ 1984, 306) the board concluded, with reference to **T 152/82**, that if a submission to the EPO stated that a debit order for payment of a fee had been issued, this statement could, if need be, itself be considered such a debit order in the absence of any record of the original (see headnote). These decisions were followed by **T 170/83** (Debit order III, OJ 1984, 605), which held that for payment by debit order the question was whether the EPO was authorised in due time to avail itself for a clearly specified purpose of funds deposited with it, notwithstanding formal deficiencies (here use of a national form in error). Applying the same approach, the board in **T 152/85**

(OJ 1987, 191) concluded that no document had been timely filed which could be construed as a debit order.

In **T 1265/10** the board considered in the particular circumstances of the case that the crossing of Section X of the notice of opposition (EPO Form 2300) to indicate enclosure of a fee payment voucher (which enclosure, however, was not found at the EPO) was a declaration of the intention to pay the opposition fee. A debit order had to be unambiguously recognisable and show a clear and unambiguous intention to make a particular payment (**T 170/83**, **T 152/82**, **T 152/85**). As stated in **T 170/83**, an authorisation to be derived from the circumstances required that the authorising person (account holder) was known and clearly identifiable, and that certain fees due to the EPO for a known procedure were meant to be paid by the withdrawal from such account (and not in any other way). Following **T 806/99**, which was based on almost identical facts, the board found these conditions to be fulfilled. This was sufficient for payment of the fee.

In **J 14/12** the question was whether for the renewal fees paid on a divisional application additional fees were also due. The board found that, for some of the renewal fees, a submission filed within the four-month period of R. 51(3), second sentence, EPC requesting (in general terms) debiting of the fees falling due with the filing of that divisional application was, when read in conjunction with the internal fee calculation sheet filed with the application, sufficient to fulfil the requirements for the content of a valid debit order (see former point 6.3 ADA, as published in Supplement to OJ 3/2009). Hence, those renewal fees were timely paid and additional fees were not due.

In **T 1474/19** the appellant had filed a debit order using Form 1038E which specified a reduced amount of the appeal fee to which the appellant was not entitled (see in this chapter III.U.5.2). The amount lacking was paid outside the time limit. Following **T 152/82**, the board concluded that the appellant's clear intention was to pay the appeal fee to file a valid appeal, the applicable amount (here) being the full amount of the fee. That an incorrect, i.e. the inapplicable, reduced amount was specified in the debit order was irrelevant to the question of validity of the payment. As there were sufficient funds in the deposit account on the date the debit order was received by the EPO, such date was to be considered the (full) payment date.

According to the board in **T 1678/21**, both **T 152/82** and the summary of the subsequent case law endorsing it given in **T 1474/19** could be followed, but only under the condition that it was known to a board from the file as it stood at the end of the appeal period that the appellant, at the point in time of authorising the debit of the reduced appeal fee, was not entitled to the reduction of the appeal fee under R. 6(4) and (5) EPC. As this condition was not met in the case in hand, the statements made by the appellant in the notice of appeal and Form 1038E could not be assessed as reflecting a clear intention to pay the regular appeal fee. See also b) below on the appellant's request for correction under R. 139 EPC.

(ii) More literal approach

Some decisions have put more emphasis on the incorrect amount specified in the order. This has led to appeals being considered not validly filed (see e.g. **T 17/83** and **T 79/01**).

In **T 198/16** the board held that the statement in the electronically filed notice of appeal "The appeal fee is paid via the enclosed form 1010" (which form was not enclosed) was not a "clear, unambiguous and unconditional" debit order under point 6.3 ADA 2015 (which required that the fee amount be specified in the debit order). It was rather considered to be a mere statement that such a debit order was supposed to be given, and thus payment made, by means of a different document, i.e. Form 1010. Deviating explicitly from **T 1265/10**, the board held that the intention to authorise debiting of the deposit account did not already allow the EPO to act on such authorisation and carry out such intent where the EPO, under the deposit account system, already holds such money in trust. **T 1000/19** also rejected the approach in **T 1265/10** in view of the ADA 2017, which required a debit order to be filed in a specific electronically processable format. However, the board in that case favoured a correction under R. 139 EPC and concluded that the fee had been validly paid (see b) below).

In **T 1060/19** the appellant had filed a debit order using EPO Form 1038E which specified a reduced amount of the appeal fee to which the appellant was not entitled (see in this chapter III.U.5.2). The amount lacking was paid outside the time limit. The board held that an express instruction to debit the full fee had only been given outside the appeal period, and no declaration of entitlement to the reduced fee had been filed (see also **T 1222/19** and **T 333/20**).

b) Correction of errors in a debit order under Rule 139 EPC

In early decision **T 170/83** (OJ 1984, 605 – see above), the board observed that, because the running of deposit accounts fell outside the grant or opposition procedures, it was not governed by the correction provisions of R. 88, first sentence, EPC 1973 (cf. R. 139, first sentence, EPC). To make a payment was to perform an act, namely to make a given amount available to the EPO at a particular time (Art. 9(1), first sentence, RFees; see now Art. 8, first sentence, RFees). A similar conclusion was reached in **T 152/85** (OJ 1987, 191). However, R. 139, first sentence, EPC has been applied to correct an error in debit orders in subsequent board of appeal decisions since the introduction in point 5 (now point 7) ADA of stricter conditions for filing debit orders (see e.g. **T 130/19**, **T 317/19**, **T 1000/19** and **T 1146/20**). Rule 139, first sentence, EPC has also been applied in the context of debit orders which had mistakenly indicated the reduced rather than the full appeal fee (see e.g. **J 8/19**, **T 2620/18**, **T 3098/19**, **T 444/20**, **T 1678/21**, **T 1538/19** and chapter V.A.2.5.4). See also **T 186/22** concerning correction of a debit order specifying an incorrect deposit account number.

In **T 71/21** the appellant (opponent) had attempted to pay the appeal fee within the appeal period by setting up an automatic debiting procedure. This could not succeed because this online payment method is inadmissible for opponents (see also in this chapter III.U.2.2.4). Applying R. 139 EPC and taking into account the principles set out in **G 1/12**, the board

concluded that it was not possible to retroactively correct the payment method and deem the deadline for payment met. According to the board, both the notice of appeal and Form 1038 objectively showed, in view of the wording chosen, the appellant's clear and unambiguous intention to pay the appeal fee by means of the automatic debiting procedure. The fact that the appellant was not entitled to use this debiting procedure and had therefore chosen an inadmissible payment method had no bearing on the objectively recognisable unambiguity of this intention (see also in chapter III.A.4.2.2).

In **T 2170/21** the appeal fee had not been paid within the appeal period in the prescribed amount because the appellant (patent proprietor) had issued the debit order on the wrong electronic form for an opposition fee. The board saw no reason to question the possibility in principle of correcting an erroneous fee payment under R. 139 EPC, in line with **T 71/21** and the further decisions cited therein. In the board's view, a correction was possible without replacing the entire form. Contrary to the respondent's view, the conditions for allowing a correction as established by the Enlarged Board and developed in the case law of the boards of appeal (**G 1/12**, point 37 of the Reasons, conditions (a) to (d)) were also met.

The board in **T 1678/21** held that the four criteria for assessing whether a request for correction of a document filed with the EPO pursuant to R. 139 EPC could be granted were principles (a) to (c) of **G 1/12** (see point 37 of the Reasons), complemented by a further criterion (d), namely, balancing of the public interest in legal certainty with the interest of the party requesting correction, with factors relevant to the specific case. As a rule, criteria (a) to (d) were to be assessed in the order (c), (a), if applicable, together with (b), and (d). In the case in hand, the board concluded that the criteria for correction applicable in this case had been met (see also **T 1678/21** in this chapter III.U.2.2.5a)(i) above).

According to the board in **T 3098/19**, the relevant point in time for the question as to whether a request for correction had been filed without delay could only be the date on which the mistake had been discovered by the relevant person (see also **J 1/20** and **T 1678/21**). Since the appellant filed the request immediately after having been informed by the EPO about the payment of the reduced appeal fee, the board considered that the criterion of **G 1/12** had been met.

See also **T 1474/19** in this chapter III.U.2.2.5a)(i).

2.2.6 Processing of debit orders

In **T 773/07** the appellant's deposit account held insufficient funds to cover the appeal fee. The board rejected the argument that this fee could or should have been booked before six other fees on the relevant date. It was not for the EPO cashier to choose priorities between fees to be paid, all the more so since under the ADA it was the responsibility of the account holder to ensure that the account contained sufficient funds at all times.

In **T 871/08** of 23 February 2009 the opponent had indicated that the appeal fee would be paid by online debit order, but also requested that, if this was not done by one day before

expiry of the Art. 108 EPC 1973 time limit, the EPO should debit the fee. The board held that the payment of the appeal fee was exclusively the responsibility of the appellant or its representative, who could not discharge themselves by shifting the responsibility to the EPO, let alone with a conditional order. However, in **T 2364/12** a different conclusion was reached in the circumstances of that case. It is to be noted that the requirement that debit orders must be "unconditional" was introduced in the ADA 2009, remaining in the ADA versions of 2014 and 2015 and being removed from the ADA 2017.

2.2.7 Date of payment of amounts paid by debit order

Provided that there are sufficient funds in the deposit account on the date the EPO receives a debit order, this date will be considered the date on which the payment is made (see point 10 of the ADA and e.g. **T 1474/19** and **T 1678/21**). The debit order may also specify that a payment order should be executed at a date later than the submission date (point 10.2 of the ADA).

In the case of automatic debit orders, the debit is effected in the amount applicable for the fee on the date considered the decisive payment date. The EPO automatically debits the appropriate amounts of all fees due in the proceedings for which the order has been filed and treats the payment as received in due time (see AAD). In **T 342/21** the board held that not debiting the fee automatically (in the case at issue, the fee under R. 82(2) EPC and the surcharge under R. 82(3) EPC) constituted a substantial procedural violation on the part of the EPO. As confirmed in **T 270/00**, if an automatic debit order is revoked after the decisive payment date for the appeal fee, this is too late to affect the payment. Valid payment of the appeal fee is a matter of fact, which cannot be undone and is not at the disposal of the appellant. See also **J 6/21** concerning revocation of an automatic debit order on its execution date.

2.3. Indication of purpose of payment

Article 6 RFees (previously Art. 7 RFees) regulates the particulars concerning payments, which include those necessary to enable the EPO to establish a payment's purpose.

According to **J 16/84** (OJ 1985, 357, headnote), if when a fee is paid the purpose of the payment has evidently been given incorrectly, this deficiency is not prejudicial if the intended purpose can be established without difficulty from the remaining information. The inadvertent use of a fee by the EPO for a different purpose from that evidently intended by the person making the payment has no effect on the purpose intended by that person.

J 23/82 (OJ 1983, 127) and **J 19/96** concerned designation fees for individual contracting states under the earlier law. In **J 19/96** the board noted that **J 23/82** held that the indication of the purpose of a payment within the time limit for payment was not a mandatory requirement for payment to have been made in due time and, according to Art. 7(2) RFees (now Art. 6(2) RFees), could thus still be given later. However, the current board doubted whether this meant that it was generally possible to change the purpose of a payment after expiry of the relevant time limit with retroactive effect to the date on which the payment was made.

For decisions concerning payments by debit order, see also the previous section.

3. Date of payment

3.1. Payment to a bank account held by the EPO

Where an amount is paid into or transferred to a bank account held by the EPO, the date on which the amount of the payment or transfer is actually entered in its account is considered to be the date on which the payment has been made to the EPO (Art. 7(1) RFees). Thus, dates relating to the mistaken transfer of an appeal fee to a bank account of the German Patent Office were held not to be relevant to establishing whether a fee due to the EPO had been paid in time (see **T 45/94** and **T 1130/98**).

3.2. Payment by credit card

Payment by credit card is deemed to have been made on the date on which the transaction is approved (see OJ 2017, A72 and A18).

3.3. Payment by debit order

For date of payment of amounts paid by debit order, see in this chapter III.U.2.2.7.

3.4. Fiction of fee payment in due time – fail-safe arrangement

If payment of a fee is considered not to have been made until after expiry of the period for payment, the period is considered to have been observed upon evidence that the payer took certain steps to initiate the payment within the period (Art. 7(3), (4) RFees, as amended with effect from 1 April 2020, see OJ 2020, A3 and e.g. **T 315/19**). There is no longer a surcharge under Art. 7(3) RFees (**T 842/90**, **J 20/00**, **J 25/12** concern the former surcharge).

Article 7(3), (4) RFees also apply to the payment of a renewal fee, because in effect the due date for payment of this fee marks the last day of a period (R. 51(1) EPC; R. 37(1) EPC 1973) during which this fee can be validly paid (**J 20/00**).

Article 7(3) RFees does not apply to key dates after which payments reaching the EPO are affected by a fee increase (**J 18/85**, OJ 1987, 356).

Article 7(3) RFees does not apply where payment is made through (or, as in this case, a transfer order is given to) a banking establishment which is not in an EPC contracting state, even if the bank has a subsidiary in a contracting state (**J 10/20**, citing **T 401/97**).

A period for payment may be deemed to have been observed within the meaning of Art. 7(3) RFees (cf. Art. 8(3) RFees 1973) even if the receipt of the funds after the expiry of the period is no longer attributable to the original transfer order, but to another payment transaction initiated in the meantime (**J 7/08**; see also **J 22/85**, OJ 1987, 455).

3.5. Prepayment of a fee

Unless otherwise expressly stated (e.g. payment of the renewal fee under R. 51(1) EPC), a fee cannot be validly paid before its due date (**G 1/18**).

4. Insufficient payments – small amounts lacking

A time limit for payment is in principle deemed to have been observed only if the full amount of the fee has been paid in due time (Art. 8, first sentence, RFees).

However, the EPO has the discretion, where this is considered justified, to overlook any small amounts lacking without prejudice to the rights of the person making the payment (Art. 8, fourth sentence, RFees).

It is established in the jurisprudence of the boards and in the practice of the EPO that a "small amount" means around 10% of the relevant fee (see e.g. **T 130/82**, OJ 1984, 172; **J 11/85**, OJ 1986, 1; **T 109/86** of 20 July 1987). In **T 343/02** of 20 January 2003, an underpayment of less than 2% due to the unexpected deduction of bank charges was overlooked.

In **T 290/90** (OJ 1992, 368) and **J 27/92** (OJ 1995, 288), by contrast, it was held in the circumstances of each case that an underpayment of 20% of the relevant fee could be considered a small amount. Among the factors which the board took into account was that this percentage would allow the provision to be applied to cases in which a party mistakenly sought to take advantage of the (then generally available) 20% language-based fee reduction.

However, these have remained isolated cases. Already in **T 905/90** (OJ 1994, 306, Corr. 556) the board found that the meaning of "smallness" could best be determined by comparing the amount of shortfall with the amount of the full fee. A difference of 20% clearly could thus not, on purely arithmetical grounds, be regarded as small. It was with very small or trifling amounts that the former Art. 9 RFees (see Art. 8 RFees) was designed to deal so as to prevent a loss of rights where an inadvertent error of some kind had led to a slight underpayment of an amount due in respect of the relevant proceedings. This decision was confirmed in **T 642/12**, in which the board considered that "small amounts lacking" are to be read as "insignificant or negligible amounts". The legislator had presumed that a fee reduction of 20% pursuant to R. 6(3) EPC was not merely symbolic, but would effectively alleviate the burden of having to prepare translations. Therefore it could not have intended this fee reduction to be considered small in the sense of negligible or insignificant.

The question of what constitutes a "small amount lacking" has also arisen more recently in cases concerning the payment of the reduced rather than the full fee for appeal (see in this chapter III.U.5.2) where the appellant was not entitled to the reduction. See in particular the analysis of the board in **T 3023/18**, and its conclusion that the underpayment of the appeal fee by about 17% was not "small" within the meaning of Art. 8, fourth sentence, RFees. According to the board, it was furthermore reasonable to assume that

the legislator saw the fee reduction under Art. 2(1), item 11, RFees as being of genuine financial assistance to the listed categories of person, and not merely as symbolic. See, similarly, **T 2422/18**, **T 2620/18** and **T 637/21**, and chapter V.A.2.5.4c).

The board in **J 25/12** did not doubt that the underpayment in that case could be regarded as a small amount, but stressed that the EPO could exercise its discretion to overlook small amounts only if justified. This was not so here since the representative had been informed about the changed fee rates and invited to pay the amount lacking within a time limit – which, however, he had failed to do. The board in **T 2620/18** similarly observed that there were two cumulative requirements in Art. 8, last sentence, RFees, namely that the amount lacking be "small" and that overlooking it be "justified". It conceded that overlooking the underpayment might be justified in the case in hand, because the appeal fee had later been paid in full, but it could not do so because the difference between that full fee and the amount initially paid was not small.

5. Fee reductions

5.1. Filing fee, examination fee

The RFees contain provisions regulating fee reductions for certain categories of applicant. By decision of 14 December 2023 (OJ 2024, A3), the Administrative Council amended R. 6 EPC and Art. 14 RFees and adopted new R. 7a and 7b EPC. These changes introduced a new fee reduction scheme specifically for micro-entities, which complements the existing support measures for small entities, and in particular the language-related fee reductions. The eligibility requirements for any language-related fee reductions are now provided for in Art. 14(4) EPC and R. 7a(1) and (2) EPC (previously R. 6(3) and (4) EPC).

Article 14(1) RFees defines the percentage of the language-related reduction of the filing fee and the examination fee provided for in R. 7a, paragraphs 1 and 3, EPC. For relevant decisions, see chapter III.F.6.

Article 14(2) RFees defines the percentage reduction of the examination fee for certain Euro-PCT applications having entered the regional phase. The reduction does not apply to divisional applications (**J 1/09**, confirming **J 14/07**).

5.2. Fee for appeal

Under Art. 2(1), item 11 RFees, as in force from 1 April 2024, the persons and entities listed in R. 7a, paragraphs 2(a) to (d) EPC, pay a reduced fee for appeal (see decision of the Administrative Council of 14 December 2023, OJ 2024, A3). Relevant board decisions are reported in chapter V.A.2.5.4c).

6. Fee refunds

As a general rule, once a fee has been validly paid it will not be refunded, unless a refund is provided for in the EPC or RFees.

In **T 2069/18** the board held that the examining division had rightly found the renewal fees in issue to have been duly incurred and imposed. The refund arrangements laid down in e.g. Art. 9 to 11 RFees, albeit inapplicable in the case in hand, showed that the EPC 1973 legislator had provided for the possibility of refunds in certain cases. Otherwise too, the EPO regularly refunded payments made without a legal basis of its own accord, on the grounds of equity. Renewal fees which had been duly imposed and paid were not retrospectively deprived of their legal basis because the EPO had been slow to act in examination proceedings. See also **T 1284/09**.

See also decision of the President of the EPO dated 25 September 2024 concerning the revision of the ADA and their annexes – changes regarding the repayment of renewal fees that are not due (OJ 2024, A81).

For decisions on the refund of specific procedural fees, see the relevant chapters of the book, in particular chapter II.B.3.3, III.E.9 and V.A.11.

6.1. Partial refund of the examination fee

The Legal Board ruled in **J 25/10** (OJ 2011, 624, see headnote) that following the withdrawal of a European patent application, a refusal by the examining division of a request for a 75% refund of the examination fee, on the basis that substantive examination has already begun (Art. 11(b) RFees), must be based on facts which objectively demonstrate that this is so. See also **J 9/10**. Following these two decisions the EPO made adjustments to the system for refunding search and examination fees – see notice dated 29 January 2013 (OJ 2013, 153).

V. Representation

6. Fee refunds 1274
6.1. Partial refund of the examination fee 1275

1. Overview

Article 133 EPC lays down the general principles applying to representation. Art. 134 EPC governs representation before the EPO. Art. 134a EPC concerns the Institute of Professional Representatives before the EPO.

Article 133 and 134 EPC together with R. 152 EPC and the decision of the President of the EPO dated 12 July 2007 on the filing of authorisations (OJ SE 3/2007, 128, L.1.) provide a complete, self-contained code of rules of law on the subject of representation in proceedings established by the EPC. Art. 133(1) EPC stipulates that, subject to Art. 133(2) EPC, no person is compelled to be represented by a professional representative in proceedings established by the EPC. However, according to Art. 133(2) EPC, natural persons not having their residence in an EPC contracting state must be represented by a professional representative (Art. 134(1) EPC) or a legal practitioner (Art. 134(8) EPC) and act through him in all proceedings established by

the EPC, other than in filing the European patent application (**T 578/14**). That the set of rules on representation is complete and self-contained was reaffirmed in **T 1893/22**.

The Guidelines (April 2025 version) contain detailed information on the practice relating to representation, most notably in: A-III, 2; A-VIII, 1 and D-I, 7.

2. Professional representatives

2.1. List of professional representatives (Article 134(1) EPC)

Article 134(1) EPC stipulates that professional representation of natural or legal persons in proceedings established by the EPC may only be undertaken by professional representatives whose names appear on a list maintained for this purpose by the EPO. The requirements for entry in this list are laid down in Art. 134(2) EPC. In the context of Art. 134(1) EPC, it is also useful to consult R. 154 EPC "Amendment of the list of professional representatives", as well as the related decision of the President, OJ 2013, 600, notice from the EPO, OJ 2015, A55, and Administrative Council decision, OJ 2018, A57; Notice from the EPO dated 13 May 2024, OJ 2024, A57.

The objective of the list of professional representatives is to provide a survey of particularly qualified representatives in patent matters (**D 14/93**, OJ 1997, 561).

In **J 1/78** (OJ 1979, 285) the appellant was entered on the list of professional representatives before the EPO under the letter "V" as "von F., A.". The object of his appeal was to obtain a ruling which would enable him to be entered under the letter "F" as, for example, in the telephone directory. The decision found that the entry was made in accordance with the principles laid down by the President of the EPO whereby the full surname must be entered in alphabetical order. Under German law, former titles of nobility ("von") form part of the surname. The board noted that the purpose of entry on the list was to confer upon the person whose name was entered the right to appear in the European patent grant procedure. A distinction had to be made between entry for the purposes of conferring a right and publication of the list, which latter was not prescribed in the EPC 1973. The EPO issues a directory from time to time for the purposes of meeting public demand for information. In this directory, the person entered on the list could be allowed an additional entry under another letter should he so desire.

2.2. Party having its seat in an EPC contracting state

Under the EPC there is no obligation for parties having their residence or principal place of business in a contracting state to be represented in proceedings before the EPO (Art. 133(1) and (2) EPC). If a European professional representative – qualified in accordance with Art. 134 EPC – is appointed, the party acts "through" them in all proceedings established by the Convention (Art. 133(2) EPC) and notifications are made to them (R. 130(1) EPC) (see e.g. **J 1/20**).

In **T 1893/22**, the proprietor contested the admissibility of the opposition inter alia on the basis that the opponent's professional representative could not represent the French

company since he was simultaneously managing the legal entity he represented. The board reminded that a legal person having its seat in an EPC contracting state is not obliged to be represented by a professional representative (Art. 133(1) EPC). Furthermore, persons whose names appear on the list of professional representatives are entitled to act in all proceedings established by the EPC (Art. 134 EPC). A legal person having its seat in an EPC contracting state can act in proceedings before the EPO through its legal representatives. At the time the opposition was filed, Mr N in his capacity as President of the company was entitled to represent the company since under French law (Art. L. 227 Commercial Code) he was entitled to act on behalf of the legal person in all circumstances. Mr N as a professional representative would have been entitled to act not only as the president of the company, but also as a professional representative appointed by that legal person. For the sake of completeness, the board detailed why neither the references to French law (Civil Code) nor German law, nor the reference to general principles under Art. 125 EPC could, in its view, prevent the company from appointing Mr N as its professional representative before the EPO.

2.3. Duty of persons without residence nor place of business within a contracting state to be represented by a professional representative

According to Art. 133(1) EPC, no person shall be compelled to be represented by a professional representative in proceedings established by the EPC. However, Art. 133(2) EPC stipulates that natural or legal persons not having either a contracting state residence or their principal place of business within the territory of one of the contracting states must be represented by a professional representative and act through him in all proceedings established by the Convention, other than in filing a European patent application. The Implementing Regulations may permit other exceptions. **T 1157/01** reviews the applicable law.

In **J 1/04** the board stated that there is no obligation for an applicant having a principal place of business within an EPC contracting state to be represented in proceedings established by the Convention. If, however, the applicant wishes to be represented, he must authorise either an employee or a professional representative or legal practitioner.

Regarding an employee of a **group of companies**, **T 2308/10** says that an employee of a company in such a group is not entitled to represent another company belonging to the same group. **T 298/97** had already established that, there being no provision in the Implementing Regulations pursuant to Art. 133(3), last sentence, EPC, the EPC did not currently allow the representation of one legal person by an employee of another economically related legal person.

In **T 213/89** the Japanese inventor replied directly to the EPO with a set of revised application documents, and accompanied by a letter to his representative indicating that the revised documents had also been sent to the representative. The board noted that no confirmation by the representative was received that any of the submissions directly received from the inventor should be regarded as an official reply to an EPO action. Since persons not having a residence or their principal place of business within the territory of

one of the contracting states must act through their representative in the proceedings, the said submissions received direct could not be taken into account.

In **T 717/04**, a letter from the appealing applicant, a natural person with an address not within the territory of one of the contracting states, was faxed to the EPO with arguments and a new set of claims to be taken into account. According to Art. 133(2) EPC 1973, since the appealing applicant's address was not within the territory of one of the contracting states, the board concluded that filing claims and arguments such as those in the appealing applicant's letter would have required professional representation. As these submissions were neither made nor endorsed by the representative, the board could not take them into account.

In **T 578/14** Mr S., as a resident of New Zealand, had to act through a representative in the appeal proceedings. Therefore, the board could not take into account requests and submissions, which were made neither by the representative nor endorsed by him (**T 213/89**, **T 717/04**, and **J 4/10**). This did not apply to submissions which exclusively concerned the appointment or change of a representative or the filing of an authorisation or of any information that the representative's authorisation has terminated.

In **J 9/13** the Receiving Section refused the European patent application pursuant to Art. 90(5) EPC, because the applicant, resident in Moscow, had not appointed a professional representative as required by Art. 133(2) EPC. The appellant (applicant) contended that Art. 133(2) EPC did not apply to residents of the Russian Federation. The Russian Federation was a party to the "Partnership and Cooperation Agreement (PCA). The board stressed that neither the European Patent Organisation nor the EPO is part or member of the European Union. Therefore, neither the European Patent Organisation nor the EPO are bound by the provisions of the PCA, neither of them is a "party" or "other party" pursuant to Art. 98 of the PCA. The appeal was deemed not to have been filed.

2.4. Professional representatives during the transitional period

One of the conditions for including a professional representative on the EPO list is that he has passed the EQE. During a transitional period after the EPC 1973 first entered into force, this requirement could be waived under the conditions laid down in Art. 163 EPC 1973 (see **J 19/89**, OJ 1991, 425; **J 10/81**). For all states acceding to the EPC 1973 at its inception, this period ended on 7.10.1981 (decision of the Administrative Council dated 6.7.1978, OJ 1978, 327). Art. 163 EPC 1973 was one of the transitional provisions, now superseded, and has therefore been deleted in the new EPC 2000.

Article. 163(6) EPC 1973 retains all its significance as a grandfather clause and is therefore preserved in the EPC 2000 to deal with the situation of national representatives of states acceding to the EPC in the future. The substance of the grandfather clause of Art. 163 EPC 1973 has therefore been integrated in Art. 134(3) EPC 2000 in simplified form, as a permanent provision of the EPC.

The reunification of Germany posed its own problems, in **J 18/92**, **J 30/92**, **J 31/92**, **J 32/92** and **J 33/92**, regarding the admission of professional representatives. The appellants argued that the provisions of Art. 163(6) EPC 1973 should be applied to patent attorneys, even where they had qualified in West Germany and not the former GDR. In the board's view, Art. 163(6) EPC 1973 could only be applied by analogy to those finding themselves in a similar situation to the patent agents of a country acceding to the EPC. This requirement was fulfilled only by patent agents from the former GDR and not by their colleagues who had already been admitted in the West.

2.5. Procedural steps performed by a person other than the professional representative

A procedural act performed by a non-entitled person is to be treated in the same way as a missing signature (**G 3/99**, OJ 2002, 347; **T 665/89**; **T 1048/00**).

In **J 28/86** (OJ 1988, 85) the Legal Board held that a request for examination filed by a person who was not entitled to act as a representative in accordance with Art. 134 EPC 1973 was invalid. The board noted that the situation did not change because the representative had later been entered on the list of professional representatives. In this capacity he had neither approved nor resubmitted the invalid request he had made earlier.

In **T 665/89** the board addressed the question of the admissibility of an opposition by an opponent whose residence was not in a contracting state, where the notice of opposition was signed by a person who was neither a professional representative nor an employee of the opponent. The board of appeal concluded that the actions of the unauthorised person ought to be judged as if the signature were missing, and thus assumed that the **deficiency** was remediable. The opponent supplied the missing correct signature at the EPO's invitation within the time limit laid down. The document thus retained the original date of receipt in accordance with R. 36(3), third sentence, EPC 1973 (R. 50(3) EPC). See also **T 1427/09** of 17 November 2009.

R 18/09 the Enlarged Board, referring in detail to **G 3/99** (OJ 2002, 347), stated that concerning the principle that a plurality of persons acting in common be treated as a single party (a "group party") and the requirement that such a group party acts through a common representative which both apply to petition proceedings. It was also held in **G 3/99** (point 20 of the Reasons) that there is no practical need to acknowledge the validity of procedural acts of one member of a group party who is not its common representative. Such a procedural act is treated by the EPO in the same way as a missing signature. Where an appeal is filed by a non-entitled person, it shall be considered as not duly signed and the common representative be invited to sign it within a given time limit. (See also **G 3/99** under III.V.3.3.2 "Common representative").

In **J 32/86** the board held that the mere appointment of a professional representative to meet the requirement of Art. 133(2) EPC 1973 (the appellant had his residence in the USA) did not automatically have the legal effect of validating acts previously performed by an applicant himself. The EPO was however obliged to give the representative a fair

chance to remedy any deficiency of this kind that might have occurred before his appointment and which could still lawfully be remedied by him.

2.6. Submissions by a professional representative after transfer of opponent status

In **T 1204/13**, Mr S., the representative acting for the original opponent, submitted that it had since merged with its parent company. The board held that, if so, its opponent status would have been automatically transferred to its universal successor in title but, if not, it remained the opponent. In any event, Mr S. was entitled to act as professional representative in either case and so to make submissions on behalf of whichever opponent he now represented.

3. Legal practitioners entitled to act as professional representative

3.1. General issues

According to Art. 134(1) EPC, professional representation of natural or legal persons in proceedings established by the EPC may only be undertaken by professional representatives whose names appear on the above list. However, Art. 134(8) EPC (former Art. 134(7) EPC 1973) provides that professional representation in such proceedings may also be undertaken, in the same way as by a professional representative, by any legal practitioner qualified in one of the contracting states and having his place of business within such state, to the extent that he is entitled, within the said state, to act as a professional representative in patent matters. The arrangements for legal practitioners set out in Art. 134(8) EPC therefore constituted an exception.

In **J 8/10** (OJ 2012, 472), the board observed that, if a legal practitioner wishes to act under Art. 134(8) EPC, the EPO considers whether he meets the conditions of that provision (i.e. is qualified in a contracting state and has his place of business and the right to act as a professional representative in patent matters in that state). If the legal practitioner fulfils the conditions, the EPO enters his name on a list which – like the list of associations of representatives – it keeps as an internal working tool and does not publish.

In **J 19/89** (OJ 1991, 425) it was observed that the last clause of Art. 134(7), first sentence, EPC 1973 (Art. 134(8) EPC) prevented a "Rechtsanwalt", "legal practitioner" or "avocat" from having more extensive powers of representation before the EPO than he was entitled to before his national patent office. Art. 134(7) EPC 1973 was therefore a special rule limited in scope to the corpus of legal practitioners, which existed under various designations in all the contracting states.

In **J 18/99** the board pointed out that under the current Spanish law, any legal practitioner qualified in Spain and having his place of business in Spain was entitled to represent clients in patent matters before the Spanish Patent and Trademark Office if he presented an authorisation from the party.

See also Guidelines A-VIII, 1.3 – April 2025 version.

3.2. Register of legal practitioners

The register of legal practitioners must be clearly distinguished from the list of professional representatives established in accordance with Art. 134(1) to (4) EPC.

The objective of the list of professional representatives is to provide a survey of particularly qualified representatives in patent matters; it would be jeopardised if legal practitioners without such qualifications were included on the list. Accordingly, the conditions for entry on the list of professional representatives under Art. 134(2) EPC 1973 also apply to legal practitioners (**D 14/93**, OJ 1997, 561).

Whereas, according to Art. 134(4) EPC 1973, the entry of a person's name in the list of professional representatives entitles them to act in **all proceedings** established by the EPC 1973, the EPC 1973 does not contain any corresponding provision for legal practitioners. Their competence to undertake representation before the EPO is not general, but depends directly on their complying with the provisions of Art. 134(7) EPC 1973 (**J 27/95**).

3.3. Qualifying conditions according to Article 134(8) EPC

3.3.1 Representation by a legal practitioner

In **J 19/89** (OJ 1991, 425) the Legal Board considered whether a patent attorney under national law should, in view of his legal qualifications and entitlement to act as a professional representative in national patent matters, be regarded as a "legal practitioner" within the meaning of Art. 134(7) EPC 1973 and hence be authorised to act before the EPO. The board decided that irrespective of his specialist qualifications and powers of representation in national patent matters, a **patent attorney** under national law could not be regarded as a "legal practitioner" within the meaning of Art. 134(7) EPC 1973, and therefore was not entitled to act as a professional representative before the EPO (see also **D 14/93**, OJ 1997, 561).

In **J 27/95**, the Legal Board first made it clear that the competence of legal practitioners to undertake representation before the EPO depended directly on their complying with the provisions of Art. 134(7) EPC 1973. Thus, each time a legal practitioner made a request to act as a professional representative in proceedings before the EPO, the Legal Division had the right to examine whether he or she satisfied the conditions under Art. 134(7) EPC 1973. In its decision the board pointed out that a legal practitioner qualified in a contracting state had to have "his place of business in such State". The place of business within the meaning of Art. 134(7) EPC 1973 was the place (if any) at which a person practised his or her profession as legal practitioner.

See also **T 643/01** (French lawyer) and **T 1846/11** (no authorisation filed for legal practitioner, nor any subsequent approval by appellant submitted for steps taken by legal practitioner without such authorisation).

3.3.2 Common representative

In **G 3/99** (OJ 2002, 347) the Enlarged Board dealt with the question of the admissibility of joint oppositions and joint appeals. The decision makes it clear that an opposition filed in common, apart from the fact that it is filed by more than one person, is as much a single opposition as an opposition filed by only one person. In an opposition filed in common, there must in all cases be a **common representative** (Art. 133(4) and R. 100 EPC 1973) (R. 151 EPC), and only that common representative is entitled to act in the opposition proceedings on behalf of all the common opponents taken as a whole.

If the opposing party consists of a plurality of persons, an appeal must be filed by the common representative under R. 100 EPC 1973. Where the appeal is filed by a non-entitled person, the Board of Appeal shall consider it not to be duly signed and consequently invite the common representative to sign it within a given time limit. The non-entitled person who filed the appeal shall be informed of this invitation. If the previous common representative is no longer participating in the proceedings, a new common representative shall be determined pursuant to R. 100 EPC 1973.

In order to safeguard the rights of the patent proprietor and in the interests of procedural efficiency, it has to be clear throughout the procedure who belongs to the group of common opponents or common appellants. If either a common opponent or appellant (including the common representative) intends to withdraw from the proceedings, the EPO shall be notified accordingly by the common representative or by a new common representative determined under R. 100(1) EPC 1973 in order for the withdrawal to take effect.

G 3/99 was applied in **T 1154/06** in connection with the necessity of appointing a professional representative if the first-named of multiple patent proprietors was not resident in a contracting state. (See **R 18/09**, in which the Enlarged Board referred to these two decisions and held that both the principle that a plurality of persons acting in common must be treated as a single party (a "group party") and the requirement that such a group party acts through a common representative apply to petition proceedings.)

In **T 1654/13** it was submitted that the appeal filed by the common representative of the joint patent proprietors had to be understood as having been filed on behalf of both patent proprietors as joint appellants. The wording used in the notice of appeal, referring only to the first of the two patent proprietors, i.e. Unilever N.V., thus had to be understood only in relation to the request for the reduction of the appeal fee. The board, citing Art. 118 EPC and calling to mind **R 18/09** and **T 1154/06**, decided that there was no doubt that Unilever N.V. and Unilever PLC were joint appellants. The appeal was admissible.

In decision **T 1366/04** the appeal had been filed by the first of two joint patent proprietors only. The board held that the requirements of Art. 118 EPC were met and that there was no doubt about the identity and appellant status of the two patent proprietors.

Decision **T 418/07** concerns a different case, where shortly before the oral proceedings the respondent (patent proprietor) appointed a second firm of representatives as joint representatives in addition to the firm already acting and asked the board to send copies

of all correspondence to both firms. In this case of **multiple representatives**, the board held that while it is open to a party to appoint as many representatives as it may wish, the board is not aware of any requirement on it or on other parties to send correspondence to more than one representative of one party. If a party wants to retain multiple representatives, it must make its own arrangements for copying correspondence to them all. Parties cannot expect the board to provide copying services for their convenience.

In **T 1907/20** the appellant (patent proprietor) argued in support of its appeal's admissibility that, as professional representative acting for the two joint patent proprietors (Bosch und Samsung) under R. 151(1) EPC, the representative who had filed and signed its notice of appeal ("representative on appeal") had been entitled to do so even without a special authorisation. His acting in addition to the representative who had filed the patent application was covered by R. 152(10) EPC. The board agreed that the representative on appeal had already been entitled at the time of filing the appeal to act as the joint proprietors' common representative under R. 151(1) EPC, even without meeting any further formal requirements, because he personally had performed this act as professional representative. The appointment of another common representative was likewise no obstacle to acknowledging the representative on appeal as yet another common representative of the proprietors within the meaning of R. 152(10) EPC. It was not necessary to provide the EPO with any special declaration. The opponent had also not disputed that, as professional representative under Art. 134 EPC, the representative on appeal did not need to produce an authorisation from Samsung within the meaning of Art. 1 of the President's decision dated 12 July 2007 on the filing of authorisations. Moreover, the EPO had no grounds for considering that there had been a change of representative. Both the representative previously dealing with the application and the representative on appeal were just two of several representatives acting for Bosch under R. 152(10) EPC. At the oral proceedings before the board, the respondent argued that the representative on appeal's lack of authority to act did not result from a missing authorisation but instead from the fact that there had been no appointment of a common representative as expressly envisaged in R. 151 EPC. The board, however, held that R. 151 EPC did not require that the representative be appointed in the form of a special declaration by the applicant or proprietor in addition to the authorisation issued for the purposes of R. 152 EPC. Hiring a professional representative or issuing a professional representative with an authorisation (and, as the case may be, subsequently filing that authorisation with the EPO for the purposes of grant or opposition proceedings) was deemed to be an appointment of a common representative within the meaning of R. 151 EPC.

See also **J 35/92** (common professional representative appointed; application withdrawn) and **J 10/96** (appointed common professional representative withdrew from case during the proceedings), **T 464/20** (board applied R. 151(1) EPC in a case where opposition had been filed jointly by two companies in which a letter from the representative had stated that the second one was in liquidation but no supporting evidence was produced).

4. Authorisations for appointment of a representative

At various points in the following sections there are references to the issue of whether an authorisation actually exists, a problem in a number of cases.

4.1. Filing of the authorisation

R. 101 EPC 1973 has been redrafted as R. 152 EPC 2000. R. 152(6) EPC, in particular, now reads: "If a required authorisation is not filed in due time, any procedural steps taken by the representative, other than the filing of a European patent application, shall be deemed not to have been taken, without prejudice to any other legal consequences provided for by this Convention." See also the decision of the EPO President dated 12 July 2007 on the filing of authorisations (OJ SE 3/2007, 128, L.1.), and **J 8/10** (OJ 2012, 470).

The **new law now applicable** is laid down in the decision of the EPO President dated 8 July 2024 on the signing and filing of authorisations (OJ 2024, A75; see also the notice explaining the new system in OJ 2024, A77 – the rules introduced also apply in proceedings relating to European patents with unitary effect, OJ 2024, A76). On its entry into force on 1 November 2024, this decision dated 8 July 2024 superseded the decision dated 12 July 2007 on the filing of authorisations (OJ SE 3/2007, L.1.). See also Guidelines A-VIII, 1.6-1.9 and 3 – April 2025 version. No board decisions applying the new law have been issued so far.

Under R. 152(1) EPC and Art. 1(1) of the EPO President's decision (OJ SE 3/2007, 128, L.1.), professional representatives whose name appears on the EPO's list and who identify themselves as such need file a signed authorisation only in certain specified circumstances (change of representative without notification that the previous representative's authorisation has terminated or where the EPO has doubts about the representative's entitlement to act), **T 1204/13** (see also **T 548/13**).

In **T 1105/16** the board stated that, even if Mr K. (a professional representative) were acting as an employee of the patent proprietor, a signed authorisation would not be required since an employee has to file a signed authorisation only if the employee is not a professional representative (see Art. 3 decision of the President, (OJ SE 3/2007, 128, L.1.).

In **T 924/17** the new representative filed in due time on 6 June 2017 a signed authorisation, following the invitation by the EPO according to R. 152(2) EPC. The authorisation bore a signature with date of 23 May 2017, i.e. after lodging the notice of appeal. The board stated that there was no requirement for the signature's date to be prior to the filing date of the notice of appeal, let alone a requirement that any procedural step taken before the signature's date be explicitly approved in the signed authorisation. This would be tantamount to requiring proving the existence of a previous informal oral or written authorisation, which entitles the representative to act on behalf of a party ("Bevollmächtigung") and further, this would also be contrary to the intended purpose of R. 152(2) EPC, which is clearly to allow to remedy the missing filing of the authorisation,

as it appears implicit and evident that the authorisation generally relates to and encompasses any action by the new representative during specific ongoing proceedings before the EPO.

In **J 12/88** it turned out that the former representative of the appellant had acted before the EPO on behalf of the appellant without being instructed to do so and using a forged authorisation. The board considered all these proceedings to be null and void. All fees paid to the EPO on behalf of the appellant never had been due and had to be reimbursed.

In **T 850/96** the appellant had alleged that the opposition was not admissible because the signatories of the notice of opposition did not file an authorisation. According to him an employee must declare with the notice of opposition that he acts as a professional representative. Otherwise he must file an authorisation. In the case under consideration both signatories of the notice of opposition were professional representatives. The board held that Art. 1(1) of the decision of the President of the EPO of 19 July 1991 (OJ 1991, 489) stipulates that a professional representative whose name appears on the list maintained by the EPO **and who identifies himself as such** shall be required to file a signed authorisation only in the circumstances set out in Art. 1(2) and (3) of this decision of the President (now decision of 2007, OJ SE 3/2007, 128, L.1.). In the case at issue, the deficiency had not been the lack of a signed authorisation, but the failure of the signatories of the notice of opposition to identify themselves as professional representatives (see also **T 1744/09** citing **T 850/96** saying that a professional representative identifying himself retroactively is not precluded).

In **T 425/05**, the respondent (patent proprietor) requested the board at the start of the procedure to declare the appeal inadmissible, on the one hand because it had been filed at a date when the original opponent (company I) had been dissolved and had therefore ceased to have legal existence, and on the other because the mistake in the notice of appeal could not be a mere clerical error on the part of the professional representative which could easily be corrected, since the representative manifestly could not act on behalf of company F, which had not yet authorised him to do so. The board began by establishing that the representative's authorisation to act on behalf of company I had never been contested or rescinded. It was equally evident that the original opponent, company I, no longer had legal existence, as it had been dissolved and its assets had passed into the hands of company F, its associate and sole shareholder. The board concluded that company F had succeeded company I as opponent, and therefore also as the client of the representative. Thus the appeal filed by the representative, whose authorisation, confirmed in the meantime, had never been rescinded, had been implicitly, but necessarily, filed on behalf of his actual client, company F; the identification of company I as the opponent in the notice of appeal was due to a clerical error which had since been corrected.

In **T 267/08** a change of representation had been notified by the new representative together with the notice of appeal. The previous representative had not contacted the EPO to indicate that his authorisation had terminated. The decision of the President of the EPO (OJ SE 3/2007, 128, L.1.) stated that in cases of a change of representation, and where the EPO had not been notified of the termination of the previous representative's

authorisation, "the new representative must file, together with the notification of his appointment, an individual authorisation (original and one copy) or a reference to a general authorisation already on file. If he does not, he shall be requested to do so within a period to be specified by the EPO." In the case at issue, the board invited the new representative under R. 152(2) EPC to file an authorisation, as the board had realised that the authorisation failed to name the correct opponent. The new representative sent the authorisation by fax but failed to file the original version. The board stated that the filing of a valid authorisation for the opponent must, of necessity, entail the **filing of the original**, and a professional representative should know this. The legal consequence of this was that the procedural steps taken by the new representative were deemed not to have been taken (R. 152(6) EPC). Consequently the notice of appeal was deemed not to have been filed and an appeal did not exist.

In **T 637/09** the appellant informed the board and the respondent that Mr M, who was already acting as its professional representative, would be joined by Mr S, another professional representative. Mr S's authorisation to represent the appellant was challenged by the respondent at the start of the oral proceedings. The board observed that under R. 152(10) EPC a party may be represented by **several representatives** acting jointly. Mr S was not required to file a signed authorisation in order to be able to represent the appellant. There was no need to file a (further) authorisation under Art. 1(3) of the decision of the President of the EPO (OJ SE 3/2007, 128, L.1.). The board concluded that Mr S was duly authorised to represent the appellant along with Mr M.

The board in **T 1700/11** ruled that if a European representative files an opposition on behalf of a party but fails to file a signed authorisation in due time in response to a request to do so from the board, the opposition is deemed not to have been filed (R. 152(1) and (6) EPC). The board held that this legal fiction resulted in a loss of rights (R. 112(1) EPC) and that an examination of the admissibility of the opposition, which had not been filed according to the legal fiction, was out of the question. (Decision cited by **T 7/17**).

In case **J 19/13** the representative who electronically signed the request for grant (EPO Form 1001E) was not a valid signatory for the applicant. A procedural act performed by a non-entitled person is to be treated in the same way as a missing signature. For the electronic filing of a document accompanied by the electronic signature of an unauthorised person, the same principle applies, as confirmed, for instance, in **T 1427/09** of 17 November 2009. Therefore, the request for grant form was to be considered not signed.

4.2. General authorisations

This subsection deals inter alia with the extent of the powers conferred.

In **J 9/99** (OJ 2004, 309) the board decided that the Legal Division had authority to check the authorisation of a representative named in a general authorisation and to issue a formal decision to reject the registration of a general authorisation. A decision not to register a general authorisation can only be issued in respect of a request from a party to the proceedings within the meaning of R. 101(2) EPC 1973, i.e. either an authorising or an authorised party.

In **J 11/93** the applicant submitted in his statement of grounds of appeal that the official communication should have been sent to the authorised European representative since he had been duly empowered to act on behalf of the applicant by a general authorisation filed with the EPO in respect of another European patent application. Instead of this the communication was sent directly to the applicant, a US company. The board confirmed that the authorisation in suit had never been registered by the EPO as being a general one, and that even if it had been so registered it would then have been incumbent on the applicant to communicate the number allotted to the general authorisation so that the Receiving Section could take it into consideration before sending the communication to the applicant at its last known address, rather than to the representative. Under these circumstances the board considered that when the letter sent directly to the applicant was issued no European professional representative had yet been appointed by the applicant.

In **J 17/98** (OJ 2000, 399) the Legal Board had to rule on whether communications concerning the deemed withdrawal of applications had been correctly notified to the applicants, who were residents of a non-EPC contracting state, even though general authorisations were held by the EPO on their behalf. The applicants argued that the communications relating to deemed withdrawal should in fact have been notified to the representatives appearing in the general authorisations on file with the EPO. The board held that the filing of a general authorisation to act on behalf of a specific applicant and the notification of the appointment of a representative in an individual application were two **separate** procedural acts. By definition, general authorisations did not refer to specific cases and did not allow the EPO to assume, without further information from the applicant, that a specific representative had been appointed in a particular case. From the EPC it was clear that the filing of a general authorisation did not imply the appointment of a professional representative in a specific case (see also chapter III.S.3. "Notification to representatives").

In **J 1/04**, the relevant question in this case was whether the notifications of the communications were correctly addressed to the appellant. The appellant criticised the EPO's practice of sending communications directly to the applicant, even if the latter had appointed a national representative in the international phase. The board pointed out that an authorisation for the international phase did not comprise an authorisation for the European phase and that disregard thereof could lead to a loss of rights. Furthermore, as long as the applicant did not appoint a representative who was entitled to represent him before the EPO, the general principle applied that procedural acts had to be performed by the EPO in relation to the registered applicant as being the party to the proceedings. Thus, notifications had to be addressed to the registered applicant and they had been correctly made if they were addressed to the applicant (appellant) in the case at issue. The appeal was dismissed.

In **T 1865/07**, the board noted that, in the circumstances of the case, giving an incorrect general authorisation number was of no consequence.

In **T 846/22** the assessment of potential financial relationships between a dormant company and an appointed representative was of no relevance to establishing the legal status of the company as a legal person either. Moreover, the opponent's representative

was appointed in accordance with the requirements of the EPC. Hence, there was no reason for the board to doubt that the representative was duly authorised.

4.3. Sub-authorisations

In **T 227/92** it was held that a sub-authorisation from a professional representative to a person who was not a professional representative within the meaning of Art. 134 EPC 1973 was invalid. The latter person's role was therefore limited to that of technical adviser to the professional representative.

In **T 382/03** the previous representative, Mr E. of UDL, filed a fax to announce that Mr U., who was not a member of that association, would appear for respondent 1 at the oral proceedings before the board. Mr E. did not notify the board that his association's authorisation was terminating. Hence, that was a situation where the President's decision required the new representative, Mr U., to prove that he was authorised to act on behalf of respondent 1. As Mr U. did not refer to a general authorisation from respondent 1, proof of an individual authorisation had to be provided to the board. In principle, that could be done by filing a direct individual authorisation from opponent 1, or by filing a sub-authorisation from an authorised representative who was entitled to sub-authorise a third representative. In view of the sub-authorisation from UDL submitted by Mr U. at the oral proceedings, the only issue remaining was whether or not UDL was entitled to give such a sub-authorisation.

For an example of a professional representative entitled by a chain of sub-authorisations to make submissions on behalf a party, see **T 1081/06**.

In **T 953/21** the board noted in its communication under Art. 15(1) RPBA dated 6 December 2023 that, with regard to the sub-authorisation on file for Mr D, a legal practitioner, the required individual authorisation or a reference to a general authorisation which indicated that the patent proprietor's representative was entitled to sub-authorise was lacking from the file. With its letters dated 16 January 2024, the patent proprietor filed an authorisation for its newly appointed representatives which entitled them to give sub-authorisations. In its reasons, the board then wrote that it was clear from the authorisation on file that the patent proprietor's representative was authorised to grant sub-authorisations. Mr D was therefore validly authorised.

In **T 1676/08**, the board had no reason in the circumstances of the specific case to doubt that Mr S, a legal practitioner entitled to act as a representative, was duly sub-authorised. Moreover, on the same day of the oral proceedings, the professional representative, Mr M, stated as a precautionary measure that he endorsed any submission made by Mr S during these oral proceedings.

In **T 1693/10**, the contested sub-authorisation given to a second professional representative had eventually been withdrawn. This second representative was regarded from then on as assisting the first representative as an "accompanying person" within the meaning of **G 4/95** (OJ 1996, 412) but was not permitted to speak at the oral proceedings

because at least one of the criteria laid down in that decision for such permission had not been met.

In **T 2453/12** opponent 2's notice of opposition had been filed under the name of an already defunct company and rejected as inadmissible by the opposition division at the oral proceedings. Its representative had then been issued with authorisation to act for opponent 1 during the remaining proceedings. The patent proprietor (respondent) took the view that one opponent's representative could not now act for the other opponent too. The opponents argued that opponent 1's original representatives – who were anyway its employees – remained authorised to represent it and that the appeal lodged by those representatives was therefore admissible. Opponent 1 had merely issued opponent 2's representative with a sub-authorisation during the opposition proceedings. The board observed that, under Art. 133(1) and (3) EPC, legal persons having their principal place of business in an EPC contracting state were not compelled to be represented by a professional representative in EPO proceedings and were instead free to have a duly authorised employee act for them. That applied irrespective of whether they chose also to authorise a professional representative in parallel.

4.4. Authorisation of an association of representatives

R. 152(11) EPC provides that an authorisation of an association of representatives is deemed to be an authorisation of any representative who can provide evidence of being member of the association. On this point, see the Administrative Council's decision CA/D 9/13 of 16 October 2013 on the interpretation of the term "association of representatives" (OJ 2013, 500). For more information on this subject, see also the notice dated 28 August 2013 on matters concerning representation before the EPO (OJ 2013, 535).

As explained in **J 8/10** (OJ 2012, 470), the EPO keeps a list of associations of representatives as an internal working tool which it does not publish.

In **J 16/96** (OJ 1998, 347) the EPO Legal Division had informed a company X that its patents department could not be registered as an association of representatives. Such an association meant one consisting solely of professional representatives in private practice. The Legal Board concluded that there was no basis in the EPC for the EPO's practice of restricting R. 101(9) EPC 1973 (now R. 152(11) EPC) to professional representatives "in private practice". An **association** within the meaning of that provision could therefore **also** be formed by **professional representatives not in private practice**. There was no reason to interpret the term "association of representatives" in a way which limited its meaning. (**J 16/96** cited on this point in **T 656/98**). As mentioned in the introduction to this point, Decision CA/D 9/13 endorsed the Legal Board's interpretation in **J 16/96**.

Case **J 8/10** (OJ 2012, 470) was about whether legal practitioners too could belong to associations of representatives under R. 152(11) EPC. The board interpreted R. 152(11) EPC as referring to an association of professional representatives. Therefore, legal practitioners were not covered by the legal fiction of R. 152(11) EPC (see also **T 1846/11**).

4.5. Termination of authorisation

According to R. 152(8) EPC, a representative is deemed to be authorised until the termination of his authorisation has been communicated to the EPO.

In **T 578/14** the board stated that if, or for as long as, the termination of an authorisation was not communicated to the EPO, the authorisation remained effective vis-à-vis the EPO even though, the contract between the party and its representative had been dissolved, or the party had – vis-à-vis the representative – revoked the authorisation that it had given him. In the case of a change of representative involving professional representatives, the provisions of Art. 1(2) of the decision of the President of the EPO (OJ SE 3/2007, 128, L.1.) also apply, i.e. usually either the termination of the authorisation of the previous representative is communicated to the EPO or the new representative files an individual authorisation (original and one copy) or a reference to a general authorisation already on file. In view of R. 152(8) EPC and the decision of the President, the responsibility for informing the EPO about the termination of the contract between a party and its representative before the EPO lies with the represented party, irrespective of whether or not it has its residence in an EPC contracting state, or with its representative. It is only when the EPO receives such information that it might have to determine on the basis of the documents filed whether a contract between a party to the proceedings before the EPO and its representative has indeed been terminated. The board added that informing the EPO about an intention to change the representative could not be equated with a clear withdrawal of an authorisation under R. 152(7) EPC or with the communication of the termination of the authorisation as mentioned in R. 152(8) EPC. Both cases concern a procedural declaration which in the interest of legal certainty has to be unambiguous.

5. Oral submissions by an accompanying person

5.1. Enlarged Board's landmark decision G 4/95

In **G 2/94** (OJ 1996, 401) and **G 4/95** (OJ 1996, 412), the Enlarged Board answered questions referred to it in **J 11/94** (OJ 1995, 596) and **T 803/93** (OJ 1996, 204) as to whether, and if so in what circumstances, a person not qualified to act as a representative before the EPO (an "accompanying person") might make oral submissions on either legal or technical issues on a party's behalf during oral proceedings under Art. 116 EPC 1973 in ex parte or inter partes proceedings.

According to the decision **G 4/95** oral submissions by an accompanying person in opposition or opposition appeal proceedings cannot be made as a matter of right, but only with the permission and at the discretion of the board. According to the decision **G 2/94** a board of appeal has a discretion to allow an accompanying person to make submissions during oral proceedings in ex parte proceedings, in addition to the complete presentation of a party´s case by the professional representative.

In **G 4/95** the Enlarged Board noted that the appointment of a professional representative by a party involved the authorisation and identification of the professionally qualified person who was responsible for the presentation to the EPO of all submissions made by

the party. Such presentation of a party's case was the essential core of the function of a professional representative under Art. 133 EPC 1973. During oral proceedings, a professional representative was expected to present the entire case of the party that he or she represented.

As to the presentation of **facts or evidence** by an accompanying person, the Enlarged Board held that such oral submissions during oral proceedings – in addition to the complete presentation of the party's case by the professional representative – are not excluded under the EPC. They may be allowed under the overall discretionary control which the EPC gives to the EPO with respect to the filing of facts and evidence.

As to the question whether an accompanying person may make oral submissions during oral proceedings by way of **argument**, the Enlarged Board pointed out that Art. 133 EPC 1973 made no distinction between written and oral proceedings in connection with the requirements for representation. Thus a professional representative was responsible for all written and oral submissions made on behalf of the party who had appointed him.

The Enlarged Board further held that such oral submissions could not be made as a matter of right, but only with the permission of and at the discretion of the EPO. The following **criteria** should be considered by the EPO when exercising its discretion:

(i) The professional representative should request permission for such oral submissions to be made. The request should state the name and qualifications of the accompanying person and should specify the subject-matter of the proposed oral submissions.

(ii) The request should be made sufficiently in advance of the oral proceedings so that all opposing parties are able properly to prepare themselves in relation to the proposed oral submissions.

(iii) A request made shortly before or at the oral proceedings should, in the absence of exceptional circumstances, be refused unless each opposing party has agreed to the making of the oral submissions requested.

(iv) The EPO should be satisfied that oral submissions by an accompanying person were made under the continuing responsibility and control of the professional representative.

5.2. Application of the case law established by the Enlarged Board

5.2.1 Introduction

The decisions reported below show how the criteria established by the Enlarged Board have been applied, both in oral proceedings before the boards and when scrutinising decisions taken by the department of first instance.

In the following cases, the accompanying person was **not authorised** to make oral submissions: **T 334/94** (request not made early enough); **T 1208/06** (inventor not the

proprietor); **T 89/04** (classed as accompanying person – request made just three days before the oral proceedings); **T 2135/08** (no information on experts' qualifications and subject-matter of oral submissions); **T 1706/06** (request not made early enough – consent not given by the other party); **T 302/02** (submissions of the expert of a party on subject-matter not specified in some detail beforehand); **T 1676/08** (examination of the criteria – numerous procedural points raised); **T 2552/11** (insufficient information to enable other party to prepare); **T 520/07** (request made during oral proceedings – same submissions by same person at first instance – appeal proceedings separate); **T 8/13** (person closely followed the whole case from beginning); **T 484/17** (request not properly substantiated); **T 634/16** (request not made early enough).

In the following cases, the accompanying person was **authorised** to make oral submissions: **T 899/97** (request made early enough in circumstances); **T 475/01** (persons accompanying both parties – one party representing itself); **T 1212/02** (professional representative's colleague – pragmatic approach); **T 754/08** (former patent attorney); **T 1207/06** (presentation of the entire case – not established); **T 919/07** (accompanying persons authorised if contribution relevant to discussion); **T 1458/11** (trainee in professional representative's law firm – objection on appeal to scope of submissions not upheld), **T 661/14** (right to speak on legal issues – no distinction between legal or technical issues)

In **T 2198/15** the board allowed an accompanying person to make oral submissions on specific technical issues. Had permission been refused, it was likely that the respondent would have repeatedly requested that the oral proceedings be interrupted to enable it to consult the accompanying person (see also **T 1212/02**).

In **T 765/21**, by submission shortly (two weeks) before the oral proceedings, the proprietor indicated that Mr. X, an employee of the proprietor, would attend the oral proceedings and requested that he be allowed to make oral contributions as a technical expert at the hearing. In view also of the fact that no request had been made to summon Mr. X under Art. 117(1)(e) EPC and R. 118 EPC, the board concluded that Mr. X should be considered as an accompanying person within the meaning of decision **G 4/95**. As indicated in **G 4/95**, oral submissions by persons accompanying professional representatives but not covered by Art. 117 EPC cannot be made as a matter of right, but only at the discretion of the board. Without any indication of his qualification or the nature of his intended contribution, the request did not meet the criteria in **G 4/95**. And the opponent did not agree.

In the following decisions, the boards held that **G 4/95** did not apply: **T 621/98** (patent proprietor); **T 1687/08** (lawyer).

5.2.2 Trainee patent attorneys

In **T 1431/12**, the reason given for Mr W.'s making submissions was that he was a trainee patent attorney familiar with the case. It was therefore unlikely that his submissions (unlike, for example, an expert's) would go beyond those of a patent attorney specialising in the subject-matter and so would not mean that the appellant would have to commission an expert to counter them. Given those circumstances, the board exercised its discretion to

permit Mr W. to provide any technical information necessary to supplement the submissions made by the professional representative supervising him.

For a classic application of the requirements set out in **G 4/95** to a party's contention that, since the accompanying person was preparing for the European qualifying examination, he ought to be given a training opportunity, see **T 378/08**, in which permission for the person to make oral submissions was refused.

5.2.3 Distinction between party to proceedings and accompanying person

In **T 2036/12**, the opposition division had refused to permit Mr S. to make submissions on the basis that they had to be considered those of a "technical expert". The board rejected its line of argument, observing that **G 4/95** concerned "accompanying persons", i.e. people who were not parties to the proceedings and generally not entitled to make their own submissions as a matter of right, whereas Mr S., as the **proprietor's managing director** with the power to sign for it, was a direct party to the proceedings. It made no difference that a professional representative had likewise been present; as a party to the proceedings, he was entitled in his own right to make submissions in support of his case. The opposition division's refusal to permit his submissions was thus a breach of the right to be heard under Art. 113(1) EPC.

In **T 621/98**, during oral proceedings, the board was faced with the question of whether the patent proprietor, who was professionally represented, needed to announce in advance his intention to make submissions during the proceedings, pursuant to **G 4/95**. The board ruled that the patent proprietor was a party to the proceedings and as such was not to be treated as an accompanying person. As a party to the proceedings he had a right to take part in them.

In **T 89/04** Mr D. was a vice-president of the company OpenTV. Since the company ACTV, Inc. was recorded in the Register as the patentee, OpenTV, which was a different legal person, was not a party to the proceedings in accordance with Art. 99(4) and 107, second sentence, EPC 1973. Mr D. was considered to be a person accompanying the representative.

In **T 475/01** the board took the view that neither the EPC nor the above Enlarged Board decision could be held to imply that **a party that represented itself** in proceedings was to be treated differently to a professional representative in respect of oral submissions by accompanying persons.

In **T 754/08**, in the respondent's/patent proprietor's view, since Mr R. was the former patent attorney of the appellant in this case, his submissions would be those of a professional representative. Since he was not authorised to act in the latter function, he should not be allowed to speak during the oral proceedings. The board decided that the conditions set out in the decision **G 4/95** were applicable to **any accompanying person**. Therefore, there was no reason to exclude a former European patent attorney as such. Since the conditions were met the board saw no reason not to allow Mr R. to make oral submissions during the oral proceedings.

In **T 1687/08**, at oral proceedings held before the opposition division on 25 February 2008, the division had refused Mr J permission to speak on behalf of the patent proprietor/ appellant. The board found in the case at issue that the requirements for representation by a legal practitioner were fulfilled, i.e. that the letter dated 16 January 2008 represented an authorisation which established that Mr J was entitled to represent the patent proprietor. The board stated that from the minutes of the oral proceedings and the decision under appeal it was apparent that the opposition division had not considered Mr J to be a legal practitioner under Art. 134(8) EPC. Instead, it had treated him as an accompanying person, and therefore applied the requirements set out in decision **G 4/95**. Since the patent proprietor had requested Mr J's participation in the oral proceedings as a legal practitioner under Art. 134(8) EPC, not as an accompanying person within the meaning of decision **G 4/95**, the division's decision not to allow him to speak had been taken under the wrong legal provision.

In a communication the board in **T 8/13** stated that the request to allow another person who was not a professional representative to make submissions on behalf of the appellant (opponent) during the oral proceedings would not be allowable in view of the conditions set by Art. 134 EPC and having regard to decision **G 4/95**. Ms. L was neither a representative according to Art. 134 EPC nor was she presented as a technical expert to be heard on a technical question. The personal involvement with the case or her relationship to the appellant also did not qualify Ms. L to have made submissions as an accompanying person in accordance with the conditions set out in **G 4/95**.

In **T 1212/02** the board held that an employee of the opponent's holding could make submissions only as a person accompanying its professional representative and so subject to the conditions set out in **G 4/95**, even though he worked alongside the professional representative on the opponent's affairs in the holding's patent department.

5.2.4 Inventor as accompanying person

In **T 1208/06** the inventor was not identical to the patent proprietor. The board held the opposition division to have acted correctly by categorising the inventor as an "accompanying person" and not as a party to the proceedings within the meaning of Art. 99(3) EPC and by rejecting the proprietor's request.

The board in **T 1150/12** agreed to hear the inventor as an accompanying person, if necessary to supplement the professional representative's submissions. It was anyway bound to treat an inventor's submissions or comments just as impartially as it would the naturally one-sided submissions made by the parties' representatives.

5.2.5 Name, qualifications and subject-matter to be specified

Professional representatives must request permission for oral submissions to be made by an accompanying person, stating that person's name and qualifications and specifying the subject-matter of the proposed oral submissions.

In **T 1668/14** the board considered that **G 4/95** did not deal explicitly with the question of whether an accompanying person may ever be allowed to speak on matters other than those previously notified. However, the fact that the EPO has a discretion to decide that a proposed accompanying person may not be heard at all suggests that such discretion extends also to the nature of the submissions to be permitted. The board therefore judged, in the case in hand, that it fell within the discretion of the EPO to decide whether an accompanying person might be allowed to speak on matters other than those previously notified, and that this discretion was to be exercised taking into account the facts of the particular case and the principles set out in **G 4/95**. Permission should only be granted where it is clear that it would not unexpectedly disadvantage the opposing party.

Concerning the admissibility of oral presentations by three technical experts, the board in **T 2135/08** concluded that none of the three criteria i), ii) and iii) of **G 4/95** were met, among other reasons since the requesting party had failed to state -even at the oral proceedings- the qualifications of these three persons and to specify the subject-matter of their proposed oral submissions.

The board in **T 302/02** did not allow the expert to make submissions. If an expert were allowed to make submissions on subject-matter not specified in some detail beforehand, the other party or parties would be placed at a disadvantage since they could not prepare themselves properly, and this would be against the spirit and purpose of decision **G 4/95** and should only be permitted if none of the parties to the proceedings objects.

In **T 2552/11**, the board did not permit oral submissions from Mr J. The statement by the appellant (opponent) that Mr. J would "refer to the prior art documents cited by the opponent" was very general, and not sufficient to enable the respondent (patent proprietor) to prepare itself properly.

In **T 919/07**, where the requests in writing concerning oral submissions by accompanying persons did not indicate what such submissions could contribute to the evidence on the file, the board exercised its discretion by deciding that the accompanying persons should be heard in the event that the board wished to ask them questions.

In **T 1624/20** the minutes of the oral proceedings before the opposition division mentioned that the appellant (opponent) had objected to Mr S.'s right to speak, citing the **G 4/95** criteria as a basis. The opposition division, however, had allowed it, likewise relying on the **G 4/95** criteria. In particular, it had considered that there was adequate information about Mr S.'s qualifications in the respondent's request, which described him as "an inventor and research engineer, expert, employee of C-TEC Constellium Technology Center". In its view, it was not essential to specify his academic qualifications. The board agreed that **G 4/95** did not impose any obligation to specify academic qualifications or experience in the industry or to provide a curriculum vitae. The appellant had therefore failed to adduce convincing evidence that the opposition division had not exercised its discretion in accordance with the right principles or exercised it in an unreasonable way, and so exceeded the proper limits of its discretion. The board further considered that whether Mr S. belonged to the company of the respondent's representative (as opposed to the respondent's company) was irrelevant in this connection.

In **T 2112/22**, the representative had requested that an accompanying person, who was a partly qualified German patent lawyer (Patentassessor), be allowed to make oral submissions. The board noted that the person in question was not on the list of professional representatives before the EPO, and although they were indeed a Patentassessor, they were not a legal practitioner qualified in a contracting state within the meaning of Art. 134(8) EPC. Nor were they an expert in the particular technical field. The board pointed out that making oral submissions was not a right. Further, an accompanying person was not entitled to present all or most of the essential submissions in place of a representative unless there were special circumstances to justify that, such as the training of a future professional representative. The board, in the exercise of its discretion, had taken into account that the request had been made in good time and that the name and qualification of the person had been provided, but that the subject-matter of the submissions had not been specified in any concrete way. In the end, the board had given the floor to the accompanying person during the oral proceedings in so far as it had deemed it necessary to supplement the representative's presentation.

5.2.6 Oral submissions to be requested sufficiently in advance

Any request should be made sufficiently in advance of the oral proceedings to enable all opposing parties to prepare themselves properly for the proposed submissions.

In **T 334/94** the board emphasised that a party wanting such submissions to be made had to ask permission sufficiently in advance of the oral proceedings to give the other parties time to prepare. The board noted that the Enlarged Board had not defined what "sufficiently in advance" meant, or laid down a deadline for making such requests. In its view, the **deadline of one month** before the proceedings for filing submissions or new sets of claims was a minimum. On that basis, nominating an accompanying expert one week before the proceedings was not acceptable.

In **T 899/97** the appellant (opponent) requested that a technical expert be allowed to speak during the oral proceedings in order to explain the physical phenomena that occurred when a prior art separator was used. Pointing out that the relevant letter from the appellant had reached him only two weeks before the oral proceedings, and referring to **G 4/95** and **T 334/94**, the respondent requested that this technical expert be refused permission to speak. The board considered the particular circumstances of the case, i. a. that this technical expert was one of the authors of the test report (R2) filed by the appellant with the statement of grounds, that the board had raised some questions on this specific technical issue in the annex to the summons to oral proceedings, and that these technical issues had already been discussed before the department of first instance. With these circumstances in mind, the board held that the appellant's request that the technical expert be heard had been submitted sufficiently in advance of the oral proceedings.

In **T 634/16** there was still just over a month to go before the date of the oral proceedings when the appellant (patent proprietor) requested permission for an accompanying person to make oral submissions, but the festive holiday period fell in the time in between. The respondents (opponents) argued chiefly that they had been unable in the short time available between receiving the letter with the appellant's request and the start of that

general holiday period and then until the date of the oral proceedings to find technical experts who would have been able to help their representatives to refute the arguments made in any such oral submissions. The board considered it plausible that this had made it at least very difficult to prepare any defence against the oral submissions, it being unknown what technical matters they would cover as those announced by the appellant in its letter had been vague. Since there were no exceptional circumstances that might have served as justification, the board therefore refused to allow the oral submissions.

The board in **T 89/04** refused a request that an accompanying person be permitted to make oral submissions as it had been filed only three days before the opposition proceedings.

5.2.7 Exceptional circumstances

Save in exceptional circumstances, a request made shortly before or at the oral proceedings should be refused unless each opposing party has agreed to the making of the oral submissions requested.

In **T 520/07** the board did not share the respondent (patentee's view) that the appellant could not be surprised by its request, the same accompanying person having already made submissions in oral proceedings before the opposition division. In all procedural matters, appeal proceedings were completely separate from first-instance ones, so requests made in the latter had no effect for the former.

The board in **T 953/21** considered that, of the criteria established in **G 4/95**, criteria (i) and (iv) were met, and so the remaining issue was the timing of the request made by the appellant (patent proprietor) (criteria (ii) and (iii)). On that issue, it found that Ms B was only to respond to new technical arguments that might be submitted by the opponent at the oral proceedings. Hence no specific oral submissions were proposed which would have required time for the opponent to properly prepare themselves. In these exceptional circumstances, the board saw no reason to refuse the patent proprietor's request that Ms B be allowed to make oral submissions as accompanying person at the oral proceedings, even though the request had been filed only shortly before the oral proceedings.

5.2.8 Professional representative's responsibility

The EPO must be satisfied that an accompanying person's oral submissions were made under the continuing responsibility and control of the professional representative.

In **T 1027/13**, on the day of the first-instance oral proceedings, the chair had categorically forbidden Mr H (accompanying person) to address the opposition division and to communicate with Mr W (representative), apparently under the impression that Mr H had not only been present to make submissions regarding some specific legal or technical points, but had actually been **intending to present the complete case** in place of the **newly appointed representative** Mr W. The patent proprietor and the opposition division had concluded that Mr H was trying to act as the representative of the opponent, thereby circumventing the provisions of Art. 133 and 134 EPC. The patentee also contested that

there was proper control and supervision by Mr W since he had declared that he was not prepared to defend the case in oral proceedings. The board stated that as a consequence of this conduct of the oral proceedings, the representative of the opponent appeared to have been totally deprived of any support he was expecting to get from the announced accompanying person Mr H, i.e. a person very familiar with all aspects of the case from its very beginning. The categorical refusal in effect had been keeping the opponent from taking position in an "efficient and effective manner" on the contentious issues of the case, which would also have included the obviously very important supporting oral contributions by Mr H.

In case **T 1458/11** appellant 2 (patent proprietor) was represented by a professional representative, Mr Ch, accompanied by Mr H, a **trainee in the law firm** of Mr Ch. Mr H had not been announced prior to the oral proceedings before the opposition division. Appellant 2 requested that Mr H be allowed to speak "on selected issues during the oral proceedings under his (Mr Ch's) supervision and responsibility". Appellant 1 (opponent) agreed to this with the proviso that Mr H would "not make the complete case". The opposition division allowed this. After the impugned decision was pronounced, appellant 1 submitted that, according to its observations, Mr H had spoken "for more than 50% of the time" and that this was not what had been agreed at the beginning of the oral proceedings. It was incumbent on appellant 1 to inform the opposition division of any alleged negligence of the opposition division's duty as soon as it became aware of it. This immediate reaction was required since a party to the proceedings must take an active part and must on its own initiative submit in due time whatever will support its position (see **R 2/08**). Furthermore, nothing indicated that appellant 1 was taken by surprise or that it was not prepared, or at least could not have been prepared, for the oral submissions made by the accompanying person.

5.2.9 Procedural objection under R. 106 EPC

In **R 3/08** the question arose whether an accompanying person can validly raise a procedural objection pursuant to R. 106 EPC. However, in the circumstances this question did not need to be answered since, based on the affidavit of Mr S.L., it was credible that the professional representative himself explicitly supported his procedural objections. Even if, in the absence of further evidence, the exact circumstances of the representative's intervention was not established, the board was prepared to assume in favour of the petitioner that the objections raised in that phase of the oral proceedings met the requirements of R. 106 EPC.

5.3. Oral submissions by former members of the boards of appeal

In **J 11/94** (OJ 1995, 596) the authorised representative was accompanied during oral proceedings by a former chair of the Legal Board who had retired about a year and a half previously. The professional representative requested permission for the former board member to make submissions in addition to his own arguments. The case referred to the Enlarged Board therefore encompassed the question whether special criteria applied to the exercise of a board's discretion in relation to a request for the making of additional oral submissions by a former board of appeal member.

The Enlarged Board noted in **G 2/94** (OJ 1996, 401) that there was a potential conflict between what might be seen as a right of former board of appeal members to seek subsequent employment on the basis of their special knowledge by making oral submissions during proceedings before the EPO, and the need for proceedings before the EPO to be conducted free from any suspicion of partiality. The existence of such a potential conflict was well recognised in the context of national judicial systems where it was clear that persons accepting appointments as judges were subject to restrictions if they wished to work in private legal practice after having served as judges. The Enlarged Board concluded that the above potential conflict had to be resolved with a view to avoiding any suspicion of partiality during the conduct of proceedings before the EPO. The public interest in the proper conduct of proceedings before the EPO had to prevail over the personal interests of former board of appeal members who wished to make oral submissions on behalf of parties to the proceedings.

It was therefore necessary to place **restrictions** on the admissibility of such oral submissions, at least for a reasonable period of time following termination of a person's appointment as a member of a board of appeal. In the absence of specific legislation, the point in time following termination of his or her appointment after which a former member of the boards of appeal might make oral submissions in proceedings before the board of appeal was **a matter within the judicial discretion** of the boards of appeal. The Enlarged Board found that during either ex parte or inter partes proceedings, a board of appeal should refuse permission for a former member of the boards of appeal to make oral submissions during oral proceedings before it, unless it was completely satisfied that **a sufficient period of time** had elapsed following termination of such former member's appointment to the boards of appeal, so that the board of appeal could not reasonably be suspected of partiality in deciding the case if it allowed such oral submissions to be made.

After **three years** have elapsed, permission should be granted except in very special circumstances.

T 585/06 dealt with the presence of a former member of the boards of appeal at the oral proceedings before the opposition division and acting as consultant of the patent proprietor. The former member had not acted as an authorised representative but only as the patent proprietor's consultant. He had not addressed the opposition division. This amounted to an important difference from the facts of case **G 2/94**.

5.4. Oral submissions by qualified patent lawyers of non-EPC contracting states

Another question of law decided in **G 4/95** was whether, having regard in particular to the provisions of Art. 133 and 134 EPC 1973, a person who was not qualified in accordance with Art. 134 EPC 1973 but was a qualified patent lawyer in a country which was not an EPC contracting state might present some or all of a party's case as if he were qualified under Art. 134 EPC 1973. The Enlarged Board decided that no special criteria applied to the making of oral submissions by qualified patent lawyers of countries which were not contracting states to the EPC. The criteria set out above were equally applicable to such patent lawyers (see **T 774/05** with respect to "US patent attorney").

In case **T 756/09**, the request for oral submissions by Dr M, an Australian patent attorney, was made only ten days before the oral proceedings and the appellant (opponent) had denied its agreement both in writing and at the beginning of the oral proceedings. In support of its request, the respondent (patent proprietor) essentially submitted that Dr M would not make submissions in the capacity of a technical expert, but as a patent attorney who was very familiar with the case, had advised the professional representative before the oral proceedings and would continue to do so during the oral proceedings. Taking into account the circumstances of the case, in particular that Dr M was not a technical expert and thus was **not** expected to elaborate on technical aspects of the case in a manner which might take the appellant **by surprise**, the board concluded that submissions made directly by Dr M under the supervision of the professional representative would not put the appellant (opponent) at a disadvantage and might contribute to an efficient debate. Hence, despite its late filing, the board decided to accede to the respondent's request for oral submissions by an accompanying person with the proviso that such submissions would be stopped if new technical facts or arguments were introduced into the debate.

W. Guidelines for Examination in the European Patent Office

1. Overview 1276
2. Professional representatives 1277
2.1. List of professional representatives (Article 134(1) EPC) 1277
2.2. Party having its seat in an EPC contracting state 1277
2.3. Duty of persons without residence nor place of business within a contracting state to be represented by a professional representative 1278
2.4. Professional representatives during the transitional period 1279
2.5. Procedural steps performed by a person other than the professional representative 1280
2.6. Submissions by a professional representative after transfer of opponent status 1281
3. Legal practitioners entitled to act as professional representative 1281
3.1. General issues 1281
3.2. Register of legal practitioners 1282
3.3. Qualifying conditions according to Article 134(8) EPC 1282
3.3.1 Representation by a legal practitioner 1282
3.3.2 Common representative 1283
4. Authorisations for appointment of a representative 1285
4.1. Filing of the authorisation 1285
4.2. General authorisations 1287
4.3. Sub-authorisations 1289
4.4. Authorisation of an association of representatives 1290
4.5. Termination of authorisation 1291
5. Oral submissions by an accompanying person 1291
5.1. Enlarged Board's landmark decision G 4/95 1291
5.2. Application of the case law established by the Enlarged Board 1292
5.2.1 Introduction 1292
5.2.2 Trainee patent attorneys 1293
5.2.3 Distinction between party to proceedings and accompanying person 1294
5.2.4 Inventor as accompanying person 1295
5.2.5 Name, qualifications and subject-matter to be specified 1295
5.2.6 Oral submissions to be requested sufficiently in advance 1297
5.2.7 Exceptional circumstances 1298
5.2.8 Professional representative's responsibility 1298
5.2.9 Procedural objection under R. 106 EPC 1299
5.3. Oral submissions by former members of the boards of appeal 1299
5.4. Oral submissions by qualified patent lawyers of non-EPC contracting states 1300

In accordance with Art. 10(2)(a) EPC, the President of the EPO adopted, effective as at 1 June 1978, the Guidelines for Examination in the EPO. Since the decision of the President dated 28 July 2015 the Guidelines have been amended pursuant to Art. 10(2) EPC in accordance with the policy of revising them annually. The latest version of the Guidelines is the April 2025 edition. There is now greater user involvement in

drafting new editions. The section of the EPO website devoted to the Guidelines presents the steps in their revision cycle, along with useful documentation on the topic that has likewise been made available online. The revised April 2025 edition of the Guidelines entered into force on 1 April 2025 and supersedes the March 2024 edition. It is available online at *www.epo.org*. Notices giving general information about the changes made in each revision round are published in the OJ: for the November 2015 version, in OJ 2015, A74; for the November 2016 version (the last version published as a hard copy), in OJ 2016, A76; for the November 2017 version, in OJ 2017, A75; for the November 2018 version, in OJ 2018, A73; for the November 2019 version, in OJ 2019, A80; for the March 2021 version, in OJ 2021, A6; for the March 2022 version, in OJ 2022, A10; for the March 2023 version, in OJ 2023, A6; for the March 2024 version, in OJ 2024, A9; and for the April 2025 version, in OJ 2025, A4. Please note that the Guidelines do not constitute legal provisions. For the ultimate authority on practice at the EPO it is necessary to refer firstly to the EPC itself, including the Implementing Regulations, and secondly to the interpretation put upon the EPC by the boards of appeal and the Enlarged Board (Guidelines General Part, 3 – April 2025 version). With the exception of important aspects relating to interlocutory revision, the appeals procedure is not dealt with in the Guidelines (Guidelines General Part, 5 – April 2025 version).

Article 20(2) RPBA (OJ 2019, A63, unchanged in the consolidated version in OJ 2024, A15), just like Art. 20(2) RPBA 2007 before it, stipulates that: "If, in its decision, a Board gives a different interpretation of the Convention to that provided for in the Guidelines, it shall state the grounds for its action if it considers that this decision will be more readily understood in the light of such grounds."

It should be borne in mind that the edition of the Guidelines referred to in the following abstracts of board decisions is that applied by the board in question and may have been worded differently from the April 2025 version. The various different editions of the Guidelines are archived at *epo.org/en/legal/guidelines/archive*.

1. Guidelines not binding on boards

The Guidelines for Examination are not binding on the boards of appeal.

In **T 1561/05** the board confirmed that the Guidelines were not binding on the boards of appeal (applying **T 162/82**, OJ 1987, 533). **T 1561/05** of 17 October 2006 is also referred to in **J 7/10**.

In **T 740/98** the board noted, among other things, that the legal system established under the EPC did not treat the Guidelines as binding.

In **T 1063/06** (OJ 2009, 516), the board held that the appellant could not successfully rely on the Guidelines to support its right to a functional definition of chemical compounds before the boards. It could be left open whether or not the appellant's contentions with respect to the Guidelines' content were correct, because the Guidelines were issued by the President of the EPO and had no normative binding effect on the boards of appeal (with reference to **T 162/82** and Art. 23(3) EPC).

In **T 1356/05** the board stated that no provision of the Guidelines could override an article or rule of the EPC (see also **T 1360/05**, and **T 861/02**, in which the board, while noting the advice in the Guidelines on decisions consisting of references to communications, stated that R. 68(2) EPC 1973 (R. 111 EPC) must always be complied with).

In **T 500/00** the appellant argued that the disclaimer had been made in good faith according to the Guidelines and in accordance with the practice of the boards of appeal at the time of making the disclaimer. The board pointed out that the Guidelines were not rules of law and noted that what counted was not whether the opposition division had acted in accordance with the Guidelines, but whether it had acted in accordance with the EPC.

As to the alleged lack of consistency between what was in fact the established case law and the Guidelines, the board in **T 1741/08** noted that it was not bound by the Guidelines, an important factor in the judicial independence of the boards of appeal (Art. 23(3) EPC). An alleged divergence between the Guidelines and case law therefore could not be a sufficient basis for challenging the case law by means of a **referral** to the Enlarged Board. Decision **T 438/22** also stated that a referral to the Enlarged Board whose sole purpose was to correct the Guidelines and which was not necessary either for ensuring uniform case law within the boards or for the board's decision was not admissible. Such a referral could be perceived as an attempt to encroach on the President's powers under Art. 10(2)(a) EPC (Catchword and point 8.2.2 of the Reasons).

In **T 1363/12** the board stated that it is to be noted that the principles established by the Enlarged Board for the assessment of the requirement of Art. 123(2) EPC could not be changed **by issuing amended Guidelines**.

In ex parte case **T 1090/12**, the appellant drew the attention to the Guidelines G-VII, 3.1 – November 2016 ("an assertion that something is common general knowledge need only be backed by documentary evidence (for example, a textbook) if this is contested") and submitted that this passage was binding on the boards of appeal when exercising the power of the examining division. The appellant requested the referral of the following question to the Enlarged Board: "To what extent is a Board of Appeal, when exercising power within the competence of the first-instance department which was responsible for the decision appealed under Art. 111(1) EPC, subject to the same constraints on that power as the first-instance department, such as the duty to follow the Guidelines?". The board refused this request and stated that the Guidelines are not part of the EPC (see Art. 164(1) EPC 1973) and therefore cannot be binding upon the members of the boards of appeal (see Art. 23(3) EPC 1973).

In **T 246/22**, on the question what was meant by "**admissibly raised**" (Art. 12(4) RPBA) before the opposition division, the board said that one viable approach would see a board slip into the shoes of the opposition division. That board would then have to infer, from its perspective, how the opposition division should have exercised its discretion on the basis of the applicable procedural basis, e.g. in view of the current Guidelines. However, one of the possible consequences of that approach could arguably be that the boards would have to closely monitor the currently applicable Guidelines to derive guidance as to how the opposition division concerned should have exercised discretion. Another reason this

approach failed to convince the board was that the Guidelines are not binding on the boards and the RPBA are approved and adopted specifically to govern the proceedings before the boards. The board proposed another approach (See also for an assessment made independently of the Guidelines: **T 1135/22**, **T 506/23**). Compare further on the topic interpretation of "admissibly raised" based on the applicable Guidelines with: **T 364/20**, **T 1800/20**, **T 446/22**, **T 731/22**, **T 924/22**, **T 1178/23**.

The board in **T 364/20** (request admissibly raised and maintained) deviated from the Guidelines E-VI, 2.1 and E-VI, 2.2.2 – 2023 version.

The fact that the Guidelines are not binding on the boards of appeal does not mean that the boards do not apply them or quote them as a source of inspiration (see in this chapter III.W.3.).

2. Guidelines binding (in principle) on departments of first instance

The Guidelines state (General Part, 3 – April 2025 version): "The Guidelines cannot cover all possible occurrences and exceptions in every detail, but must be regarded as general instructions that may need to be adapted to the individual case. The application of the Guidelines to individual European patent applications or patents is the responsibility of the formalities officers and examiners. As a general rule, parties may expect the EPO to act in accordance with the Guidelines. It should be noted also that the Guidelines do not constitute legal provisions. For the ultimate authority on practice in the EPO, it is necessary to refer firstly to the European Patent Convention".

In **T 647/93** (OJ 1995, 132) the board stated that it was normally desirable for examining divisions to act in accordance with the Guidelines, but pointed out that these were not rules of law, so failure to follow a procedure set out in them was not in itself a substantial procedural violation (**T 51/94**, **T 937/97**).

In **T 162/82** (OJ 1987, 533) and **T 42/84** (OJ 1988, 251), two boards of appeal ruled on the discretionary power of examining divisions to depart from the Guidelines. According to these two decisions, the Guidelines were only general instructions intended to cover normal occurrences. Thus, an examining division could depart from them provided it acted in accordance with the EPC. In reviewing the decision of an examining division, a board of appeal would wish to ensure uniform application of the law and judge whether the division had acted in accordance with the EPC, not whether it had acted in accordance with the Guidelines.

In **T 500/00** the board noted that what counted was not whether the opposition division had acted in accordance with the Guidelines, but whether it had acted in accordance with the EPC.

In **T 1388/10**, the board observed that the Guidelines merely offered general guidance covering normal occurrences. Their application in specific individual cases was the responsibility of the examining division, which could depart from them in exceptional cases. Also, the Guidelines were not the law – unlike the EPC and its Implementing

Regulations. When reviewing examining division decisions, the boards did not assess whether the division had complied with the Guidelines. Rather, they considered whether it had exercised its discretion within the limits set by the EPC and its Implementing Regulations.

In **J 27/94** (OJ 1995, 831) the board stated that there might be cases in which the public had a legitimate expectation that the department of first instance would not deviate from the established case law. This might apply if the relevant case law had become enshrined in the consistent practice of the department of first instance, and in particular if this had been made known to the public in published Guidelines, legal advice or notices from the EPO. In such a situation, an applicant might legitimately expect that a practice allowing or even recommending a particular way of proceeding would not be changed without appropriate advance information. In the case at issue, the Guidelines had remained unchanged, which in fact led to the reasonable expectation that the practice based on them would likewise not be changed.

The board in **T 1607/08** recalled that the Guidelines were one of the sources of legitimate expectations. Therefore, where the Guidelines gave the clear indication that the continuation of the opposition proceedings had to be communicated to the patent proprietor, the latter was entitled to expect that such information would be given before a decision on the substantive issues was issued. Otherwise, as in the case at issue, the decision to revoke the contested patent would come as a surprise to the patent proprietor.

In **T 182/90** (OJ 1994, 641), **T 119/91**, **T 523/91**, **T 366/92** and **T 397/94** the boards of appeal stated that it was **not** a substantial procedural violation within the meaning of R. 67 EPC 1973 (R. 103 EPC) if a request to be called back by or have an interview with the primary examiner was ignored. It was a matter for the examiner's discretion to decide whether to conduct such informal discussions in accordance with the Guidelines, bearing in mind the particular circumstances of the case (see also **T 300/89**, OJ 1991, 480).

The examining division's failure to follow a procedure set out in the Guidelines is not in itself a substantial procedural violation unless it also constitutes a violation of a rule or principle of procedure governed by an article of the EPC or one of the Implementing Regulations. This is because the Guidelines are not legally binding (**T 42/84**, OJ 1988, 251; **T 51/94**; **J 24/96**, OJ 2001, 434).

In **T 246/08** the board saw, in the particular circumstances of the case, the examining division's deviation from the Guidelines as a matter for approval rather than reproach.

In **T 313/10** the examining division had argued, using their own criteria, that a method performed by a computer was excluded. This was contrary to the established jurisprudence as set out in the Guidelines.

In **T 1020/15** the board cited, in addition to applicable EPC provisions, numerous passages from the Guidelines in support of its finding that the examining division's decision was vitiated by four substantial procedural violations.

According to the board in **T 755/14**, contrary to the appellant's view, although the search and examining divisions had failed to follow the procedure established in the Guidelines for considering unity, their substantively incorrect assessment of the unity issue could not be regarded as or equated to a substantial procedural violation within the meaning of R. 103(1) EPC, especially as the Guidelines were not legally binding. The board was also unable to identify any substantial procedural violation in the action then taken by the examining division.

In **T 679/14**, the board found, in line with the Guidelines (regarding postponements at the instigation of the division; see Guidelines E-III, 7.1.2 – April 2025 version), that it is unacceptable to repeatedly postpone oral proceedings without serious reasons, especially if it is done several times in the same examination proceedings after long delays have already occurred. In the case in hand, although the individual delays caused by the (eight) postponements were short, the examining division had acted against the interests of procedural efficiency, at the same time as ignoring clear rules given in the Guidelines to avoid such delays.

In **T 1655/21**, in relation to a request for acceleration of the opposition proceedings after remittal, the board drew the opposition division's attention to the instructions in the Guidelines D-VII, 1.2. – March 2024 version.

In **T 2240/22**, ruling on the opposition division's exercise of its discretion in relation to changing its position on novelty, as compared with its preliminary opinion, at the oral proceedings, the board cited the Guidelines (E-VI, 2.2.2, last bullet point, – March 2024 version) and stated that the opposition division appeared to have taken the right approach.

See also **T 1946/21** in chapter III.A.3.7.

3. The boards' application of the Guidelines in specific cases

Although the boards are not bound by the Guidelines, this does not mean that they do not take them into account or turn to them for inspiration when reaching their decisions. It should be borne in mind that the edition of the Guidelines referred to in the decisions summarised below to illustrate the related case law is that applied by the board in the specific case concerned and not necessarily that currently in force (April 2025 version).

In **T 651/91** the board cited with approval the Guidelines, confirming that a generic disclosure did not normally deprive any specific example falling within that disclosure of novelty.

In **T 523/89** the board saw no reason to disagree with the general principle of interpretation laid down in the Guidelines.

In **T 631/97** (OJ 2001, 13) the board found that the interpretation of R. 46(1) EPC 1973 (R. 64 EPC) was in agreement with that of the Enlarged Board in Opinion **G 2/92**. It also found that the Guidelines were fully consistent with **G 2/92** and R. 46 EPC 1973.

In **T 587/98** (OJ 2000, 497) the board found that the claims were not "conflicting" claims within the meaning of the Guidelines.

The Enlarged Board in **G 3/14** (OJ 2015, A102) observed that neither the EPC itself nor the Implementing Regulations made any distinction between independent and dependent claims when it came to their compliance with the requirements of the EPC at the examination stage. Although not part of the express legal framework of the EPC, the Guidelines likewise made no distinction between independent and dependent claims when it came to objections of lack of clarity (Guidelines F-IV, 4.1, – November 2014 version).

In the ex parte case **T 655/13** (examining division's reasoning based on a pertinent prior art document in a non-official EPO language), the board based its reasoning partly on the Guidelines.

In **T 300/89** (OJ 1991, 480) the board held, in relation to the appellant's complaint as to the failure of the examiner to telephone as requested, that the practice in relation to such informal communications was clearly set out in the Guidelines.

The applicant's request "to render a decision on the record" was not to be construed as a waiver of the right to a fully reasoned first-instance decision, even in the light of the suggested procedure in the Guidelines (see **T 1309/05**, **T 1356/05**, **T 583/04**). In **T 1709/06** the board noted that although the Guidelines E-X, 4.4, suggested a procedure for issuing a decision "on the state of the file" taking a standard form, a number of decisions of the boards of appeal had pointed out that such a standard decision form did not meet the "reasoned" requirement of R. 68(2) EPC 1973 (R. 111(2) EPC).

In **T 1123/04** the board noted that R. 68(2) EPC 1973 (R. 111(2) EPC) stipulated that decisions of the EPO which were open to appeal had to be reasoned. The criteria for the "reasoning" were, for instance, elaborated in the Guidelines.

In **T 2068/14** the board had to consider whether the decision of the examining division was adequately reasoned. The board endorsed the following statement in the Guidelines, as it reflected the jurisprudence of the boards of appeal: "It is particularly important that special attention should be paid to important facts and arguments which may speak against the decision made. If not, the impression might be given that such points have been overlooked" (Guidelines E-IX, 5 – September 2013 version then applicable; idem Guidelines E-X, 2.6 – April 2025 version). The board in **T 1998/10** (use of standard form) backed up its reading of the R. 111(2) EPC provision on the need to give reasons for decisions by referring to the same section of the Guidelines E-IX, 5, according to which the reasons given in a decision should be "complete and independently comprehensible, i.e. generally without references".

In **T 833/99**, which concerned a number of alleged prior uses, the board observed that, contrary to what the appellant (opponent) had argued, it was not the conditions set out in the first paragraph of Guidelines D-V, 3.1.3.1 (later covered in G-IV, 7.2.1 – for example in the April 2025 version) that applied but those in the last sentence of the final paragraph (in G-IV, 7.2.1 – April 2025 version: "... however, any concealed features which could be

ascertained only by dismantling or destroying the object cannot be regarded as having been made available to the public.").

The board in **T 2362/13**, referring to the Guidelines G-II, 3.5.3 – November 2019 version, and **T 983/11**, stated that logistics was generally considered to fall within the categories of excluded matter in Art. 52(2) EPC.

In **J 12/18** the board found that the reasoning in the appealed decision and the Guidelines cited there (Guidelines A-IV, 1.3.4) were in line with its interpretation of Art. 76(2) EPC (reached in accordance with recognised rules of interpretation).

In **T 261/15**, in respect of the argument that a selected sub-range has inter alia to be sufficiently far removed from the end-points of the known range, the board pointed out that it was not aware of any jurisprudence stating this condition in such a general way. It was true that the Guideline, G-VI, 8 – November 2017 version, recited under point (ii)(b) this criterion as a condition for acknowledging novelty of a numerical selection. However, neither decision **T 198/84** nor **T 279/89**, which are cited in this passage of the Guidelines, stipulates this condition.

In interpreting R. 116(1) EPC and deciding whether or not the department of first instance had applied it correctly, the board in **T 1750/14** applied a literal reading of its provisions in conjunction with those of R. 132(2) EPC, as found in the Guidelines D-VI, 3.2 – September 2013 version, last sentence.

In **T 2431/19**, the examining division had invoked R. 137(5) EPC as a basis for exercising discretion. The board was aware that the Guidelines used terminology relating to "admittance" in connection with R. 137(5) EPC (see Guidelines F-IV, 3.3 – November 2018 version, fourth paragraph: "such amendments may not be admitted"; H-II, 6.2, third paragraph: "such amendments are not admissible"). However, the board held that R. 137(5) EPC, as opposed to R. 137(3) EPC, did not give the examining division any discretionary power.

In **T 944/15** the board disagreed with the statement in the Guidelines G-II, 4.2.1 – November 2019 version, last paragraph, to which the appellant had referred and which read as follows: "Claims to medical devices, computer programs and storage media which comprise subject-matter corresponding to that of a method for treatment of the human or animal body by surgery or therapy or to that of a diagnostic method practised on the human or animal body are not to be objected to under Art. 53(c) EPC, because only method claims may fall under the exception of Art. 53(c) EPC."

The reasons given in the EPO notice of 8 November 2013 on handwritten amendments for changing a practice that had been applied for years at first instance and was also recognised in the Guidelines do not warrant changing the established practice of the boards of appeal and the related case law (**T 37/12**, citing **T 1635/10**, point 5 of the Reasons).

The board in **T 736/14**, whilst observing that the EPC contains no explicit provisions about how to proceed if an applicant whose application is non-unitary responds unclearly or in a misleading way to an invitation from the examining division to specify which searched invention it wishes to prosecute further, nevertheless found that Guidelines H-II, 7.1 – September 2013 version should not have been applied at all when refusing to admit the auxiliary request, since the applicant had not clearly indicated the invention to be further examined at that stage of the examination proceedings.

The board in **T 2015/20** stated that neither **T 609/02** nor the case law that had developed from that decision signalled a deviation from the established case law or an interpretation differing from the Guidelines F-III, 1 – November 2019 version, in particular with respect to the precondition of serious doubts for a convincing argument of lack of sufficiency.

When dealing with internet disclosures, the boards have referred to the Guidelines (see Guidelines G-IV, 7.5.2 – April 2025 version) and established the balance of probabilities as the applicable standard of proof (**T 2227/11**, **T 1711/11**, **T 353/14**, **T 545/08**). Earlier decision **T 1134/06** that the stricter standard of proof "beyond reasonable doubt" had to be applied to internet disclosures has been refuted by the later case law cited above.

In **T 314/18** the board stated that no provision of the EPC required that an alleged prior use be conclusively proven within the opposition period. When referring to the EPO Guidelines G-IV, 7.2, and E-IV, 1.2, and arguing that the lack of adequate substantiation of the prior use in the notice of opposition could not be overcome by hearing the witness, the opposition division had mixed up the submission of facts and the proof required to establish them.

In **T 967/17** the board decided that, contrary to what had been implied by the appellant, the Guidelines F-IV, 4.14 – November 2019 version, did not state that a claim directed towards a first entity and referring to a second entity that was not part of a claimed first entity could be (re-)directed towards a combination of those two entities. Rather, it had to be verified, for each case individually, whether such a combination fell within the boundaries set by Art. 123(2) EPC.

In **T 879/18** the board concluded, with reference to the Guidelines E-VI, 2.2(a) – November 2017 version, that the opposition division had exercised its discretion unreasonably in not admitting the amended main request (now first auxiliary request) in response to the opponent's fresh objection. The board decided to admit the auxiliary request into the appeal proceedings.

The board in **T 1121/17** stated (in the catchword) that the criteria set out in the Guidelines H-IV, 3.5 – November 2016 version, which concerned the allowability of amendments under Art. 123(3) EPC, were inappropriate for the assessment of compliance with Art. 123(2) EPC.

When examining whether a substantial procedural violation had occurred before the examining division (need for complete and detailed reasoning), the board in ex parte case **T 625/21** stated that **T 763/04** fully applied to the case in hand. Moreover, the reasoning

in **T 763/04** was reflected in the passages of the Guidelines (2019 version) that concerned drafting decisions. Decision **T 625/21** also includes findings on file inspection that were made by reference to the Guidelines, according to which any exchange of emails should be properly documented in the file.

In **T 2486/22**, in relation to allowability of amendments, the appellant referred to the Guidelines (H-IV, 2.2), which state that "the examining division needs to avoid disproportionally focusing on the structure of the claims as filed to the detriment of the subject-matter that the skilled person would directly and unambiguously derive from the application as a whole." The board noted that this statement was based on decision **T 2619/11**. It agreed with the appellant's argument that the examining division, contrary to the guidance given in the aforementioned section of the Guidelines and therefore contrary to decision **T 2619/11**, had relied almost entirely on the claim structure to support the assertion that the combination of features of claim 1 of the main request was not originally disclosed.

In **T 1762/21** the appellant (opponent) argued that a number of essential features had been inadmissibly omitted and that this amounted to an unallowable intermediate generalisation. In its arguments, the appellant cited the Guidelines. The board first set out in detail the "gold" standard for assessing any amendment and then said that the passage in the Guidelines H-V, 3.2.1, concerning intermediate generalisations had to be understood in this context.

As to the interpretation of Art. 109(1) EPC, the board in **T 682/22** pointed out, with reference to Art. 20(2) RPBA, that the case law and the Guidelines (E-XII, 7.4.2) were inconsistent with each other.

In ex parte case **T 3000/19**, which concerned a refusal decision based on prior art consisting of a YouTube video that was no longer accessible on the date of the board's decision, the board stated that the measures recommended in the Guidelines, B-X, 11.6 – November 2018 version, which had been followed by the examining division, were not adequate to preserve relevant electronic evidence and guarantee its accessibility over time.

In **T 727/19** the board observed that the Guidelines E-XI set out the procedure whereby the reasons for a decision by the superior responsible to reject a challenge to the impartiality of a division can be appealed. This procedure did not make the superior's decision formally appealable. The statement in the Guidelines that the reasons for the director's decision "will be part of and appealable together with the final decision" was easy to misunderstand.

In **T 222/21** the board concluded that the examining division, in relying solely on the Guidelines H-II, 2.4, i.e. extensiveness per se, when exercising its discretion, had failed to consider the correct factor, i.e. the time for examination that the amendments might require and thus the potential delay in the preparations for the grant of the patent. The Guidelines H-II, 2.4 had to be read in conjunction with H-II, 2.5.1.

In **T 111/21** the board noted that the examining division's analysis of inventive step was based on mere references to passages of the Guidelines and did not consider whether technical effects might occur within the claimed computer-implemented process by specific adaptations to data transfer or storage mechanisms (see **G 1/19**, point 85 of the Reasons).

In ex parte case **T 1910/20** the appellants' argument on the issue of a mathematical method and building a therapy plan seemed to build on a misleading blanket statement they had cited from the Guidelines. As regards the particular passage of the Guidelines, the board found that, at least at its level of generality ("those steps make a technical contribution regardless of what use is made of the results"), it was wrong.

The board in **T 1741/22** stated in its Catchword that the mere generation of further data from measurement data already collected from the human body was not a technical effect (**T 2681/16** and the Guidelines not followed). Concerning the Guidelines (G-II, 3.3 – March 2024 version), the board in its Reasons further referred to Art. 20(2) RPBA.

IV. PROCEEDINGS BEFORE THE DEPARTMENTS OF FIRST INSTANCE

A. Preliminary and formalities examination

1. Introduction 1314
2. Responsibility for formalities examination 1314
3. Where and how applications may be filed 1315
4. Persons entitled to file application 1315
5. Accordance of a date of filing 1316
5.1. Requirements for according a date of filing 1316
5.2. Identity of applicant 1318
5.2.1 Requirement for information identifying the applicant (Rule 40(1)(b) EPC) 1318
5.2.2 Correction of designation of applicant (Rule 139 EPC) 1319
5.3. Legal effect of accordance of a date of filing 1320
5.4. Subsequent filing of missing parts of the description or missing drawings (Rule 56 EPC) 1321
5.4.1 Legal provisions 1321
5.4.2 Interpretation of Rule 56 EPC 1321
5.5. Corrections under Rule 139 EPC 1322
5.5.1 Legal provisions 1322
5.5.2 No replacement of invention 1322
5.5.3 Extent of competence of the Receiving Section for corrections under Rule 139, second sentence, EPC 1324
5.6. Erroneously filed application documents or parts (Rule 56a EPC) 1325
5.7. Change of date of filing 1325
6. Examination of formal requirements 1326
6.1. Requirements of a European patent application (Article 78 EPC) 1327
6.2. Designation of the inventor 1328
6.3. Any other requirement laid down in the Implementing Regulations 1329
6.3.1 Presentation of the application documents (Rule 49 EPC) 1329
7. Designation of states 1330
7.1. Legal provisions 1330
7.2. Effect of non-payment of the designation fee 1331
7.2.1 Deemed withdrawal 1331
7.2.2 Designation of states in divisional applications 1331
7.2.3 No correction of non-payment of fee under Rule 88 EPC 1973 1332
7.3. Correction of designation of states (Rule 139 EPC) 1332
7.3.1 Decisions considering the application of the EPC 1973 1332
7.3.2 Decisions considering the application of the EPC 2000 1334
8. Priority 1334
8.1. Filing of priority documents 1334
8.2. Correction of priority declarations 1335
8.2.1 Requirement for mistake to have been made 1335
8.2.2 Time limit for request for correction 1335
8.2.3 Correction of the priority declaration under Rule 52(3) EPC 1337

9. Fiction of withdrawal of the application (Rule 100(3) EPC) 1338
10. Publication of the application 1338

1. Introduction

The EPO first examines whether a patent application satisfies the requirements for the **accordance of a date of filing** in accordance with the Implementing Regulations (Art. 80 EPC, Art. 90(1) EPC and R. 40 EPC). Only if an application is accorded a date of filing is the **examination as to formal requirements** commenced (Art. 90(3) EPC).

2. Responsibility for formalities examination

Under Art. 16 EPC, the Receiving Section is responsible for the examination on filing and the examination as to formal requirements of European patent applications. It retains responsibility up to the time when the examining division becomes responsible for the examination of the European patent application under Art. 94 EPC (R. 10 EPC).

The limitation in time of the Receiving Section's responsibility was previously in Art. 16 EPC 1973. The move to the Implementing Regulations ensures greater flexibility in determining when competence passes within the EPO from one department to another.

The Receiving Section is also no longer limited to the EPO's branch in The Hague as it was under Art. 16 EPC 1973. According to **T 1012/03**, the amendments to Art. 16 and 17 EPC deleting the allocation of the search divisions and Receiving Section to the branch at The Hague clearly indicate that the EPC no longer restricts the competence of the President of the EPO to decide which transactions shall be carried out at Munich and which at The Hague.

In **G 1/02** (OJ 2003, 165) the Enlarged Board pointed out that Art. 90 EPC 1973 and Art. 91 EPC 1973 entrusted to the Receiving Section certain duties relating to formalities examination of applications on filing, and that the section's decisions may give rise to a loss of rights (see Art. 91(3) EPC 1973) which are appealable (see Art. 106 EPC 1973). The Receiving Section is composed entirely of formalities officers who – just like their counterparts working with opposition divisions – receive specialist training but are not required to have studied a technical subject or law at university.

In **J 18/84** (OJ 1987, 215) the Legal Board distinguished the respective areas of responsibility of the Receiving Section and the Legal Division regarding the designation of the inventor. It held that the examination of an initial designation of inventor complying with Art. 81 EPC 1973 fell exclusively to the Receiving Section as one of its formalities examination responsibilities under Art. 16 and 91 EPC 1973. (These responsibilities are now in Art. 16 and 90(3) EPC). However, once entries began to be entered in the Register – which under Art. 127, second sentence, EPC 1973 coincided with the publication of the

European patent application – the Legal Board found that the Legal Division would be competent for any disputed corrections.

In **J 13/02**, the Legal Board took the view that the fact that the EPC 2000 versions of Art. 16 to 18 EPC were already applicable in accordance with Art. 6 of the Revision Act did not alter the fact that the Receiving Section's competence came to an end once a valid request for examination had been made with the result that the examining division had to examine whether the application met the requirements of the EPC 1973 (Art. 94(1) EPC 1973 in conjunction with Art. 96(2), 97(1) and 97(2) EPC 1973).

See in this chapter IV.A.5.5.3 for the extent of competence of the Receiving Section vis-à-vis the examining division in respect of requests for correction under R. 139 EPC.

3. Where and how applications may be filed

Under Art. 75 EPC a European patent application may be filed with the EPO or, if the law of a Contracting State so permits, (and subject to Art. 76(1) EPC) with the central industrial property office or other competent authority of that State.

According to **J 3/80** (OJ 1980, 92), the obligation to forward European patent applications filed nationally to the EPO rests upon the relevant central industrial property office and not upon the applicant (see also **J 1/12** in this chapter IV.A.5.1.; see also chapter III.E.2.2. "Re-establishment only in cases of failure to observe a time limit for which it was for the applicant to observe").

The form of filing is governed by R. 2 EPC; it can be by hand, by postal services or by means of electronic communication. Details and conditions are laid down by the President of the EPO.

As from 1 July 2024, European patent applications may not be filed by fax at the EPO. Any transmission of a patent application by fax to the EPO shall be deemed not to have been received (see the decision of the President of the EPO and the notice from the EPO dated 22 April 2024 concerning the abolition of facsimile (fax) as a means of filing patent applications and other documents (respectively in OJ 2024, A41 and OJ 2024, A42)). The decision of the President of the EPO dated 20 February 2019 concerning the filing of patent applications and other documents by facsimile (OJ 2019, A18) applies only to patent applications and documents received by fax at the EPO on and before 30 June 2024.

The filing of European patent applications by other means such as email is not allowed (see the notice dated 12 September 2000 concerning correspondence with the Office via email (OJ 2000, 458)).

4. Persons entitled to file application

A European patent application may be filed by any natural or legal person, or any body equivalent to a legal person by virtue of the law governing it (Art. 58 EPC). An application

may also be filed either by joint applicants or by two or more applicants designating different contracting states (Art. 59 EPC). If the applicants for a patent are not the same for different contracting states they will be regarded as joint applicants in proceedings before the EPO (Art. 118 EPC).

In proceedings before the EPO, the applicant is deemed to be entitled to exercise the right to a European patent (Art. 60(3) EPC). This fiction only relieves the EPO of any need to investigate the existence of the entitlement. Art. 61 EPC deals with the remedies available where a person other than the patent applicant is held to be the person entitled to the grant of a European patent in a final decision by a national court.

In **J 1/23** the board explained that in cases where a final sovereign decision of a national court had determined that a person other than the applicant was entitled to the grant of the European patent under Art. 61(1) EPC, the matter of how and by whom the right to the patent had been acquired was considered and settled by the competent national court, and the EPO was bound by the court's conclusion (Protocol on Jurisdiction and the Recognition of Decisions in respect of the Right to the Grant of a European Patent). The EPO was not competent to examine the substance and merits of the court's decision (**G 3/92**).

The Enlarged Board held in **G 3/92** (OJ 1994, 607) that when it has been adjudged by a final decision of a national court that a person other than the applicant is entitled to the grant of a European patent, and that person, in compliance with the specific requirements of Art. 61(1) EPC, files a new European patent application in respect of the same invention under Art. 61(1)(b) EPC, it is not a pre-condition for the application to be accepted that the earlier original usurping application is still pending before the EPO at the time the new application is filed.

5. Accordance of a date of filing

5.1. Requirements for according a date of filing

The date of filing of the European patent application shall be the date on which the requirements laid down in the Implementing Regulations are fulfilled (Art. 80 EPC, which is applicable to European patent applications filed on or after 13 December 2007). Detailed provisions concerning the requirements have been moved to the Implementing Regulations (R. 40 EPC). The requirements include:

- an indication that a European patent is sought;

- information identifying the applicant or allowing the applicant to be contacted (see in this chapter IV.A.5.2.);

- a description or reference to a previously filed application.

The patent application must be filed with the EPO or other competent authority in accordance with Art. 75(1) EPC.

It is not necessary for the applicant to provide any claims to obtain a filing date. If the application is filed without claims but satisfies all requirements for obtaining a filing date, the applicant will be requested to provide at least one claim later according to R. 57(c) EPC and R. 58 EPC.

Where the description is filed by reference to a previously filed application, the reference must contain the information required in R. 40(2) EPC.

If a date of filing cannot be accorded following the examination under Art. 90(1) EPC, the application is not dealt with as a European patent application (Art. 90(2) EPC).

According to **G 2/95** (OJ 1996, 555), Art. 80 EPC 1973 stipulated the minimum requirements which had to be met in order for a filing date to be accorded. Under Art. 80(d) EPC 1973 (see now R. 40 EPC, which no longer includes this requirement), the documents filed by the applicant had to contain a description and one or more claims (complying with Art. 14 EPC 1973, which was substantially amended in the EPC 2000).

In **J 18/86** (OJ 1988, 165) the Legal Board stated that under R. 24 EPC 1973 in conjunction with Art. 75(1)(b) EPC 1973 the date of filing of a European application was always the date on which the application documents were actually received, either by the EPO directly or by a competent national authority. The Legal Board found that nothing in the EPC 1973 allowed for the possibility of applying a provision of any national law to the determination of the date of filing of a European patent application.

In **J 4/87** (OJ 1988, 172), the Legal Board held that in the event of an unforeseeable postal delay causing non-compliance with a time limit, if R. 85(2) EPC 1973 (relating to general interruption or subsequent dislocation in the delivery of mail in a Contracting State) was not applicable so as to extend the time limit, the EPO had no discretion to extend it. Applying the principles set out in **J 18/86** above, in the case in hand the date of filing was the actual date of receipt by the EPO or a competent national authority. See also **J 13/05**.

In **J 12/05**, the Legal Board, citing **J 4/87** and **J 18/86**, held that the EPC did not permit backdating of the filing date. It went on to state that, even where the conditions for extending the priority period under either R. 84a EPC 1973 or R. 85 EPC 1973 were met, this did not result in a change of the actual filing date. Instead, there arose a legal fiction that the priority period had been observed, even though the filing date was actually later than that period's expiry date.

In **T 382/94** (OJ 1998, 24) the board held that if the drawings were filed in full on the date of filing, they formed part of the application as filed, even if they contained text in an official language other than the language of the proceedings. There was nothing to prevent the application being amended on the basis of a translation of this text into the language of the proceedings. The language requirements for a European patent application were amended under the EPC 2000, see chapter III.F.1. "Language of filing and date of filing of a European patent application".

In **J 1/12** the appellant had filed a European patent application with the UK Patent Office with the same documents as those underlying the later application before the EPO. The application in the UK never reached the EPO. The Legal Board therefore had to consider whether, contrary to Art. 80 EPC 1973, it would be justified to assign the application the earlier filing date (Art. 75(1)(b) EPC 1973). Art. 77(2) EPC 1973 provided that European patent applications filed within the member states were to be forwarded to the EPO within six weeks after filing. Art. 77(5) EPC 1973 supplemented this provision by providing that European patent applications which did not reach the EPO before the specified time limit were deemed to be withdrawn. It followed that the application filed with the UK Patent Office was deemed to have been withdrawn. No re-establishment of rights was provided for. In such a situation the legislator expressly provided in the last sentence of Art. 77(5) EPC 1973 for the refund of the filing, search and designation fees. In addition, Art. 135(1)(a) and 136(2) EPC 1973 provided facilities for a conversion of the lost European patent application into national patent applications. It followed that the legislator of the EPC clearly recognised the harsh consequences of Art. 77(5) EPC 1973 for an applicant. But, having recognised the problem, the legislator did not provide the applicant with any means to regain the lost application.

5.2. Identity of applicant

5.2.1 Requirement for information identifying the applicant (Rule 40(1)(b) EPC)

R. 40(1)(b) EPC provides that the date of filing of a European patent shall be the date on which the documents filed by the applicant contain, inter alia, 'information identifying the applicant or allowing the applicant to be contacted'. The requirement for information identifying the applicant was previously contained in Art. 80(c) EPC 1973.

In **J 25/86** (OJ 1987, 475) it was pointed out that the requirement under Art. 80(c) EPC 1973 for "information identifying the applicant" was to be considered as having been met whenever it was possible to establish beyond reasonable doubt the identity of the applicant on the basis of all data contained in the documents filed by the applicant or his representative.

As noted in this chapter IV.A.4., under Art. 60(3) EPC the EPO assumes the applicant to be entitled to the European patent.

In **T 948/10** the EPO was wrongly informed that the applicant company's name had changed, and amended it accordingly. As neither the appellant's representative nor the examining division/Client Data Registration department had had any reason to believe that the party to the proceedings was anyone other than the original applicant, the board found that this error did not invalidate the procedural steps taken by the applicant before the first-instance departments ("falsa demonstratio non nocet"), and that the EPO should correct the mistake itself.

5.2.2 Correction of designation of applicant (Rule 139 EPC)

Under the first sentence of R. 139 EPC, linguistic errors, errors of transcription and mistakes in any document filed with the EPO may be corrected on request. The boards, in particular the Legal Board, have developed a large body of case law on corrections, namely that the correction must introduce what was originally intended; where the original intention is not immediately apparent, the requester bears the burden of proof, which must be a heavy one; the error to be remedied may be an incorrect statement or an omission; and the request for correction must be filed without delay (see **G 1/12**, point 37 of the Reasons). The decisions below consider the application of the EPC 1973 (R. 88 EPC 1973, which was not amended in substance). On R. 40(1)(b) EPC, see in this chapter IV.A.5.2.1.

In **J 7/80** (OJ 1981, 137), the Legal Board held that if the wrong applicant was named in an application and the wrong applicant and the correct applicant were both companies forming part of the same group of companies then the mistake could be corrected under R. 88 EPC 1973, if there was sufficient evidence to support the request for correction.

Following **J 7/80** (OJ 1981, 137) it was held in **J 18/93** (OJ 1997, 326), **J 17/96** and **J 31/96** that a correction substituting the name of the applicant was allowable under R. 88 EPC 1973 if there was sufficient evidence to support the request for correction. This rule was not in conflict with the provisions of Art. 61 EPC 1973, which concerned ownership disputes. R. 88, second sentence, EPC 1973 was not applicable. It was only necessary to verify whether there was sufficient evidence to support the request under R. 88 EPC 1973 for correction of the applicant's name; where the correction of a mistake was requested and R. 88, second sentence, EPC 1973 was not applicable, the EPO had to be satisfied that a mistake had been made, what the mistake was and what the correction should be. In **J 8/80** (OJ 1980, 293), the Legal Board added that, in order to avoid any abuse, the burden of proving the facts had to be a heavy one.

A correction under R. 88, first sentence, EPC 1973 was retroactive to the original date of filing (**J 3/91**, OJ 1994, 365; **J 2/92**, OJ 1994, 375) and the application was restored to the form which it should have taken on the filing date if the error had not been made (**J 4/85**, OJ 1986, 205).

In **J 17/97** and **J 18/97** the representative had filed the parent application in the name of Int. Inc., but the divisional application in the name of S.medica. Due to the different identities of the applicants, the Receiving Section had refused to treat the application as a divisional application. In its decisions, the Legal Board did not allow the request for correction to replace the name of the applicant of the divisional application with the name of the applicant of the parent application pursuant to R. 88 EPC 1973 because the appellant had not proved that the divisional application had been filed in error by S.medica and should have been filed by Int. Inc.

5.3. Legal effect of accordance of a date of filing

According to **T 1409/05** (OJ 2007, 113) a legally effective – in the terminology of the EPC, an accorded – filing date had several different legal consequences. Amongst others:

(a) it marked the beginning of the pendency of a European patent application; Art. 80 EPC 1973 in conjunction with Art. 90(1)(a), 90(2) EPC 1973;

(b) it marked the notional date on which the applicant formally claimed to have deposited his invention with the EPO; and

(c) the filing date defined the state of the art and hence the extent of search and examination, for the purposes of Art. 54(2) and (3) EPC 1973.

The legal effects (a) to (c) ensued immediately when the filing date was accorded. Further legal effects of the filing date unfolded upon publication of the patent application:

(d) It marked the date which counted as the filing date so as to affect other applications for the purposes of Art. 54(3) EPC 1973.

The filing date unfolded still further legal effects on grant:

(e) it marked the starting date for the granted protection envisaged by Art. 64(1) EPC 1973, see also Art. 63(1) EPC 1973; and

(f) the filing date marked the legally confirmed date by which the applicant had deposited the invention for which protection was granted, and as such, recognised the claim of (b).

The board went on to point out that the difference between the legally relevant dates (a) to (f) was clearly shown by the fact that logically they did not need to coincide, although this was the core assumption in the patent-granting system established by the EPC.

A filing date for a "normal" application was accorded as soon as the requirements of Art. 80 EPC 1973 were met – apart from other formal issues, such as language etc. If an application was deemed to have been accorded a filing date, an application came into existence. In other words, there was a pending application, with the legal consequences (a) to (c) above.

Conversely, a pending application had always to be deemed to have been accorded a filing date. It was true that the EPC used the notion of an application that was not deemed to have been accorded a filing date; see Art. 90(2) EPC 1973. However, such a purported application would legally never be pending, as there would be no application; see Art. 90(2) EPC 1973. Such a purported application would neither be searched nor examined, and neither filing, search, examination nor annual fees needed to be paid thereafter. A purported application which did not have a filing date simply did not exist as an application sensu stricto for the purposes of the EPC. This showed that a pending application without a filing date would be in a legal limbo. In other words, the notion of

according a filing date was synonymous with the legal recognition of the existence of a pending European patent application.

5.4. Subsequent filing of missing parts of the description or missing drawings (Rule 56 EPC)

5.4.1 Legal provisions

In the context of the system as a whole, R. 56 EPC relates to Art. 80 EPC (date of filing) (**J 3/06**). If the examination under Art. 90 EPC to determine whether the application satisfies the requirements for the accordance of a date of filing reveals that parts of the description, or drawings, appear to be missing, the EPO invites the applicant to file the missing parts within two months (R. 56(1) EPC).

Where the applicant files missing parts of the description or missing drawings within two months of the date of filing or of an invitation from the EPO to file the missing parts, the application is re-dated to the date on which the missing parts were filed. However, if the application claims priority, the missing parts of the description or the missing drawings are completely contained in the earlier application and all the requirements of R. 56(3) EPC are fulfilled, the application is not re-dated but retains the date on which the requirements laid down in R. 40(1) EPC were fulfilled (R. 56(3) EPC). R. 56(3) EPC implements Art. 5 PLT. It is based on the concept introduced in the EPC 2000 whereby the documents required for the accordance of a date of filing do not, under certain circumstances, immediately have to be physically present. Instead, they can be introduced into the proceedings by being contained in another application (**J 10/07**).

Even though it is not expressly stipulated in R. 56 EPC, it follows from the wording of R. 56(2), first sentence, EPC that applicants may also file missing parts of the description or missing drawings of their own motion. This approach is in line with the legislator's intention, as expressed in the travaux préparatoires; see **T 1963/17**.

Rule 56 EPC applies only to applications filed after the entry into force of the EPC 2000 (**J 3/06**, OJ 2009, 170, and **J 10/07**). Its counterpart under the EPC 1973, R. 43 EPC 1973, referred only to missing drawings.

For more on the correction of erroneously filed application documents or parts for applications filed on or after 1 November 2022, see new R. 56a EPC (IV.A.5.6.).

5.4.2 Interpretation of Rule 56 EPC

According to **J 27/10**, the same interpretation is to be given to the term "parts of the description ... appear to be missing" in R. 56(1), first sentence, EPC as to the term "missing parts of the description" in the subsequent paragraphs of R. 56 EPC for deciding if a part is missing from the description. The term "description" in "missing parts of the description" in R. 56 EPC refers to the description which was originally filed in order to obtain a filing date and not to any other description. The incomplete originally filed description is to be completed by the missing parts which must be added to the already filed text of the

description. Thus an interpretation of R. 56 EPC that some, or all, of the description that was originally filed in order to obtain a filing date could be amended, replaced or deleted is incorrect (see also **T 1963/17** and **J 16/13**).

In **J 15/12** the Legal Board made it clear, with reference to **J 27/10**, that R. 56 EPC could also not be used to replace drawings. R. 56(1), first sentence, EPC was confined to drawings referred to in the description or claims but which appeared to be missing. See also **T 1183/21**. In **J 12/14** the Legal Board stated that the filing of drawings where the reproduction of the figures is of low visual quality cannot be remedied by R. 56 EPC.

In **J 2/12** the Legal Board found that where (a) the description as filed with an application includes references to numbered drawings and (b) drawings with corresponding numbering are also filed with the application, different drawings may nevertheless be filed later under R. 56 EPC as "missing drawings" if it can be established without having to apply technical knowledge that the drawings originally filed with the application are not the drawings referred to in the description and that the later-filed drawings are the drawings referred to in the description. In the case at issue, it was immediately apparent that the figures referred to in the description were not the figures as originally filed. In other cases it might be that such a conclusion could not be reached so readily, but as it was so clear in this case, the Legal Board did not have to consider where in general the dividing line should be drawn.

5.5. Corrections under Rule 139 EPC

5.5.1 Legal provisions

Under R. 139 EPC (formerly R. 88 EPC 1973), mistakes in any document filed with the EPO may be corrected on request. However, if the request for such correction concerns the description, claims or drawings, the correction must be obvious in the sense that it is immediately evident that nothing else would have been intended than what is offered as the correction. Regarding corrections under R. 139, second sentence, EPC see also chapter II.E.4. "Correction of errors in the description, claims and drawings – Rule 139 EPC".

5.5.2 No replacement of invention

The decisions below are mainly about applying R. 88 EPC 1973, which however has not substantively changed; in R. 139 EPC, only minor editorial amendments to all three language versions have been made.

In **G 2/95** (OJ 1996, 555) the Enlarged Board held that the complete documents forming a European patent application, that is the description, claims and drawings, cannot be replaced by way of a correction under R. 88 EPC 1973 by other documents which the applicants had intended to file with their request for grant (overruling **T 726/93**, OJ 1995, 478). The interpretation of R. 88 EPC 1973 had to be in accord with Art. 123(2) EPC 1973. This meant that a correction under R. 88 EPC 1973 was thus bound by Art. 123(2) EPC 1973, in so far as it related to the content of the European patent

application as filed (see **G 3/89** (OJ 1993, 117). Such a correction could therefore be made only within the limits of what a skilled person would derive directly and unambiguously, using common general knowledge and seen objectively and relative to the date of filing, from the whole of the documents forming the content of the European patent application (referring to **G 3/89**).

The content of the European patent application was formed by the parts of the application which determined the disclosure of the invention, namely the description, claims and drawings (referring to **G 3/89**). As a result of the prohibition of extension under Art. 123(2) EPC 1973, documents other than the description, claims and drawings could only be used in so far as they were sufficient for proving the common general knowledge on the date of filing (referring to **G 3/89**). On the other hand, documents not meeting this condition could not be used for a correction even if they were filed together with the European patent application. These included, inter alia, priority documents, the abstract and the like (referring to **G 3/89**). See also **J 5/06**.

In **J 21/94** and terminating the appeal proceedings following the referral to the Enlarged Board dealt with in **G 2/95** (OJ 1996, 555), the Legal Board concluded that the originally disclosed invention B could be accorded a filing date even if there were contradictions between the request for grant (which related to invention A) and the application documents (which disclosed invention B). If a further invention (here invention A) was disclosed during grant proceedings, it could not be given a filing date unless it was clear that protection for this invention was now sought.

In **J 5/06**, the Legal Board referred to **J 21/94** and stated, if an application is accorded a date of filing pursuant to Art. 80 EPC 1973, the technical content of the application is definitively established (**G 2/95**). Exchanging this technical content with another one is a technical modification. The application of the strict requirements of either Art. 123(2) or R. 88, second sentence, EPC 1973 is not limited to those circumstances when a minor part of a complete description needs to be interpreted relative to the rest, but these requirements are applicable to any suggested amendment or correction. This means that the technical content of the application as filed cannot simply be discarded, even if it does not correspond to the intention of the applicant, but must be considered when deciding whether an amendment or correction is allowable or not. The intention of the applicant at the time of filing (or even later) is immaterial in establishing the technical content of a patent application.

In **J 16/13** the appellant requested correction of the wrongly filed description and claims under R. 139 EPC. The Legal Board stated that the skilled person would have immediately recognised the mismatch between the drawings and the other parts of the description. However, it was not "immediately evident that nothing else would have been intended than what is offered as the correction". R. 139 EPC required certainty as to the only correction possible; here, that was lacking. The Legal Board noted that the case before it was similar to **J 5/06**, in which it had been confirmed that the earlier case law (up to **T 726/93**) holding that R. 88 EPC 1973 had to be applied in the light of the applicant's intentions had clearly now been overturned (see **G 2/95**, **J 21/94**, **G 3/89**), and the request that the patent specification be corrected under R. 139 EPC was refused. See also **T 158/21**.

In **J 3/21**, the Legal Board observed that the ban on corrections aimed at replacing the description, established in **G 2/95** on the basis of Art. 123(2) EPC and further developed in e.g. **J 5/06** and **J 16/13**, was categorical and followed from the principle reflected in R. 40(1)(c) EPC that the accorded filing date is inseparable from the description as originally filed. An exchange of the description by way of correction would directly result in the separation of the filing date from the description in contravention of Art. 123(2) EPC. This principle applied irrespective of any intention of the applicant.

5.5.3 Extent of competence of the Receiving Section for corrections under Rule 139, second sentence, EPC

Rule 139, second sentence, EPC (previously R. 88, second sentence, EPC 1973) lays down as a condition for acceptance of a request for correction concerning a description, claims or drawings that a correction must be obvious in the sense that it is immediately evident that nothing else would have been intended than what is offered as the correction. This often requires a technical examination of the file, so that the question has arisen under R. 88 EPC 1973 whether the Receiving Section was competent to deal with the correction in such a case.

In **J 4/85** (OJ 1986, 205) the Legal Board made it clear that the duties of the Receiving Section did not include a technical examination of the file (recently endorsed in **J 11/20**); it should not, therefore, take a decision on a request for correction necessitating such an examination, but should leave the request in abeyance until the file had been transferred to the examining division (likewise **J 5/12**).

However, in **J 33/89** (OJ 1991, 288) the Legal Board pointed out that the Receiving Section remained competent for decisions on requests for correction of drawings under R. 88, second sentence, EPC 1973 unless the request necessitated a technical examination. In **J 12/14** the Legal Board agreed, and decided that the question of what technical features the figures in the drawings showed with respect to the claimed invention was not part of the formal examination procedure before the Receiving Section.

In **J 3/21** the Legal Board observed that the Receiving Section had not exceeded its competence (Art. 16 EPC in conjunction with R. 10(1) EPC) when deciding on the request by the applicants to correct the description of the European patent application, which had been filed in Chinese, by replacing it with that of the English translation filed on the same day. The ban on such corrections was categorical. An exchange of the description by way of correction would directly result in the separation of the filing date from the description in contravention of Art. 123(2) EPC. Refusing such a request for correction did not require any technical examination and technical qualifications.

In **J 5/01** the Legal Board decided that the wording of Art. 16 and 18 EPC 1973 as they stood left no room for an interpretation according to which the responsibility for a European patent application could be split between the Receiving Section and the examining division. The clear and mutually exclusive allocation of this responsibility in the EPC prevailed over considerations of procedural or cost economy (likewise **T 2411/10**; contrary to **J 8/82**, OJ 1984, 155). Thus, relying on the point in time at which a request for correction

was made rather than on the two acts mentioned in Art. 16 EPC 1973 (request for examination or indication under Art. 96(1) EPC 1973) would be contra legem. The Legal Board pointed out that corrections under R. 88 EPC 1973 were not a matter which formed part of the examination on filing or of the examination as to formal requirements (Art. 90 and 91 EPC 1973). Rather, the wish or the need for a correction might arise during the whole grant procedure and even afterwards, e.g. during opposition proceedings. For corrections necessitating a technical examination see **J 4/85**, OJ 1986, 205.

5.6. Erroneously filed application documents or parts (Rule 56a EPC)

New R. 56a EPC entered into force on 1 November 2022 (OJ 2022, A3). This new rule was introduced to align the EPC with R. 20.5*bis* PCT. New R. 56a EPC allows for the correction of erroneously filed application documents in EPC procedures for applications filed on or after that date. If the applicant shows that the correct application documents or parts thereof are completely contained in the claimed priority application, the initial date of filing is maintained. If this is not the case, the date of filing is changed to the date of receipt of the correct application documents. For further details, see the notice from the EPO in OJ 2022, A71.

5.7. Change of date of filing

The date of filing may change in cases where the applicant inserts missing parts of the description or missing drawings under R. 56 EPC (see IV.A.5.4.) or corrects erroneously filed parts under R. 56a EPC (see IV.A.5.6.) after the date of filing. This subsection deals with other situations where a re-dating of the application was requested.

The Legal Board held in **J 14/90** (OJ 1992, 505) that re-dating an application could not be justified on the grounds that the later date would permit the granting of a European patent for a new Contracting State. The designation of a state formed part of the request for grant of a patent, and hence belonged to the documents making up a patent application, which meant that in principle there was no reason why the filing date of an application should not be changed to the date on which a further state was designated. What was lacking were the necessary legislative provisions which would make this possible. In the case before the Legal Board there were no special circumstances, as had been the case with **J 5/89**. On the contrary the public interest and the need for consistency ruled out a re-dating.

In **J 5/89** the Legal Board had stated that it was clear that Art. 80 EPC set a date **before** which a date of filing could not be accorded to an application, but it did not follow that an application could not be given a **later** filing date with the consent of the applicant, provided that there was no detriment to the public interest, in circumstances in which the applicant had been **misled** by the EPO into not filing a new application entitled to that later filing date. See also chapter III.A. "The principle of the protection of legitimate expectations".

J 18/90 (OJ 1992, 511) followed **J 14/90** (OJ 1992, 505) in holding that the express designation of a new Contracting State in a European patent application shortly before entry into force of the EPC for that state was no justification for deferring the filing date until the date of entry into force. However, the Legal Board added in **J 18/90** that such

express designation might, after checking with the applicant, be interpreted as meaning that the applicant did not want a filing date earlier than the date on which the EPC entered into force for the state concerned.

In **T 683/06** the appeal had been lodged against a decision of the examining division to refuse a divisional application. The parent application had been sent by fax during the night. Some of the documents had arrived before midnight, some of them after midnight. According to the examining division's contested decision, the divisional application extended beyond the content of the parent application (Art. 76(1) EPC) because the claims in the divisional application were supported only by those parts of the documents for the parent application which had arrived by fax after midnight and in the light of the applicant's decision in favour of the earlier filing date did not belong to the parent application.

In its main request, the appellant sought to have the date after midnight recognised as the parent application's date of filing. However, the EPC makes no provision for a filing date once fixed to be changed subsequently. Only R. 56 EPC enables the filing date to be moved back if missing drawings or parts of the description are filed later. The correction of errors in filed documents in accordance with R. 139 EPC may also result in a change of filing date. But the case in point involved no such correction. Nor was a correction possible under R. 140 EPC.

6. Examination of formal requirements

Under Art. 90(3) EPC, if the patent application is accorded a date of filing, the EPO examines, in accordance with the Implementing Regulations, whether the requirements set forth in the following provisions have been satisfied:

- Art. 14 EPC, concerning the language of the European patent application (see chapter III.F.1.);

- Art. 78 EPC, concerning the requirements of a European patent application (see in this chapter IV.A.6.1.);

- Art. 81 EPC, concerning the designation of the inventor (see in this chapter IV.A.6.2.);

as well as any requirements laid down in the Implementing Regulations, and, where applicable;

- Art. 88(1) EPC, concerning claiming priority (see in this chapter IV.A.8.);

- Art. 133(2) EPC, concerning general principles of representation (see chapter III.V.);

- any other requirement laid down in the Implementing Regulations (see in this chapter IV.A.6.3.).

Under Art. 90(4) EPC, where the EPO notes that there are deficiencies which may be corrected, it shall give the applicant an opportunity to correct them. If any deficiency noted

under Art. 90(3) EPC is not corrected, the patent application shall be refused unless the EPC provides a different legal consequence (Art. 90(5) EPC).

In **J 18/08**, the Legal Board held that, where an application was refused under Art. 90(5) EPC, the deficiency on which the refusal decision was based could be corrected at the appeal stage. From this it followed that if an appeal was filed against such a refusal under Art. 90(5) EPC, the board had to examine whether the deficiency noted had been corrected or not. The Legal board explained that the present case was different from the situation where the non-observance of a time limit automatically led to the application being deemed to be withdrawn. In such a case the legal consequence automatically ensued when an act required within a specific time limit was not performed, without any decision to be taken concerning the refusal of the application.

In **J 11/20** the applicant appealed a decision of the Receiving Section refusing their application under Art. 90(5) EPC in conjunction with R. 58 EPC. The sole reason for the refusal was that the four amended drawings filed by the applicant to remedy formal deficiencies in the application documents were not in agreement with the application documents as originally filed and, despite the invitation by the Receiving Section, the applicant had not corrected this deficiency in due time. The Legal Board observed that when the appeal was filed, the formal deficiency had already been remedied, albeit late, with the filing of the correct drawings. Considering that the ground for refusal of the application under Art. 90(5) EPC had been remedied, the Legal Board established that the Receiving Section should have granted interlocutory revision in accordance with Art. 109 EPC.

6.1. Requirements of a European patent application (Article 78 EPC)

Under Art. 78(1) EPC a European patent application shall contain:

- a request for the grant of a European patent;

- a description of the invention;

- one or more claims;

- any drawings referred to in the description or the claims;

- an abstract

In addition it shall satisfy the requirements laid down in the Implementing Regulations.

Under Art. 78(2) EPC a European patent application is subject to the payment of the filing fee and the search fee. If the filing fee or the search fee is not paid in due time, the application shall be deemed to be withdrawn.

In **J 13/04**, the patent application had been validly filed with the French Patent Office INPI. The Legal Board observed that, under Art. 78(2) EPC 1973, the time limit for payment of

the filing and search fees in the case at hand could not be determined on the basis of either the date on which the application was forwarded to the EPO or the date on which the receipt had been issued under R. 24(2) EPC 1973 but rather only on the basis of the date on which the application had been received by the competent national authority, provided that the date of that filing was also the date of filing within the meaning of Art. 80 EPC 1973.

6.2. Designation of the inventor

Designation of the inventor is governed by Art. 81 and R. 19 EPC. The inventor is to be designated in the European patent application. If the applicant is not the inventor or is not the sole inventor, the designation must contain a statement indicating the origin of the right to the European patent (Art. 81 EPC).

Under R. 19 EPC, the request for grant of a European patent shall contain the designation of the inventor. For the requirements of the designation of inventor, see also the notice from the EPO dated 22 February 2021 concerning the amendment of Rules 19 and 143 EPC (OJ 2021, A12). Amended R. 19 EPC entered into force on 1 April 2021 (CA/D 11/20, OJ 2021, A3).

If the designation of the inventor is not made in accordance with R. 19 EPC, the EPO shall inform the applicant under R. 60(1) EPC that the application will be refused unless the designation is made within sixteen months of the date of filing of the application, or, if priority is claimed, of the date of priority. This period is deemed to have been observed if the information is communicated before completion of the technical preparations for the publication of the patent application.

Rule 21(1) EPC (R. 19(1) EPC 1973) requires consent to the rectification of a designation of inventor to be given by a "wrongly designated" person. In **J 8/82** (OJ 1984, 155), the Legal Board held that a person already named whose name is not to be cancelled from the designation is not a "wrongly designated" person within the meaning of the Rule and his consent to the addition of the name of another person is not required. (The Legal Board's finding in this decision on the allocation of responsibility between the Receiving Section and examining division for making a decision concerning such requests was overruled in **J 5/01**, see in this chapter IV.A.5.5.3).

The issue which arose in **J 1/10** was whether the legal position regarding designation of the inventor is changed by early publication of the European patent application at the applicant's request under Art. 93(1)(b) EPC, which can mean that the European patent application as published does not tell the public who the inventor is. In the Legal Board's judgment, early publication under Art. 93(1)(b) EPC did not affect the time period under R. 60(1) EPC for filing the designation of the inventor. If it did, it would shorten the 16-month period for filing that designation. However, there was no legal basis for assuming any connection between early publication and a reduction in the 16-month period. Nor could this be inferred from R. 60(1) EPC or the provisions governing the procedure for rectifying deficiencies (Art. 90(3) and (4) EPC).

The questions addressed by the Legal Board in **J 8/20** (and in **J 9/20** which is almost identical) were, firstly, whether an applicant could designate an entity which was not a natural person as the inventor (Art. 81, first sentence, EPC); secondly, what were the requirements of the statement indicating the origin of the right to the patent (Art. 81, second sentence, EPC) and, thirdly whether and to what extent the EPO could examine and object to the designation of inventor and the statement indicating the origin of the right to the patent filed under Art. 81 EPC.

Regarding the first question, the Legal Board held that the designated inventor had to be a person with legal capacity. This was the ordinary meaning of the term inventor. With the secondary legislation (R. 19 EPC) supporting this interpretation, it was not necessary to resort to the travaux préparatoires. The purpose of the provisions dealing with the inventor and its designation was primarily to confer and to protect the rights of the inventor, to facilitate the enforcement of potential compensation claims provided under domestic law, and to identify a legal basis for entitlement to the application. Designating a machine without legal capacity could serve none of these purposes. Furthermore, whether the designation of the inventor was published or corrected depended only on a unilateral decision of the inventor. Third parties had no rights in this regard. These provisions were not reconcilable with the theory that the public had a right under the EPC to know who the inventor was.

As to the second question, the Legal Board held that Art. 81, second sentence, EPC referred to the "origin of the right to the European patent". Art. 81 EPC thus established a link to Art. 60 EPC, where the right to a European patent was mentioned and provided for. Art. 60(1) EPC envisaged two ways to acquire the right to a European patent: either by developing the invention ("inventor") or by deriving the right from the inventor ("successor in title"). In view of the normative link between Art. 60(1) and Art. 81 EPC, only a declaration which identified the origin of the right in a manner consistent with Art. 60(1) EPC could be considered to comply with the EPC. Therefore, the statement that the appellant had derived the right to the European patent as owner and creator of the machine did not meet the requirements of Art. 81, second sentence, EPC in conjunction with Art. 60(1) EPC.

As to the third question, the Legal Board explained that, under Art. 90(3) EPC, the EPO shall examine whether the requirements in Art. 81 EPC have been satisfied. This examination was only a formal assessment. It was not necessary to assess whether, according to the relevant law, the applicant was de jure entitled to file the application, or if the relevant transaction or relationship was valid and really occurred. Such an examination was consistent with the principles set out in Art. 60(3) EPC and R. 19(2) EPC.

6.3. Any other requirement laid down in the Implementing Regulations

6.3.1 Presentation of the application documents (Rule 49 EPC)

Until 31 January 2023, R. 46 EPC prescribed the form of drawings and the general provisions governing the presentation of the application documents were found in R. 49 EPC. These included, among others, the requirement in R. 49(2) EPC that the

documents making up the application shall be presented so as to allow electronic and direct reproduction in an unlimited number of copies (**J 4/09**), the requirement in R. 49(7) EPC that the lines of each sheet of the description and of the claims shall preferably be numbered in sets of five (**T 3181/19**) and the requirement in R. 49(10) EPC that only the technical terms, formulae, signs and symbols generally accepted in the field in question shall be used (**T 1981/15**).

By decision of 13 October 2022, the Administrative Council adopted a set of legal changes to the Implementing Regulations aiming at supporting the ongoing digital transformation in the patent grant procedure at the EPO and strengthening alignment with the PCT (OJ 2022, A101). In this context, it delegated the authority to decide on the presentation requirements of the application and other documents to the President of the EPO (R. 49(2) EPC), including the formal requirements of drawings. These rule changes and a decision of the President restating the requirements previously set forth in R. 46 and R. 49 EPC (OJ 2022, A113) entered into force on 1 February 2023. For further details, see the notice from the EPO published in OJ 2022, A114.

In **J 11/20** the Legal Board explained that, in the context of the examination, with respect to formal requirements of the application, the Receiving Section was competent under R. 58 EPC to identify inconsistencies in the application documents which were immediately apparent, including whether formal discrepancies were present between amended documents and the documents as originally filed, provided no technical knowledge was required. Citing **J 4/09**, the Legal Board said that the question of what exactly the drawings showed with respect to the claimed invention was not part of the formal examination before the Receiving Section. An analysis by the Receiving Section going beyond the points to be examined on filing under R. 46, R. 49(1) to (9), and R. 49(12) EPC (as applicable until 31 January 2023) was impermissible. In particular, it was not permissible to allow the filing of improved drawings resulting in a disclosure which could not be found in the original version of the application; nor could the applicant be compelled to change the drawings and so sacrifice a disclosure which, in their view, could only take this form.

7. Designation of states

7.1. Legal provisions

Under Art. 79(1) EPC **all** the contracting states which are party to the EPC at the time of filing of the patent application are deemed to be designated in the request for grant of a European patent. This is different from the situation under the EPC 1973, where contracting states had to be positively designated in the request for grant. This practice caused problems since, in principle, a later designation made after the filing date of the European patent application was inadmissible. Applicants continue to have the option of withdrawing designations pursuant to Art. 79(3) EPC.

Under Art. 79(2) EPC the designation of a contracting state **may** be subject to the payment of a designation fee (under the EPC 1973 it was stated, 'The designation of a Contracting State **shall** be subject to the payment of the designation fee.' – emphasis added).

Since 1 April 2009, a flat designation fee has been payable for one or more contracting states designated (Art. 2(1) item 3 RFees).

The time limit for the payment of designation fees is within six months of the date on which the European Patent Bulletin mentions the publication of the European search report (R. 39 EPC, formerly Art. 79(2) EPC 1973).

The revised Art. 79 EPC is applicable to all European patent applications filed on or after 13 December 2007.

For case law on Art. 79(2) EPC 1973 (as in force until 30 June 1997), please refer to the CLB, 5th edn. 2006, VII.A.4.1. "Article 79(2) EPC (old version)".

7.2. Effect of non-payment of the designation fee

7.2.1 Deemed withdrawal

Since 1 April 2009 a single designation fee has been payable in respect of **all** the contracting states of the EPC. R. 39 EPC in force from that date provides that the designation fee shall be paid within six months of the date on which the European Patent Bulletin mentions the publication of the European search report. Where the designation fee is not paid in due time or the designations of all the contracting states are withdrawn, the European patent application shall be deemed to be withdrawn. Under the EPC 1973 the same time limit was to be found in Art. 79(2) EPC.

For the effect of a designation if the relevant designation fee had not been paid within the applicable time limit, see **G 4/98** in this chapter IV.A.7.2.2.

Under Art. 121 EPC, where a designation is deemed withdrawn for any contracting state in respect of which the designation fee has not been paid (R. 39(2) EPC), the applicant may now apply for further processing, unless he has waived his rights to receive a R. 112(1) EPC communication and to request further processing by crossing the appropriate box in the Request for grant form.

Rule 39 EPC as amended from 1 April 2009 applies to European patent applications filed on or after that date, as well as international applications entering the regional phase on or after that date.

7.2.2 Designation of states in divisional applications

Article 76(2) EPC 1973 stipulated that a European divisional application could not designate contracting states which were not designated in the earlier application.

In **G 4/98** (OJ 2001, 131), the Enlarged Board held, overruling **J 22/95** (OJ 1998, 569), that, without prejudice to Art. 67(4) EPC 1973, the designation of a contracting state party to the EPC 1973 in a European patent application did not retroactively lose its legal effect

and was not deemed never to have taken place if the relevant designation fee had not been paid within the applicable time limit.

The Enlarged Board further held that since in its opinion no general retroactive effect was attached to the fact that a designation was deemed to be withdrawn, the deemed withdrawal necessarily took effect upon expiry of the time limits mentioned in Art. 79(2) EPC 1973 and R. 15(2), 25(2) and 107(1) EPC 1973, as applicable, and not upon expiry of the period of grace provided by R. 85a EPC 1973.

Article 76(2) EPC has therefore been amended to ensure that only those contracting states which remain designated in the earlier application at the time of filing of a divisional application are deemed to be designated in the divisional application. (Similarly, the EPO can only act as the "designated Office" for states designated in an international application in respect of which the EPC was in force on the date on which the international application was filed; **J 30/90**, OJ 1992, 516).

7.2.3 No correction of non-payment of fee under Rule 88 EPC 1973

In **J 21/84** (OJ 1986, 75) it was held that if the designation fee for a state was paid, neither within the time limit under Art. 79(2) EPC 1973 nor within the period of grace under R. 85a EPC 1973 together with the surcharge, such failure could not be corrected on the basis of and in conjunction with the correction of an error according to R. 88 EPC 1973. See also **J 27/96**, **J 16/01** and **J 6/02**.

Concerning the indication of the purpose of fee amounts paid in respect of designation fees under the earlier law, see CLB, 6th edn. 2010, VI.F.2.4. "Designation fees".

7.3. Correction of designation of states (Rule 139 EPC)

7.3.1 Decisions considering the application of the EPC 1973

Under Art. 79 EPC 1973 the request for the grant of a European patent had to contain the designation of the Contracting State or States. This was substantially changed with the EPC 2000. The decisions below consider the application of the EPC 1973. (Unlike Art. 79 EPC 1973, R. 88 EPC 1973 (now R. 139 EPC) was not amended in substance).

According to **J 10/87** (OJ 1989, 323) a request for retraction of a withdrawal of the designation of a Contracting State filed after publication of the patent application may have been allowable under R. 88 EPC 1973 in appropriate circumstances, in particular if;

(a) the public had not been officially notified of the withdrawal by the EPO at the time the retraction of the withdrawal was applied for;

(b) the erroneous withdrawal was due to an excusable oversight;

(c) the requested correction did not result in a substantial delay of the proceedings; and

(d) the EPO was satisfied that the interests of third parties who may possibly have taken notice of the withdrawal by inspection of the file are adequately protected.

J 17/99 explained that with respect to corrections of designations in Euro-PCT applications, the same principles applied as for Euro-direct applications (see also chapter VI. "The EPO acting as a PCT authority").

J 27/96 concerned a Euro-PCT application which originally designated all the contracting states for a European patent, but on entry into the regional phase only designated and paid fees for ten. The Legal Board acknowledged that correction of a mistake pursuant to R. 88 EPC 1973 by adding the designation of a state had in principle been allowed by the Legal Board (see **J 3/81**, OJ 1982, 100). However, it could remain undecided whether R. 88 EPC 1973 could have been applied to the designations purported to be missing, as the lack of fee payment in due time was not a mistake that could be corrected under R. 88 EPC 1973 and was therefore a failure which could not be remedied (referring to **J 21/84**, OJ 1986, 75). Nor could the appellant's auxiliary request to replace expressly designated states with other non-designated states succeed – the designated states were not designated erroneously – rather the error lay in the omission of the non-designated states. Moreover, were there a retroactive effect of the correction, this did not mean that the applicant would be reinstated into the procedural phase when designations had to be made and fees paid or that, in consequence, the whole procedure in that phase would be available to him again. Correction of a mistake was an isolated procedural measure and not a case of re-establishment into a procedural phase as a whole.

In **J 3/01** the Legal Board was concerned with the same problem, in that the appellant's request was aimed at a reinstatement into an earlier procedural phase by means of a correction under R. 88 EPC 1973. The Legal Board held that correction under R. 88 EPC 1973 did not reverse the effect of decisions already taken on the basis of the uncorrected document and did not re-open a procedural phase already terminated or a time limit already expired. In other words, a procedural loss of right only indirectly caused by the incorrect document would not be remedied by a later correction of the document pursuant to R. 88 EPC 1973. This principle also characterised the functional and essential difference between a correction under R. 88 EPC 1973 on the one hand and restitutio in integrum pursuant to Art. 122 EPC 1973 on the other hand (see also **J 25/01**). The Legal Board concluded that correction under R. 88 EPC 1973, to include designation of the UK following failure to pay the designation fee, was not allowable, as it would be in breach of Art. 122(5) EPC 1973, according to which re-establishment into periods for payment of designation fees was not allowable.

In **J 16/08** the request for correction of the designation of states was allowed in the unusual circumstances of the case. Following the case law summarised in **J 7/90** (OJ 1993, 133) and endorsed in **J 6/02**, the Legal Board applied the three conditions to be met by such a request for correction in order for it to be allowable – firstly, that the error was an excusable oversight; secondly, that the request for correction was filed without undue delay upon discovery of the error, and thirdly, that the request for correction was, in the public interest, made early enough to enable publication of a warning with the European patent application. No such warning was required in the circumstances of this case, as the

application had erroneously been published showing all contracting states as designated. Third parties were therefore not prejudiced by the correction, since no publication had ever indicated that the territorial scope of the invention was limited to two contracting states.

7.3.2 Decisions considering the application of the EPC 2000

Under Art. 79(1) EPC **all** the contracting states which are party to the EPC at the time of filing of the patent application are now deemed to be designated in the request for grant of a European patent. Applicants continue to have the option of withdrawing designations pursuant to Art. 79(3) EPC (see in this chapter IV.A.7.1.).

J 9/14 confirmed the established jurisprudence of the Legal Board on the correction of errors according to which the withdrawal of the designation of a contracting state could not be retracted once it had been published in the European Patent Bulletin. The Legal Board referred to **J 1/11** where it had been held that with regard to the progress of technology and the implementation of internet technology by the EPO a distinction between public file inspection and publication in the European Patent Bulletin was no longer relevant.

The Legal Board in **J 9/14** re-emphasised that the public had a legitimate interest in relying on the information published by the EPO. The official notification to the public of the withdrawal is a key step and legal certainty would suffer unacceptably if thereafter, even for only a short period, a correction of the withdrawal were allowable (see also **J 25/03**, **J 37/03**, **J 7/06**).

8. Priority

This section deals with the requirements for filing priority documents and correcting priority declarations. Further details on priority can be found in chapter II.D.

8.1. Filing of priority documents

An applicant desiring to take advantage of the priority of a previous application must file a declaration of priority and any other document required, in accordance with the Implementing Regulations (Art. 88 EPC). Under R. 52(2) EPC, a declaration of priority shall preferably be made on filing the European patent application, but it may still be made with sixteen months of the earliest priority date claimed. This is a significant relaxation of the requirements as compared to R. 38(2) EPC 1973, under which at least the date and the state of the previous application had to be indicated on filing.

Similarly, R. 53 EPC (R. 38(3) EPC 1973) provides that an applicant claiming priority shall file a copy of the previous application within sixteen months of the earliest priority date claimed.

In **J 1/80** (OJ 1980, 289) it was stated that as R. 38(3) EPC 1973 permitted an applicant to file certified copies of the priority documents at any time before the end of the sixteenth month after the date of priority, there was only a deficiency which he must be given an invitation to correct if the priority documents had not been filed at the end of the period.

8.2. Correction of priority declarations

Under the EPC 1973, the correction of priority declarations was allowed under R. 88 EPC 1973. The possibility to correct the declaration of priority was expressly introduced into the EPC 2000 in R. 52(3) EPC. This additional possibility of correcting priority data under R. 52(3) EPC is not exhaustive and R. 139 EPC therefore continues to be applicable, too (see e.g. **J 11/18**, **J 15/18**).

8.2.1 Requirement for mistake to have been made

Under the EPC 1973, the Legal Board allowed correction of state designations under R. 88, first sentence, EPC 1973 (now R. 139 EPC), early on (**J 8/80**, OJ 1980, 293; **J 12/80**, OJ 1981, 143; **J 3/81**, OJ 1982, 100; **J 21/84**, OJ 1986, 75). Shortly afterwards the rather strict principles developed in these decisions were also applied in cases where correction of priority declarations was at stake. Although a mistake correctable under R. 88, first sentence, EPC 1973 could be an incorrect statement or the result of an omission, all the previous cases related to omitted priority declarations (**J 3/82**, OJ 1983, 171; **J 4/82**, OJ 1982, 385; **J 14/82**, OJ 1983, 121; **J 11/89** and **J 7/90**, OJ 1993, 133).

In the four decisions **J 3/91** (OJ 1994, 365), **J 6/91** (OJ 1994, 349), **J 9/91** and **J 2/92** (OJ 1994, 375), the Legal Board refined the principles to be applied to corrections of priority declarations. In **J 6/91** it analysed and summarised the previous case law, pointing out that the applicant had to prove a **mistake**, i.e. that the document filed with the EPO did not express the true intention of the person on whose behalf it was filed. In the earlier decisions the **burden of proof** on the applicant was defined as a heavy one. In **J 9/91**, however, the Legal Board took the view that the omission of a priority declaration would, in nearly every case, be an error. Thus, as a general rule, there was no need in cases of this kind to require special evidence to discharge the burden on the applicant of proving that a mistake had been made.

8.2.2 Time limit for request for correction

Despite the fact that R. 88, first sentence, EPC 1973 allowed correction without any time bar, the Legal Board followed the established case law requiring a request for correction of a priority claim to be made sufficiently early for a warning to be included in the publication of the application (**J 3/82**, OJ 1983, 171; **J 4/82**, OJ 1982, 385; **J 14/82**, OJ 1983, 121). This principle was upheld because the EPO, when exercising its discretionary power under R. 88, first sentence, EPC 1973 had to balance the applicant's interest in gaining optimum protection and a third party's interest in maintaining legal security and, in particular, in ensuring that the published application data were correct.

The Legal Board in **J 6/91** noticed, however, that the previous case law in special circumstances already allowed the correction even without such a warning:

(i) if the EPO was partly responsible for the fact that no warning was published (**J 12/80**, OJ 1981, 143) and/or

(ii) if the interest of the public was not seriously affected because

- the mistake was obvious (in this sense, implicitly, **J 8/80**, OJ 1980, 293);

- under certain circumstances, where only a second or further priority was added (**J 4/82**, OJ 1982, 385; **J 14/82**, OJ 1983, 121; **J 11/89**);

- the public was otherwise informed about the full scope of protection sought by the applicant (**J 14/82**, OJ 1983, 121).

In **J 3/91**, **J 6/91** and **J 2/92** it was held that even after publication of a European patent application without a warning, the priority declaration could be corrected under R. 88, first sentence, EPC 1973 provided that there was an **obvious discrepancy** in the published application indicating that something was wrong. In such a case the interests of third parties were not adversely affected by the correction.

In **J 3/91** the Legal Board held that an experienced practitioner could have noticed the obvious discrepancy because the claimed Japanese priority date (31 December 1983) and the European application date (3 January 1984) were close together and the Japanese file number was mentioned.

In **J 6/91** the international application in suit claiming priority from a US continuation-in-part application was itself presented as a continuation-in-part application and referred back to an earlier US application. In view of this and other special circumstances, the Legal Board allowed the addition of a (first) priority claim referring to the earlier US application.

In **J 2/92** the US priority date claimed for a PCT application was, owing to a clerical error, a Saturday when the USPTO was closed, instead of the previous Friday. The correct date was indicated on the priority document. Owing to a further clerical error in the request for transmittal of priority documents under R. 17.1(b) PCT (a typing error in the document number), the Receiving Office – in this case the USPTO – transmitted the wrong document to WIPO. The Legal Board allowed its replacement even after publication of the international application, adding, however, that this might not always be possible (see also **T 33/06**).

In the parallel cases **T 972/93** and **T 973/93** the examining division had refused a request for the priority date to be corrected. European patent application E1 claimed the priority of a French application F1, from which two French divisional applications F2 and F3 were filed within the priority year claiming the priority of the parent application. At issue in **T 972/93** and **T 973/93** were European applications E2 and E3, which claimed the priority of F2 and F3 respectively. In error however, the filing date of F2 and F3 was given as the priority date. This mistake was detected during examination proceedings, after E2 and E3 had been published with the wrong priority date, because E1 was discovered as a prior right within the meaning of Art. 54(3) EPC 1973 (Art. 54 EPC has been substantially amended – see chapter I.C. "Novelty").

The board allowed the correction (following **J 6/91**, OJ 1994, 349), ruling that the mistake was apparent, because only eight months separated the filing date of E2 and E3 from the incorrect priority date, whereas the priority year was usually exploited to the full. The interests of third parties had not been adversely affected because the precautionary filing of two European divisional applications with respect to E1, which had the same content as F2 and F3, made it possible to gain protection for the subject-matters of E2 and E3 with the priority of F1.

On the other hand, in **J 7/94** (OJ 1995, 817) the Legal Board did not allow the correction. It held that the mere fact that an existing priority was not claimed could not justify adding this priority by correction. The correction of priority data, not requested sufficiently early for a warning to be included in the publication of the application, was only allowable if it was justified by special circumstances (confirming **J 6/91**, OJ 1994, 349). See also **T 796/94**.

In **J 11/92** (OJ 1995, 25) it was held that an incomplete priority declaration could be corrected, by the addition of an omitted priority in special circumstances, even after publication of the European patent application without a warning to the public that a request for correction had been made, provided that the public had been informed about the full scope of European patent protection sought, by way of a second European or Euro-PCT patent application, filed as a precautionary measure by the applicant in due time (referring to **J 6/91**, OJ 1994, 349).

In **T 713/02** (OJ 2006, 267), the board held that the examination of a request for correction of priority data after the publication of the application was not to be restricted to that portion of the facts and circumstances which in a decision of a board in another case were considered not to preclude the correction. Therefore, in the case before the board, it could not be ignored that the requested correction by addition of an earlier priority date would eliminate from the state of the art pursuant to Art. 54(2) EPC 1973 a highly relevant document, which the applicant had previously de facto accepted as comprised in that state of the art (see, however, the notice from the EPO regarding **T 713/02** (OJ 2006, 293a), according to which the EPO's departments of first instance do not, for the time being, follow the findings that no decisions, except where a total loss of rights should be remedied, may be taken in the applicant's favour prior to the decisions terminating the granting procedure).

8.2.3 Correction of the priority declaration under Rule 52(3) EPC

New R. 52(3) EPC introduced the possibility to correct the declaration of priority. New R. 52(2) EPC and (3) EPC apply the time periods laid down in the PCT for the addition or correction of priority claims to Euro-direct applications, with the necessary terminological adjustments, in order to avoid treating Euro-PCT and Euro-direct applications differently. Pursuant to R. 52(3) EPC, an applicant may correct a declaration of priority within 'sixteen months from the earliest priority date claimed, or, where the correction would cause a change in the earliest priority date claimed, within sixteen months from the correct earliest priority date, whichever sixteen-month period expires first, provided that such correction may be submitted until the expiry of four months from the date of filing accorded to the European patent application'. However, for easy publication, a declaration of priority may

not be made or corrected after a request for early publication of the European patent application (Art. 93(1)(b) EPC) has been filed (R. 52(4) EPC).

9. Fiction of withdrawal of the application (Rule 100(3) EPC)

Rule 100 EPC concerns the examination of appeals. If an applicant, as the appellant in ex parte appeal proceedings, fails to reply in due time to an invitation under R. 100(2) EPC, the European patent application is deemed to be withdrawn under R. 100(3) EPC, unless the decision impugned was taken by the Legal Division. These provisions were previously contained in Art. 110(2) and (3) EPC 1973 respectively.

The Legal Board held in **J 29/94** (OJ 1998, 147) that if the appellants failed to reply in due time to an invitation under Art. 110(3) EPC 1973, the European patent application was deemed withdrawn, even if the appeal related to formal points, as the effect of the appeal, namely that the board was now competent for the case, applied to the entire application (see chapter V.A.1. "Legal character of appeal procedure").

10. Publication of the application

Article 93 EPC concerns the publication of the European patent application, which should take place as soon as possible after the expiry of a period of eighteen months from the date of filing, or, if priority has been claimed, from the date of priority, unless the applicant requests earlier publication. Under R. 67(1) EPC (R. 48 EPC 1973), the President of the EPO shall determine when the technical preparations for publication of the patent application are deemed to have been completed (see the decision of the President of the EPO dated 12 July 2007 concerning the completion of technical preparations for the publication of European patent applications (OJ SE 3/2007, D.1)). The application shall not be published if it has been finally refused or withdrawn or is deemed to be withdrawn before the termination of the technical preparations for publication (R. 67(2) EPC).

In **J 5/81** (OJ 1982, 155) it was stated that the key date for completion of the technical preparations for publication under Art. 93 EPC 1973 specifiable pursuant to R. 48(1) EPC 1973 could be said to give the applicant a certain minimum period of time within which his withdrawal of the application also prevented its publication. If the application was not withdrawn until after the key date, the applicant could no longer rely on its not being published. Nevertheless, the EPO was allowed by law to prevent publication, at its own discretion.

B. Examination procedure

1. Stage before substantive examination 1341
1.1. Amendments made by the applicant of their own volition under Rule 137(2) EPC 1341
1.2. Request for examination (Rule 70 EPC) 1341
1.2.1 General issues 1341
1.2.2 The invitation to confirm early request for examination (Rule 70(2) EPC) 1343
1.2.3 Transfer of the responsibility for examining the application to the examining division 1343
2. The first stage of substantive examination 1344
2.1. Beginning of "substantive examination" 1344
2.2. Communications under Rule 71(1) and (2) EPC 1345
2.2.1 Invitation to correct deficiencies and to propose amendments (Rule 71(1) EPC) 1345
2.2.2 Content of Article 94(3) EPC communication (Rule 71(2) EPC) 1346
2.3. Refusal after a single communication 1347
2.3.1 Discretion of the examining division 1347
2.3.2 Bona fide attempt to deal with the examining division's objections 1349
2.4. Amendments under Rule 137(3) EPC 1350
2.4.1 Discretion of the examining division under Rule 137(3) EPC 1350
2.4.2 Consent under Rule 137(3) EPC in oral proceedings 1353
2.4.3 The burden of proposing amendments 1353
2.4.4 Converging or diverging versions of claims 1354
2.4.5 Reasons for the exercise of discretion 1355
2.4.6 Requests for amendments filed at an advanced stage in proceedings 1356
2.4.7 Late-filed requests after summons to oral proceedings in examination 1357
2.4.8 Second communication under Rule 71(3) EPC: the consent of the examining division 1357
2.5. Failure to reply to the communication from the examining division (Article 94(4) EPC) 1358
2.5.1 Reply within the meaning of Article 94(4) EPC 1358
2.5.2 Waiver of the applicant's right to present comments 1359
2.6. Issuing a further communication in light of Article 113(1) EPC 1359
2.6.1 Introduction 1359
2.6.2 Arguments taken into account in the decision of the examining division 1360
2.6.3 Inclusion of the essential reasoning 1361
2.6.4 Essential reasoning based on an International Preliminary Examination Report 1362
2.6.5 Fresh argument based on grounds and evidence communicated beforehand 1362
2.6.6 Bona fide attempt by the applicant to overcome the objections 1363
2.6.7 Form of the communication under Article 113(1) EPC 1364
2.7. Informal communications 1364
2.7.1 Telephone conversations 1364
2.7.2 Interviews 1365
3. The grant stage in examination 1365
3.1. Informing applicant of the text intended for grant (Rule 71(3) EPC) 1366

3.2. Approval of the text by the applicant 1367
3.2.1 Clear and unambiguous approval of the text 1367
3.2.2 Option to waive the right to a further communication under Rule 71(3) EPC 1369
3.2.3 Decisions with no text submitted or agreed by the applicant (Article 113(2) EPC) 1369
a) General issues 1369
b) Deemed approval under Rule 71(5) EPC 1370
c) Auxiliary request issues 1373
3.3. Amendments or corrections filed in response to the communication under Rule 71(3) EPC 1374
3.3.1 Amendments where Rule 71(3) EPC communication is the first communication 1374
3.3.2 Amendments and corrections requested according to Rule 71(6) EPC 1375
3.3.3 Criteria for admitting amendments filed in reply to the Rule 71(3) EPC communication 1375
3.3.4 Claims fees due in response to Rule 71(3) EPC communication 1378
3.4. Amendment after approval of the text for grant 1379
3.5. Examination after remittal for further prosecution 1380
3.6. Amendments after the decision to grant 1381
3.7. Withdrawal of amendments and abandonment of subject-matter 1382
3.7.1 General issues 1382
3.7.2 Effects of non-payment of claims fees 1383
3.8. Withdrawal of the patent application 1383
3.8.1 General issues 1383
3.8.2 Unambiguous and unconditional withdrawal 1384
3.8.3 Correction of the withdrawal of the application 1384
a) Conditions for the correction 1385
b) Public interest 1385
c) Intention of the party 1387
3.9. Refusal of a European patent application under Article 97(2) EPC 1388
3.10. Date on which a decision to grant a European patent takes effect 1390
3.11. Errors in the European Patent Bulletin 1391
4. Additional searches during examination 1392
4.1. Rule 63 EPC governing incomplete search 1392
4.1.1 Introduction 1392
4.1.2 Additional search necessary: limited discretion of the examining division 1393
4.1.3 Declaration under Rule 63(2) EPC 1396
a) Notoriously well-known technical features 1396
b) Subject-matter not having technical character 1396
c) Statement indicating the subject-matter to be searched not sufficient to overcome the deficiency noted under Rule 63(1) EPC 1397
4.2. Non-payment of further search fees under Rule 64 EPC 1397
5. Amendments relating to unsearched subject-matter – Rule 137(5) EPC 1398
5.1. General issues 1398
5.2. The purpose of Rule 137(5) EPC 1398
5.3. Applicability of Rule 137(5) EPC 1399
5.3.1 General issues 1399

5.3.2 Extent of the European search report 1400
5.3.3 Subject-matter of amendment not combining with the originally claimed invention 1402
5.4. Criteria for amendments to be allowable under Rule 137(5) EPC 1403
5.4.1 Amendment not affecting the notion of unity of invention 1403
5.4.2 No legal basis for exercise of discretion 1405
5.4.3 Amendments filed to meet an objection 1405
5.5. Non-compliance with Rule 137(5) EPC: a ground for refusing an application 1406

1. Stage before substantive examination

1.1. Amendments made by the applicant of their own volition under Rule 137(2) EPC

Following receipt of the search report and search opinion, and prior to the first communication from the examining division, the applicant must (subject to certain exceptions) respond to the search opinion, by filing amendments to the description, claims or drawings and/or filing their observations on the objections raised in the search opinion. Any amendments filed at this stage are made by the applicant of their own volition in accordance with R. 137(2) EPC (Guidelines C-II, 3.1 – April 2025 version).

Rule 137(2) EPC states that together with any comments, corrections or amendments made in response to communications by the EPO under R. 70a(1) or (2) EPC or R. 161(1) EPC, the applicant may amend the description, claims and drawings of their own volition. No further amendments may be made without the consent of the examining division (R. 137(3) EPC).

The applicant's response required by R. 70a EPC (or filed voluntarily in response to search opinions not requiring a response) will be taken into account by the examining division when drafting the first communication (Guidelines C-II, 3.1 – April 2025 version).

In **T 1178/08** the board stated that in accordance with Art. 123(1) EPC in conjunction with R. 137(2) and (3) EPC, an applicant is to be given at least one opportunity to amend the application of his own volition. No further amendments may be made without the consent of the examining division.

1.2. Request for examination (Rule 70 EPC)

1.2.1 General issues

According to Art. 94(1) EPC, the EPO shall, in accordance with the Implementing Regulations, examine on request whether the European patent application and the invention to which it relates meet the requirements of the EPC. The request shall not be deemed to be filed until the examination fee has been paid. Art. 94(1) EPC is nearly identical to Art. 94(1) EPC 1973. Only the word "written" was deleted and replaced by the

words "in accordance with the Implementing Regulations". As regards the requirement to use the written form, see R. 1 EPC. If no request for examination has been made in due time, the application shall be deemed to be withdrawn (Art. 94(2) EPC, which corresponds to Art. 94(3) EPC 1973).

Rule 70(1) EPC (Art. 94(2) EPC 1973) stipulates that the applicant may request examination of the European patent application up to six months after the date on which the European Patent Bulletin mentions the publication of the European search report. The request may not be withdrawn.

In **J 21/98** (OJ 2000, 406) the Legal Board stated that the request for examination constituted an autonomous step, which had to be kept quite separate from the (previous) step of filing the European patent application. In particular Art. 94(1) EPC 1973 showed that, according to the EPC, the patent application was not considered as the only necessary step to be taken by the applicant to obtain the grant of a patent, since a further step was necessary, consisting in a written request for examination – that meant a new declaration of intention to continue the grant procedure. Thus the applicant was given the right to know the outcome of the search report before deciding whether to ask for the prosecution of the grant procedure by means of the request for examination, which implied the payment of the related fee, or to drop said procedure.

In **J 12/82** (OJ 1983, 221) the Legal Board found that the unequivocal terms of Art. 94 EPC 1973 did not permit any wide interpretation; the article required that the request be written, filed within a certain period and accompanied by payment of the fee within the same period. It held that the mere payment of the examination fee within the time limits provided for in Art. 94(2) EPC 1973 could not be a substitute for filing the request itself in good time.

In **J 4/00** the Legal Board held that a request for examination under Art. 94 EPC 1973 required, over and above payment of the examination fee, that the underlying intention of an applicant that their application should proceed to examination was manifested in a written statement addressed to the EPO and received in time. To qualify as a request for examination, the only reasonable interpretation of the text filed with the EPO had to be that the applicant thereby wanted to inform the EPO that they wished to have the application examined pursuant to Art. 94 EPC 1973.

In **T 158/12** the board held there was no provision in the EPC which would allow the payment of multiple examination fees for a patent application. This was in line with the possibilities to argue in the examination proceedings that unity existed or to file divisional applications which allowed the principle of one invention - one examination (and one examination fee for one examination proceedings) to be maintained. Thus for one application, only one examination was to be carried out as the result of the single examination fee paid. Having chosen one invention (or one group of inventions) to be made the subject of examination, this choice could not be altered once examination of that invention had commenced. The board was of the opinion that this approach based on the statutory provisions of the EPC was confirmed in opinion **G 2/92** (OJ 1993, 591), which found that "at the examination stage, having regard to the requirement of unity of invention

and the fact that only one examination fee can be paid for each application, clearly only one invention in each application is to be examined" (point 2 of the Reasons). Hence, the appellant's view that the examination of an application could be based on more than one invention was not supported by this opinion of the Enlarged Board.

1.2.2 The invitation to confirm early request for examination (Rule 70(2) EPC)

Under R. 70(2) EPC (Art. 96(1) EPC 1973) if the request for examination has been filed before the European search report has been transmitted to the applicant, the EPO shall invite the applicant to indicate, within a period to be specified, whether they wish to proceed further with the application, and shall give them the opportunity to comment on the search report and to amend, where appropriate, the description, claims and drawings. In order to accelerate proceedings, the EPO offers the applicants the possibility to waive the right to receive the invitation to confirm early request for examination under R. 70(2) EPC (see Guidelines C-VI, 3 – April 2025 version).

Following **J 8/83** (OJ 1985, 102), the applicant is entitled to receive the invitation provided for in R. 70(2) EPC also in cases where a supplementary European search report is to be drawn up on a Euro-PCT application (see Guidelines E-IX, 2.5.3 – April 2025 version).

In **J 8/83** and **J 9/83** the Legal Board found that if a supplementary European search report had to be drawn up in respect of an international application which was deemed to be a European patent application, the applicant was entitled to receive the invitations provided for in Art. 96(1) EPC 1973 and R. 51(1) EPC 1973 (now R. 70(2) EPC). Since in the case of such an international application, responsibility for examination of the application did not pass to the examining division until the applicant had indicated under Art. 96(1) EPC 1973 that they desired to proceed further with their application, the applicant might obtain a refund of the examination fee if in response to the invitation under Art. 96(1) EPC 1973 they withdrew their application, or allowed it to be deemed to be withdrawn. The Legal Board noted that the provisions of Art. 96(1) EPC 1973 and R. 51(1) EPC 1973 encouraged applicants to review their applications critically and realistically in the light of the European search report, before substantive examination began. The opportunity given by the EPO to obtain a refund of the substantial fee for examination by withdrawing the application at that stage, or allowing it to be deemed to be withdrawn, provided an additional incentive to withdraw cases unlikely to succeed.

1.2.3 Transfer of the responsibility for examining the application to the examining division

Responsibility for examining the application passes from the Receiving Section to the examining division once a request for examination has been filed (R. 10(2) EPC). This is subject to two exceptions: (i) if a request for examination has been filed before the European search report has been transmitted to the applicant, then the examining division is responsible from the time when the EPO receives the confirmation of the request for early examination following an invitation under R. 70(2) EPC; (ii) if the applicant has also waived the right under R. 70(2) EPC, then the examining division is responsible from the time when the search report is transmitted to the applicant (R. 10(3) EPC and R. 10(4) EPC; Guidelines C-II, 1 – April 2025 version).

2. The first stage of substantive examination

2.1. Beginning of "substantive examination"

In **J 9/10** the Legal Board held that a communication pursuant to Art. 94(3) EPC on EPO Form 2001A entitled "Communication pursuant to Article 94(3) EPC" which was automatically generated by a computer and posted by a formalities officer without the involvement of an examiner appointed to the examining division did not constitute a legally effective act of the examining division and therefore could not be regarded as the beginning of "substantive examination" pursuant to Art. 10b(b) RFees (as amended by decision of the Administrative Council of 15 December 2005; now Art. 11 RFees as last amended by decision of the Administrative Council of 29 June 2016). The Legal Board noted that to ensure predictability and verifiability of the application of Art. 10b(b) RFees, the beginning of "substantive examination" had to be interpreted as requiring a concrete and verifiable act of the examining division as regards "substantive examination" after having assumed responsibility for the examination of the application (see also **J 25/10**, OJ 2011, 624). The Legal Board held that if a communication of a particular examining division was to be legally valid, it had to have been written on behalf of and represent the views of the members who had been appointed to that division to examine the issues forming the subject of the communication. There was, however, no indication in the file that the appointed primary examiner had actually authenticated the communication under Art. 94(3) EPC before it was despatched by the formalities officer. Therefore, the communication could not be attributed to the examining division, but only to the formalities officer whose name was indicated on EPO Form 2001A. Further, the Legal Board found that the formalities officer, although acting in good faith, had had no power to issue the communication pursuant to Art. 94(3) EPC. Following decisions **J 9/10** and **J 25/10** the EPO made adjustments to the system for refunding examination fees (see notice dated 29 January 2013, OJ 2013, 153). The examination starting date is now stored in the publicly available part of the electronic file to ensure that it is verifiable. For published applications, this date is visible in the European Patent Register.

In **J 17/92** the Legal Board held that allowing consolidation of proceedings was something both permissible and desirable under the EPC, in accordance with the desire expressed in the preamble to the EPC that protection be obtainable in the contracting states by means of a single procedure for the grant of patents. Consolidation was not only in the interest of applicants, but also in that of the public not to have to take into account two separate European patents with the same text. The Legal Board noted that the conditions to be imposed on consolidation should not be more restrictive than necessary. It therefore took the view that the condition that the two applications at issue as filed had to be identical was too stringent. In the case in hand, the Legal Board found that if the form of claims with which the applicant wished to proceed in the consolidated applications was acceptable either as an amended set of claims or as being identical to the set of claims as filed, consolidation should be possible. In the Legal Board's view, such an amended set of claims should prima facie not prevent consolidation.

2.2. Communications under Rule 71(1) and (2) EPC

2.2.1 Invitation to correct deficiencies and to propose amendments (Rule 71(1) EPC)

The applicant's response to the search opinion required by R. 70a EPC (or filed voluntarily in response to search opinions not requiring a response) will be taken into account by the examining division when drafting the first communication (Guidelines C-II, 3.1 – April 2025 version).

According to R. 71(1) EPC (R. 51(2) EPC 1973) in any communication under Art. 94(3) EPC the examining division shall, where appropriate, invite the applicant to correct any deficiencies noted and to amend the description, claims and drawings within a period to be specified.

Article 94(3) EPC states that if the examination reveals that the application or the invention to which it relates does not meet the requirements of the EPC, the examining division shall invite the applicant, as often as necessary, to file their observations and, subject to Art. 123(1) EPC to amend the application.

In **T 301/10** the board stated that according to the established case law developed in relation to Art. 96(2) EPC 1973 and also applicable to Art. 94(3) EPC, the expression "**as often as necessary**" in this article indicates that the examining division has discretion which has to be exercised objectively in the light of the circumstances of the case (see **T 162/82**; OJ 1987, 533; **T 300/89**, OJ 1991, 480; **T 726/04**). See also **T 1734/10**.

Neither Art. 113(1) EPC 1973 nor Art. 96(2) EPC 1973 (Art. 94(3) EPC) require that the applicant be given repeated opportunities to comment on the examining division's submissions if the main objections to the grant of a European patent remain the same (**T 84/82**, OJ 1983, 451; **T 161/82**, OJ 1984, 551; **T 162/82**, **T 243/89**, **T 958/99**). A further invitation to present comments following a substantiated communication in which deficiencies were recorded is only appropriate if it would appear likely that, in the light of the applicant's reply, the examination proceedings would terminate in the granting of a patent (see **T 84/82**, **T 161/82**, **T 162/82**, **T 243/89**, **T 300/89**, **T 793/92**, **T 516/93**, **T 201/98**).

In **T 17/22** the examining division had issued a communication headed "Invitation pursuant to R. 137(4) EPC and Art. 94(3) EPC". In the annex to this communication the examining division had raised an objection under Art. 123(2) EPC, and had added: "nota bene: The amendment appears also not suitable to remedy the deficiencies." The decision to refuse the application was based on Art. 123(2) EPC as well as on lack of novelty, inventive step and clarity. The board held that said communication could not be considered a substantive communication under Art. 94(3) EPC nor a communication which would obviate the need for such a communication. The communication under R. 137(4) EPC, with a period for reply of one month, was of a formal nature. The applicant was merely asked to identify the amendments and to indicate the basis for them in the application as filed, independently of whether these amendments complied with Art. 123(2) EPC. The objection raised by the examining division under Art. 123(2) EPC in the annex to the communication under

R. 137(4) EPC, and the added nota bene that the amendment appeared also not suitable to remedy the deficiencies did not turn this communication into a substantive communication under Art. 94(3) EPC and R. 71(1) EPC, especially as the period for a reply was still only one month. The mere reference to Art. 94(3) EPC in the heading of the communication did not affect this conclusion. The omission of a communication under Art. 94(3) EPC was, in the board's view, a substantial procedural violation, as it deprived the applicant of the opportunity to react to such a communication. See also chapter III.B.2.5.3 regarding the violation of the right to be heard.

2.2.2 Content of Article 94(3) EPC communication (Rule 71(2) EPC)

According to R. 71(2) EPC (R. 51(3) EPC 1973) any communication under Art. 94(3) EPC (Art. 96(2) EPC 1973), shall contain a reasoned statement covering, where appropriate, all the grounds against the grant of the European patent.

In **T 937/09** the board observed that R. 71(2) EPC contained two requirements: applicants had to be informed, first, of each EPC requirement deemed not to be met and, second, for each such requirement, of the legal and factual reasons why it was deemed not to be met.

If no search opinion has been issued, the examiner's first communication under Art. 94(3) EPC will, as a general rule and by analogy with the search opinion, cover all objections to the application (Guidelines C-III, 4 – April 2025 version).

In **J 32/95** (OJ 1999, 733) the Legal Board held that the objection raised by the appellant that the examining division had unduly dealt with the application in a piecemeal manner was unfounded. According to the Guidelines applicable at the time, the examiner's first letter should, as a general rule, cover all objections to the application. Pursuant to R. 51(3) EPC 1973 any communication shall, where appropriate, cover all the grounds against the grant of the European patent. Whether and to what extent this was to be done was a matter of procedural expediency. The Legal Board explained this meant that the examining division had to weigh the aspects of the case involved. In particular, the likelihood that the objection raised could be overcome, the kind of amendments which could be expected, and any objections which could yet remain thereafter had to be weighed against the amount of additional work involved for the examining division. In the case in hand, an objection concerning lack of novelty was raised in the first communication against all claims of the application. Such a far-reaching objection can normally only be overcome by substantial amendment of the claims. Therefore, claims amended in this way, if filed, have to be largely re-examined with respect to the prior art. In the view of the Legal Board, R. 51(3) EPC 1973 therefore did not require that an examining division should immediately raise the objection that the claims on file lacked inventive step in relation to other documents, if it was of the opinion that all the claims in the application were anticipated by one document. By contrast, in its second communication concerning the amended claims filed by the appellant, the examining division, although maintaining the non-novelty objection against new claim 1, also raised an objection of lack of inventive step. The Legal Board came to the conclusion that the appellant's submission that the examining division had breached R. 51(3) EPC 1973 by issuing several communications was unfounded. See also **T 937/09**.

In **T 2311/10** the board held that whether and to what extent the examining division covered all the grounds against the grant of the European patent in a communication was a question of procedural economy (see **J 32/95**) and a matter for the division's discretion.

In **T 20/83** (OJ 1983, 419) the board noted that Art. 96(2) EPC 1973 prescribed that the examining division had to draw all obstacles to patentability to the applicant's attention. This conclusion related to the requirements for patentability as laid down in the EPC itself. The board in **T 830/91** (OJ 1994, 728) noted however that the validity of a patent in various contracting states was not an immediate condition under the EPC.

In **T 98/88** the board pointed out that R. 51(3) EPC 1973 did not make it compulsory for communications in accordance with Art. 96(2) EPC 1973 to set out all the grounds against the grant of the patent. The board's view in this case was that deferral of the examination in respect of the requirements under Art. 52 EPC 1973 until a clear version of the claims had been received did not conflict with R. 51(3) EPC 1973. See also **T 677/97**.

2.3. Refusal after a single communication

2.3.1 Discretion of the examining division

In **T 821/96** the board stated that, according to the established case law, it was left to the examining division's discretion to decide whether to issue a further invitation to present comments under Art. 96(2) EPC 1973.

In **T 162/82** (OJ 1987, 533) the board held that the interests of orderly and economic examining procedures may preclude the sending of more than one communication where this would not appear to be likely to lead to a positive result. In **T 84/82** (OJ 1983, 451) the board found that it was within the discretion of the examining division to interpret the submissions on behalf of the applicant as complete and final, and to assume, in consequence, that no useful purpose would be served by the provision of further opportunities for filing observations, and to reject the application in the second communication, when this was justified by in the circumstances. See also **T 201/98**, **T 79/91**, **T 1969/07**, **T 2351/16**.

In **T 201/98** the board noted, with reference to the established case law of the boards of appeal (**T 84/82**, **T 300/89**, OJ 1991, 480) that an examining division did not exceed its discretionary power by an immediate refusal, provided that the decision complied with Art. 113(1) EPC 1973, i.e. was based on grounds on which the appellant had had an opportunity to present comments. In **T 162/82** the board held that neither Art. 113(1) nor Art. 96(2) EPC 1973 required that the applicant be given a repeated opportunity to comment on the argumentation of the examining division so long as the decisive objection against the grant of a patent remained the same (see also **T 300/89**, **T 95/04**). The board in **T 63/93** held that this was particularly the case when the claimed subject-matter had not been substantially modified (see also **T 304/91**). See also chapter III.B.2.6.3 "Immediate refusal after communication".

In **T 300/89** the board noted that the burden lay with an applicant to propose amendments which overcame the objections raised by the examining division in their observations in reply to the first communication in which such objections were raised.

In **T 640/91** (OJ 1994, 918) the board stated that the requirement in Art. 96(2) EPC 1973 that the examining division must invite the applicant to file their observations "as often as necessary" implicitly recognised that in certain circumstances the examining division would be legally obliged to invite further observations from the applicant before issuing a decision, for example before issuing a decision based on grounds or evidence on which the applicant had not previously had an opportunity to present their comments (Art. 113 EPC 1973). Having regard to Art. 113(1) EPC 1973, there was a "necessary" legal obligation for an examining division to invite further observations from an applicant before issuing a decision adversely affecting them in which the immediate issue of the decision was justified on the ground that the applicant had shown lack of good faith in their previous observations. The board pointed out, moreover, that it was in principle not the function of an examining division to assess either the degree of collaboration from applicants or their good faith when deciding whether or not to invite further observations in the exercise of its discretion under Art. 96(2) EPC 1973. The exercise of this discretion depended primarily upon whether or not there was a reasonable prospect that such an invitation could lead to the grant of a patent. See also **T 855/90**.

In **T 677/97** the board noted that R. 51(3) EPC 1973, by virtue of the phrase "where appropriate", allowed the examining division discretion to issue a first communication which was less than comprehensive. This interpretation of the EPC had also been approved in **T 98/88**. The board held it was incumbent on the examining division under Art. 96(2) EPC 1973 to send a second communication containing a reasoned statement as to why the objection under Art. 56 EPC was maintained. In making this finding the board stated it was not departing from the established case law of the boards of appeal which recognised that it was within the discretion of an examining division to issue a refusal decision after a single communication. In the circumstances of the case in hand, however, an immediate refusal was not a reasonable exercise of this discretion. The limits on the examining division's discretion in this respect were explained in **T 951/92** (OJ 1996, 53), in which decision the board stated that if a communication under R. 51(3) EPC 1973 and pursuant to Art. 96(2) EPC 1973 did not set out the essential legal and factual reasoning which would lead to a finding that a requirement of the EPC had not been met, then a decision based upon such a finding could not be issued without contravening Art. 113(1) EPC 1973, unless and until a communication had been issued which contained such essential reasoning. If a decision was issued in the absence of a communication containing such essential reasoning, Art. 96(2) EPC 1973 was also contravened, since in order to avoid contravening Art. 113(1) EPC 1973 it was "necessary" to issue a further communication (following **T 640/91**).

In **T 449/03** the board stated that the appellant's allegation that the applicant was generally entitled to receive at least two communications in the examination proceedings before a negative decision on patentability was unfounded (see **T 84/82**). However, where features are added to a claim in response to an official communication, it is only in exceptional cases that a further communication may be dispensed with (see **T 161/82**, OJ 1984, 551).

In **T 5/81** (OJ 1982, 249) the board noted that an appeal might relate only to a decision subject to appeal within the meaning of Art. 106(1) EPC 1973 and not to preparatory measures referred to in Art. 96(2) EPC 1973 and R. 51(3) EPC 1973. A failure to comply with these requirements could not be taken into consideration unless it had some influence on the decision to refuse, as in the case of a breach of Art. 113(1) EPC 1973 (see also **T 808/90**). The appellant's objection was unfounded, not only for this reason, but also because the examiner commented on the content of the claim in question by drawing attention to the possibility of formulating an independent claim based thereon. Since the appellant did not make use of that possibility, the examining division was not obliged to discuss it when refusing the application. The allusion thereto in the reasons for the decision did not form part of the ratio decidendi and was intended solely to demonstrate that the examining division was aware of the fact that the application might contain patentable subject-matter. A refusal under these circumstances was not open to challenge. See also **T 228/89**, **T 347/04**, **R 14/10**.

2.3.2 Bona fide attempt to deal with the examining division's objections

In **T 802/97** the board stated that when applying Art. 96(2) EPC 1973 to determine whether an applicant should be given a further opportunity to present comments or amendments before refusing an application after a single official communication, the established practice of the examining divisions as set out in particular in the Guidelines applicable at the time was to warn the applicant who had made a bona fide attempt to deal with the examining division's objections, e.g. by a telephone conversation or by a short further written action, that the application would be refused unless the applicant could produce further more convincing arguments or make appropriate amendments within a specified time limit. It held that only when the applicant had not made any real effort to deal with the objections raised in the first communication, should the examining division consider immediate refusal of the application, this however being an exceptional case. See also **T 89/93**, **T 201/98**, **T 587/02**.

In **T 201/98** the board accepted that in the case in hand the appellant's response to the single communication was a bona fide attempt to deal with the examining division's objections. However according to the established case law of the boards of appeal an examining division did not exceed its discretionary power by immediately refusing an application, provided that the decision complied with Art. 113(1) EPC 1973, i.e. was based on grounds on which the appellant had had an opportunity to present comments, see **T 84/82** (OJ 1983, 451) and **T 300/89** (OJ 1991, 480). In the case in hand, the board considered that the decision of the examining division was based on grounds on which the appellant had had an opportunity to present comments in accordance with Art. 113(1) EPC 1973.

In **T 1002/03** the board found that in the circumstances of the case no special warning (that the following stage might be the refusal of the application) in the official communication was necessary. The reasons given in the decision under appeal were essentially the same as those presented in the IPER on which the appellant had had an opportunity to present comments. The appellant's right to be heard (Art. 113(1) EPC 1973) had not been violated and the examining division had not exercised its discretion in an

unreasonable way by refusing the application after a single official communication (see also **T 1969/07**).

In **T 1388/10** the appellant argued that it had indeed made a "bona fide" attempt to overcome the examining division's objections and that its application should therefore not have been refused without a further "warning". The board noted that the Guidelines were not the law – unlike the EPC and its Implementing Regulations. It pointed out that when reviewing examining divisions' decisions it did not assess whether the division had complied with the Guidelines. Rather, it considered whether the division had exercised its discretion within the limits set by the EPC and its Implementing Regulations. In the case in hand, the board held that the examining division's decision not to issue a second communication under Art. 94(3) EPC fell within the discretion available to it, and its exercise of that discretion had not been flawed.

2.4. Amendments under Rule 137(3) EPC

Under Art. 123(1) EPC, a European patent application or a European patent may be amended in proceedings before the EPO, in accordance with the Implementing Regulations.

Before receiving the European search report, the applicant may not amend the description, claims or drawings of a European patent application unless otherwise provided (R. 137(1) EPC). Together with any comments, corrections or amendments made in response to communications by the EPO under R. 70a(1) or (2) EPC or R. 161(1) EPC, the applicant may amend the description, claims and drawings of their own volition (R. 137(2) EPC.

Rule 137(3) EPC stipulates that no further amendment may be made without the consent of the examining division.

2.4.1 Discretion of the examining division under Rule 137(3) EPC

The discretion given to the examining division under R. 137(3) EPC is intended to ensure that the examination procedure is brought to a conclusion in as few actions as possible. In exercising its discretion the examining division must consider all relevant factors; in particular, it must balance the applicant's interest in obtaining a patent which is legally valid and the EPO's interest in bringing the examination procedure to a close in an effective way possible (Guidelines C-IV, 3; H-II, 2.3 – April 2025 version). In giving or withholding such consent, the examining division has to exercise its discretion responsibly and in accordance with the principles as set out in **G 7/93** (OJ 1994, 775) which, although made in relation to amendments made in the pre-grant stage, can be considered generally applicable to new requests put forward at a late stage of the proceedings (see **T 1064/04**). Furthermore, the exercise of discretion under R. 137(3) EPC needs to be reasoned (see e.g. **T 182/88**, OJ 1990, 287; **T 183/89**; **T 755/96**, OJ 2000, 174).

In **G 7/93** the Enlarged Board pointed out that in the exercise of its discretion under R. 86(3) EPC 1973 (now R. 137(3) EPC), an examining division was required to consider

all relevant factors which arise in a case. In particular, it must consider both the applicant's interest in obtaining a patent which is legally valid in all of the designated states, and the EPO's interest in bringing the examination procedure to a close by the issue of a decision to grant the patent, and must balance these interests against one another (see also **T 1982/07**). Once an examining division has exercised such discretion, a board of appeal should only overrule it if it comes to the conclusion either that the examining division did not exercise its discretion in accordance with the right principles or that it exercised its discretion in an unreasonable way and had thus exceeded the proper limit of its discretion (see **T 237/96** with particular reference to **G 7/93** and **T 182/88**; see also **T 937/09**, **T 1214/09**, **T 918/14**).

In **T 573/12** the board noted that, as set out in **G 7/93**, an examining division, when considering whether to admit an amendment or not, is required to consider all relevant factors which arise in the case. In particular it must consider and balance the applicant's interest in obtaining a patent and the EPO's interest in bringing the examination procedure to a close. In the case in hand, the examining division's first communication was rather vague and assessed the invention in rather general terms, without analysing the individual features. The appellant's subsequent amendment added some features to the independent claims. In the board's judgment, this was a bona fide reaction. Additionally, it was the first amendment which was dependent on the examining division's consent and the minutes showed that the examining division could and did discuss the added features. Admitting the request would not have involved excessive or unjustified additional work. Furthermore, the Guidelines (Part C-VI, 4.7 – April 2010 version) stated: "Regarding less extensive amendments, the examiner should adopt a reasonable approach, trying to balance fairness to the applicant against the need to avoid unnecessary delay and excessive and unjustified additional work for the EPO." Given the above circumstances, the board held that the examining division did not properly balance all relevant factors and thus could not endorse the examining division's conduct.

In **T 1045/18** the board reiterated that an examining division had to take all relevant factors into account when exercising its discretion under R. 137(3) EPC; in particular, it had to strike a balance between the applicant's legitimate interest in obtaining a European patent and the EPO's interest in conducting the examination proceedings efficiently. The relevant factors included the stage reached in the proceedings and whether the applicant had already had sufficient opportunity to amend the application. Another important factor to be considered was the extent to which the amendments were suitable to overcome an existing objection and did not manifestly – i.e. unequivocally and in an immediately apparent way – give rise to new ones. Clear or prima facie allowability was at most a criterion for the admissibility of late-filed amendments (Guidelines H-II, 2.7.1) whereas the amended claim set at issue in this case had been filed within the period set under R. 116(2) EPC (see also **T 222/21**).

In **T 937/09** the board stated that a proper exercise of the examining division's discretion under R. 137(3) EPC as to whether to admit amendments to a European patent application after the first communication meant, in its view, that the examining division had to admit amendments filed by the applicant together with the reply to a communication giving reasoned notice of a particular deficiency for the first time, if it could already have raised

an objection to that deficiency in its first communication, and if the amendments could be regarded as an objectively suitable attempt to correct the deficiency.

In **T 166/86** (OJ 1987, 372) the board held that the examining division would not be able to refuse its consent to an amendment if, for good reasons, the applicant was only at that late stage in a position to request the amendment, or if the requested amendment was obviously essential for him and to take it into account would not appreciably delay the grant procedure.

In **T 229/93** the board found that in the circumstances of the case the examining division should have considered refusing to consent to the amendments pursuant to R. 86(3) EPC 1973, since the filing of such amendments after the expiry of the time limit for answering the first communication of the examining division in the form of a completely retyped description was contrary to the requirement of procedural economy (see **T 113/92**).

In **T 951/97** (OJ 1998, 440) the board held that it was easier to secure an amendment at an earlier rather than at a later stage of the procedure. See also **T 76/89**, **T 529/94**, **T 937/07**. For instance, the board in **T 674/17** exercised its discretion not to admit the new main request into the proceedings, in accordance with R. 137(3) and 100(1) EPC, since the new main request (submitted only after the board had sent a communication under Art. 15(1) RPBA 2007) amounted to the presentation of a fresh case.

In **T 2324/14** the examining division had found that the auxiliary request "prima facie [did] not overcome the objections under Art. 84 EPC and Art. 83 EPC", and thus it did not give its consent under R. 137(3) EPC to it. The board noted that the EPC does not define what it means for an examining division to give or deny its consent to an amendment under R. 137(3) EPC. The boards of appeal had, however, accepted that the examining division could base its decision to deny consent to an amendment on prima facie considerations and that it could deny its consent to an amendment with prima facie deficiencies. However, the examining division had not limited its examination of the auxiliary request to prima facie considerations. In fact, the examining division had considered the auxiliary request fully, since it was able to give sufficient reasons for its conclusion that a patent could not be granted on the basis of that request. The examining division thus having considered the auxiliary request fully, the board took the view that there was no discretion left for the examining division "not to admit" it. In **T 2026/15** the board confirmed these findings, adding that this meant that the examining division had implicitly admitted the auxiliary request and, equivalently, had given its consent under R. 137(3) EPC. See also **T 1585/19**.

In **T 1105/96** (OJ 1998, 249) the board noted that where an examining division had indicated that a further request in the form of an amended text for the main claim of an application would be allowable, it was difficult to imagine any circumstances in which it would be lawful for the examining division to deny the admissibility of such request, in the exercise of its discretion. Certainly, in the circumstances of the case in hand, the rejection in advance of such a further auxiliary request unless all preceding requests were

abandoned was an abuse of procedure, an unlawful exercise of discretion under R. 86(3) EPC 1973 and thus a substantial procedural violation.

In **T 2558/18**, the board dealt with the binding effect on an examining division of a remittal with precisely specified documents for the purposes of R. 71(3) EPC. It observed that, under Art. 111(1), second sentence, EPC, the boards could either exercise any power within the competence of the department responsible for the decision appealed (alternative 1) or remit the case to that department for further prosecution (alternative 2). It summed the situation up as follows in its Catchword: Where a board remits a case to the examining division for the grant of a patent in a precisely specified version, i.e. with precisely specified claims, description and drawings, the decision on this version is taken by virtue of the first alternative in Art. 111(1), second sentence, EPC. The version is binding on the examining division in accordance with the legal principle enshrined in Art. 111(2) EPC (res judicata), on the basis of which the remittal is also ordered. The procedure under R. 71(6) EPC is inapplicable in view of the binding effect arising from Art. 111(2) EPC by virtue of Art. 164(2) EPC. See chapter V.A.10.1.1b) "Binding effect on examining divisions".

2.4.2 Consent under Rule 137(3) EPC in oral proceedings

Rule 116(2) EPC supplements R. 137(3) EPC with a special provision on amendments to the application where oral proceedings are to be held, under which the examining division has discretion to disregard such amendments if they are not filed before the date fixed in the summons to such proceedings. However, whilst meeting the time limit for filing further requests for amendments to the application fixed in the summons under R. 116 EPC does not render R. 137(3) EPC inapplicable, requests filed by that time limit can only be refused under R. 137(3) EPC in a proper exercise of discretion (**T 937/09**, **T 2294/12** and **T 1411/21**).

2.4.3 The burden of proposing amendments

In **T 300/89** (OJ 1991, 480) the board pointed out that, even if it were possible for the examiner to envisage amendments which might lead to the grant of a patent, the burden lay with the applicant to propose amendments if they so wished (including various alternatives in the form of auxiliary requests). These amendments could be proposed in the applicant's observations in reply to the first communication (Art. 96(2) EPC 1973) from the examining division, where any objections were raised (see also **T 599/92**).

In **T 301/10** the board stated that it was incumbent upon the appellant to maintain unamended or to amend – optionally on an auxiliary basis – the application documents upon which examination was to be carried out and a decision eventually to be reached (Art. 94 and 97 EPC together with Art. 113(2) EPC 1973) (see **T 300/89**), and not upon the examining division to prolong the examination procedure beyond the procedural framework set out in the EPC (see in this respect Art. 123(1) EPC together with R. 86(3) EPC 1973) until the applicant opts for amending the application and eventually "exhausts" all possibilities for amendment, as this would seriously undermine the principle of procedural economy.

2.4.4 Converging or diverging versions of claims

In **T 2680/18** the board noted that in principle, the convergence of a plurality of requests may be taken into account when deciding on the admissibility of requests based on R. 137(3) EPC. What mattered was the "convergence" or "divergence" of the claim versions, i.e. whether they further developed the subject-matter of the independent claim of the main request by progressively limiting it in one direction or in the direction of one inventive idea, respectively, or whether they develop it along various directions by incorporating different features.

Also in **T 1411/21** the board stated that the convergence (or the divergence) of requests was in principle an accepted criterion for deciding on their admissibility under R. 137(3) EPC. It applied not only within a set of claims filed together but also with respect to earlier requests.

In **T 1074/10** the board noted that the convergence criterion (i.e. whether the respective versions of the sets of claims converge or diverge) had been accepted and also applied by the boards of appeal themselves (see e.g. **T 240/04**, **T 1685/07**, **T 1969/08**). The board observed that R. 86(3) EPC 1973 (R. 137(3) EPC) left open entirely how the examining division should exercise its discretion and in particular, neither defined a convergence criterion nor a criterion based on prima facie compliance with the requirements of the EPC. The board was of the opinion that the "divergence" of a request from earlier requests in the sense that it changed substantially the issues at stake could be contrary to the EPO's interest in bringing the procedure to a close. Therefore, the board agreed with the cited case law and considered that divergence of a request was one factor amongst others which a deciding instance may consider when exercising its discretion under R. 86(3) EPC 1973. The decision of the examining division not to admit a request was therefore not wrong merely because this criterion was used.

In **T 996/12** the board stated that, in general terms, the way in which the examining division should exercise its discretion to allow amendment of an application depended upon the circumstances of each individual case and on the stage of the pre-grant procedure which the application had reached. The board noted that the applicable Guidelines did not support the concept of converging claim sets being a requirement for allowing amendments or, conversely, a diverging claim set not being acceptable. The examining division referred to two board of appeal decisions, **T 1685/07** and **T 745/03**, for this criterion. Apart from the fact that these decisions apply particularly to the situation where a patent proprietor submits a plurality of auxiliary requests in addition to a main request in opposition appeal proceedings, it needed to be stressed that its underlining justification was to be found in the efficiency of these appeal proceedings, the latter being of a judicial nature in contrast to the purely administrative character of the proceedings before, for instance the examining division or the opposition division. The board found that this fundamental distinction eo ipso made the unqualified application of this criterion by the department of first instance of the EPO questionable.

2.4.5 Reasons for the exercise of discretion

In **T 182/88** (OJ 1990, 287) and **T 166/86** (OJ 1987, 372) the boards decided that a separate set of claims submitted at a late stage in the proceedings was admissible under the particular circumstances. They added that the EPO's user-friendly reputation should clearly be excluded from consideration during the exercise of any discretion by the EPO. The showing of consideration towards parties before the EPO should not be confused with the proper exercise of discretion according to the law. It was also held that when a decision hinged on the exercise of discretion, the reasons should be given (see also **T 183/89**; **T 755/96**, OJ 2000, 174).

In **T 309/09** the board doubted that the number of auxiliary requests could generally be considered a factor on the basis of which their admission under R. 137(3) EPC could properly be denied outright. Whilst it did not wish to rule out that a large number of auxiliary requests might be a sufficient reason in specific cases, it decided that the question could be left unanswered in the case in hand, as in any event six auxiliary requests could not automatically be considered excessive. Nor did it have to consider whether a lack of convergence among the requests was relevant in this connection, because the contested decision did not contain any explicit analysis of specific cases which might support such a conclusion, even though any convergence criterion applied would at any rate have had to be assessed separately for each individual request. The board concluded that the examining division had been entitled to exercise discretion and had done so in accordance with criteria which were essentially correct in the light of **G 7/93**, but that, contrary to R. 111(2) EPC, it had failed to give adequate reasons in support of its exercise of discretion in the contested decision. Discretionary decisions could not be taken arbitrarily and – like all decisions open to appeal – had to be substantiated.

In **T 246/08** the board stated that according to the established case law of the boards of appeal the power of the examining division to consent to amendments under R. 137(3) EPC was a discretionary power that had to be exercised after considering all the relevant factors of the specific case and balance in particular the applicant's interest in obtaining an adequate protection for their invention and the EPO's interest in bringing the examination to a close in an effective and speedy way. Moreover, the exercise of a discretionary power had to be reasoned, otherwise it would be arbitrary. It followed that a refusal of consent to amend made in advance of any amendment being submitted could not be a reasonable exercise of discretion pursuant to R. 137(3) EPC. Indeed it was ipso facto a substantial procedural violation since it risked deterring an applicant from making an amendment which could not reasonably have been forbidden. See also **T 872/90**, **T 1591/23**.

In **T 233/12** the board pointed out that the criterion that an amended set of claims was prima facie not allowable was, in general, an accepted principle (amongst others) to be taken into account in the assessment of whether consent under R. 137(3) EPC should be given to the amendment. While a prima facie finding that a claim was not allowable may, by its very nature, be justified in briefer terms than a fully reasoned conclusion, the reasons for a prima facie finding may not be so short as to reduce the finding to a mere allegation. Moreover, the amount of reasoning required to justify a prima facie finding was amongst

the parameters which the examining division had to balance in view of the circumstances of each individual case when exercising its discretion. In particular, if an applicant filed an amendment together with arguments as to why the amendment, in its view, satisfied a particular requirement of the EPC, the examining division could not merely assert the contrary without giving an indication as to why the applicant's argument failed. That is, a prima facie finding must not simply ignore the arguments on file which appear to directly contradict it.

In **T 431/21** the board concluded that the examining division had exercised its discretion under R. 137(3) EPC in an unreasonable manner, thereby exceeding the limits of its discretion. Citing **T 233/12**, the board agreed that the criterion of "clear non-allowability" was, in general, an accepted principle (among others) to be taken into account in the assessment of whether consent under R. 137(3) EPC should be given to the amendment. The examining division, however, had not duly balanced this criterion with the equally relevant principle of the legitimate interest of the appellant to obtain a valid patent. To come to this conclusion the board considered that the relevant requests were filed in due time, i.e. within the time limit set according to R. 116(1) EPC, and that they were convergent. Moreover, the amendments represented a fair attempt to overcome the prima facie objections raised by the examining division under Art. 84 and 123(2) EPC. The board found that the decision of the examining division to assess prima facie that all amendments were unsuitable for overcoming the objections raised was not justified. A separate discussion of the alleged "clear non-allowability" for each request, as wished by the appellant, would have been fair and appropriate and should not have been denied by the examining division at the oral proceedings. Moreover, the board noted that the reasoning presented in relation to the alleged "clear non-allowability" issue had failed to explain why the detailed arguments presented in writing by the appellant in support of the allowability of certain of their requests were not convincing. This deficiency in the decision under appeal gave rise to a substantial procedural violation (Art. 113(1) EPC and R. 111(2) EPC).

2.4.6 Requests for amendments filed at an advanced stage in proceedings

According to the Guidelines, when the applicant files an extensively revised request to replace the text of the application on the basis of which a patent could be granted , they must provide good reasons for proposing the changes only at this stage in the proceedings (Guidelines H-II, 2.4 – April 2025 version).

In **T 222/21** the board noted that Guidelines H-II, 2.4 (November 2019 version) was incomplete insofar as it merely referred to the criterion of whether the text was "extensively revised", i.e. a quantitative criterion. It held that this point should be read in conjunction with point H-II, 2.5.1 of the Guidelines ("Criteria for admitting such amendments"). It followed from these two points, read in conjunction, that what mattered for the exercise of the discretion to admit or not to admit, if the text was extensively revised, was the content of the amendments and the consequential amount of time for examination that the amendments prima facie required. It was this amount of time that determined whether the amendments were extensive.

2.4.7 Late-filed requests after summons to oral proceedings in examination

The examining division will first consider the requests before deciding on their admissibility. The mere fact that they are filed late is not per se a reason for not admitting them. In exercising its discretion under R. 137(3) EPC (see **G 7/93**), the examining division should take into account whether the applicant has good reasons for filing the request late (Guidelines H-II, 2.7 – April 2025 version).

The examining division will also apply the criterion of "clear allowability" in exercising its discretion under R. 137(3) EPC for treating requests filed after the final date set in accordance with R. 116(2) EPC without proper justification (Guidelines H-II, 2.7.1 – April 2025 version; see also **T 153/85**, OJ 1988, 1).

In **T 102/15** the board found that the examining division's reasons for refusing to admit the then auxiliary requests 6 to 8 – namely that, prima facie, they did not overcome the objections of a lack of inventive step and their extension beyond the content of the application as filed – showed that it had followed the approach set out in the Guidelines and concluded that the requests had already failed at the first hurdle in the assessment of admissibility. Auxiliary requests 6 to 8 were filed with the examining division the day before the oral proceedings, i.e. after the date fixed under R. 116 EPC in the summons. The examining division had, the board held, exercised its discretion under R. 137(3) EPC reasonably and – in applying the "clear allowability" test – in accordance with the right criteria. The board saw no reason to exercise its own discretion under Art. 12(4) RPBA 2007 differently.

2.4.8 Second communication under Rule 71(3) EPC: the consent of the examining division

If the examining division gives its consent to the amendments filed under R. 137(3) EPC and/or the correction of errors under R. 139 EPC and considers them allowable without issuing a further communication under Art. 94(3) EPC, it issues a second communication under R. 71(3) EPC based on the amended/corrected text, after which it then proceeds to the grant of the patent pursuant to Art. 97(1) EPC (see below in this chapter IV.B.3.1. "Informing applicant of the text intended for grant (Rule 71(3) EPC)").

In **T 816/19** the board accepted that, in the light of Guidelines C-V, 1.1 (November 2017 version), and the nature of the proposed amendments, it was debatable whether it was wise to propose these amendments in a communication under R. 71(3) EPC without first consulting the applicant. However, even if an amendment proposed in a communication under R. 71(3) EPC was inappropriate, no fundamental loss of rights was at stake since the applicant always retained the right to disapprove such an amendment (pursuant to Art. 113(2) EPC) thereby triggering either a new communication under R. 71(3) EPC or a resumption of examination proceedings, pursuant to R. 71(6) EPC.

2.5. Failure to reply to the communication from the examining division (Article 94(4) EPC)

According to Art. 94(4) EPC, if the applicant fails to reply in due time to any communication from the examining division, the application shall be deemed to be withdrawn. Art. 94(4) EPC corresponds in essence to Art. 96(3) EPC 1973.

2.5.1 Reply within the meaning of Article 94(4) EPC

In **J 37/89** (OJ 1993, 201), the Legal Board noted that requesting in good time a time-limit extension could also be regarded as a timely answer, even if it did not address the matter at issue. Applicants' answers did not have to contain relevant matter enabling the examining division to alter the view expressed in its communication for a loss of rights under Art. 96(3) EPC 1973 to be avoided. However, an applicant who merely requests an extension of the term for reply which request is then refused, "fails to reply" within the meaning of that sub-paragraph, with the consequence that the application must be deemed withdrawn.

In **T 160/92** (OJ 1995, 35) the board held that Art. 96(3) EPC 1973 did not require "a complete reply", but only "a reply" in order to avoid the consequence of having the application deemed to be withdrawn. A letter of reply to a communication of the examining division filed in due time by the applicant and dealing with substantial points of this communication constituted a reply within the meaning of Art. 96(3) EPC 1973 and thus, from the point of view of procedural law, ruled out the possibility of deemed withdrawal.

In **J 29/94** (OJ 1998, 147) the Legal Board observed – in relation to Art. 110(3) EPC 1973 – that there was another form of reply which could result in a refusal, and not in the deemed withdrawal of the application; if the applicant did not want to reply in substance to the communication, it was permissible for him to ask for a decision on the file as it stood. In **T 685/98** (OJ 1999, 346) the board noted that this type of reply was in effect a waiver of the right under Art. 113(1) EPC 1973 to present comments in relation to the disclosed deficiencies. It concluded, with reference also to **J 37/89** and **T 160/92** that prior to a valid refusal the applicant must either have exercised their right to comment or have waived this right.

In **J 5/07** the Legal Board held that the filing of a divisional application did not constitute a response to an invitation by the examining division in the parent application within the meaning of Art. 96(3) EPC 1973. The Legal Board noted that a divisional application was legally and administratively separate and independent from the grant proceedings concerning the parent application (see **G 1/05**, OJ 2008, 271; **T 441/92**). The filing of a divisional application left the text of the patent application objected to unamended.

In **T 861/03** the board found that filing a request for an interview with the processing examiner without also submitting substantive observations on deficiencies identified in the communication under Art. 96(2) EPC 1973 did not amount to an adequate reply for the purposes of Art. 96(3) EPC 1973, under which the legal consequence of failing to submit such a reply was that the application was deemed to be withdrawn.

2.5.2 Waiver of the applicant's right to present comments

In **T 685/98** (OJ 1999, 346) the board held that in unclear cases there could be no presumption that an applicant had waived their right to be heard under Art. 113(1) EPC 1973. The board noted that prior to a valid refusal under Art. 97(1) EPC 1973 the applicant must either have exercised their right to comment or have waived this right. It held that a simple procedural request made by the applicant after receipt of the R. 51(2) EPC 1973 communication could not be treated as a waiver of the right to present comments during the remainder of the four-month term set for reply. When the applicant neither replied in substance to the objections raised nor waived their right to present comments, then the refusal of the application was ultra vires and voidable ab initio because under Art. 97(1) EPC 1973 the application was to be refused if no different sanction was provided for by the EPC. However, Art. 96(3) EPC 1973 provided a different sanction for failure to reply, namely the deemed withdrawal of the application.

2.6. Issuing a further communication in light of Article 113(1) EPC

2.6.1 Introduction

If it appears that the previous communications were insufficiently reasoned or incomplete, or if the applicant has filed amendments and/or arguments since the previous communication, the examiner should carefully consider Art. 113(1) EPC before issuing a refusal. A further communication may have to be issued with sufficient reasoning, unless oral proceedings are to be held (see Guidelines C-V, 15.4 – April 2025 version).

Under Art. 113(1) EPC, the decisions of the EPO may only be based on grounds or evidence on which the parties concerned have had an opportunity to present their comments.

In **T 645/11** the board stated that Art. 113(1) EPC 1973 guaranteed that proceedings before the EPO would be conducted openly and fairly (see **J 20/85**, OJ 1987, 102; **J 3/90**, OJ 1991, 550). The right to be heard ensures that the parties to proceedings are not taken by surprise by grounds mentioned in an adverse decision (see e.g. **T 669/90**, OJ 1992, 739; **T 892/92**, OJ 1994, 664). That requires, firstly, that a party be given an opportunity to comment on the grounds and evidence alleged against it. In particular, it means that if a decision to refuse is taken on the basis of grounds which have not previously been presented to the applicant, then the decision does not comply with the provisions of Art. 113(1) EPC 1973. It is not sufficient that the applicant be presented with an assertion that the application fails to comply with some provision of the EPC. There must also be an explanation of why it fails to comply. The right to be heard also requires the deciding instance demonstrably to hear and consider any relevant comments (see **T 763/04**, **T 246/08**).

In **T 690/09** the board stated that if a request for amendment was refused, the examining division must inform the applicant of the reasons for not admitting the amendments in order to satisfy the right to be heard according to Art. 113(1) EPC. The applicant would typically be invited to request grant on the basis of a preceding acceptable version of the claim set

if such a version existed. Otherwise, if the applicant maintained their request for amendment, the application had to be refused under Art. 97(2) EPC, since there was no text which had been approved by the applicant and allowed by the examining division (see Art. 113(2) EPC 1973, see also **T 647/93**, OJ 1995, 132; **T 946/96**; **T 237/96**).

In **T 246/08** the board stated that established case law had interpreted Art. 113(1) EPC 1973 to mean that the comments presented must be considered in the ensuing decision (**J 7/82**, OJ 1982, 391). Thus a decision which failed to take explicitly into account potentially refutative arguments submitted by a party, i.e. arguments which may militate against or cast doubt on the decision in question, contravened Art. 113(1) EPC 1973, thereby constituting a substantial procedural violation. In brief, a decision must show that all potentially refutative arguments adduced by a party are actually refutable. See also **T 1170/07**.

In **T 1854/08** the applicant was informed by e-mail that the three newly filed requests were not admitted into the proceedings because they introduced substantial obscurities. The board stated that the applicant had not been given any opportunity to present their comments to overcome the negative position expressed in the e-mail. Contrary to that, the applicant had gathered from the e-mail that it was no longer possible to convince the examining division. This followed from the fact that the refusal to admit the newly filed request was not presented as a provisional opinion of the division but as a decision which could not be overturned. This contravened Art. 113(1) EPC.

2.6.2 Arguments taken into account in the decision of the examining division

According to the case law of the boards of appeal, the examining division does not have to address each of the party's arguments (see e.g. **T 1969/07**, **T 1557/07**, **R 19/10**).

In **T 1557/07** the board stated that with regard to the allegation that the examining division did not fully and accurately deal with all the relevant arguments submitted by the applicants, the examining division was under no obligation to address each and every argument presented by the party concerned. In the case in hand, the examining division had commented on the crucial points of dispute thus giving the applicants a fair idea of why their submissions were not considered convincing. This allegation was therefore not conclusive. In conclusion, the examining division had not committed a substantial procedural violation.

In **R 19/10** the petitioner submitted that Art. 113(1) EPC not only enshrined a party's right to be heard before a decision was issued against it, but also guaranteed its right to have the relevant grounds fully taken into account in the written decision. The Enlarged Board stated that this principle was not without any limitation, as explained in **T 1557/07**: provided that the reasons given enable the parties concerned to understand whether the decision was justified or not, the deciding organ is under no obligation to address each and every argument presented by the party concerned.

In **T 802/97** the board held that if a decision included several grounds, it should meet the requirements of Art. 113(1) EPC 1973 with respect of each of the grounds. In the board's

judgment, if a decision of the EPO included several grounds supported by respective arguments and evidence, it was of fundamental importance that the decision as a whole met the mandatory requirements of Art. 113(1) EPC 1973. Leaving it up to the deciding body to suggest which of the grounds were to be considered as the basis of the decision and which were not – and did not therefore need to comply with the requirements of Art. 113(1) EPC 1973 – could only lead to legal uncertainty and confusion of the parties. An exception from the above principle could be obiter dicta which were not part of the grounds on which a decision is based.

2.6.3 Inclusion of the essential reasoning

In **T 951/92** (OJ 1996, 53) the board held that if a communication under R. 51(3) EPC 1973 and pursuant to Art. 96(2) EPC 1973 did not set out the essential legal and factual reasoning to support a finding that a requirement of the EPC had not been met, then a decision based on such a finding could not be issued without contravening Art. 113(1) EPC 1973, unless and until a communication had been issued which did contain the essential reasoning. If a decision was issued in the absence of a communication containing essential reasoning, Art. 96(2) EPC 1973 was also contravened, since in order to avoid contravening Art. 113(1) EPC 1973 it was "necessary" to issue a further communication (see also **T 487/93**, **T 520/94**, **T 750/94**, OJ 1998, 32; **T 121/95**, **T 677/97**). Moreover, the board summed up the case law by stating that Art. 113(1) EPC 1973 was intended to ensure that, before a decision refusing an application for non-compliance with a requirement of the EPC was issued, the applicant had been clearly informed by the EPO of the essential legal and factual reasons on which the finding of non-compliance was based. This was so that in advance of the decision the applicant knew both that the application might be refused and why, and also so that they might have a proper opportunity to comment upon the reasons and/or to propose amendments so as to avoid refusal of the application. Thus the term "grounds or evidence" in Art. 113(1) EPC 1973 should not be narrowly interpreted. In particular, in the context of the examination procedure the word "grounds" did not refer merely to a ground of objection to the application in the narrow sense of a requirement of the EPC which was considered not to be met. The word "grounds" should rather be interpreted as referring to the essential reasoning, both legal and factual, which led to refusal of the application (**T 187/95**). In other words, before a decision was issued an applicant had to be informed of the requirement which they had to meet and had to have an opportunity of meeting it (see also **T 487/93**, **T 520/94**, **T 750/94**, **T 121/95**).

In **T 907/91** the examining division refused the application without informing the applicant of its grounds for not accepting the amended documents submitted after receipt of the first communication and after oral proceedings. The board held this action to be in breach of Art. 113(1) EPC 1973 because, prior to issuing the contested decision in written or oral proceedings, the examining division should have given its reasons for refusing to accept the amended documents. Such grounds could be of a formal nature or relate to substantive patent law, depending on the relevant provisions. However, other grounds could also be brought to bear, based on generally recognised principles of procedural law (see Art. 125 EPC 1973), such as the applicant's attempt to delay proceedings by submitting

an excessively large number of requests for amendments in clear abuse of the patent grant procedure.

In **T 763/04** the board stated that Art. 113(1) EPC 1973 enshrined a party's right to be heard before a decision was issued against it. In accordance with the established case law of the boards of appeal (see **J 7/82**, OJ 1982, 391 and **T 94/84**, OJ 1986, 337) this right also guaranteed the right to have the relevant grounds fully taken into account in the written decision. The board held that Art. 113(1) EPC 1973 would be contravened where, as in the case in hand, facts and arguments, which from the appellant's submissions were clearly central to their case and which may speak against the decision taken, were completely disregarded in the decision in question. The board stated that Art. 113(1) EPC 1973 required not merely that a party be given the opportunity to voice comments, but more importantly that the deciding instance demonstrably heard and considered these comments. In summary, the right to be heard in accordance with Art. 113(1) EPC 1973 was contravened if the decision of the first instance failed to mention and to take into consideration important facts and arguments which may speak against the decision in question. See also **T 206/10**, **T 246/08**.

2.6.4 Essential reasoning based on an International Preliminary Examination Report

In **T 275/99** the board held that the requirements of Art. 113(1) EPC 1973 were met if the appealed decision was entirely based on the grounds, facts and evidence which were already known to the appellant from the extensive IPER which had been drawn up for the description and the claims of the international application corresponding exactly to the European application refused and which had been incorporated by way of reference in an official communication of the examining division.

In **T 587/02** the board held that if the only communication preceding the decision to refuse an application merely drew attention to an IPER, the requirements of Art. 113(1) EPC 1973 were met provided the IPER constituted a reasoned statement as required by R. 51(3) EPC 1973, using language corresponding to that of the EPC.

In **T 1870/07** the single communication from the examining division pursuant to Art. 96(2) EPC 1973 merely signalled agreement with the IPER. The board did not see any objection to citing an IPER from an IPEA other than the EPO, provided that it constituted a reasoned statement (see, for example, **T 951/92**). However, in its view, the IPER failed to meet the requirements of a reasoned statement. In the communication of the examining division, there was no logical chain of reasoning which would have permitted the appellant to understand and deal with the novelty objection, either by amendment or counterargument. Art. 113(1) EPC 1973 was, therefore, not satisfied.

2.6.5 Fresh argument based on grounds and evidence communicated beforehand

According to the case law of the boards of appeal, the use of a fresh argument in a decision still based on grounds and evidence communicated beforehand is not precluded.

In **T 268/00** the board pointed out that the right to be heard pursuant to Art. 113(1) EPC 1973 only precluded a decision being taken on the basis of fresh evidence and grounds, while the use of a fresh argument in a decision still based on grounds communicated beforehand was not precluded. Hence the technical argument in the decision under appeal addressed by the appellant, whether fresh or not, did not violate any of the appellant's rights. As to the technical substance of that argument, whilst the appellant might neither agree with the finding of the examining division nor with the technical argument given, a divergence of views between the examining division and the appellant on the substantive issue of inventive step did not amount to a procedural violation. See also **T 1557/07**, **T 815/08**.

2.6.6 Bona fide attempt by the applicant to overcome the objections

In **T 734/91** the appellant had filed a fresh set of claims in reply to a communication of the examining division, the subject-matter of claim 1 being considerably changed in the light of the objection of lack of novelty raised by the examining division. The effort by the appellant was therefore considered to represent a bona fide attempt to overcome these objections. Claim 1 as amended had not been dealt with in the communication by the examining division but only in the contested decision. Thus the appellant did not have an opportunity to present their comments with regard to the grounds for refusal of this amended claim 1. The board stated that the examining division had to communicate the grounds against the grant of a patent to the applicant before refusing an application. In doing so it had to exercise its discretion to decide when it was deemed necessary and appropriate to invite the applicant's comments. This had to be done objectively in the light of the circumstances of each case (**T 162/82**, OJ 1987, 533). This did not mean that the applicant should be given repeated opportunity to comment on the same objections (**T 161/82**, OJ 1984, 551; **T 42/84**, OJ 1988, 251; **T 243/89**). In a case where an applicant had made a bona fide attempt to overcome the objections raised by the examining division, Art. 113(1) EPC 1973 may require such an attempt to be confirmed in the light of amended claims and substantial comments of the applicant. See also **T 582/93** and **T 998/05**.

In **T 763/04** the board held that the appellant, who had made a bona fide attempt to address the sole objection raised, could have legitimately expected the examining division out of fairness to use the discretion afforded by Art. 96(2) EPC 1973 to offer at least one further opportunity to address the objection. The board considered the refusal after the third communication, which was the first R. 51(3) EPC 1973 compliant communication as regards the ground of lack of novelty, without the issuance of a further communication, to represent a violation of the general principle of good faith and fair proceedings underlying the proceedings before the EPO.

In **T 92/96** the board found that, after notification of a correctly reasoned communication from the examining division, the applicants had had an opportunity to comment on the objections set out therein, but had confined themselves to suggesting a minor correction to the claim. The examining division decided to refuse the application, since the applicants had made no real effort to reply to the objections. In the board's view, the applicants had therefore suffered no prejudice. Consequently, the examining division had not committed a procedural violation, particularly with regard to Art. 113(1) EPC 1973.

2.6.7 Form of the communication under Article 113(1) EPC

In **T 1237/07** the board pointed out that the right to present comments enshrined in Art. 113(1) EPC 1973 did not necessarily need to be exercised in writing but could be satisfied by way of oral proceedings.

In **T 497/02** the board found that Art. 113(1) EPC 1973 merely required applicants to be afforded the opportunity to present their comments on the grounds on which the EPO had based its decision: it did not require a written communication nor did it specify how much time applicants should be afforded to consider and present their comments.

2.7. Informal communications

There are instances where personal consultation with the applicant can be helpful in advancing the procedure. Such consultations used to take place by telephone or in the form of interviews; nowadays they are preferably held by videoconference, thereby allowing, where necessary, the presentation of documents, the participation of other persons and the verification of the identity of the person(s) attending. However, consultations can still be held by telephone at the request of the applicant, if the situation so requires (see Guidelines C-VII, 2 – April 2025 version).

2.7.1 Telephone conversations

In **T 300/89** (OJ 1991, 480) the board held, in relation to the appellant's complaint as to the failure of the examiner to telephone as requested, that the practice in relation to such informal communications was clearly set out in the Guidelines. Such informal communications and the practice relating to them should be clearly distinguished from the formal examination procedure governed by Art. 96(2) EPC 1973 and R. 51 EPC 1973. The examiner's discretion as to whether to make such an informal communication had to be exercised in accordance with the Guidelines, having regard to the particular circumstances of each individual case. An exercise of such discretion adversely to an applicant, such as in the case in question, could not by its nature be a procedural violation, however, because the procedure for such conversations was informal in the sense that it was not governed by the EPC 1973, but was additional to the procedure provided by the EPC 1973. In any event, in the board's view, in the case in question no criticism could properly be made of the examiner in relation to their failure to telephone the appellant.

In **T 160/92** (OJ 1995, 35) the appellant claimed that in two telephone conversations with the primary examiner they were misled into believing that a refusal was not imminent, as a further communication would be issued as the next step of the procedure. The board observed that one should be warned against expecting too much from telephone calls in critical situations, as misunderstandings could happen more easily than in writing. It was with good reason that the procedure before the EPO was in principle, with the exception of oral proceedings under Art. 116 EPC 1973, a written procedure. Moreover, in the examination (as well as in the opposition) procedure the primary examiner was only one of a division of three examiners, it being well known that the individual statements of the primary examiner could not be binding for the division. Furthermore, telephone

conversations were not provided for in the EPC and did not, as such, form part of the formal procedure before the EPO. The board held that the answer to the controversial question whether the applicant was misled about the possibility of imminent refusal of the application must be sought by focusing on the procedurally relevant content of the file.

In **T 1905/07** the board pointed out that presenting new grounds in a telephone conversation should not be equated with presenting the same grounds in formal oral proceedings or in a formal written communication. First, mere verbal communication by telephone was more prone to misunderstandings. Secondly, a party also had a right to be heard by the organ which took the decision, i.e. the examining division in the case in hand. A telephone conversation with only one of the examiners of that division did not safeguard this right in the same way as oral proceedings. Whether or not a party's fundamental right to be heard had been infringed depended on the particular circumstances of the case.

2.7.2 Interviews

In **T 98/88** it was held that Art. 116 EPC 1973 gave every party the absolute right to oral proceedings, but not the right to an interview with a particular member of an examining division. It was for the examiner concerned to decide whether such an interview should take place (see also **T 589/93**). In **T 193/93**, the board held that examiners were under no obligation to grant an "interview" (**T 235/85**, **T 909/95**).

In **T 409/87** the board noted that a request for an interview was clearly not, by itself, a request for oral proceedings and there was thus no obligation upon the examining division to grant a request for an interview when, as set out in the Guidelines, the examiner believed that no useful purpose would be served by such a discussion (see **T 19/87**, OJ 1988, 268, **T 909/95**). As an interview, in contrast to oral proceedings, is not a procedural step provided by the EPC, the refusal to grant a request for an interview was not a decision open to appeal and, therefore, does not fall under the provision of R. 68(2), first half-sentence, EPC 1973. See also **T 283/88**.

In **T 299/86** (OJ 1988, 88) the board held that the right of a party to request oral proceedings under Art. 116 EPC 1973 was in no way affected by the fact that such party could have also requested and/or attended an interview with the examiner.

In **T 808/94** the board stated that informal interviews (also called "personal consultation") and/or informal consultations by telephone which were carried out by the primary examiner alone could not replace duly requested oral proceedings under Art. 116 EPC 1973, which were to take place before all members of the examining division (Art. 18(2) EPC 1973).

3. The grant stage in examination

By decision of the Administrative Council CA/D 2/10 of 26 October 2010 (OJ 2010, 637), R. 71 EPC's paragraphs 3 to 7 were amended, its paragraphs 8 to 11 were deleted and new R. 71a EPC was inserted. The provisions as amended entered into force on 1 April 2012. Among other changes, the requirement to file a translation of the claims each time that the applicant requested (or agreed to) an amendment or correction of the claims

was removed, and the pre-2002 practice concerning changes to the text intended for grant suggested by the examining divisions was reinstated.

Amended R. 71 EPC focuses on the work of the examining division and R. 71a EPC on issues which arise when the grant procedure is concluded and which are mainly dealt with by the formalities officer acting on behalf of the division (such as the filing of translations of the claims or the payment of the fee for grant and publishing).

3.1. Informing applicant of the text intended for grant (Rule 71(3) EPC)

The amended text of R. 71(3) EPC (R. 51(4) EPC 1973), which entered into force on 1 April 2012, reads as follows: "Before the examining division decides to grant the European patent, it shall inform the applicant of the text in which it intends to grant it and of the related bibliographic data. In this communication the examining division shall invite the applicant to pay the fee for grant and publishing and to file a translation of the claims in the two official languages of the EPO other than the language of the proceedings within four months."

Thus once the examining division has decided that a patent can be granted it must inform the applicant of the text on the basis of which it intends to do so. This text may include amendments and corrections made by the examining division on its own initiative which it can reasonably expect the applicant to accept (Guidelines C-V, 1.1 – April 2025 version).

In **T 1849/12** the appellant asked for the withdrawal of the examining division's communication, and requested that the examining division be instructed to issue the communication under R. 71(3) EPC without delay – specifically before the expiry of 18 months from the priority date – and therefore to grant the European patent as quickly as possible. The board noted that Art. 93(2) EPC provided for the possibility of granting a patent before the expiry of the 18-month period. An earlier grant was thus not ruled out, provided the examining division had already concluded that the application met all the requirements of the EPC. As this was not yet so in the case in hand, the possibility provided for in Art. 93(2) EPC of granting a patent before the 18 months expired did not apply. The board did not see any conflict in this regard between the provisions of Art. 93(2) and 97(1) EPC. Under the EPC, the granting of a patent was conditional upon the mandatory examination of all EPC requirements. A patent could only be granted if the examining division considered all examination requirements met. Contrary to the appellant's claim, the examining division had no discretion in this regard. It had to be taken into account that the EPO was responsible for safeguarding the interests of the public, in addition to those of the appellant, and the public had to be able to rely on it doing so.

In **T 1377/15** the board pointed out that a communication under R. 71(3) EPC, even when taken as a whole, did not have the character of a "decision". It was not designed to bring examination proceedings to a close but was instead a preparatory action (taken towards any later decision to grant a European patent) which was not open to appeal. The board observed that the communication the appellant had received under R. 71(3) EPC – unlike the one under R. 51 EPC 1973 at issue in **T 1181/04** – had expressly referred to the possibility of expressing disapproval and subsequently obtaining an appealable decision

giving the reasons for refusing the higher-ranking requests. It therefore held that the conditions set out in **T 1181/04** for exceptionally treating such a communication as an appealable decision were not met.

In **T 121/06** the board held that issuing a communication under R. 51(4) EPC 1973 (in the version that entered into force on 1 July 2002), in which amendments were proposed, which the applicant could not reasonably be expected to accept without further discussion, constituted a substantial procedural violation.

3.2. Approval of the text by the applicant

3.2.1 Clear and unambiguous approval of the text

A number of decisions commented on below relate to R. 51(4) EPC 1973. Nevertheless, they may also be applicable to R. 71(3) EPC.

In **J 12/83** (OJ 1985, 6) the Legal Board held that an applicant for a European patent could be "adversely affected", within the meaning of Art. 107 EPC 1973, by a decision to grant the patent if the patent were granted with a text not approved by the applicant, contrary to Art. 97(2)(a) EPC 1973. Approval, for the purposes of that article, had to be established "in accordance with the provisions of the Implementing Regulations" (here R. 51(4) EPC 1973).

In **J 13/94** the Legal Board observed that any approval of the text, in accordance with R. 51(4) EPC 1973, might thus have serious procedural consequences for applicants. Hence, according to the case law of the Legal Board, declarations by applicants should only be treated as valid approval under R. 51(4) EPC 1973 if they are clear and unambiguous which, in particular, implied that: the approval was not subject to any condition (**J 27/94**, OJ 1995, 831); it was clear to which text the applicant had given their approval (**J 29/95**, OJ 1996, 489).

In **J 27/94** (OJ 1995, 831) the Legal Board held that in the interests of legal certainty a procedural declaration had to be unambiguous (confirming **J 11/94**, OJ 1995, 596). This implied that it must not be subject to any condition, leaving it open whether the EPO could proceed further on the basis thereof. It found that the examining division should not have treated the letter in question as valid approval under R. 51(4) EPC 1973, because it contained a condition which made the approval invalid. The approval of the text intended for grant was a necessary requirement for the next step in the proceedings, i.e. the communication under R. 51(6) EPC 1973. It had to be clear for the EPO when receiving the declaration whether or not it was an appropriate basis for the despatch of this communication. In the interests of legal certainty the Legal Board stated that procedural declarations had to be unambiguous. The examining division should have objected to the invalid approval, with the eventual consequence foreseen in R. 51(5), first sentence, EPC 1973.

In **T 971/06** the board noted that the approval by an applicant or patent proprietor under Art. 97(2)(a) EPC 1973 was a principle underlying all decisions of the EPO (see

Art. 113(2) EPC 1973). Accordingly, it was perfectly clear that it was an absolute pre-condition of any decision of the examining division to grant a patent that an applicant had to have consented to the proposed text. If that pre-condition were not fulfilled, the only courses of action open to the examining division would be to refuse the application under Art. 97(1) EPC 1973 or, if possible amendments or corrections remained to be considered, to continue the examination. So strict was the approval condition that, as the case law showed, the only valid approval was that which was unconditional, unambiguous and clear (see **J 13/94**, **J 27/94**, **J 29/95**). The board held that in the absence of a valid approval, the examining division had no power to make a decision to grant and any decision to grant purportedly made without the applicant's valid approval could have no legal effect.

In **T 872/90** the board held that, in view of the requirement of Art. 113(2) EPC 1973 according to which the EPO would consider and decide on the European application only in the text submitted to it, or agreed, by the appellant, former claims which had been replaced by newly filed claims could no longer be considered to constitute a text agreed to by the applicant.

In **T 1/92** (OJ 1993, 685) the board held that the applicant's approval of the text was only binding if it was still unambiguously present at the expiry of the R. 51(4) EPC 1973 period. The appellant had first approved of the proposed text for grant, before submitting requests, within the period given in the R. 51(4) EPC 1973 communication, and before the communication under R. 51(6) EPC 1973, to disregard the prior approval and to extend the time limit for responding to the R. 51(4) EPC 1973 communication. The request to disregard the approval, being on time, made it impossible for the EPO to establish as required by R. 51(6) EPC 1973 that the approval still was maintained unambiguously.

The decisions below apply R. 71(3) EPC in the version applicable from 1 April 2012 (OJ 2010, 637).

In **T 2864/18** the appellant, in its reply to the first communication under R. 71(3) EPC, had requested certain corrections in the translations of the claims and then proceeded to state "All the other pages of the text enclosed to the Communication under R. 71(3) EPC do not require amendments or corrections and are hereby approved by the Applicant". From these statements the board inferred that the appellant was fully aware of the complete set of documents proposed as forming the basis for the intended grant. It found that the approval of the text was unequivocal and was repeated, albeit not explicitly in writing, but by reacting to the second communication under R. 71(3) EPC (payment of fees).

In **T 646/20** the board found no support for any obligation of the examining division to defer a decision of grant until the expiry of the four months period in a case where the applicant had at any given time within this period of time given approval to grant and thereby allowed the examining division to issue a corresponding decision. It found it would be rather strange if the examining division had to defer a decision for the eventuality that the applicant had second thoughts. In the case in hand, following the R. 71(3) EPC notification, the applicant gave their explicit approval to issue the decision to grant, however following the decision to grant, the appellant then voiced their disapproval. The board distinguished the case in hand from **T 1/92** (see above in this chapter). It was also

not convinced by the appellant's argument that an approval sent in response to a R. 71(3) EPC communication could not be interpreted as a waiver of further options or remedies. Every approval of the text of a patent implied a waiver of the remaining infinity of texts in which a patent could be granted.

3.2.2 Option to waive the right to a further communication under Rule 71(3) EPC

From 1 July 2015 until 30 June 2020, the EPO offered applicants the option of expressly waiving their right to receive a further communication under R. 71(3) EPC (see notice from the EPO dated 8 June 2015; OJ 2015, A52). This option was abolished by notice from the EPO dated 26 May 2020 (OJ 2020, A73).

3.2.3 Decisions with no text submitted or agreed by the applicant (Article 113(2) EPC)

a) General issues

Article 113(2) EPC states that the EPO shall examine, and decide upon, the European patent application or the European patent only in the text submitted to it, or agreed, by the applicant or the proprietor of the patent. See also Guidelines C-V, 4.9 – April 2025 version.

In **T 690/09** the board stated that the application would be refused under Art. 97(2) EPC, if there was no text which had been approved by the applicant and allowed by the examining division (see **T 647/93**, OJ 1995, 132; **T 946/96**; **T 237/96**).

In **T 1093/05** the board noted that to grant a patent in a text not approved by the applicant was in breach of Art. 97(2)(a) and 113(2) EPC 1973 and thus a substantial procedural violation. The board stated that in those circumstances it was established case law that an examining division was bound by its final decision on an application, which could be set aside only following an admissible, reasoned appeal (see **G 12/91**, OJ 1994, 285; **G 4/91**, OJ 1993, 707; **T 371/92**, OJ 1995, 324; **T 1081/02**; **T 830/03**). In view of this established case law, the board could not subscribe to the view expressed in **T 971/06** that an erroneous decision was a nullity and therefore no appeal needed to be filed against it.

In **T 237/96** the board noted that in circumstances in which, as in the case in question, amendments proposed by the applicant were not allowed by the examining division by virtue of R. 86(3) EPC 1973 and the applicant did not give its agreement to any other version of the application documents, the established practice of the EPO, sanctioned by consistent case law, was to refuse the application on the ground that there was no version approved by the applicant within the meaning of Art. 113(2) EPC 1973 on which a patent could be granted.

Some decisions showed a different approach concerning the legal basis for refusing an application where no agreed claim text existed. In **T 246/08** the board held that the substantive legal requirement for the continued presence of claims in an application was expressed in Art. 78(1)(c) EPC 1973, not in Art. 113(2) EPC 1973. It noted that Art. 78(1)(c) EPC 1973 was a requirement of the application not only for a filing date, but

also for substantive examination and grant, whereas Art. 113(2) EPC 1973 was silent as to the legal consequence of the absence of an agreed text (see also **T 2112/09**).

In **T 32/82** (OJ 1984, 354) the board held that in accordance with Art. 113(2) EPC 1973, it could only decide on the European patent application in the text submitted to it or agreed by the applicant. It followed that when deciding the appeal the board had no authority under the EPC to order the grant of a European patent containing claims which were different from those submitted by the applicant in their content or interdependency. Even if the board had indicated to an applicant that a dependent claim might be allowable if rewritten as an independent claim but the applicant had not expressly requested the board to consider it as such, the board was not obliged to do so.

In **T 647/93** (OJ 1995, 132) the board stated that the provision of Art. 113(2) EPC 1973, that the EPO shall consider and decide upon the European patent application or the European patent only in the text submitted to it, or agreed, by the applicant for or proprietor of the patent, was a fundamental procedural principle, being part of the right to be heard, and was of such prime importance that any infringement of it, even as the result of a mistaken interpretation of a request, must, in principle, be considered to be a substantial procedural violation. In any case, such violation occurred when, as in the case in hand, the examining division did not make use of the possibility of granting interlocutory revision under Art. 109 EPC 1973, after the mistake had been pointed out in the grounds of appeal. See also **T 121/95**.

b) Deemed approval under Rule 71(5) EPC

If applicants pay the fees and file the translations within the due period (and file or request no corrections or amendments to the text proposed for grant in the R. 71(3) EPC communication), they are deemed to have approved the text intended for grant (R. 71(5) EPC) (see Guidelines C-V, 1.1 – April 2025 version).

The above also applies where the R. 71(3) EPC communication was based on an auxiliary request, provided that the applicant does not reply to the R. 71(3) EPC communication by requesting that a grant be based on a higher ranking request. It also applies where the R. 71(3) EPC communication included proposals by the examining division for amendments or corrections of the text intended for grant. Consequently, provided the applicant does not reject these proposed amendments or corrections in their reply, the completion of the above acts constitutes approval of the text containing the amendments or corrections as proposed by the examining division (Guidelines C-V, 2 – April 2025 version).

In **T 1003/19** the board found that the decision under appeal did not comply with Art. 113(2) EPC and that the examining division had committed a substantial procedural violation; the granted version of the patent corresponded neither to a text submitted by the appellant nor to a text agreed by it, nor to a text deemed to have been approved by it. The appellant had not requested the grant of a patent with any other than the seven drawing sheets as initially submitted and published. The communication under R. 71(3) EPC, however, referred only to "drawings, sheets 1/1 as published". The board noted that

appellant did not expressis verbis approve the amended application documents as referred to in the communication and found that the appellant also could not be deemed to have approved the list of documents communicated to it in this communication according to R. 71(5) EPC. The consequence as stipulated in R. 71(5) EPC, i.e. "the applicant ... shall be deemed to have approved the text communicated to him under paragraph 3", only applied where the applicant, according to R. 71(3) EPC, had been informed "of the text in which it [i.e. the examining division] intends to grant" the patent. The board stated that under normal circumstances it was to be assumed that the text referred to in a communication under R. 71(3) EPC reflected the true will of the examining division and was therefore identical to the text on the basis of which the grant of the patent was intended. In the present case, however, it found sufficient evidence to conclude that this was not the case in respect of the communication under R. 71(3) EPC. The board further stated that the EPO may on its own initiative suggest minor amendments; however the removal of all drawing sheets showing embodiments of the invention could not be expected to be accepted by an applicant.

The board stated that it had not deviated from **G 1/10**, which based its consideration on the requirement according to R. 71(3) EPC that the applicant must be informed of the text in which the examining division intends to grant a patent (see point 10 of the Reasons) and deals with the applicant's possible reactions thereto, like the implicit approval of this text. In contrast thereto the board's decision in the case in hand was based on the fact that the text intended for grant by the examining division had, based on verifiable facts, not been communicated to the appellant and, therefore, R. 71(5) EPC did not (at that time) apply. As a result, no text had been approved by the appellant. The request for reimbursement of the appeal fee was however rejected; while the error was committed by the examining division, the appellant had several instances to spot this error and, at the latest, could and should have noticed it when comparing the text of the communication under R. 71(3) EPC and the "Druckexemplar".

In **T 2081/16**, the board found that where the text intended for grant is not communicated to the applicant under R. 71(3) EPC, the fact that the appellant subsequently files a translation and pays the fees for grant and publishing is not decisive. The provisions of R. 71(5) EPC, in this regard, refer to R. 71(3) EPC and therefore presuppose that the applicant has not been notified of any text but of the text *intended for grant* (emphasis added by the board). Only in this case would R. 71(5) EPC apply and would the filing of a translation and the payment of the relevant fees imply the approval of the text communicated to it. The board found that in the present case neither the documents referred to in Form 2004C nor the "Druckexemplar" reflected the text in which the examining division intended to grant the European patent. In arriving at its decision, the board stated that it had not deviated from **G 1/10** and that Art. 21 RPBA 2007 did not therefore apply. In **G 1/10**, the Enlarged Board found that R. 140 EPC was not available to correct the text of a patent. This question was not at stake in the case in hand, where no text had been approved by the applicant.

In **T 408/21** the board stated that when trying to clarify the intention behind an action or request, this was frequently done in the case law of the boards of appeal by identifying the "true will" of the actors in a case. Normally the documents indicated in a communication

according to R. 71(3) EPC corresponded to the applicant's request and to the examining division's intention; however, in a case where there appeared to be severe doubts as to whether the documents indicated in R. 71(3) EPC were actually those intended to be granted by the examining division, the board considered the above-mentioned clarification of the "true will" of the examining division an appropriate means. In line with the **T 1003/19** the board concluded that the examining division did not indicate in the communication according to R. 71(3) EPC the text it intended to grant in the case in hand. Following **T 2081/16** and **T 1003/19**, the board found that R. 71(5) EPC correspondingly did not apply in this case, as in the step preceding the deemed approval the applicant has to be informed of the text in which the examining division intends to grant the patent according to R. 71(3) EPC.

In **T 2277/19** the board held that the text referred to in the communication under R. 71(3) EPC had to be regarded as the text intended for grant. Since this text on the basis of which the patent was granted was approved by the appellant, the requirements of Art. 113(2) EPC were met. The appellant had approved the text intended for grant (subject to the correction of some minor errors in the description). Hence, the board considered that the examining division had legitimately expected the applicant to have checked and verified the Druckexemplar, in particular since the applicant had requested some amendments to the text intended for grant. The board found that the examining division did not have any reason to assume that the approval was based on the prerequisite that only drawing pages 1 to 7 were actually intended for publication. Moreover, the appellant expressly waived their right to the issue of a further communication under R. 71(3) EPC. The appellant argued that the facts in the case in hand were very similar to those of decision **T 1003/19** with reference also to **T 2081/16**, but the board did not follow those earlier decisions. In its view there was no legal basis in the EPC for a distinction between the text referred to in a communication under R. 71(3) EPC and that reflecting what the examining division actually intended. Moreover, R. 71(6) EPC addressed the possibility that the text communicated under R. 71(3) EPC did not reflect the appellant's requests. In the board's judgement, R. 71(3) EPC thus imposed on the applicant a duty to check and verify this text. The fact that an applicant did not exercise their right to request amendments under R. 71(6) EPC could therefore only be interpreted as approval of the communicated text, i.e. the text intended for grant. Whether the applicant noticed a possible error had no effect on the fact that this approval was binding.

In **T 265/20** the board held that the prerequisites for the legal consequence foreseen in R. 71(5) EPC were fulfilled. The legal consequence was that the applicant was deemed to have given approval to the text communicated to them under R. 71(3) EPC. The unambiguous wording of R. 71(5) EPC did not allow for an interpretation other than the foreseen legal consequence. Firstly, there was no legal basis in the EPC for a distinction between the text referred to in a communication under R. 71(3) EPC and the text really intended by the examining division (see also **T 2277/19**, point 1.3 of the Reasons). Secondly, it was not the content of the text which triggered the deemed approval under R. 71(5) EPC, but the applicant paying the fee and filing the translations according to R. 71(5) EPC. It followed that it was pointless to explore the "true will" of the members of the examining division when editing the communication pursuant to R. 71(3) EPC. It

was the applicant themself with whom the final responsibility for the text remained, not the examining division. The board further considered that decisions **T 1003/19** and **T 2081/16** did not amount to diverging case law; it had no doubt that the wording of R. 71 EPC did not allow it to be concluded that the "true will" of the examining division was something that had to be taken into consideration.

In **T 1823/23** the board confirmed **T 2081/16**, **T 1003/19** and **T 408/21**. The board noted that the case in hand was distinguished from **T 265/20**, not least in that the board in the present case could identify convincing reasons why the examining division's true intention was not reflected by the text of the R. 71(3) EPC communication.

c) Auxiliary request issues

Where it is not clear which higher request the applicant wishes to pursue, the examining division must request that the applicant clarifies this in resumed examination proceedings. (Guidelines C-V, 4.9 – April 2025 version).

In **T 1255/04** (OJ 2005, 424) the board held that in a case where a request was considered allowable on which a R. 51(4) EPC 1973 (now R. 71(3) EPC) communication was to be sent, but where higher-ranking requests were not allowed, the communication under R. 51(4) EPC 1973 would be deficient if it was not accompanied by reasons why the higher-ranking requests were not allowed. This communication should also expressly mention the option of maintaining the disallowed requests, thus reminding the applicant and the examining division of the possibility for the applicant of asking for a written appealable decision on these higher-ranking requests (**T 1181/04**, OJ 2005, 312, followed). It pointed out that if the applicant maintained a still pending higher-ranking request discussed at the oral proceedings before the examining division, that request could not be refused under R. 86(3) EPC 1973 (now R. 137(3) EPC). R. 86(3) EPC 1973 could not be used to deprive an applicant from obtaining a decision giving the substantive reasons for refusal of a request already considered in substance during the proceedings. A decision merely stating that the application was refused because there was no version approved of by the applicant within the meaning of Art. 113(2) EPC 1973 on which a patent could be granted, was inadequately reasoned because it did not give substantive reasons why what the applicant approved of was not in conformity with the patentability requirements of the EPC.

In **T 169/96** the board held that according to Art. 113(2) EPC 1973, the EPO was bound to the requests of the applicant or proprietor. In case of main and auxiliary requests, this meant that the EPO was also bound to the order of the requests. Before a decision could be taken on the basis of an auxiliary request, the main request had to be examined and decided upon (see also **T 484/88**). In the case in hand the applicants were only invited to indicate their approval of the text according to auxiliary request III. Therefore, their express disapproval related necessarily only to this version of the application. Hence, auxiliary requests I and II were pending when the decision under appeal was taken and the failure to give a decision on these requests was a violation of Art. 113(2) EPC 1973. The failure to deal with the requests preceding auxiliary request III violated also R. 68(2) EPC 1973 (now R. 111(2) EPC). If a decision related to several requests, it had to give reasons for

the rejection of each one (see **T 234/86**). The fact that the first examiner had expressed a preliminary view in a previous communication which might be applicable to these requests could not replace reasons in the decision itself. It had to be clear from the decision which considerations led the division to its conclusions (**T 234/86**, see also **T 1439/05**).

In **T 255/05** the board observed that the appellant's "auxiliary request" was not one single request but encompassed numerous requests. It was totally undefined in which order these four requests and any such combination requests should be considered by the board. The board noted that according to Art. 113(2) EPC 1973, the EPO should consider or decide upon the European patent application only in the text submitted to it, or agreed, by the applicant. It was therefore the applicant's responsibility to define the text on the basis of which it requested a patent to be granted. In the case of auxiliary requests this included the requirement that the applicant had also to indicate the order in which the requests were to be examined. As a consequence, when the appellant, even after having been invited to do so by the board, did not clearly indicate the order in which its several requests were submitted and what the exact content of each of these requests was, there was no text submitted or agreed by the applicant within the meaning of Art. 113(2) EPC 1973 and no request which could be considered by the board. Therefore, the appellant's "auxiliary request" had to be disregarded.

In **T 888/07** the board held that if the examining division refused to consent to the latest submitted set of amended claims, put forward to substitute the claims previously on file under R. 86(3) EPC 1973, the previous set of claims that the examining division had consented to consider but which the applicant had not maintained as an auxiliary request was not automatically revived. It noted that in accordance with Art. 113(2) EPC and established case law (see e.g. **T 237/96**) a decision could not be based on the previous set of claims. Art. 113(2) EPC 1973 stated that the EPO had to consider and decide upon the European application or patent only in the text submitted to it, or agreed to, by the applicant or proprietor. Deciding to refuse an application on the grounds that the claims previously on file were not allowable would have contravened Art. 113(2) EPC 1973, since these claims were no longer pending.

3.3. Amendments or corrections filed in response to the communication under Rule 71(3) EPC

3.3.1 Amendments where Rule 71(3) EPC communication is the first communication

By way of exception, in cases where the R. 71(3) EPC communication is also the first communication in examination proceedings, amendments filed in response thereto must be admitted into the proceedings under R. 137(2) EPC. However, where a further R. 71(3) EPC communication is sent in respect of such cases, any amendments filed in response thereto must be consented to by the examining division according to R. 137(3) EPC (see Guidelines C-V, 4.4 – April 2025 version).

3.3.2 Amendments and corrections requested according to Rule 71(6) EPC

Rule 71(6) EPC reads as follows: "If the applicant, within the period under paragraph 3, requests reasoned amendments or corrections to the communicated text or keeps to the latest text submitted by him, the examining division shall issue a new communication under paragraph 3 if it gives its consent; otherwise it shall resume the examination proceedings". On the possibility to waive the right to a further communication under R. 71(3) EPC (abolished as of 1 July 2020) see above in this chapter IV.B.3.2.2.

Where amendments or corrections are not admitted, or where they are admitted but not considered allowable, examination will be resumed (Guidelines H-II, 2.5.2 – April 2025 version).

In **T 1567/17** the board held that the applicant's remark in a response under R. 71(6) EPC that an amended feature "can also be omitted if regarded as violating Art. 123(2) EPC" could not be construed as waiving their right to be heard and their right to a reasoned decision in case the application were to be refused. Rather, this remark merely intimated that the applicant would accept the issue of a new communication under R. 71(3) EPC on the basis of the amended set of claims without said feature. The appellant had been given no opportunity to respond to the division's opinion on this issue and the board held that the direct refusal of the application by the examining division was in violation of Art. 113(1) EPC. Surrender of a right cannot be simply presumed (referring to **G 1/88**, OJ 1989, 189; **T 685/98**, OJ 1999, 346).

3.3.3 Criteria for admitting amendments filed in reply to the Rule 71(3) EPC communication

The criteria for accepting or refusing requests for amendment under R. 137(3) EPC (R. 86(3) EPC 1973), or correction under R. 139 EPC (R. 88 EPC 1973), have not been changed by amended R. 71 EPC (R. 51 EPC 1973), which entered into force on 1 April 2012 (OJ 2010, 637).

Decision **G 7/93** (OJ 1994, 775) dealt with the criteria for assessing the admissibility of late-filed amendments in examination. In particular, applying the principles of **G 7/93** to amendments filed in response to the communication under R. 71(3) EPC means that this communication does not constitute an opportunity for the applicant to call into question the outcome of the earlier procedure (**T 375/90**). The Enlarged Board noted that the question whether an approval submitted under R. 51(4) EPC 1973 becomes binding once a communication in accordance with R. 51(6) EPC 1973 has been issued depended rather upon the proper interpretation of Art. 123(1) EPC in conjunction with R. 86(3) EPC 1973. The Enlarged Board came to the conclusion that said approval did not become binding. It stated that, in general terms, the way in which the examining division should exercise its discretion to allow an amendment of an application must depend upon the circumstances of each individual case, and must also depend upon the stage of the pre-grant procedure which the application has reached. It was clear from the wording of the provisions in R. 51(4) to (6) EPC 1973 that the underlying object of the R. 51(6) EPC 1973 communication was to conclude the granting procedure on the basis of the previously

notified and approved text of the application. Thus although the examining division still had a discretion to allow amendments at this stage of the pre-grant procedure, such discretion must be exercised with the above underlying object in mind. In particular it held that admission of amendments at a late stage of the proceedings was to be the exception and not the rule.

In **T 1064/04** the board stated that the principles in **G 7/93** could be considered generally applicable to new requests put forward at a late stage of the proceedings, where the applicant had already had at least one opportunity to amend the application and the examining division has already completed substantive examination of the application. In the case in hand, the board found that the examining division had exercised its discretion in a reasonable way in accordance with the applicable principles. A late stage of the examination proceedings had been reached at the end of the oral proceedings, and any amendments thereafter fell to be considered under the principles derivable from decision **G 7/93**. **T 1064/04** summarised the principles derived from decision **G 7/93** (OJ 1994, 775) on admission of amendments at a late stage of proceedings (see also **T 1540/11**, **T 1326/11**). The principles that can be derived from the decision of the Enlarged Board are:

(a) Until the issue of a decision to grant the patent, the examining division does have discretion under R. 86(3), second sentence, EPC 1973 (now R. 137(3) EPC) whether or not to allow the amendment of the application at a late stage, irrespective of whether the applicant has already agreed to a text (**G 7/93**, point 2.1 of the Reasons).

(b) The examining division is required to exercise its discretion considering all relevant factors, in particular the applicant's interest in obtaining a patent which is valid in all designated states, and the EPO's interest in bringing examination to a close, and must balance these against one another (**G 7/93**, point 2.5 of the Reasons).

(c) Allowing a request for amendment at a late stage of the examination proceedings, that is, against the background that the applicant has already had at least one opportunity to amend the application and that the examining division has already completed the substantive examination of the application, will be an exception and not the rule (**G 7/93**, point 2.3 of the Reasons).

(d) It is not the function of a board of appeal to review all the facts of the case as if it were in the place of the department of first instance, in order to decide whether or not it would have exercised the discretion in the same way as the department of first instance. Rather a board of appeal should only overrule the way in which the department of first instance exercised its discretion if it comes to the conclusion either that the department of first instance has not exercised its discretion in the right way as set out in (b) above or has exercised its discretion in an unreasonable way, and thus exceeded the proper limits of its discretion (**G 7/93**, point 2.6 of the Reasons).

In **T 1399/10** the board held that if an examining division comes to the conclusion that a request is not prima facie allowable but introduces new deficiencies, it is justified for the division to refuse the request under R. 137(3) EPC.

In **T 1326/11** the decision under appeal dealt solely with the refusal under R. 137(3) EPC by the examining division to admit into the proceedings the request received after issuance of the communication under R. 71(3) EPC. Thus, the question to be decided on this appeal was whether this refusal was an appropriate exercise of the discretion given to the examining division under R. 137(3) EPC. Guided by the principles to be found on **G 7/93** as summarised in **T 1064/04**, the board was of the view that the complexity of the case only supported the decision of the examining division not to admit a request at a very late stage of proceedings, which had already involved two communications of the examining division and oral proceedings before it. Admitting the request at that late stage would have led to re-examination and consequently unduly lengthened the proceedings.

In **T 246/08** the board held that a refusal of consent to amend made in advance of any amendment being submitted could not be a reasonable exercise of discretion pursuant to R. 137(3) EPC (R. 86(3) EPC 1973) and was ipso facto a substantial procedural violation.

A number of decisions set out below relate to earlier versions of R. 51(4) EPC 1973 which were applicable up to 1 July 2002. Nevertheless, they may also be applicable to the amended version of R. 71(3) EPC, which entered into force on 1 April 2012.

In **T 375/90** the board noted the conditions defined by the boards of appeal limiting the extent of the discretion which may be exercised when applying R. 86(3) EPC 1973, where amendments were proposed by the applicant after issue of the R. 51(4) EPC 1973 communication:

(i) There was no discretion in the obligation to admit amendments which removed deficiencies constituting violations of the EPC 1973 (see **T 171/85**, OJ 1987, 160; **T 609/88**).

(ii) In all other cases the EPO's interest in a speedy completion of the proceedings must be balanced against the applicant's interest in the grant of a patent with amended claims (see **T 166/86**, OJ 1987, 372; **T 182/88**, OJ 1990, 287; **T 76/89**).

The board noted that the Guidelines stated that the communication under R. 51(4) EPC 1973 did not constitute an opportunity for the applicant to call into question the outcome of the earlier procedure and only minor amendments would be considered within the period under R. 51(4) EPC 1973. It followed from the foregoing considerations that the examining division (or the board acting within its competence), when applying the provisions of R. 86(3) EPC 1973, was not completely free to deny any examination of the respective amended documents. See also **T 989/99**.

In **T 999/93** the decision to refuse the application under R. 51(5), first sentence, EPC 1973 for lack of any approved text of the application (Art. 113(2) EPC 1973), was incorrect since the fact that the appellant never withdrew the main and first and second auxiliary requests as well as the appellant's letter (disapproval of the text proposed for grant, but request for a decision on the main request) clearly showed that they indeed approved and proposed the text according to their higher-ranking requests (see also R. 51(5), second

sentence, EPC 1973). The decision would instead have required reasoning as to the substance of the main, first auxiliary and second auxiliary requests.

In **T 237/96** the board held that the broadening of the scope of claim 1 requested by the applicant after receipt of the examining division's communication under R. 51(4) EPC 1973 so as to encompass one originally disclosed embodiment was not consistent with their previous submission that said embodiment was not part of the invention, raised new issues as to clarity and inventive step and was not supported by any argumentation in favour of the allowability of the amended claim. The board found that the examining division, in refusing to consent to the amendment under R. 86(3) EPC 1973, did not exercise its discretion in a wrong or unreasonable manner. Had it given its consent to the amended version of the claim, it would have been necessary to restart examination from the beginning, which, given the prima facie lack of clarity of the claim, would have led to a considerable delay.

In **T 1066/96** it was clear that further amendments could not be excluded wholesale in advance, but the discretion under R. 86(3) EPC 1973 had to be exercised on a case-bycase basis balancing the interests of the EPO and the applicant against one another (see **G 7/93**, OJ 1994, 775). Therefore, in exercising its discretion under R. 86(3) EPC 1973 in a negative way, an examining division could only refuse an application if, before issuing a decision, it had informed the applicant of the fact that the further amendments requested would not be admitted and of the reasons for not admitting said amendments, thereby taking due account of the applicant's reasons for such late filing of further amendments (see also **T 2536/17**). If the applicant maintained their request and their counterarguments were not considered convincing by the examining division, the application had to be refused under Art. 97(1) EPC 1973, since it contained no claims to which the applicant had agreed.

3.3.4 Claims fees due in response to Rule 71(3) EPC communication

According to R. 71(4) EPC (in force since 1 April 2012) if the European patent application in the text intended for grant comprises more than fifteen claims, the examining division shall invite the applicant to pay claims fees in respect of the sixteenth and each subsequent claim within the period under paragraph 3 unless the said fees have already been paid under R. 45 or 162 EPC.

The appeal in **J 6/12** was lodged against the decision by the formalities officer acting for the examining division to refuse a request for a refund under R. 71(5) EPC of ten claims fees following amendments which had resulted in a smaller number of claims. R. 71(6) EPC (now R. 71(4) EPC), which entered into force in December 2007, was the legal basis for the invitation to pay claims fees. According to this provision, the "text [of the application] intended for grant" was the basis for charging additional claims fees. However, the Legal Board held that this text had only become final after the examining division had approved the filed amendments, and not already on the date of issue of the communication under R. 71(3) EPC. Fees which the appellant had been invited to pay at that earlier stage had not yet become payable and decreased in the measure that the appellant had reduced the number of claims in response to the communication under R. 71(3) EPC. The Legal

Board stressed that the EPO could not retain fees of more than insignificant amounts which had been paid for no legal reason.

3.4. Amendment after approval of the text for grant

Rule 71a(2) EPC (Conclusion of the grant procedure) makes it clear that, until the decision to grant the European patent is issued, the examining division may resume the examination proceedings at any time.

An examining division has discretion to allow amendments until issue of a decision to grant (**T 690/09**, referring to **G 7/93**, order 1, OJ 1994, 775; **G 12/91**, OJ 1994, 285).

Once the applicant has approved the text communicated to them pursuant to R. 71(3) EPC, by paying the fees and filing the translation of the claims, further requests for amendment will only exceptionally be admitted under the discretionary power of the examining division given by R. 137(3) EPC. A clear example of an admissible request is where the applicant files separate sets of claims for designated states for which prior national rights exist. Similarly, it is appropriate to admit minor amendments which do not require re-opening of the substantive examination and which do not appreciably delay the issue of the decision to grant (see **G 7/93**).

A refusal of amendments must be reasoned, and both Art. 113(1) and 116(1) EPC must be observed. It must be shown that the conditions defined in **G 7/93** are not met. This means that arguments must be given as to why the amendments are not minor in nature but in fact necessitate resuming substantive examination while considerably delaying the issue of a decision to grant the patent (Guidelines H-II, 2.6 – April 2025 version).

In decision **G 7/93** the Enlarged Board stated that the wording in R. 86(3) EPC 1973 (now R. 137(3) EPC) "No further amendment may be made without the consent of the examining division" simply meant that the examining division might or might not give its consent to a request for amendment by the applicant. The approval of a notified text submitted by an applicant pursuant to R. 51(4) EPC 1973 was not rendered binding by virtue of a communication being issued in accordance with R. 51(6) EPC 1973. Even following the issue of such a communication and until the issue of a decision to grant the patent, it was left to the discretion of the examining division under R. 86(3), second sentence, EPC 1973 whether or not to allow amendment of the application. However, since the underlying object of a R. 51(6) EPC 1973 communication was to conclude the granting procedure on the basis of the approved text, a request for amendment which was received by an examining division after such a communication has been issued should be considered in a different way from a similar request for amendment received at a much earlier stage in the overall examination procedure, and in particular before approval by the applicant of a notified text. Such a request should be considered in the context of the very late stage in the pre-grant procedure at which it had been made, and against the background that the examining division had already completed its substantive examination of the application, and that the applicant had already had at least one opportunity to amend the application. Against such a background, allowing a requested amendment after the issue of a R. 51(6) EPC 1973 communication would be the exception rather than the rule.

The question remained in what kind of circumstances it would be appropriate to make an exception to the normal rule. In the Enlarged Board's view, the discretion to allow amendment should be exercised according to the same principles. Of course, an objection should only be raised by an examining division at that stage of the proceedings if it was prepared to allow amendments to meet the objection. When exercising its discretion following the issue of a R. 51(6) EPC 1973 communication, an examining division had to consider all relevant factors. In particular it had to consider and balance the applicant's interest in obtaining a patent which would be legally valid in all of the designated states, and the EPO's interest in bringing the examination procedure to a close by the issue of a decision to grant the patent.

In **G 10/92** (OJ 1994, 633) the Enlarged Board stated that if examination proceedings were re-opened by the examining division after approval in accordance with R. 51(4) EPC 1973, because – for whatever reason – the proposed text for grant was to be amended, R. 51(4) EPC 1973 required that the applicant once again be informed of the text in which the examining division intended to grant the European patent. The same was true in appeal proceedings. The approval in accordance with R. 51(4) EPC 1973 given before the department of first instance was equally binding on an appeal. If the board of appeal then concluded that the patent had to be amended prior to grant, the applicant again had to approve the amended text, approval being stated before the board if the board was ruling on the issue, or to the examining division if the matter had been remitted.

In **G 10/93** (OJ 1995, 172) the Enlarged Board held that the examining division was not bound by the view – whether positive or negative – expressed in the examination pursuant to Art. 96(2) EPC 1973; examination proceedings could be re-opened "for whatever reason" after the approval in accordance with R. 51(4) EPC 1973.

In **T 171/85** (OJ 1987, 160) the board decided that if discrepancies or inconsistencies were found in the text communicated under R. 51(4) EPC 1973 to the applicant for a European patent, they may be removed in agreement between examining division and applicant even if the latter had already given their approval under R. 51(4) EPC 1973 to the (faulty) text.

3.5. Examination after remittal for further prosecution

If a case is remitted from the boards of appeal for further prosecution, the examining division must check whether requests from examination proceedings prior to the appeal are still outstanding and must give the party an opportunity to comment (see **T 1494/05**; see also Guidelines E-X, 2.1 – April 2025 version).

If a department has to give a decision in a case which has already been remitted by the board of appeal for further prosecution to that department, it is bound by the ratio decidendi of the board of appeal, insofar as the facts, e.g. the subject-matter of the patent and the relevant state of the art, are the same (Guidelines E-X, 4 – April 2025 version).

In **T 79/89** (OJ 1992, 283) the board rejected the appellant's main request, and remitted the case to the department of first instance for further prosecution on the basis of the

auxiliary request. In this case, Art. 111(2) EPC 1973 was applicable, according to which the department of first instance shall be bound by the ratio decidendi of the board of appeal, insofar as the facts are the same. The ratio decidendi of the board of appeal's previous decision was that the subject-matter of the main request was not allowable, but that the grant of a patent in accordance with the auxiliary request was subject to a consideration of its patentability by the examining division. In this case, in the board's judgment, following the issue of the board's previous decision, the examining division clearly had no power to re-open examination on the basis of the claims which the appellant requested (with subject-matter corresponding to the previously rejected main request). Having examined the subject-matter of the auxiliary request for patentability and found no objection to it, the examining division was bound to issue a communication under R. 51(4) EPC 1973 with a text based on the auxiliary request. Furthermore, in the absence of approval of such text, in the board's judgment the examining division was bound to refuse the application, for the reasons set out in its decision. Since the examining division had no power to re-open examination in respect of the claims as requested by the appellant, in the context of the appeal in question the board necessarily had no power to re-open examination in respect of such claims, because it could only exercise power which was within the competence of the examining division (Art. 111(1) EPC 1973). Thus, the main request of the appellant had to be refused.

3.6. Amendments after the decision to grant

In **T 798/95** the decision to grant the European patent was handed over by the formalities section of the examining division to the EPO postal service for notification. The request for amendment of the application under R. 86(3) EPC 1973 was filed on the same day at 6.47 pm, thus after completion of the proceedings. Referring to **G 12/91** (OJ 1994, 285), the board held that a request for amendment under R. 86(3) EPC 1973 filed after completion of the proceedings up to grant before an examining division was to be disregarded, even if the filing of the request and the completion of the proceedings occurred on the same date. See also Guidelines H-II, 2.6 – April 2025 version.

In **T 646/20** the board noted in its Catchword that further member states could not be designated after grant. With reference to decision **G 1/10** (OJ 2013, 194), the board concluded that in the interest of legal certainty, the patent in the version as granted should no longer be open to amendments and that the applicant had had "adequate means at his disposal" to remedy beforehand. In the board's view, it was incumbent on the applicant to verify the complete file in order to spot any inconsistencies it may wish to draw attention to. Inconsistencies related to text and the designated member states in the communication under R. 71(3) EPC and not raised in response thereto must be considered as approved by applicant.

3.7. Withdrawal of amendments and abandonment of subject-matter

3.7.1 General issues

A request to withdraw an amendment is itself a request for further amendment; thus, if this request occurs after reply to the first communication from the examining division, the corresponding amendment will be admitted only if the examining division consents.

In deleting subject-matter from an application, the applicant should avoid any statement which could be interpreted as abandonment of that subject-matter. Otherwise the subject-matter cannot be reinstated (see **J 15/85** (OJ 1986, 395); **G 1/05**, OJ 2008, 271; **G 1/06**, OJ 2008, 307; see also Guidelines H-III, 2.4 – April 2025 version).

In **J 15/85** it was held that if an applicant cancels claims in a patent application but fails to state at the time that their deletion is without prejudice to the filing of a divisional application, the examining division is obliged to withhold its consent to the subsequent filing of a divisional application. However, a declaration of abandonment can be interpreted to the effect that there was no intention to abandon definitively the subject-matter of the application or patent. In **T 910/92** the applicants had expressly abandoned several claims in their application, but later retracted their declaration and requested that the claims deleted from the application be reinstated in a divisional application. The board considered under what circumstances it was possible to retract a declaration of abandonment. It referred to the case law, which required that the real intention of the party making the declaration be established, taking into account all the circumstances of the case, and concluded that in this case the appellants' real intention was not to abandon part of the original disclosure altogether, but to avoid the lack of unity that had arisen as a result of the change in the protection sought. In contrast to the case in **J 15/85** the board did not see any need in this case to protect the public interest by generally prohibiting the retraction of a declaration of abandonment. It could be expected that any third parties interested in the proceedings relating to the application in question would have asked to inspect the files at suitable intervals up until the conclusion of the proceedings (**G 1/06**; **G 1/05**; **J 2/01**, OJ 2005, 88; **J 29/97**).

In **J 13/84** (OJ 1985, 34) the Legal Board applied the same criteria to the interpretation of a declaration of abandonment as the case law had developed for declarations of withdrawal of an application. In particular, all the circumstances had to be taken into consideration and not just the preceding declarations. In the case in question the applicants had deleted their claim 21 in response to a communication from the examining division, adding that "in accordance with the examiner's suggestion, we are filing a divisional application for the intermediate products ... and for their method of preparation". The Receiving Section took the view that the divisional application, with the former claim 21 as its subject-matter, was not filed within the period of two months prescribed in R. 25(1)(b) EPC 1973 (in the version which entered into force on 7 October 1977; the provision was deleted with effect from 1 October 1988). It argued that claim 21, which had already been divided out from the application on 6 June 1983 and therefore no longer formed part of the parent application on 31 August 1983 (the date of filing of the divisional application), could no longer be converted into a divisional application. The Legal Board

did not share this view and called for the declaration of abandonment to be interpreted in the same way as a declaration of withdrawal of an application, i.e. taking into account all the circumstances. It added that, generally speaking, and as stated in the Headnote of **J 11/80** (OJ 1981, 141), a request for withdrawal should only be accepted without question if it was completely unqualified and unambiguous. The Legal Board also referred to decisions **J 24/82**, **J 25/82** and **J 26/82** (OJ 1984, 467), in which it was found that, where claims were withdrawn specifically under R. 25(1) EPC 1973 (in the version which entered into force on 7 October 1977), the applicant's restrictive intention was not to be interpreted in isolation on the strength of particular statements but in the context of the entire procedure. The Legal Board took the view that in this case no express intention to drop the claim ensued from the circumstances. The divisional application was therefore admissible.

In **T 118/91** the board ruled that the inclusion of a particular claim in a divisional application did not mean that claim had been dropped from the parent application.

3.7.2 Effects of non-payment of claims fees

If an applicant fails to pay claims fees, the applicant is considered under R. 45(3) EPC (R. 31 EPC 1973) to have abandoned the claims. Apart from resolving the specific question whether certain parts of the application were part of the description or were claims, decision **J 15/88** (OJ 1990, 445) made clear that such abandonment of certain claims could only cause a substantive loss of subject-matter if the subject-matter involved was contained only in the claims and not also in the description or drawings. The Legal Board held that an applicant who declined to pay claims fees when they were demanded ran the risk that features of a claim deemed to have been abandoned pursuant to R. 31(2) EPC 1973, which were not otherwise to be found in the description or drawings, could not subsequently be reintroduced into the application and, in particular, into the claims. The idea that there could be forced abandonment of subject-matter, in reliance on R. 31(2) EPC 1973, appeared rather to be in conflict with the principles of higher law to be deduced from Art. 52(1) EPC 1973 in conjunction with Art. 123(2) EPC 1973. An applicant normally had the right to derive subject-matter from any part of the description, claims or drawings as originally filed. See also **T 490/90**.

3.8. Withdrawal of the patent application

3.8.1 General issues

A valid notice of withdrawal which has been received at the EPO is binding on the applicant, although, in the case of withdrawal by mistake, R. 139 EPC (R. 88 EPC 1973) may be applicable (see e.g. **J 10/87**, OJ 1989, 323; **J 4/97**; **T 1673/07**; **J 6/13**; **J 11/16**). However, a withdrawal cannot be retracted once the public has been officially informed of it (**J 1/11**, **J 2/15**). A publication in the European Patent Register has the same legal effect as a publication in the European Patent Bulletin, unless otherwise specified (**J 1/11**, **J 2/15**).

3.8.2 Unambiguous and unconditional withdrawal

A request for withdrawal of a European application should only be accepted without question if it is completely unambiguous and unconditional (compare **J 11/87**, OJ 1988, 367; **J 27/94**, OJ 1995, 831; **J 19/03**; see also **J 11/80**, OJ 1981, 141; **T 60/00**; **J 38/03**; **T 1673/07**). In **J 11/87** (OJ 1988, 367) the Legal Board added that where there was even the slightest doubt as to the applicant's actual intent such a declaration should be construed as a declaration of withdrawal only if the subsequent facts confirmed that such had been their true intent.

In **J 15/86** (OJ 1988, 417) the Legal Board stated that there was a recognised difference between passive abandonment and active withdrawal of a European patent application. Each case in which there was a dispute as to the applicant's intention had to be considered on its own facts. A written statement by the applicant or their representative had to be interpreted in the context of the document as a whole and the surrounding circumstances. Similarly, **J 7/87** (OJ 1988, 422) ruled that the language used had to be interpreted in the light of the surrounding circumstances, from which it had to be clear that the applicant really wanted immediate and unconditional withdrawal rather than passive abandonment leading in the course of time to deemed withdrawal. Actual withdrawal did not depend on whether the applicant had used the term "withdrawal".

In **J 6/86** (OJ 1988, 124) the Legal Board considered the statement "the applicant wishes to abandon this application" as an unambiguous withdrawal of a European patent application, since nothing in the circumstances under which the statement had been made could be taken as qualifying such an interpretation. It was too late to ask for retraction of a notice of withdrawal once the withdrawal had been notified to the public in the European Patent Bulletin (see **J 15/86**).

3.8.3 Correction of the withdrawal of the application

In **J 19/03** the Legal Board noted that it was obvious that corrections of procedural acts having an ab initio effect could have a potentially serious impact on an application, in particular if they related to its territorial extent or to whether the application was pending at all, and raised serious concerns as to legal certainty not only for the applicants vis-à-vis the EPO but also for the public. Therefore, the case law of the boards of appeal took as a starting point that, as a general rule, an applicant was bound by its procedural acts notified to the EPO provided that the procedural statement was unambiguous and unconditional (compare **J 11/87**, OJ 1988, 367; **J 27/94**, OJ 1995, 831) and was not allowed to reverse these acts so that they could be considered as never filed (**J 10/87**, OJ 1989, 323; **J 4/97**; see also **J 2/15**). On the other hand, the boards of appeal considered that R. 88 EPC 1973 (R. 139 EPC) acknowledged as a further legal value the desirability of having regard to true, as opposed to ostensible, party intentions in legal proceedings (**T 824/00**, OJ 2004, 5) in appropriate circumstances. As a result of the conflict between these two legal principles, the boards regarded R. 88, first sentence, EPC 1973 as conferring a discretion on the competent instance to allow or not to allow a correction of an error since it was only stated in this rule that a respective error "may be corrected".

Rule 139 EPC (R. 88 EPC 1973) states that linguistic errors, errors of transcription and mistakes in any document filed with the EPO may be corrected on request. However, if the request for such correction concerns the description, claims or drawings, the correction must be obvious in the sense that it is immediately evident that nothing else would have been intended than what is offered as the correction.

a) Conditions for the correction

In **J 4/97** the applicants informed the EPO three days after withdrawal that their request had been made erroneously and should be cancelled. The EPO informed the applicants that the withdrawal had come into force and was binding, and notification of the withdrawal was later published in the European Patent Bulletin. However, the Legal Board held that the withdrawal of the application could be corrected under R. 88 EPC 1973 (which corresponds to R. 139 EPC). The legal considerations contained in **J 10/87** concerning the retraction of a withdrawal of a designation of a contracting state applied equally to the withdrawal of a patent application as a whole. In particular, it had to be ascertained that the withdrawal had been due to an excusable error, that there was no undue delay in seeking retraction, and that the retraction of the withdrawal had not adversely affected the public interest or the interests of third parties. In the circumstances of the case, the Legal Board held that the mere fact that the withdrawal was retracted after only three days was a strong indication that it had indeed been made in error. The error resulted from confusion between two similar reference numbers assigned by the appellants to their patent applications. In the Legal Board's opinion this mistake could be considered as an excusable oversight. The public interest was not affected because the withdrawal was retracted before the corresponding entry was made in the Register and more than six weeks before the withdrawal was officially notified to the public in the European Patent Bulletin. Thus, at the time the general public was informed of the withdrawal, the public part of the file clearly showed that a request for cancellation of the withdrawal had been filed thereby warning third parties relying on the information published by the EPO. The board also considered that the interests of third parties who might have inspected the file could be protected if a national court applied Art. 122(6) EPC 1973 mutatis mutandis. See however **J 5/19** in which the Legal Board did not adhere to e.g. **J 10/87** and **J 4/03** insofar as these decisions required, as a condition to be met for corrections under R. 139 EPC, that the error was due to an excusable oversight.

b) Public interest

In **J 4/03** the Legal Board noted that the request for retraction of the withdrawal of the application had been made after notification of the withdrawal in the European Patent Bulletin, the means of official publication of the EPO. That meant that the public had already received the information that the application no longer existed so that the principal precondition for allowing a correction was not met. See also **J 7/06**.

In **J 14/04** the Legal Board rejected the request for correction of the withdrawal of the application. It agreed with **J 10/87** that the public interest lay in being able to rely on information officially published by the EPO. The Legal Board took the view that the Register constituted an official publication (see also **J 37/03**, **J 38/03**), and as, at the time

of the request for withdrawal, access to the Register was freely offered to the public on the internet, the request for withdrawal was available to the public on the date the Register indicated the request for withdrawal was recorded. It was of no relevance whether the file was actually consulted on this date. Nor did the Legal Board consider that Art. 122(6) EPC 1973 could apply mutatis mutandis to cases of correction under R. 88 EPC 1973.

The Legal Board held in **J 25/03** (OJ 2006, 395) that entries in the Register also amounted to notification to the public from the day of their publication as well as publication in the European Patent Bulletin. The Legal Board rejected the request for correction of the withdrawal of the patent application and added that it was of no relevance that only four days had elapsed between mention of the withdrawal in the Register and mention of the request for retraction of the withdrawal. Legal certainty would suffer unacceptably if further delay were permitted for retraction of the withdrawal in such circumstances where even after inspection of the complete file there would not have been any reason for a third party to suspect, at the time of its official notification to the public, that the withdrawal could be erroneous and later retracted.

In **J 1/11** the Legal Board noted that both the European Patent Register according to Art. 127 EPC and the European Patent Bulletin according to Art. 129(a) EPC were official sources of information to the public. There was nothing that would allow a distinction as to which of the two was more official, reliable or decisive. Contrary to what the appellant alleged, entries into the Bulletin were no more "cast in stone" than those of the Register, and could be corrected either under R. 140 EPC, or by way of a decision. As far as the function of providing information to the public was concerned, the Legal Board was unable to deduce a fundamental difference between the Register and the Bulletin. The Legal Board decided that the appellant's requests for retraction of the withdrawal of its application as a correction of an error under R. 139 EPC had to be refused. The Legal Board pointed out that explicitly withdrawing a pending patent application was a declaration of the highest importance for the applicant, since all the legal effects of the application, such as establishing a preliminary right, were finally abandoned. In the light of these consequences, utmost caution was therefore required when declaring the withdrawal of an application. A correction of errors in documents filed with the EPO under R. 139 EPC was only possible under strictly defined conditions. In the case in hand, the request for retraction of the withdrawal reached the EPO more than a month after the withdrawal was made and after it was recorded in the Register. However, a withdrawal cannot be retracted once the public has been officially informed of it. In a broader sense, this was also reflected in the principle that a declaration of intent could only be retracted if the retraction reached the addressee (the public) either before said declaration or at the same time, a rule that could be found in the civil law systems of many contracting states of the EPC. See also **J 2/15** and **J 3/22**.

In **J 6/13** the Legal Board pointed out that an applicant was bound by its procedural acts notified to the EPO provided that the procedural statement was unambiguous and unconditional (**J 19/03**). The Legal Board held that there could be no retraction of a withdrawal if there was no reason for third parties to assume that the withdrawal was erroneous. Referring to **J 12/03** (citing with approval **J 25/03**), the Legal Board pointed out

that in the interest of legal certainty for third parties, and taking into account the public function of the Register, a third party upon file inspection must have had good reason to suspect that the withdrawal was made in error in order to allow its retraction. The Legal Board had to determine whether, in the case in hand, such good reason was present. It took the view that, based on decisions **J 12/03** and **J 18/10**, the prospects of the application, however promising, were insufficient to infer an obvious or even potential contradiction with a subsequent withdrawal. Patent applications may be withdrawn due to considerations of business strategy, investor preference, shift in portfolios, agreements with competitors, etc. Due to financial considerations, most granted European patents were validated only in a limited number of countries. These considerations may come into play at any time, even after the recent payment of annuities, or after the communication of a positive search report. The favourable prospects of the application in this case would thus not lead a third party to the conclusion that the withdrawal was possibly made in error. Nor did they lead the representative who handled the case to this conclusion, either.

In **J 2/15** the applicant had pointed to a "fundamental inconsistency" between the decisions in cases **J 10/87** and **J 4/97** on the one hand, and **J 25/03** and **J 1/11** on the other, concerning the question whether the publication of a withdrawal in the Register amounted to an official publication thereof. The Legal Board acknowledged that the reasoning of the more recent decisions had led a change in the case law due to the evolution of technical means. However, this could not be seen as an inconsistency in the case law where cases on the same subject-matter arrive at different results and have a different reasoning whilst being decided at the same time. The Legal Board was of the opinion that this inconsistency had been comprehensively addressed in **J 1/11**, and saw no need to elaborate on this further.

In **J 10/08** the Legal Board concluded that the public would not have been misinformed or misled by the information published in the Register, since in the case in hand the public would have been informed about the withdrawal and the request for its retraction at the same time and would therefore have been sufficiently warned that there was possibly something wrong with it. Hence, the withdrawal of the application could be retracted by correction under R. 139 EPC.

In **J 6/19** the Legal Board noted that the request for withdrawal, which the applicant had sought to retract, was unqualified, unambiguous and unconditional, and therefore valid. The Legal Board applied the reasoning of **J 25/03**, where four days elapsed from the mention of the withdrawal in the Register to the addition to the file of the request for retraction of the withdrawal. The Legal Board concluded that it was therefore of no relevance to the case in hand that the request for retraction was received on the same day the withdrawal was published. The time requirement of R. 139 EPC had not been met.

c) Intention of the party

In **J 7/19** the board concluded, with reference the case law of the boards of appeal (**J 8/80**, OJ 1980, 293; **J 4/82**, OJ 1982, 385) to R. 139 EPC, that mistakes which resulted in a divergence between the party's actual and declared intent were eligible for correction under R. 139 EPC. In the case in hand the applicant decided to abandon the application

on the basis of an erroneous assumption. The board found there to be no divergence between the applicant's declaration and its true intention and dismissed the appeal. In the case law of the boards, only errors relating to the declaration, its content or its transmission fell under the notion of a mistake within the meaning of R. 139 EPC. The board explained there were good policy reasons for having this limitation. If the notion of a mistake were extended to also cover a scenario where the declaration correctly reflected a party's intentions, but was based on wrong assumptions, any mistaken assessment of the disclosure of the application, the patentability of the invention, the entitlement to priority, the legal provisions or the related case law would make any withdrawal potentially eligible for correction. This would be detrimental to legal certainty. Where the applicant has made a decision on withdrawal without considering all the relevant circumstances, it must bear the consequences.

In **J 19/03** the Legal Board found that under R. 88, first sentence, EPC 1973 (R. 139, first sentence, EPC), it was not sufficient to prove that a divergence had occurred between the true intention of the applicant and the declaration filed by their representative; rather it was additionally required that this divergence was caused by an error of the person who was competent to make the decision on the procedural act before the EPO. Therefore, as a rule, in cases where the party was represented by a professional representative, the error pursuant to R. 88 EPC 1973 had to be an error of the representative in expressing their own intentions.

In **J 5/19**, however, the Legal Board held that in assessing whether the withdrawal was due to a mistake in the case in hand, only the intention of the applicant and not that of the European representative was relevant. The decision to withdraw the application indeed lay with the former and not the latter.

3.9. Refusal of a European patent application under Article 97(2) EPC

Under Art. 97(2) EPC (Art. 97(1) EPC 1973) if the examining division is of the opinion that the European patent application or the invention to which it relates does not meet the requirements of the EPC, it shall refuse the application unless the EPC provides for a different legal consequence.

In **R 14/10** the Enlarged Board held that there was no obligation under the EPC to carry out the examination of a European patent application or patent in its entirety, i.e. in respect of all pending claims if a claim considered unallowable has been maintained and no auxiliary request relating to a set of claims not comprising this unallowable claim had been submitted. In such a case the application or patent failed to meet a requirement of the EPC and was open to refusal or revocation (see **T 228/89**, referring to **T 5/81**, OJ 1982, 249; see also **T 293/86**, **T 398/86**, **T 98/88**).

In **T 162/88** it was stated that if the European patent application in the version submitted or approved by the applicant contained a claim which the examining division considered unallowable, the examining division had to refuse the European patent application in its entirety under Art. 97(1) EPC 1973 and not just the claim concerned (see also **T 117/88**, **T 253/89**, **T 228/89**).

In **T 11/82** (OJ 1983, 479) the board held that a European patent application had to satisfy the conditions laid down in the Implementing Regulations (see Art. 78(3) EPC 1973). If, in the opinion of the examining division, the application did not do so, the examining division was obliged by Art. 97(1) EPC 1973 to refuse it.

In several decisions the boards pointed out that it was highly desirable that the examining division should give an appealable decision with sufficient reasoning on all the issues that had been properly raised by the EPO during the examination proceedings and dealt with substantively in the applicant's reply. Such "complete" decisions streamlined the procedure, rendering remittal to the department of first instance unnecessary; the board could decide all issues already raised in the department of first instance without depriving the appellant of the opportunity to have them considered at two instances (see **T 153/89**, **T 33/93**, **T 311/94**).

In **T 839/95** the examining division did not take a final decision as provided for in Art. 97 EPC 1973. Instead, it issued a decision indicated as an interlocutory decision under Art. 106(3) EPC 1973 rejecting the main and two auxiliary requests and stating that the invention claimed according to the third auxiliary request was found to meet the requirements of the EPC. The board noted that an interlocutory decision in the case of an allowable auxiliary request was foreseen in the instructions to examiners only for auxiliary requests in opposition proceedings. It did not consider it appropriate for the department of the first instance to proceed in the same way in grant proceedings. In the board's judgment, the purpose of the interlocutory decision in opposition proceedings was intended to save the proprietor the further cost of fulfilling the formal requirements under R. 58(5) EPC 1973 before there was a final decision on the version in which the patent could be maintained (**T 89/90**, OJ 1992, 456). A corresponding situation did not exist in grant proceedings because there was no adverse party who might object to the version to which the applicant had agreed. The appeal was admissible, since the appellant was adversely affected by the rejection of their preceding requests.

In **T 856/05** the appellant had argued that since the decision of the examining division did not give any reasons for refusing claim 6, it was not reasoned, thereby contravening R. 68(2) EPC 1973. The board held that it was sufficient for the examining division, when deciding to refuse a European patent application under Art. 97(1) EPC 1973, to state one ground only which in their opinion would prejudice the grant of a European patent, since the EPC did not contain any provision which would allow a European patent to be partially granted. In the case in hand, the examining division was unable to grant a patent because it was of the opinion that the subject-matter of claim 1 did not involve an inventive step. Consequently, the examining division was under no obligation to comment on the other claims.

A European patent application can also be refused under Art. 97(2) and 125 EPC if it claims the same subject-matter as a European patent which has been granted to the same applicant and does not form part of the state of the art pursuant to Art. 54(2) and (3) EPC (**G 4/19**, OJ 2022, A24). For more on the topic of double patenting, see chapter II.G "Prohibition of double patenting".

3.10. Date on which a decision to grant a European patent takes effect

Under Art. 97(3) EPC the decision to grant a European patent shall take effect on the date on which the mention of the grant is published in the European Patent Bulletin. Art. 97(3) EPC is essentially identical to Art. 97(4), first sentence, EPC 1973. The provisions concerning the minimum period that must lapse before the grant can take effect have been deleted from the article. With the other grant formalities being transferred to the Implementing Regulations (see R. 71 EPC), this matter too was more appropriately regulated at a lower legislative level. Consequently, Art. 97(6) EPC 1973 was deleted as unnecessary.

Article 98 EPC stipulates that the EPO shall publish the specification of the European patent as soon as possible after the mention of the grant of the European patent has been published in the European Patent Bulletin. The contents of the specification have been transferred to the Implementing Regulations (see R. 73(1) EPC). Art. 98 EPC contains the words "as soon as possible" in order to indicate that it is not always technically possible to publish the specification on the same day as the mention of the grant.

In **T 84/16** the board referred to **T 1644/10** and held that no legal effects were provided by the EPC with respect to the patent specification. The board endorsed the finding in Legal Advice No. 17/90 (OJ 1990, 260) that "the text of the patent specification (...) has no binding character. Its function is confined to facilitating public access to the content of the granted patent, particularly the nature and scope of the industrial property right".

In **J 7/96** (OJ 1999, 443) the Legal Board did not share the view of the department of first instance and the applicant that the proceedings for grant were concluded on the date the examining division reaches its decision to grant a European patent under Art. 97(2) EPC 1973. The Legal Board noted that it was true that this date represented the date on which the process of reaching a decision on the application within the examining division was concluded; both the EPO and the applicant were bound by the decision as far as the text of the patent to be granted, the claims, description and drawings were concerned, and the subject-matter of the text of the patent became res judicata at that date. Thereafter, the EPO could no longer amend its decision and had to disregard any fresh matter the parties might submit (see **G 12/91**, OJ 1994, 285). Only linguistic errors, errors of transcription and obvious mistakes could be corrected later under R. 89 EPC 1973. The date on which the decision to grant the European patent was reached was thus clearly decisive as regards the EPO and the applicant. The Legal Board noted that under Art. 97(4) EPC 1973, the decision to grant a European patent referred to in Art. 97(2) EPC 1973 did not take effect until the date on which the European Patent Bulletin mentions the grant. It was from this date of mention that, in accordance with Art. 64(1) EPC 1973, a European patent conferred on its proprietor the same rights in respect of each contracting state in respect of which it is granted as would be conferred by a national patent granted in that state. The mention also marked the time when the responsibility of the EPO came to an end and the national patent systems took over, the granted patent becoming a bundle of national patents. It also marked the start of the period during which a notice of opposition may be filed (Art. 99(1) EPC 1973). Thus, the date of publication of the mention of the grant of the patent was the date on which the grant of the

patent took legal effect with respect to third parties, and on which the extent of protection conferred on the applicant was determined once and for all by means of the accompanying publication of the specification of the patent pursuant to Art. 98 EPC 1973. During the period between the decision to grant the patent (Art. 97(2) EPC 1973) and the publication of the mention of the grant (Art. 97(4) EPC 1973), the application was deemed to be still pending before the EPO. As the department of first instance itself admitted in its decision, and as was also not disputed by the applicant, according to established EPO practice it was still possible during this interim period to take some limited action in respect of the application, which may, for example, be withdrawn or transferred. Applicants may even withdraw individual designations if they so wish. For its part, the EPO continued to have certain rights or obligations concerning the patent during this period; for example, the annual fees fell due and transfers of rights in the patent must be registered by the EPO.

In **J 23/03** the appellant requested that the designation country GR incorrectly marked with a cross be corrected to GB. After a considerable exchange of correspondence, the examining division refused the request for correction on the ground that, from the date of publication of the patent, public interest in the reliability of the published information overrode the patent proprietor's interest in a correction, especially as the applicant had had several opportunities to check the designation information in the course of the proceedings, namely after the notification of forms 2004 and 2005. The Legal Board stated that R. 88 EPC 1973 did not contain an explicit reference to a time limit and that a request for correction could therefore be submitted at any stage of the patent grant procedure (see also **J 6/02**). This also applied to the correction of incorrect designation information in the application documents as requested by the appellant. The Legal Board nevertheless found that the appellant's request for correction of the designation information in the application documents had been submitted to the EPO only on 29 April 2002. Mention of the grant of the patent had appeared in the Patent Bulletin over a month before that date. Under Art. 97(4) EPC 1973, mention of the patent grant led to the grant of the patent taking effect and to the patent grant proceedings being concluded. At the time that the appellant submitted their request for correction, therefore, the proceedings were no longer pending (see **J 7/96**, OJ 1999, 433; **J 42/92**). The Legal Board held that the pendency of patent grant proceedings was, however, a requirement for the submission of an admissible request for correction because after that date the bundle of European patents granted under a single system divides into national patents which are then no longer administered by the EPO but by the appropriate national offices.

3.11. Errors in the European Patent Bulletin

In decision **J 14/87** (OJ 1988, 295) the question arose to what extent a deficiency in the publication of the mention of grant of a European patent, i.e. the omission of important particulars relating to the grant, might render the patent ineffective. The Legal Board held that in principle deficiencies in the publication of the mention of grant in the European Patent Bulletin did not necessarily render the decision to grant within the meaning of Art. 97(4) EPC 1973 ineffective. Nevertheless, this matter could be decided only in the light of the case in question and the fact that the purpose of the publication was to draw the attention of interested parties to the grant of the patent, and also that any decision to file an opposition had, under normal circumstances, to be based on a careful examination

of the extent of the protection conferred by the patent and not solely on the particulars given in the European Patent Bulletin. Such an examination could be carried out satisfactorily only if the patent specification was published at the same time as the mention of grant of the patent.

4. Additional searches during examination

An additional search will sometimes be required either at the first stage of amendment or subsequently. This may arise for a number of reasons (for more details, see Guidelines C-IV, 7.3 – April 2025 version).

4.1. Rule 63 EPC governing incomplete search

4.1.1 Introduction

Rule 63 EPC (R. 45 EPC 1973) governs the procedure followed by the search division when it is not possible to carry out a meaningful search. For more details see Guidelines B-VIII, 3 – April 2025 version.

Rule 63 EPC was amended by decision of the Administrative Council CA/D 3/09 of 25 March 2009 (OJ 2009, 299), which entered into force on 1 April 2010. It introduced among other things the invitation to the applicant to file a statement indicating the subject-matter to be searched. In particular, R. 63(1) EPC states that if the EPO considers that the European patent application fails to such an extent to comply with the EPC that it is impossible to carry out a meaningful search regarding the state of the art on the basis of all or some of the subject-matter claimed, it shall invite the applicant to file, within a period of two months, a statement indicating the subject-matter to be searched.

According to R. 63(2) EPC if the statement under paragraph 1 is not filed in due time, or if it is not sufficient to overcome the deficiency noted under paragraph 1, the EPO shall either issue a reasoned declaration stating that the European patent application fails to such an extent to comply with the EPC that it is impossible to carry out a meaningful search regarding the state of the art on the basis of all or some of the subject-matter claimed or, as far as is practicable, draw up a partial search report. The reasoned declaration or the partial search report shall be considered, for the purposes of subsequent proceedings, as the European search report.

In **T 1242/04** (OJ 2007, 421) the board held that R. 45 EPC 1973 applied to cases which did not comply with the provisions of the EPC to such an extent that it was not "possible" to carry out a "meaningful search" into the state of the art on the basis of all or some of the claims. Thus a R. 45 EPC 1973 declaration was allowed only where a search was not possible. In other cases the search division had to draw up a partial search report, so far as was practicable. The board explained that R. 45 EPC 1973 related only to the practicability of a search and not to the potential relevance of its results in subsequent substantive examination.

In **T 1653/12** the appellant cited **T 1242/04** to support its position that a search in the case in hand would not have been impossible. The board noted that **T 1242/04** dealt with R. 45 EPC 1973, which had a different wording from current R. 63 EPC. Since **T 1242/04** dealt with a case, in which no invitation of the search division under R. 63(1) EPC and no response thereto was present, the reasons of that decision were not directly applicable to the case in hand. However, both decisions stated that fundamental clarity problems might make it impossible to carry out a meaningful search. The discrepancy between the claims and description in the case in hand was such a fundamental clarity problem.

Pursuant to R. 63(3) EPC when a partial search report has been drawn up, the examining division shall invite the applicant to restrict the claims to the subject-matter searched unless it finds that the objection under paragraph 1 was not justified.

4.1.2 Additional search necessary: limited discretion of the examining division

In **T 1515/07** the board stated that in normal circumstances an additional search had to be carried out if a search under R. 63 EPC was missing. The case law allowed discretion in this respect, but this discretion was limited to the special cases of notoriously known features or those explicitly accepted by the applicant as known. In all other cases, an additional search had to be performed. In particular, as long as no search had been performed an examining division should normally not refuse an application for lack of inventive step if the invention as claimed contained at least one technical feature which was not notorious. The examining division considered that it was not "necessary" to carry out a search because a decision could be reached anyway. The examining division was held to have committed a substantial procedural violation within the meaning of R. 103(1)(a) EPC by not performing an additional search that was manifestly necessary. It was therefore equitable to reimburse the appeal fee.

In **T 1242/04** (OJ 2007, 421) it was held that only when a search was not at all possible could it be denied under R. 45 EPC 1973. Whether or not the search division believed that the result of a search would be of use for the substantive examination was irrelevant. If nevertheless the situation occurred that no search had been performed although it could (and should) have been, an examining division was not obliged to perform an additional search for purely formal reasons if it considered a refusal of the application to be justified on the basis of prior art which was either so well known that it clearly did not require written proof or was accepted by the applicant as known. In all other cases an additional search should be performed.

In **T 690/06** regarding the procedure before the examining division the board was of the opinion that the examining division should have performed an additional search since the database partitioning and access control features were neither non-technical nor notorious. Following the principles set out in **T 1242/04**, the board considered that, as long as no search has been performed, an examining division should normally not refuse an application for lack of inventive step if the invention as claimed contained at least one technical feature which was not notorious. The term "notorious" had to be interpreted narrowly. See also **T 918/14**.

In **T 1411/08** the board understood "notorious" as implying that technical detail was not significant. The board stated that where a search division had decided that no search was to be performed, it was not always necessary for the examining division to carry out an "additional search" before raising an inventive-step objection. According to the established case law of the boards of appeal it was possible to raise an objection of lack of inventive step without documented prior art. That should be allowable where the objection was based on "notorious knowledge" or indisputably forms part of the common general knowledge (**T 1242/04**). Such cases, however, were exceptional, and a search was otherwise essential. In the case in hand, the examining division could and should have ensured that a search was performed before refusing the application for lack of inventive step. The board considered that the failure to carry out an "additional search" constituted a substantial procedural violation.

In **T 929/18** the board, referring to decision **T 1411/08**, held that a mobile user device of a peer-to-peer data sharing group was a technical feature of the infrastructure of the system, which went beyond a notorious data processing system. Therefore, the board remitted the case to the examining division for an additional search to be carried out (Guidelines C-IV, 7.2 – March 2022 version). The board noted that the Guidelines did not define what such an additional search should cover. In the board's view, in a case like this, where no search had been carried out, the additional search should be just as complete as a normal prior art search under Art. 92 EPC. Furthermore, the results of the search ought to be presented in the public file, either in a separate document or in a communication of the examining division. At a minimum, the field of search and the relevant documents should be indicated. Should the search not reveal any relevant documents, a statement to that effect would allow the applicant, a board of appeal and third parties to conclude that the search had been completed.

In **T 1924/07** the board held that the applicant's acknowledgement in the original application that certain prior art was known was, in general, not a sufficient reason for not carrying out an additional search. The only condition under which an additional search can be dispensed with was where all the technical features of a claim correspond to "notorious" prior art.

In **T 2299/10** the decision under appeal was, inter alia, based on the objection that the subject-matter of claim 1 lacked an inventive step. The EPO acting as International Searching Authority issued a declaration of non-establishment of the international search report under Art. 17(2)(a) PCT. No supplementary European search report was established either. The examining division examined the application despite the fact that no search had been carried out. However, this was only possible in exceptional cases and, according to the case law of the boards of appeal, an additional search for pertinent prior art may be dispensed with only if the technical features of the claims were considered to be "notorious", i.e. generic and so well known that they could not reasonably be refuted (see **T 1411/08**). In the board's judgment, the technical features went beyond the mere common general knowledge and could not be considered "notorious". An applicant's acknowledgement in the original application that certain prior art was known is in general not a sufficient reason for not carrying out an additional search since such statements may be – and indeed frequently are – withdrawn or qualified. Moreover, this could only apply in

cases where all the technical features in the claim would be acknowledged as known (see **T 1924/07**). In the case in hand, however, the appellant did not acknowledge the relevant features of claim 1 mentioned as being known. Thus, claim 1 could not be definitively assessed with respect to novelty and inventive step without knowledge of the relevant documented prior art. Thus the request required a search for relevant prior art. Hence the matter had to be remitted for an additional search and further examination.

In **T 359/11** the board held that where the relevant search authority had stated, either in a search report or in a declaration that no search report would be established, that it was not necessary to cite any documentary evidence of the prior art on the grounds that all of the technical features of the claimed invention were notorious, it was always incumbent upon the examining division to consider whether an additional search was necessary. The criterion to be applied was that if the invention as claimed contained at least one technical feature which was not notorious, the application should normally not be refused for lack of inventive step without performing an additional search (see **T 690/06**). In the case in hand, the choice of the examining division to decide on the issue of inventive step without performing an additional search could only be considered justifiable if the claimed subject-matter comprised no technical features which were non-notorious.

In **T 2249/13** the appellant doubted the legitimacy of the notice from the EPO dated 1 October 2007 concerning business methods (OJ 2007, 592), which announced a no-search policy for claims pertaining to business methods. It claimed such discrimination was not justified. It considered that the EPO had enriched itself unfairly by receiving the search fee without performing a search. Furthermore, the no-search declaration of the search division could not be deemed to be a European search report under R. 63(2) EPC as the search division had ignored R. 63(1) EPC by failing to invite the appellant to file a statement indicating the subject-matter to be searched. The board pointed out that the board was applying the EPC and associated provisions as they stood. The Rules Relating to Fees did not provide for a refund of the search fee in case of a no-search declaration under R. 63 EPC. R. 63(2) EPC states that such a no-search declaration shall be considered as the European search report. Further, the fact that the search division did not comply with R. 63(1) EPC (failure to communicate with the appellant) did not alter the legal situation. The search division's actions were not open for review by the board (Art. 106(1) EPC) and, for the same reason, neither was the search division's reliance on the notice from the EPO dated 1 October 2007 concerning business methods. Therefore, the board considered that the request for a (partial) refund of the search fee was inadmissible.

In **T 1895/13** the board concurred with in **T 2249/13**; it could only apply the EPC and associated provisions as they were. Art. 9(1) RFees provided for a refund of the search fee only in the case that the European patent application was withdrawn at a time when the EPO had not yet begun to draw up the search report, but not in the case of a no-search declaration under R. 63 EPC. Furthermore, the search division could be assumed to have analysed the set of claims before taking the decision to issue a no-search declaration, and, hence, it could not be argued that the EPO had been unjustly enriched. The board explained that it was also not competent to decide on claims for compensation in respect

of a loss or damage allegedly caused by the EPO in the course of patent grant proceedings (see **J 14/87**, OJ 1988, 295).

4.1.3 Declaration under Rule 63(2) EPC

a) Notoriously well-known technical features

According to the case law of the boards of appeal an examining division need not carry out an additional search if the technical features of the claims are notoriously well known. In particular, it is possible to raise an objection of lack of inventive step without documented prior art (see e.g. **T 939/92**, OJ 1996, 309; **T 1242/04**, OJ 2007, 421; **T 1411/08**, **T 1895/13**). That should be allowable where the objection was based on "notorious knowledge" or indisputably forms part of the common general knowledge. In such cases it would be inappropriate to carry out an additional search for documented prior art on purely formal grounds (**T 1242/04**; see also **T 690/06**, **T 698/11**, **T 779/11**).

In **T 2467/09** the examining division refused the application for lack of inventive step without making reference to documentary evidence. In fact, no prior art search was carried out in either the international phase or the European phase. The board noted that according to the established case law of the boards of appeal, an application should normally not be refused for lack of inventive step as long as no search had been performed. An exception may however be made in cases where the objection was based on knowledge that was "notorious" or indisputably formed part of the common general knowledge. The board pointed out that while it could not be reasonably disputed that server systems providing web pages were known at the priority date of the application, in its view this was less evident for "technologies for the dynamic building of web pages". While such technologies were probably well known in 2008, which was when the examining division for the first time explicitly relied on their existence, it had to be kept in mind that the field of web technology had evolved considerably in the eight years following the filing of the priority application in April 2000. The board noted that the argument that certain knowledge was notorious was only a sufficiently cogent reason if it satisfied any reasonable addressee, i.e. if, at the time the argument was to be assessed by the applicant and, in case of an appeal, by a board of appeal, it could not be reasonably disputed that knowledge formed part of the common general knowledge of the skilled person at the effective filing date. In the case in hand, the board held that without documentary evidence, the examining division's reasoning failed to convince in this respect. The board remitted the case to the department of first instance for further prosecution. The examining division was to carry out an additional search on the basis of the claims, including the dependent claims. See also **T 283/12**.

b) Subject-matter not having technical character

In **T 1242/04** (OJ 2007, 421) the board noted that R. 45 EPC 1973 applied to cases which did not comply with the provisions of the EPC to such an extent that it was not "possible" to carry out a "meaningful search" into the state of the art on the basis of all or some of the claims. Thus a R. 45 EPC 1973 declaration was allowed only where a search was not possible. In other cases the search division would draw up a partial search report, "so far

as is practicable". In the board's view, R. 45 EPC 1973 related only to the practicability of a search and not to the potential relevance of its results in subsequent substantive examination. The board noted that it was not evident that claims directed only to technical features that the search division deemed "trivial" could prevent a meaningful search into the state of the art, which in fact ought to be particularly simple in such a case. The board held that where the application's subject-matter had non-technical aspects, a declaration under R. 45 EPC 1973 could be issued only in exceptional cases in which the claimed subject-matter clearly had no technical character. In the board's view, however, it was not always necessary in such circumstances to carry out an additional search in the documented prior art.

The board in **T 779/11**, referring to **T 1242/04**, pointed out that although R. 45 EPC 1973 was not identical to Art. 17(2)(a) PCT (in conjunction with R. 39.1 PCT), there appeared to be no good reason why the same findings should not apply to the issuing of a declaration under Art. 17(2)(a) PCT. See also **T 2948/18** and **T 918/14**.

c) Statement indicating the subject-matter to be searched not sufficient to overcome the deficiency noted under Rule 63(1) EPC

In **T 1653/12** the board pointed out that the applicant's statement did not provide a basis for the search examiner to perform a meaningful search. The particular wording used therein ("and/or") left it entirely open which of the two alternatives claimed should be searched. Hence, it was plausible that a meaningful search could not be made.

In **T 736/14** the board noted that the EPC contained no explicit provisions on how to proceed if an applicant whose application was non-unitary responded unclearly or in a misleading way to an invitation from the examining division to specify which searched invention it wished to prosecute further. The board held that in such a situation it could not automatically be assumed that the applicant selected the invention covered by the main request for examination. Rather, the examining division had to clarify, e.g. via a further communication, which of the searched inventions the applicant actually wanted it to examine.

4.2. Non-payment of further search fees under Rule 64 EPC

Rule 64(1) EPC (R. 46 EPC 1973) was amended by decision of the Administrative Council (OJ 2009, 299), and entered into force on 1 April 2010.

Under R. 64(1) EPC if the EPO considers that the European patent application does not comply with the requirement of unity of invention, it shall draw up a partial search report on those parts of the application which relate to the invention, or the group of inventions within the meaning of Art. 82 EPC, first mentioned in the claims. It shall inform the applicant that, for the European search report to cover the other inventions, a further search fee must be paid, in respect of each invention involved, within a period of two months. The European search report shall be drawn up for the parts of the application relating to inventions in respect of which search fees have been paid.

In **G 2/92** (OJ 1993, 591) the Enlarged Board stated that an applicant who failed to pay the further search fees for a non-unitary application when requested to do so by the search division could not pursue that application for the subject-matter in respect of which no search fees had been paid. Such an applicant must file a divisional application in respect of such subject-matter if they wished to seek protection for it. The Enlarged Board also stated that if the applicant had not availed himself of the opportunity to have the search results on the other inventions included in the search report because they had paid no additional search fees in response to the invitation under R. 46(1) EPC 1973, they would be taken to have elected that the application should proceed on the basis of the invention which had been searched. However, non-payment was not to be equated with the abandonment of parts of the application.

In **T 998/14**, however, the board noted that decision **G 2/92** did not necessarily apply for features which were disclosed in the original application documents in connection with an invention or group of inventions in respect of which a search had been made.

5. Amendments relating to unsearched subject-matter – Rule 137(5) EPC

5.1. General issues

Rule 137(5) EPC as in force from 1 April 2010 (OJ 2009, 299) (R. 137(4) EPC and R. 86(4) EPC 1973) relates to amendments made during the grant procedure which are under the control of the examining division. It stipulates that amended claims may not relate to unsearched subject-matter which does not combine with the originally claimed invention or group of inventions to form a single general inventive concept. Nor may they relate to subject-matter not searched in accordance with R. 62a or 63 EPC.

In **T 2459/12** what was at issue was whether the invention was "unsearched" within the meaning of R. 137(5) EPC, which limits the choice of subject-matter which may be put forward by way of amendment for examination in the European procedure. The board stated that it was clear that the only interpretation of R. 137(5) EPC was that, within the meaning of R. 137(5) EPC, "unsearched" means "unsearched by the EPO". It was consequently the view of the board that where, following the drawing up of a supplementary European search report by the EPO, an applicant files amended claims seeking protection for subject-matter not covered by the supplementary European search as a result of the application of R. 164(1) EPC as then in force, an objection under R. 137(5) EPC should be raised (see also **T 1871/14**).

5.2. The purpose of Rule 137(5) EPC

The wording of R. 137(5), first sentence, EPC is the same as that of R. 86(4) EPC 1973. R. 86(4) EPC 1973 (with effect from 1 June 1995) was intended to prevent amendments of the application which circumvent the principle that a search fee must always be paid for an invention presented for examination. The board in **T 274/03** explained that R. 86(4) EPC 1973 stopped applicants switching to unsearched subject-matter in the reply to a communication from the examining division and made means available for the EPO to react when different subject-matter was claimed not simultaneously but in sequence as

was the case when the applicant drops the existing claims and replaces them with originally non-unitary subject-matter extracted from the description. See also **T 442/11**, **T 509/11**, **T 1285/11**, **T 2334/11**, **T 145/13**, **T 1485/13**, **T 820/15**.

In **T 443/97** the board stated that R. 86(4) EPC 1973 concerned examination proceedings, and particularly those cases in which no further search fees requested by the search division for non-unitary subject-matter had been paid by the applicant. The purpose of R. 86(4) EPC 1973 was to exclude any amendment which circumvented the principle according to which a search fee must always be paid for an invention presented for examination. The board noted that unity of invention was a requirement of an administrative nature and that the administrative purposes of this requirement were fulfilled when the examination procedure had been concluded, i.e. when the patent had been granted (see **G 1/91**, OJ 1992, 253). Therefore, R. 86(4) EPC 1973 was not relevant for the opposition case in hand.

5.3. Applicability of Rule 137(5) EPC

5.3.1 General issues

Rule 137(5) EPC states: "Amended claims may not relate to unsearched subject-matter which does not combine with the originally claimed invention or group of inventions to form a single general inventive concept. Nor may they relate to subject-matter not searched in accordance with Rule 62a or Rule 63".

According to well-established case law, R. 137(5) EPC does not apply when the applicant has not paid the search fee in respect of a non-unitary invention relating to the originally filed claims (see **T 708/00**, OJ 2004, 160; **T 1285/11**).

In **T 613/99** the board stated that R. 86(4) EPC 1973 (now R. 137(5) EPC) referred to a particular situation, i.e. where subject-matter was described but not claimed in the original application and was therefore not searched; where that subject-matter failed to meet the requirement for unity of invention with the matter claimed in the application; and where, following the search report, the applicants had filed fresh claims relating only to this unsearched matter. In this situation, the patentability of these fresh claims could not be examined in the context of the original application, since this would have amounted to a derogation from the principle endorsed in **G 2/92** (OJ 1993, 591), according to which the invention to be examined had to be an invention for which a search fee had been paid. In the case in hand, the situation was entirely different. The claimed subject-matter in the application at issue had been claimed in the original application and had therefore been searched, even if it had not been possible to carry out a meaningful search. Moreover, the invention forming the subject of claims 1 and 2 of the application at issue was substantially the same as that which formed the subject of claims 1 and 2 of the original application. In such a situation, if the examining division rejected a finding of the search division regarding matter excluded from the search, a so-called additional European search could be carried out at the request of the examining division.

5.3.2 Extent of the European search report

The extent of the search for prior art to be conducted for the purposes of the European search report is defined in Art. 92 EPC, which states that the European search report shall be drawn up by the EPO "on the basis of the claims, with due regard to the description and any drawings". In principle, and in so far as possible and reasonable, the search should cover the entire subject-matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended (Guidelines B-III, 3.5 – April 2025 version).

In **T 708/00** (OJ 2004, 160) the application was refused by the examining division, principally on the grounds that the new claims were not allowable under R. 86(4) EPC 1973. The board stated that the provisions of Art. 92(1) EPC 1973 must not have the effect of limiting the search solely to the subject-matter of the claims, even if this would simplify matters for the search division. Nor did this imply that the sole purpose of the description and drawings was to help interpret the claims. It did, however, mean that the search division had to be discerning in the use of its discretionary power so as to ensure that the search was in complete accordance with the subject-matter of the patent application (see R. 44(1) EPC 1973), i.e. the invention, even if the essential features were not all defined in the claims at the time of search but were disclosed for example in the description or drawings. In the case in hand, the applicants were never informed of exactly what subject-matter was searched, which meant that the examining division and board of appeal were also without any information in this regard. It was therefore impossible – since negative proof is out of the question – to establish what subject-matter went "unsearched" under R. 86(4) EPC 1973. This rule therefore had to be interpreted using alternative means such as the preparatory documents or the documents published regarding the adoption of the rule. The board came to the conclusion that amended claims may only be refused on the basis of R. 86(4) EPC 1973 if the subject-matter of the claims filed originally and that of the amended claims was such that, had all claims originally been filed together, a further search fee would have been payable – on top of the search fee payable in respect of the claims actually filed at the outset – in respect of the amended claims, relating to a different invention within the meaning of R. 46(1) EPC 1973. The board noted that R. 86(4) EPC 1973 must be interpreted so as to fairly balance the objective of this rule, namely the EPO's interest in collecting, in return for services rendered, search and examination fees, and the fundamental right conferred by the EPC on the applicant to make amendments at least once to the description, claims and drawings that prove necessary during the grant procedure. The board pointed out that the intention and purpose of R. 86(4) EPC 1973 and the interference with the applicant's fundamental right to amend the application at least once called for a strict interpretation of R. 86(4) EPC 1973 (see also **T 141/04**). It held that R. 86(4) EPC 1973 did not apply when the applicant had not paid the search fee in respect of a non-unitary invention relating to the originally filed claims in spite of being invited to do so under R. 46(1) EPC 1973. In that case, the application could not be examined further, and a divisional application would have to be filed if protection were sought (see **G 2/92**, OJ 1993, 591). The boards in **T 319/96** and **T 631/97** (OJ 2001, 13) made a clear distinction between applying the provisions of R. 86(4) EPC 1973 and a situation where search fees were not paid in spite of an invitation to do so under R. 46(1) EPC 1973.

In **T 789/07** the board held that in order to search a claimed feature completely – as required by Art. 92 EPC and in line with the Guidelines – the search division must as a rule ascertain how the feature is to be interpreted in the light of the description and drawings. Only then can it arrive at a reasoned assessment about the amendments likely to be made to the claims during examination proceedings and within the framework of the original disclosure. This interpretation also forms the basis for comparison, with a view to R. 86(4) EPC 1973, with the originally claimed invention or group of inventions. The board also took the view that a claimed feature falling within the scope of the search must be regarded for R. 86(4) EPC 1973 purposes as searched, even if it was not in fact searched in a specific case (see also **T 2334/11**, **T 1679/10**, **T 345/13**, **T 1503/13**). In **T 1679/10** the board added that it would go too far to construe the Guidelines as meaning that it would be sufficient to have one broad independent claim in the application as filed, with no dependent claims, in order to be entitled to a search extending to all the features of a large number of embodiments covered by the wording of that claim.

In **T 264/09** the board stated that if a feature which had not been searched, and which further defined an element which was already part of a claim which had been searched, was taken from the description and added to this claim in order to overcome an objection under the EPC, e.g. lack of inventive step, this did not result in a claim which had been amended such that it related to unsearched subject-matter which did not combine with the originally claimed invention to form a single general inventive concept (see also **T 2334/11**, **T 1503/13**). The board thereby followed the well-established case law on the interpretation of R. 86(4) EPC 1973 (see e.g. **T 708/00**, OJ 2004, 160; **T 274/03**; **T 141/04**), it being noted that R. 86(4) EPC 1973 had the same wording as R. 137(4) EPC (as in force at the date the examining division took its decision), which, as from 1 April 2010, is included in R. 137(5) EPC. The board noted that the Guidelines were drafted accordingly; these explicitly mentioned the possibility of carrying out an additional search in connection with the examination of amended claims.

In **T 2029/13** the board was of the view that amended claims 1 to 13 did not lack unity of invention, and that consequently the search division should also have searched claims 7 to 13 (second group of inventions) of the supplementary European search report, and the examining division should not have raised an objection under R. 137(5) EPC (version that entered into force on 1 April 2010) against the second and third auxiliary requests underlying the decision under appeal on the grounds that claim 1 of those requests comprised unsearched features. Since the claims of the present main request and first auxiliary request comprised features relating to claims 7 to 13 of the supplementary European search report , which should have been searched but were not, the board considered it appropriate to remit the case to the examining division for further prosecution under Art. 111(1) EPC to perform an additional search for the combination of features of claims 7 to 13 and continue substantive examination on that basis.

In **T 1520/14** the board accepted that there was no obligation on the search division to extend the search to a feature mentioned in the description where there was no objective reason to expect that future amendments might be directed to precisely this feature. However, where the description repeatedly stresses the utility of the invention for a particular purpose or in a particular technical area, it was clearly foreseeable that the

invention may ultimately be claimed in relation to this purpose or technical area. The board found that the position of the search division that claim 1 was fully searched, but that the search did not extend to what was repeatedly presented in the description as the principal area of application, was not reasonable and not in conformity with the requirements of Art. 92 EPC. It was equally unreasonable for the examining division to confirm the correctness of this position.

5.3.3 Subject-matter of amendment not combining with the originally claimed invention

In **T 442/95** the appellants submitted new claims, based on subject-matter which did not appear in the claims as filed. They submitted that the description of this newly claimed subject-matter was to be found in the description. In the board's judgment, the subject-matter claimed had not been searched and did not combine with the originally claimed and searched groups of inventions to form a single general inventive concept. There was no need at this stage to investigate whether the application as filed provided support for such a claim, because under R. 86(4) EPC 1973 the claim was not admissible. The only path open to the appellants was to pursue the subject-matter of said claim in the form of a divisional application.

In **T 353/03** the examining division had stated in its decision of refusal that the new feature in claim 1 had not been searched and that, for that reason, the application was refused according to Art. 97(1) EPC 1973 in conjunction with R. 86(4) EPC 1973. The board found that in its decision the examining division did not take into account the fact that R. 86(4) EPC 1973 mentioned another condition which also had to be fulfilled for amended claims to be rejected, namely that the unsearched subject-matter did not combine with the originally claimed invention to form a single general inventive concept (lack of unity). There was no discussion in the appealed decision as to why the subject-matter of new claim 1 was not in unity with original claim 1. The board came to the conclusion that the appealed decision was not reasoned within the meaning of R. 68(2) EPC 1973.

In **T 333/10** the board found that the subject-matter of amended claim 1 could not be considered to have been searched and it did not combine with any of the originally claimed inventions to form a single general inventive concept. The appellant referred to **T 2334/11** and argued that, in a case like the one before it, no "a posteriori" unity judgment was to be made; rather, it was to be generally examined if the added feature taken from the description combined with the originally claimed invention to form a single general inventive concept focused on in the claims and description as originally filed. The board noted that the claims as originally filed had been found to lack unity by the search division. It also stated that the case in hand concerned the replacement of some of the features from the combination of features on which the search was based by features which might not be considered as corresponding special technical features within the meaning of R. 44(1) EPC and which could not be expected to constitute a pure limitation of one of the searched inventions. In contrast, **T 2334/11** concerned a factual situation in which added features restricted the scope of the searched subject-matter. This difference had also been addressed in **T 2334/11**, which essentially stated that the case law concerning R. 137(5) EPC distinguished between cases in which the claimed subject-matter was substantially changed, in particular by replacement or omission of a feature in a claim, and

which could give rise to an objection under R. 137(5) EPC, and cases which concerned the pure limitation or concretisation of a claim by adding a feature disclosed in the application as originally filed, and which did not normally cause lack of unity with the originally claimed invention within the meaning of R. 137(5) EPC. In the case in hand, the board did not see a limitation or concretisation of any of the four inventions which had initially been searched and which could have been pursued by the appellant. The board noted that **T 2334/11** could not be understood to the effect that the amendment of an independent claim by a feature extracted from the description was generally admissible under R. 137(4) EPC if the subject-matter of the independent claim had been searched and lacked novelty with respect to a prior art document. Instead, the board in **T 2334/11** emphasised that – in such cases – it always had to be examined whether the added feature was linked to the general inventive idea that can be deduced from the claims and description as originally filed. Hence, the amended set of claims was not admissible.

5.4. Criteria for amendments to be allowable under Rule 137(5) EPC

The question concerning the criteria to be used for the proper application of R. 137(5) EPC has been dealt with in various decisions of the boards of appeal.

5.4.1 Amendment not affecting the notion of unity of invention

A claim may be limited by inclusion of additional features, provided the resulting combination was directly and unambiguously disclosed in the application as originally filed in an explicit or implicit manner and does not relate to an invention which was not searched (Guidelines H-V, 3.2 – April 2025 version).

In **T 708/00** (OJ 2004, 160) the board held that under R. 86(4) EPC 1973, amended claims could only be refused if the subject-matter of the claims filed originally and that of the amended claims was such that, had all the claims originally been filed together, a further search fee would have been payable – on top of the search fees payable in respect of the claims actually filed at the outset – in respect of the amended claims, relating to a different invention within the meaning of R. 46(1) EPC 1973 (see also **T 319/96**; **T 631/97**, OJ 2001, 13, **T 1473/13**). It noted that a subsequent amendment to limit the subject-matter of the main claim by additional features disclosed in the application as filed did not generally affect the notion of unity of invention under either R. 86(4) or 46(1) EPC 1973 and that it was normal for an applicant to make such an amendment in respect of an objection to the patentability of the subject-matter in unlimited form. See also **T 2334/11**.

In **T 274/03** it was however made clear that certain conditions had to be satisfied for an amendment not to generally affect the notion of unity of invention. Thus, this notion was not affected, and therefore no post-search switching of subject-matter was involved by the amendment, if for instance features were added from the description to further define an element that was already a feature of the original main claim. See also **T 1394/04**.

In **T 2334/11** the board held that what generally had to be ascertained for the purposes of applying R. 137(5) EPC where an original claim was amended by adding a feature was whether the added feature could be regarded as falling under the original general inventive

concept as established in the light of the claims and description as filed (see **T 1640/07**), and not whether the originally claimed subject-matter and the subject-matter defined in the amended claim withstood an assessment of unity a posteriori. It found that one of the ideas underlying the case law on application of R. 137(5) EPC was that, while amendments to claimed subject-matter which considerably altered the essence or nature of the invention – especially through replacement or omission of features in a claim (see **T 442/95**, **T 274/07**) – might occasion an objection under R. 137(5) EPC, the mere limitation or the more specific drafting or supplementing of a claim by inclusion of a feature disclosed in the application as filed, in order, for example, to overcome an objection of lack of clarity, novelty or inventive step, generally did not result in a lack of unity for the purposes of R. 137(5) EPC. See also **T 1503/13**, **T 820/15**.

In **T 1394/04** the board noted that careful consideration of the very nature of the added feature was necessary in order to determine whether the amendment lead to a situation where lack of unity of inventive concept between the original main claim and the later claimed subject-matter arose. Such a situation in the context at issue would necessarily entail an implicit finding of lack of unity "a posteriori" (with reference to **T 274/03**) and according to the Guidelines this form of objection to lack of unity should be the exception. The board also noted that it could not be excluded that such a situation could arise as a consequence of later amendments supported solely by the description. In fact, it may occur that the description of the application contains a further general inventive concept, distinct from that underlying the main claim and its dependent claims, if any, but not clearly identified or declared as such in the description. In such a case, if the subject-matter of the main claim based on the first inventive concept had to be amended, on account of a lack of novelty resulting from too broad terms used in the wording, any amendment of the claim pertaining exclusively to said further inventive concept could justify an objection of lack of unity "a posteriori". This example elucidates that situations may actually occur where the amendment of the main claim, whose subject-matter lacks novelty, based on features supported exclusively by the description, may affect the notion of unity of the invention. Although such situations occur very rarely in practice, as already noted above, in such cases R. 86(4) EPC 1973 would have to be applied in order to avoid a possible circumvention of Art. 82 EPC 1973. In the case in hand however it was clear that, much the same way as in **T 274/03**, the introduced amendment feature merely constituted a further specification of original features of the claim which were essential to the invention. This constituted an essential aspect of the invention. Therefore, no lack of unity pursuant to R. 86(4) EPC 1973 in conjunction with Art. 82 EPC 1973 could be found.

In **T 2021/15** the board held, following **T 708/00**, that when rejecting amended claims as inadmissible under R. 137(5) EPC, it was not enough to show that an objection of lack of unity would have arisen if the amended claims had been part of the original claim set. It must be shown that the amended claim lacked unity with all claims in the original claim set, because each claim was part of the originally claimed "group of inventions". In other words, if there was unity with at least one of the original claims, R. 137(5), first sentence, EPC did not apply.

In **T 1866/15** the board agreed with the general statement that, in order to assess whether or not amended claims fulfilled the requirements of R. 137(5), first sentence, EPC it

needed to be established whether or not an objection of lack of unity would have been raised if the amended claims had been present in the set of claims on file at the time of the search. The board also agreed with the statement from the Guidelines that "an objection under Rule 137(5), first sentence, EPC would [...] arise if a technical feature taken from the description which has an effect unrelated to the effect(s) of the features of the originally claimed invention(s) were added to a claim" (see Guidelines, H-II, 6.2 – March 2021 version) insofar that the effect of an originally claimed invention could be that of a feature of a dependent claim. However, it stated that if an amendment introduced a feature with an effect entirely unrelated to the effects of the original claims, this might well be a sound basis for the examining division to deny its consent under R. 137(3) EPC. Confirmed in **T 416/19**.

5.4.2 No legal basis for exercise of discretion

In **T 2431/19** the board held that R. 137(5) EPC provided for a mandatory requirement that amended claims must fulfil to be allowable. R. 137(5) EPC did not refer to the act of making an amendment, but rather to the amended claims themselves. More specifically, the phrase "amended claims may not" or "nor may they" in R. 137(5) EPC expressed – in the form of a prohibition – a substantive and mandatory requirement for amended claims to be allowable. This requirement did not leave any room for discretion on the part of the deciding body. Accordingly, and contrary to R. 137(3) EPC, there is no reference to consent by the examining division in R. 137(5) EPC. The board found that R. 137(5) EPC hence relates to a matter of substantive law rather than to a matter of procedural law. It lays down substantive requirements, non-compliance with which leads to the refusal of a European patent application under Art. 97(2) EPC (see also **T 1126/11**). R. 137(5) EPC does not, however, provide a separate legal basis for taking a discretionary decision on the admittance of amended claims which could be relied upon independently from R. 137(3) EPC. In the case in hand the non-admittance of an amended set of claims on the basis of that rule alone therefore constituted a substantial procedural violation under R. 103(1)(a) EPC.

In **T 1866/15** the board endorsed the findings of **T 2431/19**, finding that if an amendment did not comply with R. 137(5) EPC, it was not allowable on that ground alone and the examining division no longer had discretion whether or not to admit it under R. 137(3) EPC. See also **T 416/19.**

5.4.3 Amendments filed to meet an objection

In **T 141/04** the board held that R. 86(4) EPC 1973 does not apply if a feature originally disclosed in the description is added to an originally-filed claim in order to meet an objection raised. It noted that the Guidelines were in line with the case law of the boards of appeal. The board noted that, notwithstanding the applicant's right to introduce subject-matter from the description into the claims, the exercise of such a right was not without restrictions, as indicated by Art. 123(1) EPC 1973 and R. 86(3) EPC 1973. Therefore, the examining division could possibly have exercised its discretion under R. 86(3), last sentence, EPC 1973 to refuse to admit this request, as it was filed for the first time during the oral proceedings before the examining division and apparently comprised unsearched

subject-matter. As such, the request could not reasonably be considered as clearly allowable, this latter being a usually applied requirement for admissibility of a request at such a late stage of the proceedings. On the contrary, the potential requirement for an additional search would have represented an unreasonable protraction of the examination procedure.

In **T 274/03** the board noted that it was clear that post-search "switching" of subject-matter clearly implied a significant change in the nature of the subject-matter being claimed which was not normally comparable to the addition of features taken from the description to further define an element that was already a feature of the original main claim. The board was of the opinion that an amendment amounting to the restriction of an original main claim by including complementary features from the original description into the claim represented an admissible reaction of an applicant vis-à-vis an objection against the patentability of the unamended claim and did not constitute an abuse of the system of the nature which R. 86(4) EPC 1973 was introduced to prevent (**T 377/01**, **T 708/00**). This type of amendment should not therefore in general be judged as contravening the requirements of the rule, even though an additional search could be required**.** In this context it was to be observed that the implicit finding of lack of unity between the originally claimed and later claimed subject-matter, which was a prerequisite for an objection under R. 86(4) EPC 1973, had to, with amendments of the type under consideration here, be a posteriori. The Guidelines made it clear however that this form of objection to lack of unity should be the exception, with benefit of the doubt being given to the applicant. See also **T 2334/11**.

5.5. Non-compliance with Rule 137(5) EPC: a ground for refusing an application

In **T 2459/12** the board noted that in **T 1981/12** doubt was also expressed whether R. 137(5) EPC could be an appropriate basis for refusing an application. The board in **T 1981/12** concluded that, by reference to **T 708/00** and **T 442/95**, an amendment not complying with this rule was inadmissible. According to Art. 97(2) EPC, a European patent application which does not meet the requirements of the EPC is refused unless "this Convention provides for a different legal consequence". R. 137(5) EPC sets out a requirement to be met by amended claims of a European patent application, and neither in the rule itself nor elsewhere in the EPC is any "different legal consequence" provided for the case where this requirement is not met. The board therefore judged that a failure to meet the requirements of R. 137(5) EPC was a ground for refusal of the application under Art. 97(2) EPC (see also **T 2431/19**, **T 1126/11**). The board stated that this was also entirely consistent with the view taken in **T 708/00** according to which R. 86(4) EPC 1973 was regarded as having "the status of an administrative provision in the context of the search and grant procedures", as is "the case for the unity of invention requirement in general".

C. Opposition procedure

1. Legal character of opposition proceedings and applicable principles 1410
2. Filing and admissibility requirements 1412
2.1. Entitlement to file an opposition 1412
2.1.1 General principles 1412
2.1.2 A natural or legal person, or equivalent thereto 1413
2.1.3 Examination at any stage in the proceedings of entitlement to oppose 1414
2.1.4 Filing of opposition by patent proprietor or inventor 1414
2.1.5 Filing of opposition on behalf of a third party – straw man 1415
2.1.6 Repeated filing of opposition documents by the same person 1417
2.1.7 Filing of multiple oppositions by different persons – single opposition proceedings 1418
2.1.8 Filing a joint opposition – multiple opponents 1418
a) Payment of a single opposition fee 1418
b) Representation, legal status and composition of a multiple opponent 1418
2.2. Formal requirements for opposition and filing in due time 1420
2.2.1 Introduction 1420
2.2.2 Opposition period 1420
a) Period triggered by the publication of the mention of the grant of the patent 1420
b) Observance of the time limit 1421
2.2.3 Payment of opposition fee – correction of a payment form 1422
2.2.4 Identity of opponent and correction of opponent's name 1423
a) Principles 1423
b) Incorrect designations and abbreviations 1423
c) Evidence of identity 1424
d) Availability of Rule 139 EPC to rectify errors 1425
2.2.5 Sufficient identification of the opposed patent 1427
2.2.6 Statement of extent of opposition 1427
2.2.7 Statement of grounds for opposition 1428
2.2.8 Substantiation of grounds for opposition: indication of facts, evidence and arguments 1429
a) No "partial inadmissibility" 1429
b) Relevant date for compliance 1429
c) Full and concise reasoning 1430
d) Substantiation to be distinguished from strength of the opponent's case 1431
e) Indication of evidence 1432
f) No burden of proof with regard to negative facts 1432
g) Examples – sufficient substantiation acknowledged 1433
h) Examples – sufficient substantiation denied 1434
i) Alleged public prior use 1435
j) Non-patent literature and oral disclosures 1437
2.2.9 Other requirements for notice of opposition 1438
a) Translation 1438

b) Signature 1438
c) Authorisation 1438
2.3. Procedural aspects of examination of admissibility 1439
2.3.1 Admissibility of opposition to be checked at every stage 1439
2.3.2 Formalities officers' powers in opposition proceedings 1439
2.3.3 Preliminary opinions on admissibility 1439
2.3.4 Consequences of inadmissibility 1439
3. Substantive examination of opposition 1440
3.1. Introduction 1440
3.2. Extent of opposition 1440
3.3. Scope of examination of grounds for opposition 1442
3.4. Fresh grounds for opposition 1443
3.4.1 Fresh grounds examined exceptionally 1443
3.4.2 Meaning of "fresh grounds for opposition" 1443
3.4.3 Prima facie relevance 1445
3.4.4 Objections of lack of novelty and lack of inventive step 1446
3.4.5 Examination of fresh facts and evidence related to a fresh ground 1446
3.4.6 Opportunity to comment on new grounds for opposition 1447
3.5. Grounds raised against claims amended after grant 1449
4. Late submission of documents, lines of attack and arguments 1449
4.1. Discretionary decision 1449
4.2. Concept of "in due time" 1450
4.2.1 Duty to facilitate due and swift conduct of proceedings 1450
4.2.2 Rule 116(1) EPC – not an invitation to file new submissions 1452
4.2.3 Fair response – examples 1452
4.3. Sufficient reasoning 1453

8.2.2 Maintenance of European patent as amended 1500

1. Legal character of opposition proceedings and applicable principles

Opposition proceedings (see Art. 99 to 105 EPC and R. 75 to 89 EPC) constitute an exception to the general rule under the EPC that after grant a European patent is no longer within the competence of the EPO but becomes a bundle of patents within the jurisdiction of the designated contracting states (**T 9/87**, OJ 1989, 438). They allow, during a limited period of time, a centralised action for revocation of a European patent to be brought before and decided by the EPO.

Opposition is an **independent procedure** following the grant procedure (**T 198/88**, OJ 1991, 254). It is not designed to be an extension of the examination procedure (**G 1/84**, OJ 1985, 299). As explained in **G 9/91** and **G 10/91** (OJ 1993, 408 and 420), it takes place at a point in time when the proprietor is enjoying in each designated contracting state the same rights as would be conferred by a national patent granted in that state (Art. 64 EPC). The relief sought by the opponent is not, as in traditional pre-grant opposition, refusal of the patent application but revocation of the patent as granted (in its entirety or in part) with effect ex tunc in all designated contracting states (Art. 68 EPC). Furthermore, the limited grounds for opposition (Art. 100 EPC) are essentially the same as the grounds for revocation under national law (Art. 138 EPC), the concept of post-grant opposition under the EPC differs considerably from that of pre-grant opposition. The opposition procedure before the EPO thus has several important features more in common with the concept of the traditional revocation procedure and its effect is more similar to that of such a procedure. This characteristic is further emphasised by the addition at a late stage in the preparation of the EPC of the possibility to oppose a European patent even if it has been surrendered or has lapsed for all contracting states (Art. 99(3) EPC 1973; see R. 75 EPC and also **T 606/10**). As opposition is an independent procedure which takes place after the grant procedure, a document considered in examination proceedings is not automatically scrutinised in opposition or opposition appeal proceedings, even if quoted and acknowledged in the contested European patent (**T 198/88**, OJ 1991, 254).

The opposition procedure is a purely administrative procedure. It differs fundamentally from the appeal procedure, which must be regarded as a judicial procedure and is, by its very nature, less investigative (see **G 7/91** and **G 8/91**, OJ 1993, 356 and 346; **G 9/91**, OJ 1993, 408). Unlike an appeal, opposition has neither suspensive effect nor the effect of transferring the case to a superior instance (see **T 695/89**, OJ 1993, 152).

Post-grant opposition proceedings under the EPC are in principle to be considered as **contentious** proceedings between parties who normally represent opposing interests and

who should be treated equally fairly (**G 9/91** and **G 10/91**, OJ 1993, 408 and 420). As soon as the notice of opposition has been filed, the procedure automatically becomes bilateral, no matter whether the opposition is valid, admissible or allowable. The Convention does not provide for a decision by an opposition division "to end the ex parte proceedings" (**T 263/00**). R. 79(1) EPC (R. 57(1) EPC 1973) requires the opposition division to communicate the opposition to the proprietor of the patent, and the Guidelines D-IV, 1.5 (April 2025 version) provide that communications and decisions about whether the opposition is deemed to have been filed and is admissible are also to be notified to the patent proprietor. Concerning the contentious nature of opposition proceedings, see also parallel cases **T 1553/06** and **T 2/09** in this chapter IV.C.2.1.4.

According to the principle of party disposition (cf. **G 9/92** and **G 4/93**, OJ 1994, 875), the request of the opponent determines the extent to which the patented subject-matter may be examined in opposition. In **T 364/18**, for instance, the board saw itself limited to examining the patent with regard to the claims opposed, in accordance with the principle of ne ultra petita (on the extent of opposition, see also chapters IV.C.2.2.6 and IV.C.3.2).

Opposition proceedings are characterised by the interplay between its nature as contentious proceedings between parties (**G 9/91** and **G 10/91**, OJ 1993, 408 and 420) and the principle of ex officio examination which applies to proceedings before the EPO (Art. 114(1) EPC) and thus also in opposition proceedings (**G 9/92** and **G 4/93**, OJ 1994, 875). Accordingly, in opposition proceedings, the EPO must investigate the facts of its own motion (Art. 114(1) EPC). However, certain restrictions have been placed on this principle in order to make opposition proceedings clearer, to shorten and accelerate cases, and to limit the risks to the parties (**G 9/92** and **G 4/93**, OJ 1994, 875). In particular, ex officio examination has a restricted application with respect to the grounds for opposition: grounds extending beyond those properly covered by the opponent's statement pursuant to R. 76(2)(c) EPC are only exceptionally considered (**G 9/91** and **G 10/91**; for details, see chapter IV.C.3.3 and 3.4).

Under the EPC, there is no legal obligation for the patent proprietor to take an active part in opposition proceedings (e.g. in reply to the communications under R. 81(3) EPC or R. 116(2) EPC). However, the patent proprietor is not free to present or complete their case at any time they wish during the opposition or opposition appeal proceedings (see e.g. **T 936/09** and **T 167/11**; see also the case law in chapters IV.C.5.1.4 "Timeframe for filing amendments", V.A.4.3.4 "Discretion under Article 12(4) RPBA", V.A.4.3.7 "Submissions that should have been submitted at first instance – Article 12(6), second sentence, RPBA".

Certain topics relating to opposition proceedings are dealt with in Part III: See chapters III.O. "Transfer of party status", III.P. "Intervention", III.Q. "Continuation of the opposition proceedings by the EPO" and III.R. "Apportionment of costs".

2. Filing and admissibility requirements

2.1. Entitlement to file an opposition

2.1.1 General principles

The legislator explicitly designed the opposition procedure as a legal remedy in the public interest which, according to Art. 99(1) EPC, is open to "any person" (**G 3/97** and **G 4/97** (OJ 1999, 245 and 270). "Any person" is to be interpreted in line with Art. 58 EPC as "any natural or legal person, or any body equivalent to a legal person by virtue of the law governing it". Thus, any legal entity recognised as such under any system of law anywhere in the world may give such notice, and not just those recognised under the laws of the contracting states to the EPC (**G 3/99**, OJ 2002,347; **G 1/13**, OJ 2015,42; see also **T 635/88**, OJ 1993,608). It is a generally recognised principle of national law and also under the EPC that legal entities which do not exist cannot bring or take part in proceedings (**G 1/13**, **T 353/95**). "Any person" does not include the patent proprietor (**G 9/93**, reversing **G 1/84**). See chapters IV.C.2.1.2. and IV.C.2.1.4.

According to the Enlarged Board in **G 3/97** and **G 4/97**, but also more recently **G 1/13**, an opponent's status is a procedural status, and the basis on which it is obtained is a matter of procedural law. This is addressed in Art. 99(1) EPC in conjunction with Art. 100 EPC, R. 76 and R. 77(1) EPC (R. 55 and R. 56(1) EPC 1973). The opponent is the person who fulfils the requirements set out therein for filing an opposition; in particular the person must be identifiable (R. 76(2)(a) EPC, R. 41(2)(c) EPC; R. 55(a) EPC 1973; see also in this chapter IV.C.2.2.4). The EPC does not specify any further formal conditions to be met by the opponent. A person who fulfils the said requirements becomes a party to the opposition proceedings (Art. 99(3) EPC; Art. 99(4) EPC 1973).

Thus, the EPC does not require that the opponent have an interest in the outcome of the opposition proceedings. As early as in **G 1/84** (OJ 1985, 299) the Enlarged Board held that the motives of the opponent were in principle irrelevant (otherwise, the phrase "any person" would have been rendered as "any person interested"), whilst their identity was primarily of procedural importance (similarly in **T 635/88**, OJ 1993, 608; **T 590/93**, OJ 1995, 337). Following that case law, the board in **T 798/93** (OJ 1997, 363) found that the EPC and its attendant provisions contained no requirements as to the opponent's personal circumstances or motives for acting. Requests for the opposition to be declared inadmissible therefore had to be refused if, as in the case under consideration, they were based on either an objection regarding a particular aspect of the opponent's status, such as their profession (professional representative before the EPO), field of technical expertise (different from that of the opposed patent), or on a lack of motivation for acting (statement by the opponent saying that their only reason for acting was to complete their training). See also **T 1839/18**, in which the board held that the current system of allowing any person to have a patent reviewed by way of opposition proceedings regardless of any specific interest was in line with the function of patents and with the public's interest in legal certainty and clearing the register of undeserved or undeservedly broad monopolies. The board noted that the case law of the Enlarged Board was consistent in this regard.

2.1.2 A natural or legal person, or equivalent thereto

The legal personality of a named entity under the EPC is decided on the same basis as before national courts, namely the capacity to sue or to be sued in its own name and on its own account. Thus "any person" according to Art. 99(1) EPC) is to be interpreted in line with Art. 58 EPC as "any natural or legal person, or any body equivalent to a legal person by virtue of the law governing it" There is no procedural difference with respect to an opposition filed by a single natural person, by a single legal person or by a single body equivalent to a legal person by virtue of the law governing it; they have to fulfil the same requirements and to pay a single opposition fee (**G 3/99**).

Where it is doubtful whether the opposition is filed on behalf of a body which enjoys legal personality in its own right, or on behalf of several natural persons acting in common, the opposition division shall invite the opponents to establish that the body is a legal person or an equivalent thereto. If this is not established, the opposition is to be considered as having been filed on behalf of the several natural persons as common opponents (**G 3/99**; see also chapter IV.C.2.1.8 "Filing a joint opposition").

In **G 1/13** (OJ 2015, A42) the Enlarged Board considered that the starting point should be the clearly established principle under the EPC that national law should be referred to in order to determine whether a legal entity exists or has ceased to exist, and has capacity to act (subject to limits where national law provisions were contrary to the EPC). The case in hand concerned a UK company which had ceased to exist as a legal entity but which had later been restored to existence using a particular procedure available under UK law, the effect of which was that the company was deemed to have continued in existence as if it had not ceased to exist. The Enlarged Board noted the position under French law differed from English law, whereby striking a company off the register of companies (the "RCS") did not, by itself, have any effect in terms of loss of that company's legal personality or, therefore, any bearing on its capacity to act in judicial proceedings. The dissolution of a company was only the first step towards its loss of legal personality. See also the summary of further aspects of this decision in chapter IV.C.2.1.3 "Examination at any stage in the proceedings of entitlement to oppose".

In **T 846/22** the respondent had submitted that as a "dormant company" under UK law at the time of filing the opposition, the appellant was not entitled to conduct any business and could not be equated to a legal person. The board referred to Section 1169 of the (UK) Companies Act 2006, according to which a company is dormant during any period in which it has no significant accounting transactions. Although inactive, a dormant company was not struck off, but remained on the Companies House register and thus maintained the status of a legal person. The board thus agreed with the conclusion drawn to this effect in **T 184/11**. Whether the appellant had engaged in transactions which could have led to the loss of its dormant status went beyond the assessment of its status as a legal person.

In **T 1893/22** the admissibility of the opposition was contested on the basis that the opponent's professional representative could not represent the company since he was simultaneously managing the legal entity he represented, and also because the entity had changed legal form. On the former aspect see chapter III.V. "Representation". On the latter

aspect the board agreed with the reasoning of the opposition division that the change of legal form from SASU to SARL under French law seemed to indicate a change of name, but not a transfer of assets to a different company, as supported by D12 stating that no new legal entity had been created. The board thus agreed with the decision under appeal that the opposition was admissible (R. 76(2)(a) and (d) EPC).

2.1.3 Examination at any stage in the proceedings of entitlement to oppose

An objection that an opposition is inadmissible because the opponent was not entitled to file it may be raised at any stage of the proceedings, i.e. even at a late stage before the board of appeal.The admissibility of the opposition is an indispensable procedural requirement for any substantive examination of the opposition submissions and is therefore to be examined ex officio (see **T 289/91**, OJ 1994, 649; **T 590/94**, **T 522/94**, OJ 1998, 421; **T 1178/04**, **T 384/08**, **T 2596/19**). If the board has good reasons for examining the admissibility of an opposition (**T 199/92**), it may and is obliged to do so, even if the patent proprietor has not challenged admissibility during either opposition or appeal proceedings (**T 541/92**). In **G 3/97** and **G 4/97** (OJ 1999, 245 and 270), the Enlarged Board reaffirmed that the admissibility of an opposition could be challenged during the appeal proceedings on grounds relating to the identity of an opponent, even if no such objection had been raised before the opposition division.

During the appeal underlying **G 1/13** (OJ 2015, A42), the proprietor had challenged the admissibility of the opposition because the opponent company had ceased to exist during the opposition proceedings. By court order, the company was then restored with retrospective effect. The Enlarged Board held that where an opposition is filed by a company which subsequently, under the relevant national law, ceases to exist, but is subsequently restored to existence under a provision of that national law, by virtue of which the company is deemed to have continued in existence as if it had not ceased to exist, all these events taking place before a decision of the opposition division maintaining the opposed patent in amended form becomes final, the EPO must recognise the retroactive effect of that provision of national law and allow the opposition proceedings to be continued by the restored company (see also chapter V.A.2.4.3d) "Existence of a company").

In **T 1121/21** the board considered that the question of admissibility could be assessed at any stage of the proceedings. Thus it found in the case in hand that the appellant's argument that, in application of the principle of protection of good faith, admissibility of an opposition cannot be questioned at a late stage in the proceedings, did not stand.

For decisions concerning **transfer of opponent status**, see chapter III.O.2.

The status of opponent can also be acquired by an **assumed infringer** who has **intervened** in pending opposition proceedings (see chapter III.P. "Intervention").

2.1.4 Filing of opposition by patent proprietor or inventor

Patent proprietors may not oppose their own patents. In **G 9/93** (OJ 1994, 891), the Enlarged Board departed from the view taken in **G 1/84** (OJ 1985, 299) and held that

patent proprietors were not covered by the expression "any person" used in Art. 99(1) EPC 1973, thereby endorsing the concept of opposition proceedings applied in **G 9/91** and **G 10/91** (OJ 1993, 408 and 420) as contentious proceedings between parties normally representing opposing interests. The provisions of Part V of the EPC and the corresponding Implementing Regulations were clearly based on the assumption that the opponent was a person other than the patent proprietor and that the opposition proceedings were always inter partes. The case law established in **G 1/84** on this point is thus obsolete.

In **T 3/06** the patentee argued, with reference to **G 9/93** (OJ 1994, 891), that opponent 2 as the **inventor** of the patent in suit, being a **shareholder** of the patent proprietor, could not validly file an opposition even if the plain language definition of "any person" in Art. 99(1) EPC did not prevent inventors from filing an opposition. The board held the patent proprietor and the opposing inventor to be different persons. The inventor, although a shareholder in the patent proprietor, was not an executive of the company, nor did he have any substantial influence on commercial and judicial decisions concerning the business of the patent proprietor.

A procedure for limitation or revocation of a European patent at the request of the patent proprietor is now provided for under Art. 105a to 105c EPC (see also chapter IV.D.1.).

2.1.5 Filing of opposition on behalf of a third party – straw man

With regard to the question whether an opposition is inadmissible if the opponent is a "straw man" acting for some other person, the Enlarged Board clarified in **G 3/97** and **G 4/97** (OJ 1999, 245 and 270) that the opponent is the person who fulfils the requirements of Art. 99(1) in conjunction with Art. 100 EPC, R. 55 and 56(1) EPC 1973 (R. 76 and 77(1) EPC). The EPC does not specify any further formal requirements to be met by the opponent. Filing the opposition renders this person formally the legitimate opponent. The fact that the opponent is acting on behalf of a third party does not render the opposition inadmissible. It is however inadmissible if the opponent's involvement is to be regarded as **circumventing the law by abuse of due process**. Such circumvention of the law arises, in particular, if:

- the opponent is acting on behalf of the patent proprietor. According to **G 9/93** (OJ 1994, 891), a proprietor cannot oppose their own patent; opposition is an inter partes procedure, so the patentee and opponent must be different persons.

- if the opponent is acting on behalf of a client in the context of activities which, taken as a whole, are typically associated with professional representatives, without possessing the necessary qualifications (Art. 134 EPC 1973). This would be the case if a person not entitled to act as a professional representative were acting on a client's behalf and carrying out all the activities typically carried out by professional representatives, while they themselves assumed the role of a party in order to circumvent the prohibition on their acting as a professional representative.

However, circumvention of the law by abuse of process does not arise merely because a professional representative files an opposition in their own name on behalf of a client. In any case, the principle of the free evaluation of evidence applies. The **burden of proof lies with the person alleging that the opposition is inadmissible**. The deciding body has to be satisfied, on the basis of clear and convincing evidence, that such abuse is occurring.

Previously relevant case law (see e.g. **T 10/82**, OJ 1983, 407; **T 635/88**, OJ 1993, 608; **T 25/85**, OJ 1996, 81; **T 289/91**, OJ 1994, 649; **T 590/93**, OJ 1995, 337; **T 798/93**, OJ 1997, 363) has been superseded by **G 3/97** and **G 4/97**.

The fact that the existence of a "hypothetical client" is openly confirmed in the course of opposition proceedings does not affect the opponent's identity and cannot create any confusion in this regard. The question whether the actual existence of a client is confirmed has no bearing on the admissibility of the opposition. The situation is not different from the case in which no such open confirmation is given: both when a professional representative acts as opponent and when an opposition is filed by a legal entity named "straw man", everybody is aware that the entity which has assumed the procedural status of an opponent is acting on behalf of a third party (**T 2095/21**, see also **T 2365/11**). In **T 1839/18** the board noted that labelling an opponent as a "straw man" was misguided, as no interest in raising an opposition was necessary or needed to be proven, and consequently any argument based on an opponent's alleged lack of "real interest" had to fail.

In parallel cases **T 1553/06** and **T 2/09**, involving the same parties but different patents, the board examined whether the parties and their representatives had worked together on a **test case** in order to obtain answers from the EPO to specific legal questions regarding prior art. Following the principles set out in **G 9/93** and **G 3/97**, the board emphasised the contentious nature of opposition proceedings as a necessary condition for the admissibility of the opposition and examined whether an abuse of procedure, i.e. because the opponent acted on behalf of the patent proprietor ("straw man"), rendered the opposition inadmissible. The board could not find a circumvention of the law by abuse of process as it saw no reason to doubt the parties' submissions that the opponent was not bound by any instructions from the patentee or the study committee. An opposition filed within the framework of a test case was not inadmissible for that sole reason, provided that the prosecution of the proceedings thereby instituted was contentious because the parties defended mainly opposing positions.

In **T 2365/11** the notice of opposition was filed by a natural person; however, in a submission (to indicate the language which would be used during the oral proceedings) the opponent's attorney had referred to a certain company as the opponent. The board held that the opponent was clearly identified in the notice of opposition. Whether or not the correctly identified opponent was acting on behalf of a third person did not affect the admissibility of the opposition. The situations described in **G 3/97** (Order 1(b) and (c)) as circumvention of the law by abuse of process could be excluded in the present case.

In **T 84/19** the issue at stake was whether the filing of the opposition/appeal by a straw man (the patent attorney firm) constituted a circumvention of the eligibility criteria to pay a

reduced appeal fee. The board had no doubts as to the veracity of the appellant's original SME declaration and found the filing of the opposition and the appeal by the patent attorney firm constituted no circumvention of the law regarding the entitlement to pay a reduced appeal fee. The board further disagreed that decision **T 1839/18** availed the argument that companies employing "straw men" to file their oppositions/appeals could abuse the provisions relating to entitlement to pay a reduced appeal fee. See also chapter V.A.2.5.4c) "Reduced fee for appeal filed by a natural person or a particular entity". The Rules relating to Fees are discussed further under chapter III.U.

In **T 846/22** the respondent contended the appellant had been acting on behalf of a third party with the intention of avoiding any liability for possible costs apportioned to the appellant under Art. 104 EPC. The board noted that acting on behalf of a third party could not be seen as a circumvention of the law unless further circumstances were involved (**G 3/97**) and found there was no requirement under the EPC that a party be equipped with sufficient financial means to comply with a merely hypothetical costs order. Moreover, the EPC did not offer the patent proprietor any kind of guarantee that an opponent would be able in fact to reimburse costs awarded against them (**G 3/97**, point 3.2.6 of the Reasons). On the apportionment of costs, see chapter III.R.

2.1.6 Repeated filing of opposition documents by the same person

According to **T 9/00** (OJ 2002, 275), the repeated filing of an opposition by the same person could be objected to for lack of legitimate interest. A (legal) person who filed two different notices of opposition against the same patent acquired party status as an opponent only once, even if both notices complied with the requirements of Art. 99(1) EPC and R. 55 EPC 1973 (R. 76 EPC). Both oppositions in question gave lack of novelty and lack of inventive step as grounds. Since the later opposition did not entail any change in the legal situation in the opposition proceedings compared to the earlier one, the board dismissed it as inadmissible for lack of a general legitimate interest. Nor could such an interest be inferred from the fact that the later opposition was assigned to a different part of the company and only that part of the company had been transferred to a third party. The status of opponent could pass to a third party only if both parts or the entire company were transferred to it.

In **T 774/05** a notice of opposition was filed on one day, enclosing a cheque for the opposition fee but no reasoned statement. On the following day further documents were filed which included patent documents and a reasoned statement referring to a notice of opposition. The board found the opponent had intended to maintain a single opposition, as evidenced by the statement in the faxes that the cheque for the opposition fee presented the day before should be used for the opposition. That both the document filed initially and the faxes of the following day each stated that they were an opposition was not an indication, of an intention to file two oppositions but rather an indication of their content. Taking all these documents together, the board considered that the opponent had filed only one opposition, for which the requirements for a valid filing had been completed within the opposition period. The opposition was therefore admissible.

In **T 966/02**, the same opponent had filed two oppositions, the second of which cited document D1, on which the opposition division based its decision. The main issue was whether the opposition division had been competent to use the document cited in the second opposition. The board stated that the first opposition had been filed in due form and time and was therefore admissible. Hence there was no need to decide whether the second opposition was admissible, since the department of first instance was, in any event, competent to take account of both document D1 and any other relevant material of its own motion (Art. 114 (1) EPC).

2.1.7 Filing of multiple oppositions by different persons – single opposition proceedings

According to Art. 99(3) EPC, opponents are parties to the opposition proceedings as well as the patent proprietor. It is clear from this provision that multiple admissible oppositions do not initiate a corresponding number of parallel opposition proceedings but only a single one. Each opponent can rely on an opposition ground duly submitted by other opponents and communicated to all parties in accordance with R. 79(2) EPC, both in the opposition proceedings and in any subsequent appeal proceedings (**T 270/94**, **T 620/99**, **T 774/05**, **T 1657/14**, **T 891/16**).

2.1.8 Filing a joint opposition – multiple opponents

a) Payment of a single opposition fee

In **G 3/99** (OJ 2002, 347), the Enlarged Board held that an opposition filed in common by two or more persons, which otherwise met the requirements of Art. 99 EPC 1973, R. 1 EPC 1973 (R. 3 EPC) and R. 55 EPC 1973 (R. 76 EPC), was admissible on payment of a single opposition fee. The payment of the opposition fee was linked to the filing of an opposition and not to the number of persons who filed the opposition. There was no procedural difference with respect to an opposition filed by a single natural person, by a single legal person or by a single body equivalent to a legal person by virtue of the law governing it. With respect to the wording "any person" in Art. 99(1) EPC 1973 and its interpretation in line with Art. 58 EPC 1973 see chapter IV.C.2.1. above.

b) Representation, legal status and composition of a multiple opponent

In **G 3/99** (OJ 2002, 347), the Enlarged Board also held that, in an opposition filed in common, there had to be in all cases a **common representative** (Art. 133(4) EPC 1973 and R. 100 EPC 1973). Only that common representative is entitled to act in the opposition proceedings on behalf of all the common opponents taken as a whole and to sign the filed documents. Since the EPO treats a procedural act performed by a non-entitled person in the same way as a missing signature (see **T 665/89**), each common opponent or any other person acting on their behalf could perform such an act to avoid missing a deadline, provided the deficiency is remedied within an additional period set by the board in the communication under R. 36(3) EPC 1973 (R. 50(3) EPC), notified to the common representative and sent for information to the non-entitled person who performed the act. The deficiency is remedied once the procedural act is signed by the common representative.

According to the Enlarged Board, in order to safeguard the rights of the patent proprietor and in the interests of procedural efficiency, it had to be **clear throughout the proceedings** who belonged to the group of common opponents or common appellants. If either a common opponent or appellant (including the common representative) intended to withdraw from the proceedings, the EPO had to be notified accordingly by the common representative or by a new common representative determined under R. 100(1) EPC 1973 in order for the withdrawal to take effect.

Referring to this case law in its interlocutory decision in **T 482/02** of 9 February 2005, the board stated that, where it was doubtful whether an opposition had been filed on behalf of a body which enjoyed legal personality in its own right or on behalf of several natural persons acting in common, the opponents (here a UK partnership) should be invited to establish that the body was a legal person or an equivalent thereto. If this was not established, the opposition was to be considered as having been filed on behalf of the several natural persons as common opponents (see also **T 866/01**). In that case the opponents still had to furnish the names and addresses of the partners in order to comply with R. 55(a) EPC 1973 (R. 76(2)(a) EPC). If this information was not received within a period specified by the board, the opposition had to be rejected as inadmissible under R. 56(2) EPC 1973 (R. 77(2) EPC), irrespective of whether or not such information would have been sufficient to prevent rejection under R. 56(1) EPC 1973 (R. 77(1) EPC).

Similarly, in **T 315/03** (OJ 2005, 246), the board followed **G 3/99**, adding that, while the admissibility of an opposition by multiple opponents had to be kept under review throughout the proceedings, parties could not expect the opposition division or board to do this alone. It was clear that the board had neither the resources nor the knowledge of the relevant laws of all the contracting states necessary to police the composition of, and the legal status of all members of, multiple opponents. Once prima facie admissibility was acknowledged, it had to be up to the party or parties seeking to challenge admissibility to make a case of inadmissibility.

With regard to changes over time in the **composition** of a multiple opponent, the board agreed with the respondent that the absence over eleven and a half years of any notification concerning the 1200 members of opponent 6 ("opposition club") could in itself be considered an indication that the "clear throughout" condition established in **G 3/99** had not been complied with. On the other hand, the fact that certain opponents only came into being for the purpose of filing opposition to one patent could not in itself be an objection to admissibility; an opponent's motive or lack of motive was irrelevant (see **G 3/97**, OJ 1999, 245). Similarly, it appeared to the board to be wholly irrelevant that an opponent, whether individual or multiple, might be supported by others (e.g. employees or shareholders of a company which was a party). Such supporters clearly could not take any part in the proceedings and could not affect its outcome. Moreover, the support for a party could not per se be a reason to challenge admissibility.

2.2. Formal requirements for opposition and filing in due time

2.2.1 Introduction

According to Art. 99(1) EPC notice of opposition must be **filed within nine months** of the publication of the mention of the grant of the European patent in the European Patent Bulletin. Notice of opposition is not deemed to have been filed until the opposition fee has been paid. In the interests of legal certainty, the Convention lays down certain further requirements that must be met before the opposition period expires, in particular that the notice of opposition is filed in a written reasoned statement (R. 76(1) EPC), that it sufficiently identifies the opponent (R. 76(2)(a) EPC) and the patent opposed (R. 76(2)(b) EPC), that it states the extent to which the patent is opposed and the specific grounds, and that it indicates the facts and evidence presented in support of these grounds (R. 76(2)(c) EPC). Fulfilment of the requirements of R. 76(2)(c) EPC (R. 55(c) EPC 1973) is not only essential for the admissibility of the opposition. They also establish the legal and factual framework of the opposition (see **G 9/91** and **G 10/91**, OJ 1993, 408 and 420).

In **T 1408/19** an erroneous citation of the publication number of document E2 had been provided in the notice of opposition filed on the last day of the nine-month period according to Art. 99(1) EPC. The board rejected the respondant's interpretation of **T 344/88** that the opposition division should have been able to identify the correct publication number within the nine-month period according to Art. 99(1) EPC. It would be completely unrealistic to expect the opposition division to immediately check such errors. It followed from the normal daily operation of the EPO that the division would be assigned to the file only later, and in all likelihood would not even see the file within the opposition period. The board took the view that in the case at hand it was decisive that all material and information necessary for (possibly later on) establishing the correct publication number of E2 was submitted prior to expiry of the nine-month period according to Art. 99(1) EPC.

In **T 571/22** the board endorsed the approach according to which the end of the opposition period under Art. 99(1) EPC was a fixed point in time as of which an opposition division had discretion not to admit facts and evidence submitted by an opponent (see **T 1776/18**, summarised below in this chapter IV.C.5.1.6). Accordingly, an opposition division had discretion not to admit facts and evidence which were not filed within the nine-month opposition period.

2.2.2 Opposition period

a) Period triggered by the publication of the mention of the grant of the patent

In **T 438/87** the question addressed was whether a **delay in publication** of the European patent specification could affect the calculation of the nine-month period for filing an opposition. The board concluded that, since the mention of the grant of the patent in suit had been brought to the public's attention in the normal way, it was from this date that the opposition period had begun, irrespective of what problems may have affected publication of the patent specification and what consequences such an untoward event might have for certain third parties owing to their geographical location.

According to **T 1644/10**, the opposition period is triggered solely by the grant of a European patent and publication of the mention of its grant in the European Patent Bulletin. The mention in the European Patent Bulletin that a correction of the patent specification has been issued does not trigger either a first or any "further" opposition period, even if the corrected specification confers a broader scope of protection than that conferred by the one originally published.

In **T 956/19** the board found that the legally effective filing of oppositions by opponents 1 and 2 on the last day of the opposition period under Art. 99(1) EPC was the prerequisite for the opposition proceedings to be pending and so also for interrupting this opposition procedure. That an opposition period was running did not in itself mean proceedings were pending before the EPO, but simply imposed a time limit for initiating such proceedings. An interruption could therefore only apply from the date of the effective filing of the oppositions at the earliest; it could not preclude their filing. R 142(4) EPC was not applicable to periods such as the opposition period under Art. 99(1) EPC which the applicant or patent proprietor were not required to observe. See also chapter III.D.4.8. "Consequences of interruption of proceedings (Rule 142(4) EPC)".

b) Observance of the time limit

(i) Filing using the EPO's Online Filing software

In **T 480/21** the board stated that the EPO's Online Filing system was intended to be installed on users' electronic systems. If the software supplied by the EPO contained some bug which meant that any attempted filing would inevitably fail, that fault would be attributable to the EPO, even though the software was not running on an EPO machine or on EPO premises. In the case in hand, following a malfunction of the Online Filing system on the last day of the opposition period, the opponent successfully filed the notice of opposition by fax the same day. The request therein that the EPO debit a deposit account for the payment of the opposition fee was however not carried out. The opponent then successfully paid the opposition fee the following day using the Online Filing system, thus outside the regular opposition period. However, the payment period was extended under point 5.5 ADA to at least the next day, due to the malfunction of the Online Filing system, and as the payment was made on this day, the opposition was deemed to have been filed in time.

(ii) Filing by fax

From 1 July 2024, the EPO no longer accepts filings by fax (see decision of the President of the EPO dated 22 April 2024 concerning the abolition of facsimile (fax) as a means of filing patent applications and other documents, OJ 2024, A41). The decisions below therefore relate to filings prior to the applicability of this decision.

In **T 2061/12**, the board noted that the case law of the boards of appeal distinguished between fax parts received before and after midnight, according the different filing dates (**T 683/06**, **T 2133/10**; decision of the President of the EPO dated 12 July 2007, OJ SE 3/2007, 7, in force at the relevant time,). In this case, only the last page and possibly

part of the penultimate one had arrived after midnight, while Form 2300 signed by the representative, the payment form and at least the first two pages of the notice of opposition – which at a minimum substantiated a novelty objection – had all certainly reached the EPO before midnight. The opposition had therefore been filed in due time under Art. 99(1) EPC; it also complied with R. 76(1) and (2) EPC. It was therefore admissible (R. 77(1) and (2) EPC). See also **T 2317/13**.

However, in **T 858/18** the board held that if a facsimile transmission of a document within the meaning of R. 50(3) EPC begins on an earlier date and extends beyond midnight to a later date, the entire document is accorded the later date as the single date of receipt. The board found that the decision of the President of the EPO dated 12 July 2007 concerning the filing of patent applications and other documents by facsimile (OJ SE 3/2007, 7) provided no legal basis for according the earlier date as the date of receipt for the part of the document arriving at the EPO before midnight. The term "document" referred to the record of a complete unit of information.

The board in **T 2307/15** (regarding a statement setting out the grounds of appeal received by fax) did not follow this approach, but confirmed the approach taken in **T 2061/12** and **T 2317/13** (for a more detailed summary of **T 2307/15**, see chapter V.A.2.6.).

2.2.3 Payment of opposition fee – correction of a payment form

Article 99(1), last sentence, EPC states that a notice of opposition is not deemed to have been filed until the opposition fee has been paid. According to the board in **T 152/85** (OJ 1987, 191), payment of an opposition fee is a factual requirement, which must be fulfilled within the nine-month opposition period if an opposition is to be admitted. Failure to pay an opposition fee within the required period where the filing of an opposition is intended is a factual mistake which cannot be rectified once the time limit for filing an opposition has passed. In the board's view, it could not be corrected under R. 88 EPC 1973 (R. 139 EPC). It was apparent from the wording of that rule that the clear policy of the EPO was to distinguish between a mistake in a document and other kinds of mistakes, such as failure to pay a fee in time, and only to allow correction of mistakes in a document.

In **T 1000/19**, however, the board allowed the correction of electronic form 2300E. The opponent's representatives had mentioned in their letter accompanying the notice of opposition that they had authorised the responsible EPO department to debit the opposition fee from their deposit account, but had failed to indicate the payment method in box X of the form. The opposition division's view that R. 139 EPC was not "time-barred" and could therefore not be applied to the non-extendable time limit for filing an opposition was rejected by the board as legally incorrect. There could be no doubt that the ratio of **G 1/12** (OJ 2014, A114) also applied if the admissibility of an opposition, or the question whether an opposition was deemed to have been filed, was concerned (**T 615/14**, **T 579/16**). Furthermore, the board saw no reason why the lines of reasoning set out in **G 1/12** regarding the applicability of R. 139 EPC should not equally apply to a correction of an incorrectly filled-in payment form (see **T 317/19**). Rather, the applicability of

R. 139 EPC to debit orders had been acknowledged or at least not ruled out by the boards of appeal (**T 152/82**, OJ 1984, 301, **T 17/83**, OJ 1984, 306).

2.2.4 Identity of opponent and correction of opponent's name

a) Principles

Under R. 76(2)(a) EPC and R. 41(2)(c) EPC, the notice of opposition must contain the name, address, nationality of the opponent (nationality only for natural persons, **T 978/17**) and the state where their residence or principal place of business is located. However, a notice of opposition in which a piece of information required under R. 76(2)(a) EPC in conjunction with R. 41(2)(c) EPC is missing is inadmissible only if the opponent cannot be **clearly identified** by the end of the opposition period (see **T 25/85**, OJ 1986, 81; **T 1551/10**; **T 978/17**).

T 590/94 held that this defect cannot be remedied. With reference to the rationale of **G 1/12** (relating to correction of the appellant's name) the board in **T 615/14** concluded however that a request to correct the designation of the opponent in the notice of opposition was allowable under R. 139, first sentence, EPC provided that it complies with the principles endorsed in **G 1/12** (see also **T 1121/21**). Hence, the original intention at the time of filing the opposition could also be established on the basis of evidence submitted after expiry of the opposition period. See also the summaries of **T 615/14** and **T 579/16** in chapter IV.C.2.2.4d) below.

Deficiencies such as a wrong postal code or lack of signature may be subsumed under R. 76(2)(a) and R. 50(3) EPC, respectively, and can thus be remedied within a time limit set by the opposition division in accordance with R. 77(2) EPC. The opposition division can extend this time limit or set a new time limit if deemed appropriate (**T 1632/06**, **T 244/12**). See also the cases in this chapter IV.C.2.2.9b) "Signature" below.

b) Incorrect designations and abbreviations

In **T 870/92** of 8 August 1997 the board emphasised that, when indicating a legal entity, failure to use its exact official designation (R. 26(2)(c) EPC 1973 and R. 61a EPC 1973; R. 41(2)(c) and R. 86 EPC) did not necessarily mean that the opposition was inadmissible. An incorrect designation which nevertheless sufficed to indicate the party's identity had to be distinguished from the absence of such information. Errors in a designation could be corrected at any time (R. 88, first sentence, EPC 1973; R. 139, first sentence, EPC; see also **T 828/98** and **T 719/09**).

In principle, the use of an abbreviation instead of the full name of a legal entity does not render an opposition inadmissible as long as the party's identity can be established. In **T 1034/08**, the board had no reasonable doubt that the abbreviation GSK stood for GlaxoSmithKline with regard to the identity of the Belgium-based opponent GSK Biologicals. Given that Belgian company law allows the co-existence of more than one company name and that GlaxoSmithKline Biologicals was the company's sole primary

name, the board concluded that abbreviation GSK Biologicals did not constitute an incorrect designation of the opponent.

In **T 1893/22**, the board endorsed the analysis of the opposition division in its decision that the fact that a submission was filed on a business letter indicating the old legal form (SASU) did not undermine its opinion that the change to the legal form of the then opponent from SASU to SARL indicated a change of name only, as the letter was filed close to the date of change of the legal form and thus the company stationery might not have been updated yet or the use of the old footer might have been overlooked. A letter filed 10 days later indicated SARL in the footer.

c) Evidence of identity

In **T 1165/03** the board regarded an identity card or passport as the **best evidence of identity** but with the same proviso as applies to all evidence, i.e. that its value could be offset or even negated by other evidence. In this case, two partly illegible photocopies of different identity cards and inconsistent explanations had been filed. The board therefore held that the identity card evidence was inherently unreliable and inconclusive.

Questioning the identity of an opponent is not enough to render the opposition inadmissible; cogent evidence must be put forward. In **T 4/05** no such case was made. The appellant had not filed the extract from the commercial register which, it submitted during oral proceedings before the board, showed a different company name. This could therefore not be cited as evidence that the opponent's identity was unclear. The appellant's objection that two other companies were trading at the same address as the opponent also failed.

In **T 1426/13** the opposition had been filed on behalf of "Isarpatent GbR". The board noted that the lack of public registration of a **GbR** ("Gesellschaft bürgerlichen Rechts") could contribute to uncertainty or even confusion about the name and/or identity of a GbR at specific points in time. However, the EPO had to accept that such **unregistered legal entities may be a party in proceedings** before the EPO. Any relevant evidence had to be evaluated according to the principle of free and unfettered consideration of evidence (e.g. **T 482/89**, OJ 1992, 646). From the documents submitted the board was satisfied that a name change had occurred before the opposition was filed and that no other entity than Isarpatent GbR could have been the opponent. Nor was the admissibility of the opposition affected by any changes in the composition of the GbR after the opposition had been filed. A GbR may be held liable for its obligations, including costs which may be awarded to another party in EPO opposition proceedings. Therefore it was not necessary to determine the individual members (**T 482/02** of 9 February 2005 distinguished).

In **T 2439/17** the board considered the filed register extract to be evidence of the company's existence. The appellant had failed to cast any plausible doubt on this. The board further observed that neither being well known nor demonstrable business activity were among the EPC requirements for obtaining the status of opponent.

In **T 1121/21** the board noted that the letter of opposition clearly identified one single legal person, namely Evonik Degussa GmbH. It found no concrete indication in the opposition letter that the opposition could have been filed by Evonik Industries AG, as suggested in the appealed decision. The opposition division had found a basis for its assumption in the use of a logo mentioning "Evonik Industries" on the top of numerous pages of the letter of opposition. The board held that due to its function, its generic presence on official papers and its typical symbolic representation, **a logo alone could not be a sufficient legal identification** of a company for the purposes of R. 76(2)(a) EPC. Likewise the fact alone that Evonik Industries AG was the owner of the deposit account was completely irrelevant. The fact that fees were paid by another company within the Evonik group was not sufficient to raise reasonable doubts as to the identity of the party to the proceedings. The board distinguished the present case from **T 25/85** (OJ 1986, 81), in which at expiry of the opposition period the name of the opponent was completely missing, and from **T 579/16** in which two distinct entities were mentioned in the notice of opposition, so that there were objective doubts upon expiry of the opposition period as to the identity of the opponent.

d) Availability of Rule 139 EPC to rectify errors

According to **T 1551/10**, for an opposition to be admissible, the opponent has to be **identifiable** by expiry of the opposition period (**T 25/85**, OJ 1986, 81), and provided this is the case, wrong information can be corrected (**T 219/86**, OJ 1988, 254; **T 870/92** of 8 August 1997, **T 1121/21**). Extracts from the commercial register showed that Swisscom (Schweiz) AG was the (sole) universal successor in title to Swisscom Mobile AG, which was originally named as the opponent, although it had already been removed from the register before the opposition was filed. It was not apparent that any of Swisscom Mobile AG's business assets had been taken over by any other legal entity. Therefore, Swisscom (Schweiz) AG was clearly and unambiguously identifiable as the opponent by the time the opposition period ended. Procedural statements mistakenly made in the name of a deceased party or of a legal person that no longer existed following a merger could be regarded as having been made in the name of their universal successor in title (**T 15/01**, OJ 2006, 153; see also **T 2941/18**). The mistake in the opponent's name could therefore be corrected under R. 139 EPC. See however **T 1226/13** in which the board requested additional evidence concerning the true intention of the person on whose behalf the opposition was filed.

In **T 1269/11** the board held that both R. 77 and R. 139 EPC were available in principle to rectify errors in the name of the respondent (opponent) as given in the notice of opposition (by analogy with **G 1/12**, OJ 2014, A114, concerning correction of the wrong identification of the appellant and summarised in chapter V.A.2.5.2a)). However, there was not sufficient evidence to allow a correction in this case.

The Enlarged Board summarised in **G 1/12** (OJ 2014, A114) the principles for reliance on R. 139 EPC developed in the case law of the boards of appeal, namely: a) the correction must introduce what was originally intended; b) where the original intention is not immediately apparent, the requester bears the burden of proof, which must be a heavy one; c) the error to be remedied may be an incorrect statement or an omission; d) the request for correction must be filed without delay. Furthermore, an allowable correction

under R. 139 EPC has **retrospective effect** (confirmed in **T 2941/18**, see also **G 2/21**, OJ 2023, A85). See in particular point 37 of the Reasons.

The board in **T 615/14** confirmed the availability of R. 139 EPC to correct the name of the opponent (irrespective of the question of identifiability of the opponent, which was not discussed). It stated that a request to correct the designation of the opponent in the notice of opposition was allowable under R. 139, first sentence, EPC provided that it complied with the principles endorsed in **G 1/12** (OJ 2014, A114), in particular that the correction had to introduce what was originally intended when filing the notice of opposition, that it did not give effect to a change of mind or development of plans and that it represented the opponent's actual rather than ostensible intention. The original intention at the time of filing the opposition could also be established on the basis of evidence submitted after the expiry of the opposition period. See also **T 603/15** and **T 1226/13**, which emphasises the heavy burden of proof required (with reference to **G 1/12**, OJ 2014, A114 and **J 8/80**, OJ 1980, 293).

In **T 2254/14**, the board investigated whether the opponent had been duly identifiable on expiry of the opposition period and found that the particulars provided had indeed been inconsistent in that the trading name given in the notice of opposition (EPO Form 2300) could be associated to a different legal person from the one named in the attached statement of grounds. Citing **G 1/12** (OJ 2014, A114), however, it held that this could be corrected under R. 139 EPC. The board considered that the criteria set out in that decision, in particular in point 37 of the Reasons, were met.

In **T 579/16** too, the board, having first of all found that the opponent had not been clearly identifiable from the documents submitted prior to expiry of the opposition period, confirmed that an opponent's name could be corrected under R. 139, first sentence, EPC where the conditions set out in **G 1/12** (OJ 2014, A114) were met. Drawing on the wording of Section 121(1) of the German Civil Code, it interpreted the condition that the correction request be filed "without delay" to mean that it had to be filed "without culpable delay" ("ohne schuldhaftes Zögern"), i.e. how promptly a requester could reasonably be expected to act had to be **assessed subjectively rather than objectively**. The answer therefore depended not only on any special circumstances of the specific case having to be taken into account in line with **J 16/08** but also on the knowledge and personal perspective of the person making the request. The board held that the request at issue had been made without delay.

This line was also taken in **T 1755/14**, where the entity in the name of which the opposition was filed **ceased to exist** before this filing so that no opposition status was acquired which could be transferred as requested. However, having examined the requirements established in **G 1/12** (point 37 of the Reasons), the board considered that the request for correction of the error was allowable.

In **T 1638/14** the notice of opposition was not accompanied by form 2300 and the information regarding the opponent's identity in the header and the body text of this notice was contradictory. In the board's view, by the end of the opposition period, the opponent had not been unambiguously identified. The opponent's request for correction under

R. 139, first sentence, EPC was refused as the conditions set out in **G 1/12** (OJ 2014, A114) were not fulfilled. Likewise in **T 603/15** the request for correction was rejected for the reason that condition d) ("without delay") of point 37 of the Reasons in **G 1/12** was not considered to be fulfilled, with the board holding that taking four years to make the request was not in keeping with this condition that it be filed without delay.

2.2.5 Sufficient identification of the opposed patent

Under R. 76(2)(b) EPC, the notice of opposition must contain, inter alia, the number of the patent, the name of the proprietor and the title of the invention. If the patent is not sufficiently **identified**, the opposition must be rejected as inadmissible under R. 77(1) EPC, unless the deficiency has been remedied before expiry of the opposition period.

In **T 317/86** (OJ 1989, 378) the opponent had not indicated the title of the invention within the period specified under R. 56(2) EPC 1973 (R. 77(2) EPC) for remedying deficiencies other than those falling under R. 56(1) EPC 1973 (R. 77(1) EPC). The board decided that omission from the notice of opposition of the title of the invention – merely an item of bibliographical data identifying the contested patent – did not constitute a deficiency within the meaning of R. 56(2) EPC 1973, if the other particulars available to the EPO were together sufficient to identify easily and beyond doubt the patent being contested by means of an opposition.

In **T 335/00** and **T 336/00**, the R. 55(b) EPC 1973 (R. 76(2)(b) EPC) requirements were not strictly fulfilled. Among other things, the title of the invention was missing, and the opposition was directed to the application. The board nonetheless deemed the opposition admissible because the contested patent was identifiable uniquely and fairly easily on the basis of the specified publication number.

2.2.6 Statement of extent of opposition

The Enlarged Board remarked in **G 9/91** (OJ 1993, 408) that in practice it is rather unusual that the opposition is limited to only a certain part (subject-matter) of the patent. Normally, the whole of the patent is opposed. Addressing the situation where it was clear from the statement under R. 55(c) EPC 1973 (R. 76(2)(c) EPC) that the patent was opposed only to a certain extent, the Enlarged Board held that by limiting the extent to which the patent is opposed to only certain subject-matters, the opponent deliberately refrains from making use of their right under the EPC to oppose remaining subject-matters covered by the patent. Such subject-matters are therefore, strictly speaking, not subject to any "opposition" in the sense of Art. 101 and 102 EPC, nor are there any "proceedings" in the sense of Art. 114 and 115 EPC concerning such non-opposed subject-matters. The statements in the notice of opposition relevant to the extent to which the European patent is opposed should be interpreted in such a way that an addressee would understand them, taking into account the surrounding circumstances (**T 376/90**, OJ 1994, 906; see also **T 1/88**, in which the board based its interpretation of equivocal procedural acts on the "objective value of the declaration", German: "objektiver Erklärungswert"). However, the general practice of interpreting the **absence of such statements** as an indication of the

opponent's intention to oppose the patent concerned in its entirety has been subject to scrutiny in the light of **G 9/91**. In **T 376/90** the board doubted that this "liberal" practice could be continued. In the extreme, where the extent to which a patent is opposed is in serious doubt, this reviewed approach may lead to a rejection of the opposition as inadmissible (**T 376/90**). However, in **T 764/06** the board concluded from the absence of a statement under R. 55(c) EPC 1973 (that the patent was opposed only to a certain extent) that the patent in suit was opposed in its entirety. In **T 570/14** the board considered that the question whether claims 5 to 7 were covered by the extent of the opposition was not a question of admissibility.

2.2.7 Statement of grounds for opposition

The notice of opposition must also state the grounds on which the opposition is based (R. 76(2)(c) EPC; R. 55(c) EPC 1973). The grounds for opposition which can form the legal basis of an opposition are contained in an exhaustive list in Art. 100 EPC. Accordingly, an opposition may only be filed on the grounds that (a) the subject-matter of the European patent is not patentable under Art. 52 to 57 EPC, (b) the European patent does not sufficiently disclose the invention or (c) the subject-matter of the European patent goes beyond what was originally disclosed.

The Enlarged Board set out a number of fundamental principles in **G 1/95** (OJ 1996, 615):

Whereas the grounds for opposition in Art. 100(b) and (c) EPC 1973 each relate to a single, separate and clearly delimited legal basis on which an opposition can be based, i.e. insufficient disclosure or unallowable amendment before grant, the same does not apply to Art. 100(a) EPC 1973. Art. 100(a) EPC 1973 not only refers to the general definition of patentable inventions under Art. 52(1) EPC 1973 and the exceptions to patentability under Art. 53 EPC 1973; it also refers to a number of definitions given in Art. 52(2) to (4) and 54 to 57 EPC 1973 for the terms "invention", "novelty", "inventive step" and "industrial application", which, when used in conjunction with Art. 52(1) EPC 1973, set specific requirements and therefore constitute separate grounds for opposition. Taken together, Art. 52 to 57 EPC 1973 therefore do not, for the purposes of Art. 100(a) EPC 1973, constitute a single objection to the maintenance of the patent, but a collection of different objections. Some of these are completely independent of each other (e.g. Art. 53 and 52(1) EPC 1973, Art. 54 EPC 1973) whereas others might be more closely related (e.g. Art. 52(1) and 54 EPC 1973; Art. 52(1) and 56 EPC 1973). For an opposition to be admissible under Art. 100(a) EPC 1973, it has to be based on **at least one of the grounds for opposition** set out in Art. 52 to 57 EPC 1973.

According to the reasoning of **G 1/95**, one function of R. 55 and 56 EPC 1973 (R. 76 and 77 EPC) is to establish what the notice of opposition has to contain in order to be admissible. R. 76(2)(c) EPC specifies that the notice of opposition has to contain a statement of the extent to which the European patent was opposed and of the grounds (i.e. the legal reasons mentioned above) on which the opposition is based and an indication of the facts, evidence and arguments presented in support of these grounds, i.e. the substantiation. The wording of (c) shows clearly the distinction made between the grounds, meaning the legal reasons or legal bases, such as those under Art. 100(a) EPC,

and the substantiation. Accordingly, in the context of Art. 99 and 100 EPC and of R. 76(2)(c) EPC, a "ground for opposition" has to be interpreted as meaning an individual legal basis for an objection to the maintenance of a patent. It follows in particular that Art. 100(a) EPC contained a collection of different legal objections (i.e. legal bases), or different grounds for opposition, and is not directed to a single ground for opposition.

Non-compliance with Art. 84 EPC is not a ground for opposition, but is a matter to be considered in the context of Art. 101(3) EPC (see also **G 3/14**, OJ 2015, A102 and in this chapter IV.C.5.2.2).

In **T 600/08** the board observed that the EPC did not provide for reviewing, as part of opposition proceedings, the legality of a decision by the Receiving Section to correct an applicant's name in a divisional application. The grounds for opposition were set out exhaustively in Art. 100 EPC. Objections to the text of a patent as granted could not be raised on other grounds. It made no difference that the text of the patent in suit had been amended.

2.2.8 Substantiation of grounds for opposition: indication of facts, evidence and arguments

Rule 76(2)(c) EPC requires that the notice of opposition contain a statement of the extent to which the European patent is opposed and of the grounds on which the opposition is based, as well as an indication of the facts and evidence presented in support of these grounds.

a) No "partial inadmissibility"

The third requirement of R. 76(2)(c) EPC for the admissibility of the opposition is the substantiation of the specified ground, i.e. an indication of the facts, evidence and arguments presented in support of it. The fulfilment of this latter requirement in respect of **one of the grounds for opposition** is enough to render admissible the opposition **as a whole**. Nowhere in the EPC is there any basis for the concept of partial admissibility of oppositions. The concept of "inadmissibility" is only applicable to the notice of opposition as a whole (**T 653/99**; see also **T 212/97**, **T 65/00**, **T 414/17** and **T 2659/17**).

According to **T 114/95**, if an opponent requests revocation of the patent in its entirety, it is sufficient to substantiate the ground(s) of opposition in respect of **at least one claim** of the patent for the requirements of R. 76(2)(c) EPC (R. 55(c) EPC 1973) to be met (**T 926/93**, OJ 1997, 447; **T 1180/97**, **T 1900/07**; see also in this chapter IV.C.3.3.).

b) Relevant date for compliance

The question whether the requirements in R. 76(2)(c) EPC are met must be determined on expiry of the nine-month opposition period (R. 77(1) EPC). A notice objectively complying with the requirements **on the relevant date** is not rendered inadmissible where the opponent later cites prior art not mentioned in it to support their line of argument (**T 1019/92**; see also **T 104/06**).

c) Full and concise reasoning

In accordance with R. 76(1) EPC, a notice of opposition shall be filed in a written reasoned statement. It should contain reasoning that is full but concise (**T 222/85** (OJ 1988, 128).

In **T 222/85** (OJ 1988, 128) the board held that the third requirement of R. 55(c) EPC 1973 (R. 76(2)(c) EPC) was only satisfied if the contents of the notice of opposition were sufficient for the opponent's case to be **properly understood on an objective basis**, from the point of view of a reasonably skilled person in the art to which the opposed patent relates. The board reasoned that the purpose of this third requirement, in combination with the first two requirements, was to ensure that the notice of opposition set out the opponent's case sufficiently so that both the patentee and the opposition division knew what that case was. Whereas the requirements of R. 55(a) and (b) EPC 1973 (R. 76(2)(a) and (b) EPC) and the requirements (1) and (2) of R. 55(c) EPC 1973 could be considered as **formal** in nature, requirement (3) of R. 55(c) EPC 1973, in combination with Art. 99(1) EPC, was **substantive** in nature, and called for reasoning which went to the merits of the opponent's case. A well-drafted opposition ought to contain reasoning that was full but concise. And in general, the less reasoning that a notice of opposition contained, the greater the risk that it would be rejected as inadmissible (similarly **T 925/91**, OJ 1995, 469; see also **T 2/89**, OJ 1991, 51; **T 448/89**, OJ 1992, 361; **T 545/91**, **T 204/91**). Thus, the sufficiency of the notice of opposition in this respect had to be distinguished from the strength of the opponent's case. On the one hand, an unconvincing ground of opposition might have been clearly presented and argumented. Conversely, a deficient submission may be rejected as inadmissible even though if properly drafted it would have succeeded. According to the board, the question whether a particular notice of opposition had met the minimum substantive requirements of Art. 99(1) EPC 1973 and R. 55(c) EPC 1973 could only be decided in the context of the particular case (since various relevant factors, such as the complexity of the issues raised, vary from case to case) – see also e.g. **T 534/98**, **T 1097/98**, **T 934/99**, **T 426/08**.

In **T 134/88** the board found that allegations which could not be subsumed under one of the opposition grounds had to be left out of consideration (see also e.g. **T 521/00**).

In **T 623/18** the board qualified these principles established in **T 222/85** and **T 134/88** by emphasising inter alia that there was no basis for making the admissibility of the opposition dependent on substantive questions, such as whether an objection relates merely to a lack of clarity (see the abstract in this chapter IV.C.2.2.8g).

In **T 204/91** the board stated in particular that the term "indication" in R. 55(c) EPC 1973 (R. 76(2)(c) EPC) had to be construed as requiring **more than a mere hint** at a number of possible attacks upon the patent and at the likely support for each such possible attack, which indication or hint might then be augmented by the subsequent late filing, possibly even at the appeal stage, of further evidence, arguments or other matter – even of fresh grounds of objection. Rather, the scope and depth of "indication" needed to be such as to enable the patentee and the opposition division to see clearly just what attack was being mounted against the patent, and what evidential support was being adduced for that attack. In other words, the patentee and the opposition division had to be put in a position

of understanding clearly the nature of the objection submitted as well as the evidence and arguments in its support. This required the elaboration of the relevant circumstances of the case to such an extent that the patentee and the opposition division were able to form a definitive opinion on at least one ground for opposition raised, without the need to make further investigations (see **T 453/87** and **T 279/88**; see further e.g. **T 1069/96** and **T 426/08**). But see **T 1408/19** summarised in chapter IV.C.2.2.8e) below (merely an indication of the facts and evidence required).

The fact that a patentee must be able to understand, without undue burden, the case made against their patent in the notice of opposition does not, however, exclude the possibility that they may have to undertake a **certain amount of interpretation** (**T 199/92**; see also **T 934/99**, **T 1553/07**, **T 265/16**, **T 2596/19**; see however **T 1082/00**, which highlights the limits of this principle and refers to **T 204/91**).

From decisions **T 222/85** (OJ 1988, 128), **T 2/89** (OJ 1991, 51), **T 199/92**, **T 934/99**, **T 204/91** and **T 1069/96**, the board in **T 1332/18** summarised the established requirements for an admissible opposition as follows: the reasons for the objections to the patent had to be objectively apparent without any need for investigation and they had to put the patent proprietor in a position to respond to them with arguments and amendments to the claims. An opposition could only be deemed admissible if both of these criteria were satisfied for at least one of the grounds for opposition.

d) Substantiation to be distinguished from strength of the opponent's case

In **T 934/99** the board stated that R. 55(c) EPC 1973 (R. 76(2)(c) EPC) did not imply the requirement of a logical line of reasoning in the sense that the arguments brought forward in the notice of opposition had to be cogent or convincing. Rather, the criterion was whether the arguments presented were relevant and, where necessary as the result of a reasonable interpretative effort, specific enough to allow a person skilled in the art to form a reasoned opinion of whether the line of reasoning on which the opponent apparently relies was (logically) correct ("convincing") or not (i.e. wrong).

The sufficiency of the notice of opposition has **to be distinguished** from the **strength** of the opponent's case. On the one hand, an unconvincing ground for opposition might have been clearly presented and argued. Conversely, a deficient submission may be rejected as inadmissible even though, if properly drafted, it would have succeeded (**T 222/85**, OJ 1988, 128; **T 621/91**, **T 3/95**, **T 1069/96**, **T 1856/11**).

In the same vein, in **T 65/00** the board held that it was of no importance for admissibility whether the relevance of the arguments brought forward, or their correctness, was sufficient to revoke the patent. In the case at issue it was therefore irrelevant whether the arguments brought forward by the opponent referred to Art. 84 or Art. 83 EPC 1973. For admissibility it was sufficient that the arguments were such that an **arguable case** was **established**. See also **T 623/18**.

Similarly, the board in **T 1194/07** referred to the established case law, according to which the indication of facts, evidence and arguments need not be conclusive or correct. That is

an issue of merit. However, the board also emphasised that the merits of a case can only be assessed in a meaningful manner if the case has been stated fully, by an adequate indication of the relevant facts, evidence and arguments. Key elements linking the cited prior art to the claim or relating to their validity as evidence, as well as crucial arguments informing the reader why the skilled person might have considered combining the features of such prior art with those of the accompanying evidence, should not be missing in the notice's chain of logic leading from the prior art to the invention.

e) Indication of evidence

Assessing the evidence is part of the process of ascertaining whether the opposition is well founded in substance (**T 234/86**, OJ 1989, 79). Thus, in **T 353/06** the board identified the appellants' arguments for the inadmissibility of the opposition as concerning the corroborative value of the facts and evidence, rather than a failure to indicate such facts and evidence in support of the grounds of opposition.

In **T 426/08** too, the board, citing **T 234/86** and **T 538/89**, stressed that R. 55(c) EPC 1973 did not require that the indicated evidence be put on file within the period for opposition. However, the board considered that the **content of evidence** merely referred to within the opposition period but not produced until after it could not, for the purpose of examining admissibility, be taken into account either as an indication of facts or evidence or as proof of facts. On the indication of evidence in the context of public prior use, see in this chapter IV.C.2.2.8i) below.

In **T 1408/19** the board observed that R. 76(2)(c) EPC **merely required an indication** of the facts and evidence presented in support of the argued grounds for opposition, but that not necessarily every piece of evidence need already be presented along with the notice of opposition. It should also be sufficient if the indications given in the notice of opposition permitted the substantive content of the evidence offered to be established only at a later stage, provided that this substantive content could be established without undue effort and still within a reasonable time. In the case in hand the patent proprietor argued that the opposition was insufficiently substantiated and therefore was not admissible due to the erroneous citation of the publication number of document E2 which meant it was not possible to identify it; unacceptable independent enquiries and further investigations would therefore have been necessary to enable the proprietor to understand the objections raised. According to the board, the facts and evidence submitted in accordance with R. 76(2)(c) EPC were sufficient for the ground of opposition to be correctly understood by the opposition division and the proprietor.

f) No burden of proof with regard to negative facts

In **T 2037/18**, the board observed that there was **no burden of proof** ("Darlegungs- und Beweislast") **with regard to negative facts** to be discharged in substantiating the notice of opposition. Under the rules on the burden of proof applicable in EPC proceedings, each of the parties had to present and prove only the facts in their favour – in line with the principle of "negativa non sunt probanda" (see the summary of this decision in this chapter IV.C.2.2.8j)).

g) Examples – sufficient substantiation acknowledged

In **T 1279/05**, the board held that it was not absolutely necessary to cover every single feature of the opposed patent claim so long as the notice of opposition dealt with the **essence** of the invention defined in that claim (see **T 134/88** and **T 1097/98**). See also **T 114/07**.

In **T 534/98** the board held that evidence of the **common general knowledge** was not required to substantiate an opposition. In accordance with the prevailing view in the case law, proof that something belonged to the common general knowledge was only necessary if this was called into question by another party or by the EPO.

In **T 1074/05**, the arguments in the notice of opposition were concise and made no reference to relevant sources in citation D5. The board, however, considered that such references were unnecessary in the case in hand because D5 was a short document disclosing a technically straightforward communication system in a similarly abstract fashion to the contested patent.

Similarly, in **T 1014/09** the board, considering the facts of the case in issue and the accompanying legal analysis set out in the notice of opposition, held that the **general reference** to the original disclosure in the notice of opposition could be regarded as a due indication within the meaning of R. 55(c) EPC 1973 (R. 76(2)(c) EPC).

In **T 185/88** (OJ 1990, 451) the board ruled that a formally correct statement of grounds for opposition existed if the only document cited in support of the sole assertion of lack of inventive step (here: German patent specification), while itself published **after** the date of filing or priority, nevertheless contained a reference to a document published **before** the date of filing or priority (here: German unexamined application or "Offenlegungsschrift"). See also **T 205/08**.

In **T 864/04** the board had to examine whether the express mention of document D1a in the notice of opposition in relation to D1 by the statement: "(divided out inter alia of US-PS No. 5,290,583)" was sufficiently precise to enable the patentee to find out the date of the publication of this document. In the board's view, this was indeed the case because no undue burden was involved to discover D1a's publication date.

In **T 623/18** the board guarded against a too strict approach. The board emphasised the purpose of the statement under R. 76(1) and (2)(c) EPC, as explained in **G 9/91** and **G 10/91** (OJ 1993, 408 and 420), namely to define the extent and scope of the opposition and the legal and factual framework, within which the substantive examination of the opposition is in principle conducted, as well as to give the patentee a fair chance to consider their position at an early stage of proceedings. The board saw no basis for making admissibility of the opposition dependent on the assessment of substantive questions, in particular on whether an objection merely related to a lack of clarity or could support the ground for opposition under Art. 100(b) EPC. It was also a matter of substantive examination to characterise the person skilled in the art, for whom, according to Art. 100(b) EPC, the description should be sufficiently clear and complete, and for whom

obviousness over the prior art was to be assessed according to Art. 100(a) EPC in combination with Art. 56 EPC.

In **T 470/19** the board held that whether or not the invention as defined in the patent claims could be carried out within the meaning of Art. 100(b) EPC did not depend on whether or not the claimed subject-matter solved the problem cited but not claimed by the opponent. See also chapter II.C.3.3 "Alleged effect not a feature of the claims".

h) Examples – sufficient substantiation denied

In **T 182/89** (OJ 1991, 391) the board took the view that, if a notice of opposition alleging insufficiency under Art. 100(b) EPC 1973 as the sole ground for opposition contained a mere statement that one example in the patent had been repeated once "exactly as described" without obtaining exactly the described results as claimed in the patent, the notice of opposition should be regarded as inadmissible even if the alleged facts were subsequently proved.

In **T 550/88** (OJ 1992, 117) the board of appeal considered whether **national prior rights** could as a matter of law constitute "facts or evidence" relevant to the ground of lack of novelty under Art. 54(1) and (3) EPC 1973. In the board's judgment, on the proper interpretation of Art. 54(3) EPC 1973, national prior rights were not comprised in the relevant state of the art. The board decided that the opposition was inadmissible because the only facts and evidence indicated in the notice of opposition were references to national prior rights.

According to **T 613/10**, the admissibility of the opposition has to be decided in the light of the circumstances of the case, especially if the requirements of R. 76(2)(c) EPC are not clearly and unambiguously met. Those circumstances included not just the technical complexity of the subject-matter in the opposed patent and the citations but also the number of claims and the number of citations – even if in principle an opposition could contain any number of attacks or citations. The patent proprietor should not have to try and work out the opponent's case themselves, from inadequate information given in the notice of opposition. In the case before the board, notice of opposition had been filed within the opposition period on the official form and two additional sheets. These listed 26 items of evidence, which however were filed, together with a detailed statement, only after the period expired. The notice had indicated the grounds of lack of novelty and lack of inventive step but did not say which citations related to which. None of the cited passages or drawings had been compared with the features of any of the 26 claims; nor had any technical connection been established between the citations and the claims. The board concluded that the requirements of R. 76(2)(c) EPC were not fulfilled.

In the similar case **T 296/17**, where the opponent filed nineteen pieces of evidence and a notice of opposition of one page which neither substantiated any of the grounds for opposition nor referred to any relevant paragraph of the evidence filed, the board likewise considered the opposition inadmissible. The board rejected the appellant's argument that the opposition division should have examined the opposition of its own motion.

i) Alleged public prior use

In accordance with **G 1/95** (OJ 1996, 615), alleged public prior use does not constitute a ground for opposition under Art. 100(a) EPC but is a fact cited to substantiate such a ground (**T 190/05**).

An allegation of public prior use will only meet the third requirement of R. 76(2)(c) EPC if it is sufficiently substantiated. It is established case law (e.g. **T 328/87**, OJ 1992, 701; **T 538/89**; **T 988/91**; **T 541/92**; **T 28/93**; **T 927/98**; **T 900/99**; **T 1022/99**; **T 190/05**; **T 25/08**; **T 1856/11**; **T 2037/18**, **T 105/18**) that, when an opposition ground is based on an allegation of public prior use, the requirements of R. 76(2)c) EPC are fulfilled if the notice of opposition indicates, within the opposition period, the facts which make it possible to determine

– the date of prior use ("when"), in order to ascertain its "prior" character;

– the object of the use ("what"), in order to examine its relevance, and

– the circumstances relating to the alleged use ("how") in order to confirm its availability to the public.

The notice of opposition must also indicate the arguments and evidence in support of the alleged prior use.

An **abstract indication** of the subject-matter of the prior use is generally insufficient. Instead, the opponent must compare its features with those of the contested claim and demonstrate the technical parallels between them (see e.g. **T 28/93**, **T 25/08**, **T 426/08**). This can, however, be dispensed with in straightforward cases in which the facts are immediately self-evident to the average skilled person (**T 1069/96**, **T 25/08**, **T 426/08**). In **T 1856/11** the board took the information contained in the supporting documents filed during the opposition period into account for establishing the required details.

In **T 538/89** the board stressed that the evidence offered in support of public prior use could be submitted after expiry of the period for opposition since R. 55(c) EPC 1973 (R. 76(2)(c) EPC) only required that it be indicated (see also e.g. **T 234/86**, OJ 1989, 79; **T 752/95**; **T 249/98**; **T 1022/99** and **T 25/08**). According to the board, **nomination of a witness** for subsequent examination is deemed to constitute indication of evidence (see also **T 28/93**, **T 988/93** and **T 241/99**). In **T 1553/07** the board held that the naming of a witness to be heard later was to be regarded as a sufficient indication of evidence as long as it was clear for what assertions of facts the witness was being named. There was no need also to indicate what the witness would be able to say about the alleged facts.

A distinction must be made between examining the admissibility of the opposition and its substantive merit. The information relating to the "when", the "what" and the "how" of the circumstances surrounding prior use is all that the patent proprietor and the opposition division need in order to understand the case of the opponent and for the opposition to be admissible. The rest, i.e. whether the alleged facts were or would be sufficiently proven

through additional filings in the course of the opposition proceedings, was a question of allowability in terms of substantive law. Thus, establishing that the alleged prior use was indeed public had little bearing on the **admissibility** of the opposition, but could be significant for assessing its **allowability** in terms of substantive law (see **T 786/95**, **T 1022/99**, **T 1553/07**, **T 25/08**, **T 1856/11**, **T 2037/18**, **T 105/18**).

Case law on the issue of whether sufficient details of the "when, what and how" of the prior use have been submitted can also be found in other contexts, namely when a board needs to establish whether (and, if so, at what point) a late-filed prior use had been sufficiently substantiated to be considered in the proceedings (see e.g. **T 441/91**, **T 97/92**, **T 611/97**, **T 460/13**, **T 1955/13**; on the admission of late-filed submissions, see in this chapter IV.C.4.) or whether facts had been sufficiently substantiated for evidence offered to be taken (see e.g. **T 1271/06**, citing **T 297/00**).

Addressing the substantiation requirement under R. 76(2)(c) EPC, the board in **T 2037/18** reiterated that, under the rules on the burden of proof ("Darlegungs- und Beweislast") applicable in EPC proceedings, each of the parties had to present and prove the facts in their favour (**T 219/83**, **T 270/90**). It then explained that the sale of a ready-to-use object to a third party was the typical case of something being made publicly available (**T 482/89**), since the third party usually had an interest in using the object as they saw fit. Thus, when an object was sold to a customer, it and its identifiable technical features became publicly available on its handover to that buyer (positive fact) unless the buyer was bound by a confidentiality obligation (negative fact). Accordingly, it was for the opponent to assert and prove such a handover to a buyer (**T 326/93**), whereas it was for the patent proprietor to assert and prove that this buyer had been bound by any confidentiality obligation (**T 221/91**, **T 969/90**), as was reflected in the principle "negativa non sunt probanda", i.e. a negative need not be proved, recognised in the boards' case law (**R 15/11**, **R 4/17**). The board went on to observe that the burden of proof could shift but not until the party initially bearing it had produced prima facie evidence or argued a typical course of events supporting a presumption as to the facts (**T 570/08**). A patent proprietor's submissions could therefore place a secondary burden of proof on the opponent, but only from that point on ("ex nunc") and so without any bearing on what it was required to substantiate in its notice of opposition under the third point of R. 76(2)(c) EPC.

Several decisions note that specification of the circumstances of the act of use also requires that the opponent indicates "**to whom**" the subject-matter was made available (see e.g. **T 522/94**, OJ 1998, 421; **T 339/01**; **T 1553/07**; **T 2010/08**; **T 1927/08**). In **T 241/99**, for instance, the board considered it insufficient for the purposes of R. 55(c) EPC 1973 (R. 76(2)(c) EPC) that, in the event of a purported **sale to a small**, **closed group of customers**, these were identified only by a coded indication (list of numbers). This was different from the **sale of mass-produced goods to anonymous buyers** and resembled rather the case of a single sale, for which the requirements of R. 76(2)(c) EPC were met only if the name and address of the sole buyer were indicated within the opposition period.

Citing **T 472/92** (OJ 1998, 161), the board in **T 55/01** noted that, in cases where only one party had access to information about an alleged public prior use, the case law had tended

towards expecting that the public prior use be proved beyond any reasonable doubt ("up to the hilt"), answering the typical questions "What?", "When?", "Where?", "How?" and "To whom?", since the other party was reduced to merely pointing out inconsistencies or gaps in the chain of evidence. However, the board noted with reference to **T 241/99** that case law had taken into account that cases of **mass-produced consumer goods**, which were widely advertised and offered for sale to customers who often remained anonymous, may require a different treatment. In the case at issue no allegations concerning the identity of the purchasers had been made and no proof concerning this matter produced. The sale of the mass-produced product on the market and the distribution of the corresponding service manual was nevertheless considered as proven on the balance of probabilities. See also **T 414/17**, where the board considered the indication that a product (intended for the mass market) was made available by advertisement and offer for sale to be sufficient to substantiate the circumstances.

In **T 574/17** all the available evidence stemmed from the sphere of the appellant-opponent. Hence, it was decisive whether or not the board – after having assessed all the evidence – was convinced beyond reasonable doubt that the alleged public prior use had taken place. The board was satisfied that the "Tonga" elements at issue had to be considered a mass-produced product, as evident from witness testimonies. It was also convinced that they had been sold in large numbers, evidenced by available invoices; it was further persuaded that these sales took place prior to the priority date. Under these circumstances, the board held it was not necessary to prove that a particular sale of a particular Tonga panel occurred to prove beyond reasonable doubt that 25 mm and 40 mm Tonga panels were sold before the priority date. It considered, however – contrary to the board in **T 55/01**, which relied on the balance of probabilities for its conclusion – that the aforementioned sales had been proven beyond reasonable doubt in the case in hand.

The evaluation of evidence and standard of proof in cases of alleged public prior use is dealt with in detail in chapter III.G.4.3.2.

j) Non-patent literature and oral disclosures

In **T 511/02**, concerning the opponent's duty of substantiation, it had not been indicated when and how **fitting and installation instructions** cited against the patent had been made available to the public. Since this factor was crucial to the establishment of whether they formed part of the prior art and thus whether they could actually be cited against the patent, no adequate indication had been given of the relevant facts and evidence (see also **T 1271/06** and **T 109/11** for cases where the requirements of R. 55(c) EPC 1973 (R. 76(2)(c) EPC) were found not to be met; see **T 1688/12** for a case where these requirements were considered to be fulfilled).

In **T 782/04** the board noted however that the respondent had to apply a reasonable amount of understanding by reading the notice of opposition as required by the jurisprudence. In the case in hand the **brochure** produced by a company to illustrate a product to potential customers bore the notice "printed in Japan 73", whereas the priority date of the patent in suit was ca. 18 years later. The board considered that the allegations were sufficiently substantiated. See also **T 1236/13** (concerning documentation available

on the internet) where the allegations as to which information carrier was used, the publication date and who was the public could be derived from document D6.

In **T 16/14**, the board considered an **author's copy** to be sufficient evidence of what was in the article actually published, since the publisher had at any rate been specified in such a way that a check could have been performed without undue burden. Besides, the appellant had not only already offered in its notice of opposition to produce the actually published article but also gone on to do so.

Where an **oral disclosure** is cited as prior art, the opposition division and the patent proprietor must be provided with sufficient details of the facts asserted and the supporting evidence to determine the date and content of the disclosure and the circumstances in which it was made public (**T 406/92**).

2.2.9 Other requirements for notice of opposition

a) Translation

In **T 193/87** (OJ 1993, 207) the board found that if a notice of opposition was filed in a language of a contracting state other than an official language of the EPO and the prescribed **translation** was not filed in due time (Art. 14(4) and (5) EPC 1973; Art. 14(4) EPC), the notice should be deemed not to have been received, and the opposition fee was to be refunded (following **T 323/87**, OJ 1989, 343). Since the opposition had not come into effect, there was no question of examining its admissibility under R. 56(1) EPC 1973 (R. 77(1) EPC).

b) Signature

In **T 960/95** the notice of opposition was filed without having been signed. The board stated that a notice of opposition should be duly signed (R. 36(3), first sentence, EPC 1973, R. 61a EPC 1973; R. 50(3), first sentence, EPC, R. 86 EPC). The omission of the signature was remedied within the time limit set by the opposition division, and the notice of opposition therefore retained its original date of receipt (R. 36(3), third sentence, EPC 1973; R. 50(3), third sentence, EPC). See also **T 1165/03** and **T 1850/19**, which confirmed the application of R. 50(3) EPC (former R. 36(3) EPC 1973).

c) Authorisation

In **T 1700/11**, the board observed that, where a European representative filed an opposition on a party's behalf but then failed to file a signed authorisation in due time after being asked to do so by the board, the opposition had to be deemed not filed (R. 152(6) EPC). On the topic of representation, see also chapter III.V.

2.3. Procedural aspects of examination of admissibility

2.3.1 Admissibility of opposition to be checked at every stage

The admissibility of the opposition must be checked ex officio in every phase of the opposition and ensuing appeal proceedings (**T 289/91**, OJ 1994, 649 and e.g. **T 522/94**, OJ 1998, 421; **T 646/13**, stating that this is established case law, and **T 414/17**). On the other hand, as highlighted in **T 522/94**, the requirement of admissibility must not be circumvented by overemphasising the ex officio principle and shifting the burden of establishing the case from the opponent to the opposition division.

2.3.2 Formalities officers' powers in opposition proceedings

In opinion **G 1/02** (OJ 2003, 165), the Enlarged Board examined the power of formalities officers to decide on the consequences of late payment of the opposition fee. Taking the view that **T 295/01** (OJ 2002, 251) and **T 1062/99** were divergent, the President asked the Enlarged Board to consider whether points 4 and 6 of the notice of the Vice-President of Directorate-General 2 of the EPO of 28 April 1999 (OJ 1999, 506) conflicted with provisions of a higher level (Referral by the President of the EPO, OJ 2002, 466). The Enlarged Board stated that the provisions of the notice were valid on the basis of R. 9(3) EPC 1973 (R. 11(3) EPC), under which formalities officers could be entrusted with duties falling to the examining and opposition divisions and involving **no technical or legal difficulties**. It therefore concluded that points 4 and 6 of the notice of 28 April 1999 did not conflict with provisions of a higher level.

2.3.3 Preliminary opinions on admissibility

In **T 222/85** (OJ 1988, 128) the board stated that a communication under R. 57(1) EPC 1973 (R. 79(1) EPC) indicating that an "admissible notice of opposition" had been filed within the opposition period was not a decision of the opposition division, and the sending of such a communication did not prevent the subsequent rejection of the notice of opposition as inadmissible under R. 56(1) EPC 1973 (R. 77(1) EPC), for example if the admissibility was challenged by the patent proprietor. The contents of a "communication" never constitute an appealable "decision". Thus, the communication, even though it had been sent after the notice of opposition had presumably been examined for admissibility, only represented a preliminary view, on an ex parte basis, and was not binding upon the department of the EPO which sent it (see also **T 621/91**).

2.3.4 Consequences of inadmissibility

If a notice of opposition is rejected as inadmissible, the opposition proceedings are legally terminated without a decision as to the substance of the opposition. It is inconsistent with this procedural principle for the decision rejecting the opposition as inadmissible to consider its merits (not even if the division does so ex officio under Art. 114(1) EPC, according to the board in **T 956/19**). Remarks on substantive matters in a decision rejecting the opposition as inadmissible, have no legal effect, and should in principle be avoided (**T 925/91**, OJ 1995, 469).

The inadmissibility of an opposition, when finally decided, or an appeal, has the effect of transferring the European patent to the national jurisdiction of the designated states, which then assumes sole responsibility for assessing the patent's validity with reference to their own legislation (**T 925/91**, OJ 1995, 469; see also **T 328/87**, OJ 1992, 701).

In **T 1420/21**, the board stated that, contrary to what the respondent claimed, a situation could not arise whereby the opponent would cease to be a party to the proceedings while opposition proceedings were under way. The board said that an opponent did not "lose their status as a party" because facts, evidence and arguments filed along with their notice of opposition in accordance with R. 76(2)(c) EPC failed to comply with that rule. In such a case, the opposition would be rejected as inadmissible and there were would be no further opposition proceedings to which the opponent and patent proprietor could be a party.

3. Substantive examination of opposition

3.1. Introduction

In **G 9/91** and **G 10/91** (OJ 1993, 408 and 420) the Enlarged Board held that R. 76(2)(c) EPC (R. 55(c) EPC 1973) made sense only when interpreted as having the **double function** of governing (together with other provisions) the admissibility of the opposition and of simultaneously establishing the legal and factual framework within which the substantive examination of the opposition was in principle to be conducted.

The **legal framework** of an opposition case is defined solely by (i) the extent to which the patent is actually opposed and (ii) the grounds upon which it is opposed, whilst its **factual framework** is determined by the facts, evidence and arguments adduced and set out in the notice of opposition pursuant to R. 76(2)(c) EPC (**T 737/92**; see also **T 1900/07** with regard to the legal framework). A distinction has to be made between the two main requirements of R. 76(2)(c) EPC, i.e. the indication of the **extent** to which the European patent is opposed and the **grounds** for opposition.

3.2. Extent of opposition

Rule 76(1) EPC (Art. 99(1) EPC 1973) provides, inter alia, that "notice of opposition shall be filed in a written reasoned statement". R. 76(2)(c) EPC (R. 55(c) EPC 1973) requires the notice of opposition to contain, inter alia, "a statement of the extent to which the European patent is opposed" (see also in this chapter IV.C.2.2.6).

In **G 9/91** (OJ 1993, 408) the Enlarged Board clarified that the **power** of an opposition division or a board of appeal **to examine and decide** on the maintenance of a European patent under Art. 101 and 102 EPC 1973 (now merged in Art. 101 EPC) depends on the extent to which the patent is opposed in the notice of opposition (R. 55(c) EPC 1973; R. 76(2)(c) EPC). However, this principle is subject to a restriction: even if the opposition is expressly directed only against the subject-matter of an independent claim in a European patent, claims which depend on any such independent claim can nonetheless also be examined as to their patentability if the independent claim is eliminated in

opposition or appeal proceedings, provided that the validity of these **dependent claims** is put in doubt prima facie by the information which is already available (see also **T 443/93**, **T 31/08**; the principles set out in **G 9/91** have been followed by subsequent case law, e.g. **T 1019/92**, **T 1066/92**, **T 711/04**, **T 1350/09**; see also **T 525/96** and **T 907/03** in respect of claims of an auxiliary request).

If in a request the claims against which the opposition was directed have been deleted, that request and its subject-matter are allowable, because they are not a subject of the opposition proceedings (see e.g. **T 2278/14**).

The **statements** in the notice of opposition **relevant to the extent** to which the European patent is opposed should be interpreted in such a way that an addressee would understand them, taking into account the surrounding circumstances (**T 376/90**, OJ 1994, 906; see also **T 1/88**, in which the board based its interpretation of equivocal procedural acts on the "objective value of the declaration"; for a case where the accompanying letter contradicted the indication in Form 2300, see **T 570/14**).

In the light of **G 9/91**, the board in **T 376/90** doubted that the general practice of interpreting the **absence of such statements** as an indication of the opponent's intention to oppose the patent concerned in its entirety could be continued. See however also **T 764/06**, in which the board concluded from the absence of a statement under R. 55(c) EPC 1973 that the patent was opposed only to a certain extent that the patent in suit was opposed in its entirety.

In **T 938/03** the board highlighted that the extent to which a patent was opposed did not depend on the second requirement under R. 55(c) EPC 1973 (R. 76(2)(c) EPC), namely the indication of the grounds of opposition and the facts, evidence and arguments in support of these grounds. Rather, the extent to which a European patent is opposed was exclusively determined by what has been implicitly (see **T 376/90**, OJ 1994, 906) or explicitly indicated (in the case at issue by ticking the relevant box in EPO Form 2300). See, however, the different opinion in **T 737/92**, requiring that claims are actually opposed, as distinct from being merely formally mentioned in the notice of opposition.

In **T 809/21** the board, applying the principles of **G 9/91**, noted that the opposition division's discretion to extend the opposition to unopposed claims was limited to claims which, while not explicitly opposed, were dependent upon an opposed independent claim which falls in opposition or appeal proceedings. There was no legal basis for the EPO to deprive the proprietor of a patent comprising claims 1 to 7 only, which were not opposed, nor the subject of any other ongoing proceedings before the EPO. Where the patent was not opposed in its entirety, and where the opposition division decided that all of the proprietor's requests in relation to the opposed claims must fail, only the unopposed claims, which were not part of any opposition proceedings, were left standing. Hence, provided the requirements of R. 82(1) EPC were met, the patent may be maintained on the basis of the unopposed claims, irrespective of whether the proprietor had filed an explicit request for this during the proceedings. Such a request would, in fact, be superfluous, since the unopposed claims had been granted and were not the subject of any opposition. In the case in hand the board found the decision of the opposition division to directly revoke the

only partially opposed patent in its entirety had to be considered a substantial procedural violation within the meaning of R. 103(1)(a) EPC.

3.3. Scope of examination of grounds for opposition

According to the Enlarged Board in its opinion **G 10/91** (OJ 1993, 420; see also **G 9/91**, OJ 1993, 408), an opposition division or a board of appeal is **not obliged to consider all the grounds for opposition** referred to in Art. 100 EPC, going beyond the grounds covered by the statement under R. 55(c) EPC 1973 (R. 76(2)(c) EPC), but may exceptionally do so. In opposition proceedings, the opposition division may, in application of Art. 114(1) EPC, raise a ground for opposition not covered by the opposition statement or consider such a ground raised by the opponent (or referred to by a third party under Art. 115 EPC) after the expiry of the time limit of Art. 99(1) EPC in cases where, **prima facie**, there are clear reasons to believe that it is relevant and would in whole or in part **prejudice the maintenance of the European patent**.

However, in opposition appeal proceedings a more restrictive application of Art. 114(1) EPC is generally justified. A fresh ground for opposition should only be raised by the board of appeal or admitted into the proceedings if the board considers it already prima facie highly relevant and the patentee agrees to its introduction (**G 10/91**). For details see chapter V.A.3.2.3h) "Fresh ground for opposition on appeal".

In order to avoid any misunderstanding, the Enlarged Board stated in **G 10/91** that in the case of **amendments** of the claims or other parts of the patent **in the course of opposition** or appeal proceedings, such amendments are to be fully examined as to their compatibility with the requirements of the EPC. As explained in **G 3/14** (OJ 2015, A102), the term "amendments" has to be understood in the sense that the subject-matter to be examined must have some direct nexus with the amendment. See chapter IV.C.3.5 "Grounds raised against claims amended after grant" and chapter IV.C.5.2. "Scope of examination of amendments" (which also highlights the limited extent of examination of amended claims for compliance with Art. 84 EPC).

The wording of Art. 101(1) EPC ("at least one ground for opposition", as opposed to "the grounds for opposition" in Art. 101(1) EPC 1973) now makes it clear that the opposition division is not obliged to examine all the grounds for opposition. Reference is also made to this chapter IV.C.3.4. "Fresh grounds for opposition".

Following **G 10/91**, the board in **T 274/95** (OJ 1997, 99) held that, if a ground for opposition was substantiated in the notice of opposition but was **subsequently not maintained** during the opposition proceedings (in the case in question, a statement to that effect had been made by the opponent during oral proceedings), the opposition division was under no obligation to consider this ground further or to deal with it in its decision, unless the ground was sufficiently relevant to be likely to prejudice maintenance of the patent.

In **T 223/95** the board observed that an investigative approach by which the opposition division would take steps of its own motion to establish the level of knowledge of the person skilled in the art would not be consistent with the character of the post-grant opposition

proceedings under the EPC. Opposition proceedings were in principle to be considered as **contentious proceedings** between parties normally representing opposite interests, who should be given equally fair treatment. In the board's opinion, it was unrealistic to suppose that the opposition division could seek, gather and select evidence in an entirely impartial fashion; herein lay an essential distinction between the functions of the examining divisions and the opposition divisions. It was the responsibility of the opponent itself to present to the opposition division the facts, evidence and arguments in support of the grounds on which the opposition was based. See also **T 897/19** in which the board noted that an investigative approach from the opposition division under Art. 114(1) EPC was limited in view of the character of the post-grant opposition proceedings under the EPC.

In **T 2685/19** the board held that it did not follow from the Enlarged Board's decision **G 10/91** that it was imperative to examine other criteria in addition to prima facie relevance. This meant that, in the case in hand, the fact that the opposition division had not made additional comments on whether the late filing of insufficient disclosure as a ground for opposition was excusable could not be taken as a basis for classing the admission of this ground as an error in exercising discretion.

3.4. Fresh grounds for opposition

3.4.1 Fresh grounds examined exceptionally

In **G 10/91** (OJ 1993, 420) the Enlarged Board held that in principle, the opposition division shall examine only such grounds for opposition, which have been properly submitted and substantiated in accordance with Art. 99(1) EPC 1973 in conjunction with R. 55(c) EPC 1973. Exceptionally, the opposition division may in application of Art. 114(1) EPC consider other grounds for opposition, which, prima facie, in whole or in part would seem to **prejudice the maintenance of the European patent** (see also the summary of **G 10/91** in this chapter IV.C.3.3. above).

This **exercise of discretion** by the opposition division is reviewed by the boards in accordance with the principles set out in **G 7/93**, according to which boards of appeal should only overturn discretionary decisions of first instance if it is concluded that the first instance exercised its discretion according to the wrong principles, or without taking into account the right principles or in an unreasonable way (see e.g. **T 1005/14**, **T 1965/17**, **T 3077/19**). For an example where the board found the opposition division had exercised its discretion to admit a new ground for opposition unreasonably, see **T 375/21**.

See also chapter V.A.3.4 "Review of first-instance discretionary decisions"

3.4.2 Meaning of "fresh grounds for opposition"

In **G 1/95** and **G 7/95** ("Fresh grounds for opposition", OJ 1996, 615 and 626; consolidated proceedings), the Enlarged Board first defined the meaning of "grounds for opposition" within the framework of Art. 100 EPC, and paragraph (a) in particular, as well as in the light of **G 10/91** (OJ 1993, 408 and 420, which had first used the term "a fresh ground for

opposition" in the context of considering the proper application of Art. 114(1) EPC during opposition appeal proceedings – see also summary of **G 10/91** in this chapter IV.C.3.3.).

It noted that the function of Art. 100 EPC is to provide a limited number of legal bases i.e. a limited number of objections, on which an opposition can be based, all "grounds for opposition" in Art. 100 EPC having their counterparts in other articles of the EPC which have to be met during the procedure up to grant. Whereas the grounds in Art. 100(b) EPC and 100(c) EPC each relate to a separate and clearly delimited legal basis for an opposition, the totality of the articles (Art. 52 to 57 EPC) within the meaning of Art. 100(a) EPC constitute a collection of different objections to the maintenance of the patent. The Enlarged Board further noted that the wording of R. 55(c) EPC 1973 (R. 76(2)(c) EPC) clearly showed the distinction made between the grounds, meaning as in Art. 100(a) EPC the legal reasons or legal bases, and their substantiation. Accordingly, in the context of Art. 99 and 100 EPC 1973 and R. 55(c) EPC 1973 (R. 76(2)(c) EPC), a "ground for opposition" had to be interpreted as meaning an **individual legal basis for objection to the maintenance of a patent**. It followed in particular that Art. 100(a) EPC 1973 contained a collection of different legal objections (i.e. legal bases), or different grounds for opposition, and was not directed to a single ground for opposition.

In **G 1/95** (OJ 1996, 615), the Enlarged Board went on to hold that, in a case where a patent had been opposed on the grounds set out in Art. 100(a) EPC, but the opposition had only been substantiated on the grounds of lack of novelty and lack of inventive step, the ground of unpatentable subject-matter based on Art. 52(1) and (2) EPC was a fresh ground for opposition.

In **G 7/95** (OJ 1996, 626), it was held that in a case where a patent had been opposed under Art. 100(a) EPC on the ground that the claims lacked an inventive step in view of documents cited in the notice of opposition, the ground of lack of novelty vis-à-vis the said documents based on Art. 52(1) and 54 EPC was a fresh ground for opposition. However, the allegation that the claims lacked novelty in view of the closest prior art document could be considered in the context of deciding on the ground of lack of inventive step. See also **T 2455/19**.

According to the board in **T 514/04**, the lack of novelty objection originally raised against claim 5, relating to a process for the preparation of a product, **did not extend to the products obtained from this process**, including the products of claims 1 to 4, and consequently the lack of novelty objection raised against claims 1 to 4 for the first time before the board was a fresh ground for opposition. See also **T 1244/13**.

In **T 1959/09** the patentee (respondent) had requested the board to refer to the Enlarged Board the question whether an existing ground for opposition **raised in respect of a different independent claim** amounted to a fresh ground of opposition as set out in **G 10/91**. In this respect, reference was made to **T 514/04** (see above), where the board had stated that the extent and ground for opposition mentioned in R. 55(c) EPC 1973 (R. 76(2)(c) EPC) were connected in the sense that a specific claim(s) is/are objected to under a specific ground or grounds. The board did not recognise the necessity for such a referral since the ground for opposition pursuant to Art. 100(c) EPC as well as the question

whether the requirements of Art. 123(2) EPC were met were clearly considered in the impugned decision. In addition, the board distinguished the present case, where claims 1 and 17 of the main request both belonged to the same category and virtually included the same subject-matter, from the case in **T 514/04**, where the question posed was whether a ground for opposition raised against a claim to a process applied equally to a claim to a product produced by said process. Hence, **T 514/04** had no bearing on the case at issue.

The board noted in passing that there was no basis in **G 10/91** for the general assumption that a ground for opposition raised against an independent claim may not subsequently be raised by the opponent against another independent claim, falling within the scope of the opposition. According to the board, **T 514/04** neither mentioned nor elucidated the relevant passages in **G 10/91** which supported that assumption. Actually, **G 10/91** appeared to regard a new ground for opposition as being a "ground for opposition not covered by the statement" pursuant to R. 55(c) EPC 1973, no indication being given in that decision which would justify the inference that this should be construed far more broadly as meaning any ground for opposition in respect of a specific given claim which was not covered by the statement pursuant to R. 55(c) EPC 1973 (R. 76(2)(c) EPC).

See also in this chapter IV.C.3.4.4 "Objections of lack of novelty and lack of inventive step".

For decisions dealing with the meaning of "fresh ground of opposition" in the context of appeal proceedings, see **T 520/01** and **T 620/08**. See also chapter V.A.3.2.3h) "Fresh ground for opposition on appeal".

3.4.3 Prima facie relevance

In **T 736/95** (OJ 2001, 191) the ground referred to by the appellant under Art. 100(c) EPC had not been raised in the notice of opposition. The opposition division had decided not to admit the newly submitted ground, without giving the parties any indication that it considered it to be less pertinent. Having regard to **G 10/91** (OJ 1993, 420) and **G 1/95** (OJ 1996, 615), the board held that the department of first instance at least had to examine whether a fresh ground was **relevant** and could therefore prejudice maintenance of the patent. Since it did not do so, but based its refusal to admit the ground only on the fact that it had been raised late, the opposition division deprived the appellant of the opportunity to have the relevance of this ground, and thus its admissibility, examined on appeal.

In **T 1340/15** the appellant argued that "prima facie" was to be understood as "at first glance" and that the legal question of whether or not the granted claims were covered by the original disclosure of the application (Art. 100(c) EPC) could not be solved prima facie. The board considered that following **G 10/91** the opposition division only had to determine if there were, prima facie, clear reasons for considering the issue of added matter. The "prima facie" test was not to be interpreted so narrowly as to mean that it must be possible to definitely conclude "at first glance" that Art. 123(2) EPC was actually infringed. In the case at hand, in view of the evident ambiguity of the language of the relevant passage, the opposition division had a valid reason for admitting the new ground.

In **T 1298/15**, the board observed that it was established case law that the main criterion to be considered in relation to a late-filed ground of opposition was its prima facie relevance. That the opposition division had not applied any other criteria did not amount to an improper exercise of its discretion. The board ruled out falling back on other criteria set out in Art. 13(1) and (3) RPBA 2007 – as the appellant (opponent) had argued should be done – on the basis that opposition and appeal proceedings were fundamentally and structurally different in nature. See also e.g. **T 3077/19** and **T 346/16**.

3.4.4 Objections of lack of novelty and lack of inventive step

In **T 135/01**, the board took the view that the mere observation in the course of an opposition procedure, whether by a party or the opposition division, that the subject-matter of a claim was new having regard to the prior art did not mean that **lack of novelty** was thereby introduced **as a ground for opposition**. Thus an assessment of inventive step generally began with a determination of the point of novelty, which implied a finding that the subject-matter of the claim was new. Treating such a routine affirmation of novelty as introducing the opposition ground of lack of novelty would be tantamount to including the latter ground as an invariant concomitant of the opposition ground of lack of inventive step, which would be contrary to decision **G 7/95** (OJ 1996, 626 – see in this chapter IV.C.3.4.2).

If a patent has been opposed on the grounds of lack of novelty and lack of inventive step and if only the ground of novelty has been substantiated, a specific substantiation of the ground of lack of inventive step is not necessary. Under such circumstances a specific substantiation of the ground of lack of inventive step is not even generally possible since – given that novelty, i.e. the presence of a difference between the claimed subject-matter and a prior art, is a prerequisite for determining whether an invention involves an inventive step in view of that prior art – this would contradict the reasons in support of lack of novelty. Therefore, the objection of lack of inventive step does not constitute a fresh ground for opposition and can therefore be examined in the appeal proceedings without the agreement of the patentee (**T 597/07**; see also **T 131/01**, OJ 2003, 115).

In **T 635/06** the notice of opposition specified that the patent in suit was opposed for lack of novelty and lack of inventive step as the respective boxes of the standard EPO Form had been crossed and as the notice explicitly indicated both grounds. In the circumstances of the case it was not possible for the opponent to substantiate the ground of lack of inventive step by any analysis going beyond its arguments against novelty. The opponent was thus limited to the position that a comparison of the disclosed composition and the claimed subject-matter revealed no distinguishing feature, the presence of which would, however, be necessary for a detailed objection to inventive step. Hence, the ground of lack of inventive step was considered by the board to be sufficiently addressed and, thus, properly raised in the notice of opposition.

3.4.5 Examination of fresh facts and evidence related to a fresh ground

In **T 1002/92** (OJ 1995, 605) the board stated that, when considering the admissibility of a further ground for opposition not covered by the notice of opposition after expiry of the

opposition period, both before an opposition division and before a board of appeal, the Enlarged Board (**G 10/91**, OJ 1993, 420) was necessarily implicitly considering the admissibility of such a fresh ground in combination with at least an indication of the **fresh facts and evidence** intended to support it. The mere stating of a fresh ground without any indication of the fresh facts, evidence and argument supporting it would obviously be inadmissible, either within or after expiry of the opposition period. The board then went on to conclude that it would be illogical to have one criterion for the admissibility of late-filed new facts, evidence and arguments in combination with a fresh ground, and a different criterion for judging the admissibility of late-filed new facts, evidence and arguments in support of a ground for opposition already covered by the opposition statement. Hence, in the board's view, it followed that the principles set out by the Enlarged Board in the opinion **G 10/91** as underlying the admissibility of fresh grounds for opposition, were also generally applicable to the admissibility of late-filed new facts, evidence and arguments intended to support grounds for opposition already covered by the opposition statement.

For further details on examination of fresh facts and evidence, see in this chapter IV.C.4. "Late submission of documents, lines of attack and arguments" below.

3.4.6 Opportunity to comment on new grounds for opposition

Article 113(1) EPC, in which the requirement that the parties be heard is enshrined, provides that decisions of the EPO may only be based on grounds or evidence on which the parties have had an opportunity to present their comments. The word "grounds" is interpreted as referring to the **essential reasoning, both legal and factual** (see e.g. **T 951/92**, OJ 1996, 53; **T 433/93**, OJ 1997, 509). See also in this chapter IV.C.6.5. Opportunity to present comments" below.

Thus if an opposition division wishes to introduce a new ground of opposition into the proceedings in addition to the ground(s) substantiated in the notice of opposition, either of its own motion or upon request by an opponent, the patent proprietor must be informed (normally in writing) not only of the new ground of opposition (i.e. the new legal basis for the opposition), but also of the essential legal and factual reasons which could lead to a finding of invalidity and revocation. Thereafter the patent proprietor must have a proper opportunity to present comments in reply to the new ground and its substantiation (**T 433/93**, OJ 1997, 509, see also **T 1283/11**).

In **T 656/96**, the opponent had based its opposition solely on the invention's purported lack of inventive step. However, lack of novelty was advanced as a ground for opposition for the first time in the oral proceedings and in the absence of the patent proprietor, who had previously informed the division that they would not be attending oral proceedings. The opposition division revoked the contested patent, even though it had not originally raised a novelty objection in its communication under Art. 101(2) EPC 1973 (Art. 101(1) EPC). In such circumstances, the board referred to the case law of the Enlarged Board distinguishing between the opposition ground of lack of novelty and that of lack of inventive step (**G 7/95**, OJ 1996, 626) and recognising the opposition division's competence to consider, exceptionally under Art. 114(1) EPC, fresh grounds for opposition which, prima facie, appear, either in whole or in part, to prejudice maintenance of the European patent

(**G 10/91**, OJ 1993, 420). In the case in hand, the board held that, particularly in the light of the opinion on novelty expressed in the communication from the opposition division, no prima facie case against maintenance of the patent could be gathered from the file, so that the appellant had been entitled to consider that the question of novelty would play no part before the opposition division. The appellant must therefore have been **taken by surprise** by the decision taken in its absence by the opposition division at the oral proceedings to revoke the patent on the grounds of lack of novelty, grounds on which the appellant had not been asked, nor had any reason, to express an opinion.

In **T 270/94**, the board found that the opposition division had infringed Art. 113(1) EPC by preventing opponent 1, who had based its opposition solely on lack of novelty, from commenting on an opposition ground of lack of inventive step duly submitted by opponent 2 and communicated to all the parties in accordance with R. 57(2) EPC 1973 (R. 79(2) EPC). Furthermore, the board observed that Art. 114(2) EPC, relied on by the opposition division, was not applicable to the case, because it indicated only that the EPO could disregard late-filed facts or evidence, whereas the case in hand involved arguments put forward by one of the parties to the proceedings in relation to a ground for opposition submitted in due time by another party.

In **T 1164/00** the board held that the opposition division was in principle entitled to introduce a new ground for opposition even at the late stage of oral proceedings, since, in its view, it was apparent that the patent in suit did not comply with the requirements of Art. 83 EPC. However, in this case, the annex to the summons to oral proceedings did not contain any indication of the opposition division's intention to introduce a new ground for opposition, which meant that the appellant was made aware of the factual and legal reasons supporting the introduction of this new ground for the first time during the oral proceedings. The board therefore concluded that the appellant had not been notified in writing as early as possible and, not having been informed beforehand of the factual and legal reasons, had been taken by surprise and had not had a fair opportunity during the oral proceedings to prepare a proper defence against this new objection. In those circumstances, the opposition division **ought to have adjourned the oral proceedings** in order to give the appellant sufficient time, in accordance with Art. 113 EPC, to prepare a suitable defence against the new objections (see also **T 433/93**, OJ 1997, 509; **T 817/93**; **T 1083/01**; **T 64/03** and **T 27/14**).

In **T 2362/08**, in its decision on insufficiency, the opposition division developed a completely different line of argument on a substantive issue of insufficiency which was raised for the first time at the oral proceedings. Furthermore, the patent proprietors had to face an **unexpected reversal of opinion** from the opposition division, which discharged the opponents of the burden of proof, thereby shifting it to the patent proprietors. The board could not consider the simple formal hearing of the patent proprietors on the issue at the oral proceedings to have been a proper opportunity for them to present their comments. By presenting the new legal and factual framework only at the oral proceedings and by coming to a final decision on the issue without first having given the patent proprietors a proper opportunity to respond, the opposition division did not respect their right to be heard (Art. 113(1) EPC).

3.5. Grounds raised against claims amended after grant

Amendments of the claims or other parts of a patent in the course of opposition (or opposition appeal) proceedings are to be examined as to their compatibility with the requirements of the EPC. The principle that the opposition division must examine only such grounds for opposition as have been properly submitted and substantiated in accordance with Art. 99(1) EPC 1973 in conjunction with R. 55(c) EPC 1973 (R. 76(1), (2)(c) EPC) does not apply to such amendments (see **G 9/91** and **G 10/91**, OJ 1993, 408 and 420, point 19 of the Reasons respectively). For details, see chapter IV.C.5.2 "Scope of examination of amendments" which also explains the limited extent of the power to examine amended claims for compliance with Art. 84 EPC.

4. Late submission of documents, lines of attack and arguments

4.1. Discretionary decision

Under Art. 114(1) EPC, the EPO is **obliged to examine the facts of its own motion**, and in doing so, it is not restricted to the facts, evidence and arguments provided by the parties and the relief sought. In **T 223/95**, however, the board emphasised the character of the post-grant opposition proceedings under the EPC, which were in principle to be considered as contentious proceedings between parties normally representing opposite interests, who should be given equally fair treatment. It was the **responsibility of the opponent** itself to present to the opposition division the facts, evidence and arguments in support of the grounds on which the opposition was based. See also **T 998/04** (referring to **G 9/91**, OJ 1993, 408 and **T 671/03**) and **T 223/05**.

According to Art. 114(2) EPC, the EPO may disregard facts or evidence which are not submitted in due time by the parties concerned. Interpretation of Art. 114 EPC therefore requires an analysis of the inter-relationship between its paragraphs 1 and 2. In **T 122/84** (OJ 1987, 177) the board summarised the historical development of the principle of ex officio examination with regard to late submission on the basis of the "travaux préparatoires" to the EPC 1973. A solution it found compatible with this principle was to leave it to the **discretion** of the department concerned whether or not to examine facts or evidence not submitted in due time, rather than ruling out such examination altogether.

Following the principles set out in **G 10/91** (OJ 1993, 420), the board in **T 1002/92** decided that in opposition proceedings late-filed facts, evidence and related arguments going beyond the "indication of the facts, evidence and arguments" presented in the notice of opposition pursuant to R. 55(c) EPC 1973 (R. 76(2)(c) EPC) in support of the grounds of opposition on which the opposition is based should only exceptionally be admitted into the proceedings by the opposition division if, prima facie, there are **clear reasons to suspect** that such late-filed material would prejudice the maintenance of the European patent in suit. See also **T 334/06**, referring to **T 273/84** (OJ 1986, 346) and **T 1002/92**. For details of the criteria for the exercise of discretion, see chapter IV.C.4.5.

For appeal proceedings the boards have highlighted that a rigid rule excluding all new evidence might lead to injustice and unfairness in some cases and would not be

compatible with the principles of procedural law generally recognised in the contracting states (**J 5/11**, **J 6/14**, **T 598/13**). That applies a fortiori to opposition proceedings.

For proceedings at first instance, R. 116(1) EPC provides that, when the summons to oral proceedings is issued, a final date for making written submissions in preparation for the oral proceedings must be fixed. New facts and evidence submitted after this date need not be considered, unless admitted on the grounds that the subject of the proceedings has changed. This provision does not act as an absolute bar to admitting late submissions; instead, its very wording shows that it leaves **room for discretion** (**T 798/05**; see also **T 2102/08**, **T 1253/09**, **T 1854/16**, **T 921/21**). See also chapter IV.C.3.2 below.

In **T 1485/08** the opposition division had decided not to admit the late filing (on the day of the oral proceedings) of an English translation of a Korean patent which had been filed with the grounds of opposition. The board noted that the document (Korean patent) had been filed with the notice of opposition against novelty of the patent in suit. Although not in one of the official languages of the EPO, from the use of various English terms in the description of the document it was already discernible that its subject-matter was related to the claimed subject-matter. The board was of the opinion that the opposition division in not admitting the English translation for the sole reason that it was late-filed, without having examined its relevance or considered any other criteria, did not properly exercise its discretion.

In **T 574/17** the board found that the line of attack presented by the opponent for the first time during the oral proceedings in the opposition proceedings lacked essential details, which made it impossible for the opposition division and the proprietor to prepare themselves and undertake a meaningful substantive assessment of this new line of attack at that point of time. Thus, the opposition division had applied the correct principles in the right manner when deciding not to admit the new line of attack.

4.2. Concept of "in due time"

4.2.1 Duty to facilitate due and swift conduct of proceedings

The discretionary power pursuant to Art. 114(2) EPC applies to facts and evidence filed late (see e.g. **T 502/98**, **T 986/08**, **T 66/14**; see also **T 1022/09**, according to which documents that were filed with the notice of opposition, and whose filing was substantiated, were automatically admitted to the opposition proceedings). What is meant by "in due time" for the purposes of Art. 114(2) EPC requires interpretation.

The parties in inter partes cases are subject to a particular **duty to facilitate due and swift conduct of the proceedings**, in particular by submitting all relevant facts, evidence, arguments and requests as early and completely as possible (see e.g. **T 1955/13**; see also **T 1768/17**, albeit in the context of the submission of requests). This duty is reflected in the EPC provisions governing the handling of late submissions: Art. 114(2) EPC as a general provision (which is, according to the preparatory documents, aimed at preventing the negligent conduct of proceedings, **T 122/84**); R. 137 EPC for the grant procedure; and R. 76(2)(c) and R. 80 EPC for the opposition procedure; R. 116(1) EPC concerning the

final date for making written submissions in preparation for oral proceedings. For appeal proceedings see the Rules of Procedure of the Boards of Appeal (RPBA), OJ 2024, A15; in this chapter V.A.4. "New submissions on appeal"

The boards have stressed that opponents are required to submit all their objections during the opposition period, setting each out in full (**T 117/86**, OJ 1989, 401; see also above in this chapter IV.C.2.2.6 and IV.C.3.2.). Under R. 76(2)(c) EPC, the notice of opposition must contain a statement of the extent to which the European patent is opposed and of the grounds on which the opposition is based, as well as an indication of the facts and evidence presented in support of these grounds. In **T 2165/10**, the board held that the appellant (opponent) should have included an indication of the alleged public prior use submitted later in its notice of opposition and indicated/filed all evidence in its possession at that time. It did not accept the appellant's argument that the documents in its possession at the time of filing the opposition were considered by the appellant not to be enough to constitute a complete chain of evidence.

In **T 1364/12**, the board found that documents not admitted by the opposition division had been submitted by the appellant (patent proprietor) in due time in response to the communication under R. 79(1) EPC and so should have formed the basis for the opposition proceedings. It had not been open to the opposition division to consider whether or not to admit them at its discretion on the basis of prima facie relevance, and doing so therefore amounted to an erroneous exercise of that discretion.

The filing of facts and evidence within subsequent periods of time may also be in "due time" when it occurs in accordance with the principle of procedural economy and, therefore, when the filing party has observed a **fair degree of procedural vigilance** (**T 502/98** referring to **T 201/92**, **T 238/92**, **T 532/95** and **T 389/95**; cited in **T 568/02**; see also e.g. **T 574/02**).

Accordingly, new facts, documents and/or evidence are regarded as having been filed on time if their filing was occasioned by an argument or a point raised by another party so that, under the circumstances of the case, they could not have been filed earlier. According to **T 502/98** this may occur, for instance, when certain facts or evidence became relevant only after a party has submitted an unforeseeable amendment of the claims or a new experimental test report or has challenged for the first time the existence of common general knowledge. In such cases, a diligent party normally has no obligation to retrieve and file such facts and evidence before such action of the other party (cited e.g. in **T 986/08**). See also **T 623/93**, where the board held that, where amended claims were introduced in the opposition proceedings there could be no objection to the opponent's submitting new citations and new arguments against the new claims (with reference to **G 9/91**, OJ 1993, 408, point 19 of the Reasons).

Therefore, the filing of new facts and evidence in direct response to new submissions by the other party (**T 389/95**, **T 320/08**, **T 1698/08**, **T 1949/09**), or at the earliest time possible in the proceedings (**T 468/99**, **T 2551/16**), or promptly after their relevance has become apparent (**T 201/92**, **T 502/98**, **T 568/02**, **T 574/02**, **T 986/08**, **T 998/17**), has been considered to be "in due time" (see also **T 156/84**, OJ 1988, 372, but also e.g. **T 1734/08**

and **T 733/11**, which considered submissions filed outside the period specified by Art. 99(1) EPC to be late-filed, without considering the observance of procedural vigilance).

In **T 1445/22** the board found, however, that the opposition division had not raised any new aspects in its preliminary opinion, but rather reiterated the position given by the respondent in its reply to the notice of opposition. There had been no change in the subject of the proceedings before the opposition division which would have led to new evidence being considered to be timely filed.

In **T 117/02** the board stated that in the case of a request to introduce late-filed submissions (here: a new ground of opposition and new arguments and evidence) the **right to be heard** should be granted before those late-filed submissions were rejected.

An opponent must be given an opportunity to respond in an appropriate way when the subject of the proceedings has changed, for example due to amendment. Depending on the nature of the amendment this may involve the filing of further documents (**T 366/11**).

4.2.2 Rule 116(1) EPC – not an invitation to file new submissions

According to the established case law, R. 116(1) EPC should not be construed as an invitation to file new evidence or other material departing from the legal and factual framework of issues and grounds pleaded as established with the notice of opposition (**T 39/93**, OJ 1997, 134; **T 1445/22**). Also, the fact that the opposition division expressed a preliminary opinion in its communication did not necessarily justify the filing of new evidence, unless this was in **reaction to new aspects** raised in the communication (**T 628/14**).

The board in **T 66/14** observed that, according to case law, evidence first submitted by an opponent after expiry of the nine-month period under Art. 99(1) EPC was generally to be regarded as late for the purposes of Art. 114(2) EPC, and that R. 116(1), fourth sentence, EPC was not to be understood to mean that a fresh period during which new evidence could be filed without being treated as late was triggered on issue of the summons to oral proceedings (see also **T 841/08**, **T 1445/21**, **T 531/22**). However, there may be cases in which special circumstances justify an opponent's not filing evidence until after the nine-month period under Art. 99(1) EPC and in which, therefore, that evidence is **not** to be treated as late for the purposes of Art. 114(2) EPC (**T 532/95**). In particular, new evidence submitted after the date referred to in R. 116(1) EPC is to be admitted if the **subject of the proceedings has changed**. This is typically the case where new claim requests are filed such that there was no reason to file the evidence in response thereto any earlier or where the opposition division raised a new issue (**T 1445/22**).

4.2.3 Fair response – examples

In **T 1551/14**, during the written proceedings that followed initial oral proceedings before the opposition division, at which witnesses had been heard, the patent proprietor had filed a new auxiliary request limiting the subject-matter of the independent claims by a new

feature. Having been summoned to a second round of oral proceedings, the opponent had filed, within the period fixed under R. 116 EPC, a statutory declaration made by one of the previously heard witnesses and proposed that the witness be heard again. For the board, this declaration, which dealt with matters that had become relevant only once the new auxiliary request had been filed, was a direct and timely reaction of the opponent (appellant) to that request, and therefore could not be treated as filed late. The board did not share the appellant-proprietor's misgivings that the declaration conflicted with the case made so far. That submissions filed as a legitimate reaction to an amendment to the counter-party's case contained contradictions was in any event not a proper basis for refusing to admit those submissions from the outset.

In **T 2734/16** the board held that a new line of attack on inventive step pursued in response to and using the documents submitted by the patent proprietor with its reply to the opposition should not be considered late-filed per se. For reasons of "equality of arms", the new attack could be admitted into the opposition proceedings even if the documents ultimately proved no more relevant than other documents.

In **T 1711/16** the opponent had filed further evidence within the final date set in accordance with R. 116(1) EPC in order to overcome concerns expressed by the opposition division for the first time in its communication sent out in preparation for the oral proceedings. The board pointed out that the prima facie relevance of these documents, which in the proprietor's opinion was lacking, was irrelevant to the issue of admittance. The decisive point was whether these documents and the submissions made in respect of them dealt with the concerns of the opposition division and were timely submitted, i.e. whether they represented a **fair answer** to the concerns raised by the opposition division. Accordingly, the board overturned the opposition division's discretionary decision not to admit the evidence at issue.

4.3. Sufficient reasoning

According to the consistent case law of the boards of appeal, although Art. 114(2) EPC gives an opposition division discretion not to consider facts and evidence not submitted in due time, the division is obliged to give reasons for its decision; it is not enough merely to cite their late submission (**T 705/90**, **T 214/01**, **T 1855/13**, **T 1984/19**). Even if submissions are late-filed, their admission remains a procedural aspect over which the opposition division can exercise discretion. As a consequence, the decision needs to show the reasoning why the discretion was exercised one way or the other (**T 1855/13**).

In **T 2097/10**, the board found that the brief statement of reasons given by the opposition division – to the effect that documents D18 and D19 were relevant and not especially voluminous – was sufficient. Moreover, it was not apparent from the minutes that the patentee's representative had been denied an opportunity to comment on those documents, or that they had asked for more time to prepare such comments but their request had been refused.

In **T 544/12** the board pointed out that a **bare assertion** of a lack of prima facie relevance was not by itself sufficient reasoning.

In **T 1984/19** the board found that while an opposition division must have a certain freedom in admitting or disregarding late-filed evidence, the reasoning given in the contested decision for not admitting D16 into the opposition proceedings was insufficient in view of R. 111(2) EPC. From the decision and the minutes, the board was unable to comprehend which considerations had led the opposition division to the conclusion that the content of D16 did not go beyond the content of the documents on file and why D16 was considered not relevant for the outcome of the case, whether in view of novelty or inventive step. In order to ascertain whether the opposition division had exercised its discretion properly (**G 7/93**, OJ 1994, 775), it was essential for the board to know which principles the opposition division had taken into account and which interests it had balanced.

4.4. Documents cited in the patent specification or search report

A document considered during the examination procedure is **not automatically** scrutinised in opposition or opposition appeal proceedings, even if it is quoted and acknowledged in the contested European patent (**T 155/87**, **T 198/88**, OJ 1991, 254; **T 484/89**, **T 652/99**, **T 2053/13**, **T 1522/21**). Generally, it has to be relied upon by a party to be considered by the opposition division.

According to **T 291/89** this also applied to a document cited in the search report (see also **T 387/89**, OJ 1992, 583, summarised below). In **T 111/04** the board agreed with the case law and considered that this applied also to evidence filed during the grant proceedings.

In **T 536/88** (OJ 1992, 638) the board pointed out, however, that the document cited and acknowledged in the description of the contested patent itself as the **closest prior art** and on the basis of which the technical problem in the description was formulated remains an exception. Such a document also forms part of the opposition or opposition appeal proceedings even if it is not expressly cited within the opposition period (confirmed e.g. in **T 541/98**, **T 652/99**, **T 454/02**, **T 86/03**, **T 257/14**, **T 1123/14**; distinguished e.g. in **T 1421/12** and **T 2541/17**; for the opposite view, see e.g. **T 234/90**, **T 300/90** and **T 501/94**, OJ 1997, 193).

In **T 140/00** although document (7) had been cited in the specification of the patent in suit, it had merely been acknowledged as **conventional background art**; it was not considered therein as essential or as the closest prior art and starting point of the claimed invention. Therefore, that document did not automatically form part of the appeal proceedings and, thus, was late-filed evidence subject to a discretionary decision of the board.

In the board's view in **T 387/89** (OJ 1992, 583), neither an opposition division nor a board of appeal had any duty to reconsider the relevance of documents cited in the European search report if such documents had not been relied upon by the opponents to support their grounds of opposition. Under Art. 114(1) EPC 1973, however, an opposition division or appeal board could introduce new documents into the opposition proceedings if it had good reason to suppose that the documents could affect the outcome of the decision (**T 420/93**, **T 530/00**).

4.5. Criteria for the exercise of discretion

4.5.1 Different approaches

It is at the opposition division's discretion whether to admit late-filed documents (Art. 114(2) EPC; see chapter IV.C.4.1. above). According to settled case law, it must first examine them as to their relevance. Late-filed facts, evidence and supporting arguments should only exceptionally be admitted into the proceedings if, prima facie, there are reasons to suspect that such late-filed documents prejudice the maintenance of the European patent in suit (see, in particular, **T 1002/92**, OJ 1995, 605; see also **T 1643/11**, **T 2443/12**; and in this chapter IV.C.4.5.3 "Prima facie relevance").

As to whether and, if so, to what extent opposition divisions can or must consider other criteria too, with the result that even prima facie relevant documents may not be admitted in certain cases, the boards have taken various different approaches.

According to one of those approaches, the **principle of examination** by the EPO of its own motion (Art. 114(1) EPC) **takes precedence** over the possibility of disregarding facts or evidence not submitted in due time. This follows from the EPO's duty towards the public not to grant or maintain patents which it is convinced are legally invalid (**T 156/84**, OJ 1988, 372; **T 2542/10**; **T 1272/12**). Accordingly, the **main criterion** for deciding on the admissibility of late-filed documents and evidence is their **relevance**, i.e. whether they are decisive (relevant) for the outcome of the case (see **T 258/84**, OJ 1987, 119; **T 892/98**; **T 605/99**, **T 572/14**). Some decisions assess the relevance in relation to other documents already in the case (e.g. **T 932/99**, **T 482/01**, **T 927/04**; see however **T 1652/08** and **T 66/14** rejecting this definition). If the document is relevant it must be admitted into the case and taken into account (**T 164/89**, **T 1016/93**).

In addition, in landmark decision **T 1002/92** (OJ 1995, 605) the board held that the principles set out by the Enlarged Board in **G 9/91** and **G 10/91** (OJ 1993, 408 and 420) with regard to the admissibility of fresh grounds of opposition (see chapter IV.C.3. above) are also generally applicable to late-filed new facts and evidence in support of grounds of opposition already presented in the notice of opposition. Accordingly, in proceedings before the opposition divisions, late-filed facts, evidence and related arguments which go beyond the "indication of the facts, evidence and arguments" presented in the notice of opposition pursuant to R. 55(c) EPC 1973 should only exceptionally be admitted into the proceedings if, prima facie, there are clear reasons to suspect that such late-filed material would prejudice the maintenance of the European patent in suit. The board saw the consideration of relevance as the principal factor governing the exceptional admissibility of late-filed new facts, evidence and related arguments in proceedings before the opposition division. For the more restrictive and stringent criteria in proceedings before the boards of appeal, see chapter V.A.4. and, in particular, chapters V.A.4.4.6, V.A.4.5.5m) and V.A.4.5.4e).

Many decisions have affirmed **T 1002/92** (for late submissions in opposition proceedings see e.g. **T 481/99**, **T 481/00**, **T 1643/11**, **T 1883/12**, **T 2438/13**, **T 710/15**). In **T 2049/16** the board reiterated that the need to avoid the maintenance of invalid European patents

justified, in first-instance proceedings, the admittance of documents that, in the opposition division's view, were prima facie relevant.

However, in many decisions, the relevance of late-filed documents was not viewed as being the only decisive criterion for admitting them. Other criteria, such as how late the documents were, why they had been submitted late and whether their submission constituted a procedural abuse or whether admitting the late-filed documents could lead to an excessive delay in the proceedings, were also held to be decisive (see **T 534/89**, OJ 1994, 464; **T 17/91**, **T 951/91**, OJ 1995, 202; **T 1019/92**, **T 481/99**, **T 1182/01**, **T 927/04**, **T 1029/05**, **T 1485/08**, **T 2542/10**, **T 1272/12**, **T 1883/12**, **T 1271/13**).

The board in **T 1445/22** did not consider the circumstances leading to the obtaining of the evidence by the party filing it as relevant for the issue of whether a document was filed in due time. These circumstances were external to the proceedings and it would run counter to the concept of discretionary power if that discretion were denied to a deciding body by circumstances external to the proceedings. Were such discretion to be denied, then all documents created or coming to light at any stage of the proceedings that were filed by a party would automatically be part of the proceedings. However, this would undermine the nine-month period under Art. 99(1) EPC which aims to establish the factual and legal framework within which the substantive examination of the opposition is, in principle, conducted, allowing the patent proprietor a fair chance to consider its position at an early stage of the proceedings (see **G 10/91** and **T 1002/92**).

For decisions on the exercise of discretion by opposition divisions, see in this chapter IV.C.4.5.2 to 4.5.5; for criteria for considering late-filed facts and evidence in appeal proceedings, see chapter V.A.4. and, in particular, chapters V.A.4.1.2, V.A.4.4.6, V.A.4.5.1, and V.A.4.5.4e).

4.5.2 Review of discretionary decisions by the boards

a) Limits to the discretionary power in Article 114 EPC

The discretionary power conferred by Art. 114 EPC necessarily implies that the EPO department of first instance must have a certain degree of freedom in exercising its power. A board of appeal should only overrule the way in which a department of first instance has exercised its discretion when deciding on a particular case if it concludes that it has done so according to the wrong principles, or without taking into account the right principles, or in an unreasonable way, and has thus exceeded the proper limits of its discretion (**T 640/91**, OJ 1994, 918; **G 7/93**, OJ 1994, 775; see also chapter V.A.3.4). This rule also applies with respect to opposition division decisions on the admission (**T 1209/05**, **T 1652/08**, **T 1852/11**, **T 2513/11**) or non-admission (**T 1485/08**, **T 1652/08**, **T 1253/09**, **T 1568/12**, **T 1883/12**, **T 1271/13**, **T 1690/15**, **T 1711/16**) of late-filed submissions. It is not the function of a board of appeal to review all the facts and circumstances of the case as if it were in the place of the department of first instance in order to decide whether or not it would have exercised such discretion in the same way (**T 75/11**, **T 2685/19**, **T 1522/21**; see however **T 544/12**, where the opposition division did not give sufficient reasons for its decision). In particular, the board should not interfere in such a discretionary decision

simply because, under the same circumstances, the board itself would have decided differently (**T 960/15**).

This discretionary power has to be exercised reasonably after hearing the parties, including in oral proceedings if requested (**T 281/00**).

In **T 435/20** the board found that the opposition division had decided according to the wrong principles and had disregarded the **principles of procedural fairness and of equal treatment of the parties**. Firstly, the board found inter alia that the mere fact that the opposition division's preliminary opinion was positive for one party could not in itself justify not admitting any further documents by this party which were filed by the final date set by the opposition division for making written submissions under R. 116(1) EPC. Secondly, as pointed out by the board, arguments submitted by a party's professional representative do not qualify as means of giving evidence under Art. 117(1) EPC and may therefore have a different weight depending on whether or not they are supported by further evidence. Accordingly, the opposition division was mistaken in holding that the declaration D81 with supporting documents on the one hand, and the representative's arguments on the other were equivalent and that this could justify non-admittance of documents D81 to D90. Further, D81 to D90 had been filed as direct and immediate response to new evidence submitted by the appellant on the last day for making written submissions under R. 116 EPC. In admitting this late-filed evidence into the proceedings but not admitting D81 to D90 filed by the respondents in direct response, the opposition division had not respected the principles of procedural fairness and of equal treatment of parties.

In **T 879/21** the board considered that the opposition division had exercised its discretion using the wrong criteria and in an unreasonable manner when deciding not to admit the late-filed documents. The opposition division's finding that D15 to D17 were not prima facie relevant because the allegations that the claimed composites and foams could not be obtained and the objections of lack of disclosure, novelty and inventive step "were already brought forward in the notice of opposition" was unreasonable. With this reasoning, the opposition division had de-facto not assessed the prima facie relevance of these documents. The board found that if this approach were to be implemented, a party would lose the right to have any new evidence supporting an attack raised in the notice of opposition considered, irrespective of its prima facie relevance for the outcome of the proceedings.

See also in particular chapter V.A.3.4.1 "Principles applying to the review of first-instance discretionary decisions".

b) No legal basis to overturn submissions admitted by the opposition division

In **T 1852/11** the board observed that the framework of the EPC did not provide a legal basis for excluding, at the appeal stage, a prior art document which was correctly admitted into the first-instance proceedings. The board in **T 617/16** held that this was particularly the case when the impugned decision was based on them (see e.g. **T 1549/07**, **T 1652/08**, **T 26/13**, **T 1201/14**); in view of the aim of the appeal proceedings to review the decision

under appeal in a judicial manner according to Art. 12(2) RPBA, such submissions were automatically part of the appeal proceedings (see e.g. **T 487/16**, **T 2603/18**).

Other boards have not ruled out the possibility of a review altogether, but have limited it to cases of errors in exercising discretion or procedural errors (**T 2603/18**, **T 2685/19**; see **T 1549/07**, **T 1652/08**, **T 2197/11**, **T 572/14**).

For a more substantial review of the case law concerning the board of appeal's review of first-instance discretionary decisions, see chapter V.A.3.4.

4.5.3 Prima facie relevance

a) Relationship between prima facie assessment and in-depth assessment

According to established case law of the boards of appeal, a decisive criterion for admitting late-filed documents is their prima facie relevance, see e.g. **T 1002/92**, OJ 1995, 605; **T 212/91**, **T 931/06**, **T 1883/12**, **T 1511/14** and **T 838/17**; for appeal proceedings, see in particular chapters V.A.4.1.2, V.A.4.4.6, and V.A.4.5.5.

Prima facie relevance is ascertained on the face of the facts, i.e. with **little investigative effort**, which reflects the need for procedural expediency in considering and admitting late-filed facts and evidence (**T 1883/12**).

In **T 1348/16** the board considered that the opposition division, in admitting a document which it had found to be prima facie relevant and potentially prejudicial to the maintenance of the patent in suit, had based its decision on the right principles and that there was no reason to doubt that it had exercised its discretion in a reasonable way. This was not contradicted by the fact that a detailed analysis of the document later led the opposition division to conclude that it was actually not novelty destroying and that another document represented the most relevant state of the art. Such an in-depth analysis was not part of the prima facie assessment of the relevance of a document. See also **T 1614/18**.

In **T 1525/17** the board observed that it was inherently contradictory to take late-filed documents as a basis for an in-depth examination of the patentability requirements, and so consider them as to their substance, yet at the same time declare them not admitted, as the opposition division had done in this case, having fully considered documents E5 and E6 in its thorough substantive assessment of inventive step. That assessment had not been referred to explicitly as a prima facie assessment of the documents' relevance; nor could it be regarded implicitly as a matter to be settled before dealing with their non-admission. The refusal to admit them therefore amounted to an erroneous exercise of discretion. See also **T 1185/15** (necessary thorough analysis at odds with finding that document is not prima facie relevant) and **T 346/16**. See likewise **T 847/20** in which the opposition division had not carried out a prima facie assessment but had fully considered the requests before concluding that they could not be admitted. The board took the view that the opposition division had wrongly exercised its discretion because, having implicitly admitted the requests, there was no discretion left not to admit them. **T 2324/14** and

T 2026/15 address implicitly admitted requests in examination proceedings, see chapter IV.B.2.4.1.

In **T 838/17** the board held that an assessment of whether a prior art document prejudiced inventive step, even at prima facie level, needed, necessarily, to go beyond an assessment of whether that document prejudiced novelty. An assessment of inventive step did not stop at the identification of a difference. While a lack of difference was sufficient to substantiate an inventive-step objection, the identification of a distinguishing feature was not sufficient to demonstrate that the invention would not have been obvious. Even if the opponent's argumentation did not go beyond the statement that there was actually no difference, proper exercise of discretion would require, at least, some explanation as to why the opposition division saw no reason to suspect that the difference would have been obvious.

In **T 1614/18** the board stated, with reference to the version of Guidelines applicable at the relevant time, that the competent department had to take a late-filed and "prima facie" relevant evidence into consideration no matter what stage the procedure had reached and whatever the reasons for the belated submission. The fact that after discussion at the oral proceedings the suspected relevance was not confirmed did not imply that the discretion was applied incorrectly. In the case in hand procedural expediency was not an issue since D6 was filed two months before the oral proceedings, and therefore no undue burden affecting negatively the position of the appellant could be reasonably invoked.

In **T 2716/19** the board decided the opposition division had applied the criterion of prima facie relevance in an unreasonable way because it had limited its assessment to the subject-matter of the then main request. It should have extended to the subject-matter of the auxiliary requests on file.

In **T 21/22** the opposition division had conducted a comprehensive examination of late-filed D20 in respect of novelty and inventive step prior to concluding that it should not be admitted on the basis of its late filing and the fact that it was not prima facie relevant. The opposition division had therefore not only carried out a mere prima facie assessment but had fully considered D20 and the objections based upon it. Thus, the board held that there was no discretion left for the opposition division not to admit D20 into the proceedings, since it was de facto fully considered (and therefore implicitly admitted) by the opposition division.

b) Relative or absolute concept of relevance

Regarding the examination of evidence, documents and other submissions as to their relevance, one line of case law holds that "irrelevant" means no more "weighty" or "cogent" than those already on file (see e.g. **T 611/90**, OJ 1993, 50, and also the decisions summarised below).

In **T 560/89** (OJ 1992, 725) the board explained that Art. 114(2) EPC 1973 allowed the EPO to disregard documents which contained no more information than the documents filed on time and did not disclose matter which could change the outcome of the decision. In **T 1557/05**, the appellant (opponent) filed further patent documents as prior

art. The board held that late-filed evidence was admissible only if it was prima facie more relevant than the evidence already on file. In this regard the board in **T 1883/12** added that relevance was decided in relation to facts to be proven, and if late documents (here: patent documents), on the face of it, were not more relevant to those facts than admitted evidence and thus appeared to add nothing, it was perfectly reasonable in the interest of procedural economy not to admit them.

Similarly, the board in **T 1690/15** rejected the appellant's argument that relevance had to be assessed absolutely. It pointed out that an opposition division carried out its prima facie assessment by comparing the features obvious from the disclosure at issue with the claimed subject-matter. If it concluded that those features did not provide it with any evidence beyond that already on file, it could justifiably disregard the disclosure. If it was clearly no better than the previously cited prior art, it could already be assumed that it was no more likely to result in a finding of a lack of patentability.

In another line of case law, however, the boards have held that, in establishing whether a document was prima facie relevant, the decisive factor is **not** whether it is even more relevant than a previously filed document, but rather whether it is prima facie **relevant for the outcome** of the case (see e.g. **T 1652/08**, **T 66/14**, **T 1348/16** and **T 435/20**).The board in **T 66/14** further explained that this could not be assessed in isolation from the submissions put forward by the party submitting a document late; in exercising its discretion, the opposition division had to consider what objection the late-filed document was supposed to substantiate.

In **T 2165/10**, documents E1-E10, which related to an alleged public prior use, had not been admitted into the proceedings by the opposition division. The board held that the prima facie relevance test had been exercised correctly. The opposition division had considered, with regard to novelty, that E1-E10 did not disclose a number of the claimed features and, with regard to inventive step, that they did not deal with the problem underlying the contested patent. Since there was a document (D4) that related to this problem, the board could not find fault in the division's reasoning that the prior use was less relevant as the starting point.

c) Further examples

For examples of cases where the boards were satisfied that the opposition division had considered the correct criterion, prima facie relevance, and had done so in detail and in a reasoned manner, see e.g. **T 1643/11**,**T 782/13**, **T 2513/11**, **T 572/14** and **T 2053/13**.

For an example of a case where the board did not agree with the opposition division's view that the late-filed document was not prima facie relevant, see **T 591/15**.

d) Other aspects must be considered

In **T 1984/19** the board found that determining whether late-filed documents were prima facie more relevant than those already on file was only one of several aspects that needed to be balanced when taking the discretionary decision to admit or not admit late-filed

evidence into the proceedings. Other aspects included the point in time at which the evidence was first presented and the amount of time available for the other party to deal with it and prepare a meaningful reply, or the complexity of the new submission and the expected lengthening of the proceedings that its admittance would cause.

4.5.4 Abuse of proceedings and submissions contrary to fair and expedient procedure

An abuse occurs where a party deliberately withholds documents for tactical reasons (see e.g. **T 1019/92**, **T 724/03**).

In **T 17/91** the board took the view that an assertion of public prior use based on the **opponent's own activities** which is submitted after the expiry of the opposition period and in the absence of good reasons for the delay represented an abuse of the proceedings and a breach of the principle of "good faith" which all parties are expected to observe. As soon as evidence was in the possession of the opponent and it was recognisable that it could be highly relevant to the validity of the patent it should be submitted in the proceedings.

By contrast, in **T 1019/92** the board held that the fact that an opponent submitted prior art material originating from itself after the end of the opposition period did not constitute an abuse of the proceedings in the absence of evidence that this was done **deliberately for tactical reasons**. Likewise, in **T 481/00** the board considered that the maintenance of a prima facie clearly invalid patent as the legal consequence of the late submission of a clearly novelty-destroying prior use allegation in opposition proceedings, albeit still submitted in time to guarantee the patentee's right to be heard, would in the specific circumstances of its case amount to an inappropriate sanction without a sufficient legal basis in the EPC or in the general principles of procedural law applicable under Art. 125 EPC. See, along the same lines, **T 2049/16**.

However, according to the board in **T 1955/13**, there were good reasons not to treat an opponent's late-filed allegation of its own public prior use differently for the purposes of admissibility depending on whether it admitted to having withheld the alleged prior art deliberately or claimed simply not to have looked for it earlier. If the lateness of its prior-art search could not be explained by procedural developments that would prompt a reasonable person to search in a particular direction for the first time, the opposition division would not be committing any error in law in applying the case law on abusive withholding of prior art when it came to deciding whether to admit its allegation.

In **T 1271/13** the opponent had submitted report D11, underlying a new insufficiency objection, one month before the oral proceedings and a corrected version D11a one day before the oral proceedings. The opposition division had come to the conclusion that the experiment results had not been submitted sufficiently well in advance for the proprietor to have had the opportunity to perform counter-experiments. The very late submission of D11/D11a was contrary to a fair and expedient procedure. The board found that the opposition division had based its discretionary decision not to admit D11/D11a on well-established principles and had not acted in an unreasonable way.

In **T 154/95** the board ruled that in opposition or appeal proceedings it was basically irrelevant how an opponent came across documents or other evidence made available to the public. Thus there was nothing to stop an opponent from citing a prior use invoked in the same case by another opponent whose opposition was inadmissible because it had been filed after expiry of the opposition period.

4.5.5 Legitimate expectation that the document is already in the proceedings

In **T 68/02** document D16 was discussed extensively by the respondent without objecting to its admission into the proceedings. At the start of the oral proceedings before the opposition division the respondent requested that the document not be admitted into the proceedings. The opposition division as a consequence did not admit the document. The board could not agree with the action of the opposition division in this respect. The discussion of the document by the respondent and the opposition division before the oral proceedings took place led to the normal expectation that the document was already in the proceedings. See also **T 1194/08**.

4.6. Late submissions of new arguments

4.6.1 New arguments – definition

The Enlarged Board defined "new arguments" in opinion **G 4/92** (OJ 1994, 149) as being not new grounds or evidence, but reasons based on the facts and evidence which had already been put forward (e.g. **T 131/01**, OJ 2003, 115). In **T 604/01**, the board held that facts in the legal sense were to be understood as the circumstances and incidents of a case, looked at apart from their legal bearing. In **T 926/07** the board stated (with reference to **T 92/92**) that facts are alleged circumstances/matters which must, where applicable, be substantiated by evidence. Arguments, by contrast, are the expositions generated when the law is applied to facts and evidence filed on time. Arguments based on facts filed on time were therefore to be admitted at every stage of the opposition and opposition appeal proceedings. See also chapter V.A.4.2.3l) to p). on the late submission of new arguments in appeal proceedings.

Taking a similar line in **T 861/93**, the board ruled that **decisions** referred to by a party in support of its arguments were never citations which, under Art. 114(2) EPC 1973, could be rejected as being late. Decisions to which a party referred in support of its arguments should be regarded as part of these arguments and should not be rejected as being filed late (doubted in **T 1914/12**).

In **T 131/01** (OJ 2003, 115) the board considered that the reasons why, in the opponent's view, the skilled person would obviously have arrived at the claimed subject-matter with the aid of a particular DE citation constituted a new argument. This document had been **cited and analysed in the notice of opposition** and its content therefore did not constitute new facts. The board in **T 2238/15** similarly took the view that a newly submitted objection of a lack of inventive step over two citations already on file was at best a new argument. Since the contents of those citations, in so far as they were relevant for claim 1

as granted and the additional features according to the first auxiliary request, had already been analysed in the notice of opposition, they were not new facts.

The board in **T 1448/09** observed that, while reference to **common general knowledge** could be an argument, whether that knowledge actually existed was a question of fact.

According to **T 1553/07** arguments also included statements intended to rebut facts which had already been put forward (including evidence). In oral proceedings before the opposition division, the patent proprietor explained why, in its opinion, the public prior use claimed by the opponent had not been established beyond all doubt by the evidence which had been submitted late. The board did not regard the disputing of the prior use claimed by the opponent as constituting the presentation of new facts.

In **T 710/15**, the opponent raised during oral proceedings before the opposition division a new objection under Art. 100(c) EPC. This ground for opposition had been previously validly invoked. The board held that in the case at issue the new objection did not introduce new facts or evidence, but merely a new argument.

According to the board in **T 1914/12**, a "fact" was to be understood as a piece of (allegedly) factual information or a circumstance on which a party based its case, whereas an "argument" was a contention that it based on one or more such facts and that supported the ground it was invoking (see also **T 2086/21**). The board gave the example of an opponent objecting that a claim lacked novelty over the disclosure in a particular paragraph of a prior art document: the ground invoked would then be lack of novelty (i.e. an assertion that the claimed subject-matter was part of the prior art), and that ground would be based on the argument that the claimed subject-matter was disclosed in the cited paragraph of the document; the fact on which that argument, meanwhile, was based would be the document's wording, a translation or copy of the document being filed as (a piece of) evidence. While a distinction was sometimes made in the case law between an "argument" and a "line of argument", the board it could see no legal basis in the EPC for treating an isolated argument differently from a set of arguments.

In **T 2053/13** the appellant's (opponent's) inventive step assessment starting from the teaching of document D3 was first presented on the day of the oral proceedings before the opposition division. Document D3 itself had been filed with the notice of opposition; it was however not presented as the closest prior art, but mentioned only in a footnote for a marginal issue. The board recalled that according to **G 4/92** (OJ 1994, 149), arguments are reasons based on facts and evidence which have already been put forward. The board considered that rather than merely presenting an additional argument in support of a chain of reasoning already known in an established factual context, the appellant had changed its case. The submission in question introduced a whole new chain of reasoning based on the allegation that document D3 was a promising springboard to the invention as claimed. Thus, the appellant's submission related to a new alleged fact. Filing a piece of evidence did not mean that any alleged fact or objection potentially derivable from that evidence was also introduced into the proceedings.

In **T 1875/15**, which concerned the admission of an objection under Art. 100(c) EPC raised for the first time during oral proceedings before the board, the board endorsed the finding in **T 1914/12** that a board has in principle no discretion not to admit late-filed arguments. However, it also noted that if a late-filed objection included new allegations of fact, the board had discretion under Art. 114(2) EPC not to admit it into the proceedings (see also **J 14/19**; for more details see chapter V.A.4.2.3l) to p)).

4.6.2 No legal basis for disregarding late-filed arguments in opposition proceedings

According to the case law of the boards of appeal, Art. 114(2) EPC provides no legal basis for disregarding late-filed arguments. Art. 114(2) EPC refers to late-filed facts and evidence ("Tatsachen und Beweismittel" in German; "faits et preuves" in French), but not legal submissions and arguments (**T 861/93**, **T 386/01**, **T 150/09**). Late-filed arguments cannot therefore be disregarded on the grounds that they were submitted for the first time at the oral proceedings (**T 92/92**, **T 704/06**). In **T 710/15** the board confirmed that Art. 114(2) EPC was not a basis for disregarding arguments not submitted in due time. For the admission of new arguments before the boards of appeal, see also **T 1914/12** citing and disagreeing with **T 1069/08** and **T 1621/09**, and chapter V.A.4.2.3l) to p).

In **T 92/92** the board held that the EPC in the English version made a clear distinction between "facts and evidence" on the one hand and "arguments" on the other in Art. 114(1) EPC and that Art. 114(2) EPC did not refer to arguments. Art. 114(2) EPC was to be interpreted such that the parties' right to argue their case was not unduly restricted.

Under R. 116 EPC (R. 71a EPC 1973) new facts and evidence do not need to be considered after the time stated in the summons, unless they are admitted on the grounds that the subject of the proceedings has changed. R. 116 EPC, and Art. 114(2) EPC on which it is based, refer to late-filed facts and evidence but not to new arguments, which can be made at any stage in the proceedings. In accordance with the jurisprudence, therefore, new arguments in support of facts already adduced have to be considered in accordance with R. 116 EPC, even if presented after the date specified in the summons, and equally cannot be rejected by citing Art. 114(2) EPC (see the following decisions issued in relation to R. 71a EPC 1973: **T 131/01**, OJ 2003, 115; **T 926/07**, **T 1553/07**).

In **T 2238/15** too, the board (citing **T 92/92**) endorsed the view that the EPC distinguished clearly between "facts and evidence" and "arguments" and provided no basis for refusing to admit late-filed arguments. The discretion under Art. 114(2) EPC to disregard late-filed facts and evidence therefore did not extend to arguments, and that applied equally to new arguments not submitted until after the date fixed in the summons to oral proceedings (see R. 116 EPC).

5. Amendments to claims, description and drawings in opposition proceedings

5.1. Admissibility of amendments

5.1.1 Principles

The extent to which amendments may be admissible in opposition proceedings was discussed in **T 1149/97** (OJ 2000, 259). Once a decision to grant has been issued, the European examination procedure is closed and its results become binding on the applicant and the EPO in that no further amendments may be made. However, if an opposition is filed, the patent in suit may be amended. Such amendments are not left to the general discretion of the patent proprietor, since opposition proceedings are not a continuation of the examination proceedings (**G 1/84**, OJ 1985, 299). However, the patent proprietor may, pursuant to **R. 80 EPC** (R. 57a EPC 1973) – without prejudice to R. 138 EPC (R. 87 EPC 1973) – react to the opponent's objections by amending the description, claims and drawings, provided that the amendments are **occasioned by the grounds for opposition** specified in Art. 100 EPC, even if the respective ground has not been invoked by the opponent (see also in this chapter IV.C.5.1.2). In addition, amendments occasioned by national rights of earlier date are admissible pursuant to **R. 138 EPC** (see also in this chapter IV.C.5.1.3).

According to the board in **T 1149/97**, those regulations could be seen to reflect the formal aspects of a procedural cut-off effect associated with the grant of a patent in the opposition phase. The grant of a patent did not constitute a general cut-off point in that the patent had to be defended in unamended form. However, only amendments as reactions to actual or possible grounds of opposition or to conflicting earlier national rights were admissible (R. 80 and 138 EPC). Possible substantive cut-off effects for amendments after grant could, in the board's view, only be based on Art. 123(3) EPC (see also chapter II.E.2.3.2).

Since the EPC does not provide for surrender of the patent in opposition proceedings, patent proprietors can merely request that the patent be amended. In requesting that the patent be maintained in a limited form, a patent proprietor is merely attempting to delimit it against objections raised by the EPO or the opponents, and **does not**, by virtue of such limitation, **irrevocably surrender subject-matter** not covered by the request as limited. In principle, the patent proprietor is free to withdraw such a request at any time during opposition proceedings or to amend it subsequently and, in particular, to resume a defence of the patent as granted, unless this would constitute an abuse of procedural law or the proprietor is prevented from doing so by the prohibition of reformatio in peius (see e.g. **T 123/85**, OJ 1989, 336; **T 296/87**, OJ 1990, 195; **T 445/97**; **T 473/99**; **T 699/00**; **T 880/01**; **T 794/02**; **T 934/02**; **T 1018/02**; **T 1213/05**; **T 1394/05**; **T 1150/11**; **T 385/15** and **T 43/16**, which refer to this principle as established case law).

Unlike R. 137(3) EPC (R. 86(3) EPC 1973), R. 80 EPC (R. 57a EPC 1973) does not specify the point in time up to which the proprietor may amend the description, claims and drawings under the requirements specified in this provision. The boards had from the beginning based their decisions on the principle that the proprietor has no right to have

amendments admitted at any stage of opposition proceedings and this did not change by the introduction of R. 57a EPC 1973. The discretion of the opposition division with regard to late-filed amendments was however derived from different provisions of the EPC (including R. 116(2) and Art. 114(2) EPC). In **R 6/19** the Enlarged Board held that Art. 123(1) EPC is the basis for the EPO's discretion whether or not to admit claim requests in opposition proceedings (see also **T 966/17**, which cited Art. 123(1), first sentence, EPC, read together with R. 79(1) and 81(3) EPC; **T 256/19**, which referred to **R 6/19** and **T 966/17** and cited Art. 123(1) EPC in conjunction with R. 79(1) and/or 81(3) EPC and, in the case of arranged oral proceedings, with R. 116(2) EPC). In **T 754/16** the board emphasised that for the opposition division to have discretion not to admit new requests, these had to be late-filed in the first place. For details regarding the late submission of amendments in opposition proceedings, see in this chapter IV.C.5.1.4.

In **T 966/17** the board made it clear that parties to adversarial proceedings were not entitled to "detailed guidance" from the decision-making department on how to overcome a deficiency at issue. Instead it was incumbent on each party to react adequately to the submissions of the opposing party.

In **G 1/10** (OJ 2013, 194), the Enlarged Board held that R. 140 EPC is not available for correcting patents, including during opposition or limitation proceedings. However, it is always open to a patent proprietor to seek to amend their patent during opposition or limitation proceedings and such an amendment could remove a perceived error. Such an amendment would have to satisfy all the legal requirements for amendments including those of Art. 123 EPC (see also full summary of **G 1/10** in chapter III.L.2.1.; but see also **T 657/11**, summarised in chapter II.E.4.5).

5.1.2 Amendments occasioned by a ground for opposition – Rule 80 EPC

a) General

Pursuant to R. 80 EPC (R. 57a EPC 1973) the claims of a granted patent may be amended, provided that the amendments are occasioned by a ground for opposition under Art. 100 EPC, even if that ground has not been invoked by the opponent. Prior to the introduction of R. 57a EPC 1973 (entry into force on 1 June 1995, see decision of the Administrative Council, OJ 1995, 9), it had already been clarified in the case law that the EPC did not guarantee a patent proprietor the right to have proposed amendments admitted in opposition (appeal) proceedings. Whether to allow such amendments was to be decided by the department concerned exercising due discretion. Amendments could be refused if they were neither appropriate nor necessary (see e.g. **T 406/86**, OJ 1989, 302). For later decisions referring to these criteria within the framework of R. 57a EPC 1973 (R. 80 EPC), see e.g. **T 17/97**, **T 313/98**, **T 994/03**, **T 263/05**, OJ 2008, 329, **T 323/05**, **T 340/10**, **T 2063/15**.

As underlined in **T 256/19** with reference to the notes on the introduction of R. 57a EPC 1973 (notice dated 1 June 1995, OJ 1995, 409), R. 80 EPC addresses the purely substantive aspects of the proprietor´s entitlement to amend the patent, and does not specify the point in time up to which amendment is allowed (on "Late submission of

amendments" and in particular discretion regarding their admittance, see chapter IV.C.5.1.4 below). In the board's view, the wording of R. 80 EPC (in particular "may be amended, provided that") meant that claims may be amended if the amendments are occasioned by an opposition ground; they may not be amended otherwise. The requirement of R. 80 EPC was therefore similar to that of Art. 123(2) EPC (see in particular "may not be amended in such a way that"). Accordingly, the board considered R. 80 EPC to be a **non-discretionary provision** with a substantive requirement that relates to the **allowability** of a patent as amended rather than to admissibility (see also **T 123/22**).

According to **T 323/05**, which concerned a request to adapt the description, R. 57a **EPC** 1973 (R. 80 EPC) established a limit to the amendments which can be made to the patent in suit. Art. 84 and R. 57a EPC 1973 were the two provisions which have to guide the patent proprietor when invited by the opposition division to adapt the description. In other words, the amendments have to be **appropriate and necessary**, and nothing more.

In **T 750/11** the board observed that amendments under R. 80 EPC were formally admissible so long as they could be regarded as a **serious attempt** to overcome a ground for opposition (see also **T 123/22**). So an amendment further limiting the subject-matter of an independent claim complied with R. 80 EPC in formal terms. Whether it actually overcame any ground for opposition was a separate matter to be settled as part of the ensuing substantive examination. A serious attempt was acknowledged in e.g. **T 1175/11** and **T 1797/16**. For a counter-example, see **T 1833/15** (in which the amendment did not change the claimed subject-matter and so did not amount to a serious attempt). The board in **T 276/20** interpreted R. 80 EPC as requiring at least a **bona fide attempt** to overcome a ground of opposition, i.e. where it appeared at least plausible that the amendment may well change the claim scope and thus may potentially address objections under one or more grounds for opposition.

In **T 993/07** the board recalled that R. 80 EPC is lex specialis for amendments during opposition proceedings, analogous to R. 137 EPC for amendments during examination proceedings. The board interpreted the rule to mean that in opposition proceedings the proprietor's right to amend the patent, e.g. the claims as granted, is limited to making amendments in order to overcome an objection based on a ground for opposition as specified in Art. 100 EPC, thereby possibly **avoiding revocation** of the patent (confirmed in **T 21/16** and referred to as established case law). In line with this interpretation, the board stated that opposition proceedings were not to be understood as an opportunity for the proprietor to fix any, from their perspective, shortcomings in the patent, such as an insufficient number of independent and/or dependent claims in order to define all commercially valuable embodiments. The fact that the addition of one or more independent and/or dependent claims may improve the fall-back positions in any future revocation proceedings before a national court was clearly not the scope and purpose of either R. 80 EPC or the opposition procedure (confirmed in **T 1764/17**). The board also observed that a limitation procedure pursuant to Art. 105a EPC was not subject to the same requirement as set out in R. 80 EPC. In **T 2444/18** the board held that the adaptation to the reduced number of preceding claims resulting from other amendments was however normal practice and could not infringe R. 80 EPC since this adaptation did not result in a

change of content but merely preserved the still applicable back-references. Moreover, the board noted R. 80 EPC concerns amendment(s) of a European patent, i.e. a comparison of an amended version to the granted version rather than a comparison between different amended versions.

In **T 359/13** the board stated that R. 80 EPC did not place any restriction on the form of amendments a patent proprietor could (seek to) make to address objections raised (here: reformulating the product claim as a use claim). On the contrary, a proprietor was free to draft proposed amendments to the specification in any manner considered appropriate. Even in the situation considered in **G 1/99** where the requirements of the principle of no reformatio in peius imposed restrictions on the manner in which the claims may be amended, an opponent as appellant had no right to prescribe the form of the amendments which the patent proprietor as respondent may make (see **T 23/04**). In **T 123/22** the board reaffirmed the view of the board in **T 359/13**, adding with reference to **T 750/11** that the sole basis for assessing the R. 80 EPC requirement was whether the amendment was occasioned by a ground for opposition. In assessing whether an amendment of claims within the meaning of R. 80 EPC was occasioned by a ground for opposition, it was therefore irrelevant whether the features added to an opposed claim were derived from dependent claims or from the description.

In **T 1285/15** the board underlined that the very language of R. 80 EPC ("... occasioned by a ground for opposition ...") made clear that the situation **at the time of the amendment** needed to be considered when compliance with this provision was examined. The fact that, as in the case in hand, the claims were amended again at a later stage and that, as a consequence, the deletion of the sentence was no longer required, did not lead to the conclusion that the amendment of the description retroactively contravened R. 80 EPC. The original amendment could still be said to have been occasioned by a ground for opposition.

In **T 946/16** the board found that the opponents' objection was based on a misinterpretation of R. 80 EPC. The amendments referred to in this rule were not ones made to an earlier version differing from the patent as granted. The result of interpreting R. 80 EPC that way would be incompatible with the spirit and purpose of the EPC. Among other things, it would make it impossible for the patent proprietor ever to overcome a clarity objection to an amendment which was itself in line with R. 80 EPC.

b) Correction of errors

In **T 2450/17** the patent specification contained an incorrect reference to the prior art as a result of an amendment during the grant proceedings. At the oral proceedings before the board, the appellant submitted an amended paragraph from which the inaccurate information had been deleted. As to whether the contested amendments were admissible under R. 80 EPC, the board pointed out that the case law had recognised that references to relevant prior art as defined in R. 42(1)(b) EPC could be added at a later stage without this necessarily being deemed an inadmissible extension of the subject-matter of the application. However, such references designed to delimit the relevant prior art should not be incorrect or misleading, otherwise they could indeed alter the subject-matter of the

patent. Remedying inaccuracies of this kind thus did not contravene Art. 123(2) EPC; on the contrary, doing so was appropriate and necessary for ensuring compliance with that provision. Deleting incorrect information about the prior art from which the patent specification was to be distinguished was thus appropriate for addressing the ground for opposition under Art. 100(c) EPC. The board also concluded that it was wrong to say that any amendment to an incorrect reference to the prior art permitted under R. 80 EPC (as it was occasioned by Art. 100(c) EPC) automatically constituted a breach of Art. 123(3) EPC. It noted that R. 80 EPC was satisfied if the patent documents were amended to overcome a potentially relevant ground for opposition and that, in the case in hand, the scope of protection had not been extended.

In **T 2444/18** the board held that the fact that there was an error in certain amended claim requests could not be used to prevent the patent proprietors from stating the back-references correctly in another claim request. R. 80 EPC did not apply to such a situation as it concerned amendment(s) of a European patent, i.e. a comparison of an amended version to the granted version rather than a comparison between different amended versions. A different understanding of the legal framework would create a legal asymmetry. On the one hand, any amended text would have to comply with all the requirements of the EPC. On the other hand, any subsequent amendments of that text could be allowed only if they were prompted by a ground for opposition.

c) Amendments intended to remedy a lack of clarity (Article 84 EPC)

Objections to the clarity of claims or any consequent requests for amendment are only relevant to opposition proceedings in so far as they can influence the decisions on issues under Art. 100 EPC or arise in relation to the subject-matter to be amended as a consequence of such issues (**T 127/85**, OJ 1989, 271).

According to the established case law of the boards of appeal, Art. 84 EPC is an EPC requirement that has to be taken into account in opposition proceedings whenever the patent proprietor files any amendments (within the limits set in **G 3/14**, OJ 2015, A102; see in this chapter IV.C.5.2.2). However, Art. 84 EPC is not itself a ground for opposition under Art. 100 EPC. Irrespective of how the granted claims are formulated, and be they dependent or independent, an opposition cannot be lodged on the basis that they lack clarity (**T 23/86**, OJ 1987, 316; **T 565/89**; **T 89/89**; **T 16/87**, OJ 1992, 212; **T 1835/08**; **T 1855/07**). The board in **T 89/89** followed the findings in decision **T 295/87** (OJ 1990, 470) according to which amendments during opposition proceedings should only be considered as appropriate and necessary in the sense of R. 57(1) and 58(2) EPC 1973 and therefore admissible if they can fairly be said to arise out of the grounds of opposition (confirmed in **T 792/95**)**.**Now, "occasioned by a ground for opposition" is a requirement under R. 80 EPC (see e.g. **T 2391/18**).

In **T 2122/17** the board agreed with the parties that a lack of clarity under Art. 84 EPC arose from granted claim 8 because it contained an option that conflicted with a feature in granted claim 1. However, it considered that granted claim 8 also fell foul of the requirements of Art. 83 and 100(b) EPC. Deleting claim 8 was therefore justified on the basis of Art. 83 and 100(b) EPC and so by a ground for opposition. As provided in

R. 80 EPC, the ground for opposition (here: Art. 100(b) EPC) did not have to have been invoked by the opponent.

In **T 2391/18** the reason for the alleged obligation to remove an inconsistency by adapting the description to the wording in the claim was to be seen in a possible lack of support of the claims by the description within the meaning of Art. 84 EPC. However, the board held that as Art. 84 EPC was not a ground for opposition, such a further amendment to the description would not be "occasioned by a ground for opposition" within the meaning of R. 80 EPC. For this reason alone it was questionable whether such a (hypothetical) amendment would be allowable.

d) Filing of new dependent or independent claims

(i) Filing of new dependent claims (sub-claims)

As explained in **T 829/93** and **T 317/90**, the addition of a dependent claim is not a response to an objection that the claimed subject-matter is not patentable because it neither limits nor amends the subject-matter claimed in the relevant independent claim. The fact that dependent claims can serve as an important safety net should the corresponding independent claim ultimately be refused does not render it legitimate to add them to a remaining, broader independent claim in opposition proceedings. See also **T 313/98**, which cited **T 829/93** in the context of R. 57a EPC 1973.

In **T 340/10**, the board reiterated that, in accordance with R. 80 EPC and the boards' settled case law, amendments to the text of a granted patent during opposition proceedings were considered appropriate and necessary, and so admissible, only if they were aimed at overcoming a ground for opposition under Art. 100 EPC (see e.g. **T 317/90**, **T 794/94**, **T 674/96**). In line with earlier case law, it explained that adding dependent claims was not, however, an answer to an objection that the claimed subject-matter was not patentable, because they neither limited nor amended the subject-matter of the related independent claim and so had no effect on its scope. It therefore considered the amendments to contravene R. 80 EPC.

(ii) Filing new independent claims

In **T 610/95** the board referred to **G 1/84** (OJ 1985, 299), which made it clear that the opposition procedure was not designed to be an extension of the examination procedure. It would, in the board's opinion, contravene the principles set out in **G 1/84** if it was considered admissible to amend the text of a granted patent during opposition proceedings, while maintaining the sole independent claim under opposition, by incorporating an additional new independent claim which as such had no counterpart in the granted patent. See also **T 2063/15** (summarised below).

In **T 223/97** the board confirmed that the addition during opposition proceedings of one or more independent claims while maintaining the main claim in question could not be considered to be a restriction to the main claim in order to meet the ground for opposition raised against it. However, the replacement of one independent claim as granted by

several, for example two, independent claims each directed to a respective specific embodiment covered by the independent claim as granted was admissible if the replacement was occasioned by grounds for opposition. See also **T 428/12**.

Referring to the above decisions, the board held in **T 181/02** that only **in exceptional cases** could the replacement of a granted single independent claim by two or more independent claims be occasioned by a ground for opposition, for example where a granted independent claim covered two specific embodiments. Such a situation might also arise if two granted dependent claims (e.g. claims 2 and 3) were linked in parallel to a single independent claim (claim 1). Then the filing of two independent claims (e.g. including the features of claims 1 and 2, and 1 and 3) might be possible (moreover thereby decreasing the number of claims). However, it was normally sufficient for the patentee to remain with a single independent claim solely by modifying the granted claim once, i.e. by adding one or more features to the granted single independent claim. See also **T 1689/12**; see further **T 1810/14**, where the board defined a further situation in which the replacement of a granted sole independent claim by two independent claims may be admissible. In **T 1764/17** .the board noted an exception could arise if two granted dependent claims were linked in parallel to a single independent claim. Then the filing of two independent claims including each one of the two parallel claim combinations might be possible, thus allowing separate fragments of the scope of protection afforded by the patent as granted to be retained. However, this exception did not apply to the addition of an independent claim directed at an aspect of the invention that was not included in the granted set of claims.

Citing the above case law, the board in **T 263/05** (OJ 2008, 329) added that, when examining the amendments, it did not have to decide whether the ground for opposition would occasion the replacement of a granted single independent claim by two or more independent claims only in "exceptional cases". Rather, it had to be asked in each individual case whether the proposed amendments were an **appropriate and necessary** response designed to avoid revocation of the patent and could thus be regarded as occasioned by the grounds for opposition. See also **T 428/12**, **T 2063/15** and **T 431/22** (summarised below).

In **T 937/00** the board saw **no objection in principle** to a patentee amending its claims in response to an opposition so that they comprised several independent claims directed to different subject-matters originally covered by a single generic claim of a given category, when such claim could not be maintained. However, the board noted that the filing of multiple independent claims directed to different inventions might **unduly complicate and delay** the opposition procedure, in particular when this filing was followed by a series of further amendments. An efficient and possibly complete examination of the opposition might for instance become virtually impossible if subsequent amendments were proposed in a piecemeal way rather than addressing all the objections raised by the other party as soon as these objections arose. See also **T 2290/12**, in which the board considered it legitimate to seek to cover parts of an initially granted claim later found by the opposition division to lack inventive step by including them in a series of independent claims so long as this did not amount to an abuse of procedure and the number of independent claims was not unreasonably high (see also **T 123/22**).

In **T 1/05** the board did not regard the introduction of product-by-process claims as an amendment occasioned by a ground for opposition. The submission of such claims demonstrated that these amendments were not directed to addressing a ground for opposition but were intended to compensate for the effects of an amendment that had been made to address such a ground, namely deletion of the product claims.

In **T 2063/15** the request at issue comprised two independent claims. However, whilst claim 2 was based on a combination of claims 1 and 9 as granted, claim 1 was based on a combination of claims 1 and 2 as granted and also additional features taken **from the description**. The board explained that, with the subject-matter of claim 1 as granted having been found not to be novel, one or more independent claims based on a combination of claim 1 as granted with features of granted claims dependent upon claim 1 could be understood to be occasioned by the ground for opposition under Art. 100(a) EPC. However, with reference to **G 1/84** (OJ 1985, 299), **T 610/95** and **T 223/97**, the board held that the inclusion of the additional independent claim 1 was no longer simply occasioned by a ground for opposition, since this ground was already addressed through the filing of independent claim 2; the additional independent claim 1 furthermore introduced claimed subject-matter which had no counterpart in the claims of the granted patent.

In **T 431/22** the board decided that R. 80 EPC did not set out any requirements for how amendments had to be made in order to overcome a ground for opposition. Amendments that were necessary and appropriate to overcome a ground for opposition were "occasioned" within the meaning of R. 80 EPC. It was admissible to replace one independent claim with several independent claims in so far as their subject-matter was limited or amended as compared with the granted claim (see also **T 123/22**). However, the board emphasised that a line had to be drawn in cases where the replacement of an independent claim appeared to be an attempt to prolong the procedure up to grant or some other form of procedural abuse. In the case in hand, the original independent claims 1 and 14 were replaced by independent claims 1 to 4 and additionally restricted so that they essentially constituted combinations of the granted independent claim 1 and its dependent claims. The board could not see any abuse of procedure in this.

5.1.3 Amendments occasioned by national prior rights

In **T 15/01** (OJ 2006, 153) the board made it clear that the general purpose of R. 57a EPC 1973 (R. 80 EPC) was to allow amendments only where they were made to overcome an objection against the validity of the European patent. It followed from the reference to R. 87 EPC 1973 (R. 138 EPC) that, within the framework of the centralised opposition procedure before the EPO, amendments were also to be allowed where the patentee intended to overcome a possible ground of invalidity which only existed in respect of a particular contracting state. Thus, R. 57a EPC 1973 was not infringed by the formulation of a separate set of claims for a contracting state in which, due to a reservation made under Art. 167(2)(a) EPC 1973, certain product claims as granted would be considered invalid or ineffective.

5.1.4 Timeframe for filing amendments

Unlike R. 137(3) EPC (R. 86(3) EPC 1973), according to which no amendment may be made without the consent of the examining division other than in the circumstances set out under paragraph (2) of that provision, R. 80 EPC (R. 57a EPC 1973) does not specify a point in time up to which the proprietor may amend the description, claims and drawings in accordance with the requirements of this provision.

According to the case law of the boards of appeal, however, the proprietor has no right to have amendments admitted at any stage of the opposition proceedings that it chooses, such as during oral proceedings, especially not without the need to give good reasons for such late filing. The right to file amendments in the course of proceedings is not unlimited in time and proposed amendments may be disregarded in particular if submitted late in the proceedings (**T 153/85**, OJ 1988, 1; **T 406/86**, OJ 1989, 302; **T 295/87**, OJ 1990, 470; **T 132/92**, **T 382/97**, **T 796/02**, **T 1253/09**).

The board in **T 500/15** also held that while there was no legal basis for refusing to admit a request merely because it had been filed after a point in time specified by the opposition division, the general admissibility of amendments did not mean that amendments always had to be admitted.

5.1.5 Discretion to admit or not admit amendments

The boards have derived the principle of discretion of the opposition division to admit or not admit amendments from different legal provisions. Early decisions derived the discretion of the opposition division from Art. 101(2) EPC 1973 read together with R. 57(1) and 58(2) EPC 1973 (R. 79(1) and R. 81(3) EPC), see e.g. **T 406/86**, OJ 1989, 302; **T 295/87**, OJ 1990, 470, **T 132/92**. The boards have also derived this discretion from R. 116 EPC, from Art. 123(1) EPC in conjunction with R. 79(1) and 81(3) EPC, and from Art. 114(2) EPC (sometimes in conjunction with R. 116 EPC (R. 71a EPC 1973)).

a) Rule 116 EPC as legal basis

Rule 116(1) EPC establishes that when issuing the summons, a final date for making written submissions in preparation for the oral proceedings shall be fixed. R. 132 EPC does not apply in this context, meaning the usual provisions for extending time limits are not available for these submissions. New facts and evidence presented after that date need not be considered, unless admitted on the grounds that the subject of the proceedings has changed. R. 116(2) EPC imposes the same obligations on the applicant or patent proprietor when submitting new documents that meet the requirements of the EPC as R. 116(1) EPC imposes on the parties in submitting new facts and evidence. In **T 382/97** the board explained that R. 57a EPC 1973 (R. 80 EPC) and R. 71a EPC 1973 (R. 116 EPC) together governed the procedural preconditions for amendments to a patent by its proprietor before the opposition division. R. 57a EPC 1973 created the legal basis for amendment, and R. 71a EPC 1973 governed the deadline for doing so. It noted that amendments not complying with a time limit set under R. 71a EPC 1973 might nevertheless be admissible, if there existed good reasons for their late submission.

In **T 28/10** the board agreed with the view that the principle of free party disposition was restricted by the principle of focussed proceedings ("Konzentrationsgrundsatz", or the "principle of procedural concentration"). As far as amending sets of claims during opposition proceedings was concerned, this "principle of concentration" was enshrined in R. 116(2) EPC. Although this provision did not completely exclude subsequent amendment of a party's case by imposing strict time limits for making certain submissions, it was left to the decision-making body's discretion whether to consider such amendments.

The board in **T 1067/08** also found that R. 116 EPC gave the opposition division the discretionary power to refuse new requests for amendments if amended claims were presented after the final date fixed under that provision. This applied in particular to requests which were presented for the first time during the oral proceedings (e.g. **T 484/99**, **T 64/02**). The board noted the purpose of this provision was in particular to prevent parties from seeking unjustified procedural advantages by abusive tactics in disregard of procedural economy. Therefore, any amendment had to be carried out in the most expedient manner, which had to be established by the opposition division taking into account the interests of all parties (see also **T 382/97**, **T 1253/09**), and the power to refuse late requests had to be exercised by considering all relevant factors which arose in a particular case, taking into account inter alia whether there were good reasons for the late filing, whether the other parties were taken by surprise and whether new issues were raised by the amendments made (see also chapter IV.C.5.1.7 "Principles for the exercise of discretion by the opposition division").

Likewise in **T 688/16** the board held that Art. 114(2) EPC only provided a discretion to admit or not admit facts and evidence and that the discretion not to admit late-filed requests was conferred by R. 116(2) EPC. That discretion was conditional on a communication stating that grounds prejudiced the maintenance of the patent. In the case at issue, however, the opposition division had not issued any such negative communication but only one stating its provisional opinion that none of the grounds for opposition prejudiced maintenance of the patent as granted, and thus the board concluded the (non)-admittance of auxiliary request 3 was not at all within the discretion of the opposition division in the case in hand.

The board in **T 1662/21** agreed with the position set out in **T 688/16**, adding that this did not mean that any amendment submitted must be admitted. The opposition division first needed to establish whether amendments were indeed intended to overcome the objections, and whether they did so in a way that was appropriate and proportionate to the circumstances. The division thus still had discretion, but had to exercise it differently from when deciding admission of amendments filed after the R. 116 EPC date that were not justified by a change of the subject of the proceedings.

In **T 1332/21** the board stated that the discretion of the opposition division whether to admit amended claims during oral proceedings was apparent from R. 116(2) EPC referring to the last two sentences of R. 116(1) EPC that such amendments "need not be considered". For criteria for the use of this discretion, the board referred to the Guidelines, E-III, 8.6 – March 2021 version (now in E-VI, 2. – April 2025 version). For the principles for the use of this discretion, see also below chapter IV.C.5.1.7.

b) Article 123(1) EPC in conjunction with Rules 79(1) and 81(3) EPC as legal basis

In **T 755/96** the board held that the power of the opposition division to accept or refuse late-filed new facts or evidence was governed by Art. 114(2) EPC 1973, the discretionary power to refuse new requests for amendments by Art. 123 EPC 1973 and the corresponding implementing regulations, i.e. R. 57a EPC 1973 (R. 80 EPC) (see also **T 1903/13**, which cites Art. 123(1) EPC as the legal basis for the discretion of the boards in opposition appeal proceedings). Several recent decisions have likewise considered Art. 123 EPC (albeit in conjunction with R. 79(1) and 81(3) EPC) to be the legal basis for this discretion: **T 966/17**, **R 6/19** and **T 256/19**.

In **T 966/17** the board considered that the opposition division's discretion in deciding whether to admit amended claims followed in essence from Art. 123(1) EPC (first sentence) in conjunction with R. 79(1) and 81(3) EPC for the reasons set out below: Art. 123(1) EPC provided that a European patent application or a European patent could be amended in proceedings before the EPO in accordance with the Implementing Regulations. In opposition proceedings, R. 79(1) EPC allowed the patent proprietor to amend the description, claims and drawings within a period set by the opposition division. Later amendments, by contrast, were admissible only at the opposition division's discretion, as was clear from R. 81(3) EPC for instance ("shall, where necessary, be given the opportunity"). See also **T 1081/20**.

In **R 6/19** the Enlarged Board held that the basis for an opposition division's discretion to admit or not admit claim requests was Art. 123(1) EPC. It observed that the first sentence states the general possibility to carry out amendments in patent applications and in patents, but only in accordance with the provisions of the Implementing Regulations (R. 81(3) EPC for opposition proceedings). It also noted that the second sentence of Art. 123(1) EPC explicitly provides applicants with a right to at least one opportunity to amend an application and remarked that, were the first sentence of Art. 123(1) EPC to mean that the patent proprietor or applicant always has the right to amend their patent or application, the second sentence of Art. 123(1) EPC would be redundant. The Enlarged Board pointed out that the right, found in the second sentence of Art. 123(1) EPC, to at least one opportunity to amend, does not extend to a patent proprietor in opposition proceedings, where the opposition division has the discretion, given in the first sentence of Art. 123(1) EPC, not to admit such requests. In such proceedings an opportunity to amend is to be given only where necessary (R. 81(3) EPC). The Enlarged Board saw no need to answer the question whether Art. 114(2) EPC, too, provides a basis for refusing requests.

In **T 256/19** it was the board's view that discretion to disregard an amended version of a patent in inter partes proceedings could only emanate from Art. 123(1) EPC in conjunction with R. 79(1) and/or 81(3) EPC and, in case of arranged oral proceedings, with R. 116(2) EPC.

In **J 14/19** the Legal Board stated that Art. 123(1) EPC could serve as an additional legal basis besides Art. 114(2) EPC.

c) Article 114(2) EPC as legal basis

In many decisions the boards have relied on Art. 114(2) EPC (sometimes in conjunction with R. 71a EPC 1973 or R. 116 EPC as its implementing provision) as the legal basis for the opposition division's discretion to admit or disregard late-filed requests (see in particular **T 1105/98**, which cited the preparatory documents to R. 71a EPC 1973, without however distinguishing between paragraphs 1 and 2 of R. 71a EPC 1973; see also e.g. **T 4/98**, **T 811/08**, **T 66/12**, **T 1214/12**, **T 2385/12**, , **T 2332/15**, **T 44/17**, **T 350/17** and **T 879/18**). In **T 1855/13** a submission containing a claim request was explicitly considered to be a fact within the meaning of Art.114(2) EPC (see also **T 604/01** in which the patent as granted and the claims as amended were considered facts; and **T 1776/18** in which the board held a patent claim was to be regarded as a statement of technical facts in legal terms and thus qualified as "facts or evidence" within the meaning of Art. 114(2) EPC). See also the additional case law outlined in **T 1776/18**, point 4.5 of the Reasons, and **T 364/20**.

The board in **T 1776/18** highlighted examples of case law in which the opposition division's discretion not to admit claim requests was considered to have its legal basis in Art. 114(2) EPC specifically in conjunction with R. 116(1) EPC (see e.g. **T 1270/18**, **T 85/19**). It further observed there were also decisions in which Art. 114(2) EPC in conjunction with R. 116(2) EPC was considered to be the legal basis for not admitting amended claim requests (e.g. **T 2536/12**, **T 1758/15**). The board agreed with the case law according to which Art. 114(2) EPC constituted a legal basis for not admitting claim requests, concluding that in submissions containing claim requests which were explicitly or implicitly substantiated, factual elements were present. The presence of these factual elements allowed Art. 114(2) EPC to be relied on as a legal basis for disregarding claim requests which were not filed in due time (**J 14/19**). Applying Art. 114(2) EPC to amended claim requests and hence to the submissions of both opponents and patent proprietors also ensured that the parties were treated equally and according to the same criteria, which guaranteed equality of arms. See also **T 364/20**, **T 1733/22**.

For the contrary view according to which Art. 114(2) EPC cannot serve as a basis for the opposition division's discretion to admit or refuse requests, see **T 755/96**, **T 281/99**, **T 688/16**, **T 754/16**.

In **T 281/99** the board was not aware of any article or rule under the EPC nor of any case law which would oblige the opposition division to refuse new claims submitted during the proceedings irrespective of their contents and the reasons for their late filing. It stated that Art. 114(2) EPC did not relate to the submission of amended claims, but noted that even this article did not affect the opposition division's discretion to accept new facts and evidence which were not submitted in due time.

In **T 754/16** the board stated that Art. 114(2) EPC did not provide a basis for disregarding the auxiliary requests filed during the oral proceedings before the opposition division, since, firstly, this article did not apply to late-filed requests in the form of amended claims, but only to late-filed facts and arguments. Secondly, the auxiliary requests in the case in

hand were filed in due time, as a direct and immediate response to the opposition division's changed opinion and since the proprietor had no earlier opportunity to react thereto.

5.1.6 Concept of "late-filed" and implications for discretion

In **T 487/13** the board held that, by deciding not to admit auxiliary requests 4 to 6 directly after late-filed document D10 was admitted into the proceedings, the opposition division did not respect the appellant's right to be heard, which was inextricably linked to the principle of fair and equal treatment of the parties. Since these new requests were filed in **direct response** to a change in the subject of the proceedings, they were submitted **in due time** and the opposition division had no discretion to disregard them.

Likewise, in **T 754/16** the opposition division had not admitted auxiliary requests 8 and 9, filed during oral proceedings, on a prima facie basis (referring to Art. 114(2) and R. 116 EPC). The board noted that this presupposed, in the first place, that the requests were late (confirming **T 273/04**). This was however not the case since filing the auxiliary requests was a **direct response to the opposition division's change of opinion** in the oral proceedings. Under R. 116(2) EPC, requests filed after the final date set for making written submissions can only then not be admitted if the patent proprietor had been notified of the grounds prejudicing the maintenance of the patent, which was not the case here. See also **T 586/16**.

In **T 966/17**, however, the board explained that, in opposition proceedings, R. 79(1) EPC allowed the patent proprietor to amend the description, claims and drawings within a period set by the opposition division. **Later amendments**, by contrast, were admissible only at the opposition division's discretion, as was clear from R. 81(3) EPC for instance. The board then considered that the opposition division's expression of a different opinion at the oral proceedings from the one provisionally set out in the communication accompanying the summons was not enough by itself to deprive it of that discretion and oblige it to admit whatever requests were filed at the oral proceedings. It was permissible for the decision on admitting new requests filed by the appellant in response to a new line of attack taken by the opponent on the basis of a newly filed document to take into consideration whether those requests were prima facie allowable or would anyway have to be refused owing to other objections already raised at a previous stage in the proceedings. See also **T 908/19** and **T 1523/22**, in which cases the boards considered that the respective auxiliary requests had been filed in due time in accordance with R. 79(1) EPC and that therefore the question whether they were "clearly allowable" was not relevant; no exercise of discretion was available to the opposition divisions on the issue of admissibility.

Another approach was taken in **R 6/19**. In this decision the Enlarged Board pointed out that the right, found in the second sentence of Art. 123(1) EPC, to at least one opportunity to amend, did not extend to a patent proprietor in opposition proceedings. It concluded that the opposition division had the discretion, given in the first sentence of Art. 123(1) EPC, not to admit such requests.

In **T 1776/18** the board analysed whether the concept of "not submitted in due time" in Art. 114(2) EPC relied on fixed criteria, such as a certain point in time in the proceedings,

or, alternatively, on relative criteria, such as individual procedural developments. It spoke against relying on relative criteria. It observed inter alia that, for appeal proceedings, the RPBA implemented Art. 114(2) EPC in a manner which in principle was binding (**T 1042/18**) and relied on fixed criteria in order to determine whether a board had the discretion not to admit a certain submission. In the board's view this approach was also preferable for opposition proceedings as an approach relying on relative criteria tied to individual procedural circumstances had the grave disadvantage that the opposition division's discretionary power was then not clearly and predictably delimited by the law itself. As to the interpretation of R. 116(2) EPC when applied to opposition proceedings, the board did not share the views expressed in **T 754/16** that requests filed after the final date set for making written submissions could only then not be admitted if the patent proprietor had been notified of the grounds prejudicing the maintenance of the patent (see also **T 1171/20**). The primary purpose of inviting the patent proprietor to file amended claim requests under R. 116(2) EPC was to expedite the opposition proceedings, and to prevent the patent proprietor from filing such requests after the date specified in R. 116(1) EPC. The board found that R. 116(2) EPC did not limit the opposition division's discretionary power under Art. 114(2) EPC and R. 116(1) EPC. In the board's opinion, as a rule, this discretionary power did not depend on the contents of the opposition division's communication under R. 116(1) EPC. However, if the opposition division invited the patent proprietor to file an amended claim request to address a specific objection and the patent proprietor complied with this invitation by filing the required amendments by the date set under R. 116(1) EPC, the opposition division's discretion not to admit that claim request may effectively be reduced to zero.

In **T 921/21** the board emphasised that, even if the approach taken in **T 1776/18** were followed, the opposition division had to exercise its discretion based on the correct criteria. In the case in hand, however, the opposition division had taken into account at least one improper criterion, namely that the requests had been filed so unusually late as to justify a departure from the principle usually applied of admitting requests filed in response to facts filed late by the other party. The board pointed out that the assumption that the patent proprietor had taken note of the opponent's written submission before Christmas, and thus prior to the EPO's communication of the submission on 20 January 2021, was speculative and disputed by the appellant. The division had therefore exercised its discretion in a flawed manner.

In **T 364/20** auxiliary requests were filed after expiry of the time limit set under R. 79(1) EPC and before expiry of the time limit set under R. 116(1) EPC. The board noted that under similar circumstances, the board in **T 221/20** had found the auxiliary requests to be admissibly raised. However, in the view of the board in the present case, it could not be held that any claim request submitted after the expiry of the time limit set under R. 79(1) EPC and before the expiry of the time limit set under R. 116(1) EPC was automatically filed in due time and thus was admissibly raised. It depended on whether it was submitted as a direct and timely response to a change of the subject of the proceedings introduced by the opponent or the opposition division. The board noted with reference to **T 966/17** that opposition divisions had the discretion to not admit any late-filed claim request if a decision on admittance was required. Hence, the boards had the

discretion to consider a late-filed claim request not to have been admissibly raised (see also chapter V.A.4.2.2c)).

5.1.7 Principles for the exercise of discretion by the opposition division

a) Criteria applicable at later stages of the proceedings – in general

The case law of the boards of appeal has confirmed the following criteria (as set out in the Guidelines E-VI, 2.2.3 – April 2025 version) that the opposition division should take into account when properly exercising its discretion under Art. 114(2) EPC or R. 116(1) or (2) EPC: prima facie allowability, procedural expediency, abuse of procedure, and the question as to whether the opponents could be expected to familiarise themselves with the amendment in the time available (see e.g. **T 491/09)**.

In **T 500/15** the board noted it was undisputed that such a discretionary decision had to be taken by applying the criteria recognised in the practice of the EPO. In the case in hand, the board agreed with the additional criterion identified by the opposition division of "the complexity of the amendments", and noted that the applicability of the examined procedural criteria had to always depend on their actual substantive effect.

In **T 2385/12** the board noted that instances where discretion may be exercised by a department of the EPO had not been formulated in a concrete manner since the particular way in which the discretion may be exercised was necessarily dependent on the specific circumstances of the case in hand.

In **T 1930/14** the opposition division, having considered the timing of the filing of the auxiliary request (which could have been filed earlier), its complexity and its prima facie allowability, did not admit the auxiliary request into the proceedings. The board was satisfied that the opposition division had exercised its discretion according to the right principles and in applying these principles had not exercised its discretion in an unreasonable way.

In **T 84/17** the board concluded that the opposition division had exercised its discretion in a reasonable way and had used the correct principles. The opposition division had correctly stressed that the auxiliary requests had been filed very late without appropriate justification. The underlying objections had been on file since the notice of opposition and their pertinence commented on in the annex to the summons. Moreover, the opposition division's decision not to admit the requests was not exclusively based on the unjustified lateness but also on the finding that the opponents could not be expected to deal with the specific restrictions of subject-matter introduced with these requests, i.e. the opposition division had also considered the substance of the amendments. In the board's opinion, if the arguments in the particular case showed that some criteria weighed so heavily that other criteria could not outweigh them, it was **not necessary to discuss all criteria**.

In **T 1617/20** the board held that using the criterion of prima facie allowability under Art. 123(2) EPC, to object for the first time at oral proceedings to a feature of the late-filed claim request (auxiliary requests 2) that was already present in higher-ranking claim

requests and had never been objected to before, not even when deciding on the allowability or admittance of those higher-ranking claim requests, went against the principles of fairness and good faith. The opposition division **should have used the same criteria** it had used when deciding on the admittance of auxiliary requests 1, which was also substantially identical to a previous request. Not doing so, and thus basing the decision as regards the two claim requests on different criteria, resulted in an inconsistent approach. The opposition division, had thus used the available criteria in an unreasonable way and its decision thus suffered from an error in the use of its discretion.

In **T 1081/20** the board noted that the admittance of the auxiliary request in question was at the opposition division's discretion pursuant to Art. 123(1) EPC in conjunction with R. 79(1) and/or R. 81(3) EPC. It stated that a board should overrule such a discretionary decision only if the wrong principles had been applied or if the decision had been taken in an unreasonable way. See also the settled jurisprudence in light of **G 7/93** (OJ 1994, 775), in chapter IV.C.5.1.8 and chapter V.A.3.4.1.

b) Prima facie allowability

In numerous decisions, the boards have considered that an opposition division's decision not to admit prima facie unallowable requests filed at a late stage of the proceedings was a proper exercise of its discretion (see e.g. **T 171/03**, **T 484/11**, **T 1737/12**, **T 108/14**, **T 2332/15**, **T 1710/18**, **T 1617/20**).

In **T 491/09** the division had regarded the request as prima facie overcoming the opposition grounds based on Art. 100(b) and (c) EPC, and, as was evident from the minutes of the oral proceedings, no clarity objections had been raised.

In **T 222/16** the board observed that the 3rd auxiliary request filed during oral proceedings at first instance in response to a change of the subject of the proceedings should have been admitted under R. 116(2) EPC. According to the established jurisprudence, the relevant criterion for deciding on the admissibility of late-filed requests was their prima facie allowability in view of the objection under discussion. This criterion had been fulfilled since the amendment in claim 1 was clearly suitable to overcome the objections under Art. 123(2) and (3) EPC. The convergence criterion relied upon by the division was of secondary importance in the context of objections under Art. 123(3) EPC.

In **T 586/16** the board acknowledged that prima facie allowability was normally the correct criterion to be applied; however, in the case in hand the opposition division should have admitted the auxiliary request, since it was a reaction to a change of mind by the opposition division during the oral proceedings.

In **T 2683/17** the board held that the opposition division, when admitting the 3rd auxiliary request filed at the oral proceedings, had exercised its discretion properly and according to the right criterion of prima facie allowability in considering that the amendments were prima facie suitable to overcome the Art. 123(2) EPC objection raised against the previous requests, and that further requirements, in particular compliance with Art. 84 EPC, were also prima facie met.

In **T 877/20** the board judged that the opposition division had exercised correctly its discretion to admit auxiliary request 4, taking the right principles into account. The board considered that the deletion of the method claims did not confront the opponents with new subject-matter and that auxiliary request 4 was prima facie allowable. Indeed the opposition division noted that auxiliary request 4 complied with R. 80 EPC and Art. 84, 123(2) and (3) EPC and overcame raised novelty objections.

The board in **T 849/22** stated the aim of the prima facie allowability criterion was to assess whether the admittance of late-filed amendments - which might change the subject of the proceedings with respect to the previous discussion of the case - was justified from the point of view of procedural economy. It found that assessing whether an independent claim of the request - which was unamended compared with the reply to the notices of opposition, which had been filed in a timely manner, and which was unaffected by and unrelated to the amendment made - was prima facie novel for the purpose of admittance represented an incorrect application of the prima facie criterion.

c) Procedural expediency and abuse of procedure

In general, the question whether an amendment is appropriate can only be answered on the basis of its content, i.e. after it has actually been submitted. To refuse any further amendment is only appropriate if it is evident after various unsuccessful amendments that the proprietor is not seriously trying to overcome the objections but is only delaying the proceedings (**T 132/92**; see also **T 623/12** and **T 1758/15**, which refers to **T 246/08**).

In **T 491/09** the board noted that firstly, due to the direct treatment of the third auxiliary request by the opposition division, instead of returning to written proceedings, a protraction of the proceedings was avoided and the respondent did not benefit from any further delay. Secondly, it was clearly the purpose of oral proceedings that all concerned were aware of the outstanding issues and what positions were taken on them, including those of the opposition division. Not allowing simple further amendments to resolve such issues would clearly run counter to this purpose. The board pointed out that the Guidelines in force at the time (E-III, 8.7 – 2010 version) made this clear by referring to the fact that if the opposition division found that some patentable subject-matter resulted from a limitation/amendment, it could even inform the proprietor of the fact and allow them an opportunity to submit amended claims thereon (see also in Guidelines E-III, 8.9 – April 2025 version). In view of the above, the board concluded that while the respondent needed some prompting to finally come up with this request to address the point under discussion, this did not amount to an abuse of proceedings by, nor to/an unwarranted advantage for the respondent.

In **T 28/10**, the patent proprietor had defended a limited set of claims in the written proceedings but reverted to the claims as granted at the oral proceedings. The opposition division had exercised its discretion not to admit the request on the basis that it considered its late submission to be an abuse of procedure and that the proprietor itself had conceded that it did not meet the Art. 54 EPC requirements. The board could not see any improper exercise of discretion in this.

In **T 2385/12**, too, the patent proprietor reverted back to the claims as granted during the oral proceedings before the opposition division. The opposition division admitted this request. The board held, that while there may be instances where reverting to the claims as granted at a late stage of opposition proceedings would be seen as an abuse of procedure, the present specific circumstances (Art. 123(2) EPC objection addressed, no evidence of a deliberate attempt to mislead the opponent) indicated this not to be so in this case. The board also did not accept the suggestion that there should be a point at which previous requests were surrendered prohibiting the return to this subject-matter. Providing concrete guidance on when requests could be filed was not foreseen within the EPC, particularly in view of the exercise of discretion provided in Art. 114(2) EPC. It would also be against the general principle that a surrender of a right cannot be presumed. See also **T 1770/16**.

In **T 368/16** the opposition division allowed the proprietor to file various auxiliary requests in the course of the oral proceedings. Its request IVa was however not admitted by the opposition division. The board held that by not admitting request IVa into the proceedings, the opposition division had exercised its power of discretion under R. 116(2) EPC in an unreasonable way and by not applying the proper principles. The request per se was apt to overcome all the objections discussed so far during oral proceedings. Even if inventive step had still to be discussed, its filing could not be considered as an attempt to prolong unnecessarily the proceedings; on the contrary, since request IVa was based on a convergent limitation with respect to request IIIb and on a combination of features derived from the granted claims, it clearly **restricted the issues remaining to be discussed**. See, similarly, **T 222/16**.

In **T 802/17** the opposition division had given the patent proprietor an opportunity to draft one additional request during the oral proceedings. However, as it then filed only an amended main request, its later request for permission to file amended auxiliary requests too was refused as this would not have been "fair" to the opponent. In the board's view, the presumably underlying considerations of procedural economy had been insufficient to justify this refusal in the circumstances, as the proprietor had been reacting to a new objection under Art. 123(2) EPC, which had been a surprising turn taken in the proceedings and which its amendment had overcome. See also **T 756/18** in which the board found that the opposition division had overstepped the limits of its discretion by stating that it would admit only one auxiliary request and rejecting all other auxiliary requests from the outset for no apparent reason; it did not even examine whether the amendments could have overcome all the objections validly raised up to that point without giving rise to any new ones – which might have rendered them admissible. No abuse of procedure or delaying tactic on the part of the appellant was apparent from the file.

In **T 879/18** the board held that a patent proprietor should be given an opportunity to amend, if **new facts and evidence** were admitted as the subject of the proceedings will have changed. In the case in hand, adding detail from the description was, in the board's view, an appropriate response and should have been admitted. Likewise in **T 222/16**, the board held that the patent proprietor should have been given at least one opportunity to file a new request in response to the new objection filed by the respondent-opponent for the first time on the final date set under R. 116 EPC. On the principles of the **right to be**

heard and the **fair treatment of the parties**, see also **T 487/13** (summarised under chapter IV.C.5.1.6 above) and **T 623/12**.

In **T 1219/19** the appellant asserted that the opposition division had changed its view in the oral proceedings and invoked R. 116(2) EPC to argue that the opposition division had no discretion to disregard the auxiliary request filed after the time limit prescribed in R. 116 EPC or to apply the criterion of prima facie allowability. The board found that the opposition division had exercised its discretion in accordance with the right principles. It could not have been deprived of that discretion merely because it had expressed a different opinion at the oral proceedings from that provisionally set out in the communication accompanying the summons. Moreover, the opposition division's preliminary opinion clearly indicated that those objections were to be the subject of further discussion at the oral proceedings. The preliminary conclusion was expressed in a careful manner and could not be understood as if the opposition division thereby gave up its discretionary power to disregard submissions filed later. A different conclusion would penalise the useful practice of providing a detailed discussion of the relevant issues in preparation for oral proceedings. In the particular circumstances of the case, a different conclusion reached at the oral proceedings by the opposition division departing from its preliminary opinion in the summons could not be regarded as a change of subject of the proceedings.

On the concept of abuse of procedure, see also the decisions relating to the late submission of documents summarised in chapter IV.C.4.5.4, and in particular **T 85/18**, which held that abuse of procedure implied deliberate misconduct, not merely a lack of diligence.

d) Reasonable expectation that the opponents familiarise themselves with the proposed amendments in the time available

Whether the opponent could be expected to deal with the amendment during the oral proceedings (see above summary of **T 491/09**) was also considered an appropriate criterion in **T 2415/13**. Along similar lines, in **T 281/99** the board approved the opposition division's admission of changes, filed during oral proceedings, which were minor (in addition to being in direct response to new objections).

In **T 463/95** the board explained that consideration of a new or amended independent claim could reasonably be expected when such a new or amended claim results from a combination of features taken from granted claims which have been specifically opposed, since the opponents should already be familiar with the subject-matter (similarly **T 577/97**; distinguished in **T 960/04**).

In **T 1261/13**, the board held that the **object and purpose of R. 116 EPC** was to ensure that all parties and the division had enough time to thoroughly prepare for the oral proceedings. As a rule, therefore, requests meeting the R. 80 EPC requirements and filed before expiry of the time limit under R. 116 EPC were admissible. In the board's view, that also went for requests with claims containing features taken from the description.

In **T 43/16**, the opposition division had considered the proprietor's **reverting to the granted claims** two weeks before the oral proceedings to be inadmissible. The board, however, considered that it was not unreasonable to expect the opponent to revisit the granted claims and its own line of argument in the notice of opposition within that time frame.

In T **491/09** the third auxiliary request filed during the oral proceedings was not going in a different direction, but was prepared on the basis of the 3rd auxiliary request filed before the deadline of one month before the oral proceedings. The amendments therein exactly addressed the issues the appellant was well aware of before the oral proceedings since it had raised objections on them at the oral proceedings. The board could therefore only conclude that the appellant had had sufficient opportunity to familiarise itself with the amended subject-matter.

5.1.8 Review of first-instance discretionary decisions by the boards

According to the settled jurisprudence of the boards of appeal developed in view of decision **G 7/93** (OJ 1994, 775), a board should only overrule the way in which a department of first instance has exercised its discretion if it concludes that the department has done so according to the wrong principles, or without taking into account the right principles, or in an unreasonable way (see e.g. **T 879/18**, **T 491/09**, **T 1933/12**, **T 222/16**).

This case law has been codified in Art. 12(6) RPBA 2020, first sentence, according to which the board "shall not admit requests, facts, objections or evidence which were not admitted in the proceedings leading to the decision under appeal, unless the decision not to admit them suffered from an error in the use of discretion or unless the circumstances of the appeal case justify their admittance" (**T 1617/20**; see also **T 1191/20**).

For further details, see chapters V.A.4.1.1b) and V.A.3.4.1 below.

5.1.9 Amending a non-opposed sub-claim

In **T 711/04**, the board observed that, in accordance with the principles set out in **G 9/91** (OJ 1993, 408), the subject-matter of a non-opposed claim was not the subject of an "opposition" within the meaning of Art. 101 and Art. 102 EPC 1973 (Art. 101 EPC combines Art. 101(1) and (2) with Art. 102(1) to (3) EPC 1973; R. 82 EPC), or "proceedings" within the meaning Art. 114 and Art. 115 EPC 1973. The Enlarged Board had also found, however, that this basic principle was not directly applicable where the only subject-matter outside the specified scope of the opposition were dependent claims which had to be regarded as implicitly covered. This exception for sub-claims was, the board found, entirely justified by the fact that a sub-claim that was combined with a main claim and then requested as a new main claim had to be examined as to its form and substance in order to ascertain whether or not the combination of the claims had extended the protection sought. This also showed that the theoretical legal construct underlying the decision in **G 9/91**, i.e. that there were no proceedings within the meaning of Art. 114 and Art. 115 EPC 1973, was untenable in the case in hand. A patent proprietor wishing to limit the patent to the subject-matter of a non-opposed sub-claim had to combine that sub-claim

with the corresponding main claim. The non-opposed sub-claim was inevitably amended as a result, even if the amendment might appear to be a mere technicality. Noting that R. 57a EPC 1973 (R. 80 EPC) had entered into force after the date of the decision in **G 9/91**, the board added that amending non-opposed sub-claims remained permissible under that provision too.

5.1.10 Applicability of Rule 43(2) EPC in opposition proceedings

Rule 43(2) EPC (R. 29(2) EPC 1973) provides that a European patent application may not contain more than one independent claim in the same category unless they involve (i) a plurality of interrelated products, (ii) different uses of a product or apparatus or (iii) alternative solutions to a particular problem, where it is inappropriate to cover these alternatives by a single claim.

The scope and potential applicability of R. 43(2) EPC in opposition proceedings was addressed in **T 263/05** (OJ 2008, 329). Having considered the purpose and legislative history of the rule, the board concluded that it could not apply across the board to all amendments made during opposition proceedings. If it did, it would be impermissible to make any amendment introducing non-unitary claims, something which was not only permissible in opposition proceedings but also clearly appropriate given that the patent proprietor was no longer able to file a divisional application. To conclude that R. 43(2) EPC applied across the board in opposition proceedings would have watered down the decision in **G 1/91** (OJ 1992, 253). R. 43(2) EPC could not be applied in opposition proceedings to prohibit the amendment of a patent as granted where it would be unreasonable to demand that the amended claims comply with it. This was the case where, otherwise, R. 43(2) EPC would force the patent proprietor to abandon potentially valid subject-matter already contained in the claims as granted. The board could not envisage any circumstances in opposition proceedings in which R. 43(2) EPC would be of any application because, once it had been established that an amendment to the claims was necessary and appropriate having regard to grounds for opposition, it would inevitably be unreasonable to impose the additional requirement that the amendment complied with the purely administrative provisions of R. 43(2) EPC.

In **T 830/11** the board confirmed that the condition of conciseness of Art. 84 EPC 1973 and the provisions of R. 29(2) EPC 1973 (R. 43(2) EPC) had to be construed in opposition proceedings in the light of the finding in **G 1/91**, point 4.2 of the Reasons. R. 29(2) EPC 1973 (R. 43(2) EPC) should not constitute an obstacle to defending the patent in all its branches (cf. **T 263/05** and **T 1416/04**). The board emphasised that it was not questioning the general applicability of Art. 84 EPC 1973 as to conciseness or of R. 29(2) EPC 1973 (R. 43(2) EPC) in opposition proceedings. It merely considered that these norms did not apply to sets of claims whose subject-matter was already claimed in the granted version of the patent.

According to the board in **T 1416/04**, a request containing a plurality of independent product claims might be allowable under R. 57a EPC 1973 (R. 80 EPC) in order to provide an amendment of a granted set of claims containing only one independent product claim, if the amended independent claims arose from the deletion of previous claims. With regard

to the form of the claims, the board did not consider it relevant for the case before it to decide whether R. 43(2) EPC applied to opposition cases or not: even if R. 43(2) EPC should be considered applicable, the subject-matter in the granted claims could not appropriately be covered by one independent claim so that the requirements of this rule would have been met anyway. On the filing of new independent claims, see also chapter IV.C.5.1.2d)ii).

5.1.11 Applicability of Rule 137(5) EPC in opposition proceedings

The board in **T 735/12** held that an opponent's objection under R. 137(5) EPC that a claim included features taken only from the description and therefore unsearched was inoperative if only because R. 137 EPC governed solely amendments to a European patent application and was therefore not applicable in opposition (appeal) proceedings. See also **T 1542/14**.

5.1.12 Converging or diverging versions of claims in opposition proceedings

In **T 2254/17** the board was faced with the argument that the opposition division, when exercising its discretion, had failed to consider the criterion that claim sets filed shortly before the oral proceedings should be converging. The board noted that certain boards of appeal had applied the criterion that claim sets filed shortly before the oral proceedings should be converging in deciding whether to admit and consider a plurality of claim sets filed for the first time in appeal proceedings (e.g. **T 1685/07**). It found however that it was questionable whether converging claim sets could be regarded as an absolute requirement for allowing amendments in examination or opposition proceedings (see also **T 996/12**). In any case, it was apparent from the decision under appeal that the opposition division had considered non-converging claim sets to be justified in view of the numerous novelty objections raised by the opponents based on different documents.

See also the chapters on converging or diverging versions of claims: chapter IV.B.2.4.4 (examination procedure, with regard to amendments under R. 137(3) EPC); chapters V.A.4.2.2 and V.A.4.2.3 (convergent approach).

5.1.13 Correction or removal of error (in claim) in opposition proceedings – Rule 139 EPC

The second sentence of R. 139 EPC allows for the corrections concerning the description, claims or drawings, provided the correction is obvious in the sense that it is immediately evident that nothing else would have been intended than what is offered as the correction.

The case law in relation to this topic is set out in chapter II.E.4.5 "Correction of errors in the description, claims and drawings after grant, and in opposition proceedings".

5.2. Scope of examination of amendments

5.2.1 Scope of examination not limited to grounds raised pursuant to Rule 76(2)(c) EPC

Amendments of the claims or other parts of a patent in the course of opposition proceedings are to be examined as to their compatibility with the requirements of the EPC (Art. 101(3) EPC). When amendments are made to a patent, opposition divisions (as well as the boards of appeal) have the power to deal with grounds and issues arising from those amendments even if they were not specifically raised by an opponent pursuant to R. 76(2)(c) EPC (**T 227/88**, OJ 1990, 292; **G 9/91**, OJ 1993, 408, **G 10/91**, OJ 1993, 420, point 19 of the Reasons, respectively; **T 472/88**; **T 922/94**; **T 1437/15**; see also **T 459/09**; for the extent of the power to examine amended claims for compliance with Art. 84 EPC, see **G 3/14**, OJ 2015, A102, and chapter IV.C.5.2.2 below).

Where amended claims were introduced in the opposition proceedings there could be no objection to the opponent's submitting new citations and new arguments against the new claims that challenged inventive step for the first time (**T 623/93**). The examination by the opposition division of a new submission justified in this way was in keeping with **G 9/91** (OJ 1993, 408, point 19 of the Reasons).

In **T 1437/15** the board pointed out that the grounds for opposition specified in Art. 100 EPC concerned only the maintenance of a granted patent (Art. 101(1) and (2) EPC). By contrast, where a patent was amended during opposition proceedings, it could be maintained as so amended only if, taking into consideration the amendments made, it met the requirements of the EPC (Art. 101(3) EPC).

In **T 693/98** the board dealt with the question as to whether, on the proper interpretation of Art. 102(3) EPC 1973 (Art. 101(3)(a) EPC), the fact that an amendment to the claims has been made in opposition proceedings opens the possibility for an opponent to raise an objection under Art. 123(2) EPC to all the amendments to the claims including those made before the patent was granted, even if such objection was not originally raised and substantiated as a ground for opposition. Citing **G 10/91** (OJ 1993, 420, point 19 of the Reasons) the board concluded that only the amendments made during opposition or appeal proceedings, not those made before grant, must be examined for compliance with the requirements of the EPC (see also **T 301/87**, OJ 1990, 335). Cited in **T 2696/16**.

The introduction of a feature into an independent claim, which feature was present in the claims and in the description as granted, could not be considered as an amendment which legitimated the admittance of Art. 100(b) EPC as a fresh ground of opposition, which required that a European patent as a whole had to disclose the invention in a manner sufficiently clear and complete for it to be carried out by a person skilled in the art (**T 1053/05**; see also **T 739/08** and **T 565/13**).

In **T 2155/17** the board considered that the new added-matter objection in question related to the amendment and not to the combination of features in the claims as granted, and therefore did not constitute a fresh ground in the sense of **G 10/91** (OJ 1993, 420).

In **T 895/18** the board cited **G 9/91** (OJ 1993, 408, point 19 of the Reasons) and concluded that the EPC required that, in the case of amendments in opposition or appeal proceedings, a full examination had to be undertaken of the amendments and therefore in particular of the **claims resulting from the amendments**. The board rejected a "parallelism" between the treatment of unclear features and of added matter, as suggested by the appellant (proprietor), as this disregarded the fact that, in contrast to added matter, lack of clarity was not one of the grounds for opposition according to Art. 100 EPC.

In **T 571/19**, the board observed that Art. 101(3)(a) EPC required that new claim requests be examined for compliance with the EPC requirements. This did not extend to clarity where granted claims had been combined (**G 3/14** – see also chapter IV.C.5.2.2) or to the requirement of unity of invention (**G 1/91**, Headnote), but compliance with Art. 123(3) EPC always had to be established (see **G 9/91** and **G 10/91**, point 19 of the Reasons; **T 648/96**; **T 1302/06**). However, it was not apparent from the opposition division's decision why it had found the claims of the auxiliary request on which the decision was based to be in keeping with Art. 123(3) EPC, and so the decision was insufficiently reasoned for the purposes of R. 111(2) EPC. The board considered it irrelevant that Art. 100(c) EPC had not been cited as a ground for opposition and that the opponent had not raised any objection under Art. 123(2) EPC; the amended claims should nevertheless have been examined for compliance with Art. 123(3) EPC.

5.2.2 Extent of power to examine amended claims for compliance with Article 84 EPC

The extent to which the opposition division or a board of appeal may examine clarity for the purpose of Art. 101(3) EPC was the subject of questions put to the Enlarged Board in referral **G 3/14** (OJ 2015, A102). In the case underlying the referral (**T 373/12**, OJ 2014, A115) claim 1 of auxiliary request 1, submitted during opposition proceedings, consisted of a combination of the features of claim 1 as granted and of dependent claim 3 as granted.

As a preliminary point, the Enlarged Board identified the following main types of case: amendments which encompass a literal insertion of elements of dependent claims as granted into an independent claim (type A) – these include amendments in which a dependent claim contains within it alternative embodiments, one of which is then combined with its independent claim (Type A(i))– and amendments in which a feature is introduced into an independent claim from a dependent claim, being a feature which was previously connected with other features of that dependent claim from which it is now disconnected (Type A(ii)); furthermore, amendments which encompass a literal insertion of complete dependent claims as granted into an independent claim (Type B, this being the case with which the referring board was confronted).

The Enlarged Board first considered its previous jurisprudence, i.e. **G 1/91** (OJ 1992, 253), **G 9/91** (OJ 1993, 408) and **G 10/91** (OJ 1993, 420). Citing the statement in point 19 of the Reasons in **G 9/91** and **G 10/91** that "[...] in case of amendments of the claims or other parts of a patent in the course of opposition or appeal proceedings, such amendments are to be fully examined as to their compatibility with the requirements of the EPC", it noted that if the Enlarged Board had at the time considered that the opposition division and the

boards of appeal were given wide powers to examine amended claims, it would have said so. Therefore, the term "amendments" had to be understood in the sense that the subject-matter to be examined must have some direct nexus with the amendment.

The Enlarged Board identified three main lines in the jurisprudence of the technical boards: the "conventional" approach, based on the test whether the amendment introduces any contravention of Art. 84 EPC, and the principle that Art. 101(3) EPC does not allow objections to be based upon Art. 84 EPC if they do not arise out of the amendments made (see **T 301/87** and **T 227/88**, applied in many further cases, see e.g. **T 381/02**, **T 1855/07**, **T 367/96** of 3 December 1997 and **T 326/02**). Secondly, there was a wider interpretation, according to which a lack of clarity could be examined if the amendment "highlights and focuses attention" on a previously existing ambiguity (**T 472/88**; see also **T 681/00** and **T 1484/07**). The third line of jurisprudence was considered "diverging". According to **T 1459/05** (see also **T 1440/08** and **T 656/07**), clarity may be examined on a case-by-case basis as a matter of discretion when the added feature is the only feature that distinguishes the subject-matter of the claim from the prior art. **T 459/09** was the most far-reaching of these diverging cases, stating that amended claims may generally be examined for clarity on a case-by-case basis irrespective of the kind of amendment.

On the interpretation of Art. 101(3) EPC, the Enlarged Board pointed out that the requirements of Art. 84 EPC are part of the "requirements of the Convention" for the purposes of Art. 101(3) EPC. There was, however, no indication that the object and purpose of Art. 101(3) EPC was to open up the patent to a complete re-examination, whether for clarity or the other requirements of the EPC. It was rather the amendment itself which was relevant, and its effect for the ground for opposition in question. Self-evidently, the amendment must not itself give rise to new objections.

As apparent from the travaux préparatoires to the EPC 1973, the legislator had deliberately chosen not to make Art. 84 EPC a ground for opposition. It would be unsatisfactory if an opponent could cause delays whenever an amendment was made, by raising all kinds of Art. 84 EPC objections. Furthermore, when the EPC 2000 was drafted, no suggestion was made for a change to reverse the effect of the then established case law, i.e. the conventional approach based on **T 301/87**. If the deletion of an independent claim with its dependent claims permitted examination of the remaining claims for lack of clarity, Art. 84 EPC would effectively become a ground for opposition in a large number of cases, which would be contrary to the legislator's intention. To conclude otherwise for a combination of claims which actually consists of striking out the original independent claim and then writing out the previously dependent claim in full, would be arbitrary and unjustified.

In conclusion, the Enlarged Board approved the conventional line of jurisprudence as exemplified by **T 301/87**, and answered the referred questions as follows:

"In considering whether, for the purposes of Art. 101(3) EPC, a patent as amended meets the requirements of the EPC, the claims of the patent may be examined for compliance with the requirements of Art. 84 EPC only when, and then only to the extent that, the amendment introduces non-compliance with Art. 84 EPC."

Considering the different types of amendment distinguished in **G 3/14**, the board in **T 1112/12** observed that a common theme underlying the Enlarged Board's ruling appeared to be that modifying a claim by **merely deleting or excluding embodiments** from the claimed subject-matter did not result in an amendment which was open to an objection under Art. 84 EPC (see also **T 1977/13** and **T 260/13**). In **T 2437/13** the granted claims already referred to figures and tables; it was thus not the amendments which introduced non-compliance with Art. 84 EPC in combination with R. 43(6) EPC. For further cases where the lack of clarity was already present in the claims as granted and the clarity objection therefore rejected, see e.g. **T 266/15**, **T 488/13**, **T 1905/13**, **T 1287/14**, **T 2311/15**, **T 2321/15**, **T 2244/19**, **T 2391/18**.

The following decisions are examples of cases in which the claim amendment in issue involved not a simple combination of granted claims or the mere deletion or exclusion of embodiments, but rather the addition of a feature from the description, with the result that the amended claim was open to clarity objections: **T 565/11**, **T 2321/13**, **T 842/14**, **T 315/15**, **T 1976/19**, **T 2817/19**.

In **T 248/13** certain ambiguous terms were already contained in claim 15 as granted. However these terms defined the flavour of the final product, whereas the terms of claim 1 of auxiliary request 1 referred to an ingredient to be added. The board considered that by taking these terms out of the context in claim 15 as granted and placing them in the context of claim 1 of auxiliary request 1, a **new ambiguity was introduced** that was not present before. Therefore this amendment was objectionable under Art. 84 EPC.

In **T 1221/19** the board referred to **G 3/14** (OJ 2015, A102) and recalled that, in considering whether, for the purpose of Art. 101(3) EPC, a patent as amended meets the requirements of the EPC, the claims may be examined for compliance with Art. 84 EPC only when, and then only to the extent that, the amendment introduces non-compliance with Art. 84 EPC. In line with this, the board considered that the **description** of the patent may also be examined for compliance with Art. 84 EPC only when, and then only to the extent that, the amendment introduced non-compliance with Art. 84 EPC. This was in accordance with both **G 9/91** (OJ 1993, 408) and **G 3/14**. In the case in hand the reversion back to an erroneous reference as in the application as filed did not result in any lack of clarity or ambiguity of the disclosure in the paragraphs concerned.

In **T 2391/19** the allegedly required amendment to the description did not relate to any amendment to the claims during opposition proceedings. Instead, it related to an alleged inconsistency that already existed in respect of a feature present in the granted claims. The board found that such an amendment to the description was not appropriate in opposition proceedings or opposition appeal proceedings. Even without the amendment to the description, there was no reason for the board (or the opposition division) to come to the conclusion that the requirements of the Convention (in particular the requirements of Art. 84 EPC) within the meaning of Art. 101(3)(a) EPC were not fulfilled in consideration of the conclusion of the Enlarged Board in **G 3/14** set out above in this chapter.

5.2.3 Additional searches

In **T 503/96** the board considered the criteria for the need for an **additional search** in relation to restrictive amendments. It referred to the Guidelines B-III, 3.5, in the version then applicable, which stated, "In principle, and in so far as possible and reasonable, the search should cover the entire subject-matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended..." (see also in lightly amended form, B-III, 3.5 – April 2025 version). The board stated that whether or not to commission an additional search in a particular case was a matter for the administrative discretion of the opposition division, but if an inappropriate criterion was invoked when exercising this **discretion**, doubt would inevitably be raised as to whether the discretion was reasonably exercised. Since, in the case of amendment of the claims in the course of opposition or appeal proceedings, such amendments are to be fully examined as to their compatibility with the requirements of the EPC (**G 9/91**, OJ 1993, 408), it was not inappropriate for an opponent to make observations on a possible need for an additional search to enable this full examination to be carried out (Guidelines D-VI, 5, then applicable). The judgment on whether an additional search was necessary and the obligation to perform this search if it was judged to be necessary were administrative matters for the EPO.

5.3. Proprietor's approval of amended text of the patent

In **T 1467/16** the board recalled that the text of the patent was at the disposition of the patent proprietor (Art. 113(2) EPC) and hence a patent could not be maintained against the patent proprietor's will. Since revocation under Art. 105a(1) EPC at the request of the patent proprietor was not possible in the framework of opposition or opposition appeal proceedings (Art. 105a(2) EPC), the board, in line with previous case law, revoked the patent under Art. 101 EPC.

In **T 861/16**, the board held that since the principle of tacit acceptance ("qui tacet consentire videtur") was not established in the EPC, it was not enough for an opposition division merely to ask the patent proprietor whether it wished to comment on amendments to the description which had been prepared by the division. It had to ensure that the patent proprietor approved them.

On the need for a text submitted or agreed by the proprietor, see also chapter III.B.3.

6. Right to be heard in opposition proceedings

6.1. Principle of equal treatment

The principle of equal treatment is enshrined in Art. 6(1) ECHR and also binding for opposition proceedings, since it relies on principles of law common to all member states of the European Patent Organisation and applicable to all its departments (**T 2274/22**; see also chapter III.H.7. and chapter III.J.1.3. and the decisions therein on the applicability of the ECHR to proceedings before the EPO).

In inter partes proceedings such as opposition proceedings the right to be heard is inextricably linked to the **principle of equal treatment**: no party should be given preferential treatment in the number of times it is allowed to present its case orally or in writing. The opposition division is therefore required to ensure that the parties can exchange their submissions in full and have equal opportunity to comment on them. If the opposition division considers a multiple exchange of submissions expedient, it must give each party equal opportunity to comment. Thus, the opposition division may invite a party to submit a **rejoinder to the reply** to the notice of opposition, but in that case it is obliged to invite the other party to **respond to that rejoinder**, after which it must decide again whether a third exchange of submissions is expedient. The fact that R. 79(3) EPC (R. 57(3) EPC 1973) leaves it to the opposition division ("if it considers it expedient") to invite the opponents to reply cannot be interpreted as an authorisation to derogate from the fundamental principle of equal treatment (see **T 190/90**, **T 682/89** and **T 439/91**).

According to **T 669/90** (OJ 1992, 739), if the opposition division misleads a party into believing that it is not necessary to defend its interests by filing observations in reply to new facts and evidence filed by an adverse party, and if such new facts and evidence then form the basis for a decision adversely affecting the misled party, the latter has not had "an opportunity to present its comments" within the meaning of Art. 113(1) EPC. Such a procedure is also not a fair procedure and is contrary to the principle of good faith governing relations between the EPO and parties to proceedings before it (cf. **T 532/91**, **T 678/06**). Such inequality of treatment constitutes a substantial procedural violation.

In **T 487/13** the board held that, by deciding not to admit auxiliary requests 4 to 6 directly after late-filed document D10 was admitted into the proceedings, the opposition division did not respect the appellant's right to be heard, which was inextricably linked to the principle of fair and equal treatment of the parties. It thus committed a substantial procedural violation. Indeed, since these new requests were filed in direct response to a change in the subject of the proceedings, they were submitted in due time and the opposition division had no discretion to disregard them.

In addition to the cases that follow, see in this chapter IV.C.3.4.6 "Opportunity to comment on new grounds for opposition".

6.2. Invitation to file observations under Article 101(1) EPC

Article 101(1) EPC (Art. 101(2) EPC 1973) reinforces the right to be heard laid down in Art. 113 EPC by requiring the opposition division, when examining an opposition, to invite the parties **"as often as necessary"** to comment, within specified periods, on its own communications or those filed by other parties. Where necessary, any communication to the proprietor of the European patent must contain a reasoned statement covering all the grounds against the maintenance of the European patent (R. 81(3) EPC; R. 58(3) EPC 1973).

Article 101(1) EPC does not require as a rule that the grounds for not maintaining the patent invariably be set out in a communication, but only if this is "necessary". Such "necessity" can arise only in efforts to establish the facts or in view of Art. 113(1) EPC. So

the opposition division **must issue a communication only if** it considers this **necessary**, e.g. to take up **new** substantive or legal arguments or draw attention to points still requiring clarification. R. 81(3) EPC, which merely contains instructions concerning the content of any communications that may have to be issued, adds nothing to the above consideration of principle. Accordingly, the provisions of Art. 101(1) EPC and R. 81(3) EPC cannot be interpreted as meaning that the opposition division is obliged in every case to issue at least one communication before giving its decision, unless it is necessary to do so on the basis of Art. 113(1) EPC (see e.g. **T 275/89**, OJ 1992, 126; **T 538/89**, **T 682/89**, **T 532/91** and **T 2120/18**).

Not issuing at least one communication under Art. 101(1) EPC cannot in itself substantiate an allegation of infringement of the right to be heard under Art. 113 EPC (see e.g. **T 774/97**, **T 781/08** and **T 802/12**). In **T 165/93**, for example, the board saw no need under Art. 113(1) EPC for the opposition division, before revoking the patent, to announce its opinion in a communication or to give a further opportunity to the patentee to declare whether they were interested in a limited patent if, despite having been informed of an additional objection of the opponent, they did not react but maintained their sole request for maintenance of the patent with the amended claims. Nor is it necessary under Art. 113(1) EPC to give a party a repeated opportunity to comment on the argumentation of the EPO body, so long as the decisive objection against the contested procedural action remains the same (see e.g. **T 161/82**, OJ 1984, 551; **T 621/91**).

According to **T 295/87** (OJ 1990, 470), in opposition proceedings, under Art. 101(2) and R. 57(1) EPC 1973 (Art. 101(1) and R. 79(1) EPC) the proprietor has a right to file observations upon a notice of opposition. Thereafter, observations from the parties are only admissible in the exercise of the discretion of the opposition division or a board of appeal, if such observations are necessary and expedient in the sense of Art. 101(2) and R. 57(3) EPC 1973 (Art. 101(1), R. 79(3) EPC). The board specified that following communication of the patentee's observations (and any amendments), other parties are only to be invited by the opposition division to reply to such observations "if it considers it expedient". It was clearly desirable in the interest of the smooth and efficient conduct of opposition proceedings, and in the public interest, that observations by parties should be properly limited to what is necessary and expedient. This in turn required the exercise of a proper control by the opposition division over the admissibility of observations by parties as well as of documents filed in support of such observations. Of course, the extent to which further observations are necessary or expedient depended upon various factors, including the complexity of the issues, and could only be decided in the context of each case.

In **T 2120/18** the opposition division had used its discretion to reject the patent proprietor's request for extension of the time limit to file observations. The board found that the consequence of a possible error in the exercise of the discretion not to extend the time limit would (merely) be that late submissions by the proprietor could not be disregarded. In the absence of any submissions by the proprietor during the opposition proceedings, however, the opposition division's possible lack of proper reasoning had no effect. The board noted that the opposition division's rejection of a request for extension of the time limit indicated in its communication under R. 79(1) EPC had not

terminated the opposition proceedings. Therefore, as the non-compliance with the four-month time limit did not lead to a direct legal consequence to the detriment of the proprietor, and as the opposition division did not decide on the opposition until eleven months after the refusal of the extension request, the proprietor was still in a position to respond to the notice of opposition well beyond the time limit. The opposition division's refusal of the extension request therefore did not violate the proprietor's right to be heard. The proprietor could have anticipated that the opposition division would issue its decision after expiration of the four-month time limit indicated in the communication under R. 79(1) EPC (see Guidelines E-VII, 1.6 – November 2016 version; now in E-VIII, 1.6 – April 2025 version).

For cases where a communication was considered necessary, see in this chapter IV.C.6.5. below (**T 293/88**, **T 120/96** and **T 1056/98**).

6.3. Invitation to file observations under Rule 82(1) EPC

Rule 82(1) EPC (R. 58(4) EPC 1973) provides that the opposition division is to inform the parties of the text in which it intends to maintain the patent and invite them to state their observations within two months if they disapprove of that text. The boards of appeal have frequently addressed the issue of when it is necessary to send the parties such a communication.

In **T 219/83** (OJ 1986, 211) and **T 185/84** (OJ 1986, 373) the board stated that, after oral proceedings in an appeal from opposition proceedings, the parties had to be sent a communication pursuant to R. 58(4) EPC 1973 (R. 82(1) EPC) only if they could not reasonably be expected to state their observations concerning the maintenance of the European patent in the amended form definitively during the oral proceedings (confirmed in e.g. **T 75/90**, **T 895/90** and **T 570/91**).

In **T 446/92** it was stated that, in a case where a duly summoned opponent was not represented at oral proceedings, the decision of the board to maintain the contested patent in amended form in accordance with a request of the patentee submitted during those proceedings could nevertheless be given orally (R. 68(1) EPC 1973; R. 111(1) EPC) at the end of the proceedings, if no new facts or evidence were dealt with during the proceedings. Under these circumstances, the application of R. 58(4) EPC 1973 (R. 82(1) EPC) could be dispensed with because the patent in suit was maintained with an amended text emanating from and approved by the patentee (see, in this respect, **G 1/88**, OJ 1989, 189) and, furthermore, because the opponent's **deliberate decision to refrain from being represented at oral proceedings** before the board was to be regarded as being tantamount to a tacit abandoning of their right to present comments pursuant to Art. 113(1) and R. 58(4) EPC 1973 (R. 82(1) EPC).

In **T 29/16** the board held that a substantial procedural violation had occurred when the opposition division did not comply with R. 82(1) EPC, which, it stated, defined the right to be heard more particularly in the case in hand. The opponent had not been invited to comment on the text, on the basis of which the opposition division intended to maintain the patent in amended form. Therein lay a violation of the right to be heard.

6.4. EPO communication concerning submissions by the other party – adequate opportunity to reply

Communications signed by the formalities officer and inviting the appellants to "take note" of the opponents' submissions are not communications of the opposition division within the meaning of Art. 101(1) EPC (Art. 101(2) EPC 1973), which require a period to be fixed for reply. It is at the discretion of the recipient to reply to this communication if they find it necessary. If they intend to reply but for any reason are prevented from doing so within a reasonable period of time, then the appropriate action is to inform the opposition division of their difficulties (see **T 582/95**).

The boards of appeal have dealt in a series of decisions with the issue of determining what is a reasonable period which provides the recipient of an EPO communication with an adequate opportunity to reply:

In **T 275/89** (OJ 1992, 126) the board noted that the opposition division had waited for somewhat longer than a month before taking its decision. In the board's view, in the case of a communication which was issued for information purposes only and which did not set a time limit for response, a period of **one month** (which in the present case was exceeded) sufficed as a rule to comply with the requirements of Art. 113 EPC. Moreover, the documents on which the decision under appeal was based had already been mentioned in the notice of opposition together with an assessment of their substantive and legal significance.

In **T 263/93** the board held that the right to be heard enshrined in Art. 113(1) EPC requires that the party concerned be given **sufficient time** to submit an adequate response if the EPO decides to communicate to a party to proceedings before it an objection raised by another party without an express invitation to reply within a specified time limit. The question regarding what period of time is sufficient for this purpose is a **question of fact** which has to be answered on the basis of the merits of each individual case. The board further noted that, as a rule, a time limit set by the EPO should not be shorter than **two months** (see R. 132 EPC, former R. 84 EPC 1973). In the circumstances of **T 263/93**, where **difficult technical questions** had to be considered, the board came to the conclusion that the appellant's right to a fair procedure would have required the opposition division to have waited at least two months before issuing a decision based on the objections raised for the first time in this counterstatement. This was confirmed in **T 1152/14**.

In **T 494/95**, the board took the view that the interval of more than one month between the notification of the patent proprietor's reply to the opposition and the date of issuing the decision was sufficient to allow the appellant (opponent) a reasonable opportunity to present their comments, or **at least to indicate an intention** of so doing, or to request oral proceedings. In the board's view, it was clear from R. 57(3) EPC 1973 (R. 79(3) EPC), from the EPO information "Opposition Procedure in the EPO" (OJ 1989, 417) and from previous decisions that, if oral proceedings did not take place and the decision was based solely on grounds on which the parties concerned had had an opportunity to present their

comments, a decision could be taken without further notice upon expiry of the period allowed to the patent proprietor for submitting observations.

In **T 914/98** the board stated that the **seventeen-day** period which elapsed between the appellants receiving the reply of the respondents and the handing over of the decision to the EPO internal postal service was manifestly **too short** to give the appellants an adequate opportunity for comment. According to the board, in view of the case law highlighted in the decision and summarised above, the appellants could not reasonably have expected a decision to be issued so quickly.

However, the board in **T 2243/18** held that there was no requirement in the EPC for the opposition division to wait for further submissions of the parties after the notice of opposition and the reply of the proprietor have been received. On the contrary, parties should expect the opposition division to prepare the next action (in most cases summons to oral proceedings) at any time after receiving the reply of the proprietor (see notice from the EPO concerning the opposition procedure as from 1 July 2016, OJ 2016, A42, point 3).

6.5. Opportunity to present comments

Article 113(1) EPC, in which the right to be heard is enshrined, provides that decisions of the EPO may only be based on grounds or evidence on which the parties have had an opportunity to present their comments. The term "grounds or evidence" in Art. 113(1) EPC should not be narrowly interpreted. The word "grounds" does not refer merely to a ground of objection to the application or patent in the narrow sense of a requirement of the Convention which is considered not to be met. The word "grounds" should rather be interpreted as referring to the **essential reasoning, both legal and factual**, which leads to the findings of the decision (see e.g. **T 951/92**, OJ 1996, 53, with regard to a refusal of the application, **T 433/93**, with regard to the finding of invalidity and revocation, and **T 1056/98** with regard to inadmissibility; on the right to be heard, see also chapter III.B.).

In **T 293/88** (OJ 1992, 220) the board found that the decision of the opposition division to revoke the patent without issuing any communication in advance disregarded the fact that the validity of the **uncontested claims** 7, 9 and 10 had not been challenged at all, and a further opportunity to fall back at least to such position was reasonably to be expected in such circumstances. The onus of raising such related additional matter with the parties was on the opposition division under Art. 113(1) EPC – which it had not done in this case (distinguished in **T 463/93**; see also **T 2094/12**).

In **T 558/95** the opposition division had issued two written communications before the oral proceedings stating that, "in the provisional opinion of the opposition division", the subject-matter described in the public prior use did not prejudice the contested patent within the terms of Art. 100(a) EPC. The patent proprietor therefore found it surprising that detailed consideration was given to the public prior use during the oral proceedings. However, the board held that **provisional opinions** of this kind were not binding on the further proceedings.

If the opposition division rejects an opposition as **inadmissible** without providing a reasoning prior to its decision prevents the opponent from responding with comments, it violates the opponent's right to be heard (**T 1056/98**).

Normally, where a document has been sent to one of the parties, that party is given sufficient time to respond thereto before a department of the EPO takes a decision (**T 263/93**; see above in this chapter IV.C.6.4). If the case is to be **remitted to the department of first instance** for further prosecution, the recipient of a document still has, in view of the remittal, the opportunity to contest the arguments put forward by the other party (see **T 832/92**).

Under Art. 113(1) EPC, decisions of the EPO may only be based on grounds or evidence on which the parties concerned have had an opportunity to present their comments. This also applies **after remittal** to the opposition division of a case by a board of appeal for further prosecution on the basis of new evidence, even if submissions with respect to this new evidence have already been made during the preceding appeal proceedings. In such circumstances an express opportunity to present observations must be given to the parties by the opposition division (see **T 892/92**, OJ 1994, 664; see also **T 769/91**). In **T 120/96** another board shared this view and added that the term "opportunity" in Art. 113(1) EPC could only be given effective meaning by applying the principles of good faith and the right to a fair hearing. For such an opportunity to exist, it is necessary that the parties be expressly asked whether or not they wish to present, within a fixed period of time, their comments, or if, as in the case at issue, the parties have already made detailed submissions during the previous appeal proceedings, whether or not these submissions should be regarded as complete. On these grounds alone, the board found that the immediate termination of the opposition proceedings following the remittal, without any intervening communication announcing the resumption of proceedings, was inconsistent with Art. 113(1) EPC.

In **T 1027/13**, the board held that the categorical refusal of the opposition division to allow the accompanying person to make oral submissions or even communicate with the opponent's representative had in effect been keeping the opponent from taking a position in an "efficient and effective manner" on the contentious issues of the case. It was thus not in line with the principles stated in **G 4/95** (OJ 1996, 412; on these principles see also chapter III.V.5.2).

6.6. Communications allegedly not received

Although the patent proprietor may decide not to react to the notice of opposition, the communication under R. 79(1) EPC does not constitute a mere formality, rather it allows the patent proprietor to both contribute to the opposition division's appreciation of the facts and to defend its interests. The communication forms the basis for the preparation of the factual examination of the opposition. In **T 1529/20** the appellant (proprietor) submitted that they had never received the decision of the opposition division revoking their patent, only becoming aware of it and, more generally, of the opposition proceedings through an email from a formalities officer of the EPO. The board acknowledged that a party submitting that a communication had not been received would have difficulty trying to

prove a negative (negativa non sunt probanda). Proving that a letter was not received was hardly ever possible. Under the circumstances of the case in hand, legal certainty and the protection of the right to be heard would have required the opposition division to establish, by any available means, the fact and date of delivery of the communication of the notice of opposition. There was nothing in the file that suggested the EPO had discharged its burden of proving delivery. Since the initial act of (non-)notification of the notice of opposition was flawed, the entire opposition proceedings including the decision of the opposition division was flawed.

6.7. Change in composition of opposition division during opposition proceedings

For the implications of a change in the composition of the opposition division for the party's right to be heard, see chapter III.K.1.3.2.

7. Acceleration of opposition proceedings

7.1. Following remittal back to the opposition division

In **T 1108/21** the board, having accelerated the proceedings under Art. 10(3) RPBA in response to the legitimate and reasoned interest of opponent 1 to bring the proceedings to an end as soon as possible, remitted the case to the opposition division for further prosecution. To partially mitigate the negative impact of this course of action on opponent 1, the board explicitly ordered an acceleration of the opposition proceedings.

In **T 2916/19**, however, the board rejected the respondent's request for the board to instruct the opposition division to accelerate the proceedings, since the board was not empowered to impose time constraints to the department of first instance in charge of the case. The question of when or at which pace the case was to be dealt with by the opposition division was a managerial decision to be taken by the department of first instance.

7.2. In the case of pending infringement proceedings

In cases where an infringement action in respect of a European patent is pending before the Unified Patent Court or a national court of a contracting state, a party to the opposition proceedings may request accelerated processing. The request may be filed at any time. It must be filed in written reasoned form. In addition, the EPO will also accelerate the processing of the opposition if it is informed by the Unified Patent Court, the national court or competent authority of a contracting state that infringement actions are pending (notice of the EPO dated 7 November 2023, OJ 2023, A99; Guidelines E-VIII, 5 – April 2025 version).

The case underlying **T 290/90** (OJ 1992, 368) involved seven oppositions. One of these was deemed not filed, and the opponent appealed against the decision issued in respect of it under R. 69(2) EPC 1973 (R. 112(2) EPC). The patent proprietor requested accelerated processing of the appeal because an infringement action was pending and, in view of the probable number of infringing products on the market, the longer the opposition

proceedings took, the more difficult it would be to enforce the patent if maintained. According to the board, a "raison d'être" for obtaining and maintaining a patent was to enforce it where appropriate. The timing of enforcement proceedings could be of real importance and delays could be prejudicial to the proprietor's interests and those of their competitors. In the case of infringement proceedings the speedy processing of opposition proceedings in respect of the relevant European patent became especially important. It was therefore important to decide quickly not only on the appeal but also on the complete substantive opposition. In the case of multiple oppositions, as here, the board considered, in view of the suspensive effect of the appeal, that the opponent (appellant) should be treated as having duly filed an opposition unless and until the board decided otherwise. With an appeal concerning the existence or admissibility of one of the oppositions, the examination stage of the opposition proceedings should be prepared and processed in parallel, with the participation of all the opponents, up to the point when it was ready to be decided: as soon as the appeal was decided, the opposition could also be decided.

See also chapter V.A.1.5. "Accelerated processing before the boards of appeal".

8. Decisions of opposition division

8.1. Revocation of a European patent for failure to fulfil formal requirements – by way of decision

It had been held in **T 26/88** (OJ 1991, 30) that the revocation of the patent for failure to fulfil the formal requirements of paying the printing fee and filing the translations of the amended claims (Art. 102(4) and (5) EPC 1973; R. 82(3), second sentence, EPC) had occurred by operation of law ("automatically").

However, according to **G 1/90** (OJ 1991, 275), the revocation of a patent under Art. 102(4) and (5) EPC 1973 **required a decision**. The Enlarged Board compared the ways of terminating proceedings provided for at various stages under the EPC and concluded that the wording of the regulations clearly indicated in each case whether a decision or a communication had to be issued concerning the loss of rights under R. 69(1) EPC 1973 (R. 112(1) EPC). It also considered the issue of legal certainty and, in the light of the "travaux préparatoires", discussed the question of when a loss of rights noted in accordance with that provision became non-appealable. It found that the procedure of pronouncing revocation by way of a decision led neither to legal uncertainty nor to misunderstandings. See also **T 1403/16** for a more recent decision emphasising (in the context of the applicability of Art. 122 EPC), for all three possibilities pursuant to Art. 101 EPC to terminate opposition proceedings (revocation of the patent, rejection of the opposition and maintenance of the patent as amended), that the opposition division had to deliver a decision within the meaning of Art. 106(1) EPC. This also applied to R. 84(1) EPC.

8.2. Interlocutory decisions

8.2.1 General

In case **T 376/90** (OJ 1994, 906) the opposition division had held that the opposition was admissible in an interlocutory decision within the meaning of Art. 106(3) EPC 1973 (Art. 106(2) EPC), i.e. a decision which did not terminate the proceedings as regards one of the parties, without, however, **allowing separate appeal**. In the board's view, according to the clear language of the provision, such an interlocutory decision could only be appealed together with the final decision, unless the decision allowed separate appeal. Whether to allow a separate appeal was within the **discretion** of the opposition division. This discretion had been properly exercised by the opposition division with a view to enabling a decision on the substantive issues to be reached as soon as possible.

8.2.2 Maintenance of European patent as amended

The long-established practice of the EPO of delivering interlocutory decisions subject to appeal when the opposition division intends to maintain a patent as amended was acknowledged by the Enlarged Board in **G 1/88** (OJ 1989, 189).

According to Art. 101(2) and (3)(a) EPC (Art. 102(1) to (3) EPC 1973) a decision on an opposition to a European patent can involve revocation of the patent, rejection of the opposition or maintenance of the patent as amended, the latter requiring the publication of a new European patent specification. Previously a publishing fee was required under R. 82(2) EPC (R. 58(5) EPC 1973) for maintenance of the patent as amended; this fee was abolished as of 1 April 2024 (see decision of the Administrative Council CA/D 16/23 of 14 December 2023, OJ 2024, A3). With these regulations in mind, the EPO very early on adopted the device of an interlocutory decision, for which there is no express provision, in order to establish in the first place the text of the amended specification. Only after this interlocutory decision has become final (or the case has been decided on appeal) is a translation of the claims in the other official languages requested pursuant to R. 82(2) EPC (R. 58(5) EPC 1973), the publishing fee being no longer required. Where an appealable decision has been based on documents not complying with the applicable requirements prescribed by the President of the EPO under R. 49(2) EPC (i.e. in handwritten form), the patent proprietor shall be invited to file the amended text in a form compliant with those requirements (i.e. typed or printed) within the three-month period (R. 82(2) EPC in its amended form as of 1 April 2024; Art. 2(7), decision of the President of the EPO dated 25 November 2022 on the presentation of application and other documents, OJ 2022, A113). Once these requirements have been fulfilled what is then a non-appealable final decision on maintenance of the patent as amended is given and the new patent specification is published.

An interlocutory decision which determines the text of the patent to be maintained as amended can of course only be given if there is a text "submitted or agreed" by the patent proprietor pursuant to Art. 113(2) EPC.

In **T 390/86** (OJ 1989, 30) the board held that neither Art. 102(3) EPC 1973 (which partly became Art. 101(3)(a) EPC and partly was incorporated in R. 82 EPC) nor R. 58(4) EPC 1973 (R. 82(1) EPC) precluded an opposition division from giving decisions on substantive issues in the opposition before sending a communication under R. 58(4) EPC 1973, and before "deciding to maintain the patent in amended form". For example, an opposition division could during the course of an opposition make a (final) interlocutory decision (either orally or in writing) that a particular proposed amendment contravened Art. 123 EPC. Similarly, an opposition division could make a (final) interlocutory decision during an opposition that the main claim, for example, of the opposed patent could not be maintained. Such a **substantive interlocutory decision** was not a decision actually to maintain the patent in amended form, but was preliminary to such a decision. The taking of such substantive interlocutory decisions during the course of opposition proceedings was desirable both in order to move the proceedings forward towards a conclusion, and, in appropriate cases as envisaged in Art. 106(3) EPC 1973 (Art. 106(2) EPC), to allow a party to appeal such an interlocutory decision before the opposition proceedings were terminated. It was further held that where a final substantive decision had been given, an opposition division had no power thereafter to continue examination of the opposition in relation to the issues which were the subject of that decision. Further submissions from the parties relating to such issues were inadmissible.

In **T 89/90** (OJ 1992, 456) the opponents had lodged objections to an interlocutory decision finding that the patent as amended and the invention to which it related met the requirements of the EPC. The legal basis for interlocutory decisions was provided by Art. 106(3) EPC 1973. The board observed that the EPC contained no general rules as to when an interlocutory decision could or should be delivered. The relevant department therefore had to use its discretion in judging whether an interlocutory decision was appropriate in an individual case. This involved weighing up various considerations such as whether an interlocutory decision would accelerate or simplify the proceedings as a whole (clarifying a disputed question of priority, for example, could be of key importance for the form and length of the subsequent proceedings) and clearly also included the issue of costs. In the board's view, it was clear that the established practice of delivering appealable interlocutory decisions under Art. 106(3) EPC 1973) (Art. 106(2) EPC) where a patent was maintained as amended was based on the weighing up of such cost aspects. The board concluded that this practice was both formally and substantively acceptable.

In **G 9/92** (OJ 1994, 875), the Enlarged Board set out the implications of an admissible appeal against an interlocutory decision of the opposition division concerning maintenance of the patent in amended form, first, where the sole appellant is the patent proprietor and, secondly, where the sole appellant is the opponent. In the first case, neither the board nor the non-appealing opponent as a party as of right may challenge the maintenance of the patent as amended in accordance with the interlocutory decision. In the second case, the patent proprietor is primarily restricted to defending the patent in the form in which it was maintained by the opposition division. The board may reject as inadmissible any amendments proposed by the patent proprietor as a party as of right if they are neither appropriate nor necessary. For further details of the prohibition on reformatio in peius and its application in board decisions, see chapter V.A.3.1.

D. Limitation/revocation

1. Limitation/revocation – Article 105a-105c EPC 1502
2. Requests for revocation during opposition and opposition appeal proceedings 1502

1. Limitation/revocation – Article 105a-105c EPC

With the entry into force of the EPC 2000, Art. 105a EPC was introduced, pursuant to which a European patent may be revoked or limited at the request of the proprietor. Limitation can be achieved by an amendment of the claims. The effect of a successful limitation or revocation is that the patent is limited or revoked ab initio (Art. 68 EPC) and in respect of all the contracting states in which it has been granted. It takes effect on the date on which the mention of the decision to limit or revoke is published in the European Patent Bulletin (Art. 105b(3) EPC, **T 646/08**; **T 2177/12**). The nature of this procedure, which is ex parte, lies somewhere between the examination and opposition proceedings (**G 3/14**, point 61 of the Reasons, OJ 2015, A102).

There is no time limit as to when the request for limitation/revocation can be made. However, it is a precondition that no opposition proceedings (including opposition appeal proceedings) in respect of the patent are pending (Art. 105a(2) EPC). If they are, then the request is deemed not to have been filed (R. 93(1) EPC). If limitation proceedings are pending at the time of the filing of an opposition, the limitation proceedings are terminated (R. 93(2) EPC). If a patentee wishes to to have its patent revoked whilst opposition proceedings are ongoing, it may request it, but not by using the procedure set out in Art. 105a to 105c EPC (see in this chapter IV.D.2.). If the patentee wishes to limit its patent, it may be able to do so by amending it in the course of the opposition and opposition appeal procedure.

The examining division decides on requests for limitation or revocation under Art. 105a EPC (R. 91 EPC). If it finds the request admissible, the examining division examines whether the amended claims constitute a limitation of the claims of the European patent as granted or amended, and whether they comply with Art. 84, 123(2) and 123(3) EPC (R. 95(2) EPC; see **T 2830/18**). No examination of the claims with regard to Art. 52 to 57 EPC is foreseen. The decision of the examining division is appealable before the technical boards of appeal.

In **T 2830/18** the only claims that had been amended as compared with the patent as granted were claims 8 and 9, so these were the only claims that needed examining under Art. 105b(1) EPC.

2. Requests for revocation during opposition and opposition appeal proceedings

The procedure for limitation/revocation pursuant to Art. 105a-105c EPC is not available during opposition and opposition appeal proceedings. However, a patent may still be

revoked during such proceedings at the request of the patent proprietor. Art. 105a(2) EPC does not prevent the proprietor from filing a request for revocation during opposition proceedings, nor does it prevent the opposition division from dealing with such requests (**T 2177/12**), but these procedural courses of action are **not covered by Art. 105a-105c EPC**. As explained in **T 1651/14**, legal certainty demands clarity about the situation as regards intellectual property rights ("die Schutzrechtssituation"). Proceedings must therefore be brought to an end as quickly as possible (**T 1651/14**; see also **T 1960/12**; **T 1832/16**; **T 757/17**).

According to the board in **T 1467/16**, in view of there being no text of the patent on the basis of which the board could consider the appeal, the only possibility was for the board to revoke the patent as envisaged, albeit for other reasons, in Art. 101 EPC (see also **T 1960/12**; **T 1832/16**; **T 757/17**).

If the patent proprietor states in opposition or opposition appeal proceedings that it no longer approves the text in which the patent was granted and will not be submitting an amended text, the patent is to be revoked (see e.g. **T 1651/14**). This is supported by Art. 113(2) EPC, which provides that a patent may be maintained only in a version approved by the patent proprietor. If there is no such version, one of the requirements for maintaining the patent is lacking (**T 73/84**, OJ 1985, 241, followed by numerous decisions, see e.g. **T 307/13** and **T 1536/14**, **T 796/15**). On the requirement of a text agreed by the patent proprietor, see chapter III.B.3.3.

If the patent proprietor itself requests that the patent be revoked, the decision to revoke the patent is given **without substantive examination as to patentability**. The examination as to whether the grounds for opposition laid down in Art. 100 EPC prejudice the maintenance of the patent becomes impossible since the absence of a valid text of the patent precludes any substantive examination of the alleged impediments to patentability (**T 186/84**, OJ 1986, 79; see also **T 157/85**; **T 1659/07**; **T 124/08**; **T 1287/08**; **T 1111/10**; **T 796/15**; **T 1651/14**).

In **T 237/86** (OJ 1988, 261) the board stated that a direct request for revocation sufficed, whatever the form of the words, when it was made clear to the boards that appellant and respondent agreed that the patent should be revoked. In **T 459/88** (OJ 1990, 425) the board stated that if, in proceedings before the EPO, the patent proprietor itself requested that its patent be revoked, there could scarcely be a more cogent reason for revoking it since it could not be in the public interest to maintain a patent against its proprietor's will. The patent was thus revoked by the board under Art. 111(1) EPC 1973 (see also **T 655/01**; **T 1187/05**; **T 1526/06**; **T 1610/07**; **T 1541/09**; **T 1089/23**).

There must be no doubt that the proprietor applying to have the patent revoked is requesting revocation with the consequences specified in Art. 68 EPC (Art. 68 EPC 1973), namely the cancelling of the effects of the European patent application and the resulting patent as **from the outset** (**T 186/84**; **T 347/90**; **T 386/01**; dealing with a declaration to surrender, **T 393/15**). Where the respondent (patent proprietor) states that the patent has been abandoned 'since' a particular date, this cannot be considered to be a request for revocation, as it does not indicate that the patent has been abandoned ab initio. The case

law on requests for revocation therefore does not apply and the appeal must be examined as to its merits (**T 973/92**).

In **T 237/86** (OJ 1988, 261) the statement "we herewith abandon the above patent" was held to be equivalent to a request for revocation to which the board could accede under Art. 111(1) EPC 1973 (see also **T 347/90**). In **T 92/88** the words "the patent has been allowed to lapse in all designated states" were held to amount to a request for revocation.

In a number of cases the boards decided that a request by a patent proprietor to withdraw "the application" amounted to a request to revoke the patent (**T 264/84**; **T 415/87**; **T 68/90**; **T 322/91**). The board in **T 393/15** pointed out that the basic rule nevertheless applied that any statement intended as such a request had to be clear and leave no room for doubt. In the specific case before it, a letter stating "the patent application is withdrawn" could not be considered clear, because (among other things) the numbers of the patent and the appeal case were missing.

In **T 646/08** the appellant, in a letter, withdrew its appeal and at the same time withdrew its approval of the text of the patent as maintained by the opposition division in its interlocutory decision. The board held that the letter did not contain an **unequivocal** statement by the proprietor that it accepted the revocation of the patent with all the consequences specified in Art. 68 EPC. The appeal proceedings were terminated.

In **T 2573/12** the proprietor had stated during proceedings before the opposition division that it wished to abandon the patent. The board held that the **wish** to abandon the patent did not constitute **a clear and unambiguous** request for abandonment that could be construed as equivalent to a request for revocation (see **T 237/86**, OJ 1988, 261).

A number of cases concerned the situation in which the opposition division revoked the patent, and the patent proprietor appealed, and then, in the course of the appeal proceedings, requested the revocation of the patent. In **T 347/90** the board dismissed the appeal without going into the substantive issues, so that the revocation of the patent by the opposition divisionwas confirmed. In **T 18/92**, by contrast, the request by the patent proprietor (appellant) for revocation of the patent was interpreted by the board as a withdrawal of the appeal. Withdrawal of the appeal meant that the opposition division's decision revoking the patent took effect. In **T 481/96** the board examined the two solutions and endorsed **T 18/92**. In **T 1244/08** the board confirmed that according to established case law (see also **T 1003/01** and **T 53/03**), if an appellant (patent proprietor) whose patent has been revoked by an opposition division states clearly and unambiguously that it is no longer interested in pursuing the appeal proceedings, that is tantamount to a statement withdrawing the appeal. The withdrawal had the effect of immediately terminating the appeal proceedings, such that the opposition division's revocation decision became final. Any later request to retract the withdrawal and continue appeal proceedings was inadmissible. The board in **T 436/20** also followed this approach.

These two lines, which also may have an impact on partial reimbursement of the appeal fee, were summarised in **T 2684/18** as follows:

One line of the boards' case law views it equivalent to a withdrawal of appeal if the patent proprietor, as sole appellant against the opposition division's decision to revoke the patent, declares that it no longer approves the text of the patent as granted and withdraws all further claim requests on file (see e.g. **T 53/03**; **T 1244/08**; **T 547/11**; **T 1868/11**; **T 436/20**). According to another line of case law, a declaration by the patent proprietor that they no longer approve the text of the patent as granted means that the appeal is to be rejected as there is no longer any text of the patent in the proceedings on the basis of which the board could consider the appeal (Art. 113(2) EPC), with the result that the decision of the opposition division to revoke the patent becomes final (see, e.g. **T 163/99**, **T 1637/06**; **T 2524/12**; **T 784/14**; **T 454/15**; **T 1021/15**; **T 1653/18**). The board in **T 2684/18** concluded that, if the patent proprietor, instead of withdrawing the appeal (which would involve a partial refund of the appeal fee), does not choose this path but declares a non-approval of the text of the patent in any form, this is a deliberate choice and can thus not be interpreted as an unambiguous withdrawal of the appeal. However, the board found it unambiguous that the patent proprietor wished the decision of the opposition division to revoke the patent to become final. Thus, a dismissal of the appeal was in line with this wish.

For details on the requirement for a text submitted or agreed by the patent proprietor, see chapter III.B.3.

V. PROCEEDINGS BEFORE THE BOARDS OF APPEAL

A. Appeal procedure

1. Legal character of appeal procedure 1519
1.1. General 1519
1.2. Rules of Procedure of the Boards of Appeal 1520
1.3. Suspensive effect of the appeal 1521
1.4. Devolutive effect of the appeal 1522
1.5. Accelerated processing before the boards of appeal 1523
2. Filing and admissibility of the appeal 1524
2.1. Transitional provisions for the EPC 2000 1525
2.2. Appealable decisions 1525
2.2.1 Departments 1525
2.2.2 Whether there has been a decision 1526
a) Examples of appealable decisions 1526
b) Examples where the communication was not an appealable decision 1526
2.2.3 Interlocutory decisions 1528
2.2.4 Appeals against decisions of the boards of appeal 1529
2.3. Board competent to hear a case 1530
2.3.1 Technical or Legal Board of Appeal 1530
a) General 1530
b) Technical board of appeal competent 1530
c) Legal Board of Appeal competent 1531
2.3.2 Specific cases 1531
a) Interruption of proceedings 1531
b) Request for a search-fee refund 1531
c) Interlocutory revision and reimbursement of appeal fee 1532
2.4. Entitlement to appeal 1532
2.4.1 Formal aspects under Article 107 EPC 1532
a) Appeal filed by wrong company 1532
b) Appeal filed in name of representative 1532
c) Party consisting of plurality of persons 1533
d) Company in receivership 1534
e) Death of the appellant (opponent) 1534
2.4.2 Party adversely affected (Article 107 EPC) 1534
a) General 1534
b) Patent applicant 1535
c) Patent proprietor 1537
d) Opponent 1538
2.4.3 Procedural status of the parties 1540
a) Parties to appeal proceedings 1540
b) Rights of parties under Article 107 EPC 1542
c) The boards' duty of impartiality in inter partes proceedings 1543
d) Existence of a company 1543
2.5. Form and time limit of appeal 1544

2.5.1 Electronic filing of appeal 1544
2.5.2 Form and content of notice of appeal (Rule 99(1) EPC) 1545
a) Name and address of the appellant – Rule 99(1)(a) EPC 1545
b) Indication of the decision impugned – Rule 99(1)(b) EPC 1549
c) Request defining the subject of the appeal – Rule 99(1)(c) EPC 1549
d) Rule 99(3) EPC 1551
2.5.3 Appeal filed within the time limit 1551
a) Notification issues 1551
b) Languages 1551
c) Misleading decisions of the department of first instance 1552
2.5.4 Payment of appeal fee 1552
a) Notice of appeal not filed 1552
b) Payment of only one appeal fee 1553
c) Reduced fee for appeal filed by a natural person or a particular entity 1553
d) Payment not from own account 1557
2.5.5 Appeal deemed not to have been filed 1557
2.6. Statement of grounds of appeal 1557
2.6.1 Legal provisions 1557
2.6.2 Form of statement of grounds of appeal 1558
2.6.3 Content of the statement of grounds of appeal 1559
a) General 1559
b) Indication of the extent to which the decision impugned is to be amended 1560
c) Direct link between the contested decision and the statement of grounds of appeal 1561
d) Adequate reasoning for an appeal against a refusal of the application 1561
e) Adequate reasoning in an appeal filed by the opponent 1562
f) Statement of the legal or factual reasons 1563
g) Addressing the reasons given in the decision in the statement of grounds of appeal 1564
h) Complete case within the meaning of Article 12(3) RPBA 1565
i) Mere repetition of arguments 1565
j) Appeal based on objection not raised nor examined at first instance 1565
k) Statement of grounds of appeal not filed in full 1566
l) Duty of board to be impartial 1566
2.6.4 New case raised 1567
a) Appeal based on the same ground for opposition 1567
b) Taking new submissions into consideration 1568
c) Amended claims filed 1568
2.6.5 References to earlier submissions 1570
2.6.6 Arguments need not be new or relevant 1571
2.6.7 Exceptional circumstances warranting admissibility of appeal 1572
a) Immediately apparent the contested decision cannot be supported 1572
b) Patent proprietor requests revocation 1572
c) Substantial procedural violation 1572

2.6.8 No partial admissibility of appeal 1572
2.7. Examination of the admissibility of appeal in every phase of appeal proceedings 1573
2.8. Cases where admissibility of appeal need not be considered 1573
2.9. Interlocutory revision 1574
2.9.1 General 1574
2.9.2 The department of first instance's obligation to rectify the decision 1575
2.9.3 Well-founded appeal within the meaning of Art. 109(1) EPC 1576
2.9.4 Competence of the department of first instance 1576
2.9.5 "Cassatory" or "reformatory" interlocutory revision 1576
3. Substantive examination of the appeal 1577
3.1. Binding effect of requests – no reformatio in peius 1577
3.1.1 Reformatio in peius does not apply separately to each point 1577
3.1.2 Reformatio in peius and devolutive effect of appeal 1578
3.1.3 Cases where reformatio in peius does not apply 1578
3.1.4 Patentee as sole appellant 1578
3.1.5 Opponent as sole appellant 1579
3.1.6 Revocation of patent 1580
3.1.7 Exceptions to the prohibition of reformatio in peius 1581
a) Limited exceptions to the prohibition of reformatio in peius – G 1/99 1581
b) Case law around G 1/99 1582
c) Remittal to the department of first instance 1583
d) Lack of clarity 1584
e) Causal link 1584
f) Undisclosed disclaimer 1585
3.1.8 Reformatio in peius and lack of cross-appeal in the EPC 1585
3.2. Subject-matter under examination 1585
3.2.1 Primary object of the appeal proceedings – Article 12(2) RPBA 1585
3.2.2 Complete case on appeal 1586
3.2.3 Opposition appeal proceedings 1587
a) Admissibility of opposition 1587
b) The notice of appeal 1587
c) Unopposed subject-matter not reviewed 1587
d) Dependent claims 1588
e) Appeal by patentee against revocation 1589
f) Removal of references in dependent claims 1589
g) Abandonment of subject-matter 1589
h) Fresh ground for opposition on appeal 1591
i) No general review of the first-instance decision 1592
j) Ambiguities in the claims 1593
k) Ex officio examination of Art. 123(2) EPC 1593
3.2.4 Patentability requirements under examination in ex parte proceedings 1593
3.3. Facts under examination – applying Article 114 EPC in appeal proceedings 1594
3.4. Review of first-instance discretionary decisions 1596
3.4.1 Principles applying to the review of first-instance discretionary decisions 1596
a) General 1596
b) Proper exercise of discretion 1596

c) Review of first-instance discretionary decisions taken on substantive grounds 1597
3.4.2 Exercise of the boards' own discretion not to admit submissions 1598
a) Submissions refused at first instance admitted on appeal 1598
b) Submissions not admitted by the boards 1600
c) Discretion misused by the department of first instance 1600
3.4.3 Submissions admitted at first instance are part of the appeal proceedings 1601
3.4.4 Review of an opposition division's discretionary decision (not) to admit a new ground for opposition 1603
3.4.5 Review of discretion – stay of proceedings 1605
4. New submissions on appeal 1605
4.1. Introduction 1605
4.1.1 Legal basis 1605
a) Legal bases in the EPC 1605
b) Legal bases in the Rules of Procedure of the Boards of Appeal 1607
4.1.2 Primary object of appeal proceedings and the convergent approach to amendments made to party's case 1609
4.2. Amendment to a party's case 1611
4.2.1 Discretion under Articles 12(4) and 13(1) and (2) RPBA applies only to amendments 1611
4.2.2 First level of the convergent approach: amendments to a party's case – Article 12(4) RPBA 1611
a) Principles 1611
b) Whether submissions on appeal were directed to requests, facts, objections, arguments or evidence on which the decision under appeal was based 1612
c) Whether submissions were "admissibly raised" at first instance 1616
d) Whether submissions were "maintained" at first instance 1620
e) Documents referenced in the patent specification – not automatically part of the appeal proceedings 1621
4.2.3 Second and third levels of the convergent approach: amendments to a party's appeal case – Article 13(1) and (2) RPBA 1621
a) Principles 1621
b) Submissions at first instance not automatically part of appeal case 1623
c) Request for dismissal of the appeal and maintenance of the patent 1623
d) Deletion of claims or alternatives within claims 1623
e) New request combining subject-matter of previously filed claims 1625
f) Request previously only paraphrased and not set out in full 1626
g) Resubmission of withdrawn requests or requests no longer pursued 1626
h) Belated substantiation of requests 1627
i) Requests reordered 1628
j) Procedural requests – requests for non-admittance of the other party's submissions 1629
k) Amendment of the description 1630
l) Further developing arguments within the framework of the appeal case as submitted so far 1631
m) Belated substantiation of objections 1632

n) New objection based on documents already on file – new assertions of fact 1633
o) New defence and belated substantiation of a defence 1634
p) Submissions concerning interpretation of the law 1635
q) Information supporting oral submissions 1637
r) Translation filed later 1637
s) Late assertion of a breach of the right to be heard 1637
4.3. First level of the convergent approach – submissions in the grounds of appeal and the reply – Article 12(3) to (6) RPBA 1638
4.3.1 Principles 1638
4.3.2 Transitional provisions 1639
4.3.3 Amendment within the meaning of Article 12(4) RPBA 1639
4.3.4 Discretion under Article 12(4) RPBA 1640
a) Principles 1640
b) Requirement to identify each amendment to the case and provide reasons for timing of submission – Article 12(4), third sentence, RPBA 1640
c) Requirement to indicate the basis for amendments to the patent application or patent in the application as filed and to provide reasons why the amendment overcomes the objections raised – Article 12(4), fourth sentence, RPBA 1641
d) Complexity of amendment 1642
e) Suitability to address the issues leading to the decision under appeal 1642
f) Need for procedural economy 1644
g) Whether the submission should have been filed in first-instance proceedings – Article 12(6), second sentence, RPBA 1645
h) Primary object of the appeal proceedings to review the decision under appeal 1645
i) Application of the principles expressed in Article 12(6) RPBA to amended requests or single claims 1647
j) Convergence criterion 1648
k) No objection raised by opposing party 1648
l) Obvious corrections in description 1649
4.3.5 Incomplete case in grounds of appeal or reply – substantiation requirement – Article 12(3) and (5) RPBA 1649
a) Principles 1649
b) Incomplete appeal case – unsubstantiated requests – Article 12(3) RPBA 1650
c) Incomplete appeal case – unsubstantiated objections or defence – Article 12(3) RPBA 1654
d) Discretion under Art. 12(5) RPBA 1656
4.3.6 Submissions not admitted at first instance – error in the use of discretion – Article 12(6), first sentence, RPBA 1657
a) Principles 1657
b) Whether a submission was late-filed 1658
c) Prima facie relevance of late-filed objections and evidence 1658

d) Prima facie allowability of a request 1660
e) Need for procedural economy – convergence 1660
f) Principles of fairness and equal treatment of parties 1660
g) Board's own discretion when the exercise of discretion by the department of first instance suffers from an error 1661
h) Admittance justified by the circumstances of the appeal case 1661
i) Not covered by Article 12(6), first sentence, RPBA: submissions admitted at first instance 1662
4.3.7 Submissions that should have been submitted or which were no longer maintained at first instance – Article 12(6), second sentence, RPBA 1663
a) Principles 1663
b) New request addressing objection raised for the first time at the first instance oral proceedings 1663
c) New request addressing objection that was dismissed or in case of a rejected opposition 1664
d) New request in reaction to a change of opinion of the opposition division 1665
e) New request – amended pages of the description 1666
f) New request – opportunity in opposition proceedings to address the issue 1666
g) New request – opportunity in examination proceedings to address the issue 1667
h) New request – examination of subject-matter deliberately foregone 1668
i) New request – repeated attempts to meet EPC requirements 1669
j) New request – unambiguous indication how to address the objection 1669
k) New defence or evidence in response to objections raised late in the proceedings 1669
l) New defence in response to a change of opinion by the opposition division at the oral proceedings 1670
m) New objections or defence in response to views in the opposition decision that had already been set out in the preliminary opinion 1670
n) New objections or evidence in response to the patent proprietor's submissions at first instance 1671
o) New evidence for objection raised early in opposition proceedings 1674
p) Objection to admittance of a claim request 1674
q) Submissions that were no longer maintained in first instance and counter-examples 1675
r) Admittance justified by the circumstances of the appeal case 1676
4.4. Second level of the convergent approach – submissions made after filing of grounds of appeal or reply – Article 13(1) RPBA 1677
4.4.1 Principles 1677
4.4.2 Transitional provisions – immediate applicability of Article 13(1) RPBA 1678
4.4.3 Amendment to appeal case within the meaning of Article 13(1) RPBA 1678
4.4.4 Party's duty to justify amendment 1678
a) Principles 1678

b) Party's duty to provide reasons for not submitting amendment at an earlier stage 1679
c) Requirement to substantiate the amendments to the patent application or patent 1680
4.4.5 Discretion under Article 13(1) RPBA – new requests 1681
a) Time of filing – whether request should have been filed earlier 1681
b) Whether the amendment prima facie overcomes the issues raised without giving rise to new objections 1684
c) Whether the amendment is detrimental to procedural economy 1686
d) Complexity of the amendment 1686
e) Convergence of claim requests 1687
f) Deletion of claims or alternatives within claims 1688
4.4.6 Discretion under Article 13(1) RPBA – new facts, objections, arguments and evidence 1689
a) Time of filing – whether the new submissions should have been filed earlier 1689
b) Suitability to solve the issues raised 1693
c) Prima facie relevance for assessment of patentability 1694
d) Whether the amendment is detrimental to procedural economy 1696
e) Complexity of the amendment 1696
4.5. Third level of the convergent approach – submissions filed after notification of the Article 15(1) RPBA communication or after expiry of period specified in Rule 100(2) EPC communication – Article 13(2) RPBA 1697
4.5.1 General principles 1697
a) Overview 1697
b) Events which trigger the third level of the convergent approach 1699
c) Duty under Article 13(2) RPBA to provide cogent reasons to demonstrate exceptional circumstances and duties under Article 13(1) RPBA 1700
d) Whether a causal link between the exceptional circumstances and the time of filing is required 1701
e) Meaning of "exceptional" 1703
f) Meaning of "in principle" 1704
g) Whether assessment of "exceptional circumstances" and exercise of discretion to admit an amendment is a two-step evaluation 1705
4.5.2 Transitional provisions 1705
4.5.3 Amendment to an appeal case within the meaning of Article 13(2) RPBA 1706
4.5.4 Admittance of new requests 1706
a) Waiting for the preliminary opinion not compatible with convergent approach 1706
b) Justified response to new objections raised in board's communication, in subsequent submissions or at oral proceedings 1707
c) Justified response to an objection – earlier response could not be expected 1709
d) Purpose of oral proceedings especially in ex parte proceedings 1711
e) No carte blanche to amend claims at will – criteria set out in Articles 13(1) and 12(4) RPBA 1712

f) Board's preliminary opinion that confirms in essence objections or arguments previously raised 1715
g) Other cases in which amendments should have been filed earlier 1718
h) Change of the board's opinion 1721
i) Repeated attempts at overcoming deficiencies 1722
j) Deletion of claims or alternatives in claims 1723
k) Amendment not detrimental to procedural economy and no other party negatively affected 1726
l) Right to be heard violated and no other party affected 1728
m) Prima facie and clear allowability 1728
n) Editorial amendments to remove inconsistencies and typographical errors 1729
o) Adaptation of the description 1730
p) Response to a large number of objections 1730
q) Requests reordered 1731
r) Procedural requests – requests for non-admittance of other party's submissions 1731
s) Circumstances in the sphere of the representative 1732
4.5.5 Admittance of new facts, objections, arguments and evidence 1733
a) Waiting for the preliminary opinion not compatible with convergent approach 1733
b) Justified response to new requests in the reply to the appeal 1733
c) Justified response to new line of arguments in the board's preliminary opinion 1734
d) Justified response to a reweighting of the case in the board's preliminary opinion 1735
e) Justified response to new developments in the case following the communication under Article 15(1) RPBA 1735
f) Board's opinion based exclusively on earlier party submissions or reasoning of the first-instance division 1735
g) Importance of a direct response to the other party's written submissions 1736
h) Inventive step objection following unsuccessful novelty objection 1737
i) Further cases in which the new submissions should have been filed earlier 1738
j) Basis of the appeal proceedings unchanged and amendment not detrimental to procedural economy 1739
k) Immediately apparent that objection raised against different request also applies to request at issue 1739
l) Appellant's silence in response to unsubstantiated submissions by the respondent 1739
m) Prima facie relevance 1740
n) Submission of new evidence 1741
o) Allegation of public prior use 1742
p) Allegation and evidence of common general knowledge 1742
q) Decisions and opinions by national courts filed at the earliest opportunity 1742

r) Filing of translations 1743
s) Circumstances in the sphere of the representative 1743
t) No absolute right to discussion of all objections raised at first instance 1743
u) Further illustration of the technical teaching by means of photographs 1744
5. Parallel proceedings 1744
6. Change in composition of a board 1744
7. Termination of appeal proceedings 1744
7.1. Closure of the substantive debate 1744
7.1.1 Decision taken as the file stands 1745
7.1.2 Proceedings after delivery of the decision 1745
7.2. Interlocutory decisions of a board 1745
7.3. Withdrawal of the appeal 1746
7.3.1 Article 114(1) EPC and withdrawal of the appeal 1746
7.3.2 Board's powers to decide on issues after withdrawal of the appeal 1746
7.3.3 Partial withdrawal of appeal by sole appellant and opponent 1747
7.3.4 No withdrawal of appeal with retrospective effect 1747
7.3.5 Request for withdrawal of appeal to be unambiguous 1747
7.3.6 Conditional withdrawal of appeal 1748
7.3.7 Correction of withdrawal of appeal under Rule 139 EPC 1748
7.4. Deemed withdrawal of patent application 1749
7.5. Legitimate interest in the continuation of the grant and the appeal proceedings 1749
8. Reasons in abridged form 1749
8.1. Abridged reasons under Art. 15(7) RPBA 1749
8.2. Abridged reasons under Art. 15(8) RPBA 1749
9. Remittal to the department of first instance 1750
9.1. General 1750
9.1.1 Article 111(1) EPC 1750
9.1.2 Article 11 RPBA 1750
9.1.3 Art. 11 RPBA 2007 1751
9.2. Exercise of discretion to remit 1751
9.2.1 No absolute right to have issue decided on at two instances 1751
9.2.2 Remittal and admittance of auxiliary requests 1752
9.2.3 Remittal and scope of review 1752
a) Primary object of appeal proceedings is to review decision under appeal in a judicial manner 1752
b) Ex parte proceedings 1752
c) Inter partes proceedings 1752
9.2.4 TRIPS 1753
9.3. Special reasons for remittal 1753
9.3.1 Introduction 1753
9.3.2 Non-examined patentability issues 1754
a) Issues undecided at first instance but which become relevant during or after appeal proceedings 1754
b) Primary object of the appeal proceedings 1754

c) Undue burden 1755
d) Different interpretation of terms 1756
9.3.3 Procedural economy 1757
9.3.4 Financial situation of a party 1757
9.3.5 Remittal following amendments to the claims 1758
a) Ex parte cases 1758
b) Inter partes cases 1759
c) Discrepancies between the clean and the annotated versions of a request 1759
9.3.6 Incomplete search 1759
a) Features considered non-technical 1759
b) Closest prior art not suitable or misinterpreted 1760
c) Additional prior-art search necessary 1760
9.3.7 Opposition withdrawn 1761
9.4. Remittal following fundamental deficiencies 1761
9.4.1 Article 11 RPBA 1761
9.4.2 Article 11 RPBA 2007 1761
9.4.3 The term "fundamental deficiencies" 1762
9.4.4 Fundamental deficiencies 1762
a) Violation of right to be heard 1762
b) Reasons for decision deficient 1762
c) Missing signatures 1763
d) Failure to hold oral proceedings 1763
e) Incorrect application of R. 137(5) EPC 1763
9.5. Requests for or against remittal 1763
9.6. No remittal to the department of first instance 1764
9.6.1 Discretion despite special reasons 1764
9.6.2 Same legal and factual framework 1764
9.6.3 Objections raised by the board 1765
9.6.4 Opportunity to comment 1766
9.7. Obiter dicta 1766
9.8. Remittal for hearing of witnesses 1767
9.9. Remittal for adaptation of the description 1767
9.10. Remittal to a differently composed department of first instance 1767
9.11. Accelerating proceedings after remittal 1768
10. Binding effect 1768
10.1. Binding effect of decision remitting case to department of first instance 1768
10.1.1 Department of first instance bound by decision of board of appeal 1768
a) Notion of ratio decidendi and binding effect 1768
b) Binding effect on examining divisions 1769
c) Binding effect on opposition divisions 1770
10.1.2 Binding effect in opposition proceedings after remittal to an examining division 1770
10.1.3 Board of appeal bound in subsequent appeal proceedings following remittal 1771
10.1.4 Binding effect: remittal for the continuation of proceedings 1772
10.1.5 Binding effect: remittal only for adaptation of the description 1772

10.2. Binding effect of interlocutory referral decision on subsequent proceedings 1773
11. Reimbursement of appeal fees 1773
11.1. Introduction 1773
11.2. Examination ex officio 1774
11.3. Appeal deemed not to have been filed 1774
11.3.1 Appeal deemed not to have been filed due to late filing of the notice of appeal and/or late payment of the appeal fee 1774
11.3.2 Translation of notice of appeal 1775
11.3.3 No legal ground for payment 1775
11.3.4 Request for re-establishment in respect of the time limit for filing the notice of appeal and/or for paying the appeal fee 1775
11.3.5 No legal basis for retaining appeal fee in case of intervention in opposition appeal proceedings 1776
11.3.6 Several appellants 1776
11.3.7 No reimbursement if appeal filed in accordance with the requirements of Article 108 EPC 1776
11.4. Reimbursement of appeal fee in case of interlocutory revision 1776
11.4.1 Requirements 1777
11.4.2 Competence to decide on reimbursement 1777
11.4.3 Examining division should have rectified decision 1778
11.4.4 A rectification decision maintaining earlier decision 1779
11.4.5 Re-opening examination after rectification 1780
11.5. Allowability of the appeal 1780
11.6. Substantial procedural violation 1780
11.6.1 Violation must be of a procedural nature 1780
11.6.2 Violation must be substantial and affect the entire proceedings 1781
11.6.3 Procedural violation must be committed by the department whose decision is under appeal 1782
11.6.4 Search 1783
11.6.5 Guidelines 1783
11.6.6 Request for interview 1783
11.6.7 Oral proceedings 1784
a) Failure to summon for oral proceedings 1784
b) Submissions of parties as response to summons 1784
c) No reasons for refusal of request for postponement 1784
d) No reasons for refusal of request to change location for oral proceedings 1785
e) Repeated postponements of oral proceedings 1785
f) Minutes 1785
11.6.8 Right to be heard 1786
11.6.9 Inadequate reasons given in the decision at first instance 1786
11.6.10 Error of judgment by a department of first instance 1787
a) Communications 1787
b) Wrong assessment of prior art or technical content 1788
c) Error in the application of the law 1789
d) Board reaches a different conclusion than the department of first instance 1789

e) Exercising of discretion 1790
f) Wrong procedure adopted 1790
g) Following earlier decisions 1790
11.6.11 Cases concerning the decision-making process and the decision 1791
a) Issuing of decision 1791
b) Content of decision 1793
c) Requests 1795
d) Amendments 1796
e) Signature on decision and minutes 1797
f) Composition of opposition division 1797
11.6.12 Partiality 1798
11.6.13 Suspensive effect of appeal 1798
11.6.14 Non-compliance with order of the board 1798
11.6.15 Referral pending before Enlarged Board 1799
11.6.16 Refusal of application on one ground only 1799
11.6.17 Cases concerning documentation and communications passing between the EPO and the parties 1799
a) Ambiguous communication or wrong form 1799
b) No reply to communication under Article 101 EPC 1799
c) Wrong type of communication 1800
d) Period set for opponent to reply to patentee's response 1800
e) Observations not forwarded to other party 1800
f) Appointment of professional representative 1800
g) Warning in relation to a grace period 1800
11.7. Reimbursement must be equitable 1801
11.7.1 Causal link between substantial procedural violation and filing of appeal 1801
11.7.2 Conduct of appellant 1803
a) Reimbursement held not to be equitable 1803
b) Reimbursement held to be equitable 1805
11.8. Reimbursement in full under Rule 103(1)(b) EPC 1805
11.9. Revised Rule 103 EPC on partial reimbursement of the appeal fee 1806
11.10. Partial reimbursement (75%) under Rule 103(2) EPC 1806
11.11. Partial reimbursement (50%) 1806
11.11.1 Partial reimbursement under former Rule 103(2) EPC 1806
11.11.2 Partial reimbursement (50%) under Rule 103(3) EPC 1808
11.12. Partial reimbursement (25%) under Rule 103(4) EPC 1808
11.13. Communication in preparation for the oral proceedings 1810
11.14. Reimbursement of the appeal fee outside of the scope of Rule 103 EPC because of a violation of the principle of the protection of legitimate expectations 1810

1. Legal character of appeal procedure

1.1. General

The provisions governing the appeal procedure are set out in Art. 106 EPC to Art. 111 EPC and R. 99 EPC to R. 103 EPC and in the RPBA. R. 100(1) EPC plays an important role since it stipulates that, unless otherwise provided, the provisions relating to proceedings before the department which had taken the decision impugned shall apply to appeal proceedings. This application by analogy is, however, not automatically permissible in every case and for every provision (**G 1/94**, OJ 1994, 787). Criteria therefore had to be established for when such an analogy was permissible and when not. To this end it was necessary to analyse the legal nature of the appeal procedure.

Appeal proceedings are wholly separate and independent from the proceedings at first instance. Their function is to give a judicial decision upon the correctness of a separate earlier decision taken by a department (**T 34/90**, OJ 1992, 454; **G 9/91**, OJ 1993, 408; **G 10/91**, OJ 1993, 420; **T 534/89**, OJ 1994, 464; **T 506/91**). Appeal proceedings are not and were never intended to be the mere continuation of first-instance proceedings (**T 34/90**, OJ 1992, 454; **T 501/92**, OJ 1996, 261; **T 1251/07**; **T 719/09**; **T 177/18**). Article 12(2) RPBA now expressly states that the primary object of the appeal proceedings is the review of the decision under appeal in a judicial manner.

In **T 501/92** (OJ 1996, 261) the board deduced from this principle that any procedural request or statement made by a party during proceedings in the first instance was not applicable in any subsequent appeal proceedings, and had to be repeated during the latter if it was to remain procedurally effective.

The fact that the boards of appeal are courts was established in **G 1/86** (OJ 1987, 447, point 14 of the Reasons). In decision **G 1/99** (OJ 2001, 381) the Enlarged Board held that the appeal procedure is to be considered as a judicial procedure (see **G 9/91**, OJ 1993, 408, point 18 of the Reasons) proper to an administrative court (see **G 8/91**, OJ 1993, 346, point 7 of the Reasons; likewise **G 7/91**, OJ 1993, 356). In **G 9/92** and **G 4/93** (both OJ 1994, 875) it was decided that the extent of appeal proceedings is determined by the appeal.

These characteristics of the appeals procedure not only serve as criteria when assessing whether a provision may be applied analogously in individual cases; they also have general legal consequences in many respects. It follows from the characteristics set out by the Enlarged Board that the general principles of court procedure, such as the entitlement of parties to direct the course of the proceedings themselves ("principle of party disposition"), also apply to appeals (see **G 2/91**, OJ 1992, 206; **G 8/91**, **G 8/93**, OJ 1994, 887; **G 9/92** and **G 4/93**), that a review of the decision taken by the department of first instance can, in principle, only be based on the reasons already submitted before that department (**G 9/91**, **G 10/91**), and that the proceedings are determined by the petition initiating them (ne ultra petita) (see **G 9/92** and **G 4/93**). The Enlarged Board has also made it clear that the decision-making powers of opposition divisions, and of the boards in opposition appeal proceedings, are circumscribed by the statement under

R. 55(c) EPC 1973 (R. 76(2)(c) EPC) of the extent to which the European patent is opposed. They have no powers to decide and thus investigate anything extending beyond that statement (see **G 9/91**). This defined the sphere of application of Art. 114(1) EPC 1973, and clarified the distinction between the power to initiate and determine the object of proceedings, on the one hand, and the power to examine the facts then relevant, on the other. The individual procedural consequences and the Enlarged Board's decisions are discussed in greater detail below.

It is established jurisprudence that the boards of appeal and the Enlarged Board respectively act as judicial bodies, which were established by law, and apply general principles of procedural law (see **G 3/08**, OJ 2011, 10 and **G 2/08**, OJ 2010, 456).

In **T 1676/08** the board went on to say that one of these principles is laid down in Art. 6(1) ECHR, relying on principles of law common to the member states of the European Patent Organisation and applying to all EPO departments of the said organisation, which requires inter alia in "… the determination of his civil rights and obligations … everyone is entitled to **a fair and public hearing** within a reasonable time by an independent and impartial tribunal established by law". It is also established jurisprudence that, for **inter partes** proceedings before a board of appeal to be fair, the board must be neutral (see e. g. **R 12/09** of 15 January 2010 and **T 253/95**).

1.2. Rules of Procedure of the Boards of Appeal

The RPBA have their legal basis in Art. 23(4) EPC in conjunction with R. 12c(2) EPC (on this, see also **T 700/15**). They were comprehensively revised in 2019 and the new version came into force on 1 January 2020 (for details on this, see Supplementary publication 2, OJ 2020; for subsequent amendments see OJ 2021, A35 and OJ 2024, A15). The aims of the revision of the RPBA were: (i) to increase efficiency by reducing the number of issues (questions) to be dealt with, (ii) to improve predictability for the parties and (iii) to promote harmonisation.

The amendments to the RPBA can be divided into two categories. Firstly, improvements have been made as regards the management of the boards' overall caseload and of individual cases. Secondly, changes have been made to clarify that the primary object of appeal proceedings is to review the decision under appeal in a judicial manner (Art. 12(2) RPBA).

The boards of appeal are the first and final judicial instance in the procedures before the EPO. In this capacity, they review appealed decisions on points of law and fact. One of the consequences of their function being above all to review appealed decisions is that, as the appeal proceedings progress, the possibilities for parties to amend their case become increasingly limited.

The last time major changes had been made to the RPBA was in 2003. These related to the "core" of the appeal procedure, i.e. written and oral proceedings and various related aspects, such as late filing and costs (for details, see CA/133/02). In 2007 they were

revised again, to reflect the EPC 2000 (OJ 2007, 536); the provisions on written and oral proceedings were largely left unchanged, but renumbered.

Under Art. 23 RPBA, which was left unchanged from the previous version, the RPBA are binding on the boards unless they lead to a situation which would be incompatible with the spirit and purpose of the EPC (on this, see **T 2227/12**).

In **T 2154/15** the board stated that the RPBA constitute second-degree subsidiary law and thus could not remove powers attributed to the boards by an article of the EPC.

Further details on the RPBA can be found in particular in chapters V.A.9. "Remittal to the department of first instance", V.A.4. "New submissions on appeal", and III.C. "Oral proceedings".

1.3. Suspensive effect of the appeal

Under Art. 106(1), second sentence, EPC, an appeal has suspensive effect.

In **G 2/19** (OJ 2020, A87) the Enlarged Board observed that this provision has basic character. It is tailored to the standard case of an appeal filed by a party to the preceding proceedings who was adversely affected by a decision issued in them and who is seeking redress for a grievance which is appealable as such. There is, however, no legitimate interest in also lending suspensive effect to a means of redress which has no basis in the EPC and which is therefore clearly inadmissible, such as an appeal filed by a third party within the meaning of Art. 115 EPC to remove allegedly unclear claims (Art. 84 EPC). The Enlarged Board held that it logically follows that the initiation of a means of redress which, owing to such circumstances, is clearly inadmissible can have no suspensive effect.

The Legal Board defined this effect in **J 28/94** (OJ 1995, 742), in which a third party claimed entitlement to the grant of the patent and requested suspension of the proceedings for grant under R. 13(1) EPC 1973 (R. 14 EPC). The board took the view that the appeal's suspensive effect meant the contested decision had no legal effect until the appeal was resolved. Otherwise the appeal would be nugatory. Thus, if a decision refusing to suspend the publication of the mention of grant of a patent were appealed, publication should be deferred until the appeal was decided. If (as here) this was not possible for technical reasons, the EPO should take all necessary steps to advise the public that the mention of grant was no longer valid (see also **T 1/92**, OJ 1993, 685).

According to **J 28/03** (OJ 2005, 597), suspensive effect means that the consequences following from an appealed decision (here: grant of a patent on the parent application) do not immediately occur after the decision has been taken. Actions normally taking place after a decision are "frozen". Suspensive effect does not have the meaning of cancellation of the appealed decision. Even after an appeal the decision as such remains and can only be set aside or confirmed by the board of appeal.

In **J 12/16** the examining division had had the mention of the grant of the patent published while the period for appealing against the Legal Division's rejection of a request for the application's transfer was still running. The board held that doing so could cause serious problems because publishing the mention of the grant triggered the start of the period for opposing the patent; that, in turn, could make the appeal redundant while the appeal proceedings were still pending, even though the appeal itself had suspensive effect. Since, as long as the appeal period had not expired, in theory the filing of an appeal, and so the suspensive effect under Art. 106(1) EPC, had to be expected at any moment (see also **J 28/94**), publishing the mention of the grant should be avoided in such circumstances so as not to deprive the appeal of its suspensive effect in practice.

In **T 591/05**, the suspensive effect of an appeal was said to be a direct consequence of, and was subordinate to the appeal itself and, consequently, no circumstance directly arising from the suspensive effect of the appeal could be invoked in support of the admissibility of the appeal itself.

J 18/08 and **T 1674/12** likewise concerned the meaning of suspensive effect.

In view of the suspensive effect of an appeal, a request for conversion under Art. 135 and R. 155 EPC cannot be considered during appeal proceedings, since such a request is conditional on the application being deemed withdrawn, withdrawn or rejected (**T 1283/19**).

1.4. Devolutive effect of the appeal

When appeal proceedings start, responsibility for the case passes from the department of first instance to the boards of appeal (known as the devolutive effect; see **T 473/91**, OJ 1993, 630; **T 830/03**, **T 555/08**).

According to **T 1382/08**, the devolutive effect of an appeal before a board extends only to that part of the impugned decision which is indicated in the statement of grounds for appeal and actually challenged by the appeal. For the board, therefore, the extent to which the impugned decision is to be amended, as defined under R. 99(2) EPC, is simultaneously the limit of the devolutive effect. This in turn implies that the impugned decision's part not covered by the statement of grounds of appeal also cannot be part of the appeal proceedings and consequently becomes final on expiry of the time limit for appeal. This approach was also adopted by the same board in **T 448/09**. Only those issues that were considered and decided upon in the decision can later be challenged in appeal proceedings (**T 2117/11**). However, the board in **T 689/09** noted that, whilst it was aware of case law according to which the distinction between different

legal effects of a decision also fell under the "extent to which the impugned decision is to be amended" pursuant to R. 99(2) EPC, (**T 1382/08**), this approach left the notion of the "subject of the appeal" even more diffuse and elusive. See also in this chapter V.A.3.2. "Subject-matter under examination".

On appeal, the department of first instance loses its competence for the further prosecution of the application for all contracting states – the appeal does not leave a part of the application pending in the first instance. Thus, deemed withdrawal of the application pursuant to Art. 110(3) EPC 1973 applied in the case of a failure to reply to a communication pursuant to Art. 110(2) EPC 1973 in ex parte appeal proceedings, even where the decision under appeal did not refuse the application, but only a particular request. The board reasoned that even if the appealed decision concerned only the designation of a state and not the application as a whole, according to the principle of unity of the application and of the patent in the proceedings the suspensive effect of the appeal affected the application as a whole (**J 29/94**, OJ 1998, 147).

The devolutive effect of the appeal does not affect the competence of the department of first instance to decide on a request concerning the contents of the minutes of the oral proceedings held before it. What is devolved is the subject-matter decided by the appealed decision (**T 1198/97**).

1.5. Accelerated processing before the boards of appeal

New rules on accelerating appeal proceedings have been introduced in Art. 10(3) to (6) RPBA. Paragraphs 3 to 6 replace the notice from the Vice-President DG 3 dated 17 March 2008 concerning accelerated processing before the boards of appeal (OJ 2008, 220). See also the notice from the Boards of Appeal on accelerated proceedings of 19 January 2024.

The possibility of accelerating proceedings allows the boards to give an appeal priority over other pending appeals. Parties with a legitimate interest may ask the boards of appeal to deal with their appeals rapidly. Under Art. 10(3) RPBA, the boards have discretion in deciding on a party's request for acceleration (for details on this, see the explanatory remarks on Art. 10 RPBA, published in Supplementary publication 2, OJ 2020).

The appellant (patentee) in **T 734/12** requested acceleration of the appeal proceedings on the basis of three arguments: the possibility of remittal; the suggestion that the decision under appeal related to an important point of law the resolution of which might take additional time; and the commercial and medical importance of the patented and approved treatment. In the board's opinion these reasons did not in themselves justify acceleration. Whilst acceleration had been acknowledged as appropriate when infringement proceedings were threatened or pending, which was not the case here. However, it was clear there was a substantial measure of agreement between the parties and the public had an interest in the early resolution of disputes. The interests of the parties and of the public would therefore best be served by an expedited procedure.

In **T 895/13** of 28 March 2014 the board confirmed that acceleration is always a matter for the exercise of the board's discretion. While trivial reasons would clearly not warrant acceleration, there was no fixed standard of proof. It was clear in the case at issue that the board could have accelerated the procedure ex officio under the notice of 17 March 2008 concerning accelerated processing before the boards of appeal (OJ 2008, 220), in view of the disadvantage which could ensue before the Belgian courts

from the suspensive effect of the appeal in question. If the board could allow acceleration on that basis of its own motion, it could clearly do so on the request of a party. The board ordered the appeal proceedings to be accelerated. It added that its views related only to the particular facts of this case and the co-pending appeal in **T 1125/13** of 28 March 2014 between the same parties and were not intended to set any precedent for application beyond those facts.

In **T 239/16** the board allowed acceleration. The board stated that according to the notice of 17 March 2008 concerning accelerated processing before the boards of appeal (OJ 2008, 220) trivial reasons would clearly not justify acceleration. It followed from the scenarios in the notice that the term "legitimate interest" was not to be construed as requiring compelling reasons. Rather, objective reasons had to be put forth that warranted giving the appeal priority. Of course, the reasons invoked must be weighed against any disadvantage which might possibly ensue from granting accelerated proceedings. In the case in hand, in support of their requests for accelerated processing, the appellants (opponents) argued that infringement proceedings had been brought against their affiliates in France. The board was satisfied that the appeal proceedings at issue had a bearing on the infringement proceedings in France even if the appellants were not party to the infringement proceedings in France. See also **T 1868/16** where the board allowed acceleration on the grounds that arbitration proceedings had been brought against an affiliate company in Portugal.

In **T 872/13** the board did not accede to the request for accelerated processing of the appeal because the reason provided by the appellant (opponent) that the patent was "causing uncertainty and hampering investment and development decisions by interested parties" was a general statement and not specifically related to a party to the proceedings.

In **T 1213/17** the proprietor requested that the case be remitted to the opposition division if the new objection was admitted into the proceedings. The board noted that the impugned decision dealt with all the grounds for opposition raised by the opponent. Moreover, national proceedings on issues of infringement and revocation were pending before the Stockholm District Court/Patent and Market Court in Sweden, on the basis of which the opponent requested accelerated processing before the board. The board decided not to remit the case.

See also chapter IV.C.7. "Acceleration of opposition proceedings".

2. Filing and admissibility of the appeal

According to Art. 108 EPC a notice of appeal shall be filed, in accordance with the Implementing Regulations, at the EPO within two months of the date of notification of the decision. Notice of appeal shall not be deemed to have been filed until the fee for appeal has been paid. A statement setting out the grounds of appeal must be filed in accordance with the Implementing Regulations within four months of notification of the decision. R. 99 EPC sets out what the notice of appeal and the statement of grounds must contain.

The admissibility of an appeal can only be assessed as a whole (**T 382/96**, **T 1763/06**, **T 509/07**, **T 23/10**, **T 2001/14**). There is no support in the EPC for a notion of 'partial admissibility' of an appeal (**T 774/97**, **T 509/07**).

See also chapter V.A.11.3. "Appeal deemed not to have been filed".

2.1. Transitional provisions for the EPC 2000

If notice of appeal was filed before the revised EPC entered into force, the appeal's admissibility must be assessed under the provisions of the EPC 1973, in line with the principle (tempus regit actum) that entitlement to perform a procedural act is governed by the law in force when the act took place (**T 1366/04**).

In **J 10/07** (OJ 2008, 567) the board had to decide whether the EPC 1973 or the EPC 2000 applied. The decision whether an appeal is admissible according to the relevant provisions, geared to the fulfilment of the requirements for admissibility within a certain legally defined period, depends entirely on the substantive and legal position at the time of expiry of the time limits. Since the belated fulfilment of admissibility requirements after the expiry of the time limit cannot be taken into account in the examination of admissibility, so too a change in the legal position occurring after the expiry of the time limit for fulfilling the admissibility requirements can have no impact, either to the appellant's advantage or to his detriment, on the assessment of admissibility. In **T 2052/08**, the board, citing the finding in **J 10/07** that R. 103 EPC should not be applied to appeal cases concerning patent applications filed before the entry into force of the EPC 2000, found that, as **J 10/07** concerned the reimbursement of the appeal fee in situations where a substantial procedural violation had occurred at first instance, its conclusions should not be taken as implying a statement on the applicability of R. 103 EPC (see also **T 49/11**).

In **T 616/08**, the board found that, to the extent that it was relevant whether an aligned or the original version of a rule applied, there was a gap in the law which needed to be closed by case law as long as – like in the case of Art. 107, 109 and 111 EPC – the legislator was not active.

2.2. Appealable decisions

Under Art. 106(1), first sentence, EPC appeals lie from decisions of the Receiving Section, examining divisions, opposition divisions and the Legal Division. It is such decisions themselves rather than their grounds that are open to appeal (see **T 611/90**, OJ 1993, 50).

2.2.1 Departments

The boards can hear appeals only against the decisions taken by other EPO departments (**J 12/85**, OJ 1986, 155). There is thus no right of recourse to the boards of appeal in respect of extensions of patent applications and patents to the extension states. Instead, it is the respective national jurisdiction which is responsible (**J 14/00**, OJ 2002, 432; **J 19/00**, **J 9/04**, **J 2/05**, **J 4/05**, **J 22/10** and **J 9/11**). The board in **T 506/08** considered

that it was not competent to hear a request for a (partial) refund of the international search fee where no search had been performed. See also **T 2948/18**.

2.2.2 Whether there has been a decision

Whether a document constitutes a 'decision' or not depends on the substance of its content and not on its form (**J 8/81**, OJ 1982, 10; see also **J 26/87**, OJ 1989, 329; **J 13/92**, **T 263/00**). The criterion of substance has to be assessed in its procedural context (**T 713/02**, OJ 2006, 267, **R 4/18**). A "decision" needs to involve a reasoned choice between legally viable alternatives (**T 934/91**, OJ 1994, 184). According to **T 165/07**, the decisive question was whether the document (communication by a formalities officer), when objectively interpreted in its context, could have been understood by its addressees as a final, i.e. not merely preliminary, and binding determination of substantive or procedural issues by the department ("organ") of the EPO which had jurisdiction ("is competent"). In **J 12/19** the board shared this view, with the proviso that even a document issued by a department of the EPO that does not have jurisdiction may constitute a decision.

On this point, see also chapter III.K.3.1. "When is there a decision within the meaning of Rule 111 EPC?"

a) Examples of appealable decisions

(i) A formalities officer's letter rejecting the opposition as inadmissible was held to be an appealable decision in **T 1062/99**. (See also **G 1/02**, OJ 2003, 165, a referral occasioned by diverging decisions **T 1062/99** and **T 295/01**, OJ 2002, 251) on a formalities officer's competence to decide on the admissibility of an opposition).

(ii) A document (EPO Form 2901) concerned with the applicant's request for re-establishment in respect of the period for payment of the third renewal fee plus additional fee was deemed to be a decision in **J 7/08**.

(iii) A communication from the Legal Division to deny the opponent party status in the proceedings pursuant to R. 142 EPC and its resulting refusal to consider the observations and requests submitted by the opponent constituted a decision within the meaning of Art. 106 EPC (**J 12/19**).

b) Examples where the communication was not an appealable decision

The case law of the boards of appeal has established that the following are **not** regarded as appealable decisions:

(i) A request under R. 89 EPC 1973 (R. 140 EPC) for correction of a contested decision. Not until the request has been decided at first instance can the matter be referred to the board (**J 12/85**, OJ 1986, 155).

(ii) The preparatory steps referred to in Art. 96(2) EPC 1973 and R. 51(3) EPC 1973 (R. 71(3) EPC, **T 5/81**, OJ 1982, 249).

(iii) A communication under R. 57(1) EPC 1973 (R. 79 EPC, **T 222/85**, OJ 1988, 128), or R. 69(1) EPC 1973 (R. 112 EPC, **J 13/83**).

(iv) A communication from the opposition division finding that an opposition has been validly filed, and stating that the decision will be taken on that point at the oral proceedings (**T 263/00**).

(v) An order by a director of a department of first instance (such as an opposition division) rejecting an objection to a member of the division on the ground of suspected partiality. The composition of the division could, however, be challenged on such a ground in an appeal against its final decision or against a separately appealable interlocutory decision under Art. 106(3) EPC 1973 (**G 5/91**, OJ 1992, 617).

(vi) A "decision" by a director on a request for inspection of file (**J 38/97**).

(vii) A letter bearing the letterhead of an EPO DG and signed by an EPO Vice-President, if it is evident from its content that it does not constitute a decision and from its form that it does not emanate from any of the departments listed in Art. 21(1) EPC 1973 (**J 2/93**, OJ 1995, 675).

(viii) The consistent case law of the boards of appeal has been that the minutes of oral proceedings, and the correction thereof, are not decisions within the meaning of Art. 106 EPC (**R 4/18**, see **T 838/92**, **T 212/97**, **T 231/99**).

(ix) A communication from a formalities officer primarily dealing with the patentee's request to stay the opposition proceedings and to remit the case to the examination division for a decision on the request for correction under R. 89 EPC 1973 (**T 165/07**).

(x) A communication under R. 71(3) EPC. This is not intended to terminate the examination procedure but is rather a preparatory action and is therefore as such not appealable (**T 1181/04**, OJ 2005, 312; **T 1226/07**; **T 1377/15**).

(xi) When not acceding to a request to hold oral proceedings in Munich instead of The Hague, the examining division does not take a decision but only expresses the way the EPO is managed (**T 1142/12**, see also **R 13/14**).

(xii) A communication of information by which the appellant was informed that, as the decision to grant had been rectified under Art. 109 EPC, the examination procedure was resumed, and it was not possible to file an opposition during this part of the procedure (**J 22/12**).

(xiii) An order to take evidence is neither an appealable decision under Art. 106(1) EPC nor an interlocutory decision allowing a separate appeal within the meaning of

Art. 106(2) EPC. Instead, it is a case-management measure that precedes a substantive decision and cannot be reviewed as long as the proceedings are still pending (**T 1954/14**).

(xiv) A communication to change in a board's composition with regard either to the number of its members under Art. 21(4)(b) EPC 1973 or to the replacement of a member under Art. 4 of the BDS of the Technical Boards of Appeal is not a decision (**T 1676/08**).

(xv) Notification of the case number and the responsible board of appeal by the Registry did not constitute a decision under R. 69(2) EPC 1973 (R. 112 EPC) recognising that an appeal was pending (**T 371/92**, OJ 1995, 324; see also **T 1100/97** and **T 266/97**).

(xvi) A communication from the opposition division refusing a request for postponement of oral proceedings is not open to appeal and not an interlocutory decision against which a separate appeal must be allowed (**T 1967/20**).

T 26/88 (OJ 1991, 30), which held that a document stating that the patent was revoked under Art. 102(4) and (5) EPC 1973 did not constitute a decision, was overruled by **G 1/90** (OJ 1991, 275).

2.2.3 Interlocutory decisions

Under Art. 106(2) EPC (formerly Art. 106(3) EPC 1973) a decision which does not terminate proceedings as regards one of the parties (interlocutory decision) can only be appealed together with the final decision, unless the decision allows a **separate appeal**. The EPC does not explicitly set out the cases in which interlocutory decisions have to allow a separate appeal. Instead, the legislator has expressly left it to the department making the decision to decide whether to allow an appeal; see the "travaux préparatoires" for the EPC 1973 (**T 1954/14**). It is settled practice to allow a separate appeal against interlocutory decisions on admissibility of an opposition (see e.g. proceedings in **T 10/82**, OJ 1983, 407) or a finding that a patent as amended meets the requirements of the EPC (see e.g. **T 247/85** and **T 89/90**, OJ 1992, 456).

It is a requirement for admissibility of an appeal against an interlocutory decision within the meaning of Art. 106(2) EPC that the department of first instance allowed a separate appeal (**J 8/11**).

In **T 857/06** the board stated that a first interlocutory decision which does not allow a separate appeal can be appealed together with a second interlocutory decision which does not leave any substantive issues outstanding and which allows a separate appeal.

The board in **T 756/14** observed that allowing a separate appeal against an interlocutory decision under Art. 106(2) EPC is a constitutive decision by the examining decision without which the former decision cannot be challenged by way of an appeal and so this aspect must be included in the order too. See also **T 1967/20**.

2.2.4 Appeals against decisions of the boards of appeal

Art. 106(1) EPC does not provide for appeals against decisions of the boards of appeal. Appeals under Art. 106(1) EPC against final board decisions are therefore not possible and have to be rejected as inadmissible. A limited judicial review of decisions of the boards of appeal was introduced into the EPC 2000, in Art. 112a EPC. See chapter V.B.3."Petition for review under Article 112a EPC".

In **J 3/95** (OJ 1997, 493), the Legal Board referred a number of questions, including: In the context of the EPC, what administrative or jurisdictional measures should be taken in response to requests based on the alleged violation of a fundamental procedural principle and aimed at the revision of a decision taken by a board of appeal with the force of res judicata?

In **G 1/97** (OJ 2000, 322), the Enlarged Board answered the question as follows:

1. In the context of the EPC 1973, the jurisdictional measure to be taken in response to requests based on the alleged violation of a fundamental procedural principle and aimed at the revision of a final decision of a board of appeal having the force of res judicata should be the refusal of the requests as inadmissible.

2. The decision on inadmissibility is to be issued by the board of appeal which took the decision forming the subject of the request for revision. The decision may be issued immediately and without further procedural formalities.

3. This jurisdictional measure applies only to requests directed against a decision of a board of appeal bearing a date after that of the present decision.

4. If the Legal Division of the EPO is asked to decide on the entry in the Register of a request directed against a decision of a board of appeal, it must refrain from ordering that the entry be made if the request, in whatever form, is based on the alleged violation of a fundamental procedural principle and aimed at the revision of a final decision of a board of appeal.

This situation has not been changed by the introduction of a petition for review in Art. 112a EPC (**T 365/09**). According to the board, a first difference between appeal and petition evidently lay in the fact that, unlike Art. 106(1) EPC, Art. 112a(3) EPC clearly excludes a suspensive effect of the petition. Moreover, a petition for review can, according to Art. 112a EPC, only be based on fundamental procedural violations or defects during the appeal proceedings, which do not include questions relating to patentability. This can be derived from the exhaustive list of fundamental procedural violations and defects in Art. 112a(2) EPC and R. 104 and 105 EPC. This view has, in the meantime, been confirmed in **G 3/08** (OJ 2011, 10).

In **T 846/01** it was clear that the appellants were not contesting the substance of the opposition division's interlocutory decision, which dealt with the renumbering of the claims and the adaptation of the description, but were actually trying to reopen the issue of validity

which had already been decided in an earlier decision of a board of appeal. Under Art. 106 EPC 1973 and in view of the binding effect of board decisions, this finding in the decision was not open to challenge, even though the opposition division decision was accompanied by a form stating the decision was appealable. See also **T 2047/14** on this topic.

2.3. Board competent to hear a case

2.3.1 Technical or Legal Board of Appeal

a) General

The responsibilities and composition of boards are laid down in Art. 21 EPC. In **G 2/90** (OJ 1992, 10) the Enlarged Board made it clear that under Art. 21(3)(c) EPC 1973, the Legal Board was competent only for appeals against decisions taken by an examining division consisting of fewer than four members and which did not concern refusal of the application or grant. In all other cases, i.e. those covered by Art. 21(3)(a), 21(3)(b) and 21(4) EPC 1973, the technical boards were competent. The provisions of Art. 21(3) and (4) EPC 1973 governing responsibilities and composition were not affected by R. 9(3) EPC 1973 (R. 11(3) EPC).

b) Technical board of appeal competent

Article 21(3)(a) EPC expressly states that appeals against decisions concerning refusal of a European patent application or the grant, limitation or revocation of European patents are to be heard by the technical boards of appeal.

An appeal against a decision of an examining division refusing a request under R. 89 EPC 1973 (R. 140 EPC) for correction of the decision to grant was to be decided by a technical board of appeal (**G 8/95**, OJ 1996, 481, overruling **J 30/94**). (A board, however, has no appellate competence, in inter partes opposition appeal proceedings, to review the decision on correction of the grant decision taken in ex parte examination proceedings under R. 89 EPC 1973, since that decision does not form the subject of the appeal roceedings before it; see **T 79/07**, deviating from **T 268/02**; see also e.g. **T 1495/09**).

According to **T 1382/08**, for the purpose of determining competence under Art. 21(3) EPC 1973, a contradictory or unclear impugned decision is to be considered in the light of its legal consequences vis-à-vis the applicant or the impression given to the public as to its legal nature. In the case at issue, it was unclear whether the contested decision of the examining division was actually a refusal of the application or, instead, merely a refusal of a request for a refund of the search fee or confirmation of the loss of rights established in the R. 69(1) EPC 1973 (R. 112 EPC) communication. In the latter two cases, the Legal Board would have been competent to hear the appeal under Art. 21(3)(c) EPC 1973. The board found that the decision had the effect of a refusal, which meant that the technical board of appeal was competent.

However, in **J 16/13**, the board held that, where the formal order of an appealed decision is obviously erroneous to such an extent that it is essentially incomprehensible when compared with the reasons in the body of the decision, in particular when it plainly does not correspond to any of the foreseen possible legal effects flowing from the substantive issue underlying the appealed decision, and if the competence pursuant to Art. 21(3) EPC is supposed to change from one board to another only because of such an "impossible" order, the formal order can be disregarded for the purposes of Art. 21(3)(a) and (c) EPC, and rather the substantive request underlying the decision must be guiding in determining the board competent to decide the case (**T 1382/08** not followed).

c) Legal Board of Appeal competent

An appeal against the decision of the examining division refusing a request for corrections under R. 88 EPC 1973 (R. 139 EPC) filed after grant of the patent, on the other hand, is to be decided by the Legal Board. The appeal concerned the preliminary question of whether a request under R. 88 EPC 1973 could be made after grant. This was purely a question of law, and did not concern the refusal of a European patent application or the grant of a European patent. It was also consistent with **G 8/95**, as answering the preliminary question did not involve any consideration of the text with which the patent should be granted (**J 42/92**).

2.3.2 Specific cases

a) Interruption of proceedings

The question for the board in **T 854/12** was whether it was competent to decide itself whether proceedings had been interrupted under R. 142 EPC, or had to arrange for the Legal Division to take a decision in this regard. It found that a decision-making board had to ascertain for itself whether, based on the facts submitted and any additional facts it had had to investigate of its own motion, the conditions for an interruption had been met, if its decision depended on this point (see also **T 54/17**).

b) Request for a search-fee refund

In **G 1/11** (OJ 2014, A122) the Enlarged Board held that a technical board of appeal was competent to hear an appeal against an EPO examining division's decision – taken separately from its decision granting a patent or refusing the application – not to refund search fees under R. 64(2) EPC.

Where a request under R. 64(2) EPC for a refund of a further search fee paid under R. 64(1) EPC is first filed on appeal against an examining division decision, the board has no competence to decide on it and it must therefore be refused as inadmissible (**T 2076/15**).

c) Interlocutory revision and reimbursement of appeal fee

In **G 3/03** (OJ 2005, 344), the Enlarged Board held that in the event of interlocutory revision under Art. 109(1) EPC 1973, the department of first instance whose decision had been appealed was not competent to refuse a request of the appellant for reimbursement of the appeal fee. It was the board of appeal which would have been competent under Art. 21 EPC 1973 to deal with the substantive issues of the appeal if no interlocutory revision had been granted which was competent to decide on the request.

2.4. Entitlement to appeal

2.4.1 Formal aspects under Article 107 EPC

Under Art. 107, first sentence, EPC, an EPO decision can be appealed only by a party to the proceedings which gave rise to it. Concerning the entitlement to appeal of a transferee of a patent, see chapter III.O.1. "Party status as patent proprietor".

a) Appeal filed by wrong company

In **T 340/92** the appellant was a company which had obviously been named in the notice of appeal by mistake, instead of a subsidiary, which was the real opponent. The actual appellant was the only party adversely affected by refusal of the opposition, and was readily identifiable through its representative, who was named in the appeal dossier. The board held that this deficiency could be remedied under R. 65(2) EPC 1973 (R. 101(2) EPC). See also **T 875/06**.

However, if the notice of appeal was filed by an adversely affected party, but the grounds of appeal were filed by a different company which was not a party to the opposition proceedings, let alone a party adversely affected by the outcome of those proceedings, the appeal could not be held admissible. No provision having been made in the Implementing Regulations pursuant to Art. 133(3), last sentence, EPC 1973 the EPC 1973 did not allow the representation of one legal person by the employee of another economically related legal person, who could not therefore file the grounds of appeal on the other's behalf (**T 298/97**, OJ 2002, 83).

According to **G 1/12** (OJ 2014, A114), the identity of the appellant, i.e. the person entitled to appeal, has to be established by expiry of the two-month period prescribed in Art. 108, first sentence, EPC at the latest (see R. 101(1) EPC). In certain circumstances, errors in the information identifying the appellant can be corrected under R. 101(2) EPC (for more details on this, see chapter V.A.2.5.2).

b) Appeal filed in name of representative

An appeal filed in the name of the representative instead of the party adversely affected by the decision impugned was rejected as inadmissible in **J 1/92**.

In the absence of any clear indication to the contrary, a professional representative who was authorised to act for a party adversely affected by a decision and then filed an appeal against this decision had to be presumed to be acting on behalf of the very same party that he acted for in the first-instance proceedings, and not on behalf of someone else not entitled to appeal (**T 920/97**). Although the notice of appeal did not indicate the name and address of the appellant as required by R. 64(a) EPC 1973, the appellant corrected the notice of appeal in time and the appeal was thus admissible. See also **T 1911/09** and **T 2244/14**.

c) Party consisting of plurality of persons

If a party consists of a plurality of persons, an appeal against a decision which adversely affects this party has to be filed on behalf of all these persons through their duly determined common representative (see **G 3/99**, OJ 2002, 347, where multiple opponents file a joint opposition; **T 1154/06**, with respect to joint proprietors of a European patent; see also **R 18/09**, with respect to joint proprietors and a petition for review) (**T 755/09**).

In **G 3/99** (OJ 2002, 347), the Enlarged Board held that where the opposing party consisted of a plurality of persons, an appeal had to be filed by the common representative under R. 100 EPC 1973. Where the appeal was filed by a non-entitled person, the board of appeal was to consider it not to be duly signed and consequently invite the common representative to sign it within a given time limit. The non-entitled person who filed the appeal should be informed of this invitation. If the previous common representative was no longer participating in the proceedings, a new common representative should be determined pursuant to R. 100 EPC 1973 (R. 151 EPC). See also **R 18/09**. In order to safeguard the rights of the patent proprietor and in the interests of procedural efficiency, it had to be clear throughout the procedure who belonged to the group of common opponents or common appellants. If either a common opponent or appellant (including the common representative) intended to withdraw from the proceedings, the EPO had to be notified accordingly by the common representative or by a new common representative determined under R. 100(1) EPC 1973 in order for the withdrawal to take effect (see e. g. **T 562/13**).

Where an appeal is filed by **only one of several joint members** of a party and where this member is not the common representative, the board of appeal should send the common representative a communication giving him the opportunity to fulfil the necessary requirements of the EPC (see **G 3/99**, **T 1154/06**). If the common representative does not do so, the notice of appeal is deemed not to have been filed. Such an appeal is thus treated in the same way as an appeal filed but not signed by an authorised person (**R 18/09**; see also **T 755/09**).

In **T 755/09** the appeal was filed only on behalf of one of several persons who, at the time of filing the appeal, were the joint applicants of the application in suit (see Art. 59 EPC). In principle the appeal had therefore to be held inadmissible in accordance with R. 101(1) EPC. The board pointed out that the case did not come under the category calling for a communication under R. 101(2) EPC inviting the appellant to remedy deficiencies under R. 99(1)(a) EPC within a specified period (see **G 1/12**, OJ 2014, A114).

The notice of appeal was unambiguous nor did the appellant ever claim that the notice of appeal contained a deficiency under R. 101(2) EPC. The legal remedy foreseen in R. 101(2) EPC therefore could not apply (see also **T 656/98**, OJ 2003, 385).

An appeal filed by a party to the proceedings who is adversely affected by the contested decision is admissible even if it was jointly filed with a different company that was not a party to the proceedings (**T 158/19**).

d) Company in receivership

A company that has gone into receivership can no longer validly file an appeal; only the insolvency administrator can do so on its behalf. In **T 693/05**, the insolvency administrator had authorised the representative to file an appeal, which was held admissible. In **T 1324/06**, the authorised representative of a company which had previously been declared bankrupt filed an appeal on behalf of the company. Relying on R. 101(6) EPC 1973 and R. 152(8) EPC, under which the authorised representative shall be deemed to be authorised until the termination of his authorisation has been communicated to the EPO, the board held the appeal admissible, no such notification having been received from the insolvency administrator or representative.

e) Death of the appellant (opponent)

In **T 1213/13**, the board noted that the appellant, the only party to the proceedings adversely affected by the appealed decision, had died. The deadline set in the board's communication aiming to establish if there were any heirs had passed and the communication gone unanswered. It had therefore not been possible to identify any heirs (or legal representatives). Since the status of opponent could pass to any heirs, where an opponent was an appellant too, the heirs could pursue the appeal. However, they had to make themselves known and prove their status as such. The board declared the proceedings closed for want of an appellant to pursue them (see also **T 74/00**).

2.4.2 Party adversely affected (Article 107 EPC)

a) General

Under Art. 107 EPC, any party to proceedings adversely affected by a decision may appeal. A party is adversely affected within the meaning of Art. 107 EPC if the decision fails to meet that party's wishes. This had to be assessed by comparing the request at first instance with the substance of the decision (see **T 244/85**, OJ 1988, 216; **T 1682/13**). According to **T 234/86** (OJ 1989, 79) a party is adversely affected if the decision does not accede to his main requests or to auxiliary requests preceding the allowed auxiliary request (see also **T 392/91**). This is not the case if the patent proprietor withdraws his main request or preceding auxiliary requests and agrees with the allowed auxiliary request (**T 506/91**, **T 528/93**, **T 613/97**, **T 54/00**, **T 434/00**).

The question of whether or not a party is adversely affected by a decision taken by an authority as defined in Art. 106 EPC arises in connection with Art. 107 EPC in order to establish who may appeal.

An appeal is inadmissible where the appellant is seeking to amend not the decision itself but the reasons for it (**T 84/02**) or the sole aim is to settle a point of law not relevant to the case (**J 7/00**, see also **T 1790/08**). Abandoning claims to have a prompt decision in order to be in a position to appeal results in the appeal being inadmissible where the patentee's requests were actually granted by the opposition division (**T 848/00**).

In **T 735/13**, the board held that appellants who had agreed with a decision at the time but later changed their minds could not be regarded as adversely affected; an adverse effect required a discrepancy between the decision and what they had been requesting when it was issued (see also **T 1558/21**).

b) Patent applicant

(i) Decision to grant the patent

In **J 12/83** (OJ 1985, 6) the board found that an applicant for a European patent might be "adversely affected" within the meaning of Art. 107 EPC 1973 by a decision to grant the patent, if the patent was granted with a text not approved by him under Art. 97(2)(a) EPC 1973 and R. 51(4) EPC 1973 (R. 71(3) EPC) (see also **J 12/85**, OJ 1986, 155; **T 114/82** and **T 115/82**, both OJ 1983, 323 and **T 1/92**, OJ 1993, 685).

In **T 1003/19** the appellant was adversely affected despite the decision to grant a patent. The granted version of the patent corresponded neither to a text submitted by the applicant nor to a text agreed by it, nor to a text deemed to have been approved by it. There was, therefore, a discrepancy between the applicant's request and the decision of the examining division. R. 71(5) EPC only applied where the text intended for grant had been communicated to the applicant according to R. 71(3) EPC. In the board's view, this was not the case, where there was sufficient evidence to conclude that the text referred to in the communication under R. 71(3) EPC did not reflect the true will of the examining division. See also **T 2081/16**.

Following **T 1003/19** and **T 2081/16**, the board in **T 408/21** stated that R. 71(5) EPC did not apply in this case either, as in the step preceding the deemed approval the applicant had to be informed of the text in which the examining division intended to grant the patent according to R. 71(3) EPC. Although the (then) applicant received a R. 71(3) EPC communication, the documents indicated were not those which the examining division intended to grant.

In **T 2277/19** the board stated that the appellant was not adversely affected by the decision to grant a patent. The board did not follow the approach taken in **T 1003/19** and **T 2081/16**. In the board's judgement, R. 71(3) EPC imposed on the applicant a duty to check and verify the text. The fact that an applicant did not exercise its right to request amendments

under R. 71(6) EPC could only be interpreted as approval of the communicated text, i.e. the text intended for grant.

In **T 265/20** the board found that the appellant was adversely affected by the decision to grant a patent, as all the drawing sheets as requested were missing from the text of the granted patent. The board referred to **T 2277/19** (see above), in which the facts were different from the outset. In that case, the original application contained the description pages, the claims and drawing sheets 1/18 to 18/18. During the examination proceedings, the applicant filed amended drawing sheets 1/7 to 7/7 to replace drawing sheets 1/18 to 18/18 of the application as filed. Drawing sheets 1/7 to 7/7 were included in the text communicated to the applicant under R. 71(3) EPC, but drawing sheets 8/18 to 18/18, were also included. The applicant then approved the text intended for grant subject to minor amendments. The board held the appeal inadmissible on the ground that the appellant was not adversely affected. The facts of the case in hand differed in that no drawings at all, i.e. neither the requested ones nor any others, were included in the text communicated to the applicant under R. 71(3) EPC and the Druckexemplar, and in that no explicit approval was given, but approval was rather deemed to have been given.

In **T 646/20** the applicant had approved the text intended for grant and the corresponding bibliographical data. The appellant filed an appeal against the decision to grant and requested correction of the designation of member states and the addition of further states. The board held that the applicant's approval in response to the notification under R. 71(3) EPC also related to the designated member states, and the decision to grant subsequently rendered by the examining division matched the contents of the notification and the applicant's approval. The board concluded that the appellant was not adversely affected.

For more details on this, see also chapter IV.B.3.2. "Approval of the text by the applicant".

(ii) Other cases

An applicant was 'adversely affected' and thus able to file an appeal where the examining division had rectified its decision but refused to grant reimbursement of the appeal fee (**J 32/95**, OJ 1999, 733).

The grounds forming the basis of a decision on rectification should not be interpreted to mean only the legal basis of the decision, but also the factual reasons supporting the legal basis. An applicant adversely affected by the **factual basis** was thus considered adversely affected in **T 142/96**.

In **J 17/04** the board found that although the notice of appeal only referred to a correction of the decision under appeal under R. 88 and 89 EPC 1973, the appellant made therewith (implicitly) the allegation that the decision under appeal incorrectly limited the regional scope of the patent and that this decision should be set aside. The board was therefore satisfied that the appellant had sufficiently claimed to be adversely affected and the appeal was admissible.

In **J 5/79** (OJ 1980, 71) the board ruled that an applicant whose priority right was found to have lapsed because he failed to file the priority documents was no longer adversely affected if re-established in his rights before the application was published.

c) Patent proprietor

In **T 457/89**, by analogy with **G 1/88** (OJ 1989, 189), the board took the view that the appellant (patentee) was adversely affected by the decision revoking his patent, despite failing to comment on a communication within the time specified in an opposition division's invitation under Art. 101(2) EPC 1973. For, according to **G 1/88**, wherever non-compliance could lead to loss of rights, the EPC 1973 always expressly indicated this and Art. 101(2) EPC 1973 made no provision for any loss of rights. See also **T 1103/21**.

In **T 73/88** (OJ 1992, 557) the board ruled that if a patentee's request that his patent be maintained was upheld by a decision of the opposition division, he could not appeal against adverse reasoning in the decision (here, regarding his claim to priority) because he was not adversely affected by it within the meaning of Art. 107 EPC 1973.

One of the principles representing the fundamental value of legal procedural certainty was that a party was not to be regarded as adversely affected within the meaning of Art. 107 EPC 1973 by a decision which granted his final request. A request under R. 88 EPC 1973 for correction of a document as the sole reason for the appeal was inadmissible (**T 824/00**, OJ 2004, 5). In this case the proprietor had requested correction under R. 88 EPC 1973 (R. 139 EPC) of his letter withdrawing all requests (see also **T 961/00** and **J 17/04**).

In **T 528/93** a request was withdrawn during opposition proceedings and was thus not the subject of the contested decision. The board decided that a virtually identical request filed during appeal proceedings was not the subject of the appeal, because the appellant was not adversely affected by the decision of the opposition division as far as this request was concerned.

In **T 327/13** the board found that, to establish whether a party has been adversely affected by a decision, it is not enough to consider the end result in isolation, but to consider the party's complete case, as is defined in Art. 12(2) RPBA 2007, in conjunction with the substance of the decision. Although the board noted that it was clear that the appellants were adversely affected by the opposition division's decision not to accede to the then main request, the decision had not been contested with the appeal. The board therefore concluded that they could not be regarded as "adversely affected" under Art. 107 EPC.

The argument that the discovery of a prior art disclosure in national proceedings meant that the patent proprietor had subsequently become adversely affected was rejected in **T 591/05** – by granting the patent the department of first instance had acceded to the then valid request of the appellant.

In **T 332/06** the patent proprietor's appeal was admissible at the time it was filed but became inadmissible when the statement of grounds was received, as the patent

proprietor only contested that portion of the decision relating to the claims for the contracting state DE. However, these claims for DE had been allowed by the opposition division and were identical to the claims for DE in the patent proprietor's initial main request, which had been rejected only as regards the other contracting states. The patent proprietor was therefore not adversely affected with respect to DE.

In **T 1783/12** the opposition division had refused the main request that the opposition be rejected as inadmissible. The appellant (patent proprietor) had therefore been adversely affected by this procedural aspect of the decision under appeal. However its statement of grounds of appeal had not set out why this aspect should be set aside, instead explicitly addressing only why the patent should be maintained as granted. Moreover, at first instance it had requested the maintenance of the patent in amended form, and this request had been granted. Summing up, the board held that at the relevant point in time under Art. 108 EPC – the filing of the statement of grounds of appeal – (a) no reasons had been given why the decision not to reject the opposition as inadmissible should be set aside; and (b) the substantive request for the maintenance of the patent as granted did not result from an adverse effect within the meaning of Art. 107 EPC. The appeal was therefore inadmissible.

In **T 611/15** the opposition division maintained the patent in amended form based on auxiliary request VIII. The proprietor had argued that it had withdrawn only the auxiliary requests filed in writing before the oral proceedings, not the main request. However, the minutes stated that the representative of the proprietor announced that he would withdraw all other requests so that auxiliary request VIII as filed during the oral proceedings represented the main and sole request of the proprietor. In the absence of any request for correction of the minutes, the board assumed that these statements accurately reflected the state of the proprietor's requests. Given that the decision on this request was in favour of the proprietor it followed that the proprietor was not adversely affected by the decision.

d) Opponent

(i) Rule 82(1) EPC

Under R. 82(1) EPC (previously R. 58(4) EPC 1973), before the opposition division decides to maintain the patent as amended, it shall inform the parties of the text in which it intends to maintain the patent and shall invite them to file their observations within two months if they disapprove of that text.

The Enlarged Board found in **G 1/88** (OJ 1989, 189) that the fact that an opponent had failed, within the time allowed, to make any observations on the text despite an invitation to do so under R. 58(4) EPC 1973 did not render his appeal inadmissible. To regard silence as betokening consent would be tantamount to withdrawal of the opposition with consequent surrender of the right to appeal. Surrender of a right could not be simply presumed. Deeming silence to be equivalent to surrender would also be inconsistent with the logic of how the EPC operated, since it would be at odds with the way in which it dealt with the loss of rights. Where the legal consequence of an omission was to be a loss of rights, this was expressly stated. Furthermore, under Art. 164(2) EPC 1973 the

Implementing Regulations had always to be interpreted in the light of the EPC. The interpretation of the Implementing Regulations which corresponded most closely to the principles of the EPC thus prevailed. It was a principle of the EPC, however, that parties' rights were safeguarded by the possibility of appeal to at least one higher-ranking tribunal. The Implementing Regulations should therefore be construed in such a way that R. 58(4) EPC 1973 was not allowed to interfere with the right of appeal under Art. 106 and 107 EPC 1973. This interpretation in the light of the sense and purpose of the procedure under R. 58(4) EPC 1973, leads to the same goal.

In **T 156/90** the opponent had stated that he would have no objection to maintenance of the patent if the claims were amended in a specified way, which they were. His subsequent appeal was dismissed as inadmissible; his argument that the circumstances had changed and he was no longer bound by his consent failed.

In **T 266/92** of 17 October 1994 the opponent had declared in opposition proceedings that he would withdraw his request for **oral proceedings** if the patentee agreed to an amended wording of the patent, as he did. The board held that the appellant was adversely affected within the meaning of Art. 107 EPC 1973, and was entitled to appeal; withdrawal of a request for oral proceedings did not in itself imply withdrawal of any other existing request (see also **T 25/15**).

In **T 833/90** the board held that an appeal should be considered admissible if it was not clear or ascertainable whether the opponent (appellant) had agreed to maintenance of the patent. This was followed in **T 616/08**.

(ii) Opponent adversely affected

In **T 273/90** the board concluded that legal uncertainty arising from **inadequate adjustment of the description** to amended claims constituted sufficient grievance, as the commercial interests of the appellant (opponent) could be adversely affected (likewise **T 996/92**).

In **T 1178/04** (OJ 2008, 80) the board found the appeal filed by the opponent admissible even where the **validity of the opponent's status** was challenged following a disputed transfer, as a person was a party to proceedings for the purposes of Art. 107 EPC 1973 even if his entitlement to take part in such proceedings was brought into question. A decision that he was not entitled to take part in the proceedings would have the effect that he was no longer entitled to take part in the proceedings, but not that he had never been a party. See also **T 1982/09**.

It is not necessary for an opponent to have a **continuing interest**, financial or otherwise, in the prosecution of the opposition or appeal; it suffices that the decision does not accede to one of its substantive requests (**T 1421/05** following **T 234/86**, OJ 1989, 79).

(iii) Opponent not adversely affected

In **T 299/89** the board considered the extent of entitlement to appeal of an opponent who in his opposition had requested only partial revocation but in his appeal wanted the whole patent revoked. It decided that this was determined by the scope of the original request made in the opposition. The opponent was only adversely affected within the meaning of Art. 107 EPC 1973 **to the extent that this request was not granted**, and he could not on appeal file a wider request.

An opponent is not adversely affected by **obiter dicta reasons** given in a revocation decision and favourable to the patent proprietor, and which it is appropriate for the opposition division to include to obviate remittal in the event of revocation being reversed on appeal (**T 473/98**, OJ 2001, 231).

A respondent (opponent) which is not adversely affected by a decision revoking the patent is not entitled to file an appeal for the sake of **acquiring an independent appellant status** instead of the status of a respondent (party as of right) (**T 193/07**). The board considered that its conclusion was in accordance with the established jurisprudence of the boards of appeal (see e.g. **T 981/01**, **T 1147/01**, **T 854/02**, **T 1341/04**). The board also pointed out that purely hypothetical considerations put forward by the opponent in support of the admissibility of its appeal concerning potentially disadvantageous situations that might occur (in the future) in related national litigation proceedings had no legal relevance under Art. 107 EPC.

In **T 1569/11** the opponents did not seek to challenge the decision of the opposition division (i.e. revocation of the patent) but the reasons for the decision. In particular, the opponents wanted the patent to be found invalid under Art. 100(c) EPC. The board noted that, in doing so, they misunderstood the nature and purpose of opposition appeal proceedings, which are not to re-examine a patent but to decide whether or not a first instance decision is correct (cf. **T 854/02**; **T 437/98**, OJ 2001, 231; **T 193/07**).

In **T 735/13** the opponent had not raised during the oral proceedings before the opposition division any of the objections under Art. 100(a), (b) and (c) EPC to the second auxiliary request that it then had in its grounds of appeal. Since patents as granted and maintained could be opposed only for one of the reasons allowed under the EPC, the opponent had not been adversely affected by the maintenance of the patent as per the second auxiliary request, at least not for any of the reasons it had given on appeal.

2.4.3 Procedural status of the parties

a) Parties to appeal proceedings

Under Art. 107, second sentence, EPC the parties to proceedings before the department of first instance are also parties to the ensuing appeal proceedings, even if they have not personally filed an appeal. Pursuant to Art. 99(3) EPC, opponents as well as the patentee are parties to opposition proceedings. In addition, Art. 105 EPC makes provision for intervention by the assumed infringer. For further details, see chapter III.P. "Intervention".

As a matter of principle, the boards of appeal have to examine the question of party status ex officio before dealing with the substance of the case (cf. e.g. **T 384/08**, **T 540/13**).

In **T 811/90** (OJ 1993, 728) opposition proceedings had been concluded and the time limit for lodging an appeal had expired. Only the patent proprietor lodged an appeal, but against a separate decision on a point incidental to the opposition (removal of documents from the public part of the file). It was held that the other party had no right to be a party to the appeal as he had not been a party to the relevant decision.

However, in a decision concerning an appeal against a Legal Division decision refusing to suspend grant proceedings under R. 13 EPC 1973 (R. 14 EPC), the applicant was to be treated as a party to the proceedings. The request for suspension could not be separated from the grant proceedings. The applicant's legal position was directly affected by suspension, because for its duration he was denied the rights under Art. 64(1) EPC 1973 (**J 33/95** of 18 December 1995).

An applicant who was not heard when grant proceedings were suspended at a third party's request pursuant to R. 13 EPC 1973 could still challenge the justification for that suspension. He was a party as of right to any appeal proceedings initiated by the third party against rejection of the latter's request by the EPO (**J 28/94**, OJ 1997, 400).

In **T 643/91** the **appeal** of opponent 1 was rejected as inadmissible. Opponent 2 filed an admissible appeal. Opponent 1 was considered by the board to be "any other party to the proceedings" under Art. 107 EPC 1973 and, as a consequence, to be a party as of right in the appeal proceedings of opponent 2.

In **T 898/91** it was held that an opponent whose **opposition** had been rejected as inadmissible by the opposition division and who had not filed an appeal against this decision was not entitled to be a party to any appeal proceedings brought by the patent proprietor, because it ceased to be a party to the opposition proceedings once the decision on the admissibility of its opposition took full legal effect.

T 540/13 followed **T 1178/04** (OJ 2008, 80) rather than **T 898/91**. The board stated that when an opposition division decides that an opposition is inadmissible in a case where at least one other admissible opposition has been filed, it is not necessary for the opponent of the opposition held inadmissible to appeal this decision in order to preserve its party status in appeal proceedings initiated by another party.

Where two opponents lodge appeals contesting different sets of claims and one subsequently withdraws its appeal, it becomes a party as of right under Art. 107 EPC and the other opponent becomes the sole appellant (see e.g. **T 233/93**).

Where a company is dissolved and thus ceases to be a legal person, it loses its capacity to be a party to any proceedings. If it was the original appellant, the appeal consequently lapses (**T 353/95** and **T 2334/08**). However, a party's opponent or appellant status does not lapse merely as a result of bankruptcy proceedings being issued (**T 696/02**). See also

G 1/13 (OJ 2015, A42) on recognising a company's retrospective restoration under national law (see below in this chapter V.A.2.4.3 d)).

Third parties commenting under Art. 115 EPC 1973 on the patentability of the invention claimed are not parties to the proceedings before the EPO. See also chapter III.N. "Observations by third parties".

b) Rights of parties under Article 107 EPC

In appeal proceedings, the case law recognises the right of all parties to be heard (see **J 20/85**, OJ 1987, 102; **J 3/90**, OJ 1991, 550; **T 18/81**, OJ 1985, 166; **T 94/84**, OJ 1986, 337; **T 716/89**, OJ 1992, 132). The parties also have a right to oral proceedings.

Furthermore, **G 1/86** (OJ 1987, 447) recognised the validity of the principle that all parties must be treated equally in similar legal situations in proceedings before the boards of appeal.

Decision **T 73/88** (OJ 1992, 557) deduced from this that all parties to proceedings had the right to continue appeal proceedings. If there was already one valid appeal, no further appeals were needed and the fees paid for appeals filed later had to be refunded. However, in decision **G 2/91** (OJ 1992, 206) the Enlarged Board disagreed. It took the view that from the legal point of view the status of parties who had filed an appeal was not comparable with that of those who had not. It was clear from generally recognised principles of procedural law that the appellant alone could decide whether the appeal filed by him was to stand. Art. 107, second sentence, EPC 1973 only guaranteed non-appellants who were party to proceedings of the first instance that they were parties to **existing** appeal proceedings. A person who was entitled to appeal but did not do so, settling instead for being "automatically" a party to the appeal proceedings, had no independent right of his own to continue those proceedings if the appellant withdrew his appeal. He acquired that right only by filing an appeal himself and paying the associated appeal fee. By the same token, there was also no reason to refund the fee for any appeals filed after the first, unless the requirements of R. 67 EPC 1973 (R. 103 EPC) were met. The related issue of whether non-appealing parties can file substantive requests is dealt with in **G 9/92** and **G 4/93** (both OJ 1994, 875; see also chapter V.A.3.1. "Binding effect of requests – no reformatio in peius").

Also in **T 864/02** the board found that, according to some case law, a non-appealing party as of right did not have the same procedural status in all respects as did an appellant e.g., it did not have an independent right to continue appeal proceedings if the appellant withdrew its appeal (see **G 2/91**, OJ 1992, 206 and **G 9/92**, OJ 1994, 875). However, the case law also confirmed the right to be heard of all parties to pending proceedings (principle that all parties must be treated fairly and equally). The party as of right was thus entitled to raise a novelty objection where the notice of opposition had raised this ground and the submission therefore lay within the framework of the opposition procedure. In **T 591/01** and **T 475/97** the respective parties as of right were allowed to submit requests.

c) The boards' duty of impartiality in inter partes proceedings

In **T 1072/93** the board held that the freedom of the board to offer specific advice to one of the parties as to how an objection might be overcome, even when such an objection stemmed from the board itself, was severely limited, especially in inter partes proceedings where the preservation of judicial impartiality was a paramount requirement. In **T 253/95**, the same board confirmed that boards of appeal in inter partes proceedings must be strictly impartial and found that alerting a party to a possible argument against him and on a ground on which the burden of proof rested on him, in advance of the oral proceedings, would amount to a clear violation of the principle of impartiality, irrespective of the fact that the communication setting out such an argument would also be sent to the other party. In **T 394/03** the board held that, even though the opposition division's decision to reject the opposition had been annulled, it was not necessary, in the absence of a request, to give the patentee and respondent another opportunity to comment, nor, given the impartiality of the board, was there any requirement on principle to do so.

d) Existence of a company

In the case underlying **G 1/13** (OJ 2015, A42) an opposition had been filed by a company which subsequently, under the relevant national law governing the company, for all purposes had ceased to exist. However, the company was subsequently restored to existence under a provision of that governing national law, by virtue of which the company was deemed to have continued in existence as if it had not ceased to exist. The Enlarged Board held that the EPO had to recognise the retroactive effect of that provision of national law. Thus, where a valid appeal was filed in due time in the name of the non-existent opponent and the restoration of the company to existence with retroactive effect took place after the expiry of the time limit for filing the notice of appeal under Art. 108 EPC, the board of appeal had to treat the appeal as admissible. The Enlarged Board referred to the clearly established principle under the EPC that national law should be referred to in order to determine whether a legal entity existed or had ceased to exist, and had capacity to act. The Enlarged Board also considered that the EPO should follow national law as regards the deemed retrospective existence of such a legal entity. This was merely to apply the general principle that such issues are the exclusive concern of national law.

In **T 796/12** the patent proprietor raised the objection that company Z, which was registered as the appellant (opponent), had been dissolved as a result of a bankruptcy procedure before the appeal had been filed. Hence, the opponent had ceased to exist as a legal person before the filing of the appeal and could not file the appeal or be the appealing party in the opposition-appeal proceedings. The board stated that whether an opponent to an ongoing opposition appeal case can validly be regarded as a legal entity and act in these proceedings is a matter of national law of the state where the company is incorporated, see **G 1/13** (OJ 2015, A42); in the case at issue that state was Germany. Under German law, even a company removed from the company register could validly perform procedural acts, such as filing a lawsuit in cases where a dispute is related to any form of economic interest. The board thus held that the opponent could file a valid appeal even after its removal from the company register.

2.5. Form and time limit of appeal

2.5.1 Electronic filing of appeal

The EPO's online filing systems can be used to file notice of appeal and all subsequent documents (see decision of the President concerning the electronic filing of documents dated 14 May 2021, OJ 2021, A42). Art. 3 of the President's decision dated 3 March 2021, however, rules out using the **Web-Form Filing** service in appeal proceedings.

In **T 1633/18** the applicant submitted both the notice of appeal and a further letter by using the EPO Web-Form Filing service. The board stated that this service could not be used for filing documents in respect of appeal proceedings (see Art. 3 of the decision of the President of 14 May 2021, OJ 2021, A42). If documents in respect of appeal proceedings were nonetheless filed using the EPO Web-Form Filing service, they were deemed not to have been received. In such a situation the sender, if identifiable, should be notified without delay. In the case in hand, the EPO did not notify the applicant in conformity with this provision. Since both letters had been received well before the expiry of the respective time limits (for filing the appeal and for filing a statement of grounds of appeal), by not observing its duty to inform the appellant without delay, the EPO deprived it of the opportunity to resubmit its letters by a correct means of filing. As the appellant resubmitted its letters in a correct manner in reply to the board's communication pursuant to R. 100(2) EPC and as the EPO failed to notify the appellant of its incorrect use of the Web-Form Filing service, the appellant had to be treated, in accordance with the principle of the protection of legitimate expectations, as if it had submitted these letters in a correct manner before the expiry of the respective time limits. See also **T 1295/20**, in which the board held that the principle of the protection of legitimate expectations was to be applied where the deficiency – in the case in hand: the appellant's address had been filed via Web-Form Filing – could be readily identified by the EPO in the course of its normal handling of the case at the procedural stage in question and could still be corrected by the appellant in time.

The decisions reported below relate to cases settled before the previously applicable President's decision of 10 November 2015 concerning electronic filing of documents (OJ 2015, A91) entered into force (on 16 November 2015).

Under Art. 108 EPC 1973, notice of appeal was filed in **writing**. Art. 108 EPC was amended when the EPC was revised. It now requires appeals to be filed **in accordance with the Implementing Regulations** (see R. 99 EPC). Thus an appeal filed via electronic means (*epoline*®), not being "in writing" was rejected as inadmissible in **T 781/04** of 30 November 2005 and **T 991/04** of 22 November 2005, referring to the notice from the EPO dated 3 December 2003 concerning the My *epoline*® portal. Referring to **T 781/04**, **T 991/04** and **T 514/05** (OJ 2006, 526), the board in **T 765/08** stated that documents purporting to be documents filed subsequently for the purposes of R. 2(1) EPC (here the notice of appeal) must be deemed not to have been received if they are filed by technical means not approved by the President of the EPO. This applies even if the means of transmission is subsequently allowed (**T 331/08**, following **T 514/05**); the board was not entitled to exercise discretionary power to consider whether the appeal, filed via *epoline*®,

might nonetheless be deemed to have been filed, since i) to do so would be tantamount to exercising legislative power; 2) such legislative power was however clearly delegated in R. 36(5) EPC1973 to another authority within the EPO, namely the President; 3) thus pursuant to Art. 23(3) EPC1973 the board was precluded from examining whether this purported notice of appeal could be deemed to have been received, since such a procedure would be ultra vires; 4) it was immaterial that this means of communication was now permitted for the filing of appeals. It was the law and instructions in place at the time of filing which had to be applied. The board in **T 1090/08** also found the appeal inadmissible, but on the facts of the case granted re-establishment of rights.

In **T 1427/09** of 17 November 2009 the notice of appeal and statement of grounds were filed in due time but the electronic signatures were not issued to a person authorised to act in the proceedings, in contravention of Art. 8(2) of the decision of the President concerning the electronic filing of documents (OJ 2009, 182), which was silent on the legal consequences of non-compliance. The board held that the principle that the signature of an unauthorised person should be treated like a missing signature, as set out in **T 665/89**, should apply not only to handwritten signatures, but also to electronic signatures. The electronic filing of a document in appeal proceedings accompanied by the electronic signature of an unauthorised person should therefore be treated under R. 50(3) EPC like the filing of an unsigned document per mail or telefax in the same proceedings.

2.5.2 Form and content of notice of appeal (Rule 99(1) EPC)

Rule 99(1) EPC defines the content of the notice of appeal to be filed within the period specified in Art. 108 EPC. Under R. 99(1) EPC the notice of appeal shall contain, under R. 99(1)(a) EPC, the **name and address of the appellant**, under R. 99(1)(b) EPC an **indication of the decision impugned** and under R. 99(1)(c) EPC, a **request** defining the **subject** of the appeal.

A notice of appeal is a declaration directed to the EPO of the intention to challenge a particular decision by means of an appeal. The declaration of the intent to file an appeal must be clear and unambiguous (**T 551/15**).

The requirement of R. 99(1)(c) EPC takes into account the fact that the appellant's initial request, according to **G 9/92** and **G 4/93** (OJ 1994, 875) and **G 1/99** (OJ 2001, 381) defines the subject of the appeal and thereby the framework of the appeal proceedings.

a) Name and address of the appellant – Rule 99(1)(a) EPC

Under R. 99(1)(a) EPC the notice of appeal must contain the name and address of the appellant as provided in R. 41(2)(c) EPC (see also R. 64(a) EPC 1973, according to which the notice of appeal had to contain the name and address of the appellant in accordance with the provisions of R. 26(2)(c) EPC 1973).

– Appellant sufficiently identified

According to **T 624/09** it has become established case law that the provisions of R. 99(1)(a) EPC are satisfied if, as in the case in hand, the notice of appeal contains sufficient information for identification of a party (see e.g. **T 483/90**, **T 613/91** and **T 867/91**). In **T 483/90** the appellant's name was incorrectly given and its address was missing but the number of the contested patent and the name and address of the professional representative were the same as those cited in previous proceedings. In **T 613/91** the appellant's precise address was missing from the notice of appeal, but was known to the parties and the board from the opposition proceedings. In **T 350/13** there was sufficient information available to identify the appealing party (opponent); the notice of appeal indicated the number of the European patent, the decision of the opposition division and the name of the patent proprietor. Also in **T 624/09** (the notice of appeal did not contain the appellant's address), **T 1636/13** and **T 1712/10** it was possible to identify the appellant when the appeal was filed. It was alleged in **T 899/95** that the opponent was a legal entity but was not identified by its official designation; its identity was, however, clear. In **T 786/11**, the board held that "IS Limited" did not change its legal identity by being transferred to Mauritius (see also **T 1458/12** and **T 1201/14**).

An appeal filed by an appellant whose name was changed before the appeal was filed without indicating the change of name met the requirements of R. 64(a) EPC 1973 (R. 99(1)(a) EPC), provided that the appellant was identifiable (**T 157/07**). See also **T 1/97**, **T 786/00** and **T 866/01**. According to **T 866/01**, the requirement regarding sufficient identification of the appellant was to be considered to be met whenever it is possible to establish beyond reasonable doubt the identity of the appellant on the basis of all information provided by the appellant or his legal representative within the time limit under Art. 108 EPC or in the previous proceedings, including any such information contained in the decision under appeal. In **T 350/19** the appellant (patent proprietor) had indicated a different address in its notice of appeal than in the Register and only subsequently requested a change of the address in the Register. The board held that R. 99(1)(a) EPC cannot be interpreted to require that an address indicated in the notice of appeal be identical to the address in the Register. It is irrelevant for admissibility that the appellant had requested a change of its address in the European Patent Register and when this change became effective. What matters is whether the appellant can be properly identified.

In **T 2561/11** the notice of appeal was only signed by the opponent's representative without mentioning the opponent. The board was satisfied that a reader willing to understand would have understood, before the end of the time limit for filing an appeal, that the notice of appeal had been filed on behalf of the opponent.

– Missing address

In **T 314/15** the notice of appeal of the appellant (opponent) did not contain an address. This deficiency had however been remedied according to the procedure prescribed in R. 101(2) EPC. See also **T 662/09** and **T 819/15**.

In **T 1295/20**, the board considered that the principle of protection of legitimate expectations applied and that the deficiency resulting from the missing address had been remedied in time.

However, in **T 938/94**, where the appellant's name and address were not stated in the notice of appeal and it failed to give this information within the time limit set by the invitation pursuant to R. 65(2) EPC 1973 (R. 101(2) EPC), the appeal was rejected as inadmissible (see also **T 774/05**, in which the appeal was rejected as inadmissible, as the appellant's address was not given in the notice of appeal).

– Error in information identifying the appellant

Several decisions have allowed correction of the name of the appellant to substitute a natural or legal person other than the one indicated in the appeal. Where there is objectively a deficiency in the notice of appeal indicating a genuine error as regards the identity of the appellant and there is objective evidence in the file indicating with a sufficient degree of probability who the appellant should be, then the notice of appeal may be corrected under R. 101(2) EPC (**T 1961/09**, following **T 97/98**, OJ 2002, 183; see also **T 15/01**, OJ 2006, 153; **T 715/01**; **T 707/04**; **T 875/06**; **T 540/09**; **T 662/09**).

Thus, an appeal filed by mistake in the name of an opponent who no longer exists but who has a universal successor, and which was obviously intended to be filed on behalf of the person who is the actual opponent and who was prejudiced by the decision, namely the universal successor, is admissible (**T 1421/05**).

In **T 445/08** (OJ 2012, 588) it was undisputed that the notice of appeal as filed was not admissible because the appellant company had not been a party to the opposition proceedings and accordingly was not adversely affected by the appealed decision. It was no longer the patent proprietor. The questions the board referred to the Enlarged Board included whether the request for correction, which would result in the appeal being admissible, was possible pursuant to R. 101(2) or 139 EPC. The request was filed only after expiry of the relevant two-month period provided for by R. 101(1) EPC.

In **G 1/12** (OJ 2014, A114) the Enlarged Board reformulated the question originally posed in **T 445/08** (OJ 2012, 588) to ask whether, when a notice of appeal, in compliance with R. 99(1)(a) EPC, contains the name and the address of the appellant as provided in R. 41(2)(c) EPC and it is alleged that the identification is wrong due to an error, the **true intention** having been to file on behalf of the legal person which should have filed the appeal, it is possible to correct this error under R. 101(2) EPC by a request for substitution by the name of the true appellant. See later on in this chapter for the Enlarged Board's findings in **G 1/12** on whether a wrong name can be corrected under R. 139 EPC.

The Enlarged Board answered that it was possible, provided the requirements of R. 101(1) EPC had been met. Given the explicit reference in R. 101(1) EPC to Art. 107 EPC and the possibility of remedying deficiencies only within the two-month appeal period under Art. 108, first sentence, EPC, the identity of the appellant, i.e. the person entitled to appeal, had to be established by expiry of the two-month period prescribed in Art. 108, first sentence, EPC at the latest. R. 101(2) EPC concerns deficiencies concerning the indication of the appellant's name and address as prescribed by R. 99(1)(a) EPC. They may be remedied irrespective of the time limits pursuant to Art. 108 EPC, upon invitation by the board of appeal (see also **T 755/09**).

The Enlarged Board thus fully endorsed the case law (see above), in which it was considered that an incorrect indication of the appellant's identity is a deficiency which can be remedied, provided its correction does not reflect a later change of mind as to whom the appellant should be, but on the contrary only expresses what was intended when filing the appeal.

In **T 979/12** the board noted that according to **G 1/12**, the board must establish the true intention of the appellant "on the basis of the information in the appeal or otherwise on file, i.e. ascertain who must be deemed in all likelihood to have filed the appeal...".

In **T 2564/12**, too, the true appellant was identifiable from the file, even if not correctly identified in the notice of appeal.

In **T 2330/10** the board stated that there was a difference between establishing the identity of an appellant and knowing the address where the appellant could be found. The deficiencies concerning the indication of the appellant's name and address as prescribed by R. 99(1)(a) EPC did not necessarily have to be remedied within the two-month time limit pursuant to Art. 108 EPC, but could be remedied later following an invitation under R. 101(2) EPC if there was a reason to issue such invitation.

– Correction of wrong name under Rule 139 EPC

In **G 1/12** (OJ 2014, A114) the Enlarged Board also found that in cases of an error in the appellant's name, the general procedure for correcting errors under R. 139, first sentence, EPC was available under the conditions established by the case law of the boards of appeal. The following principles have been established:

(1) The correction must introduce what was originally intended. It is the party's actual rather than ostensible intention which must be considered.

(2) Where the original intention is not immediately apparent, the requester bears the burden of proof, which must be a heavy one (**J 8/80**).

(3) The error to be remedied may be an incorrect statement or an omission.

(4) The request for correction must be filed without delay.

An allowable correction under R. 139 EPC has retrospective effect (**J 4/85** as endorsed in several subsequent decisions, for example **J 2/92**, OJ 1994, 375; **J 27/96**; **J 6/02**; **J 23/03** and **J 19/03**).

In **T 603/15** the board found that this last condition had not been met because four years had passed before the request for correction of an EPO Form 2300 under R. 139 EPC had been filed, and so it had to be refused in light of **G 1/12**.

However, where the effective date of transfer of the patent to the appellant named in the notice of appeal had not actually occurred until after the period for filing a notice of appeal

and it was the appellant's **true intention** to file an appeal on behalf of the name given in the notice of appeal, there is no deficiency in the notice concerning the name of the appellant which may be remedied in accordance with R. 99(1)(a) EPC in conjunction with R. 101(2) EPC nor an error which may be corrected pursuant to R. 139, first sentence, EPC and the appeal is thus inadmissible (**T 128/10** following **T 97/98**; see also **T 2045/09**).

In **T 445/08** of 26 March 2015 the board noted that it was not immediately clear that the appeal filed on behalf of the appellant, a company fully identified with its address and nationality and different from the patent proprietor, was actually intended to be filed on behalf of the appellant and stated that, regarding the requirements listed in **G 1/12**, it could not accept that the mere fact that the appellant was the party adversely affected during the opposition proceedings was sufficient to establish the true intention. The board stated that if it was indisputable that the notice of appeal was to be considered in the context of the file history, the true intention needed to be confirmed by external facts, at least to prevent requirements such as those of Art. 107 EPC being circumvented. It found that in applying R. 139 EPC to a party's request to correct a mistake in the notice of appeal in respect of the identity of the appellant, the principle of legal certainly, according to which parties are bound by their procedural acts, needed to be taken into consideration. The board concluded that the requirements for the correction requested had been met, and thus that the correction was to be allowed.

b) Indication of the decision impugned – Rule 99(1)(b) EPC

Under R. 99(1)(b) EPC, the notice of appeal shall contain an indication of the decision impugned.

According to **J 16/94**, (OJ 1997, 331), for a notice of appeal to comply with Art. 108, first sentence, EPC 1973 and R. 64(b) EPC 1973, it had to express the definite intention to contest an appealable decision. An appeal filed as a subsidiary request, i.e. **conditional** on the main request not being allowed by the department of first instance, was therefore inadmissible. This was because there should be legal certainty as to whether or not a decision was contested. This was confirmed by **T 460/95** (OJ 1998, 588).

In **T 2716/16** the board stated that the fact that the appellant referred to the opposition division's decision in its notice of appeal erroneously as a decision on the revocation of the patent (the opposition division rejected the opposition) was immaterial to the admissibility of its appeal (see **T 1/88** in which the appellant (opponent) had also erroneously referred to the opposition division's decision to reject the opposition as a decision to reject the application).

c) Request defining the subject of the appeal – Rule 99(1)(c) EPC

The notice of appeal shall contain **a request defining the subject** of the appeal (R. 99(1)(c) EPC).

Under R. 64(b) EPC 1973, the notice of appeal had also to contain a statement identifying the decision which was impugned and the **extent** to which amendment or cancellation of the decision was requested. If the extent to which cancellation of the decision was requested was not expressly stated in the notice of appeal, the board would examine whether the relevant information could be determined from the totality of the appellant's submissions (see **T 7/81**, OJ 1983, 98 and **T 32/81**, OJ 1982, 225; see also **T 925/91**, **T 932/93** and **T 372/94**). However, this requirement now applies to the statement of grounds and no longer to the notice of appeal and can be found, reworded, in R. 99(2) EPC.

In decision **G 1/99** (OJ 2001, 381), the Enlarged Board pointed out that issues outside the subject-matter of the decision under appeal are not part of the appeal. It also noted that within the limits of what in the subject-matter of the decision under appeal adversely affects it, it is the appellant who in the notice of appeal determines the extent to which amendment or cancellation of the decision under appeal is requested.

According to the board in **T 358/08**, R. 99 EPC has not altered the previous law as to the requirements of either the notice of appeal or the statement of the grounds of appeal as regards the appellant's requests. R. 99(1)(c) EPC is satisfied if the notice of appeal contains a request, which may be implicit, to set aside the decision in whole or, (where appropriate) only as to part. Such a request has the effect of 'defining the subject of the appeal'. Nor is it necessary in the case of an appeal by an applicant or proprietor for the notice of appeal to contain a request for maintenance of the patent in any particular form. This is something which relates to 'the extent to which [the decision] is to be amended', and which is therefore a matter for the statement of grounds of appeal under R. 99(2) EPC. This has been confirmed in many decisions, e.g. **T 844/05**, **T 509/07**, **T 9/08**, **T 226/09**, **T 689/09** and **T 648/10**.

The requirement in R. 99(1)(c) EPC is duly met where the notice of appeal states that "an appeal is filed". This statement defines the subject of the appeal as a request for the legal effects of the decision being contested to be reversed. The specific wording in which the patent proprietor would like its patent to be maintained can then be requested in the grounds of appeal within the meaning of R. 99(2) EPC, which must set out the reasons why the decision should be set aside or the extent to which it should be amended (**T 1777/14**, **T 424/15**).

In **T 2561/11** the board summarised the established jurisprudence with regard to the meaning of the expression "a request defining the subject of the appeal" in R. 99(1)(c) EPC and stated that the boards had repeatedly construed the appeal of patent proprietors against a decision to revoke the patent as a request that the decision be set aside in its entirety, even though there had been auxiliary requests before the opposition division (see **T 358/08**). Similarly, in appeals against the rejection of the opposition the appeal of the opponent was construed as a request to set aside the decision under appeal and revoke the patent (see **T 9/08**, **T 183/12** and **T 256/13**).

In **T 620/13** the board pointed out that the notice of appeal must contain an unambiguous, clear and, most of all, explicit statement, which is recognisable as a legal statement,

concerning both the identification of the impugned decision and the subject of the appeal (see also **J 19/90**). It was immaterial that the registrar was able to establish which decision was appealed (see also **T 551/15**). The board conceded that the requisite request defining the subject the appeal could be implicit. However, on a correct reading of **T 358/08**, what might be "implicit" was that part of the request which indicates whether the decision is to be set aside in whole or only in part. Decision **T 358/08** lent no authority to the argument that there need not be any request at all. The appeal was rejected as inadmissible.

d) Rule 99(3) EPC

Under R. 99(3) EPC Part III of the Implementing Regulations applies mutatis mutandis to the notice of appeal, the statement of grounds and the documents filed in appeal proceedings.

Rule 99(3) and 41(2)(h) EPC together make it clear that a notice of appeal must be signed by the appellant or his representative, but not that every single document in the notice has to be signed or that the signature has to be appended at a particular place or page. In **T 783/08**, the debit order had been part of the notice of appeal, so the board held that the signature on it fulfilled the EPC requirements in question. The appeal had therefore been validly filed.

2.5.3 Appeal filed within the time limit

Article 108, first sentence, EPC requires notice of appeal to be filed at the EPO within two months of notification of the decision being contested.

a) Notification issues

In **T 389/86** (OJ 1988, 87) the board stated that an appeal which was filed after pronouncement of a decision in oral proceedings but **before notification** of the decision duly substantiated in writing complied with the time limit pursuant to Art. 108, first sentence, EPC 1973. See also **T 427/99**, **T 1125/07** and **T 1431/12**.

According to **T 1281/01** the legal fiction that the decision (under appeal) had been delivered on the tenth day following its posting (R. 78(2) EPC 1973) did not apply when it had actually been delivered to a previously authorised representative **after** she had notified the EPO that the file had been transferred to another representative. Pursuant to R. 82 EPC 1973, the decision under appeal was deemed to have been notified on the date it was received by the authorised representative and the appeal had thus been filed in due time.

b) Languages

Where the translation of the notice of appeal in an **official language** of the EPO was not filed in due time, the notice was deemed not to have been received according to Art. 14(5) EPC 1973 and the appeal not to have been filed (**T 323/87**, OJ 1989, 343; see also **T 126/04**).

Where the notice of appeal was filed in a non-official language by a company not entitled to benefit from the provisions of Art. 14(4) EPC 1973 and a translation into an official language was filed on the same day, the notice of appeal was nonetheless deemed not to have been filed. In view of **G 6/91** (OJ 1992, 491), where the translation was filed at the same time as the original, the EPO could not take it as the "official" notice of appeal and ignore the original as superfluous. As further stated in **G 6/91** "a translation cannot become the original; whatever the date on which it is filed it remains a translation, with all ensuing legal consequences, including the possibility of correction to bring it into conformity with the original" (**T 1152/05** and **T 41/09**). The residence or principal place of business of the professional representative used was irrelevant (**T 149/85**, OJ 1986, 103 and **T 41/09**).

In **T 2133/10** the board referred to **G 6/91** that a party who wanted to benefit from a fee reduction under R. 6(3) EPC must file the translation "no earlier than simultaneously" with the original. From a contextual reading of these separate parts the board inferred that the terms "at the same time" and "simultaneously" were used synonymously and were meant at least to cover the case at hand, i.e. where the original and translation were filed together in a single filing on the same date. Thus, if the original and translation are filed together a fee reduction under R. 6(3) EPC should apply.

c) Misleading decisions of the department of first instance

Where an appellant was **misled** by the EPO into thinking that the decision issued was only a draft that will be replaced by a second version, it is sufficient that the appeal was filed within the prescribed time limit as counted from notification of the second written decision (**T 830/03**).

Where the opposition division misleadingly issued two decisions, it sufficed if the statement of grounds of appeal was filed within the time limit applicable to the second decision, even if it was outside the time limit for the first decision (**T 993/06**).

In **T 124/93** the parties were misled by the re-dating of the decision by the opposition division. Following the principle of good faith governing the relationship between the EPO and the parties acting before it, their submissions received after expiration of the normal terms were considered to have been made in due time (see e.g. **T 124/93**, **T 1176/00** and **T 1694/12** in comparable cases).

2.5.4 Payment of appeal fee

a) Notice of appeal not filed

It is established case law that, if no written notice of appeal has been filed within the time limit but only the appeal fee has been paid in time, the mere payment does not constitute a valid means of lodging an appeal (**T 551/15**, **T 2609/18**). For a notice of appeal to be valid it must at least contain an explicit declaration of the wish to contest a particular decision by means of an appeal (**T 371/92**, OJ 1995, 324; **T 767/18**). It clearly follows from the wording of Art. 108 EPC that filing notice of appeal and payment of the appeal fee are

two distinct requirements, each of which has to be fulfilled separately (see **T 778/00**, OJ 2001, 554; **T 551/15**).

The legislative amendment under the EPC 2000 whereby R. 99(1) EPC lists the items making up the obligatory content of the notice of appeal removed any doubt there might have been as to the fact that the mere payment of the appeal fee cannot replace the notice of appeal (**T 1943/09**, see also **T 861/12**).

Payment of the appeal fee may at the most imply that the appellant intends to file an appeal because, once an appeal fee is paid, it remains free to decide whether or not it wishes to lodge an appeal (**T 371/92**, **T 778/00**, **T 767/18**). The party is still left the choice of whether, or at what point in time, to file notice of appeal as the necessary second act for an appeal to come into existence (**T 551/15**).

It was established very early on in the boards' case law that paying an appeal fee is not enough on its own for an appeal to be validly filed (**J 19/90**). The board stated that this applied even if the object of the payment was indicated as being a "fee for appeal" relating to an identified patent application and the form for payment of fees and costs was used. This was confirmed in **T 371/92** (OJ 1995, 324), **T 445/98**, **T 514/05** (OJ 2006, 526) and **T 778/00** (OJ 2001, 554), where the board also added that the failure to indicate the provisions of R. 65 EPC 1973 in the annex to the communication dealing with the possibility of appeal did not make this incomplete or misleading. This applies equally to inter partes proceedings (**T 1926/09**); it is in the public interest in both ex parte and inter partes proceedings to be informed with certainty about the applicant's intention of challenging a first-instance decision. See also **T 1946/15**. **T 275/86** is an exception.

In **T 595/11** the board held that fee payment is not an issue of admissibility of the appeal, but rather a precondition for the very existence of the appeal, i.e. its deemed filing. If the appeal fee is not paid, the appeal need not be examined at all for admissibility and even less on its merits.

b) Payment of only one appeal fee

The Legal Board in **J 1/16** wrote in its Catchword: "If the Legal Division has issued a single decision with rulings on the fate of more than one set of patent grant proceedings, it is legitimate to file a single appeal against that decision and to pay only one appeal fee for it."

c) Reduced fee for appeal filed by a natural person or a particular entity

Article 2(1), item 11, RFees (see decision of the Administrative Council of 13 December 2017, CA/D 17/17, OJ 2018, A4) provides that the persons and entities listed in former R. 6(4) and (5) EPC and now R. 7a(2)(a) to (d) (microenterprises, small and medium-sized enterprises, natural persons, non-profit organisations, universities or public research organisations) need only pay a reduced appeal fee rather than the full fee. The notice from the EPO dated 18 December 2017 (OJ 2018, A5) contains further details on claiming entitlement to the reduced appeal fee (note that the requirements for this

declaration are distinct from the requirements of R. 7b EPC which concerns language-related fee reductions). Its point 3 stipulates that appellants wishing to benefit from a reduced fee for appeal must expressly declare that they are a natural person or an entity covered by R. 6(4) EPC (now R. 7a(2) EPC). Under point 4, the declaration must be filed at the latest by the time of payment of the reduced fee for appeal. Point 11 states that if the reduced fee is paid but no declaration is submitted, the notice of appeal may be deemed not to have been filed or the appeal may be considered inadmissible.

In **J 8/18** the Legal Board noted that an entity within the meaning of R. 6(4) and (5) EPC (now R. 7a(2) EPC) was a small or medium-sized enterprise (SME) as defined by the European Commission Recommendation 2003/361/EC mentioned in R. 6(5) EPC (now in point 7. of the notice from the EPO dated 25 January 2024, OJ 2024, A8). The fact that the appellant was an enterprise that had its principal place of business in China did not mean that it could not benefit from the lower appeal fee.

In the cases reported below, the appellants had paid only the reduced appeal fee within the time limit for appeal, despite the criteria for a reduction not being met or being disputed. The question was thus whether the appeals were to be deemed not to have been filed for failure to pay the required amount of the appeal fee (Art. 108, second sentence, EPC; **G 1/18**, OJ 2020, A26).

In **T 84/19** a patent attorney firm was acting as a straw man opponent and subsequently appellant. The responded argued the firm was therefore not entitled to a reduced appeal fee. The board disagreed and explained that the entitlement to pay a reduced appeal fee must be assessed vis-à-vis the entity which has assumed the procedural status of an appellant, i.e. the status of appellant at the timing of filing the notice of appeal was the only relevant question In the case in hand this was vested in the patent attorney firm, regardless of whether it was acting as a straw man.

– Declaration of entitlement to reduced appeal fee

In **T 1060/19** the board noted that Council Decision CA/D 17/17 did not require a declaration according to points 3 and 4 of the corresponding notice. The board nevertheless assumed arguendo that the provisions of the notice that were pertinent to the case in hand were binding. From point 11 of the notice it followed that point 4 must be read as meaning that "it is strongly recommended that" the declaration be filed together with the payment. The board stated that the declaration of entitlement to benefit from a reduced fee for appeal mentioned in the notice from the EPO (OJ 2018, A5) could be filed until the end of the appeal period, despite the wording of point 4, last sentence, of the notice, which must be reconciled with the meaning of point 11 of the notice.

In **T 225/19**, the board followed decision **T 1060/19**, in which it was held that there was no legal basis for determining whether the fiction of non-filing applied to an appeal for which a reduced appeal fee had been paid according to whether or not a declaration complying with points 3 and 4 of the notice had been submitted. Council decision CA/D 17/17 and the resultant new version of Art. 2(1), item 11, RFees did not contain any legal foundation for the declaration required under points 3 and 4 of the notice. The notice established the

additional requirement of a declaration to be submitted with the fee payment – a requirement devoid of any basis in law. The boards were bound solely by the statutory provisions, not by EPO notices concerning the application or interpretation of those provisions (**J 8/18**, Art. 23(3) EPC). This meant at the very least that a declaration under points 3 and 4 of the notice could not already be demanded on payment of the reduced appeal fee. The boards were anyway empowered and obliged to examine whether an appeal was admissible and had been duly filed throughout the appeal proceedings, and so even after the time limit for appeal had elapsed. The boards were especially called on to examine this when other parties to the proceedings disputed that those requirements were met. The boards' general practice in this respect was to accept a declaration and supporting evidence of compliance with the requirements under R. 6(4) EPC (now R. 7a(2) EPC) even after the time limit for appeal had elapsed and the appeal proceedings were under way (see **T 3023/18**).

In **T 3023/18** notice of appeal was filed in the name of Borealis AG, and the reduced appeal fee paid, on the last day for doing so. In its first communication, the board invited the appellant to file the hitherto missing declaration necessary for the fee reduction. The appellant thereupon confirmed that it was not entitled to the reduced fee. The board pointed out that the non-filing of the required declaration was not evidence of a clear intention by the appellant to pay the full appeal fee. In the light of the above, the board did not accept that it was possible to establish that the appellant's intention was to pay the full appeal fee. The appeal was deemed not to have been filed and the board ordered reimbursement of both fee amounts (**G 1/18**, OJ 2020, A26). See also **T 1474/19** and **T 1678/21**.

– Request for correction under Rule 139 EPC

In **T 317/19** the appellant filed the notice of appeal within the two-month time limit. However, due to an error in the "Method of payment" box on Form 1038E (the box did not indicate a method but stated "not specified"), the debit order for the payment of the appeal fee was not carried out before expiry of that time limit. Following Opinion **G 1/18** (OJ 2020, A26) this resulted in the appeal being deemed not to have been filed. To change the above result, the appellant filed a request for correction under R. 139 EPC. The board referred to **G 1/12** (OJ 2014, A114) where the Enlarged Board affirmed that a correction of errors under R. 139 EPC in documents filed with the EPO is generally applied. The board was aware that the Enlarged Board had made its findings only in the context of the correction of an error in the appellant's name. However, the board failed to see why it should not equally apply to a correction of an erroneously filled payment form. In the case in hand the appellant met the requirements for a correction under R. 139 EPC as summarised in **G 1/12**. As a consequence, the appeal was retroactively deemed to have been filed. Thus, an error in a duly filed form for paying the appeal fee may be corrected under R. 139, first sentence, EPC. See also **J 8/19**, in which the Legal Board concluded that the requirements for the requested correction of the amount of the appeal fee indicated in the debit order in Form 1038E were met. As a consequence, the appeal was retroactively deemed to have been filed, the correction under R. 139 EPC having effect ex tunc.

In **T 444/20** the board held, with reference to **T 317/19**, that an error in a duly filed form for paying the appeal fee may be corrected under R. 139, first sentence, EPC. The board also referred to **T 2620/18**, which concerned very similar circumstances. In that case too the appellant had confused the then current reduced appeal fee with the former sole appeal fee and had indicated the incorrect amount of EUR 1 880 both in the notice of appeal letter and in the payment form. According to the board in that case, it was plausible that the appellant had been guided by the previously applicable, known fee amount of EUR 1 880 and had mistakenly assumed that it was paying the full fee (EUR 2 255). The present board saw no reason to deviate from that decision. Therefore, the board was satisfied that the correction sought introduced what was originally intended by the appellant and that this original intention was immediately apparent. Lastly, the appellant had filed its request under R. 139 EPC merely two weeks after the board's communication, in which it was indicated for the first time that the prescribed appeal fee had not been validly paid. The board concluded that the requirements for the requested correction were met (see **G 1/12**).

In **T 2620/18**, the appellant relied on **T 152/82** of 5 September 1983 (OJ 1984, 301) and the EPO practice of correcting underpayments in debit orders of its own motion and debiting the correct, full amount where the payer's payment intention is clear. In the board's opinion, this EPO practice was not readily applicable to a differentiated fee structure like that of appeal fees. If the debit order explicitly stated the intention to pay the reduced appeal fee, the EPO could not reasonably assume of its own accord that the payer actually wanted to pay the full fee. Moreover, not filing a declaration under R. 6(6) EPC was not an unambiguous indication of an intention to pay the full fee. The board interpreted the appellant's submissions in its statement of grounds of appeal as amounting in substance to a request for correction of the debit order and considered it credible that the appellant had indeed presumed it had paid the full appeal fee. However, it found that this request for correction had not been filed without delay (criterion (d) in the list in **G 1/12**, OJ 2014, A114, point 37 of the Reasons). The request in the statement of grounds had not been filed until six weeks after the mistake had been discovered. In the board's view, the appellant's merely having submitted another debit order at an earlier stage did not amount to an implied request for correction (R. 139 EPC).

– Difference not small

In **T 2620/18** and **T 3023/18**, the difference between the amount paid and the full appeal fee was not considered to be small. It could reasonably be assumed that, in introducing the reduced appeal fee, the legislator had not been simply looking to provide a marginal, as it were symbolic fee reduction for natural persons and small and medium-sized enterprises.

In **T 2422/18**, the appellant claimed to have paid the reduced appeal fee under R. 6(4) EPC by mistake and said that it would pay the outstanding EUR 375 later. The board rejected its arguments invoking the protection of legitimate expectations, observing that the outstanding amount was not an "amount lacking" within the meaning of Art. 8, fourth sentence, RFees.

d) Payment not from own account

In **T 186/22** the board held that the appeal fee having been debited not from the patent proprietor's account but from that of a third party could not alter the fact that the requirement of Art. 108, second sentence, EPC being fulfilled. That provision did not require the payment of the appeal fee to be made by the appellant. In fact, the question of who paid the appeal fee was irrelevant to whether the appeal was deemed to have been filed. It was sufficient that an appeal fee be paid (in the appropriate amount) before the expiry of the appeal period.

2.5.5 Appeal deemed not to have been filed

In **G 1/18** (OJ 2020, A26), the point of law referred by the President of the EPO was whether an appeal is to be treated as not filed or as inadmissible in cases of a failure to observe the two-month time limit under Art. 108 EPC owing to belated payment of the appeal fee and/or belated filing of notice of appeal.

The Enlarged Board answered the referred point of law as follows:

1. An appeal is deemed not to have been filed in the following cases: (a) where notice of appeal was filed within the two-month time limit prescribed in Art. 108, first sentence, EPC AND the appeal fee was paid after expiry of that two-month time limit; (b) where notice of appeal was filed after expiry of the two-month time limit prescribed in Art. 108, first sentence, EPC AND the appeal fee was paid after expiry of that two-month time limit; (c) where the appeal fee was paid within the two-month time limit prescribed in Art. 108, first sentence, EPC for filing notice of appeal AND notice of appeal was filed after expiry of that two-month time limit.

2. In the cases referred to in answers 1(a) to (c), reimbursement of the appeal fee is to be ordered ex officio.

3. Where the appeal fee was paid within or after the two-month time limit prescribed in Art. 108, first sentence, EPC for filing notice of appeal AND no notice of appeal was filed at all, the appeal fee is to be reimbursed.

On this in connection with reimbursement of appeal fees, see also chapter V.A.11.3. "Appeal deemed not to have been filed".

2.6. Statement of grounds of appeal

2.6.1 Legal provisions

Under Art. 108 EPC a statement setting out the grounds of appeal shall be filed within four months after the date of notification of the decision in accordance with the Implementing Regulations. Under R. 99(2) EPC, appellants have to indicate in the statement of grounds of appeal the reasons for setting aside the decision impugned, or the extent to which it is to be amended, and the facts and evidence on which the appeal is based.

Under Art. 12(3) RPBA the statement of grounds of appeal and the reply shall contain a party's complete appeal case. Accordingly, they shall set out clearly and concisely the reasons why it is requested that the decision under appeal be reversed, amended or upheld, and should specify expressly all the requests, facts, objections, arguments and evidence relied on. Art. 12(3) RPBA has the same content as Art. 12(2) RPBA 2007, apart from a few amendments (for consistency with the new paragraphs in Art. 12(2) and (6) RPBA, the terms "requests" and "objections" were added).

Under R. 64(b) EPC 1973 a statement identifying the extent to which amendment of the impugned decision was requested already had to be included in the **notice of appeal**. **T 358/08** contains a detailed analysis of the situation under R. 64(b) EPC 1973 as compared to the provisions of R. 99(1) and (2) EPC.

If the notice of appeal does not contain anything that can be regarded as a statement of grounds, the appeal is inadmissible unless a written statement of grounds is received by the EPO within the time limit set in Art. 108 EPC (R. 99(2) EPC and R. 101(1) EPC) (**T 13/82**, OJ 1983, 411).

2.6.2 Form of statement of grounds of appeal

Whether a document complies with Art. 108 EPC, third sentence, is considered to depend on its substance and not upon its heading or form. In **T 145/88** (OJ 1991, 251) the document headed "Statement of Grounds" was found not to contain even the minimum of reasoning and thus was not a statement of grounds at all. The mere existence of some argumentation and carrying the heading "Statement of the Grounds of Appeal" or "Grounds" does not automatically pass the threshold of Art. 108 EPC, even if clearly relating to the substance of the impugned decision (**T 1581/08**, referring to **T 145/88**). The board went on to point out that sufficiency is also not a question of volume. There is no minimum requirement as to the length or the fullness of detail of the argumentation which is necessary for an admissible appeal. In this context a distinction is to be drawn between insufficiency for the purposes of admissibility and insufficiency as far as the persuasiveness of the grounds is concerned which – if the arguments are not convincing – results in the dismissal of the appeal (see **T 922/05** and below). See also e.g. **T 23/03** and **T 613/07**.

The board in **T 74/12** pointed out that R. 99(2) EPC did not require a case number to be indicated in the statement of grounds of appeal. That logically implied that an appeal could not be found inadmissible simply because the case number was missing, as only the law, viz. the EPC and its implementing regulations, could define the conditions for taking certain procedural steps and the consequences to be expected if those steps were not taken. A procedural principle stated that rights or a means of redress could be lost only if such a consequence was clearly and precisely prescribed (see also **T 1638/17**).

2.6.3 Content of the statement of grounds of appeal

a) General

Under Art. 108, sentence 3, EPC, the appeal has to be substantiated in line with the Implementing Regulations (R. 99(2) EPC). As per Art. 12(3) RPBA, the statement of grounds of appeal and the reply have to contain a party's complete appeal case.

Whether a statement of grounds meets the requirements of Art. 108 EPC can only be decided on a case-by-case basis (**T 162/97**, **T 165/00**, **T 1435/11**).

The board in **T 1435/11** added that it was the boards' settled case law that the grounds for appeal had to set out an appellant's case – meaning not just its arguments but its requests too – in a way that was coherent, clear and sufficiently substantiated (see **T 760/08**, **T 446/00**). Indeed, the purpose of the statement of grounds, together with the notice of appeal, was to define the scope of the appeal. This definition was at the sole discretion of the appellant (see **T 2532/11**).

In **T 23/10** the board stated that, whether or not sufficient grounds relating to the requests submitted, was immaterial for the purposes of the admissibility of the appeal, because an appeal can only be assessed as a whole. In other words, if the admissibility requirements of Art. 108, third sentence, EPC are fulfilled in respect of at least one request, let alone of several requests, the appeal as a whole will be admissible (**T 509/07**, **T 1763/06**). The fact that the appellant, in the course of appeal proceedings, withdrew the main and auxiliary request and thereby abandoned its refutation of the reasoning of the impugned decision under Art. 100(c) EPC, had no bearing on the assessment of the admissibility of the appeal as filed. The admissibility requirements of Art. 108, third sentence, EPC concerning the appeal filed by the patentee were met within the time limit for filing the statement of grounds of appeal at least as far as the main request and auxiliary requests were concerned. As a consequence, the appeal of the patentee was admissible. See also **T 1668/14**.

If the appellant submits that the decision under appeal is incorrect, then the statement setting out the grounds of appeal must enable the board to understand immediately why the decision is alleged to be incorrect and on what facts the appellant bases its arguments, without first having to make investigations of its own (**J 10/11**, see also **T 220/83**, OJ 1986, 249, and **T 177/97**; affirmed by numerous decisions, see for example **T 573/09** and **T 918/17**).

Exceptionally, it has been acknowledged that the requirement for admissibility may also be regarded as satisfied if it is immediately apparent upon reading the decision under appeal and the written statement of grounds that the decision should be set aside (see **J 22/86**, OJ 1987, 280).

In **T 343/16** the board stated that references to the statement of grounds of other appellants were permissible. In the case in hand opponent 1 had referred to its notice of appeal and in support of its request that the patent be revoked, invoked the statement of

grounds of appeal of appellant 2, which was stated to be incorporated by reference. The board held that the appeal by opponent 1 was admissible.

b) Indication of the extent to which the decision impugned is to be amended

The decisions below concern the application of R. 64(b) EPC 1973, in particular the requirement concerning the extent to which amendment or cancellation of the decision was requested in the notice of appeal. This request, reworded, now forms part of the statement of grounds; R. 99(2) EPC.

It was sufficient to fulfil the requirements of R. 64(b) EPC 1973 if the extent of the request made on appeal could be inferred interpreting the notice of appeal in an objective way (**T 85/88**, see also e.g. **T 32/81**, OJ 1982, 225; **T 7/81**, OJ 1983, 98; **T 1/88**, **T 533/93**, **T 141/95** and **T 308/97**).

T 631/91, **T 727/91** and **T 273/92** confirmed the principle that the appeal's scope could be ascertained from the appellant's overall submissions if the request filed in the appeal proceedings did not make this clear. Since no indication was made to the contrary in the appellant's submissions, the board of appeal assumed that he wished to file a request in the appeal proceedings along the same lines as that filed in the opposition proceedings (see also **T 925/91**, OJ 1995, 469; **T 194/90** and **T 281/95**).

The wording "... we hereby file notice of appeal to the decision ..." was construed in **T 632/91** as a request to set aside entirely the decision under appeal and to grant a patent on the basis of the documents of the European patent application to which the decision under appeal referred. This was followed in **T 49/99** and **T 1785/06**. See also **T 9/08** for a corresponding application under R. 99(2) EPC.

If the only ruling in an opposition division decision was that the patent was revoked, a statement by the patent proprietor that he was appealing against the decision was invariably tantamount to his stating that he wished and hence requested that the decision be set aside in its entirety, because setting aside had to be unitary. Hence the content of the notice of appeal was what R. 64(b) EPC 1973 demanded as one of its requirements for an admissible appeal, i.e. a statement identifying the extent to which cancellation of the decision was requested (**T 407/02**). This has also been applied under R. 99 EPC; see **T 912/08**, **T 624/09**, **T 689/09** and **T 1188/09**.

However, where the decision under appeal related to more than one different legal issue, the statement identifying the extent of the appeal as prescribed by R. 64(b) EPC 1973 had to make it clear which issue(s) of the decision were also subjects of the appeal (**T 420/03**). As the notice of appeal was completely silent on the apportionment of costs and there was nothing which indicated that the decision should be set aside in its entirety, this issue was not within the extent of the appeal.

c) Direct link between the contested decision and the statement of grounds of appeal

There must be a causal relationship between the arguments in the statement of grounds of appeal and the reasons given in the decision under appeal (**T 2012/16**). The absence of any correlation of the ground of appeal to the decision under appeal is detrimental to the admissibility of the appeal (**T 349/09**). See also **T 1561/15**.

In **J 22/86** the appellant had made no submissions regarding the causal relationship between the reasons given in the statement of grounds of appeal and the asserted invalidity of the findings of the decision impugned. If no causal relationship were required, any submission, even one not connected with the reasons on which the decision impugned is based, would be acceptable. This would render the provisions of Art. 108 EPC moot. Whilst the grounds do not have to be conclusive in themselves, i.e. justify the setting aside of the decision impugned, they must enable the board to assess whether or not the decision is incorrect. The appeal was rejected as inadmissible.

In **T 223/14** the amended claims had obviously been filed with the intention of clarifying existing features and so overcoming the objection underlying the finding of a lack of novelty. They therefore did not constitute a completely new set of facts and thus there was a sufficiently direct link (see **T 2532/11**) between the decision under appeal and the statement of grounds of appeal. See also **T 1750/16**.

In **T 123/17** the board noted that the concept of a clear and direct link is not an additional requirement for the admissibility of the appeal but simply a means of expressing the requirements of Art. 108, third sentence, EPC in conjunction with R. 99(2) EPC.

d) Adequate reasoning for an appeal against a refusal of the application

Decisions **T 213/85** (OJ 1987, 482) and **T 95/10** clarify that the appeal procedure is not a mere continuation of the examination procedure (in accordance with decisions **G 10/91**, OJ 1993, 420; **G 9/92**, OJ 1994, 875 and **G 4/93**, OJ 1994, 875), but separate therefrom. Where the applicant in the grounds of appeal repeats its arguments set out during the examination phase without taking into account the decision under appeal, it mistakes the function of the boards of appeal; they are not a second go at the examination procedure, but are meant to review decisions made by the examining divisions, based on the objections raised against the decision in the grounds of appeal, which must therefore relate to the reasons on which the decision under appeal is based.

It is the boards' settled case law that this statement has to deal with all the main reasons for the contested decision in order to be considered sufficient for the purposes of admitting an appeal (**T 1904/14**). A statement of grounds failed to meet the minimum requirements if it dealt with only one of several grounds for refusal (**T 1045/02**, **T 473/09**, **T 231/14**, **T 2411/16**, **T 918/17**, **T 868/18**). Any ground that can justify a refusal when considered in isolation, independently of the other grounds stated in the decision, is considered a ground for refusal (**T 231/14**). In **T 1904/14**, the board held that this principle applied even if the grounds given in the contested decision were wrong or contradictory. A wrong, contradictory or incomplete decision did not absolve an appellant of the need to address

any such deficiencies in the statement of grounds of appeal. A sufficient statement of grounds had to be filed by the deadline in Art. 108, third sentence, EPC; a failure to so could not be remedied retroactively with a late submission.

Where there had been several independent reasons for the decision to refuse the application and at least one of those reasons was not addressed in the statement of grounds at all or only in insufficient detail, the board could not normally reverse the contested decision, even if it concurred with the appellant in relation to all the reasons for refusal addressed in the statement of grounds. The requirements of Art. 108, R. 99(2) EPC were not met (**T 899/13**).

A ground for refusal can be addressed either by amending the claims and explaining why the ground for the decision no longer applies, or by giving arguments why the objection on which the ground was based is incorrect (see **T 2022/16**, **T 305/11** and **T 899/13**).

In **T 733/98**, where an application was refused under Art. 97 EPC 1973 and R. 51(5) EPC 1973 (R. 71(4) EPC), on the grounds that the applicant neither communicated his approval of the text proposed for grant within the period according to R. 51(4) EPC 1973 nor proposed amendments within the meaning of R. 51(5) EPC 1973 within this period, the statement of the grounds of appeal was inadmissible, as it dealt only with the issues of the admissibility and allowability of new claims filed with the statement of grounds.

In the following cases, the appeal was deemed inadmissible: **T 395/12** (the applicant's only statement that directly addressed the decision under appeal was that the examining division was "wrong", with no explanation why); **T 1407/17** (the grounds of appeal gave no indication of why the ground for refusal under Art. 56 EPC was unfounded).

e) Adequate reasoning in an appeal filed by the opponent

It is established case law of the boards of appeal that appeals by opponents – as opposed to appeals by proprietors, which would need to address all objections withstanding the maintenance of the patent – are sufficiently reasoned where they make a substantiated case for the decision under appeal being wrong on one of the objections or grounds for opposition. That was because, if the decision were indeed wrong on that point, the appeal had to be allowed for this reason alone (**T 767/14**, see also **T 950/99**, **T 846/01**, **T 87/17**, **T 456/17**). For such an appeal, therefore, it is also immaterial if the case is lacking as regards other aspects dealt with in the contested decision. If an opponent's statement of grounds of appeal is insufficiently reasoned in relation to specific parts only, this does not mean the appeal is inadmissible, because admissibility can only be assessed in light of the appeal as a whole (**T 2270/17**).

In **T 950/99**, the statement setting out the grounds of appeal included the legal and factual reasons why the decision under appeal should be set aside with respect to at least one ground, namely lack of inventive step. Therefore, even if it did not contain a full reasoning with respect to each and every ground, it nevertheless met the minimum requirement of Art. 108 EPC. In **T 808/01**, the board held that, where the statement of grounds contained

several lines of argument and reasons sufficient to render the appeal admissible had been given in support of at least one of them, the appeal was admissible and it did not matter that no such reasoning had been given in support of one of others.

In **T 846/01**, the board held that, for an appeal to be admissible, at least one of the grounds in the written statement of grounds of appeal must relate to a point which could at least arguably have been decided in the appellant's favour by the instance appealed from but which point had not been so decided, and such favourable decision on this point would have produced a different outcome. Following **T 846/01**, the board in **T 1178/04** confirmed that an appeal does not lie against part of a decision of a first instance tribunal if the result would have been the same even if the point had been decided in the appellant's favour.

In **T 1187/04**, where the appellant had dealt only with the novelty objections and not addressed inventive step, the appeal was held inadmissible.

In **T 257/03**, since all the board could gather from the statement of grounds was that the appellant sought the reopening of the entire opposition proceedings, but not why it considered that the opposition division's decision should be amended, it dismissed the appeal as inadmissible.

In **T 1649/10** the board held that the mere indication by appellant II (patentee) that the subject-matter of granted claim 1 was inventive, starting from document D4 as the closest prior art, whereas the impugned decision based its analysis on a combination of D10 as the closest prior art and document D4, did not fulfil the requirements of R. 99(2) EPC. The board was not in a position to recognise in the reasoning put forward by appellant II, why the reasoning of the opposition division, which relied on document D10 as closest prior art, had to be rejected. The appeal filed by appellant II was, hence, rejected as inadmissible. Its role in the appeal proceedings was then that of a party as of right under Art. 107 EPC.

f) Statement of the legal or factual reasons

Already in **T 220/83** (OJ 1986, 249) the board ruled that the grounds for appeal should specify the legal or factual reasons on which the case for setting aside the decision was based. The arguments had to be clearly and concisely presented to enable the board and the other party or parties to understand immediately why the decision was alleged to be incorrect, and on what facts the appellant based his arguments, without first having to make investigations of their own. Whilst passages from the literature setting out the state of the art might – provided sufficiently precise reference was made to them in the grounds of appeal – be considered an integral part of the grounds, they could not by themselves form a sufficient statement of grounds. This principle was expressly confirmed in many decisions, for example **T 250/89** (OJ 1992, 355), **T 1/88**, **T 145/88** (OJ 1991, 251), **T 102/91**, **T 706/91**, **T 493/95**, **T 283/97**, **T 500/97**, **T 1045/02**, **T 809/06**, **T 2346/10**, **T 294/11**, **T 2001/14**, **T 2270/17**.

In **T 22/88** (OJ 1993, 143), the board held that a written statement announcing only that the appellant would complete an omitted act (here the filing of the translations of the

revised claims) did not comprise sufficient reasons, and therefore did not constitute a valid statement of the grounds of appeal.

Where, as a result of contradictions and inexactitudes in an anyway very brief statement of grounds, it is left to the board to make sense of it, the appeal is usually inadmissible (**T 760/08**).

In **T 2377/13** the appellant's grounds of appeal had not addressed any of the main reasons for the opposition division's decision, and in particular the finding that experiments D9 and D13 were not suitable to show that a technical effect resulted from the difference between the closest prior art and the claimed subject-matter, and so had not set out why the appealed decision should be set aside.

Precisely cited passages from the relevant literature become an integral part of the grounds but cannot by themselves form a sufficient statement of grounds (**T 1402/10**, citing **T 922/05**).

g) Addressing the reasons given in the decision in the statement of grounds of appeal

In **T 213/85** (OJ 1987, 482) the board stated that grounds sufficient for the admissibility of an appeal had to be analysed in detail vis-à-vis the main reasons given for the contested decision. If an opposition had been dismissed on the grounds of insufficient substantiation and the grounds for appeal merely disputed patentability without elaborating on the admissibility of the opposition, the appeal was inadmissible for lack of adequate substantiation (see also **T 169/89**, **T 2001/14**).

According to the board in **T 95/10**, there were three reasons for this: First, the appeal procedure is not a continuation of the opposition procedure, but a distinct procedure in which any facts, evidence or arguments considered relevant must, if need be, be resubmitted (see **G 10/91**, OJ 1993, 420; **G 9/92** and **G 4/93**, both in OJ 1994, 875). Second, the appellant's analysis of the contested decision is needed in its statement of grounds of appeal. The third reason is that, in the absence of such an analysis, neither the board of appeal nor the respondent can establish why the appellant regards the contested decision as incorrect. It is, however, only based on this knowledge that the respondent can counter the appellant's arguments and that the board is in a position to reach an objective decision (see also **T 1188/08**, **T 720/12**).

In **T 395/13**, although the statement of grounds of appeal contained no substantive arguments addressing the reasoning of the decision under appeal, it nonetheless met the requirements of Art. 108 EPC in combination with R. 99(2) EPC. This was because the main objection of the appellant in the grounds of appeal was that the decision under appeal did not contain sufficient reasoning to enable the appellant to file such arguments. R. 99(2) EPC required no more than this and in particular did not specifically require that the statement of grounds of appeal addresses the arguments in the decision under appeal. The board therefore concluded that the appeal was admissible.

h) Complete case within the meaning of Article 12(3) RPBA

Under Art. 12(3) RPBA, the statement of grounds of appeal and the reply have to contain a party's complete appeal case. See also chapter V.A.3.2.2 "Complete case on appeal".

In **T 2884/18** the appeal was rejected as inadmissible. The board considered the statement of grounds of appeal insufficient as it primarily discussed only the opposition division's finding that the asserted public prior use had not been adequately demonstrated, while failing to duly substantiate a lack of novelty in view of that public prior use. The board explained that, for a case based on chains of reasoning to be complete, as Art. 108 EPC and Art. 12 RPBA required, it was necessary to set out all the facts that led to the asserted legal outcome only when considered cumulatively. The approach had to mirror that in proceedings against a decision listing various alternative reasons why a patent could not be granted or maintained. In this respect, the case law of the boards of appeal had it that an appeal could be deemed sufficiently substantiated only if it addressed all the grounds precluding patentability. Only then had a case for setting the decision aside been made (see **T 922/05**). The same had to apply in reverse if several grounds cast doubt on the patentability of a maintained patent only when considered cumulatively, as was the case here: prior use forming part of the prior art and prior use anticipating the invention. If out of a number of facts having to be considered cumulatively in order to alter the decision just one was sufficiently substantiated, the appeal was inadmissible.

i) Mere repetition of arguments

In **T 198/15** the statement setting out the grounds of appeal consisted essentially of word-for-word repetitions of the notice of opposition, supplemented by word-for-word repetitions of the appellant's written submissions and new novelty attacks based on documents which did not form part of the proceedings before the opposition division. The arguments which were mere repetitions of the ones presented before the opposition division, did not, and could not, provide reasons why the decision under appeal was to be set aside because they were drafted before the decision of the opposition division was issued.

Furthermore, a statement of grounds of appeal that is identical or nearly identical to the notice of opposition can as a rule not be considered to contain arguments as to why the decision under appeal is incorrect (**T 2077/11**, **T 39/12**, **T 123/15** of 21 December 2016).

j) Appeal based on objection not raised nor examined at first instance

In **T 393/15** the appellant had based its statement of grounds of appeal solely on an objection under Art. 83 EPC it had not raised at first instance. During the proceedings before the opposition division, however, features from the description had been added to independent claim 1 of the request ultimately held allowable. The board observed that a request amending a patent by adding features not in the claims as granted was as a rule open in opposition proceedings to objection under Art. 83 EPC (in conjunction with Art. 101(3) EPC), even if the ground for opposition under Art. 100(b) EPC had not been cited (see also **T 66/14**). Accordingly, the Art. 83 EPC objection raised on appeal did not go beyond the legal scope of the case before the opposition division. The requirements of

Art. 108 and R. 99(2) EPC were thus met. See also chapter V.A.3.2.3h) "Fresh ground for opposition on appeal".

k) Statement of grounds of appeal not filed in full

In **T 382/16** the patent proprietor submitted with its rejoinder comparative tests (D 11). However, the rejoinder had not been signed because the last page of the rejoinder bearing the signature of the representative had not been transmitted. The whole rejoinder including the missing page 5 with the signature of the representative was submitted later. The board stated that in analogy to the provisions of R. 50(3) EPC, it was considered that the tests shall retain their original date of receipt and therefore were deemed to have been filed within four months of notification of the grounds of appeal.

In **T 2307/15** the respondent argued that the appeal was inadmissible since the statement setting out the grounds of appeal sent by facsimile was incomplete. The board found that although some paragraphs were missing in the statement setting out the grounds of appeal, the document still allowed the reader to understand the reasons according to which the appellant requested the impugned decision to be set aside and the facts and evidence on which the appeal was based. The statement setting out the grounds of appeal received was therefore to be seen as being complete. Thus, the appeal was admissible. However see also **T 858/18** regarding incomplete facsimile transmission and the observance of the time limit Art. 99(1) EPC).

l) Duty of board to be impartial

The case law of the boards of appeal was reviewed in **T 922/05** and much of it found to take a relatively lenient position in the sense that the appeals were deemed to be admissible if the competent board was able to infer from the particulars of the case the presumed intentions of the applicant and the probable reasons underlying its actions (see **T 563/91**, **T 574/91**, **T 162/97**, **T 729/90**). However, excessive leniency towards one party would rightly be perceived as an injustice towards the other. The board was of the opinion that submissions of a party which only made it possible for a board to **infer** a line of argumentation did not fulfil the requirements of either the "**clear** reasons" or the "**express** specification of facts and arguments" as prescribed by the RPBA. The statement of the grounds of appeal filed by the appellant remained silent on at least two issues, which would have been clearly relevant for deciding on the appeal, and therefore should have been addressed by the grounds of appeal in order to be complete. The appeal was rejected as inadmissible (see also e.g. **T 760/08**, **T 727/09**, **T 450/13**, **T 460/13**).

In **T 450/13** the board pointed out that the statement of grounds of appeal was not sufficiently substantiated with regard to the alleged public prior use attacks. A reference back to first-instance proceedings was not a sufficient reasoning to render a submission in the statement of grounds of appeal admissible (see **T 473/09**). The submissions in the statement of grounds of appeal had to be such as to enable the board (and any other party) to understand immediately why the decision was alleged to be incorrect, without first having to make investigations on its own. To ask the board to do this would mean that the

board had to make up the appellant's case in breach of the principle of impartiality (see also **T 1676/08**).

2.6.4 New case raised

a) Appeal based on the same ground for opposition

According to the case law of the boards of appeal (see e.g. **T 389/95**, **T 1063/98**, **T 1029/05**, **T 1915/09**, **T 1314/12**), an appeal invoking a ground for opposition already invoked in opposition proceedings, i.e. remaining within the same legal framework, albeit being based on a completely fresh factual framework does not ipso facto lead to an inadmissible appeal. However, this finding does not necessarily mean that the new items of **evidence** only filed during the appeal procedure may not be disregarded by the board.

In **T 389/95** an appeal was filed on existing grounds for opposition but based solely on new evidence introduced in the grounds of appeal. The board found the appeal to be admissible because the issue of new factual framework was one of fact to be determined objectively as part of the substantive examination of the appeal. **G 10/91** allowed even a fresh legal ground for opposition to be considered in appeal proceedings if the patentee approved and it followed from this, that an appeal based solely on such a ground was not ipso facto inadmissible; by the same token an appeal based on the same legal ground, albeit on a completely fresh factual framework, might be admissible. See also **T 932/99**.

In **T 611/90** (OJ 1993, 50) the opponent, on appealing the finding of the opposition division that the patent was novel and inventive, went on to develop what was an entirely fresh case on lack of novelty. Similarly, the appeal was found admissible in **T 938/91**, where the opponent (appellant) introduced a new alleged public prior use and citation; although a "fresh case" was presented by the appellant to the board, the fresh reasons still fell within the same ground for opposition.

Following **T 611/90**, the board in **T 252/95** held that grounds could be deemed to be sufficient if new facts were submitted which removed the legal basis from the decision. That also applied where the grounds for opposition were based on new facts and there was no discussion whatsoever of the grounds for the opposition division's decision. See also **T 801/00**.

In **T 2361/15** the appeal of the appellant was solely based on an alleged public prior use filed for the first time with its statement of grounds on the same ground for opposition. The board stated that bringing a fresh case in appeal does not automatically imply that the statement of grounds does not "indicate the reasons for setting aside the decision impugned". It is a sufficient condition that the statement of grounds of appeal enables the board to understand immediately why the decision is alleged to be incorrect and on what facts the appellant bases its arguments. The statement of grounds met this condition.

Similarly, in **T 727/09** there was an entirely new set of facts, albeit based on the same ground for opposition. The board noted that if the statement of grounds of appeal is exclusively based on these new documents, there must be a direct and clear link between

the contested decision and the grounds for appeal. In the case at issue, the factual basis was, however, entirely new. The appeal was rejected as inadmissible.

b) Taking new submissions into consideration

The extent to which new submissions filed with the statement of grounds of appeal are taken into consideration is at the board's discretion as per Art. 12(4) RPBA; for more detail on this point, see chapter V.A.3.2.2 "Complete case on appeal" and chapter V.A.4 "New submissions on appeal".

In **T 278/15**, the board held that, having found an appeal to be admissible, it could not deem it inadmissible retroactively even if it later exercised its discretion not to admit an amended request into the proceedings. The admissibility of the appeal had to be examined on the basis of all the documents filed by the appellant within the deadline, even if these documents were subsequently excluded from the proceedings (see explanatory remarks to Art. 12(4) RPBA, Supplementary publication 2, OJ 2020).

In **T 2270/17**, the board held that when deciding whether the appeal had been adequately reasoned, it was immaterial that D7 and D8 were new documents that had not been part of the opposition proceedings. Specifically, a statement of grounds of appeal could be admissible even if the facts and evidence liable to deprive the contested decision of its basis which it cited in support of an existing ground for opposition were new. The board's later, discretionary decision on whether to exclude any such new submissions from the appeal proceedings as per Art. 12(4) RPBA 2007 had no retroactive effect on the admissibility of the appeal.

In **T 501/09** the board was aware that other boards of appeal had found that an appeal based entirely on new evidence may be admissible when the grounds for opposition have remained the same (see **T 1557/05**). However, this finding does not necessarily mean that the new items of evidence only filed during the appeal procedure may not be disregarded by the board (see e.g. **T 389/95**). If this new evidence is subsequently not admitted in the appeal proceedings this has the consequence that the appellant's case on appeal is not substantiated.

c) Amended claims filed

(i) General

It is settled case law that the grounds for appeal can also be considered sufficient where they refer to new facts which deprive the decision of its legal basis (**T 252/95**, **T 760/08**), particularly where new sets of claims are filed (**T 934/02**, **T 2226/13**). An appeal is not necessarily rendered inadmissible by an appellant filing amended claims, and defending the patent solely on the basis of claims as amended in the grounds of appeal (**T 1320/19**).

In **T 655/03** an appeal by the patent proprietor was to be considered as sufficiently substantiated to satisfy the requirements of Art. 108 EPC, third sentence, even if it did not state any specific reason why the decision was contested, provided that two criteria were

met: there is a change in the subject of the proceedings due to the filing of amended claims together with the statement setting out the grounds of appeal, and the reasons for the decision are no longer relevant in view of the amended claims. See also **T 717/01**, **T 934/02** and **T 1708/08**.

The board in **T 934/02** added that it was therefore not necessary and would also be pointless for the purposes of adequately substantiating an appeal, to file grounds in support of a version of a claim that the appellant (patent proprietor) was no longer defending in the appeal proceedings. See also **T 1197/03** and **T 642/05**. However, where the application was not refused on the basis that the previous set of claims on file could not be allowed, i.e. for lack of clarity, novelty or inventive step, rather on the ground that there was no agreed set of claims, filing new claims was not an adequate response (**T 573/09**); the statement of grounds should have set out why the appellant should be given the opportunity to have the proceedings continued before the board.

In **T 2532/11** the question arose whether newly filed requests could be seen as implicit grounds of appeal. A statement of grounds of appeal supported by amended claims may define, at least implicitly, the extent to which the appellant wishes the decision under appeal to be set aside. The board of appeal has the duty to assess whether the appeal is well founded within the framework of the case as presented by the appellants but it cannot guess what the arguments are, let alone, provide arguments in lieu of the appellants. A direct link must be maintained between the decision under appeal and the statement of grounds of appeal, which had not been done in the case in hand.

Where amended claims are filed, the appeal's admissibility does not depend on whether the board later admits those claims into the proceedings or whether the appellant's case is ultimately convincing (**T 2558/16**). The extent to which amended claims filed with the statement of grounds of appeal are taken into consideration is at the board's discretion as per Art. 12(4) RPBA; for more detail on this point, see chapter V.A.4.3 "First level of the convergent approach – submissions in the grounds of appeal and the reply – Article 12(3) to (6) RPBA".

(ii) Adequate reasoning for filing amended claims

- Patent proprietor

It is not an absolute requirement for admissibility that the appellant should attack the opposition division's decision as flawed. Where amended claims have been filed, an appeal may also be admissible if sufficient reasons are given in the statement of grounds why the amendments are considered apt to remedy the deficiencies identified by the opposition division (**T 1668/14**, see also **T 278/15**, **T 1311/17** and **T 1320/19**). In **T 1610/15**, the board added that the appeal's admissibility did not depend on whether the appellant's case was ultimately convincing or whether the board later admitted the amended claims into the proceedings. See also **T 1320/19**.

However, it was not enough merely to file a new set of claims without comment. Rather, appellants had to set out why and to what extent the amended set of claims was a

response to the factual and legal assessment on which the opposition division had based its decision (**T 220/83**, OJ 1986, 249; and **T 145/88**).

The amendments should address the reasons for the decision being contested (**T 2453/09**). See also **T 1533/13**.

In **T 1276/05** the patent proprietor/appellant reverted back to a form of claim which had been effectively withdrawn during the opposition proceedings, i.e. the patent as granted, without explaining why the contested decision was wrong. The board noted that the lack of a need for explanation was based on the specific situation of the case before it, wherein – unusually – the offered amendments self-evidently overcame the grounds for the decision and the appeal was thus admissible.

- Applicant

In **T 933/09** the board considered that the mere filing of amended claims did not exonerate the appellant from the task of expressly specifying in the statement of grounds of appeal the relevance of the amendments for overcoming the objections on which the decision under appeal was based.

The mere fact of filing amended claims with the statement of grounds of appeal is not sufficient if it does not overcome the reasons for the refusal in the case at issue. The appellant in **T 1707/07** did not address the reasons given in the decision under appeal and it was thus not clear to the board why the decision under appeal was alleged to be incorrect. The appeal was rejected as inadmissible. See also **T 502/02** and **T 132/03**.

In **T 295/04**, the statement of grounds contained only a general reference to pleadings submitted during the proceedings at first instance and a set of new claims. Since such a general reference could not be regarded as setting out why the department of first instance's decision should be amended, the appeal was dismissed as inadmissible.

2.6.5 References to earlier submissions

The boards have frequently held that a statement of grounds referring generally to submissions made at first instance, as a rule, cannot be considered sufficient for the purposes of Art. 108, third sentence, EPC (see e.g. **T 254/88**, **T 432/88**, **T 534/89**, **T 90/90**, **T 154/90**, OJ 1993, 505; **T 287/90**, **T 188/92**, **T 646/92**, **T 473/09**, **T 47/12**, **T 450/13**, **T 16/14**, **T 2411/16**).

In **T 1311/13** the board stated that a mere reference to a party's earlier submissions and/or the verbatim repetition of the arguments presented in those submissions ("grounds by cut-and-paste"), including the submissions or arguments put forward at the oral proceedings before the opposition division, without actually dealing with, or entering into a discussion of the reasons given in the decision under appeal by the opposition division for arriving at its decision, was not enough to substantiate a ground of appeal.

In **T 432/88** the appeal filed only made a general reference to the appellant's submissions in the preceding opposition proceedings and thus amounted to no more than a mere assertion that the contested decision was incorrect, without stating the legal or factual reasons why that decision should be set aside. Consequently, the appellant had left it entirely to the board and the respondent to conjecture in what respect the appellant might consider the decision under appeal to be defective. This was followed in **T 534/89**, where the board pointed out that otherwise the respondent is at a loss to know how to prepare his case and the board cannot direct the appeal proceedings in an efficient way.

Merely referring to one's own first-instance submissions could not normally replace an explicit account of the legal and factual reasons for the appeal. Only exceptionally did the case law allow substantiation to take that form. References to earlier submissions, even when taken together with the contested decision, did not as a rule clearly indicate which grounds of the decision were regarded as mistaken, and why. The board and the opposing party could not then consider the merits of the appeal without making investigations of their own (**T 349/00**). See also **T 165/00**. According to the case law of the boards of appeal, the grounds of appeal should state the legal and factual reasons why the appeal should be allowed and the contested decision set aside. It is not enough merely to seek fresh examination of the patentability requirement found not to be met at the previous instance by indicating disagreement with that finding (see **T 220/83**, OJ 1986, 249; **T 213/85**, OJ 1987, 482; **T 145/88**, OJ 1991, 251; **T 1462/08**; **T 2077/11**).

In **T 2556/16** the board stated that merely referring to one's own submissions in the first-instance proceedings could not normally replace an explicit account of the legal and factual reasons for the appeal (see **T 2012/16**). This applied even more, when the absence of evidence for an alleged common general knowledge was one of the decisive reasons in the first instance decision for rejecting the opposition. The appeal had to be found inadmissible.

In a small number of isolated decisions, however, the boards have accepted a general reference to submissions at first instance as potentially constituting grounds for an admissible appeal (**T 355/86**, **T 140/88**, **T 725/89**, **T 869/91**, **T 216/10**), but these decisions were given in special cases in which those submissions already adequately addressed the grounds underlying the contested decision.

2.6.6 Arguments need not be new or relevant

Whether the appellant's arguments are convincing or likely to be successful is irrelevant for the purposes of determining the admissibility of the appeal (**T 1668/14**). See also **T 1610/15**.

In **T 644/97** the board found that the fact that the points made in the statement of grounds of appeal did not go beyond those made before the opposition division did not detract from the admissibility of an appeal. A requirement that new arguments be submitted to render an appeal admissible would have implied that the appealed decision must have been correct. Nor did the appeal need to have a strong prospect of success.

The fact that some arguments were already presented during the opposition proceedings was not detrimental to the admissibility of the appeal (**T 1074/12**).

Irrelevancy and lack of cogency might lead to an unsuccessful outcome of the appeal, but did not of themselves render it inadmissible (**T 65/96**, see also **T 922/05**).

2.6.7 Exceptional circumstances warranting admissibility of appeal

a) Immediately apparent the contested decision cannot be supported

In **J 22/86** (OJ 1987, 280) the board made it clear that where the written statement did not contain such full reasons, the requirement for admissibility might be regarded as satisfied if it was immediately apparent upon reading the decision under appeal and the written statement that the decision should be set aside. According to the board, a well-drafted statement of grounds should contain reasoning that is full but concise. And, in general, it is obvious that the less reasoning that a statement contains, the greater will be the risk that the appeal will be rejected as inadmissible for non-compliance with Art. 108 EPC. The question whether a particular statement alleged to be a statement of grounds of appeal in a particular case meets the minimum requirement of Art. 108 EPC could only be decided in the context of that particular case; and the context of a particular case will normally include the contents of the decision under appeal. In a wholly exceptional case such as the one before the board, it might be immediately apparent to the board upon reading the decision under appeal and the statement of grounds that such decision cannot properly be supported, even though the grounds contained in such statement can fairly be described as minimal. See also **J 2/87** (OJ 1988, 330), **J 6/88**, **T 195/90**, **T 729/90** and **J 1/14**.

b) Patent proprietor requests revocation

An opponent's appeal is admissible when the written statement of grounds is based solely on the fact that the patent proprietor himself filed the request for revocation of the patent after the appeal was filed (**T 459/88**, OJ 1990, 425 and **T 961/93**).

c) Substantial procedural violation

In **T 1020/13** the board held that, if a substantial procedural violation is alleged and adequately substantiated in the statement of grounds of appeal, it is irrelevant for the decision on admissibility of the appeal whether the challenge to the substantive reasons for the decision can likewise be regarded as adequately substantiated.

2.6.8 No partial admissibility of appeal

The admissibility of an appeal can only be assessed as a whole (**T 382/96**, **T 1763/06**, **T 509/07**, **T 2001/14**). There is no support in the EPC for a notion of 'partial admissibility' of an appeal (**T 774/97**, **T 509/07**, **T 2339/12**, **T 1311/13**, **T 1679/17**).

The board in **T 509/07** thus found it immaterial for the purposes of the admissibility of the appeal whether or not sufficient grounds relating to the main request had been submitted, where the first auxiliary request clearly complied with the admissibility requirements of Art. 108, third sentence, EPC. However, it is a different question whether a request in relation to which the admissibility requirements of Art. 108, third sentence, EPC are not met is admitted into the appeal proceedings. In **T 382/96** and **T 509/07**, such unsubstantiated requests were not admitted. See also **T 1763/06** and **T 2001/14**.

In **T 1679/17**, the board stated that so long as one objection to the contested decision had been raised in compliance with R. 99(2) EPC, the entire appeal was admissible. Even if other objections were not adequately substantiated as per Art. 12(2) RPBA, this did not entail any partial inadmissibility that could no longer be remedied by a later submission. Rather, it merely meant that the admission of those objections (assuming they were not substantiated until later in the proceedings) would be at the board's discretion under whichever provision was applicable at the time of their belated substantiation (Art. 13(1) or 13(2) RPBA).

2.7. Examination of the admissibility of appeal in every phase of appeal proceedings

It is established jurisprudence of the boards of appeal that the admissibility of the appeal is to be examined ex officio at every stage of the appeal proceedings (see **T 15/01**, OJ 2006, 153), and thus also at the oral proceedings (**T 501/09**, **T 2223/10**, **T 198/15**). It can and, where appropriate, must be raised by the board in appeal proceedings even if this is the first time this matter is addressed (**T 289/91**, OJ 1994, 649; **T 28/93**; **T 522/94**, OJ 1998, 421; **T 1668/07**).

In **T 670/09**, the respondent did not challenge the appeal's admissibility until two days before the oral proceedings. The board observed that, under Art. 12(2) RPBA 2007, the reply to an appeal had to contain the respondent's entire case. As a rule, respondents had to object to the appeal's admissibility or the board's competence in limine litis, i.e. before submitting their substantive defence. The respondent's objection to admissibility was therefore disregarded.

2.8. Cases where admissibility of appeal need not be considered

In appeal proceedings in which the question of allowability of an appeal can be readily decided (i.e. the appeal is clearly unallowable) but no decision on its admissibility can be taken yet, the issue of admissibility of the appeal can be left open (**T 1467/11**). Similarly, in a number of decision on petitions for review under Art. 112a EPC, the Enlarged Board did not arrive at a final conclusion as to whether the petition in question was clearly inadmissible, because it found the petition to be clearly unallowable (**T 2023/09**).

2.9. Interlocutory revision

2.9.1 General

Under Art. 109(1) EPC, in **ex parte** proceedings the department whose decision is contested must rectify its decision if it considers the appeal to be admissible and well founded. This is for reasons of procedural economy. Interlocutory revision is generally not available for decisions in **inter partes** proceedings, as the appellant should not be opposed by any other party to the proceedings. In exceptional cases, however, an opposition division may correct its decision by way of interlocutory revision if it wrongly revoked a patent for failure to comply with certain requirements despite intending to maintain that patent in amended form pursuant to a final interlocutory decision (see **T 168/03**).

On expiry of the three-month period under Art. 109(2) EPC 1973, the department of first instance whose decision is contested ceases to be responsible for the matter. Rectification of the decision is then no longer possible (**T 778/06**).

Art. 109(1) EPC provides an exception to the principle of general devolutive effect of the appeal, in order to allow an interlocutory revision. This exception has to be construed narrowly in connection with the interlocutory revision, and not as a broader entitlement for the department of first instance to decide whether an appeal is admissible (**T 1973/09**) (see also **T 473/91**, OJ 1993, 630, **T 808/03** of 12 February 2004).

In **G 3/03** (OJ 2005, 344), the Enlarged Board held that the object and purpose of interlocutory revision under Art. 109(1) EPC was to avoid, in the interest of procedural economy, any need to remit clear and straightforward cases to the boards of appeal, it being preferable for the department of first instance whose decision was contested to rectify the decision if it was immediately apparent to that department that its decision could not stand. As to reimbursement of the appeal fee in the event of an interlocutory revision, see chapter V.A.11.4.

In **T 1558/18**, the two oppositions against the patent had been withdrawn and so the appellant had not been opposed by any other party to the proceedings within the meaning of Art. 109(1) EPC. The appeal being admissible and also well founded with regard to a substantial procedural violation, the opposition division should have rectified its decision itself under Art. 109(1) EPC but had instead remitted the appeal straight to the board. In doing so, it had committed a further substantial procedural violation in relation to the appellant's right to be heard.

In **T 638/01** a form was wrongly filled in and the appeal was sent by the formalities officer acting for the opposition division directly to the boards of appeal, bypassing the consideration for interlocutory revision. The board pointed out that since the granting of interlocutory revision in an appropriate case is **mandatory**, it followed a fortiori that considering a case for interlocutory revision in circumstances where the latter is possible is itself a **mandatory procedural step**. Since, however, the legislative purpose of

Art. 109 EPC is overall procedural economy, it made no sense for the board to remit the case to the department of first instance for performance of this omitted step.

2.9.2 The department of first instance's obligation to rectify the decision

In case **T 139/87** (OJ 1990, 68) the board of appeal made it clear that an appeal by an applicant for a patent was to be considered well founded within the meaning of Art. 109(1) EPC 1973 if the main request of the appeal included amendments which clearly met the objections on which the refusal of the application had been based as indicated by the examining division. In such a case, the department that issued the contested decision **must** rectify the decision. Irregularities other than those that gave rise to the contested decision do not preclude rectification of the decision (see also **T 47/90**, OJ 1991, 486; **T 690/90**; **T 1042/92**; **T 1097/92**; **T 219/93**; **T 647/93**; OJ 1995, 132; **T 648/94**; **T 180/95**; **T 794/95**; **T 1120/11**; **T 410/14** and **T 2303/16**).

Similarly, according to **T 1060/13** it is established case law of the boards of appeal that, in the event that the appeal is objectively to be considered as admissible and well founded, the department of first instance is obliged to grant interlocutory revision (**T 139/87**, OJ 1990, 68; **T 180/95**; **T 2528/12**; **T 1362/13**); there is no room for discretion in the interests of procedural efficiency (**G 3/03**, OJ 2005, 344; **J 32/95**, OJ 1999, 713; **T 919/95**).

In **T 2445/11** the board was aware that its interpretation of Art. 109(1) EPC was not fully in line with the views expressed in **T 1060/13**, even though the outcome was the same. According to **T 1060/13**, interlocutory revision must be allowed if the main request filed with the statement of grounds of appeal clearly overcomes the grounds for refusal, it being irrelevant whether amended claims give rise to new objections or suffer from deficiencies that are themselves the subject of observations included by way of obiter dicta. In the board's view in **T 2445/11**, this approach may sometimes be too rigid, as it leaves no room for a pragmatic assessment of the situation with a view to procedural efficiency and may result in a needless repetition of the first-instance proceedings, forcing the applicant to pay a second appeal fee. In **T 682/22**, the board did not follow **T 2445/11** and followed the line of **T 1060/13**.

In **T 508/13** the board stated that the expression "considers the appeal to be ... well founded" in Art. 109(1) EPC leaves an examining division room for exercising judgment while bearing in mind that the purpose of interlocutory revision is to speed up the procedure (see **T 2445/11**). At the same time, once an examining division has decided not to rectify a refusal decision, the possible incorrectness or inappropriateness of not rectifying it is in itself insufficient reason for an immediate remittal of the case: the opportunity to cut short the appeal procedure by means of interlocutory revision has in any event passed. Rather, it has to be assessed whether an immediate remittal is appropriate in view of the overall state of the case.

2.9.3 Well-founded appeal within the meaning of Art. 109(1) EPC

An appeal is to be considered "well founded" if at least the main request submitted with the appeal includes amendments which clearly meet the objections on which the decision relies, such that the department of the first instance could reasonably be expected to recognise this and thus rectify its decision. That there are other objections which have not been removed but which were not the subject of the contested decision cannot preclude the application of Art. 109(1) EPC 1973 (**T 139/87**; **T 1060/13**; see also **T 47/90**, OJ 1991, 486; **T 219/93**; **T 919/95**). Thus, even if the amendments raise new objections not yet discussed, interlocutory revision must be allowed since an applicant should have the right to two instances (**T 1060/13**, **T 691/18**, **T 982/18**).

According to **T 1640/06** objections or remarks made in an obiter dictum of a decision under appeal cannot be taken into account (see also **T 483/20**). In **T 726/10** the board was of the opinion that the question whether or not the claims filed with the statement setting out the grounds of appeal took into account the remarks made in the obiter dictum was irrelevant for deciding whether interlocutory revision should be granted or not.

2.9.4 Competence of the department of first instance

In **T 473/91** (OJ 1993, 630) the board made it clear that the admissibility question under Art. 109 EPC 1973 fell under the jurisdiction of the department of first instance only when this question could be decided immediately on the basis of the appeal submissions themselves. Consequently, the appellate instance had exclusive jurisdiction over a request for restitutio in integrum into a time limit relating to the appeal itself.

2.9.5 "Cassatory" or "reformatory" interlocutory revision

In **T 919/95** the appellant was of the opinion that an interlocutory revision had to result in the appeal being allowed. A "cassatory" revision that merely set aside the contested decision and resumed the suspended proceedings was not compatible with the EPC. The interlocutory revision had to be a 'reformatory' revision, i.e. one that conferred on the appellant something that the contested decision deprived him of. The board stated that the requirements of Art. 109 EPC 1973 were met if the reason for the contested decision were removed as a result of an admissible appeal; once the contested decision had been set aside the requested decision could be taken, or the proceedings could be resumed, since further examination was required of new grounds or facts. The latter did not rule out a subsequent refusal. The purpose of interlocutory revision was to speed up the procedure. If an examining division rectified a decision under Art. 109 EPC 1973 merely in order to grant a patent according to an auxiliary request, even though the applicant insisted on his main request, the procedure was not thereby accelerated but slowed down and this would constitute a substantial procedural violation (see also **T 142/96**).

In **J 5/08** the Legal Board stated that according to established EPO practice, interlocutory revision under Art. 109 EPC 1973 could either be such as to annul the decision (a "rein kassatorische Abhilfe", or purely "cassatory" act) or it can be a "reformatory" revision. In both cases, and whether or not the cancellation of the appealed decision is expressly

ordered, the appealed decision is set aside by the department of first instance, in the first case by a "cassatory" procedural act, e.g. by a communication providing for the further examination of the application or, in the second case, by a revision decision immediately revising the appealed decision.

3. Substantive examination of the appeal

3.1. Binding effect of requests – no reformatio in peius

The question of law referred to the Enlarged Board in **G 9/92** and **G 4/93** (both OJ 1994, 875) asked whether and to what extent a board of appeal could depart from the request formulated in the notice of appeal when deciding opposition appeal proceedings, to the disadvantage of the appellant.

The Enlarged Board took several factors into account. The aim of the appeal was to eliminate an 'adverse effect'. As the filing of an appeal was subject to a time limit, it would not be consistent to allow non-appealing parties the unrestricted right to alter the extent of the proceedings by submitting their own requests without limitation of time. A non-appealing party as a respondent had the opportunity to make what it considered to be appropriate and necessary submissions in the appeal proceedings to defend the result obtained before the department of first instance.

The Enlarged Board thus concluded that:

1. If the **patentee** was **sole appellant** against an interlocutory decision maintaining his patent in amended form, neither the board of appeal nor the non-appealing opponent (as party to the proceedings as of right under Art. 107, second sentence, EPC 1973) could challenge maintenance of the patent as thus amended.

2. If the **opponent** was **sole appellant** against an interlocutory decision by an opposition division maintaining the patent in amended form, the patentee was primarily restricted in the appeal proceedings to defending the patent as thus maintained. Amendments proposed by the patentee (as party to the proceedings as of right under Art. 107 EPC 1973, second sentence) could be rejected by the board as inadmissible if they were neither appropriate nor necessary.

As legal uncertainty had been created by the fact that the case law of the boards of appeal had not been uniform as regards the principle of prohibition of reformatio in peius when applying or interpreting decision **G 9/92** (OJ 1994, 875), a further question was referred to the Enlarged Board, which was answered in **G 1/99** (OJ 2001, 381). See in this chapter V.A.3.1.7.

3.1.1 Reformatio in peius does not apply separately to each point

According to the established case law of the boards of appeal, the doctrine of prohibition of reformatio in peius cannot be construed to apply separately to each point or issue decided, or the reasoning leading to the impugned decision (see **T 149/02**). If an appeal

is lodged against an adverse decision of the department of first instance about the main request, then the whole request is before the board of appeal and within its jurisdiction, and the board is empowered to reopen and to decide upon matters which have been an issue before the opposition division (see **T 327/92**, **T 401/95**, **T 583/95**, **T 576/12**). The prohibition of reformatio in peius relates solely to the legal effect of an impugned decision; it does not apply to individual issues or objections (**T 1924/18**, with reference to **T 1437/15**; **T 803/17**).

3.1.2 Reformatio in peius and devolutive effect of appeal

In **T 149/02** the board stated that the two general principles of procedure – prohibition of reformatio in peius and the devolutive effect of the appeal, which conferred on the board the power to consider its subject-matter – were complementary and had to be implemented in such a way that they did not exclude each other.

3.1.3 Cases where reformatio in peius does not apply

In **T 1178/04** (OJ 2008, 80) the board held that where the issue was a person's right to be a party, the principle of no reformatio in peius was of no application, bearing in mind the fact that the principle of no reformatio in peius was taken mainly from the well-established principle in German law ("Verschlechterungsverbot"). This principle has no application in those cases where (a) there exist procedural preconditions for making relevant requests to the court ("Verfahrensvoraussetzungen") and (b) these preconditions are of a kind that cannot be waived or dispensed with ("unverzichtbare Verfahrensvoraussetzungen"), such that the court must itself be satisfied that they have been fulfilled. According to the board, in the context of patent proceedings such as these, preconditions of this kind included the admissibility of the opposition itself and the capacity of a person to be a party to the proceedings in the first place.

Referring to **T 1178/04**, the board in **T 384/08** found that the admissibility of the opposition is an indispensable procedural requirement for the substantive examination of the opposition submissions at every stage of the proceedings. The board therefore had to examine the question of the transfer of status of the opponent ex officio before dealing with the substance of the case. In **T 882/17** however, the board held that if the opponent was the sole appellant against an interlocutory decision maintaining a patent in amended form, an objection related to the inadmissibility of the opposition was subject to the principle of the prohibition of reformatio in peius. In deciding this way the board noted that it departed from **T 1178/04**.

3.1.4 Patentee as sole appellant

In **T 598/99** the board observed that the principle of reformatio in peius applied so as to prevent a sole appellant being put in a worse situation than he was in before he appealed. Where the patentee was the sole appellant, the principle could not serve to protect the opponent (respondent) from being put in a worse situation than he was in before the appeal (**G 9/92**, OJ 1994, 875 and **G 4/93**, OJ 1994, 875). Indeed, whenever a sole patentee was successful in his appeal against the revocation of his patent, the opponent would be in a

worse position than before. The fact that the opponent was not entitled to appeal against the decision to revoke the patent was immaterial in that respect.

An early decision applying the principles expounded in **G 9/92** and **G 4/93** (OJ 1994, 875) was **T 856/92**, in which the board concluded that in a case where the patentee and sole appellant appealed only in respect of some of the claims held allowable in the opposition division's interlocutory decision, neither the board nor the opponent might challenge those claims not questioned by the appellant.

When the patent proprietor is the sole appellant, the patent as maintained by the opposition division in its interlocutory decision cannot be objected to by the board, either at the request of the respondent (opponent) or ex officio (see **G 1/99**, OJ 2001, 381, **T 1689/12**, **T 822/16**).

In **T 1626/11**, the first ten claims of the main request were identical in wording to those of the second auxiliary request, which the opposition division had already found to comply with the EPC. Faced with the question whether it could examine those claims without contravening the principle of no reformatio in peius, the board cited **T 856/92** and **T 149/02**, in which the boards had concluded that, where the proprietor was the sole appellant, they could no longer review any part of a set of claims included in a new set of claims also containing additional (parallel) claims if the opposition division had already held that the first set to be EPC-compliant and the additional claims did not alter how it was to be interpreted. This conclusion, based on **G 9/92**, was similarly reached in **T 168/04**, **T 1713/08**, **T 722/10** and **T 428/12**.

The board in **T 659/07** found that where the patentee is the sole appellant, the patent as maintained by the opposition division in its interlocutory decisions, cannot be objected to by the board, either at the request of the respondent (opponent) or ex officio, even if the patent as maintained would otherwise have to be revoked on the ground that a feature present in both claim 1 as granted and as maintained introduces added subject-matter contrary to Art. 123(2) EPC 1973.

3.1.5 Opponent as sole appellant

In **T 752/93** of 16 July 1996, **T 637/96**, and **T 1002/95** the opposition division had maintained the patent in amended form and only the opponent had appealed. The non-appealing patentee proposed amendments during the appeal proceedings. In **T 752/93** and **T 1002/95** the board found that amendments proposed by a non-appealing patentee could, according to **G 9/92** (OJ 1994, 875), be rejected as inadmissible by the board of appeal if they were neither appropriate nor necessary, i.e. had not been occasioned by the appeal. According to **T 752/93** the patentee should therefore have the opportunity to correct erroneous amendments if these were detected later in the proceedings. Similarly, in **T 637/96**, the respondent (patentee) was able to request restoration of the claim as granted, as the amendment made to it in opposition proceedings did not change its subject-matter (i.e. the claim as granted and amended meant the same thing) and was therefore unnecessary. In **T 752/93** and **T 637/96** the amendments were found not to worsen the sole appellant's position and the board thus considered them appropriate and

necessary. In **T 1002/95** the board pointed out that under R. 57a EPC 1973, which came into force after decisions **G 9/92** and **G 4/93**, a patentee was entitled to make "appropriate and necessary" amendments occasioned by grounds for opposition specified in Art. 100 EPC 1973, even if the respective ground was not invoked by the opponent.

In **T 23/04** the board made it clear that the requirements of reformatio in peius do not imply any right of the appealing party (opponent) to dictate the form any proposed amendments may take, and certainly to prescribe a form of amendment which would be maximally disadvantageous to the patent proprietor.

In **T 1380/04** the board, referring to **G 1/99** (OJ 2001, 381), held that the deletion of a term by the patentee/respondent could not be allowed, as this would have worsened the legal position of the appellant, contrary to the prohibition of reformatio in peius. It was immaterial that the term had only been introduced at the suggestion of the opposition division, as this did not alter the fact that approval of this amendment was the responsibility of the proprietor. See also **T 2503/18**.

However, if the opponent and sole appellant deliberately refrains from invoking the prohibition of reformatio in peius against a claim request submitted by the respondent (patentee) which extended the scope beyond that of the claims as maintained by the department of first instance, the board need not apply the principle of the prohibition of reformatio in peius of its own motion. Following the principle of party disposition, any right protecting an appellant against an outcome that puts it in a worse position than if it had not appealed, may be waived (**T 1544/07**).

The board observed in **T 111/10** that the exceptional possibilities for amendment foreseen by **G 1/99** in application of the principle of the prohibition of reformatio in peius only applied if the patent would otherwise have to be revoked, i.e. the patent proprietor (respondent) did not have any other possibility of amendment which would allow rescue of even part of the opposed patent. In the case at issue, however, such a possibility existed. Although this would have resulted in a restriction of scope, it could not be considered unduly inequitable for a patent proprietor who, not having appealed, could not from the outset expect to get more than what was already maintained by the opposition division.

3.1.6 Revocation of patent

The principles of **G 9/92** (OJ 1994, 875) were applied in **T 169/93** to the situation where the patent had been revoked, not amended. The patentee appealed against the decision to revoke (for lack of inventive step). The opposition division had found the patent sufficiently disclosed and novel. The appellant submitted that these issues could not be reopened, as none of the opponents had appealed this finding, relying on decisions **G 9/91** (OJ 1993, 408), **G 10/91** (OJ 1993, 420) and **G 9/92**. The board disagreed, pointing out that the respondents were unable to file an appeal, not being adversely affected under Art. 107 EPC 1973, their request for revocation having been granted. Moreover, as the patent had been revoked, it was not possible for the appellant to have an even worse outcome. It was thus open to the respondents to re-argue matters which had already been at issue before the opposition division. See also **T 1341/04**, where the board further noted

that the situation arising from a decision to revoke a patent was legally different from the one in which the patent had been maintained by the opposition division in amended form, where the decision could be appealed by both patentee and opponent. It was this situation which led to the conclusion in **G 9/92** and **G 4/93** that the patent proprietor is primarily restricted during the appeal proceedings to defending the patent in the form in which it was maintained by the opposition division, in a case where the opponent is the sole appellant.

3.1.7 Exceptions to the prohibition of reformatio in peius

a) Limited exceptions to the prohibition of reformatio in peius – G 1/99

Limited exceptions to the rule against reformatio in peius exist. In **G 1/99** (OJ 2001, 381) the Enlarged Board answered the question referred to it in **T 315/97** (OJ 1999, 554), namely, "Must an amended claim which would put the opponent and sole appellant in a worse situation than if he had not appealed – e.g. by deleting a limiting feature of the claim – be rejected?".

The Enlarged Board held that **in principle** such a claim must be rejected. However, an exception to this principle might be made where the opposition division had allowed an inadmissible amendment. In the case at issue the opposition division had done just that with the agreement of the proprietor, who was thus not adversely affected by the decision and unable to appeal. The patent proprietor (respondent) had filed during the appeal proceedings a main request including the added (and unallowable) limiting feature, and an auxiliary request deleting it (and thus widening the claim). The Enlarged Board found that the main request had to be rejected because it did not meet the requirements of the EPC. Moreover, if the principle of reformatio in peius were to be applied without considering the specific circumstances of the case, the auxiliary request would also have to be rejected because it would put the opponent (appellant) in a worse situation than if it had not appealed. The only possible course the board could then take would be to revoke the patent, there being no further remedy for the proprietor. The proprietor would thus definitively lose any protection as a direct consequence of an inadmissible amendment being held allowable by the opposition division. The Enlarged Board considered it inequitable for the patent proprietor not to be given a fair opportunity to mitigate the consequences of errors of judgment made by the opposition division. The patent proprietor should thus be allowed to file requests in order to overcome this deficiency, as follows:

- in the first place, for an amendment introducing one or more originally disclosed features which limited the scope of the patent as amended;

- if such a limitation was not possible, for an amendment introducing one or more originally disclosed features which extended the scope of the patent as maintained, but within the limits of Art. 123(3) EPC 1973;

- finally, if such amendments were not possible, for deletion of the inadmissible amendment, but within the limits of Art. 123(3) EPC 1973, even if, as a result, the situation of the opponent was made worse.

See **T 594/97**, **T 994/97**, **T 590/98**, **T 76/99** and **T 724/99** for application of the principles enunciated in **G 1/99**.

b) Case law around G 1/99

According to **T 809/99** a non-appealing patent proprietor is primarily restricted on appeal to defending the claims as maintained by the opposition division. If these claims are not allowable, the principle of prohibition of reformatio in peius applies, i.e. an amended claim which would put the opponent and sole appellant in a worse situation than if it had not appealed must be rejected. The board went on to say that the only exception to this principle as set out in **G 1/99** requires consideration of a particular sequence of possibilities for overcoming the deficiency presented by the claim(s). The first solution for overcoming the deficiency to be considered (an amendment introducing one or more originally disclosed limiting features which would not put the opponent (appellant) in a worse situation than it was in before it appealed) in fact concerns a limitation of the scope of the claim. Such limitation can also be achieved by deleting the alternative embodiment in the claim, which led to the deficiency. The proprietor's argument that the limitation to only one of the two alternatives would render the scope of protection too narrow for it to be commercially interesting is not a valid reason for dismissing this solution and proceeding to the next possible solution indicated in **G 1/99**.

The respondent (patent proprietor) in **T 1194/06** conceded that a limitation according to the first route mentioned in the decision **G 1/99** (OJ 2001,381) was possible but argued that this would result in a substantial restriction of the scope of the claims. The board was aware of the fact that the respondent would lose part of the protection afforded by the patent as maintained by the opposition division. It was, however, clear from **G 1/99** that the principle of reformatio in peius had to be respected by the boards of appeal and that an exception to this principle should be construed narrowly. There was no reason to assume that the Enlarged Board in **G 1/99** considered even a substantial limitation of the scope of protection unacceptable.

The board in **T 1033/08** made it clear that **G 1/99** did not supersede **G 9/92** and **G 4/93**, but was complementary thereto in that it gave directions for allowing an exception to the principle of prohibition of reformatio in peius as defined in these decisions. Certain conditions had to be fulfilled. A limiting feature introduced during the opposition procedure had to be deleted. The necessity for its deletion had to be caused by the appeal. This meant that the deletion was necessary and appropriate because it was related to a ground of opposition and caused by new facts, evidence or arguments put forward by the appellant, or because of a different evaluation of the situation by the board of appeal. Without the deletion, the patent would have to be revoked. It was not possible to overcome the objection by introducing new features which limit the scope of the patent as maintained. Only if these preconditions were fulfilled, might an objection be overcome by introducing new features which extended the scope of the patent as maintained, but within the limits of Art. 123(3) EPC according to the second option of **G 1/99**.

In **T 2129/14** the inadmissible amendment concerned four elements of the claimed system and some relationships between them. Compared with claim 1 of the request found

allowable by the opposition division, in claim 1 of the second auxiliary request three features were deleted. As a result, the protection was extended compared to the request on the basis of which the patent would have been maintained if the opponent and sole appellant had not appealed. Under such circumstances the opponent and sole appellant was in a worse situation than if it had not appealed. The Enlarged Board laid down the conditions under which the exception may be made. The board noted that the three conditions laid down by **G 1/99** are sequential. Further, the board noted that in claim 1 of the second auxiliary request features had been added which also involved some relationships between the four elements of the system. In the board's opinion, each of the requirements lost by deleting the inadmissible amendment had to be considered together with the added features, in the light of the conditions established in **G 1/99**. The board came to the conclusion that the amendments fell within the conditions for an allowable exception under **G 1/99**, allowing the deletion of the former inadmissible amendments, and were therefore allowable.

In **T 957/22**, after having withdrawn its own appeal, the patent proprietor in its respondent's role was limited to defending the patent in the form held allowable by the opposition division, or in a more restricted form. It sought to introduce auxiliary requests which looked as though they were merely part of the proprietor's defence against the opponent's appeal; in reality, they introduced broader claim language which the opposition division had rejected ("containing" instead of "consisting of"). The board held that these requests were not to be admitted: the patent proprietor could not rely on the exception to the prohibition of reformation in peius according formulated in **G 1/99**, because **the patent proprietor had deliberately withdrawn its appeal and thus waived the possibility of defending its patent in a broader version** than that upheld by the opposition division. It had done so despite being aware that the board had endorsed in its preliminary opinion the objection under Art. 123(2) EPC against the first auxiliary request. In this situation, for reasons of equity there was no justification to grant the proprietor back the benefit of the exception to the prohibition of reformatio in peius. The patent proprietor had waived an existing right in full knowledge of the legal situation.

c) Remittal to the department of first instance

According to **T 1843/09** (OJ 2013, 502) the prohibition of reformatio in peius as far as it entails a procedural limitation of the proprietor's liberty to change by way of amendments the scope of protection sought prevails "in principle" (**G 4/93**, OJ 1994, 875) until the final settlement of the opposition case and, therefore, also in any proceedings, including further appeal proceedings, subsequent to a remittal under Art. 111 EPC. The board went on to say that it is clear from **G 1/99** that exceptions to the principle of the prohibition of reformatio in peius are a matter of equity in order to protect the non-appealing proprietor against procedural discrimination in circumstances where that prohibition would impair the legitimate defence of its patent. Therefore, exceptions are not limited to the situation specifically dealt with in **G 1/99**. Rather, the equity approach as taken by the Enlarged Board covers, beyond an error of judgment by the opposition division, any change of the factual and/or legal basis on which limitations have been made by the proprietor prior to the appeal by the opponent as the sole appellant, provided the proprietor would be

prevented by the prohibition on reformatio in peius from adequately defending its patent against new facts and objections introduced into the proceedings at the appeal stage.

In **T 24/13**, the appellant had asserted that a remittal under Art. 111 EPC would also put it at a disadvantage as the proprietor might possibly be granted a broader patent. The board disagreed because the prohibition on reformatio en peius applied equally in opposition proceedings resumed after such remittal (see **T 1843/09**, OJ 2013, 508; **T 1033/08**).

d) Lack of clarity

The three options given in **G 1/99** were set out with regard to the requirement of Art. 123(2) EPC. According to **T 648/15** these options could be applied in a similar way when dealing with the requirement of Art. 84 EPC (see also **T 1380/04**). The board further noted, that the three options given in **G 1/99** do not apply independently of one another and cannot be chosen ad libitum. Indeed, they are set out in such a way so as to indicate a particular sequence of options for overcoming the deficiency presented by a claim.

In **T 974/10** the board emphasised that the Enlarged Board had stated in **G 1/99** that, "... if the patent cannot be maintained **for reasons which were not raised at the first instance**, the non-appealing proprietor deserves protection for reasons of equity". As, in the case at issue, the clarity objection was raised by the board for the first time in the appeal, the respondent had to be allowed to file amendments as foreseen in decision **G 1/99**, which decision gave due regard to the principle of equity.

In **T 1845/16**, the board concluded that making an exception to the prohibition of reformatio in peius in line with **G 1/99** was warranted. The Enlarged Board had held there that such an exception to the otherwise binding principle of the prohibition of reformatio in peius could be allowed for reasons of equity but was to be construed narrowly, stipulating that an impermissible feature could be deleted only if there was no other option for amendment that was less detrimental to the opponent. In the case in hand, the board could not identify any such option, nor had the appellant argued anything to that effect. Consequently, there was justification for making an exception to the prohibition of reformatio in peius and permitting the patent proprietor to overcome the lack of clarity in its main request by making the amendments to claim 1 requested in its auxiliary request 1.

e) Causal link

In **T 61/10** the board pointed out that the existence of a causal link between the limiting feature to be deleted and the new situation arising on appeal was a necessary precondition for justifying an exception to the principle of prohibition of reformatio in peius for reasons of equity. In **G 1/99**, **T 1843/09** and **T 1979/11** this condition was fulfilled. However, in the case before the board, the precondition was not fulfilled, so a departure from the principle of prohibition of reformatio in peius based on analogies with the cases cited was not justified.

f) Undisclosed disclaimer

In **T 2277/18**, the respondent (patent proprietor) requested that the patent be maintained as granted or, alternatively, in the version as amended by the opposition division. Compared with the version as granted, independent claim 1 contained a disclaimer that had not been disclosed in the version as originally filed. As per **G 1/03** (OJ 2004, 413), a disclaimer should not remove more than is necessary to restore novelty. However, the board held that the disclaimer in the maintained version of the contested patent had removed more than was necessary. On the prohibition of reformatio in peius, the board stated that the requirements laid down in **G 1/99** for an admissible exception to the prohibition of reformatio in peius also applied when the inadmissible amendment was an undisclosed disclaimer. The question in this case was whether, in line with the first option from **G 1/99**, adding originally disclosed features that limited the scope of the patent as maintained could overcome the established deficiency. The board found that it could, since the application as originally filed disclosed a particular implant made of a specific Mg-Zn-Ca alloy. Adding the features from this example would further limit the scope of the patent compared with the version as maintained while simultaneously making the excessively broad and so inadmissible disclaimer superfluous and thereby overcoming the deficiency it had created.

3.1.8 Reformatio in peius and lack of cross-appeal in the EPC

According to an obiter dictum in **T 239/96**, the board took the view that, in the absence of a provision on cross-appeal (in German "Anschlussbeschwerde"), reformatio in peius could not be ruled out altogether under the EPC, as it might serve as a means of avoiding unnecessary litigation, while still satisfying the legitimate expectations of the parties for a fair hearing. The board found that this deficiency in the EPC (i.e. the lack of a cross-appeal) was of prime importance when considering the respondent's procedural position and the issue of reformatio in peius.

3.2. Subject-matter under examination

3.2.1 Primary object of the appeal proceedings – Article 12(2) RPBA

As set out in Art. 12(2) RPBA, since the primary object of the appeal proceedings is to review the decision under appeal in a judicial manner, a party's appeal case shall be directed to the requests, facts, objections, arguments and evidence on which the decision under appeal was based. In the explanatory remarks to Art. 12(2) RPBA (Supplementary publication 2, OJ 2020) it is stated that this paragraph provides a general definition of the nature and scope of the appeal proceedings in accordance with the established case law. The boards of appeal constitute the first and final judicial instance in the procedures before the EPO. In this capacity, they review appealed decisions on points of law and fact.

In **T 1604/16** the board referred to the explanatory remarks to Art. 12(2) RPBA that the boards have competence to review appealed decisions in full, including points of law and fact. This was in accordance with Art. 6 ECHR, which stipulates that there must be at least one judicial instance that can review a case in full, i.e. the law and the facts, given that the

boards of appeal are the only judicial body to review decisions by the departments of first instance of the EPO. The board was well aware that there is case law on a restriction of the boards' competence when reviewing discretionary decisions taken by the departments of first instance in certain circumstances (**G 7/93**, OJ 1994, 775, and case law based on this decision). However, it did not consider the evaluation of evidence to be a discretionary decision. See also chapter V.A.3.4 "Review of first-instance discretionary decisions" below.

3.2.2 Complete case on appeal

Under Art. 12(3) RPBA (cf. Art. 12(2) RPBA 2007), the statement of grounds of appeal and the reply must contain a party's complete appeal case. Accordingly, they must set out clearly and concisely the reasons why it is requested that the decision under appeal be reversed, amended or upheld, and should specify expressly all the requests, facts, objections, arguments and evidence relied on.

The board has a discretion not to admit any submission by a party that does not meet the requirements of Art. 12(3) RPBA, see Art. 12(5) RPBA. For further detail on this, see chapter V.A.4.3.5 "Incomplete case in grounds of appeal or reply – substantiation requirement – Article 12(3) and (5) RPBA".

In **T 2457/16**, the patent proprietor submitted a large number of auxiliary requests with the statement of grounds of appeal. The board found that the patent proprietor had not explained the amendments made in these auxiliary requests or their purpose, leaving the board and the opponent unsure as to the order in which the auxiliary requests were to be examined, precisely what amendments had been made in the requests and the reasons why they had been made. That was contrary to the requirement under Art. 12(3) RPBA that parties must submit their complete case in the statement of grounds of appeal; the patent proprietor had thereby shifted to the opponent and the board the responsibility – properly incumbent on it – to select from the numerous requests one that might ultimately be allowable (see also **R 11/08**).

In **T 412/18**, the board indicated that an appeal case in which the substantiation for a particular objection had to be pieced together from parts of the rest of the case that, when read on their own, had no readily discernible link with the issue addressed in the objection was not a complete case within the meaning of Art. 12(3) RPBA. This approach ran counter to the purpose of that provision, namely that the parties had to present a complete case at the start of the proceedings in order to provide the board (and the other parties) with an appeal file that contained every party's complete case and to prevent any tactical procedural abuse (see also **T 1488/08**, referring to the then applicable Art. 12(2) RPBA 2007). Consequently, the board did not take the inventive-step objection into consideration.

In **T 706/17**, the board held that a sweeping reference to the opposition case was insufficient for establishing why the contested decision should be reversed. Under Art. 108 EPC, R. 99(2) EPC and Art. 12(3) RPBA or Art. 12(2) RPBA 2007, the appellant (opponent) had to present a complete case in its statement of grounds of appeal that

allowed the board and the other parties to understand why the contested decision should be reversed without having to make any further investigations of their own. The appellant's inventive-step objections were therefore disregarded on appeal pursuant to Art. 12(4) RPBA 2007.

In **R 8/16** the Enlarged Board rejected the argument that the board should have known, and therefore should have considered, the petitioner's arguments from the file as presented before the opposition division. The board had no obligation to peruse the whole file of the first-instance proceedings. It is the duty of the parties to raise issues again in the appeal proceedings, to the extent necessary, as set out in Art. 12(1) and (2) RPBA 2007. In **T 16/14**, the board explained that the words "to the extent necessary" (see **R 8/16**) did not imply that a board had to consider the submissions from the first-instance proceedings. In its view, they meant that any submission not relevant for the issues to be dealt with on appeal did not have to be presented again. It concluded that a mere reference to the case made at first instance did not meet the requirements of Art. 12(2) RPBA 2007. Consequently, the appellant's (opponent's) arguments in relation to documents E1/E1a and E2/E2a were not to be considered in the appeal proceedings pursuant to Art. 12(4) RPBA 2007.

See also chapter V.A.2.6.3h) "Complete case within the meaning of Art. 12(3) RPBA ", in relation to admissibility of the appeal.

3.2.3 Opposition appeal proceedings

a) Admissibility of opposition

The admissibility of the opposition, being an indispensable procedural requirement for any substantive examination of the opposition submissions, must be checked ex officio in every phase, including any ensuing appeal proceedings (**T 240/99**).

b) The notice of appeal

In **T 226/09** the board decided that the request in the notice of appeal for the patent to be maintained on the basis of the first auxiliary request did not limit the subject of the appeal within the meaning of R. 99(1)(c) EPC for the appellant-proprietor and therefore did not rule out a broader request in the statement of grounds.

c) Unopposed subject-matter not reviewed

No part of a patent's subject-matter (e.g. individual claims) not opposed within the nine-month time limit can be reviewed in either opposition or appeal proceedings. The opponent's statement under R. 76(2)(c) EPC (R. 55(c) EPC 1973) establishes the extent to which the patent is contested and thus the formal competence of the opposition division or board of appeal. The only exception to this principle concerns an opposition explicitly directed **only** to the subject-matter of an independent claim. In such a case, subject-matter covered by claims which depend on the independent claim can also be examined as to patentability (see e.g. **G 9/91**, OJ 1993, 408; see also **T 323/94**).

According to **T 896/90**, detailed grounds for opposition for a single granted independent claim do not mean that only that part of the patent is being contested, if the opponent has indicated that he wants the whole patent revoked. However, in **T 737/92** (in which only arguments against process claims and not against composition claims were submitted) the board found that an opposition was filed only to the extent that it was substantiated (see also **T 318/01**).

Where two opponents lodge appeals contesting different sets of claims and one subsequently withdraws its appeal, it becomes a party as of right under Art. 107 EPC 1973 and the other opponent becomes the sole appellant. The scope of the appeal is defined by the latter's request, which the non-appealing party may not exceed and which binds the board (**T 233/93**).

In **T 653/02** it was held that a board has no competence to examine a newly formulated claim derived by combination of granted claim 1 with a sub-claim not being within the extent to which the patent had been opposed; this did not fall within the exception allowed by **G 9/91** (OJ 1993, 408). In **T 646/02** the board found that the case at issue differed from the facts before the board in **T 653/02**, in that the subject-matter not opposed was described in the patent and was part of the independent claim as granted but was not itself the subject-matter of a dependent claim of the patent as granted. Whether or not the board had competence to examine depended, however, only on whether the patent was clearly restricted to a subject-matter not covered by the notice of opposition. This was done in **T 646/02** by restriction to the subject-matter of the **deliberately excluded dependent claim** and, in the case at issue, by restriction to **deliberately excluded variants** of the invention. The board held that the exception in **G 9/91** was not therefore applicable in the case before it either, since it was applicable only to subject-matter implicitly covered by the notice of opposition and not to those explicitly excluded.

In **T 364/18** the appellant (opponent) expressly requested in the notice of opposition revocation of claims 1-5, 8, 9, 11, 15-17, 19 and 20. This request was repeated on appeal. The board saw in the above an express statement that the patent was opposed and the decision was appealed only in as far as the claims mentioned were concerned, which thus defined, respectively, the extent of opposition according to R. 76(2)(c) EPC, and the extent to which decision was to be amended according to R. 99(2) EPC. In accordance with the principle of ne ultra petita the board saw itself limited to examining the patent only for the claims opposed. The auxiliary request, however, was directed to the subject-matter of unopposed granted claims 6, 7, 10, 12 to 14 and 18, in the form of independent claims 1 to 7 which combined the features of respective ones of these claims with granted claim 1. As the auxiliary request was directed to those unopposed subject-matters, and the board had no power to examine such subject-matter, the patent was to be maintained in this limited form.

d) Dependent claims

In line with **G 9/91**, a patent proprietor could, in appeal proceedings, amend an uncontested **dependent** claim in accordance with R. 57a EPC 1973 (**T 711/04**).

In **T 2094/12** granted claim 5, which was dependent on granted claim 1, was not opposed. Claim 1 as upheld by the opposition division combined granted claim 1 with the (non-optional) subject-matter of granted claim 5. The subject-matter of claim 1 of the main request was therefore based on "dependent subject matters" as referred to in **G 9/91**. According to this point: "...even if the opposition is explicitly directed only to the subject-matter of an independent claim of a European patent, subject-matters covered by claims which are depending on such an independent claim may also be examined as to patentability, if the independent claim falls in opposition or appeal proceedings, provided their validity is prima facie in doubt on the basis of already available information (cf. **T 293/88**, OJ 1992, 220). Such dependent subject-matters have to be considered as being implicitly covered by the statement under R. 55(c) EPC 1973 (now R. 76(2)(c) EPC)....". Thus in the case in hand because the opposition notice was explicitly directed to granted claim 1, it was implicitly also directed to the subject-matter of granted claim 5, now claim 1 of the main request. The opposition division was thus also competent to in considering prima facie validity of the patent.

e) Appeal by patentee against revocation

Where the patentee appeals the revocation of the patent, the board is not bound by the findings of the opposition division; the whole case, including those claims considered novel by the opposition division, and objected to by the non-appealing opponent, must be considered (**T 396/89**). Furthermore, if the patent proprietor as the sole appellant in the opposition appeal proceedings makes amendments to the version of the patent adopted in accordance with an interlocutory decision of the opposition division, the board is both competent and obliged ex officio to examine those amendments from both a formal and a substantive point of view, even if the respondents expressly agree to them (**T 1098/01**). Similarly, where the patent proprietor was respondent on appeal against the decision of the opposition division as a whole, it was the board's power and duty to decide for itself on each issue addressed and it was not bound by any finding of that decision (in the respondent's favour) (**T 36/02**).

f) Removal of references in dependent claims

Claims which remain unchanged after the removal of the references in dependent claims need not be examined in opposition appeal proceedings to see if they contain grounds for opposition raised for the first time in those proceedings, unless the patentee consents (**T 968/92**).

g) Abandonment of subject-matter

Established case law of the boards of appeal has it that previous limitations of the claims cannot be treated as an express abandonment of parts of the patent but are to be regarded merely as attempts to come up with a wording delimiting the patent in such a way as to overcome objections. The patent proprietor is free at any time to revert to broader claims or to the version as granted, provided this does not amount to an abuse of procedural law (**T 43/16**; see **T 123/85**, OJ 1989, 336; **T 296/87**, OJ 1990, 195; **T 900/94**; **T 1018/02**;

T 934/02; **T 699/00**; **T 794/02**). Nonetheless, the admissibility of any such request on appeal is subject to the provisions of Art. 12(4) RPBA (see **T 28/10**, **T 1135/15**).

According to **T 123/85** (OJ 1989, 336), the EPC makes no provision for patentees to surrender their patents during opposition proceedings (referring to **T 73/84**, OJ 1985, 241; **T 186/84**, OJ 1986, 79) nor surrender part of the patent so as to limit it. Thus a request withdrawn during opposition proceedings may nonetheless be considered in any ensuing opposition appeal proceedings.

In **T 1018/02**, it was stated that amendments of a European patent had to comply with R. 57a EPC 1973 (R. 80 EPC). According to this rule, amendments were possible provided that they were occasioned by grounds for opposition. However, this did not mean that, if a patent proprietor in the first instance chose to defend a main request which was limited in scope compared with the claims as granted, then he could not during the appeal proceedings go beyond the limits of that request. In accordance with **T 407/02**, a patent proprietor who had only defended his patent in limited form before an opposition division, was in principle allowed on appeal to return to a broader version or even to the patent as granted. Following **T 407/02**, the board in **T 1188/09** pointed out that opponents must therefore always be prepared for the possibility that a patent proprietor whose patent has been revoked by the opposition division will seek its restoration as granted on appeal. According to the board in **T 1188/09**, **T 1018/02** expressly followed this approach, which was again upheld in **T 386/04**, where it was explained that supposedly contrary decisions had always been concerned with circumstances in which the amendment to the claim amounted to an abuse of the procedure.

According to **T 386/04**, an appellant (proprietor), whose patent has been revoked, is entitled to seek maintenance of the patent as granted even though its main request before the opposition division had only been the maintenance of the patent in more limited form. The exception to this is where to allow the proprietor to revert to the amended claims would amount to an abuse of procedure. According to the board, this long-standing principle is not contradicted by decisions **T 528/93** or **T 840/93** (OJ 1996, 335), which are concerned with new claims raising new issues, and is not contrary to the statement by the Enlarged Board in decision **G 9/91** (OJ 1993, 408), concerning the purpose of an appeal. In **T 727/15** the board referring to **T 386/04** admitted the main request into the proceedings (reversion to claims as granted after maintenance in more restricted form). In the case in hand such reversion did not constitute an abuse of procedure.

The board in **T 28/10** extensively discussed **T 123/85** (OJ 1989, 336) and the case law based on it (including **T 386/04**) holding that it did not follow from this case law that a patent proprietor must be able to revert to a broader version of the claims which it had not initially defended in the opposition proceedings, and thereby amend its case, without being subject to any procedural restrictions. In the case at issue, the patentee had sought to introduce into the appeal proceedings claims which had not been the basis of discussion before the opposition division. The board found that the legal situation had changed since **T 123/85** and Art. 12(4) RPBA 2007 was now the relevant legal provision rather than case law based on that decision.

In **T 2558/16**, the board held that just because a patent proprietor had dropped its request for rejection of the opposition, or replaced it with other requests, in the first-instance proceedings did not mean that it could not go back on appeal to defending the version of the patent as granted. That being said, the patent proprietor was not entitled to do so unconditionally; it had to be requested and it was at the board's discretion to grant such a request. In exercising its discretion under Art. 12(4) RPBA 2007, the board had to consider the circumstances of the individual case before it (which, in the case in hand, meant especially the events in the opposition proceedings).

h) Fresh ground for opposition on appeal

Grounds for opposition submitted for the first time on appeal may be considered only with the patent proprietor's consent. If the patentee has not consented to a fresh ground's introduction into the proceedings, the board's decision must not deal with it in substance at all and may mention only that it has been raised (see **G 10/91** and **G 9/91**, OJ 1993, 420; **G 1/95**, OJ 1996, 615). In **G 7/95** (OJ 1996, 626) the Enlarged Board held that lack of novelty and lack of inventive step, albeit both falling under Art. 100(a) EPC, were different legal grounds for opposition.

On the introduction of fresh grounds for opposition into opposition proceedings, see chapter IV.C.3.4.

In **T 1571/12** the patent proprietor consented at the oral proceedings before the board to the introduction of a fresh ground for opposition, namely that the invention could not be carried out (Art. 100(b) EPC). The board remitted the case to the department of first instance for an answer to the highly relevant question of whether the claimed subject-matter was sufficiently disclosed for it to be carried out.

In **T 350/13** the opponent's argument, that the proprietor had implicitly given its approval with respect to Art. 100(c) EPC by arguing in response to the opponent's objections, was not persuasive in admitting this ground for opposition. Irrespective of the patent proprietor at some time responding substantively to the new ground, this could not be interpreted as an implicit or binding indication that it approved the introduction of this ground into the appeal proceedings.

An appeal unconnected with the reasons given in the appealed decision (lack of inventive step) and directed only to a new ground for opposition (lack of novelty) based on a new document is contrary to the principles laid down in decisions **G 9/91** and **G 10/91** (OJ 1993, 408 and 420), according to which an appeal should be within the same legal and factual framework as the opposition proceedings. It is tantamount to a new opposition and is thus inadmissible (**T 1007/95**, OJ 1999, 733).

In **T 27/13** the board held that the objection under Art. 83 EPC in the statement of grounds constituted a fresh ground for opposition under Art. 100(b) EPC that was outside the legal framework of the opposition proceedings. The board pointed out that it could find the present appeal admissible only if the same ground for opposition was raised when the

appeal was filed. Only then could there be any discussion of the possibility of introducing a fresh, additional ground for opposition. Hence the appeal was inadmissible.

In **T 1029/14** the first time that the appellant argued that the subject-matter of claim 1 lacked an inventive step was during appeal proceedings, two working days before the oral proceedings. This objection was not admitted into the proceedings pursuant to Art. 13(3) RPBA 2007. The board further questioned whether the line of attack starting from D1 as the closest prior art could be discussed at all in the appeal proceedings without the agreement of the patent proprietor. The appellant argued that the objection concerning inventive step starting from D1 did not constitute a fresh ground of opposition and could be examined in appeal proceedings without the agreement of the patentee, since D1 had been used to attack novelty. The board referred to the similar case **T 448/03** in which inventive step was not discussed at all in the opposition proceedings, but for the first time in the appeal proceedings. In **T 448/03** it was concluded that an objection concerning inventive step was to be considered a fresh ground if it was raised for the very first time in the appeal proceedings, irrespective of the fact that the document used as the starting point for the inventive step objection was the same document as used before to attack novelty. In **T 77/18**, the opponent had raised the ground for opposition under Art. 100(c) EPC for the first time during the oral proceedings before the opposition division. Neither the minutes of the oral proceedings nor the decision under appeal indicated that the opposition division had at any later stage decided to admit the new ground for opposition. The board considered that in the absence of a positive decision on admittance by the opposition division, the ground for opposition under Art. 100(c) EPC was to be treated as a fresh ground at the appeal stage and its admittance governed by the principles set forth in **G 10/91**.

In **T 184/17** the board held that even when the ground of inventive step was neither raised and substantiated in the notice of opposition nor discussed during opposition proceedings, an objection of lack of inventive step could exceptionally be examined in the appeal proceedings without the agreement of the patent proprietor, if it stayed within the same factual and evidentiary framework of a novelty objection properly raised and substantiated in the notice of opposition. This does not mean that the ground of lack of inventive step starting from the same prior art is always implicit in a properly substantiated allegation of lack of novelty. It rather applies exclusively to a case such as the case in hand, where, after having validly raised lack of novelty in opposition on the basis of a given document and passages cited therein, the ground of lack of inventive step is subsequently invoked on appeal based only on that document and the same passages, and where therefore the factual and evidentiary framework is substantially the same.

i) No general review of the first-instance decision

In **T 1799/08** the board stated that it is not the function of the boards of appeal to carry out a general review of decisions at first instance, regardless of whether such a review has been sought by the parties. In view of the character of the inter partes appeal proceedings, it could not be expected that the board, independently of its preliminary opinion on some of the critical issues for deciding on a ground not properly substantiated by the opponent which had initially raised it, would fully investigate that ground, in breach of the principle of

equal treatment of the parties, and provide its own reasoning, substituting itself for an opponent which remained passive. The board thus accepted, in the absence of any evidence to the contrary, the patent proprietors' arguments.

j) Ambiguities in the claims

Reviewing and eliminating any ambiguities in the claims and description which are not necessary to refute substantiated grounds of opposition is not part of the review of the contested decision carried out during opposition appeal proceedings. In the event of ambiguities in the claims which are not connected to changes in the granted documents, Art. 69 EPC 1973 stipulates that the description and drawings must be used to interpret the claims, not that the claims must be changed (**T 481/95**).

k) Ex officio examination of Art. 123(2) EPC

In **T 996/18**, the board held that claims which the patent proprietor had amended by adding features from the description but which had not been examined in the opposition proceedings should be examined ex officio on appeal for compliance with Art. 123(2) EPC (Art. 114(1) EPC, R. 100(1) EPC). Otherwise, subject-matter might ultimately be allowed that had been determined solely by the parties, without ever having been examined by the EPO. In this case, the board had raised the objections under Art. 123(2) EPC for the first time during the oral proceedings. To uphold the right to be heard (Art. 113(1) EPC) and the principle of equality of arms, the appellant was given the opportunity to comment on the objections and to overcome them by filing a new auxiliary request.

3.2.4 Patentability requirements under examination in ex parte proceedings

In **G 10/93** (OJ 1995, 172) the Enlarged Board ruled that, where the examining division had refused an application, the board had the power to examine whether the application or the invention to which it related met the requirements of the EPC 1973. This also held good for requirements the division had not considered in the examination proceedings or had regarded as fulfilled. The board should then, where appropriate, decide either to rule on the case itself or send it back to the examining division.

This followed from the fact that ex parte review was not of a contentious nature. It involved examination of the patentability requirements in proceedings in which only one party (patent applicant) was involved. The departments involved at every instance had to ensure that these requirements were fulfilled. In ex parte proceedings, therefore, the boards of appeal were not restricted either to examination of the grounds for the contested decision or to the facts and evidence on which that decision was based, and could include new grounds even though in ex parte cases too the main aim of appeal proceedings was to review the contested decision.

This decision was based on case **T 933/92**, in which an examining division had refused an application for non-compliance with Art. 123(2) EPC 1973. Whilst sharing the examining division's view with respect to Art. 123(2) EPC 1973, the board felt the application should

be refused for lack of inventive step. In the board's view, the question whether grounds could be added or replaced was not resolved by **G 9/91** and **G 10/91**.

If an application for which no search had been carried out in accordance with R. 45 EPC 1973 (R. 63 EPC), inter alia for lack of clarity of the claims, had been refused for the same reason, a board of appeal need only examine whether the claims failed to comply with the clarity requirement of Art. 84 EPC 1973 to such an extent that it was not possible to carry out a meaningful search. Having found that the claims fulfilled the requirements of the EPC to such an extent that it should have been possible to carry out a search, the board in **T 1873/06** remitted the application to the examining division for an additional search to be performed and the substantive examination to be continued.

In **T 1367/09**, when preparing the communication pursuant to Art. 15(1) RPBA 2007 the board did not raise the issue of Art. 84 EPC 1973. Nevertheless, when reconsidering the case in preparation for the oral proceedings the board noted that Art. 84 EPC 1973 should indeed be addressed in the oral proceedings. The board noted that in the light of **G 10/93** (OJ 1995, 172) the board had the power, in ex parte appeal proceedings, to enforce any grounds for refusal of an application, in particular grounds which the examining division did not consider at all or held to be satisfied.

The extent of the obligation to review a case where the appeal is partially withdrawn is discussed in chapter V.A.7.3.3 "Partial withdrawal of appeal by sole appellant and opponent".

3.3. Facts under examination – applying Article 114 EPC in appeal proceedings

Art. 114(1) EPC, which also applies in appeal proceedings, requires the board to establish the facts of its own motion. See **J 4/85**, OJ 1986, 205; **T 1800/07**; **T 1574/11**. The obligation of ex officio examination as laid down in Art. 114(1) EPC is explicitly limited in particular by Art. 114(2) EPC, i.e. the possibility of disregarding facts and evidence not submitted in due time, which is further specified by Art. 12 and 13 RPBA. Although Art. 114(1) EPC formally also covers the appeal procedure, this provision generally applies in a more restrictive manner in inter partes appeal proceedings than in opposition proceedings (see **G 9/91**, OJ 1993, 408 and **G 10/91**, OJ 1993, 420). In **T 1370/15** the board noted that this meant that a board was not excluded outright from introducing new facts and evidence in inter partes proceedings. The explanatory remarks on Art. 13(1) RPBA state: "Where the Board raises an issue of its own motion under Art. 114(1) EPC, the party's right to be heard under Art. 113(1) EPC must be respected." The board stated that this sentence made it clear that, under the RPBA, a board is not prohibited from raising issues of its own motion.

As the Enlarged Board made clear in **G 8/93** (OJ 1994, 887), the board's obligation under Art. 114(1) EPC 1973 existed only once proceedings were pending (see also **T 690/98**). Earlier, **T 328/87** (OJ 1992, 701) had already ruled that the facts could be investigated only if the appeal was admissible. There were, however, limits to this obligation, for example under Art. 114(2) EPC 1973, where facts and evidence are submitted late. The same applied if an opponent (respondent) withdraws his opposition: in **T 34/94** the board

found that, "if in the event of withdrawal of the opposition the opponent is the respondent, the board may take into account evidence which was submitted by the opponent prior to withdrawal of the opposition. However, for reasons of procedural economy, the duty of the EPO to examine the facts of its own motion does not extend to its having to examine the submission of the opponent that a previous oral disclosure took place if the crucial facts were difficult to ascertain without his co-operation" (this confirmed the case law in **T 129/88**, OJ 1993, 598; **T 830/90**, OJ 1994, 713; **T 887/90**, **T 420/91** and **T 634/91**; see also **T 252/93** and **T 1047/03**).

In **T 1574/11** the board observed that it was not restricted to the facts, evidence or arguments provided by the parties. As the primary purpose of the appeal procedure was to check that the contested decision was correct, the board was in principle entitled to consider the evidence provided therein if it deemed it to be relevant to its own decision.

T 182/89 (OJ 1991, 391) sets out what the obligation to investigate involves; Art. 114(1) EPC 1973 should not be interpreted as requiring the opposition division or board of appeal to ascertain whether there was support for grounds for opposition not properly substantiated by an opponent, but as enabling the EPO to investigate fully the grounds for opposition which were both alleged and properly substantiated pursuant to R. 55(c) EPC 1973 (see also **T 441/91** and **T 327/92**).

The board in **T 2501/11** stated in its Catchword: where prior publication of a citation has been admissibly disputed and the party bearing the burden of making the case for and proving it fails to provide a substantiated response, the board cannot treat that citation as prior art because opposition appeal proceedings are adversarial and so conducted in accordance with the adversary system of procedure, in which it is for the parties to make their cases and the boards' power to examine the facts of their own motion (Art. 114(1) EPC) is limited.

In **T 862/16** the board raised, ex officio, a further objection under Art. 76(1) EPC. The appellant objected to the board's raising new issues in the appeal proceedings, arguing that new Art. 12(2) RPBA establishes the character of the appeal proceedings as a judicial review in which the parties have only very limited room for amending their case with respect to the first-instance proceedings. The board therefore should be similarly constrained from introducing new objections of its own motion. The board stated that Art. 12(2) RPBA framed the "primary object of the appeal proceedings [as being] to review the decision under appeal in a judicial manner", but mainly concerned, if at all, obligations on the parties and not the board. The board saw here no provision, or any other provision of the RPBA, which could and would restrict its power conferred by Art. 111(1) and 114(1) EPC to raise new objections of its own motion. This would, moreover, be incompatible with the spirit and purpose of the Convention (Art. 23 RPBA). Thus, provisions of the RPBA as secondary legislation according to Art. 23(4) EPC and R. 12c EPC could never take precedence over the provisions of the EPC itself. The board noted in passing that in ex parte appeal proceedings any new ground, i.e. one not examined by the first-instance department, could be invoked by a board of appeal under Art. 114(1) EPC during the appeal proceedings (cf. **G 10/93**, OJ 1995, 172). That the

board might raise new objections, such as even a new inventive-step objection, had furthermore been confirmed by the Enlarged Board (see e.g. **R 16/13**). See also **T 174/21**.

In **T 1370/15** the board stated in its Catchword that not only in ex parte, but also in inter partes appeal proceedings, a board is allowed to introduce new ex officio common general knowledge without evidence of such knowledge which prejudices maintenance of the patent, to the extent that the board is knowledgeable in the respective technical field from the experience of its members working on cases in this field.

In **T 1138/20**, the board recalled that the boards of appeal constitute the first and final judicial instance and thus the only judicial body to establish both facts and law in proceedings before the EPO. As such, the boards have the power, at any stage of the appeal proceedings, to establish the relevant facts of the case before them and thereby substitute the findings of fact of the departments of first instance. However, the boards have no obligation to establish de novo, facts already established by the departments of first instance (see also **T 42/19**). The board underlined that review of a fact-finding process should not be conflated with the review of discretionary decisions within the meaning of **G 7/93**. The review of findings of fact is distinct from the review of discretionary decisions, which can only be reviewed for a particular type of errors (see **G 7/93**, point 2.6 of the Reasons), while a review of findings of fact has no such limitation.

3.4. Review of first-instance discretionary decisions

3.4.1 Principles applying to the review of first-instance discretionary decisions

a) General

In several decisions, the boards have addressed the issue of their scope for reviewing decisions taken by departments of first instance in exercise of their discretion. Among the factors to be considered is whether or not the department of first instance exercised its discretion properly.

The issues associated with exercising discretion are addressed in a number of other chapters in the context of the various individual provisions conferring discretion: see IV.B.2.4.1 on the examining divisions' discretion under R. 137(3) EPC; IV.C.4.5. on the opposition divisions' discretion to admit late-filed submissions; V.A.9.2. on discretion to remit; and V.A.4.3.4 and following on the boards' discretion to admit late-filed submissions.

b) Proper exercise of discretion

On appeal against a decision taken by a department of first instance in exercise of its discretion, it is not for the board to review all the facts and circumstances of the case as if it were in that department's place and decide whether or not it would have exercised discretion in the same way. If the EPC requires that a department of first instance exercise discretion in certain circumstances, that department should have a certain degree of freedom to do so without interference from the boards. They should overrule the way in

which it exercised its discretion in reaching a decision in a particular case only if they conclude that it did so in accordance with the wrong principles, without taking the right principles into account or in an arbitrary or unreasonable way, thereby exceeding the proper limits of its discretion (on this point, see, in particular, **G 7/93**, OJ 1994, 775, and **T 640/91**, OJ 1994, 918, where the board found that the department of first instance had exercised its discretion unreasonably and that this amounted to a substantial procedural violation).

Although **G 7/93** was concerned with a specific situation, namely an examining division's refusal to admit amendments after issuing a communication under R. 51(6) EPC 1973, the boards have applied the criteria established there to their review of other discretionary decisions of the departments of first instance (**T 820/14**, see also **T 858/17**). For instance, the same approach has been taken to reviewing opposition division decisions on the admission of late-filed submissions (**T 1209/05**, **T 1652/08**, **T 902/09**, **T 1253/09**, **T 544/12**, **T 1882/13**, **T 960/15**).

In several decisions, e.g. **T 1614/07**, **T 849/08**, **T 1788/12**, **T 1643/11**, **T 74/14**, **T 89/15**, the boards have cited one or both of **G 7/93** and **T 640/91** when reviewing whether the department of first instance exercised its discretion properly.

In **T 820/14** the board pointed out that so long as departments of first instance had exercised their discretion properly, the boards **as a rule** should not overrule their decisions and substitute their own discretion for that exercised at first instance. That applied regardless of whether not they ultimately decided to admit the previously refused submissions, uphold the refusal to admit them on different grounds or remit the case to the department of first instance and give it an opportunity to exercise its discretion anew. By the same token, however, the case law established in **G 7/93 could not be interpreted as imposing on the boards any duty** to uphold a proper exercise of discretion at first instance.

c) Review of first-instance discretionary decisions taken on substantive grounds

In **T 1816/11**, the sole reason for the examining division's refusal to admit the main request had been that it did not meet the requirements of Art. 84 and 56 EPC. The board held that, in such cases, where the discretionary decision had been taken on substantive rather than procedural grounds, the criteria established in **G 7/93** could not apply (likewise **T 820/14**, **T 556/13** and **T 971/11**). Rather, the substantive assessment (of clarity, inventive step, etc.) underlying the decision was fully open to review, as this went to the very essence of the boards' power of review.

In **T 2342/13**, as to the examining division's reason for not admitting the auxiliary request, namely a prima facie lack of inventive step, the board considered that a question relating directly to the compliance of a request with a provision of substantive patent law was to be assessed by the board itself and that on such a point there was no latitude for deferring to the view of the department of first instance (cf. **T 1816/11**, similar **T 2343/13** and **T 1159/13**).

The board in **T 1820/13** added that, although an opposition division's exercise of discretion could, as a rule, be reviewed only to a limited extent, i.e. only for abuse or errors, that could not mean that any substantive issues underlying its resulting decision were not open to review by the boards (see also **T 307/22**). Such issues went to the very essence of the boards' power of review and so they were called on to use their own discretion under Art. 12(4) RPBA 2007 (see **T 1816/11**). Thus, their review of an exercise of discretion had to include checking any underlying prima facie examination, for example as to whether it was vitiated by manifest errors (see also **T 1332/17**).

In **T 188/16**, the opposition division had not admitted the second auxiliary request into the opposition proceedings because the amended feature did not meet the requirements of Art. 123(2) EPC. The board stated that, in such cases, it was incumbent on the boards for the purposes of applying Art. 12(4) RPBA 2007 to review the substantive assessment on which the opposition division had based its discretionary decision.

In **T 47/14** the issue was whether the opposition division had exercised its discretion improperly as a result of being mistaken as to the citation's technical relevance. The board found that it was certainly open to it to review the substantive basis for an opposition division's exercise of discretionary decision if the resulting decision was manifestly erroneous (see **T 109/08**).

3.4.2 Exercise of the boards' own discretion not to admit submissions

a) Submissions refused at first instance admitted on appeal

In the cases reported here, the boards admitted on appeal facts, evidence and requests refused at first instance, some of them pointing out that they have their own discretion to do so and are generally not bound in this by how the department of first instance exercised its discretion (see, in particular, **T 820/14** and, similarly, **T 2219/10**, **T 1811/13**, **T 795/14**, **T 1817/14**, **T 291/15**, **T 575/15**). For a summary of the development of the case law on this topic under Art. 12(4) RPBA 2007 (the corresponding passages are now in Art. 12(6) RPBA, on which see chapter V.A.4.3.), see CLB, 10th edn. 2022, V.A.3.4.2.

In **T 971/11** the opponent (appellant) filed document B1 two days before the oral proceedings before the opposition division, which did not admit it into the proceedings. The board stated that the opposition division had based its discretionary decision on the principles established by the jurisprudence and had not acted in an unreasonable way. Together with its statement of grounds of appeal, the appellant re-submitted document B1. The board considered whether it had discretion to admit a document which was not admitted in the first-instance proceedings. According to Art. 12(4) RPBA 2007 the non-admission of a document which was not admitted in the first-instance proceedings into the appeal proceedings is at the discretion of the board. The board referred to the established case law, according to which a filing made with the statement of grounds of appeal should not be considered inadmissible if it is an appropriate and immediate reaction to developments in the previous proceedings. The board has to exercise its discretion under Art. 12(4) RPBA 2007 independently, giving due consideration to the appellant's additional submissions. In the judgement of the board, a document which would have been

admitted into appeal proceedings if it had been filed for the first time at the outset of those proceedings should not, however, be held inadmissible for the sole reason that it was already filed before the department of first instance (and not admitted). To impose such a limitation on the discretion conferred by Art. 12(4) RPBA 2007 could even have the undesirable effect of encouraging a party to hold back a document during the opposition proceedings, only to present it at the appeal stage. The board admitted the document (see also **T 876/05**, **T 1403/13**, **T 1768/17**, **T 1964/17**).

In **T 2219/10** the board stated that although **T 971/11** concerned the admission of documents in opposition, similar considerations applied with respect to the question of whether sets of claims filed with the grounds of appeal which had not been admitted in the first-instance proceedings should be admitted into the appeal proceedings. This is especially the case in ex parte proceedings, in which issues of equal treatment of adverse parties do not arise. In the case in hand, there was no need to examine whether the examining division had correctly exercised its discretion in not admitting the auxiliary request filed at a late stage of the first-instance proceedings, since in the exercise of its own discretion under Art. 12(4) RPBA 2007 the board admitted all the appellant's requests, including the main request, into the proceedings. See also **T 1888/18**.

In **T 575/15** the board was of the opinion that it had the discretion to admit auxiliary requests 3 and 4, which had not been admitted by the examining division. Since at least some of the fundamental objections against the higher-ranking requests applied to these dependent claims as well, the board saw no reason not to admit them and hence took them into account.

In **T 1811/13** the board stated that the fact that the opposition division had not admitted documents HL13 and its translations did not preclude the board from admitting them if it considered them to be relevant (see **T 971/11**). This was not to be understood to mean that the opposition division had necessarily exercised its discretion incorrectly; the procedural situation simply was not the same any more. In the case in hand, the board found document HL13 to be relevant because it disclosed a feature that was critical for the assessment of inventive step.

In **T 291/15** the board stated that the fact that the opposition division did not admit a late-filed document and did not exceed the proper limits of its discretion by not admitting it did not, in principle, prevent the board from admitting the document pursuant to Art. 12(4) RPBA 2007, in particular if it considered it to be prima facie relevant and taking into account additional facts and different circumstances (**T 971/11**, **T 1811/13**).

In line with **T 971/11** and **T 2219/10** the board exercised its discretion in **T 945/12** with regard to auxiliary request I in light of the new circumstances and submissions, while taking into account the reasoning given by the opposition division for not admitting the very similar request in the first-instance proceedings. The board noted that most of the reasons invoked by the opposition division no longer applied. Since auxiliary request I was submitted with the grounds of appeal, both the board and the opponent had time to examine the request. The board therefore decided to admit the request into the appeal proceedings.

The boards in **T 490/13**, **T 1397/14**, **T 556/13** and **T 368/16** likewise admitted, on appeal, requests not admitted in the opposition proceedings.

b) Submissions not admitted by the boards

In the cases reported here, the boards decided **not to admit** facts, evidence and requests already not admitted at first instance.

In **T 584/09** of 10 June 2013, the board found that the opposition division had given sufficient reasons for its exercise of discretion and applied the correct criteria. Citing **T 640/91**, it held that it was not for it to review whether, as the appellant had argued, the opposition division might have been mistaken as to the relevance of the documents in question. In **T 1643/11** the board was not convinced that the opposition division had exercised its discretion in an unreasonable way or according to the wrong principles, nor did it consider that that exercise was based on a manifestly wrong technical assumption. For these reasons the board confirmed the division's decision not to admit D9 and D13 into the proceedings.

In **T 182/12**, the appellant had requested in its statement of grounds of appeal that its patent be maintained on the basis of a request identical to an auxiliary request that the opposition division had refused to admit. Its failure to file it earlier had been at least partly a procedural tactic and in any event not justified by an unexpected turn of events. The board therefore saw no reason to overrule the opposition division's exercise of discretion and concluded that, since it too could not admit the appellant's sole request, the appeal had to be dismissed.

In **T 1882/13**, the opposition division had refused to admit a document on the ground that it was irrelevant. Finding that to be the right criterion for deciding whether to admit late-filed documents in opposition proceedings and that the division had not applied it unreasonably or arbitrarily, the board upheld its decision.

The board in **T 1467/11** observed that Art. 12(4) RPBA 2007 left the boards room for finding in specific cases that the facts were such that requests the opposition division had rightly refused to admit could nonetheless be admitted on appeal. However, it understood the review criteria laid down by the Enlarged Board in **G 7/93** to mean that, where the opposition division had properly exercised its discretion in deciding not to admit amendments to a case, this was liable to result in their non-admission on appeal too unless facts justifying treating them differently could be established.

See also **T 902/09**, **T 2576/12**, **T 241/13**, **T 366/19**.

c) Discretion misused by the department of first instance

In **T 1872/08** the opposition division used its discretion in an unreasonable way by refusing to admit the additional comparative tests. Therefore, the board decided to overrule the decision of the opposition division in this respect and to admit into the proceedings these comparative tests, which the patentee had resubmitted in its statement of grounds.

In **T 1485/08** the board stated that the opposition division had not properly exercised its discretion in not admitting document (16T) for the sole reason that it was late-filed, without having examined its relevance or having considered any other criteria. Document (16T), which was resubmitted with the statement of grounds of appeal, was highly relevant as there were clear reasons to believe that it would prejudice the maintenance of the patent. The board decided, in the exercise of its discretion pursuant to Art. 12(4) RPBA 2007, not to hold document (16T) inadmissible.

In **T 2716/19** the opposition division, when deciding on the admittance of D24, while using the correct criterion of prima facie relevance, had used it in an unreasonable way because it limited its assessment to the subject-matter of the then main request. It should have extended to the subject-matter of the auxiliary requests on file.

3.4.3 Submissions admitted at first instance are part of the appeal proceedings

The issue in several decisions has been how far the boards can go in reviewing the admission of documents, requests or evidence in the first-instance proceedings. It is the boards' established case law that, on appeal against a decision taken by a department of first instance, it is not for the board to revisit the facts and circumstances of the case as if it were in that department's place and decide whether it would have exercised discretion in the same way (see chapter V.A.3.4.1 b) above).

In a number of decisions, it has been held that the EPC does not provide any legal basis for excluding on appeal documents, requests or evidence correctly admitted by the department of first instance, particularly if the contested decision was based on them (**T 1852/11**, **T 1201/14**, **T 1227/14**, **T 525/15**, **T 1348/16**, **T 852/17**, **T 2049/16**, **T 1525/17**, **T 110/18**, **T 1861/22**, **T 2037/22**). In view of the very aim of the appeal proceedings to review the decision under appeal in a judicial manner according to Art. 12(2) RPBA, such submissions are automatically part of the appeal proceedings (**T 617/16**, **T 487/16**, **T 2603/18**). In **T 1206/19** the board considered that only if there was a substantial procedural violation could a document admitted by the first-instance department be "unadmitted"; this would normally lead to a direct remittal of the case (contrast with **T 960/15**). In **T 1193/21** the board summarised in an obiter dictum various decisions dealing with this question.

In **T 2049/16** the opposition division admitted D20, which was filed by the opponent one month before oral proceedings, because it found it to be prima facie relevant. It was argued that the opposition division should not have admitted the document because its late filing constituted a tactical abuse of proceedings. The board, however, was not convinced that the opponent's behaviour could be deemed an abuse of proceedings. The board considered whether it was possible to reverse the admittance on appeal. The board was not aware of any explicit legal basis that would make it possible to retroactively exclude evidence that has been admitted into the proceedings and decided upon by the department of first instance.

In **T 572/14** the board noted that it can hold inadmissible and hence disregard a party's submission in the appeal proceedings only on the basis of Art. 114(2) EPC and Art. 12(4)

and 13 RPBA 2007. However, since document (21) was admitted by the opposition division and therefore became part of the opposition proceedings, it could not be excluded from the appeal proceedings pursuant to Art. 12(4) RPBA 2007 (see also **T 467/08**).

In **T 1227/14**, the board observed that the boards did not have the power to disregard on appeal submissions admitted by the opposition division in exercise of its discretion.

In **T 104/17**, the board could not immediately discern any legal basis for retroactively rejecting on appeal specific documents which had been admitted into the opposition proceedings and on which the contested decision had been based. Under Art. 12(1)(a) RPBA, any such documents, having become part of the contested decision, were basically part of the appeal proceedings too. Art. 114(2) EPC did not appear to offer any basis for retroactive rejection either. Once the examination or opposition division had admitted a document, even a possibly late-filed one, and thus taken it into account in its decision, this fact could not be excluded from the proceedings or otherwise erased without repealing the entire decision and remitting the case for a new decision.

In **T 2603/18** the board discussed the extent to which the admission of D23 into the opposition proceedings could be reviewed. The board held that, since D23 had then been cited as a basis for the contested decision at issue on appeal, it had become part of it. That alone meant it had to be considered in the appeal proceedings; otherwise, a full review of the contested decision would not be possible (see also **T 26/13**, **T 1568/12**, **T 487/16**). In the case in hand, therefore, a review of the opposition division's discretionary decision could not entail exclusion of D23, which consequently formed part of the proceedings. The board observed that some boards did nevertheless check whether the opposition division had erred in deciding to admit a document where this was alleged by a party (see **T 1652/08**, **T 572/14**, **T 2197/11**, **T 960/15**).

In **T 467/15**, the board held that the boards' discretion under Art. 12(4) RPBA 2007 explicitly covered **only** the rejection of facts, evidence or requests that could have but had not been submitted in the first-instance proceedings or that had not been admitted into those proceedings. Consequently, if the opposition division had admitted a submission into the opposition proceedings within the bounds of its discretion, the board could not disregard it on appeal. It appeared to be debatable whether, if one of the parties so requested, a decision admitting an auxiliary request should still be reviewed on appeal as to whether the discretion had been exercised appropriately (a review to this end was undertaken in relation to admitted documents in **T 572/14**, **T 1227/14**, **T 2197/11**, **T 1652/08**, **T 1209/05**, for example), or whether it was not open to such review (see **T 26/13**, referring to **T 1852/11**) because an admitted request forming the basis for the contested decision could no longer be excluded from the proceedings on appeal even if the opposition division had exceeded the proper limits of its discretion in admitting that request.

In **T 487/16** the appellant requested that D7 be excluded from the appeal proceedings. The board stated that since D7 was part of the opposition proceedings and the decision was based on D7, it was part of the appeal proceedings (see also Art. 12(2) RPBA). Furthermore, considering that the aim of the appeal proceedings was to review the

decision under appeal in a judicial manner and in view of the appellant's main request for maintenance of the patent as granted, which required a review of the decision with regard to the conclusion drawn inter alia on the basis of D7, the board saw no legal basis on which it could be excluded from the appeal proceedings. Thus, in this regard, the board confirmed the case law developed under RPBA 2007 (cf. **T 26/13**, **T 1568/12**, **T 2603/18**). For the sake of completeness, the board added that Art. 12(4) RPBA 2007 would not provide a basis for excluding D7 from the appeal proceedings either since the document was admitted into the proceedings by the opposition division.

Also in **T 858/17** the board questioned whether it had any discretion at all to exclude from the appeal proceedings a claim request that had already been admitted by the opposition division and made the subject of the appealed decision (Art. 12(2) RPBA; see also **T 1227/14**). The board held, that even assuming that it had the power to exclude something from the appeal proceedings that had been admitted by the opposition division and taking decision **G 7/93** into account, the board saw in the case in hand no reasons for excluding the main request from the appeal proceedings.

In **T 467/08**, the board refused the request to disregard on appeal comparative test results submitted in the opposition proceedings, on the basis that neither the EPC itself nor the RPBA provided for such a decision. The boards merely had competence to review a decision taken by the opposition division on whether or not to admit late-filed submissions, documents and requests filed in those earlier proceedings, or to decide themselves whether or not to admit submissions, documents and requests filed on appeal.

In **T 1525/17**, the opposition division had taken account of late-filed citations E5 and E6 throughout its entire substantive examination of inventive step, but then not admitted them into the proceedings. The board held that it was inherently contradictory to take late-filed documents as a basis for an in-depth examination of the patentability requirements, and so consider them as to their substance, yet at the same time declare them not admitted. As a rule, that documents had been examined as to their substance meant that a board could fully review their examination on appeal or at least that it was barred from holding them inadmissible under Art. 12(4) RPBA 2007 on the basis that they had not been admitted by the department of first instance, when their purported non-admission had in fact been inherently contradictory and so amounted to an improper exercise of discretion (see **T 2324/14** and **T 2026/15**).

Also in **T 346/16** the board took the view that it was necessary to take the documents into consideration when reviewing the opposition division's decision with respect to novelty and inventive step since the documents de facto formed part of the contested decision's reasoning despite the explicit decision by the opposition division to exclude them.

3.4.4 Review of an opposition division's discretionary decision (not) to admit a new ground for opposition

An opposition division has the discretionary power to introduce of its own motion a fresh ground for opposition (Art. 114(1) EPC). With regard to the opposition proceedings the Enlarged Board stated in **G 10/91** (OJ 1993, 420) that exceptionally, the opposition

division may in application of Art. 114(1) EPC consider other grounds for opposition which, prima facie, in whole or in part would seem to prejudice the maintenance of the European patent. With regard to the appeal proceedings the Enlarged Board held that fresh grounds for opposition may be considered in appeal proceedings only with the approval of the patentee. On the extent to which an opposition division should examine new grounds for opposition, see also chapter IV.C.3.3. "Scope of examination of grounds for opposition".

The board's review of the discretionary decision of the opposition division is essentially limited to ensuring that the opposition division did not use this power unreasonably (**T 1340/15**).

In **T 1119/05** the objection under Art. 100(b) EPC was already raised, although belatedly, before the opposition division which decided not to admit this late-filed ground. The board introduced the documents referred to in support of the objection in order to assess whether the opposition division had exercised its discretion properly. Having found no indication that the opposition division had exercised its discretion in an unreasonable way, the board saw no reason to reverse the decision of the first instance (see also **T 839/14**).

The board in **T 109/08** held that, when reviewing an opposition division's exercise of discretion in deciding under Art. 114(2) EPC not to admit a late-filed ground for opposition, the boards had the power to overrule its decision if they concluded that it was based on manifestly incorrect technical assumptions or on an erroneous approach to applying the ground in question, since that would amount to a misuse of the discretionary power under Art. 114(2) EPC. The case was remitted to the department of first instance for a new decision. The board may also set aside the decision of the opposition division admitting a new ground for opposition (**T 375/21**).

In **T 1286/14** the board addressed the limited scope for reviewing exercises of discretion to refuse a "fresh ground for opposition" where the proprietor objects to its admission on appeal. In the case at issue, the opposition division had considered a late-filed ground irrelevant and refused to admit it. In such circumstances, it was sufficient for the board to establish that there was evidence that the opposition division had actually examined whether the ground was prima facie relevant and given reasons for its finding on this. So, instead of reviewing whether the opposition division had examined such prima facie relevance "correctly" in substance, it merely had to check that such an examination had demonstrably been conducted. In other words, its duty to review the exercise of discretion was limited. Citing **G 10/91** (OJ 1993, 420), it thus refrained from examining the substance of the fresh ground, thereby following the approach taken in **T 736/95**, OJ 2001, 191; **T 1519/08** and **T 1592/09** and rejecting that entailing a thorough review of the earlier exercise of discretion on its merits, as taken in e.g. **T 1053/05**, **T 1142/09** and **T 620/08**.

In **T 339/18** the board followed the rationale of **T 1286/14** and concluded that the new ground for opposition could not be admitted into the appeal proceedings without the consent of the patent proprietor.

In **T 21/15**, the issue was whether to admit a newly asserted ground for opposition into the appeal proceedings. The board referred to the view taken in **T 1286/14** that, if a ground

for opposition not admitted by the opposition division was invoked again in the statement of grounds of appeal, it had to be deemed a "fresh ground for opposition" as per **G 9/91** and **G 10/91** (OJ 1993, 408 and 420) and could be admitted on appeal only with the patent proprietor's consent. In the case in hand, that would mean that the board was barred from admitting the ground for opposition asserted by the appellant into the appeal proceedings, since the respondent had not given its consent. In **T 620/08**, however, a different board had considered that the term "fresh ground for opposition" meant one relied on for the first time on appeal and did not cover a late-filed ground for opposition that had explicitly not been admitted into the proceedings after being thoroughly addressed in the contested decision. If that view were taken in the case in hand, admission on appeal of the ground for opposition not admitted by the opposition division would be at the board's discretion under Art. 12(4) RPBA 2007. The patent proprietor's consent might then be a further criterion to be factored into the board's exercise of discretion under Art. 12(4) RPBA 2007. It was decided in the case in hand not to admit the ground for opposition at issue.

In **T 178/16** the board stated that even if a board of appeal is not barred from considering a ground for opposition not considered by the opposition division, they have the power to hold inadmissible facts, evidence or requests, which were not admitted in the first-instance proceedings pursuant to Art. 12(4) RPBA 2007. The board considered this to be in line with **T 21/15**.

In **T 1969/17** the board noted that, according to **T 986/93** and **T 620/08** a board of appeal was at least not barred from considering a late-filed ground for opposition which had been disregarded by the opposition division if it was of the opinion that the opposition division exercised its discretion wrongly in this respect. See also **T 22/15**.

3.4.5 Review of discretion – stay of proceedings

In **J 1/16**, the applicant had appealed against the Legal Division's decision not to resume stayed grant proceedings until further notice. The Legal Board stated in its Catchword: where, when deciding not to resume proceedings, the Legal Division has properly identified and exhausted its scope for discretion and weighed up the situation in the light of all the relevant factors, without being influenced by anything irrelevant and without making any logical mistakes in its assessment of the facts, it is not open to the Legal Board to exercise its own discretion in the Legal Division's place. See also **J 10/21**.

4. New submissions on appeal

4.1. Introduction

4.1.1 Legal basis

a) Legal bases in the EPC

Under Art. 114(1) EPC, the EPO is obliged to examine the facts of its own motion, and in doing so, it is not restricted to the facts, evidence and arguments provided by the parties and the relief sought. According to Art. 114(2) EPC, however, the EPO may disregard facts

or evidence which are not submitted in due time by the parties concerned (on the application of these principles in opposition proceedings, see also chapter IV.C.4. "Late submission of documents, lines of attack and arguments").

Earlier case law already pointed out that the wording of Art. 114(1) EPC 1973 (Art. 114 EPC left unchanged by the EPC 2000 revision) does not mean that the boards of appeal have to conduct rehearings of the first-instance proceedings, with unfettered right, and indeed obligation, to look at all fresh matter regardless of how late it was submitted. Such an interpretation of Art. 114(1) EPC 1973 takes it out of the context not only of the remainder of the article, namely Art. 114(2) EPC 1973, but also of Art. 111(1) EPC 1973 (the EPC 2000 revision entailed only minor editorial changes to the English and French versions). When Art. 114(1) EPC 1973 is construed in its proper context, it becomes evident that there is a clear limit on the scope of any new matter that may be introduced on appeal by the parties or by the board itself, because cases on appeal must be and remain identical or closely similar to those on which the first-instance decisions were rendered (**T 97/90**, OJ 1993, 719, cited in **T 951/91**, OJ 1995, 202; see also **T 26/88**, OJ 1991, 30, where it was stated that the essential function of the appeal procedure was to determine whether the decision issued by a department of first instance was correct on its merits; **T 229/90**; **T 611/90**, OJ 1993, 50; **T 339/06** and **T 931/06**).

Facts and evidence submitted for the first time in appeal proceedings may be disregarded by the boards of appeal as a matter of discretion under Art. 114(2) EPC 1973, which limits the boards' inquisitorial duties under Art. 114(1) EPC 1973 (**T 326/87**, OJ 1992, 522).

In **T 482/18** the board dealt with whether restricting the admission of amendments as provided for in the version of the RPBA that entered into force on 1 January 2020 (in the following referred to as "RPBA") was essentially compatible with the principle of ex officio examination and concluded that it was. On this point, it cited **G 9/91** and **G 10/91** (OJ 1993, 408 and 420), according to which the main purpose of inter partes appeal proceedings was to give the losing party an opportunity to challenge the opposition division's decision on its merits and it was justified to apply Art. 114(1) EPC 1973 in a generally more restrictive manner on appeal than in opposition proceedings.

Furthermore, in **T 1767/18**, the board explained (in relation to the hierarchy of norms between the EPC and RPBA) that Art. 13(2) RBPA (in the version that entered into force in 2020) was based on Art. 114(2) EPC. There was no conflict with the provision of Art. 101(3)(a) EPC, which could not be construed as meaning that any EPC requirements needed to be examined, even less so ex officio.

In **T 1758/22**, the board considered that a purported requirement to always check claims for compliance with the requirements of Art. 123(2) EPC and/or Art. 84 EPC overstretched the principle of ex officio investigation and so was counter to the provisions of the RPBA. Likewise ruling on the principle of ex officio investigation under Art. 114(1) EPC, the board in **T 1774/21** found that it did not impose any duty on a board to examine of its own motion whether new submissions by a party were late, even if the opposing party had not (in due time) filed a request for their non-admission. Rather, Art. 114(2) EPC showed that the boards had discretion in this respect.

In **T 1042/18**, the board indicated that the filing of new submissions was restricted not only by case law on taking new grounds for opposition into account in accordance with decisions **G 10/91** (OJ 1993, 420), **G 1/95** (OJ 1996, 615) and **G 7/95** (OJ 1996, 626), but also by the possibility under Art. 114(2) EPC and the RPBA of rejecting late-filed submissions. These restrictions were independent of one another and had a cumulative effect. The board further explained that the provisions of the RPBA on late-filed submissions reflected the provision of Art. 114(2) EPC in a way that was essentially **binding** on the boards (Art. 23 RPBA).

In the same vein, the board in **T 254/20** concluded that the way in which Art. 12(6), second sentence, RPBA is worded was not at odds with Art. 114(2) EPC. It rejected the opponent's argument that the wording of Art. 12(6), second sentence, RPBA limited the use of discretion to such an extent that in essence no discretion at all could be exercised, referring among other things to the last half-sentence of the provision ("unless ...") and to the purpose of opposition-appeal proceedings (see **G 9/91**, OJ 1993, 408, and **G 10/91**, OJ 1993, 420).

It is settled case law of the boards of appeal that **new requests** containing amended claims may exceptionally be admitted in appeal proceedings (see CLB, 10th edn., 2022, V.A.5.12.1). According to R. 100(1) EPC, the provisions in R. 137(3) EPC, relating to examination, and in R. 80 EPC, relating to opposition, apply in appeal proceedings (unless otherwise provided).

In **R 6/19** the Enlarged Board held that Art. 123(1) EPC was the basis for the boards' (and the opposition divisions') discretion whether or not to admit claim requests in (opposition) appeal proceedings (see also **J 14/19** and **T 966/17**, the latter referring to Art. 123(1), first sentence, EPC, read together with R. 79(1) and 81(3) EPC). For the discussion on the legal basis for opposition divisions' discretion not to admit new requests filed during opposition proceedings, see also chapter IV.C.5.1.1.

b) Legal bases in the Rules of Procedure of the Boards of Appeal

The RPBA lay down precise provisions on later amendments to a party's case which, in particular, explicitly leave it to the board's discretion whether to admit them (regardless of whether they relate to facts, objections, evidence or requests). The RPBA were thoroughly revised in 2019, with the new version entering into force on 1 January 2020 (this thoroughly revised version is hereinafter referred to as "RPBA", first published in OJ 2019, A63, republished in OJ 2021, A35 with Art. 15a RPBA and in OJ 2023, A103 again with further amendments, in particular in Art. 13(2) and 15(1) RPBA; on the RPBA generally, see also chapter V.A.1.2.).

Under Art. 12(2) and (4) RPBA, the boards have discretion not to admit an **amendment to the case made by a party at first instance** or, more precisely, not to admit submissions on appeal which are not directed to requests, facts, objections, arguments or evidence on which the decision under appeal was based and for which the party has not demonstrated that they were admissibly raised and maintained at first instance. In addition, Art. 12(6) RPBA, in a similar way as Art. 12(4) RPBA 2007 before it, explicitly refers to the

boards' discretion not to admit requests, facts, objections or evidence which were not admitted in the first-instance proceedings (first sentence) or which should have been submitted or were not maintained in those proceedings (second sentence). Such submissions are not to be admitted unless the decision not to admit them at first instance suffered from an error in the use of discretion or the circumstances of the appeal case justify admitting them. For details on how these provisions have been interpreted in the case law, see chapter V.A.4.3. "First level of the convergent approach – submissions in the grounds of appeal and the reply – Article 12(3) to (6) RPBA".

Art. 12(3) and (5) RPBA play a role for both the admissibility of an appeal (see chapter V.A.2.6.3h)) and the admittance into appeal proceedings of incomplete or unsubstantiated requests, facts, objections, arguments or evidence (see the decisions summarised in this chapter V.A.4.3.5). Case law on the admittance aspect is included in this chapter V.A.4., although the "complete case" requirement applies not only to new submissions on appeal, but also to submissions on which the contested decision is based.

Under Art. 13(1) RPBA, the boards have discretion whether to admit amendments to a party's appeal case **after it has filed its statement of grounds of appeal or reply**. The criteria for exercising this discretion are similar to those applied under Art. 13(1) RPBA 2007 and codify the case law on that earlier provision (see e.g. **T 634/16**, **T 700/15**). The case law on Art. 13(1) RPBA is reported in chapter V.A.4.4. "Second level of the convergent approach – submissions made after filing of grounds of appeal or reply – Article 13(1) RPBA".

Article 13(2) RPBA (as amended in 2023 and entered into force on 1 January 2024) provides that amendments made to a party's case at an advanced stage of the proceedings (that is, after expiry of a **period specified** by the board **in a communication under R. 100(2) EPC** or after **notification of a communication under Art. 15(1) RPBA**) are generally to be disregarded unless there are exceptional circumstances which have been justified with cogent reasons by the party concerned. Under the previous version of Art. 13(2) RPBA the third level of the convergent approach was triggered by the notification of the summons to oral proceedings. The case law on both versions is reported in chapter V.A.4.5. "Third level of the convergent approach – submissions filed after notification of the Art. 15(1) RPBA communication or after expiry of period specified in R. 100(2) EPC communication – Article 13(2) RPBA".

The provisions mentioned above implement the "**convergent approach**", whereby the possibilities for parties to amend their case become increasingly limited as the appeal proceedings progress (see e.g. **T 1370/15**, **T 2778/17**). Parties must **identify and justify any amendments** to their case and state why they were not submitted at an earlier stage in the proceedings. Where their various individual requirements are met, the provisions are **cumulatively** applicable. See chapter V.A.4.1.2 "Primary object of appeal proceedings and the convergent approach to amendments made to party's case" below.

4.1.2 Primary object of appeal proceedings and the convergent approach to amendments made to party's case

In line with the principle set out in decisions **G 9/91** (OJ 1993, 408, point 18 of the Reasons) and **G 10/93** (OJ 1995, 172, point 4 of the Reasons; see also e.g. **T 2194/14**, **T 1102/15**, **T 343/16** and **T 632/16**), the RPBA which entered into force in 2020 highlight in their new Art. 12(2) RPBA that the **primary object** of the appeal proceedings is to review the decision under appeal in a judicial manner. Numerous decisions have referred to this principle in their reasoning when applying the provisions of the RPBA governing new submissions on appeal (see e.g. **J 3/20**, **T 2214/15**, **T 786/16**, **T 256/17**, **T 2778/17**, **T 1422/17**, **T 1456/20**, **T 1963/20**).

For ex parte proceedings, **T 913/20** recalled however that, following the principles set out in **G 10/93** (OJ 1995, 172), boards have the power to examine whether the application or the invention to which it relates meets the requirements of the EPC, including requirements, objections or evidence which the examining division did not take into consideration.

For opposition proceedings, the board in **T 1117/16**, referring to the case law on the RPBA 2007 (see CLB, 10th edn., 2022, V.A.5.2.1), reiterated that in view of the primary goal of appeal proceedings, which was now enshrined in Art. 12(2) RPBA, the factual and legal framework of the opposition proceedings was largely decisive for the subsequent appeal proceedings. Thus, parties are subject to certain restrictions during the proceedings, resulting from the **principle of fairness** to other parties in inter partes cases and from the requirements of due process more generally. In particular, parties in inter partes cases also have a duty to facilitate the **due and swift conduct of proceedings**. See also **T 2482/22**, in which the board rejected the argument that concerns over the validity of the patents issued by the EPO had to trump any other considerations.

One of the consequences of the boards' function being above all to review the appealed decision is indeed that, as the appeal proceedings progress, the possibilities for parties to amend their case become increasingly limited (see e.g. **T 1370/15**, **T 2778/17** and CA/3/19, section V.B.c), point 48). This "**convergent approach**" (referred to in numerous decisions interpreting the relevant provisions of the revised RPBA; see. e.g. **T 2214/15**, **T 2227/15**, **T 2279/16**, **T 2778/17**) consists of three levels, regulated in Art. 12(4), 13(1) and (2) RPBA. Which of these provisions apply depends on the point in the proceedings at which a party changes its case:

– at the outset of the appeal proceedings – first level of convergent approach – only Art. 12(4) RPBA;

– after the party has filed its grounds of appeal or its reply – second level of convergent approach – Art. 13(1) RPBA, which contains a reference to Art. 12(4) to (6) RPBA;

– after the period set in a communication under R. 100(2) EPC has expired or a communication under Art. 15(1) RPBA (as of 1 January 2024, previously: summons to

oral proceedings) has been notified – third level of convergent approach – Art. 13(2) RPBA (and the criteria of Art. 13(1) RPBA, see below).

Indeed, these provisions are, where their various individual requirements are met, **cumulatively applicable**.

The requirements of the first level of the convergent approach – i.e. those set out in Art. 12(4) to (6) RPBA – apply **throughout the appeal proceedings**. By way of express reference to Art. 12(4) to (6) RPBA, it is clarified in Art. 13(1) RPBA that the criteria set out in those provisions apply mutatis mutandis to any submissions made after a party has filed its grounds of appeal or its reply.

As regards Art. 13(1) RPBA, numerous decisions have confirmed that the criteria of this provision may also be applied at the third level of the convergent approach (see e.g. **T 584/17**, which gives a detailed explanation based on the travaux préparatoires in document CA/3/19, section VI, explanatory remarks on Art. 13(2) RPBA; see also **T 2227/15**, **T 172/17** and **T 574/17**). This in turn provides the possibility of relying on the criteria set out in Art. 12(4) to (6) RPBA, which are referred to in Art. 13(1) RPBA (**T 487/20**; see also **T 2486/16**, **T 2429/17** and **T 1058/20**).

All decisions pertaining to the requirements of the first level of the convergent approach set out in Art. 12(4) to (6) RPBA are reported in chapter V.A.4.3 "First level of the convergent approach – submissions in the grounds of appeal and the reply – Article 12(3) to (6) RPBA", irrespective of the stage of the proceedings at which the submissions concerned were filed.

For more details on the application of the criteria of Art. 13(1) RPBA at the third level, see chapters V.A.4.5.1a), V.A.4.5.1g) and V.A.4.5.4e)".

The provisions of Art. 12(4), 13(1) and (2) RPBA only apply to cases in which a party has **amended** its case (i.e. as compared to the one it presented at first instance as far as Art. 12(4) RPBA is concerned or its appeal case as far as Art. 13(1) RPBA and Art. 13(2) RPBA are concerned). Decisions on this preliminary issue of whether new submissions are an amendment are summarised in chapter V.A.4.2 "Amendment to a party's case".

Concerning late-filed third-party observations in appeal proceedings, see chapter III.N.3.2 and III.N.4.4.

In **R 4/22**, the Enlarged Board found that the case law of the ECtHR provides no grounds for questioning restrictive provisions such as the convergent approach in principle, or for generally denying that the application of such provisions is compatible with Art. 6 ECHR.

4.2. Amendment to a party's case

4.2.1 Discretion under Articles 12(4) and 13(1) and (2) RPBA applies only to amendments

The provisions of Art. 12(4) and 13(1) and (2) RPBA only apply to cases in which a party has amended its case (i.e. its case presented at first instance as far as Art. 12(4) RPBA is concerned or its appeal case as far as Art. 13(1) and (2) RPBA are concerned). Thus, as explained with regard to Art. 13(2) RPBA e.g. in **T 247/20**, the **test** to be applied is **two-fold**. The first question is whether the submission objected to is an amendment to a party's appeal case. If that question is answered in the negative, then the board has no discretion not to admit the submission. If, however, that question is answered in the affirmative, then the board needs to decide whether to take the submission into account (confirmed in e.g. **J 14/19**, **T 2920/18**, **T 2988/18**, **T 528/19**, **T 1361/19**, **T 2295/19**, **T 907/20**).

The point of reference for assessing whether a case had been amended within the meaning of Art. 13(1) or (2) RPBA is the statement of grounds of appeal or the reply, whereas the point of reference for assessing whether any part of the appeal case has to be regarded as an amendment within the meaning of Art. 12(4) RPBA is the decision under appeal (see **J 14/19**) and any part of the appeal case for which the party demonstrates that it has been admissibly raised and maintained in the first-instance proceedings.

According to **T 524/18** it is irrelevant whether the other party has requested non-admittance of amendments and if so when, as the board has to decide on admittance on the basis of the provisions of the RPBA, and such decision is not dependent on any request from the parties. On the related question whether procedural requests (including those for non-admittance) are amendments within the meaning of Art. 12(4) and 13 RPBA, see however chapter V.A.4.2.3j).

4.2.2 First level of the convergent approach: amendments to a party's case – Article 12(4) RPBA

a) Principles

The primary object of the appeal proceedings is to review the decision under appeal in a judicial manner (Art. 12(2) RPBA). In view of this primary object, Art. 12(2) RPBA provides that a party's appeal case has to be directed to the facts, objections, evidence and requests on which the decision under appeal was based.

At the first level of the convergent approach, the rule according to Art. 12(4), first sentence, RPBA is that any part of a party's appeal case

– that does not meet the above-mentioned requirements of Art. 12(2) RPBA, and

– for which the party has not **demonstrated** that this part was admissibly raised and maintained in the proceedings leading to the decision under appeal

is to be regarded as an amendment to the party's case.

Thus, an amendment to a party's case under Art. 12(2), (4) RPBA is a submission which is not directed to the requests, facts, objections, arguments and evidence on which the decision under appeal was based – in other words which goes beyond the framework established therein (**T 19/20**, see also **T 247/20**, **T 2988/18** and **T 907/20**) – and for which it has not been demonstrated that it was admissibly raised and maintained in the proceedings leading to the decision under appeal. Any such amendment may be admitted only at the discretion of the board (Art. 12(4), second sentence, RPBA). See chapter V.A.4.3.4.

The appeal proceedings, which are largely determined by the factual and legal scope of the proceedings that led to the appealed decision, are not intended as an opportunity to bring forward an entirely fresh case. This means that an appellant is not at liberty to shift its case as it pleases, as this would compel the board either to give a first ruling on critical issues or to remit the case to the department of first instance. Conceding such freedom to an appellant would run counter to orderly and efficient appeal proceedings, which are primarily directed to reviewing the correctness of the decision under appeal according to Art. 12(2) RPBA (**T 919/22**; see also **T 101/17** on the ratio legis of the closely related Art. 12(6), second sentence, RPBA).

In relation to the requirements of Art. 12(2) RPBA, the boards have repeatedly held that any requests not decided on in the contested decision because they were ranked lower than the request that was deemed allowable do not form part of the contested decision (see chapter V.A.4.2.2b) (iv) below).

The case law has repeatedly emphasised that, as a rule, the party making the submission bears the burden of showing that it was "admissibly raised and maintained" at first instance (see e.g. **T 246/22**, **T 3024/19** and **T 81/20**; see also chapter V.A.4.2.2c) (ii) "Party's duty to demonstrate").

Different approaches have been taken regarding how to examine whether submissions were "admissibly raised and maintained". Specifically, the boards in **T 1913/21**, **T 446/22** and **T 364/20** based their approach on whether the department of first instance would have had to admit the submission had a decision on admittance been required, whereas the boards in other decisions (in particular **T 1800/20**, **T 246/22** and **T 1659/22**) formulated certain requirements independent of those governing the first-instance proceedings (see chapter V.A.4.2.2c) (i) below).

b) Whether submissions on appeal were directed to requests, facts, objections, arguments or evidence on which the decision under appeal was based

(i) Submission decided on the merits

In several decisions, the boards have found that requests and objections on which the examining or opposition division had decided on the merits formed the basis of the contested decision as per Art. 12(2) RPBA (see e.g. **T 1186/20** and **T 1886/22** for auxiliary

requests that were admitted but not deemed allowable, and **T 920/20** for objections dealt with in the decision). Similarly, in **T 449/21** and **T 2337/16** the boards have held that a document to which the opposition division referred for the examination of a substantive issue formed the basis of the contested decision within the meaning of Art. 12(2) RPBA.

In **T 920/20** and **T 449/21**, however, the boards pointed out that only submissions that had been adequately addressed in the grounds of appeal (or the reply to the appeal) were part of the appeal proceedings from the outset in accordance with Art. 12(2) and Art. 12(4) RPBA.

The boards did not always consider that the lack of discretion under Art. 12(2) and (4) RPBA ruled out the possibility of undertaking a **limited review** of the decision to admit. In **T 1670/21**, the board reviewed the opposition division's discretionary decision on the basis of the criteria from **G 7/93** (point 2.6 of the Reasons, OJ 1994, 775), before finding that the main request on appeal, which corresponded to auxiliary request 5 admitted and allowed by the opposition division, was part of the appeal proceedings. Furthermore, the boards in **T 852/17**, **T 110/18** and **T 2603/18**, for example, could not discern any legal basis for excluding from the appeal proceedings requests or evidence that had been **duly** admitted in the first-instance proceedings. However, see also the case law referred to in **T 1193/21**.

For more detail on "Principles applying to the review of first-instance discretionary decisions", see chapter V.A.3.4.1, and for more detail on the related issue of whether submissions admitted at first instance can be excluded from appeal proceedings, see chapter V.A.3.4.4.

(ii) Submissions admitted but not decided on the merits

In **T 1520/20**, for example, the opponent filed documents D45 to D48, which the patent proprietor contended were late-filed. The opposition division admitted these documents (although the content of only two of them was actually used). The board found that these documents formed part of the contested decision. Since there had thus not been any amendment as per Art. 12(2) and (4) RPBA, the board did not have any discretion to disregard them.

However, regardless of whether there was any discretion under Art. 12(2) and (4) RPBA, the boards in some cases undertook a limited review of the decisions to admit at first instance (see e.g. **T 2886/19**, **T 1520/20**, **T 1522/21** and **T 605/22**, in which it was examined whether the opposition division had exercised its discretion to admit documents appropriately and in accordance with the right principles; for more on this approach, see point (i) above). In **T 1206/19**, related to the decision at first instance to admit a citation, the board considered that the possibility of "unadmitting" a request was limited to cases where the decision to admit involved a substantial procedural violation.

(iii) Submissions not admitted

Cases where a submission not admitted at first instance is then re-filed on appeal are governed by Art. 12(6), first sentence, RPBA. See also chapter V.A.4.3.6.

(iv) Opposition decision based on a higher-ranking request

In **T 1370/21**, the board noted that the contested decision related to the rejection of the opposition, meaning that the decision had been based solely on the main request. In the board's view, the auxiliary requests were not a subject of the decision as per Art. 12(2) RPBA. See also decisions **T 1800/20** and **T 364/20**, in which the boards additionally noted that the opposition division had not decided on the admission of the auxiliary request in question.

In **T 1135/22**, the board noted (referring to **T 42/20**, **T 221/20**, **T 1800/20** and **T 364/20**) that dealing with "carry-over requests" in this way was in line with case law that had been settled in the meantime. In its grounds, the board pointed out that the passage from Art. 12(4), first sentence, RPBA reading "[...] unless the party demonstrates that this part was admissibly raised and maintained" would be immaterial if a mere reference to the relevant auxiliary requests in the facts of the contested decision satisfied the requirements of Art. 12(2) RPBA. **T 639/20**, **T 615/22** and **T 246/22** are further examples.

(v) Deletion of claims or claim alternatives

In **T 1516/20**, the subject-matter claimed in auxiliary request 6, submitted with the grounds of appeal, had been restricted further by comparison with auxiliary request 6 on which the contested decision was based, through the deletion of a variant. The board deemed this to be an amendment but admitted the request, exercising its discretion under Art. 12(4) RPBA (see chapter V.A.4.3.4). Similarly **T 1058/20**, citing inter alia **T 2920/18** and **T 494/18**. See also **T 890/21**, in which the question was however eventually left open.

On whether the deletion of claims or claim alternatives always amounts to an amendment to the party's case or whether it does only if the deletion leads to a fresh case, see also chapter V.A.4.2.3d) dealing with this issue in the context of Art. 13 RPBA.

(vi) Reordered requests

In **T 1520/20**, with regard to the admissibility of auxiliary request 4 (which corresponded to auxiliary request 1 admitted and allowed by the opposition division), the board held that the request met the requirement of Art. 12(2) RPBA and therefore could not be regarded as an amendment as per Art. 12(4) RPBA. The opponent argued that submitting higher-ranking requests, in this case the new auxiliary requests 1 to 3, which, for their part, were divergent and inadmissible, rendered auxiliary request 4 inadmissible. The board was not convinced, noting that the facts in the cited decision **T 2112/16** were considerably different from those in the case at issue, in which the auxiliary request in dispute already formed part of the first-instance decision.

However, see also decision **T 309/21** (summarised in chapter V.A.4.2.2c)(vi)), which related to a similar situation but where the request filed at first instance did not form part of the contested decision.

(vii) Objection raised for the first time against another request

In **T 28/20** an inventive-step objection raised in the statement of grounds of appeal against auxiliary request 1 started from closest prior art (D4) which was different from the closest prior art relied upon against this request in the first-instance opposition proceedings (D9). The board held that this new objection constituted an amendment of the appellant's case within the meaning of Art. 12(4) RPBA, since it was not directed to an objection on which the decision under appeal was based (Art. 12(2) RPBA).

In **T 19/20**, however, the board took the view that the appellant's submission under Art. 123(3) EPC against the main request (auxiliary request 2 in opposition) was directed to an objection on which the decision was based, even though it was clear from the minutes of the oral proceedings before the opposition division and from the contested decision that no specific objection under Art. 123(3) EPC had been raised against what was then auxiliary request 2. The board underlined that it was undisputed between the parties that the present objection under Art. 123(3) EPC was **exactly the same** as the objection raised against the main request of the opposition proceedings. Indeed, the amendments in auxiliary request 2 were unrelated to the objection.

(viii) Objection based on document already part of the proceedings but with new reasoning

In **T 652/20** the appellant-opponent raised for the first time in its statement of grounds of appeal an objection of lack of novelty over example 12 of E3 based on the argument that chitin (not only fibroin as previously alleged) anticipated a certain feature of the subject-matter of granted claim 1. The board considered that this new reasoning based on chitin constituted an amendment to the appellant-opponent's case.

(ix) New presentation of known evidence

In the specific circumstances of **T 489/20** the board held that the tabular presentation in documents D30 (filed at the oral proceedings before the opposition division) and D31 (filed with the statement of grounds of appeal) merely highlighted experimental results already reported in the patent itself and additionally only indicated percentages calculated from these results. The content of documents D30 and D31 did there not represent new evidence and the board saw no reason for excluding them from the appeal proceedings.

(x) New arguments vs mere development of arguments

In **T 73/20** the appellant (patent proprietor) argued for the first time in the statement of grounds of appeal that there was a technical prejudice in the prior art, based on common general knowledge, against the combination of D1 and D2. The appellant submitted that this argument was just a development of the arguments put forward in opposition proceedings. The board, however, pointed out that the decision under appeal did not mention at any point the argument that there was such a technical prejudice in the prior art, merely a lack of motivation. See also **T 919/22** (defence based on a different effect and problem to be solved).

For the definition of argument in the sense of Art. 12(2) RPBA, see also **J 14/19** (summarised in chapter V.A.4.2.3p) below). See also **T 250/19**, which confirmed this approach albeit in the framework of the application of Art. 12(4) RPBA 2007.

c) Whether submissions were "admissibly raised" at first instance

(i) Approaches to the "admissibly raised" requirement

In several decisions, the boards have based their approach on whether the department of first instance would have had to admit the submissions in question in accordance with the rules governing the first-instance proceedings, had such a decision needed to be taken (explicitly e.g. in **T 1913/21**, **T 2395/22** and **T 364/20**, impliedly e.g. in **T 446/22**, **T 731/22** and **T 924/22**).

In some of these decisions, the Guidelines were taken as the basis, either the version valid at the time the new submission was filed (**T 1913/21**, **T 446/22**, **T 731/22**, **T 1178/23**, the latter with detailed explanations; cf. also **T 1659/22** and **T 823/23**), or the version valid at the time of the board's decision (**T 924/22**).

The board in **T 364/20** determined which criteria were applicable to the department of first instance not primarily on the basis of the Guidelines but on independent criteria. The board held that, in view of Art. 114(2) EPC, as a rule, claim requests should have been admitted by the opposition division if they were filed within the time limit set under R. 79(1) EPC. However, based inter alia on **R 6/19**, in truly exceptional situations auxiliary requests filed within this time limit could be considered not to have been admissibly raised. Whether or not a claim request filed after the expiry of this time limit but before expiry of the period set under R. 116(1) EPC was to be considered filed in due time depended on whether this request was submitted in direct and timely response to a change to the subject of the proceedings. Concerning the exercise of discretion, the board referred to **G 9/91** and held that a patent proprietor had in principle to be **permitted to redefine its fallback positions** in terms of auxiliary claim requests also at a late stage of opposition proceedings. The board acknowledged that **lack of clear allowability** could be a reason for the opposition division not to admit a late-filed claim request filed after the expiry of the R. 79(1) EPC time limit, as could be **insufficient time** for an opponent to deal with an amended claim request. Moreover, the criteria generally used by the boards when exercising their discretion to admit a party's submission in appeal under the RPBA could also be used, **in a more lenient way** however, in view of the administrative character of opposition proceedings. See also **T 309/21**. On the principles to be applied by the first instance, see also chapters IV.C.4. and IV.C.5.1.4 to IV.C.5.1.11.

In other decisions, the boards did not take the perspective of the first-instance department but formulated aspects or requirements to be considered in relation to the requirement of "admissibly raised" that were independent from the criteria applicable at first instance (albeit to varying degrees reminiscent of these criteria).

In **T 1800/20**, the board explained that the review of whether a part of the appeal case had been admissibly raised in the first-instance proceedings should take the following aspects,

among others, into consideration: a) the time the submission was filed; b) the suitability of the submission to overcome the objections against the higher-ranking request; c) whether the submission creates new issues; d) the suitability of the submission to contribute to a convergent development of the first-instance proceedings (see **T 1903/13**).

In **T 246/22** the board discussed the different approaches to the "admissibly raised" requirement. The approach taken in **T 364/20** (slipping at least partly into the shoes of the opposition division) did not convince the board inter alia because determining what an opposition would have decided would be a "moving target". Neither did the board subscribe to the elaborate criteria proposed in **T 1800/20**, which, in the present board's view, could lead to rather harsh situations for the parties. Nor did the board endorse the conclusions drawn in decisions **T 42/20** and **T 476/21**, where merely the timing aspect was considered. Instead, it proposed a new approach defining the following **requirements**. The party has to demonstrate:

1) that the requests had been filed in due time, typically before expiry of the time limit set by the opposition division under R. 116 EPC; and

2) that it had been made clear, explicitly or by way of unambiguous implication, for which purpose they were filed, i.e. which objections raised by the other party or the opposition division they tried to overcome and how this was actually achieved.

See also e.g. **T 1135/22**, **T 1749/22**, **T 2366/22**, **T 506/23** (by the same board); along similar lines, see also **T 445/21**.

In **T 1659/22**, the board took the term "admissibly raised" to mean "raised in the bona fide expectation that it would be admitted" and saw in this wording an expression of the principle of the protection of legitimate expectations generally applicable in proceedings before the EPO (**G 5/88**, OJ 1991, 137). As the patent proprietor had filed and substantiated its auxiliary requests in the opposition proceedings within the period under R. 116(1) EPC, the board considered that there had been such a legitimate expectation. It could not see anything that might have led the opposition division to exercise its discretion differently, for example a lack of substantiation (**T 246/22**), an excessive number of requests or diverging requests (**T 1800/20**).

And again in other decisions, without setting out a general approach for the criteria to be applied, the boards have based their conclusions regarding the "admissibly raised" requirement on the circumstances of the case, e.g. time of filing and (lack of) justification for not filing earlier (e.g. **T 2978/19**, **T 108/20**, **T 543/20**, **T 274/20**, **T 996/20**, **T 778/21**, **T 886/21**, **T 1214/21**, **T 1650/21**, **T 842/22**, **T 1464/22**, **T 2036/22**).

(ii) Party's duty to demonstrate

In several decisions the boards have emphasised the respective party's duty to demonstrate that a part of their case had been "admissibly raised" and have based their conclusions (inter alia) on the party's failure to fulfil this duty (**T 3024/19**, **T 81/20**, **T 639/20**, **T 1081/20**, **T 309/21**, **T 631/21**, **T 1224/21**, **T 246/22**, **T 389/22**, **T 1135/22**).

In **T 246/22** the board explained, with regard to Art. 12(4) RPBA, that the ordinary meaning of "demonstrates" was that, as a general rule, the party making a submission bears the burden of showing that it was "admissibly raised and maintained". The lawmakers' idea was obviously **not** to put **ex officio** responsibilities on the boards and expect them to assume an investigative role, identify and track claim requests to their source, and understand why they were filed. Furthermore, the board held that, since the statement of grounds of appeal, with which the auxiliary requests were submitted, lacked any indication that they had been "admissibly raised and maintained", it had not contained the proprietor's complete appeal case (cf. Art. 12(3) RPBA). In this sense, there were **temporal restraints** on the "demonstration" required under Art. 12(4), first sentence, RPBA.

In **T 1135/22**, the board pointed out that right up to the end of the proceedings the patent proprietor had been unable to state precisely **why** the amendments at issue had been made. The patent proprietor's observation that the auxiliary requests had been filed within the time specified in accordance with R. 116(1) EPC was irrelevant since such requests could still be deemed "late-filed" under the case law. See also **T 309/21**.

(iii) Invoking other opponents' submissions

In **T 920/20**, the board could not derive any restriction under Art. 12(4) RPBA to the effect that each party on appeal could only base its case on matter that it had itself admissibly raised in the previous proceedings. Therefore, the board deemed it legitimate for an appellant to also use lines of attack raised by other opponents in the opposition proceedings. See also **T 2036/22** (D42).

(iv) Time of filing – requests

In several decisions the boards have, according to the circumstances of the case, considered requests to be admissibly raised which were filed **within the four month time limit for reply** to the notice of opposition (see e.g. **T 2114/19** and **T 615/22**; see also **T 1214/21**, where additionally a later correction under Art. 14(2) EPC had been carried out) or before or on the **final date in accordance with R. 116(2) EPC** (see e.g. **T 42/20**, **T 221/20**, **T 476/21** and **T 1464/22**; see also **T 108/20**, where it was furthermore undisputed that the request had been admissibly raised, and **T 1650/21** where additionally redundant text was deleted shortly before the oral proceedings in a request initially filed before the final date under R. 116 EPC).

However, in **T 364/20** the board referred to exceptional situations where auxiliary requests filed within the time limit under R. 79(1) EPC could be considered not to have been admissibly raised (in line with **R 6/19**). Whether or not a claim request filed before expiry of the period set under R. 116(1) EPC was to be considered filed in due time depended on whether this request was submitted as a **direct and timely response** to a change to the subject of the proceedings. In **T 1135/22** and **T 309/21** too, the boards emphasised that the fact that the requests in question had been filed by the date fixed under R. 116(2) EPC was not decisive for the purposes of Art. 12(4) RPBA. See also **T 246/22**.

For filings after the final date set under R. 116 EPC, the boards have generally examined whether there was a justification as to why the submission in question had not been filed earlier (e.g. **T 996/20**, **T 778/21**, **T 842/22**, **T 506/23**). In the circumstances of the case before it, in **T 996/20** the board considered a request as admissibly filed which had been filed at the end of the oral proceedings before the opposition division.

(v) Time of filing – objections or evidence

In **T 1738/21** the board found that document E23 was admissibly filed **in reaction to** the opposition division's **preliminary opinion**. E23 was an extract from a handbook representing common general knowledge, which was prima facie relevant for the contested issue.

In **T 221/20** documents, which were filed two weeks after the final date specified in accordance with R. 116 EPC, constituted in the view of the board a **direct reaction to** the submission of the **amended requests** and were "admissibly raised".

(vi) Reordered requests

In **T 309/21**, auxiliary requests 18 to 20, which were filed with the grounds of appeal, were identical to requests filed and maintained in opposition proceedings. However, higher-ranking auxiliary requests had been inserted before them. Thus, the overall sequence of auxiliary requests for consideration relative to the opposition had changed. The board pointed out that this materially changed the focus of auxiliary requests 18 to 20. And this had also led to a lack of convergence because the higher-ranking requests were based on combinations with dependent claims and included newly introduced features from the description. The board observed that in the case law of the boards of appeal such a change of case resulting from the introduction of higher-ranking requests had been regarded as an amendment (citing **T 1185/17** and **T 2112/16**, with respect to Art. 13(1) RPBA, and **T 1516/20** with respect to Art. 12(4) RPBA, see also the summary of the latter decision in chapter V.A.4.2.2d) (ii)). The board also noted that the proprietor had not presented any reasoning as to why the requests were admissibly raised at that stage of the opposition proceedings. In this respect the board held that not every claim request submitted before the expiry of the time limit set under R. 116(1) EPC was automatically admissibly raised (see e.g. **T 364/20**).

(vii) Convergence

In **T 886/21**, claim 1 of auxiliary request 6 in the opposition proceedings did not further restrict the subject-matter of claim 1 of auxiliary request 5 but the subject-matter of claim 1 of the main request. As such, claim 1 of each higher-ranking request had not been developed in a convergent manner. For the board, this alternative way of restricting the subject-matter, namely in a divergent direction, was not apt to bring the proceedings to an end, even retrospectively. The board pointed out that the issue of whether a new set of claims is convergent was a valid criterion for an opposition division to consider when exercising its discretion. Moreover, the board acknowledged that a significant part of the added feature was derivable solely from the description, concluding on the basis of these

considerations that the request had "not been admissibly" raised in the opposition proceedings.

Likewise, in **T 1800/20** auxiliary request 2' was already not convergent with the next-highest-ranking request at the time the request was filed in the opposition proceedings. In the board's view, the request could not be considered to have been admissibly raised for this reason alone.

For further decisions in which the boards applied or at least acknowledged the convergence criterion as applicable criterion for the exercise of discretion of the opposition division, see **T 364/20**, **T 312/22** und **T 309/21**.

However, in **T 1464/22**, the board held that the mere fact that the request in question was not "convergent" with a previous request did not necessarily mean that it was not "admissibly raised" within the meaning of Art. 12(4), first sentence, RPBA. See also **T 2254/17**, citing **T 996/12**.

In **T 2395/22** the board considered that the requests at issue were "sufficiently convergent" given the number of objections.

d) Whether submissions were "maintained" at first instance

(i) Party's duty to demonstrate

As underlined by the board in **T 246/22**, as a general rule, the party making a submission bears the burden of showing that it was "admissibly raised and maintained". See also the further decisions cited above in chapter V.A.4.2.2c) (ii).

(ii) Whether requests were "maintained"

In **T 1214/21** a request filed two months before the oral proceedings before the opposition division and a request filed at these oral proceedings were both labelled "New Main Request". The board considered that there was no reason to suggest that the opposition division's understanding that the new main request was supposed to **replace** the previous one was erroneous. And there was no reason why the opposition division should have clarified the status of the previous request.

The board dealt with a different procedural situation in **T 1788/21**. In this case the appealed decision was to maintain the patent in amended form on the basis of the then auxiliary request 1. In the appeal proceedings, the respondent (patent proprietor) requested that the patent be maintained according to a set of claims filed as second auxiliary request during opposition proceedings. In the board's opinion, nothing suggested that this request had not been maintained in the first-instance proceedings.

In **T 1516/20**, the board regarded auxiliary requests 1, 2, 3 and 5 as an amendment to the party's case. In the board's opinion, the **requests had been reordered** in the opposition proceedings. Specifically, the aforementioned auxiliary requests had been skipped after

the opposition division expressed doubts about their allowability. Ultimately, the requests were not dealt with, and no decision was taken on them. Auxiliary request 3 was even replaced with a different auxiliary request 3. The board stressed that appeal proceedings were not conceived as a second opportunity to present a case that had **intentionally not been presented for decision** at first instance. For the board, the re-filing of auxiliary requests 1, 2, 3 and 5 in their original order, including the re-filing of withdrawn auxiliary request 3, constituted an amendment as per Art. 12(4) RPBA. See also **T 206/22**.

(iii) Whether objections were "maintained"

In **T 526/21** the board observed that the attacks based on D24 and D34 were raised in writing during the opposition proceedings in reply to the preliminary opinion of the opposition division, but not mentioned in the impugned decision. According to the minutes of the opposition oral proceedings the opponents agreed that D9 was the closest prior art and the proprietor argued that example 2 of D2 would be a better closest prior art. The choice between D2 and D9 was then discussed but no other document was considered by any opponent. None of the appellants requested a correction of the minutes. In line with **T 2730/16**, the board considered that the attacks starting from D24 and D34 were **not actively maintained**.

In **T 928/20** the board noted that the respondent admissibly filed Appendix A during the opposition proceedings within the time limit according to R. 116 EPC. This document was **not discussed** during the oral proceedings before the opposition division, nor was it mentioned in the decision under appeal. Thus, the board considered it to be an amendment pursuant to Art. 12(2) and (4) RPBA. It was, however, admitted. Similarly, see **T 2137/22**, where the opponent, even when invited by the chair of the opposition division to discuss "candidates" for closest prior art during oral proceedings, did not refer to D1 (which was not admitted in view of Art. 12(6) RPBA).

e) Documents referenced in the patent specification – not automatically part of the appeal proceedings

In **T 1522/21** the board recalled that, according to established case law (see chapter IV.C.4.4) a document is not automatically scrutinised in opposition or opposition appeal proceedings simply because it was quoted and acknowledged in the patent in suit. The opponent had not referred to these documents during opposition proceedings, but done so for the first time with its statement setting out the grounds of appeal. See also **T 2391/18** (referring to **T 140/00**).

4.2.3 Second and third levels of the convergent approach: amendments to a party's appeal case – Article 13(1) and (2) RPBA

a) Principles

An amendment to a party's appeal case under Art. 13 RPBA is in analogy with Art. 12(4) RPBA (with reference to Art. 12(2) RPBA) a submission which is not directed to the requests, facts, objections, arguments and evidence relied on by the party in its statement

of grounds of appeal or its reply. In other words, it goes beyond the framework established therein (**T 247/20** and **T 2988/18**, endorsed e.g. in **T 907/20**, **T 19/20**, **T 499/20**). Parties must however be allowed to refine their arguments, even to build on them, provided they stay within the framework of the arguments and the evidence submitted in a timely fashion in the written proceedings (**T 247/20**, confirmed in **T 2605/18**, **T 2623/18** and **T 1132/22**).

This definition was explained in **T 247/20** as follows: the RPBA contained no definition of "amendment to a party's appeal case", but they assisted in defining what was meant by an "amendment" and by "a party's complete appeal case". Under Art. 12(3) RPBA parties needed to set out why the decision under appeal should be reversed, amended or upheld, and should specify expressly "all the requests, facts, objections, arguments and evidence relied on". Art. 12(4) RPBA defined what was meant by an **amendment vis-à-vis the first-instance proceedings**, namely everything that did not comply with Art. 12(2) RPBA. In effect, an amendment was – apart from a clearly defined exception – what was not "directed to the requests, facts, objections, arguments and evidence on which the decision under appeal was based". The board then transferred this definition to **amendments to a party's appeal case**. In the case in hand, the arguments which the appellant had presented during the oral proceedings and to which respondent 2 objected were all aimed at illustrating, refining or further developing the arguments already presented with the grounds of appeal and at countering the arguments made by respondent 2 in this context and, in the board's view, did not amount to an amendment of the appellant's appeal case.

In **J 14/19**, the Legal Board also found that, on a systematic interpretation, the question whether a submission resulted in an "amendment to a party's appeal case" within the meaning of Art. 13 RPBA had to be answered using the list of possible components of an appeal case in Art. 12(2) RPBA. Art. 12(3) RPBA likewise referred to those components. See also **T 101/18** and **T 1042/18**.

In **T 100/18**, however, the board found that, while Art. 12(3) RPBA, invoked by the appellant (opponent), set out requirements to be met by the statement of grounds of appeal and the reply, it did not define what was meant by an amendment to an appeal case. The board thus looked only at whether the requirements under Art. 12(2) RPBA had been met. The content of the letter at issue in the case in hand, which had not been received until after expiry of the period for the reply, did not go beyond the requests, facts, arguments and evidence dealt with in the decision under appeal. It therefore met the requirements of Art. 12(2) RPBA and was aimed at achieving the main purpose of the appeal proceedings, namely a review of the decision under appeal in a judicial manner.

In **J 14/19** the Legal Board further held that, at the level of the EPC, the possibility of refusing to admit late-filed submissions was provided for in Art. 114(2) EPC (supplemented by Art. 123(1) EPC for amendments to a patent or patent application). Under Art. 114(2) EPC, a late-filed submission containing **factual elements** could be disregarded. See also **T 1042/18**.

The board in **T 482/18** only partly endorsed the view taken in **T 1914/12** that the boards had no discretion when it came to admitting late-filed arguments based on facts already at issue in the proceedings. Art. 114(2) EPC 1973 (left unchanged by the EPC 2000 revision)

was not a basis for rejecting **arguments**. However, the board interpreted "argument" narrowly, treating the term as equivalent to **submissions concerning interpretation of the law** (on this see, chapter V.A.4.2.3l) and V.A.4.2.3p)). It also rejected the view that facts apparent from the patent documents were part of the proceedings without having been expressly asserted (see chapter V.A.4.2.3n)).

b) Submissions at first instance not automatically part of appeal case

Several decisions have pointed out that submissions made by a party during the preceding administrative proceedings are not automatically part of any subsequent appeal proceedings where they have not been reiterated in a substantiated manner at the outset of those appeal proceedings. Raising these submissions after the initial phase of the appeal proceedings therefore constitutes an amendment to the party's appeal case (see e.g. **T 2024/16**, **T 276/17**, **T 241/18**, **T 1108/16** and **T 1577/19**, citing **G 9/92** and **G 4/93**, OJ 1994, 875).

In **T 276/17** the board explained that it followed from Art. 12(3) RPBA that facts and evidence submitted in the opposition proceedings were not automatically part of the appeal case. It was not enough for the grounds of appeal (submitted here by the patent proprietor) to make a sweeping reference, without any further explanation, to the minutes of the oral proceedings and to the arguments and facts mentioned therein.

The board in **T 1439/16** likewise pointed out that it was the appellant who defined the extent of the appeal and that, according to Art. 12(3) RPBA, the statement of grounds of appeal had to contain a party's complete case. It had been the choice of the appellant in the case in hand to make an objection of added subject-matter only to claim 1 and not to claim 8 in its statement setting out the grounds of appeal.

Regarding documents referenced in the patent specification, see chapter V.A.4.2.2e).

c) Request for dismissal of the appeal and maintenance of the patent

In **T 1309/16** the patent proprietor had not submitted any reply to the opponent's grounds of appeal and, instead, only requested, about one month before the oral proceedings, that the appeal be dismissed and the patent maintained. The board observed that the primary purpose of the appeal proceedings was to judicially review the contested decision which had rejected the opposition (Art. 12(2) RPBA) and the patent proprietor did not have to request the appeal's dismissal for that to happen. The board considered that there was no need to decide whether the patent proprietor's request was formally admissible under Art. 13(2) RPBA.

d) Deletion of claims or alternatives within claims

It is now widely accepted that even an uncomplicated amendment to a set of claims, for example deletion of an entire claim category, always constitutes an amendment to the appeal case as per Art. 13 RPBA, regardless of whether this alters the factual or legal framework of the proceedings and thus leads to a "fresh case" (see e.g. **T 1800/21** with

references to the case law; for more recent decisions, see e.g. **T 499/20**, **T 541/20**, **T 598/20**, **T 1058/20**, **T 321/21**, **T 953/21**, **T 42/22** and **T 1673/22**). However, there does appear to be a consistent line of case law developing to the effect that in cases where an uncomplicated amendment of this kind leads to a request on the basis of which the patent can clearly be maintained, any such requests can be admitted as long as the amendment does not alter the factual or legal framework of the proceedings, does not require the matter at issue to be re-evaluated, does not run counter to the principle of procedural economy and does not jeopardise the legitimate interests of any of the parties (examined in depth in **T 1800/21** with reference to the case law, following on from **T 2295/19**; for detail on the discretion to admit, see chapter V.A.4.5.4j).

After the revised RPBA came into force in 2020, the question of whether deleting claims (in particular entire claim categories) constituted an amendment to the appeal case as per Art. 13 RPBA was initially answered in different ways.

In a first line of case law, the deletion of a claim category, of dependent claims or of alternatives within claims were held not to be amendments to the appeal case if the deletion did not lead to a fresh case (see e.g. **T 1480/16**, **T 2638/16**, **T 884/18**, **T 914/18**, **T 995/18**, **T 1151/18** and **T 1857/19**). This approach was referred to in **T 494/18** and **T 2360/17** as the "non-applicability approach". Factors frequently considered by the boards applying the "non-applicability approach" when assessing whether a deletion amounted to an amendment were whether it would **alter the factual and legal framework** of the case or the subject of the discussions (e.g. **T 995/18**, **T 981/17**, **T 1569/17**, **T 1792/19**, **T 1857/19**) or entail **thoroughly re-evaluating the matters at issue** (e.g. **T 2638/16**, **T 995/18**) or whether, instead, it would merely reduce the complexity of the proceedings by eliminating one of the matters in dispute (see e.g. **T 995/18**, **T 2610/19**). Example cases where deletions were held not to be an amendment when applying these tests are **T 1480/16**, **T 2638/16**, **T 995/18** and **T 884/18**.

This view has been justified, for example, on the basis that it did not appear appropriate to make the formal fact of claims being deleted the reference point for the legal assessment and to determine on this basis alone that there had been an amendment to an appeal case that was sanctionable under Art. 13(2) RPBA and so would as a rule have to be disregarded. That is because it is not the deleted claims that are the subject of the ongoing proceedings, but rather the claims that are left in the request and thus to be decided on by the board. Not taking such requests into account would seem questionable, particularly if the remaining claims were already a subject of the appeal proceedings (Art. 12(2) and (3) RPBA) and thus had already been discussed in the context of the parties' cases (**T 2201/19**). See also **T 1361/19** which pointed out that in the case in hand all of the appellant's arguments and submissions on the remaining part remained unchanged.

By contrast, in a second line of case law, the boards have taken the view that deletions of claims or of alternative embodiments within claims always amounted to amendments and so exercised their discretion under Art. 13 RPBA (see e.g. **T 713/14**, **T 1224/15**, **T 2222/15**, **T 1597/16**, **T 1439/16**, **T 853/17**, **T 1569/17**, **T 2360/17**, **T 306/18**, **T 494/18**, **T 908/18**, **T 2091/18**, **T 2604/18**, **T 2920/18**, **T 2964/18**, **T 84/19**, **T 355/19**, **T 482/19**, **T 2295/19**, **T 541/20**, **T 1058/20**, **T 424/21**, **T 1225/21**), in most cases, however, ultimately

admitting the requests concerned, though not in e.g. **T 2222/15**, **T 1569/17**, **T 2360/17**, **T 482/19**, **T 84/19**, **T 2610/19**, **T 608/20**, **T 1058/20**.

This line of case law has been justified, for example, in that the expression "amendment to the appeal case", which is not defined any further in Art. 13 RPBA, has to be systematically construed in the context of other provisions. Referring to Art. 12(2) and (3) RPBA, it could be concluded that a submission filed by a party and not directed to requests, facts, objections, arguments or evidence contained in the statement of grounds of appeal or the reply to the appeal entails an amendment to the appeal case. In line with this systematic interpretation, therefore, filing an amended set of claims – even if the amendment merely involves claims being deleted – leads to an amendment to the status of the requests in the appeal proceedings (see e.g. **T 2295/19** with reference to **T 247/20**, **T 2091/18** and **J 14/19**). This conclusion based on a systematic interpretation of Art. 12(2), (3) and 13 RPBA was also endorsed e.g. in **T 494/18**, **T 2964/18**, **T 2920/18**, **T 355/19**, **T 1058/20**, **T 2091/18**, **T 2295/19**.

The board in **T 2091/18** held that whether an appeal case had been amended within the meaning of Art. 13(2) RPBA had to be divorced from considerations as to the impact on how the proceedings would progress (followed in **T 355/19** and **T 541/20**). Similarly, in **T 494/18** the board criticised that the "non-applicability approach" anticipated a criterion of procedural economy ("change of the factual or legal framework"). See also **T 424/21**.

In a vast majority of decisions, the boards are now of the view that this is an amendment as per Art. 13 RPBA (see in particular **T 1800/21** with further references, and the more recent decisions cited above in the first paragraph). At the same time, when deciding on whether to admit the amendment to the appeal case, most of these decisions have taken into account the aspects of whether or not the amendment leads to an altered factual situation or required the matter at issue to be re-evaluated, and of whether admitting such requests was accordingly consistent with the principles of procedural economy and fair proceedings. In this context, the board in **T 2080/18** left it open as to whether the auxiliary request in question could be deemed an amendment to the appeal case (see also **T 489/20**). However, there has not been a uniform approach as to whether the assessment of "exceptional circumstances" as per Art. 13(2) RPBA leaves any scope for taking such considerations into account. However, there appears to be a consistent line of case law developing in favour of doing so (see **T 1800/21** and chapter V.A.4.5.4j) below).

e) New request combining subject-matter of previously filed claims

In ex parte case **T 1775/18**, the appellant argued that the introduction in an independent claim of a **feature** taken **from a dependent claim** was not an amendment of its case which, under Art. 13(2) RPBA , required exceptional circumstances justified with cogent reasons. Such an amendment could not come as a surprise, since dependent claims were meant to define fallback positions. The board did not agree. While it was true that dependent claims defined fallback positions for certain purposes, in EPO proceedings they could not be equated with auxiliary requests. Art. 113(2) EPC required the EPO to decide on an application in the text submitted to it, or agreed, by the applicant. According to the board, this meant that it was the applicant's responsibility to file an (amended) set of

application documents that fully met the requirements of the EPC. For the sake of procedural efficiency, the RPBA set limits on when such amendments could still be filed in appeal proceedings.

T 312/19 concerned a new auxiliary request (6bis), filed during the oral proceedings, which combined subject-matter from two auxiliary requests. The board rejected the respondent's (patent proprietor's) arguments that the new request did not add anything new to the discussion, that the subject-matter under discussion already formed part of the respondent's appeal case, even if not included in one and the same request, and that, by not submitting all possible permutations of the independent claims, it had avoided the filing of an overwhelming number of requests. It held that the new auxiliary request was a change in the respondent's appeal case since it had never been part of the appeal proceedings until the oral proceedings. The board also pointed out that the new request **combined two independent claims** of two different requests and thus constituted a new contingency position of the respondent.

In **T 532/20** the sole claim of auxiliary request A was a **combination of granted dependent claims**. The board tended to agree with the analysis in **J 14/19** and **T 2091/18**, according to which any change from the appeal case as defined in Art. 12(2) RPBA was an amendment. The fact that auxiliary request A clearly introduced new issues to be examined into the proceedings was considered by the board in the exercise of its discretion.

f) Request previously only paraphrased and not set out in full

In **T 2154/19** the appellant (patent proprietor) argued that auxiliary requests 2 and 3 filed at the oral proceedings did not amend its appeal case because they had already been filed in a passage in its grounds of appeal. However, the claim sets had merely been paraphrased there; they had not been set out in full. A sufficiently precise particular combination of claims selected from the auxiliary requests dealt with in the contested decision could not be identified from that passage. The board therefore considered that auxiliary requests 2 and 3 amended the appeal case.

The situation was different in **T 276/17**, in which auxiliary request 2 had not been filed with either the notice of appeal or the grounds of appeal, but had been dealt with in the decision under appeal and referred to in the grounds of appeal. In the board's view, there was no doubt that the reference to "the auxiliary request" could relate only to the single auxiliary request dealt with in the decision under appeal, and so that request had been clearly identified. In addition, since that auxiliary request had already been admitted, and its merits decided by the opposition division, the board considered that the identical auxiliary request 2 filed on appeal was part of the appellant's case under Art. 12(3)(a) RPBA.

g) Resubmission of withdrawn requests or requests no longer pursued

Since a withdrawn request ceases to be at issue in the proceedings, its admission (consideration) if it is resubmitted at a later stage is subject to the same procedural requirements as apply to a brand new one (**T 2692/18**, referring to **T 1695/14** and

T 1421/20). In the case to be decided in **T 2692/18**, this meant that Art. 13(2) RPBA had to be applied because the request originally filed in response to the reply had been replaced by other requests following the communication under Art. 15(1) RPBA and had not then been resubmitted until the oral proceedings.

In **T 1421/20** auxiliary requests 1 to 5 had been considered in the decision under appeal, but the board noted that they had been replaced at the beginning of the appeal and were thus not part of the appellant's (applicant's) appeal case. The board thus regarded their reintroduction (after notification of the summons to oral proceedings) as an amendment to the appellant's case, the admission of which was subject to its discretion (Art. 13 RPBA). See also **T 798/18** and **T 1436/19**.

With regard to a similar procedural situation (namely sole request subject of the appealed decision abandoned and replaced at the outset of the appeal proceedings by two other requests, but later resubmitted), the board explained in **T 2124/21** that it was the pending requests with which the abandoned and resubmitted request had to be compared when establishing whether it was an "amendment" to the appeal case.

h) Belated substantiation of requests

In numerous decisions, boards have pointed out that the **later substantiation** of initially unsubstantiated requests is to be considered as an amendment to the party's appeal case (e.g. **T 319/18**, **T 1220/21**, **T 321/21**, summarised below, and **T 1128/21**, **T 2013/21**). There are, however, different approaches to the treatment of the initial **unsubstantiated requests**, one being that they are considered not effective (see **T 319/18**, summarised below, and e.g. **T 1732/10**, **T 2288/12**, **T 1784/14**, **T 2393/18**) and the other that they have been validly filed but are admitted to the appeal proceedings only at the board's discretion (e.g. **T 1220/21**, summarised below, and **T 1128/21**). See also chapter V.A.4.3.5b) (v).

In **T 319/18** the board recalled that Art. 12(3) RPBA, analogously to Art. 12(2) RPBA 2007, required that the parties to appeal proceedings set out their complete case in their initial submissions. The board held, with reference to **T 933/09** and **T 1533/13**, that when filing of a new set of claims, it was necessary to explicitly state why the amendments overcame the objections on which the decision under appeal was based and/or which were raised by the opponent. Unless the purpose of the amendments was self-explanatory, if reasons explaining why the new claims overcome the outstanding objections were filed after the statement of grounds of appeal or the reply, these reasons constituted an amendment to the party's appeal case. In the case in hand, the board held that the requests became effective only at the date on which they were substantiated. They were not admitted (Art. 13(2) RPBA). See also **T 750/18**. For an example where an amendment was held to be self-explanatory, see **T 2964/18**.

In **T 1220/21**, however, the board held, in view of Art. 12(3) and (5) RPBA, that a lack of or insufficient substantiation of an amended request may lead to its non-admittance, but that this did not imply that the request had not been validly filed. The board considered the late substantiation of the requests at issue as an amendment to the party's appeal case and decided not to admit it under Art. 13(2) RPBA. Moreover, it exercised its discretion

under Art. 12(5) RPBA not to admit the unsubstantiated requests. Along similar lines, in **T 1128/21** the board explained that a distinction had to be made between the filing of an amended claim request and the question of whether the request had been sufficiently substantiated. That followed systematically from Art. 12(3) and (5) RPBA, according to which a request, even if not sufficiently substantiated, had to be assessed by the board with respect to its admittance. Such an assessment of the request and the possibility of admitting it despite insufficient substantiation presupposed that the request was pending, i.e. had been validly filed.

In **T 321/21** the board discussed the two approaches to dealing with unsubstantiated requests and objections (i.e. whether unsubstantiated submissions are not validly filed or are effective but subject to the board's discretion). It pointed out that a main difference between the two approaches appeared to be whether or not a board had to take a formal admittance decision on a claim request or objection which it considered unsubstantiated. The board also explained that the principle that a party must contribute to the conduct of the proceedings by substantiating its own requests and objections in a minimum way is a general procedural principle underlying the EPC (see **T 1776/18**). In Art. 12(3), second sentence, RPBA this principle was specifically applied to the statement of grounds of appeal and the reply.

On belated substantiation of an objection or defence, see chapters V.A.4.2.3m) and V.A.4.2.3o) below.

On the substantiation requirement and especially the question whether self-explanatory requests meet the requirements of Art. 12(3) RPBA, see chapter V.A.4.3.5b) and V.A.4.4.4c) (ii).

On case law on unsubstantiated requests under Art. 12(2) RPBA 2007, see CLB, 10th edn. 2022, V.A.5.12.6.

i) Requests reordered

Opinions have differed amongst the boards as to whether it can be considered an amendment to the appeal case if a request presented in the statement of grounds of appeal or the reply to the appeal is altered as a result of new higher-ranking requests being filed or the requests being reordered. For the same issue in the context of Art. 12(4) RPBA, see chapter V.A.4.2.2c) (vi). For the exercise of discretion under Art. 13(2) RPBA, see chapter V.A.4.5.4g).

In **T 2112/16** the sequence of the auxiliary requests had been changed during the course of the appeal proceedings due to the introduction of auxiliary request 1A, which contained an additional feature, which was not present in any of the lower-ranking auxiliary requests. In the board's view this involved a material change in focus of the claimed invention and thus resulted in an amendment of the case.

In **T 716/17** the patent proprietors substantially reordered their pending requests several times during the oral proceedings. This resulted in a repeated change in the subject-matter

to be discussed, since the auxiliary requests selected by the patent proprietors related to a variety of different and diverging attempts to find allowable subject-matter. The board considered that the reordering of pending requests carried out by the patent proprietors amounted to an amendment of the case, which needed to be justified according to Art. 13(2) RPBA. This requirement was not met.

In **T 1436/19** the appellant (patent proprietor) requested a few weeks before the oral proceedings to reorder the requests filed with the statement of grounds of appeal by renumbering the former auxiliary request 4 as new main request and the former main request and auxiliary requests 1 to 3 as new auxiliary requests 1 to 4 respectively. The appellant justified the proposed reordering by referring to the need for procedural economy in view of the preliminary opinion of the board stating that auxiliary request 4 was likely to overcome all the objections raised. The board decided that the reordering of the requests constituted an amendment to the appellant's appeal case and in exercise of its discretion under Art. 13(2) RPBA did not to take the amendment into account.

In **T 218/20**, however, the board did not see how merely changing the order of requests that were all filed with the reply to the grounds of appeal as a fair and appropriate reaction to developments in the first-instance proceedings, and which the parties and the board had had ample opportunity to consider, should mean that the much stricter provisions of Art. 13 RPBA had to apply for their admission. In the board's view, in the case in hand the subject of the proceedings and the issues raised had clearly not changed.

In **T 228/22** the appellant (proprietor) changed the order of requests in response to the board's preliminary opinion by promoting the most promising request to main request. The board noted that the changed ranking order would result in the auxiliary requests not being convergent with the new main request. However, it held that even if the changed order as a whole were an amendment to the appellant's case, this would not affect the discussion of the main request.

j) Procedural requests – requests for non-admittance of the other party's submissions

In **T 755/16** the board dealt with the admittance of the patent proprietor's request not to admit a document filed with the statement of grounds of appeal into the proceedings, the request having been filed for the first time during oral proceedings. The board observed that the patent proprietor had discussed two experiments contained in the document at issue in its reply to the grounds of appeal, but had objected to its admittance neither in its reply to the grounds of appeal nor in its subsequent letters. The request not to admit the document thus represented an amendment to the patent proprietor's case.

Furthermore, in case **T 18/21**, in which the opponent likewise did not request that the patent proprietor's submission (in this case the main request) not be admitted until the oral proceedings, at which point it had already been commented on in terms of merit during the written proceedings, the board considered this late procedural request to be an amendment to the previous case.

However, in **T 1006/21** the board interpreted the term amendment in Art. 12 and 13 RPBA more narrowly. According to the board, these provisions were directed at (claim) requests or (allegations of) facts and evidence, i.e. at **substantive** issues, objections and related arguments (see Art. 12(2) and (4) and Art. 13(1) and (2) RPBA). In contrast, **procedural** requests were not amendments within the meaning of Art. 12(4) and Art. 13(1) and (2) RPBA. The board explained that this conclusion applied to procedural requests on questions that had to be taken up ex officio as well as to other procedural requests. Such procedural requests could therefore be made at any time during the appeal proceedings.

The board in **T 1774/21**, however, saw it differently. In this case the appellant raised a new objection under Art. 123(2) EPC against a feature of the main request in its statement of grounds of appeal. The respondent, after having first replied to this objection with counter-arguments, requested only in its response to the board's communication under Art. 15(1) RPBA that it not be admitted into the proceedings. The board first explained that, in the context of the RPBA, the general term "requests" included requests for non-admittance of, for example, an objection. When the RPBA sought to specifically address the issue of amended texts of patent applications or patents, it expressly referred to "an amendment to a patent application or patent" (see Art. 12(4), fourth sentence, or Art. 13(1), fourth sentence, RPBA). This understanding was also confirmed in the Explanatory remarks to Art. 12(2) RPBA (see Supplementary publication 2, OJ 2020, 55). Therefore, a request for non-admittance of an objection constituted an amendment to the party's appeal case if it was not filed in the initial stage of the appeal proceedings.

Similarly, in **T 1230/22**, the board said that it did not share the view that requests for non-admittance of late submissions always had to be considered regardless of the stage of the proceedings. Contrary to the view expressed in **T 1006/21**, the board held that the admissibility of auxiliary requests, facts or arguments was not a purely procedural question, as it was for the admissibility of an appeal or the remittal of a case to the department that issued the decision. On the contrary, whether submissions were admissible was a question relating to the subject-matter of the case and so the basis for the decision to be taken. The board therefore concluded that, regardless of the procedural aspects, this was a substantive matter. If such a request for non-admittance of late submissions was filed late in the proceedings, it was also an amendment that had to meet the requirements under Art. 12 and 13 RPBA.

k) Amendment of the description

According to the board in **T 2178/17**, the filing of a description adapted to a set of claims found by a board of appeal to meet the requirements of the EPC does not generally constitute an amendment to a party's appeal case and is therefore not subject to the board's discretion under Art. 13(2) RPBA.

A different approach was, however, taken in **T 1968/18**, in which the board, referring to the systematic interpretation set out in **J 14/19**, held that the filing of an adapted description during the oral proceedings before the board resulted in an amendment of the patent proprietor's appeal case. At the same time, it considered that this procedural

situation constituted exceptional circumstances within the meaning of Art. 13(2) RPBA. See also chapter V.A.4.5.4o) on admittance of such an amendment.

l) Further developing arguments within the framework of the appeal case as submitted so far

In **T 247/20** the board held that an amendment to a party's appeal case was a submission which was not directed to the requests, facts, objections, arguments and evidence relied on by the party in its statement of grounds of appeal or its reply. In other words, it went **beyond the framework established therein** (see also **T 2988/18**). In the case in hand, the arguments which the appellant (proprietor) had presented during the oral proceedings and to which respondent 2 objected were all aimed at illustrating, refining or further developing the arguments already presented with the grounds of appeal and at countering the arguments made by respondent 2 in this context. To the extent that additional passages or figures were referred to, this merely served that purpose. The board noted that no additional pieces of evidence had been introduced and that both the patent and D1 were very concise documents. In view of the above, the board held that the arguments at issue did not amount to an amendment of the appellant's appeal case. The board added that **oral proceedings would serve no purpose** if the parties were limited to presenting a mere repetition of the arguments put forward in writing. Instead, parties had to be allowed to **refine their arguments**, and even to build on them, provided they stayed within the framework of the arguments, and of course the evidence, submitted in a timely fashion in the written proceedings.

In the following decisions too, the boards ruled that the submission in question was merely a further development in line with the appeal case up to that point, not an amendment as per Art. 13 RPBA.

In **T 1807/19** the board considered that the appellant's (opponent's) objection of lack of inventive step submitted one month before the oral proceedings against the subject-matter of claim 1 of auxiliary request I did not constitute an amendment to the appellant's case as this objection was essentially the same as the inventive-step objection raised against claim 1 of the patent as maintained by the opposition division. Along similar lines **T 907/20** and **T 2623/18**.

In **T 684/18** the board held that the opponent's appeal case had not been amended by new arguments and even associated documents filed in support of the view already taken in the grounds of appeal that the materials disclosed in D2 had the claimed relationship in terms of mechanical strength.

See also **T 315/19** (additional argument of the patent proprietor regarding the omission of a term from claim 1 of the main request considered as refinement of the arguments in the reply to the grounds of appeal) and **T 2833/19** (argument of the opponent regarding the de facto presence of two sub-ranges in a feature of claim 1 considered as refined illustration of previous line of argument).

Moreover, see **T 450/20** which draws conclusions for the issue of whether a refinement of objections can be a reason for filing new claim requests (see chapter V.A.4.5.4f) below).

A new attack starting from a different example (relating to a different object) in the same document is neither a refinement nor further development (**T 711/21**). Moreover, further development needs to be distinguished from fleshing out previously not adequately substantiated submissions (see chapter V.A.4.2.3m)).

m) Belated substantiation of objections

Substantiating a previously unsubstantiated objection does not qualify as a mere refinement but constitutes an amendment to the appeal case (see e.g. **T 2117/18** in which the board, referring to case law on unsubstantiated requests, also held that an objection becomes effective only when sufficient substantiation is provided).

In **T 2253/16** the board found that the appellant's (opponent's) submissions in its grounds of appeal in support of its contention that D4 was novelty destroying were not adequately substantiated and therefore could not be considered (Art. 12(3) RPBA and Art. 12(4) RPBA 2007). In particular, there was no analysis of D4 showing where the appellant considered which claim features to have been disclosed. At the oral proceedings, the appellant wanted to present the case on D4 it had made in the opposition proceedings but not included in its grounds of appeal. However, the board considered that fleshing out its incomplete appeal case in this way would amount to amending it.

In **T 1217/17** the board decided to disregard several lines of argument merely mentioned but not adequately substantiated in the reply to the appeal. At the oral proceedings, the respondent (opponent) announced that it would be "expanding" on these arguments. The board however found that, for those lines of argument for which the reply merely referred to arguments put forward in the opposition proceedings, any submissions at the oral proceedings would have to be regarded as forming an entirely new appeal case. As to the other lines of argument, the board observed that the respondent's reply did not set out a logical chain of arguments as regards lack of inventive step, so any submissions on this point too would amount to a change in the substance of its appeal case. The announced submissions were not merely new arguments but also new facts, e.g. the features analysis missing from the reply and the detailing of the specific passages in the adduced evidence that the respondent regarded as destroying the novelty of claim 1.

For further cases where the boards have held that the later substantiation of an unsubstantiated objection constitutes an amendment within the meaning of Art. 13 RPBA, see **T 329/16** (no inventive step arguments raised by the opponent despite extensive novelty arguments from the patent proprietor in its statement of grounds of appeal), **T 988/17** (one attack substantiated in the reply, but attack starting from D1 substantiated only in that it "does not lead to a different assessment"), **T 1903/17** (reference to unsubstantiated arguments in the notice of opposition on the asserted lack of reproducibility of pending claims), **T 2200/17** (mere reference to notice of opposition in the grounds of appeal), **T 1436/18** (submissions of the appellant 2-opponent on inventive step too vague and general).

n) New objection based on documents already on file – new assertions of fact

(i) Requirement to make new assertions of fact in due time

The board in **T 482/18** disagreed with the finding reached in **T 1914/12** that facts apparent from the patent documents on the case file (here: disclosure of "rod-shaped" in the application as filed and clarity of that term) were automatically at issue on appeal without having been expressly asserted. That position was at odds with the nature of **judicial proceedings**, such as those before the EPO boards of appeal, which were of the kind proper to an administrative court, since such proceedings involved deciding on a factually supported case and so depended on the **assertion of facts**. On the board's interpretation of "argument", see chapter V.A.4.2.3p). See also **T 250/19** (albeit dealing with this issue in the framework of Art. 12(4) RPBA 2007).

The Legal Board in **J 14/19** shared the view taken by the board in **T 482/18**. Observing that late-filed **submissions with factual elements** could be disregarded on the basis of Art. 114(2) EPC, it held that the simple fact that a party had already submitted a particular document on appeal did not mean that its entire content formed part of its appeal case. If it later relied on parts of that document other than those it had previously cited, that could amount to amending its appeal case. It further found that both a new combination of factual aspects and a new combination of factual and legal aspects were as a rule to be treated as an amendment to the appeal case. Such an amendment had to be distinguished from a mere **fine-tuning** of an existing line of argument (as in **T 247/20**; see the abstract in chapter V.A.4.2.3l)); on the Legal Board's interpretation of "arguments" within the meaning of Art. 12(2) RPBA, see also chapter V.A.4.2.3p). Followed e.g. in **T 1161/20** (new facts asserted in relation to knowing which parts of the device of D15 disclose the features of the invention).

(ii) New lack of inventive step objection

In **T 1042/18**, the board endorsed the view in **J 14/19**, according to which both a new combination of facts (e.g. selecting a different citation or a different passage of a citation as the starting point for an objection) and a new combination of facts and law (e.g. referring to a document or passage in a different legal context) constituted an amendment to the appeal case. Therefore, in the board's opinion, an inventive step objection raised for the first time at the oral proceedings before the board starting from a **citation that had previously only been invoked in relation to a novelty objection** generally constituted an amendment to the appeal case as per Art. 13(2) RPBA. See also **T 1851/21**.

In **T 2866/18** the board explained that the question of whether newly raised inventive step objections stayed within the same overall "factual and legal framework" as previous novelty objections was not decisive for the purpose of determining what constituted an amendment of the appeal case (see **T 2360/17**).

T 2796/17 and **T 557/21** are further decisions in which new objections under Art. 56 EPC based on citations that were already part of the proceedings were regarded as an amendment to the appeal case.

(iii) New combination of documents

In **T 187/18** the board held that a new combination of documents (already cited as part of the appellant's inventive-step attack, but in different combinations) was not a mere elaboration on a previously pleaded line of argument, but a change to the party's case.

(iv) New added-matter objection

In **T 1707/16** it was only at the oral proceedings before the board that the appellant (opponent) – for the first time in either the opposition or the appeal proceedings – raised the objection that the feature at issue in claim 1 of the main request was not disclosed in figure 9, whereas it had previously argued that claim 1 contained an intermediate generalisation as the feature at issue was inextricably linked to the remaining features of the embodiment of figure 9. The board, however, considered that the question of whether or not figure 9 unambiguously disclosed the feature in question completely changed the framework of the discussion relating to Art. 123(2) EPC and therefore regarded it as an amendment to the party's case.

o) New defence and belated substantiation of a defence

(i) New defence vs elaboration on arguments already on file

In **T 1108/16** the respondent (patent proprietor) countered the inventive-step objection raised in the grounds of appeal only after receiving the communication under Art. 15(1) RPBA, by submitting arguments as to why taking the cited prior art documents together could not render the combination of features in claim 1 of its main request obvious. On the admissibility of these late-filed arguments, it contended that they had to be regarded as a natural elaboration on arguments in its reply, which already included a detailed analysis of the documents' content from which it directly followed that their teachings were essentially incompatible. The board, however, pointed out that, especially in adversarial opposition-appeal proceedings, it was essentially bound in its assessment of the factual and legal circumstances by the case made by each of the parties. Accordingly, it was not – and could not be – up to it to piece together itself from that case arguments a party had not expressly set out in defence of its patent. The new submissions in this case had to be regarded as an amendment.

(ii) Assertions containing new factual elements

In **T 2803/18** the board decided pursuant to Art. 13(2) RPBA not to take into account the respondent's (patent proprietor's) assertion of a distinguishing feature. Contesting that the feature was disclosed in D2 introduced a new factual element into the proceedings and therefore constituted an amendment to the respondent's appeal case. See also **T 791/17**.

In **T 121/20**, in order to counter the objection that claim 1 of the main request encompassed an embodiment which was not originally disclosed, the respondent (patent proprietor) invoked for the first time on appeal a different interpretation of a certain term in the claims. The board held that even if this new argument was submitted in the framework

of the same objection and the same features, it amounted to a new interpretation of the claim being based on **new facts** (different passages in the description) and thus changed the respondent's case.

In **T 203/20** auxiliary request 9 had been filed with the statement of grounds of appeal, but only during oral proceedings did the appellant (proprietor) argue that the subject-matter claimed was entitled to the priority claimed by the patent. The board held that these submissions consisted of both new allegations of fact as well as new arguments in law, and represented an amendment to the patent proprietor's case.

In **T 19/20** a new line of defence against an objection under Art. 123(3) EPC was brought forward for the first time at the oral proceedings before the board. Whereas the respondent (patent proprietor) had previously argued that the deleted part was an added undisclosed feature without any technical meaning, it argued at the oral proceedings that the deletion of a feature did not change the scope of claim 1 because it was implicitly limited by this feature in view of the description. The board held that this new line of defence raised new legal and technical issues and thus constituted a change of the legal and factual framework of the appeal.

For a further decision discussing whether a new defence comprised a new allegation of fact and thus amounted to an amendment to the party's appeal case, see e.g. **T 1303/18** (summarised above in chapter V.A.4.2.3p)).

(iii) New experimental data

In **T 2271/17** the respondent (patent proprietor) argued that the late-filed experimental data was fully in line with its position regarding inventive step set out earlier in written appeal proceedings and therefore not an amendment to its case. The board however clarified that by arguing that the experimental data demonstrated a specific effect, the respondent indicted that the data was relevant in the assessment of inventive step and the formulation of the objective technical problem. Consequently, the filing of the experimental data could only be understood as an amendment to the respondent's appeal case.

(iv) Belated substantiation of a defence

In **T 2752/19** the board considered that the new line of argument, brought forward by the appellant (applicant) during the oral proceedings before the board, went beyond a mere refinement of the arguments submitted in the statement of grounds of appeal. In these initial submissions the appellant had argued without further substantiation that D2 neither disclosed nor suggested the combined features of claim 1 of the sole request. Therefore, the new line of argument constituted an amendment to the appellant's appeal case.

p) Submissions concerning interpretation of the law

In **T 2988/18** the board observed that there was no definition of the term "argument" in the RPBA. In **G 4/92** (OJ 1994, 149) the Enlarged Board had contrasted arguments with grounds or evidence and suggested that arguments "are reasons based on the facts and

evidence which have already been put forward". In the board's view, this left open the question whether the type of argument made by the appellant, namely one which concerned the Enlarged Board's interpretation of Art. 123(2) EPC in **G 1/93** (OJ 1994, 541), also fell under the ambit of Art. 13(2) RPBA. The board explained that arguments pertaining to interpretation of the law were generally accepted **at any stage of the proceedings** (with reference being made to sources of German and English law). This had been recognised in the explanatory remarks to the RPBA (in its version which entered into force on 1 January 2020), according to which submissions of a party which concerned the interpretation of the law were not an amendment (Supplementary publication 2, OJ 2020, 56). The board concurred with this view. It further noted that the appellant's argument was essentially that the principle set out in Headnote 2 of **G 1/93** applied to the present case. This was precisely what was meant by the passage of the explanatory remarks to the RPBA referred to above, because an argument about the interpretation of the law would naturally concern how that interpretation applied to the facts of the case before the board. For an example where the appellant's submissions related to the interpretation of Art. 56 EPC, specifically to case law on the application of the problem-solution approach, see **T 325/16**.

In **T 482/18** the board endorsed the view taken in **T 1914/12** that the boards did not have any discretion when it came to admitting late-filed arguments based on facts already at issue in the proceedings, on the ground that Art. 114(2) EPC 1973 (identical to Art. 114(2) EPC) did not provide a basis for rejecting arguments. Nevertheless, it interpreted "argument" narrowly, treating the term as equivalent to submissions concerning interpretation of the law.

In **J 14/19** the Legal Board, noting that late-filed submissions with factual elements could be disregarded under Art. 114(2) EPC, held that "**arguments**" in Art. 12(2) RPBA had to be interpreted in such a way that the meaning arrived at was in line with Art. 114(2) EPC. Submissions of a party as to how the law should be interpreted did not have a factual dimension. Such **submissions concerning only interpretation of the law** were therefore not covered by the term "arguments" in Art. 12(2) RPBA, which instead referred to submissions with both factual and legal elements, of the kind as a rule made in relation to patentability issues. The Legal Board thus concluded that submissions concerning only interpretation of the law did not result in an amendment within the meaning of Art. 12(4) RPBA. Ultimately, this conclusion was confirmed by the explanatory remarks on Art. 12(4) RPBA (CA/3/19, point 54 and related part of table in section VI, explanatory notes on Art. 12(4) RPBA), and it applied by analogy to Art. 13(1) and (2) RPBA too.

In **T 1303/18** the board did not admit into the proceedings the appellant's defence (raised for the first time after the filing of the grounds of appeal and the replies) relying on entitlement to partial priority, pursuant to Art. 13(1) RPBA and Art. 12(2), (4) RPBA 2007. The board held that the new defence by which a right to partial priority was invoked was not merely a presentation of a new argument pertaining to the interpretation of law but comprised a new allegation of fact. Indeed, it would have involved a new factual assessment of the subject-matter of claim 1 as granted and of priority application D49.

In **T 116/18** (28 July 2023) the board decided at the oral proceedings not to admit the respondent's (patent proprietor's) submission that the facts underlying **T 873/21** were analogous to the facts under consideration in the case in hand, so that, based on that decision, the effect demonstrated in D21 could be relied on. In the board's view, a distinction had to be made between an interpretation of the law based on a previous decision by the boards of appeal, on the one hand, and a reference to the specific factual and legal assessments of this previous decision and the allegation that this factual situation was the same as in the case pending before the board, on the other hand. As regards the interpretation of the law, the board explained that the boards had to examine the relevant case law ex officio. If there was a contradiction between the interpretation of the EPC the board intended to follow in the case pending before it and the interpretation adopted in the earlier decision, the board had to explain the reason for its deviation. As regards the second type of submissions, the board underlined that such a submission contained both a statement of fact and its legal qualification. In order for the board to deal with such a submission, it had to examine the factual situation on which the earlier decision was based and assess whether it was similar to the one underlying the pending case. For these reasons, such a submission included a new allegation of fact and thus constituted an amendment to the respondent's appeal case.

q) Information supporting oral submissions

In **T 247/20** the appellant (patent proprietor) filed slides containing figures illustrating its interpretation of relevant processes of the patent and D1 two months before the oral proceedings. The board did not regard these figures as evidence, or a change in the appellant's appeal case, but as supporting information for the appellant's oral presentation, albeit filed in advance of the oral proceedings.

r) Translation filed later

In **T 1554/16** the appellant (opponent) had attached a translation of a Japanese patent specification to its grounds of appeal. Later, after receiving the summons to oral proceedings, it also filed a translation of the related patent application. For the board, the later translation was not an amendment to the appeal case within the meaning of Art. 13(1) RPBA, because a Japanese patent specification usually did not contain any teaching going beyond the original disclosure in the application and so the opponent's line of argument had already been clear from the translation of the specification.

In **T 1795/19**, the board held that presenting a different machine translation of a citation constituted an amendment to the opponent's case. If the translation were admitted, the patent proprietor and the board would have to deal with altered and potentially entirely new facts for which they could not prepare before the oral proceedings.

s) Late assertion of a breach of the right to be heard

In **T 545/18** the appellant argued for the first time at the oral proceedings that the fact that the inventive step was not discussed at the oral proceedings before the examining division (as noted in the statement of grounds of appeal), although Art. 56 EPC was one of the

grounds for refusing the application, amounted to a violation of its right to be heard. The board considered this to be an amendment of the appellant's case, but held that there were exceptional circumstances within the meaning of Art. 13(2) RPBA.

4.3. First level of the convergent approach – submissions in the grounds of appeal and the reply – Article 12(3) to (6) RPBA

4.3.1 Principles

According to established case law the appeal proceedings should normally be based on the facts, evidence and requests which led to the decision under appeal (see e.g. **J 12/18**, referring to CLB, 9th edn. 2019, V.A.4.11.1). This principle is reflected in Art. 12(2) RPBA, which states that, in view of the primary object of the appeal proceedings to review the decision under appeal in a judicial manner, a party's appeal case must be directed to the requests, facts, objections, arguments and evidence on which the decision under appeal was based.

Article 12(4) RPBA implements the first level of the convergent approach (see CA/3/19, section VI, explanatory remarks on Art. 12(4) RPBA, Supplementary publication 2, OJ 2020, 56). According to Art. 12(4), first sentence, RPBA, parts of a party's appeal case which do not meet the requirements in Art. 12(2) RPBA are in general regarded as an amendment. It is not an "amendment", however, if the party demonstrates that the parts not meeting those requirements were admissibly raised and maintained in the proceedings leading to the decision under appeal. For decisions on the issue of what is considered an amendment under Art. 12(4) RPBA, see chapter V.A.4.2.2 above. Any amendment may be admitted only at the discretion of the board (Art. 12(4), second sentence, RPBA).

In **T 1776/18** the board referred to Art. 114(2) EPC and explained that any submission which has not been made during the first-instance proceedings is in the appeal proceedings considered not to have been submitted in due time within the meaning of this article. Considerations such as whether a party could not have adequately reacted to a request or document filed at a late stage of the first-instance proceedings did not determine whether a submission was late-filed, but were instead relevant to the question of how a board should exercise its discretion (see also CA/3/19, pages 35 and 36, explanatory remarks on Art. 12(4) RPBA).

The requirement that the statement of grounds of appeal and the reply thereto should contain the party's complete case is laid down in Art. 12(3) RPBA (expressed by substantially identical wording to Art. 12(2) RPBA 2007, as noted in **T 1533/15**). Under Art. 12(5) RPBA, the board has discretion not to admit any part of a submission by a party which does not meet the requirements in Art. 12(3) RPBA (see chapter V.A.4.3.5d) "Discretion under Art. 12(5) RPBA" below).

This requirement to provide substantiation also applies to submissions (e.g. requests, see **T 534/21**) on which the contested decision is based. However, to cover the case law on Art. 12(3) and (5) RPBA in the context of other provisions in Art. 12 and 13 RPBA,

decisions on this requirement are presented in this chapter V.A.4, even if they do not relate to "new submissions on appeal".

Article 12(6), first sentence, RPBA concerns the admittance of submissions which were not admitted in the proceedings at first instance (see chapter V.A.4.3.6 below). Here again, this provision does not only apply to new submissions in appeal proceedings but will nevertheless be covered in this chapter V.A.4 in the overall context of Art. 12 and 13 RPBA.

Article 12(6), second sentence, RPBA relates to submissions which could and should have been submitted during the proceedings at first instance, or were no longer maintained during those proceedings, thereby preventing the department of first instance from taking a decision on them (see chapter V.A.4.3.7 below). According to the explanatory remarks in CA/3/19 on Art. 12(6) RPBA, its first and second sentences reflect established case law on Art. 12(4) RPBA 2007 (see **T 791/20**; on this case law, see also CLB, 10th edn. 2022, V.A.5.11 "Article 12(4) RPBA 2007").

Article 12(6), second sentence, RPBA (just as Art. 12(4) RPBA 2007 before) expresses and codifies the principle that each party should submit all facts, evidence, arguments and requests that appear relevant as early as possible so as to ensure a fair, speedy and efficient procedure. An appellant is not at liberty to bring about the shifting of its case to the appeal proceedings as it pleases, and so compel the board either to give a first ruling on the critical issues or to remit the case to the opposition division. Conceding such freedom to an appellant would run counter to orderly and efficient opposition-appeal proceedings. In effect, it would allow a kind of "forum shopping" which would jeopardise the proper distribution of functions between the departments of first instance and the boards of appeal and would be unacceptable for procedural economy generally. See **T 101/17**, citing **T 162/09** and **T 1848/12**, and **T 878/21**.

The requirements of the first level of the convergent approach – i.e. those set out in Art. 12(4) to (6) RPBA – apply **throughout the appeal proceedings**, i.e. also at the stages of the appeal proceedings which are governed by Art. 13(1) and (2) RPBA (see chapter V.A.4.1.2).

4.3.2 Transitional provisions

For summaries of decisions in which the transitional provisions of Art. 25 RPBA were applied (in particular of **J 12/18** and **T 1533/15**), see CLB, 10th edn. 2022, V.A.4.3.2.

4.3.3 Amendment within the meaning of Article 12(4) RPBA

It is at a board's discretion whether to admit an amendment within the meaning of Art. 12(4) RPBA. On the definition of "amendment" in this context, see chapter V.A.4.2.2 "First level of the convergent approach: amendments to a party's case – Article 12(4) RPBA".

4.3.4 Discretion under Article 12(4) RPBA

a) Principles

Pursuant to the non-exhaustive list of criteria in Art. 12(4), fifth sentence, RPBA, the boards are to exercise their discretion in view of, inter alia, the complexity of the amendment, the suitability of the amendment to address the issues which led to the decision under appeal, and the need for procedural economy.

As a further criterion, the boards have considered whether the submissions on appeal should have been filed earlier or whether – on the contrary – they were filed at the first opportunity, i.e. could be justified as a legitimate reaction to late developments in the proceedings leading to the decision under appeal. See e.g. **T 121/20**, **T 864/20**, **T 3240/19** and **T 3248/19**, which partly refer to Art. 12(6) RPBA in this context, as well as **T 73/20**, which additionally refers to the requirement in Art. 12(4), third sentence, RPBA according to which the party shall inter alia provide reasons for submitting the amendments in the appeal proceedings.

Other factors taken into account by the boards when exercising their discretion include whether the party's case takes account of the primary object of the appeal proceedings to review the contested decision in a judicial manner (see e.g. **T 1963/20**), and whether it would seem appropriate to defer dealing with a citation until any subsequent revocation proceedings, albeit without giving this factor the same importance as the criteria in Art. 12(4) RPBA (**T 1657/20**).

The decisions summarised in this sub-chapter are reported under the heading of one of these criteria but their assessment was usually based on an overall consideration of several factors. See e.g. **T 3240/19**, **T 3248/19**, **T 121/20**, **T 868/20**, **T 869/20**, **T 1516/20**, **T 1617/20**, **T 1821/20**).

Whether the boards have discretion to exclude submissions which form part of the appeal proceedings under Art. 12(2) RPBA is debatable. In many decisions the boards have considered that there is no legal basis for excluding submissions (such as prior art documents) from the appeal proceedings which had been admitted into the proceedings by the opposition division (see e.g. **T 617/16**, **T 2337/16**, **T 449/21**). In other decisions the boards have held that they review such discretionary decisions, albeit only in a limited way (see e.g. **T 2055/20**, with reference to CLB, 10th edn. 2022, V.A.3.4.1.b) and to **G 7/93**, OJ 1994, 775).

b) Requirement to identify each amendment to the case and provide reasons for timing of submission – Article 12(4), third sentence, RPBA

In **T 28/20** the appellant did not explain why a new inventive-step objection (based on a different closest prior art) was first raised on appeal. The board, considering that the requirements of Art. 12(4) RPBA were not fulfilled, made use of its discretion pursuant to Art. 12(4) RPBA not to admit this new objection into the proceedings.

In **T 73/20** the appellant argued for the first time in the statement of grounds of appeal that there was a technical prejudice in the art against combining the teachings of D1 and D2. It neither identified the amendment to its case nor provided reasons for submitting it only in the appeal proceedings. As this submission could not be justified as a legitimate reaction to late developments in the opposition proceedings and created a new situation on appeal, the board exercised its discretion not to admit the new argument.

See also the ex parte case **T 2030/21**, in which the board underlined that the statement of grounds of appeal should also have explained why it had not been necessary to file the claim request already in the first-instance proceedings (cf. Art. 12(6), second sentence, RPBA).

c) Requirement to indicate the basis for amendments to the patent application or patent in the application as filed and to provide reasons why the amendment overcomes the objections raised – Article 12(4), fourth sentence, RPBA

In **T 32/16** the respondent's response to the board's preliminary opinion contained amended claim requests and a statement from where the amendment was taken. The board noted that the introduced terminology was an explicit recitation of the language used in the application as filed. Demonstration of how these amendments overcame the objection in this particular case, where the lacking features as such had at least already been identified by the appellant, was thus **self-evident** in the amendments made. See also **T 498/21**.

A counter-example is decision **T 890/21**, in which auxiliary request 8, submitted with the reply to the appellant's (opponent's) statement of grounds of appeal, was not admitted into the appeal proceedings. In this request the product claims 1 - 5 had been deleted, but the respondent's reply did not contain any reasons why the **remaining claims** overcame the objections succeeding against the product claims and the board could not recognise the suitability of the amendment for addressing these objections.

Presenting the board with references to a **large number of text passages** with no specific explanations as to how the skilled reader would directly and unambiguously derive the claimed subject-matter from the application as filed is contrary to Art. 12(4), fourth sentence, RPBA (**T 864/20**).

In **T 248/22** the board recalled that, in exercising its discretion under Art. 12(4) RPBA, it had to consider whether the amendment was suitable for addressing the objections **raised**. However, in the case in hand, the proprietor had referred to an objection which was not part of the decision under appeal or the appeal proceedings. The objection had neither been admitted by the opposition division nor maintained on appeal by the opponent. The board held that a reason as to why an amendment overcame an **unraised** objection did not constitute a valid reason for admitting an amended request in view of Art. 12(4) RPBA.

d) Complexity of amendment

(i) New submissions not admitted

In **J 3/20** the appellant (applicant) presented a completely fresh case concerning R. 139 EPC with the statement of grounds of appeal. The Legal Board considered that these submissions would imply complex legal and factual issues which were not addressed in the decision under appeal and would thus contradict procedural economy. The Legal Board therefore used its discretion not to admit these submissions into the appeal proceedings.

In **T 652/20** the appellant raised for the first time in its statement of grounds of appeal an objection of lack of novelty over example 12 of E3 based on the argument that chitin (not only fibroin as previously alleged) anticipated a certain feature of granted claim 1. The board observed that this new reasoning raised an entirely new discussion regarding the properties of chitin. It therefore did not address the reasoning of the first instance decision as such, but merely the conclusion thereof. Moreover, in the board's view, this new discussion would have introduced complexity and hence been against procedural economy. Accordingly, the new reasoning and the supporting evidence were not admitted into the appeal proceedings.

(ii) New submissions admitted

In **T 3272/19** of 11 February 2021 D14, filed with the statement of grounds of appeal, consisted of a single table comprising a list of molecular weights which corresponded to a feature specified in operative claim 1. The board observed that D14 was not only **easy to understand** but also related to a feature which was essential for the outcome of the decision under appeal. It also noted that the appellant's (opponent's) arguments based on D14 were in support of the **same line of attack** as the one used during the opposition proceedings. The board underlined that, although D14 could have been filed earlier (since the feature the list related to was already present in claim 1 as granted), it had been filed at the first opportunity in reaction to the decision under appeal. In view of these circumstances, D14 was admitted pursuant to Art. 12(4) RPBA.

For further examples where the amendment did not lead to any complex subject-matter and was admitted, see e.g. **T 1655/20** (ex parte, further limitation of the claim by deleting "particularly"), **T 1617/20** (inter partes, deletion of one sentence in the description), **T 1516/20** (inter partes, subject-matter of the claim limited by deleting a variant).

e) Suitability to address the issues leading to the decision under appeal

(i) Suitability of claim amendments

In **T 1655/20** (ex parte) the first auxiliary request, which was filed for the first time with the statement of the grounds of appeal, was an amendment to the party's case which could be admitted only at the discretion of the board (Art. 12(2) and (4) RPBA). The board considered that the amendment (deletion of "particularly", thereby rendering a feature

mandatory) resulted in a further limitation of the claim **in a genuine attempt** by the appellant (applicant) **to respond to the objection** of lack of novelty raised by the examining division in the decision under appeal. Furthermore, this amendment did not lead to any complex subject-matter and did not appear to introduce further issues which would negatively impact on procedural economy. In view of these reasons the board admitted the first auxiliary request into the appeal proceedings.

In **T 714/20** (ex parte) the board admitted the first auxiliary request filed with the grounds of appeal, which corresponded to the main request on which the decision under appeal was based with a further amendment to remedy a clarity objection noted in this decision. This amendment used **wording employed by the examining division** itself when construing the claim. The board therefore considered this to be an appropriate response to the grounds for refusal and admitted the request into the appeal proceedings (Art. 12(4) RPBA).

For further examples in which the amendment was considered suitable to address the issues leading to the decision under appeal and admitted into the proceedings, see **T 1617/20** (amendment to the description), **T 3038/19** (limitation to a single specific composition).

By contrast, suitability for addressing the issues raised in the first-instance proceedings was denied in the following cases.

In **T 1421/20** (ex parte) the board held that, while the amendments carried out in the auxiliary requests at issue may have addressed the objection of lack of clarity raised in the impugned decision, they **did not address another objection** equally raised by the examining division. The board decided not to admit these requests into the proceedings.

In **T 1897/20** (ex parte) claim 1 of the main request submitted with the statement of grounds of appeal had been amended by omitting certain features, inter alia one which the appellant considered to be well-known in the relevant prior art and thus not necessary to delimit the claims over the prior art. The board pointed out that the **omission of features** that were **known from the prior art** was typically not suitable to overcome objections concerning inventive step. Furthermore, the board held that admitting these requests would be contrary to the requirement of procedural economy.

In **T 726/20** the board held that the amendment made in claim 1 of auxiliary request 1 was **prima facie** not supported by the teaching of the application as originally filed. Therefore, in exercise of its discretion under Art. 12(4) RPBA, the board did not admit auxiliary request 1.

(ii) Suitability of a new defence or supporting evidence

In **J 3/20** the appellant invoked the principle of protection of legitimate expectations for the first time during oral proceedings before the Legal Board and alleged that it had trusted the content of a communication in a parallel case. The Legal Board saw no reasons that could justify why the appellant had presented the new defence and the underlying facts

for the first time at such a late stage of the proceedings, thereby counteracting principles of procedural economy. Moreover, the objection did not seem to be suited to address the issues which led to the decision under appeal as it would have introduced a **completely new aspect** on which the assessment and the reasoning in the appealed decision were not focused.

For a decision in which the board admitted new evidence supporting the proprietor's defence, see e.g. **T 1720/20**. In this case the opposition division had concluded that the priority document and the PCT application from which the contested patent derived were filed by different legal entities. The board admitted documents D14 and D15 (bibliographic data and translation), as they were considered suitable for addressing the issue of the identity of the applicant. A further example is **T 415/20**.

f) Need for procedural economy

In **T 1897/20** (ex parte) the board noted with regard to the main request and auxiliary request I that the omission of features that were known from the prior art was typically not suitable to overcome objections concerning inventive step. It also considered that admitting these requests would be contrary to the requirement of procedural economy, as it would possibly make it **necessary to remit the case** for further examination. See also **T 1780/20,** concerning an amendment of independent claims by introducing features from the description.

In **T 1785/20** (ex parte) the board noted, regarding procedural economy, that the amendments introduced a number of **new potential deficiencies** (namely issues of claim construction which prima facie suggested a lack of clarity) which would have to be addressed if the amendments were admitted.

For a further decision in which the board did not admit the relevant request as it was contrary to the requirement of procedural economy, see e.g. **T 1161/20**. For an example where admitting new attacks based on different closest prior art would have been against procedural economy, see **T 526/21**.

Counter-examples where the new requests did fulfil the needs of procedural economy can be found in **T 121/20** and **T 3240/19**. In both cases auxiliary requests were filed at the first opportunity, the amendments in question clearly addressed the objections and they did not give rise to further issues. See also **T 869/20** (inter partes, straightforward clarity objections).

In **T 1657/20**, the board admitted citation A8 into the appeal proceedings primarily because it was suitable for addressing the issues that had led to the contested decision. In other words, as set out by the board, the citation was prima facie relevant despite the opposition division's finding to the contrary. However, the board also considered the fact that the two other criteria specified in Art. 12(4), last sentence, RPBA did not prevent the citation being admitted. Moreover, in the circumstances, the board did not consider it to be an appropriate solution to defer the assessment of A8 until any subsequent national revocation proceedings, despite Art. 12(4) RPBA not actually directly governing this

aspect of **inter-institution procedural economy**. Since the list in said paragraph is not exhaustive, this aspect was taken into account, albeit with less importance than the other criteria.

g) Whether the submission should have been filed in first-instance proceedings – Article 12(6), second sentence, RPBA

In many decisions, the boards, when exercising their discretion under Art. 12(4), second sentence, RPBA, have relied, in addition to the criteria mentioned in that provision, on whether requests, facts, objections and evidence should have already been filed in the proceedings that led to the contested decision. In some cases, the boards have made reference to Art. 12(6) RPBA (**T 291/21**, **T 3240/19**, **T 886/21**) whereas in others they have made no such reference (**T 121/20**, **T 864/20**, **T 1288/21**). On occasion, they have also used slightly different wording, e.g. in **T 218/20**, **T 121/20**, **T 3272/19** (first opportunity to respond/to file amendments/documents) and **T 1085/20** (timely reaction).

These decisions are described in chapter V.A.4.3.7 together with the decisions in relation to Art. 12(6) RPBA.

h) Primary object of the appeal proceedings to review the decision under appeal

It is established case law, and has been explicitly confirmed in Art. 12(2) RPBA, that the primary object of the appeal proceedings is to review the decision under appeal in a judicial manner. The purpose of the appeal proceedings is not to give the party adversely affected by the decision under appeal a second opportunity to put forward a new case (**T 1881/19**).

The appeal procedure is neither a continuation of the examination procedure nor a second, parallel procedure for the applicant to use as it sees fit (**T 1120/20**). This is also true for inter partes proceedings. As a result, the appellant cannot try another way of reacting to the same objection on appeal; in particular the appellant cannot submit amended auxiliary requests which were not submitted during the opposition proceedings (**T 1441/21**).

This principle, which is closely linked to the issue of whether the submissions concerned should have been filed earlier (see e.g. **T 1456/20**), has also been taken into account by the boards when exercising their discretion under Art. 12(4) RPBA, as exemplified in the following paragraphs.

(i) Completely fresh case presented for the first time in the appeal proceedings

In **J 3/20** the Legal Board held that presenting a completely fresh case for the first time in the appeal proceedings is tantamount to treating the appeal as a new independent proceeding rather than as a judicial review based on the facts presented in the first instance. The appellant had submitted its request for a correction of the withdrawal of Great Britain as designated state and the facts underlying this request for the first time with the grounds of appeal. Moreover the submissions implied complex legal and factual issues which were not addressed in the decision under appeal and would thus contradict

procedural economy. Therefore the board used its discretion not to admit these submissions. See also **T 2061/19**.

(ii) Examination of subject-matter deliberately foregone

Reintroducing subject-matter the examination of which was deliberately foregone in the first-instance proceedings is at odds with the purpose of the appeal proceedings as a review instance, as stipulated in Art. 12(2) RPBA. Generally, therefore, any such requests are not to be admitted under Art. 12(6), second sentence, first half-sentence, RPBA (**T 1456/20**).

In **T 1456/20** the board held that auxiliary request 7 (which corresponded to one of the auxiliary requests filed with the reply) should already have been submitted in the opposition proceedings. The novelty objection it was designed to overcome had already been discussed at the oral proceedings before the opposition division but the patent proprietor had decided at the time to limit the claimed subject-matter in a certain way and thereby deliberately foregone an examination of subject-matter now reintroduced in auxiliary request 7. The board was not persuaded by the patent proprietor's argument that this approach could be justified by the aim of limiting the number of requests in the opposition proceedings. In the board's view, it was immaterial that the additional features were features of claims as granted.

In ex parte case **T 1120/20**, the applicant filed new requests with the statement of grounds of appeal on the grounds that they addressed clarity objections raised by the examining division. However, these objections had already been raised in several communications as well as in the annex to the summons to oral proceedings before the examining division. The applicant had not reacted with requests but had opted to defer the discussion until the appeal stage.

(iii) Failure to actively maintain objection at the oral proceedings

In **T 526/21** inventive step attacks starting from D24 and D34 were raised by appellant 1 (opponent 1) in writing during the opposition proceedings (in reply to the preliminary opinion). But they were not actively maintained at the oral proceedings before the opposition division. According to the minutes the three opponents agreed that D9 was the closest prior art and the proprietor argued that an example of D2 would be a better closest prior art. The choice between D2 and D9 was then discussed but no other document considered. Neither were the attacks based on D24 and D34 mentioned in the decision. The board concluded that these attacks did not form part of the appeal proceedings according to Art. 12(2) RPBA. In exercise of its discretion under Art. 12(4) RPBA, the board decided not to admit them into the appeal proceedings, as their implicit abandonment by appellant 1 had **prevented the decision from being based thereupon**. In the board's view a re-introduction of these attacks would be against the purpose of the appeal proceedings and procedural economy.

(iv) Requirement to immediately react to surprising developments

In **T 655/20** the board held that the opponent should have immediately reacted to a perceived surprising development in the proceedings putting it in an allegedly unexpected and disadvantageous situation. This would have allowed the opposition division to deal with the issue and decide on any request the opponent might have considered appropriate to submit. The opponent however did not request any additional measures during oral proceedings. Reacting to a change of stance taken by the opposition division in the interpretation of a feature for the first time in the statement of grounds of appeal – here by filing two new documents and an objection based on them – was contrary to the primary object of the appeal proceedings (Art. 12(2) RPBA) and contrary to procedural economy (Art. 12(4) RPBA).

(v) Cases in which the primary object of the appeal proceedings was met

In **T 1963/20** the board recalled that, in view of the primary object of appeal proceedings the intention was to review the correctness of the first-instance decision rather than to continue examination by other means (**G 10/93**, OJ 1995, 172, **T 980/08**, **T 65/11**). Whereas the main request and auxiliary requests 2 to 6 filed with the statement of grounds of appeal were not admitted into the appeal proceedings, as it was not apparent why the amendments could not have been submitted in the examination proceedings, request 7, which referred exclusively to the features encompassed by claim 9 of the request forming the basis of the impugned decision, was admitted. The restriction to this claim met the primary object of appeal proceedings, the amendments were not complex, and they clearly overcame the issues which had led to the decision under appeal.

In **T 1780/20** auxiliary requests 5 and 6 were identical to auxiliary request I and II which had been discussed during the oral proceedings before the examining division and for which the examining division provided an **obiter dictum** in its decision (the appellant having maintained only its main request). Consequently, as pointed out by the board, the appellant did not present a fresh case with these auxiliary requests; rather, the situation did not substantially differ from that described in Art. 12(2) RPBA. Therefore, the board admitted auxiliary requests 5 and 6 into the appeal proceedings.

i) Application of the principles expressed in Article 12(6) RPBA to amended requests or single claims

In ex parte case **T 714/20**, the main request was based on a request not maintained at first instance, with a further amendment to remedy a clarity objection noted in the decision under appeal. Similarly, the second auxiliary request corresponded to an auxiliary request underlying the decision under appeal, which had not been admitted by the examining division, again with a further amendment to remedy said clarity objection. The board noted that Art. 12(6) RPBA did not apply as such as the **non-maintained and non-admitted requests** had been **amended**. However, in the board's view the principles in Art. 12(6) RPBA for the admittance of non-maintained or non-admitted requests can be considered in the exercise of discretion under Art. 12(4) RPBA. As regards the main request, the board observed that the amendment which had been carried out as a response to the mentioned

clarity objection was unrelated to the amendment carried out at first instance when the non-maintained request was replaced. As regards the second auxiliary request, the board similarly observed that the amendment for clarity was unrelated to the reasons given for non-admittance of the corresponding first instance request. The board was further of the opinion that the discretionary decision of the examining division was taken in a reasonable manner. The requests were not admitted.

In **T 1161/20**, claim 1 of auxiliary request 1, submitted with the notice of appeal, corresponded to an independent claim of a request that had been filed on opposition but **withdrawn** during the oral proceedings before the opposition division. According to the board, the question arose as to whether Art. 12(6), second sentence, RPBA was applicable to the case in hand even though it was not auxiliary request 1 as a whole that corresponded to the request withdrawn on opposition but **only one independent claim**. The board noted that the reintroducing the claim was at odds with the aim of Art. 12(6), second sentence, RPBA. However, the board left said question open since, in the exercise of its discretion, it could take account of the criteria set out in Art. 12(4), fifth sentence, RPBA, as well as the principle set out in Art. 12(6), second sentence, RPBA (see **T 714/20**). The opposition division had been deprived of the chance to decide on the subject-matter of independent claim 1 of the auxiliary request 1 in question. Moreover, admitting such a request would run counter to the principle of procedural economy.

j) Convergence criterion

In **T 1456/20**, the board noted in the context of its decision regarding the admission of new requests under Art. 13(2) RPBA that the convergence criterion was an expression of procedural economy, non-compliance with which in certain parts of the proceedings, pursuant to Art. 12 and 13 RPBA, could lead to new requests not being admitted even if the opponent had not raised any objection to that effect.

By contrast, the board in **T 1516/20** did not take the convergence criterion into account when exercising its discretion under Art. 12(4) RPBA. The board had had to decide whether to admit a new auxiliary request filed with the statement of grounds of appeal. It admitted said request pursuant to Art. 12(4) RPBA since it considered the amendments in claim 1 to be a direct reaction to the opposition division's decision and since the amendments addressed the inventive step issue and further limited the claimed subject-matter through the deletion of a variant. Doing so did not lead to any complex amendments. The board further noted that the convergence criterion asserted by one of the respondents was not relevant.

k) No objection raised by opposing party

In **T 3272/19** of 11 February 2021 D9a and D13 had already been filed during the opposition proceedings, in reply to the preliminary opinion of the opposition division, but had not been decided upon in the contested decision. They were filed again by the respondent (proprietor) with its response to the statement of grounds of appeal. The appellant (opponent) explicitly indicated that they had no objection to the admittance of these documents into the proceedings. The board further took into account that D9a was

relied upon by both parties, in particular during the oral proceedings. The board found it appropriate to exercise its discretion pursuant to Art. 12(4) RPBA by admitting D9a and D13 into the proceedings. See also **T 2930/19**.

l) Obvious corrections in description

In **T 1444/20** the description of the main request (filed as auxiliary request 1 with the statement of grounds of appeal) contained insertions, in several occurrences, which in the board's view were obvious corrections under R. 139 EPC that did not contravene Art. 123(2) EPC. The board saw no reason to hold this request inadmissible under Art. 12 RPBA.

4.3.5 Incomplete case in grounds of appeal or reply – substantiation requirement – Article 12(3) and (5) RPBA

a) Principles

In accordance with the principles underlying the RPBA, the statement of grounds of appeal and any reply to it must contain the party's complete case (Art. 12(3) RPBA, essentially the same as Art. 12(2) RPBA 2007). The purpose of this provision – in both its revised and former versions – is to ensure **fair proceedings** for all parties and to enable the board to start working on the case **on the basis of each party's complete submissions** (**T 2610/16**, referring to CLB, 9th edn. 2019, V.A.4.12.5; see also **T 1904/16**, **T 113/18** and **T 319/18**).

The requirement to present a complete case stipulated by Art. 12(3) RPBA is not merely a rule of administrative convenience, but the expression of a fundamental principle of court proceedings (**T 2202/21**, see also **T 1776/18**, referring to this requirement as a general procedural principle underlying the EPC). As underlined in **T 321/21**, the substantiation requirement is not limited to the statement of grounds of appeal and the reply but must also be complied with for claim requests and objections filed later in the appeal proceedings.

This provision plays a role in both, the admissibility of the appeal (see chapter V.A.2.6.3h)) and in the admittance in the appeal proceedings of incomplete or unsubstantiated requests, facts, objections, arguments or evidence (see the decisions summarised in this chapter V.A.4.3.5).

This requirement to provide substantiation also applies to submissions on which the contested decision is based (see e.g. **T 559/20** and **T 534/21** for requests and **T 557/21** for objections). However, to cover the case law on Art. 12(3) and (5) RPBA in the context of other provisions in Art. 12 and 13 RPBA, decisions on this requirement are presented in this chapter V.A.4, even if they do not relate to "new submissions on appeal".

A **sweeping reference** by the **appellant** to its case in the first-instance proceedings is not sufficient to establish why the contested decision should be reversed. This approach is at odds with the appeal proceedings, in which, the appellant is obliged under Art. 108 EPC,

R. 99(2) EPC and Art. 12(3) RPBA, to present a complete case with its statement of grounds of appeal, one that would allow the board and the other parties to understand why the contested decision should be reversed without having to make any further investigations of their own (**T 706/17**; also set out in **T 2117/18** in relation to Art. 12(2) RPBA 2007, which was only amended slightly). See also **T 2457/16** and **T 1690/22** (the latter noting that this corresponds to long-standing and well-established case law of the boards of appeal; for details see chapter V.A.2.6.5 above).

The board in **T 1041/21** also deemed **sweeping references** made by the **respondent** (patent proprietor; the successful party in the first-instance proceedings) to its case in said proceedings to be inconsistent with the requirement of Art. 12(3) RPBA. See also **T 503/20**. On the other hand, see also **T 108/20**. For further details, see chapter V.A.4.3.5b) (iii).

The requirement under Art. 12(3) RPBA to be concise does not exempt the parties from the obligation to specify expressly all the requests, facts, objections, arguments and evidence relied on (see **T 2117/18**, **T 2872/19**, **T 1615/22**).

Regarding the **legal consequences of a failure to meet the complete case requirement**, new Art. 12(5) RPBA provides that a board has discretion not to admit any part of a submission on appeal which does not meet the requirements in Art. 12(3) RPBA. In **T 503/20**, the board pointed out that it had discretion to admit passages of the reply to the opposition referred to using their specific margin references and that this depended on the specific circumstances of the case in hand. These included whether the **impugned decision had been sufficiently discussed** and, if the points at issue were irrelevant for this decision, whether it was clear enough from both parties' complete cases which points were being pursued and on what specific basis, and how these related to the **opposing party's case**.

Providing the required substantiation for a previously unsubstantiated objection or request does not qualify as a mere refinement. Fleshing out an incomplete case at a later stage was considered as an amendment within the meaning of Art. 13 RPBA in e.g. **J 3/20**, **T 2227/15**, **T 326/16**, **T 1439/16**, **T 2796/17** (see also chapter V.A.4.2.3m) "Belated substantiation of objections"). In several decisions the boards have referred to Art. 12(3) RPBA when exercising their discretion under Art. 13(1) or (2) RPBA not to admit later submitted amendments of the appeal case (see e. g. **T 1439/16** and **T 1533/15**). On whether unsubstantiated requests or objections have been validly submitted in the first place, see below chapter V.A.4.3.5b) (v) and V.A.4.3.5c) (vi).

b) Incomplete appeal case – unsubstantiated requests – Article 12(3) RPBA

(i) Required degree of substantiation

In **T 1128/21** the board explained that the degree of substantiation required under Art. 12(3) RPBA depended on the specific circumstances of the particular case. As a rule, a patent proprietor filing an amended claim request had to specify expressly and precisely (i) the basis in the application as originally filed for each amendment, (ii) which objections

were intended to be overcome and (iii) reasons why the respective amendment would overcome the objections raised. These requirements were taken as a basis in the established case law for both Art. 12(3) RPBA and Art. 12(2) RPBA 2007 (see **T 319/18** and CLB, 10th edn. 2022, V.A.5.12.6). See also **T 1221/21**, **T 731/22** (see the summary in chapter V.A.4.3.5b) (ii)).

In **T 1220/21** the board added that, if a claim request was intended to overcome novelty or inventive step objections, the proprietor should identify the **relevant documents and the features** which distinguish the claimed subject-matter therefrom (see **T 1659/20**). It also held that the specific extent and detail of the explanations required depended on the level of **detail and accuracy of the objections** to be overcome.

The boards have emphasised in several decisions the need for the appellant (patent proprietor) to address the grounds underlying the contested decision (e.g. **T 559/20**, **T 430/20**).

Blanket reasoning can be tantamount to a complete lack of reasoning. In **T 559/20**, for example, the board held that the blanket reasoning that the auxiliary requests were more limited than the main request and therefore novel and inventive **for the same reason as the main request** was clearly not sufficient to justify the allowability of the auxiliary requests if the board found the main request not to be allowable. See also **T 437/20**, **T 309/21**, **T 2013/21**. Similarly, in **T 203/20** the appellant (proprietor) filed auxiliary request 9 with the statement of grounds of appeal, but failed to provide a substantiation as to **why** the amendments made would overcome objections against any higher-ranking request.

In **T 2202/21** the board held that merely identifying the additional differences to the prior art was not sufficient, the proprietor (appellant or respondent) also had to explain why these differences were considered inventive. See also **T 2532/17** (applying Art. 12(2) RPBA 2007).

In **T 1220/21** the board pointed out that without an explicit reference and explanation by the party, information that can only be found in attached documents cannot be regarded as sufficient substantiation pursuant to Art. 12(3) RPBA.

Equally strict substantiation requirements were also applied in cases where the opposition division had **rejected the opposition**:

In **T 1128/21**, justifying these strict requirements, the board referred to the provision of Art. 12(3) RPBA that each party must set out clearly and concisely the reasons why it is requested that the decision under appeal be reversed, amended or **upheld**, and specify expressly all the arguments relied on.

In **T 904/21** the board did not admit auxiliary request 4 (which was filed by the respondent – patent proprietor – with the reply to the statement of grounds of appeal and corresponded to an auxiliary request filed during opposition proceedings), as the respondent had failed to indicate in its submissions how the additional features could overcome the objection of lack of inventive step **raised by the appellant in its statement of grounds of appeal**.

See also **T 1959/19** (summarised in section (ii) below), **T 262/20**, **T 437/20**, **T 2202/21** and **T 312/22**.

The board in **T 1220/21** pointed out that the duty to provide a basis for the amendments did not depend on whether the allowability of the request had previously been contested under Art. 123(2) EPC.

In several decisions, the boards have found there was no lack of substantiation in cases where no explanation as to why amendments were filed was needed because the amendments were **self-explanatory** (e.g. **T 731/22**, **T 2964/18**). See however **T 1220/21**.

Sweeping references made by the appellant or respondent to its case in first-instance proceedings are inconsistent with the requirement of Art. 12(3) RPBA (see chapter V.A.4.3.5b) (iii) below and chapter V.A.2.6.5).

(ii) Self-explanatory amendments

In **T 731/22** the board began by confirming that, as a rule, a patent proprietor filing an amended claim request had to specify expressly and precisely the basis in the application as originally filed for each amendment, which objections were intended to be overcome and reasons why the respective amendment would overcome the objections raised. However, the necessary scope and level of detail of the explanations could not be determined in absolute terms but depended on the specific circumstances of the particular case. Furthermore, there was no lack of substantiation in cases where no explanation as to why amendments were filed was needed because the amendments were **self-explanatory** (see CLB, 10th edn. 2022, V.A.5.12.6). The board affirmed that this was so in the case in question because only a novelty objection had been raised and it was self-explanatory that the structural limitation was an attempt to restore novelty to the document concerned.

Likewise in **T 2964/18** the board considered the deletion of claim 1 in auxiliary request 4 to be self-explanatory in the sense that the board and the other party were in a position to understand which outstanding objections were meant to be overcome.

In **T 1959/19**, on the other hand, the board rejected the respondent's argument that the wording of auxiliary requests I to XVII (which had already been submitted in the opposition proceedings) made it clear why they met the requirements of the EPC, namely simply because these requests had been further distinguished from the prior art compared with the version as granted. In the board's view, the prior art from which the subject-matter had been distinguished was not immediately discernible. Likewise, in **T 319/18** and **T 1128/21** the boards did not consider that the purpose of the respective amendments in respect of overcoming the prevailing objections was self-explanatory. See also **T 262/20**

In **T 1220/21** the board took a different approach to self-explanatory requests. It held that an amended request that was self-explanatory nevertheless did not meet the standard as set out in Art. 12(3) RPBA, because an implicit argument did not meet the requirement that the party should expressly specify the arguments relied on (citing **T 2598/12**).

(iii) Reference to requests or supporting arguments filed at first instance

A **sweeping reference** by the **appellant** to its case in the first-instance proceedings was not sufficient to establish why the contested decision should be reversed. This approach is at odds with the appeal proceedings, in which, the appellant is obliged under Art. 108 EPC, R. 99(2) EPC and Art. 12(3) RPBA, to present a complete case with its statement of grounds of appeal, one that would allow the board and the other parties to understand why the contested decision should be reversed without having to make any further investigations of their own (**T 706/17**; also set out in **T 2117/18** in relation to Art. 12(2) RPBA 2007, which was only amended slightly). See also **T 2457/16** (sweeping reference to requests filed at first instance without any further details, thereby shifting the responsibility to select a request that might ultimately be allowable to the opponent and the board).

The board in **T 1041/21** also deemed **sweeping references** made by the **respondent** (patent proprietor; the successful party in the first-instance proceedings) to its case in said proceedings to be inconsistent with the requirement of Art. 12(3) RPBA. Referring to or merely repeating arguments made in the opposition proceedings did not make it immediately clear for either the board or the other party which objections raised by the appellant in its appeal against the main request had been remedied by the amendments made in the auxiliary requests, or to what extent and why.

In **T 503/20**, the board endorsed this view and referred to the wording of Art. 12(3) and (5) RPBA and the explanatory notes to Art. 12(5) RPBA (Supplementary publication 2, OJ 2020, 57), according to which a party is required to "specify expressly" all the requests, facts, etc. relied on.

On the other hand, see also **T 108/20**, in which the board took the view that if a party refers to a submission in the first-instance proceedings to which **no response was given**, a sweeping reference is sufficient for said submission to be part of the appeal proceedings.

(iv) Claims not presented in full

In **T 1421/20** requests 1a to 5a were introduced and commented on in the statement of the grounds of appeal but no claims were filed at that stage. Hence they did not fulfil the requirements of Art. 12(3) RPBA and the board had discretion not to admit them into the proceedings for this reason only (Art. 12(5) RPBA). Since the requests were not part of the decision under appeal, they were further considered to be amendments (Art. 12(2) and (4) RPBA).

(v) Whether unsubstantiated requests have been validly filed

The boards differ in opinion as to whether an unsubstantiated request is to be considered to have been validly submitted only at the time when sufficient substantiation was provided (see e.g. **T 319/18**, **T 1191/18** and **T 2117/18**) or whether an unsubstantiated request is merely not admitted under Art. 12(5) RPBA (see e.g. **T 2457/16**, **T 1128/21**, **T 1220/21**), and the later filed substantiation not admitted under Art. 13 RPBA. For further details, see

chapter V.A.4.2.3h). See also CLB, 10th edn. 2022, V.A.5.12.6 "Unsubstantiated requests" on the case law under the RPBA 2007.

In **T 321/21** the board discussed the two approaches to dealing with unsubstantiated requests and objections and pointed out that a main difference between the two approaches appeared to be whether or not a board had to take a formal admittance decision on a claim request or objection which it considered unsubstantiated.

c) Incomplete appeal case – unsubstantiated objections or defence – Article 12(3) RPBA

(i) Required degree of substantiation

Under Art. 12(3) RPBA, the appellant (opponent) has to set out clearly the reasons for requesting that the decision under appeal be reversed and **specify expressly all** facts, objections and evidence relied on. Attacking the decision only generally or referring generally to the case made in the opposition proceedings was not enough for this (**T 2796/17**).

In other words, in order to substantiate an objection in the appeal proceedings which the opposition division did not consider convincing, it is necessary to provide specific reasons why the finding and the reasoning in the decision under appeal are supposedly incorrect with regard to this objection. Arguments which have already been put forward in the opposition proceedings may be included in these reasons, but must be put in the context of the decision under appeal (**T 2117/18** applying the substantially identical Art. 12(2) RPBA 2007; see also **T 557/21**, **T 1079/22**, **T 266/23**).

The party has to present a logical and structured chain of arguments to support the alleged objection (e.g. **T 1217/17**, **T 2883/19**, **T 2649/22**).

In **T 2253/16** the only argument the appellant (opponent) had put forward in its grounds of appeal in support of its assertion that the subject-matter of claim 1 lacked novelty over D4 was that the contested decision contradicted itself on one of the features. The board observed that there was **no analysis of D4** showing where the appellant considered what claim features to be disclosed. Art. 12(3) RPBA required that the grounds of appeal contain the appellant's complete case. The board could not simply refer to the submissions made in the opposition proceedings, it being clear from Art. 12(3) RPBA that they were not automatically part of the appeal case. An unspecific reference to the notice of opposition made no difference; Art. 12(3) RPBA required that all facts and objections be specified expressly.

For further cases relating to insufficient substantiation of an objection, see e.g. **T 2227/15** (with regard to Art. 12(2) RPBA 2007, which, as the board noted, corresponds to Art. 12(3) RPBA), **T 565/16**, **T 1617/20**, **T 186/20**. In all these cases, there was no substantiation of why the opposition division's reasoning and conclusions should be found to be incorrect.

In **T 1695/21**, on the other hand, the board considered the substantiation of an objection under Art. 84 EPC as sufficient because the subject of the objection had been essentially apparent from the specific points in the minutes of the oral proceedings before the opposition division to which reference had been made.

However, see also **T 108/20** regarding sweeping references to a submission in the first-instance proceedings to which **no response was given** (objections against auxiliary request 3).

(ii) Failure to address auxiliary requests filed in opposition proceedings but not considered in the contested decision

According to the board in **T 664/20**, the statement of grounds of appeal of an appellant (opponent) had to include its entire case as regards all the requests pending before the opposition division, including those which were not considered in the contested decision. In this case, the appellant had produced documents from an additional search only after the proprietor had re-filed requests already submitted at the oral proceedings before the opposition division but not decided upon by it. As a result, the board decided not to admit these documents under Art. 12(3) and 13(1) RPBA.

For a different view, however, see **T 2035/16**. In a similar situation the board considered that the rejoinder had been the first opportunity for the opponent to respond to the introduction of the auxiliary request in appeal proceedings. According to the board, while it was true that the same request had been submitted to the opposition division, their decision had not dealt with it, and it had not been part of appeal proceedings until the proprietor had sought to make it so.

(iii) No requirement to address all dependent claims

In **T 750/18** the board held with regard to Art. 12(2) RPBA 2007 that presenting a complete case did not imply that an appellant-opponent, impugning a decision to maintain a patent in granted or amended form, had to raise objections against all the dependent claims. The appellant/opponent had to set out clearly and concisely the reasons why it requested that the decision under appeal be reversed. Objections against an independent claim found allowable by the opposition division were therefore sufficient to comply with this requirement.

(iv) Defence – reference to first instance submissions

In **T 503/20**, in which the respondent (patent proprietor) disputed an alleged public prior use, the board decided to take no account of the part of the case in the reply to the appeal that merely made a sweeping reference to the opposition case. The board justified this in particular on the grounds that the respondent had not discussed the decision in any way, even though the decision had spelled out why the public prior use was deemed to have been proven and which patentable features were deemed to have been disclosed as a result. The board noted that simply referring to the opposition case was not a substitute for appropriate substantiation in the appeal proceedings; it was imperative to present a

complete case as per Art. 12(3) RPBA, because it cannot be left to the board to investigate which of the arguments from the opposition proceedings might still be relevant in light of the contested decision and its findings (as in **T 1792/17** regarding RPBA 2007). By the same token, the board refused to admit the extracts from the reply to the opposition and the rejoinder in the opposition proceedings included in a later submission on appeal because they merely repeated the arguments from said earlier submissions word-for-word and the patent proprietor did not discuss the opposition division's findings any further. As already established in **T 1041/21**, it made no difference whether reference was made to said arguments or whether they were resubmitted without being adapted to the case.

(v) Case not fully prepared

In **J 3/20** the appellant invoked the principle of protection of legitimate expectations for the first time during oral proceedings before the Legal Board and alleged that it had trusted the content of a communication in a parallel case, which, however, it had already received in 2016. The Legal Board highlighted that the condition in Art. 12(3), first sentence, RPBA required a complete preparation **considering all the relevant documents that were available**. Thus, in its view, no reasons were apparent that could justify why the appellant had presented the new defence and the underlying facts for the first time at such a late stage of the proceedings, thereby counteracting principles of procedural economy.

(vi) Whether unsubstantiated objections have been validly filed

On the admission of new, unsubstantiated objections, see **T 321/21** (summarised in chapter V.A.4.2.3h)).

d) Discretion under Art. 12(5) RPBA

In **T 503/20** the board held that it had discretion whether to admit passages of the reply to the opposition which had been referred to using their specific margin references, and this depended on the specific circumstances of the case in hand. These included whether the **impugned decision had been discussed to a sufficient extent** and, if the points at issue were irrelevant for this decision, whether it was clear enough from both parties' complete submissions which points were being pursued for what specific reasons and how these relate to the opposing party's case.

In ex parte case **T 1421/20** requests were introduced and commented on in the statement of grounds of appeal, but no claims were filed, and so the board had discretion not to admit them under Art. 12(5) RPBA. The board took into account that the requests contained a feature which had previously been found to be unclear. Since none of the requests at issue met the requirement of clarity, the board exercised its discretion not to admit these requests.

For further cases in which the boards considered that the requirements of Art. 12(3) RPBA were not met and exercised their discretion under Art. 12(5) RPBA not to admit the part of the appeal submissions which did not meet these requirements, see e.g. **T 2457/16**, **T 430/20**, **T 640/20**, **T 1421/20**, **T 557/21**, **T 1041/21**.

In **T 1220/21** the board explained that the purpose of Art. 12(3) RPBA was to ensure that the relevant submissions were present in the proceedings as early as possible to enable the board and the other party(ies) to start working on the case on the basis of the parties' complete submissions without being forced to speculate on their intentions. The extent to which a lack of or an incomplete substantiation runs counter to this objective was a factor that could be taken into account when exercising the discretion under Art. 12(5) RPBA (**T 1659/20**). This included addressing the question of whether the amendments and the chain of logic underlying the claim requests were self-explanatory (which was not the case here). See also **T 658/22**.

4.3.6 Submissions not admitted at first instance – error in the use of discretion – Article 12(6), first sentence, RPBA

a) Principles

It is established case law that if a discretionary decision of the examining division or the opposition division not to admit submissions is challenged on appeal, it is not the task of the board to review all the facts and circumstances as if it were in the place of the opposition division and to decide whether or not it would have exercised discretion in the same way. The board should overrule the way in which the first instance division exercised its discretion only if it concludes that the division did so according to the wrong principles or without taking into account the right principles, or that it exercised its discretion in an unreasonable way and thus exceeded the proper limit of its discretion (for recent decisions see e. g. **T 222/16**, **T 879/18**, **T 1695/18**, **T 435/20**, **T 214/20**, **T 1017/20**, **T 1617/20**, **T 1004/21**, **T 1309/21**; not to be conflated with the review of a fact-finding process in first instance, see **T 1138/20**. However, see also **T 307/22**, according to which substantive findings on which the discretionary decision is based are open to review, at least in certain cases (here in the case of validly claimed priority); see also chapter V.A.3.4.1c).

This established case law on limited review of first-instance discretionary decisions, which had been developed in view of decision **G 7/93**, has been codified in Art. 12(6), first sentence, RPBA (**T 1617/20**). See also **T 214/20** and **T 435/20** noting that Art. 12(6) RPBA reflects this case law by referring to "an error in the use of discretion".

It is for the appellant to **demonstrate** that the opposition division erred in the exercise of its discretion (**T 726/20**). The same principle applies in ex parte appeal proceedings. In **T 1421/20**, for instance, auxiliary requests were filed in preparation for the oral proceedings before the examining division, which, exercising its discretion under R. 137(3) EPC, decided not to admit them into the proceedings as late filed and prima facie unclear. Since the appellant did not provide any arguments with respect to these requests on appeal, the board saw no reason to question the decision of the examining division and decided not to admit these requests into the appeal proceedings (Art. 12(6) RPBA).

Some of the case law handed down in application of Art. 12(6), first sentence, RPBA on whether there was an error in the exercise of discretion is summarised in the following sections to provide a general overview. On the discretionary criteria to be applied by the

first instance, see also chapter IV.B.2.4, for examination, and chapters IV.C.4.5 and IV.C.5.1.7 to IV.C.5.1.11, for opposition. On review of first instance discretionary decisions by the boards of appeal, see also chapters IV.C.4.5.2 and V.A.3.4.1).

If there was an error in the use of discretion (or it can no longer be determined whether any such error occurred), the proviso in Art. 12(6), first sentence, RPBA does not apply and the board exercises its own discretion (**T 1657/20**).

According to Art. 12(6), first sentence, RPBA, there are two criteria which can justify the admittance of the request under this provision: an **error** (of the first-instance department) **in the use of discretion** or the **circumstances of the appeal case** (**T 726/20**).

b) Whether a submission was late-filed

When applying Art. 12(6), second sentence, RPBA, the boards in opposition-appeal proceedings also review findings that a submission was late-filed and assess whether the opposition division had been right to conclude that the late filing was not justified.

In **T 214/20**, for instance, the board agreed with the opposition division that the documents which were filed by the proprietor to counter a certain argument of the opponent were to be considered late-filed because they should have been filed already when the argument was first raised.

Likewise in **T 1017/20**, the board found that the main request submitted at the oral proceedings was not justified by an unexpected turn of events and was thus late-filed. The opponent had already raised the objection which this late-filed main request allegedly sought to address, in the notice of opposition.

In **T 1445/22** the board underlined that evidence submitted by an opponent after the expiry of the nine-month period according to Art. 99(1) EPC was generally to be regarded as late-filed. Exceptions to this rule were where such evidence could not have been filed earlier, for example where the subject of the proceedings had changed. The question of whether submissions were filed in due time could not depend on circumstances external to the proceedings.

See chapter IV.C.5.1.4 for more detail on the late filing of main and auxiliary requests by the patent proprietor in opposition proceedings, and chapter IV.C.4.2 for more detail on the late filing of objections and evidence in the opposition proceedings.

c) Prima facie relevance of late-filed objections and evidence

Prima facie relevance is a recognised criterion for assessing the admissibility of late-filed objections in first instance opposition proceedings (see e.g. **T 2883/19**). In numerous decisions the boards held that the opposition division applying the prima facie relevance criterion had relied on the right principles and, in the case in hand, had applied them in a reasonable way (see e.g. **T 3166/19**, **T 415/20**, **T 687/20**, **T 803/21**, **T 214/20**).

T 1161/20 illustrates the importance of giving reasons as to why the opposition division's decision not to admit objections was incorrect.

(i) Party's disagreement with the result of the substantive assessment – not sufficient to demonstrate an error in the use of discretion

The mere disagreement by the party with the result of the substantive assessment by the opposition division is not sufficient to indicate an error in the use of the discretion. This was, for instance, underlined in **T 2883/19**. In the same decision, the board also pointed out that it was not apparent that the prima facie relevance evaluation of the added-matter objection at issue was based on **manifestly incorrect technical assumptions**. The board exercised its discretion under Art. 12(6) RPBA not to admit this objection into the appeal proceedings.

Similarly, in **T 61/21** the board did not accept the appellant's (opponent's) arguments according to which the opposition division, when deciding not to admit D10 as prima facie not relevant, had incorrectly placed excessive emphasis on the supposed remoteness of the document.

In **T 307/22**, however, the board reviewed the substantive basis (valid claim of priority) for a decision of the opposition division not to admit a citation. In the board's opinion, the opposition division had failed to recognise that the claimed invention had only partial priority. The board therefore exercised its own discretion. However, it too decided not to admit the citation in question (D7), on the basis that it lacked relevance for novelty. Its relevance for inventive step had been asserted by the appellant for the first time at the oral proceedings.

(ii) Insufficiently reasoned discretionary decision – error in the use of discretion

In **T 2055/20** the board found that the opposition division had provided in the written decision only an unreasoned statement for the non-admittance of auxiliary request 1 filed during the oral proceedings. In particular, no reasoning was provided as to why this request, prima facie, did not overcome this objection. Moreover, according to the minutes of the oral proceedings before the opposition division, when dealing with the admittance of said request, only issues of added subject-matter were raised and discussed with the parties. The board concluded that the opposition division's decision resulted from an error in the use of discretion and admitted the request into the proceedings.

In **T 1657/20**, the facts on which the opposition division had based its discretionary decision were not entirely apparent from the contested decision. In particular, the opposition division had substantiated the lack of prima facie relevance only in relation to claim 1 of the main request but not the broader claim 15. It was also debatable how rigorously the opposition division had assessed prima facie relevance for inventive step. Therefore, the board exercised its own discretion and admitted A8 into the appeal proceedings under Art. 12(4) and (6) RPBA.

See also **T 1324/21** (in-house information on publicly available tablets not irrelevant, as there was no basis to assume that the analysis of the pertinent feature would present skilled person with undue burden).

d) Prima facie allowability of a request

Prima facie allowability is an established criterion as regards admittance of requests in first-instance proceedings (**T 1081/20**). For a more detailed outline of the case law on this criterion, see chapter IV.C.5.1.7b).

In numerous decisions, the boards found no errors of discretion in opposition division decisions based on the criterion of a lack of prima facie allowability (or the criterion of a lack of prima facie suitability for overcoming the outstanding objections) (see e.g. **T 430/20**, **T 1017/20**, **T 1037/20**, **T 1081/20**). In many cases, the boards also used the expression of a lack of clear allowability (see e.g. **T 337/20**, **T 1556/20**, **T 1009/21**).

In **T 1037/20** the opposition division, in not admitting auxiliary request 3, made an error in the use of its discretion because it used the prima facie criterion, but did not explain **why** the request, prima facie, was not allowable.

e) Need for procedural economy – convergence

In **T 1411/21** the board held that the convergence (or the divergence) of requests is in principle an accepted criterion for deciding on the admissibility of requests under R. 137(3) EPC. It applied not only within a set of claims filed together but also with respect to earlier requests. In **T 3097/19**, however, the board (applying Art. 12(2) and (4) RPBA 2007) underlined that non-convergence of requests is, on its own, not a sufficient reason for non-admittance. It must be reasoned that and why non-convergent requests **affect procedural economy** in view of the particular circumstances of the case. See also **T 714/20** by the same board, in which it was pointed out that when oral proceedings before the examining division were imminent, it was legitimate to expect the claims of subsequent requests to converge, so that a focused discussion could be had.

In the inter-partes case **T 2204/18**, the board (applying Art. 12(4) RPBA 2007) held that the opposition division, which had relied on the convergence criterion among others, had exercised its discretion in accordance to the right principles in a reasonable way. See however **T 683/19**, in which the board (applying Art. 12(4) RPBA 2007) overruled a decision of the opposition division based on lack of convergence as the request at issue constituted a timely bona fide reaction to the admission of a new document by the opposition division.

f) Principles of fairness and equal treatment of parties

In **T 726/20** the board rejected the appellant's argument that the discretionary decision of the opposition division not to admit auxiliary request 1, filed during the oral proceedings, had suffered from an error. The opposition division had not admitted this request because it was late-filed and based on subject-matter not previously covered by the claims. In the

board's view, these reasons were in line with the case law (see CLB, 10th edn. 2022, IV.C. 5.1.4, in particular **T 2415/13**), which confirmed that claims can be amended during oral proceedings only in a manner that the opponent **could be expected to deal with** during the oral proceedings. This had the purpose of enabling all parties and the opposition division to prepare the case adequately, and of ensuring procedural fairness and efficiency.

In **T 1617/20** the board held that it resulted in an **inconsistent approach** to base the decision on admittance of auxiliary requests 1 and 2, both filed at the oral proceedings before the opposition division, on different criteria. Moreover, using the prima facie allowability criterion to object for the first time at oral proceedings to a feature of the late-filed claim request that was **already present in higher-ranking claim requests** and had **never** been **objected** to before went against the principles of fairness and good faith.

In **T 435/20** the board pointed out that in admitting the late-filed documents D64 to D80, including new evidence, into the proceedings but not admitting documents D81 to D90 filed in direct response, the opposition division had not respected the principles of procedural fairness and of equal treatment of the parties. The board also noted that the mere fact that the opposition division's preliminary opinion was positive for one party could not in itself justify not admitting any further documents by this party which were filed by the final date set by the opposition division for making written submission under R. 116(1) EPC.

g) Board's own discretion when the exercise of discretion by the department of first instance suffers from an error

In **T 1657/20**, the board exercised its own discretion since it could no longer be determined whether the discretion had been correctly exercised in the decision not to admit. Therefore, the proviso in Art. 12(6) RPBA that a board of appeal should not replace a correct first-instance discretionary decision by exercising its own discretion did not apply. In exercising its discretion, the board used the criteria of Art. 12(4), last sentence, RPBA.

h) Admittance justified by the circumstances of the appeal case

According to Art. 12(6), first sentence, RPBA there are two criteria which can justify the admittance of the request under this provision: an **error in the use of discretion** or the **circumstances of the appeal case** (**T 726/20**). Similarly **T 1017/20**. In the following cases, the boards, after finding that the non-admittance by the opposition division was not affected by an error, examined the question of whether admittance was justified by the circumstances of the appeal case.

In **T 1017/20** compliance of a previous main request with the requirements of Art. 100b) EPC had been discussed at the oral proceedings before the opposition division and denied by the opposition division and was the reason for the submission of the amended main request. The board held that, in this particular situation, the prima facie compliance of the main request on appeal with the provisions of Art. 100(b) EPC formed part of the circumstances of the appeal case that were to be considered for the purpose of applying

Art. 12(6) RPBA. However, since the main request prima facie did not solve the issue discussed at the oral proceedings, it was not admitted.

In **T 1589/21** the appellant (patent proprietor), in response to the preliminary opinion of the board, resubmitted requests that had not been admitted into the opposition proceedings. The appellant argued that since the board had a different opinion on added subject-matter from the opposition division, the appellant's situation had changed. However, the board did not find this argument persuasive, as in its preliminary opinion, it had merely agreed with the respondent on this issue. The respondent had raised this objection of added matter already in the notice of opposition and again in the reply to the appeal.

In **T 500/20** the board considered that there was no apparent error in the opposition division's exercise of discretion regarding the admittance of E18, which was resubmitted on appeal. The board also observed that the subject-matter of the case, i.e. the **claims** at issue, was **unchanged** and concluded in its preliminary opinion that there appeared to be no new circumstances of the case that could justify the admittance of the new document in question at this stage. Since this conclusion was not challenged, E18 was not admitted into the appeal proceedings.

In **T 1556/20** the board, having found that it could not recognise any error by the opposition division in the use of its discretion not to admit late-filed requests, noted that the circumstances of the appeal case were **not different** from those existing before the opposition division since the **disputed issues remained the same**. The board therefore decided not to admit these requests into the proceedings under Art. 12(6) RPBA.

In **T 290/20** document D6 had been filed by the opponent after the date set by the opposition division under R. 116 EPC and less than four weeks before the oral proceedings, according to the opponent in reaction to the proprietor's late filing of auxiliary request 4 (single independent claim directed to a process). The opposition division had not admitted D6 as it considered that this document could have been filed earlier and that it was not more relevant than other documents already in the proceedings. The board however admitted D6 into the proceedings. The filing of auxiliary request 4 shortly before the date of the oral proceedings before the opposition division, and the arguments brought forward by the proprietor in support of inventive step of claim 1 of that request, represented a **change in the course of the opposition proceedings**, which justified the filing of a new document as a reaction by the opponent.

i) Not covered by Article 12(6), first sentence, RPBA: submissions admitted at first instance

Submissions that have been admitted at first instance do not fall within the ambit of Art. 12(6) RPBA (as noted e.g. in **T 1193/21**). Whether the boards can review such decisions and exclude the submissions concerned from the appeal proceedings is a matter of discussion.

In many decisions the boards have considered that there is no legal basis for excluding documents from the appeal proceedings which had been (correctly) admitted into the

proceedings by the opposition division, especially when the impugned decision had been based on them (see e.g. **T 617/16**, **T 449/21**, **T 205/22**, **T 1005/22**, **T 527/22**). In numerous other decisions the boards have held that they review discretionary decisions, albeit only in a limited way (see e.g. **T 2055/20**, with reference to CLB, 10th edn. 2022, V.A.3.4.1.b) and to **G 7/93**, OJ 1994, 775). See also chapters V.A.3.4.1c) and V.A.3.4.4.

4.3.7 Submissions that should have been submitted or which were no longer maintained at first instance – Article 12(6), second sentence, RPBA

a) Principles

Art. 12(6), second sentence, RPBA implies that the submissions in question had not been submitted in first-instance. The test of Art. 12(6), second sentence, RPBA is therefore often applied in the framework of the exercise of discretion under Art. 12(4) RPBA. See e.g. **J 12/18**, **T 1081/20**, **T 3240/19**. Other decisions address this question without reference to Art. 12(4) RPBA. On the concept of amendment under Art. 12(2), (4) RPBA, see above chapter V.A.4.2.2. In **T 141/20**, the board deemed Art. 12(6) RPBA to be lex specialis in relation to Art. 12(4) RPBA.

Art. 12(6), second sentence, RPBA (just as Art. 12(4) RPBA 2007 before) expresses and codifies the principle that each party should submit all facts, evidence, arguments and requests that appear relevant as early as possible so as to ensure a fair, speedy and efficient procedure (**T 101/17**, citing **T 162/09** and **T 1848/12**; on the case law under Art. 12(4) RPBA 2007 and earlier case law, see CLB, 10th edn. 2022, V.A.5.1.2, V.A.5.11).

Reintroducing subject-matter the examination of which was deliberately foregone in the first-instance proceedings is at odds with the purpose of the appeal proceedings as a review instance, as stipulated in Art. 12(2) RPBA. Generally, therefore, any such requests are not to be admitted under Art. 12(6), second sentence, first half-sentence, RPBA (**T 1456/20**).

As with Art. 12(6), first sentence, RPBA (see chapter V.A.4.3.6h)), the boards, after having established that the relevant requests, facts, objections or evidence should have been submitted in the first-instance proceedings, examine in a second step whether the circumstances of the appeal case justify admittance. See in this chapter V.A.4.3.7r).

b) New request addressing objection raised for the first time at the first instance oral proceedings

In several decisions, the boards found that, in the circumstances of the case in hand, a new (main or auxiliary) request, filed in response to a new objection raised at the first-instance oral proceedings, need not have been submitted at those oral proceedings pursuant to Art. 12(6), second sentence, RPBA.

In **T 218/20** the respondent (proprietor) filed auxiliary requests 1 to 5 with its reply to the grounds of appeal. The board accepted that these requests had been filed in response to new inventive step objections first raised in the oral proceedings before the opposition

division. In the board's view, there was no need at that moment to file any further auxiliary requests as the **opposition division** was **not convinced** by these objections. Thus, the respondent had availed itself of the first opportunity to respond to these attacks. The board further held that the requests seemed to be fair and appropriate reactions and therefore justified in the sense of Art. 12(4) RPBA. Similarly **T 121/20** and **T 172/20**. See also the decisions in chapter V.A.4.3.7c).

In **T 315/21** the board examined whether the appellant (proprietor) should have filed the amendment in question (removal of a comma from the main request, on which the impugned decision was based) already at the oral proceedings before the opposition division when the related objection of clarity was first raised. The board noted that this objection was raised together with a **number of further clarity objections**, some of which were also new, and held that the patentee was not in a position to find an appropriate response to this **complex situation** in the **little time** given during the oral proceedings. Nor was this a situation of its own making as it had filed what was then the main request more than one and a half years before the oral proceedings. Thus the board did not consider that the proprietor should have filed the present main request during oral proceedings before the opposition division.

In **T 849/22** the new main request was basically identical to the main request in the opposition proceedings apart from an amendment to address an objection under R. 80 EPC, which had been raised for the first time at the first-instance oral proceedings. The board observed that this request theoretically could have been submitted at these oral proceedings. However, the opposition division had also – incorrectly, in the board's view – considered the main request in opposition to be prima facie unallowable for prima facie lack of novelty of claim 1. The board concluded that presenting the new main request during the oral proceedings would thus **foreseeably have resulted in a further non-admittance finding** based on the same (wrong) ground. Consequently, it could not be considered that the new main request should have been submitted during the opposition proceedings.

c) New request addressing objection that was dismissed or in case of a rejected opposition

In **T 205/22** the board stressed that since the opposition had been rejected, there was no need for the patentee to file auxiliary requests before the opposition division, and a request filed at the beginning of the appeal proceedings could not be rejected solely on the ground that it should have been submitted earlier (see **T 141/20**, **T 1758/21** and **T 2202/21**). See also **T 972/21**.

In **T 290/20** the appellant (patent proprietor) filed a new auxiliary request 5 in reply to the opponent's grounds of appeal, as an attempt to overcome inventive step objections based on a **document**, which **had not been admitted** by the opposition division but for which admittance had been requested again in appeal. The board pointed out that there had been no reason for the proprietor to file a corresponding request before the opposition division or with its statement of grounds of appeal. Overcoming any objection based on

this document only became necessary when it was re-filed by the opponent with its statement of grounds of appeal.

Similarly in **T 3240/19** the board held that there was no requirement for the respondent (proprietor) to file, during the first instance oral proceedings, any requests overcoming the new objection under Art. 123(2) EPC, raised on the final date in accordance with R. 116 EPC, as the opposition division considered that this **objection did not prejudice maintenance** of the patent in amended form according to the main request. See also **T 218/20** (summarised above).

In **T 141/20**, the board pointed out that it was insufficient under Art. 12(6) RPBA that the requests could have been filed in the opposition proceedings; that requests "should have been submitted" required that there were reasons for doing so. However, the board could not discern any such reason since the opposition division had made it clear during the proceedings that it did not agree with the opponent's objection. The board explained that the objection simply being part of the proceedings did not suffice as such a reason. In the opposition proceedings, the patent proprietor **could not be expected to counter** essentially **any objection raised**, and any permutation of an objection, by filing auxiliary requests. This would constitute an undue burden for both the opposition division and the other parties. The board's decision to admit had to take account of whether there was a **need** for the request to be filed in the opposition proceedings.

In **T 938/20** the appellant's new main request, filed as auxiliary request 105 shortly before the notification of the summons to oral proceedings before the board, was considered a fair reaction to opponent 2's objection raised under Art. 83 EPC in its reply to the appeal. This objection had been raised already in its notice of opposition, but had apparently not been discussed during the oral proceedings before the opposition division (although it would have equally applied to a request then at issue). The board took into account the **high number of objections** raised by the opponents in opposition proceedings and that there was apparently no clear indication that such a request should have been filed in addition to the numerous requests filed before the opposition division, since the opposition division apparently **had not considered this objection critical** for the requirements of Art. 83 EPC. Therefore there was no reason not to admit it when considering Art. 12(6) RPBA.

d) New request in reaction to a change of opinion of the opposition division

In **T 868/20**, auxiliary request 2 was filed for the first time with the grounds of appeal after the opposition division had changed its mind at the oral proceedings by comparison with its view in the preliminary opinion, ultimately deciding that claim 8 as granted was not novel. According to the board, this explained why the patent proprietor had been unable to prepare any auxiliary requests for this situation prior to the hearing. Instead, the auxiliary requests filed previously with the reply to the opposition had been pursued, and one of these had been found allowable. In submitting auxiliary request 2, the patent proprietor was pursuing the legitimate goal of limiting the patent as granted to a lesser extent than in the version held allowable. After consideration of other discretionary factors, the board decided to admit the auxiliary request into the proceedings.

In **T 847/20** however, where the opposition division had also diverged from its preliminary opinion at oral proceedings, the board nevertheless held that the auxiliary requests at issue, filed for the first time with the statement of grounds of appeal, should have been filed in the proceedings before the opposition division. The objection which the appellant (patent proprietor) intended to address had already been raised in the notice of opposition. Although the opinion of the opposition division had changed in the course of the proceedings, the appellant had had several opportunities to address this objection by filing new requests and had filed several requests during oral proceedings to this end. The board could not see any valid reason that would justify the filing of further requests to address this very same issue at the appeal stage.

e) New request – amended pages of the description

In **T 1617/20** the appellant (proprietor) filed, with the statement of grounds of appeal, as main request a set of claims identical to the claims of auxiliary request 2 underlying the appealed decision as well as amended pages of the description. The board examined whether the amended description should have been submitted in opposition proceedings. It pointed out that it was **common practice** in proceedings before the opposition division that when amended claims are filed, corresponding amendments to the description are carried out only once (and only if) the amended claims are admitted into the proceedings and found to be allowable. Since auxiliary request 2 had not been admitted, there was no need for the appellant at that time to file amended description pages.

f) New request – opportunity in opposition proceedings to address the issue

In several decisions, the boards decided not to admit submissions that addressed objections raised in the opposition proceedings, because the proprietor had had ample opportunities to address these objections (see **T 825/20** and **T 1326/21**, summarised below, and **T 847/20**, summarised in chapter V.A.4.3.7d) above). However, in other decisions the boards have held that a proprietor confronted with numerous objections of added subject-matter was justified in not having filed auxiliary requests for all possible combinations of individual amendments already before the opposition division (**T 1311/21**, **T 1928/22**). See further the decisions in chapter V.A.4.3.7c) and in particular **T 141/20**, in which the board pointed out that there needed to be a reason to file auxiliary requests, not just the possibility of doing so.

In **T 825/20** the four auxiliary requests filed for the first time with the statement of grounds of appeal aimed at overcoming the opposition division's inventive step objection to the main request. However, in its preliminary opinion the opposition division had already drawn the parties' attention to this issue. The appellant was given the opportunity to react and did so by filing several new auxiliary requests, however not those filed in appeal. The board concluded that the latter could and should have been filed during the first-instance opposition proceedings. Similarly **T 1820/22**.

A counter-example where the board took the view that the patent proprietor had not been obliged to respond immediately during the oral proceedings, is **T 487/20**. In this case the opposition division had indicated in its preliminary opinion that the opponent's objections

under Art. 100(c) EPC were not convincing and the arguments addressed by auxiliary request II filed with the statement of grounds of appeal had been only briefly discussed during the oral proceedings.

In **T 1326/21** the appellant (patent proprietor) explained that the main request in appeal which addressed only two out of three objections under Art. 100(c) EPC discussed during the first instance oral proceedings, could not have been submitted at that moment. This was because the opposition division had come to the conclusion that all three objections were justified; such a request would not have been admitted. The board however pointed out that the relevant objections had been raised and substantiated already in the notice of opposition and that the opposition division had given a preliminary opinion on all of them in the annex to the summons. Thus, the appellant had had ample opportunities to file requests addressing any of the above-mentioned objections. Accordingly, the appellant had **deliberately chosen not to file** in opposition proceedings any amendments aimed at overcoming the objections under Art. 100(c) EPC, but to respond solely with arguments.

However, in **T 1311/21** the board took the view that, where the opposition division had decided on several objections of added subject-matter at the same time, resulting in the filing of a single amended request overcoming all objections during the first-instance proceedings, Art. 12(6) RPBA did not prevent the board from admitting a new request overcoming only some of these objections. In the same vein **T 1928/22** (dealing with a situation where numerous objections of added matter had been raised in opposition proceedings, which had been individually addressed but not in all possible combinations). See also **T 849/22** (summarised in chapter V.A.4.3.7b), concerning an objection under R. 80 EPC and an incorrect novelty objection).

g) New request – opportunity in examination proceedings to address the issue

In **T 2012/20** the request in hand was only submitted with the grounds of appeal without an indication of reasons. The board emphasised the primary object of the appeal proceedings (Art. 12(2) RPBA) and recalled that appeal proceedings were not a continuation of examination proceedings. In the board's view, the request at hand should have been submitted at the latest during oral proceedings before the examining division. The decision under appeal did not contain any surprising content which would have justified the filing of a new request at the appeal stage. All the objections were known and the applicant was explicitly given the opportunity to respond to these objections during the oral proceedings. See also **T 1512/21**.

In **T 836/20**, the appellant had merely submitted that it was not foreseeable that the examining division would stand by its objections even after the appellant's detailed explanations. However, the board emphasised that the appellant's confidence in its own case was not sufficient as a circumstance to justify late admission.

In **T 789/22** the amendments made did not address the actual reasons for the application's refusal. In the board's view, their sole purpose was to "tidy up" the claims, even though the examining division never expressed concerns in this respect. These amendments should already have been submitted during the examination proceedings.

h) New request – examination of subject-matter deliberately foregone

Reintroducing subject-matter the examination of which was deliberately foregone in the first-instance proceedings is at odds with the purpose of the appeal proceedings as a review instance, as stipulated in Art. 12(2) RPBA. Generally, therefore, any such requests are not to be admitted under Art. 12(6), second sentence, first half-sentence, RPBA (**T 1456/20**).

In **T 1456/20** the board concluded that auxiliary request 7 (which corresponded to one of the auxiliary requests filed with the reply) should already have been submitted in the opposition proceedings. The novelty objection it was designed to overcome had already been discussed at the oral proceedings before the opposition division but the patent proprietor had decided at the time to **limit the claimed subject-matter in a certain way** and thereby deliberately foregone an examination of subject-matter now reintroduced in auxiliary request 7. The board held that reintroducing this subject-matter was at odds with the purpose of appeal proceedings referred to in Art. 12(2) RPBA. The board was not persuaded by the patent proprietor's argument that this approach could be justified by the aim of limiting the number of requests in the opposition proceedings. In the board's view, it was immaterial that the additional features were features of claims as granted.

In **T 1116/20**, in the first-instance proceedings the patent proprietor had merely pursued the maintenance of the patent in its version as granted and had not requested to file a new auxiliary request until after the decision, which was to its detriment, had been pronounced. In this regard, the board noted that in the opposition proceedings there had been both a **reason** for preparing and submitting an auxiliary request and the **possibility** of doing so. The patent proprietor's conduct had ultimately prevented the opposition division from taking a decision on auxiliary requests. Yet the appellant cannot defer the matter to the department of second instance as it sees fit.

The situation was different in **T 541/20**, where, in reply to the summons, the proprietor had filed several auxiliary requests in which three dependent claims had been deleted, but had not maintained these auxiliary requests during oral proceedings before the opposition division. They were replaced by requests which contained the deleted claims again. The board underlined that by replacing the earlier requests the proprietor **had not avoided a decision** on the deleted claims. The board therefore admitted three requests filed on appeal, in which the dependent claims had once more been deleted.

In **T 1404/20**, the main request (patent as granted) was rejected but the patent was maintained in amended form as per auxiliary request 0, which had been submitted at the oral proceedings and ranked higher than auxiliary request 1. On appeal, the patent proprietor **changed** the **order** and ranked auxiliary request 1 above auxiliary request 0. In this regard, the board noted that the patent proprietor had selected the original order on its own initiative, which it had been entitled to do within the framework of the procedural disposition principles. The patent proprietor had known that if auxiliary request 0 were successful, no decision would have been taken on auxiliary request 1. Changing the order resulted in a new status of the requests. In the board's view, taking auxiliary request 1 into account in the appeal proceedings was subject to the provisions of Art. 12(6), second

sentence, RPBA. The board held that auxiliary request 1 should have been presented effectively for a decision in the opposition proceedings.

For further decisions that deal with the issue of "examination of subject-matter deliberately foregone", see e.g. **T 1326/21** (summarised in chapter V.A.4.3.7f), **T 921/21** and **T 1820/22**.

i) New request – repeated attempts to meet EPC requirements

In **T 864/20** the board observed with respect to the new main request filed with the statement of grounds of appeal, that there could not be an indefinite right to have newly amended claims admitted into the proceedings whenever the examining division (or the board of appeal) raised an objection under Art. 123(2) EPC. An applicant had the burden to consider carefully whether the amended claims it intended to file had a basis in the application as filed, in particular when the amendments were made in response to an earlier objection under Art. 123(2) EPC. Hence, the board considered that the main request, being a repeated attempt to bring the claims in conformity with Art. 123(2) EPC, could have been filed in the first-instance proceedings in response to one of the earlier objections under Art. 123(2) EPC.

j) New request – unambiguous indication how to address the objection

In **T 1188/16** the board, applying Art. 13(1) RPBA and Art. 12(6) RPBA, came to the conclusion that the request of the appellant (proprietor) should have been filed in the first-instance proceedings. At the latest during the oral proceedings before the opposition division, the appellant, which had already been aware of a general objection regarding an intermediate generalisation, had received an unambiguous indication which features were missing from the claim and thus been in a position then to file requests including the omitted features. For a counter-example, see **T 938/20** summarised in this chapter V.A.4.3.7c) above.

k) New defence or evidence in response to objections raised late in the proceedings

In **T 291/21**, the respondent (patent proprietor) submitted a test report with the reply. The board considered this report to be a reaction to the specific objections raised against the examples of the patent for the first time just before the oral proceedings before the opposition division. Since the report had been submitted so close to the date of the oral proceedings, the patent proprietor realistically would not have been able to carry out more comparative tests. Moreover, the opposition division's preliminary opinion regarding inventive step had been positive. The board also considered that the content of the submitted tests did not go beyond the scope defined in the patent, so the tests were admitted (Art. 12(4) and (6) RPBA).

Similarly, in **T 802/20** the appellant (patent proprietor) filed the experimental report D22 with the statement of grounds of appeal in order to show the presence of a technical effect over the closest prior art. The board admitted the report under Art. 12(4) and (6) RPBA, for the following reasons. The auxiliary request at issue (main request in appeal) had been

filed shortly before the final date under R. 116 EPC, the corresponding objection of lack of inventive step only shortly before the oral proceedings. In the board's view, filing D22 with the statement of grounds of appeal could be seen as having been made at the earliest opportunity. See also **T 1778/21** (response to opponent's inventive step objection raised only two months prior to date of oral proceedings).

See however **T 1198/21**, in which two experimental reports filed with the statement of grounds of appeal in response to experimental data filed by the opponent two months before the oral proceedings were not admitted.

l) New defence in response to a change of opinion by the opposition division at the oral proceedings

In **T 2973/19** D27 to D30, submitted by the patent proprietor for the first time on appeal, related to the validity of the priority claim of the patent. The opposition division's assessment of the validity of this priority changed during the oral proceedings. The board held that in preparation for the oral proceedings before the opposition division the patent proprietor had no reason to expect that it would need further evidence to defend the priority claim of the patent.

See also the related issue of requests filed in reaction to a change of opinion of the opposition division (chapter V.A.4.3.7d) above).

m) New objections or defence in response to views in the opposition decision that had already been set out in the preliminary opinion

The boards have repeatedly indicated that filing new documents on appeal is not to be regarded as a direct response to the decision of the opposition division, if the finding the to which the party is reacting had already been expressed by the opposition division in its preliminary opinion (**T 2973/19**, **T 892/21**; see also **T 882/21**, in which the board also took into account that the opposition division's preliminary opinion had deemed all the other inventive step attacks not convincing).

In **T 2973/19** the board saw no convincing reason why the inventive step attack starting from D14 was not already raised in the opposition proceedings. The opposition division had indicated in the annex to the summons that the subject-matter of the claims of the main request was novel also in view of D14.

In **T 892/21** the board dealt with the admittance of experimental data (D22), which according to the appellants (patent proprietors), had been filed to address a reason given in view of Art. 56 EPC in the appealed decision, namely the lack of evidence proving a certain technical effect. However, the opposition division had already pointed to the absence of this experimental evidence in its preliminary opinion. The board stressed that a further circumstance speaking against the admittance of D22 was that the respondent had disputed the meaningfulness of the experimental data it related to. Thus the admission of this document would have rendered the case substantially more complex.

n) New objections or evidence in response to the patent proprietor's submissions at first instance

(i) In response to requests filed by the patent proprietor at an early stage of the proceedings

The boards have repeatedly ruled that new objections against claims as granted or against claims filed with the reply to the notice of opposition should have already been filed in the opposition proceedings. The opposition division **rejecting other objections previously raised** by the opponent has **not** been deemed to be a **surprising development in the proceedings** that could justify raising new objections only on appeal (see e.g. **T 2917/19**, **T 523/20**).

In **T 2917/19**, the appellant had relied on documents D6 to D11 (patents or patent applications submitted with the statement of grounds of appeal) both to demonstrate the common general knowledge and as secondary documents for its inventive step attack. The board noted that patents and patent applications usually cannot establish the common general knowledge. In so far as said documents were used as secondary documents (D6 to D10), the board held that they created a **fresh case**. The claims at issue were, however, those of the patent as granted. The opposition division having acknowledged an inventive step **could not be regarded** as a **surprising development of the proceedings**, nor did it give rise to the option of reacting by filing new documents. On the other hand, the board did take document D11 (manual reflecting the common general knowledge) into consideration. The document was similar to D2, which was already part of the proceedings, but was a newer document and supplemented the content of D2.

In **T 186/20**, documents E18 and E19 were filed to support the appellant's (opponent's) arguments in relation to the inventive step of features that were already present in claim 1 as granted. In the board's view, therefore, there were no discernible circumstances that would justify not submitting documents E18 and E19 until the statement of grounds of appeal.

For further examples, see **T 557/21** (objection against claim 1 as granted, no circumstances justifying admittance), **T 3280/19** (new objections against the main request, which was the patent as granted; additionally the documents on which these objections were based were not prima facie novelty destroying), **T 186/21** (new objections of added subject-matter arguing unallowable intermediate generalisation and multiple selections).

(ii) In response to requests filed by the patent proprietor by the final date as per R. 116 EPC

As regards whether an opponent can still be expected to react at the opposition proceedings stage to requests filed by the patent proprietor on the last possible date under R. 116 EPC, the boards have come to differing decisions (partly due to the respective circumstances of the various individual cases).

In **T 1520/20** the board had to decide on the admissibility of an attack submitted for the first time in the appeal proceedings regarding the inventive step of claim 1 of auxiliary request 4. As to whether this attack could have been filed earlier, the board indicated that auxiliary request 4 filed with the grounds of appeal was identical to auxiliary request 1 filed at the oral proceedings before the opposition division, and that this auxiliary request 1 had in turn encompassed the subject-matter of a previous auxiliary request filed on the final date as per R. 116 EPC (two months before oral proceedings). The opponent had therefore had several weeks to prepare attacks in this regard.

In **T 351/20**, however, two documents were admitted, which had been filed with the statement of grounds of appeal to pursue lines of argumentation already raised in opposition and addressing a feature that had been introduced two months prior to the oral proceedings before the opposition division. See also the similar conclusion reached in in **T 1578/20**, where the features introduced two months prior to the oral proceedings in opposition were, moreover, taken from the description.

In **T 2035/16** the board dealt with a case where the final date for making written submissions pursuant to R. 116(1) EPC had been set as one month before the oral proceedings. The proprietor had filed auxiliary request II shortly before this date and refiled this request in its reply to the appeal. In its rejoinder the opponent submitted, for the first time, an inventive step attack against auxiliary request II starting from document D25. The board held that the opponent could not have submitted D25 before the opposition division as there had been insufficient time left before the oral proceedings to find the document and incorporate it into the case. Moreover, it considered that the **rejoinder** had been the **first opportunity** for the opponent to address this request, as it had **not been dealt with in the decision** of the opposition division and had only become part of the appeal proceedings when the proprietor had refiled it. (For a different opinion on this last point, however, see **T 664/20**, which is summarised in chapter V.A.4.3.5c) (ii)).

(iii) In response to a defence or contestation by the patent proprietor during written proceedings

If the patent proprietor asserts a defence or dispute during the written proceedings before the opposition division, the opponent may also have to react in the opposition proceedings by making further submissions.

In **T 1279/20** the appellant (opponent) filed F18 only with their statement of grounds of appeal. F18 addressed the relevance to inventive step of the examples in a secondary document (F14) relied on by the opponent. The relevance of these examples had however already been disputed by the patent proprietor in reply to the notice of opposition. The board concluded that this evidence should have been filed during the opposition proceedings in order to be considered by the opposition division.

For a counter-example, see **T 1729/22**. Since the patent proprietor had first mentioned a particular technical effect on the date fixed under R. 116(1) EPC, and that effect was discussed for the first time in the oral proceedings, the board considered the statement of

the grounds of appeal as the first possible opportunity for the opponent to file the means of proof related to this question.

(iv) In response to submissions at a very late stage of the proceedings

T 1362/20 and **T 186/20** concerned objections or evidence filed with the statement of grounds of appeal in response to claim amendments made **during first-instance oral proceedings** which included **new claim features taken from the description**. The new submissions

In **T 186/20**, documents E17 and E20 were submitted for the first time with the statement of grounds of appeal inter alia in relation to a feature that had not been added to the claim in question until the first-instance oral proceedings. In addition, this feature had been taken from the description. The board concluded that neither E17 nor E20 could have been submitted during the first-instance oral proceedings.

Similarly in **T 1362/20**, the board admitted the clarity objection, raised by the appellant for the first time with the statement of grounds of appeal, against a particular feature that had already been included in the auxiliary requests filed at the oral proceedings before the opposition division. The board indicated that these late-filed auxiliary requests included features taken from the description and the opponent had had just half an hour to deal with each one. In the board's view, although the opponent could have identified a clarity issue and raised an objection within that amount of time, this could not have been expected of the opponent under Art. 12(6), second sentence, RPBA. Since the amendments had been taken from the description and admitted into the opposition proceedings at a very late stage, **fairness** dictated that new objections against the amended claims should still be admitted if they were raised at the earliest opportunity in the appeal proceedings.

In **T 1520/20**, on the other hand, the board did **not admit** a new attack raised only on appeal against a set of claims which corresponded to an auxiliary request filed at the oral proceedings before the opposition division and covering **the subject-matter of a previous auxiliary request** that had been filed on the final date stipulated under **R. 116 EPC**.

In **T 1085/20** the board admitted a document (D6) filed on appeal by the respondent (opponent) in **reaction to a new defence by the proprietor** at the oral proceedings before the opposition division. This document presented attempts at reproducing an example of a prior art document to prove that it anticipated the subject-matter of claim 1 of the main request. The aim of this declaration was to corroborate the content of a first declaration, filed in response to the summons to oral proceedings before the opposition division. The patent proprietor reacted to this first declaration only at the oral proceedings. The board considered the filing of D6 with the reply to the statement of grounds of appeal to be a timely reaction.

In **T 2973/19** the board held that the opponents could not have been surprised by the fact that a **claim feature** – here a certain term – **whose omission they had contested** for the first time at the oral proceedings before the opposition division was then added to the claim

at issue in an auxiliary request filed at these oral proceedings. As such, this could not justify the late filing of documents in reaction to a new claim request containing this term.

(v) Not necessarily to be considered for admittance: prima facie relevance, lack of knowledge of prior art, difficult retrieval

As pointed out in **T 576/18** referring to **T 724/08**, in cases in which objections or evidence should have already been submitted in the opposition proceedings, it is not necessarily relevant for admittance (in this case under Art. 12(4) RPBA 2007) if said objections or evidence are prima facie relevant. The board noted that neither RPBA 2007 nor the current version of the RPBA specified prima facie relevance as a factor to be taken into account. Other decisions in which the board pointed out that prima facie relevance was not a factor to be taken into account when deciding on admission under Art. 12(6), second sentence, RPBA can be found in chapter V.A.4.3.7r) (ii) below (**T 1522/21** and **T 765/20**).

See also **T 980/19** and **T 2964/18** (both on Art. 12(4) RPBA 2007), in which the boards followed the view expressed in **T 724/08**, that it was of no relevance whether certain disclosures were difficult to retrieve. Similarly, in **T 1309/21** it was found that a mere lack of knowledge of documents was inadequate as grounds for their admission in the appeal proceedings; unsuccessful attempts to obtain these documents on time from a third-party company had not been proven.

o) New evidence for objection raised early in opposition proceedings

In **T 623/20** an experimental report was filed by respondent 1 with the reply to the grounds of appeal. It was intended to demonstrate lack of reproducibility of a certain starting material prepared in an example of the impugned patent. However, the board considered that this experimental report should have been filed before the opposition division. The respondent had raised this objection that the example in question could not be identically reproduced during opposition proceedings and they **should then also have filed any evidence** in support of this objection. According to the established case law of the boards of appeal, each of the parties to the proceedings bears the **burden of proof** for the facts it alleges.

p) Objection to admittance of a claim request

In **T 687/20** the appellant (opponent) objected to the decision of the opposition division to admit an auxiliary request with the argument that it was late filed at the oral proceedings and comprised not only unsearched matter taken from the description, but also features derived from the figures. The board however held that the appellant should have objected to the admittance of this request upon its submission at the oral proceedings if it was of the opinion that the amendments introduced at such a late stage of the discussion negatively affected its position in the opposition proceedings. The opponent failed to do so. Therefore, the appellant's objection to the admittance of the corresponding auxiliary request in appeal proceedings was not admitted into the proceedings.

q) Submissions that were no longer maintained in first instance and counter-examples

(i) Replaced requests

Replacing a previously filed request by a new version results "de facto" in the withdrawal of the previous one (**T 1897/20**, **T 687/20**, **T 541/20**).

In **T 1897/20** the board explained that, according to Art. 12(2) RPBA, it was decisive on which requests the decision under appeal was based and not for which requests an opinion of the examining division was communicated to the applicant. By replacing previous versions of the claims in the reply to the examining division's preliminary opinion annexed to the summons, the applicant had **renounced the possibility of obtaining a reasoned decision** on these requests. As a consequence, the board did not admit the auxiliary requests, which corresponded to these previous requests, into the appeal proceedings.

Similarly, in **T 687/20** the board did not accept the appellant's (patent proprietor's) argument that the request at issue had not been "actively withdrawn". The request at issue had been replaced by a new version in the course of the oral proceedings. The opposition division's statement mentioned in the minutes expressed a preliminary opinion. By replacing the previous version the appellant had deprived the first instance department of the possibility to rule thereon. See also **T 1094/22**, where all previous requests were replaced by a new main request at the oral proceedings before the examining division.

See also chapter V.A.4.2.2d) dealing with the related question of when submissions were "maintained in the proceedings leading to the decision under appeal" within the meaning of Art. 12(4) RPBA.

(ii) Objection no longer maintained

In **T 2137/22** the board noted that the respondent's objection based on document D1 qualified as an amendment under Art. 12(4) RPBA as it had not been maintained in the proceedings leading to the decision under appeal. In fact, in the opposition proceedings, in response to the chairperson's question about the closest prior art, the opponent had only referred to other documents. Since the objection had not been maintained, the Art. 12(6), second sentence, RPBA was lex specialis to Art. 12(4) RPBA and the board did not see any circumstances that justified its admittance.

For a further example, see **T 266/23** (withdrawal noted in minutes of the oral proceedings).

(iii) Counter-examples: submissions that were considered maintained

In **T 19/20** the appellant (opponent) raised an Art. 123(3) EPC objection against the main request in opposition. The board considered that this objection had been maintained against lower-ranking requests, which differed from the main request by amendments unrelated to the objection, even if not explicitly repeated. The statement of the appellant before the opposition division that there were no objections under Art. 123(3) EPC against

auxiliary request 2 (later main request in appeal) had to be understood as expressing that there were no further objections. Hence, in the board's view the condition of Art. 12(6), second sentence, RPBA ("no longer maintained") did not apply.

r) Admittance justified by the circumstances of the appeal case

(i) Examples of new submissions admitted

In **T 1734/20** the opposition division's decision was based on a misconception of data in an experimental report submitted by the appellant (opponent). The appellant became aware of this only after the written decision had been issued and filed, with the statement of grounds of appeal, a new report which contained identical data apart from additional information aimed at preventing the misconception. The board considered that these circumstances justified the admittance under Art. 12(6) RPBA.

In **T 2043/20** the board, applying Art. 12(6), second sentence, RPBA, considered that the third auxiliary request in appeal, which was based on the second auxiliary request filed before the examining division, but in which certain claims had been **deleted**, responded to an objection under R. 43(2) EPC. But it also held that this request could have been filed before the examining division, as the objection had already been present in the annex to the summons. However, since the new request **overcame** the R. 43(2) EPC **objection** and did **not** constitute a **complex** amendment, the board admitted it.

(ii) Counter-examples

In **T 1522/21** claim 1 under consideration corresponded to claim 1 as granted. For this reason the board could not see any circumstances justifying admitting new, late-filed evidence (D1 and O9) against this claim. The board did **not** see **prima facie relevance** of the new evidence as an aspect to be taken into account.

In **T 765/20**, the board found that potential prima facie relevance was not critical and did not admit a document that had been submitted for the first time with the grounds of appeal. See however also **T 1017/20** in which the board considered that, in the particular situation of the case, the prima facie compliance of the main request on appeal with the provisions of Art. 100 b) EPC formed part of the circumstances of the appeal case to be taken into account for the purpose of applying Art. 12(6) RPBA.

For a further example decision in which the board did not accept that the circumstances in the appeal proceedings justified the admittance of the amendment of the appellant's case, see **T 608/20**. See **T 1094/22** for an example of a decision in which the board noted that the appellant had **not submitted** any justifying circumstances.

4.4. Second level of the convergent approach – submissions made after filing of grounds of appeal or reply – Article 13(1) RPBA

4.4.1 Principles

Art. 13(1) RPBA implements the second level of the convergent approach applicable in appeal proceedings. It defines the conditions under which a party may amend its appeal case after the initial stage of the proceedings (in particular with the appellant's rejoinder).

The onus is on the party to **explain and justify** any amendment to its case (see CA/3/19, section V.B.a), point 49; see also chapter V.A.4.4.4 below). That includes providing reasons for not submitting the amendment at an earlier stage in the appeal proceedings (Art. 13(1), third sentence, RPBA, underlined e.g. in **T 136/16** and **T 2688/16**). The boards have repeatedly emphasised the duty on the parties to file all facts, evidence, arguments and requests **as early and as completely as possible** (see e.g. **T 1014/17** and **T 1203/16**).

The admittance of the amendment is subject to the **board's discretion** (see CA/3/19, section VI, explanatory remarks on Art. 13(1) RPBA, Supplementary publication 2, OJ 2020, 59). Pursuant to Art. 13(1) RPBA, the boards exercise their discretion in view of inter alia, the current state of proceedings, the suitability of the amendment to resolve the issues which were admissibly raised by another party or raised by the board, whether the amendment is detrimental to procedural economy, and in case of an amendment to a patent application or patent, whether the party has demonstrated that any such amendment prima facie overcomes the issues raised and does not give rise to new objections.

As confirmed by the board in **T 1217/17** and **T 2101/16**, the list of **criteria for applying that discretion** given in Art. 13(1) RPBA is **non-exhaustive** (see also. **T 1213/19**, citing CA/3/19, section VI, Explanatory remarks on Art. 13(1), fourth sentence, RPBA, Supplementary publication 2 to OJ 2020). Moreover, Art. 13(1), second sentence, RPBA stipulates the application mutatis mutandis of **Art. 12(4) to (6) RPBA**, which includes the criteria in Art. 12(4), fifth sentence, RPBA (inter alia, complexity of the amendment, see e.g. **T 32/16**, **T 310/18**). According to **T 1213/19** (citing **T 731/16**, **T 2796/17** and **T 310/18**), it is established case law that, besides the criteria enumerated in Art. 13(1) RPBA, further decisive criteria for admitting late-filed documents can be their prima facie relevance and whether they introduce any complex matter. Prima facie relevance of the submissions however does not always prevail over the fact that the respondent could and should have submitted them (in a substantiated manner) when initially formulating its appeal case (see e.g. **T 1333/20**). In **T 154/16** the board considered inter alia the potential for the other party to be taken by surprise and the principle of procedural fairness. The latter was also considered in **T 1014/17**.

In several decisions the boards have admitted new requests at this stage because they were considered filed in good time and prima facie allowable (see e.g. **T 851/18**, **T 131/18**) or at least prima facie suitable to overcome the objections discussed in the appealed decision (see e.g. **T 2044/20**). Some requests that should have been filed earlier were

nevertheless admitted, e.g. because they were prima facie allowable and not detrimental to procedural economy (see e.g. **T 1597/16**).The boards have repeatedly highlighted that the criteria set out in Art. 13(1) RPBA (in its current version) **reflect established case law** developed through the stringent application of the requirements of Art. 13(1) RPBA 2007 (see e.g. **T 634/16**, **T 32/16**, **T 1480/16**, **T 1597/16**, **T 658/17**).

As mentioned in chapter V.A.4.1.2 "Primary object of appeal proceedings and the convergent approach to amendments made to party's case" above, the requirements of the second level of the convergent approach (Art. 13(1) RPBA) also play a role at the **third level**. As envisaged in the explanatory remarks on Art. 13(2) RPBA and confirmed by case law (e.g. **T 989/15**, **T 584/17**, **T 954/17**, **T 1869/18**), the boards may in the exercise of their discretion under Art. 13(2) RPBA also rely on **criteria** applicable at the second level of the convergent approach. It is noted that decisions applying the criteria of Art. 13(1) RPBA are therefore presented not only in this chapter but also in chapters V.A.4.5.4e), V.A.4.5.5b) and V.A.4.5.5j) below.

4.4.2 Transitional provisions – immediate applicability of Article 13(1) RPBA

According to Art. 25(1) RPBA, the RPBA (in their version which entered into force on 1 January 2020) apply, as a general rule, to any appeal pending on, or filed after, the date of entry into force. While this principle of immediate application is subject to the two exceptions provided for in Art. 25(2) and (3) RPBA, these exceptions do not apply to the second level of the convergent approach. For more details, see CLB, 10th edn. 2022, V.A.4.4.2.

4.4.3 Amendment to appeal case within the meaning of Article 13(1) RPBA

Under Art. 13(1) RPBA, any amendment to a party's appeal case after it has filed its grounds of appeal or reply must be justified and may be admitted only at the board's discretion. On the definition of "amendment to a party's appeal case", see chapter V.A.4.2.3.

4.4.4 Party's duty to justify amendment

a) Principles

As stated in CA/3/19 (section V.B.a), point 49), one of the most important elements of the "convergent approach" is that the onus is on a party to explain and justify any amendment to its case. That includes providing reasons for not submitting the amendment at an earlier stage in the appeal proceedings (Art. 13(1), third sentence, RPBA; see chapter V.A.4.4.4b) below). In the case of an amendment to a patent application or patent, the party must indicate the basis for it in the application as filed (Art. 13(1), second sentence, in conjunction with Art. 12(4), fourth sentence, RPBA) and demonstrate that, prima facie, it overcomes the issues raised by either another party in the appeal proceedings or by the board and does not give rise to new objections (Art. 13(1), fourth sentence, RPBA).

b) Party's duty to provide reasons for not submitting amendment at an earlier stage

In **T 2688/16** the board observed that it was a **fundamental requirement** under Art. 13(1) RPBA for consideration – at the board's discretion – of an amended appeal case that reasons be given for not making the amendment at an earlier stage in the proceedings. In the case in hand, a second experimental report filed with the patent proprietor's reply revealed a synergetic effect that was decisive for inventive step. The opponents contested the effect, but the board refused to admit the supporting evidence (in particular **experimental reports**), which they had not filed until about one month before the oral proceedings. The board observed that the opponents had had ample time (over 1.5 years) to file suitable evidence. A counter-example may be found in **T 23/17** where the opponent's argument that new documents (filed about a year in advance of the oral proceedings) had been filed in response to experimental data produced by the patent proprietor in its reply was held plausible and understandable.

In **T 256/17** the board refused to admit two **new lines of attack** based on lack of inventive step which the appellant (opponent) had filed in response to the respondent's reply to the statement of grounds of appeal. Both lines of attack were based on documents submitted during the first-instance proceedings. The appellant gave no reasons for first raising these objections after having filed the statement of grounds of appeal, and the board could see no reason for it either.

In **T 1759/17** the appellant did not explain which allegedly new submissions of the respondent (patent proprietor) were to be addressed by the **new documents** and these were therefore not admitted.

In **T 967/16** the board noted that the objection the respondents (proprietors) sought to overcome had already been raised in the notice of opposition. No reasons had been provided by the respondents why the auxiliary **request** in question could not have been filed at earlier stages of the proceedings.

For a further case where the party concerned did not provide any reasons for submitting **new requests** at this stage of the proceedings and the amendments were not admitted, see **T 1005/22**.

However, in **T 938/14** the board exceptionally admitted auxiliary request 2, filed in response to the respondent's submissions and identical to the main request underlying the decision under appeal, despite the fact that no justification was offered for the late reintroduction, as the request allowed the board to review the decision under appeal.

Whether the submissions should have been filed earlier is an important factor the boards have considered in exercising their discretion; see chapter V.A.4.4.5a) and V.A.4.4.6a) in particular.

c) Requirement to substantiate the amendments to the patent application or patent

(i) Explanation required with regard to the request at issue and in view of all outstanding objections

In **T 667/18** the board noted that it was established case law that requests which were not properly substantiated were not admissible. In the case in hand, the claims of the new main request filed in reply to the board's preliminary opinion (but Art. 13(2) RPBA not yet applicable) combined features which had never been claimed before, without any explanation. In the board's view this was detrimental to procedural economy. As regards inventive step, the appellant's (applicant's) submissions were restricted to an unclear reference to items in its statement setting out the grounds of appeal, which related to novelty and inventive step of the then main request.

In **T 2222/15** auxiliary requests 2.2 and 2.3 had been amended by the deletion of the method claims so that only the device claims remained. The board observed that the claimed product was essentially defined by the method. The objection of lack of novelty against the method was, therefore, equally relevant to the product, even if this was **not explicitly mentioned** in the statement of grounds of appeal. The board held that if the subject-matter of the product claims was patentable on grounds different from those that applied to the method claims, these grounds would have had to be submitted as a justification for the amendment.

In **T 608/20** the board pointed out, among other things, that the appellant, when submitting auxiliary request 8 as a reaction to the respondents' allegedly new objections on inventive step in their replies to the grounds of appeal, failed to substantiate this amendment of its appeal case in view of the **other outstanding objections**, contrary to the further requirement of Art. 13(1), fourth sentence, RPBA.

In **T 938/20** the board noted that "giving rise to new objections" was understood to mean that the appellant had to show that **prima facie no valid new objection** is recognisable (see Supplementary publication 2, OJ 2020, Table setting out the amendments to the RPBA and the explanatory remarks). It did not mean that any new objection raised by the opponents – whether justified or not – rendered the request inadmissible. In the case in hand it meant in particular with respect to Art. 123(2) EPC that a basis for the amendment should be easily recognisable, which was the case.

(ii) Self-evident substantiation

In **T 32/16**, in its written response the respondent (patentee) had stated from where the amendment was taken (Art. 12(4) RPBA). The board noted that the introduced terminology was an explicit recitation of the language used in the application as filed. Demonstration of how these amendments overcame the objection in this particular case, where the lacking features as such had already been identified by the appellant (opponent), was thus **self-evident** in the amendments made.

By contrast, the board in **T 700/15** found that the appellant (patent proprietor) had not demonstrated, as required under Art. 13(1) RPBA, that the amendment – namely new auxiliary requests (1', $1'_0$, 1'a, etc.) – overcame, prima facie, issues raised by the board; nor was this apparent to the board from the amendment itself. It therefore refused to admit the auxiliary requests.

(iii) Impact of insufficient substantiation on valid filing

In **T 319/18** (where it was not immediately apparent how auxiliary request 5 was directed to overcoming the inventive-step objection over document D1) the board pointed out that it was established jurisprudence of the boards that requests that were not self-explanatory became **effective only** on the date on which they were **substantiated** (with reference to **T 1732/10**). See also **T 2457/16**.

A contrary view was however taken in **T 1220/21**. In this decision the board held that a lack of or insufficient substantiation of a request could lead to its non-admittance, but this did not imply that the request had not been validly filed. For a discussion of the two approaches to this question, see also **T 321/21**.

4.4.5 Discretion under Article 13(1) RPBA – new requests

a) Time of filing – whether request should have been filed earlier

The question of whether requests should have been filed earlier is an important criterion for the exercise of discretion under Art. 13(1) RPBA (see also chapter V.A.4.4.4b) on a party's duty to provide reasons for not amending its case at an earlier stage in the proceedings; some decisions also refer to Art. 12(6), second sentence, RPBA, which applies mutatis mutandis at the second level of the convergent approach (Art. 13(1), second sentence, RPBA, see e.g. **T 938/20**).

(i) Response to objection not considered critical by opposition division – high number of objections

In **T 938/20** the appellant's (proprietor's) new main request, filed as auxiliary request 105 shortly before the notification of the summons to oral proceedings, was considered a fair reaction to opponent 2's objection raised under Art. 83 EPC in their reply to the appeal. This objection had already been raised in the notice of opposition but had apparently not been discussed during the oral proceedings before the opposition division (although it would have equally applied to a request then at issue). The board noted that the request could have been filed before the opposition division, but took into account the total **number of objections** raised by the opponents in opposition proceedings and that there was apparently no clear indication that it should have been filed in addition to the **numerous requests filed before the opposition division**, since the opposition division apparently did **not** consider this objection **critical** for the requirements of Art. 83 EPC. Therefore, there was no reason not to admit it when considering Art. 12(6) RPBA.

(ii) Response to new objections raised by the other party

In **T 131/18** the board first of all assessed whether, hypothetically, it would have admitted auxiliary request 3 filed in response to the reply, because, apart from two amendments, its wording and content were identical to the new auxiliary request 6 now at issue. It considered auxiliary request 3 admissible for the following reasons: the main request the appellant had filed with its grounds of appeal had been a first attempt to remedy the infringement of Art. 123(2) EPC established in the contested decision and, as it had demonstrated, the further minor amendments made in auxiliary request 3 had simply been its response to the additional objections to that main request **raised in the reply** under Art. 123(2), 83 and 84 EPC. Moreover, auxiliary request 3 had not been filed so late that the respondent (opponent) had no longer been able to react. The board found that the amendments made overcame the existing problems without giving rise to any new ones and so concluded that it would have exercised its discretion under Art. 13(1) RPBA to admit auxiliary request 3. The editorial adjustments to that request which had been made in auxiliary request 6 in order to remove inconsistencies were also admitted under Art. 13(2) RPBA (see under chapter V.A.4.5.4 n)).

In **T 524/18** the board considered the filing of auxiliary request B1 as legitimate and timely reaction to the filing of experimental reports **with the reply** to the statement of grounds of appeal, which experimental reports comprised new data in order to strengthen the respondent's position.

(iii) Response to clarification of objections

In **T 32/16**, with regard to the respondent's reasons for submitting the request in issue only in response to the board's preliminary opinion (Art. 13(1) RPBA applied instead of Art. 13(2) RPBA), the board highlighted the special circumstances of the case in hand, where the board's communication had **crystallised for the first time** what the board itself had deduced to be the relevant elements of the appellant's lengthy arguments concerning its objections under Art. 100(c) EPC. Although the appellant had stated that its set of arguments was always supposed to have been understood in the way the board had deduced, the board took the view that its statement could be understood as having identified the salient argument for the first time. The board also noted that the respondent's amended request had been submitted on the day it received the board's preliminary opinion.

(iv) Further examples where the reaction was considered timely and legitimate – inter partes

For further inter partes cases where the boards admitted new requests which were considered a timely and legitimate reaction, see e.g. **T 32/16** (summarised in chapter V.A.4.4.5 d) below), **T 2101/16** (legitimate reaction to clarification of Art. 83 EPC objection raised in statement of grounds of opposition), **T 102/16** (inventive-step objection raised for the first time in the board's preliminary opinion, essentially a combination of two claims of the patent as granted, no need to adjourn).

(v) Examples where the reaction was considered timely and legitimate – ex parte

In ex parte case **T 278/17** the amendments in the (sole) claim of the main request were a reaction to issues raised by the board for the first time during a telephone conversation with regard to auxiliary request 2. Auxiliary request 2 had in turn been a serious attempt to overcome all of the issues raised – mainly for the first time – in the communication under Art. 15(1) RPBA 2007. Since the amendments were directed to and clearly overcame all of the objections raised in the telephone conversation and the communication under Art. 15(1) RPBA 2007, the board admitted the new main request, having regard to Art. 13(1) RPBA and Art. 13(1) and (3) RPBA 2007.

For a further ex parte case, see **T 2129/16** (request clearly overcame the clarity objection raised for the first time in the board's preliminary opinion).

(vi) In response to board's communication confirming the opposition division's or opponent's opinion

In **T 136/16** the board considered the criteria under Art. 13(1) RPBA – which under Art. 25(3) RPBA applied in this case instead of Art. 13(2) RPBA – and exercised its discretion not to admit auxiliary request 1. It found, first, that the amendment made in auxiliary request 1 prima facie led to a new objection under Art. 84 EPC and, second, that this amendment could and should have been made at an earlier stage in the appeal proceedings. Indeed, **in the contested decision** the opposition division had already pointed out the fundamental importance of the interpretation of a disputed term in the claim. The opposition division had construed this term narrowly in the light of paragraph 7 of the description, but in its statement of grounds the appellant (opponent) had submitted detailed arguments contradicting this narrow interpretation on the basis of other passages of the description. Since the amendment had been made in view of an issue of fact that had already been discussed extensively, the respondent (patent proprietor) had already had cause to make it together with its reply. Its argument that the large number of attacks put forward prevented it from formulating meaningful auxiliary requests until it had the board's preliminary opinion did not convince the board either, given the fundamental importance of the interpretation of the term at issue in almost all the objections raised.

In **T 1004/18** the board found that it had already been foreseeable for the respondent (patent proprietor) on the basis of the **grounds of appeal** that it would take the same line as either the opposition division or the appellant and that, accordingly, it should already have come up with auxiliary requests as a fallback position in its reply to the grounds of appeal. Therefore the board did not admit the auxiliary request in question.

The board in **T 700/15** similarly held that a communication from the board which merely summarised and reiterated the interpretation already reached by the opposition division in the **contested decision** and advocated by the opponent in its **reply** to the grounds of appeal and did not include any new aspects or arguments or raise any new objection could not be taken as justification for filing new auxiliary requests that could have been filed earlier (referring to CLB, 9th edn. 2019, V.A.4.7). The requests were not admitted.

For a further case in which the new request was not admitted because the issues underlying the board's conclusions had already been raised in the decision under appeal, see **T 1384/16**.

For a further case in which an objection had been on file since the filing of the **grounds of appeal** and new requests in reaction to a statement of the board reiterating this objection were not admitted under Art. 13(1) RPBA, see e.g. **T 1170/16**.

For a case in which the new request was considered late because the objections it intended to overcome had been part of the appeal proceedings from the outset, but the request was nevertheless admitted in view of other discretionary criteria, see **T 1597/16**.

b) Whether the amendment prima facie overcomes the issues raised without giving rise to new objections

As outlined in chapter V.A.4.4.4, the onus is on a party to explain and justify any amendment to its case. This includes demonstrating that any amendment to a patent application or patent prima facie overcomes the issues raised by another party in the appeal proceedings or by the board and does not give rise to new objections.

(i) Request does not prima facie overcome objection

In **T 1187/15** (in which, in accordance with Art. 25(3) RPBA, Art. 13(2) RPBA did not yet apply) the board, in the exercise of its discretion under Art. 13(1) RPBA, took into account, whether the appellant (applicant) had demonstrated that the amendments, prima facie, overcame the issues raised by the board and did not give rise to new objections. The board noted that this was a **key criterion** developed in the boards' case law on the exercise of their discretion under Art. 13(1) RPBA 2007 (CLB, 9th edn. 2019, V.A.4.4.2). Art. 13 RPBA 2007 also applied in the case in hand (Art. 25(3) RPBA). The board found that, prima facie, auxiliary request XI did not overcome the objections under Art. 123(2) EPC since the omission of certain features constituted an unallowable intermediate generalisation. In view of this and the fact that the appellant had had an opportunity to respond to the points raised by the board of its own motion, the board exercised its discretion not to admit auxiliary request XI into the proceedings. Moreover, the board rejected the appellant's **request for another interruption** to enable it to prepare another request to replace auxiliary request XI. It was not compatible with the principle of procedural economy that oral proceedings were conducted in such a way that the appellant was given the opportunity to repeatedly file new requests until a version of the claims was found that was acceptable to the board.

In **T 1338/16** (in which Art. 13(2) RPBA did not yet apply), the board considered, in view of the appellant's submissions, that the amendments made in the main request and auxiliary requests 1 to 3 were primarily directed to overcoming objections in relation to added subject-matter, clarity and support, but prima facie did not overcome its objections to patentability under Art. 54 and 56 EPC. Consequently, the board exercised its discretion under Art. 13(1) RPBA not to admit these requests into the proceedings.

In **T 700/15** too, the board concluded (with regard to requests 1', $1'_0$, 1'a, etc.) that the appellant (patent proprietor) had not, as required under Art. 13(1) RPBA, demonstrated that the amendment in the auxiliary requests prima facie overcame the issues raised by the board.

More decisions on the duty to provide reasons showing that an amendment overcomes the objections raised are reported in chapter V.A.4.4.4c) "Requirement to substantiate the amendments to the patent application or patent".

(ii) Claim amendments that prima facie give rise to new objections

In **T 700/15** the board had doubts about whether claim 1 of each the auxiliary requests at issue (0, 1_0, $1a_0$, etc.) was compatible with Art. 123(2) and 84 EPC. The claim contained a feature related to the result envisaged in the application. Finding that the amendments made in claim 1 of each of the auxiliary requests gave rise, at least prima facie, to new objections, the board exercised its discretion under Art. 13(1) RPBA not to admit the auxiliary requests.

The board in **T 136/16** likewise exercised its discretion not to admit two auxiliary requests, in particular because the amendment in auxiliary request 1 gave rise prima facie to a new objection under Art. 84 EPC. It also considered that the amendment could and should have been made at an earlier stage in the proceedings.

In **T 2257/19** the board found that an inescapable trap intrinsically precluded the admission of new requests under Art. 13(1) and (2) RPBA, as the requirements of Art. 123(2) and (3) EPC could not both be satisfied.

(iii) Claim amendments that overcome the objections

In **T 851/18** of 10 January 2020 (in which the 2020 version of Art. 13(1) RPBA, but not of Art. 13(2) RPBA, was applicable under Art. 25(3) RPBA), the auxiliary request in question differed from the claims with which the patent had been maintained by the opposition division in two respects. First, its claim 1 combined the subject-matter of claims 1 and 3 as maintained. Second, the subject-matter of claim 3 had also been included in the second independent claim 7 for the first time. The board considered that these two amendments were relatively straightforward, did not give rise to any new issues and were appropriate and so, despite the late stage reached in the proceedings, saw no reason not to admit the auxiliary request. The inclusion of the features of claim 3 as maintained in claim 1 amounted, in essence, to a deletion of the broader claim 1 as maintained and answered all the objections in a procedurally efficient way, while claim 3 as maintained had not been contested in the proceedings up to that point. The second amendment obviously overcame a novelty objection the board had raised to claim 7.

In **T 2044/20** the board considered it sufficient that **all grounds discussed in the appealed decision** were overcome. The filing of auxiliary request 1, filed in reaction to the reply to the appeal, was considered an appropriate reaction of the appellant to the course of the opposition proceedings, where the appellant had found itself in a so-called

inescapable trap, in which scenario, as noted by the board, it is usually not self-evident how to overcome an objection under Art. 123(2) EPC. The further grounds for opposition pursuant to Art. 100(a) and (b) EPC **had not been discussed conclusively** in the opposition proceedings. Hence, the board saw no reason why the appellant should be limited to filing auxiliary requests which on a prima facie basis overcame all outstanding objections raised in the opposition proceedings. The purpose of the appeal proceedings was instead to focus on the grounds discussed in the appealed decision.

In several decisions dealing with late-filed requests in which certain claims had been deleted, the boards have admitted these requests inter alia because they were considered prima facie allowable. For instance, in **T 1597/16** the board considered that the new request did not lead to any other disputed points of fact or patent law, that the opponent was thus able to react and that the request prima facie allowable since it appeared to overcome all remaining objections without creating any new issues.

c) Whether the amendment is detrimental to procedural economy

In **T 2638/16**, the patent proprietor had filed its reply to the grounds of appeal late (shortly after expiry of the period prescribed in Art. 12(1)(c) RPBA), its request for an extension having been refused. Exercising its discretion under Art. 13(1) RPBA, the board took into account that the reply had been received immediately after notification of the refusal of the request for an extension and so at a still early stage in the proceedings and that the belated filing had not prevented it from considering the complete cases of all the parties. It could see no indication that the late filling had been a tactical abuse of procedure or impaired procedural economy. It thus took the reply, and a document filed with it, into account under Art. 13(1) RPBA.

In ex parte case **T 786/16** the request at issue was filed at a late stage of the oral proceedings before the board. **Possibly unsearched features** were added from the description, along with expressions which were not literally disclosed in the application as filed. The addition of the unsearched features further meant that the claim now included three alternatives, each requiring separate examination. The board noted that either an extensive examination of the new features with respect to compliance with Art. 83, 84, 123(2), 54 and 56 EPC would have had to be undertaken at the oral proceedings before the board or the case would have had to be remitted to the examining division for further examination. In the board's view, neither of these steps would have been consistent with the need for procedural economy, even less so considering the primary purpose of appeal proceedings (Art. 12(2) RPBA).

For further decisions in which procedural economy was considered and the requests were not admitted, see e.g. **T 136/16** and **T 2112/16**.

d) Complexity of the amendment

In **T 32/16** the board accepted the respondent's reasons for submitting the new main request at a late stage and held that demonstration of how the amendments overcame the objection in this particular case, where the lacking features as such had at least already

been identified by the appellant, was self-evident in the amendments made. Moreover, the amendments were not complex (Art. 13(1), second sentence, RPBA, referring to Art. 12(4) RPBA) in any sense, nor had this been argued to be the case. The request was therefore admitted.

e) Convergence of claim requests

(i) Claim requests becoming non-convergent by later submission of further requests

In **T 2112/16** the appellant (proprietor) filed auxiliary requests 1 to 14 with the grounds of appeal, and later, but before the notification of the summons to oral proceedings, new auxiliary requests 1A and 4. The board exercised its discretion under Art. 13(1) RPBA not to admit auxiliary requests 1A and 4 into the proceedings. On auxiliary requests 2, 3 and 5 to 14, the board held that the sequence of the auxiliary requests had been changed during the course of the appeal proceedings due to the introduction of auxiliary request 1A, and this involved a material change in the focus of the claimed invention. The board took the view that the selected sequence of the auxiliary requests led to an evident broadening and lack of convergence in the requests. Such a change made after a party had presented its complete case did not meet the requirement for procedural economy set out in Art. 13(1) RPBA. The board exercised its discretion under Art. 13(1) RPBA not to admit the auxiliary requests 2, 3 and 5 to 14 into the proceedings. See also **T 1185/17** by the same board.

However, see also **T 1520/20**, in which the board drew a distinction with case **T 2112/16** as to whether there had been an amendment to the submissions at all. In the case at issue, all auxiliary requests were submitted with the statement of grounds of appeal, and contested auxiliary request 4 had already provided the basis for the first-instance decision. The board held that auxiliary request 4 did not become inadmissible as a result of the submission of new auxiliary requests 1 to 3, which, according to the opponents, were divergent.

(ii) Non-convergent requests filed in response to diverging objections

In **T 938/20** the main request had been submitted as auxiliary request 105 shortly before the notification of the summons to oral proceedings. When exercising its discretion under Art. 13(1) RPBA the board observed that, in the case at issue, where an extremely large number of objections of different kinds had been raised against all the requests on file, convergence was particularly difficult to achieve and under the given circumstances should not be used as the only criterion for denying admissibility of this request. It further noted in this context that a series of requests that are drafted in defence against a single objection are expected to converge, but **equality of arms** would be undermined if the opponent was free to raise a multitude of diverging objections, whereas the patentee was restricted to only one line of defence against all of these.

f) Deletion of claims or alternatives within claims

A recurrent topic that the boards have dealt with when applying Art. 13(1) RPBA are requests in which the claimed subject-matter has been limited by deletions of claims or alternatives in claims. In these cases the issue arises whether this is an amendment within the meaning of Art. 13 RPBA in the first place, which is answered in the affirmative by the majority view. For decisions on this issue, see chapter V.A.4.2.3d). Decisions deciding on admittance under Art. 13(1) RPBA are summarised in the following. For decisions dealing with requests limited by deletions of claims and alternatives in claims filed at the last stage of the appeal proceedings, see chapter V.A.4.5.4 j).

In **T 1597/16** the admission of the new main request, which had been filed before the entry into force of the 2020 version of the RPBA, was at the board's discretion under Art. 13(1) RPBA (which applied instead of Art. 13(2) RPBA by virtue of the transitional provisions). In the board's view, the respondent had not given any cogent reasons for waiting until the final stage of the appeal proceedings to file the amendment to the claim. The objections it mentioned had been part of the appeal proceedings from the outset. Nonetheless, the board decided to admit the new main request into the proceedings for the following reasons. Limiting the claimed subject-matter to two out of the three alternatives in claim 1 as granted did **not lead to any other disputed points of fact or patent law**. The appellant (opponent) had been able to formulate an objection for lack of inventive step straight away and could otherwise refer to its written case, which matched that from the first-instance proceedings. Moreover, the board considered the new request to be prima facie allowable since it appeared to overcome all remaining objections without creating any new issues.

Similarly, in **T 494/18** the board admitted auxiliary request 8 (directed exclusively to method claims, the product and use claims having been deleted), considering among other things that the respondent had provided reasons for submitting the amendment at this stage of the proceedings, that the closest prior art for the discussion of the opponent's sole objection against inventive step did not change and that the additional comments of the parties for the assessment of inventive step **merely specified** their **previous arguments**. The board also considered that the method of this new request was prima facie clearly allowable under Art. 123(2) and 56 EPC.

In **T 682/16** the board noted that, by deleting certain claims, the respondent had **addressed all issues** raised by the appellant and by the board. The request, which moreover did not give rise to new objections and **contributed to the efficiency** of the procedure, was admitted under Art. 13(1) RPBA (the 2020 version of Art. 13(2) RPBA not being applicable yet). See also **T 1439/16** and **T 2897/18** (both referring to procedural economy).

In **T 608/20** the board reached a different conclusion in the circumstances of the case. It considered that the request limited to the method claims **could and should** have been submitted **in the first-instance proceedings**, or at the very latest together with the appeal grounds and it did not consider that the circumstances in the appeal proceedings justified its admittance (Art. 12(6), Art. 13(1), second sentence, RPBA). In particular, the board took

the view that, taking into account the circumstances in the opposition proceedings, the refusal to grant a further possibility to submit an amended request in the afternoon of the third day of oral proceedings could not justify the admittance of further auxiliary requests at a later stage in the appeal proceedings.

4.4.6 Discretion under Article 13(1) RPBA – new facts, objections, arguments and evidence

a) Time of filing – whether the new submissions should have been filed earlier

(i) Duty of the party to properly conduct the proceedings

In **T 1014/17** the board considered that, in the circumstances, the appellant had already had ample opportunity to revise its position on the clarity of claim 1 and raise appropriate objections, and could have done so in its grounds of appeal at the latest. What was more, it had had a responsibility to do so in view of what was required for properly conducted proceedings, including the duty on the parties to file all facts, evidence, arguments and requests **as early and as completely as possible** (Art. 12(2) RPBA), and also for reasons of fairness towards the respondent (patent proprietor), who had to be able to see as early as possible to what extent its patent was being challenged and on what grounds. The board refused to admit the objection under Art. 13(1) RPBA and Art. 13(1) and (3) RPBA 2007.

(ii) Response to new evidence submitted by the patent proprietor

In **T 23/17** the board exercised its discretion under Art. 13(1) RPBA and held plausible and understandable the argument made by the appellant (opponent) that the new documents (filed after the statement of grounds of appeal but before the notification of the summons to oral proceedings) had been filed in **response to** the **experimental data** presented by the respondent (patent proprietor) **in its reply** to the appeal and so, as Art. 13(1) RPBA, put it, "to resolve the issues which were admissibly raised by another party in the appeal proceedings". The board could not see that there had been any reason to file these documents at an earlier stage of the proceedings.

In **T 446/16** too, the appellant (opponent) had filed experimental report D35 after its grounds of appeal but before the summons with a view to **rebutting** the **experimental results** in D33, which the respondent (patent proprietor) had **filed with** its **reply**. The board accepted the reasoning that this response to D33 could not have been filed earlier, finding that the appellant could not be denied an opportunity to cast doubt on the results in D33 in this way.

However, see also **T 2688/16** for an example of a case in which a board refused to admit experimental results owing to a **lack of adequate reasons** for their late filing (see chapter V.A.4.4.4b)).

In **T 1759/17** the appellant (opponent) filed new documents in direct response to the respondent's reply to the grounds of appeal and in particular to the new evidence filed by

the respondent. Since there were **no objections from the respondent** (patent proprietor) against admission of these documents, the board decided to admit them into the proceedings.

(iii) Response to new claim requests filed with the reply after opposition had been rejected

In **T 1038/18** the respondent (proprietor) filed new requests with its reply to the statement of grounds of appeal. In its rejoinder the appellant (opponent) submitted for the first time during the proceedings that the priority of the patent was not validly claimed and that consequently claim 1 of auxiliary request 2 did not involve an inventive step over D1 and D3, the latter representing in view of the invalid priority claim state of the art within the meaning of Art. 54(2) EPC. However, auxiliary request 2 corresponded to the claims of a request submitted already during first-instance proceedings. The respondent argued that the new attack should have been presented earlier, but the board did not agree. It pointed out that the opposition had been rejected by the opposition division and hence the appellant was only required in the statement of grounds of appeal to **substantiate** why they considered non-convincing the reasons given by the opposition division **in respect of the patent as granted**. The question of the validity of the priority and of the status of document D3 as state of the art only became pertinent when subsequently the respondent, in reply to the statement of grounds of appeal, filed the amended claims of auxiliary request 2.

(iv) Need to reply to proprietor's detailed case in the grounds of appeal

In **T 329/16** the board referred to Art. 12(3) RPBA and concluded that the onus had been on the opponents to make a substantiated case in support of its inventive-step objections in its reply, even though the opposition decision had found in its decision that the subject-matter of claim 1 of auxiliary request 1 lacked novelty. Given that the patent proprietor had made a detailed case in support of the subject-matter's novelty in its grounds of appeal, the opponent could not rely on the board's reaching the same conclusion as the opposition division.

(v) New lines of attack based on documents submitted during first-instance proceedings

In **T 256/17** the board had to decide whether to admit two new lines of attack submitted against claim 1 of the patent on the basis of a lack of inventive step which the appellant (opponent) had filed in response to the respondent's reply. Both lines of attack were based on documents submitted during the first-instance proceedings, but one of them combined for the first time two documents previously discussed as the closest prior art and the other, starting from a known combination, argued on the basis of a different technical problem. The appellant gave no reasons for first raising these objections after having filed the statement of grounds of appeal, and the board could no reason for this either. It pointed out that, by acting this way, the appellant had prevented the respondent from reacting to the attack during the opposition proceedings and the opposition division from deciding on the matter. With the late submission the appellant had confronted the board and the respondent with a fresh case, which was contrary to the very aim of appeal proceedings (Art. 12(2) RPBA). The board thus decided to exercise its discretion not to admit the new

lines of attack under Art. 12(2), (4) RPBA 2007, Art. 25(2) RPBA and Art. 13(1) RPBA, Art. 25(1) RPBA.

(vi) Defence which should have been presented before the opposition division

In **T 1303/18** the board did not admit into the proceedings the appellant's (proprietor's) defence (raised for the first time after the filing of the grounds of appeal and the replies) relying on entitlement to partial priority. The appellant had argued that the subject-matter of claim 1 as granted should at least be entitled to partial priority from D49 in accordance with decision **G 1/15**. The board observed that an objection as to the validity of the priority claimed from D49 had already been raised by the respondents in their notices of opposition. Decision **G 1/15** had been published in the Official Journal of the EPO before the oral proceedings were held before the opposition division. Therefore, the appellant's defence claiming a right to partial priority could and should have been included at the latest in the statement of grounds of appeal. Moreover, the new defence was not merely a presentation of a new argument pertaining to the interpretation of law but comprised a new allegation of fact. The board decided not to admit it into the proceedings, as the required new factual assessment would have been complex and the appellant had provided no justification for this late amendment.

(vii) Common general knowledge

In **T 2741/19** the board did not find the appellant's (opponent's) justification convincing that the document was only found during the preparation of the opposition against a patent originating from a divisional application filed in relation to the present patent. The board pointed out that the document was **part of the public domain**. Nor did the board accept the appellant's argument that the document was submitted as evidence for the skilled person's common general knowledge at the time. Even if it were common general knowledge, this did **not** mean that it could be filed **at any time** of the proceedings. Evidence of common general knowledge could be filed at a later stage only if it served to back up argumentation that has already been put forward.

In **T 1333/20** the board held that the respondent (opponent) could and should have submitted its **complete case**, including the alleged proof of common general knowledge supporting its insufficiency of disclosure objections against the patent as granted, at least when forming its appeal case with its reply to the statement setting out the grounds of appeal. The appellant had already focused on insufficient evidence as regards Art. 100(b) EPC in the opposition proceedings and in the statement setting out the grounds of appeal.

In **T 1417/18**, by contrast, D10, a textbook referred to by the appellant within the time limit set by the board in its communication under R. 100(2) EPC, was taken into account. D10 had already been submitted by the opponent (subsequent appellant) in the opposition proceedings, but had not been admitted. The board held that D10 was relevant for assessing common general knowledge. It also took into account that both parties were already familiar with D10. The fact that D10 had not been admitted in the first-instance proceedings was considered immaterial.

(viii) Developments in parallel proceedings

In **T 1038/19**, in exercise of its discretion under Art. 13(1) RPBA, the board admitted a new objection of added subject-matter of claim 1 of the main request. The appellant (opponent) had raised this objection shortly after a similar issue had been decided in its favour in parallel proceedings (**T 1773/18**). The board saw this as justified, especially in view of the developments in the parallel appeal case. It also took into account that the other parties to the proceedings had had sufficient time to consider the objection.

A counter-example is **T 1808/21**. In this case presentation slides (D26) and a compilation of alleged facts (D27), which were subject of parallel pending UK proceedings, were submitted by appellants 2 and 3 only after filing their respective grounds of appeal. The appellants argued that, since this evidence had not yet been referred to at trial in the English proceedings, it was not possible to file it at an earlier stage in the appeal proceedings. The board however pointed to the possibilities of seeking consent from the patent proprietor or getting permission from the English court. In view of this, the board was convinced that there had been no legal obstacles and that it was rather the choice of the appellants not to submit these documents at an earlier stage. Therefore the board did not admit D26 and D27 into the appeal proceedings.

(ix) Late discovery of documents

In **T 603/21**, after filing its statement of grounds of appeal (but before notification of the summons to oral proceedings), the appellant (opponent) made new attacks on inventive step, based on, among other things, two new documents. It argued that the documents had only recently come to light by chance during research into another case and were prima facie relevant. The board stressed, however, that the chance discovery was not sufficient to justify the late filing, as generally admitting such changes would allow the arbitrary extension of the subject of the proceedings beyond that of the opposition proceedings, and thus run counter to the primary object of the appeal proceedings as set out in Art. 12(2) RPBA. In particular, this would undermine the requirement of Art. 12(6) RPBA, and failure by one of the parties to comply with it would be detrimental to the opposing side. Similarly **T 1684/17** (summarised in chapter V.A.4.4.6d) and **T 2741/19** (the fact that the document could not be easily found was not considered a justification for late filing). However, see also **T 1213/19** (also summarised in chapter V.A.4.4.6c) (ii).

However, see also **T 463/19**, in which, even at the third level of the convergent approach, the board admitted a late-filed document that was objectively difficult to find, had undoubtedly not been withheld intentionally, belonged prima facie to the state of the art and was prima facie very relevant. See chapter V.A.4.5.5m).

(x) New document originating from the patent proprietor submitted by the appellant-opponent

In **T 533/17** the appellant (opponent) argued that a poster (D19) and two related documents, filed after its grounds of appeal, should be considered since the respondent

(patent proprietor) had apparently concealed this earlier own publication. The board, however, noted that R. 42(1)(b) EPC did not put a stringent obligation on applicants to acknowledge prior art known to them at the time of filing their application. Therefore, the failure to acknowledge D19 in the patent in suit was not a sufficient reason for admitting this document into the appeal proceedings. Moreover, the appellant had not provided a convincing justification of why it had not been possible to find D19 when preparing this case at the opposition stage. The new documents were therefore not considered, in accordance with Art. 13(1) and 25(3) RPBA.

(xi) Public prior use

In **T 552/18** the board did not admit further evidence of a public prior use filed in reply to its communication under Art. 15(1) RPBA 2007 for the following reasons: These documents had been submitted at a very late stage of the proceedings and raised new questions. Although appellant 2 (opponent) had provided reasons why the documents had only been retrieved when they were, the board considered that there was no justification why they could not have been retrieved earlier if **sufficient effort** had been made. The board also held that the admission of these documents would go against the interests of procedural economy as laid down in Art. 13(1) RPBA. Moreover, the documents presented did not enable the issues raised to be resolved, as was required by Art. 13(1) RPBA. The board also underlined that these issues' pertinence had already been known in the opposition proceedings.

Likewise in **T 1117/16** the board considered it immaterial that the appellant had only actually become aware of the alleged public prior use – in this case by a third party – a few months after the filing of the statement of grounds of appeal. In particular, it took into account that the search for possible citations is the **responsibility of the opponent**. The fact that it did not discover a state of the art in time did not justify disregarding either the requirement of procedural economy or the need to act fairly towards the other parties. The board held that other criteria for the exercise of discretion mentioned in Art. 13(1), fourth sentence, RPBA also precluded admission to proceedings (see the summary in chapter V.A.4.4.6 b).

By contrast, in **T 34/18** the board considered the filing of new pieces of evidence of prior use (minutes of a hearing before a technical section of the Austrian Patent Office and a witness's written statements), which were intended to prove the existence of an obligation of confidentiality, to be admissible under Art. 13(1) RPBA. In particular, the board took into account that the opposition division had assumed there was no such agreement, that the evidence was therefore prima facie relevant, that its admittance did not appear to be detrimental to procedural economy and that the appellant had convincingly argued that the new evidence could not have been provided earlier.

b) Suitability to solve the issues raised

In **T 1117/16** the board first emphasised that the fact that the appellant had not discovered the public prior use at issue in time did not justify disregarding the requirement of procedural economy or the need to act fairly towards the other parties. The board also

could not see how the amendment to the appellant's case could resolve questions admissibly raised by the respondent. Rather, these amended submissions amounted to a completely new attack on the patent in suit, and one which had **not been prompted** by the respondent's submissions. Admitting the amendment would also have been detrimental to procedural economy, since, in the board's view, the documents submitted could not, prima facie, prove the alleged prior use up to the hilt ("lückenlos").

For further examples where the suitability criterion was among others applied, see **T 23/17** (summarised in chapter V.A.4.4.6 a) (ii)), **T 552/18** (summarised in chapter V.A.4.4.6 a) (xi)) and **T 1217/17**.

c) Prima facie relevance for assessment of patentability

(i) Not a sufficient justification for late submission

As observed in **T 731/16** (citing CLB, 9th edn. 2019, V.A.4.13.2), it was the boards' established case law that a decisive criterion for admitting late-filed documents was their prima facie relevance. Such material needed to be prima facie highly relevant in the sense that it was highly likely to prejudice maintenance of the European patent.

In many decisions in which the revised (2020) version of Art. 13(1) RPBA is applied, boards have pointed out that besides the listed criteria further decisive criteria for admitting late-filed documents could be their prima facie relevance and whether they introduced any complex matter (see **T 1213/19**, citing **T 731/16**, **T 2796/17** and **T 310/18**; for a contrary view, see **T 1684/17**, in which the board notes that prima facie relevance is not mentioned in Art. 13(1) RPBA). In **T 361/19** the board considered that admission of a late filed, but prima facie novelty-destroying document was, in principle, **covered by Art. 114 EPC** and also by Art. 13(1) RPBA. In the board's view these provisions leave sufficient discretion to a board to admit such documents. However, numerous decisions illustrate that, while this aspect is considered, it does not necessarily prevail over other criteria, in particular the time of filing (see e.g. **T 361/19 T 1203/16**, **T 1333/20**).

In **T 1203/16** the appellant (opponent) submitted, in reply to the preliminary opinion of the board, new lines of attack based on a document considered in opposition, and additionally, a new novelty objection based on a new document. As justification for these late amendments to its case, the appellant merely argued that the new lines of attack were relevant for assessing the patentability of the opposed patent and avoiding maintenance of a patent not fulfilling the requirements of the EPC. The board emphasised that such a justification was not sufficient. These new lines of attack could and should have been filed before. The board emphasised the leading principle of the RPBA, namely that on appeal parties' cases should be complete at a very early stage. It therefore decided in exercise of its discretion not to admit the new lines of attack and the corresponding document into the proceedings pursuant to Art. 12(4) RPBA 2007, Art. 13(1) RPBA and Art. 13(1) and (3) RPBA 2007.

(ii) Examples where prima facie relevance was considered, and the late submission taken into account

In **T 1213/19** the appellant (opponent) justified the late filing of D8, more than six months after the filing of the statement of grounds of appeal, by the fact that it was found by chance during a search for another patent. In the board's view, the document could have been found earlier as it lay in the same technical field as the patent, had been published five years before the end of the opposition period and seemed to have been pivotal in the examination proceedings of a divisional application derived from the European patent application on which the patent was based. However, the board weighed these aspects against the considerations that the respondent must have been familiar with the content of this document and that, at first glance, D8 could reasonably be expected to prejudice the maintenance of the patent. In view of the above, the board exercised its discretion to admit document D8 under Art. 13(1) RPBA.

For a further case in which prima facie relevance was one criterion among others that were taken into account and the relevant submissions were admitted, see e.g. **T 34/18** (prima facie relevance of evidence rebutting a public prior use, summarised above in chapter V.A.4.4.6 a) (xi)).

(iii) Example where prima facie relevance did not prevail over other criteria

In **T 1333/20** the board held that in the case in hand the alleged relevance of the new submissions (objections under Art. 123(2) EPC) did not prevail over the fact that the respondent **could and should** have submitted them in a substantiated manner **when forming its appeal case**, namely, in the case in hand, with its reply to the statement setting out the grounds of appeal (Art. 12(3) RPBA).

(iv) Examples where late submissions were rejected as inadmissible for lack of prima facie relevance

In **T 731/16** citation D12 had only been filed in response to the board's communication under Art. 15(1) RPBA 2007. In the board's view, it was out of the question that it would have been self-evident for the skilled person to combine the teaching of D4, a citation already on file, with that of newly filed D12. It therefore held that D12 was not highly relevant prior art and refused to admit it.

In **T 2796/17** prima facie relevance was one of several factors the board considered in exercising its discretion (Art. 13(1), 25(1) RPBA and Art. 13 RPBA 2007, Art. 25(3) RPBA). The board found that the new submission (an inventive-step objection to the subject-matter of claim 1, based on a combination of two documents filed with the notice of opposition) was not prima facie relevant, because the appellant (opponent) had not substantiated why the skilled person starting from the asserted closest prior art would have consulted the second document (without hindsight) or how that document disclosed the features added to the new main request. Not only had the appellant, without providing any justification, raised the objection for the first time at the oral proceedings, but the objection involved a complex new set of facts. The board therefore refused to admit it.

For further cases where (prima facie) relevance was considered but not acknowledged, see e.g. **T 102/16** (concerning D26), **T 1877/16** (concerning D20 and D21).

d) Whether the amendment is detrimental to procedural economy

In **T 1684/17** the board did not admit a new objection of lack of inventive step, which was based on a newly filed document which the appellant alleged had only become known to it in parallel appeal proceedings. The objection concerned the subject-matter of claim 1 of the patent as granted and, in the board's view, should already have been raised by the opponent in the course of the opposition proceedings. The opponents' approach was inconsistent with the principle of procedural economy that applied to all parties to the proceedings and therefore also inconsistent with the principle set out in Art. 12(6), second sentence, RPBA. The prima facie relevance claimed by the appellant was not a decisive criterion to be taken into account when applying Art. 13(1) RPBA. On this last point, see also chapter V.A.4.4.6c).

Likewise in **T 140/15**, **T 2227/15**, **T 154/16**, **T 1117/16**, **T 1217/17** and **T 552/18** the boards, exercising their discretion under Art. 13(1) RPBA, concluded that admitting late submissions would (among other things) be inconsistent with the need for procedural economy and did not admit them into the proceedings.

By contrast, the board in **T 553/22** admitted into the proceedings the opponent's reply to the statement of grounds of appeal, which was received 6 minutes after the expiry of the time limit set forth in Art. 12(1)(c) RPBA, as it did not prevent the board from considering the complete case of all the parties, nor seemed to be a tactical abuse of procedure, nor was contrary to procedural economy.

e) Complexity of the amendment

As pointed out in **T 1213/19**, besides the criteria listed in Art. 13(1) RPBA, according to established case law, **further decisive criteria** for admitting late-filed documents under Art. 13(1) RPBA can be their prima facie relevance and **whether they introduce any complex matter** (**T 731/16**, **T 2796/17** and **T 310/18**).

(i) New objection relying on previously discussed documents

In **T 310/18** the appellant (opponent) raised an objection regarding lack of inventive step starting from D2 in view of D15 for the first time about a month before the oral proceedings. However, since an attack starting from D15 in view of D2 had already been dealt with in the decision under appeal, the relevant technical content of these documents had been discussed extensively during the earlier stages of the appeal proceedings. The board considered that starting from D2 instead of D15 did not introduce any complex matters but merely relied on a combination of the previously discussed features. Under these circumstances the board decided to admit the objection into the proceedings (Art. 13 RPBA 2007, Art. 13(1) and (3) RPBA, the 2020 version of Art. 13(2) RPBA not yet being applicable).

However, in **T 140/15** a late-filed new objection based on a known combination of documents was not admitted. The board held that it made no difference that an objection based on the same documents but in reverse order had been raised earlier in the proceedings; this was still a new objection and its discussion would not necessarily take a similar course to that of the earlier one.

(ii) Mere development of previous submissions

In **T 3212/19** the submission of documents which had already been submitted with the grounds for opposition but not yet in the appeal proceedings, was considered in the case at hand to be just a development in the appellant's appeal case. The board considered that these documents simply served to help explain the operating modes of the devices described in documents already forming part of the proceedings. The board therefore saw no reason not to admit them into the appeal proceedings. See similarly, **T 2271/17** (new facts presented in terms of references to specific documents, mere development of objections outlined previously, adequate time for respondent to react thereto).

(iii) Examples where submissions introduced new complexity and were not admitted

In **T 2227/15**, applying Art. 13(1) RPBA as well as Art. 13(1) and (3) RPBA 2007 and considering all the circumstances of the case, the board concluded that admitting the new inventive-step attack into the proceedings would not only substantially add to and considerably change the complexity of the matter to be discussed, but would also be contrary to the need for procedural economy and would take the respondent by surprise.

In **T 1303/18** the board did not admit the appellant's (proprietor's) defence (raised for the first time after the filing of the grounds of appeal and the replies) relying on entitlement to partial priority into the proceedings. The required new factual assessment would have been complex and the appellant had provided no justification for this late amendment.

See also e.g. **T 2796/17** (summarised in chapter V.A.4.4.6c) (iv)) and **T 1217/17**.

4.5. Third level of the convergent approach – submissions filed after notification of the Article 15(1) RPBA communication or after expiry of period specified in Rule 100(2) EPC communication – Article 13(2) RPBA

4.5.1 General principles

a) Overview

Article 13(2) RPBA implements the third level of the convergent approach applicable in appeal proceedings. Art. 13(2) RPBA imposes the most stringent limitations on a party wishing to amend its appeal case at an advanced stage of the proceedings, namely after expiry of a period set by the board of appeal in a communication under R. 100(2) EPC or, where no such communication is issued, after notification of the communication under Art. 15(1) RPBA (see document CA/3/19, section VI, explanatory remarks on Art. 13(2)

RPBA, published in Supplementary publication 2, OJ 2020, 60, as well as OJ 2023, A103 on the latest amendment of Art. 13(2) RPBA).

In the version of Art. 13(2) RPBA which entered into force on 1 January 2020 the third level was triggered, in cases where no R. 100(2) EPC communication had been sent, by notification of the summons; this is reflected in part of the case law presented in this chapter. However, in order to avoid that the third level of the convergent approach is triggered by an early summons, as from 1 January 2024 (see Art. 2 of the decision of the Administrative Council of 13 December 2023, OJ 2023, A103), it is for all pending appeal proceedings the notification of the communication under Art. 15(1) RPBA, rather than the summons, which triggers the third level.

Article 13(2) RPBA provides that any amendment to a party's appeal case made at this stage of proceedings will, in principle, not be taken into account unless there are exceptional circumstances, which have been justified with cogent reasons by the party concerned.

In numerous decisions the boards have emphasised the party needs to **set out compelling reasons** why the circumstances are exceptional, in the absence of which the submissions concerned are not admitted (see e.g. **T 1107/16**, **T 2486/16**; see however the exception stated in **T 1294/16**). See also chapter V.A.4.5.1c) below. Furthermore, Art. 13(1) RPBA – including the **duties to provide justification** it lays down – also applies to the third level of the convergent approach (see e.g. **T 2360/17**).

Applying Art. 13(2) RPBA, the boards have consistently refused at this advanced stage of the proceedings to admit new submissions that should have been made earlier and that were considered detrimental to procedural economy or the rights of the other parties (see in particular the decisions cited in chapters V.A.4.5.4f), V.A.4.5.4g), V.A.4.5.4h), V.A.4.5.4i), V.A.4.5.4m) and V.A.4.5.4q)).

However, in cases in which the unjustified late submission ran contrary to neither the principle of procedural economy nor the legitimate interests of a party to the proceedings, the boards have come to different conclusions in their interpretation of Art. 13(2) RPBA.

In some of their decisions, the boards have considered that there needs to be a causal link between the "exceptional circumstances" and the time of filing in the proceedings (e.g. **T 2463/16**, **T 2486/16**), or that the "exceptional circumstances" need to justify the filing of new submissions at this advanced stage of the proceedings (e.g. **T 1904/16**, **T 482/19**, **T 1590/19**, **T 2795/19**). This interpretation of Art. 13(2) RPBA is based on, among other things, the parties' **duty to facilitate due and swift conduct of the proceedings** (**T 2843/19**) and on the aim of ensuring **fair proceedings for all parties** (**T 1904/16**).

In many other decisions, however, the boards have interpreted "exceptional circumstances justified with cogent reasons" in a broader sense. In **T 2920/18** the board pointed out in this context that it was clear from the explanatory remarks that the legislator had had the intention to give the boards discretionary power (Supplementary publication 1, OJ 2020, Annex 2, 221). In **T 339/19** the board explained that, in each case, it was incumbent on

the deciding board to balance the right to be heard with the public interest in doing justice in good time. In the same way, numerous decisions have considered "exceptional circumstances" to be circumstances in which admission **did negatively impact neither the procedural rights of another party** (or of the other parties in inter partes proceedings) **nor procedural economy** (see, for example, **T 1294/16**, **T 101/18**, **T 1290/18**, **T 1598/18**, **T 2920/18**, **T 339/19** and **T 2465/19**). For further details see chapter V.A.4.5.4k) below. See also V.A.4.5.5b) to V.A.4.5.5 e).

On the various related interpretations of "exceptional", see also chapter V.A.4.5.1e). On the meaning of "in principle" in Art. 13(2) RPBA, see chapter V.A.4.5.1f).

These different interpretations of "exceptional circumstances justified with cogent reasons" within the meaning of Art. 13(2) RPBA also influence whether admissibility under Art. 13(2) RPBA is examined **in one or two steps**. See chapter V.A.4.5.1g) below.

As regards the applicable criteria for exercising discretion, there seems to be consensus that at the third level of the convergent approach the boards of appeal are free to apply the criteria set out in Art. 13(1) RPBA when exercising their discretion under Art. 13(2) RPBA in deciding whether to allow an amendment at this stage in the proceedings (see, for example, **T 989/15**, **T 584/17**, **T 954/17**, **T 752/16**, **T 764/16**, **T 709/16**, **T 995/18**, **T 1780/20**; see also **T 1609/16** and **T 1421/20**, which apply these criteria without citing Art. 13(1) RPBA). In **T 2429/17** the board held that at the third level of the convergent approach it could also use criteria that applied to the first level, i.e. the criteria set out in Art. 12(4) to (6) RPBA. See also chapters V.A.4.5.4 and V.A.4.5.5, which provide a more detailed description of the case law on admitting new requests or new facts, objections, arguments or evidence, arranged by specific procedural situation or topic.

b) Events which trigger the third level of the convergent approach

Art. 13(2) RPBA, which imposes the most stringent limitations on a party wishing to amend its appeal case, concerns in its version as from 1 January 2024 amendments to a party's appeal case made after the expiry of a period specified in a communication under R. 100(2) EPC or, where such a communication is not issued, after notification of a communication under Art. 15(1) RPBA (see decision of the Administrative Council of 13 December 2023, OJ 2023, A103). In the previous version of Art. 13(2) RPBA which entered into force on 1 January 2020 the third level was triggered, in cases where no R. 100(2) EPC communication had been issued, by notification of the summons. In the following, decisions are summarised which deal specifically with these trigger events.

In **T 2125/18** the board pointed out that the standardised communication accompanying the copy of the statement of grounds of appeal is not a communication under R. 100(2) EPC.

Decision **T 2384/18** concerned the particular situation where the communication under Art. 15(1) RPBA contained an invitation under R. 100(2) EPC to the parties to reply to two issues highlighted in a specific point of the communication. The board used its discretion

under Art. 13(1) RPBA to admit auxiliary request 1a, which had been filed within the period specified and specifically addressed the highlighted issues.

c) Duty under Article 13(2) RPBA to provide cogent reasons to demonstrate exceptional circumstances and duties under Article 13(1) RPBA

Article 13(2) RPBA provides that, for new submissions at the third level of the convergent approach to be taken into account, the party concerned must **justify** with cogent reasons that there are exceptional circumstances.

In **T 482/19**, for instance, the board found that the patentee had not provided any exceptional circumstances justified with cogent reasons, as to why the auxiliary requests in question had been filed only at a late stage of the proceedings (namely after notification of the summons to oral proceedings). Hence both auxiliary requests were not taken into account, in accordance with Art. 13(2) RPBA (see however also chapters V.A.4.5.1d) to V.A.4.5.1g) on the different interpretations of "exceptional circumstances").

In **T 2423/19** the board underlined with reference to the explanatory notes relating to Art. 13(2) RPBA (Supplementary publication 2, OJ 2020, 60) that, if the board raises an objection in a communication, which in the party's view is raised for the first time, it is up to that party to explain precisely why they consider this objection not to fall under objections previously raised.

An exception may be found in **T 1294/16**. In this decision, the board held that there was no need for a party to put forward cogent reasons where the circumstances were beyond that party's control (e.g. board's judgment as to whether it can, without undue delay, deal with the submission at issue; other party's agreement) and a board, bearing in mind the purpose of the convergent approach, considered ex officio the circumstances to be exceptional (see also **T 1790/17**; on the different views of what constitutes "exceptional circumstances", see however chapters V.A.4.5.1d) to V.A.4.5.1g) below). A further exception is described in **T 2465/19**. In the board's view, considering that the amendments were filed following the express invitation from the board, requiring such an explanation from the appellant would be clearly counter-intuitive.

In **T 552/16** the board did not admit a late-filed document, because exceptional circumstances for its late filing within the meaning of Art. 13(2) RPBA had **neither** been **presented nor** were they **evident** from the case (see also **T 553/22**).

Duties to provide justification can additionally arise under **Art. 13(1) RPBA**, which also applies to the third level of the convergent approach. In **T 2360/17**, for instance, the board did not admit the new request inter alia because the appellant's arguments did not constitute a justification for the amendment as required by Art. 13(1), first sentence, RPBA. On these duties under Art. 13(1) RPBA, see also chapter V.A.4.4.4.

d) Whether a causal link between the exceptional circumstances and the time of filing is required

The question whether the term "exceptional circumstances" should be interpreted such that these circumstances must be the cause of or, in other words, justify the time of filing, has been answered in the case law in different ways.

(i) Decisions according to which a causal link is required

In **T 2486/16** the board emphasised that a party, when providing its "cogent reasons", should not only identify the circumstances invoked and explain why they were to be regarded as exceptional but also explain why these circumstances had the **direct result** of preventing it from filing its requests at an earlier stage (see also **T 1707/17** by the same board, which referred to **T 1033/10**). In the case in hand, the appellant, which had filed the new request at issue and was successor in title of the original applicant, had invoked receivership and a transfer of ownership as exceptional circumstances. However, in the view of the board, even if these difficulties experienced by the original applicant were considered to constitute exceptional circumstances within the meaning of Art. 13(2) RPBA, the requirement of establishing a **causal link** had not been fulfilled. The new appellant had submitted no evidence that the original applicant had been experiencing any such difficulties at the date of filing the statement of grounds of appeal. See also **T 2463/16** and **T 1433/18**.

Similarly, in **T 2795/19** the board held that Art. 13(2) RPBA required the party not only to explain why the case involved exceptional circumstances but also to explain why its amendment, in terms of both **content and timing**, was a **justified response** to these circumstances. In particular, where a party sought to amend its case at a very late stage in the proceedings, the cogent reasons referred to in Art. 13(2) RPBA should include reasons why it had not been possible to file such an amendment earlier (citing **T 1707/17**; see also **T 755/16** and **T 482/19**). In **T 1190/17** the board held that its inclusion of a new argument in the chain of arguments leading to the finding of lack of inventive step did not open the door to the introduction of amendments whose content would have gone well beyond that needed to refute the new argument (see also **T 1869/18**).

In **T 2843/19** the board emphasised the **duty** of parties **to facilitate due and swift conduct of the proceedings** and did not admit the appellant's new objection, since no exceptional circumstance had been presented that could have justified its late submission so close to the scheduled date for oral proceedings.

In **T 2482/22** the board rejected the argument that concerns regarding the validity of the patents issued by the EPO had to trump any other considerations. The legislator had seen this differently, as evident from Art. 12(2) RPBA (as adopted by decision of the Administrative Council of 26 June 2019), according to which the primary object of the appeal proceedings is to review the decision under appeal and a party should direct their appeal case at the requests, facts, objections, arguments and evidence on which the decision under appeal is based. As a consequence, the possibility for a party to change its case or add to it was very limited, increasingly so as the appeal procedure progressed.

The board noted that Art. 12(4) and 13(1) RPBA still included criteria that could be seen as relating to the merit or relevance of any such new material albeit subject to a reasoned justification. However, such criteria are entirely absent from the wording Art. 13(2) RPBA. Thus, merit or relevance was not somehow subsumed in the sole criterion of "exceptional circumstances", which could only relate to circumstances that arise from the way the proceedings have developed, i.e. the **procedure itself and not its subject**. In the same vein, see the earlier case **T 1590/19**.

(ii) Decisions according to which no causal link is required

Other decisions have not required such a causal link between exceptional circumstances and late filing. Rather, these held that, even if late filing was not justified, other aspects could be taken into account when determining whether there were exceptional circumstances. In **T 339/19**, for instance, the board explained that, in each case, it was incumbent on the deciding board to balance the right to be heard with the public interest in doing justice in good time. Thus, numerous decisions have considered "exceptional circumstances" to be circumstances in which admission **did not negatively impact either the procedural rights of another party** (or other parties in inter partes proceedings) **or procedural economy** (see, for example, **T 1294/16**, **T 101/18**, **T 1290/18**, **T 1598/18**, **T 2920/18**, **T 339/19** and **T 2465/19**, some of which are summarised below, as well as the other decisions cited therein). Similarly **T 713/14**, **T 545/18** and **T 1686/21** (in which the large number of different objections was also taken into account).

In **T 1294/16** the board noted that the major motivation for the convergent approach was the procedural economy of the appeal proceedings. The board deduced from this that if admittance of a (late-filed) submission was not detrimental to procedural economy, it was appropriate to accept that there were "exceptional circumstances" within the meaning of Art. 13(2) RPBA , provided that this did not adversely affect the other party. In the ex parte case in hand, the board admitted the three late-filed auxiliary requests, since the amendment could be dealt with during the oral proceedings. This decision was followed e.g. in **T 1290/18**, **T 339/19** and **T 2465/19** (the latter specifically addressing the situation in ex parte cases). See also **T 424/21** which points out that prohibiting the deletion of dependent claims at a late stage might lead to a huge number of auxiliary requests at an early stage and thus not be in the interest of procedural economy.

In **T 339/19** the board agreed that the term "exceptional circumstances" should be interpreted in light of the principles underlying the RPBA. It added that these principles had been developed by the boards in connection with the right to be heard (Art. 113 EPC), the right to oral proceedings (Art. 116 EPC) and the right to a fair hearing both under Art. 6 ECHR (as per decisions **G 1/05**, OJ 2007, 362, **G 2/08** of 15 June 2009; **T 1676/08**, **R 19/12** of 25 April 2014) and Art. 125 EPC (**T 669/90,** OJ 1992, 739). The right to be heard also related to the right to introduce and have heard evidence as defined in Art. 117 EPC (**T 2294/12**). Art. 114(2) EPC, however, clarified that such a right was not absolute. In each case it was thus incumbent on the deciding board to balance the right to be heard with the public interest in doing justice in good time. The board agreed with **T 855/96**, in which the board had emphasised the position of the Boards of Appeal as the only judicial instance in proceedings before the EPO.

In **T 2920/18** the board noted that the wording of Art. 13(2) RPBA did not require the amendment to be triggered by exceptional circumstances. The exceptional circumstances could also be **of a legal nature**. In addition, a teleological interpretation which considered the purpose of the EPO's power to disregard late submissions as enshrined in Art. 114(2) EPC and Art. 123(1) EPC seemed to support this conclusion. Indeed, it followed from the preparatory documents to the EPC 1973 (see **T 122/84**, **T 951/91**) that this procedural possibility was intended to prevent the parties from improperly delaying the proceedings. This power did not constitute a procedural end in itself. See also **T 2295/19** by the same board, confirmed e.g. in **T 1800/21**.

This approach was further confirmed in e.g. **T 1857/19**, **T 1709/20** and **T 732/21** (in the latter the board held that the purpose of the RPBA was the defence of the parties' rights to a fair hearing within a reasonable time).

Many decisions following this approach relate to late-filed requests in which only a single category of claim or dependent claims were removed from the previous request. See, for example, the discussion of the related case law in **T 1800/21**, as well as chapter V.A.4.5.4j).

e) Meaning of "exceptional"

According to one line of case law "exceptional circumstances" within the meaning of Art. 13(2) RPBA generally concern **new or unforeseen developments** in the appeal proceedings, such as new objections raised by the board or another party (e.g. **T 1702/18**, see also **T 1780/19**), whereas circumstances outside the appeal proceedings (e.g. **T 2329/15**, **T 1583/21**, **T 2482/22**) or the normal course of events (**T 1870/15**, **T 2214/15**, **T 2271/17**, **T 24/18**, **T 1436/19**, **T 1959/19**, **T 599/21**) cannot justify late submissions. See also **T 1558/22** and **T 2124/21** for circumstances in the sphere of responsibility of the submitting party.

Accordingly, exceptional circumstances have been acknowledged where, for instance, the filing of new requests constituted a legitimate and timely response to a new objection raised by the board (in its communication under Art. 15(1) RPBA, see e.g. **T 2306/17**, **T 1255/18**, **T 974/20**, or at the oral proceedings, see e.g. **T 1561/15**). In this context, a "new objection" means one not covered by those previously raised by the board or a party (**T 2610/16**, **T 42/17**).

In contrast, where an objection had already been raised by the first-instance division or a party, the board's raising of these objections (e.g. **T 1187/16**; even where this involved a change in the board's opinion, e.g. **T 752/16**, **T 995/18**), or objections merely developing the objections originally raised or stating them more precisely (e.g. **T 2539/16**, **T 1080/15**) or objections to unsuccessful attempts at overcoming previously identified issues (**T 2214/15**) has been seen as an **ordinary development** in the appeal proceedings which could therefore not justify the filing of new requests.

However, in other decisions, in particular regarding the deletion of claim categories, the boards have found that "exceptional" could be interpreted more broadly:

In **T 1294/16**, for instance, the board noted that the example of exceptional circumstances provided in the explanatory remarks in CA/3/19 (namely a new objection raised by the board) suggested that exceptionality was not necessarily linked to events being exceptional in the sense of deviating from the expected, but could also be caused by **considerations related to the legal framework**. Since the major motivation for the "convergent approach" was the procedural economy of the appeal proceedings, it was appropriate to accept that there were "exceptional circumstances" if admittance of a (late-filed) submission was not detrimental to procedural economy, provided that this did not adversely affect any other party. See also e.g. **T 1598/18** (by the same board, inter partes) and **T 2920/18** (inter partes), in which the board confirmed that exceptional circumstances could be of a **legal nature**.

For further examples of case law giving "exceptional circumstances" a broad meaning which accommodates cases in which procedural economy and the rights of the parties are safeguarded, see **T 713/14**, **T 101/18**, **T 545/18**, **T 1968/18**, **T 339/19**, **T 2111/19**. See also the decisions cited in chapter V.A.4.5.1d) above and in V.A.4.5.4k) dealing in particular with requests in which claims or claim alternatives have been deleted.

In **T 2352/19** the board held that the term "exceptional circumstances" needed to be interpreted in the light of the principles underlying the EPC and the RPBA. The board derived from this that exceptional circumstances could justify the admittance of a new request filed in response to a new aspect raised by the board, only if this aspect was ultimately relevant for the board's final conclusion. Otherwise, the parties' right to be heard was not affected and there would be no reason for exceptions to be applied.

f) Meaning of "in principle"

In several decisions the boards have discussed the question of how the term "in principle" in Art. 13(2) RPBA had to be construed.

In **T 1294/16** (see also the summary in chapter V.A.4.5.1e)) the board discarded the possibility that this term was meant to provide a residue of discretion for the board to admit a request even in the absence of exceptional circumstances (or where no cogent reasons were supplied as justification for them) and concluded that it should be ignored. In **T 2125/18** the board underlined that the wording "in principle" could not be understood to mean that Art. 13(2) RPBA could be applied simply where the board considered it fitting. Highlighting the convergent approach, the board found that, for the board to take the amendment to the appeal case into account, exceptional circumstances must have arisen. In the same vein, in **T 2920/18**, the board explained that the principle laid down in Art. 13(2) RPBA was precisely that amendments to a party's case were not to be taken into account at this late stage of the procedure ("in principle"). The exception to this principle then followed in the half sentence introduced by the phrase "unless".

However, in **T 172/17** the board held that Art. 13(2) RPBA did not remove the board's discretion to admit an amendment of a party's appeal case. The obligation expressed by "shall" was qualified by "in principle", and it was also up to the board to assess whether "exceptional circumstances" exist. The board referred to Art. 114 EPC in this context and

to the explanatory remarks on Art. 13(2) RPBA (see supplementary publication 2, OJ 2020, 60), according to which the board may admit the amendment "in the exercise of its discretion". Citing **T 172/17**, the board in **T 574/17** explained that when applying Art. 13(2) RPBA a board may also rely on the criteria referred to in Art. 13(1) RPBA. This was part of the board's exercise of discretion under Art. 13(2) RPBA. This discretion was inherent to the assessment of whether there were "exceptional circumstances" and was furthermore expressed by the phrase "in principle". Similarly, in **T 424/21** the board interpreted the wording "shall, in principle," in Art. 13(2) RPBA such that it leaves the board some discretion in its assessment of the alleged exceptional circumstances. Sensibly applying this discretion appeared to the board to be particularly important in technical fields with patents containing a large number of dependent claims.

g) Whether assessment of "exceptional circumstances" and exercise of discretion to admit an amendment is a two-step evaluation

In some decisions, the boards have assessed admission under Art. 13(2) RPBA **in two steps**. First, they have assessed whether it has been shown that there are exceptional circumstances justifying the late submission or whether any such circumstances are apparent. And only if that is the case have they gone on in a second step to apply the criteria for exercising discretion laid down in Art. 13(1), fourth sentence, and Art. 12(4), fifth sentence, RPBA and, if relevant, taken account of other considerations (see, for example, **T 989/15**, **T 709/16** and **T 924/22**). In **T 709/16** it was emphasised that, if the board accepted the party's argument that the circumstances were exceptional, it was still within the board's discretion whether to admit the request into the appeal proceedings. In **T 2486/16** the board explained that the criteria of Art. 13(1) RPBA could supplement, but not supplant, the separate requirements of Art. 13(2) RPBA. In **T 1558/22** the board held that there was no exceptional circumstance beyond the respondent's sphere of responsibility that might have justified the late filing of auxiliary request 4a. That made it irrelevant whether other criteria for exercising discretion laid down in Art. 12(4) and 13(1) RPBA (e.g. whether the amendment was uncomplicated) – which could be considered **in addition** to the strict requirements of Art. 13(2) RPBA – had been met.

In other decisions, all aspects, including in particular the criteria in Art. 13(1) RPBA about the exercise of discretion, have been used to assess whether "exceptional circumstances" exist. In **T 1773/22**, for instance, the board explained that assessing whether there are exceptional circumstances was not separate from exercising discretion to admit an amendment (confirmed in **T 152/22**). The board noted that not separating them was consistent with the view that exceptional circumstances could be of a legal nature (citing **T 2295/19**, **T 339/19**, **T 1800/21**). Further examples of this approach can be found in, for example, **T 713/14**, **T 1904/16**, **T 988/17**, **T 1055/17**, **T 1790/17**, **T 1227/19**, **T 916/21** and **T 172/22**.

4.5.2 Transitional provisions

According to Art. 25(3) RPBA, where the summons to oral proceedings or a communication of the board under R. 100(2) EPC was notified before the date of entry into force (1 January 2020), new Art. 13(2) RPBA did not apply. Instead, Art. 13 RPBA 2007

continued to apply. For summaries of decisions in which these transitional provisions were applied, see CLB, 10th edn. 2022, V.A.4.5.2.

4.5.3 Amendment to an appeal case within the meaning of Article 13(2) RPBA

Article 13(2) RPBA provides that any amendment to a party's appeal case made after the expiry of a period specified by the board in a communication under R. 100(2) EPC or after notification of a communication under Art. 15(1) RPBA (as of 1 January 2024; previously notification of a summons to oral proceedings) will, in principle, not be taken into account. On what is meant by "amendment to a party's appeal case", see chapter V.A.4.2.3 "Second and third levels of the convergent approach: amendments to a party's appeal case – Article 13(1) and (2) RPBA".

4.5.4 Admittance of new requests

The main principles of the case law on admitting new submissions at the third level of the convergent approach have already been outlined in chapter V.A.4.5.1. Structured around particular procedural situations or topics, the following now looks in more detail at the case law on admitting new requests.

a) Waiting for the preliminary opinion not compatible with convergent approach

(i) Preliminary opinion not an invitation to make further submissions

The primary purpose of a board's preliminary opinion is to establish the framework of the appointed oral proceedings, i.e. to prepare the oral proceedings, rather than being an invitation to a party to make further submissions or to file further requests (**T 2703/16**, with reference to **T 1459/11**). See also e.g. **T 752/16** (summarised in chapter V.A.4.5.4 h)), **T 995/18**, **T 2271/18**, **T 121/20**, **T 920/20**.

In **T 2778/17** the appellant (applicant) argued that a reaction in response to the provisional opinion of the board should be possible. For reasons of procedural economy, it would not be expedient to file beforehand a plurality of auxiliary requests without knowledge of the opinion of the board. The board did not agree. It recalled the basic principle of the third level of the convergent approach that, at this stage of the appeal proceedings, amendments to a party's appeal case were not to be taken into consideration and that only a limited exception was provided for. The board could not see any exceptional circumstances justified with cogent reasons by the appellant. The appellant had merely stated that it considered it desirable and justified to amend its requests after having been provided with the board's provisional opinion on the merits of the case.

(ii) Requirement to respond to the case made by the opposing party

Each party to appeal proceedings must present its own case at the outset – if necessary, by responding to the case made by the opposing party immediately – rather than waiting to see whether the board later confronts it with an unfavourable opinion (**T 995/18**). See also **T 1937/19**, **T 924/22**.

In **T 121/20** the respondent (patent proprietor) filed auxiliary request 1 in reaction to the board's preliminary opinion and argued that it appeared from this opinion that among the various objections of added matter raised by the appellant only one was convincing and that accordingly the amendments addressing the other objections were not necessary. The board, however, noted that the preliminary opinion was predominantly intended to give the parties an opportunity to thoroughly prepare their arguments, not to file new submissions. The board added that it would be against the principle of procedural fairness if the board allowed a party to take advantage of such a preliminary opinion to put them in a better position compared to the position they took in reply to the other party's case.

b) Justified response to new objections raised in board's communication, in subsequent submissions or at oral proceedings

In numerous decisions, the boards have treated situations in which the proprietor was first confronted with new objections, arguments or evidence in the communication under Art. 15(1) RPBA, in subsequent party submissions or at the oral proceedings as exceptional circumstances (with reference to the explanatory remarks on Art. 13(2) RPBA in Supplementary publication 2, OJ 2020, 60; see e.g. **T 2461/17**, **T 1255/18**). They have then admitted requests which, in terms of both their content and timing, were a justified response to those circumstances. It was sometimes the situation as a whole, including the justified response to the new objections, that was treated as amounting to exceptional circumstances; see chapter V.A.4.5.1 on the various different interpretations of Art. 13(2) RPBA.

When exercising their discretion in this respect, they have also relied on the criteria in Art. 13(1) RPBA and Art. 12(4) RPBA; on this, see chapter V.A.4.5.4e) "No carte blanche to amend claims at will – criteria set out in Articles 13(1) and 12(4) RPBA".

(i) Examples from ex parte proceedings

In **T 1255/18**, for instance, the board observed that, as was apparent from the appellant's (applicant's) submissions, the filing of the auxiliary requests concerned constituted not only a **legitimate** but also a **timely response** to the additional objection under Art. 76(1) EPC, raised by the board in the communication under Art. 15(1) RPBA. The amendment introduced into these auxiliary requests did not go beyond amending the feature whose presence in the higher-ranking requests had been newly objected to by the board. The board acknowledged that there were exceptional circumstances within the meaning of Art. 13(2) RPBA which justified taking the newly submitted auxiliary requests into account.

In **T 2351/17** the board found that there were exceptional circumstances, given that it had raised a new objection under Art. 123(2) EPC in its preliminary opinion and that the amendments were designed to overcome that objection and did not give rise to any new ones.

For further ex parte cases where the board raised an objection or argument for the first time in its preliminary opinion or at the oral proceedings and considered this (partly together with the fact that the reaction to this objection was appropriate) to be an

exceptional circumstance, see e.g. **T 1870/15** (auxiliary requests aimed at overcoming new clarity objection), **T 2461/16** (new clarity objection in provisional opinion an exceptional circumstance which justified the filing of new requests intended to overcome this objection), **T 2429/17** (main request filed to address issues newly raised under Art. 84 EPC and Art. 123(2) EPC), **T 1166/18** (legitimate reaction to objections under Art. 84 and 123(2) EPC), **T 1768/20** (main request and auxiliary requests admitted as legitimate defence against fresh line of argument against inventive step).

(ii) Counter-examples from ex parte proceedings

A counter-example, where a board did not admit requests filed in response to objections or arguments raised for the first time at the oral proceedings, is **T 2214/15** (summarised in chapter V.A.4.5.4i) "Repeated attempts at overcoming deficiencies"). The identification of problems newly introduced when the appellant attempted to solve issues discussed in the proceedings up to that point was to be seen as an ordinary development of the discussion.

In **T 1869/18** the board emphasised that while objections raised by the board for the first time in a communication under Art. 15(1) RPBA could be considered to give rise to exceptional circumstances and could possibly justify the filing of amendments which specifically respond to the new objections, this did not open the door to additional amendments which were **unrelated to the new objections**. Similarly **T 1190/17**.

(iii) Examples from inter partes proceedings

In **T 1756/16** a clarity objection to auxiliary request 1 filed with the reply was raised for the first time by the board, of its own motion, in its preliminary opinion under Art. 15(1) RPBA. The respondent (patent proprietor) sought to overcome this objection at the oral proceedings by filing a "new auxiliary request 1" containing just one minor amendment (lowering of the indices for intensity features "I44" and "I45"). The board found that its objection amounted to an exceptional circumstance justifying the filing of the auxiliary request at this stage.

In **T 1482/17** the board admitted auxiliary requests filed during the oral proceedings. As regards the requirement that their filing be justified by exceptional circumstances, the board observed that adding another clarifying feature was a **direct response** to a **new line of argument** that the board had, of its **own motion**, raised for the first time during the oral proceedings. This line of argument was a departure from its preliminary opinion that the earlier auxiliary request 1 was allowable; this implied that there was little prospect of the other auxiliary requests being allowable either. In view of this exceptional circumstance, the board considered that, even at this late stage in the proceedings, the patent proprietor was entitled to be given a chance to overcome the newly raised objections. Moreover, the amendments amounted to an elaboration on the gist of the invention. In the board's view, both the amendments and the resulting subject-matter were technically straightforward and did not entail unexpected combinations. The new auxiliary requests also did not put the appellant (opponent 2) at a disadvantage because there was essentially no change in either the closest prior art or the invention's technical contribution.

Another case in point is **T 135/17**, in which the filing of the second auxiliary request during the oral proceedings before the board did not present a fresh case and could be regarded as an **appropriate reaction** to a novelty objection raised during the oral proceedings against the independent method claim of the first auxiliary request. Moreover, it did not increase the technical and procedural complexity of the case and the opposing party did not object.

For further examples of inter partes cases in which the proprietor was confronted with a new objection or argument raised in the board's preliminary opinion or at the oral proceedings and the board admitted the new request as a legitimate response taking into account further aspects, see **T 1152/17**, **T 2091/18**, **T 655/19**, **T 935/19**, **T 953/20**, **T 974/20**, **T 1489/20**, **T 623/23**. See also **T 32/16** (in which the board highlighted the special circumstances of the case in hand, where the board's communication had crystallised for the first time what the board itself had deduced to be the relevant elements of the appellant's lengthy arguments concerning its objections under Art. 100(c) EPC); see however also **T 1362/21**, in which the board distinguished its case from **T 32/16**. See also chapter V.A.4.5.4e) "No carte blanche to amend claims at wish – criteria set out in Articles 13(1) and 12(4) RPBA".

(iv) Counter-examples from inter partes proceedings

The board in **T 2632/18** explained that the mere fact that a "new" objection was raised by a board could not per se amount to "exceptional circumstances" within the meaning of Art. 13(2) RPBA (citing **T 2271/18**). Nothing else could be derived from the decisions cited by the appellant (**T 1482/17** and **T 1278/18**). In both these cases, the aspect relating to "new objections" was considered as only one of several other criteria, including the complexity or the clear allowability of the amendments made (see also chapter V.A.4.5.4e) "No carte blanche to amend claims at will – criteria set out in Articles 13(1) and 12(4) RPBA".) In the case in hand, no new objection had been raised.

In **T 2352/19** the board held that exceptional circumstances could only justify the admittance of a new request filed in response to a new aspect raised by the board, if this aspect was ultimately **relevant for the board's final conclusion**. Otherwise, the parties' right to be heard was not affected and there would be no reason for exceptions to be applied.

c) Justified response to an objection – earlier response could not be expected

In some cases involving objections or arguments that were not entirely new but had in fact already been submitted at first instance or in the opposing party's written submissions, the boards have nevertheless decided that filing requests in response at an earlier stage could not have been expected.

(i) Response to individual aspect of an overall unconvincing line of argument

In ex parte case **T 916/21** the amendments made in auxiliary request 3 were a response to an explanation of the interpretation of the claims given in the board's preliminary opinion.

The same explanation had already appeared in the contested examination decision, but there it was just part of a line of argument that was fundamentally unconvincing as a whole. In the board's view, the appellant could not have been expected to file amendments in response to this individual aspect of an overall unconvincing line of argument as early as when filing the appeal. The board therefore treated the amendments as a response to its preliminary opinion and admitted them on the basis that the request clearly met the EPC requirements and so it could take a decision without holding oral proceedings.

(ii) Early objection raised but not pursued by examining division

In **T 922/17** the board took into consideration that, while the objection at issue had already been introduced by the examining division in an earlier communication, it was contained in neither the communication underlying the contested decision with respect to the main request nor the contested decision. The board therefore held that, in the case in hand, the fact that it had reintroduced the Art. 123(2) EPC objection in its communication under Art. 15(1) RPBA could be regarded as an exceptional circumstance within the meaning of Art. 13(2) RPBA. Moreover, the effect of the amendments at issue was readily apparent, such that the board was satisfied that the appellant had justified the amendments by cogent reasons as required by Art. 13(2) RPBA.

However, see also the following decisions, in which the boards considered the requirement of exceptional circumstances not to be fulfilled for objections or arguments that had already been raised by the examining division: **T 2778/17**, **T 2279/16**, **T 14/20**, **T 1080/15**, **T 597/16**, **T 689/15**.

(iii) Objection raised previously but without substantiation

In **T 1224/15** the appellant (patent proprietor) had filed a new auxiliary request 3 in response to an objection raised by the board under Art. 123(2) EPC in its preliminary opinion. The respondent (opponent) contended that this objection had already been raised in its reply to the grounds of appeal. The board, however, observed that the respondent had merely **referred to its notice of opposition** and had not countered the arguments on which the contested decision was based, as was required under Art. 12(2) RPBA 2007. This objection was therefore disregarded. The board thus considered the amendment made in auxiliary request 3 to be a direct response to its preliminary opinion. Since this amendment (deletion of a dependent claim) also did not give rise to any new objection or entail any change to the arguments in support of insufficient disclosure and lack of novelty, the board found the new request admissible (Art. 13(2) RPBA).

(iv) Objection of opposition division not reflected in the appealed decision

In **T 1771/17** the respondent (proprietor) filed new auxiliary request 2B in response to the board's objection under Art. 123(2) EPC against auxiliary request 2A in its communication under Art. 15(1) RPBA. The board considered that it was irrelevant whether the opposition division had already referred to the objected claim wording in its preliminary opinion, as this was in any case not reflected in the decision under appeal. Nor had the appellant raised this issue against auxiliary request 2A which had been filed with the reply to the

appeal. Thus, the objection was not part of the appeal proceedings until it was mentioned in the board's communication and the respondent had no reason to file auxiliary request 2B earlier. Moreover, no new issues were raised by auxiliary request 2B. The board admitted this request.

(v) Response to further development of an argument

In **T 1609/19**, the appellant's arguments had developed at the oral proceedings and finally led to the board's conclusion on novelty. The board underlined that it was thus appropriate to give the respondent an opportunity to react to this new line of argument as it could not have anticipated the way in which the appellant's arguments would develop. The board held that a party's argument developing in such a way as to be decisive for the decision on the request, yet not being seen as a change of the party's case, was to be seen as an exceptional circumstance which in the present case justified taking auxiliary request 12 into account.

d) Purpose of oral proceedings especially in ex parte proceedings

In the ex parte proceedings **T 1790/17** the board explained that, although its discretion under Art. 13(2) RPBA was rather limited, it still had to consider and balance all relevant circumstances when using its discretion. These circumstances included the development of the case and the purpose of oral proceedings. In the board's view, the purpose of oral proceedings was, for the appellant, to better explain its case and, for the board, to understand and clarify points which perhaps had not been sufficiently clear up to that point. The board underlined that this was particularly relevant in ex parte cases. If amendments resulting from such discussions were not possible, oral proceedings would be pointless. In the board's view, the new auxiliary request had been filed as a **direct reaction to the exchange of arguments** in the oral proceedings and addressed the board's objections and concerns. Furthermore, the request overcame the grounds on which the appealed decision was based. It was therefore admitted into the proceedings.

However, in **T 3258/19** the board took the view with respect to oral proceedings, that the right to be heard related only to the opportunity for an appellant in an ex parte case to orally present arguments relating to the requests already made in the written part of the underlying proceedings. If a board, moreover, has communicated a preliminary opinion based on the written submissions on file, the purpose of the oral proceedings for the party concerned would mainly be to explain why this opinion was wrong on the basis of the submissions and evidence already on file (citing **T 1213/19**).

See also **T 1870/15**, summarised in chapter V.A.4.5.4g) (iii), in which a request filed in response to a mere elucidation at the oral proceedings of the assessment in the preliminary opinion was not admitted.

On the purpose of oral proceedings, see also chapter III.C.2.

e) No carte blanche to amend claims at will – criteria set out in Articles 13(1) and 12(4) RPBA

Irrespective of whether the admissibility of new claim requests under Art. 13(2) RPBA is examined in one or two steps (on this, see chapter V.A.4.5.1g)), exceptional procedural developments justifying a response never give carte blanche (see **T 1080/15**) to make just any amendment whatsoever to the claims. Instead, the "new objections" aspect is treated as just one of several criteria, including the complexity of the amendments made or whether they are clearly allowable (as was made clear in e.g. **T 2632/18** with reference to **T 2271/18**, **T 1482/17** and **T 1278/18**).

According to established case law, at the third level of the convergent approach, the boards may, in the exercise of their discretion under Art. 13(2) RPBA, also rely on criteria applicable at the second level of the convergent approach, i.e. those set out in Art. 13(1) RPBA (see e.g. **T 989/15**, **T 2010/15**, **T 584/17**, **T 954/17**, **T 752/16**, **T 764/16**, **T 709/16**, **T 855/16**, **T 101/18**, **T 995/18**, **T 1869/18**, **T 416/19**, **T 541/20**, **T 920/20**, **T 1780/20**, **T 719/22**). As underlined e.g. in **T 2429/17**, this includes the criteria applicable at the **first level** of the convergent approach, i.e. those set out Art. 12(4) to (6) RPBA (see also the reference to these provisions in Art. 13(1), second sentence, RPBA).

(i) Whether amendments prima facie overcome the issues raised and do not give rise to new objections

As noted in **T 1107/16**, according to the explanatory remarks on Art. 13(1) RPBA, the **onus** is on the appellant **to demonstrate** both why the amendment overcomes the issues raised by the board and why the amendment, prima facie, does not give rise to new objections.

In ex parte case **T 1609/16** the board noted that the main request had manifestly been filed in reply to new clarity objections raised in its preliminary opinion. Moreover, the amendments to the original claims were straightforward, clearly addressed the outstanding issues in a manner already contemplated in the board's written opinion, and did not introduce any new subject-matter or raise new objections requiring further consideration. Hence the board decided to admit the main request into the appeal proceedings.

For further cases where the boards examined these criteria and were satisfied that they were fulfilled, see e.g. **T 1107/16**, **T 1338/16**, **T 545/18**, **T 1278/18**, **T 416/19**, **T 655/19**.

In the examples below, by contrast, the criteria were not fulfilled and the boards therefore refused to admit the requests.

In **T 953/16** the appellant (applicant) submitted that the new auxiliary requests at issue were a legitimate response to a clarity objection raised by the board in its communication under Art. 15(1) RPBA. The board noted, however, that although the amendments made to claim 1 in these requests constituted an attempt to clarify the claims, the inventive-step objections raised by it in its communication had already taken the features concerned into account in the interpretation of claim 1. It was therefore apparent to the board that the

amendments did not add anything of substance to the discussion of inventive step and, therefore, they did not address all of the outstanding issues raised by it. In view of its negative conclusions on inventive step for the higher-ranking requests, the board saw no exceptional circumstance that could justify the admission of the new auxiliary requests into the appeal proceedings.

In **T 709/16** (ex parte) the board exercised its discretion under Art. 13(2) RPBA in view of the suitability of the amendment in auxiliary request I to resolve the issue of lack of inventive step raised by the board. However, the amendment was not suitable to resolve this issue as it was only meant to clarify a certain feature and the inventive-step objection against the main request had already been based on the understanding this led to.

In **T 2257/19** the board found that an inescapable trap intrinsically precluded the admission of new requests under Art. 13(1) and (2) RPBA, as the requirements of Art. 123 (2) and (3) EPC could not both be satisfied. Consequently, and irrespective of the discussion whether there were exceptional circumstances that would justify filing the new requests at this very last stage of the procedure, auxiliary requests 4A to 4C were not admitted into the proceedings under Art. 13(1) and (2) RPBA, because they prima facie could not overcome the objections under Art. 123(2) EPC without infringing the requirements of Art. 123(3) EPC.

For further cases where the new requests were not admitted because, among other things, they did not (prima facie) overcome the issues raised, see **T 2429/17** (ex parte, clarity objection), **T 2692/18** (inter partes, inventive step objection), **T 884/18** (inter partes, issue of priority), **T 2271/18** (ex parte, clarity objection), **T 416/19** (ex parte, mere presentation of information), **T 920/20** (inter partes, objection under Art. 123(2) EPC, new requests filed only at oral proceedings).

For further cases in which the new requests gave rise to new objections, see e.g. **T 995/18** (inter partes, objection under Art. 123(2) EPC), **T 2271/18** (ex parte, clarity objection), **T 855/16** (ex parte, objection under Art. 123(2) EPC), **T 920/20** (inter partes, objection under Art. 123(2) EPC, new requests filed only in oral proceedings), **T 2795/19** (ex parte, objection under Art. 123(2) EPC, request substituting all former requests filed only at oral proceedings).

(ii) Procedural economy and complexity

In **T 764/16** claim 1 of the amended auxiliary requests necessarily included a feature, which had been only optional in claim 1 of the main request. The board, however, observed that there had been no discussion of this feature in the contested decision, the proceedings at first instance having concentrated on objections relating to alternative feature 1k. Moreover, it considered the feature to require interpretation. Filing the auxiliary requests after the summons thus confronted the board and the appellant with new facts involving complex issues which, if the requests were admitted, might mean having to remit the case to the opposition division. The amendments in the auxiliary requests were therefore detrimental to procedural economy. The board could not see any exceptional

circumstances within the meaning of Art. 13(2) RPBA that could have justified the late filing of the auxiliary requests.

In **T 920/20** the board observed that the respondents could already have responded to the appellants' objections under Art. 123(2) EPC in their reply to the appeal. It further found that the criteria set out in Art. 13(1) RPBA, which could be relied on additionally when applying Art. 13(2) RPBA (see e.g. **T 989/15**), were not met, because the combination of granted claims on which the new claim 1 was supposed to be based resulted in a completely new and complex case in which it was extremely doubtful "prima facie" whether the proposed amendments could overcome the objections raised and also likely that they would give rise to new objections. The board considered that the thorough discussion which would be required would be detrimental to procedural economy and highly unreasonable at such a late stage in the proceedings.

In **T 541/20** the board also considered, in addition to prima facie allowability of the amendments, that they had reduced the complexity of the case, as the objections against the deleted claims became moot, and hence admitted the request at issue.

(iii) Convergence

In **T 528/19** the board pointed out that convergence was a criterion for use when considering **procedural economy** for the purposes of Art. 13 RPBA.

In **T 1436/19** the appellant (patent proprietor) requested a few weeks before the oral proceedings to reorder the requests filed with the statement of grounds of appeal. The board decided that this constituted an amendment to the appellant's appeal case and that it could not be taken into account, inter alia because the proposed reordering of the requests clearly resulted in lack of convergence thereof. See also chapter V.A.4.5.4 g) "Requests reordered".

In ex parte case **T 1080/15** the independent claims of auxiliary request VII, filed after notification of the summons to oral proceedings, related to an **embodiment** disclosed in one of the figures and in the description which, however, had **never** been **claimed**. The embodiment had not been examined and did not amount to a converging development of the subject-matter claimed in any of the higher-ranked auxiliary requests. The board held that, although an objection raised for the first time by the board could qualify as an exceptional circumstance justifying the admission of a request, it did not give the appellant carte blanche to amend the claims at wish. The amendments should, as a rule, remain within the framework of the embodiments that had been examined by the first-instance department.

A further example can be found in **T 1717/17**.

f) Board's preliminary opinion that confirms in essence objections or arguments previously raised

In many decisions, ex parte as well as inter partes, the boards have emphasised that a preliminary opinion of the board containing, or giving an opinion on, objections that were already part of the proceedings did not qualify as an exceptional circumstance within the meaning of Art. 13(2) RPBA (e.g. **T 2778/17**, summarised in chapter V.A.4.5.4a) (i) and the examples below). According to some of the case law, however, exceptional circumstances can nevertheless arise in view of other factors in such cases (see chapters V.A.4.5.4j) and V.A.4.5.4k)).

In several decisions the boards have pointed out that it was irrelevant for the purposes of Art. 13(2) RPBA whether the opinion in their communication diverged from a previous position or differed from the contested decision (e.g. **T 752/16**, **T 2610/16**, **T 1962/17**).

Objections or arguments that were confirmed **in essence** in the preliminary opinion were not considered as new objections, which could be a reason for providing the proprietor with a further opportunity to file new claim requests (e.g. **T 3171/19**, ex parte). For examples, see the summaries and further references below in sections (ii) and (iii). In some of these cases the board's reasoning departed to some extent from the objections previously raised (e.g. **T 689/15**) or refined/developed the previous argumentation (**T 1080/15**, **T 450/20**, **T 599/21**).

(i) Duty to substantiate why the objection is new

In **T 42/17** the board recalled the principles set out in the explanatory remarks on Art. 13(2) RPBA (in CA/3/19, section VI), and in particular the following: if an appellant submitted that the board had raised an objection for the first time in its communication, it had to explain precisely why this objection was new and did not fall under objections previously raised by the opposition division or the respondent (opponent). The issues in question in the case in hand had already been discussed in the first-instance proceedings and had been referred to by the respondent in its reply to the grounds of appeal. The appellant (patent proprietor) therefore had to expect that the board might express a provisional opinion that was different from the opposition division's opinion. The appellant did not demonstrate that the board's provisional opinion contained any objection not raised previously. See likewise **T 2423/19**.

See also chapter V.A.4.5.1c) regarding more generally the duty under Art. 13(2) RPBA to provide cogent reasons to demonstrate exceptional circumstances.

(ii) Preliminary opinion confirming (in essence) objections or arguments raised by the examining division

In **T 689/15** the application was refused because, inter alia, the subject-matter of claim 1 of the then first auxiliary request lacked inventive step over the combined disclosures of documents D1 and D2. The board's assessment of inventive step in its preliminary opinion was based on the same documents and the board identified the same closest prior art

(D1). However, the board identified only one difference with respect to D1, whereas the examining division had identified two differences. As a result, the board defined an objective technical problem which was not as broad as the one defined by the examining division. But the board confirmed the examining division's assessment that the person skilled in the art would implement the teaching of D2 in the method known from D1. The board was therefore not convinced that the arguments set out in its preliminary opinion differed from the arguments set out in the decision under appeal to such an extent that they presented a whole new line of reasoning. Hence, the board saw no exceptional circumstances which would justify admitting the auxiliary request into the proceedings.

Similarly, in **T 2279/16** the combination of documents on which the board based its inventive-step objection in its preliminary opinion was exactly the same as the one which had led to the refusal of the application, and hence this was not a new objection from the board (even if the board's reasoning differed in certain details). The board saw no exceptional circumstances.

In **T 599/21** the board held that using a passage of the description to confirm the examining division's broad interpretation of a term in the claims did not confront the appellant with facts previously unknown to it and did not constitute an "exceptional circumstance" which could justify amendments to the appeal case in the present case.

See also the following cases, where, in the board's view, its preliminary opinion did not raise a new objection which could have justified the filing of new requests: **T 14/20** (examining division's assessment already based on the same understanding of the features and definitions at issue), **T 1080/15** (objection raised by the board was a mere development of the objection originally raised by the examining division), **T 597/16** (board's observations consistent with the decision under appeal), **T 2486/16** (board, while departing in some respects from the reasoning of the examining division on inventive step, reached the same conclusion), **T 1294/16** (board cited D7 as evidence that an argument of the examining division was based on common general knowledge, but exceptional circumstances acknowledged for other reasons; see chapter V.A.4.5.5k)), **T 167/17** (board merely explained, in detail and by highlighting all relevant aspects, why it was of the preliminary opinion that the examining division had not erred in finding that the main request did not meet the requirements of Art. 76(1) EPC), **T 1639/18** (board argued in essentially the same manner as the examining division), **T 1058/20** (board's preliminary opinion merely confirmed the reasons given in the contested decision).

(iii) Preliminary opinion confirming (in essence) objections or arguments raised by the opposition division or the opponent

In **T 1187/16** the board held that, where all objections addressed in a board's communication had already been raised earlier on in the proceedings, the communication could not be regarded as creating exceptional circumstances within the meaning of Art. 13(2) RPBA. The objections in this case had already been set out in detail, in particular in the reply filed by the respondent (opponent). The board thus concluded that the appellant had already had **ample opportunity** before notification of the summons to oral proceedings **to respond** to the existing objections by filing precautionary auxiliary

requests. In the board's view, considerations of procedural economy and the fact that the appellant had filed the auxiliary request more than one month before the oral proceedings were irrelevant in such circumstances (for a different view, see however chapters V.A.4.5.1a) and V.A.4.5.1d)).

In **T 121/19** the board held that its endorsing one of the opponent's arguments was neither surprising nor unforeseeable; it was instead in the very nature of a decision-making body's process of determining the legal situation.

In **T 121/20** the respondent (patent proprietor) filed auxiliary request 1 in reaction to the board's preliminary opinion and argued that it appeared from this opinion that among the **various objections** of added matter raised by the appellant **only one** was **convincing** and that accordingly the amendments addressing the other objections were not necessary for meeting the requirements of Art. 123(2) EPC. The board, however, recalled that the preliminary opinion was predominantly intended to give the parties an opportunity to thoroughly prepare their arguments, but not to file new submissions.

In several decisions the fact that, in its communication under Art. 15(1) RPBA or at the oral proceedings, the board's opinion **differed from the contested decision** was not considered an exceptional circumstance within the meaning of Art. 13(2) RPBA.

The board in **T 2610/16**, for instance, refused to accept the line of argument put forward by the appellant (patent proprietor) that the amendment at issue had been made in response to the communication under Art. 15(1) RPBA and that there had been no need to file it during the opposition proceedings because the patent had been maintained as granted. The board instead pointed out that the objection (included in its communication) had already been raised in the grounds for opposition and reiterated in the grounds of appeal. In these circumstances, that the position it had taken in its communication differed from the contested decision was not a cogent reason justifying an exceptional circumstance within the meaning of Art. 13(2) RPBA. See also **T 752/16** (summarised in chapter V.A.4.5.4h).

The board in **T 1962/17** followed this case law (citing **T 764/16** and **T 2610/16**). It also remarked that, in doing so, it was even sticking to the practice before the revised RPBA's entry into force on 1 January 2020 (see **T 1906/17**). For further examples, see **T 1897/16**, **T 172/17**, **T 1422/17**, **T 1569/17**, **T 1717/17**, **T 1962/17**.

In other decisions the boards have also addressed the question of whether the objection it had raised in its preliminary opinion went **beyond the scope** of the one already raised previously in the proceedings or the facts asserted in support of it.

In **T 2539/16** the board found that this was not the case and that it had at most clarified the arguments made by the appellant on the basis of the facts already asserted.

Likewise, in **T 2775/17** the board rejected the respondent's argument that it had only been on reading the communication with the board's preliminary opinion that it had been able

to understand the tenor of the objections to its auxiliary request 2. The board found that its communication had not introduced any new aspect.

In **T 1891/16** the clarity objection raised in the board's communication to claim 1 of the fourth auxiliary request had been explicitly submitted in the opponent's reply only in relation to claim 1 of the first auxiliary request. However, the **same contested feature** was also present, unchanged, in the fourth request. Since, in the board's view, this was readily apparent to the patent proprietor, it could have filed the fifth auxiliary request as an immediate response to the opponent's reply instead of waiting for the board's summons.

In **T 2632/18** the board observed with regard to the case in hand that no new objections had been raised in the board's communication under Art. 15(1) RPBA. Only reasoning was provided as to why the appellant's arguments as regards novelty in view of feature (d) were not persuasive.

In **T 450/20** the board pointed out that a party could **refine** an objection within the previously established framework without this automatically constituting an amendment of its appeal case which could justify the filing of a new claim request. This also applied to a board taking up and refining arguments introduced by a party (citing **T 1891/20** of 15 November 2021). **T 450/20** was followed in **T 719/22**, in which exceptional circumstances were denied. Similarly **T 1656/20** (citing **T 1891/20** and **T 2563/17**) and **T 3258/19**.

g) Other cases in which amendments should have been filed earlier

As a rule, patent proprietors must not wait to see which objections the board follows up in its preliminary opinion before filing amended claim sets in response to them and, as illustrated in chapters V.A.4.5.4a) and V.A.4.5.4f), instances of such behaviour are one situation in which the boards have frequently found that the proprietor's requests should have been filed earlier. Other decisions in which the boards have reached this conclusion are summarised below. However, in some of the case law, the boards have taken the view that, even in cases where the requests should have been filed earlier, exceptional circumstances can nevertheless arise in view of other factors (see in particular chapters V.A.4.5.4j) and V.A.4.5.4k)).

(i) Amendments should have been filed before the first-instance department

In **T 2703/16** claim 1 of the main request and auxiliary request 1, filed for the first time less than two weeks before the oral proceedings, differed from claim 1 of the claim set underlying the appealed decision and of the claim set filed with the statement of grounds of appeal in that certain **limiting features** had been **removed**, with the result that the claimed method had significantly changed. According to the board, by deleting the limitations which had been introduced during the examination proceedings and maintained until its conclusion, the appellant had essentially reset the case and thereby let the appealed decision become irrelevant. Thus, a **fresh case** had been created. The board held that if it were to admit the new requests, it would be compelled to either give a first ruling on a significantly changed subject-matter, which would run counter to the primary

purpose of appeal proceedings, or remit the case to the department of first instance, which would clearly be contrary to procedural economy. In addition, the board saw issues under Art. 84 and 83 EPC. In view of the above, the board decided not to admit the new requests into the appeal proceedings.

In **T 1421/20** the board considered that the auxiliary requests at issue (0b', 0b'-1 and 0c'), which had been filed after the board had issued the summons to oral proceedings and which contained features which had **never** been **included in any of the claims** filed and discussed before the examination division, could and should have been filed during first-instance proceedings. Moreover, the board considered that it could not deal with requests comprising such features without undue burden, since it was not even certain that appropriate prior art was readily available in the file. Exercising its discretion under Art. 13 RPBA, the board decided not to admit the requests into the proceedings.

Similarly, in **T 2154/19** the board considered that the amendments requested at the oral proceedings before it could already have been filed at the opposition stage after the opposition division had found the main request not allowable at the oral proceedings. According to the board, that several different claim sets would have to have been filed at that point to overcome all the different novelty attacks addressed in the opposition proceedings was by no means an exceptional circumstance within the meaning of Art. 13(2) RPBA.

In **T 1058/20** (ex parte) the board explained that the **principles underlying Art. 12(2), (4) and (6) RPBA** can also be applied when assessing whether exceptional circumstances are present according to Art. 13(2) RPBA. Indeed, an amendment that would not have been admitted at the beginning of the appeal proceedings (as it could and should have been submitted during the first-instance proceedings) can normally not be justified at a later stage of the appeal proceedings either. In the case in hand, the board held that exceptional circumstances which could justify the admittance of the new first auxiliary request – restricted to only one of the previously claimed embodiments – were not present; the filing of a request limited to this embodiment would have been reasonable during the examining proceedings and the circumstances had neither changed in view of the impugned decision nor during the appeal proceedings. Moreover, the admittance of the new claim request would have changed the framework of the proceedings. The board pointed out that refraining from the submission of the new request in the first-instance proceedings contravened procedural economy. See also **T 1639/18**. On deletion of claims or claim alternatives, see also chapter V.A.4.5.4j).

(ii) Party initially addresses new objection raised in preliminary opinion only by providing arguments

In **T 428/18** the appellant (applicant) argued that the amended main request, filed during the oral proceedings and attempting to overcome a new objection raised in the board's preliminary opinion, should be admitted because it had not understood the objection until the oral proceedings. However, in the board's view the objection in its communication was sufficient to inform the appellant of its concern. It was then up to the appellant to consider, at the earliest opportunity, whether it was necessary to amend the application and to

carefully examine whether there was a basis for any such amendment in the application as filed. For the main request filed with its letter of reply, the appellant had chosen not to address the objection by making an amendment and instead argued that the objected-to features did in fact have a basis in the application as filed. Therefore, the board did not deem the circumstances mentioned by the appellant to be exceptional.

In inter partes case **T 1937/19**, in the board's view the respondent (patent proprietor) could and should have replied directly to the objections that the appellant had raised in its rejoinder against auxiliary request 2. The board emphasised that waiting for its preliminary opinion before making appropriate amendments was not commensurate with the purpose of the RPBA.

(iii) Board's opinion at the oral proceedings in essence confirms its preliminary opinion

In **T 1870/15** the appellant argued that the board's claim interpretation at the oral proceedings could not have been anticipated. The board, however, observed that its communication pursuant to Art. 15(1) RPBA had provided a preliminary assessment of inventive step of the claimed subject-matter over D1 as closest state of the art, which had already been thoroughly discussed in the proceedings before the examining division. The board's claim interpretation at the oral proceedings was merely a further elucidation of its inventive-step assessment which did not have any influence on the determination of the distinguishing features of the claimed subject-matter over document D1 and was entirely consistent with its previously communicated preliminary opinion on this issue. This was regarded by the board as a normal course of events during a discussion at oral proceedings.

In **T 545/19** the board's reasoning given during the oral proceedings differed from the shorter one in its preliminary opinion. But the board held that, this notwithstanding, the respondent had been informed of its preliminary negative opinion on the feature in question and could therefore not have been surprised that it came to a negative finding during the oral proceedings.

(iv) Requests replacing late-filed requests

In **T 640/20** the respondent argued that it was the board's communication under Art. 15(1) RPBA that had first raised doubts based on Art. 12(6) RPBA about the admissibility of the auxiliary requests it had filed with its reply to the appeal. It therefore considered that the new sets of claims it had submitted in response had been filed at the first opportunity. However, the board could not see any exceptional circumstances in this course of events. In particular, it observed that the conditions for admissibility under Art. 12 RPBA applied irrespective of whether the opponent had raised a related objection (see **T 1426/17**).

According to the boards in **T 2599/19** and **T 380/21**, their respective pointing to substantive issues in requests which were eventually not admitted under Art. 12(6) RPBA could not serve as a valid justification for the presence of exceptional circumstances.

h) Change of the board's opinion

The principles described in chapter V.A.4.5.4f) above also apply to a revised opinion of a board if it contains in essence objections already made by parties at an earlier stage of proceedings. Whether it diverges from a previous preliminary opinion was considered irrelevant in such cases.

In **T 752/16**, for instance, the board considered that it was irrelevant for the purposes of Art. 13(2) RPBA whether the revised preliminary opinion in its second communication under Art. 15(1) RPBA diverged from a previous position or differed from the contested decision. Parties to proceedings before the boards always had to reckon with an unfavourable preliminary opinion at any time up to announcement of the decision. The board observed in this connection that the main purpose of communicating a preliminary opinion under Art. 15(1) RPBA was to define the scope of the oral proceedings and that it was a procedural measure designed to make it easier for the parties to prepare for them efficiently, not an "invitation" to make further amendments (see e.g. **T 1459/11**). Patent proprietors were not entitled to hold back on making amendments in response to an opponent's objections until being confronted with an unfavourable preliminary opinion of the board or realising that the board was not going to endorse their position and arguments (see e.g. **T 136/16**, **T 2072/16**). See also **T 1187/16** and **T 646/17**.

In **T 995/18** too, the board held that it was irrelevant for the purposes of Art. 13(2) RPBA whether it departed at the oral proceedings from its preliminary opinion in the communication under Art. 15(1) RPBA. Each party to appeal proceedings had to present its own case **at the outset** – if necessary, by responding to the case made by the opposing party immediately – rather than waiting until the board confronted it with an unfavourable opinion. Changing an opinion expressly referred to as preliminary in the light of the oral discussion of arguments that were all already known from the written proceedings could not serve as justification for the purposes of Art. 13(2) RPBA. The board nevertheless admitted the auxiliary request filed at the oral proceedings on the basis that it did not regard it as an amendment within the meaning of Art. 13(2) RPBA (see chapter V.A.4.2.3d) above).

Similarly, in **T 924/22**, the board explained that given that the opinion in the communication under Art. 15(1) RPBA is preliminary, it was an objectively possible and foreseeable outcome of the oral proceedings that this opinion may change in the light of the submissions made at the oral proceedings (if this were not so, then oral proceedings would serve little purpose). It was therefore not an exceptional circumstance.

For further examples where the board changed its opinion in the course of the proceedings, but this was not accepted as an exceptional circumstance in the case at issue, see e.g. **T 24/18** and **T 920/20**. This situation has to be distinguished from that where the amendment has been filed as a direct response to a new line of argument raised by the board of its own motion (see e.g. **T 1482/17**).

i) Repeated attempts at overcoming deficiencies

In **T 2214/15**, the board held that there were no exceptional circumstances which would justify taking a further amended claim request (auxiliary request 3) into account. Rather, the identification of problems newly introduced when the appellant attempted to solve issues discussed in the proceedings up to that point was to be seen as an ordinary development of the discussion. Contrary to the appellant's submission, in the board's opinion, the present case was a typical case, where a central objection (that of lack of support) had been among the grounds for refusal, was identified and agreed with by the board and was the central topic throughout the appeal proceedings, thus typically not warranting the opportunity to file a further auxiliary request. The board pointed out that the topics of discussion in view of auxiliary request 2 (admitted but rejected as unallowable) did not differ in substance from those identified in the summons. The amendments were unsuccessful attempts at overcoming previously identified issues of clarity and lack of support already raised in the summons. The further objections concerning clarity raised by the board during the oral proceedings did **not** go **beyond the framework of the previous discussions**, which were defined by the underlying claim deficiencies. The board noted that if the appellant's argument that identifying newly introduced problems amounted to exceptional circumstances were correct, this would mean that the appellant would have to be given repeated opportunities to file amended claims until no new problems were introduced, which would be at odds with the primary object of the appeal proceedings of a judicial review of the impugned decision (Art. 12(2) RPBA). See also **T 975/20**.

Likewise in **T 1880/20** (ex parte) the board did not recognise exceptional circumstances in the following sequence: indication of the basis for claimed subject-matter only during the oral proceedings, conclusion of the board that the requirements of Art. 123(2) EPC were still not met, filing of amended claim request 6.

The board in **T 2578/19** observed that filing amended claims always entailed the possibility that the proposed amendments might lead to new objections, in particular under Art. 84 EPC or Art. 123(2) EPC. In addition, objections to features introduced at a late stage and first at issue on appeal were – just like objections to the admissibility of late-filed requests – necessarily new. That meant that treating such objections as creating exceptional circumstances within the meaning of Art. 13(2) RPBA would undermine the spirit and purpose of the provisions on admissibility in Art. 12 and 13 RPBA, which prescribed that late-filed amendments were to be admitted on appeal only in exceptional cases. See also **T 2214/15** (concerning an objection under Art. 123(2) EPC newly raised by the board to amendments made in auxiliary request 2).

In **T 2256/17** the board took a different approach in a case where it had raised a new inventive step objection in its communication under Art. 15(1) RPBA. In response to this communication, the appellant (applicant) had filed further requests. During the oral proceedings, the board raised objections of lack of clarity against these further requests for the first time. In response, the appellant filed another set of claims (sole request) with the aim of overcoming these new objections. In the board's view, these were exceptional circumstances within the meaning of Art. 13(2) RPBA.

j) Deletion of claims or alternatives in claims

It is now widely accepted that even an uncomplicated amendment to a set of claims, for example deletion of an entire claim category, always **constitutes an amendment to the appeal case** as per Art. 13 RPBA, regardless of whether this alters the factual or legal framework of the proceedings and thus leads to a "fresh case" (see e.g. **T 1800/21** with references to the case law; for more details, see chapter V.A.4.2.3d)).

However, in the case of deletions of claim categories, dependent claims or alternatives in claims, in a majority of decisions the boards have come – in the circumstances of their respective case – to the conclusion that exceptional circumstances were present and admitted the requests, even if these could have been filed earlier (e.g. **T 713/14**, **T 1224/15**, **T 1597/16**, **T 1439/16**, **T 853/17**, **T 1569/17**, **T 306/18**, **T 1857/19**, **T 489/20**, **T 2019/20**, **T 424/21**). The reasons given for this were among other things that the reduced claim-set did not change the scope of the appeal proceedings but simplified the proceedings (e.g. **T 306/18**, similarly **T 2019/20**), that it enhanced procedural economy without disadvantaging the opponent (e.g. **T 1857/19**, **T 424/21**), that the remaining claims had always been the principle focus in appeal proceedings (e.g. **T 489/20**), that the principles of procedural economy and procedural fairness were safeguarded (e.g. **T 2295/19**, in the same vein **T 1800/20**) that the factual and legal scope of the respondent's appeal case was not altered and the appellant was not faced with any new subject-matter (**T 2084/22**).

Examples, in which the reduced claim-sets were not admitted may be found in e.g. **T 355/19** (auxiliary requests 1 and 2), **T 499/20** and **T 1558/22**. In **T 499/20** the requests were not admitted essentially for the reason that the amendment altered the factual or legal framework of the proceedings. In **T 355/19** and **T 1558/22**, however, the boards focussed on the time of filing. In **T 1558/22** the board held that filing the amended request only at the oral proceedings despite a previous objection by the appellant was not compatible with the convergent approach.

On the interpretation of "exceptional circumstances", see also chapter V.A.4.5.1d) to V.A.4.5.1g).

(i) Amendments admitted

In **T 424/21** the board (referring to **T 1857/19**) held that deleting dependent claims 4 and 5 **enhanced procedural economy** as doing so clearly overcame existing objections without giving rise to any new issues. In the board's opinion these were cogent reasons justifying exceptional circumstances. The board took into account that this deletion did not affect the objections for the other claims, all of which had been addressed in the statement of grounds of appeal, the reply and the board's communication under Art. 15(1) RPBA. The appellant (**opponent**) was therefore **not disadvantaged** by the admittance of the request. The board interpreted the wording "shall, in principle," in Art. 13(2) RPBA such that it left the board at least some discretion in its assessment of the alleged exceptional circumstances. Sensibly applying this discretion appeared to be particularly important in technical fields with patents containing a **large number of dependent claims**. Generally

prohibiting the deletion of dependent claims in reaction to the development of the appeal proceedings would require a huge number of auxiliary requests to be filed at an early stage covering all combinations and permutations of possible fall-back positions. This would not be in the interest of procedural economy and not be in line with the aim and purpose of the RPBA.

In **T 2295/19** the board admitted auxiliary request 5, from which the substance claims had been removed, even though it considered that it would already have been possible and reasonable to file such a claim set together with the reply to the appeal. Its reason for this was that some boards had acknowledged exceptional circumstances in similar cases so long as admitting the amendment was not detrimental to procedural economy, the convergent approach laid down in the RPBA or the legitimate interests of a party to the proceedings (see **T 1598/18**, **T 1294/16**, **T 339/19**). Agreeing with this approach, the board observed that the wording of Art. 13(2) RPBA did not require that an amendment be triggered by exceptional circumstances. It was instead enough that exceptional circumstances existed, and these could therefore be of a **legal nature** too. That did not conflict with the explanatory remarks (Supplementary publication 1, OJ 2020, Annex 2, 221), which appeared to illustrate only the main scenario for applying the rule. In addition, a teleological interpretation, which takes into account the purpose of the power enshrined in Art. 114(2) and 123(1) EPC to disregard facts, evidence and requests not submitted in due time, seemed to support this conclusion. The "travaux préparatoires" for the EPC 1973 (see **T 122/84**, **T 951/91**) showed that this procedural possibility was intended to prevent parties from improperly delaying the proceedings. In the board's view, there was no reason to disregard requests filed at a late stage in the proceedings unless there was a risk of prejudice to the **principles of procedural economy and fair proceedings** (see also **T 339/19**). See also e.g. **T 2920/18** (decided by the same board), **T 2186/21** and **T 2022/22**.

The board in **T 355/19**, while pointing out in relation to auxiliary requests 1 and 2 that a "trial-and-error" approach or tactics by elimination ("salami" tactics) were not acceptable in proceedings of a judicial nature, admitted auxiliary request 3 on the basis that the amendments had been made well in advance of the oral proceedings and the deletion of claims **clearly simplified** the matter to be examined. See also **T 376/22**.

In **T 489/20** the board, citing **T 2080/18** (see chapter V.A.4.2.3d) above), admitted the new main request, in which all process claims had been deleted, as these deletions merely set aside the objection of lack of inventive step against the process as defined in claim 20 as granted (explicitly raised for the first time one month before by the respondent) without affecting the issues, submissions and conclusions with regard to the **remaining claims**, which had **always been the principal focus** of the opposition and appeal proceedings.

In **T 2019/20** all product claims had been deleted from the request filed during the oral proceedings before the board. The board considered that the claimed subject-matter and the attacks against it were fully encompassed by both the appellant's and the respondent's initial appeal case within the meaning of Art. 12(1) to (3) RPBA. Moreover, the request limited the potential issues for discussion. This meant that, in view of the totality of the facts of the present case, the filing of this request, although formally an amendment, in

substance did not constitute an amendment of a party's case within the meaning of Art. 12(4) RPBA, but rather a **partial abandonment of the initial appeal case**. There was no apparent reason not to admit such a request under any of the Art. 12(5) RPBA, Art. 13(1) RPBA or Art. 13(2) RPBA.

In **T 1800/21** only the device claims remained in auxiliary request V, which had been filed after notification of the summons to oral proceedings. Interpreting the term "exceptional circumstances", the board endorsed the view taken in **T 2295/19** that Art. 13(2) RPBA was intended to safeguard the principles of procedural economy and procedural fairness and that an auxiliary request could therefore be admitted if the amendment did not alter the factual or legal framework of the proceedings, did not require a re-evaluation of the matter at issue and did not run counter to procedural economy or the legitimate interests of any of the parties. A consistent line of case law appeared to be developing to the effect that exceptional circumstances within the meaning of Art. 13(2) RPBA could be accepted where an uncomplicated amendment such as the deletion of a whole claim category led to a request on the basis of which the patent could clearly be maintained. The board considered this line of case law to be in keeping with the convergent approach established by the RPBA, also in terms of the degree of relevance required of the amendment.

(ii) Amendments not admitted

The board in **T 355/19** conceded that cases where claims could be admissibly deleted at a late stage in the proceedings were possible, but that did not mean that the proprietor was completely free to adapt the claims throughout the proceedings, and especially not when the starting point was a claim set with seven independent claims and amended sets of claims had repeatedly been filed over the course of the proceedings. Giving a party that freedom would amount to allowing it to take a "trial-and-error" approach or use a process of elimination ("salami" tactics), both of which were unacceptable in any kind of proceedings, let alone in those of a judicial nature such as appeal proceedings. See also **T 172/22**.

In **T 499/20**, which concerned the deletion of alternatives within a claim, the board first observed that the filing of a set of claims in which granted claim 1 was further limited would already have been possible and reasonable with the reply to the statement of grounds of appeal. Moreover, the board held that the limitation in the first auxiliary request did not simplify the procedure in the sense that it would immediately overcome the objection of lack of inventive step. Therefore, it could not be held that the first auxiliary request did not alter the factual or legal framework of the proceedings, nor that there was no need for a re-weighting of the subject of the proceedings.

In **T 1558/22**, however, the factor the board based its assessment on was not whether the proceedings were simplified but rather the procedural conduct of the respondent (patent proprietor). It had argued that its auxiliary request 4a (in which two method claims had been deleted) was a corrected version of auxiliary request 4, which had already been filed during the opposition proceedings and then again with the reply to the appeal. There had been an obvious error in the deleted method claims, in that certain restrictive features had been left out by mistake. The board, however, could not see any obvious error and similarly

did not consider the correction to be obvious. It also found that the respondent could not have been taken by surprise at the oral proceedings by its opinion on inventive step of claims 12 and 13 according to auxiliary request 4. The respondent could not assume that where the preliminary opinion did not reiterate objections in relation to subordinate auxiliary requests, the objections did not apply to those requests, even though the facts were the same. The respondent had first sought to make amendments in response at the oral proceedings, but the board considered that it was precisely that kind of wait-and-see procedural conduct that the convergent approach laid down in the RPBA was designed to prevent. The board therefore held that there was no exceptional circumstance **beyond the respondent's sphere of responsibility** that might have justified the late filing of auxiliary request 4a. That made it irrelevant whether other criteria for exercising discretion laid down in Art. 12(4) and 13(1) RPBA (e.g. whether the amendment was uncomplicated) – which could be considered in addition to the strict requirements of Art. 13(2) RPBA – had been met.

k) Amendment not detrimental to procedural economy and no other party negatively affected

While in numerous decisions the boards have considered that there needs to be a causal link between the "exceptional circumstances" and the time of filing of new submissions in the proceedings (e.g. **T 2463/16**, **T 2486/16**), or that the "exceptional circumstances" need to justify the filing of new submissions only at this advanced stage of the proceedings (e.g. **T 1904/16**, **T 1590/19**, **T 2795/19**), in numerous other decisions the boards have interpreted "exceptional circumstances justified with cogent reasons" in a broader sense. In **T 339/19** the board explained that, in each case, it was incumbent on the deciding board to balance the right to be heard with the public interest of doing justice in good time. There have been numerous other decisions in the same vein in which "exceptional circumstances" were seen as ones in which admittance would **not impair the procedural rights of another party or procedural economy** (see e.g. **T 1294/16**, **T 101/18**, **T 1290/18**, **T 1598/18**, **T 2920/18**, **T 339/19** and **T 2465/19**). For an overview of the case law on the interpretation of "exceptional circumstances" and, more generally, of the various different approaches to interpreting Art. 13(2) RPBA, see chapter V.A.4.5.1.

Many of the decisions adopting the more lenient approach concern cases in which a claim alternative, dependent claims or an entire claim category has been deleted. On these cases see chapter V.A.4.5.4j). In the following, some further decisions are summarised in which the boards following this approach have dealt with amendments other than deletions of claims or claim alternatives.

In ex parte case **T 1294/16** the board observed that the example of exceptional circumstances provided in the explanatory remarks (namely a new objection raised by the board) suggested that exceptionality was not necessarily linked to events being exceptional in the sense of deviating from the expected, but could also be caused by considerations related to the legal framework, notably the principles underlying the RPBA. Art. 12 and 13 RPBA implemented the "convergent approach", the **major motivation** for which was the **procedural economy** of the appeal proceedings. The board deduced from this that if admittance of a (late-filed) submission was not detrimental to procedural

economy, it was appropriate to accept that there were "exceptional circumstances" within the meaning of Art. 13(2) RPBA, provided that this did not adversely affect the other party. In the case in hand, the board admitted the three late-filed auxiliary requests because they were filed in ex parte proceedings and the board was able to deal with the amendment without undue delay during the oral proceedings.

In **T 2465/19** (likewise ex parte) the claims and the adapted description (main request) had been filed as a response to the **express invitation of the board** in its communication under Art. 15(1) RPBA to file such amended application documents. The board was satisfied that the amendments prima facie appeared suitable to overcome the outstanding objections and admitted the request under Art. 13(2) RPBA. In the board's view, Art. 12 and 13 RPBA mainly served to prevent the raising of issues that could not be expected to be treated by other parties or the board within the foreseeable extent of the appeal proceedings.

In inter partes case **T 339/19**, in which the respondent replaced two percentage ranges by two percentage values in its new main request, the board agreed with the interpretation of "exceptional circumstances" explained in **T 1294/16** and held that "exceptional circumstances" were those that compromised neither the procedural rights of the other party, nor procedural economy. The new main request had been filed after receipt of the preliminary opinion, which had not raised any points of fact or of law that had not already been addressed. But the board found it a good-faith attempt to overcome the inventive step objection raised against the main request then on file. Moreover the request did not raise new issues, could be dealt with within the current framework of proceedings and posed no additional difficulties or surprises for either the other party or the board.

Decision **T 1294/16** was also followed in **T 2920/18**, in which the board added that a teleological interpretation of "exceptional circumstances" which considered the purpose of the EPO's power to disregard late-filed facts or evidence and the discretionary power to refuse new requests as enshrined in Art. 114(2) EPC and Art. 123(1) EPC seemed to support this view. Indeed, it followed from the preparatory documents to the EPC 1973 (cf. **T 122/84**, **T 951/91**) that this procedural possibility was intended to prevent the parties from improperly delaying the proceedings. In particular, it served to **ensure** the principles of **procedural economy** and of **procedural fairness**. The power to disregard late submissions under the EPC did not constitute a procedural end in itself.

In **T 1686/21**, concerning a new specific combination of features, the board likewise held that exceptional circumstances could justify the admissibility of a request filed for the first time at the oral proceedings before the board even when the amendment were made in response to an objection raised long ago. In the case in hand, the board held that the amendment, which clearly solved the issue raised against the patent as maintained, could not be considered surprising for the appellant in such a way as to negatively affect its position in the appeal proceedings. Furthermore, the amendment did not give rise to new objections and was not detrimental to procedural economy. The board also pointed out that, in view of the **large number of different objections** raised under Art. 76(1) EPC, the number of requests to be filed at the very beginning of the appeal proceedings in order to provide appropriate fall-back positions for every possible outcome of the assessment of

compliance with Art. 76(1) EPC would have been extremely high and therefore not compliant with procedural efficiency.

The case in **T 1774/17** concerned a clarifying claim-amendment during oral proceedings which was **not objected to by the other party**. The single-word amendment which was intended to overcome an Art. 123(2) EPC objection merely made explicit a feature which the opposition division had already considered to be implicit in the request on which the decision under appeal was based. The board therefore decided to admit the request. The other party's agreement was also mentioned in **T 1294/16** as an element to be taken into account when establishing exceptional circumstances.

For further inter partes cases in which amendments were not detrimental to procedural economy and did not negatively affect any other party, see e.g. **T 1055/17**, **T 732/21**, **T 1758/22**.

See however also those decisions cited in chapter V.A.4.5.1d) to V.A.4.5.1g), which advocate a stricter approach to the interpretation of Art. 13(2) RPBA, focussing on the time of filing and the party's duty to facilitate due and swift conduct of the proceedings.

l) Right to be heard violated and no other party affected

In **T 545/18** the appellant (applicant) submitted for the first time during the oral proceedings before the board that its right to be heard had been violated in the first-instance proceedings. The board considered that, given the great importance attached to the right to be heard in the EPC and in the case law and the facts that no other party was affected by the late raising of this objection and that the board was in a position to take a decision on this issue without postponing the oral proceedings, there were exceptional circumstances within the meaning of Art. 13(2) RPBA. See likewise **T 2111/19**.

m) Prima facie and clear allowability

In **T 2482/22**, which concerned the last stage of appeal proceedings, the board rejected the argument that concerns of validity of the patents issued by the EPO had to trump any other considerations. The legislator had seen this differently, as evident from Art. 12(2) RPBA. As a consequence, the possibility for a party to change its case or add to it was very limited, and increasingly so as the appeal procedure progressed. See also the summary in chapter V.A.4.5.1d). See also **T 967/16**, in which the board found that there was no established "last chance" doctrine or any absolute right for a patent proprietor to such a "last chance" request (with reference to CLB, 9th edn. 2019, V.A.4.12.7, and to **T 837/07** and **T 1624/16**).

In **T 1185/17** the appellant argued that auxiliary request 1, filed after notification of the summons to oral proceedings, overcame the objection under Art. 123(2) EPC referenced in the board's preliminary opinion and was prima facie allowable. The board, however, underlined that these were criteria under Art. 13(1) RPBA that applied to any amendment of the party's appeal case after it had filed its grounds of appeal and therefore could not

simultaneously be cogent reasons justifying exceptional circumstances for taking an amendment into account under Art. 13(2) RPBA. See also **T 2787/17**.

In **T 2964/18** the board held that the question of whether auxiliary requests 2a and 2b might be clearly allowable had no bearing on its conclusion that no exceptional circumstances existed that would justify the filing shortly before the oral proceedings. Similarly see **T 1058/20**, according to which prima facie allowability as such did not justify exceptional circumstances under Art. 13(2) RPBA. See also **T 975/20**, **T 1959/19** and **T 1610/22**.

However, decisions in which clear allowability together with the fact that no other party was negatively affected were considered to constitute exceptional circumstances and the late-filed requests were admitted are contained in chapter V.A.4.5.4k) "Amendment not detrimental to procedural economy and no other party negatively affected". See also chapter V.A.4.5.4 j) on "Deletion of claims or alternatives in claims". In **T 541/20** the board emphasised that it would be at odds with one of the declared aims of the RPBA, namely "to increase efficiency, by reducing the number of issues to be treated", that a board could not consider the criterion of prima facie allowability when deciding on the admittance of a request which simplified the case in hand in a substantial manner (by deletion of dependent claims).

In other situations, taking prima facie allowability as a criterion for exercising discretion can result in a refusal to admit the filed set of claims even where it was a timely response to new objections. On this see chapter V.A.4.5.4 e) "No carte blanche to amend claims at will – criteria set out in Articles 13(1) and 12(4) RPBA".

n) Editorial amendments to remove inconsistencies and typographical errors

In **T 131/18** the main request at issue (filed after notification of the summons to oral proceedings) was, save for two amendments, identical in wording and content to auxiliary request 3, which had already been filed in response to the reply and which the board considered to meet the conditions for admission under Art. 13(1) RPBA. The two amendments in the main request served to clear up inconsistencies remaining in auxiliary request 3 (wording incompatible with Art. 123(2) EPC removed from claim 1 but left in dependent claim 2, and an unclear expression replaced in claim 1 but not in claim 6). The board concurred with the appellant that the amendments were merely editorial changes occasioned chiefly by its communication under Art. 15(1) RPBA, and classed this as an exceptional circumstance within the meaning of Art. 13(2) RPBA. Art. 13(2) RPBA had not been intended to rule out entirely the possibility of making minor amendments such as ones correcting obvious discrepancies or grammatical errors, which were admissible under R. 139 EPC for instance, once the summons to oral proceedings had been issued. See also **T 911/20**, in which a linguistic mistake was corrected that had first been objected to at the oral proceedings before the board.

Similarly, in **T 676/21**, the board admitted a new auxiliary request 1, filed during the oral proceedings before the board, in which a typographical error had been corrected. This typographical error was already contained in the claims as maintained by the opposition

division and contravened Art. 123(3) EPC. It had been overlooked by all up to the oral proceedings.

In **T 1558/22**, by contrast, the board refused to admit an amendment filed at the oral proceedings that went beyond correcting obvious inconsistencies or grammatical errors. The correction took the form of deleting method claims 12 and 13, which, according to the patent proprietor, contained an obvious error in that certain – clearly intended – features had been left out by mistake. The board, however, could not see any obvious error; nor did it consider it obvious what had originally been intended. It held that the proprietor was obliged, as part of its procedural duty to act diligently, to go through its own requests again ahead of the oral proceedings, and to correct them if necessary.

o) Adaptation of the description

In **T 1968/18** the board took the view that the filing of amended description pages resulted in an amendment to the patent proprietor's appeal case. However, in the board's view the term "exceptional circumstances" was not restricted to new or unforeseen developments in the appeal proceedings but could be interpreted more broadly (e.g. **T 713/14**, **T 1294/16**, **T 545/18**, **T 661/18** and **T 1598/18**). The board pointed out that according to established case law, if the claims of a patent as granted were amended, the description had to be made consistent therewith (e.g. **T 977/94**, **T 1883/11**, **T 1252/11**, **T 237/16**, **T 987/16**, **T 1024/18** and **T 121/20**). Moreover it was established practice of the boards of appeal to deal with the question of adapting the description only after the board had concluded that the claims of the patent as amended were allowable. Against this background, the board saw exceptional circumstances in that the amended description pages were filed to adapt the description to the claims of the main request, which was considered allowable.

Referring to **T 1968/18**, the board in **T 1695/21** confirmed the view that an adapted description should normally only be filed after the board has concluded that there is an allowable version of the claims. See also **T 2465/19**.

See also chapter V.A.4.2.3k) on whether adapting the description is even to be treated as an amendment. The board in **T 2178/17**, for instance, considered that it was not.

p) Response to a large number of objections

In **T 24/18** the proprietor had argued among other things that the late filing of auxiliary requests 2a and 2b was justified by the change of opinion of the board and the vagueness of the relevant objections of the opponents. The reason for not having filed these requests earlier was that the proprietor had not wanted to cover all possible permutations of amendments as this would have led to an excessive number of requests due to the large number of objections raised. The board rejected this argumentation as the circumstances cited by the proprietor appeared to describe a fairly normal course of events. It was not uncommon for the board to modify its preliminary opinion in view of the details discussed or the questions raised during the oral proceedings. The allegedly high number of objections was also not a reason to justify the late filing of requests, because this was by no means an exceptional circumstance. The board further considered that the fact that the

requests would not present the opponents with completely new subject-matter, was not relevant when exercising the board's limited discretion under Art. 13(2) RPBA.

In **T 1686/21**, on the other hand, the board pointed out that, in view of the large number of different objections raised under Art. 76(1) EPC, the number of requests to be filed at the very beginning of the appeal proceedings in order to provide appropriate fall-back positions for every possible outcome of the assessment of compliance with Art. 76(1) EPC would have been extremely high and therefore not compliant with procedural efficiency. The board considered this to be an exceptional circumstance.

q) Requests reordered

In **T 1436/19** the appellant (patent proprietor) justified the proposed reordering by referring to the need for procedural economy in view of the preliminary opinion of the board, which stated that auxiliary request 4 was likely to overcome all the objections raised under Art. 83 EPC, Art. 84 EPC and Art. 123(2) EPC. The board decided that the reordering of the requests constituted an amendment to the appellant's appeal case and that it could not be taken into account because, inter alia, allowing the proposed reordering would force the board to first decide on a **fully new main request** not underlying the decision under appeal. This would be contrary to Art. 12(2) RPBA. In fact, the proposed reordering of requests would potentially lead to a situation where the board would have to remit the case to the department of first instance without having decided on requests underlying the decision under appeal still on file. This would be contrary to the scope of the appeal proceedings and might be also **detrimental to procedural economy as a whole**.

In **T 2166/22** the board admitted the change of order of the auxiliary requests. It pointed out that the **factual and legal framework** of the respondent's (proprietor's) appeal case had **not changed** with the reordering of the auxiliary requests. Indeed, all the auxiliary requests had been submitted in opposition proceedings and resubmitted with the reply to the statement of grounds. Moreover, contrary to the appellant's argument, the change of order did not affect the procedural economy.

For a further example where a renumbered request was admitted, see **T 369/22**.

See also chapter V.A.4.2.3i) on the different views on whether reordering requests amounts to an amendment of the appeal case.

r) Procedural requests – requests for non-admittance of other party's submissions

In **T 847/20** the admittance of a request submitted with the statement of grounds of appeal was challenged by the respondent (opponent) only during oral proceedings. The board considered that the objection to admittance of this request should have been raised in the respondent's rejoinder and exercised its discretion under Art. 13(2) RPBA not to admit it into the proceedings.

In **T 1774/21** the appellant had raised an allegedly new line of attack against a feature of the main request (patent as maintained) in its statement of grounds of appeal. The

respondent had requested only in its response to the board's communication under Art. 15(1) RPBA that it not be admitted into the proceedings pursuant to Art. 12(2), (4) and (6) RPBA. The board rejected this request and did not agree with the respondent's argument that it was under the obligation, ex officio, to assess and decide on admittance of this attack. It explained that a board may indeed examine of its own motion the question of whether an objection was filed "late", since it was not restricted to the facts, evidence and arguments provided by the parties and the relief sought (Art. 114(1), second sentence, EPC). Moreover, Art. 114(2) EPC indeed gave the board the power to "disregard facts or evidence" which were not submitted in due time. However, the fact that Art. 114(2) EPC stated that the EPO "may" do so, also meant that a board was not obliged ex officio to examine this issue. Such an obligation could also not be inferred from the principle of ex officio examination laid down in Art. 114(1), first sentence, EPC as in general this principle was to be applied in opposition appeal proceedings in a more restrictive manner (**G 9/91**, OJ 1993, 408). The board disagreed with decision **T 1006/21** in this respect.

On whether a request for non-admittance of a new submission filed after the initial phase of the appeal proceedings constitutes an amendment to the party's appeal case in the first place, see chapter V.A.4.2.3j).

s) Circumstances in the sphere of the representative

(i) Change of representative or clerk

It is the boards' established case law that a change of representative usually does not qualify as an exceptional circumstance that could justify late submission (see e.g. **T 1080/15**, citing CLB, 9th edn. 2019, V.A.4.8.2, as well as **T 1904/16**, **T 301/17**, **T 664/17** and **T 1758/22**, and the other decisions cited there).

In **T 615/17**, for instance, the board confirmed that the admissibility of an amendment could not depend on whether there had been a change of representative, which was down to the choice made by the appellant for its own – possibly even strategic – reasons. It also reiterated that it was ultimately the applicant's responsibility to determine the subject-matter of a patent (**T 382/96**).

The board in **T 1952/19** held that the same considerations applied in cases where responsibility for handling an appeal passed from one of the appellant's clerks to another.

(ii) Representative unable to contact appellant

In **T 2329/15** the board did not accept the appellant's lack of involvement in the prosecution of the case in hand as an exceptional circumstance. Exceptional circumstances generally concerned new or unforeseen developments in the appeal proceedings themselves. In the same vein, see **T 190/19**, in which, in addition, the late-filed amendments prima facie did not overcome all objections raised, gave rise to new objections and did not exclusively relate to objections raised for the first time by the board in its communication under Art. 15(1) RPBA.

4.5.5 Admittance of new facts, objections, arguments and evidence

The main aspects of the case law on admitting new submissions at the third level of the convergent approach have already been outlined in chapter V.A.4.5.1. Structured by topic, the following now looks in more detail at the case law on admitting new facts, objections, arguments and evidence.

a) Waiting for the preliminary opinion not compatible with convergent approach

(i) Preliminary opinion not an invitation to make further submissions

In **T 1756/16** the board refused under Art. 13(2) RPBA to admit an inventive-step objection raised only after the summons to oral proceedings. It did not accept the appellant's argument that it had to be taken into account because it had been submitted within the period set in the board's communication under Art. 15(1) RPBA. It pointed out that – even if, as in this case, a communication under Art. 15(1) RPBA often set the parties a time limit for filing any submissions, which would then be subject to the admission criteria in Art. 114(2) EPC and Art. 13 RPBA – it was not a communication under R. 100(2) EPC inviting them to file observations within a specified period. The appellant had therefore not been entitled to presume that any new objections would be admitted simply because they had been filed before that time limit. See also **T 884/18**.

In **T 1767/18** the board pointed out that a communication sent by a board in preparation for oral proceedings was not binding. It was intended solely as an aid to preparing for the oral proceedings and was precisely not to be understood as an invitation to make new submissions.

(ii) Requirement to respond to the case made by the opposing party

In **T 1108/16** the board found as follows: a party's omitting to carefully analyse the opposing party's written pleadings and preferring to wait for the board's preliminary opinion before responding to an objection (here: objection of extended scope of protection) was at odds with the function of appeal proceedings, which were aimed at reviewing the contested decision, and with the rule designed to ensure the necessary procedural economy that parties had to present their complete cases at an early stage (Art. 106(1) EPC, R. 99(2) EPC and Art. 12(2) RPBA). The respondent's conduct ran counter to procedural economy and so the board refused to admit the arguments it had submitted only in response to the board's communication.

See also chapter V.A.4.5.5f) "Board's opinion based exclusively on earlier party submissions or reasoning of the first-instance division" and chapter V.A.4.5.5g) "Importance of a direct response to the other party's written submissions".

b) Justified response to new requests in the reply to the appeal

In **T 924/22** the respondent (proprietor) had submitted auxiliary request 5 with the reply to the statement of grounds of appeal. The appellant objected to this request in its rejoinder,

which was, in the board's view, the first reasonable opportunity to do so, after the summons but well before the board issued its preliminary opinion. The board held that the appellant (opponent) should be given a fair opportunity to respond to the respondent's requests that they could not foresee when they filed their appeal, even if these requests were those **filed already in opposition**. This situation represented exceptional circumstances under Art. 13(2) RPBA. The board then applied the criteria of Art. 13(1) RPBA referring to Art. 12(4) to (6) RPBA and found that all three criteria (amendment of the appellant's case should be suitable in regard of the relevant issues, not detrimental to procedural economy and not complex) were met.

For decisions on whether the appellant-opponent has to raise objections against auxiliary requests which were not considered in the appealed decision but raised in the first-instance proceedings as early as in its grounds of appeal, see also chapter V.A.4.3.5c)(ii), in particular **T 664/20**, in which the board took a different view.

c) Justified response to new line of arguments in the board's preliminary opinion

While it is incompatible with the convergent approach for a party to wait for the board's communication under Art. 15(1) RPBA instead of responding directly to the other parties' submissions (see chapter V.A.4.5.5a) above), a new line of arguments in that communication may well give rise to exceptional circumstances or at least be taken into account in assessing whether such circumstances exist.

In **T 1309/16** the board admitted new citations (D23-D25) forming common general knowledge that had been filed in response to a new line of argument in its preliminary opinion.

In **T 1038/18** the appellant (opponent), in reply to the preliminary opinion expressed by the board in its communication under Art. 15(1) RPBA, submitted for the first time during the appeal proceedings arguments of lack of inventive step over document D1 in respect of a claimed feature that did not correspond to the features identified by the opposition division as new but had subsequently been identified in the board's preliminary opinion as the sole distinguishing feature over document D1. The board did not agree with the respondent (patent proprietor), who objected that the appellant's arguments could have been submitted with the statement of grounds of appeal as precautionary measure and therefore should not be admitted. It instead acknowledged cogent reasons justifying exceptional circumstances and, in the exercise of its discretion under Art. 13(2) RPBA, admitted the appellant's arguments into the proceedings.

In **T 1287/21** the validity of Annexes A to C, which served to prove the identity of a product used in the examples of the patent, was for the first time questioned in the proceedings by the board in its preliminary opinion. The appellant had not previously contested this evidence. In the board's view the submission of Annexes E and F in response to the new arguments set out in the preliminary opinion was therefore justified by exceptional circumstances. See also **T 1756/21** (expert statement in reaction to a new argument of the board).

d) Justified response to a reweighting of the case in the board's preliminary opinion

In **T 1780/19** the respondent (patent proprietor) submitted test report P6' after receiving the summons. The board viewed the repeated test reported there as supplementing the test carried out by the appellant (opponent) and described in E21. E21 had already been discussed in the opposition proceedings, but another finding had then been added on appeal. In its preliminary opinion, the board attached particular importance to this addition, which resulted in a reweighting of the matters at issue in the case. The board found that the filing of the repeated test in P6' was to be seen as a response to this. Moreover, consideration of P6' did not disadvantage the appellant, who had opened the way for this amendment by submitting an incomplete test report.

See also **T 935/19** (new submissions relating to Art. 83 EPC in response to a point made clear in the board's preliminary opinion).

e) Justified response to new developments in the case following the communication under Article 15(1) RPBA

In **T 415/20** D15 and D16 were ISO standards filed two days before the oral proceedings before the board in support of an argument concerning the measurement in the report D14. D15 and D16 were submitted in reaction to an argument of appellant I raised only two weeks before the oral proceedings. Thus, the submission of D15 and D16 resulted from the development of the case on appeal and took place at the **earliest possible point in time**. This, in the board's view, constituted exceptional circumstances in favour of their admittance in the sense of Art. 13(2) RPBA. In **T 1411/19** the appellant raised an objection of lack of inventive step to claim 1 of auxiliary request 1 on the basis of documents D1 and D2 for the first time during oral proceedings before the board. Its related submissions went well beyond the objection, likewise based on documents D1 and D2, previously raised in the written proceedings to the subject-matter of granted claim 4. However, these new submissions had followed a change in the interpretation of claim 1 of the auxiliary request in the light of the arguments made during the oral proceedings and a discussion, for the first time, of certain aspects of the disclosure of D1. The board held that, in view of this new legal and factual situation, there were exceptional circumstances within the meaning of Art. 13(2) RPBA which justified the admission of the new objection on grounds of procedural fairness.

f) Board's opinion based exclusively on earlier party submissions or reasoning of the first-instance division

In **T 908/19** the appellant (opponent) justified the late submission of a further document and new lines of attack only at the oral proceedings by arguing that neither the document nor the objections could have been raised earlier since they were filed in response to the board's preliminary opinion expressed in the annex to the summons. The board could not accept this argument, as its preliminary opinion had been based exclusively on the submissions made by the parties in the grounds of appeal and the reply. Nor had the appellant identified any particular aspect that might be new or surprising to it, but rather appeared motivated by the fact that the board had pronounced itself provisionally in favour

of the respondent. See also **T 2271/17** (summarised above in chapter V.A.4.5.4g)) and **T 1639/18** (ex parte).

As made clear by the board in **T 662/22**, the fact that it had concurred with the patent proprietor's submission on a particular point did not amount to an exceptional circumstance that could justify the admission of new submissions. Indeed, it was in the nature of inter partes proceedings for a board to find one party's arguments more convincing than those made by the other and, as a result, to reach a conclusion in favour of that first party (in this case at the oral proceedings).

In **T 2843/19** the board pointed out that in its communication under Art. 15(1) RPBA it had merely expressed its preliminary opinion that E3 might not be novelty destroying for the subject-matter of granted claim 1. Even if by doing so it had made an assessment of the arguments put forward by the respondent, it had not raised a new issue. This could not be seen as an exceptional circumstance that could justify the late submission of the new objection of lack of inventive step over E3 so soon before the scheduled date for the oral proceedings.

In **T 73/20** the appellant argued that D7 contained experimental evidence responding to a statement by the board in its preliminary opinion regarding an alleged technical prejudice. The board disagreed and pointed out that the board's indications did not give rise to new issues. They merely pointed to the fact that the appellant's new submission was not supported by suitable evidence, as required by Art. 12(3) RPBA. As underlined by the board, a party cannot shift its responsibility under this provision to the board and wait for a negative opinion to complete its case.

See also **T 276/17** (D 23 not admitted, because the board's communication had merely addressed an issue already raised by the opposition division and made the connection with one of the appellant's arguments).

See also the decisions summarised in chapter V.A.4.5.5g) "Importance of a direct response to the other party's written submissions" and **T 684/18** summarised in chapter V.A.4.5.5h) "Inventive step objection following unsuccessful novelty objection".

g) Importance of a direct response to the other party's written submissions

In several decisions, the boards have stressed the importance of a direct response to the other party's written submissions, in particular to the reply to the appeal. It is incumbent upon each party to submit all objections it considers relevant at the earliest possible stage in the proceedings (see, for example, **T 2271/17**).

In **T 1756/16** the board considered that the fact that auxiliary request 1, initially filed with the reply, had been slightly amended again in response to its communication under Art. 15(1) RPBA did not justify the new objection (lack of inventive step) subsequently filed by the appellant, because the new auxiliary request 1 was similar in content to the old one and the appellant had already had an opportunity to respond to the filing of that older request. In this connection, the board observed that the new RPBA instructed the boards

not to send a summons in inter partes proceedings any earlier than two months after receipt of the reply (Art. 15(1) RPBA, only one month since 1 January 2024, see OJ 2023, A103). The aim of this timing was to give parties an opportunity to respond to another party's written reply.

In **T 2843/19** too, the board found that the appellant had not submitted any cogent reasons for not providing its answer to the arguments in the reply to the appeal in direct response to it, but instead only shortly before the oral proceedings. As the board emphasised, the RPBA required that the parties make their submissions in the proceedings in good enough time to enable the board to take them into account when drafting the summons. Where the submissions were intended to counter lines of attack or auxiliary requests that had not already been considered in the contested decision but were submitted by the respondent in its reply to the appeal, filing a rejoinder in response to that reply was the appropriate course of action for the appellant. The board rejected the argument that it was unreasonable to have to present a whole chain of successive lines of argument for every position the board might conceivably take. In inter partes appeal proceedings, the parties had a **duty to facilitate due and swift conduct of the proceedings**, for reasons of fairness towards the other party, but also in order to bring the proceedings to a close within a reasonable period of time.

In **T 2271/17** it was not until the oral proceedings that the appellant (opponent) raised a new inventive step objection against auxiliary request 3 which had been filed already with the reply to the grounds of appeal. The board pointed out that, independently of whether the board's opinion (which had triggered the new submission) was foreseeable, it was the responsibility of the appellant to **prepare for the possibility that the board may decide against it** in relation to a specific objection, and accordingly, to submit all objections it considered relevant at the earliest possible stage in the proceedings.

h) Inventive step objection following unsuccessful novelty objection

In its communication under Art. 15(1) RPBA, the board in **T 684/18** expressed doubts about the arguments the appellant (opponent) had put forward on the novelty of claim 1 of the main request. This prompted the appellant to attack inventive step. The board held that its comment in relation to the novelty of the claimed subject-matter had not in itself given rise to any new issue that could have justified responding with a new attack on inventive step.

In **T 1042/18** the appellant (opponent) had raised new objections of lack of inventive step over D4 or D5, which it had previously taken as a basis for novelty objections. In the board's view, these novelty objections could not be regarded as exceptional circumstances justifying the admission of new objections of lack of inventive step over these documents. The findings in **T 131/01** and **T 597/07** had to be understood against the specific background of those cases and the legal situation at the time (see, by contrast, **T 1029/14**, **T 448/03** and **T 184/17**). In particular, the board held that the finding that it was impossible to substantiate lack of inventive step as a ground for opposition if lack of novelty was already being asserted on the basis of the same document could not be applied in such a general sense to appeal proceedings. Along the same lines **T 1179/17** and **T 1407/18**.

i) Further cases in which the new submissions should have been filed earlier

(i) No right to raise objections against amendments to the patent under Article 123(2) and 84 EPC at any time

In **T 482/18** it was not until the oral proceedings on appeal that the appellant (opponent) raised objections under Art. 123(2) and 84 EPC to a term in the claims according to the main request (identical to the auxiliary request on the basis of which the opposition division had maintained the patent). It had not contested the feature in question under Art. 123(2) EPC before the opposition division, which had rejected a clarity objection to this feature. The board dismissed the opponent's arguments in support of admitting this amendment to its appeal case. In particular, it could see no basis for inferring from Art. 114 EPC 1973 (identical to Art. 114 EPC) any essentially absolute right to raise such objections in any circumstances and at any time or even any duty of the board of the kind asserted by the opponent to investigate of its own motion.

(ii) High number of auxiliary requests generally does not justify late submission

In **T 2964/18** the board rejected the appellant's argument that its new inventive-step objections raised only at the oral proceedings should be admitted in view of the high number of auxiliary requests. In the board's view, in the current case, the number of auxiliary requests (namely seventeen) filed with the reply to the appeal was not excessive, especially in view of the numerous inventive-step objections raised by the appellant in the statement of grounds of appeal. In fact, seven documents had been indicated by the appellant as documents possibly representing the closest prior art.

Likewise in **T 2391/18**, contrary to the appellant's opinion, the board did not see any insurmountable or unreasonable task in dealing with fifteen auxiliary requests which had been filed in a timely manner (with the reply to the statement of grounds of appeal) and comprised a limited number of well-defined amendments, which were moreover repeated and combined in the different auxiliary requests – including the mere deletion of granted claims in some cases. Thus, the lines of attack on novelty and inventive step of the third auxiliary request (now main request) could and should have been raised in a timely response to their filing.

(iii) Late-filed objection that would have equally applied to earlier requests

In **T 1771/17** the appellant (opponent) raised a novelty objection against claim 1 of auxiliary request 2B, which had been filed as a legitimate response to the board's preliminary opinion and so admitted. The board noted that auxiliary request 2B was based on an earlier request already on file and against which no objection had been raised by the appellant in the written proceedings. Since the new novelty objection would have equally applied to the earlier request and the appellant had not provided any cogent reasons why it had not been filed earlier, the board decided not to take it into account.

(iv) New objection or argument based on finding concerning a divisional application

In **T 1266/19** the board recalled that it was established case law that proceedings against a parent and a divisional application are separate independent proceedings. Thus, the facts, evidence, and submissions made or filed in these proceedings were not automatically part of the parent procedure and vice versa. No exceptional circumstances in the sense of Art. 13(2) RPBA could be inferred from decisions relating to a different case, or arguments submitted therein. See also chapters II.F.4.1.1 and II.F.4.1.5.

j) Basis of the appeal proceedings unchanged and amendment not detrimental to procedural economy

On the interpretation of the term "exceptional circumstances" in Art. 13(2) RPBA, the board in **T 988/17** observed that neither Art. 13(2) RPBA nor the related explanatory remarks in CA/3/19 (see also Supplementary publication 2, OJ 2020, 60) explained how to determine in general whether circumstances are "exceptional". However, the remarks did mention, as an example of such circumstances, situations where the board raised an objection for the first time in a communication. According to these remarks, the changed basis of the appeal proceedings in such a situation justified amending submissions. The board concluded that the question of whether, conversely, amended submissions also changed the basis of the appeal proceedings was thus a possible criterion to be applied when assessing whether the circumstances were exceptional. In addition, the board had to consider the criteria under Art. 13(1) RPBA when exercising its discretion under Art. 13(2) RPBA. In the case before it, the board concluded that the amended submissions (on whether there was an inventive step), which were based on facts and evidence already submitted earlier on in the appeal proceedings, did not change the basis of the proceedings, helped to resolve the issue raised and were therefore not detrimental to procedural economy. It therefore exercised its discretion to admit the new submissions into the proceedings.

k) Immediately apparent that objection raised against different request also applies to request at issue

In **T 2219/18** the board considered that there were exceptional circumstances in the case in hand, because the arguments submitted by the opponent against claim 1 of auxiliary request 3 during oral proceedings were entirely identical with the arguments submitted in the statement of grounds of appeal against claim 1 of auxiliary request 1. According to the board it was immediately apparent that these arguments likewise applied to claim 1 of auxiliary request 3. Consequently, the opponent's submissions during oral proceedings were by no means unexpected and were taken into consideration by the board.

l) Appellant's silence in response to unsubstantiated submissions by the respondent

In **T 1903/17** the respondent (opponent 3) referred in its reply to the appeal to submissions in its notice of opposition, but these merely stated that submissions made with respect to another claim should apply "by analogy". The board considered the objection to be incomplete, as it left it to the other parties and the opposition division or board themselves

to determine which of these submissions were intended to apply by analogy to the contested claims and to what extent. The board emphasised that the reference in the reply to the appeal to these unsubstantiated submissions did not give the appellant (patent proprietor) any reason to address them in substance. The board therefore rejected the respondent's argument that there were exceptional circumstances and that new arguments had to be taken into account to substantiate the objection.

m) Prima facie relevance

A finding of prima facie relevance has not been considered a sufficient reason on its own for admission at this stage of the proceedings (see, for example, **T 2113/17**, **T 187/18**, **T 482/18**, **T 1042/18**, **T 741/20** and **T 1305/21**). However, depending on the circumstances of the case, prima facie relevance has been regarded as a possible factor when considering Art. 13(2) RPBA (see, for example, **T 574/17**, **T 2391/18**, **T 463/19** and **T 307/22**).

In **T 187/18** the board first noted that the appellant's (opponent's) new line of attack against claim 1 based on a new combination of documents was a change to its case. It then recalled that, according to Art. 13(2) RPBA, exceptional circumstances justified by cogent reasons were required and that therefore alleged prima facie relevance was **not per se a consideration**. Since the appellant did not identify any special reasons for the amendment to its case, the board did not admit this new line of attack into the proceedings. See also **T 1042/18** (in which the board found that the possibility that a piece of evidence might be prima facie relevant was not sufficient on its own) and **T 1876/18** (underlining that such an interpretation of the requirements of Art. 13(2) RPBA would allow the indiscriminate admittance of any relevant evidence and objections even if filed at the latest stage of the proceedings which would clearly be against the principle of procedural economy); similarly **T 1305/21**.

In **T 482/18** it was not until the oral proceedings on appeal that the appellant (opponent) raised objections under Art. 123(2) and 84 EPC to a term in the claims according to the main request (identical to the auxiliary request on the basis of which the opposition division had maintained the patent). The board rejected the opponent's argument that under Art. 114(1) EPC 1973 it had to examine compliance with the requirements of Art. 123(2)and 84 EPC of its own motion. It also did not agree that the new submissions were no more than arguments based on facts already at issue in the proceedings. Moreover, it explained that the criterion of prima facie relevance, which the boards – generally rightly – still considered even though it was not referred to in Art. 13(1) RPBA, could not be decisive here in view of the stage reached in the proceedings and the fact that the new submissions had not been occasioned by any statements made in the proceedings before the board.

The board in **T 574/17** confirmed that when exercising its discretion under Art. 13(2) RPBA, a board may also rely on the criteria referred to in Art. 13(1) RPBA. This discretion was inherent to the assessment of whether there were "exceptional circumstances" and was furthermore expressed by the phrase "in principle" (**T 172/17**). The board noted that the criteria referred to in Art. 13(1) RPBA included the suitability of the amendment to

resolve the issues raised. In the case in hand, this translated into whether the newly raised objections against auxiliary request 14 would prima facie be successful. The board pointed out however that it was not necessary to assess the prima facie relevance of an objection in order to conclude that there were no exceptional circumstances under Art. 13(2) RPBA (see **T 2787/17**). Whether it was appropriate to conduct this kind of prima facie assessment depended on the specific circumstances of the case. The case at issue was characterised by the fact that the opposition division had maintained the patent as granted. Auxiliary request 14 had never been examined or objected to. In this specific procedural situation, the board found it appropriate to consider the (lack of) prima facie relevance of the two objections raised for the first time in the oral proceedings before the board. The board explained in this context that the obiter dictum in **G 10/91**, point 19 of the Reasons, was fully respected when the prima facie relevance of an objection was considered in the context of assessing whether there were exceptional circumstances justifying its admittance pursuant to Art. 13(2) RPBA.

In **T 463/19**, the board decided to take the opponent's late-filed document E65a into account under Art. 13(1) and (2) RPBA, in view of the following exceptional circumstances. The document had been objectively difficult to find. It had undoubtedly not been withheld intentionally, with the opponent only becoming aware of it after it had been cited for the first time by a third party in other opposition proceedings. In the board's view, it was prima facie part of the state of the art and was prima facie very relevant.

n) Submission of new evidence

(i) Evidence filed with unnecessary delay

In **T 1904/16** the board did not see any cogent reasons why the new facts and evidence could only have been filed at the latest possible stage of the appeal proceedings, i.e. at the oral proceedings. In the board's view, the issue raised by the new submissions should have been brought up immediately in reply to the statement of grounds of appeal. To admit these submissions into the proceedings would be against the principle of fair proceedings, since the respondent's conduct had led the appellant to believe that this objection was no longer a matter for discussion. Furthermore, it would be **contrary to procedural economy**, since its admission would require additional discussions, which could not be held without adjournment of the proceedings.

In **T 2271/17** the respondent (patent proprietor) submitted experimental data shortly before the oral proceedings before the board, allegedly in reaction to a surprising preliminary opinion of the board in relation to inventive step vis à vis D1. The board however pointed out that the board's communication in relation to this issue was based only on aspects of the case already comprised in the written submissions of the parties in appeal proceedings. Moreover, as admitted by the respondent, the experimental data were available much earlier. In the board's view, this unnecessary delay at least contributed to the appellant having insufficient time before oral proceedings to prepare an appropriate response, and was not appropriately justified.

(ii) Evidence filed at the earliest opportunity

In **T 34/18** the board took account of evidence (two Austrian judgments) submitted around one month before the oral proceedings with a view to rebutting new evidence and arguments previously submitted by the opposing party.

See also **T 415/20** (summarised in chapter V.A.4.5.5e).

o) Allegation of public prior use

In **T 1583/21** the board did not consider it an unforeseen development in appeal proceedings – and so an exceptional circumstance – that an alleged public prior use, which would otherwise have been difficult and required great effort to find, had been discovered by chance as a result of a change of staff. The board, noting the claim that the prior-use rotor blade had been made publicly available in 2005, found that it should in principle have been possible to find it from then on. Besides, admitting a prior-use allegation shortly before oral proceedings was only rarely compatible with the principle of procedural economy.

See also **T 2607/19** (prior use originating from a company belonging to the same group as the opponent).

p) Allegation and evidence of common general knowledge

In **T 1759/17** the board observed that evidence of common general knowledge could be filed at a later stage if it served to back up arguments that had already been put forward, e.g. to solve a dispute over whether facts relied on by a party were common general knowledge. This however was not the case here because the document at issue presented new information which had not been argued before to be part of the common general knowledge.

q) Decisions and opinions by national courts filed at the earliest opportunity

In **T 526/21** a decision and an opinion were handed down by a UK court (D49) and a Swiss court (D50) respectively in national proceedings concerning the patent at issue and filed by appellant 1 (opponent 1) after summons to oral proceedings had been notified. The board noted that, according to established case law, in the interest of the **harmonisation** of national and international rules of law, the boards of appeal will take into consideration decisions and opinions rendered by national courts in interpreting the law (**G 5/83**, OJ 1985, 64, point 6 of the Reasons). Such considerations did not exonerate a board from its duty as an independent judicial body to interpret and apply the EPC (**T 154/04**). The board acknowledged exceptional circumstances in the sense of Art. 13(2) RPBA and admitted the documents into the appeal proceedings. See also **T 1057/21**.

r) Filing of translations

Whether a board admitted a translation filed at this late stage of proceedings depended on the circumstances of the case.

In **T 1720/20** the board admitted D14 (certified translation of the bibliographic data of the Chinese priority document of the patent in suit), filed by the appellant (patent proprietor) with its statement of grounds of appeal. D16 (another certified translation of the bibliographic data of the priority document), filed by the respondent (opponent) in reply to the communication under Art. 15(1) RPBA, was also admitted. In view of the **considerable cost of a certified translation**, the board considered it unreasonable that in such circumstances the respondent should have filed the certified translation as a precautionary measure in response to the statement of grounds of appeal.

In **T 1795/19**, however, the board could not see any cogent reasons for exceptional circumstances. In particular, it saw no reason why the opponent had waited until the oral proceedings to submit an improved translation. In the board's view, the opponent had to have known from the outset that the previous machine translation was in places difficult or even impossible to understand. The board also rejected any analogy with Art. 14(2) EPC.

s) Circumstances in the sphere of the representative

In **T 1904/16** the board considered that the belated submissions (new evidence and new line of argument concerning public availability of D16) were not justified by the change of representative shortly before the oral proceedings. It recalled that a change of representative was a fact which belonged to the sphere of the party affected and, being extraneous to the proceedings, could not influence the decision whether a procedural action had been performed in time. On the contrary, a new representative was bound by the procedural actions performed by their predecessor (**T 1585/05**). The board concluded that a change of representative as such was not a sufficient justification for late filings (citing CLB, 9th edn. 2019, V.A.4.8.2).

t) No absolute right to discussion of all objections raised at first instance

In **T 48/17** the board observed that the EPC did not confer on opponents any absolute right to have all objections they raised at first instance discussed. In this case, the opposition division had allowed the opponent's opposition. Given the main purpose of appeal proceedings, the chief effect of the patent proprietor's appeal was that the contested decision would be reviewed in light of the objections on which it was based. Other admissible objections before the opposition division would have to be expressly raised in the reply to the appeal. If the objections raised at the oral proceedings on appeal had been admitted, the patent proprietor would not have had any opportunity to prepare for this. Such an approach would be at odds with both the principle of procedural economy and the right to a fair hearing.

u) Further illustration of the technical teaching by means of photographs

In **T 100/18** the appellant (patent proprietor) produced photographs at the oral proceedings with a view to using them for illustrative purposes. The board, however, found that the wish to make additional use of photographs to illustrate the teaching already disclosed by drawings in the patent and in the prior art prior was not an exceptional circumstance within the meaning of Art. 13(2) RPBA.

5. Parallel proceedings

The board in **T 18/09** stressed that, in the case of parallel proceedings before a national court and the boards of appeal, parties should inform both tribunals of the position as early as possible and ask the appropriate tribunal for acceleration in order to avoid duplication of proceedings. Whether acceleration is requested by one party, or both or all parties in agreement, or by a national court, all parties must accept a strict procedural framework including short time limits. It must also be understood that acceleration can have no effect on the equal treatment of all parties and cannot confer any advantage on any one party.

6. Change in composition of a board

Article 8 RPBA sets out the consequences of a change in the composition of a board. According to Art. 8(1) RPBA, if the composition of a board is changed after oral proceedings, the parties shall be informed that, at the request of any party, fresh oral proceedings shall be held before the Board in its new composition. In **T 956/19** the board made clear that in view of Art. 8(2) RPBA any fresh oral proceedings would be restricted to any submissions not decided on in the preceding interlocutory decision.

7. Termination of appeal proceedings

7.1. Closure of the substantive debate

Article 15(5) RPBA reads: "When a case is ready for decision during oral proceedings, the Chair shall state the final requests of the parties and declare the debate closed. No submissions may be made by the parties after the closure of the debate unless the Board decides to re-open the debate."

According to the established practice, the closing of the debate marks the last moment in the oral proceedings at which parties can still make submissions.

As long ago as **T 595/90** (OJ 1994, 695) it was noted that submissions filed after closure of the debate could not be taken into account unless the board decided to reopen the debate.

In **T 577/11** the board stated that as to the significance of the closing of the debate, the Enlarged Board confirmed in **G 12/91** (OJ 1994, 285) that, once the debate has been closed, further submissions by the parties must be disregarded unless the department allows the parties to present comments within a fixed time limit or decides to re-open oral

proceedings for further substantive debate of the issues. These considerations of principle equally apply to proceedings before the boards of appeal (cf. **R 10/08**, **R 14/10**). Hence, the closing and also, as a rule, the re-opening of the debate are at the board's discretion.

7.1.1 Decision taken as the file stands

In **T 784/91** the board took the view that if in ex parte proceedings the appellant indicated that he did not wish to comment on the case, this could be construed as signifying agreement to a decision being taken on the case as the file stood. See also **T 230/99**.

7.1.2 Proceedings after delivery of the decision

In **T 843/91** (OJ 1994, 818) it was stated that once a decision had been taken the board was no longer empowered or competent to take any further action apart from drafting the written decision (see also **T 296/93**, OJ 1995, 627, where the board disregarded statements filed after the announcement of the decision, and **T 515/94**). In **T 304/92** the respondent's request to file new claims after the Chair had announced the board's decision was rejected, but recorded (with the response) in the summary of facts.

However, in **T 212/88** (OJ 1992, 28) a request for apportionment of costs submitted after the substantive decision had been announced at the end of the oral proceedings had been, exceptionally, admitted. In **T 598/92** an error in a claim was corrected at the request of the appellant one day after the decision was delivered at the end of oral proceedings.

After the board in **T 1518/11** had announced its decision to dismiss the appeal against the refusal of the application in suit and closed the oral proceedings, the appellant stated by letter that the appeal was withdrawn. However, since the decision had already been announced at the oral proceedings and thereby became effective on that day, the appeal proceedings had already terminated (following **T 843/91**, OJ 1994, 818) and the appellant's submission made after the announcement of the board's decision was without any legal effect. Furthermore, a statement of withdrawal of appeal made by the (sole) appellant after the final decision of the board had been announced at oral proceedings did not relieve the board of its duty to issue the decision in writing, setting out the reasons for the decision, and notify the appellant of it (following **T 1033/04**). See also **T 2264/18** and **T 437/21**.

7.2. Interlocutory decisions of a board

The boards issue interlocutory decisions on the admissibility of the appeal (**T 152/82**, OJ 1984, 301), on re-establishment in respect of the time limits for appeal (**T 315/87** of 14 February 1989 and **T 369/91**, OJ 1993, 561), on the admissibility of an opposition (**T 152/95** of 3 July 1996), and to inform the public rapidly (pending the final decision) that a mention of grant in the European Patent Bulletin was incorrect because of the appeal's suspensive effect (**J 28/94**, OJ 1995, 742). Referral of a point of law to the Enlarged Board is also an interlocutory decision.

7.3. Withdrawal of the appeal

Under the EPC it is possible to withdraw a patent application, opposition or appeal. Decision **J 19/82** (OJ 1984, 6) ruled that partial withdrawal is also possible.

7.3.1 Article 114(1) EPC and withdrawal of the appeal

Under Art. 114(1) EPC the EPO shall examine the facts of its own motion in proceedings before it. The question has arisen whether this is relevant in the event of the withdrawal of the appeal.

In **G 7/91** and **G 8/91** (OJ 1993, 346 and 356) the Enlarged Board ruled that as far as the substantive issues settled by the contested decision at first instance were concerned, appeal proceedings – whether ex parte or inter partes – were terminated when the sole appellant withdrew his appeal. The Enlarged Board found that the provision of Art. 114(1) EPC 1973 did not allow for continuation of the proceedings once the appeal had been withdrawn. This was evident from the legislative rationale of the EPC. If Art. 114(1) EPC 1973 applied to all withdrawal situations, then the R. 60(2) EPC 1973 (R. 84 EPC) exception for oppositions would be superfluous. Nor was withdrawal of the appeal covered by "relief sought" within the meaning of Art. 114(1), second part of sentence, EPC 1973 to which the EPO would not be restricted in examining the facts; it constituted a procedural act not requiring the consent of the relevant board (point 8 of the Reasons). The appeal procedure was that proper to an administrative court, so any exception from general procedural principles such as the "principle of party disposition" had to be supported by much weightier grounds than in administrative proceedings. Neither Art. 114(1) EPC 1973 nor the interests of the general public or the respondent constituted arguments against this interpretation. Art. 114(1) EPC 1973 was restricted to the examination of the facts. The interests of the general public were primarily safeguarded by the opposition system. It could be assumed that the patent did not disturb those who had not filed an opposition, so there was no need to continue the appeal proceedings in order to safeguard their interests. Nor were the respondents' interests any more in need of protection if they had not themselves filed an appeal, as was explained in detail in **G 2/91** (OJ 1992, 206). Finally, the Enlarged Board pointed out that when the sole appellant withdrew his appeal, the suspensive effect of the appeal lapsed and the opposition division's decision thus became final as regards the substantive issue.

7.3.2 Board's powers to decide on issues after withdrawal of the appeal

If the sole appellant says he has withdrawn his appeal, but the parties are in dispute as to whether he did so admissibly, then the board is empowered to rule on that issue (**T 659/92**, OJ 1995, 519).

After withdrawal of an appeal it is still permissible to decide on ancillary questions (**T 85/84**). Thus in **J 12/86** (OJ 1988, 83), **T 41/82** (OJ 1982, 256) and **T 773/91**, the board of appeal dealt with requests for reimbursement of the appeal fee filed after withdrawal of the appeal, and in **T 117/86** (OJ 1989, 401), **T 323/89** (OJ 1992, 169), **T 614/89** and **T 765/89** with requests for apportionment of costs.

In **T 333/20**, the board observed that a withdrawal of the appeal brought the proceedings to a close as regards the substantive merits of the appeal case itself but not as regards requests relating to issues not settled by the withdrawal. The request for reimbursement of the appeal fee filed by the appellant on withdrawing the appeal was therefore not covered by the closure of the proceedings (see **T 41/82**, OJ 1982, 256; **T 89/84**, OJ 1984, 562; **J 12/86**, OJ 1988, 83; **T 773/91; J 37/97** and **T 433/21**).

7.3.3 Partial withdrawal of appeal by sole appellant and opponent

Partial withdrawal of an appeal by the sole appellant (opponent) following an allowable limitation of the patent's subject-matter under Art. 123 EPC 1973 during appeal proceedings deprived the board of its discretionary power to examine the substantive merits of the remaining, limited subject-matter. The patent had to therefore be granted in its amended form (**T 6/92** and **T 304/99**). In **T 127/05** the board recalled that an opponent who was the sole appellant had the possibility of withdrawing his appeal if he found that the outcome would be disadvantageous to himself. In **G 7/91** and **G 8/91** (OJ 1993, 346 and 356) the Enlarged Board ruled that as far as the substantive issues settled by the decision at first instance were concerned, appeal proceedings were terminated when the sole appellant withdrew his appeal. It followed that an opponent who was the sole appellant could, if he so wished, force the non-appealing patent proprietor to "live with" a deficiency which he had introduced. A patent proprietor who filed an appeal could prevent himself from being placed in such a situation. The board also did not agree that decision **G 1/99** (OJ 2001, 381) restricted amendment to a response to an objection first raised in appeal proceedings.

7.3.4 No withdrawal of appeal with retrospective effect

The mere fact that a representative had filed a notice of appeal before taking note of the appellant's adverse instruction did not justify a correction to the effect that no appeal had been filed. The request amounted to a withdrawal of the appeal with retrospective effect, which was not provided for in the EPC (**T 309/03**, OJ 2004, 91).

7.3.5 Request for withdrawal of appeal to be unambiguous

Effective withdrawal does not depend on the term "withdrawal" being used (**J 7/87**, OJ 1988, 422); a request for withdrawal should only be accepted without question if it is completely unqualified and unambiguous (**J 11/80**, OJ 1981, 141); and where any doubt as to a party's intent exists, the declaration made can be construed as a withdrawal only if the related subsequent facts confirm that such is the party's true intent (**J 11/87**, OJ 1988, 367).

A notice of abandonment of the patent was held to be tantamount to withdrawing the appeal in **T 1003/01**. In **T 60/00**, however, the appellant's statement that it had decided not to pursue the appeal was not regarded as unambiguous withdrawal of the appeal. In **T 2347/11** of 16 October 2012 the letter of "withdrawal" of an application in this case did not relate unambiguously and without doubt to the case at issue and thus could not be understood as withdrawal of the appeal. See also **T 2514/11** and **T 158/16**.

According to the board in **T 1244/08**, where an appellant holding a patent revoked by an opposition division stated that it did not agree with the text of the patent as granted and was not proposing an amended one, this was tantamount to a withdrawal of the appeal and immediately brought the proceedings to an end.

7.3.6 Conditional withdrawal of appeal

Procedural declarations may be made with the proviso that certain conditions are met, as long as a case is already pending (**J 16/94**, **T 854/02**) and these conditions do not concern facts outside the proceedings (**T 502/02**). Thus, whereas a conditional appeal is not possible, the conditional withdrawal of an appeal may be valid (**T 6/92**, **T 304/99**). However, the withdrawal of an appeal can take effect only if the appeal is still pending (**T 1402/13** of 25 February 2016).

In addition, the declaration of conditional withdrawal of an appeal is as a rule ineffective if it leaves open whether the appeal proceedings can be continued. This applies in particular if the condition is not purely internal to the proceedings or is unclear (**T 419/21**).

When an appellant has clearly withdrawn his appeal, the appeal proceedings can be closed without a reasoned written decision, even if the appellant has appended to his declaration of withdrawal an obviously non-allowable request for a refund of the appeal fee (**T 1142/04**).

7.3.7 Correction of withdrawal of appeal under Rule 139 EPC

In principle, a correction of a withdrawal of appeal is possible under the EPC (**R 3/22**, **T 695/18**, **T 2148/18**, **T 2474/19**, **T 433/21**), though only in exceptional circumstances has such a request for correction been held allowable (see e.g. **T 2148/18** where the withdrawal and the request for correction of the withdrawal reached the EPO on the same day).

To be allowable, a request for correction of a withdrawal needs to fulfil the strict criteria of R. 139 EPC, as set out e.g. in **T 610/11**, in which the board came to the conclusion that the declaration submitted by the appellant's representative to withdraw the appeal could not be considered to contain an error to be corrected under R. 139 EPC. The board stated that the representative did not make any error when declaring the withdrawal of the appeal. Rather, the appellant gave instructions to the representative, which, as it turned out later, did not represent its true intention. In other words, an error occurred during the process of deciding how the appellant should deal with the application. The board referred to the jurisprudence of the boards of appeal according to which, as a general rule, an applicant is bound by its procedural acts notified to the EPO, provided that the procedural statement was unambiguous and unconditional (cf. **J 11/87**, OJ 1988, 367; **J 27/94**, OJ 1995, 831), and is not allowed to reverse these acts so that they can be considered as never filed (**J 10/87**, OJ 1989, 323; **J 4/97**). The board concluded that in cases where a professional representative acts on behalf of an appellant, an error or mistake in a procedural declaration before the boards of appeal can be corrected under R. 139 EPC only if this error or mistake has been made by the representative himself (see also **J 19/03**).

7.4. Deemed withdrawal of patent application

If a European patent application is finally deemed to be withdrawn after an admissible appeal against a decision refusing it has been filed, the appeal can usually be considered disposed of, because there is no possibility of a European patent being granted for the application. However, where, as in the case before the board, the sole aim of the appeal is to obtain a finding by the board that a substantial procedural violation occurred in the first-instance proceedings, such that the appealed decision is to be set aside and the appeal fee reimbursed, the appeal cannot be dealt with in this way. In these circumstances the appellant has a legitimate interest in receiving a decision on the merits of the appeal (**T 2434/09**).

7.5. Legitimate interest in the continuation of the grant and the appeal proceedings

In **T 36/19** the application was pending for more than 20 years. As the term of a European patent amounts to 20 years from the date of filing (Art. 63(1) EPC), a patent which may eventually be granted for the present application will have already expired. The board nevertheless considered that the appellant still had a legitimate interest in the continuation of the grant and the appeal proceedings. Since a European patent application already confers rights after its publication pursuant to Art. 67 EPC, a grant decision by the EPO, even if taken only after expiry of the patent term, might become relevant for the determination of these rights.

8. Reasons in abridged form

8.1. Abridged reasons under Art. 15(7) RPBA

Under Art. 15(7) RPBA, the reasons for the decision, or parts thereof, may, with the explicit consent of the parties, be put in writing in abridged form.

In **T 1497/17**, the parties agreed that an abridged decision within the meaning of Art. 15(7) RPBA and referring to what the board had set out in its summons could be issued on the points of novelty and inventive step. See also **T 561/18**, **T 947/19** and **T 1050/19**.

8.2. Abridged reasons under Art. 15(8) RPBA

Art. 15(8) RPBA states: if the board agrees with the finding of the department which issued the decision under appeal, on one or more issues, and with the reasons given for it in the decision under appeal, the board may put the reasons for its decision in abridged form in respect of that issue.

In **T 1687/17** the board noted that all the relevant arguments raised by the parties during the appeal proceedings had already been put forward and considered in the first-instance proceedings. No new arguments had been presented on appeal, as acknowledged by the parties at the oral proceedings. On all issues, the board agreed with the opposition division's findings and the reasons given for the contested decision and so considered it

expedient to put its decision in abridged form in respect of all those issues, as per Art. 15(8) RPBA.

In **T 2227/15** the board stated that in accordance with Art. 15(8) RPBA, the reasons for its decision were given in abridged form for those issues in respect of which the board agreed with the findings of the opposition division. This clearly did not apply to the appellant's submissions which contained issues on which the impugned decision was not based within the meaning of Art. 12(2) RPBA. Recourse to Art. 15(8) RPBA required that the board agreed with the findings and reasoning of the decision under appeal in respect of one or more issues. The board concluded from this precondition of concurrence with (parts of) the decision under appeal as well as from the legislator's intention (see explanatory notes to Art. 15(7) and (8) RPBA) that in the reasons for the decision in hand it was possible for the board to refer to those parts of the findings and reasons in the decision under appeal with which it agreed. The board followed the similar approach in decision **T 1687/17**. See also **T 2555/16** and **T 1418/17**.

9. Remittal to the department of first instance

9.1. General

9.1.1 Article 111(1) EPC

Under Art. 111(1) EPC, the boards, having examined the allowability of an appeal, decide on it either by exercising any power within the competence of the department which was responsible for the decision appealed or by remitting the case to that department for further prosecution. Art. 111(1) EPC thus establishes the legal framework for the decision-making powers of the boards.

Which of these two options the board chooses will depend on the specific facts of the case before it and is a matter for its discretion.

9.1.2 Article 11 RPBA

Under Art. 11 RPBA the board shall not remit a case to the department whose decision was appealed for further prosecution, unless special reasons present themselves for doing so. As a rule, fundamental deficiencies which are apparent in the proceedings before that department constitute such special reasons.

The RPBA 2020 entered into force on 1 January 2020 (Art. 24and 25(1) RPBA). Art. 11 RPBA was completely revised and applies to any appeal pending on, or filed after, that date of entry into force.

According to the explanatory remarks on Art. 11 RPBA (Supplementary publication 2, OJ 2020), the aim of the new provision is to reduce the likelihood of a "ping-pong" effect between the boards and the departments of first instance and a consequent undue prolongation of the entire proceedings before the EPO. When exercising their discretion under Art. 111 EPC, the boards should take account of this aim. Whether "special

reasons" present themselves is to be decided on a case-by-case basis. The boards should not normally remit a case if they can decide all the issues without undue burden. Decisions **T 1531/16**, **T 1089/17** and **T 335/18** referred to these remarks.

In **T 2154/15** it was further clarified that the RPBA could not deprive the boards of the discretion conferred on them by Art. 111(1) EPC, a point which was explicitly codified in the RPBA themselves, specifically in Art. 23 RPBA; the RPBA did not limit the powers of the boards established in Art. 111 EPC.

In **T 350/17** the board noted that the concept of "special reasons" in Art. 11 RPBA should not be narrowly interpreted in a way which unduly restricts the discretion of the board to remit a case enshrined in Art. 111(1) EPC, as this would be contrary to the spirit of the Convention, which, in case of conflict, takes precedence (see Art. 23 RPBA).

9.1.3 Art. 11 RPBA 2007

Under the old Art. 11 RPBA 2007, the boards were to remit a case to the department of first instance if fundamental deficiencies were apparent in the first-instance proceedings, unless special reasons presented themselves for doing otherwise.

A summary of decisions handed down pursuant to Art. 11 RPBA 2007 can be found in the CLB, 9th edn. 2019, V.A.7. The factors considered by the boards when deciding whether to remit a case included procedural economy (9th edn. 2019, V.A.7.3), non-examined patentability issues (9th edn. 2019, V.A.7.4), new submissions filed on appeal (9th edn. 2019, V.A.7.5), substantial amendments to claims (9th edn. 2019, V.A.7.6) and fundamental deficiencies in the first-instance proceedings (9th edn. 2019, V.A.7.7).

9.2. Exercise of discretion to remit

9.2.1 No absolute right to have issue decided on at two instances

It is the boards' settled case law that parties do not have a fundamental right to have their case examined at two levels of jurisdiction. Accordingly, they have no absolute right to have each and every matter examined at two instances; Art. 111(1), second sentence, EPC leaves it instead to the board's discretion to decide on an appeal either by exercising any power conferred on the department of first instance or by remitting the case to that department (**R 9/10**, **T 83/97**, **T 133/87**, **T 557/94**, **T 402/01** of 21 February 2005, **T 399/04**, **T 1252/05**, **T 1363/10**, **T 1803/14**, **T 1521/15**, **T 418/17**, **T 113/18**). In choosing what to do, the board must consider the circumstances of the individual case, also bearing in mind other factors such as the need for procedural economy (**T 392/89** of 3 July 1990, **T 1376/07**, **T 1253/09**, **T 2266/13**).

It is well-recognised that any party should, where possible, be given the opportunity to have two readings of the important elements of a case (**T 1084/03**, **T 1907/06**, **T 286/09**, **T 1627/17**). Although there is no absolute right to have an issue decided upon at two instances, it is also not the function of the board to consider and decide upon issues which had not been examined at all by the department of first instance (**T 2839/19**).

In **T 270/19** the board noted that the relevant circumstances of the case were to be taken into account when exercising discretion. In particular, consideration was to be given as to whether further investigations would be required, whether the facts of the case had changed significantly since the contested decision and what view the applicant took of the possible "loss of an instance". The weight given to each factor depended on the circumstances of the case in hand.

9.2.2 Remittal and admittance of auxiliary requests

There is no right of the parties to choose in which form the board should exercise its competences under Art. 111(1) EPC. Thus, the board is entitled to decide on the issue of admittance of the auxiliary requests without being bound to the respondent's request for prioritisation of the request for remittal (**T 1731/19**; see also **T 238/19**).

9.2.3 Remittal and scope of review

a) Primary object of appeal proceedings is to review decision under appeal in a judicial manner

In several decisions, the boards have pointed out that Art. 11 RPBA is to be read in conjunction with Art. 12(2) RPBA, which provides that the primary object of the appeal proceedings is to review the decision under appeal in a judicial manner (**T 731/17**).

b) Ex parte proceedings

In ex parte cases too, proceedings before the boards of appeal are primarily concerned with reviewing the contested decision.

In **T 2154/15** the board observed that the legal framework had been interpreted by the Enlarged Board in **G 10/93** (OJ 1995, 172), which had held that in ex parte proceedings the boards of appeal were restricted neither to examination of the grounds for the contested decision nor to the facts and evidence on which that decision was based, and could include new grounds in the proceedings. Proceedings before the boards of appeal in ex parte cases were primarily concerned with examining the contested decision. If, however, there was reason to believe that a condition for patentability might not have been satisfied, the board either incorporated it into the appeal proceedings or ensured by way of referral to the examining division that it was included when examination was resumed. Stating that Art. 111(1) EPC gave the boards discretion and that they could not be deprived of this discretion by the RPBA, the board concluded that the RPBA did not limit the powers of the boards as laid down in Art. 111 EPC.

c) Inter partes proceedings

In **T 1370/15** the board stated that remitting a case because of new submissions would generally be contrary to what was intended by Art. 11 RPBA. It noted that, while the Enlarged Board had found in **G 10/91** (OJ 1993, 420) that the appeal procedure in inter partes cases was less investigative than the procedure before the opposition division,

Art. 114(1) EPC – which required the EPO to examine the facts of its own motion – still applied. This meant that a board was not precluded outright from introducing new facts and evidence in inter partes proceedings. The RPBA similarly did not prohibit a board from raising issues of its own motion. See also **T 862/16**.

9.2.4 TRIPS

Nor does Art. 32 TRIPS limit the board's discretion concerning remittal. In **T 557/94** the board held that Art. 32 TRIPS (which provides for the judicial review of any decision to revoke a patent) did not oblige the reviewing instance to remit the case to the department of first instance, where the department of first instance did not revoke the patent and the reviewing instance intended to deviate from the decision of the first instance. Art. 111 EPC 1973 empowered the board to decide on the merits of the case without restriction and it would be alien to at least the majority of legal systems in the EPC contracting states to limit the power of the reviewing instance in such a way that – dependent upon the "result" of the decision under attack – it would be bound to remit the case to the department of first instance (see also **G 1/97**, OJ 2000, 322).

9.3. Special reasons for remittal

9.3.1 Introduction

Under Art. 11 RPBA, a case is not to be remitted to the department whose decision was appealed, unless special reasons present themselves for doing so.

Whether "special reasons" present themselves is to be decided on a case-by-case basis. If all issues can be decided without undue burden, a board should normally not remit the case (see explanatory remarks on Art. 11 RPBA in Supplementary publication 2, OJ 2020).

In **T 1531/16**, the board held that, in view of the legislative intent reflected in the revised version of Art. 11, first sentence, RPBA, a case should be remitted only if special reasons presented themselves for doing so, i.e. in exceptional cases (see also **T 3247/19**).

When deciding whether or not to remit a case, the boards have to decide whether any special reasons within the meaning of Art. 11 RPBA present themselves. To do so, the boards examine e.g. whether there has been a comprehensive assessment of the case during the proceedings at first instance (see chapter V.A.9.3.2), whether the claims have been substantially amended (see chapter V.A.9.3.5), whether the search was complete (see chapter V.A.9.3.6) and whether the first-instance proceedings have been vitiated by fundamental deficiencies (see chapter V.A.9.4.). Other factors have also been taken into account, such as the need for procedural economy, the length of the proceedings, fairness of the proceedings and whether the parties requested remittal of the case. The weight given to each factor depended on the circumstances of the case in hand.

In essence, the boards tend to find that there are special reasons to remit the case when they would otherwise have to decide on material issues for the first time or in some other

way essentially take the place of the department of first instance to too large an extent in order to bring the case to a conclusion (see e.g. **T 1966/16**).

9.3.2 Non-examined patentability issues

a) Issues undecided at first instance but which become relevant during or after appeal proceedings

Since the main purpose of appeal proceedings is to give a losing party an opportunity to challenge a decision on its merits, remittal in accordance with Art. 111(1) EPC has generally been considered by the boards where essential questions regarding the patentability of the claimed subject-matter have not yet been examined and decided on by the department of first instance. This applies to both ex parte and inter partes proceedings.

In particular, remittal is considered by the boards where a first-instance department has issued a decision against a party based solely on one particular issue which was decisive for the case and left open those that were not or on which comments would have been obiter dicta. This can be the case where at first instance a particular objection determines the fate of the application or patent; in such cases, the department of first instance does not necessarily examine any further objections. Any such further objections can however become relevant where on appeal the objection considered decisive in the first-instance proceedings is overcome or the board overturns the decision on that point (see e.g. **T 986/16)**.

In several such decisions, the board deemed it to constitute special reasons within the meaning of Art. 11 RPBA for remitting the case, as the board would otherwise have had to examine these objections for the first time.

This current practice is in keeping with the primary object of appeal proceedings of reviewing the decision under appeal in a judicial manner (Art. 12(2) RPBA). The boards have repeatedly pointed out that Art. 11 RPBA is to be read in conjunction with Art. 12(2) RPBA, which provides that the primary object of the appeal proceedings is to review the decision under appeal in a judicial manner (**T 731/17**). This principle would not be respected if the board were to conduct a complete examination of the application or patent (**T 1966/16**; see also **T 547/14**, **T 275/15**, **T 1077/17**, **T 1508/17**, **T 2519/17** and **T 3218/19**).

In the cases reported in the following sections, the boards found that there were special reasons justifying remittal to the department of first instance.

b) Primary object of the appeal proceedings

In **T 1966/16** the board stated that the sole ground for the refusal set out in the decision under appeal, namely a lack of inventive step, was not justified. The board held that special reasons were apparent in the case in hand because the examining division had not taken an appealable decision on open issues with respect to Art. 83, 84 and 123(2) EPC. Art. 11 RPBA did not entail the board carrying out a full examination of the application for

compliance with the requirements of Art. 83, 84 and 123(2) EPC, for which no decision at first instance existed yet (see also **T 2519/17**).

In **T 731/17** inventive step over documents D1 to D4 had not yet been assessed in detail. Moreover, it might still have been necessary to investigate whether document D2 belonged to the state of the art under Art. 54(2) EPC at all. Not remitting the case to the examining division would have required the board to perform these tasks in both first- and last-instance proceedings and to effectively replace the examining division rather than review the contested decision in a judicial manner (see also **T 658/17**).

In **T 1627/17** sufficiency of disclosure was the only ground for opposition on which a decision had been taken. All the parties to the appeal proceedings had requested remittal of the case to the opposition division for consideration of the other grounds for opposition raised by the opponent in its notice of opposition (lack of novelty and lack of inventive step). The board stated that, although the EPC did not guarantee the parties an absolute right to have all the issues in the case considered at two instances, it was well recognised that any party could be given the opportunity to have two readings of the important elements of a case. The essential function of an appeal was to consider whether the decision issued by the first-instance department was correct. In the case in hand, the aforementioned facts, including the request made by both parties, were in the board's view special reasons within the meaning of Art. 11 RPBA. See also **T 516/18**.

In **T 2450/17**, the contested decision was based solely on the grounds for opposition under Art. 100(b) and 100(c) EPC. Since the novelty and inventive-step objections raised against the patent had not been fully examined by the department of first instance, the board found that there were special reasons for remitting the case to the department of first instance for further prosecution, as requested by all the parties. Had the case not been remitted, the losing side would have had to accept a first yet final decision on key patentability requirements, without the option to appeal, solely because a decision had already been handed down on other patentability requirements, albeit one that ultimately did not stand up to legal scrutiny. See the similar cases **T 731/17**, **T 1754/15** and **T 1966/16**.

c) Undue burden

Where boards would have to examine patentability issues for the first time, they remit the case if examining these issues constitutes an undue burden. The boards decide on a case-by-case basis whether there are any special reasons within the meaning of Art. 11 RPBA and that is not the case if all the relevant issues can be decided on without undue burden.

Where the basis required to decide on the key patentability issues can only be established in further examination proceedings, this is considered an undue burden (**T 1531/16**; see also **T 601/19**, **T 2669/17**).

A typical scenario is where there is a sole ground for refusal mentioned in the contested decision (e.g. only insufficiency of disclosure) and there are no substantive arguments in the appeal proceedings relating to any patentability issues other than on the sole ground for refusal. If the board considers that there are further open issues relevant to

patentability, e.g. the examination of novelty, inventive step and clarity, the appeal cannot be decided upon without undue burden (**T 3247/19**; see also **T 1650/19**).In **T 578/16** the board stated that ruling on novelty and inventive step for the first time on appeal would constitute an undue burden and run counter to the very purpose of a judicial review within the meaning of Art. 12(2) RPBA (see also **T 411/17**).In **T 131/18**, the outstanding issues were too complex to have been handled by the board from scratch without undue burden.

d) Different interpretation of terms

Where a board of appeal interprets terms differently than the department of first instance, there can be a different outcome and potentially a different view of how the application or patent should be assessed. These are circumstances in which boards have found that a difference in the interpretation of certain terms ultimately leads to special reasons for remitting the case.

This can present itself in the form of a **different interpretation of the prior art**. For example, in **T 1265/15** the board found that the subject-matter of claim 1 of the main request was novel in view of the disclosure of D1 and thus overcame the reasons for refusal given in the decision under appeal. It also found that claim 1 involved an inventive step in view of D1. Having based these findings on a different interpretation of D1 from that in the decision, the board judged it appropriate to remit the case to the examining division for further prosecution, so that it had the opportunity to reassess the invention in view of the other prior art on file.

Another scenario is where the board has a **different interpretation of the claims**. In **T 2024/15** the examining division had based its inventive-step objection on an interpretation of claim 1 which was not in line with either the normal meaning of the terms used or the description in the application. Thus, if the board decided not to remit the case to the department of first instance, it would have to carry out a full examination of the application as to the patentability requirements on the basis of the correct interpretation of the claims. This, however, was the task of the examining division (see **G 10/93**, OJ 1995, 172). The board would even have to determine whether an additional search was necessary. Hence, it concluded that the issues relevant to patentability in this case could not be decided upon without undue burden (see **T 3247/19**) and, despite the long duration of the proceedings, remitted the case to the department of first instance.

In **T 607/17** the board interpreted the wording of claim 1 differently from the opposition division, namely in a substantially broader sense. The facts of the case were fundamentally changed by this new interpretation of the claim wording. The consequence was that the subject-matter of claim 1 of the main request lacked novelty over D1, whereas the appealed decision had concluded that neither D1 nor any other available prior art document anticipated this subject-matter. This meant the board would have to assess the patentability of the subject-matter of claim 1 of the auxiliary requests on the basis of this new interpretation of the claim wording for the first time. This amounted to a fresh case, and that alone justified remitting the case to the department of first instance for further prosecution.

9.3.3 Procedural economy

Procedural economy and minimising overall duration of the proceedings concerning a patent or patent application are principles underlying Art. 11 RPBA. However, there are cases in which other considerations outweigh them. In particular where the board would have to examine certain issues for the first time (as a result of a procedural violation or otherwise), boards have made clear that procedural economy is only one of the considerations when deciding whether there are special reasons for remittal (**T 2002/17**, **T 1028/17)**.

Where the main request in appeal proceedings is different from the patent maintained as amended but the opposition division has exhaustively discussed all the requirements of the EPC that are likewise relevant for assessing the main request, for reasons of procedural economy in particular, it is expedient and reasonable to use the discretion under Art. 111(1) EPC and Art. 11 RPBA for the board to examine and rule itself on the objections raised by the opponent (**T 1561/15**). Procedural economy in itself can speak against remittal, in particular where it is coupled with the interest of legal certainty in the case of a patent that is close to expiry (**T 368/17**).

Where on the other hand the department of first instance has not already discussed all the relevant issues, the scales might tip the other way. For instance in **T 350/17** the board considered that, in the case in hand, the patentee's request to have the question of inventive step examined at two different levels of jurisdiction took precedence over procedural economy, because the patentee had been deprived of a decision at first instance on this matter as a result of the substantial procedural violation.

In **T 894/20** the board observed that inventive step was not among the reasons for the appealed decision. As the primary object of appeal proceedings was to review the decision under appeal, the board considered this, and the fact that the case had been taken considerably out of turn, meaning there were another 14 years of a potential 20-year patent term left to run, to be special reasons for remitting the case to the examining division.

In **T 2017/16** the board remitted the case to the opposition division for consideration of the ground for opposition of lack of inventive step, even though this would inevitably lengthen the proceedings and cause the parties additional costs.

9.3.4 Financial situation of a party

In **T 2092/18** the appellant (patent proprietor) requested that the case not be remitted to the opposition division for a discussion of novelty and inventive step since it would be a financial burden and unfair to him who was a private individual. The board held that special reasons under Art. 11 RPBA were immediately apparent in the case in hand as the contested decision had not dealt with the issues of novelty and inventive step. The board further agreed with the respondent (opponent) that showing particular concern for a party's financial situation would go against the principle of procedural equality of the parties to the

proceedings. Such a consideration could not justify depriving the respondent of a two-instance procedure with respect to issues never considered by the opposition division.

9.3.5 Remittal following amendments to the claims

In the following decisions, remittal was ordered due to substantial amendments to the claims that necessitated further substantive examination.

a) Ex parte cases

In **T 278/17** the contested decision dealt only with the requirements of Art. 76(1) EPC; patentability had not been discussed. Since the request was considerably different from the requests considered in the contested decision, the board's judicial review could cover only Art. 123(2) and 76(1) EPC.

In **T 1534/18**, all the grounds for refusal in the contested decision had been overcome by suitable amendments in the set of claims submitted on appeal. As a result, the contested decision was no longer valid and had to be set aside. Since the facts of the case had become fundamentally different from those on which the examination division had based its decision, the board exercised its discretion to remit the case to the department of first instance for further prosecution given the sheer amount of examination work required for the outstanding issues.

In **T 1007/15**, the amended claims overcame the objections under Art. 83 and 84 EPC on which the contested decision was based. However, the issues of novelty and inventive step had not been discussed in the first-instance examination proceedings, and so the board would have had to examine them for the first time. That would have gone far beyond the primary object of appeal proceedings, which is to review the contested decision in a judicial manner. Moreover, the appellant had agreed to the board's remitting the case and withdrawn its request for oral proceedings in the event that it did so.

In **T 2453/16** the examining division had not assessed the inventive step of the subject-matter of the claims before the board, which differed significantly from the searched claims. The appellant's position was that the cited prior art and the state of the file allowed the board to continue with an assessment of novelty and inventive step. However, the board concluded that in order to decide on the questions of novelty and inventive step, it would have to consider those questions anew in proceedings forming both the first and last instance, thereby effectively replacing the examining division.

For further examples see **T 1278/18** (the amendments to the claims clearly overcame all outstanding objections without introducing new issues; the question of whether or not the claimed invention was inventive had not been addressed in the appealed decision); **T 901/16** (claim 1 of the amended main request overcame the objections which had led to the refusal of the application but it might also be necessary to consider prior art documents other than those mentioned in the decision); **T 2670/18** (the appellant filed amendments to the claims which overcame the objection under Art. 84 EPC); **T 1028/19** (the sole

reason given by the examining division for refusing the set of claims of the main request was not applicable to the subject-matter of the new set of claims).

b) Inter partes cases

In **T 1443/15** the decision under appeal was confined to an assessment of added subject-matter under Art. 100(c) and Art. 123(2) EPC. The set of claims of the main request before the board had overcome the related issues. Having regard to the board's function of reviewing the decision under appeal and given that two of the parties had explicitly requested remittal, the remaining party had not objected to remittal and the opposition division had not ruled on the issues of novelty, inventive step and sufficiency of disclosure, the board considered that there were special reasons for remitting the case to the opposition division for further prosecution.

In **T 1174/15**, the board held that remittal to the opposition division was justified as auxiliary requests 1-3 had not been dealt with in the contested decision or commented on by the opposition division. Moreover, the respondent had requested remittal and the appellant had withdrawn its request to the contrary.

In **T 1174/18** the board remitted the case to the opposition division despite the parties' preference against remittal. The subject-matter of auxiliary request 7 had not been examined by the opposition division as to its patentability. In particular it was questionable whether document D3 was still the most relevant piece of prior art.

c) Discrepancies between the clean and the annotated versions of a request

In **T 353/18**, when admittance of objections to auxiliary request 3 under Art. 123(2) EPC was discussed at the oral proceedings before the board, there turned out to be a discrepancy between the wording of the claim in the clean and the annotated versions of that request. The respondent contended that the clean version was the valid one and that the discrepancy was due to an error when preparing the annotated version of auxiliary request 3. However, having relied on the correctness of the annotated version of auxiliary request 3, the appellant had not provided any written submissions on the specific wording of claim 1 of the clean version, in particular as far as Art. 123(2) EPC was concerned. A ruling on the valid (i.e. clean) version of auxiliary request 3 would therefore have required a substantive discussion for the first time during the oral proceedings before the board, without any prior exchange of arguments between the parties. Handling the case in this way would clearly have run counter to the primary object of the appeal proceedings, which was to review the decision under appeal in a judicial manner.

9.3.6 Incomplete search

a) Features considered non-technical

Where the subject-matter of an application is considered non-technical, the examining division may carry out no search. This can also be the case for individual non-technical features, i.e. no search is carried out against such features and they are not taken into

account in the patentability assessment at the examination stage, e.g. under the COMVIK approach.

In several cases in which boards of appeal considered that the subject-matter of an application or a feature that the examining division deemed non-technical was in fact technical, the boards remitted the case to the examining division. The boards did so because they could not further assess the application without an additional search.

Since the primary object of appeal proceedings is to review the decision of the department of first instance (Art. 12(2) RPBA), where the invention had not yet been searched on the basis of the features since found to be technical, and in some cases novelty and inventive step had not been examined either, the boards considered that special reasons presented themselves to remit the matter to the department of first instance for a search and further examination. See e.g. **T 547/14**, **T 1749/14**, **T 943/16**, **T 658/18** and **T 1984/18**.

b) Closest prior art not suitable or misinterpreted

Where the board finds that the closest prior art used to assess inventive step should be from another field than that from which the department of first instance selected what it considered the closest prior art, the search is incomplete and the board will remit the case for further prosecution (**T 97/14**).

If the examining division finds the invention obvious based on a misinterpretation of a piece of prior art , there is a possibility that the search into the state of the art was stopped too early and was incomplete, justifying remittal of the case (**T 565/17**, **T 2496/17**)).

c) Additional prior-art search necessary

The following cases were remitted to the department of first instance for an additional search.

In **T 1159/15** the board, referring to the established case law, held that a prior art search should have been carried out before refusing the application for lack of inventive step, since the claims contained at least one feature that was not notoriously well known. Since a prior art search was deemed necessary and its outcome could not be anticipated in advance, the assessment of the claimed subject-matter with respect to inventive step (and the other requirements of the EPC) had to be carried out anew. This constituted, in essence, a fresh case going beyond the issues discussed in the decision under appeal.

In **T 1877/19**, amendments to the application documents meant that the subject-matter claimed was no longer based entirely on a combination of claims as originally filed. In view of this, the examining division's search might not have included one of the claimed features, so the board could not be sure that the relevant prior art had been identified for it.

In **T 1928/14** no written prior art had been consulted during the first-instance proceedings. The board was not sure whether the publications cited as A documents in

the international search report covered the aspects of the additional features of claim 1 according to the request in hand. The supplementary European search report merely contained a "no-search declaration".

See also **T 1338/16** (the board was not in a position to decide whether the scope of the search carried out by the department of first instance had also covered the subject-matter of claim 1 according to auxiliary request 5); **T 568/17** (the question arose as to whether the search was complete; this was a question that the board was not equipped to answer); **T 1278/18** (the board stated that since the added feature had been taken from the description and drawings, an additional search for relevant prior art might be necessary); **T 2573/17** (the claims had been amended considerably during the proceedings at first instance and the board had doubts as to whether the search was complete).

9.3.7 Opposition withdrawn

In **T 1627/18** the opposition had been withdrawn and so the question arose as to whether the opposition proceedings should be continued pursuant to R. 84(2) EPC for assessment of the grounds of opposition under Art. 100(a) and 100(b) EPC, which were outstanding issues on which no decision had been taken. The board considered that the circumstances constituted special reasons for remitting the case to the opposition division, as requested by the appellant. After remittal, the opposition division would then have to exercise its discretion as to whether the opposition proceedings should be continued pursuant to R. 84(2) EPC. See also **T 1223/15**, **T 1981/16** and **T 430/17**.

9.4. Remittal following fundamental deficiencies

9.4.1 Article 11 RPBA

Article 11 RPBA states that the board is not to remit a case to the department whose decision was appealed for further prosecution, unless special reasons present themselves for doing so. As a rule, fundamental deficiencies which are apparent in the proceedings before that department constitute such special reasons (see explanatory remarks on Art. 11 RPBA, Supplementary publication 2, OJ 2020).

9.4.2 Article 11 RPBA 2007

Under Art. 11 RPBA 2007, a board was to remit a case to the department of first instance if fundamental deficiencies were apparent in the first-instance proceedings, unless special reasons presented themselves for doing otherwise. In other words, the rule was that a case was to be remitted if a fundamental procedural deficiency had been identified, but a board could exceptionally refrain from doing so if it found that there were special reasons not to. Fundamental deficiencies included a violation of the right to be heard, deficient reasoning for the decision, a breach of Art. 19(2) EPC, a lack of clarity as regards the parties' requests and a failure to hold oral proceedings.

If any special reasons were established, the boards were to refrain from remitting a case to the department of first instance even if there had been fundamental deficiencies in the

proceedings before it. Special reasons identified by the boards against remitting the case included the lengthy duration of the proceedings to date, the age of the application or patent and the fact that the department of first instance had considered all the arguments.

See CLB, 9th edn. 2019, V.A.7.7.

9.4.3 The term "fundamental deficiencies"

The term "fundamental deficiencies" referred to in Art. 11 RPBA and the notion of a "substantial procedural violation" in R. 103(1)(a) EPC are used synonymously (see **T 2231/09**). A "fundamental deficiency" does not appear to be any different from a "substantial procedural violation" (see **T 2346/10**). A board is to remit the case if fundamental deficiencies, such as a substantial procedural violation, are apparent in the first-instance proceedings (**J 16/17**, **T 1414/18**).

9.4.4 Fundamental deficiencies

a) Violation of right to be heard

According to the established case law of the boards of appeal, the violation of the right to be heard under Art. 113(1) EPC is a fundamental procedural deficiency in the first-instance proceedings that amounts to a special reason within the meaning of Art. 11 RPBA and justifies remittal to the department that issued the contested decision. The right to be heard was found to have been violated in the following cases:

T 2538/18 (lack of opportunity to make comments), **T 1879/17** (the opposition division had violated the patent proprietor's right to be heard by deciding not to admit an auxiliary request into the proceedings without having looked at it), **T 314/18** (witness offered but not heard), **T 1817/16** (the opposition division had violated the patent proprietor's right to be heard by issuing the decision to revoke the patent before expiry of the time limit it had previously set for making written submissions), **T 1928/17** (a party must not be taken by surprise by the inclusion of previously unknown grounds in the reasons for the decision), **T 1414/18** (lack of opportunity to make comments), **T 97/14** (the appellant's arguments had not been properly taken into account), **T 560/20** (the appellant had not had an opportunity to present its comments on the sole ground on which the impugned division was based) and **T 545/18** (the appellant had been unable to present arguments in relation to the objection under Art. 56 EPC).

b) Reasons for decision deficient

Rule 111(2) EPC gives parties to EPO proceedings a fundamental procedural right to be provided with the reasons for a decision. A breach of R. 111(2) EPC is a fundamental procedural deficiency that can lead to a remittal as a special reason within the meaning of Art. 11 RPBA. The following cases were remitted to the department of first instance:

T 2475/17 (insufficient reasons given for the first-instance decision, which also did not address the version of claim 1 filed by the applicant), **T 942/18** (the board considered lack

of compliance with R. 111(2) EPC to be a fundamental deficiency, not a minor defect), **T 78/17** (all relevant arguments have to be given appropriate consideration in the written decision), **T 1928/17** (inadequate reasons) and **T 571/19** (reasons for the decision must enable both the parties and the board of appeal to understand whether or not the decision is justified).

c) Missing signatures

In **T 989/19**, the board held the contested decision to be invalid because the cover page had not been signed by all the members of the examining division, which amounted to a fundamental procedural deficiency in the proceedings before the examining division. Since the established case law had it that remittal of an appeal case did not adversely affect the appellant, the decision in this case could be issued without oral proceedings (see e.g. **T 42/90** and **T 382/10**).

In **T 2348/19** the Chair of the opposition division had not signed either the minutes or the reasoned decision, and in neither case had it been explained in writing why the first examiner had signed on the Chair's behalf. The case was remitted to the opposition division for further prosecution.

d) Failure to hold oral proceedings

In **T 170/21** the decision to refuse the application without summoning the applicant to oral proceedings had taken the appellant by surprise, thereby depriving it of a further opportunity to present its final comments and/or its final fallback positions and denying it the right to be heard as guaranteed by Art. 113(1) EPC. This conclusion was in line with established case law of the boards of appeal; see for example **T 1423/13**, which dealt with almost identical circumstances (refusal without summoning to previously announced oral proceedings).

e) Incorrect application of R. 137(5) EPC

In **T 2431/19** the board stated that the incorrect interpretation and application of R. 137(5) EPC in the case in hand constituted a substantial procedural violation within the meaning of R. 103(1)(a) EPC as well as a fundamental deficiency under Art. 11 RPBA, justifying a remittal to the examining division for further prosecution (Art. 111(1) EPC).

9.5. Requests for or against remittal

Under Art. 11 RPBA, parties need not request remittal since the boards have discretion to remit a case and can do so without any such request (**T 78/17**; see also **T 1805/14**).

In many cases, the parties explicitly requested remittal to the department of first instance; see for example the ex parte cases **T 1754/15**, **T 1966/16** and **T 2519/17**. Similarly, in the inter partes cases **T 240/16**, **T 1376/17**, **T 2908/18**, **T 323/18** and **T 395/18**, the requests made by both parties were taken into account.

In **T 1964/17** the complete absence of any analysis of the grounds for opposition of lack of novelty and lack of inventive step in the decision under appeal and the requests for remittal made by both parties were considered special reasons within the meaning of Art. 11 RPBA.

In **T 194/17** the board noted that the substantial procedural violation could in principle be a sufficient reason for setting aside the contested decision and remitting the case to the opposition division. However, the appellant had requested that the case **not** be remitted to the opposition division and that the board itself decide on it. In view of the principle of procedural economy, the length of the opposition (appeal) proceedings to date, the already advanced age of the patent and the fact that the violation concerned dependent claims, the board granted the appellant's request.

In **T 1655/20** the board remitted the case to the examining division for further prosecution despite the appellant's request that the board decide on all the outstanding issues. In the case in hand the examining division had dismissed the main request only on the ground of lack of novelty and so without assessing inventive step. In addition, the first auxiliary request filed with the appeal had been modified and so differed from the first auxiliary request considered in the decision under appeal. The board deemed these circumstances to amount to special reasons justifying remittal of the case within the meaning of Art. 11 RPBA. See also **T 97/14** and **T 568/17**.

9.6. No remittal to the department of first instance

9.6.1 Discretion despite special reasons

Under Art. 111(1) EPC, a board, having examined the allowability of an appeal, decides on it either by exercising any power within the competence of the department which was responsible for the decision appealed or by remitting the case to that department for further prosecution. Which of these two options the board chooses depends on the specific facts of the case before it and is a matter which is at its discretion. Art. 11 RPBA sets out that as a rule, fundamental deficiencies which are apparent in the proceedings before that department constitute such special reasons.

In **T 3085/19** the board pointed out that the wording "as a rule" ("in der Regel", "en règle générale") is mirrored as meaning "normally" ("normalement", "in der Regel") in the explanatory remarks on Art. 11 RPBA (Supplementary publication 2, OJ 2020). This correctly reflects that Art. 11 RPBA does not deprive the boards of the discretion conferred on them by Art. 111(1) EPC. Hence, even if a fundamental deficiency is apparent, the board still has discretion not to remit the case to the examining division but to deal with the substance of the case itself (see also **T 1635/19**).

9.6.2 Same legal and factual framework

In **T 418/17** the board stated that, although the primary object of the appeal proceedings was to review the decision under appeal in a judicial manner (see Art. 12(2) RPBA), there was no absolute right to have every issue decided at two instances. In the case in hand,

although the decision under appeal was limited to the main request, auxiliary request 1 did not alter the legal and factual framework because it resulted from a combination with a granted dependent claim.

In **T 1561/15**, the contested decision had maintained the patent as amended on the basis of auxiliary request 3. The opposition division had exhaustively discussed all the requirements of the EPC that were likewise relevant for assessing the new main request. For reasons of procedural economy in particular, the board found it expedient and reasonable to use the discretion conferred on it under Art. 111(1) EPC and Art. 11 RPBA to examine and rule itself on the objections raised by the opponent.

In **T 1355/18**, the opposition division had already discussed the novelty and inventive step of a similar request to auxiliary request 1, so no special reasons as per Art. 11 RPBA presented themselves for remitting the case.

In **T 2085/17** the board stated that remitting the case to the examining division pursuant to Art. 11 RPBA, as requested by the appellant, did not seem appropriate. While the board's decision was based formally on a different legal provision, namely Art. 56 EPC instead of Art. 52(2) and (3) EPC (as cited by the examining division), the underlying issue of excluded subject-matter was the same, and the board had reached its finding on the basis of the same facts and arguments, which seemed to be quite clear.

In **T 113/18** the board's position was that the respondent's silence could not lead to automatic remittal of the case to the opposition division to decide whether there were any remaining objections likely to prejudice maintenance of the patent; that would deprive the board of the discretion conferred on it by Art. 111(1) EPC, the purpose of which was to weigh up all the circumstances of the case in hand, including, in particular, whether there were any additional contentious issues which had not been brought to its attention. Accordingly, in the absence of any objection raised by the respondent against the main request, the board decided not to remit the case to the opposition division.

In **T 464/17** the essential facts and evidence had already been part of the first-instance proceedings, so no fresh case was created.

In **T 1388/17** the board did not consider the use of a different secondary document from the one which the opposition division had used in finding that the requests before it lacked inventive step to constitute a special reason for remittal.

The boards' ruling in the inter partes cases **T 1936/16**, **T 1388/17** and **T 2202/19** and the ex parte case **T 786/16** similarly could not see any special reasons for remitting the case to the department of first instance.

9.6.3 Objections raised by the board

Objections raised by the board for the first time do not in themselves constitute special reasons for remittal. In **T 1089/17** the board underlined this with reference to the stated aim of Art. 11 RPBA to reduce the likelihood of a "ping-pong" effect between the boards

of appeal and the departments of first instance and a consequent undue prolongation of the entire proceedings before the EPO. The board had introduced a new document (a patent application filed by the appellant itself) in a communication.

The board in **T 1803/14** rejected the appellant's request for a remittal because fairness of the proceedings had been guaranteed in that the board had raised its objections twice, at points in time which had given the appellant the opportunity to consider them and respond accordingly.

Even when the board raises a fresh objection at the oral proceedings, this does not as such necessarily constitute special reasons for a remittal. In **T 1538/17** the board's new clarity objection was directly related to its and the appellant's diverging views on the interpretation of claim 1. This divergence had to be resolved before the examining division's decision refusing the then first auxiliary request (which essentially corresponded to the main request filed on appeal) for lack of inventive step could be reviewed. The board therefore considered it appropriate to deal with the clarity objection in the appeal proceedings.

9.6.4 Opportunity to comment

The fact that a party has refrained from commenting on the substance of requests, though they had had ample opportunity, carries little weight in deciding to remit or not. Where the version as upheld by the opposition division fails on appeal, it is to be expected that undecided lower-ranking requests that are clearly not inadmissible, for example because they were duly filed in opposition, would most likely need to be examined by the board for the first time. Such circumstances did not constitute special reasons for remittal. In **T 184/19** auxiliary requests 3, 4, 5 and 6 corresponded to the like numbered auxiliary requests filed shortly before the oral proceedings in opposition and which were not examined. The appeal was directed at the opposition division's interlocutory decision concerning maintenance of the patent in suit in amended form. Opponent 1 had requested remittal should these auxiliary requests 3, 4, 5 and 6 be admitted, as it could not have been prepared to discuss these requests. The board noted that the appellant proprietor and opponent 1 had both in fact made substantive submissions for these requests, and that in principle they could be discussed within that framework.

9.7. Obiter dicta

Obiter dicta are sometimes included in first-instance decisions in order to avoid remittal. They thereby serve overall procedural economy and effectiveness (**T 493/13**). In the interests of overall procedural economy and effectiveness, the board in **T 473/98** (OJ 2001, 231) also found it entirely appropriate and desirable that an opposition division should include in the reasons for a revocation decision pursuant to Art. 102(1) EPC 1973 employing the standard decision formula, by way of obiter dicta, findings which could obviate a remittal in the event of the revocation being reversed on appeal. See also **T 2446/16** (ex parte proceedings).

9.8. Remittal for hearing of witnesses

In **T 1551/14** the board remitted the case to the opposition division with an order that a witness be heard again, if necessary under oath before a national court.

9.9. Remittal for adaptation of the description

Article 11 RPBA only applies to cases that are remitted "for further prosecution". In particular, it does not apply to cases that are remitted with an order by the board to grant a patent or to maintain a patent in amended form, be it with or without adaptation of the description (see explanatory remarks on Art. 11 RPBA, Supplementary publication 2, OJ 2020).

In **T 1716/12** the board stated that remittal "with a description to be adapted" had become common practice of the boards of appeal and was, effectively, a remittal for further prosecution within the meaning of Art. 111(1) EPC and subject to the limits imposed in Art. 111(2) EPC.

In **T 146/17** the board stated that it was customary to remit cases to the department of first instance with an instruction to maintain the patent with an adapted description. It saw no reason to deviate from this standard course of action in the case in hand simply because the patent proprietor had not attended the oral proceedings.

In **T 32/16** the board stated that, regarding adaptation of the description to the new claims, the respondent's (patent proprietor's) preference to perform this at the oral proceedings was not followed. The required amendments to the description were seen to be of not inconsiderable scope, and the appellant indicated its need to fully consider any amendments made without being under time pressure. Under these circumstances, the board thus decided to remit the case to the opposition division under Art. 111(1) EPC for the description to be adapted to the claims found allowable. With regard to Art. 11 RPBA, the board noted that remittal of a case for adaptation of the description was not a remittal for "further prosecution", such that no "special reasons" needed to be present (see also **T 801/18**, **T 1968/18**).

9.10. Remittal to a differently composed department of first instance

In **T 2475/17** the board dealt with the issue of a board's power to order a different composition of a department of first instance when remitting a case to it.

Whether a case can be remitted to a differently composed department of first instance when the original first-instance decision is found to be vitiated by a substantial procedural violation is dealt with in detail, in the context of suspected partiality of members of the departments of first instance, in chapter III.J.4.2 "Remittal and rehearing of a case".

9.11. Accelerating proceedings after remittal

The EPC is silent on the possibility for a board to order acceleration of proceedings before the department of first instance after remittal. In **T 1108/21**, the board did issue such an order. It had accelerated the appeal proceedings (Art. 10(3) RPBA). It then remitted the case to the opposition division for further prosecution and explicitly ordered an acceleration of the opposition proceedings. By contrast, in **T 2916/19** the board refused to instruct the opposition division to accelerate the proceedings after remittal. It held that it was not empowered to impose any timeline/time constraints on the department of first instance and considered that when or at which pace the case was to be dealt with by the opposition division was a matter of managerial decisions to be taken by the department of first instance.

10. Binding effect

10.1. Binding effect of decision remitting case to department of first instance

10.1.1 Department of first instance bound by decision of board of appeal

a) Notion of ratio decidendi and binding effect

Article 111(2) EPC provides that, where a board of appeal remits a case to the EPO department of first instance whose decision was appealed, that department is bound by the board's ratio decidendi, in so far as the facts are the same. If the decision under appeal was taken by the Receiving Section, the examining division is also bound by the board's ratio decidendi.

The boards' decisions generally acquire their binding effect on being issued. While the EPC does not expressly refer to "res judicata", it is a generally recognised principle in the contracting states that is acknowledged by the boards (see e.g. **T 167/93**, OJ 1997, 229; **J 3/95**, OJ 1997, 493; **T 365/09**, **T 449/15**). It means a matter finally settled by a court of competent jurisdiction, rendering that matter conclusive as to the rights of the parties and their privies, such a final judgment constituting an absolute bar to a subsequent legal action involving the same claim, demand or cause of action, and the same parties or their privies (**T 934/91**, OJ 1994, 184; see also **T 1666/14**).

The boards have assumed in several decisions (**T 934/91**, **T 113/92**, **T 843/91** of 5 August 1993, OJ 1994, 832, **T 609/94**, **J 8/98** and **T 694/01**) that their decisions are final. In practical terms, that at the very least means that a board's decision on the version of a patent is binding on the department of first instance and that, therefore, this version can no longer be amended in proceedings before the EPO (for more details on this point, see **T 2558/18**).

A decision's binding effect under Art. 111(2) EPC applies only to the case decided on (**J 27/94**, OJ 1995, 831). Art. 111 EPC does not provide for such binding effect for cases not decided by the boards, although there will generally be good reasons for departments

of first instance to follow their decisions in order to maintain a consistent practice and avoid unnecessary appeals.

The ratio decidendi of a board's decision binds the administrative department dealing with the same application in the subsequently resumed examination proceedings (see Art. 111(2) EPC) and indeed the board in any fresh appeal against the then ensuing examination decision. By contrast, a decision taken on appeal in examination proceedings has no such binding effect in any subsequent opposition proceedings or on appeal against the opposition division's decision because opposition proceedings are separate and distinct from examination proceedings (especially in that different parties are involved) and differ from them in terms of the nature of the public interest involved (**T 1666/14**).

The ratio decidendi of a decision under Art. 111(2) EPC 1973 is the ground or the reason for making it – in other words, the point in a case which determines the outcome of the judgment (**T 934/91**, OJ 1994, 184). It is not contained in the order but in the section "Reasons for the Decision" and it is thus of no importance for its binding effect that a particular matter is not mentioned in the order (**T 436/95**). The order of a board's decision provides a first point of reference for establishing the extent to which the binding effect applies. However, where a case is remitted for further prosecution on the basis of claims of auxiliary requests following rejection of higher-ranking claim requests, the order is usually confined to the setting aside of the decision under appeal and the remittal for further prosecution. Thus, the order has to be seen in context with the reasons for the decision as a whole in order to determine the extent to which the decision is final (**T 449/15**).

b) Binding effect on examining divisions

The board in **T 366/92** pointed out that according to Art. 111(2) EPC 1973 the examining division was bound by the board's decision only to the extent that it had been decided that the subject-matter of Claim 1 was novel when compared with the prior art known from D2 and that the claim met the requirements of Art. 84 and 123(2) EPC 1973. See also **T 255/92**.

In **T 2558/18**, the board dealt with the binding effect on an examining division of a remittal with precisely specified documents for the purposes of R. 71(3) EPC. It observed that, under Art. 111(1), second sentence, EPC, a board could either exercise any power within the competence of the department which was responsible for the decision appealed (alternative 1) or remit the case to that department for further prosecution (alternative 2). In its Catchword, the board summarised as follows: where a board remits a case to the examining division for the grant of a patent in a precisely specified version, i.e. with precisely specified claims, description and drawings, the decision on this version is taken by virtue of the first alternative in Art. 111(1), second sentence, EPC. The version is binding on the examining division in accordance with the legal principle enshrined in Art. 111(2) EPC , on the basis of which the remittal is also ordered. The procedure under R. 71(6) EPC is inapplicable in view of the binding effect arising from Art. 111(2) EPC by virtue of Art. 164(2) EPC.

c) Binding effect on opposition divisions

When after remittal the proprietor files new requests which require examination to be re-opened on issues that have already been judged upon by the board of appeal, without the justification that might be provided, for example, by the proprietor's being faced with a new situation, then such requests should be deemed inadmissible (**T 383/11**).

In **T 308/14** the board held that if a case is remitted to the opposition division in appeal proceedings, after the board has taken a decision under Art. 84 EPC on the clarity of a certain feature in a claim, this decision is final and thus binding on the opposition division in the subsequently resumed opposition proceedings. The binding effect did not only cover the decision on Art. 84 EPC as such; it also extended to any finding of fact that led to this decision. Therefore, if in the resumed opposition proceedings an insufficiency objection is made under Art. 83 EPC on the basis that this very feature was ambiguous (insufficiency arising out of ambiguity), the opposition division should not reopen the discussion on whether this feature is clear, and should accept any finding of fact that the board made in arriving at its decision on Art. 84 EPC.

According to **T 934/91** (OJ 1994, 184), a board's decision apportioning costs constituted an absolute bar to the opposition division's considering afresh, let alone deciding upon, either the fact or the quantum of the apportionment, or their reviewing the reasons (ratio decidendi) for which the apportionment had been made. The board found that the purported decision of the opposition division on this point was in law a mere communication of the clear and immutable legal position brought about by the earlier decision of a final court of competent jurisdiction, namely, the technical board of appeal.

10.1.2 Binding effect in opposition proceedings after remittal to an examining division

A decision by a board of appeal on an appeal from an examining division decision is not binding in subsequent opposition proceedings or on appeals therefrom (**T 26/93**; **T 167/93**, OJ 1997, 229; **T 694/01**, OJ 1997,229; **T 2291/08**; see also **T 1853/16**). The binding effect is also not restricted to cases where the composition of the board remained unchanged (**T 436/95**). Following **T 167/93**, the board in **T 1099/06** pointed out that opposition proceedings are separate and distinct from examination proceedings and are characterised by the nature of the public interest. The legislative and procedural framework has quite clearly been designed to allow the public interest in challenging granted patents by opposition to take priority over any considerations of certainty or apparent consistency. The board pointed out that to the extent this principle is recognised in the law of the EPC, it is of extremely narrow scope and must meet the six criteria set out in **T 167/93** (OJ 1997, 229) – the issue must have been (a) judicially determined; (b) in a final manner, (c) by a tribunal of competent jurisdiction; (d) where the issues of fact are the same; (e) the parties (or successors in title) are the same; and (f) the legal capacities of the parties are the same. Thus, a decision in earlier examination appeal proceedings could not be binding in subsequent opposition appeal proceedings, the criteria (c), (e) and (f) not being satisfied.

10.1.3 Board of appeal bound in subsequent appeal proceedings following remittal

The problem of being bound by an earlier board of appeal decision where a case is remitted also arises in connection with a subsequent appeal against the ensuing decision.

In a number of decisions, the boards have observed that they are bound by their own initial decision if a second appeal relating to the same subject-matter is brought before them (a "self-binding" effect, known by the German term *Selbstbindung*). The binding effect of the initial decision extends to all further findings made by the board in so far as they were decisive for the outcome of that decision and the facts have not changed (**T 961/18**; see also **T 1545/08**). However, the board can be bound only in so far as the facts are the same and only in so far as its legal assessment in the initial decision itself went (**T 2337/16**). However, they are not so bound where the facts underlying the initial decision have changed (Art. 111(2) EPC) (**T 21/89**; see also **T 153/93**, **T 1545/08** and **T 2036/21**). This is often based on the argument that board of appeal decisions are final and without appeal, so that no EPO body – not even boards of appeal – can take a new decision on facts which have already been decided. In **T 690/91** the argument was that the same binding effect applied to any subsequent appeal proceedings since, according to Art. 111(1) EPC 1973, the board might exercise the same power as was within the competence of the department which was responsible for the decision appealed.

See also **T 720/93** for the extent to which a board considered itself bound by an earlier board of appeal decision in the same case. Although the claim pending before the board represented different facts from in the first proceedings since it was a different type of claim and contained a number of different features, the board found some findings of the first decision binding for the second proceedings.

The board in **T 736/16** had to rule on a second appeal brought by the appellant on the basis that it had no longer been open to the opposition division to examine compliance with Art. 123(3) EPC because the board had already settled that matter in relation to the same request when ruling on its first appeal in **T 1909/12**. The board agreed that both the opposition division and it itself were bound under Art. 111(2) EPC by the ratio decidendi in its decision on the first appeal (and, indeed, by those in **R 3/14**, another earlier decision issued in the same case). However, since it had not explicitly referred to Art. 123(3) EPC in either in the order or the reasons for that decision, it first had to ascertain whether it could be clearly inferred from any parts of the reasons that it had indeed already decided that the appellant's request met the requirements in that article. It concluded that it had not done so.

In **T 449/15** the board had to compare the subject-matter of respective claim 1 of the main request decided upon in **T 449/13** and of auxiliary requests 4 and 5 pending before the board for consideration in the second appeal proceedings. The amendments only amounted to an inclusion of redundant linguistic additions and merely represented cosmetic changes without any effect on the scope of the claims. Therefore, the board concluded that the amendments undertaken did not alter the subject-matter claimed in substance compared to the subject-matter finally decided upon in **T 449/13**, or the facts on which said decision was based. Consequently, the finding that the claimed subject-

matter lacked an inventive step had been finally settled and bound the board. In this context, the board noted that there have also been other decisions in the jurisprudence of the boards of appeal in which the competent boards considered themselves as being prevented from deciding on an issue due to the binding effect of board decisions even though the claims under consideration were not literally identical to the claims decided upon in the earlier decision (see e.g. **T 1872/08**, **T 572/07**, **T 436/95**).

On the binding effect of a final decision on the subject-matter of the parent application in proceedings relating to divisional applications, see chapter II.F.2.4.

10.1.4 Binding effect: remittal for the continuation of proceedings

Where a board of appeal issued a decision rejecting certain claimed subject-matter as not allowable and remitted the case for further prosecution in accordance with an auxiliary request, under Art. 111(2) EPC 1973, the examination for allowability of the rejected claimed subject-matter could not be re-opened, either by the examining division during its further prosecution of the case, or by the board of appeal in any subsequent appeal proceedings (**T 79/89**, OJ 1992, 283).

In the opposition proceedings following the remittal for continuation of the proceedings, an amendment of the patent claims could change the actual basis of an appeal decision. In such a case the binding effect of Art. 111(2) EPC 1973 no longer applied (**T 27/94**).

Art. 111(2) EPC 1973 stated unambiguously that the department of first instance and the board of appeal which was again concerned with the case were bound by the ratio decidendi of the remitting decision only "in so far as the facts are the same". The opposition division was thus not bound by the first decision if new claims were submitted which were not in conflict with the ratio decidendi of the decision (**T 609/94**).

10.1.5 Binding effect: remittal only for adaptation of the description

A decision remitting a case to the opposition division with the order to maintain a patent on the basis of amended claims is binding in the sense that neither the wording nor the patentability of those claims can be challenged again in subsequent EPO proceedings (**T 843/91**, OJ 1994, 832). The decision on the claims' patentability remains final even where the facts have changed (**T 27/94**). When the first board of appeal delivers its decision, the content and the text of the patent claims are finally settled and can no longer be amended in proceedings before the EPO (**T 113/92**). Only objections to the amendments made to the description by the opposition division can be examined on appeal (**T 1063/92**).

Remittal for the description to be amended does not render it possible for an opponent to challenge substantive patentability again by appealing the opposition division's decision after remittal, where a final decision has been taken on this and the scope of the patent (**T 1063/92**). Following **T 843/91** (OJ 1994, 832), the board in **T 153/93** found that all findings of fact that were a conditio sine qua non of the finally binding parts of the decision were finally settled with the result that new facts, evidence or arguments seeking to cast

doubt upon these facts could not be considered either by the opposition division or the board of appeal.

Where the board, in the decision remitting the case to the department of first instance, is silent on the question of the adaptation of the description, this does not necessarily imply that no adaptation is required, but merely that the matter was not considered or decided. The point is therefore not finally settled and so can be raised in a subsequent appeal (**T 636/97**).

10.2. Binding effect of interlocutory referral decision on subsequent proceedings

The EPC is silent on this issue. Art. 111(2) EPC provides that if a board of appeal remits a case to the department of the EPO whose decision was appealed, that department is bound by the ratio decidendi of the board of appeal, in so far as the facts are the same; however, Art. 111(2) EPC is not applicable to the relationship between an earlier interlocutory decision of a board and the subsequent proceedings before the same board. In **T 116/18** of 28 July 2023, the board decided that it was bound by its earlier decision in the same case referring a question to the Enlarged Board. The scope of the subsequent proceedings was therefore limited to the application of the Enlarged Board's decision to the unresolved issue that gave rise to the referral and to any other issues not dealt with in that decision.

11. Reimbursement of appeal fees

11.1. Introduction

According to R. 103(1)(a) EPC (R. 67 EPC 1973) the reimbursement of appeal fees is ordered in the event of interlocutory revision or where the board of appeal deems an appeal allowable, if such reimbursement is equitable by reason of a substantial procedural violation.

Rule 103(1)(b) EPC, introduced with the EPC 2000, goes some way towards compensating for the lack of a cross-appeal facility. Appeals filed as a precaution – in case the other party appeals – can be withdrawn if the other party does not file an appeal, at an early stage of the proceedings, during the period between the expiry of the respective periods for filing the notice of appeal and filing the statement of grounds of appeal, i.e. before any great expense or effort on the part of the parties or the EPO (see notes to R. 67 EPC 1973, OJ SE 1/2003, 184).

Rule 103(2) EPC, introduced by decision of the Administrative Council of 13 December 2013 (CA/D 16/13; OJ 2014, A3), provided for a reimbursement of the appeal fee at 50% if the appeal was withdrawn after expiry of the period under R. 103(1)(b) EPC provided the requirements set out under R. 103(2)(a) and (b) EPC were met. This provision was amended by the decision of the Administrative Council of 12 December 2019 (CA/D 14/19; OJ 2020, A5), which entered into force on 1 April 2020. Following these amendments, the appeal fee may be reimbursed at 75% (R. 103(2) EPC), 50% (R. 103(3) EPC), or 25% (R. 103(4) EPC) if the appeal is withdrawn

(or a request for oral proceedings is withdrawn in the case of R. 103(4)(c) EPC) and the requirements set out in the respective provisions are met (see in this chapter V.A.11.9. and following).

Rule 103(6) EPC (formerly R. 103(2) EPC; then R. 103(3) EPC until the latest revision of 1 April 2020) governs the competence of the department of first instance and of the board of appeal in the matter of the reimbursement of the appeal fee and codifies the case law of the Legal Board (**J 32/95**, OJ 1999, 733; **G 3/03**, OJ 2005, 344; see in this chapter V.A.11.4.2. "Competence to decide on reimbursement").

For the rules formally applicable to patent applications pending on the date of entry into force of the EPC 2000, see **J 10/07** (OJ 2008, 567); for the applicability of R. 103(1)(b) EPC see **T 2052/08**.

11.2. Examination ex officio

The boards may, even in the absence of a request to this effect, examine ex officio whether the reimbursement of the appeal fee is equitable by reason of a substantial procedural violation (**J 7/82**, OJ 1982, 391; **T 271/85** of 22 March 1989; **T 346/88**; **T 598/88**; **T 484/90**, OJ 1993, 448 and **T 736/14**).

11.3. Appeal deemed not to have been filed

11.3.1 Appeal deemed not to have been filed due to late filing of the notice of appeal and/or late payment of the appeal fee

For the issue of reimbursement of the appeal fee the distinction between an appeal not deemed to have been filed and an inadmissible appeal is relevant. When the appeal is deemed not to have been filed the appeal fee must be reimbursed since the purpose of this fee cannot be achieved. On the contrary, when an appeal is inadmissible it is in principle not possible to repay the appeal fee (**T 445/98**; see also **T 372/99** and **T 752/05**).

As a result of diverging case law on this distinction, the President of the EPO referred a point of law to the Enlarged Board. The latter answered the referred question in Opinion **G 1/18** (OJ 2020, A26) on whether an appeal is to be treated as not filed or as inadmissible in cases of a failure to observe the two-month time limit under Art. 108 EPC owing to belated payment of the appeal fee and/or belated filing of notice of appeal. This question had previously been submitted to the Enlarged Board in **G 1/14** and **G 2/14** – however the question had not been addressed because in **G 1/14** the referral was found to be inadmissible and in **G 2/14** the patent application was abandoned.

According to **G 1/18**, the different factual scenarios falling within the scope of the referred question and encountered in earlier case law should be treated as follows.

An appeal is deemed not to have been filed in the following cases: (a) where notice of appeal was filed within the two-month time limit prescribed in Art. 108, first sentence, EPC and the appeal fee was paid after expiry of that two-month time limit; (b) where notice of

appeal was filed after expiry of the two-month time limit prescribed in Art. 108, first sentence, EPC and the appeal fee was paid after expiry of that two-month time limit; (c) where the appeal fee was paid within the two-month time limit prescribed in Art. 108, first sentence, EPC for filing notice of appeal and notice of appeal was filed after expiry of that two-month time limit.

In the cases referred to in (a), (b) and (c) in the preceding paragraph, reimbursement of the appeal fee is to be ordered ex officio.

In addition, where the appeal fee was paid within or after the two-month time limit prescribed in Art. 108, first sentence, EPC for filing notice of appeal and no notice of appeal was filed at all, the appeal fee is to be reimbursed.

With this ruling, the Enlarged Board effectively overruled earlier decisions in which, where facts were the same as envisaged in **G 1/18**, the appeal fee was not reimbursed because the board considered that the appeal was inadmissible. For an overview of relevant decisions predating **G 1/18**, see CLB, 9th edn. 2019, V.A.9.3 "Appeal deemed not to have been filed or inadmissible appeal".

11.3.2 Translation of notice of appeal

In **T 323/87** (OJ 1989, 343) the translation of the notice of appeal had not been filed in due time. The board held that, pursuant to Art. 14(5) EPC 1973, the notice of appeal was deemed not to have been filed, and ordered reimbursement of the appeal fee. In **T 1152/05** it was also decided that, since the appeal of the patent proprietor was deemed not to have been filed, it followed that the appeal fee was paid without reason and had to be reimbursed. In **T 126/04**, on the other hand, the board decided that failure to file a translation of the notice of appeal in due time meant that the appeal was inadmissible.

11.3.3 No legal ground for payment

The grounds for reimbursement listed in R. 103(1) EPC aside, fees may also be refunded if there was no legal ground for their payment, e.g. in the event of payment by mistake or overpayment, unless this amount is insignificant: see Art. 12 RFees e contrario as interpreted in **T 1284/09**.

11.3.4 Request for re-establishment in respect of the time limit for filing the notice of appeal and/or for paying the appeal fee

In **T 1192/07** the request for re-establishment in respect of the time limit for paying the appeal fee was refused. As a result, the appeal was deemed not filed because the appeal fee had not been paid in time and the appeal fee was refunded.

In **T 1465/08** the board refunded the appeal fee in a case where the request for re-establishment in respect of the time limit for paying the appeal fee was itself deemed not to have been filed with the consequence that the appeal was deemed not to have been filed.

In **T 257/07** the request for re-establishment in respect of the time limit for filing the notice of appeal was refused, and therefore the appeal was deemed not to have been filed and the appeal fee reimbursed (see also **T 1962/08**).

11.3.5 No legal basis for retaining appeal fee in case of intervention in opposition appeal proceedings

In **T 791/06** the intervention of appellant III was considered by the board to be an admissible intervention in opposition appeal proceedings, and so only the required opposition fee needed to be paid, as established by **G 3/04**. Hence there was no legal basis for retaining the appeal fee, which in any case had been paid as a precaution. The board concluded that the appeal fee paid by the intervener should be reimbursed.

11.3.6 Several appellants

In **T 552/97** the board interpreted R. 67 EPC 1973, looking in particular at the English text, as meaning that, where several appeals have been filed, each appellant's appeal fee may be reimbursed if such reimbursement was equitable.

11.3.7 No reimbursement if appeal filed in accordance with the requirements of Article 108 EPC

In **J 15/01** the Legal Board ruled that the fact that an appeal was against a communication, as opposed to a decision under Art. 106(1) EPC 1973, did not justify refunding the appeal fee. If – as in the case before it – the board concluded that there had not been an appealable decision under Art. 106(1) EPC 1973, this made the appeal inadmissible but did not mean it had never existed, the requirements under Art. 108 EPC 1973 having been met. The appeal fee could not therefore be refunded.

In **J 18/12** the Legal Board held that the final non-existence of the patent application in a substantive sense did not mean that the appeal proceedings had not come into existence (as opposed to the legal fiction of non-existence when an appeal was deemed not to have been filed). This situation regularly arose in proceedings before the EPO, e.g. where a decision of the Receiving Section not to accord a filing date was appealed.

In **T 1284/09** the board did not order reimbursement of the appeal fee for either of the two appeals because the requirements of Art. 108 EPC were fulfilled for each of the appeals. The original opponent and its purported assignee (the opposition division had rejected the assignment request) had each filed an identical notice of appeal against the same decision and each separately paid the appeal fee.

11.4. Reimbursement of appeal fee in case of interlocutory revision

The appeal fee may be reimbursed in full under R. 103(1)(a) EPC in the event of interlocutory revision.

11.4.1 Requirements

Pursuant to Art. 109 EPC a department whose decision is contested must rectify its decision if it considers the appeal admissible and well founded; this applies in ex parte cases only. R. 103 EPC (R. 67 EPC 1973) allows for reimbursement of the appeal fee in the case of interlocutory revision. In **G 3/03** (OJ 2005, 344) it was held that the grant of interlocutory revision constituted a necessary, but not sufficient, prerequisite for the department of first instance to allow a request for the reimbursement of appeal fees (see also **T 1222/04**). In **T 939/95** the words "if such reimbursement" in R. 103 EPC were held to refer both to interlocutory revisions and appeals, meaning that it was also a prerequisite for interlocutory hearings that a substantial procedural violation had occurred and that reimbursement was found equitable in the discretion of the deciding body (see also **T 79/91**, **T 536/92**).

11.4.2 Competence to decide on reimbursement

As to the question of which department is competent to decide on the request for reimbursement, in cases of interlocutory revision, the legal situation defined by **G 3/03** (OJ 2005, 344) and **J 32/95** (OJ 1999, 733) is now enshrined in R. 103(6) EPC (see **T 625/09**, **T 206/10**). In **J 32/95** the Legal Board held that if the department of first instance considered the request for reimbursement of the appeal fee not to be well-founded in the event of interlocutory revision, it had to remit the request to the board of appeal for a decision. In **G 3/03** the Enlarged Board held that in the event of interlocutory revision under Art. 109(1) EPC 1973, the department of first instance whose decision had been appealed was not competent to refuse a request from the appellant for reimbursement of the appeal fee. The board of appeal which would have been competent under Art. 21 EPC 1973 to deal with the substantive issues of the appeal if no interlocutory revision had been granted was competent to decide on the request. **G 3/03** was, for example, applied in **T 1379/05**, **T 1315/04**, **T 245/05**, **T 1863/07** and **T 2352/13**.

In **T 21/02** the board, distinguishing the facts from **G 3/03** and **J 32/95**, held that it was not empowered to decide on the request for reimbursement of the appeal fee as the request had been submitted in the absence of a pending appeal and hence could not constitute an ancillary issue to be dealt with in appeal proceedings. An appeal had been fully dealt with by interlocutory revision by the department of first instance and was thus no longer pending when a request for reimbursement of the appeal fee was submitted (see also **T 1703/12**, **T 2134/12**, **T 2008/14**).

In **T 242/05** the board held that once interlocutory revision had been granted, the appeal was finally settled. In the absence of a pending appeal, any request for reimbursement of the appeal fee filed after the decision to grant interlocutory revision will be considered inadmissible, regardless of whether the decision was taken by the examining division or the board of appeal as the body competent to consider the appeal (see also **T 70/08**). In **T 955/20**, the board endorsed the reasoning in **T 242/05** and **T 70/08**; it distanced itself from that in **T 21/02** and **T 893/13**.

In **T 893/13** the board disagreed with **T 21/02** and **T 242/05**, and found that since the examining division was not competent to decide that the appeal fee was not to be reimbursed, an interlocutory revision without an order for reimbursement could not be construed as a decision not to reimburse. The board further stated that a request for reimbursement of the appeal fee could be validly filed even after interlocutory revision, since R. 103(3) EPC (now R. 103(6) EPC) entrusted the boards with the decision on all other matters of reimbursement based on only two conditions: that the decision was rectified and that the appeal fee was not reimbursed by the examining division.

In **T 657/17** interlocutory revision was granted by the examining division yet the matter was referred to the board for a decision on reimbursement of the appeal fee in the absence of any request for such reimbursement. The board referred to **G 3/03** (point 3 of the Reasons) according to which, in the absence of a request for reimbursement of the appeal fee, the decision of the department of the first instance granting interlocutory revision pursuant to Art. 109(1) EPC should make no mention of the issue of reimbursement of the appeal fee, and the appellant would not be adversely affected by the decision. In the case in hand, the issue of reimbursement of the appeal fee should therefore not have been referred to the board and the board was not empowered to decide on this issue.

11.4.3 Examining division should have rectified decision

In **T 647/93** (OJ 1995, 132) it was pointed out that when the examining division did not make use of the possibility of granting interlocutory revision after the **mistake** had been pointed out in the grounds of appeal, this was normally deemed to constitute a procedural violation justifying the reimbursement of the appeal fee (see also **T 808/94**, **T 898/96**, **T 861/03**, **T 1113/06**, **T 971/06**, **J 7/07**; see also **T 685/98**, OJ 1999, 346).

In **T 183/95** the board held that the appellant's request for reimbursement of the appeal fee in the event of interlocutory revision could not be granted under R. 67, first half sentence, EPC 1973, since the examining division had not rectified its decision. However, it held that a refund of the appeal fee may be ordered under R. 67, second half sentence, EPC 1973, if the appeal is allowed and the board finds this equitable by reason of a substantial procedural violation. In **T 2528/12** the board also declined to order reimbursement, because although interlocutory revision had not been granted, as it should have been, that was not a substantial procedural error. That the grant proceedings had taken longer as a result had not adversely affected the appellant in a legal sense.

In **T 794/95** the board did not consider it equitable to order the reimbursement of the appeal fee, since the examination procedure up to the decision under appeal was not tainted with any failure and the necessity for the appellant to file an appeal emerged exclusively from the substance of the decision, not because of any procedural shortcomings up to this stage and equally not from the later incorrect handling of the appeal by the examining division (i.e. the failure to rectify its decision).

In **T 685/98** (OJ 1999, 346) the board held that where a fundamental procedural right had manifestly been violated in a refusal pursuant to Art. 97(1) EPC 1973, or in the foregoing examination procedure, a further substantial procedural violation occurred if the examining

division failed to grant interlocutory revision on appeal (following **T 647/93**, OJ 1995, 132; see also **T 1765/13**), since such a right had to be safeguarded irrespective of the substantive merits of the case.

In **T 898/96** the board took the view that the decision of the examining division to refuse the application having regard to Art. 113(2) EPC 1973 should have been rectified by way of interlocutory revision. The failure to rectify such a decision in this way was a substantial procedural violation. However, the board did not consider the refund of the appeal fee to be equitable because the applicant did not approve this text of the application until he filed an appeal.

In **T 704/05** the board found that the examining division could have set its decision aside by way of interlocutory decision pursuant to Art. 109(1) EPC 1973. However, given that the examining division was expressly precluded from giving its reasons for not granting interlocutory revision, it was not open to the board to criticise this omission. The mandatory but necessarily silent judgment made pursuant to Art. 109(1) EPC 1973 as to whether an appeal refuted the reasons for a refusal was not an exercise of discretion and ipso facto left no room for an inquiry as to whether discretion had been properly exercised. The board was aware that a number of decisions of the boards of appeal had taken a different view on this point – to the extent of sometimes castigating such omission as a substantial procedural violation – but respectfully suggested that these decisions had not given sufficient weight to the implications of the silence imposed on the examining division by Art. 109(2) EPC 1973.

In case **T 1982/07** the board said that it was fundamental to the principle of fair trial that in the examination an applicant, when confronted with new prior art documents, was not only given the right to be heard, but also the right to react thereto by amending the claims in order to overcome the prior art references. In the case at issue, the way the examining division exercised its discretion under R. 86(3) EPC 1973 (now R. 137(3) EPC) was erroneous, as it did not allow the applicant to react appropriately, but rather tied its hands to an extent neither mandated by procedural efficiency nor justified in the light of the prior art documents. The examining division thus exercised its discretion in an unduly restrictive manner, thereby committing a substantial procedural violation. It would have been incumbent on the examining division to rectify the decision pursuant to Art. 109(1) EPC, but this was not done. The board ordered the remittal to an examining division that had not previously dealt with this case.

11.4.4 A rectification decision maintaining earlier decision

In **T 691/91** the board held that Art. 109 EPC 1973 provided for two legally viable alternatives: to maintain or to annul the decision which was appealed. In the case at issue, the examining division had chosen a third way: to maintain the earlier decision by issuing a decision on rectification, which resulted in the appellant having to file a second appeal against the decision on rectification. This alternative was not covered by the provisions of Art. 109 EPC 1973. This decision was thus held to be ultra vires and the board ordered reimbursement of the second appeal fee. Reimbursement of the first appeal fee was also

ordered because a violation of the right to be heard had occurred during the examination proceedings (see also **T 252/91**).

11.4.5 Re-opening examination after rectification

In **T 142/96** the practice of re-opening examination after rectification was held to be contrary to the principle of procedural economy underlying Art. 109 EPC 1973 and so constituted a substantial procedural violation.

In **T 2247/09** the examining division had granted interlocutory revision, then proceeded with the examination of the new subject-matter put forward with the appeal, before refusing the application again in its second decision. The appellant claimed that he had had to pay two appeal fees in order to have the claims considered by a board of appeal. The board noted that the reasons given in the examination division's second decision differed from those given in its first decision. Moreover, the decision to grant interlocutory revision had been correct because the applicant's new request had removed the reasons for the decision under appeal. The mere fact that the further examination again resulted in the refusal of the application did not constitute a substantial procedural violation.

11.5. Allowability of the appeal

Rule 103(1)(a) EPC stipulates as a precondition for reimbursement that the appeal must be allowable. In **J 37/89** (OJ 1993, 201) the board stated it was clear from the wording and purpose of the provision that "allowable" was to be understood to mean that the board of appeal, in substance at least, "follows" the relief sought by the appellants, in other words that the board allows their requests (see also **T 1111/09**). In **J 18/84** (OJ 1987, 215) the board held that the fact that the appeal was allowed only in part was no impediment to a refund (see also **T 129/01**, **T 604/01**, **T 863/08**, **J 1/13**).

11.6. Substantial procedural violation

One of the preconditions for reimbursement of the appeal fee under R. 103 EPC is that a substantial procedural violation has taken place. A "substantial procedural violation" is an objective deficiency affecting the entire proceedings (**J 7/83**, OJ 1984, 211). Whether or not there has been a substantial procedural violation is to be determined on an objective basis (**J 32/95**, OJ 1999, 733; **T 160/09**).

11.6.1 Violation must be of a procedural nature

In **T 12/03** the board stated that a substantial procedural violation is an objective deficiency in the procedure in the sense that the rules of procedure have not been applied in the manner prescribed by the EPC. According to **J 6/79** (OJ 1980, 225), the giving of incorrect information by the EPO about the rules of procedure, which, if followed by the applicant, could lead to the same consequences as the incorrect application of those rules, could also be considered as lying within the scope of a "procedural violation". In **T 690/06** the board held that an error of judgment on substantive issues by the examining division did

not constitute a "procedural" violation (see also **T 698/11**, **T 658/12**). See also in this chapter V.A.11.6.10.

In **T 990/91** the board held that the lack of opportunity to reply to a new argument from the examining division in its decision to refuse the application that was supererogatory and incidental could not be considered to be a procedural violation (see also **T 1085/06**).

In **T 683/14** the board held that the examining division had committed a substantive error rather than a procedural one. The procedural consequences were caused exclusively by the implementation of the division's erroneous substantive position and did not constitute an independent procedural violation for the purposes of R. 103(1)(a) EPC. The examining division had wrongly refused to take into account a confidentiality agreement, having considered that the debate had been closed and a decision had been taken during oral proceedings. The board explained that the examining division had erred in that the oral proceedings had not been terminated by a formal decision and that even if the debate had been formally closed, it could have been re-opened. The board cited **T 595/90** and held that, on re-opening the debate, considerations analogous to those that apply to the boards of appeal apply to the department of first instance: "[o]bservations submitted [after closing the debate] could only be taken into account if the Board reopened the debate (Art. 113 EPC) which depends on its discretion."

In **T 68/16** the board noted that the opposition division had not used the problem-solution approach. The board stated that this fact in itself did not constitute a substantial procedural violation. The problem-solution approach was not enshrined in the EPC and its use was not mandatory. The board agreed that, as a rule, a division that does not use the problem-solution approach should indicate its reasons for doing so, if only to dispel the impression that it acts arbitrarily. However, the Guidelines only stated that any "deviation from this approach should be exceptional" (see Guidelines G-VII, 5 – November 2017 version; this passage was subsequently deleted in the November 2018 version) and did not require a justification.

11.6.2 Violation must be substantial and affect the entire proceedings

In **T 682/91** the board of appeal emphasised that a procedural violation which did not adversely affect the rights of the parties could not be considered substantial. The seriousness of a procedural violation derived from its adverse effects.

In **J 14/99**, as in **J 15/99**, **J 21/98** (OJ 2000, 406), **J 22/98** and **J 6/99**, it was decided that a procedural violation which had not played any part in the decision could not be considered substantial (see also **T 2385/10**). In **T 2249/08** the board found it a requirement that the criticised discretionary decision of the department of first instance must be decisive for the outcome of the decision under appeal. In **T 49/13** the board held that an error which would not have led to a different outcome of the proceedings was not a substantial procedural violation (see also **T 1340/10**, **T 1740/06**).

In **T 5/81** (OJ 1982, 249) it was stated that an alleged violation affecting a part of the decision other than its ratio decidendi could not be a substantial violation within the meaning of R. 67 EPC 1973 (see also **T 959/00**).

In **T 712/97** the board held that the opposition division had considered the respondent's experimental report, but had not relied on it in a way adverse to the appellant. Therefore, the refusal to admit the appellant's experimental report into the proceedings, while a violation of the appellant's right to present comments on the respondent's experimental report, had no substantive effect on the outcome of the proceedings and did not amount to a substantial procedural violation.

In **T 219/93** the board remitted the case to the department of first instance since it clearly called for revision under Art. 109 EPC 1973. The contested decision had also been inadequately reasoned on one point within the meaning of R. 68(2) EPC 1973. Nevertheless, the refusal had been made principally on other grounds, and the board did not consider the procedural violation to be so substantial within the meaning of R. 67 EPC 1973 that reimbursement of the appeal fee would be equitable.

In **T 107/05** the board held that the opposition division's lack of consideration of the opponent's arguments on E5 had not been conclusive for the outcome of the appealed decision. The opposition division had considered E5 "acting of its own motion" and had assessed within its power of discretion that it was not relevant – an analysis confirmed in the appeal proceedings. The mistake made by the opposition division could be regarded as a procedural violation but in this particular case not as a substantial one.

In **T 1607/08** (see also **T 2246/13**) a procedural violation of the principle of the protection of legitimate expectation occurred. Since this violation led to the revocation of the patent and came as a surprise to the patent proprietor, it constituted a substantial procedural violation (see also **T 1423/13**). In **T 2321/08**, the examining division violated the procedure foreseen in Art. 94(3) EPC. This procedural violation was considered substantial because its immediate consequence was the refusal of the application.

In **T 1232/16** the board held that although the board normally orders reimbursement of the appeal fee on account of a substantial procedural violation, this would not be equitable in the case in hand in view of the refusal additionally being based on other grounds not tainted by the procedural violation.

11.6.3 Procedural violation must be committed by the department whose decision is under appeal

In **T 469/92** the alleged procedural violation was not an act of the opposition division, whose decision was the subject of the appeal, but instead that of the examining division. Even if such an act were in breach of the procedural requirements of the Convention, a board of appeal would not have the power to order reimbursement.

In **T 1875/07** the board stated that a substantial procedural violation could only be committed by one of the departments charged with the procedure mentioned in

Art. 15 EPC 1973, not by the President acting under Art. 10 EPC 1973. Therefore, the non-disclosure to the public of the details of a system for performance evaluation for examiners cannot amount to a substantial procedural violation.

11.6.4 Search

In **T 1411/08** and **T 1515/07** the boards considered that the examining division had to be held to have committed a substantial procedural violation because it had not performed an additional search that was manifestly necessary (see also **T 1924/07**). In **T 1924/07** the board held that a distinction had to be drawn between, on the one hand, whether the examining division had acted despite realising that the features were technical and not notorious, thereby indicating a situation where a search was "manifestly necessary" (cf. **T 1515/07** and **T 1411/08**), and on the other hand, whether the features had been erroneously overlooked or misjudged, i.e. an "error of judgment" had occurred (cf. **T 690/06** and **T 698/11**); the latter case could not be considered a procedural violation (see in this chapter V.A.11.6.10).

In **T 736/14** the board held that, if an applicant whose application is non-unitary responds unclearly and/or in a misleading way to an invitation from the examining division to designate which searched invention it wishes to prosecute further, it could not be automatically assumed that the applicant selected the invention covered by the main request for examination. Rather, the examining division had to clarify, e.g. via a further communication, which of the searched inventions the applicant actually wanted it to examine. Confronting the applicant with an irrevocable decision not to admit an auxiliary request covering one of the inventions searched, without giving an opportunity to comment on its admissibility beforehand, constituted a substantial procedural violation of the applicant's right to be heard. In **T 291/93** it was held that a simple reference by the appellant to an inadequate search of the prior art could not be taken as sufficiently supporting an allegation that a substantial procedural violation had occurred.

11.6.5 Guidelines

In **T 42/84** (OJ 1988, 251) the board held that the Guidelines were not legally binding and a failure by the examining division to follow them was not in itself a procedural violation within the meaning of R. 67 EPC 1973 unless it also constituted a violation of a rule or principle of procedure governed by an article of the EPC or one of the Implementing Regulations (see also **T 647/93**, OJ 1995, 132; **T 51/94**; **J 24/96** OJ 2001, 434; **T 937/97**).

11.6.6 Request for interview

In **T 182/90** (OJ 1994, 641), **T 119/91**, **T 523/91**, **T 366/92**, **T 397/94** and **T 245/15** the boards of appeal stated that it was not a substantial procedural violation within the meaning of R. 67 EPC 1973 if a request to be called back by or have an interview with the primary examiner was ignored. It was for the examiner's discretion whether to conduct such informal discussions in accordance with the Guidelines, bearing in mind the particular circumstances of the case (see also **T 300/89**, OJ 1991, 480).

11.6.7 Oral proceedings

a) Failure to summon for oral proceedings

The refusal of a request for oral proceedings usually amounts to a breach of the right to be heard, and as such, a violation justifying the reimbursement of the appeal fee (see inter alia **T 209/88**, **T 283/88**, **T 598/88**, **T 668/89**, **T 663/90**, **T 766/90**, **T 795/91**, **T 35/92**, **T 686/92**, **T 556/95**, **T 647/99**, **T 1972/13**).

In **T 405/96** the board held that receipt of the request for oral proceedings by the EPO was proven by the appellants. The fact that the department of first instance could not be held responsible for the loss within the EPO was irrelevant (see also **T 671/95**).

Failure to summon the parties to oral proceedings was considered to be a substantial procedural violation in **T 209/88** and **T 93/88** (see also **J 16/02**). In **T 560/88** the board of appeal held that there was a substantial procedural violation where a clear auxiliary request by the appellant for oral proceedings had not been granted (see also **T 543/92**, **T 460/16**).

In **T 19/87** (OJ 1988, 268), however, the board held that the finding – albeit wrong – that there had been no request for oral proceedings was not a procedural violation within the meaning of R. 67 EPC 1973. Furthermore, failure to seek clarification from the appellant did not constitute a breach of any procedure.

In **T 731/93** the board held that the refusal of a request for "further" oral proceedings constituted a substantial procedural violation where fresh evidence had been admitted. Whilst Art. 116(1), second sentence, EPC 1973 does give the EPO the discretionary power to reject a request for further oral proceedings before the same department, it does so only "where the parties and the subject of the proceedings are the same".

b) Submissions of parties as response to summons

In **T 1183/02** (OJ 2003, 404) the board held that a response to a summons to oral proceedings before the examining division which contained good faith responsive amendments and arguments did not stay the summons. Hence omitting to confirm that the summons remained valid did not constitute a substantial procedural violation within the meaning of R. 67 EPC 1973.

In **T 343/08** the board stated that there was no general duty for an examining division to provide feedback on an applicant's reply to a summons to oral proceedings, in advance of such oral proceedings.

c) No reasons for refusal of request for postponement

In **T 1505/06** the board held that the failure of the opposition division to include in its decision its reasons for refusing the request for postponement was a substantial procedural violation.

In ex parte case **T 1750/14**, the appellant's representatives requested a postponement of the final date for making submissions (under R. 116(1) EPC) repeatedly and separately from their request to postpone the date for oral proceedings. The request for postponement of the final date was never withdrawn and the appellant's desire to file amended claims was made clear even during oral proceedings before the examining division. Because of the lack of substantiation within the meaning of R. 111(2) EPC as to the refusal of the request for postponement of the final date for making submissions, the board held that the examining division had committed a substantial procedural violation. Nevertheless, the board considered that a party could not gain a procedural advantage from an omission of its own. Its procedural behaviour spoke against regarding the reimbursement of the appeal fee as equitable within the meaning of R. 103(1)(a) EPC.

d) No reasons for refusal of request to change location for oral proceedings

In **T 689/05** and **T 933/10** the boards held that the examining division's rejection of the applicant's request that the oral proceedings be held in Munich instead of The Hague had to be reasoned, R. 111(2) EPC, R. 68(2) EPC 1973. In **T 933/10** it was held that this violation justified the reimbursement of the appeal fee. However, in **T 689/05** the board held that the established procedural violation did not affect the entire proceedings before the examining division. It would have been disproportionate to set aside the entire impugned decision because of the partial lack of reasoning of the decision under appeal. In **T 1142/12** the board rejected the appellant's argument that under Art. 116 EPC the parties have not only a right to oral proceedings but also the right to have their case heard at the proper place (here, Munich instead of The Hague). Therefore, no substantial procedural violation occurred.

e) Repeated postponements of oral proceedings

In **T 679/14** the board held that it was contrary to the principles of procedural efficiency and legal certainty to repeatedly adjourn oral proceedings. Referring to the Guidelines E-II, 7.1 – June 2012 version, the board concluded that the postponement of oral proceedings on five occasions at the instigation of the examining division without serious reasons, as far as apparent from the file, constituted a procedural deficiency in the circumstances of the case in hand. The board nevertheless refrained from deciding on whether it amounted to a substantial procedural violation. The appeal fee was however reimbursed due to violation of R. 111(2) EPC (insufficient reasons).

f) Minutes

In **T 642/97** the board held that if a party was of the opinion that the minutes were incomplete or wrong since essential submissions were not reflected in the file it could request the opposition division to correct the minutes to preserve its rights. In the absence of such a request, the allegation of a substantial procedural violation could not be justified (see also **T 231/99**, **T 99/08**). In **T 1277/15** the opposition division had not commented on the appellant's request for correction of minutes either in the contested decision on the merits or in any other, separate decision. The board, however, found that this procedural error had not had any impact on the outcome of the opposition proceedings.

In **T 835/10** (referring to **T 437/98**) the appellant alleged that new arguments had been given in the decision of the examining division. The board did not agree and stated that the minutes gave a summary of what was discussed and did not have to expand the different steps of the reasoning given in writing later.

In **T 685/14** the board took the view that the failure to transmit the minutes to the appellant was a procedural deficiency but, per se, not a fundamental one. A party should be in a position to file an appeal based on its own notes. Moreover, even after having received the minutes, the appellant had neither challenged their consistency with the decision, nor extended its case by any additional considerations. The board dismissed the appeal and refused the request for reimbursement of the appeal fee.

In **T 853/10** the board held that, when judging whether a substantial procedural violation had occurred during the oral proceedings, the board could rely only on the minutes of the oral proceedings, which were not disputed by the patent proprietor (see also **T 642/97**), and on the facts agreed upon by all parties.

11.6.8 Right to be heard

The right to be heard (see chapter III.B.) is an important procedural right intended to ensure that no party is caught unawares by reasons given in a decision turning down his request on which he has not had the opportunity to comment (**R 2/14** of 22 April 2016). A decision which fails to take into account the arguments submitted by a party and which is based on a ground on which the party had had no opportunity to present its comments, contravenes Art. 113(1) EPC and constitutes a substantial procedural violation, see among many other cases **J 7/82**, OJ 1982, 391; **T 197/88**, OJ 1989, 412; **T 880/91**; **T 892/92**, OJ 1994, 664; **T 951/92**, OJ 1996, 53; **T 1101/92**; **T 220/93**; **T 479/94**; **T 778/98**; **T 594/00**; **T 1039/00**; **T 2294/12** (comparative tests), **T 203/15** and **T 2492/18**.

Other violations of Art. 113(1) EPC may also constitute a substantial procedural violation, see the various cases listed in chapter III.B.2. For a case in which the board found a violation of the right to be heard but held that a reimbursement was not equitable, see **T 433/08** (see in this chapter V.A.11.7.1).

The infringement of Art. 113(2) EPC has, in principle, also to be considered to be a substantial procedural violation justifying the reimbursement of the appeal fee (see **T 647/93**, OJ 1995, 132; see also **T 32/82** and **J 19/84**), for example when the final requests were not clarified (**T 666/90**, **T 552/97**, **T 1439/05**, **T 382/10**) or when the opposition division overlooked amended claims presented in a submission **T 543/92** and **T 89/94**). See chapter III.B.3. "Text submitted or agreed by applicant (patent proprietor) – Article 113(2) EPC".

11.6.9 Inadequate reasons given in the decision at first instance

The obligation to provide adequate reasoning in a decision in accordance with R. 111(2) EPC (R. 68(2) EPC 1973) is closely linked to the principle of the right to be heard under Art. 113 EPC (**T 1340/10**). A failure to do so is to be considered a substantial

procedural violation justifying the reimbursement of the fee for appeal (see among many other cases **T 493/88**, OJ 1991, 380; **T 522/90**; **T 392/91**; **T 142/95**; **T 278/00**; **T 571/03**; **T 897/03**; **T 1366/05**; **T 1612/07**; **T 87/08**; **T 353/11**; **T 2366/11**; **T 129/14** and **T 679/14**).

In **T 75/91** the board stated that the impugned decision enabled the reader to follow a line of argument for refusing the application. Whether these reasons were convincing and had to be accepted by the board had nothing to do with a procedural violation. See also **T 698/10**, where the board added that the examining division was under no obligation to explicitly address every argument presented by the applicant as long as the reasoning given enabled the appellant and the board to examine whether the decision was justified or not. See also chapter III.B.2.5. "Consideration of the parties' arguments, submissions and evidence".

In **T 2340/13** there was a discrepancy between what was stated in the "Summary of facts and submissions" of the written decision of the opposition division, where it was stated that, inter alia, Art. 123(3) EPC was discussed in detail, and the minutes, which although very detailed, did not mention any discussion concerned with Art. 123(3) EPC. Neither was there any discussion of this matter in the "Grounds for the decision", except that the title above point 3 read "Added subject-matter (Art. 100(c), 123(2), 123(3) EPC)". The board found that if the matter had been discussed, the opposition division should properly have given an indication thereof in the minutes and indicated in the decision whether and why Art. 123(3) EPC was regarded as being complied with. The board held that the omission of any reasons in respect of Art. 123(3) EPC was not only a violation of R. 111(2) EPC but also of Art. 113(1) EPC.

In **T 2282/17** the board held that where a decision only refers to one or more previous communications, leaving it to the board and the appellant to speculate as to which of the reasons given by the examining division might be essential to the decision to refuse the application, it does not meet the requirements of R. 111(2) EPC. Since the examining division's decision clearly contravened R. 111(2) and Art. 113(1) EPC, and since the appellant had to appeal in order to obtain a fully reasoned decision, the board found it was equitable to reimburse the appeal fee pursuant to R. 103(1)(a) EPC.

For cases concerning the obligation under R. 111(2) EPC, R. 68(2) EPC 1973, see chapter III.K.3.4. "Reasons for the decision", and in particular chapter III.K.3.4.4.

11.6.10 Error of judgment by a department of first instance

A number of decisions have discussed whether an error of judgment by a department of first instance could be regarded as a substantial procedural violation justifying reimbursement of the appeal fee.

a) Communications

In **T 19/87** (OJ 1988, 268, see also above in this chapter at V.A.11.6.7 a)) the board found the examining division had made an error of judgement and not a procedural violation when it erroneously held the appellant had made no request for oral proceedings. The

board found there was no basis for ordering reimbursement of the appeal fee in accordance with R. 67 EPC 1973.

In **T 621/91** the board held that misinterpretation of a letter to an EPO department constituted an error of judgment and not a substantial procedural violation.

In **J 9/05** and **J 18/05** the board had to decide on the examining division's decisions that R. 69(1) EPC 1973 communications were deemed to have been duly delivered to the addressees on the tenth day following its posting. The board held in each case that whilst the examining division had evaluated the evidence as to the postal delivery incorrectly, this amounted to an error of judgment and could not be characterised as a procedural non-compliance, a prerequisite for the application of R. 67 EPC 1973.

b) Wrong assessment of prior art or technical content

According to the established jurisprudence of the boards of appeal, a misinterpretation of a document normally constitutes an error of judgment rather than an error of law and is therefore no "procedural" violation, let alone a substantial one (**T 1031/12**). In **T 162/82**, OJ 1987, 533, the board held that an error in interpreting a document could not possibly be regarded as a procedural violation (see also **T 1049/92**, **T 976/11**).

In **T 367/91** the board stated that to base a decision only on a wrong assessment of prior art and/or the claimed invention had to be regarded as a substantive error, not a procedural violation (see also **T 144/94**, **T 12/03**, **T 1340/10**, **T 997/15**). In **T 68/08** the board held a wrong assessment of the claimed invention (or of the prior art) would always be a substantive issue.

In **T 17/97** the appellant's request for reimbursement of the appeal fee was based on the fact that the opposition division had disregarded a document. In the board's judgment an erroneous assessment of the relevance of a document did not, by its very nature, constitute a procedural violation within the meaning of R. 67 EPC 1973.

The misinterpretation of a document does not constitute a procedural violation (**T 1049/92**; **T 162/82**, OJ 1987, 533; **T 1031/12**). In **T 588/92** the board pointed out that a different opinion on the specialist knowledge to be applied when interpreting the technical content did not amount to a procedural violation.

In **T 860/93** (OJ 1995, 47) the board found that even though there had been a gross error of judgement on the part of the examining division there was no procedural non-compliance of the kind which was a condition precedent to R. 67 EPC 1973 taking effect.

In **T 863/93** the board held that it was the established jurisprudence of the boards of appeal that in order to fall within R. 67 EPC 1973 a procedural violation as opposed to an error of judgment must have occurred. It concluded that the issue raised by the appellant, i.e. the examining division's misunderstanding of D1, was a matter of judgment which did not justify the reimbursement of the appeal fee.

In **T 970/10** the board held that an incorrect assessment of a document with regard to its date of availability to the public related to a factual error in respect of the substantive requirements under Art. 54(2) EPC, and not to an error in respect of procedural law.

In **T 976/11** the board disagreed that the change of the closest prior art alone could constitute a substantial procedural violation. It held that an examining division had the procedural discretion to revise its objection of inventive step, including the choice of the closest prior art, at any stage of the examination proceedings, including the oral proceedings.

In **T 658/12** the board held that an insufficiently reasoned decision had to be distinguished from a decision that had faulty or unpersuasive reasoning. The board concluded that while the COMVIK-approach may have been incorrectly applied in the case in hand, this was a substantive issue, only involving judgement. Thus, the board found that the decision was reasoned in the sense of R. 111(2) EPC. The board also found that the examining division had not acted unreasonably, as claimed by the appellant (applicant), by not admitting the second auxiliary request. The board held, therefore, that there was no basis for reimbursement of the appeal fee (see also **T 690/06**).

In **T 680/89** the board found that it did not amount to a procedural violation if the examining division wrongly finds that a claim is not sufficiently clear to comply with the requirements of Art. 84 EPC 1973, even where there has been a possible error of judgment and failure to seek clarification from the appellant. It concluded there was no basis for ordering reimbursement of the appeal fee in accordance with R. 67 EPC 1973.

c) Error in the application of the law

In **T 687/05** the board held that the fact that the decision under appeal was based on an incorrect interpretation of Art. 100(c) EPC 1973 did not constitute a "procedural" violation, but was simply an error in the application of the law (see also **J 8/13** and **T 378/14**).

d) Board reaches a different conclusion than the department of first instance

The fact that a board comes to a different conclusion from the department of first instance does not by itself mean that the latter has committed a substantial procedural violation within the meaning of R. 103(1)(a) EPC (R. 67 EPC 1973), which would necessitate reimbursement of the appeal fee (**T 87/88**, OJ 1993, 430; see also **T 538/89**; **T 182/92**; **J 14/12**; **T 203/15**; **T 997/15**).

In **T 182/92** the board stated that the fact that the first instance reached a conclusion regarding the document of priority which could not be confirmed by the board was a matter of interpretation of a document, i.e. a matter of judgement, which could not amount to a procedural violation.

e) Exercising of discretion

In **T 208/00** the board considered that the department of first instance had to be granted a certain degree of latitude in exercising its power of discretion, which, in the case in hand, it had not overstepped in a clearly inappropriate manner. It stated that it was not equitable to reimburse the appeal fee, especially as under the established case law of the boards of appeal (see **T 860/93**) not even "a gross error of judgment" by the department of first instance was regarded as justifying such reimbursement.

In **T 248/00** the board decided that, where a late submission was not admitted, an irregularity had taken place if the department had exercised its discretion incorrectly, that is to say on the basis of irrelevant or arbitrary considerations (see also **T 1651/10**). The board held that, even if the non-admission might ultimately prove to be incorrect, such application of the law did not amount to a substantial procedural violation. The issue was, rather, whether the opposition division's discretion had been incorrectly exercised in not admitting a late-filed request.

In **T 2249/08** the board held that it was apparent that the opposition division had exercised its discretion to disregard "facts and evidence" presented belatedly, i.e. after a final date in preparation for oral proceedings. It stated that such discretionary decisions were not normally subject to review, unless the decision was based on the wrong principles or was otherwise manifestly unreasonable. Thus any finding of a substantial procedural violation through a discretionary decision also presupposed such grave errors, as opposed to mere errors of judgement.

f) Wrong procedure adopted

Normally there is no procedural violation justifying reimbursement of the appeal fee if the wrong procedure is adopted in a situation where the EPC does not lay down clearly what procedure is to be followed and the case law has not yet established any settled practice (**T 234/86**, OJ 1989, 79).

g) Following earlier decisions

In **T 208/88** (OJ 1992, 22) the board held that taking a different line from an isolated appeal decision – as opposed to established board of appeal case law – could not be regarded as a substantial procedural violation.

In **T 494/07** the board held that if two apparently similar case constellations were decided differently, this could at most be regarded as an error of judgment. In the case at issue, the board held that not following an earlier board decision did not constitute a substantial procedural violation.

In **T 875/98** the board noted that the EPC did not contain any rule of procedure which imposed on an opposition division an obligation to abide by a decision in a different case. It held that a single decision did not establish a "case law" which had to be adhered to in

another opposition case, even if the subject-matter of the two respective cases was closely related.

11.6.11 Cases concerning the decision-making process and the decision

a) Issuing of decision

(i) Issuing of decision before expiry of timelimit to comment

In **T 804/94** the board ruled that there had been a substantial procedural violation as the opposition division had issued a decision rejecting the opposition before **expiry of the four-month period** it had set for responding to its communication (see also **T 663/99**; see also chapter III.B.2.6.2).

(ii) Excessive length of proceedings

In **T 900/02** the board found that the extreme length of the delay – three years and seven months – between oral proceedings and the issue of a written decision amounted to a substantial procedural violation.

In **T 358/10** the board found that sending the minutes 19 months after the oral proceedings had taken place and notifying the decision 22 months after its pronouncement at the end of those proceedings were inherently unacceptable procedural violations which, by themselves, sufficed to justify refunding the appeal fee (see also **T 243/87**, **T 563/11**). In **T 2340/13** the length of time between the oral proceedings and issuing of the minutes and written decision of the opposition division was 13 months and 14.5 months respectively. The board noted, with reference to **T 358/10**, that even if this delay by itself were not considered to be a substantial procedural violation, it plausibly contributed to the other procedural violations (see in this chapter V.A.11.6.9).

In **T 823/11** the board considered the duration of the proceedings before the department of first instance of more than twelve years after entry into the European phase as excessive. According to the board, in **T 315/03** even a shorter delay of ten years in a much more complex opposition case had amounted to a substantial procedural violation. The board also referred to the judgment of the ECtHR in Kristiansen and Tyvik AS v. Norway (application No. 25498/08), in which the examination and (administrative) appeal proceedings of a patent application had taken a total of eighteen years. Taking into account the duration of patent protection of twenty years, the ECtHR had found "the length of the administrative proceedings before the patent authorities" to be excessive because it "in effect rendered meaningless any exercise by them [the applicants] of their right of access to a court". See also **T 1243/17**.

In **T 1824/15** the board noted that the reasons for decision **T 823/11** did not explain why the delays in the examination procedure could not be justified by the particular circumstances of the case. Moreover, **T 823/11** did not explain how its reasoning was in line with that of the cited ECtHR decision, in particular why circumstances leading to a finding of a violation under Art. 6(1) ECHR would necessarily lead to a finding of a

substantial procedural violation under R. 103(1)(a) EPC. In the case in hand the examining division had been entitled to raise the new objection so late in the first-instance proceedings. Members of an examining division were free to change their minds at any point in the procedure, including during oral proceedings, as long as the requirements of Art. 113(1) EPC were fulfilled. The board held that the over eleven year delay in raising of the objection based on D3 had led to neither a fundamental deficiency under Art. 11 RPBA 2007 nor a substantial procedural violation. With regard to the time taken by the examining division to issue the written decision and the minutes, the board found that the delay of seven months was not a procedural violation of any sort, let alone a substantial one, and also not a fundamental deficiency under Art. 11 RPBA 2007. The request for reimbursement of the appeal fee was therefore rejected.

In **T 1131/12** the board stated that, although a delay of five years between a last communication and the written decision would be wholly unacceptable, there was no causal link between this excessive delay and the outcome of the examining division's decision. Moreover, the appellant had only filed and substantiated the request for reimbursement shortly before the oral proceedings. For these reasons, the board refused the reimbursement request under Art. 12(1)(a) and (2) RPBA 2007.

In **T 2707/16** the contested refusal decision was taken more than fourteen years after the filing date. The board found that the excessive delays, in particular the lapse of more than seven years before the second substantive communication was sent out, constituted a procedural violation. The board argued that the violation was also substantial because the severe delays had the consequence that the first-instance decision was taken much later than it would have been without the procedural deficiencies. Thus, they had an impact on an essential element of the decision, namely its date ("justice delayed is justice denied"). However, the board was of the opinion that a reimbursement of the appeal fee in the circumstances should be regarded as equitable only where the applicant has made clear by some action that he did not tacitly agree with the stagnation of the proceedings. The board found the appellant failed to provide any such signal for a very long period of time and therefore refused the request for reimbursement.

In **T 2377/17** the board found the delay of 14 years before the examining division issued its first substantive communication to be a substantial procedural violation. The board noted that the appellant had remained inactive for over 12 years before it requested accelerated examination, but the examining division then still did not succeed in issuing a communication within the period of six months to which it had committed; instead, it required close to two more years. After the appellant filed a timely reply, it again took more than 18 months - and a second request for accelerated examination, again leading the examining division to commit itself to a date it ultimately did not keep - before the examining division issued the summons to oral proceedings. Contrasting the applicant's attempts to move the case forward with those of the applicant in **T 2707/16**, in which the same board found the reimbursement of the appeal fee not to be equitable because the applicant there had taken insufficient action to try to move the proceedings forward, and noting the periods of unjustified delay that occurred despite the appellant's attempts to move the case forward, the board considered reimbursement of the appeal fee to be equitable in the case in hand.

In **T 2699/17** the board agreed with the appellant (applicant) that a total processing time of more than 12 years (from filing of the application to the decision to refuse the application) was by far above the average, but found that although undesirably long, the duration of the case did not amount to a substantial procedural violation. Unlike in **T 2707/16**, in which there was a long period of stagnation, in the case in hand the examining division regularly returned to the case and addressed various issues of substance, which the appellant promptly addressed. During prosecution of the case, the decision in **G 1/07** (OJ 2011, 134) was also issued, which was highly pertinent to the application. The board was also unable to see why the appellant waited until the appeal stage to voice its concerns instead of making use of the PACE programme, which gives applicants a convenient tool to speed up the pace at which the proceedings are progressing.

(iii) Lack of competence

A decision taken by a department that is not competent amounts to a substantial procedural violation justifying the reimbursement of the appeal fee (see **T 2411/10** where the Receiving Section, and not the examining division, was competent to decide). A substantial procedural violation is deemed to have occurred if the decision has been taken by a formalities officer who was not competent to decide (**J 10/82**, OJ 1983, 94; **T 114/82**, OJ 1983, 323; **T 790/93**; **T 749/02**).

(iv) Decision not approved by all members

In **T 225/96** the board ruled that to issue the parties with a draft decision not approved by all opposition division members present at the oral proceedings was a substantial procedural violation.

b) Content of decision

(i) Written decision deviates from oral decision

In **T 425/97** the board decided that any substantive deviation of the decision notified in writing from that given orally at the oral proceedings amounted to a procedural violation. **T 1365/09** held that a contradiction between the decision rendered at the oral proceedings and the written decision as sent to the parties contravened R. 111(1) EPC and amounted to a substantial procedural violation.

In **T 1455/14** the board found that there was no basis in the EPC for the opposition division's use of its discretion to correct an obvious error after the proceedings had been closed, for which there was no corresponding request according to R. 139 EPC on the part of the patent proprietor. This resulted in a threefold procedural violation. The written decision was based on a text amended by the opposition division which was (1) not submitted by the patent proprietor, (2) on which the opponent had had no opportunity to comment and (3) which did not correspond to the decision announced at the end of the oral proceedings.

(ii) Decision deviates from previous communication

In **T 2006/08** the board found that although the opposition division had expressed an opinion on the issue of sufficiency of disclosure in favour of the patentee in two communications, this opinion was clearly labelled as being preliminary and non-binding. The board also held that a preliminary, provisional opinion did not prevent a party from making its complete case. It was the responsibility of a party to ensure that the facts and evidence filed were not only unequivocally clear but also as complete as possible. If a party decided to retain or not to file further evidence to support its case, it would run the risk that an adverse decision might be issued based on the available (incomplete) evidence on file. The board rejected the request for reimbursement of the appeal fee.

In **T 980/06**, the contested decision had regarded a claim as patentable, whereas in the sole previous communication the examining division had taken a negative view. In such circumstances, a second communication would have been useful. However, its absence was not a "substantial" procedural violation.

(iii) Failure to deal with objection

In **T 740/94** the board held that the failure of the opposition division to deal with an objection under Art. 100(b) EPC 1973 against an amended claim in its decision to maintain the patent in amended form clearly constituted a substantial procedural violation (see **G 10/91**, OJ 1993, 420, point 19 of the Reasons).

(iv) Third-party observations not mentioned in decision

In **T 283/02** the opposition division had duly forwarded the observations by third parties to the patentee, who had made no comment. The failure of the opposition division to mention these observations in its decision did not constitute a substantial procedural violation, even though a mention would have been desirable.

(v) Board decision containing similar facts not followed

In **T 494/07** the board held that the strict legal obligation to follow the ratio decidendi of a decision of a board (Art. 111(2) EPC 1973) was limited to the same application and the same instance whose decision has been contested in the appeal, but did not extend to other applications (or even to other instances in the same application). This was so even if the subject-matter of the two applications was highly similar (see **J 27/94**, OJ 1995, 831).

(vi) Remarks on substantive matters in decision on admissibility

Remarks on substantive matters in a decision rejecting the opposition as inadmissible have no legal effect. Even if misleading, they do not represent a substantial procedural violation justifying the reimbursement of the appeal fee (**T 925/91**, OJ 1995, 469; see also **T 1051/92**).

(vii) Applying legal provision not yet in force

In **T 991/02** an opposition division decision was set aside for lack of a legal basis. The opposition division's application of a new rule, not yet in force in this case, constituted a substantial procedural violation.

c) Requests

(i) Obligation to reason refusal of request

According to **T 961/00**, it is a party's procedural right to file and maintain such requests as are regarded by the competent organ as unallowable or even inadmissible. If a party does so, then the competent organ has to give a decision on it (see **T 1105/96**, OJ 1998, 249), but cannot simply disregard it and deal with the case as if the request did not exist. This would constitute a substantial procedural violation (see also **T 234/86**, **T 484/88**, **T 155/88**).

In **T 1157/01** the decision under appeal had omitted to give reasons for the refusal of the higher-ranking requests still pending before the examining division; this amounted to a substantial procedural violation (see also **T 488/94**; for opposition procedure see **T 234/86**, OJ 1989, 79).

In **T 1435/13** the board held that because claim 1 of the main request did not fulfil the requirements of the EPC, the main request could not be allowed. This conclusion was unaffected by the fact that independent claim 9 complied with the requirements of the EPC or that it might have been desirable that the decision under appeal included reasoning with respect to all independent claims (and thus also claim 9). As the examining division had decided on all requests before it, the board did not consider that a substantial procedural violation had occurred.

(ii) Auxiliary requests and order of requests

In **J 23/96** the board held that an auxiliary request was filed in case the main request was refused; the auxiliary request then took its place and had to be dealt with in the same decision. The examining division's failure to deal with the auxiliary request for re-establishment in the decision under R. 69(2) EPC 1973 (R. 112(2) EPC) amounted to a substantial procedural violation.

In **T 320/99** (referring to **T 1105/96**) the examining division considered the auxiliary request allowable, but nonetheless issued a decision refusing the main request and thus the application. The correct course of action would have been to issue a communication under R. 51(4) EPC 1973 based on the auxiliary request. The issue of the decision was a substantial procedural violation which justified the reimbursement of the appeal fee.

In **T 883/07** the board held that the examining division's failure to examine the auxiliary requests independently of the main request amounted to a substantial procedural violation within the meaning of R. 67 EPC 1973. Claim requests do not coexist in parallel, but form

a stack which has to be considered – each one independently of all the others – in the sequence indicated by the applicant or patent proprietor (see Guidelines C-VI, 4.1 and E-X, 3 – June 2005 version).

In **T 1758/15** the opposition division had concluded that four attempts to overcome a single issue were enough. The decision to not admit a further request was taken without having identified any signs of procedural abuse and without knowing the content of the further request. The board concluded that the opposition division had not exercised its discretion under R. 116(2) and Art. 114(2) EPC in a reasonable way, which constituted a substantial procedural violation. However, because the appeal was not deemed allowable, the appeal fee was not reimbursed. In any case, during second oral proceedings the appellant withdrew its request for reimbursement.

(iii) Requests not taken into account because of delay within EPO

In **T 231/85** (OJ 1989, 74) the board held that failure to take the applicant's requests into account as a result of a delay within the EPO (in this case six weeks) constituted a substantial procedural violation (see also **T 598/88**). In **T 205/89**, owing to a mistake by a formalities officer, a request for an extension of the time for submitting comments in opposition proceedings never reached the opposition division, which therefore took its decision without considering the argument presented in the subsequently filed submission. The board considered that the failure by the formalities section amounted to a substantial procedural violation on its part and regarded the reimbursement of the appeal fee to thus be equitable.

(iv) Requests not filed by correct party

In **T 1178/04** a procedural violation within the meaning of R. 67 EPC 1973 had occurred, in that the requests relating to the patentability of the claimed invention were made in the oral proceedings before the opposition division by a party to whom the opposition had been purportedly but invalidly transferred. These requests were inadmissible.

d) Amendments

In **T 246/08** the board stated that a refusal to allow amendments made in advance of any amendment being submitted could not be a reasonable exercise of discretion pursuant to R. 137(3) EPC and was ipso facto a substantial procedural violation (see also **T 872/90**).

In **T 121/06** the board held that issuing a communication under R. 51(4) EPC 1973 in which amendments were proposed which the applicant could not reasonably be expected to accept without further discussion constituted a substantial procedural violation.

In **T 901/10** the appellant implied that the way in which the examining division had applied R. 137(3) and (4) EPC amounted to a substantial procedural violation. After the application had entered the European phase, no examination report was issued for six years. Nevertheless, the board held that such delays, undesirable as they may be, do not oblige

the examining division to be more lenient under R. 137 (3) EPC. The appeal fee was not reimbursed.

In **T 1354/13** the board held that an applicant who presents extensively revised claims at a late stage of the proceedings has to be prepared for the possibility that the admissibility of these claims will be considered under Art. 123 and R. 137 EPC. The request for reimbursement of the appeal fee was refused.

e) Signature on decision and minutes

In **T 390/86** the board held that the written reasons for a decision delivered during oral proceedings could only be signed by members of the deciding body who had taken part in the oral proceedings (see also **T 563/11**). In **T 2076/11** the appeal fee was reimbursed as the written decision and the minutes of the oral proceedings were signed by the director of the organisational unit. See also chapter III.B.2.9. "Changes in the composition of the competent department of first instance ".

In **T 211/05**, the board took the view that for a person to take part in a decision when not entitled to do so (here the director signing the decision instead of the second examiner), resulting in failure to comply with the principle that the power to examine a patent application must not only be exercised personally but also be seen – by both the applicant and the public – to be exercised personally, constituted a substantial procedural violation, in particular because it deprived the applicant of his right to be heard by the full examining division (see also **T 1033/16**).

f) Composition of opposition division

(i) Under Article 19(2) EPC

The board of appeal ordered reimbursement of the appeal fee in **T 382/92** because the composition of the opposition division had not complied with the requirements of Art. 19(2) EPC 1973. The Chair and one member of the opposition division had already been members of the examining division which had decided on the application leading to the patent concerned (see also **T 939/91**, **T 960/94**, **T 825/08**, **T 1349/10**, **T 1700/10**, **T 79/12**, **T 1788/14**). See also chapter III.K.1.3.3.

(ii) During opposition proceedings

In **T 2175/16** the person who signed the decision of the opposition division as first examiner had not been the first examiner at the oral proceedings. Thus, a change in the composition of the opposition division had taken place between holding the oral proceedings, at the end of which a decision was given orally, and issuing the written

decision. The board considered the change of composition to be a substantial procedural violation, which justified that the appeal fee be reimbursed (see also chapter III.K.1.3.3.2).

11.6.12 Partiality

In **T 900/02** the board stated that a suspicion of partiality must inevitably arise if a member of an opposition division, or any other first instance body, first solicits and then accepts employment with a firm in which a partner or other employee is conducting a case pending before that member, even if it occurred after oral proceedings had been held. This amounted to a substantial procedural violation.

In **T 585/06** the appellant (opponent) considered that the presence of a former member of the boards of appeal, as a consultant of the patent proprietor, at the oral proceedings before the opposition division had led to partiality of the opposition division. The former member did not address the opposition division, not even under the control of the representative of the respondent. This amounted to an important difference to the facts underlying case **G 2/94**. The authorised representative was absolutely free whether to accept the hints whispered by the former member, who did not make any intervention of his own motion. The appellant's representative accepted at the beginning of the oral proceedings that the former member would sit beside the representative of the respondent and assist him. Even during the oral proceedings no objection was made to his presence. Moreover, no substantiated reasons of partiality of the opposition division were submitted by the appellant. The request for the reimbursement of the appeal fee was refused.

In **T 1647/15** the minutes indicated that the representative of opponent III was interrupted by the Chair during the oral proceedings before the opposition division with: "Shut your mouth" and "Don't talk any more". The board held that the ability of the Chair to hear opponent III with an objective judicial mind could be perceived as having been affected and held that the objection of suspected partiality was justified. The board found it equitable to reimburse the appeal fee paid by each of the opponents I to III.

11.6.13 Suspensive effect of appeal

In **J 5/81** (OJ 1982, 155) it was held that there was a substantial procedural violation where the Receiving Section had ignored the suspensive effect of an appeal in contravention of Art. 106(1) EPC 1973.

11.6.14 Non-compliance with order of the board

In **T 227/95** a decision was taken by a board to remit the case to the department of first instance (opposition division) for further prosecution and not, as assumed by the division, with instructions to maintain the patent. The fact that the opposition division had not carried out the board's order amounted to a substantial procedural violation with regard to Art. 111 EPC 1973. The case was remitted again to the department of first instance, and the appeal fee was reimbursed.

11.6.15 Referral pending before Enlarged Board

Where a decision of the examining division depended entirely on the outcome of proceedings before the Enlarged Board on a legal question or point of law raised under Art. 112 EPC 1973 – and this was known to the examining division – the further examination of the application had to be suspended until the matter had been decided by the Enlarged Board. Failure to do so amounted to a substantial procedural violation under R. 67 EPC 1973 (**T 166/84**, OJ 1984, 489). See also chapter V.B.2.5.3 "Stay of first-instance proceedings following a referral".

11.6.16 Refusal of application on one ground only

In **T 859/97** the board took the view that it was sufficient for the examining division, when deciding to refuse a European patent application under Art. 97(1) EPC 1973, to state one ground only which in their opinion would prejudice the grant of a European patent. In the case in hand, the examining division was unable to grant a patent because it had concluded that the subject-matter of claim 7 was not new. Consequently, it was under no obligation to comment on the patentability of claims 1 to 6. The requirements of R. 67 EPC 1973 were thus not met.

11.6.17 Cases concerning documentation and communications passing between the EPO and the parties

a) Ambiguous communication or wrong form

In **J 3/87** (OJ 1989, 3) it was stated that if an EPO communication was not as clear and unambiguous as it ought to be, and led a reasonable recipient into error, that amounted to a substantial procedural violation, even if the ambiguity of the communication was partly due to an unfortunate provision of the law.

In **J 17/92** the appellants complained that the examining division had used the wrong form for its communication, namely a form threatening that the application would be refused if a response was not filed. The board considered that the failure of the examining division to withdraw the wrong form and the threatened sanction of a possible refusal of the application amounted to a substantial procedural violation.

b) No reply to communication under Article 101 EPC

In **T 362/02** the opposition division had revoked the patent for the sole reason that the appellant had not replied to a communication under Art. 101(2) EPC 1973 inviting him to file observations. The board found that this decision was a substantial procedural violation because the EPC did not provide any sanction for a party's failure to reply to a communication under Art. 101(2) EPC 1973. Further, revocation of a patent for mere failure to reply to a communication was contrary to the clear intention of the law, which required a proprietor to agree to the form in which a patent was granted or amended and to use clear and unambiguous words if he wished to abandon a patent.

c) Wrong type of communication

In **J 10/07** (OJ 2008, 567), the board found that, although the Receiving Section was not to be blamed for issuing a communication under R. 43(2) EPC 1973, as the drawings could not have been in the file on that date, it should not have issued the notification under R. 43(3) EPC 1973 but a communication pursuant to R. 43(1) EPC 1973. This amounted to a substantial procedural violation. If the Receiving Section had followed the legally correct procedure, an appeal would not have been necessary.

d) Period set for opponent to reply to patentee's response

In **T 138/08** the appellant (opponent) complained that two months and 21 days was not sufficient time to reply to the patentee's observations filed in response to the opposition. The board observed that the communication of the observations of the patentee had been made merely for information and the opposition division and had not raised any matter of substance in the communication. For that simple act a period of two months was considered sufficient. Therefore, the reimbursement of the appeal fee under R. 103(1)(a) EPC was not justified.

e) Observations not forwarded to other party

In **T 789/95** the file contained no indication that a copy of the opponent's observations had been forwarded to the patent proprietor. It was therefore to be assumed that the communication of the observations to the patent proprietor had been omitted, in contravention of the Guidelines. In the board's view, this constituted a substantial procedural violation, as it infringed the principle that all parties to proceedings must be accorded the same procedural rights.

f) Appointment of professional representative

In **J 20/96** the EPO had waited one year and three months before requesting the appointment of a professional representative and nearly another year before asking for the appellant's new address. Although conceding that the Receiving Section had been slow to request the appointment of a professional representative, the Legal Board ruled that this was not a substantial procedural violation because such appointments were a matter for the appellant; similarly, it was also up to him or his representative to provide his address.

g) Warning in relation to a grace period

As to the EPO's obligation to issue a warning in relation to the grace period of R. 85a EPC 1973 (this provision was deleted in the EPC 2000), and the question of whether or not this warning constituted a "courtesy service", see **J 17/04** and **J 32/97**.

11.7. Reimbursement must be equitable

11.7.1 Causal link between substantial procedural violation and filing of appeal

In order to render the reimbursement of the appeal fee equitable, as a rule a causal link must exist between the alleged procedural violation and the decision of the department of first instance that necessitated the filing of an appeal (**T 388/09**; see also **J 9/10**, **T 1101/92**, **T 1198/97**, **T 2373/11**). For procedural deficiencies of a general nature (such as excessive length of proceedings) which affect the whole procedure leading to the contested decision, reimbursement can be equitable even in the absence of a causal link (**T 2707/16**). In **T 3071/19** the board held that if as a result of a deficiency the case is remitted to the examining division without any substantial progress having been made on it, reimbursement of the appeal fee may well be equitable even if the deficiency cannot be directly linked to the filing of the appeal.

In **T 677/08** the board held there was no causal link between the procedural violation and the necessity to file an appeal. The application was refused for lack of inventive step, and so the appellant would have had to file the appeal even if the examining division had sufficiently reasoned its refusal of the request for a videoconference.

In **T 2111/13** the board held that, according to established case law, for the reimbursement of the appeal fee to be equitable a causal link between the substantial procedural violation and the filing of the appeal was required. According to an alternative approach, a procedural violation is not to be deemed substantial if the outcome of the proceedings would not have been different had the violation not occurred (see in this chapter V.A.11.6.2). In the case at hand, the board saw no need to choose between these two approaches and rejected the appellant's request for reimbursement.

In the cases that follow the boards held that reimbursement was not equitable because no causal link could be established:

In **T 2106/10** the board reiterated that any reimbursement of the appeal fee had to be equitable and depended on the question of whether the procedural deficiencies were 1) substantial and 2) forced the appellant to file the present appeal. In the case in hand the board did not address the question as to whether a substantial procedural violation had taken place, since the board was of the opinion that the appellant had to file the appeal irrespective of whether or not substantial procedural violations had taken place.

In **T 41/97** a refund was not equitable because the procedural error (refusal of interlocutory revision prior to receipt of the statement of grounds of appeal and before the expiry of the period for filing it) was not the reason the appeal had been filed (see also **T 1891/07**, **T 1994/11**, **T 2227/09**).

In **T 711/11** the appellant alleged that the examining division found a lack of unity without providing adequate reasoning. The board stated that lack of unity was not the sole ground given in the contested decision for refusing the application. The appellant would in any

case have had to file an appeal in view of the ground of lack of inventive step. Therefore, the board considered the reimbursement of the appeal fee not equitable.

In **T 893/90** the contested decision to refuse the application on the grounds of lack of novelty was based primarily on document 1, on which, in contrast to document 2, the appellant had had adequate opportunity to put forward comments. The board stated that the decision under appeal had been fully reasoned, and that the procedural violation as regards the reliance on document 2 was thus not sufficiently closely linked to the need to pay an appeal fee for it to be equitable to reimburse the fee.

In **T 601/92** the opposition division had not commented, either in a communication or in its decision, on auxiliary request (5) submitted by the patent proprietor in good time before the decision was issued. Because auxiliary request (2), which had been submitted in the appeal proceedings and which preceded auxiliary request (5), was allowed, the board did not see any reason, despite the procedural violation, to reimburse the appeal fee, as this would not have been equitable.

In **T 2377/09** the board took the view that reimbursement of the appeal fee solely on the grounds of the established procedural violation would not be in accordance with the equitability requirement of R. 67 EPC 1973 (R. 103 EPC). This was because the rejection decision was based on additional, alternative grounds which had given the appellant no cause to claim a substantial procedural violation and against which it would in any case have had to appeal to get the decision set aside (with reference to **T 893/90**, **T 219/93**, **T 4/98** (OJ 2002, 139) and **T 978/04**).

In **T 840/07** the appellant's request which had succeeded in the appeal was the same as the main request which it had filed before the examining division but had later replaced. The appellant had not pursued that request to the point where it became the subject of a decision. The board concluded that the appellant had had no choice but to appeal if it wanted the result it had eventually obtained before the board. To reimburse the appeal fee would have given the appellant a fee-free appeal which would be inequitable (see also **T 784/11**, referring to **T 4/98**).

In **T 1891/07** the board held that despite the presence of a substantial procedural violation it would not be equitable to reimburse the appeal fee because the violation could not have been causative in filing the appeal since it occurred after the notice of appeal had been filed.

In **T 1990/08** the appellant submitted that the examining division had committed a procedural violation as it had not provided a translation of D1 but had used it to deny inventive step. The board held that even if the inventive step objection including the appraisal of document D1 in the decision were disregarded, the contested decision would still be negative as it had also relied on Art. 84 and 123(2) EPC to refuse the application. Regardless of whether a substantial procedural violation had occurred or not, the appellant would have had to appeal in order to obtain a reversal of the first-instance decision. The alleged procedural violation could not have been the immediate and only cause of the need to appeal and to pay an appeal fee.

In **T 433/08** the board and the parties agreed that a violation of Art. 113(1) EPC had occurred because the opposition division had relied in its decision on a document which had not been referred to in the course of the opposition proceedings. The board held, however, that the opposition division would not have reached a decision more favourable to the opponent if it had not taken into account said document. Thus, the opposition division had not acted to the detriment of the opponent. The board concluded that the rights of the opponent (appellant) were not curtailed to an extent that would make the reimbursement of its appeal fee equitable by reason of a substantial procedural violation.

In **T 1680/11** the board held that an alleged procedural violation with respect to a decision to rectify under Art. 109 EPC could not justify refunding the appeal fee. A decision to grant interlocutory revision could not be the reason for filing the appeal, as it was – by its very definition – taken after the appeal had been filed.

In **T 1414/18** the board found there was a causal link between the substantial procedural violation – the examining division's statement in its communication that "[t]he next procedural step will be summons to oral proceedings during which the application will be refused (Art. 97(2) EPC)" – and the necessity of filing an appeal against the examining division's decision, and found the reimbursement of the appeal fee to be equitable (on its own motion).

11.7.2 Conduct of appellant

The conduct of the appellant may render the reimbursement of the appeal fee not equitable even if a substantial procedural violation occurred (**J 4/09**; see also **T 1500/10**).

a) Reimbursement held not to be equitable

In **J 22/85** (OJ 1987, 455) the board did not consider a reimbursement of the appeal fee to be justified because the appellant had failed to provide the Receiving Section with the evidence subsequently submitted in the appeal proceedings.

In **T 167/96** the impugned decision did not meet the minimum requirements for a reasoned decision. Although there was no doubt that this lack of reasoning amounted to a substantial procedural violation, the board did not consider that a refund of the appeal fee was equitable. The appellant had availed himself of the appeal procedure to file necessary amendments which the opposition division had sought in vain over a period of years to elicit from him (see also **T 908/91**).

In **J 18/96** (OJ 1998, 403) the Receiving Section had failed to observe the provisions concerning examination on filing. Although the appeal was allowed on the ground, inter alia, of a procedural violation, the reimbursement of the appeal fee was not equitable because the appellants themselves had contributed to the failure of the proceedings before the Receiving Section.

In **J 4/09** the board said that, as a rule, an applicant could be regarded as behaving inequitably if it made no use of opportunities to participate in the initial proceedings. In this

case, it had not reacted to the Receiving Section's communication; only in its statement of grounds for appeal had it drawn attention to an obvious inconsistency.

In **T 1216/02** the board held that, albeit for reasons outside the knowledge and control of the examining division, the refusal decision had been based on evidence on which the applicant had not had an opportunity – viewed objectively – to present his comments. This constituted an objective substantial procedural violation under R. 67 EPC 1973. However, the board did not deem reimbursement of the appeal fee equitable, because the appellant should have facilitated further substantive examination in the event of remittal or interlocutory revision by including in his statement of grounds of appeal a substantive response to the examining division's communication, based on the document which, at the time when the appeal was filed, he had known to be correct.

In **T 427/03** the decision (to revoke the patent) under appeal was set aside by reason of a substantial procedural violation – no reference to any article or rule of the EPC as the legal basis for the revocation, no reasoning is provided to justify the revocation. However, the board did not find it equitable to reimburse the appeal fee as the **appellant had contributed to the situation** by filing a new set of claims 16 months after the announcement of the opposition division at the end of the oral proceedings that the patent could be maintained in amended form on the basis of the last set of claims put forward at the end of the oral proceedings instead of providing an adapted description as requested.

In **T 1500/10** the board held that if oral proceedings took place at the instance of the EPO because it considered this to be expedient under Art. 116(1) EPC and the duly summoned party does not attend them without serious reasons, this conduct might have the consequence that it would not be equitable to reimburse the appeal fee.

In **T 674/12** the board held that the appellant, by filing different unclear requests, did not help to expedite the proceedings and contributed to the fact that the decision of the examining division was based on a request which was no longer in the proceedings. The board considered the reimbursement of the appeal fee not to be equitable.

In **T 1750/14**, the appellant's representatives requested a postponement of the final date (under R. 116(1) EPC) repeatedly and separately from their request to postpone the date for oral proceedings. The specific reasons for not allowing any postponement of the final date – regardless of the refusal of the request for postponement of the date for oral proceedings – were not addressed in the decision of the examining division. The board held that the examining division had committed a substantial procedural violation. Nevertheless the board held that the applicant – and in particular its professional representative – must or should have known, in view of the last sentence of R. 116(1) EPC that it is generally not guaranteed that any written submission is automatically admitted into the proceedings before the EPO for the sole reason that it is filed prior to the final date, nor is it entirely unlikely that a submission may be admitted at the department's discretion when filed after that date. The applicant could have followed the invitation from the examining division and attempted to file, for example, amended sets of claims with the aim of overcoming the objections raised in the summons. This, however, was not done by the applicant of its own volition. In the board's view, such procedural behaviour spoke

against regarding the reimbursement of the appeal fee as equitable within the meaning of R. 103(1)(a) EPC. A party cannot gain a procedural advantage from an omission of its own.

b) Reimbursement held to be equitable

In **T 281/03** of 17 May 2006 the board held that reimbursement of the appeal fee was equitable despite the fact that the appellant had continuously delayed his case on inventive step until the last moment. The board noted that delaying detailed substantiation of the ground of inventive step raised in the notice of opposition until the last moment of opposition proceedings should be avoided if possible, since it created an unexpected situation for the other parties and the opposition division. However, the board noted that the case in hand was special, not just in that the inventive step argument was based on the same document as the novelty argument, but that the novelty of the features depended on how D1 was interpreted as a whole. The board held that it was not efficient to expect an opponent to provide a multitude of speculative arguments covering each possibility, nor did it seem sensible to the board to place a formal requirement to provide at least one argument, which may turn out to be completely wrong.

11.8. Reimbursement in full under Rule 103(1)(b) EPC

Under the EPC 1973, when appeal proceedings were terminated by the withdrawal of the appeal, R. 67 EPC 1973 was in general not applicable (see **J 12/86**, OJ 1988, 83; **T 41/82**, OJ 1982, 256; **T 773/91**; **J 30/94**; **T 372/99**; **T 543/99**; **T 1216/04**; **T 552/07**; for exceptions to this rule in case of a violation of the principle of the protection of legitimate expectations see **J 30/94** and **T 308/05**).

Under the EPC 2000, however, the appeal fee is reimbursed if the appeal is withdrawn before the filing of the statement of grounds of appeal and before the period for filing that statement has expired (R. 103(1)(b) EPC). For cases where this provision was first applied, see **T 1495/08**, **T 2052/08**, **T 1822/09**.

For a case in which the patent application was withdrawn after the expiration of the period for filing the statement of grounds and the appeal fee was thus not reimbursed, see **T 683/08**. The board in **T 1613/08** held that R. 103(1)(b) EPC did not confer any discretion on the boards to excuse missing the end of the period even by as short a time as one day.

In **T 193/20** the board held that the withdrawal of the appeal must be expressed by an explicit and absolutely clear statement. The appellant's statement that it had "decided not to file the Grounds of Appeal", even in view of the request for reimbursement of the appeal fee in accordance with R. 103(1)(b) EPC, merely conveyed the appellant's intention not to file the statement of grounds of appeal, it did not imply an unambiguous withdrawal of the appeal. The filing (or non-filing) of the statement of grounds of appeal and the withdrawal of an appeal are separate, distinct procedural steps. See also **T 2704/16**.

11.9. Revised Rule 103 EPC on partial reimbursement of the appeal fee

An amended version of R. 103 EPC entered into force on 1 April 2020. It introduced two new levels of partial reimbursement of the appeal fee: 75%, on which see below in chapter V.A.11.10. on R. 103(2) EPC; and 25%, on which see below in chapter V.A.11.12. on R. 103(4) EPC. These are in addition to reimbursement in full or of half the appeal fee under R. 103(1) EPC (see above in chapter V.A.11.8.) and R. 103(3) EPC (see below in chapter V.A.11.11.) respectively.

11.10. Partial reimbursement (75%) under Rule 103(2) EPC

The appeal fee is reimbursed at 75% under R. 103(2) EPC if, in response to a communication from the board indicating its intention to start substantive examination of the appeal, the appeal is withdrawn within two months of notification of that communication.

In **T 853/16**, the appellant had withdrawn their appeal before any communication from the board indicating its intention to start substantive examination of the appeal. The board held that it followed from the clear wording of R. 103(2) EPC, and a literal interpretation thereof, that there was no refund of 75% of the appeal fee to an appellant where, as in the case in hand, no communication had been issued from the board indicating its intention to start substantive examination of the appeal. The board also explained why **J 9/10** and **J 25/10**, referred to by the appellant, were not applicable in the case in hand, even by analogy. See also **T 43/22** and **T 2447/22**.

11.11. Partial reimbursement (50%)

11.11.1 Partial reimbursement under former Rule 103(2) EPC

Rule 103(2) EPC as amended on 13 December 2013 (CA/D 16/13; OJ 2014, A3) was amended by the decision of the Administrative Council of 12 December 2019 (CA/D 14/19; OJ 2020, A5) as of 1 April 2020. The decisions set out below concern R. 103(2) EPC as in force prior to 1 April 2020. It differs from current R. 103(3) EPC only in that the time limit under R. 103(3)(a) EPC is now "within one month of notification of a communication issued by the Board of Appeal in preparation for [the] oral proceedings" rather than "at least four weeks before [the date of oral proceedings]".

According to R. 103(2) EPC (as prior to 1 April 2020), the appeal fee was reimbursed at 50% if the appeal was withdrawn: after expiry of the period under R. 103(1)(b) EPC; and at least four weeks before the date for oral proceedings (where one had been set) or before expiry of the period set by the board for filing observations in any communication inviting the appellant to file observations. This version of the provision applied to appeals pending on 1 April 2014 and to appeals filed thereafter, until 1 April 2020, from which date the current R. 103 EPC applied to appeals pending at that date and to appeals filed after that date.

In **T 1086/09** the board held that a letter received on 28 March 2014 stating that the appeal should be withdrawn "hereby" would mean that the appeal was withdrawn on 28 March 2014, and thus no longer pending on 1 April 2014. In **T 370/11** the board held that the 50% was to be calculated on the basis of the appeal fee actually paid, and not on the basis of the rate of the appeal fee applicable on the date of withdrawal or reimbursement.

In **T 1402/13** of 31 May 2016, the board stated that under R. 103(1)(b) and (2) EPC (as prior to 1 April 2020) the termination of appeal proceedings caused by a loss of rights due to the non-payment of renewal fees could not be equated to a declaration of withdrawal of the appeal. This result was also supported by the travaux préparatoires (CA/90/13 Rev. 1), which explicitly required the appellant to make a procedural declaration. In order to claim entitlement to reimbursement under R. 103(2) EPC (as prior to 1 April 2020), the appellant was required, at a time when its application was still pending, to make a procedural declaration that left no doubt that withdrawal of the appeal was intended. As this was not the case, the request for reimbursement of the appeal fee was rejected.

In **T 265/14** the appeal had been withdrawn after expiry of the period set by the board in a first communication inviting the party to file observations under R. 100(2) EPC but before expiry of the period set in a second communication. The board held that R. 103(2)(b) EPC (as prior to 1 April 2020) was not to be interpreted as definitively ruling out reimbursement of 50% of the appeal fee where no observations were filed within the period set under R. 100(2) EPC. If a board then set a new period for filing observations, it thereby gave the appellant a fresh opportunity to withdraw the appeal, with the effect of reducing the fee, within that period. So the board concluded that issuing a second invitation under R. 100(2) EPC was to be treated as equivalent to setting a date for oral proceedings after expiry of the period set in the first invitation, which likewise reopened the possibility of the reimbursement of the appeal fee under R. 103(2)(a) EPC (as prior to 1 April 2020). That reimbursement was possible in those circumstances supported the view that R. 103(2) EPC (as prior to 1 April 2020) as a whole was to be interpreted broadly in the light of its object and purpose and that both its scenarios could be treated in the same way. The rationale of **T 265/14** was also followed in **T 110/18** and **T 2044/16**.

In **T 683/14** the examining division committed a substantive and not a procedural error. After the applicant filed an appeal against the decision to refuse the European patent, the examining division rectified their decision to refuse. The request for reimbursement of the appeal fee at 50% under R. 103(2) EPC (as prior to 1 April 2020) was refused on the grounds that by rectifying the decision the examining division had set the decision under appeal aside and had allowed the appeal. The board stated that as such the applicant's request for the withdrawal of its appeal had no object and that in the absence of a pending appeal that might be withdrawn, R. 103(2) EPC (as prior to 1 April 2020) did not apply.

In **T 1548/15** the board ordered that the appeal fee be reimbursed at 50% pursuant to R. 103(2)(a) EPC (as prior to 1 April 2020). The agreement by the appellant (patent proprietor) to terminate the appeal proceedings against the decision of the opposition division to revoke the European patent (in accordance with R. 84(1) EPC), after the patent

had in the meantime lapsed in all designated contracting states, was equivalent to a withdrawal of the appeal.

11.11.2 Partial reimbursement (50%) under Rule 103(3) EPC

The appeal fee is reimbursed at 50% if the appeal is withdrawn after expiry of the period for filing the statement of grounds of appeal, provided withdrawal occurs: (a) if a date for oral proceedings has been set, within one month of notification of a communication issued by the board in preparation for these oral proceedings; (b) if no date for oral proceedings has been set, and the board has issued a communication inviting the appellant to file observations, before expiry of the period set by the board for filing observations; (c) in all other cases, before the decision is issued.

11.12. Partial reimbursement (25%) under Rule 103(4) EPC

Under R. 103(4)(a) EPC, where a date for oral proceedings has been set, 25% of the appeal fee is reimbursed if the appeal is withdrawn later than one month after notification of a communication issued by the board in preparation for these oral proceedings but before the decision is announced at oral proceedings.

Under R. 103(4)(b) EPC, where no date for oral proceedings has been set, and the board has issued a communication inviting the appellant to file observations, 25% of the appeal fee is reimbursed if the appeal is withdrawn after expiry of the period set by the board for filing observations but before the decision is issued.

In **T 1369/18** the patent proprietor had filed an appeal against the interlocutory decision of the opposition division, which had decided that, on the basis of the second auxiliary request, the patent in suit met the requirements of the EPC. After the board issued its preliminary opinion, the patent proprietor withdrew its main request (as filed with the statement of grounds of appeal) for maintenance of the patent as originally granted and requested as a new main request the maintenance of the patent in the amended form as allowed by the opposition division. The board considered that in doing so, the patent proprietor had, in effect, withdrawn its appeal before a decision was issued within the meaning of R. 103(4)(b) EPC.

Under R. 103(4)(c) EPC, 25% of the appeal fee is reimbursed if any request for oral proceedings is withdrawn within one month of notification of the communication issued by the board in preparation for the oral proceedings, and no oral proceedings take place.

In **T 517/17** the appellant's indication that it would not attend the scheduled oral proceedings was taken as an implicit withdrawal of its request for oral proceedings for the purposes of R. 103(4)(c) EPC (see also **T 202/18**, **T 901/18**, **T 666/19**, **T 1554/21**, **T 1563/21** and **T 104/23**; see **T 1888/18** for reimbursement following a request for a decision according to the state of the file). Another interpretation is that R. 103(4)(c) EPC applies only if the party explicitly withdraws its request for oral proceedings (**T 73/17**, **T 191/17**, **T 2698/17** and **T 2356/18**). See also chapter III.C.5.3.1 "Withdrawal only by

virtue of a clearly expressed intention not to proceed with the request" and III.C.5.3.2 "Oral proceedings not held despite the lack of an explicit withdrawal ".

In **T 1282/16**, in response to the communication issued by the board under Art. 15(1) RPBA in preparation for oral proceedings, the appellant had filed a new main request and stated that it was withdrawing its request for oral proceedings if that new main request could in principle be granted. The board considered the main request allowable and so the appellant's condition was met. This meant that the withdrawal of its request for oral proceedings had taken effect on the date of filing the main request, which was within one month of notification of the communication under Art. 15(1) RPBA 2000.

In **T 777/15** the board held that the appellant not having requested oral proceedings could not benefit from another party's withdrawal of the request for oral proceedings. This was so because, for the appellant not having requested oral proceedings, the condition in R. 103(4)(c) EPC that "any request for oral proceedings is withdrawn within one month of notification of the communication issued by the Board of Appeal in preparation for the oral proceedings" was not fulfilled merely because another party had requested oral proceedings and withdrawn their request within the time specified in R. 103(4)(c) EPC (see also **T 795/19**). By contrast, in **T 488/18** the board held that the appellant could obtain reimbursement despite never having requested oral proceedings, based on the respondent's withdrawal of its request for oral proceedings in the time prescribed by R. 103(4)(c) EPC. See also **T 901/18**, **T 598/19**, **T 749/19**, **T 1026/20**.

In **T 1610/15** the board held that the appellant's request for oral proceedings had been withdrawn in time. A respondent's belated withdrawal of its request had no adverse effect in this regard. The wording of R. 103(4)(c) EPC did not require that all requests for oral proceedings filed in a case had to be withdrawn within a month of notification of the communication issued by the board in preparation for those proceedings. For the first condition for partial reimbursement under R. 103(4)(c) EPC to be met, it was instead enough that one request for oral proceedings had been withdrawn in time.

In **T 2249/18** the decision to hold oral proceedings had been made by the board rather than them being requested by the appellant. For the purposes of R. 103(4)(c) EPC, the board likened the situation in the case in hand to that where an appellant makes a request for oral proceedings. This was because conducting oral proceedings had become unnecessary due to an action by the appellant, in that it filed a request overcoming the objections raised by the board. Applying R. 103(4)(c) EPC by analogy, the board decided that 25% of the appeal fee was to be reimbursed.

In **T 1678/17** the request for oral proceedings was not in fact withdrawn within one month of notification of the communication issued by the board of appeal in preparation for the oral proceedings. However, in view of the notice from the EPO dated 1 May 2020 concerning the disruptions due to the COVID-19 outbreak (OJ 2020, A60) and R. 134(2) and (4) EPC, the board held that the conditions for reimbursement of 25% of the appeal fee, stipulated in R. 103(4)(c) EPC, were fulfilled.

In **T 2361/18**, the appellant withdrew its request for oral proceedings after the board had issued the summons to oral proceedings but before notification of a communication issued in preparation for the oral proceedings. The board held that in these circumstances 25% of the appeal fee was to be reimbursed under R. 103(4)(c) EPC. In **T 749/19** the board indicated that it shared the opinion expressed in **T 2361/18** that "within one month" in R. 103(4)(c) EPC, rather than defining a time period starting with the notification of the communication, defines an "end point" for the withdrawal of the request for oral proceedings, if partial reimbursement of the appeal fee is to be obtained.

11.13. Communication in preparation for the oral proceedings

In **T 2044/16** the board found that, even though it had already issued a detailed substantive communication under Art. 15(1) RPBA in preparation for oral proceedings, the wording of R. 103(4)(c) EPC did not preclude it from granting a reimbursement on the basis of an additional communication, issued by it at a later date (here, the board had asked the appellant to inform it whether it intended to attend the oral proceedings), that led to withdrawal of the request for oral proceedings within one month. The board concluded that the deadline under R. 103(4)(c) EPC was triggered anew by each preparatory communication issued. The deliberations in **T 265/14** regarding reimbursement under R. 103(3)(b) EPC also applied to the situation in this case. See also **T 1730/16**.

In **T 110/18** the appellant had withdrawn its request for oral proceedings within one month of notification of the second communication pursuant to Art. 15(1) RPBA, which was exceptionally issued in view of the COVID-19 outbreak. The board followed the rationale of **T 265/14** (of the same board in a different composition) and concluded that the requirements for a 25% reimbursement of the appeal fee according to R. 103(4)(c) EPC had been met.

11.14. Reimbursement of the appeal fee outside of the scope of Rule 103 EPC because of a violation of the principle of the protection of legitimate expectations

In **T 308/05** the board ruled that the appeal fee was to be reimbursed even though the appeal had been withdrawn. Referring to **J 30/94** and **J 38/97** (see below) the board held that the fact that in the case in hand the EPO had been found to have breached the principle of the protection of legitimate expectations, and that the consequence had been the filing of an appeal which was objectively superfluous, made it necessary for reasons of equity to refund the appeal fee paid by the appellant. See also **T 1785/15**.

In **T 613/14** the board stated that in contrast to a request for correction of the minutes or the decision to grant, there was no established case law on the issue of whether or not the rejection of a request for correction of a decision under R. 140 EPC was open to appeal. It found therefore that it was likely, that when filing the appeal, the appellant had relied on the opposition division's statement that the decision was open to appeal. The board considered the opposition division's statement to have created a legitimate expectation that an appeal would be found admissible and examined as to its substance, at least in respect of the request for correction of the decision. However, in its preliminary opinion, the board took the position that the appeal against the opposition division's refusal of the

request to correct its decision was not admissible. The board held that it had thus deprived the appellant of its legitimate expectations. After the board had maintained its preliminary opinion during the oral proceedings, the appellant withdrew its appeal. Under these circumstances, the board considered it justified to order the reimbursement of the appeal fee in accordance with **J 30/94**, **J 38/97**, **T 308/05** and **T 1785/15**.

In **J 30/94** the board held that Art. 109(2) EPC created a legitimate expectation of the parties that an appeal would be remitted to the board of appeal within a reasonable time after the decision of the department of first instance not to allow the appeal. The board held EPO had clearly offended against this legitimate expectation because the appeal was only referred to the Boards of Appeal seven years after its filing. The board found it equitable under these exceptional circumstances to order the reimbursement of the appeal fee even though the appeal had been withdrawn.

In **J 38/97** the appeal was found inadmissible but the appeal fee was nevertheless refunded. The board took the view that the appellant, having requested an appealable decision, could legitimately expect the impugned decision to be issued by the competent department and not by a person lacking legal authority. In accordance with the principle of good faith, it was equitable in these circumstances to order the reimbursement of the appeal fee.

B. Proceedings before the Enlarged Board of Appeal

1. Introduction 1814
2. Referral under Article 112 EPC 1815
2.1. General 1815
2.2. Composition 1815
2.3. Referral by a board of appeal 1815
2.3.1 General 1815
2.3.2 Discretion of the board 1817
2.3.3 Relevance of the referred question for the underlying case 1818
2.3.4 Question of law 1819
2.3.5 Pending proceedings 1819
2.3.6 Ensuring uniform application of the law 1820
2.3.7 Point of law of fundamental importance 1821
2.4. Referral by the President of the EPO 1823
2.4.1 General 1823
2.4.2 Discretion of the President 1823
2.4.3 Differing decisions 1823
2.4.4 Two boards of appeal 1824
2.5. Procedural issues 1824
2.5.1 Question already decided by the Enlarged Board 1824
2.5.2 Question already pending before the Enlarged Board 1825
2.5.3 Stay of first-instance proceedings following a referral 1825
2.5.4 Stay of appeal proceedings following a referral 1826
3. Petition for review under Article 112a EPC 1826
3.1. General 1826
3.2. Transitional provisions 1827
3.3. Article 112a EPC – Continuity of the petitioner's legitimate interest 1827
3.4. Article 112a(1) EPC – party adversely affected by the board's decision entitled to file a petition for review 1827
3.4.1 Article 112a(1) EPC – Party adversely affected 1828
3.4.2 Article 112a(1) EPC – Whether there has been a decision 1828
3.4.3 Article 112a(1) EPC – Whether a decision has been taken by a board 1829
3.5. Scope of review by the Enlarged Board 1829
3.5.1 Article 112a(2) EPC – grounds for a petition for review 1829
3.5.2 Grounds listed exhaustively 1829
3.5.3 No suspensory effect – review of substantive law excluded 1831
3.6. Petitions for review of an interlocutory decision 1833
3.7. Obligation to raise objections 1834
3.7.1 Purpose of Rule 106 EPC 1834
3.7.2 Requirements of a valid objection 1834
a) Recognisable immediately as an objection, defect clear and unambiguous 1834
b) Objection raised in good time by persons capable of validly doing so 1835
c) Different defects must be objected to and considered separately 1835
d) Board's explicit reaction to an alleged objection 1836

3.7.3 Written form to avoid uncertainties 1836
3.7.4 Examples of invalid objections 1836
3.7.5 Minutes as evidence that the objection was raised 1836
3.7.6 Requirements of a valid dismissal of an objection 1837
3.7.7 Objection could not have been raised 1837
3.7.8 Compliance with Rule 106 EPC left open 1838
3.8. Contents of the petition for review 1838
3.8.1 Petition must be adequately substantiated 1838
3.8.2 Non-compliance with Rule 107 EPC and failure to remedy a deficiency 1839
3.9. Time limit for filing a petition for review 1839
3.10. Article 12(1) RPEBA – late-filed submissions in the review procedure 1840
3.11. Rule 109 EPC – composition of the Enlarged Board and review procedure 1840
3.11.1 Composition of the Enlarged Board 1840
3.11.2 Involvement of parties other than the petitioner in petition for review proceedings 1841
3.11.3 Group parties 1841
3.11.4 Procedural efficiency 1841
3.12. Factual bases for the review – minutes and grounds for the decision 1841
3.13. Burden of proof 1842
3.14. Effects of a successful petition for review 1842
3.14.1 Decision of board of appeal set aside 1842
3.14.2 Replacement of board members 1843
3.14.3 Reimbursement of the fee for petitions for review 1843
4. Grounds for petition for review 1843
4.1. Article 112a(2)(a) EPC – alleged breach of Article 24 EPC 1843
4.2. Article 112a(2)(b) EPC – person not appointed as a board member 1844
4.3. Article 112a(2)(c) EPC – alleged fundamental violation of Article 113 EPC 1845
4.3.1 General 1845
4.3.2 "Fundamental" violation of Article 113 EPC – causal link and adverse effect 1845
4.3.3 No prior assessment of the merits of a submission 1845
4.3.4 Objective approach – board's intention irrelevant 1846
4.3.5 No obligation to provide detailed reasons for a decision in advance 1846
4.3.6 Boards' obligation to remain neutral 1846
4.3.7 Independence of the board members 1847
4.3.8 Parties' obligation to participate actively in the appeal proceedings 1847
4.3.9 Reasons for a decision allegedly surprising 1847
a) No opportunity to comment, surprising reasons 1847
b) Grounds not emanating from the board 1848
c) Subjective surprise 1849
d) Reasoning formed part of the proceedings 1849
4.3.10 Timing of a decision allegedly surprising 1850
4.3.11 Consideration of the parties' arguments in the written decision 1850
a) Requirement to have comments considered 1850
b) No obligation to consider each and every argument 1852
4.3.12 Parties' obligation to know the case law, references to decisions 1853
4.3.13 Normally no violation of the right to be heard where oral proceedings held by videoconference 1854

4.3.14 No right to be heard separately on all requests 1854
4.3.15 No right to a further hearing at first instance 1854
4.3.16 No right to a referral under Article 112 EPC 1854
4.3.17 No right to a communication; communication allegedly misleading 1854
4.3.18 Late-filed submissions – boards' discretion under Article 13 RPBA 2007 1855
4.3.19 Alleged violation of Article 113(2) EPC 1855

5.5. Adversarial judicial proceedings 1863
5.6. Publication of the decision 1863
5.7. Reimbursement of costs 1863

1. Introduction

The Enlarged Board is responsible for proceedings under Art. 112 EPC (referral of points of law by boards of appeal or the President of the EPO), proceedings under Art. 112a EPC (petitions for review against decisions of the boards of appeal) and proceedings under Art. 23(1), first sentence, EPC (removal from office of a member of the boards of appeal).

The provisions governing the procedure before the Enlarged Board are set out in the EPC, the Implementing Regulations and the RPEBA. The latter are binding upon the Enlarged Board, provided that they do not lead to a situation which would be incompatible with the spirit and purpose of the Convention (Art. 19 RPEBA).

The members of the Enlarged Board are mainly appointed from among the members of the boards of appeal, who continue to exercise their functions in the Legal Board or their respective technical boards ("internal members"). This double function is in itself not a reason for exclusion or objection under Art. 24 EPC (see **R 12/09** of 3 December 2009, **R 19/12** of 25 April 2014 and **R 2/14** of 17 February 2015 for petition for review proceedings). Legally qualified members of national courts or quasi-judicial authorities may also be appointed as members of the Enlarged Board ("external members"), and may continue their judicial activities at national level (Art. 11(5) EPC).

2. Referral under Article 112 EPC

2.1. General

Article 112 EPC defines the conditions in which legal uniformity within the European patent system may be established by means of a referral to the Enlarged Board. It requires the boards (Art. 112(1)(a) EPC) or the President (Art. 112(1)(b) EPC) to deem the referral necessary, either in order to ensure uniform application of the law or if points of law of fundamental importance arise. For a referral by the President, a further admissibility criterion is that two boards of appeal must have given different decisions on the question referred (**G 3/08**, OJ 2011, 10).

This chapter concerns Art. 112 EPC. The Enlarged Board's answers to referred questions of law are covered in the chapters corresponding to these questions.

2.2. Composition

In proceedings under Art. 112 EPC, the Enlarged Board consists of five legally and two technically qualified members; the Chair must be a legally qualified member (Art. 22(2) EPC). If a board of appeal refers a question to the Enlarged Board, at least four members of the Enlarged Board must not have taken part in the proceedings before the referring board (Art. 2(4) RPEBA).

2.3. Referral by a board of appeal

2.3.1 General

Under Art. 112(1)(a) EPC a board of appeal *shall* refer a question to the Enlarged Board if it considers that a decision is required, in order to ensure uniform application of the law or because a "point of law of fundamental importance" arises. With the EPC 2000, the English wording was changed from "important" to "fundamental importance" in order to bring it into line with the French and German versions (see **G 1/12**, OJ 2014, A114).

Only questions on a specific point, not entire cases, may be referred to the Enlarged Board (e.g. **T 184/91** of 25 October 1991, **T 198/12**). The Enlarged Board must examine the admissibility requirements with respect to each referred question individually (**G 1/19,** OJ 2021, A77). In consolidated cases **G 1/22** and **G 2/22** (OJ 2024, A50) the Enlarged Board took the position that since question II should be admitted, question I should also be admitted for the sole reason that the questions were interlinked insofar as an affirmative answer to question I was a precondition for approaching question II.

The Enlarged Board is not a third instance within the EPO, but part of the second instance constituted by the Boards of Appeal (**T 79/89**, OJ 1992, 283). However, the Enlarged Board's answers to the referred points of law are **binding on the referring board** in respect of the appeal in question (Art. 112(3) EPC; see also **J 8/07** of 1 July 2010). In **T 438/22** the appellant submitted that a decision of the Enlarged Board was necessary as the Guidelines would have to take into account a decision by the Enlarged Board. The

board pointed out that the Enlarged Board had no formal powers in this respect. Art. 112(3) EPC made it clear that the formal binding power of the decision of the Enlarged Board was limited to the case before the referring board. The EPC clearly stated that it was within the functions and powers of the President of the EPO to adopt the Guidelines, which the board held had to include the powers to decide how the Guidelines were to be kept up to date with the case law. Such a referral could well be perceived as an attempt to encroach on the President's powers under Art. 10(2)(a) EPC.

Furthermore, according to the board's view in **T 116/18** the referring board is bound by the referring decision's finding when the case comes back from the Enlarged Board. As a consequence of this binding effect, the scope of the proceedings in **T 116/18**, after **G 2/21** (OJ 2023, A85) had been issued, was limited to applying the legal principle, as stated by the Enlarged Board, to the issues left unresolved in the referring decision. See also in this chapter V.B.2.3.3 and chapter V.A.10.2.

The Enlarged Board is not bound by the way the referring board formulated the question, and may reformulate the referred question (see, for example, **G 2/08**, OJ 2010, 456; **G 2/10**, OJ 2012, 376; **G 1/13**, OJ 2015, A42; **G 3/19**, OJ 2020, A119; and **G 1/21**, OJ 2022, A49). However, the specific formulation chosen by a referring board is the starting point to define what a referring board considers a point of law requiring a decision by the Enlarged Board under Art. 112(1)(a) EPC (**G 2/21**). The Enlarged Board may deviate from the wording if this is required to better reflect the true object and focus of the referral. It can also refrain from rephrasing or reordering the referred questions if it does not see a need or justification for it (**G 2/21**). The Enlarged Board does not consider referred questions narrowly, but in a way as to clarify the points of law which lie behind them (**G 3/14**, referring to **G 2/88** and **G 6/88**, OJ 1990, 93 and 114).

The Enlarged Board in petition for review proceedings under Art. 112a EPC is not a "Board of Appeal" within the meaning of Art. 112(1)(a) EPC that could initiate referral proceedings under that provision (**R 7/08**, **R 1/11**, **R 7/12**). The DBA has no power to refer questions to the Enlarged Board either (**D 5/82**, **D 7/82**, **D 9/91**, **D 30/05**).

If a board is not empowered to decide a question, it is not empowered to refer that question to the Enlarged Board (**T 1142/12**).

Questions can be referred by a board either of its own motion or following a request from a party. If a board rejects a party's request for referral, it must give reasons in its final decision (Art. 112(1)(a) EPC). This was considered necessary to provide the parties with a certain guarantee, on the one hand, and to enable a certain degree of standardisation of the jurisprudence on the other (travaux préparatoires, BR/177/72, p. 31). Providing parties with a right of reference was, however, rejected (BR/168/72, p. 51).

If a party to proceedings before the boards of appeal is convinced that certain questions merit the attention of the Enlarged Board, this argument should be made before or during the discussion on this question, but certainly not afterwards (**T 196/22**). The board in **T 196/22** found thus that it was within its discretion to refuse a request by a party for time to formulate questions to the Enlarged Board, the only purpose for which could be to

reopen a debate that had already been closed and upon which the board had relied to reach its conclusions (see also chapter III.C.8.9. "Closing and reopening the debate").

The parties to the appeal proceedings are parties to the proceedings before the Enlarged Board (Art. 112(2) EPC). The Enlarged Board may invite the President of the EPO to comment on questions of general interest; the parties are entitled to submit their observations on the President's comments (Art. 9 RPEBA). Third parties may send written statements (*amicus curiae briefs*) to the Enlarged Board (Art. 10 RPEBA).

2.3.2 Discretion of the board

Several decisions state that referring a question under Art. 112(1)(a) EPC lies within the discretion of the boards (see e.g. **T 1242/04**, OJ 2007, 421; **T 365/05**; **T 1016/10**). In **T 390/90** (OJ 1994, 808) the board stated that the boards have discretionary power to refer any question to the Enlarged Board, either if a request for such reference has been made by a party, or if an important point of law arises and, in both cases, if the board considers that a decision by the Enlarged Board is required to ensure uniform application of the law or to decide upon the point of law that had arisen.

In **G 3/98** (OJ 2001, 62) the Enlarged Board stated that while the view of the referring board is decisive for assessing whether a referral is required, such assessment should be made on objective criteria and should be plausible (see also **G 2/99**, OJ 2001, 83). One of the criteria identified in **T 1242/04** was whether the question can be answered beyond all doubt by the board itself, in which case it does not need to be referred to the Enlarged Board (see also **T 758/20** and in this chapter V.B.2.3.3).

In **T 560/13** the board noted that under Art. 21 RPBA 2007, a referral of questions to the Enlarged Board must be made in cases where the board considers it necessary to deviate from an interpretation of the EPC contained in an earlier opinion or decision of the Enlarged Board. It further noted that according to Art. 20(1) RPBA 2007, if a board wishes to deviate from an earlier decision taken by a board of appeal, a referral is not compulsory (see also **T 314/20**), but the board must give the grounds for deviation unless such grounds are in accordance with an earlier opinion or decision of the Enlarged Board (see also **T 1020/03**, OJ 2007, 204; **T 1676/08**). Moreover, in **G 1/98** the Enlarged Board stated that it was clearly desirable that whenever a board of appeal was aware that its decision involved a different interpretation of the law, on a point of substance and importance, from that applied in a decision of a previous board, that attention be drawn to this fact in its decision in a manner appropriate to the circumstances of the case, and that reasons be given for the different interpretation, so that the President of the EPO can take appropriate action (see also Art. 20(1) RPBA).

In **G 1/14** the Enlarged Board held that while it was primarily up to the board of appeal to explain, in its referral decision, that – and why – it believed it needed an Enlarged Board ruling on the point arising in the case before it, the Enlarged Board must in any event examine whether the referral fulfilled the criteria of Art. 112(1)(a) EPC (including that a "decision is required") and was thus admissible.

2.3.3 Relevance of the referred question for the underlying case

The referred question must not have a merely theoretical significance for the original proceedings which would be the case if the referring board were to reach the same decision regardless of the answer to the referred question (**G 3/98**, OJ 2001, 62; **G 2/99**, OJ 2001, 83; see also **R 13/22**; **T 547/08**; **T 447/22**). It must be relevant for deciding the case in question (**G 2/04**, OJ 2005, 549; consolidated cases **G 1/22 and G 2/22**, OJ 2024, A50; **R 13/22**; **T 2136/16**; **T 758/20**; **T 1738/21**; **T 423/22**; **T 439/22**), or the Enlarged Board must be satisfied that "answers to the questions referred are necessary for each Board of Appeal to be able to dispose of their respective appeals on the correct legal basis" (**G 1/05**, OJ 2008, 271; **G 1/06**, OJ 2008, 307; see also **G 2/06**, OJ 2009, 306). In **T 154/04** (OJ 2008, 46; see also **J 16/90**, OJ 1992, 260; **R 13/22**; **T 1044/07**) the board held that the answer to the referred question must be "essential to reach a decision on the appeal in question".

Citing **G 3/98** the board in **T 116/18** held that if the board were to deny any binding effect of the referring decision and reopen the issues on which the board reached its conclusion in that decision, this would be in logical conflict with the requirements formulated for the admissibility of the referral. According to the board, it could lead to a situation in which the board departs from the assessment made in the referring decision and render the Enlarged Board's answer to the referred question ex post irrelevant, or, conversely, it could require a different referral from that originally made. See also in this chapter V.B.2.3.1.

In **T 520/01** (see also **T 787/06**) the board referred to **G 3/98**, did not maintain the patent on grounds other than those to which the question related, and thus refused the party's referral request. In **T 469/92**, the board granted the appellant's main request, and therefore did not consider its auxiliary referral request.

In **G 1/98** (OJ 2000, 111) one of the questions referred by the board concerned objections of which the appellant had not been made aware before, and the appellant expressed its intention to the Enlarged Board to make the required amendments. As a result, the Enlarged Board doubted the relevance of the referred question and deemed it inappropriate to offer guidance. In **G 7/95** (OJ 1996, 626, see also **G 9/92** of 22 June 1993) the Enlarged Board, having regard to the particular facts of the case before the referring board, deemed it not necessary to answer the referred question either.

In **G 1/09** (OJ 2011, 336) a board referred a question on whether a *rejected* patent application was still pending under R. 25 EPC 1973 (R. 36 EPC; divisional applications) when no appeal had been filed but the time limit for filing an appeal had not yet expired. In his comments under Art. 9 RPEBA, the President of the EPO raised two additional questions, namely whether a *granted* application was still pending in such a situation, and whether the filing of an inadmissible appeal could maintain the pendency of the application beyond the expiry of the time limit for filing an appeal. The first additional question was – although not relevant for the decision in the underlying case – answered by the Enlarged Board in an obiter dictum, whereas the second was considered not to be covered by the referral decision.

In **G 2/03** (OJ 2004, 448) the Enlarged Board stated that not all substantive requirements had been examined by the referring Board and that the referred question could, in the end, turn out to be irrelevant. Taking into account the usual order of examination according to which the referred question (on the allowability of disclaimers) was examined before substantive requirements such as inventive step, the Enlarged Board considered the referral nevertheless admissible. In **G 2/99** (OJ 2001, 83), the Enlarged Board had doubts whether the answer to the referred question would have an impact on the decision in the underlying proceedings, but deemed the referral nevertheless admissible, for reasons of procedural efficiency. In **G 2/07** (OJ 2012, 130) the referrals were considered admissible "irrespective of whether an answer is actually required on all aspects which the referred questions might in theory be seen as embracing".

In **G 1/14** the question referred to the Enlarged Board was whether an appeal is inadmissible or deemed not to have been filed if the notice of appeal is filed and the fee for appeal paid after expiry of the time limit (see chapter V.A.11.3. "Appeal deemed not to have been filed"). Until 1 April 2015 the wording of R. 126(1) EPC was limited to "Notification by post ... by registered letter with advice of delivery" (since amended to: "Notification by postal services ... by registered letter with advice of delivery or equivalent"). In the Enlarged Board's view notification of first-instance decisions by the postal service UPS was not covered by R. 126(1) EPC as formerly in force, so the referring board's finding that the appeal had not been lodged in time was inoperative. As this meant there was no need to refer the question, the Enlarged Board dismissed the referral as inadmissible.

2.3.4 Question of law

Only questions of law, not technical issues (e.g. **T 287/11**: the interpretation of technical features of a specific claim; **T 181/82**: whether the person skilled in the art can understand the technical content of a prior art document; see also **T 1798/08**) may be referred to the Enlarged Board. Similarly, in **T 118/89** the board stressed that only questions of law, not questions of fact may be referred (see also **T 364/20**).

2.3.5 Pending proceedings

A board may only refer a point of law to the Enlarged Board "during proceedings on a case" (Art. 112(1)(a) EPC). If the underlying appeal is withdrawn (see **G 3/06**, OJ 2007, 312; **T 1040/04**), or the underlying application deemed to be withdrawn (**G 2/14**, OJ 2015, A13), the proceedings before the Enlarged Board are terminated.

The referral to the Enlarged Board must precede the decision of the board of appeal (**T 2271/08**). After a board has issued a decision in respect of certain issues, it has no power to refer a question to the Enlarged Board in connection with the issues already decided, even though other issues are still pending in proceedings on the same case (**T 79/89**, OJ 1992, 283).

For a referral to be admissible, the appeal has to be admissible (see **T 1954/14**). This principle does, however, not apply if the referral itself concerns the admissibility of the

appeal. Without this exception, the boards would be denied the opportunity to refer questions on important points of law concerning the admissibility of an appeal. This would contradict Art. 112(1)(a) EPC where no restrictions of that kind appear (**G 1/12**, OJ 2014, A114; see also **G 2/90**, OJ 1992, 10; **G 8/92**, not published in the OJ; **G 3/99**, OJ 2002, 347 and **G 2/04**, OJ 2005, 549).

2.3.6 Ensuring uniform application of the law

In order to be admissible, the referred question must either concern a non-uniform application of the law by the boards or, alternatively, a point of law of fundamental importance (see in this chapter V.B.2.3.7). According to Art. 112 EPC, this requirement concerns not only referrals by a board but also referrals by the President, which, however, must in any case concern "different decisions" of the boards (see in this chapter V.B.2.4.3).

In **T 154/04** (OJ 2008, 46) the board found that deviating from an opinion given in another decision of a board of appeal or a deviation from national jurisprudence are not per se valid reasons for referral under Art. 112(1)(a) EPC (see also **T 314/20**). According to the board, the legal system of the EPC allows for the evolution of the case law, which is not case law in the Anglo-Saxon meaning of the term. In **T 15/01** (OJ 2006, 153) the board did not consider a referral to the Enlarged Board necessary, because only one previous decision of the boards deviated from its own conclusion as to the exhaustion of priority rights. In **T 248/88** the board also held that a single and isolated non-uniform decision did not qualify under Art. 112(1)(a) EPC. According to the board in **T 314/20** a referral would only be appropriate if two or more conflicting lines of interpretation existed, which would lead, in the case in hand, to diverging outcomes.

In **T 438/22** the board admitted that the wording of Art. 112(1)(a) EPC may appear to suggest that the removal of a discrepancy between the Guidelines and the case law could also be understood as "ensuring uniform application of the law" and as such be a good reason for an admissible referral. However, the board held that a referral whose sole purpose was to correct the Guidelines and which was not necessary either for ensuring a uniform case law within the boards or for the board's decision was inadmissible. See also in this chapter V.B.2.3.1.

In **T 712/10** the board stated that the Enlarged Board does not have the power to ensure uniform application of the law between the boards of appeal and national courts. However, a lack of uniformity between the law as applied by the boards of appeal and national courts could, in theory, bring to the fore a point of law of fundamental importance.

With regard to **T 712/10** the board in **T 447/22** remarked that, although a lack of uniformity between the law as applied by the boards of appeal and national courts could, in theory, bring to the fore a point of law of fundamental importance, the purpose of referring a question to the Enlarged Board could not be to ensure uniform application of the law between national courts.

In **T 2477/12** the board held that the application of the same legal principles and criteria may lead to different results in different cases. This is a consequence of the specific facts

of each individual case and not, however, an indication of a contradictory interpretation or an inconsistent application of the law. See also **T 314/20** and **T 364/20**.

In **G 1/12** (OJ 2014, A114), the Enlarged Board considered the requirement of non-uniform application of the law to be fulfilled because some decisions allowed deficiencies in the appellant's name to be remedied under R. 101(2) EPC, whereas in other decisions on analogous situations the boards applied R. 139 EPC. A minority of the members of the Enlarged Board were of the opinion that this merely demonstrated that, as long as the removal of the deficiency did not lead to a change of the appellant's true identity, both procedures were available according to consistent case law.

In **G 2/21** (OJ 2023, A85) the Enlarged Board accepted the referring board's perception of divergencies in the case law, if only for the use of different conceptual and terminological approaches underlying the referred questions. According to the Enlarged Board, confronted with these approaches, the referring board considered itself unable to arrive at a clear conclusion for the case at hand.

In consolidated cases **G 1/22** and **G 2/22** the Enlarged Board considered the condition that an answer to referred question I was required to ensure uniform application of the law met. The Enlarged Board reasoned that the EPO's jurisdiction concerning the entitlement to the priority right had been questioned by boards of appeal in several cases and was arising in various other cases before different boards.

2.3.7 Point of law of fundamental importance

The requirement that the referred question must either concern a lack of uniform application of the law by the boards or a point of law of fundamental importance concerns both referrals by a board and referrals by the President (see in this chapter V.B.2.4.1).

G 1/12 (OJ 2014, A114) concerned the correction of errors regarding the identity of the appellant and, in this context, the admissibility of an appeal. The Enlarged Board held that the referred question related to a "point of law of fundamental importance" because it was relevant to a large number of similar cases (see also **G 2/21**, OJ 2023, A85, **T 271/85**, OJ 1988, 341, **T 1242/04**, OJ 2007, 421 and **T 1676/08**: "a substantial number of similar cases") and was therefore of great interest not only to the parties to the specific appeal proceedings in question (see also **T 590/18** of 4 July 2018). Settling this point of law was important not only to the users of the European patent system but also to the boards of appeal and the department of first instance in examination and opposition proceedings. A minority of the members of the Enlarged Board disagreed and considered the referral inadmissible. According to the minority, the majority's view implied that "importance" within the meaning of Art. 112 EPC was nothing more than mere relevance. The number of cases affected, however, was neither a suitable nor an appropriate criterion for establishing the admissibility of a referral. In **G 1/13** (OJ 2015, A42) and **G 2/21** (OJ 2023, A85), the Enlarged Board confirmed the view of the majority in **G 1/12**.

In **G 1/19** the Enlarged Board held that the requirement of fundamental importance was fulfilled despite the small number of board decisions in the field of the application in suit. It

added that in an unknown number of cases, the issues at play in the underlying appeal had been avoided through claim drafting techniques; the referred questions could also be pertinent for these cases.

In consolidated cases **G 1/22** and **G 2/22** the Enlarged Board found that while question II referred to a specific situation, the answer would not necessarily be limited to the viability of the "PCT joint applicants approach" and may cover other situations where the applicant's entitlement to the priority right was challenged. It added that even if the answer covered only the situation described in question II, the question was considered to touch a point of law of fundamental importance in the terms of Art. 112(1) EPC.

Referring to **G 1/84**, **G 3/93**, **G 2/04** and **G 3/04**, the board in **T 1286/23** found that party status, whether before the first-instance divisions or in appeal proceedings, was normally a fundamental question of law.

In **G 4/19** the Enlarged Board noted that a point of law could be of fundamental importance even where there was no divergence in the case law (see also **T 1286/23**).

In **T 26/88** (OJ 1991, 30) the board held that a question was not sufficiently important when the legal framework upon which the question was based (here: R. 58(5) EPC 1973) had changed in the interim and the question was therefore unlikely to arise again very often (see also **T 1286/23**). Similarly, in **T 2459/12**, the board stated that a question regarding a point of law the answer to which would affect only a relatively small number of applicants for a limited period of time, after which it would become obsolete (here: due to an amendment to R. 164 EPC), was not a question relating to a point of law of fundamental importance.

In **T 364/20** the board noted that the question concerning university theses to be made available to the public in view of legal provisions or university regulations in Finland was highly specific so that no point of law of fundamental importance arose. Similarly in **T 423/22** the board considered the circumstances of the witness hearing defined in the question to be very specific (hearing by videoconference, witness is an employee of the opponent and located at the opponent's office during the hearing) and hence not applicable to the majority of witness hearings during first-instance proceedings. According to the board the question was not of fundamental importance.

The lack of case law on a particular issue is in itself not a sufficient reason to refer a question to the Enlarged Board (**T 998/99**).

In **J 5/81** (OJ 1982, 155) the appellant requested the referral of a question which the Legal Board considered an important point of law. The Legal Board refused the appellant's request regardless, as the question could be answered by reference to the EPC without doubt (see also, for example, **J 14/91**, OJ 1993, 479; **T 1196/08**; **T 1676/08**; **T 2477/12**). In **T 39/05**, the board already denied the existence of an important point of law if a question could be answered by reference to the EPC without doubt.

In **J 10/15** the Legal Board was of the opinion that the legal situation in the case in hand was clearly to be derived from the EPC and the PCT, so that there was no question of law of fundamental importance which could justify a referral to the Enlarged Board.

2.4. Referral by the President of the EPO

2.4.1 General

Under Art. 112(1)(b) EPC, in order to ensure uniform application of the law (see in this chapter V.B.2.3.6) or if a point of law of fundamental importance (see in this chapter V.B.2.3.7) arises, the President of the EPO may refer a point of law to the Enlarged Board "where two boards of appeal haven given different decisions on that question".

2.4.2 Discretion of the President

Under Art. 112(1)(b) EPC, the President of the EPO *may* refer a point of law and is entitled to make full use of the discretion granted by Art. 112(1)(b) EPC. The President's appreciation of the need for a referral may change even after a relatively short time, for example because the President's assessment of the case law of the boards of appeal has changed, or a change in the presidency has taken place (**G 3/08**, OJ 2011, 10).

2.4.3 Differing decisions

In **G 3/08** (OJ 2011, 10) the Enlarged Board found that the terms "different/abweichende/divergentes" decisions in Art. 112(1)(b) EPC had to be interpreted in the light of the provision's object and purpose according to Art. 31 of the Vienna Convention. The purpose of the presidential referral right under Art. 112(1)(b) EPC is to establish uniformity of law within the European patent system. Having regard to this purpose, the notion "different decisions" has to be understood restrictively in the sense of "conflicting decisions". Legal development is an additional factor which must be carefully considered. Development of the law is an essential aspect of its application and inherent in all judicial activity. Consequently, legal development as such cannot on its own form the basis for a referral, because case law does not always develop in linear fashion, and earlier approaches may be abandoned or modified. See also **G 3/19**.

Legal rulings are characterised not by their verdicts, but by their grounds. The Enlarged Board may thus take obiter dicta into account in examining whether two decisions satisfy the requirements of Art. 112(1)(b) EPC (see also **G 3/93**, OJ 1995, 18).

In **G 4/98** (OJ 2001, 131) the Enlarged Board held that a discrepancy between office practice of the EPO and the case law of the boards of appeal was not in itself sufficient to justify a referral by the President, if the practice of the EPO was not warranted by the case law.

In **G 3/95** (OJ 1996, 169) the Enlarged Board considered the President's referral inadmissible due to the absence of different, i.e. conflicting decisions. In **G 3/08** (concerning Art. 52(2) EPC, computer programs), the Enlarged Board said that **T 424/03**

indeed deviated from **T 1173/97**, but that this was a legitimate development of the case law and that there was no divergence which would make the referral admissible.

In **T 646/13** the board, with reference to **G 3/08**, rejected the request for a referral to the Enlarged Board, finding that alleged contradictions between decisions **T 464/05** and **T 1811/13** did not exist. Rather, in the board's view, these decisions illustrated a development of the case law on a particular question.

2.4.4 Two boards of appeal

Different decisions by a single technical board in differing compositions may be the basis of an admissible referral by the President (**G 3/08**, OJ 2011, 10). In **G 1/04** (OJ 2006, 334), the Enlarged Board found the President's referral, based on two different decisions of the same technical board of appeal, admissible and stressed that the decisions were rendered by the board in completely different compositions and that other technical boards had adopted the findings of one of the conflicting decisions.

In **G 4/98** (OJ 2001, 131) the Enlarged Board stated that if the President's power of referral were to be defined by a restrictive reading of "two Boards of Appeal", no referrals would be possible with respect to the Legal Board. This would unduly restrict the effect of Art. 112 EPC, since conflicting decisions could also occur within that board. See also **G 3/19**.

2.5. Procedural issues

2.5.1 Question already decided by the Enlarged Board

Should a board consider it necessary to deviate from an earlier opinion or decision of the Enlarged Board, the question must be referred to the Enlarged Board (Art. 21 RPBA).

In **T 297/88** the board examined under which circumstances it was possible to re-refer a question which had already been decided by the Enlarged Board. It took the view that a board may only refer the same point of law another time to the Enlarged Board if the Enlarged Board's arguments were so weak that doubts as to the correctness of the decision were unavoidable. This was also the case where the arguments were based on a false premise so that there were doubts about the conclusion drawn. Finally, a decision of the Enlarged Board could also be questioned where the premise was correct, the arguments were conclusive and the conclusion therefore also correct, but where legal or technical developments occurring in the interim made it desirable in the public interest to have the question reviewed again by the Enlarged Board.

In **T 82/93** (OJ 1996, 274; see also **T 80/05**, **T 1213/05**) the board rejected the requested referral because the question had already been decided by the Enlarged Board. In **T 423/22** the board pointed out that it did not consider a decision of the Enlarged Board to be required since it did not intend to deviate from an earlier decision of the Enlarged Board.

In **T 1063/18** the board decided that R. 28(2) EPC was in conflict with Art. 53(b) EPC as interpreted by the Enlarged Board in **G 2/12** and **G 2/13** and saw no reason to deviate from the Enlarged Board's interpretation of Art. 53(b) EPC. Furthermore, the board stated that no point of law arises in relation to the course of action in case of a conflict between a rule of the Implementing Regulations and an article of the EPC because this situation is governed by Art. 164(2) EPC. For these reasons the board decided a referral under Art. 112(1)(a) EPC was not justified.

In **G 9/93** (OJ 1994, 891), the Enlarged Board confirmed the referring board's view that the concept of opposition proceedings set out in **G 1/84** differed fundamentally from that in **G 9/91** and **G 10/91**, which it endorsed.

2.5.2 Question already pending before the Enlarged Board

In **T 208/88** of 20 July 1988 the board referred a question already pending once again to the Enlarged Board, because new aspects had emerged which it deemed useful for the Enlarged Board's decision. The same questions, supplemented by an additional question, were also referred again in **J 15/90** of 4 September 1992 (see also **T 83/05** of 8 July 2013), because the Legal Board wished to give the Enlarged Board the opportunity to consider another type of case. In **T 803/93** (OJ 1996, 204) the board complemented the questions already pending and said that important questions of law should, if possible, be considered in the context of proceedings involving parties having opposing interests in relation to these questions. In **T 184/91** of 25 October 1991 the President of the EPO had referred questions to the Enlarged Board. The board referred the already pending questions again, stating that nothing prevented a board from reiterating questions that are pending, in order that the parties to an appeal may enjoy being parties to the proceedings before the Enlarged Board. In **T 1553/13** of 20 February 2014 and **T 2017/12** of 24 February 2014 two different technical boards referred an almost identical question to the Enlarged Board.

2.5.3 Stay of first-instance proceedings following a referral

In **T 166/84** (OJ 1984, 489) the board stated that, in its opinion, where a decision of the examining division depended entirely on the outcome of proceedings before the Enlarged Board on a legal question raised under Art. 112 EPC 1973 – and this was known to the examining division – the further examination of the application must be suspended until the matter was decided by the Enlarged Board. Failure to do so would amount to a substantial procedural violation under R. 67 EPC 1973 (R. 103(1)(a) EPC).

When **G 3/14** (concerning clarity objections in opposition proceedings) was pending before the Enlarged Board, the President of the EPO decided that all proceedings before the opposition divisions where the decision depended entirely on the outcome of the Enlarged Board's decision were to be stayed ex officio, thereby superseding the then general practice under the Guidelines to stay proceedings only upon request of a party (notice from the EPO dated 7 August 2014 concerning the staying of proceedings due to referral **G 3/14**, OJ 2014, A87, see also notice from the EPO dated 2 October 2015 concerning the staying of proceedings due to referral **G 1/15**).

According to the Guidelines (E-VII, 3 – April 2025 version), where the outcome of examination or opposition proceedings depends entirely on the answer to questions referred to the Enlarged Board, the proceedings *may* be stayed by the examining or opposition division on its own initiative or on request of a party. Under a previous version of the Guidelines (E-VI, 3 – September 2013 version), the proceedings were to be stayed "only upon request of at least one of the parties" (see also notice from the EPO dated 1 September 2006 concerning staying of proceedings, OJ 2006, 538).

2.5.4 Stay of appeal proceedings following a referral

It follows from Art. 112(3) EPC that the proceedings before the referring board are stayed until the Enlarged Board gives its decision. Proceedings before other boards of appeal may also be stayed.

In **T 426/00** of 27 June 2003, the board had to answer questions that were identical to the questions raised in a referral pending before the Enlarged Board (concerning Art. 123(2) EPC, disclaimers). The board raised the purpose of ensuring a uniform application of the law under Art. 112 EPC and the need to comply with the spirit of Art. 16 RPBA 1980 (Art. 21 RPBA; see in this chapter V.B.2.3.6). In order not to anticipate the Enlarged Board's evaluation of the questions before it, the board suspended the appeal proceedings.

In **T 1875/07**, the board acknowledged the patentability of the invention under Art. 52(2) EPC but did not consider the claimed subject-matter to be inventive. A referral on Art. 52(2) EPC was pending before the Enlarged Board. According to the board, the legal basis on which an application is refused determines only the reasons for the decision, but not the decision itself. Since the decision in the appeal proceedings did not depend entirely on the outcome of the referral, the board refused the request to suspend the appeal proceedings (see also **T 787/06**, **T 1044/07** and **T 1961/09**).

3. Petition for review under Article 112a EPC

3.1. General

Article 112a EPC was introduced with the EPC 2000, following a suggestion of the Enlarged Board (**G 1/97**; OJ 2000, 322). Its purpose is not to make the Enlarged Board a third instance (**R 5/16**: second judicial instance) but to provide for a limited judicial review of decisions of the boards of appeal. The grounds on which a petition for review can be based have been exhaustively defined by the legislator. These are, firstly, fundamental procedural defects which occurred in appeal proceedings and, secondly, the existence of a criminal act which may have had an impact on a decision (Art. 112a(2) EPC).

Art. 112a EPC expands on the right to a fair trial guaranteed by Art. 6 ECHR (**R 9/14**). The examples in Art. 112a(2)(a) to (c) EPC and particularly the wording of Art. 112a(2)(d) EPC make it clear that only fundamental (but not minor) procedural defects can be the basis for a petition for review (explanatory remarks in OJ SE 4/2007, 126; see also **R 8/14**). Review proceedings are confined to procedural defects so fundamental as to be intolerable for the

legal system and overriding the principle that proceedings which have led to a final decision should not be re-opened in the interest of legal certainty (**R 16/12**, **R 8/16**). Art. 112a EPC provides an "exceptional means of redress" (**R 1/08**, **R 18/11**, **R 2/12** of 17 October 2012, **R 3/14**, **R 5/14**; see also **R 9/14**), an "extraordinary legal remedy" (travaux préparatoires, MR/21/00; see also **R 1/08**, **R 20/10**, **R 1/11**, **R 3/11**), the provisions of which have to be applied strictly (**R 1/08**, **R 23/10**). A petition for review has no suspensive effect (Art. 112a(3) EPC).

From 13 December 2007 (the entry into force of Art. 112a EPC) to 31 December 2024, 197 decisions of the Enlarged Board on petitions for review (petitions withdrawn or deemed not to have been filed and interlocutory decisions excluded) have been published on the internet. In ten cases (**R 7/09**, **R 3/10**, **R 15/11**, **R 21/11**, **R 16/13**, **R 2/14** of 22 April 2016, **R 3/15**, **R 4/17**, **R 5/19** and **R 3/22**) the decision under review was set aside and the appeal proceedings re-opened; the remaining petitions were rejected.

3.2. Transitional provisions

The decision of the Administrative Council of 28 June 2001 on the transitional provisions under Art. 7 of the Act revising the EPC of 29 November 2000 provides that "Article 112a EPC shall apply to decisions of the Boards of Appeal taken as from the date of its entry into force" (see **R 2/08**). Referring to **G 12/91** (OJ 1994, 285), the Enlarged Board in **R 5/08** interpreted "taken" to be the date a decision given orally is pronounced, not the date of notification. A petition based on a decision dated prior to, yet not notified to the parties until after entry into force of the EPC 2000, is therefore inadmissible.

3.3. Article 112a EPC – Continuity of the petitioner's legitimate interest

In **R 12/20** the Enlarged Board noted that the petitioner's ongoing legitimate interest had to continue to exist and the admissibility requirements had to continue to be met throughout the entire review proceedings, and that the EPO had to consider these criteria of its own motion. During the review proceedings in hand, the opposition proceedings had been continued. The opposition of the petitioner (opponent) had been rejected and the opposed patent maintained as granted without the petitioner filing as much as a precautionary appeal against that decision. The Enlarged Board concluded that the petitioner could no longer argue that they still had a legitimate interest and that the admissibility requirements for the originally filed petition for review were therefore no longer met. The petition for review was therefore rejected as clearly inadmissible.

3.4. Article 112a(1) EPC – party adversely affected by the board's decision entitled to file a petition for review

Under Art. 112a(1) EPC, any party **adversely affected by the decision** of a board may file a petition for review.

3.4.1 Article 112a(1) EPC – Party adversely affected

In the case underlying **R 1/11**, the patent had been transferred and the transferee had filed an appeal against the decision of the opposition division to revoke the patent. The transfer of the patent had, however, not been registered in line with R. 22 EPC before the expiry of the period for filing the notice of appeal. Therefore, the decision under review had rejected the transferee's appeal as inadmissible. The transferor's appeal, filed after the expiry of the period for filing a notice of appeal, had also been considered inadmissible. Both the transferee and the transferor filed a petition for review. The Enlarged Board held that the requirement of Art. 112a(1) EPC that the petitioner be adversely affected for a petition to be admissible was fulfilled with respect to the transferee, irrespectively of its party status before the board of appeal, since the adverse effect resulted from the refusal to acknowledge that it had the status of appellant (his petition was, however, considered clearly unallowable in the end). The transferor's petition, on the other hand, was considered clearly inadmissible because, not being the current proprietor, the transferor was not adversely affected by the impugned decision.

In **R 13/22** the Enlarged Board emphasised that Art. 112a(1) and 107 EPC both refer to the adverse effect being from a/the decision, **not the reasoning** set out in the decision. Furthermore, the Enlarged Board saw no reason to give "adversely affected" in Art. 112a(1) EPC a different meaning from that given to it in Art. 107 EPC. The case law on "adversely affected" under Art. 107 EPC was thus of relevance to the interpretation of this term in Art. 112a(1) EPC. The Enlarged Board referred among others to **T 193/07** in which the board considered that a party was only adversely affected if the Order of the appealed decision did not comply with its request. The Enlarged Board also recalled further case law of the boards, according to which, in cases where the Order of the decision of the opposition division was the revocation of the patent, an opponent who had requested revocation of the patent in its entirety was not "adversely affected by" said decision within the meaning of Art. 107 EPC, irrespective of the reasons given in the decision.

3.4.2 Article 112a(1) EPC – Whether there has been a decision

In **R 4/18** the Enlarged Board held that **minutes** were **not considered to be a decision** (see also **R 1/22**). It did not see how the use of the word "conclusion" instead of "preliminary view" in the context of the minutes of an oral proceeding could transform those minutes into a decision, noting that the appeal proceedings had been terminated by the appellant's (petitioner in the case in hand) withdrawal of the appeal in the proceedings under review. The Enlarged Board noted that it was the common practice of the boards to express views or conclusions on the substantive issues before them during the course of the oral proceedings. A decision on the case is then made at the end of the oral proceedings. See also chapter V.A.2.2. "Appealable decisions".

In **R 3/22**, the Enlarged Board considered a **communication of the Registrar** a decision for the purposes of Art. 112a(1) EPC. The Enlarged Board interpreted the Registrar's communication as a decision in which the board had implicitly decided on the appeal, while not deciding on the request for correction. The Enlarged Board noted that a ruling of this kind would not normally be considered a decision within the meaning of the EPC.

Notwithstanding, in order to avoid gaps in legal protection, an exception had to apply in the situation where a board of appeal expressly indicated that it considered the appeal proceedings to be closed and refused to deal with the case further. See also **R 3/22** in this chapter V.B.4.4.3. On this point, see also chapter III.K.3.1. "When is there a decision within the meaning of Rule 111 EPC?".

In **R 5/23** the Enlarged Board concluded that the review procedure under Art. 112a EPC did not, in any event, in accordance with the applicable provisions, concern decisions that did not put an end to proceedings before a board of appeal in respect of the party concerned. This conclusion was not inconsistent with the case law, which allowed petitions for review of decisions which, though not formally taken, put an end to appeal proceedings (see **R 3/22**). Accordingly, in the case in hand, the petition for review of the replacement board's decision to refuse a request to reject all its members on the ground of suspected partiality was rejected as clearly inadmissible.

3.4.3 Article 112a(1) EPC – Whether a decision has been taken by a board

In **R 21/22** the Enlarged Board stressed that "the decision" referred to in Art. 112a(1) EPC was a decision of a board. The decision to appoint a member of the board as rapporteur and the decision not to hold oral proceedings on this issue, which had been taken in the current case, had been decisions of the Chair. Thus, these decisions could not be subject to a petition for review.

3.5. Scope of review by the Enlarged Board

3.5.1 Article 112a(2) EPC – grounds for a petition for review

A petition for review may only be filed on the grounds listed in Art. 112a(2) EPC. Those defined in Art. 112a(2)(a) to (c) EPC concern a breach of Art. 24 EPC governing exclusion of and objection to members of a board of appeal; the participation of persons not appointed as a member of the boards of appeal; and the fundamental violation of Art. 113 EPC. In addition, Art. 112a(2)(d) EPC opens up the possibility of using the Implementing Regulations to define further fundamental procedural defects on which a petition for review might be based (explanatory remarks in OJ SE 4/2007, 126). Under R. 104 EPC, such a defect may arise from either a failure to arrange for the holding of oral proceedings requested by a party (R. 104(a) EPC), or a failure to decide on a request relevant for the board's decision (R. 104(b) EPC). Finally, a petition for review may also be filed on the ground that a criminal act may have had an impact on the decision (Art. 112a(2)(e) EPC).

3.5.2 Grounds listed exhaustively

The grounds for a petition for review have been exhaustively defined by the legislator, namely in Art. 112a(2) EPC in conjunction with R. 104 EPC (**R 1/08**; see also **R 10/09**, **R 14/09**, **R 16/09**, **R 17/09**, **R 18/09**, **R 20/09**, **R 20/10**, **R 6/11**, **R 13/11**, **R 19/11**, **R 20/11**, **R 2/12** of 17 October 2012, **R 18/12**, **R 4/13**, **R 5/13**, **R 5/14**, **R 7/14**, **R 9/14**, **R 6/15**,

R 3/16, **R 14/22**, **R 20/22**). What is not defined by the Implementing Regulations does not qualify as a procedural defect under Art. 112a(2)(d) EPC (**R 16/09**, **R 10/20**, **R 12/22**).

The erroneous application of a procedural rule, which does not in itself belong to the grounds for review enumerated in the EPC, can only be considered if it results in one of the procedural defects listed in Art. 112a(2) EPC in conjunction with R. 104 EPC (**R 2/08**, **R 20/10**, **R 18/12**). In **R 8/16** the Enlarged Board noted that Art. 125 EPC expressly states that it is only applicable in the absence of procedural provisions in the EPC and held that for this reason it could not be the basis for extending the scope of Art. 112a EPC.

In particular, the following issues cannot be considered in review proceedings:

– requests concerning the interpretation of the RPBA (**R 2/23**)

– allegedly insufficient reasoning (**R 6/11**; see also **R 1/08**, **R 19/11**, **R 5/13**, **R 1/15**, **R 8/15**, **R 7/16**, **R 4/20**, **R 10/20**, **R 8/23**), unless this involves a fundamental violation of Art. 113 EPC

– illogical and contradictory reasoning (**R 10/20**)

– an alleged failure to attach to the decision information on the available means of redress (**R 3/21**)

– the alleged violation of Art. 114 EPC in conjunction with R. 116(1) and (2) EPC or, respectively, R. 101 and 99(2) EPC (**R 14/09**)

– the refusal to allow the recording of oral proceedings, the use of a different (but equivalent) terminology than the one used in the EPC during the oral proceedings or the non-validation of the minutes at the end of the oral proceedings (**R 17/09**)

– the alleged inadequate keeping of minutes, the alleged incompetence to decide on the exclusion from file inspection or the alleged misunderstanding of a party submission (**R 20/09**, **R 7/17**)

– the alleged violation of Art. 6 ECHR (**R 18/09**, **R 1/16**), unless this involves a fundamental violation of Art. 113 EPC (see **G 3/08**, OJ 2011, 10, as to the general applicability of fundamental procedural rights in EPO proceedings)

– the alleged violation of the principle of legitimate expectations (**R 13/11**, **R 1/16**)

– the allegedly incorrect reversal of the burden of proof (**R 21/10**, **R 1/20**)

– alleged irrationality or "Wednesbury unreasonableness" (**R 19/11**)

– allegedly insufficient time allowed for the oral proceedings (**R 2/12**)

– the alleged violation of the right to be heard in respect of another party (**R 5/14**)

– the alleged lack of technical understanding of a board member, so that the board did not consist of two "technically qualified members" as required by Art. 21(4)(a) EPC (**R 3/12**)

– the alleged violation of Art. 4(3) EPC, or of Art. 11, 15(4) and 20 RPBA 2007 (**R 9/14**)

– the alleged violation of Art. 15(5) and 15(6) RPBA 2007, unless this involves a fundamental violation of Art. 113 EPC or a fundamental procedural defect under Art. 112a(2)(d) EPC in combination with R. 104(b) EPC (**R 7/14**; see also **R 10/08**)

– the alleged violation of Art. 20(1) RPBA 2007 (**R 7/13**)

– the alleged violation of Art. 114 EPC, of Art. 13 RPBA 2007, or the alleged lack of impartiality (**R 10/14**)

– the alleged violation of the principle of procedural economy (**R 1/16**).

– an alleged misapplication of a provision of the RPBA 2007, unless it can be shown that it resulted in a fundamental procedural violation within the meaning of Art. 112a(2) EPC (**R 3/17**).

As R. 106 EPC implies, only procedural defects actually attributable to a board of appeal can be reviewed under Art. 112a EPC. Procedural defects that occurred in first-instance proceedings may not be the subject of a petition for review (**R 20/10**, **R 8/11**; see also **R 19/12** of 12 April 2016, **R 3/16**).

3.5.3 No suspensory effect – review of substantive law excluded

Article 112a(3) EPC makes it clear that the petition for review is an extraordinary legal remedy the filing of which does not affect the force of res judicata of the decision under attack. Implicitly it follows that a successful petition for review results in a decision of the Enlarged Board which sets aside the decision of the board of appeal, i.e. overturns its res judicata effect, and re-opens appeal proceedings (explanatory remarks in OJ SE 4/2007, 128). Decisions of the boards of appeal must remain final decisions (see also **R 1/08**).

Under no circumstances may the petition for review be a means to review the application of substantive law. This restriction is justified because the function of the petition for review is to remedy intolerable deficiencies occurring in individual appeal proceedings, not to further the development of EPO procedural practice or to ensure the uniform application of the law (explanatory remarks in OJ SE 4/2007, 126; **R 13/10**: established case law since **R 1/08**). The Enlarged Board has no competence under Art. 112a EPC to examine the merits of the decision and to go into the substance of a case (**R 4/09**, **R 13/10**, **R 5/15**, **R 7/17**, **R 3/21**, **R 11/21**, **R 15/21**, **R 12/20**), not even indirectly (**R 19/11**, **R 6/13**, **R 3/18**, **R 24/22**). A review of the correct application of substantive law would amount to the Enlarged Board being a third instance which has been explicitly excluded (**R 3/09**; see also **R 13/09**, **R 3/18**). It is not the purpose of petition for review proceedings to evaluate

whether or not the reasons selected by the board are appropriate (**R 13/14**, **R 2/18**, **R 12/22**); the Enlarged Board cannot replace a board's substantive assessment with its own (**R 9/14**). The Enlarged Board cannot act as a third instance or second-tier appellate tribunal in petition proceedings (**R 9/10**, **R 11/11**, **R 5/13**; see also **R 1/08**, **R 3/09**, **R 13/09**, **R 3/18**).

Not being competent to decide on the merits of a case necessarily implies that the Enlarged Board has no power to control the normal exercise a board makes of its discretion (**R 10/09**, see also **R 6/17** and **R 4/22**). The exercise of discretion is only subject to review if arbitrary or manifestly illegal (**R 10/11**, **R 13/21**, **R 12/22**, **R 24/22**), thereby involving a fundamental violation of the right to be heard (**R 9/11**; see also **R 17/11**, **R 6/20**, **R 7/21**, **R 4/22**, **R 24/22**). In **R 13/21** the Enlarged Board clarified that in proceedings under Art. 112a EPC, it was at most necessary and permissible to examine (i) whether the party had been heard on the question of the admission of new submissions or new requests and/or (ii) whether there had been an error of discretion (see also **R 4/22**). The latter examination should focus on two aspects at most, namely whether there had in fact been discretionary power available to the board, and whether the board had recognised that fact (abuse of or failure to exercise discretionary power) and whether the discretionary power had been exercised in an arbitrary or manifestly unlawful manner (abuse or misuse of discretion).

In **R 13/12** the Enlarged Board stated that it had to remain vigilant and thwart any attempt to blur the frontier between what might clearly be a matter for a violation of the right to be heard under Art. 113 and 112a(2)(c) EPC, and anything else presented as a violation of the right to be heard but which actually pertained to the substantive merits of the decision under review.

In **R 25/22** the Enlarged Board held that not being competent to judge the correctness of a decision, however, did not mean that the Enlarged Board was in principle prevented from analysing and understanding the board's reasoning. In order to determine whether an ignored argument by a party or a surprising new argument by a board had indeed been causal for a board's decision, the Enlarged Board would inevitably have to go into the substance of the case and at least understand the parties' arguments and the board's reasoning (see also in this chapter V.B.4.3.2).

In **R 3/18** the Enlarged Board noted that the question at issue, i.e. the "estoppel situation" as characterised by the petitioner, might, in principle be eligible for a referral to the Enlarged Board under Art. 112 EPC. However, the Enlarged Board held that an absence of such a referral under Art. 112 EPC did not entitle the Enlarged Board in proceedings under Art. 112a EPC to deal with the petitioner's request to correct this estoppel situation and to set aside the decision under review.

The following issues cannot be considered in review proceedings:

– the assessment of inventive step (**R 1/08**, **R 12/09** of 15 January 2010, **R 6/11**, **R 14/13**, **R 6/15**), including the determination of the closest prior art (**R 5/13**)

– the interpretation of a prior art document (**R 9/08**, **R 8/09**, **R 4/11**)

– the assessment of clarity (**R 15/10**)

– the assessment of public prior use (**R 19/10**)

– the assessment of evidence (**R 21/09**)

– the conclusions in relation to arguments, facts and evidence, including the question of which party to the appeal proceedings bore the burden of presenting arguments, facts and evidence, or to what extent any counter-evidence was required (**R 11/21**)

– whether to remit a case to the department of first instance (**R 10/09**, **R 12/09**, **R 9/10**, **R 7/13**, **R 24/22**)

– whether to admit a new request (**R 10/11**, **R 11/11**, **R 13/11**, **R 4/13**) or a new document (**R 10/09**, **R 17/11**) under Art. 12 RPBA 2007 or under Art. 13(1) RPBA 2007 (**R 1/13**, **R 4/14**, **R 6/17**)

– whether an appeal is admissible (**R 10/09**, **R 10/14**)

– whether or not the exception to reformatio in peius mentioned in **G 1/99** (OJ 2001, 381) applies to a particular case (**R 4/09**; see also **R 10/14**)

– whether to refer a question to the Enlarged Board under Art. 112 EPC (**R 7/13**, **R 17/14**)

– whether the boards are empowered to decide on a request to hold oral proceedings before the examining division in Munich instead of in The Hague (**R 13/14**)

– sufficiency of disclosure (**R 2/14** of 22 April 2016).

3.6. Petitions for review of an interlocutory decision

In **R 2/15** of 21 November 2016 the Enlarged Board held that petitions for review of interlocutory decisions were not generally inadmissible (see also **R 5/08**, **R 5/15**). The Enlarged Board saw no reason to assume that Art. 106(2) EPC, which stipulates that a decision which does not terminate proceedings as regards one of the parties can, as a rule, only be appealed together with the final decision, was to be applied to the petition for review procedure. Neither Art. 112a EPC nor R. 104 to 110 EPC contained a provision corresponding to Art. 106(2) EPC.

In **R 5/15** the Enlarged Board acknowledged that interlocutory decisions dealing with objections of suspected partiality unquestionably had consequences of utmost importance for the proceedings as a whole. The petitioner had argued that it was likely that the Enlarged Board would set aside the decision of the board in its alternate and that the board had violated its right to be heard by failing to consider its request for postponement. The

Enlarged Board held it was not appropriate to base a decision on speculation. The interlocutory decision of the Board in its alternate composition was binding and had the force of res judicata.

3.7. Obligation to raise objections

Under R. 106 EPC, a petition under Art. 112a(2)(a) to (d) EPC is only admissible where an objection in respect of the procedural defect was raised during appeal proceedings and dismissed by the board, except where such objection could not be raised.

3.7.1 Purpose of Rule 106 EPC

The purpose of R. 106 EPC is to give the board a chance to react immediately and appropriately by either removing the cause of the objection or by dismissing it (see e.g. **R 5/08**, **R 3/20**, **R 11/21**, **T 1544/08**, **T 144/09**, **T 1977/13**, **T 1203/19**), thereby ensuring legal certainty for the parties and the public as to whether the ensuing substantive decision of the board is open to review under Art. 112a EPC (**R 4/08**, **R 1/10**, **R 14/11**, **R 16/12**, **R 9/22**, **R 2/23**, **T 1690/22**). By ensuring that errors can be corrected by a board before a final decision is taken, R. 106 EPC also ensures that unnecessary petitions for review are avoided (**R 14/11**, **R 18/12**).

3.7.2 Requirements of a valid objection

a) Recognisable immediately as an objection, defect clear and unambiguous

Raising an objection under R. 106 EPC is a procedural act and a precondition for access to the extraordinary legal remedy under Art. 112a EPC (**R 4/08**, **R 7/08**, **R 3/11**, **R 7/11**, **R 16/12**). The objection must be expressed by the party in such a form that the board is able to recognise immediately and without doubt that an objection under R. 106 EPC is intended (**R 6/22**, **R 9/22**, **R 2/23**). It also must be specific, indicating clearly and unambiguously on which procedural defect the petitioner intends to rely (see **R 4/08**, **R 7/08**, **R 8/08**, **R 1/10**, **R 17/10**, **R 7/11**, **R 5/12**, **R 6/12**, **R 16/12**: established jurisprudence, **R 3/14**, **R 8/16**, **R 9/22**, **R 2/23**).

An objection under R. 106 EPC is additional to and distinct from other statements, such as arguing or even protesting against the conduct of the proceedings or against an individual procedural finding (**R 2/08**, **R 7/08**, **R 9/09**, **R 1/10**, **R 14/11**, **R 21/11**, **R 16/12**, **R 6/22**, **R 9/22**). An objection under R. 106 EPC must be something other than an alleged reference being made to a potential violation of Art. 113 EPC (**R 2/23**). An objection must be expressly described as such (**R 8/08**, **R 21/11**, **R 7/18**). However, even if an objection does not contain an explicit reference to R. 106 EPC, it can qualify as an objection under R. 106 EPC (**R 21/09**; see also **R 12/14**, **R 17/14**).

In **R 18/12**, the Enlarged Board stated that only an objection which, in substance, raised a procedural defect which could be the subject of a petition for review under Art. 112a(2)(a) to (d) EPC could be regarded as an objection within the meaning of R. 106 EPC. In the case in hand, the Enlarged Board held that objecting, in substance, to the board's

conclusion on clarity did not qualify as such an objection, even if the petitioner explicitly referred to Art. 113 EPC. Referring to **R 18/12** the Enlarged Board recalled in **R 6/22** that in determining whether the petitioner has complied with R. 106 EPC, what matters is not the formal wording of the objection but its substance as it could be objectively understood by the board. In the case in hand, during the discussion before the board on the admittance of the auxiliary request, the proprietor (petitioner) had made a statement that failure to admit the request would be a violation of its right to be heard. The Enlarged Board found that, even if the board might have subjectively perceived that the proprietor's argument was intended as an objection under R. 106 EPC, the board apparently had not considered the objection to have been effectively raised.

In **R 8/18** the Enlarged Board noted that neither the petition, nor the request for correction of the minutes, nor the declarations of the representatives, stated anywhere that Art. 113 EPC or a violation of the right to be heard was mentioned by the petitioner in connection with the refused interruption, in which case the Enlarged Board might have recognised the objection as a reference to Art. 112a(2)(c) EPC. The Enlarged Board therefore concluded that the petitioner's own initial submissions did not suggest, let alone prove that a recognisable objection within the meaning of R. 106 EPC had been made.

b) Objection raised in good time by persons capable of validly doing so

In **R 1/14** the Enlarged Board held that it was an indispensable prerequisite for the admissibility of a petition that an objection be raised "in good time", i.e. at a time when the board can still rectify the alleged violation. An objection to a refusal to postpone the date of oral proceedings must therefore be made before or, at the latest, at the beginning of these oral proceedings.

In **R 21/09** the Enlarged Board held that if an objection is made during oral proceedings, the fact that it is only raised after further requests have been discussed has no bearing on the admissibility of the petition.

In **R 14/11** the Enlarged Board held that an objection cannot be formulated prematurely, i.e. before a procedural defect has come into existence (see also **R 8/08**, **R 17/10**, **R 21/11**, **R 11/21**, **R 6/22**, **T 1203/19**). In **R 11/21** the board added that making a request conditional might prevent it from being considered as submitted too late, but did not remedy a premature submission, at least in the context of R. 106 EPC.

In **R 9/09** the board held that an accompanying person cannot validly make procedural declarations, such as an objection under R. 106 EPC (see also **R 3/08**).

c) Different defects must be objected to and considered separately

Different alleged procedural defects must be objected to separately under R. 106 EPC (**R 5/13**; see also **R 10/14**), and also have to be considered separately by the Enlarged Board (**R 3/08**, **R 17/11**).

d) Board's explicit reaction to an alleged objection

In **R 6/22** the Enlarged Board pointed out that there was no trace of any explicit dismissal of an alleged objection on file. In the Enlarged Board's view it seemed likely that the board had not taken note of the intended objection. In this way, the absence of any discernible reaction from the board was a further indication that the board could not perceive the right to be heard argument as a recognisable objection within the meaning of R. 106 EPC. The Enlarged Board held that in a situation where the board does not react in a recognisable and explicit manner to an intended objection a diligent party should normally insist on a discernible response from the board. Failure to do so may leave the party with an indication that weighs against its case.

3.7.3 Written form to avoid uncertainties

In the light of the purpose of the obligation to raise objections, the board in **T 1690/22** considered that raising an objection in writing was a practice making it possible to clearly determine its scope. Although it made no difference to the objection's substance whether it was raised in writing or merely verbally, doing so in writing made it possible to record verifiably what the board had had to decide on and avoid uncertainties in any review proceedings about how the party raising the objection had intended to formulate it. See also in this chapter V.B.3.7.5.

3.7.4 Examples of invalid objections

The following are examples of acts that the respective boards have found did not qualify as an objection under R. 106 EPC:

– contesting insufficiency of disclosure or offering new documents (**R 7/08**)

– requesting that a late-filed document not be admitted into the proceedings (**R 9/09**, **R 17/10**)

– protesting against the hearing of an expert (**R 2/11**)

– an objection against the board raising a new line of argument or a request for remittal or postponement (**R 14/11**)

– requesting that a board make a statement on the scope of a claim, the request being repeatedly refused (**R 3/14**)

– a statement (a remark) that failure to admit an auxiliary request would be a violation of the party's right to be heard (**R 6/22**)

3.7.5 Minutes as evidence that the objection was raised

The test whether an objection was validly raised during oral proceedings is normally the minutes, which, as prescribed by R. 124(1) EPC, must contain the relevant statements of

the parties (**R 4/08**, **R 17/10**, **R 8/16**). In **T 1690/22** the board explained that the essentials of the oral proceedings to be recorded in the minutes of the proceedings under R. 124(1) EPC included the fact as such that an objection had been raised, but not the supporting grounds and arguments put forward by the party concerned and required to make the objection admissible. Instead, it was the parties' responsibility to submit explanations and reasons for their requests in writing. See also in this chapter V.B.3.7.3.

The absence in the minutes of an objection under R. 106 EPC and of any request for correction of the minutes is a strong indication that such an objection, if any, was at least not duly qualified (**R 3/11**; see also **R 6/13**, **R 3/14**, **R 5/14**, **R 1/22**).

In **R 7/11** the Enlarged Board noted that unless duly corrected, the minutes of the oral proceedings authenticate the facts they relate to, and in **R 2/12** of 17 October 2012 the Enlarged Board stated that If a party is really convinced that a violation of its right to be heard has occurred during the oral proceedings the subsequent objection must be clearly raised as such, so that it will oblige the board of appeal to react, and require this to be recorded in the minutes in accordance with R. 124 EPC.

In **R 8/17** the board stated that the petitioner's own submissions did not allow the conclusion that it had raised an objection in the oral proceedings which could qualify as an objection under R. 106 EPC and if the petitioner had considered the minutes to be incomplete in this regard, one would have expected it to submit a corresponding request for correction (see **R 17/10**). However, in **R 3/08** the Enlarged Board also took private minutes taken by an employee of the petitioner into account.

In **R 8/16** the Enlarged Board noted that while there was no strict formal obligation on parties to request a correction to the minutes, not doing so will leave them with the burden of proof against the minutes in case of dispute.

3.7.6 Requirements of a valid dismissal of an objection

In **R 6/22** the petitioner considered its "unequivocal statement" that failure to admit the auxiliary request would be a violation of its right to be heard an objection within the meaning of R. 106 EPC. The Enlarged Board pointed out that there was no trace of any explicit dismissal of the alleged objection on file and it was not convinced about the petitioner's explanation, according to which the non-admittance of the auxiliary request had to be regarded as the implicit dismissal of its intended objection.

3.7.7 Objection could not have been raised

Under R. 106 EPC an objection is not a requirement for the petition to be admissible where such objection could not be raised during the appeal proceedings. Therefore, if the alleged procedural defect becomes apparent to the parties only through the written reasons for the decision (in **R 3/10**: through the announcement of the decision), the admissibility of the petition is not conditional upon a corresponding objection having been raised during the oral proceedings (**R 4/08**; see, by way of example, also **R 1/08**, **R 2/08** (written procedure), **R 9/08**, **R 3/09**, **R 4/09**, **R 7/09**, **R 11/09**, **R 19/10**, **R 8/11**, **R 21/11**, **R 14/13**, **R 6/20**,

R 11/21, **R 14/22**). If a petition addresses mostly the reasoning of a decision, the benefit of the doubt is given to the petitioner as to its possibility to raise an objection before the end of appeal proceedings (**R 1/11**, see also **R 18/14**).

In **R 16/09** the petitioner requested the correction of the minutes of oral proceedings in order to establish what, in its view, had been the order of the procedural steps followed by the board, to prove that it could not raise any objection in respect of the procedural defect during oral proceedings. The Enlarged Board held that the lack of possibility for the petitioner to raise an objection could not be excluded, even if the request to correct the minutes was rejected.

In the proceedings underlying **R 10/08**, the petitioner wanted to submit a new auxiliary request, allegedly during the announcement of the decision at the oral proceedings, but the board had declared itself formally bound by the decision as announced. The petitioner could thus no longer raise an objection "during the appeal proceedings". However, in **R 12/14** the Enlarged Board held that, if the pronouncing of the decision immediately follows the closing of the debate, requiring the appellant to interrupt the Chair would overstretch the obligations arising from R. 106 EPC.

In **R 5/17** the petitioner (opponent) had misinterpreted the acts and words of the board in the decision under review and without further questioning based its strategy on this interpretation. The Enlarged Board did not accept the argument of the petitioner that, although objectively an objection could have been raised, it could nevertheless not have been raised because the petitioner subjectively had no reason to raise an objection. Only the petitioner was responsible for this misunderstanding, and thus had to bear the consequences thereof.

3.7.8 Compliance with Rule 106 EPC left open

If a request is unallowable, it can be left open whether the petitioner complied with R. 106 EPC (**R 15/09**, **R 18/09**, **R 20/09**, **R 16/11**, **R 2/12** of 17 October 2012, **R 16/12**, **R 1/13**, **R 15/13**, **R 7/14**, **R 17/14**, **R 2/16**).

3.8. Contents of the petition for review

3.8.1 Petition must be adequately substantiated

In **R 5/08** the Enlarged Board stated it was clear that apart from any reasons accepted by the Enlarged Board as special enough to justify the submission of additional facts, arguments or evidence, the petition itself must be adequately substantiated. R. 107(2) EPC requires a petition to indicate the reasons for setting aside the decision of a board of appeal and the facts and evidence on which it is based. This corresponds to the similar provisions requiring substantiation of an opposition or an appeal (R. 76(2)(c) and R. 99(2) EPC). The contents of a petition must be sufficient for the petitioner's case to be properly understood on an objective basis and must enable the Enlarged Board (and any other parties) to understand immediately why the decision in question suffers from a fundamental procedural defect. The petition must thus set out the reasons why it requests

that the impugned decision be set aside, specify the facts, arguments and evidence relied on and must do so within the time limit for filing the petition, namely two months after notification (see Art. 112a(4) EPC; see also **R 4/13**, **R 17/13**, **R 3/18**).

In **R 9/10** the Enlarged Board held that an implicit request to set aside the decision was sufficient. In **R 20/10** the Enlarged Board stated that the obligation to file a reasoned statement could not be construed so narrowly as to mean that any kind of reasoning was sufficient to fulfil this requirement, as long as it was extensive enough. In **R 2/08** the Enlarged Board held that for the petition to be admissible, it was however sufficient if only one ground was sufficiently reasoned in the request, just as it is for an appeal or opposition (see also **G 9/91**, OJ 1993, 408).

3.8.2 Non-compliance with Rule 107 EPC and failure to remedy a deficiency

In **R 6/10** the board held that if a petition did not comply with R. 107(2) EPC, it must be rejected as inadmissible.

Under R. 108(2) EPC, if the Enlarged Board notes that the petition does not comply with R. 107(1)(a) EPC, it shall invite the petitioner to remedy the deficiencies noted within a period to be specified. If the deficiencies are not remedied in due time, the Enlarged Board shall reject the petition as inadmissible. In **R 6/09** the Enlarged Board noted that such rejection was subject to the petitioner's request for re-establishment of rights.

3.9. Time limit for filing a petition for review

In accordance with Art. 112a(4) EPC, a petition for review shall be filed within two months of notification of the decision of the board of appeal (or within two months of the date on which the criminal act has been established where applicable).

In **R 3/21** the Enlarged Board stressed that it could only examine the merits of grounds for review under Art. 112a(2)(a) to (d) EPC which had been substantiated within the two-month time limit under Art. 112a(4), first sentence, EPC. Both the request and the statement of reasons required under R. 107(2) EPC therefore had to be filed within two months of notification of the contested decision.

In **R 3/14** the Enlarged Board held that it was essential to observe the two-month time limit expressly prescribed in Art. 112a(4), second sentence, EPC for filing the reasons for the petition and the supporting submissions; no exceptions could be made.

In **R 5/14** the Enlarged Board stated that filing a petition and paying the fee before the orally announced decision has been notified to the petitioner in writing did not make it inadmissible under Art. 112a(4) EPC (see also **R 20/10**).

In **R 2/10** the Enlarged Board held that the established jurisprudence of the boards of appeal that mere payment of the appeal fee was not an act which sufficed for the admissible filing of an appeal applied *mutatis mutandis* to petition for review proceedings.

In **R 1/18** the Enlarged Board saw no reason not to apply the findings reached in Opinion **G 1/18** (OJ 2020, A26) to the provisions governing the legal effects of late payment of the fee for petition for review and so concluded that the petition for review had to be deemed not filed and that the associated fee had to be reimbursed. The Enlarged Board further concluded that the proper legal effect of late payment of the fee for requesting **re-establishment of rights** was a finding that the request was deemed not to have been filed and that the fee was to be reimbursed (see also **T 46/07** in chapter III.E.9. "Reimbursement of the fee for re-establishment").

3.10. Article 12(1) RPEBA – late-filed submissions in the review procedure

Pursuant to Art. 12(1) RPEBA the Enlarged Board may consider new submissions made by the petitioner after expiry of the time limit for filing the petition for review, if this is justified for special reasons. In **R 12/10**, **R 4/13** and **R 8/16** no such reasons were advanced by the petitioner, and the Enlarged Board rejected the late-filed submissions (see also **R 6/22**). In **R 15/13** the Enlarged Board stated that "special reasons" could not extend to the late introduction of grounds not relied on unless or until the grounds in the petition proved insufficient. In **R 4/12** and in **R 16/12** the Enlarged Board said that an entirely new complaint submitted for the first time during the oral proceedings before the Enlarged Board had no bearing whatsoever on the findings as to the petition's admissibility and merits reached on the basis of the grounds, facts, arguments and evidence set out in the petition.

In **R 2/08** the Enlarged Board accepted the petitioner's additional explanations in response to its communication, and in **R 18/09** a late-filed external legal opinion on the admissibility of the petition.

3.11. Rule 109 EPC – composition of the Enlarged Board and review procedure

Unless otherwise provided, the provisions relating to proceedings before the boards of appeal apply (R. 109(1) EPC). The RPEBA also apply in proceedings under Art. 112a EPC (Art. 1 RPEBA).

3.11.1 Composition of the Enlarged Board

Petition for review proceedings consist of two stages. In the first stage, a panel of the Enlarged Board composed of three members (two legally qualified, one technically qualified) examines all petitions for review and rejects those which are clearly inadmissible or clearly unallowable (unanimity is required; R. 109(2)(a) EPC). Those not rejected are considered by a panel composed of five members (four legally qualified, one technically qualified; R. 109(2)(b) EPC). In these cases, the three-member panel under R. 109(2)(a) EPC is supplemented by two further legally qualified members (Art. 2(3) RPEBA). The Chair of the board against whose decision the petition was filed may not take part in the proceedings (Art. 2(6) RPEBA).

In **R 25/22** the Enlarged Board held that the correct criterion for determining whether the petition was "clearly" unallowable within the meaning of R. 109(2)(a) EPC was not just the

depth of the analysis required to understand the case from a legal or technical point of view. What also mattered was the degree of conviction of the individual members of the Enlarged Board as to whether the alleged procedural defect was indeed a fundamental one within the meaning of Art. 112a(2)(a) to (d) EPC, once the relevant facts of the case had been identified, possibly only after an exhaustive and detailed examination of all the legally and technically relevant facts.

3.11.2 Involvement of parties other than the petitioner in petition for review proceedings

Parties other than the petitioner are not to be involved in the first stage of petition for review proceedings (R. 109(3) EPC; **R 7/14**). In **R 5/08** the Enlarged Board held that non-petitioner parties, as long as they are not involved, have no right to be heard that could be violated. Although not summoned to oral proceedings in the first stage, non-petitioner parties may, however, attend such proceedings which are public.

3.11.3 Group parties

In **R 18/09** the Enlarged Board held that the principles set out in **G 3/99** (OJ 2002, 347), also applied to petition for review proceedings, namely that a plurality of persons acting in common must be treated as a single party (a "group party") and that such a group party must act through a common representative.

3.11.4 Procedural efficiency

Petition for review proceedings should by their nature be dealt with as speedily as possible, acceleration requests are therefore unnecessary (**R 18/09**, **R 15/13**). In **R 11/12** the board also stated that petitions for review should, in the interest of legal certainty, be dealt with expeditiously, and did not consider a planned birthday party a reason justifying the fixing of a new date for oral proceedings before the Enlarged Board.

In **R 5/08** the Enlarged Board noted that R. 109(1) EPC provides that certain specific procedural time limits do not apply to petition for review proceedings and stated that this allowed the Enlarged Board to shorten these time periods in the interest of procedural efficiency. However, it clearly provides no justification for parties to disregard time limits set by the Enlarged Board itself.

3.12. Factual bases for the review – minutes and grounds for the decision

The factual bases for a review procedure under Art. 112a EPC are the minutes of the oral proceedings and the grounds for the decision under review (**R 15/09**, **R 6/14**). However, in **R 3/10** the Enlarged Board also took signed declarations of persons who had attended the oral proceedings into account.

According to the Enlarged Board in **R 6/14** the parties can be expected to review the contents of minutes soon after receiving them and to report any errors they find. The Enlarged Board clarified in **R 18/22** that it understood this to require a party to submit a request for correction of the minutes in the shortest time possible after their receipt. This

would ensure that the relevant facts and submissions were still fresh in the minds of the members of the deciding body and, if applicable, the other party or parties.

In **R 4/16** the Enlarged Board stated that, according to its settled case law on petitions for review, the boards were not obliged to explicitly state the reasons underlying a decision until they issued the final decision in writing (see **R 8/13** of 15 September 2015). R. 124(1) EPC required only that the minutes of oral proceedings contain the essentials, so they did not have to record every single point addressed at those proceedings. It therefore could not be inferred from a point's omission from the minutes that it had not been considered.

3.13. Burden of proof

The petitioner bears the burden of proving its allegations (**R 4/09**). However, in **R 15/11** the petition was allowed and the Enlarged Board stated that it is not for the party which alleges a breach of its right under Art. 113(1) EPC to prove that it has not been heard (negativa non sunt probanda). It would rather be the task of the boards to draft their own texts in a way that enables the reader, taking into account all documents on file, to conclude that the right to be heard was respected with regard to the grounds on which the decision is based.

In **R 4/17** the Enlarged Board considered, in respect of the implausibility of the non-arrival of letters put forward by the other party, that it could not be expected that the petitioner should prove a negative, that is the non-receipt of a letter, or provide a plausible explanation for non-receipt (negativa non sunt probanda).

In **R 8/18** the petitioner pointed to decision **R 15/11** and the principle of "negativa non sunt probanda", arguing that it was not for the party to prove that it had not been heard. The Enlarged Board distinguished the case in hand from **R 15/11**. The petitioner in **R 15/11** could point to the absence of facts which led to a legal conclusion, namely, the finding that the party had not been heard. In the case in hand the petitioner based its claims on positive facts, namely, the events that were stated to have occurred. Under these circumstances, the Enlarged Board found that the petitioner clearly carried the burden of proof that these events indeed occurred as stated.

3.14. Effects of a successful petition for review

3.14.1 Decision of board of appeal set aside

If the petition is allowable, the Enlarged Board sets aside the decision of the board of appeal and orders the re-opening of the proceedings before the board (R. 108(3) EPC). The limitation of the petition for review to a particular part of the decision (e.g. the non-reimbursement of the appeal fee) is admissible.

In **R 19/12** of 12 April 2016, the Enlarged Board held that although Art. 112a(5) EPC and R. 108(3) EPC did not explicitly provide for setting a decision aside only partially, this possibility followed from general procedural principles (see also **R 16/14**).

In **T 379/10** of 21 September 2015 the board cited **R 21/11**, in which it was held that the re-opening of appeal proceedings did not mean that the parties had to be given another opportunity to comment on all the matters in dispute. Rather, proceedings re-opened after a successful petition for review had to be restricted to rectifying the defect found in the review decision.

The board in **T 695/18** interpreted Art. 112a(5) and R. 108(3) EPC and held that there was nothing textual in the EPC to suggest that the proceedings re-opened in the present case by the Enlarged Board's decision **R 3/22** were the appeal proceedings. The board saw the Enlarged Board's Order in **R 3/22** as one that opened "ancillary proceedings" for establishing whether the request for correction of the withdrawal of the appeal was allowable: if the request were found allowable, the appeal proceedings would continue; if not, the appeal proceedings would be regarded as terminated as of the date when the withdrawal of the appeal took effect.

3.14.2 Replacement of board members

The replacement of board members under R. 108(3) EPC after a petition for review has been held allowable lies in the discretion of the Enlarged Board, to be exercised fairly and proportionately in the light of the facts (**R 21/11**).

In **R 15/11** the Enlarged Board held that unless there was a compelling reason for proceeding otherwise, the BDS must be adhered to and applied to a case re-opened before the board.

In **R 16/13**, the Enlarged Board rejected the request that members be replaced because it was not substantiated. In **R 21/11**, the Enlarged Board also rejected the petitioner's request that members be replaced, stating inter alia that such a replacement would necessitate the repetition of the whole appeal proceedings, which would be disproportionate. However, after the decision in **R 21/11** had been taken, the Chair of the technical board concerned retired, and the appeal proceedings had, in any event, to be repeated. As a consequence, both the technically and the legally qualified member recused themselves under Art. 24(2) EPC (**T 584/09** of 1 March 2013).

3.14.3 Reimbursement of the fee for petitions for review

In **R 21/11** the Enlarged Board stated that the only condition for the fee for a petition for review to be reimbursed under R. 110 EPC is that the proceedings before the board of appeal are re-opened (a reimbursement request is not required).

4. Grounds for petition for review

4.1. Article 112a(2)(a) EPC – alleged breach of Article 24 EPC

For general information on Art. 24 EPC, see chapter III.J. "Suspected partiality". The present chapter deals with decisions of the Enlarged Board under Art. 112a(2)(a) EPC.

In **R 16/10** the Enlarged Board rejected the petitioner's argument that Art. 24(1) EPC, concerning the exclusion of members from a board, included not only the specific situation where one of the members had represented a party in the case in question but also the general situation where a member had previously acted as representative of that party in any matter. In **R 20/09** the Enlarged Board confirmed that, in cases of suspected partiality of a board member, Art. 112a(2)(a) EPC requires that a decision has been taken on the suspected impartiality (Art. 24(4) EPC).

In **R 3/16** the Enlarged Board confirmed that Art. 112a(2)(a) EPC foresees the situation where a member of the board has taken part in the decision despite being excluded pursuant to a decision under Art. 24(4) EPC or in breach of Art. 24(1) EPC. The petitioner had further contended that it was an established principle that a party had no obligation to appear before an unlawful court; that, on the contrary, it could be prejudicial to do so since the right to be heard could not be properly guaranteed before such a court, thus leading to the question as to whether appeal proceedings held by a board unlawfully composed may amount per se to a breach of the right to be heard. This question, however, remained open because the Enlarged Board did not come to the conclusion that the board had actually ignored the procedure of Art. 24(4) EPC.

In **R 17/09** the Enlarged Board found that in English the term "man in the street" had no pejorative associations, but was commonly used to describe an average citizen.

In **R 12/22** the Enlarged Board held that a right to always be able to obtain advance information on a board member from publicly accessible sources could not be accepted. Whether the Art. 24 EPC requirements were met could still be checked by asking the board member concerned questions about this at oral proceedings.

4.2. Article 112a(2)(b) EPC – person not appointed as a board member

The Enlarged Board has not yet found allowable or admissible any petition for review alleging that a board of appeal included a person not appointed as a board member.

In **R 21/22** the Enlarged Board considered that Art. 11(3) and 112a(2)(b) EPC both referred to the same appointment, that is to the Boards of Appeal as a whole, and not the attachment of a member to a particular board or boards. It took the view that for the ground of petition under Art. 112a(2)(b) EPC to be applicable, a member of a particular board must be someone who has not been appointed to the Boards of Appeal under Art. 11(3) EPC. Thus, the petitioner's arguments relying on the use of the singular "board of appeal" in the German language version of Art. 112a(2)(b) EPC ("nicht zum Beschwerdekammermitglied ernannt") failed to persuade the Enlarged Board.

According to Art. 19(1), second sentence, RPBA, only members of the board shall participate in the deliberations; the Chair may, however, authorise other officers to attend. In **T 857/06** the board held that, under this provision (then Art. 19(1) RPBA 2003), a board's assistant may attend and take part in the deliberations.

4.3. Article 112a(2)(c) EPC – alleged fundamental violation of Article 113 EPC

4.3.1 General

The decisions of a board of appeal may only be based on grounds or evidence on which the parties have had an opportunity to present their comments (Art. 113(1) EPC), and a patent application or a patent may only be examined in the text submitted or agreed by the applicant or proprietor of the patent (Art. 113(2) EPC). For general information on the right to be heard under Art. 113 EPC, see chapter III.B. "Right to be heard".

In most petitions for review, the alleged fundamental violation of Art. 113(1) EPC is among the grounds on which the petition is based. The majority of petitions for review that have been successful so far concern a fundamental violation of Art. 113 EPC (see in this chapter V.B.4.3.21 and in this chapter V.B.4.4.3).

4.3.2 "Fundamental" violation of Article 113 EPC – causal link and adverse effect

A violation of Art. 113 EPC can only be considered fundamental within the meaning of Art. 112a(2)(c) EPC if there is a causal link between the alleged violation and the final decision (**R 1/08**, **R 11/08**, **R 11/09**, **R 13/09**, **R 6/13**, **R 2/14** of 22 April 2016, **R 17/14**, **R 6/16**, **R 25/22**). The Enlarged Board specified in **R 25/22** that, in order to establish whether the disputed finding by the board was decisive for its final decision, their decision as a whole had to be examined in the light of the totality of the facts as derivable from the file, in particular the facts and arguments submitted by the parties, as well as the board's preliminary observations on the argued issues.

In **R 22/10** the Enlarged Board held, referring to the jurisprudence of the boards of appeal, that such a necessary causal link does not exist when, even if a procedural violation can be demonstrated, the same decision would have been taken for other reasons (see also **R 19/09** and **R 5/22**).

In **R 8/16** the Enlarged Board held that an alleged violation could not be fundamental, in the sense of intolerable, if it did not cause an adverse effect (see also **R 25/22**). In the case in hand the Enlarged Board stated that the omission of the reasons for the admission of the main request may not be a practice which it expressly endorsed but given that the petitioner did not explain and the Enlarged Board itself could not see what adverse effect might have been caused by not hearing the petitioner on this issue, and given that the admission of the petitioner's main request was clearly a positive result for the petitioner, it was not seen as a fundamental violation of Art. 113(1) EPC.

4.3.3 No prior assessment of the merits of a submission

The right to be heard is a fundamental right of the parties which has to be safeguarded irrespective of the merits of a submission. The necessity to respect it is absolute and cannot be made dependent on a prior assessment of the likelihood that the petitioner's arguments would have convinced the board (**R 3/10**, **R 5/13**). In the context of review proceedings the Enlarged Board is not entitled to go into the merits of a party's case. It is

not entitled to assess whether or not and to what degree, if any, a party's standpoint which it alleges it would have taken had it been given the opportunity to present it, would have been well-founded (**R 3/10**).

In **R 21/11** the Enlarged Board stated that it could not be ruled out that a different decision would have been reached if the party had been heard on the point on which it alleged its right to be heard had been infringed.

4.3.4 Objective approach – board's intention irrelevant

In **R 3/10** the Enlarged Board held that when determining whether a fundamental violation of the petitioner's right to be heard had occurred, an objective approach must be applied. It is therefore not relevant that it was not the deciding board's intention in any way to deprive the petitioner of its right to be heard orally on the issue of inventive step.

4.3.5 No obligation to provide detailed reasons for a decision in advance

It is settled case law that a board of appeal is not required to provide the parties in advance with all foreseeable arguments in favour of or against a request (**R 1/08** with reference to **G 6/95**, OJ 1996, 649; see also **R 13/09**, **R 18/09**, **R 4/13**, **R 5/15**, **R 6/16**, **R 9/18**, **R 25/22**). In other words, parties are not entitled to advance indications of all reasons for a decision in detail (see e.g. **R 12/09** of 15 January 2010, **R 15/09**, **R 4/11**, **R 18/12**, **R 2/13**, **R 9/14**, **R 7/15**, **R 8/17**, **R 14/21**, **R 20/22**, **R 4/23**). Thus, the right to be heard does not go so far as to impose an obligation on a board to disclose in advance to the parties how and why, on the basis of the decisive issues under discussion, or at least those foreseeable as the core of the discussion, it will come to its conclusion. This is part of the reasoning given in the written decision (see e.g. **R 8/17**, **R 4/23**).This principle also applies to the application of the problem-solution approach and even identification of an objective problem (**R 8/19**), an interpretation of a passage in the state of the art forming only part of such reasons (**R 19/11**, **R 15/12**, **R 16/13**, **R 15/21**), and to reasons of any level of generality (**R 10/17**).

In **R 8/19** the Enlarged Board held that the right to be heard in the context of the problem-solution approach meant that there should normally have been a discussion on the relevant prior art, the differences between the prior art and the claimed invention, and the technical relevance of these differences. Within the framework of what had been addressed in the course of these discussions, the deciding organ should be free to apply the problem-solution approach as it sees fit, and even identify an objective technical problem that had not been explicitly spelled out as such during the proceedings.

4.3.6 Boards' obligation to remain neutral

According to settled case law, a board must remain neutral in *inter partes* proceedings, both in its communications to the parties and in oral proceedings (**R 15/09**; see also **R 11/08**), especially when the opposing party is not present (**R 9/14**). By giving a party possible reasons to decide against its requests (**R 18/09**, **R 15/10**), by prompting a party to make further submissions (**R 9/11**, **R 3/13**, **R 17/13**), by informing a party of a possible

different interpretation of a passage in a prior art document (**R 19/11**; see also **R 18/09**), or by suggesting a possible wording of a claim (**R 4/09**, **R 22/10**; see also **R 7/14**) a board would assist a party and compromise its neutrality (see also **R 1/19**).

4.3.7 Independence of the board members

In **R 12/22** the Enlarged Board found that the right to be heard did not give a party any right to proof that a board member was sufficiently prepared – be it in the case of a substitution at short notice or in general – as exercising such a right would violate the independence of the board member concerned.

4.3.8 Parties' obligation to participate actively in the appeal proceedings

Corresponding to a board's obligation to remain neutral (see in this chapter V.B.4.3.6), parties are obliged to participate actively in the appeal proceedings (**R 2/08**, **R 6/12**, **R 12/12**), in particular in *inter partes* proceedings (**R 12/09** of 15 January 2010, **R 15/09**). Parties and their representatives are responsible for the conduct of their case and it is for them to submit the necessary arguments to support their case on their own initiative and at the appropriate time (**R 17/12**; see, by way of example, also **R 18/09**, **R 13/11**, **R 17/12**, **R 1/13**, **R 15/13**, **R 1/17**, **R 24/22**). It is for the parties to address any point they consider relevant and fear may be overlooked and to insist, if necessary by way of a formal request, that it be discussed in the oral proceedings. If then a board does not give a party the opportunity to bring forward its arguments, this may give rise to the complaint that the right to be heard under Art. 113(1) EPC has been infringed (**R 17/11**, see also **R 6/16**, **R 5/17**, **R 6/17**).

4.3.9 Reasons for a decision allegedly surprising

a) No opportunity to comment, surprising reasons

"Grounds or evidence" under Art. 113(1) EPC is understood as the essential legal and factual reasoning on which a decision is based (see chapter III.B.2.4.2 "The meaning of 'grounds or evidence'" and e.g. **R 16/13** and **R 5/22**).

While the boards are not obliged to provide the parties in advance with all reasons for a decision in detail (see in this chapter V.B.4.3.5), Art. 113(1) EPC requires that decisions may only be based on grounds or evidence on which the parties concerned have had an opportunity to present their comments. In **R 3/13** the Enlarged Board held that this implied that a party may not be taken by surprise by the reasons of a decision referring to unknown grounds or evidence (see also **R 15/09**, **R 21/10**). However, the application of principles established under the EPC should not come as a surprise (see **R 9/14**, **R 1/20**).

In **R 3/10**, **R 15/11** and **R 16/13** the petition was allowed because of surprising reasons on which the parties had not been given an opportunity to comment (see in this chapter V.B.4.3.21). On the other hand, in **R 19/11** the Enlarged Board held that there can be no denial of the right to be heard if a board of appeal, after hearing all parties in inter partes proceedings, subsequently reaches its own conclusion which is then recorded in its written

decision (see also **R 15/12**, **R 16/13**, **R 10/17**, **R 7/18**, **R 8/19**). Similarly in **R 8/19** the Enlarged Board held that the question of whether the board's reliance on an objective technical problem that had never been mentioned to the petitioner amounted to a fundamental violation of the right to be heard could not generally be answered in the affirmative. According to the Enlarged Board, in any case the objective technical problem, which had not been explicitly spelled out as such during the proceedings and which had been eventually used in the reasoning, had to be based on technical effects (or the lack of any) and the features of the invention causally linked to such effects, upon which the parties had an opportunity to comment.

In **R 6/18** the Enlarged Board found that it could not come as a surprise that the board, when deciding whether there was an unambiguous disclosure of the claimed invention, did not only consider the passage sensu stricto referred to by the petitioner but also the sentences which directly followed that passage. Parties had to be aware that in general the question of added matter could not be decided by simply relying on isolated passages of the description but required a comprehensive analysis of the application documents.

In **R 10/20**, the Enlarged Board found that – even though the board had not faulted it for not carrying out its own tests – the petitioner had had an opportunity to comment on the comparative tests in the patent by submitting the results of such tests of its own. The board had regarded the comparison made in the patent to be plausible, and so considered that sufficient evidence had been provided. That had made it incumbent on the petitioner to rebut this evidence by means of comparative tests. The Enlarged Board therefore rejected the assertion that the right to be heard had been infringed.

Referring to **R 8/13** of 15 September 2015, the Enlarged Board stated in **R 5/19** that submissions parties made (only) in writing also had to be taken into account and that appeal proceedings were conducted mainly in writing. Parties were not required to reiterate those written submissions at the oral proceedings to ensure they were taken into account in the decision.

b) Grounds not emanating from the board

Grounds or evidence within the meaning of Art. 113(1) EPC need not emanate from the board, it is sufficient if another party raises the objection (**R 2/08**; see also **R 1/08**, **R 1/13**, **R 6/16**, **R 1/20**). If the reason given in a decision corresponds to an argument put forward by the other party, the petitioner was aware of it and thus not taken by surprise (**R 4/08**, **R 12/09** of 15 January 2010; see also **R 8/14**, **R 8/19**, **R 1/20**), unless the board clearly indicated that it regarded those arguments as not convincing (**R 11/12**, see also **R 6/16**). According to the Enlarged Board in **R 1/20**, that had to apply all the more to the arguments put forward by the EPO. In its decision, the opposition division had explicitly placed the burden of proof on the petitioner. The decision under review had simply confirmed the opposition division's allocation of the burden of proof. The petitioner could have raised all issues relating to the burden of proof at the outset of the appeal proceedings.

c) Subjective surprise

A subjective surprise has no bearing on whether a party knew the issues which might be raised and had an adequate opportunity to comment thereon (**R 13/11**, **R 17/12**; see, by way of example, also **R 12/09** of 15 January 2010, **R 22/10**, **R 1/13**, **R 3/13**, **R 4/14**, **R 5/16**, **R 8/19**, **R 1/20**). What is relevant is whether a reasoning is surprising when seen objectively in light of the circumstances of the specific case (see e.g. **R 4/23**).

In **R 8/13** of 15 September 2015 the Enlarged Board held that in order to determine which subject-matter (grounds, facts and evidence) could have been expected to be discussed, and whether new facts and grounds were introduced ex officio by a board of appeal in its decision, the Enlarged Board has to check the file history (see also **R 1/15**).

In **R 8/14** the Enlarged Board held that establishing the closest prior art is part of the process of arriving at a decision and takes place only after all arguments have been heard, in the final deliberations of the board. If the closest prior art is redefined because of an amendment to a claim, the board is not obliged to address this at oral proceedings. In **R 2/16** the Enlarged Board found that there had been no need for the board hearing the case at issue to give advance notice of the objective technical problem defined in accordance with the problem-solution approach, nor to comment on whether the invention was obvious, in order to comply with the appellant's right to be heard. In its communication, the board had set out in great detail what prior art it was taking as the starting point and how it considered it to differ from the claimed invention. It had expressly stated that the issue of the problem solved would be settled at the oral proceedings and clearly specified which documents it provisionally considered relevant for assessing obviousness.

The petitioner in **R 4/16** asserted that there had been at least some confusion on its part as to the scope of the discussion. The Enlarged Board held that whether or not a petitioner might have been confused was a highly subjective matter and was not enough by itself to establish that there had been a fundamental violation of its right to be heard. The most important thing was to examine the objective evidence of how the oral proceedings had unfolded, taking into account their place within the overall context of the appeal proceedings as a whole.

d) Reasoning formed part of the proceedings

In **R 4/11** the Enlarged Board held that in order for the decision to comply with Art. 113 EPC it was sufficient that the party concerned had an adequate opportunity to present its point of view to the board before a decision was taken, that the board considered the arguments presented by the party and that the decision was based on a line of reasoning that could be said to have been in the proceedings (see also **R 11/12**, **R 18/12**). Several further cases in which the petitioner claimed that the decision under review took it by surprise have been rejected by the Enlarged Board:

In **R 7/12** the Enlarged Board found that the argument in question was "part of the appeal proceedings". See also **R 8/09** in which the Enlarged Board found that the document in question "formed part of the debate".

In **R 9/14** the Enlarged Board stated that it was sufficient that the "relevance [of a factor] became clear during the proceedings".

According to the Enlarged Board in **R 7/21** the technical board appeared to have based its decision on a line of reasoning that had been in the proceedings and thus complied with the requirements of **R 4/11**.

In **R 22/10** the Enlarged Board found that the decision did "not contain any reasons which could not be objectively foreseen".

In **R 8/13** of 15 September 2015 the Enlarged Board held that "a representative with normal experience and training could foresee what the crucial issues were for the board".

4.3.10 Timing of a decision allegedly surprising

It is not sufficient to claim that the duration of the oral proceedings resulted in a violation of the right to be heard. The petitioner must rather establish that, for reasons of lack of time, it was deprived of the possibility to defend its case properly, resulting in a decision based on grounds that it did not have an opportunity to comment upon (**R 2/12** of 17 October 2012).

In **R 14/10** the petitioner argued that it was surprised that the requests as read out would be interpreted as its final requests. The Enlarged Board held that the Chair had also read out the opponent's request "that the decision under appeal be set aside and that the European patent […] be revoked" indicated beyond any reasonable doubt that, after the closure of the debate, the board had intended to deliberate on the patentability of independent claims and that, depending on the outcome of said deliberation, it could pronounce the revocation of the patent as a whole (see also **R 7/14**).

In **R 4/12** the Enlarged Board stated that when a board, after discussing novelty, interrupts oral proceedings for deliberation, a party should be aware that the board could take a negative decision on novelty. In **R 3/10** the Enlarged Board held, however, that be surprising for a party if only novelty was discussed and a request is then rejected due to lack of inventive step (see in this chapter V.B.4.3.21).

4.3.11 Consideration of the parties' arguments in the written decision

a) Requirement to have comments considered

The right to be heard under Art. 113(1) EPC requires that those involved be given an opportunity not only to present comments (on the facts and considerations pertinent to the decision) but also to have those comments considered, that is reviewed, with respect to their relevance for the decision in the matter (**R 23/10**; see also **R 13/12**, **R 12/14**). Decisions of boards of appeal are open only to review but not to appeal, and thus not covered by R. 111(2) EPC which requires that decisions which are open to appeal be reasoned (**R 6/11**; see, however, also **R 12/10**; see also in this chapter V.B.3.4.2).

In **R 8/11** the Enlarged Board held that Art. 113(1) EPC obliged the decision-making body to allow the parties to present the necessary arguments on all essential aspects of the case, to take note of these arguments and to acknowledge them in its decision (see also **R 19/12** of 12 April 2016). In **R 8/15** the Enlarged Board stated that a party must be able to examine whether the board has afforded it the right to be heard in order to decide whether or not to file a petition for review.

In **R 4/12** the Enlarged Board held that oral remarks made by a Chair directly before a decision is pronounced do not form part of the reasons that must reflect, within certain limits, a party's arguments.

In **R 8/15** the Enlarged Board held that Art. 113(1) EPC must be interpreted more narrowly than R. 102(g) EPC. The latter requires a board to give reasons for its decision, but infringement thereof is not as such a ground for review. Reasons may be incomplete, but as long as they permit the conclusion that the board, in the course of the appeal proceedings, substantively assessed a certain point that it found it to be relevant, there is no violation of Art. 113(1) EPC (see also **R 2/18**, **R 11/21**, **R 8/23**). Confirming the approach taken in **R 8/15**, the Enlarged Board held in **R 10/18** that a board is presumed to have taken into account a party's submissions that it did not address in the reasons for its decision, meaning that, in a first step, it had taken note of them and, in a second step, considered them, i.e. assessed whether they were relevant and, if so, whether they were correct. An exception may apply if there are indications to the contrary, e.g. if a board does not address in the reasons for its decision submissions by a party that, on an objective basis, are decisive for the outcome of the case, or dismisses such submissions without first assessing them as to their correctness.

In **R 6/20** the Enlarged Board affirmed its previous decisions **R 8/15** and **R 10/18** and referred to point 1, second paragraph, of the latter's Catchword stating that Art. 113(1) EPC would be infringed if the board did not address submissions that, in its view, were relevant for the decision in a manner adequate to show that the parties were heard on them, i.e. that the board substantively considered those submissions. The Enlarged Board clarified in this regard that the requirement that "the Board substantively considered those submissions" should be given the meaning that "the Board considered the contents of those submissions", with this consideration comprising matters pertaining to admittance of facts, evidence and requests, and/or relating to substantive law, i.e. the merits of a case. Applying this approach to the case at issue, the Enlarged Board held that in view of non-admittance to the appeal proceedings of certain submissions, there had been no point in discussing their merits. See also chapters III.B.2.5. "Consideration of the parties' arguments, requests, evidence and other submissions" and III.K.3.4.2 "Right to be heard – right to have submissions taken into consideration".

In **R 10/20** the Enlarged Board endorsed the approach taken in **R 10/18** in terms of presuming that a board has taken a party's submissions into account and of how that presumption can be rebutted. It also clarified that it had to be glaringly obvious that a submission had been "objectively decisive for the outcome of the case". This followed from the fact that the review procedure under Art. 112a EPC was not as a rule aimed at

reviewing matters of substantive law, and that exceptions to this principle could only be permitted under strict conditions.

Referring to the principles set out in **R 10/18** and **R 10/20** on the extent to which the duty to give reasons could be reviewed under Art. 112a EPC, the Enlarged Board confirmed in **R 12/22** that deficiencies in the reasons were only relevant in review proceedings under the conditions of Art. 112a(2)(c) in conjunction with Art. 113(1) EPC. It was only under those conditions that the duty to state the reasons for a decision was the "correlate" of the right to comment under Art. 113(1) EPC. More generally, its "correlate" could be considered to be the right to have the comments taken into account. Contradictory reasoning could only be objected to if the contradictions were tantamount to the board not having dealt with the submissions in the grounds for its decision and this having been objectively decisive for the outcome of the case. It had to be glaringly obvious that contradictory reasoning amounted to non-reasoning, for example in that it made no sense at all.

In **R 20/22** the petitioner pointed out that the decision under review did not use the term "continuously", which term was used in the petitioner's argument, and that the absence of this term proved that the argument had not been taken into account. According to the Enlarged Board, however, it was derivable from the decision under review that the argument had been considered. Furthermore, the mere fact that the minutes of the oral proceedings before the board did not mention the petitioner's argument did not mean that the board had not duly considered the argument when taking the decision at the oral proceedings (see also **R 12/20**). Similarly in **R 8/23** the Enlarged Board noted that a board must have a considerable degree of freedom in the language it uses to refer to and summarise the documents before it. The Enlarged Board found that the omission of the word "waiver" in the board's final reference to a document that had been before it did not support a finding that the petitioner's right to be heard had been violated (see also **R 7/23**).

b) No obligation to consider each and every argument

It is not necessary to consider each and every argument of the parties in detail in a decision (**R 19/10**, **R 17/11**, **R 6/12**, **R 15/12**, **R 19/12** of 12 April 2016, **R 2/13**, **R 5/15**).

In **R 13/12** the Enlarged Board stated that while the boards have an obligation to discuss in their decisions issues and arguments to the extent that they are relevant for the decision, they may disregard irrelevant arguments (see also **R 21/10**). In **R 16/14** the Enlarged Board stated that not explicitly addressing specific points which, in the deciding organ's view, did not have to be addressed in order to arrive at an understandable decision did not mean that such points are ignored. In **R 8/16** the Enlarged Board stated that not addressing specific arguments in the decision was not necessarily a fundamental violation of the petitioner's right to be heard.

In **R 11/21** the board had not considered some arguments of the petitioner to be relevant. The Enlarged Board stated that while it might have been desirable for the considerations regarding the lack of relevance of these aspects to have been explicitly set out in the decision under review, not doing so did not amount to a deficiency in the board's

reasoning. Therefore, the Enlarged Board could not establish that the board's reasoning constituted a violation of Art. 113(1) EPC, let alone a fundamental one.

In **R 19/12** of 12 April 2016 the Enlarged Board stated that the allegedly insufficient consideration, by a board, of arguments concerning a procedural defect before the department of first instance could only constitute a fundamental violation of the right to be heard when the alleged procedural defect impacted on the decision at first instance.

In **R 8/17** the Enlarged Board held that it would have been highly questionable and contradictory for the board to have dealt in substance with an argument of a party in the written reasons after it had not allowed a discussion on it in the oral proceedings.

In **R 14/22** the petitioner was of the view that its submissions made with regard to inventive step should have been considered by the board also in any further context in which these submissions became relevant for the board's decisions. The Enlarged Board held that it was not the board's task to make the argument for the petitioner by taking the petitioner's submission out of the relevant context in which it had been presented and by elaborating on the submissions on the basis of what would be obvious and beneficial for the petitioner to argue.

4.3.12 Parties' obligation to know the case law, references to decisions

Even under the assumption that the information given by a technical board of appeal on a decision of the Enlarged Board was unclear, parties are deemed to know the case law, at least when represented by an authorised representative. Thus, a party cannot plead lack of such knowledge as an excuse (**R 4/09**).

In **R 17/09** the Enlarged Board held that reference to decisions in a decision, even decisions not cited to the party earlier in writing or at the oral proceedings, could not constitute a fundamental violation of the right to be heard.

In **R 9/14** the Enlarged Board held that a qualified professional representative can be assumed to be familiar with the analytical sequence of the problem-solution approach. Special guidance from the board is not necessary. Likewise in **R 5/16** the Enlarged Board found that a party to appeal proceedings and its professional representative should be aware of the methodology established in the case law of the boards of appeal for examining inventive step and should be prepared to submit its relevant arguments in this respect.

In **R 4/16** the Enlarged Board held that the boards might sometimes be obliged to back up a reference they made to established case law, but the onus could not be on them always to seek out specific decisions that a party had not cited in support of a position it was arguing. Were a board to do so in opposition proceedings, that would amount to its making the case for one of the parties itself, to the detriment of the other party and contrary to its duty of impartiality.

4.3.13 Normally no violation of the right to be heard where oral proceedings held by videoconference

In **R 12/22** the Enlarged Board recalled that, as held in **G 1/21**, conducting oral proceedings as a videoconference does not, in principle, constitute a violation of the right to be heard. A merely theoretical possibility of impaired communication and discussions in oral proceedings held by videoconference before a board of appeal did not amount to a violation of Art. 113(1) EPC. See also chapters III.C.8.3. "Format of oral proceedings" and III.B.2.7. "The right to be heard in oral proceedings".

4.3.14 No right to be heard separately on all requests

A party has no absolute right to be heard separately on each and every one of its auxiliary requests. The right to be heard is satisfied if a party had the opportunity to comment on the grounds for a decision on the main request, and the remaining requests are not allowed on the same grounds (**R 6/11**; see also **R 11/08**, **R 14/10**, **R 3/12**, **R 2/14** of 22 April 2016, point 11 of the Reasons).

4.3.15 No right to a further hearing at first instance

In **R 9/10** the Enlarged Board held that there is no right to a remittal, only a discretion which may or may not be exercised in a party's favour under Art. 111(1) EPC and which is the subject of considerable case-law. If there is no right to a remittal, there is no right to a further hearing before the first instance. See also **R 12/09** of 15 January 2010, **R 2/16**, **R 7/16**.

In **R 7/16** the board of appeal found that the decision of the opposition division presented a fundamental deficiency, but decided not to remit the case to the opposition division, exercising its discretion under Art. 11 RPBA 2007. The petition was based upon an alleged insufficiency of reasoning in the written decision. The Enlarged Board commented that a detailed discussion of the substantive issues before a decision on the remittal would have rendered any remittal pointless since the first instance would have been bound by the considerations of the board of appeal or could have expected that its decision would be reversed if it was not in line with the considerations of the board of appeal. The refusal of a remittal cannot per se be a ground for allowing a petition.

4.3.16 No right to a referral under Article 112 EPC

The right to be heard is not infringed if a board decides, after having heard the parties, not to refer a particular question to the Enlarged Board (**R 8/11**; see also **R 17/14**).

4.3.17 No right to a communication; communication allegedly misleading

The communication of a board, if any, is a means at the board's disposal to streamline the appeal proceedings and above all the oral proceedings. Not issuing a communication does not constitute a violation of the right to be heard (**R 16/09**). In **R 14/12** the Enlarged Board

stated that if a board decided not to issue a communication, it could be assumed that it regarded the whole file as relevant for discussion at the oral proceedings.

In **R 3/09** the Enlarged Board noted that discrepancies between a board's provisional opinion as expressed in a communication preparing oral proceedings and its analysis in its final decision was in itself not a fundamental procedural defect.

In **R 3/16** the Enlarged Board held that a petitioner is itself responsible for not having attended the oral proceedings where the alleged ambiguity of a communication could have been dispelled. A petitioner is free not to attend the oral proceedings but this choice is at its own risk since a board is never obliged to postpone oral proceedings only because a party does not appear, provided that it bases its decision on the facts and arguments on file (R. 115 EPC and Art. 15(3) RPBA). See also chapter III.B.2.8.3 "Non-attendance at oral proceedings before the boards – Article 15(3) RPBA".

4.3.18 Late-filed submissions – boards' discretion under Article 13 RPBA 2007

In **R 16/09** the Enlarged Board saw no legal basis for an obligation to hear a party on substantive issues before deciding on the admissibility of a proposed auxiliary request. In the proceedings under review the petitioner had expressed its intention to present an auxiliary request in the closing stages of the oral proceedings without having prepared a set of amended claims. The Enlarged Board stated that requiring a board to always invite a party to supply a text of amended claims before a decision on the admissibility of a proposed auxiliary request is taken, would deprive it of the discretion explicitly provided by Art. 13 RPBA 2007.

In **R 5/11** the Enlarged Board held that the mere fact that a board takes into account the lateness of an auxiliary request when exercising its discretion under Art. 13 RPBA 2007 – although it did not explicitly raise this issue in the oral proceedings – does not infringe the right to be heard.

4.3.19 Alleged violation of Article 113(2) EPC

Art. 113(2) EPC does not give any right to an applicant in the sense that the EPO is in any way bound to consider a request for amendment put forward by the applicant. The effect of this provision is merely to forbid the EPO from considering and deciding upon any text of an application other than that "submitted to it, or agreed, by the applicant or proprietor" (**G 7/93**, OJ 1994, 775). See also **R 10/08**, **R 11/11**).

In **R 10/08** the Enlarged Board stated, citing **G 12/91** (OJ 1994, 285), that the moment a decision is pronounced is not the last moment at which parties may still make submissions: "This must be done at an earlier point in the proceedings to allow the decision-making department time to deliberate and then to issue its decision based on the parties submissions". Even if the debate could be re-opened in exceptional cases, the parties have to expect that, as long as it is not re-opened, a decision can be given after deliberation.

In **R 8/16** the petitioner alleged a fundamental breach of its right to be heard partially on the basis that the decision of the board did not explain what had happened to requests withdrawn and replaced by the petitioner before the final decision of the board. The Enlarged Board held that giving reasons on withdrawn requests might well have given rise to an objection under Art. 113(2) EPC.

4.3.20 Further examples of unsuccessful petitions

In **R 17/13** the Enlarged Board stated that if a party informed the board that it would not be attending the oral proceedings and the case was then **decided in the party's absence**, the party's right to be heard was not infringed.

In **R 16/12** the Enlarged Board found that the **principle of efficiency** required a board of appeal to focus on what is relevant for the decision. If a case can be decided on the basis of sufficiency of disclosure, discussing any other ground such as inventive step would concern an obiter dictum.

In **R 4/12** the Enlarged Board stated that the assertion that the petitioner learned during the break in the oral proceedings, from a **third party** who had presented himself as the examiner who had taken the decision, that its appeal was going to be dismissed, had no bearing on an alleged infringement of the right to be heard.

In **R 21/09** the Enlarged Board found that **national judgments and documents submitted in national proceedings** may be introduced into appeal proceedings. Accepting such documents as evidence – to be freely assessed by the board – does not, as such, violate the right to be heard.

In **R 10/08** the Enlarged Board stated that if the **Chair deviated from the procedure provided for in Art. 15(5) RPBA 2007** by not stating the requests before closing the debate, this omission had not affected the petitioner's right to be heard under Art. 113(1) EPC in the case in hand, in that it had had sufficient opportunity to present its comments on the grounds and evidence on which the decision of the board of appeal was based.

In **R 3/08** (referring to **G 4/95**, OJ 1996, 412) the Enlarged Board stated that oral **submissions made by an accompanying person** were under the discretionary control of the EPO. The Enlarged Board found that the denial of a request – made shortly before the oral proceedings – for an accompanying person to present oral submissions (requiring interpretation) was not a fundamental violation of Art. 113(1) EPC.

In **R 12/22** the Enlarged Board held that a merely abstract breach of the conditions laid down in **G 4/95** for the admission of submissions by an accompanying person could not be decisive when examining whether the right to be heard had been violated. That right related to having an opportunity to respond appropriately to the content of specific statements, not to the right to have this content presented by an accompanying person entitled to make detailed submissions under the supervision of a professional representative.

4.3.21 Successful petitions under Article 112a(2)(c) EPC

In **R 7/09** the petition was allowed, as the EPO was not able to establish delivery of the opponent's statement of grounds of appeal to the patentee and subsequent petitioner. The petitioner had therefore been **unaware of the grounds** on which the decision of the board of appeal revoking its patent was based. The fact that the statement of grounds became available to the public and, thus, also to the petitioner by way of electronic file inspection had no bearing on the right of parties to be individually and specifically informed by the EPO.

Similarly, in **R 4/17** the petitioner argued that it had no record of ever having received the notice of appeal or statement of grounds for appeal and that it had **no knowledge of the existence of the appeal** until it received the decision in the appeal case. The EPO was not able to establish that the critical communications had reached their destination, as required under R. 126(2) EPC. The Enlarged Board held that parties must be able to rely on the EPO complying with the relevant provisions of the EPC and, at least for the purposes of Art. 113(1) EPC, they and their representatives have no duty to monitor the proceedings themselves by regularly inspecting the electronic file. It cannot be expected that the respondent should prove a negative, i.e. the non-receipt of a letter, or provide a plausible explanation for non-receipt (see also in this chapter V.B.3.13. "Burden of proof").

In the inter partes proceedings under review in **R 3/10** the Chair had stated after the parties' submissions on novelty "that the Board will decide on patentability". The board then closed the debate and held that the main request was novel but lacked an inventive step. According to the Enlarged Board, the term "patentability" covered a variety of potential objections and the Chair could not have meant to address all of them. Thus, the **petitioner had no reason to assume that the board's decision would address more than what had been previously discussed**, i.e. novelty. As the petitioner had not been given the opportunity to comment on inventive step, the Enlarged Board allowed the petition (see also chapter III.B.2.6.1 "Decision could not be expected").

In the ex parte proceedings under review in **R 15/11** the board had held that the request did not comply with the requirements of Art. 84 EPC. According to the Enlarged Board, there was **no explicit or implicit indication in the file** of the appeal procedure from which it could be derived **that a possible lack of clarity was at any time discussed** with the petitioner or that at least an objection was raised in this respect. The Enlarged Board allowed the petition and held that a minimum prerequisite for an opportunity to comment on a specific ground (here: Art. 84 EPC) was that the petitioner was aware or could have been aware that compliance with that ground was at issue. A statement in the communication concerning a potential discussion of, inter alia, Art. 84 EPC did not amount to a specific objection regarding the request at issue.

In the inter partes proceedings under review in **R 16/13** the petitioner had filed a document with comparative test results. In its written decision, **the board of appeal raised an issue that had not been raised in the proceedings** and it had not been possible for the petitioner to infer the board's reasoning, on the basis of its own expertise, from the way the proceedings developed. The Enlarged Board allowed the petition, stating that the right

to be heard is violated when a board gives, ex officio, reasons in its decision without having given the party adversely affected an opportunity to comment on these reasons or to submit new requests. In **T 1378/11** the board stated that **R 16/13** could not be understood to give the parties the right to find out from the deciding body how it assesses the facts and arguments on which its decision is likely to be based.

In the inter partes proceedings under review in **R 2/14** of 22 April 2016, the Enlarged Board noted that the board's decisive line of argument had concerned the aspect of modifying the inactive SEQ ID NO: 4 by means of recloning the desaturase, starting from E. gracilis. The reasons given by the board were limited in so far as, after establishing the need for recloning, it had immediately stated its conclusion that, although the skilled person could in fact perform each of the necessary steps, combining those steps created an undue burden for them. The other two **alternative approaches relied upon by the petitioner had not been discussed at all by the board**; they had merely been referred to as suffering from the same negative conclusion. The board had mentioned neither facts nor a sequence of arguments that had led it to this conclusion. Therefore, it could not be understood and reproduced by the affected party. The Enlarged Board allowed the petition.

In **R 3/15** the Enlarged Board set aside the inter partes decision under review on account of a breach of the right to be heard. The **board had reformulated the problem** based on a **new interpretation** of claim 1, **presented for the first time** in the written reasons for its decision, that none of the parties had previously made a case for, either in the opposition or the appeal proceedings. It was apparent from the parties' submissions that not only the appellant but also the respondents had assumed a different interpretation of claim 1 in the discussion on feature (ii). Thus the appellant had been surprised by the board's new line of argument on inventive step in its written decision, on which it had not had an opportunity to comment. That was a breach of the right to be heard (Art. 113 EPC).

In **R 5/19** the Enlarged Board decided that the opponent's petition for review based on a violation of the right to be heard (reason for the decision surprising) under Art. 113(1) EPC was well-founded. The opponent had based the request for review, inter alia, on a fundamental violation of the right to be heard, which had resulted from the fact that the board of appeal had, without prior notice, surprisingly disregarded all the inventive-step attacks raised in writing in the statement of grounds of appeal. According to the decision under review, the written arguments had not been taken into account because the problem-solution approach had not been used. Thus, the decision had been based on a ground on which the opponent had not been able to comment before taking note of it.

4.4. Article 112a(2)(d) EPC – any other fundamental procedural defect

Under R. 104 EPC, a fundamental procedural defect may have occurred where the board of appeal, contrary to Art. 116 EPC, failed to arrange for the holding of oral proceedings requested by the petitioner, or decided on the appeal without deciding on a request relevant to that decision. What is not defined by the Implementing Regulations does not qualify as a procedural defect within the meaning of Art. 112a(2)(d) EPC (**R 16/09**, **R 10/20**, **R 12/22**; see in this chapter V.B.3.5.2).

4.4.1 Rule 104(a) EPC – failure to arrange requested oral proceedings

The right to oral proceedings under Art. 116(1) EPC forms a substantial part of the right to be heard under Art. 113(1) EPC. Non-compliance with a request for oral proceedings deprives the party of an important opportunity for presenting its case (**T 1050/09**) and may constitute a fundamental procedural defect which merits the same treatment as the cases covered by Art. 112a(2)(a) to (c) EPC (CA/PL 5/02 Rev. 1 Add. 1, p. 26).

In **R 2/12** of 17 October 2012 the petitioner argued that R. 104(a) EPC should be understood not only as an obligation to arrange oral proceedings but also to give the parties enough time to exercise their right to be heard. The board held that the duration of oral proceedings is, as such, not listed among the procedural defects that might justify filing a petition for review (see also **R 21/10**).

4.4.2 Rule 104(b) EPC – failure to decide on a party's request

According to R. 104(b) EPC, a fundamental procedural defect under Art. 112a(2)(d) EPC may have occurred where the board decided on the appeal without deciding on a request relevant to that decision. Like R. 104(a) EPC (see in this chapter V.B.4.4.1), R. 104(b) EPC also reflects an aspect of the right to be heard (**R 21/11**).

In **R 19/10** it was acknowledged by the Enlarged Board that the EPC does not contain an explicit definition of the term "request". However, according to the common practice in the proceedings before the EPO, requests are in general directed to executable legal consequences sought by the parties. The arguments provided by the parties in support of these legal consequences do not normally belong to the legally binding requests (see also **R 17/11**, **R 6/22**). In **R 6/22** the Enlarged Board explained that the fact that an argument is decisive for the particular case did not make it a "relevant request" under R. 104(b) EPC. According to the Enlarged Board, the relevant procedural request in the case in hand, which had been directed to the admittance of the auxiliary request, had been duly decided on by the board.

In **R 3/14** the Enlarged Board explained that only requests submitted in writing or requests which the party had been recorded in the minutes of the oral proceedings fell under R. 104(b) EPC (see also travaux préparatoires, CA/PL 5/02 Rev. 1 Add. 1, p. 27). In **R 19/10** the Enlarged Board further held that it was not a procedural duty of the boards of appeal under R. 104(b) EPC to analyse the submissions of the parties in order to identify potential requests which were not explicitly made (see also **R 17/11**). In **R 14/10** the Enlarged Board confirmed that, if a party's request is unclear, it is the duty of the deciding body to ask for clarification before deliberation (see also **R 7/14**). However, if the requests as read out by the Chair in conformity with Art. 15(5) RPBA 2007 do not correspond to a party's intention, it is that party's duty to intervene at that point. In **R 12/14** the Enlarged Board stated that if a party submits written requests which the board is entitled to regard as the party's final requests under Art. 15(5) RPBA 2007, the board can also safely assume that these requests are complete.

In **R 18/22** the petitioner based its petition inter alia on R. 104(b) EPC, claiming that the board had decided on the appeal without deciding on requests relevant to that decision. The petitioner did not identify which of its requests had not been decided upon. Since the Enlarged Board itself was unable to identify any such requests, it concluded that the petition for review was clearly unallowable in this regard. See also **R 2/23**.

A request "relevant to that decision" within the meaning of R. 104(b) EPC is a request that could possibly have led to a different decision (**R 21/11**). See also **R 3/22** in chapter V.B.4.4.3.

In the proceedings under review in **R 17/13** the petitioner requested remittal of the case coupled with reimbursement of the appeal fee on the grounds of a substantial procedural violation, alternatively that the patent be maintained as granted, and finally oral proceedings. The board held oral proceedings and refused the request for maintenance of the patent and for reimbursement of the appeal fee. The Enlarged Board held that the petitioner's request for remittal was only relevant in the event of there having been a substantial procedural violation, which was held not to be the case.

In **R 15/09** the Enlarged Board held that a decision to revoke a patent necessarily includes the rejection of all auxiliary requests.

In the appeal proceedings under review in **R 13/14** the appellant had requested that the examining division's refusal of its request to hold oral proceedings in Munich instead of in The Hague be set aside. The board had stated, in the reasons for the decision, that it was not empowered to decide on this request. The Enlarged Board held that this statement, even if not expressed in the usual and formal terminology, had to be considered as a decision on the appellant's request.

In **R 10/08** (see also **R 6/14**), the Enlarged Board referred to **G 12/91** (OJ 1994, 285) and stated that the last point in time to intervene is not the moment a decision is announced but the moment at which the Chair declares the debate closed for deliberation. The petitioner should then have requested that the debate be re-opened if it intended to file a further request. Whether the petitioner intervened during or after the announcement of the decision is not relevant.

In **R 11/08** the Enlarged Board dismissed the petitioner's allegation that the board had not ruled on a request which it had considered too general.

In **R 16/14** the Enlarged Board held that since the condition underlying conditional request (iii) in the proceedings under review (namely, that the board of appeal took the position that an examining division had the option to ignore arguments advanced by an applicant) was not met, the petitioner's allegation that conditional request (iii) had become relevant again for the written reasons of the decision under review and should have been decided upon did not hold. As a consequence, the Enlarged Board held that the claim of infringement of R. 104(b) EPC must be dismissed.

4.4.3 Successful petition under Rule 104(b) EPC

In **R 21/11**, the petitioner (patentee) claimed that the board had decided on the appeal without deciding on a request for admission of a second expert testimony filed by fax. The Enlarged Board found that R. 104(b) EPC was a specific manifestation of the right to be heard which applied regardless of whether the party's submission might have persuaded the board. The argument that the undecided request was irrelevant because its admission would not have made a difference could only be accepted if it could be shown that all aspects "lost" as a result of its non-admission had been taken into account in the decision under review. According to the Enlarged Board, the procedural defect asserted by the petitioner constituted an infringement of its right to be heard, both under Art. 112a(2)(d) EPC in conjunction with R. 104 EPC and under Art. 112a(2)(c) EPC in conjunction with Art. 113(1) EPC. While the petitioner had argued that this infringement consisted in the board's failure to take account of the second testimony in its decision, the Enlarged Board saw the infringement in the board's failure to consider the request for its admission. Had that request been granted, it could have influenced the outcome. There was therefore a causal link between the denied opportunity to comment and the board's decision (see in this chapter V.B.4.3.2). The contested decision was set aside.

In **R 3/22**, the applicant had requested correction of a withdrawal of the appeal under R. 139 EPC. The Registrar informed the appellant in a communication that, following the appellant's withdrawal of the appeal, the appeal proceedings before the board had been terminated and the board was no longer competent to deal with the case. The Enlarged Board interpreted the Registrar's communication as a decision in which the board implicitly decided on the appeal, while not deciding on the request for correction (see in this chapter V.B.3.4.2 and chapter III.K.3.1.). The request for correction, i.e. the retraction of the withdrawal of the appeal filed after its withdrawal, was a relevant request within the meaning of R. 104(b) EPC for the purposes of Art. 112a(2)(d) EPC. According to the case law of the boards of appeal on R. 139 EPC (see chapter V.A.7.3.7), the success of such a request cannot be ruled out a priori, and if the request is successful, a decision on the merits of the appeal would be possible. For this reason, the Enlarged Board held that the board's refusal to decide on the request for correction under R. 139 EPC in the case at issue was a fundamental procedural defect within the meaning of Art. 112a(2)(d) EPC, and that the petition was allowable.

4.5. Article 112a(2)(e) EPC – criminal act having an impact on a decision

Under Art. 112a(2)(e) EPC, a petition for review may be based on the ground that a criminal act may have had an impact on a decision. A competent court or authority must have finally established that the criminal act occurred; a conviction is not necessary (R. 105 EPC). Deviating from the general rule, the time limit for filing the petition is two months after the criminal act has been established, and in any event not later than five years after notification of the decision (Art. 112a(4) EPC).

In **R 2/10** the petitioner referred to alleged criminal acts which had, however, not been established by a criminal court or authority. The Enlarged Board rejected the petition as clearly inadmissible, due to failure to observe the time limit for filing the petition.

In **R 3/21** the Enlarged Board stated that it was not empowered to act in the capacity of a criminal court or other prosecuting authority and establish criminal acts within the meaning of Art. 112a(2)(e) EPC, be it in relation to members of an examining division or board, the President of the Boards of Appeal or any other person. It also pointed out that, in its composition under R. 109(2)(a) EPC as an independent judicial body for patent grant proceedings, it had no formal supervisory duty to investigate alleged criminal offences or to transmit any criminal complaints to criminal authorities, whether on request or of its own motion.

5. Removal from office of a board member

5.1. General

According to Art. 23(1) EPC, first sentence, members of the Enlarged Board and the boards of appeal may not be removed from office during their term of appointment, except if there are serious grounds for such removal and if the Administrative Council, on a proposal from the Enlarged Board, takes a decision to this effect. According to Art. 12a RPEBA, the Administrative Council or the Vice-President of the EPO in charge of the Boards of Appeal (since the structural reform in 2016, the Boards of Appeal are now organised as a separate unit directed by the President of the Boards of Appeal) may make a request to the Enlarged Board to make a proposal, to the Administrative Council, for the removal from office of a board member.

5.2. Composition

According to Art. 2(5) RPEBA (see also Art. 10 BDS/EBA), the Enlarged Board in proceedings under Art. 23(1) EPC consists of five legally and two technically qualified members. The Chair of the Enlarged Board who is, under current practice, also President of the Boards of Appeal, must be replaced by their alternate, and two of the legally qualified members must be external members of the Enlarged Board (see Art. 11(5) EPC).

In **G 2301/15** the Enlarged Board held that the arrangements laid down in Art. 2(5) RPEBA and Art. 10 BDS/EBA for the composition of the Enlarged Board in proceedings under Art. 23(1) EPC were compatible with the EPC and general principles of law. It could not be inferred from Art. 23(1) EPC that a proposal to remove a member from office must be decided by the full Enlarged Board (consisting of all internal and external members under Art. 1 BDS/EBA).

5.3. Removal and judicial independence

In **G 2301/15** the Enlarged Board stated that removing an irksome judge from office could be used to indirectly influence decisions. It was crucial to judicial independence that judges could not be removed without special institutional safeguards. The requirement that a board member may only exceptionally be removed from office on a proposal from the Enlarged Board intended to make sure that unsubstantiated or groundless allegations could not be used as pretext for getting rid of an irksome judge.

In **G 2301/16** the Enlarged Board concluded that the EPO President's procedurally irregular intervention in the form of a position statement was incompatible with the Enlarged Board's judicial independence.

5.4. Independence from disciplinary proceedings

According to Art. 12a(8) RPEBA, proceedings under Art. 23(1) EPC are to be conducted independently of any disciplinary or national proceedings. In **G 2301/15**, the Enlarged Board stated that Art. 23(1) EPC requires that the Administrative Council may apply to a board member the most severe disciplinary sanction available (dismissal) only if it has first received a proposal for their removal from office from the Enlarged Board. The administrative disciplinary proceedings before the appointing authority are separate from the judicial proceedings before the Enlarged Board, which must satisfy itself that the allegations are true, and so serious as to require the removal from office.

5.5. Adversarial judicial proceedings

In **G 2301/15** the Enlarged Board held that proceedings under Art. 23(1) EPC were to be conducted in proper judicial form. A request by the Administrative Council initiated adversarial proceedings to which the board member concerned is a party as respondent (Art. 12a(4) RPEBA). The Administrative Council's request must set out all the facts, arguments and evidence relied on; all documents referred to must be attached (Art. 12a(5) RPEBA). According to the Enlarged Board, this provision requires that the Administrative Council's request specify individual incidents and the evidence for them, and give reasons why they constitute a serious ground within the meaning of Art. 23(1) EPC. It was not be up to the Enlarged Board to define of its own motion which facts may be derived from documents and exhibits. Simply referring to facts and evidence and leaving the Enlarged Board to reconstruct the events for itself neither satisfied the requirements of Art. 12a(5) RPEBA nor the respondent's right to know the charges against him. In the case in hand, as the Administrative Council's request was not substantiated as prescribed by Art. 12a(5) RPEBA, the Enlarged Board rejected the request as inadmissible.

5.6. Publication of the decision

According to Art. 18(3) RPEBA, the final decision of the Enlarged Board in proceedings under Art. 23(1), first sentence, EPC, may be published, due regard being taken of the confidentiality of the proceedings. Case **G 2302/15** was terminated following the Administrative Council's withdrawal of its request that the Enlarged Board make a proposal for the removal from office of a board member. The Enlarged Board's decision was final in that it terminated the proceedings, albeit for non-substantive reasons. The Enlarged Board decided that the decision be published.

5.7. Reimbursement of costs

According to Art. 12a(10) RPEBA the Enlarged Board may on request propose the reimbursement of some or all costs incurred in the proceedings by the respondent if the request to make a proposal for their removal from office has been rejected (see

G 2301/15). In **G 2302/15** the proceedings were terminated following the Administrative Council's withdrawal of its request during oral proceedings. The Enlarged Board proposed the reimbursement of all costs incurred by the respondent, as the costs for preparing his defence had turned out to be unnecessary as a result of the withdrawal.

C. Proceedings before the Disciplinary Board of Appeal

1. Introduction 1866
2. European qualifying examination 1866
2.1. Formalities and conditions for registration and enrolment 1867
2.1.1 Required qualification or equivalent knowledge 1867

4.1. General professional obligations 1890
4.2. Professional secrecy 1890
5. Non-appealability of decisions of the Disciplinary Board of Appeal 1890

1. Introduction

Representation of natural or legal persons in proceedings established by the EPC may only be undertaken by professional representatives whose names appear on a list maintained for this purpose by the EPO (Art. 134(1) EPC). Any natural person who is a national of a contracting state, has their place of business or employment in a contracting state and has passed the EQE may be entered on the list (Art. 134(2) EPC; see also Art. 134(3) EPC). Legal practitioners from the contracting states are also entitled to act as representatives, subject to certain conditions (Art. 134(8) EPC), and persons resident or having their principal place of business in a contracting state may authorise an employee to represent them (Art. 133(3) EPC).

Article 134a EPC, introduced under the EPC 2000, incorporates the substance of Art. 134(8) EPC 1973 and anchors in the EPC the existence of the epi, which was set up under the Regulation on the Establishment of an Institute of Professional Representatives before the EPO (OJ 1978, 85; as amended: OJ 1997, 130 and 350, OJ 2002, 429, OJ 2004, 361 and OJ 2007, 12).

All persons on the list of professional representatives must be members of the epi (Art. 134a(2) EPC; Art. 5(1) of the aforementioned Regulation). They are subject to the RDR (Supplementary publication 1, OJ 2024, 145, consolidated version of the text as published in OJ 1978, 91; as amended: OJ 2008, 14; OJ 2018, A57; see also Art. 134a(1)(c) EPC) and to the epi Code of Conduct (OJ 2022, A61).

The first-instance bodies which rule on infringements of the rules of professional conduct are the epi Disciplinary Committee and the EPO Disciplinary Board (Art. 5 RDR; see also Additional Rules of Procedure of the Disciplinary Committee and those of the Disciplinary Board, Supplementary publication 1, OJ 2024, 156 and 166, consolidated version of the texts published in OJ 1980, 177 and 183 respectively, with amendments published in OJ 2007, 552). The DBA hears appeals against decisions of both these bodies (Art. 5, 8 RDR; see also RPDBA, Supplementary publication 1, OJ 2024, 70 (consolidated version of the text published in OJ 1980, 188 with amendments published in OJ 2007, 548). DBA decisions on disciplinary matters are reported in this chapter V.C.3. to V.C.5.

For further information on representation before the EPO, see chapter III.V.

The EQE, referred to in Art. 134(2)(c) EPC, is governed in particular by the REE (version in force from 1 January 2025, OJ 2024, A4) and the IPREE (OJ 2024, A25), subject to Art. 27(2) REE and R. 29(2) IPREE (see in this chapter V.C.2.). The DBA hears appeals against decisions of the EQE Examination Board and the Secretariat (Art. 24 REE). DBA decisions in EQE cases are reported in this chapter V.C.2. Appeals decided under earlier provisions of the REE and IPREE are referred to if considered still relevant.

2. European qualifying examination

The EQE is designed to establish whether a candidate is qualified to practise as a professional representative before the EPO (Art. 1(1) REE). In principle, only persons who

have passed the EQE may be entered on the list of professional representatives (Art. 134(2)(c) EPC; see also Art. 134(3) EPC). The EQE is held online, with the same papers being made available to candidates simultaneously (Art. 20 REE).

On 14 December 2023 the Administrative Council of the EPO unanimously approved amendments to the REE then in force for the purposes of launching a new EQE in 2025 (OJ 2024, A4). Unless otherwise provided in Art. 27(2) REE (see below), the 2025 version replaced the REE in force from 1 January 2009, OJ 2009, 9 ("REE 2009"). The IPREE (OJ 2024, A25) entered into force on 1 January 2025 and, unless otherwise provided in R 29(2) IPREE, replaced the IPREE as adopted on 13 December 2018 ("IPREE 2018", Supplementary publication 2, OJ 2019, 18).

Changes included the gradual introduction of five new modules (F, M1, M2, M3 and M4) between 2025 and 2027 (Art. 1(5) and 27(2) REE), changes to the conditions for registration and enrolment, in particular to the periods of professional activity required before taking the examination (Art. 11 REE) and removal of the compensable fail. The REE includes transitional provisions (Art. 25 REE). Unless otherwise stated, references to the REE and IPREE in this chapter are to the 2025 version.

This chapter V.C.2. includes summaries of or references to decisions which were issued in writing in the period up to the end of 2024. It follows that versions of the REE and IPREE earlier than 1 January 2025 apply to these decisions. Moreover, Art. 27(2) REE provides that the REE 2009 and IPREE 2018 will continue to govern specific EQE papers until the end of 2026. From 2027, all EQE papers will be sat in accordance with the REE and IPREE.

2.1. Formalities and conditions for registration and enrolment

The Examination Secretariat decides on the registration and enrolment of candidates in accordance with the REE and the IPREE (Art. 9(2)(c) REE).

In **D 4/08** the board confirmed the Examination Secretariat's strict application of the published closing date for enrolment for the EQE (Art. 20 REE 1994; see Art. 18 REE), stressing its importance for the timely and orderly preparation of the examination. According to **D 7/08**, it followed from the applicable provisions that it was the candidate's responsibility to file the complete application, including the enrolment form and all necessary supporting evidence, by the closing date (see also **D 12/08**, **D 15/09**, **D 3/18**, **D 4/18**, and R. 1(2) IPREE).

2.1.1 Required qualification or equivalent knowledge

To qualify for registration and enrolment, candidates must normally possess a university-level scientific or technical qualification, i.e. a bachelor's degree or equivalent academic degree awarded at the end of a full-time course of a minimum of three years, with at least 80% of the course hours taken to obtain this degree having been devoted to scientific and/or technical subjects (Art. 11(1)(a) REE, R. 11 IPREE, also R. 12 IPREE). The qualifying subjects include biology, biochemistry, chemistry, construction technology,

electricity, electronics, information technology, mathematics, mechanics, medicine, pharmacology and physics (R. 13 IPREE). The EQE provisions do not distinguish between applied and pure mathematics; nor does it matter if the subject is taught as part of a specialised or an interdisciplinary course (**D 5/18**).

There is no legal requirement as to the minimum number of course hours required; to establish if a candidate's degree qualifies, the legislator chose the number of years "a "minimum" benchmark easier to establish than the number of hours) and the percentage of courses devoted to technical and/or scientific subjects (**D 13/14**). The board in **D 9/14** emphasised that the 80% is always to be calculated from the required course hours for the particular degree under scrutiny (which in the case in hand required four years of study). Furthermore, as many educational establishments issue certificates indicating the awarded credits, but not necessarily the course hours, it considered that a calculation based on credits may be suitable for the purposes of R. 11(2) IPREE 2010 but that, in the case of any discrepancy between the calculations based on course hours and those based on credits, the former is authoritative. In **D 3/18**, **D 5/18** and **D 3/20** the calculation was based on course credits awarded under the European Credit Transfer and Accumulation System ("ECTS"). See also **D 4/18** and **D 2/19** (both non-ECTS cases).

Otherwise, under Art. 11(1)(a) REE and R. 14 IPREE, equivalent knowledge may be demonstrated on the basis of at least ten years' experience in the activities defined in Art. 11(2)(b)(i) or (ii) REE (as to which see the next section). The board applied R. 14 IPREE 2010 in **D 9/13** and **D 9/14**, concluding in each case that neither alternative of Art. 11(1)(a) REE was fulfilled. In cases **D 7/14** and **D 8/14**, however, the appellants had started their practical training before the REE 2009 entered into force. The DBA held that, on the basis of good faith and equal treatment, the REE 1994 with its IPREE and relevant Instructions should be applied in accordance with the Examination Secretariat's practice before 1 January 2009 (see e.g. **D 1/12**). Taking into account in particular **D 5/08** regarding the 1994 Instructions, the board was satisfied in both cases that the appellant was suitably qualified under the 1994 provisions. Other decisions on the qualifications required under the REE 1994 are **D 15/04**, **D 17/04**, **D 18/04**, **D 8/04** and **D 10/08**.

See also **D 3/20**, according to which the Secretariat was correct in admitting the appellant to the EQE only under Art. 11(2)(a) REE 2009 and R. 11(3),14 IPREE 2018, and in finding that the requirements of Art. 11(1)(a) REE 2009 and R. 11(1), (2) IPREE 2018 were not fulfilled.

2.1.2 Professional experience

A further requirement for enrolment is that at the date of the examination a candidate must have completed a period of professional activity as set out in Art. 11(2) to (5) REE and R. 15 IPREE. The period may be reduced by six months for candidates who have successfully completed specialised studies of at least one academic year in the field of industrial property (R. 16(1) IPREE).

One way of acquiring this work experience is to complete a training period under the supervision of and as an assistant to one or more professional representatives before the

EPO, in accordance with Art. 11(2)(b)(i) REE. According to **D 4/86** (OJ 1988, 26), to comply with the equivalent provision (Art. 7(1)(b)(i) REE 1977, as amended), the trainee had to have completed their training period under conditions likely to ensure that they had actually assisted a professional representative by constantly taking part in activities pertaining to patent application procedures of which the representative was in fact in charge. **D 14/93** (OJ 1997, 561) ruled that the training period could not be served with a legal practitioner whose name did not appear on the list of professional representatives, even if the said practitioner was a patent attorney under national law (see Art. 134(7) EPC 1973; cf. Art. 134(8) EPC). The activities referred to in Art. 7(1)(b) REE 1991 presupposed the scientific or technical knowledge required for activities pertaining to European patent applications and patents; persons training EQE candidates needed to possess such knowledge, and legal practitioners did not normally do so. **D 25/96** (OJ 1998, 45) ruled that the period of professional activity required for the EQE enrolment could not be served with a self-employed German patent agent who was not on the list of professional representatives.

A candidate may alternatively complete the prescribed period of professional activity as an employee, in accordance with Art. 11(2)(b)(ii) REE (also in the 2009 version). The relevant conditions are not met where the candidate's employer is not represented before the EPO by the candidate in accordance with Art. 133(3) EPC but by external patent attorneys, or where the candidate's main activity has been in the field of national or international applications and patents (**D 6/10**, with reference to **D 12/06** and **D 13/06**; see also **D 11/11**, with reference to **D 32/07**; furthermore **D 1/12** to **D 4/12**). Given the tenor of Art. 11(2)(b)(ii) REE, (mere) professional activity and activities pertaining to patent law cannot be treated as two distinct requirements. Professional activity can be recognised only if and for such time as candidates were able to represent their employer before the EPO and in fact did so. They must have been authorised to act as representative by their employer, but formal authorisation is not enough by itself, as it does not show whether, as required, they have actually worked in that capacity (**D 1/13**).

In **D 16/04** the board confirmed that the Examination Secretariat's practice of allowing only periods of professional activity completed after the required degree was obtained was not in conflict with Art. 10 REE 1994. Article 10(1) REE 1994 mentioned the requirement of possessing a university-level scientific or technical or equivalent qualification first, followed by a reference to the conditions set out in paragraph 2, i.e. the three-year full-time training period to be completed by the date of the examination. The required length of the training period was a consequence of the candidate's technical or scientific degree acquired before starting the training period rather than vice versa. See also **D 6/08**. This is now a requirement under Art. 11(3) REE, which, in conjunction with R. 15(2) IPREE, also specifies how periods of professional activity may be aggregated to make up a full-time training period.

The period under Art. 11(2)(a) REE may be reduced by up to one year if a candidate has been a patent examiner at the EPO or the national patent office of a contracting state (R. 16(2) IPREE).

The required professional experience can also be acquired by performing full-time work as an examiner at the EPO (Art. 11(2)(b)(iii) REE). In **D 19/04** the board pointed out that corresponding provision Art. 10(2)(b) REE 1994 related to EPO examiners, who in view of their professional experience could be assumed to have a comprehensive knowledge of the European patent grant procedure. The professional experience of long-serving examiners in national offices could not be equated with that of EPO examiners.

2.2. Examination conditions – principle of equal treatment

It is established case law of the DBA that equal treatment of candidates is an issue which may be the subject of appeals under Art. 24(1) REE (see e.g. **D 8/21,** reported in this chapter V.C.2.2.3). The principle of equal treatment requires that candidates take part in the examination under equal conditions. Consequently, unequal conditions which may cause unjustified disadvantages for candidates should be compensated for, to the extent feasible (see e.g. **D 29/21**, also reported in this chapter V.C.2.2.3). However, only candidates who have in fact been treated unequally to their disadvantage in comparison to other candidates can invoke unequal treatment (**D 37/22**).

2.2.1 Application of the European qualifying examination language rules

The EQE papers are drawn up in the three official languages of the EPO and all candidates receive them in all three languages (Art. 12(1) REE). Candidates may, if they so request when enrolling for the examination, submit their answers in an official language of a contracting state which is not an official language of the EPO (R. 5(1) IPREE).

In **D 1/94** (OJ 1996, 468) the board ruled that a translation error could constitute a violation of Art. 11(3) REE 1991 (see Art. 12(3) REE, R. 5 IPREE), since this provision assumed a totally correct translation into an EPO language from the official language of a contracting state selected by the candidate for his answers. In its decision, the Examination Board therefore had to give reasons why the translation errors had not been found to be serious.

In **D 2/95** an argument that candidates whose mother tongue was not an EPO official language were at a disadvantage and should therefore be given more time did not convince the DBA that this amounted to an infringement of the relevant provisions. Similarly, in **D 9/96** the appellant submitted that the linguistic regime of the REE contravened the principle of equal treatment of candidates. The board recalled that decisions of the Examination Board may in principle only be reviewed for the purpose of establishing that they do not infringe the REE, the provisions relating to its application or higher-ranking law (Art. 27(1) REE 1994; **D 1/92**, OJ 1993, 357; **D 6/92**, OJ 1993, 361; see also Art. 24(1) REE). It conceded that not all candidates were treated equally since not all received examination papers in their mother tongue. However, this differentiation was a direct consequence of the linguistic regime of the EPC 1973. The official languages of the EPO were English, French and German (Art. 14(1) EPC 1973). Each professional representative was inevitably confronted with documents and notifications in one of those languages and thus had to be expected, in the public interest and the interest of their clients, to understand at least one of them and be able to work on documents and notifications drafted in it. See also **D 11/00**. In **D 30/05** the board further drew attention to

the option for candidates to submit their answers in an official language of a contracting state which is not an EPO official language (Art. 15(3) REE 1994; see. Art. 12(3) REE, R. 5(1) IPREE).

2.2.2 Online examination

In **D 37/21**, the appellant alleged that the Examination Board had failed to take into account systematic failures of the Wiseflow software used in the examination and the resulting time loss that candidates encountered. The DBA found it plausible that the time loss caused by the closing of the lockdown browser window was not insignificant and, even if not excessively long, would have caused additional stress preventing the appellant from concentrating on the paper. The DBA provided examples of how the loss of time could be compensated, following a conservative and a more generous approach, and remitted the case to the Examination Board for re-marking (see also **D 39/22** in this chapter V.C.2.3).

2.2.3 Mark-up error and missing question

Several appeals (e.g. **D 8/21**, **D 18/21**, **D 28/21**, **D 37/21**, **D 42/21** and **D 54/21**) concerned a mark-up error in the English and German version of Paper B of the 2021 EQE. One of the features was erroneously not in bold to reflect a change made by the client. This error did not appear in the French version. According to the DBA, candidates writing the French and English or German version had to write Paper B under different conditions. These different conditions amounted to unequal treatment deserving compensation.

The background to several appeals (**D 10/97**, **D 15/97**, **D 17/97** and **D 5/97**) was that some (but not all) copies of Paper D did not contain Question 11 and that the Examination Board automatically gave all candidates full marks for that question. The DBA reaffirmed **D 14/95**, which had stated that equal treatment did not have to be absolute, provided that the nature and extent of any unequal treatment was justifiable in the circumstances. It would be wrong in law, however, if the examination conditions put certain candidates at a disadvantage for no good reason. The Examination Board had compensated the affected candidates in a way which appeared entirely appropriate. This necessarily involved a certain unequal treatment, which however was limited in its extent and acceptable in this special situation. In particular, it ensured that no candidate was worse off than if their answer had been marked objectively. The way in which the Examination Board had corrected the error did not constitute unlawfully unequal treatment.

2.2.4 Other circumstances

In **D 2/95** (see above), the fact that certain candidates had been allowed to use normal as opposed to copy paper for the examination was held not to be in breach of the provisions governing its conduct. Some candidates might find copy paper more awkward, but others might well prefer it. In fact, only two candidates had been allowed to use normal paper, for medical reasons.

In **D 14/95** the appellant was a specialist in biochemistry, whereas Paper C was taken from mechanical engineering. The board found against any breach of the principle of equal

treatment; the appellant's position was no different from that of any other candidate whose specialist field did not happen to be used in the paper as set. True, the examination procedure did in effect involve a certain "inequality". The Examination Board set a limited number of papers, and therefore had to make a choice amongst the different technical fields. So there would always be candidates who happened to be more specialised than others in the particular field selected. This however was inherent in any general examination, and thus did not constitute arbitrary unequal treatment. Furthermore, Paper C was less concerned with testing specialist technical knowledge than the ability to draft a notice of opposition to a European patent.

The appeal in **D 11/19** concerned the pilot project during the 2019 EQE session, in which 15 candidates selected at random were additionally permitted to use a laptop with a text editor during the examination. The appellant, who sat the examination under the regular conditions, submitted in his appeal that those candidates were given an unfair advantage. The board referred to the DBA's settled practice of reviewing whether the principle of equal treatment of EQE candidates has been adhered to as higher-ranking law (see **D 2/95**; **D 14/95**; **D 10/97**; **D 5/99**; **D 19/04**). It concluded that the arrangement of the pilot project was in breach of this principle because it meant that the respective groups of candidates were treated unequally without any objectively justifiable reason (see also in this chapter V.C.2.3). See also **D 15/19**.

2.3. Complaints about the conduct of the examination – duties of the Examination Board

Complaints concerning the conduct of the examination need to be submitted by the candidates at the latest on the day after the examination paper in question (R. 19(3) IPREE; under R 19(3) IPREE 2018 they had to be submitted 30 minutes after the closing signal on the final day of the examination).

In **D 17/96**, **D 2/97**, **D 2/99** and **D 3/99**, the DBA pointed out that, under the then applicable Instructions to candidates (OJ 1995, 145) and Instructions to invigilators (OJ 1995, 153; see now R. 19(3) IPREE), a timely and formally correct complaint about the conduct of the examination was to be submitted to the Examination Board, which was then to issue a provisional opinion, together with an invitation to comment. Failure to do so put it in breach of generally recognised principles of procedural law (Art. 125 EPC), notably the right to be heard (Art. 113(1) EPC).

According to **D 3/04**, the appealed decision did not show that the appellant's complaint about unsuitable conditions during the examination had been taken into consideration by the Examination Board. In the view of the DBA, where the Examination Board found the circumstances referred to in a complaint not to justify the allocation of additional marks, brief reasons should be given explaining why this was so. See now R. 19(4) IPREE and e.g. **D 12/21** and **D 26/21**. According to the board in **D 39/22**, the failure of the Examination Board to specify the exact loss of time recognised in its compensation calculation constituted a breach of the requirement to state reasons under R. 19(4) IPREE (see also in this chapter V.C.2.2.2). The DBA reached a similar conclusion in **D 26/22** and noted that

the Examination Board also failed to explain why it used the first calculation method proposed in **D 37/21** (see in this chapter V.C.2.2.2).

In **D 3/10** the appellant had raised a complaint about disturbances during the examination only with the appeal. The DBA held that it would be inadmissible to examine the alleged disturbances in the context of an appeal without any prior decision of the Examination Board in this regard. By not submitting a complaint in accordance with R. 19(3) IPREE 2009, the appellant had deprived the Examination Board of the opportunity to determine the exact circumstances involved and to react accordingly, if necessary with a decision pursuant to R. 19(4) IPREE, or to deal with the allegations in its decision on the result of the examination under Art. 6(5) REE (see **D 3/04** above).

The view taken in **D 3/10** was endorsed in **D 11/19**. However, the board went on to examine the relevance of R. 19(3) IPREE 2018 to the case in hand. This concerned the special conditions of a pilot project in which 15 EQE candidates who had been selected at random (and did not include the appellant) were additionally permitted to use a laptop with a text editor during the examination. The board found that, as the pilot was conducted in a separate location, it had no adverse effect on the conduct of the examination according to the regular procedure, and the remaining candidates could not observe that it was taking place. Therefore, R. 19(3) IPREE 2018 did not apply in the appellant's case. Moreover, since the appellant only became aware of the pilot at a later point, he could not have submitted, or reasonably have been expected to submit, an objection until filing the appeal. Indeed, in the context of the rectification procedure (Art. 24(3) REE), the Examination Board could and should have reconsidered its decision on the examination result in the light of the appellant's submissions. See also in this chapter V.C.2.2.4.

The board in **D 45/21** held that the appellant bore the burden of proof that a filing complying with the time limit in R. 19(3) IPREE was received by the EPO (see **T 1200/01**, **T 2454/11** and **T 1587/17** in chapter III.G.4.3.7 and **D 17/19**).

2.4. Setting, marking and grading

The examination committees prepare the examination papers and marking sheets (Art. 8(1)(a), (b) REE). Each answer paper or part of an answer paper is marked by the relevant examination committee and/or by autoscoring on a scale determined by the Examination Board (R. 6(1) IPREE). To pass the examination, a candidate must have passed each paper or have obtained the minimum grades as specified in the IPREE (Art. 14(1) REE, R. 6(5) IPREE). There is no "compensable fail" grade under the REE (see R. 6(3) IPREE, cf. R. 6(3)(c) IPREE 2018). A candidate who fails the examination may resit the paper or papers not passed (Art. 16(1) REE).

On the Examination Board's implied obligation with regard to preparing the examination papers and corresponding marking scheme correctly, see **D 6/13**, summarised in this chapter V.C.2.6.3. The examination committees are also expected to base their evaluations on a legally correct premise. They must apply both the Guidelines and the basic case law when assessing whether alternative solutions not covered by the examiner's report are equally suitable to render a claim novel and inventive (**D 14/23**).

One of the changes included in the REE was the gradual introduction of five new modules (F, M1, M2, M3 and M4) starting in 2025 with the introduction of paper F. From 2027, all examination papers will be sat in accordance with the new REE (Art. 27 REE).

2.4.1 Setting and marking the pre-examination

From the entry into force of the REE on 1 January 2025, the pre-examination according to the REE 2009 and the IPREE 2018 is no longer held (Art. 25(6) REE).

The pre-examination was a single paper (R. 10(2) IPREE 2018), set in multiple-choice form. In several decisions, the DBA held statement 5.4 in the German version of the 2016 pre-examination paper to have been unclear and confusing. In some cases (e.g. **D 1/16**, **D 4/16** and **D 15/16**), the additional points awarded resulted in the candidate achieving the "PASS" grade. Challenges to other statements in the same paper were, however, rejected (e.g. **D 5/16**, **D 6/16**, **D 10/16**). In **D 5/16** the board concluded with some general remarks, as follows. It was essential to ensure that the questions to be answered and any statements to be evaluated in a multiple-choice examination such as the EQE pre-examination were formulated clearly and unambiguously. It was crucial to formulate statements in such a way that clearly only one "True" or "False" answer was possible and "correct" in the circumstances (see also **D 6/16**, later decision **D 3/19**, citing **D 13/02** and **D 2/24**). However, concerning the ambiguity of words and the relevance of the factual context of questions, if a question was logical and made sense, so that, using common sense, it was clear what answer was expected, candidates could not rely on exceptions to the rule or explore alternative interpretations with a view to showing that a different answer might also be conceivable in specific instances. See also **D 3/14** and e.g. **D 2/21**, reported in this chapter V.C.2.6.4 "Review of the marking of the pre-examination".

2.4.2 Case law on pre-examination questions and marking not applicable to the European qualifying examination

The DBA has made it clear that the case law on the questions and marking of the pre-examination is not applicable to the EQE because the former leaves no room for discretionary marking. Thus, according to **D 20/16**, the decisive difference between the pre-examination (R. 10 IPREE 2010) and the EQE, in particular Paper A (R. 23 IPREE 2010), is as follows. In the former, candidates are expected to respond to clearly defined questions or statements in a multiple-choice mode, to which they can only answer "true" or "false" by ticking a box; they have no possibility to add any reasons or explanatory notes. In the latter, candidates can offer solutions which they find meet the requirements of R. 23 IPREE 2010, and even, if need be, give reasons for their proposals in supplementary notes (R. 23(6) IPREE 2010). For Paper A, the members of the Examination Board have a broad discretion when awarding marks. See also e.g. **D 16/17**.

2.4.3 Marking the European qualifying examination answer papers consistently

On the principle of consistency of marking (Art. 6(2)(c) REE; cf. Art. 16 REE 1994, English version, "uniformity of marking"), the board in **D 4/99** stated that the appellant's starting point, namely that in case of non-identical marks by the two examiners only one value

could be the correct one, was irreconcilable with the fact that marking was an individual assessment of the candidate's work. Rather, more or less strict standards were possible and different aspects might be considered essential or less important even within the general instructions for marking contained in the IPREE 1994. Examiners must have some latitude of evaluation when awarding marks and individual examiners might arrive at different marks, both results being justifiable. Therefore, differences in marking did not violate the REE 1994 and its IPREE (**D 5/94**, **D 6/98**). In order to safeguard the principle of equal treatment, harmonisation of marking was provided for in the marking sheets. If the marking was different, the two examiners might revise their marks on the basis of a discussion between them. The examination committee recommended the grade, and the Examination Board adopted it or otherwise, in full knowledge of the different marks awarded by the two examiners. This system ensured uniformity of marking (Art. 16 REE 1994; **D 12/82**, OJ 1983, 233).

The following decisions confirmed this approach. According to **D 6/99**, small differences in marking were an unavoidable consequence of Art. 8(b) REE 1994. The board was not aware of any provision supporting the submission that in such cases only the better mark awarded in each category of the paper should be counted. In **D 12/00** the board rejected the appellant's claim that any discrepancy between the markings of each examiner showed gross disregard for the principle of uniformity within the meaning of Art. 16 REE 1994. Confirming the principles of its established case law (see **D 1/92**, OJ 1993, 357, reported in this chapter V.C.2.6.3; see also **D 4/99** above), the board held that differences of opinion over the number of marks to be awarded for a given answer were a reflection of value judgments which were not, in principle, subject to judicial review. And in **D 3/00** (OJ 2003, 365), which concerned Paper D, the board held that a candidate was not per se entitled to claim the highest mark awarded by one of the examiners for each answer to a sub-question or sub-element.

In **D 10/02** (OJ 2003, 275) the DBA noted that neither the REE 1994 nor its IPREE regulated the procedure to follow in the exceptional cases where a committee was unable to agree on the marking; nor did they provide for calling in an additional examiner. Hence the appointment of a third examiner without any basis in the REE 1994 or its IPREE had to be deemed a substantial procedural violation.

2.4.4 Marking the European qualifying examination answer papers fairly

The DBA has repeatedly invoked the principle of fair marking. In **D 7/05** (OJ 2007, 378) it stated that details of the marking of Paper D were deemed to include sufficient sub-division of the maximum achievable mark and the candidate's overall mark into sub-marks, and an indication of the substantive and legal issues for which those sub-marks were awarded. In producing schedules of marks there had to be a trade-off between their purpose of ensuring uniform marking (Art. 16 REE 1994) and the need also to allow for fair marking of answers which deviated from the scheme but were at least reasonable and competently substantiated. The schedules therefore had to leave some room for manoeuvre and – merely – be sufficiently detailed to constitute details of the marking within the meaning of R. 6(1) IPREE 1994 (cf. R. 4(1) IPREE) allowing candidates to verify, on the basis of the documents published or made accessible, whether the marking of their answers infringed

marking principles the respect of which was subject to review by the DBA. See also in this chapter V.C.2.5. and e.g. **D 11/07**, **D 23/08**, **D 8/12** and **D 13/17**.

D 6/07 and **D 7/07** were among a number of appeal decisions concerning Paper C. A large number of candidates had taken as the starting point for their attack on the claims a document which the examination committee did not consider to represent the closest prior art and had been awarded no points in this regard. The Examination Board took the view that, in keeping with long-standing practice, in this situation some credit should be given for properly drafted problem-solution approaches. Given the lateness of the proceedings and the impossibility of re-marking all the papers, it decided, as an exceptional measure, that the fairest option would be to award ten additional points (being the maximum number possible) to all candidates having sat the paper. The DBA held first that the awarding of no points by the examination committee infringed the requirements of R. 4(2) and (3) IPREE 1994: the "fit to practise" criterion required the examiners in marking the individual parts of a candidate's answers not to disregard their merit in the context of the whole answer paper (**D 3/00**, OJ 2003, 365) and the need to allow for the fair marking of answers which, although deviating from the marking scheme, were nonetheless reasonable and competently substantiated (**D 7/05**, OJ 2007, 378, see also **D 3/23** and **D 14/23**). The board further ruled that, under Art. 7(3) REE 1994, it fell to the Examination Board to award the grades "pass", "fail", or "compensable fail" and formally to decide whether the whole examination had been passed or not. Its powers did not extend to the preceding marking of candidates' individual papers on a scale of zero to 100, and therefore the alteration of the marks awarded by the examination committee (in accordance with Art. 8(b) REE 1994 and R. 4(1) IPREE 1994) by the blanket addition of ten marks per paper had been ultra vires. The abstract awarding of marks without regard to the "fit to practise" criterion of R. 4 IPREE 1994 in the individual candidates' examination papers infringed the principle of objectivity as well as Art. 8(b) REE 1994 and R. 4 IPREE 1994. In conclusion, the DBA ordered a new marking of Paper C of each appellant in accordance with R. 4 IPREE 1994, with the ten additional points already awarded to be retained by the appellant.

The candidate's different choice of the closest prior art from that of the examination committee was also in issue in e.g. **D 14/17**, **D 20/17**, **D 25/17** and **D 3/23**. Referring to **D 7/05** (OJ 2007, 378) and **D 12/82** (OJ 1983, 233), the DBA again highlighted the examiners' obligation to allow for fair marking, which had its basis in the "fit to practise" criterion of Art. 1(1) REE.

In **D 13/17** the DBA stressed that Paper A had a particular structure in that it was based on a single set of facts which meant that a wrong answer to one part was very likely to result in the other parts being wrongly answered too. That had to be taken into account when devising a marking scheme, as did the applicable regulatory requirements. In particular, R. 6(1) IPREE 2010 provided that each answer paper was to be marked on a scale from 0 to 100; it said nothing about deducting marks. There was much to suggest that the marking had to start from zero, with marks then being awarded for each correct answer or partial answer and added up. Especially given Paper A's structure, a marking scheme that allowed more marks to be deducted overall than were achievable in total was essentially untenable if the requirement for fair marking established in the case law was to be met. A different conclusion could, if at all, be reached only if the possible deductions

were not cumulative and instead applied to separate and mutually exclusive wrong or incomplete answers. With regard to the possibility that marks might be lost twice for a single mistake because, owing to Paper A's structure, a wrong answer to one part could have implications for the answer to another part, the board held that such a "double penalty" was not in keeping with the standards for fair marking set in the case law. Citing **D 9/11**, the DBA in **D 22/21** emphasised that separate deductions for claims and corresponding arguments was not necessarily a double penalty and as such not necessarily unfair. The marking was only unfair to the extent that equal errors were penalised unequally, or repeated errors were penalised repeatedly. See also **D 11/21, D 19/21**, **D 27/21**, **D 39/21**, **D 48/21** and **D 54/21**.

2.5. Substantiation of European qualifying examination decisions

At issue in **D 12/97** (OJ 1999, 566) was whether Examination Board decisions informing candidates that they have failed the examination have to be reasoned. The DBA pointed out that this was not required by the REE 1994. It also held the appellant's constitutional arguments - that substantiation of such decisions was a generally recognised principle of procedural law within the meaning of Art. 125 EPC 1973 - to be unfounded. For this to be so, it had to be shown that substantiation of such decisions was required in the EPC contracting states.

In **D 3/03** the DBA confirmed **D 12/97** (OJ 1999, 566). The REE 1994 neither required EQE decisions to be reasoned nor made reference to R. 68(2) EPC 1973 (see R. 111(2) EPC), which therefore did not apply. The Guidelines were not applicable for the same reasons. The REE and its IPREE were lex specialis for the EPC; unless they expressly referred to the EPC, then only they and not the EPC applied. Their subsidiary nature was justified in that they governed a particular matter unrelated to the EPC stricto sensu, since their purpose was to establish whether a candidate was considered fit to practise as a professional representative before the EPO. With regard to the review by the courts of decisions concerning the EQE, the German Federal Constitutional Court had also held that the obligation to give reasons for examination decisions cannot be regarded as an expression of the structural elements of any protection of basic rights intended by the Basic Law (see decision 2 BvR 2368/99 of 4 April 2001).

This case law was again confirmed in **D 7/05** (OJ 2007, 378). In its extensive reasoning the board also held that, apart from the fact that the marking sheets under R. 6(1) IPREE 1994 already had a decision substantiation function, the extent to which the principles of rule-of-law process also demanded individual substantiation of examination decisions could not be assessed without consideration of the extent of the board's powers of review under Art. 27(1) REE 1994. The absence of an obligation to provide individual substantiation was to be seen in connection with the fact that Examination Board decisions in EQE proceedings were subject to only limited judicial review (as to this see also in this chapter V.C.2.6.1 and V.C.2.6.3 below).

2.6. Appeals against decisions of the Examination Board and the Examination Secretariat

2.6.1 Competence of the Disciplinary Board of Appeal

Under Art. 24(1) REE (see Art. 27(1) REE 1994), an appeal lies from decisions of the Examination Board and the Secretariat only on grounds of infringement of the REE or of any provision relating to its application. On the extent of the DBA's competence to review decisions of the Examination Board see **D 1/92** (OJ 1993, 357), **D 6/92** (OJ 1993, 361) and the further decisions in this chapter V.C.2.6.3 (for the EQE) and V.C.2.6.4 (for the pre-examination); concerning decisions of the Secretariat, see e.g. **D 1/13** and **D 5/18**. The DBA has only very limited scope for reviewing the legal validity of implementing provisions drawn up by the Administrative Council or, in the case of delegation, by the relevant subsidiary body. In **D 3/89** (OJ 1991, 257) the board stated in justification of its limited powers of scrutiny that the relevant bodies had discretionary powers in drawing up such provisions. As long as the legislative organ and subsidiary bodies had not misused their discretionary powers, the DBA could apply the provisions concerning examinations only to the case in point (see also **D 1/81**, OJ 1982, 258, **D 5/89**, OJ 1991, 210, **D 14/96**, **D 11/99**, **D 7/05**, OJ 2007, 378 and **D 11/19**).

2.6.2 Procedural aspects

a) Requirements for appeal – paper form, statement of relief sought and payment of the appeal fee

The notice of appeal, to be filed in writing within one month from notification of the contested decision, must already include the statement setting out the grounds; the appeal fee is to be paid within the same period (Art. 24(2) REE).

The board in **D 36/21** explained that to correctly interpret the term "filed in writing" under Art. 24(2), first sentence, REE this provision had to be read in conjunction with Art. 6(1), second sentence, and Art. 6(2) RPDBA. These provisions made it clear that a fax alone did not suffice as a means of communication for filing an appeal. The standard means of communication for filing an appeal, constituting the rule, was an appeal document in paper form signed by the appellant. This document could be sent by postal services or delivered by hand to the Secretariat. The sole exception to this rule was the option to file the appeal by fax in due time provided that the original was subsequently filed within two weeks (Art. 6(2) RPDBA). Since the appellant had filed an appeal solely by email within the time limit, the appeal was rejected as inadmissible.

Citing **D 2/20** (see in this chapter V.C.3.1), the DBA in **D 40/21** held that a request for re-evaluation of the appellant's paper without requesting a better grade was inadmissible because such request was not aimed at eliminating a substantive adverse effect to the appellant. It was not sufficient to request that the decision be set aside without requesting (and reasoning why) a different (or further) legal effect should result from the appeal proceedings instead of the appealed legal effect.

In **D 9/17** the DBA confirmed that the RFees applied, at least mutatis mutandis, to the payment of the fee for an appeal lodged under Art. 24(2) REE. This fee was to be paid by payment or transfer to a bank account held by the Office (Art. 5(1) RFees); in particular, payment of the fees according to Art. 17 REE by debit order was not provided for in the ADA (see chapter III.U.2.2.1).

b) Rectification of decisions

Under Art. 24(3) REE, if the Examination Board or the Secretariat considers the appeal to be admissible and well-founded it must rectify its decision and order reimbursement of the appeal fee. If the appeal is not allowed within two months of notification of the decision, it is remitted to the DBA.

In **D 5/19** and **D 8/19** the board pointed out that the Examination Board's powers of rectification under Art. 24(3) REE form an exception to the devolutive effect of an appeal. The term "well-founded" (German "begründet", French "fondé") refers to a situation in which the Examination Board considers that the reasons which it gave for a decision which is then appealed no longer hold in light of the appeal submissions, i.e. if the appeal removes the reasons underlying the contested decision, for example, if parts of the appellant's answers to a paper have been overlooked and not marked. In this context, "rectify" (German "abhelfen", French "faire droit") is to be understood as "correct" or "amend".

However, the brevity of the period under Art. 24(3) REE does not always allow the Examination Board to review the matter in full before it expires. To impose such a constraint can hardly have been the legislator's intention, and so it is reasonable to infer that, within the period for rectification, the Examination Board may also opt to set aside the contested decision (simple annulment) and resume the proceedings before it. If, on the other hand, the Examination Board considers the appeal to be either inadmissible or unfounded, it must refer the case to the DBA, as a rule without giving reasons, since such reasons would amount to a decision on the merits of the appeal. In summary, the Examination Board normally has the following options under Art. 24(3) REE: it can either annul the contested decision and replace or not replace it by a rectified decision, or refer the case to the DBA without giving reasons.

According to the board, this interpretation of Art. 24(3) REE was in line with the main purpose of interlocutory revision to shorten the appeal proceedings in the interests of procedural expediency and economy, which is to the benefit of both the appellant and the EPO. Moreover, if rectification is granted, unnecessary work is avoided for the DBA. Even though it entails resuming the administrative proceedings, the Examination Board can normally be expected to resolve the contentious issues more expediently by this means than on remittal after a full consideration of the appeal by the DBA. Given the limited powers of review accorded to the DBA under Art. 24(1) REE, a resumption of the proceedings before the Examination Board can even be to an appellant's advantage in the sense that - in contrast to the appeal procedure before the DBA - it allows a review of the entire examination procedure, including the re-marking of an appellant's answer to an examination question.

See also earlier cases **D 38/05** of 17 January 2007 and **D 4/06** on decisions of the Examination Board, **D 3/18** and **D 4/18** on decisions of the Secretariat, as well as **D 3/14** in this chapter V.C.2.6.4 concerning the pre-examination.

c) Oral proceedings

Oral proceedings take place either at the instance of the disciplinary body if it considers this to be expedient or at the request of the party (Art. 13 RDR). In **D 9/17**, though the appellant had requested oral proceedings in relation to her main request, no such request had been filed with respect to the question raised in the board's communication on whether an appeal was deemed to have been filed (which turned on the question of valid payment of the appeal fee – see under a) above). Considering that the question whether an admissible appeal existed was to be examined by the appeal board ex officio, and the appellant had not availed herself of the opportunity which she had been given to comment on the reasons for the decision, the DBA did not consider oral proceedings to be expedient.

In **D 11/19** the DBA refused the appellant's request that a German patent attorney be allowed to accompany him at the oral proceedings. The board observed that proceedings before the DBA were not public (Art. 24(4) REE in conjunction with Art. 20 RDR) and the right to attend oral proceedings was limited (Art. 24(4) REE combined with Art. 14 RDR): only other professional representatives or legal practitioners qualified to act as such in a contracting state were permitted to provide assistance (Art. 17 RDR). Professional representatives are familiar with the EQE and what it tests. They are also subject to a supranational set of rules based on Art. 134a EPC, which, in addition to professional rights and obligations, includes disciplinary supervision. Their legal status is similar to that of legal practitioners qualified in a contracting state. This ensures not only the confidentiality of the proceedings but also an orderly process.

d) Remittal and special reasons

If the DBA considers an appeal to be admissible and well-founded, it is in principle, in accordance with Art. 24(4), second sentence, REE, only authorised to set aside the contested decision and remit the matter to the Examination Board for a new decision. Only in very exceptional cases, where there are compelling reasons for non-remittal, is non-remittal justifiable (Art. 12 RPDBA). This is conceivable, for example, where the Examination Board lacks the discretion to award a grade (see e.g. **D 3/14**) or where the Examination Board's discretion to reassess a paper in the event of remittal is so marginal that the binding effect of a DBA decision would be ignored if the Examination Board were not to change the grade (see e.g. **D 14/17**). The appellant must provide full details of any such exceptional reasons (**D 3/23** with reference to **D 1/86**). See also **D 5/86**; **D 11/91**, OJ 1995, 721; **D 8/08** and **D 9/08**.

2.6.3 Objective review of the marks awarded in the examination

In accordance with the DBA's consistent case law (see in particular **D 1/92**, OJ 1993, 357 and **D 6/92**, OJ 1993, 361), decisions of the Examination Board may in principle only be reviewed for the purposes of establishing that they do not infringe the REE, the provisions

relating to its application or higher-ranking law. In **D 1/92** and **D 6/92**, the DBA therefore concluded that its functions did not include reconsidering the examination procedure **on** its merits. Accordingly, the Examination Board's value judgment concerning the number of marks that an examination paper deserved was not subject to review by the board. Only if the appellant could show that the contested decision was based on serious and obvious mistakes could the board take this into account. The alleged mistake must be so obvious that it could be established without re-opening the entire marking procedure, for instance if an examiner was alleged to have based their evaluation on a technically or legally incorrect premise on which the contested decision rested. Any further claims regarding alleged defects in the assessment of candidates' work fell outside the DBA's jurisdiction, since **value judgments** were **not subject to judicial review**. These findings were confirmed in **D 7/05** (OJ 2007, 378). See also, for example, **D 9/00**, **D 7/01**, **D 11/01**, **D 11/07**, **D 14/08**, **D 23/08**, **D 5/13**, **D 11/18** and **D 11/19**.

In **D 6/98**, the DBA added that these conditions were in line with those for correcting errors under R. 89 EPC 1973 (see now R. 140 EPC), particularly in the case of errors of transcription or calculation in the marking. Under Art. 27(1) REE 1994 (see Art. 24(1) REE), the DBA was not empowered to reopen the assessment procedure (**D 15/97**). The DBA was not intended to be a department of second instance empowered to examine whether the marks awarded for a candidate's examination were justified on their merits or correct, and thus to superimpose its own value judgment on that of the Examination Board (**D 20/96** and **D 6/02**).

D 12/00 concerned a complaint about differences between the individual marks awarded by the two examiners. Relying on the principle of uniformity of marking (Art. 16 REE 1994; Art. 6(2)(c) REE, English text, now provides for consistency of marking), the appellant claimed that the higher number of marks should count. The board confirmed its established case law (see **D 1/92**, OJ 1993, 357, above): differences of opinion over the number of marks to be awarded for a given answer were a reflection of value judgments which were not, in principle, subject to judicial review. The fact that two independent examiners had arrived at different marks was not per se a violation of the applicable provisions. See also case summaries in this chapter V.C.2.4.3.

In **D 13/02** the board stated that obvious mistakes as referred to above were those which could be identified without a re-evaluation of the examination paper. That would be the case, for instance, if one and the same paper had been marked **very** differently by the two examiners, since the marking discrepancy alone would indicate an infringement of the principle of uniform marking, irrespective of the level of the marks awarded. Another example of an obvious mistake would be a question whose wording was ambiguous or incomprehensible. That would be clear straight away, without any reference to marks awarded, from the meaning that common sense would ascribe to the wording of the question concerned.

In **D 6/24** the board held that the marking of the appellant's Paper B had infringed R. 6(1) IPREE 2018, which provided that each answer paper is to be marked on a scale from 0 to 100 by the relevant examination committee. Although the examiner's report indicated 30 points for establishing inventive step, the points to be awarded for each step amounted

in total to 27 and not 30 points. The proper distribution of the 3 additional points could have resulted in a "compensable fail" as requested by the appellant. The board remitted the case to the Examination Board for the proper allocation of the 3 additional points.

D 17/05 cited **D 13/02** to point out that the existence of a mistake within the meaning of **D 1/92** could not be deduced from a comparison of the candidate's answer with another answer. The board also cited the statement that the disclosure of marking instructions which may have been used by the examiner was not required for a decision on an appeal and that under the established case law no other entitlement existed to any such disclosure.

D 6/13 concerned an alleged infringement by the Examination Board of R. 23(3) IPREE 2010 (regarding the content of Paper A). The Board agreed that the Examination Board has an implied obligation to prepare the examination papers and corresponding marking scheme correctly, in that the marking scheme should award the appropriate marks for correct solutions and this "correct" marking scheme should also be "correctly" applied in every case. However, the DBA may not be competent to determine whether the marking scheme or individual marking is correct from every possible aspect which may have adversely affected the marking of a candidate, given that Art. 24(1) REE excludes certain appeal grounds. Therefore, if the Examination Board did not "perfectly" fulfil this implied obligation, in that arguably correct solutions were not awarded any or enough marks, this could not qualify immediately as an infringement of R. 23(3) IPREE 2010 in the sense of Art. 24(1) REE, but was a question be decided on a case-by-case basis. If the DBA were to extend the examination of appeals to an in-depth technical examination, this would in effect reduce to zero the scope of the restriction on the possible appeal grounds stipulated in Art. 24(1) REE, and require value judgments to be made. See also e.g. **D 10/19**.

D 14/17 and **D 20/17** concerned the candidates' inventive step attack in Paper C starting from Annex 6 as the closest prior art, for which they had received 0 out of 20 marks. Based on a summary examination and (at least) a figure filed by the appellant, it was evident for the board that, contrary to what was asserted in the examiners' report, no technical obstacle existed with regard to Annex 6, which was reasonably to be regarded as an alternative starting point (see also e.g. parallel case **D 25/17**). Furthermore, having concluded that there were special reasons not to remit the case to the Examination Board (see Art. 12 RPDBA; here: prima facie competent and logical answer, small number of marks involved, very short time between oral proceedings and next EQE session), the board in **D 14/17** allowed the appellant's requests to be awarded a "compensable fail" for Paper C and, based on that, to be declared to have passed the EQE (Art. 14(1) REE). See also **D 3/23** and, concerning the EQE pre-examination, **D 3/14**, summarised in the next section, and **D 5/14**.

The burden of establishing serious and obvious mistakes necessarily lies with the appellant who alleges it (**D 46/07**). In **D 24/17** the DBA found that on most issues the appellant did not substantiate in detail in what respect the solution of the examiners' report was incorrect, but left it to the board to establish of its own motion to what extent the official solution and the marking of her papers was or could have been wrong. This would go beyond the scope of the board's review. Only on the clarity-related issues in Paper B were

the appellant's submissions (partly) well-founded. It was evident that she had addressed at least some of them in her answers, and it was therefore incomprehensible that no point at all was awarded. This amounted to a serious and obvious mistake which affected the marking. The board remitted the case for Paper B to be re-marked with respect to the aspect of clarity and ordered reimbursement of the appeal fee at 25%.

2.6.4 Review of the marking of the pre-examination

From the entry into force of the REE on 1 January 2025, the pre-examination according to the REE 2009 and the IPREE 2018 is no longer held (Art. 25(6) REE).

In **D 3/14** the appellant had obtained the grade "fail" (with 68 marks) in the EQE pre-examination. She argued that the answer to statement 10.4 in the question paper should have been "false", rather than "true", as given in the examiners' report, and requested that the decision of the Examination Board be set aside and that she be awarded a "pass".

Applying the principles established in the case law on the EQE itself (e.g. **D 1/92**, see chapter V.C.2.6.3 above), the board examined whether the alleged mistake was so obvious that it could be established without reopening the entire marking procedure. It found that statement 10.4 should have been formulated differently in order to express the aim intended. Candidates could not be expected to make an assumption in this respect (R. 22(3) IPREE 2018, see R. 21(3) IPREE), providing that candidates must limit themselves to the facts given). The appellant's understanding of statement 10.4 was justified from an objective point of view. The answer to it was "false" and not "true" as indicated in the examiners' report. The examiners had based their evaluation on an incorrect premise and therefore the contested decision was based on serious and obvious mistakes which could be established without reopening the entire marking procedure. The decision had to be set aside and the appeal fee reimbursed (Art. 24(4) REE).

Concerning the requested award of a "pass", the board held that the DBA was not empowered by Art. 24(4), second sentence, REE to correct the decision, i.e. to review the marks and grade of an examination paper, and therefore considered whether special reasons provided a legal basis for not remitting the case to the Examination Board (see Art. 12 RPDBA). Only in a few exceptional cases had the DBA found such special reasons (e.g. **D 5/86**; **D 11/91**, OJ 1995, 721; **D 8/08** and **D 9/08**: see also in this chapter V.C.2.6.2(d)), but in appeals against decisions of the Examination Board it had not made use of this power to review the contested decision on its merits. However, in the pre-examination, a multiple choice paper, the marks were awarded according to a strict scheme not involving any discretion and the award of a "pass" or "fail" was merely the arithmetical outcome of the marks achieved. From a limited review, the board was able to establish the correct marks on the basis of the appellant's answer paper without interfering with any value judgment of the examination committee or Examination Board. Also taken into account were the matter's urgency, since a "pass" in the pre-examination was a precondition for the main examination, and the fact that the Examination Board, by not rectifying its decision, even though the discrepancy had been comprehensively substantiated, had burdened the appellant with appeal proceedings. With the correction, the total marks rose from 68 to 70 and a "pass" was therefore awarded. See **D 3/19** and

the following decisions concerning statement 12.4 of the EQE pre-examination 2021: **D 2/21**, **D 3/21**, **D 4/21**, **D 5/21**, **D 6/21** and **D 7/21**. See also **D 2/24**.

In **D 1/15** too, the DBA considered that the settled jurisprudence (e.g. **D 1/92**; **D 6/92**; **D 7/05**, OJ 2007, 378) also applied to appeals on the pre-examination, even if the marking was hardly ever in dispute, given the simple marking scheme of a multiple-choice test. However, the review requested in this case was directed at the content of the examination as presented to the candidates. To decide on the issues, the board would have had to review at least a substantial part of the paper and perform a detailed, partly technical analysis of the facts presented. This exercise appeared to be well beyond the powers of the board. See also e.g. **D 6/16**.

See also the decisions in this chapter V.C.2.4.1, "Setting and marking the pre-examination".

2.6.5 Legitimate interest

According to the established case law, a candidate who appealed against failing the EQE but resat and passed it before the appeal had been decided still retained a legitimate interest in pursuing the appeal. This was confirmed in **D 3/98**. Any other view would amount to denying him recourse to the law; legitimate interest would then depend on how long proceedings took. However, appellants could exert little influence over that, and should therefore not have to suffer the consequences. Whether there was a legitimate interest was to be determined with reference to the date the proceedings were initiated (in this case, on the day the appeal was filed).

3. Disciplinary matters

The RDR (Supplementary publication 1, OJ 2024, 145, consolidated version of the text published in OJ 1978, 91, with amendments published in OJ 2008, 14 and OJ 2018, A57) contains not only provisions on general professional obligations, professional secrecy and conduct towards clients but also provisions relating to the disciplinary bodies responsible for imposing disciplinary measures (see Art. 5 RDR; also Additional Rules of Procedure of the Disciplinary Committee and those of the Disciplinary Board, Supplementary publication 1, OJ EPO 2024, 156 and 166, consolidated version of the texts published in OJ 1980, 177 and 183 respectively, with amendments published in OJ 2007, 552; see also RPDBA, Supplementary publication 1, OJ 2024, 70, consolidated version of the text published in OJ 1980, 188 with amendments published in OJ 2007, 548). While the RDR lays down the general requirements for the epi members, the associated epi Code of Conduct (OJ 2022, A61) lays down the general principles of professional conduct (see points 1(a) and (b) of the Code).

3.1. Admissibility of the appeal - statement of the relief sought

Appellants in appeal proceedings before the DBA must seek a specific relief (Art. 6(1), first sentence, RPDBA, see also e.g. **D 1/20**). According to **D 1/20**, the requirement to seek a specific relief is satisfied if the imposition of a disciplinary measure is requested but the

nature of the measure is left to the discretion of the DBA. It is not satisfied, however, if the appellant makes a request tantamount to a request for a declaratory finding (in the case in hand, a request that it be clarified whether use of the title "European patent Litigator" constituted a misleading statement under Art. 1(1) RDR). See also in this chapter V.C.3.4.

In **D 2/20** (appeal by the epi President) the DBA found the appeal inadmissible on the first ground of appeal (cost reimbursement decision) for lack of statement of the relief sought by the appellant, contrary to Art. 6(1) RPDBA. According to the DBA, "relief" in Art. 6(1) RPDBA had to be interpreted in view of the overall purpose of the appeal proceedings, which was to establish if the legal effects of the impugned decision were correct or not. It was not sufficient to request, as the appellant had done, that a decision be set aside without requesting (and reasoning why) a different (or further) legal effect should result from the appeal proceedings (see also **D 40/21** in the context of appeals under Art 24 REE). In the specific circumstances of **D 55/21**, however, the DBA was of the view that the epi President could not have been expected to request a specific and different substantive outcome. The epi President had explicitly stated why the decision was wrong and that it had to be set aside, and the appeal was found admissible.

The appeal was also found to be admissible in **D 1/22** (appeal by the epi President), which concerned a decision of the epi Disciplinary Committee dismissing the complaint. The DBA noted that according to **D 55/21**, for an appeal of the epi President to be admissible, it was sufficient to indicate why the decision under appeal was wrong in substance. Depending on the circumstances, it may not be necessary to specifically request what the expected substantive outcome should be; a request for remittal on the merits may suffice (see also **D 2/20**). In the case in hand, the DBA regarded a request for remittal as sufficient with respect to the breach of Art. 6(3) and 20 RDR invoked by the appellant, allegedly amounting to substantial procedural violations (see in this chapter V.C.3.3.1 and V.C.3.3.2). On the substantive issue (applicability of the RDR, see in this chapter V.C.3.2), the appellant considered that the epi Disciplinary Committee should not have dismissed the matter. Since the issue was about jurisdiction and the defendant was not called upon to present a defence, the request for remittal on the merits was also found to be sufficient.

3.2. Applicability of the Regulation on Discipline for Professional Representatives

In **D 16/95** the board ruled that, although drafting and filing translations and paying fees in the national phase in a contracting state were not directly related to grant, opposition or appeal proceedings, such activities were still covered by Art. 1 RDR. They were, after all, **activities in connection with a European patent** (see Art. 65 EPC and 141 EPC 1973) and as such part of a professional representative's job. Regarding them as covered by Art. 1 RDR was also justified by the fact that it was difficult for outsiders (e.g. persons commissioned to translate patent specifications) to distinguish between those of a representative's activities which were directly related to grant, opposition or appeal proceedings and those which were not. See also **D 25/05**.

According to the board in **D 19/99**, it followed from Art. 134(1) and (4) EPC that professional representatives are, in principle, the only ones entitled to act in all proceedings instituted by the EPC. Therefore, the disciplinary power delegated by the

contracting states in Art. 134(8) EPC 1973 (Art. 134a(1) EPC) must necessarily be understood as relating to their activity as such. Moreover, it was a settled principle of law in the jurisdiction of the contracting states that **provisions enacting disciplinary sanctions** that restrict the free exercise of a profession were, like those of criminal law**, to be interpreted narrowly**. This narrow interpretation was also necessary to avoid conflicts of jurisdiction between the EPO and national disciplinary bodies. Thus, the **disciplinary powers** of the bodies set up under Art. 134(8) EPC 1973 (now Art. 134(a)(1) EPC) **clearly applied only to the activities of professional representatives relating to the grant of a European patent**. Furthermore, the wording in Art. 1(1) RDR required such interpretation. Under this narrow interpretation it would not be possible for the texts imposing disciplinary sanctions to govern, by analogy, other ancillary activities that a professional representative might also engage in. In the case at issue, it was clear from the file that all the unpaid invoices (which were the subject of the complaint) related only to British patents without any connection with any European patent. It followed that the applicant was acting in a capacity other than that of a European patent attorney.

The appellant in **D 1/22** argued that the RDR applied, although the complaint concerned a dispute relating to a national patent (failure to transfer the patent as instructed by the complainants). The board disagreed, noting that the jurisdiction of the disciplinary bodies of the epi and the EPO as established by the RDR did not cover all conduct or activities of a professional representative (see **D 19/99**). The board pointed out that, while **D 25/05** stressed that the power of the disciplinary bodies of the epi and the EPO was not solely restricted to activities as a professional representative in proceedings before the EPO, it confirmed that this power did not encompass conduct or activities which were **not related to a European patent**. Both **D 25/05** and **D 16/95** concerned the filing of a translation and/or the payment of fees under the EPC for the national parts of a granted European patent as required by the EPC (see in this chapter V.C.4.1). While in **D 1/22** the national patent served as a priority application for a European patent, the complaint was only about the omission of a transfer of that national patent under the applicable national law. The national parts of the European patent, which claimed priority of the national application, were not at issue. The complaint was not related to any provision of the EPC either. The defendant's activities on which the complaint was based thus had no connection with a European patent and provisions of the EPC applicable to the national parts of any such patent (e.g. Art. 65 and 141 EPC). The fact that the defendant was a professional representative did not as such establish the link between the facts of the complaint and the EPC.

3.3. Procedural aspects

3.3.1 Observation of the time limit under Article 6(3) RDR

In **D 1/22** the appellant argued that a final decision taken by the epi Disciplinary Committee after expiry of the time limit under Art. 6(3) RDR should be considered a substantial procedural deficiency because the epi Disciplinary Committee no longer had the competence to rule after that time. The DBA disagreed, noting that there was no devolutive effect upon expiry of the time limit pursuant to Art. 6(3) RDR; the epi Disciplinary Committee remained competent to deal with the case. The Disciplinary Board can,

however, assume responsibility for the case by a decision of its chair transferring the case to the Disciplinary Board, in which case the Disciplinary Committee would no longer be able to rule on the case. The possibility of the Disciplinary Committee taking a decision more than nine months after being notified of an alleged breach of the rules of professional conduct is therefore only ruled out if the matter is transferred to the Disciplinary Board under Art. 6(4)(b) RDR. In any event, the DBA found that in the case in hand the Disciplinary Committee did not exceed the nine-month time limit under Art. 6(3) RDR.

3.3.2 Breach of the confidentiality of deliberations under Article 20 RDR

Article 20, second sentence, RDR provides that the deliberations of the disciplinary bodies "shall be confidential". In **D 1/22**, the DBA disagreed with the appellant's contention that the Disciplinary Committee had violated the confidentiality of deliberations by indicating in the contested decision that the decision had been taken by unanimity, and that this constituted a substantial procedural violation. According to the DBA, the indication merely ruled out any disagreement among the members and did not convey any further information on the actual deliberations. In any case, there was no causal link between the announcement and the decision itself. Therefore, even if there was a procedural violation, it was not a substantial procedural violation that would justify remitting the case for further prosecution.

3.4. Disciplinary measures

According to **D 5/86** (OJ 1989, 210), an infringement of the rules of professional conduct must be established to the satisfaction of the disciplinary body before it can impose a disciplinary measure. Absolute certainty is not required, but a degree of probability which in human experience verges on certainty. A disciplinary measure cannot be imposed if there is reasonable doubt as to whether the infringement has occurred.

In **D 11/91** (OJ 1995, 721) the EPO Disciplinary Board had ordered the deletion of the appellant from the list of professional representatives for an indefinite period. In his appeal, the appellant argued that the procedure before the DBA did not comply with the provisions of the ECHR, in particular because the DBA had been established not by national law but by the Administrative Council, the disciplinary bodies did not constitute an independent court, the DBA was not a national authority, and its decisions could not be referred to a higher court of appeal.

The DBA decided that the ECHR contained provisions which expressed general principles of law common to the member states of the European Patent Organisation. As such these provisions should be considered part of the legal system of this Organisation and should be observed by all its departments. This therefore applied to Art. 13 ECHR, which guaranteed the protection by the judiciary of the rights of the individual. The "national authority" mentioned in this article was clearly meant to be understood as a competent authority in accordance with the law of the state concerned. However, in ratifying the Munich Convention, the contracting states accepted a transfer of prerogatives whereby professional representatives before the EPO became subject to the same set of professional regulations, controlled by a central body whose decisions were open to

effective remedy before a body of second instance whose independence was guaranteed by the rules governing its composition. The drafting of these regulations and the establishment of these bodies was thus consistent with general principles of law, in particular those enshrined in the ECHR.

The board took the view that, in order to ensure that the penalty was proportionate to the seriousness of the charges and that the maxim whereby penalties should not be arbitrary but fixed or predetermined was respected, Art. 4(1)(e) RDR should be understood as meaning "for a period not defined by the text", that is for a discretionary period to be decided by the competent disciplinary body. In its decision, the latter should fix the said period and give reasons for its choice. See also **D 1/21** below.

In **D 20/99** (OJ 2002, 19), appellant X filed an appeal against the EPO Disciplinary Board's decision to issue him with a reprimand. The DBA, reviewing the penalty imposed in respect of the first charge only, held that X's actions, for which he had been prosecuted in France, were in breach of Art. 1(1) and(2) RDR. It was clear that D had been involved in drawing up European patent applications in consultancy L, owned by X, while being paid by company P. However, it was evident from the file that this contractual arrangement had never been the subject of invoicing. That gave an advantage to consultancy L by cutting the cost of drawing up patent applications. As it inevitably entailed unfair distortion of competition in relation to other European patent attorneys, this was an undue advantage. The misuse of corporate assets was tantamount to unfair competition and thus represented a breach of the rules of professional conduct.

According to **D 1/18**, the requirement for a Disciplinary Committee decision to state which rule of professional conduct was violated and which recommendation, if any, was not observed (Art. 17 Additional Rules of Procedure of the epi Disciplinary Committee; see also Art. 15 Additional Rules of Procedure of the EPO Disciplinary Board and Art. 17 RPDBA) is not merely a formality. To the extent that disciplinary proceedings have similarities with criminal proceedings (see also **D 19/99**), this is an expression of the principle "nullum crimen sine lege". There is no room for issuing a penalty under Art. 4(1) RDR for generally violating the spirit, aim and purpose of the RDR or the epi Code of Conduct.

In **D 1/21**, the DBA concluded that the EPO Disciplinary Board had failed to provide any reason why the period of 9 months indicated in the decision under appeal was regarded as a necessary and appropriate as well as a sufficient penalty for the established failure to comply with the rules of professional conduct. The EPO Disciplinary Board had committed a fundamental procedural violation by ordering a penalty which had no legal basis in the pertinent provision of Art. 4 RDR. The board stated that Art. 4 RDR was the only basis for disciplinary measures for a professional representative who fails to comply with the rules of professional conduct.

In **D 1/20** (appeal by the epi President) a professional representative had used on their company's website the title "IP attorney" for not yet qualified employees (i.e. team members who had not yet passed the EQE or obtained any other professional qualification, and were therefore not entitled to represent clients independently). According

to the DBA, this constituted a statement which was "misleading to the public" within the meaning of Art. 1(1), second sentence, RDR and paragraph 3(b) of the epi Code of Conduct. For the infringement of these provisions and taking into account mitigating circumstances, the professional representative concerned was given a warning under Art. 4(a) RDR.

3.5. Appealability of decisions of the epi Disciplinary Committee

In **D 15/95** (OJ 1998, 297) the DBA ruled that a Disciplinary Committee decision dismissing a complaint was a decision in the legal sense only as regards the persons referred to in Art. 8(2) RDR, and only they could appeal against it. Thus the person who made the complaint had no right of appeal. Review on appeal was limited to safeguarding the rights of the "accused", i.e. the "professional representative concerned" within the meaning of the RDR (see also **D 1/98**). In **D 28/97** and **D 24/99** the DBA added that the purpose of disciplinary proceedings was not for individuals to pursue their interests vis-à-vis others (although these might be affected in individual cases) but rather to serve the public interest in orderly and proper exercise of professional representation before the EPO. Any claims by individuals arising from a representative's infringement of the rules of professional conduct were exclusively a matter for the competent (civil) courts (see also **D 25/05** and **D 3/13**).

In cases **D 1/18** and **D 2/18** the question arose whether a decision by the epi Disciplinary Committee to refer a matter to the EPO Disciplinary Board under Art. 6(2)(c) RDR is a final decision within the meaning of Art. 8(1) RDR and hence appealable to the DBA. In its two decisions **D 2/18** of 5 April 2019 (appeal by the epi President) and **D 2/18** of 8 April 2019 (appeal by the professional representative), the board answered this question in the affirmative based on the wording "final decision" in Art. 6(3) RDR. However, in **D 1/18**, a subsequent decision, the interpretation given in decisions **D 2/18** was not followed and the board held that only a decision which effectively terminates the disciplinary proceedings by a substantive decision vis-a-vis the professional representative is meant to be a "final decision" under Art. 8(1) RDR. The Disciplinary Committee's decision under Art. 6(2)(c) RDR to refer the complaint before it to the Disciplinary Board does not terminate first-instance proceedings, as it does not result in a dismissal of the complaint or a penalty under Art. 4(1) RDR. Rather, the proceedings continue before the other first-instance disciplinary body. The referral has only a procedural effect. It is thus not a final decision within the meaning of Art. 8(1) RDR and is not appealable. Subsequent decisions have endorsed the reasoning in **D 1/18** (see e.g. **D 1/19** of 13 December 2022, **D 18/19** of 22 November 2021 and **D 19/19** of 12 November 2021).

4. Code of Professional Conduct

The epi Code of Conduct (OJ 2022, A61) lays down the general principles of professional conduct. Paragraph 1(a) of the Code refers in turn, as regards the general requirements for epi members, to the RDR. According to **D 1/18**, the Code serves the interpretation of the rather generally formulated rules of professional conduct in the RDR (see Art. 1 to 3 RDR); in a decision of a disciplinary body established under Art. 5 RDR, the Code's provisions can only be invoked with a specific provision of the Regulation.

4.1. General professional obligations

Since national-phase-related activities were covered by Art. 1 RDR (see **D 16/95** in this chapter V.C.3.2), reprehensible conduct in connection with them constituted a breach of a representative's general professional obligations under that provision (see also **D 25/05**).

See also **D 1/20** reported in this chapter V.C.3.4 concerning a breach of paragraph 3(b) of the epi Code of Conduct (statement "misleading to the public").

4.2. Professional secrecy

In **D 11/91** (OJ 1994, 401), the appellant had requested the removal of various documents placed on file by the complainant. The appellant argued that his request was justified because, inter alia, their inclusion contravened the rule of confidentiality to which professional representatives were subject. The documents were items of correspondence between the complainant and the disciplinary bodies and correspondence pertaining to an opposition case.

The board decided that the professional secrecy referred to in Art. 2 RDR set limits on the disciplinary bodies' powers of investigation and on the obligation under Art. 18 RDR for a professional representative before the EPO to supply all relevant information. However, the mere obligation of confidentiality deriving from the principle enshrined in Part I RDR could not be invoked to resist a request under Art. 18 RDR.

5. Non-appealability of decisions of the Disciplinary Board of Appeal

In **D 5/82** (OJ 1983, 175) the DBA already noted that it has no power to refer questions to the Enlarged Board. See also e.g. **D 6/82** (OJ 1983, 337), **D 19/19** and **D 3/20**.

In **D 7/05** of 2 January 2007 and **D 2/06** of 31 August 2006 the DBA had to consider requests seeking a review of its final decisions. The board stated that decisions of the boards of appeal and the DBA became final when issued, and were no longer subject to appeal, nor could they be set aside by the board itself. It refused the requests as inadmissible, with reference to the principles set out by the Enlarged Board in **G 1/97** (OJ 2000, 322), according to which the decision on inadmissibility is to be issued by the board of appeal which took the decision forming the subject of the request for revision. The decision on the request could be issued immediately and without further procedural formalities.

VI. THE EPO ACTING AS A PCT AUTHORITY – EURO-PCT APPLICATIONS

1. Introduction 1891
2. Jurisdiction of the Boards of Appeal 1891
3. The EPO acting as designated or elected Office 1892
3.1. Competence of the EPO as designated or elected Office 1892
3.2. Remedies under the PCT applied by the EPO as designated Office 1894
3.2.1 Review (Article 25 PCT, Article 24(2) PCT) 1894
3.2.2 Opportunity to correct before designated Offices (Article 26 PCT) 1894
3.2.3 Excusing of delays in meeting time limits (Article 48 PCT, R. 82*bis* PCT) 1894
3.2.4 Rectification of errors made by the receiving Office or the International Bureau (Rule 82*ter* PCT) 1895
3.2.5 Restoration of the right of priority (Rule 49*ter* PCT) 1896
4. Language of the proceedings 1897
5. Priority 1897

1. Introduction

The EPC provisions governing "international applications filed under the Patent Cooperation Treaty – Euro-PCT applications" are contained in Part X of the Convention (Art. 150 EPC to Art. 153 EPC) and Part IX of the Implementing Regulations (R. 157 EPC to R. 165 EPC). Pursuant to Art. 150(2) EPC, international applications filed under the PCT may be the subject of proceedings before the EPO. In such proceedings, the provisions of the PCT and its Regulations apply, supplemented by the provisions of the EPC. In case of conflict, the provisions of the PCT or its Regulations prevail. An international application for which the EPO is a designated Office (or, optionally, an elected Office), and which has been accorded an international filing date, is equivalent to a regular European application ("Euro-PCT application", Art. 153(2) EPC).

The Guidelines for Search and Examination at the EPO as PCT Authority (April 2025 version) set out the practice and procedures to be followed for international applications before the EPO in the course of the international phase, while Chapter E-IX of the Guidelines for Examination in the EPO (April 2025 version) focuses on aspects particular to the handling of Euro-PCT applications in the European phase.

2. Jurisdiction of the Boards of Appeal

The PCT does not expressly provide for appeal or petition during the international phase (see WIPO PCT Applicant's Guide – International Phase, para. 6.054). The sole exception under the EPC 1973 was the boards' competence to decide on protests against additional search or examination fees charged by the EPO acting as ISA (Art. 17(3)(a) PCT and

Art. 154(3) EPC 1973) or IPEA (Art. 34(3)(a) PCT and Art. 155(3) EPC 1973) after a finding of lack of unity of invention.

Thus, in **J 24/99** the Legal Board confirmed that, apart from protest cases for which the boards' responsibility explicitly derived from Art. 154(3) and 155(3) EPC 1973, the jurisdiction of the boards was limited by the EPC, in particular Art. 21 and 106 EPC, which do not confer any jurisdiction on them to review actions taken by the EPO as IPEA (see also **J 20/89**, OJ 1991, 375; **J 15/91**, OJ 1994, 296; **J 14/98**; **J 10/15**, **T 2948/18**). Decisions of the boards of appeal on protests under the former procedure are to be found in chapter II.B. "Unity of invention". The current protest procedure under R. 158(3) EPC and the preceding interim procedure are dealt with in chapter II.B.1.

A case in the same vein was **T 506/08**, in which the EPO, acting as ISA, had issued a declaration of non-establishment of the ISR under Art. 17(2)(a) PCT. The examining division did not carry out a further search on the amended application, which it subsequently refused for lack of inventive step. At the appeal stage the applicant filed a request for a (partial) refund of the international search fee. However, the board declined jurisdiction to deal with the request. The guarantee of due process of law (see **G 3/08**, OJ 2011, 10), as invoked by the appellant, did not mean that each and every claim against the EPO was a matter for the boards (e.g. **J 14/87**, OJ 1988, 295; with reference to Art. 9 EPC 1973).

Once a Euro-PCT application enters the regional phase before the EPO, the appeal procedures provided for under the EPC supplement the provisions of the PCT (**J 20/89**, OJ 1991, 375). See also in this chapter VI.3.

3. The EPO acting as designated or elected Office

Article 23(1) PCT provides that no designated Office is to process or examine the international application prior to the expiration of the time limit under Art. 22 PCT (**G 1/09**).

The EPO only becomes competent as European patent granting authority when the requirements for the entry into the European phase according to Art. 22(1) PCT are fulfilled or an express request for entry into the European phase pursuant to Art. 22(2) PCT has terminated the international phase of an international application. The time limit of 30 months according to Art. 22(1) PCT is extended to 31 months by virtue of R. 159(1) EPC (**J 18/09**).

3.1. Competence of the EPO as designated or elected Office

The EPO can be either a "designated Office" or an "elected Office" for an international application filed under the PCT that designates "EP" (Euro-PCT application). If an applicant enters the European phase without having requested international preliminary examination under PCT Chapter II, the EPO will act as a "designated Office". If, before entering the European phase, the application was processed under PCT Chapter II, the EPO will act in the European phase as an "elected Office". Pursuant to Art. 153(2) EPC,

an international application for which the EPO is a designated or elected Office is deemed to be a European patent application.

In **J 26/87** (OJ 1989, 329) the Legal Board held that if, on the proper interpretation of the request for grant of an international application, an applicant designated an EPC contracting state for which the PCT was in force on the filing date of the international application, the EPO was bound by the provisions of Art. 153 EPC 1973 to act as the designated Office for that contracting state, even if the international application had been published by the International Bureau without mentioning that contracting state as a designated state.

J 19/93 also concerned the designation of EPC contracting states in an international application for the purpose of obtaining a European patent. The Legal Board pointed out that the EPO as elected or designated Office was fully competent to interpret applications appointing it to act in these capacities. It was not bound by the interpretation of the receiving Office or of the International Bureau (see also **J 26/87**, **J 17/99**).

In **J 3/94** the Legal Board could not agree with the applicant's contention that the election of two EPC contracting states made the EPO an elected Office by operation of law. In the PCT request, the applicant had designated a European patent under "Regional Patent" and five PCT contracting states, including Germany and the United Kingdom, under "National Patent". However, in the demand for international preliminary examination, filed with the EPO as IPEA, only the five PCT contracting states were elected; under "Regional Patent" there was no cross indicating the European patent. The Legal Board held that the EPO did not become an elected Office in this case. One of the principles implemented by Art. 31(4)(a) PCT was that applicants could choose the office for which they intended to use the results of the international preliminary examination. Furthermore, it was not only a matter for the EPC to decide whether an election made for the national route was also valid for the EPO. The validity of an election had to be decided during the international phase in order to give effect to the election and, in particular, to the IPEA's duty of confidentiality (Art. 38 PCT).

As to whether the EPO had competence to interpret a declaration in the demand differently from the IPEA, the Legal Board in **J 4/94** observed that the interpretation of the demand was at the outset the task of the IPEA. However, this did not necessarily exclude an office alleged to be an elected Office from interpreting the demand as well. In the case in hand, there had been a formal deficiency in the demand (two EPC contracting states had been indicated as elected Offices in handwriting, next to the "EP" box). Instead of inviting the applicant to correct the deficiency, the IPEA had deleted the handwritten indication. A clear deviation by the IPEA from the intention expressed in the demand was not binding on the EPO. It was therefore possible for the EPO to regard itself as a validly elected Office.

3.2. Remedies under the PCT applied by the EPO as designated Office

3.2.1 Review (Article 25 PCT, Article 24(2) PCT)

Under Art. 25 PCT, the EPO may decide to allow an international application deemed to be withdrawn, or not accorded a filing date, to proceed as a European application. It must first decide whether the refusal, declaration or finding within the meaning of Art. 25(1) PCT was justified under the provisions of the PCT and its Regulations (Art. 25(2) PCT). If it finds that the refusal or declaration was the result of an error or omission on the part of the receiving Office or that the finding was the result of an error or omission on the part of the International Bureau, it must, as far as effects before the EPO as designated Office are concerned, treat the international application as if this error or omission had not occurred. To obtain such a review by the EPO as designated Office, applicants must observe the two-month time limit under R. 51.1 PCT.

Pursuant to Art. 24(2) PCT, the EPO as designated or elected Office may maintain the application as a European application even if this is not required by virtue of Art. 25(2) PCT (OJ 1984, 565). The filing of a request under Art. 24(2) PCT is governed by the same requirements as a request for review under Art. 25(2) PCT, with the exception that the two-month time limit under R. 51 PCT does not apply (**J 19/16**).

In exercising its discretion under Art. 24(2) PCT, a designated Office is not bound by the views or actions of any of the authorities involved in the patent application's international phase. On the contrary, when acting as designated Office, the EPO has to exercise that discretion in accordance with the same rules and principles it applies in identical or comparable situations concerning direct European applications. This non-discriminatory approach is not only a fundamental principle of the PCT itself (see, for example, Art. 26 and 48(2)(a) PCT) but also a direct consequence of Art. 150(3) EPC 1973 (**J 17/99**). See also **J 16/03**.

3.2.2 Opportunity to correct before designated Offices (Article 26 PCT)

In accordance with Art. 26 PCT, the EPO as designated Office must not reject an international application on the grounds of non-compliance with the requirements of the PCT and its Regulations without first giving the applicant the opportunity to correct that application to the extent and according to the procedure provided under the EPC for the same or comparable situations in respect of European patent applications.

In **J 8/01** the Legal Board held that the competence of the receiving Office under R. 91.1(e)(i) PCT did not exclude the application of Art. 26 PCT to allow for correction under regional law in proceedings before the EPO after entry of the application into the regional phase. See also **J 2/92**.

3.2.3 Excusing of delays in meeting time limits (Article 48 PCT, R. 82*bis* PCT)

Article 48(2)(a) PCT requires a contracting state to excuse, for reasons admitted under its national law, any delay in meeting any time limit. R. 82*bis*.2 PCT specifies that the

provisions of the national law referred to in Art. 48(2) PCT are those provisions which provide for reinstatement of rights, restoration, restitutio in integrum or further processing in spite of non-compliance with a time limit, and any other provision providing for the extension of time limits or for excusing delays in meeting time limits.

It thus follows from Art. 48(2)(a) PCT and R. 82*bis*.2 PCT that a Euro-PCT applicant who has not performed a certain procedural act within the time limit prescribed in the PCT can take advantage of the relevant provisions of the EPC on re-establishment of rights in all cases where "direct" European applicants may invoke them if they fail to observe the applicable time limit. For this reason, the provisions of Art. 122 EPC, which relate to the possibility of re-establishment of rights where a time limit has not been respected, should apply to Euro-PCT applicants to the same extent as they apply to direct European applicants (see decisions **G 3/91**, OJ 1993, 8, point 1.4 of the Reasons, and **G 5/93**, OJ 1994, 447, point 1.1.3 of the Reasons).

As illustrated in **J 13/16**, re-establishment of rights under Art. 122 EPC is ruled out in proceedings before the EPO in respect of the period under R. 49*ter*.2(b)(i) PCT for filing a request for restoration of a right of priority. The period for filing a request under Art. 122 EPC and R. 136 EPC for re-establishment of rights in respect of the priority period under Art. 87(1) EPC is directly comparable to the period for filing a request for restoration of the right of priority under R. 49*ter*.2 PCT, even if they differ in terms of duration. This means that, because re-establishment of rights is excluded under Art. 122(4) and R. 136(3) EPC for direct European applicants in the event of failure to observe the period for filing a request for re-establishment in respect of the priority period under R. 136(1), second sentence, EPC, Art. 48(2)(a) PCT does not oblige the EPO to give Euro-PCT applicants the possibility of re-establishing rights in respect of the period for filing a request for restoration of the right of priority under R. 49*ter*.2 PCT. See also **J 1/08**, **J 8/18** and **J 1/19**.

3.2.4 Rectification of errors made by the receiving Office or the International Bureau (Rule 82*ter* PCT)

The appeal in **J 3/00** concerned the question whether the Receiving Section should have rectified, under R. 82*ter* PCT, a purported error of the EPO acting as receiving Office (RO/EPO) for the purposes of the regional phase before the EPO. Specifically, the Legal Board examined whether the filing date of the international application was incorrect due to an error made by the RO/EPO which was such that, had it been made by the EPO (as designated Office) itself, it would have to be rectified under the EPC (R. 82*ter* PCT). The international application had been filed two days before expiry of the priority period with the description and claims in Swedish by mistake. The RO/EPO accorded as the international filing date the day of receipt of the corrected, i.e. English-language, documents (Art. 11(2)(b) PCT) and furthermore cancelled the priority claim. The applicant argued that the RO/EPO should have warned it of the deficiency. The Legal Board found that the protection of legitimate expectations required the EPO to warn the applicant of any loss of rights if such a warning could be expected in all good faith (**G 2/97**, OJ 1999, 123). As the two relevant conditions were met, i.e. the deficiency was immediately identifiable on the face of the application in the course of the Art. 11(1) PCT check and the applicant was in a position to correct it at very short notice, the Legal Board

decided that, as far as designations for the purpose of obtaining a European patent were concerned, the international filing date accorded by the RO/EPO had to be rectified under R. 82*ter* PCT.

For other cases relating to R. 82*ter* PCT, see **J 6/00** (against a decision of the examining division refusing a request that the withdrawal of the priority claims made in the international application be treated as having no effect for the EPO) and **J 10/04** (against a decision of the Receiving Section concerning the refusal of a request to correct the filing date and to recognise a US priority claim).

3.2.5 Restoration of the right of priority (Rule 49*ter* PCT)

In order to reflect the provisions of Art. 13(2) of the Patent Law Treaty (PLT) 2000 and of R. 14(4) and (5) of the Regulations of the PLT 2000, the possibility of requesting restoration of the priority right was introduced into the PCT (R. 49*ter*.2 PCT) and the possibility of requesting re-establishment of the priority right was introduced into the EPC (Art. 122 EPC and R. 136 EPC) for applicants who failed to comply with the priority period.

The Legal Board held in **J 13/16** that the remedy in R. 49*ter*.2 PCT was directly applicable to Euro-PCT applications in proceedings before the EPO acting as designated Office. If, in the international phase, a receiving Office had restored a right of priority under the "unintentional" criterion of R. 26*bis*.3(a)(ii) PCT, the restoration was not effective in proceedings before the EPO acting as designated Office, since the EPO applied only the "due care" criterion (R. 49*ter*.1(b) PCT). In such cases, within the period specified in R. 49*ter*.2(b)(i) PCT, the applicant had to file a (new) request for restoration of a right of priority under R. 49*ter*.2 PCT with the EPO acting as designated Office. For the purposes of R. 49*ter*.2 PCT, the request filed with the receiving Office under R. 26*bis*.3(b) PCT could not be taken into account in the proceedings before the EPO acting as designated Office. See also **J 17/16**, **J 10/17**, **J 8/18**, **J 1/19**, **J 8/21**, **J 14/21**.

A request for restoration of the right of priority as specified in R. 49*ter*.2 PCT is deemed not to have been filed if the applicable fee has not been paid within the relevant time limit (**J 8/18**, **J 1/19**).

In **J 14/21** the Legal Board referred to the Understanding adopted by the Assembly of the PCT Union (see PCT/A/34/6, Annex IV, point 8) which stated that "where ... the designated Office reinstates the rights of the applicant … in accordance with R. 49.6 or 76.5(ii) … such reinstatement will extend to ... the time limit under R. 49*ter*.2(b)(i)" and held that this PCT Understanding had to be taken into account when interpreting R. 49*ter*.2(b)(i) PCT, as it expressed the intention of the PCT legislator as an act of authentic interpretation (Art. 31 Vienna Convention). In the case in hand, the Legal Board found that the request for restoration of the right of priority by the designated Office, which had been filed on the same day as the timely request for further processing in respect of the 31-month period under R. 159(1) EPC, had been made in time. Furthermore, further processing and re-establishment of rights were excluded in respect of the time limit for requesting restoration of the right of priority before the designated Office, because a request for restoration of

rights as specified in R. 49*ter*.2 PCT was equivalent to, and identical in legal nature, to a request for re-establishment of rights under the EPC (**J 13/16**, **J 8/18**).

In accordance with its practice under Art. 122 EPC, the EPO applies the "due care" criterion for the purposes of R. 49*ter*.2(a) PCT (for recent decisions, see **J 8/21**, **J 14/21**). According to established case law, due care is considered to have been taken if non-compliance with the time limit results either from exceptional circumstances or from an isolated mistake within a normally satisfactory monitoring system. The party requesting re-establishment of rights bears the burden of proving that these requirements are met (see chapter III.E.5.2.).

4. Language of the proceedings

According to the Enlarged Board in **G 4/08** (OJ 2010, 572), if an international application has been filed and published under the PCT in one official language of the EPO, it is not possible, on entry into the European phase, to file a translation of the application into one of the other two EPO official languages, which would then become the language of the proceedings. Neither the EPC 1973 nor the EPC 2000 can be interpreted as allowing that. Nor is there any conflict between EPC and PCT provisions. EPO departments cannot use, in written proceedings on a European patent application or an international application in the regional phase, an EPO official language other than the language of proceedings used for the application under Art. 14(3) EPC.

5. Priority

The EPO is competent to assess whether a party is entitled to claim priority under Art. 87(1) EPC. There is a rebuttable presumption under the autonomous law of the EPC that the applicant claiming priority in accordance with Art. 88(1) EPC and the corresponding Implementing Regulations is entitled to claim priority. The rebuttable presumption also applies in situations where the European patent application derives from a PCT application and/or where the priority applicant(s) are not identical with the subsequent applicant(s). In a situation where a PCT application is jointly filed by parties A and B, (i) designating party A for one or more designated States and party B for one or more other designated States, and (ii) claiming priority from an earlier patent application designating party A as the applicant, the joint filing implies an agreement between parties A and B allowing party B to rely on the priority, unless there are substantial factual indications to the contrary (**G 1/22** and **G 2/22**).

VII. INSTITUTIONAL MATTERS

1. Legal status of the EPO Boards of Appeal 1899
1.1. The institutional structure of the European Patent Organisation 1899
1.2. Authority to amend the RPBA 1900
1.3. Boards of Appeal as judicial authorities 1901
1.3.1 Courts of law under the EPC 1901
1.3.2 Boards of Appeal as judicial or quasi-judicial authorities according to national case law 1901
1.3.3 "Self-binding" of the Boards of Appeal as tribunals under Article 6 of the ECHR 1903
1.3.4 Judicial or quasi-judicial authorities under the TRIPS Agreement 1903
1.3.5 Not a court or tribunal of an EU Member State 1904
1.4. Relationship with the law of the European Union and with CJEU case law 1905
1.5. Nature of the case law of the Boards of Appeal – no binding precedents 1905
1.6. Significance of national law and national case law for the Boards of Appeal 1906
1.6.1 In principle no binding effect – strive for harmonisation 1906
1.6.2 Binding nature of national decisions in relation to procedures under Article 61(1) EPC 1907
1.7. Competency of the EPO to assess priority entitlement 1908
2. Extension agreements and ordinances 1908
2.1. Legal nature 1908
2.2. No jurisdiction of the Boards of Appeal 1909
2.3. Non-applicability of Article 105(1)(a) EPC 1909
3. Legal status of the President of the EPO 1910

1. Legal status of the EPO Boards of Appeal

1.1. The institutional structure of the European Patent Organisation

In **G 3/08** (OJ 2011, 10) the Enlarged Board held that the European Patent Organisation is an international, intergovernmental organisation, based on the separation of powers principle, which the sovereign contracting states have entrusted with the exercise of some of their national powers in the field of patents. The EPC assigns executive power to the Office to grant patents and to its President to manage the Office in organisational respects (Art. 4(3) and 10 EPC, see also **G 5/88** (OJ 1991, 137), while to the Administrative Council it assigns limited legislative powers restricted to lower-ranking rules (Art. 33 EPC), along with financial and supervisory powers. The boards of appeal, which in their decisions are bound only by the EPC (Art. 23(3) EPC), are assigned the role of an independent judiciary in this patent system (Art. 21 to 23 EPC; see also **G 6/95**, OJ 1996, 649, points 2 et seq. of the Reasons), even if they are not an independent organ of the European Patent Organisation (Art. 4(2) EPC) but departments of the Office (Art. 15 EPC; see also **R 19/12** of 25 April 2014 and **R 2/14** of 17 February 2015). The Enlarged Board further stated that the boards of appeal of the EPO, like the judiciary of any democratic entity based on the

separation of powers principle, guarantee the due process of law within the European Patent Organisation. They are also assigned interpretative supremacy with regard to the EPC in terms of its scope of application (see Art. 23(3) EPC). Under Art. 21(1) EPC they are responsible for reviewing decisions taken by the Office in grant and opposition proceedings. Their interpretation of the EPC is the basis for the practice established by the Office for the examination of patent applications and oppositions to granted patents.

At the 148th meeting of the Administrative Council of the European Patent Organisation (Munich, 29 and 30 June 2016), the Council approved the reform of the Boards of Appeal, see CA/43/16 rev. 1 of 30 June 2016 (Reform of the Boards of Appeal); CA/D 6/16 of 30 June 2016, OJ 2016, A100 (Decision of the Administrative Council of 30 June 2016 amending the Implementing Regulations to the European Patent Convention); CA/D 7/16 of 30 June 2016, OJ 2016, A101 (Decision of the Administrative Council setting up a Boards of Appeal Committee and adopting its Regulations). The aims of the reform were to strengthen the Boards of Appeal's organisational and managerial autonomy, and to increase their perceived independence and efficiency. There was no need to revise the EPC. Since entry into force of the reform, the Boards of Appeal and the Enlarged Board, including their registries and support services, have been organised as a separate unit and directed by the President of the Boards of Appeal.

The delegation of functions and powers from the President of the Office to the President of the Boards of Appeal is published in the Official Journal (OJ 2018, A63).

1.2. Authority to amend the RPBA

The RPBA and RPEBA are adopted in accordance with the Implementing Regulations (Art. 23(4) EPC). Since entry into force of the reform of the Boards of Appeal (see above), the Boards of Appeal Committee has been responsible under R. 12c EPC for issuing the RPBA and the RPEBA. Under R. 12b(3)(c) EPC, the Presidium of the Boards of Appeal advises the President of the Boards of Appeal on proposals for amending the RPBA and the RPEBA. The RPBA and RPEBA require the approval of the Administrative Council under Art. 23(4), second sentence, EPC (see the latest decision of the Administrative Council of 13 December 2023 approving amendments to the RPBA, OJ 2023, A103).

In **T 1400/11** the board pointed out that, to guarantee their judicial function, proceedings before the Boards of Appeal are governed by the RPBA.

In case **T 1914/12**, the board underlined that the RPBA can help in clarifying and interpreting the EPC but they cannot confer on the boards any powers that the EPC does not give them.

See also chapter V.A.1.2. "Rules of Procedure of the Boards of Appeal (RPBA)".

1.3. Boards of Appeal as judicial authorities

1.3.1 Courts of law under the EPC

In **G 1/86** (OJ 1987, 447) the Enlarged Board held that "those EPC provisions governing the independence of members of the Boards of Appeal (Art. 23 EPC), their competence and method of work and the nature of the decisions they take, indicate that the Boards act as courts with the task of ensuring that the law is respected when the EPC is applied. (...) Moreover, there is no appeal against decisions of the Boards of Appeal. In the Member States of the European Patent Organisation decisions by departments of last instance, i.e. those terminating proceedings concerned with checking the legality of administrative actions and the protection of the rights of the individual, can only be taken by courts of law."

Article 112a EPC, which has now been introduced at the suggestion of the Enlarged Board (**G 1/97**; OJ 2000, 322), is intended to provide limited judicial review of decisions of the boards of appeal and not to introduce a second judicial instance (**R 5/16**, point 7 of the Reasons) (see chapter V.B.3. "Petition for review under Article 112a EPC").

In **T 1400/11** the board stated that according to the Enlarged Board decisions in **G 7/91** and **G 8/91** (OJ 1993, 356 and 346, point 7 of the Reasons, and correction to **G 8/91**, OJ 1993, 478), **G 9/91** and **G 10/91** (OJ 1993, 408, 420, point 18 of the Reasons) and **G 1/99** (OJ 2001, 381, point 6.6 of the Reasons), the appeal procedure is to be considered as a judicial procedure proper to an administrative court. See also chapter V.A.1. "Legal character of appeal procedure".

In **G 2301/15** the Enlarged Board stated that the board members' function as judges was generally recognised. In decision **G 2301/16**, concerning the same case, the Enlarged Board saw the Office President's letter of 10 June 2016 as indirectly exerted pressure that undermined the principle of judicial independence enshrined in Art. 23(3) EPC. The Enlarged Board's judicial independence in deciding on this case had been fundamentally denied.

1.3.2 Boards of Appeal as judicial or quasi-judicial authorities according to national case law

In **J 3/95** (OJ 1997, 493) the Legal Board stated that the status of the Boards of Appeal had been addressed by the High Court of Justice in the United Kingdom (Patents Court) in R. v The Comptroller of Patents, Designs and Trade Marks ex parte Lenzing AG. The High Court held that "the final arbiter of revocation under the new legal system [of the EPC] is to be the Board of Appeal of the EPO". It further stated that "the UK and the other Member States have agreed at an international level via the EPC that the BoA is the final arbiter of oppositions. It is the agreed EPO equivalent of the House of Lords (now, the UK Supreme Court), Cour de Cassation or Bundesgerichtshof... Those who apply for patents in the EPO must accept the results of its findings and its methods of procedure". **J 3/95** also acknowledged that the Boards of Appeal constitute a specialised court exercising

judicial authority within the meaning of Art. 32 TRIPS (see OJ 1997, 493, point 6.3 of the Reasons; see also this chapter VII.1.3.4.).

In **R 1/10** the Enlarged Board affirmed that the Boards of Appeal were set up as required by the rule of law, and in particular affirmed their judicial independence. It pointed out that several high-ranking national courts of EPC contracting states (in particular, the UK's Patents Court and Germany's Federal Court of Justice (Bundesgerichtshof) and Federal Constitutional Court (Bundesverfassungsgericht)) had declared the Boards of Appeal to be independent courts based on the rule of law (see also **R 19/12** of 25 April 2014) and recognised their decisions as those of such a court which they took into consideration when developing their case law.

In ex parte case **T 1473/13**, the appellant justified its request in support of a stay of proceedings on the basis of a number of constitutional complaints pending before the German Federal Constitutional Court (FCC) (see 2 BvR 2480/10, 2 BvR 421/13, 2 BvR 756/16, 2 BvR 786/15) that were based on an accusation of insufficient judicial relief ("wegen unzureichenden Rechtsschutzes") at the EPO against a decision of the Boards of Appeal. As the board did not see itself in a position to find that the complaints were clearly inadmissible or devoid of any merit, it assessed whether there would be any adverse consequences of refusing a stay of the proceedings.

It initially found that decisions by the Boards of Appeal were, in principle, subject to review by the FCC but that so far there had been no FCC case law according to which an EPO decision had infringed the German Basic Law ("deutsches Grundgesetz").

The board considered that the appellant did not show that non-stay would cause a legal disadvantage for it in case of success of the constitutional complaints. It also noted that, if other boards adopted the same approach, the administration of justice by the boards might become severely hampered. Consequently, the request for a stay was refused. With regard to the functioning of the boards, the board also made reference to examples showing that board of appeal decisions were or are qualified as administrative rulings in jurisdictions other than that of the European Patent Organisation.

In its decision of 8 November 2022, the FCC rejected constitutional complaints 2 BvR 2480/10, 2 BvR 421/13, 2 BvR 756/16, 2 BvR 786/15 and 2 BvR 561/18. The appellants had not sufficiently substantiated that the organisation of the EPO's judicial system failed to provide the required minimum level of effective legal protection. Insofar as they criticised the institutional position of the Technical Boards of Appeal and the Enlarged Board within the European Patent Organisation's system of legal protection and the associated shortcomings with regard to the material and personal independence of their members, it does not appear to be ruled out that these were not guaranteed until the structural reform of 2016. However, these shortcomings had largely been remedied by the structural reform of 2016, which had unbundled the administrative and judicial functions and made the judicial function of the Boards of Appeal largely institutionally independent.

1.3.3 "Self-binding" of the Boards of Appeal as tribunals under Article 6 of the ECHR

According to the first sentence of Art. 6(1) of the ECHR, "[i]n the determination of his civil rights and obligations ... everyone is entitled to a fair and public hearing within a reasonable time by an independent and impartial tribunal established by law."

In **R 8/13** of 20 March 2015 the Enlarged Board stated that it was established case law of the Enlarged Board (**R 2/14** of 17 February 2015: and of the Boards of Appeal) that the EPC, which had been signed by contracting parties to the ECHR, must be applied in a way which supports the fundamental principles of Art. 6(1) ECHR (**G 1/05**, OJ 2007, 362, point 22 of the Reasons; **G 2/08**, OJ 2010, 456, point 3.3 of the Reasons). It further stated that the Enlarged Board fell within the definition laid down by the ECtHR in Campbell and Fell v. the United Kingdom (28 June 1984, No 7819/77, paragraph 76): "the word 'Tribunal' in Article 6 paragraph 1 is not necessarily to be understood as signifying a court of law of the classic kind, integrated within the standard judicial machinery of the country". A tribunal may, according to the ECtHR, also be set up to deal with specific subject-matter which can be appropriately administered outside the ordinary court system. What is important, to ensure compliance with Art. 6(1) ECHR, are the guarantees, both substantive and procedural, which are in place (ECtHR, Rolf Gustafson v. Sweden, 1 July 1997, No. 23196/94, paragraph 45).

In **R 1/16**, the Enlarged Board ruled that a complaint based on a breach of the right to a fair trial under Art. 6(1) ECHR, of the protection of legitimate expectations and of the judicial duty to direct the parties was inadmissible **as such** because those were not grounds included in the exhaustive list under Art. 112a(2) EPC in conjunction with R. 104 EPC.

As to the interpretation of the EPC in the light of the ECHR, see also chapter III.H.7.

1.3.4 Judicial or quasi-judicial authorities under the TRIPS Agreement

As to the significance of the TRIPS Agreement in proceedings before the EPO, see chapter III.H.6.

Article 62(5) TRIPS provides that final administrative decisions in procedures concerning the acquisition or maintenance of intellectual property rights and, where a member's law provides for such procedures, administrative revocation and inter partes procedures such as opposition, revocation and cancellation, must be subject to review by a **judicial or quasi-judicial** authority. Art. 32 TRIPS requires member countries to provide an opportunity for **judicial** review of any decision to revoke or forfeit a patent.

In **G 1/97** (OJ 2000, 322) the Enlarged Board noted that boards of appeal may be seen as having the status of judicial authorities, since they embody all the features of such an authority: in their decisions, the members of the boards are not bound by any instructions and are obliged to comply only with the provisions of the EPC (Art. 23(3) EPC 1973; see also **R 19/12** of 25 April 2014, where the Enlarged Board stressed that the Service Regulations for EPO employees provide in Art. 1(4) that they only apply to board members

in so far as they are not prejudicial to their independence); they are appointed for a fixed term, during which they may not be removed from office except if there are serious grounds for so doing (Art. 23(1) EPC 1973); the EPC contains provisions for safeguarding the impartiality of board members (Art. 24 EPC 1973); the boards always include at least one legally qualified member (Art. 21 EPC 1973); they have their own rules of procedure; and finally, they issue written decisions containing a statement of reasons (R. 66(2) EPC 1973 – R. 102 EPC). Regarding the judicial nature of the boards of appeal, reference was also made to the House of Lords' decision of 26 October 1995 in Merrel Dow v. Norton, [1996] R.P.C. 76, and to the decision of the United Kingdom High Court of Justice dated 20 December 1996, in the case of Lenzing AG's European Patent (UK), [1997] R.P.C., 245). The Enlarged Board added that, even if the status of a judicial authority were to be contested, it would be clear that, in the light of the foregoing, the boards of appeal constitute at least a quasi-judicial authority as referred to in Art. 62(5) TRIPS.

The Enlarged Board also examined the relationship between Art. 62(5) TRIPS and Art. 32 TRIPS and found in application of the principle of lex specialis derogat legi generali that Art. 62(5) TRIPS takes precedence over Art. 32 TRIPS in matters relating to the grant of European patents (see also **J 3/98**).

In **T 557/94** the appellant (patentee) referred to Art. 32 TRIPS, which guarantees an opportunity for judicial review of any decision to revoke a patent, and requested that the case be remitted to the department of first instance if the patent were revoked on the basis of a prior art document introduced during appeal proceedings. The board found that, under Art. 111(1), second sentence, EPC 1973, the board of appeal was empowered either to decide on the merits of the case **or** to remit the case; it was not restricted to the latter alternative if the opposition division maintained the patent and the board was considering revoking the patent for the first time (see chapter V.A.9. "Remittal to the department of first instance"). Reading Art. 32 TRIPS in the context of the usual structure of judicial review in the EPC contracting states and the EPC 1973 itself, this provision guaranteed an instance for judicial review in revocation proceedings, but did not oblige the reviewing instance to remit the case to the department of first instance for continuation of proceedings when revocation was being considered by the reviewing instance for the first time.

1.3.5 Not a court or tribunal of an EU Member State

In case **T 276/99**, the board noted that **referrals** to the Court of Justice of the European Communities (CJEC; Court of Justice of the European Union – CJEU since 1 December 2009) were governed by the requirements of Art. 234 of the EC Treaty (Art. 267 of the Treaty on the Functioning of the EU (TFEU) since 1 December 2009. The board pointed out that, prima facie, as the EPO Boards of Appeal were not a court or tribunal of an EU Member State, they did not have the status to refer a question to the CJEC.

In **G 2/06** (OJ 2009, 306) the appellant had requested a referral of questions to the CJEC on the argument that, since R. 28(c) EPC repeats the wording of Art. 6(2)(c) of Directive 98/44/EC (Biotech Directive), the Enlarged Board in interpreting R. 28(c) EPC was interpreting EU law and, as a court of a contracting state, was obliged to make a referral to the CJEC. The request was rejected as inadmissible. The Enlarged Board made

it clear that neither the EPC nor the Implementing Regulations thereto contain any provision for a referral by any instance of the EPO of questions of law to the CJEC. The Boards of Appeal are a creation of the EPC, and their powers are limited to those given in the EPC. Art. 234 of the EC Treaty (Art. 267 TFEU since 1 December 2009)gives the CJEC jurisdiction to give preliminary rulings concerning the interpretation of acts of the institutions of the European Community, such as the Directive, but in the view of the Enlarged Board does not appear to provide any basis for a board of appeal of the EPO to request the CJEC to give a ruling on any questions before a board of appeal. Art. 234 EC Treaty (Art. 267 TFEU since 1 December 2009) requires the question to be raised in a case pending before a court or tribunal of an EU member state. The Enlarged Board pointed out that, although the EPO's Boards of Appeal have been recognised as courts or tribunals, they are not courts or tribunals of an EU member state, but of an international organisation whose contracting states do not all belong to the EU. The seat of the EPO Boards of Appeal in an EU member state, Germany, does nothing to alter their status as part of an international organisation with jurisdiction conferred under the EPC. The Boards of Appeal are not and have never been treated as courts or tribunals of their host country.

In **R 1/10**, the Enlarged Board stated that a CJEU finding that the Boards of Appeal lacked the independence required of a judicial body adhering to the rule of law would not be binding on the boards. This is because the EPC is not part of EU legislation but, together with the European Patent Organisation, is a subject of international law which is autonomous and inherently independent of the EU and whose members do indeed include all EU Member States but also non-EU states.

1.4. Relationship with the law of the European Union and with CJEU case law

In **G 3/19** (OJ 2020, A119), the board concluded that the legally effective and binding interpretation of Union law, whether provisions of primary law, e.g. the treaties, or of secondary law, e.g. regulations and directives, lay within the exclusive competence of the CJEU. Irrespective of this, as an independent international organisation with its own autonomous legal order, the European Patent Organisation was not directly bound by Union law. It was therefore all the more true that a legally non-binding notice on the interpretation of the Biotech Directive issued by the EU Commission in reaction to decisions of the Enlarged Board on the interpretation of a provision of the EPC, i.e. Art. 53(b) EPC, did not form part of EPC law.

See also chapter III.H. "Interpretation of the EPC".

1.5. Nature of the case law of the Boards of Appeal – no binding precedents

With regard to its decisions in petitions for review cases, the Enlarged Board stated in **R 14/11** that, like boards of appeal decisions, these review decisions do not have the legal nature of creating a precedent in the sense that it would have to show in which respect a later decision differs from an earlier one in order for that later decision to be legally justified. Referring to **R 11/08** the Enlarged Board explained that such differences are normal and that the usefulness of case law is not confined to similar or identical facts but lies in the

principles or guidance (such as interpretation of legislative provisions) which, whether the facts are similar or not, can be extracted from earlier cases.

In **G 3/19** (OJ 2020, A119) the Enlarged Board stated that a particular interpretation which has been given to a legal provision can never be taken as carved in stone, because the meaning of the provision may change or evolve over time. This aspect is intrinsic to the ongoing development of the law by way of judicial decision-making, and, in the context of the jurisprudence of the boards of appeal, is reflected in Art. 21 RPBA, which requires a board of appeal to make a referral to the Enlarged Board if it intends to deviate from an earlier decision or opinion of the Enlarged Board. Such a new referral would be pointless if there was no possibility, not even a theoretical one, that the Enlarged Board would revise its previous ruling on the point of law in question.

In **T 844/18** the board observed regarding the interpretation of "any person" (Paris Convention) that there was no case law, either of the EPO or of national tribunals, that clearly and unambiguously adopted the interpretation proposed by the appellants. In general, the bar for **overturning long-established case law and practice** should be a high one because of the disruptive effects a change may have. The board noted that the appellants were faced with over one hundred years of consistent case law and practice adopting the "all applicants" approach that they needed to show as incorrect. This was a considerable burden (point 53 of the Reasons). The continuation of such long-standing and rationally based practices could be considered **an aspect of legal certainty** (point 86 of the Reasons).

1.6. Significance of national law and national case law for the Boards of Appeal

1.6.1 In principle no binding effect – strive for harmonisation

Proceedings before the boards are independent and decisions of national courts are not binding in law. This does not, however, preclude a degree of interaction between national judicial systems and the European system, particularly with a view to developing harmonious European case law (see **R 21/09**, point 2.4 of the Reasons, which is very detailed in this respect, and, as examples of decisions dealing with the relationship between national case law and board decisions, **T 1904/12**, **T 885/02**, **T 202/13**, **T 231/13**, **T 488/16**, **T 926/20**).

Case **T 2220/14** recalled the relationship between national decisions and procedures before the boards of appeal. In the latter questions of patentability are to be decided solely in accordance with the EPC. As regards decisions made on patentability in contracting states to the EPC, these are not to be cited as if they were binding upon the boards of appeal, and claims should not be refused because their patentability cannot be upheld under the jurisdiction of one member state (**T 452/91**). Such considerations also apply to decisions of courts of non-member states such as the USA (point 16 of the Reasons).

In **G 5/83** (OJ 1985, 64) the Enlarged Board pointed out that in the interpretation of international treaties, which provide the legal basis for the rights and duties of individuals and corporate bodies, it is necessary to pay attention to questions of harmonisation of

national and international rules of law. This aspect of interpretation is particularly important where, as is the case with European patent law, provisions of an international treaty have been taken over into national legislation. The establishment of harmonised patent legislation in the contracting states must necessarily be accompanied by harmonised interpretation. For this reason, it is incumbent upon the EPO, and particularly its Boards of Appeal, to take into consideration the decisions and expressions of opinion of courts and industrial property offices in the contracting states (point 6 of the Reasons).

For certain (mostly procedural) sub-issues, however, national law is to be consulted.

In **G 1/13** (OJ 2015, A42), for instance, the Enlarged Board stated that legal entities such as companies exist only by virtue of the national legal system which governs their incorporation, subsequent existence and cessation. When determining whether a legal entity exists or has ceased to exist, and has capacity to act, the starting point should be the clearly established principle under the EPC that national law should be referred to (points 5.1 and 6 of the Reasons). The Enlarged Board qualified this by stating that there are limits on the extent to which the EPO should follow national law. For example, a provision of national law which conferred on a company procedural rights which were contrary to the EPC could not be acknowledged by the EPO.

According to **J 14/19**, the question of when proceedings became pending was to be assessed, in relation to R. 14 EPC, under the (national) procedural law of the state in question. Where the EPO was called on to apply foreign law (here: German law), it had, according to the Legal Board, to do so within the overall context of the foreign legal system, wherever possible. As an international organisation independent of state authorities and courts, the EPO was not bound by the case law of national courts when interpreting the foreign law to be applied but, if aware of such case law, in particular of the highest national courts, it should nevertheless consider and evaluate it in coming to its decision. Since legal commentaries were not official publications and did not form part either of the law created by legislation or of the case law, they were not in themselves to be taken into account when applying foreign law.

As to the binding effect of national decisions, see also chapter III.H.8.2. "National decisions: no binding effect on the boards of appeal".

1.6.2 Binding nature of national decisions in relation to procedures under Article 61(1) EPC

In **J 14/19** the Legal Board noted that, in accordance with Art. 9(2) of the Protocol on Recognition, the jurisdiction of the (national) court whose decision on the right to the grant of a European patent was to be recognised, and the validity of such decision, could not be reviewed. Although primarily addressing the contracting states of the EPC, the Protocol on Recognition was an integral part of the EPC according to Art. 164(1) EPC and thus also binding on the EPO (see **J 36/97** and, for the duty to recognise, R. 16(2) EPC). The Legal Board also made reference to **G 3/92**, in which the Enlarged Board stated that substantive examination of a claim was the preserve of the national court under the Protocol on Recognition and the EPO had no authority in this regard.

In **G 1/22** (OJ 2024, A50) the Enlarged Board confirmed that the EPO has no power to decide a dispute as to whether a particular applicant is legally entitled to apply for and be granted a European patent in respect of the subject-matter of a particular application. The determination of questions of entitlement to the right to the grant of a European patent prior to grant is governed by the "Protocol of Recognition".

1.7. Competency of the EPO to assess priority entitlement

In **G 1/22** (OJ 2024, A50) the Enlarged Board noted that a strict distinction should be made between the title to the subsequent application and the right to claim the priority date for that application. It held that Art. 60(3) EPC does not apply to the right of priority referred to in Art. 87(1) EPC, neither directly nor by analogy. The Enlarged Board concluded that the EPO is competent to assess priority entitlement and that this assessment should be made under the autonomous law of the EPC. Acknowledging the EPO's competence to assess priority entitlement also respected the argument that the EPO, in view of Art. 87(1) EPC, has to assess all aspects of the right of priority. If all four requirements underlying Art. 87(1) EPC are assessed by the EPO, the EPO is competent for all aspects that may be relevant to determine the prior art, enabling it to assess all aspects of patentability. According to the Enlarged Board, there is a rebuttable presumption under the autonomous law of the EPC that the applicant claiming priority in accordance with Art. 88(1) EPC is entitled. As to the competency of the EPO to assess priority entitlement, see also chapter II.D.2.2.

2. Extension agreements and ordinances

2.1. Legal nature

An extension agreement is an international treaty between the European Patent Organisation and an extension state which the President of the EPO is authorised by the Administrative Council to conclude with the Council's approval (Art. 33(4) EPC). Such an agreement serves the interests not only of applicants, by providing a simple route to patent protection in the extension states, but also those of the extension state, by enabling it to offer patent protection for its territory by extending the effects of European and Euro-PCT applications and patents (**J 9/04**; see also **J 2/05**, **J 14/00**, OJ 2002, 432).

In **T 7/07** the board stated that according to the "Basic principles" set out in OJ 1994, 75, the extension system provided European patent applicants with a simple and cost-effective way of obtaining protection in the extension state. It largely corresponds to the EPC system operating in the EPC contracting states, except that it is not based on direct application of the EPC but on national law modelled on the EPC. The national law of the extension state governs the proceedings and the legal effects of the extension.

In **J 9/04** the Legal Board noted that, as bilateral ordinances, the Extension Ordinances essentially deal – exhaustively and strictly separately from the Convention – with matters pertaining to the integration of extended European applications and protective rights into the respective national law and their relationship to national applications and rights. This includes, in particular, the conferral of the same effects on extended applications and

patents as on national ones, the obligation to provide the national patent offices with a translation of the claims into the respective language, the national authentic text of extended applications and patents, their prior-art effect with respect to national applications and patents, and, finally, simultaneous protection. According to the board, none of these provisions give rise to any obligations on the part of the EPO. The EPO merely undertakes vis-à-vis the national patent authorities to assist with the administrative tasks associated with the extension of European patents.

2.2. No jurisdiction of the Boards of Appeal

In **J 22/10** the Legal Board stated that decisions taken by the EPO when carrying out its obligations under the co-operation agreements with certain states extending the protection conferred by European patents (extension agreements) were based not on the EPC itself but solely on the co-operation agreements between the European Patent Organisation and the extension states; it therefore rejected the respective appeals as inadmissible (see **J 14/00**, OJ 2002, 432; **J 19/00**; **J 9/04** of 1 March 2005; **J 2/05**; **J 4/05**). Any decisions based on such international treaties did not fall within the scope of the EPC and, as a result of this, were not subject to the jurisdiction of the boards of appeal. The extension agreements made it absolutely clear that references to provisions of the EPC were exhaustive and, thus, that there could be no corresponding application of other provisions, including those of Art. 106 EPC concerning the appeals procedure. In other words, the Legal Board was not competent to decide a case that was governed solely by a "foreign" legal system.

In **J 14/00** (OJ 2002, 432) the Legal Board decided on the admissibility of an appeal directed against a letter issued by an EPO formalities officer in application of the EPC 1973 in relation to the Extension Ordinance (OJ 1994, 75) associated with the Extension Agreement with the Republic of Slovenia. It held that, according to the exhaustive provision in Art. 106(1) EPC 1973, only those decisions of the EPO could be contested which were taken, within the framework of their duties under the EPC 1973, by the departments listed therein. This was not the case for decisions taken by the EPO when carrying out its obligations under the Extension Agreement. The Legal Board found that there was no basis in the structure or legal nature of the Extension Ordinance for the appealability of a letter issued by an EPO formalities officer. The board held that the extension procedure generated legal effects exclusively on the basis of Slovenian national law. The Extension Ordinance thus made it absolutely clear that its references to provisions of the EPC 1973 were exhaustive and that there was no question of any corresponding application of other provisions, including those of Art. 106 EPC 1973 on the appeals procedure.

As to the role of the national jurisdictions, see also **J 9/04** in this chapter, VII.2.1. (previous section).

2.3. Non-applicability of Article 105(1)(a) EPC

In **T 1196/08** an assumed infringer intervened under Art. 105(1)(a) EPC and claimed that the Romanian patent resulting from the extension of a European patent had to be seen as a European patent granted under the EPC. The board did not agree. The term "the same

patent" in Art. 105(1)(a) EPC meant a European patent within the meaning of Art. 2(1) EPC 1973. While there were certain parallels between the extension system and the European patent system, fundamental differences still existed. The extension system, including all the conditions and legal effects of extension, was based exclusively on the application of national law unless express reference was made to the EPC. By contrast, the European patent system and the effects of a European patent in the contracting states relied solely on the direct application of the EPC, even if certain provisions of the EPC referred to national law. The board concluded that a patent extended to the territory of an extension state was not a European patent within the meaning of Art. 2(1) EPC 1973. Furthermore, the Romanian extension ordinance did not refer to Art. 105 EPC. The references in the Romanian extension ordinance to the provisions of the EPC being exhaustive, there could be no question of applying Art. 105 EPC by analogy.

3. Legal status of the President of the EPO

According to Art. 10(1) EPC the EPO is managed by the President, who is responsible for its activities to the Administrative Council. To this end, Art. 10(2)(a) EPC empowers and requires the President to "take all necessary steps to ensure the functioning of the European Patent Office". According to Art. 5(3) EPC, the President shall represent the European Patent Organisation. In **G 8/88** (relating to an Administrative Agreement between the Presidents of the German Patent Office (as it was at the time, now German Patent and Trade Mark Office) and the EPO); OJ 1991, 137) the Enlarged Board found that the capacity to represent the European Patent Organisation by virtue of Art. 5(3) EPC 1973 is one of the President's defining functions but does not give him or her any power extending beyond representation of the Organisation. The President may only represent the Organisation by performing a legal act, such as the signing of an agreement, provided he or she has the power to perform that act. The extent of the President's power to act in directing the EPO is derived from and governed by Art. 10 EPC 1973. "Art. 10(2) EPC 1973 contains a list of the President's particular functions and powers, which (…) are essentially concerned with internal matters of the EPO. The extent to which, under Art. 10 EPC 1973, the President can lawfully "direct the EPO" concerning any external activity without the supervision of the Administrative Council in accordance with Art. 4(3) EPC 1973, insofar as such external activity is not directly related to the President's particular functions and powers listed in Art. 10(2) EPC 1973, is not specifically defined by the EPC, and is therefore a matter of interpretation". See also **G 5/88**, **G 7/88**.
